For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear - Part 4-1A: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Combination Motor Controller" (or "Comb. Mtr. Cntrl.>").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Float- and Pressure-operated (NKPZ)

USE

This category covers:

Float-operated switches, including weight-operated switches

Pressure-operated switches, including vacuum-operated switches

These devices are intended for direct control of motors and/or control of general-use-type loads.

Unless otherwise marked, these devices are intended for use only with air, water, or other nonhazardous fluids.

RELATED PRODUCTS

Pressure-operated switches investigated for use in connection with automatic sprinkler or similar protective equipment are covered under Switches, Pressure (VOXZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

Motor Controllers, Float- and Pressure-operated (NKPZ)—Continued

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.>").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Magnetic (NLDX)

GENERAL

This category covers:

- Across-the-line starters
- Across-the-line starters with motor circuit switches
- Combined starters and speed regulators
- Reduced-voltage starters, such as autotransformer, part-winding wye-delta, reactance and resistant types
- Speed regulators

Magnetic motor controllers have been tested to determine their acceptability for continuous operation at their marked rated load.

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Switches, Industrial Control (NRNT).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear - Part 4-1A: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Magnetic Motor Controller" (or "Mag. Mtr. Cntrlr.>").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Manual (NLRV)

GENERAL

This category covers the following manually-operated devices intended for across-the-line starting of motors:

- Across-the-line starters
- Autotransformer starters
- Combined starters and speed regulators
- Reactance-type starters
- Resistance-type starters
- Speed regulators

Motor disconnect switch — Manual motor controllers that have been additionally investigated for use as a motor disconnect switch are marked "Suitable as Motor Disconnect." These devices are intended to be installed on the load side of motor branch-circuit protection in accordance with Section 430.109(A)(6) of ANSI/NFPA 70, "National Electrical Code" (NEC).

Tap conductor protection — Manual motor controllers that have been additionally investigated for use as tap conductor protection within a motor group are marked "Suitable as Tap Conductor Protection in Group Installations." These devices are intended to be installed on the load side of motor branch-circuit protection for a motor group in accordance with Section 430.53(D)(3) of the NEC.

ADDITIONAL INFORMATION

Motor Controllers, Manual (NLRV)—Continued

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear - Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear - Part 4-1A: Contactors and Motor-Starters - Electromechanical Contactors and Motor-Starters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manual Motor Controller" (or "Man. Mtr. Cntrlr.>").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Motor Controllers, Mechanically Operated and Solid-state (NMFT)

GENERAL

This category covers the following devices intended for across-the-line starting of motors:

- Flow-operated motor controllers
- Machine-operated motor controllers
- Soft starters
- Solid-state starters
- Solid-state reduced-voltage starters
- Solid-state speed controls

These devices are intended for the direct control of motors.

Mechanically operated and solid-state motor controllers have been tested to determine their acceptability for continuous operation at their marked rated motor load.

REBUILT PRODUCTS

This category also covers mechanically operated and solid-state motor controllers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt mechanically operated and solid-state motor controllers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt mechanically operated and solid-state motor controllers are subject to the same requirements as new mechanically operated and solid-state motor controllers.

RELATED PRODUCTS

Devices intended for use in control circuits of magnetic motor controllers and the like are covered under Auxiliary Devices (NKCR).

Devices intended for use in nonmotor circuits other than motor control circuits are covered under Switches, Industrial Control (NRNT).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq."), "Solid-state Motor Controller" or "Solid-state Reduced-voltage Starter."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Power Conversion Equipment (NMMS)**GENERAL**

This category covers equipment that supplies power to and controls a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also covers power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power conversion equipment may be of the open or enclosed type. This equipment is intended for use in ordinary locations in accordance with Articles 430 and 440 of ANSI/NFPA 70, "National Electrical Code."

Power conversion equipment incorporating overload protection for motors and not intended for use with remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection such as thermal overload relays, or a thermally protected motor must be otherwise provided.

Power conversion equipment is marked with input electrical ratings and output motor electrical ratings.

This category does not cover power conversion equipment intended for use in safety-related functions (i.e., functional safety applications).

REBUILT PRODUCTS

This category also covers power conversion equipment that is rebuilt by the original manufacturer or by the Applicant's authorized manufacturer as found in the original product Follow-Up Service Procedure Authorization Page or Addendum to the Follow-Up Service Procedure Authorization Page. Rebuilt power conversion equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power conversion equipment is subject to the same requirements as new power conversion equipment, including production-line tests as applicable.

RELATED PRODUCTS

Power conversion equipment rated over 1500 V is covered under Power Conversion Equipment, Medium Voltage (NJC).

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is investigated in accordance with UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are utility interactive, stand-alone, and multimode inverters and converters.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508C, "Power Conversion Equipment," or ANSI/UL 61800-5-1, "Adjustable Speed Electrical Power Drive Systems - Part 5-1: Safety Requirements - Electrical, Thermal and Energy."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Power Conversion Equipment."

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MANUAL-DISCONNECT SWITCHES (NMSJ)**USE**

This category covers open and enclosed manual-disconnect switches intended for use in photovoltaic (PV) systems. These devices are intended for disconnecting the output of dc PV panels.

PRODUCT MARKINGS

In addition to the product markings required in ANSI/UL 508, "Industrial Control Equipment," these devices are also marked with: "Suitable as photovoltaic disconnect switch in accordance with Article 690 of NFPA 70 (NEC)."

RELATED PRODUCTS

Controllers intended for the direct control of motors are rated in horsepower and are covered under Motor Controllers, Magnetic (NLDX).

Photovoltaic Manual-disconnect Switches (NMSJ)—Continued

Manual motor controllers and manual motor controllers suitable for disconnecting motor loads are covered under Motor Controllers, Manual (NLRV).

Mechanically operated and solid-state motor controllers are covered under Motor Controllers, Mechanically Operated and Solid-state (NMFT).

Industrial control switches intended for switching nonmotor loads are covered under Switches, Industrial Control (NRNT2).

Magnetic switches for controlling other than motor loads are covered under Switches, Industrial Control (NRNT).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," in addition to the requirements contained in UL Subject 508I, "Outline of Investigation for Manual Disconnect Switches for Use in Photovoltaic Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Manual-disconnect Switch" (or "PV Manual-disconnect Switch").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CIRCUIT AND MOTOR-MOUNTED APPARATUS (NMTR)**GENERAL**

This category covers autotransformers, including motor-starting and variable-voltage types; battery chargers for industrial use; magnetically operated brakes; magnetically operated clutches; busbars; enclosed slip rings; lamp dimmers, including incandescent, fluorescent, mercury vapor, surgical light and theater use; phase converters; power-factor-correction equipment; power supplies for industrial use; reactors, including line chokes; current transformers and current transducers; voltage transformers and voltage transducers; and resistors, including motor-starting, rheostats, potentiometers, and high-impedance grounding types.

A brake or clutch may consist of several parts with the Certification Mark appearing on the main electrical part (e.g., field coil). Where other part(s) are essential to complete a certified assembly, the basic unit is marked to indicate the parts needed.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.>").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE CONTROLLERS (NRAQ)**GENERAL**

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input and output accessories, computer interfaces, and programming or program diagnostic units associated with programmable control systems.

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating

Programmable Controllers (NRAQ)—Continued

is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

RECONDITIONED PRODUCTS

This category also covers programmable controllers and their accessories which have been reconditioned by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. (Reconditioned programmable controllers and their accessories may also be referred to as rebuilt.) Reconditioned programmable controllers and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Reconditioned programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

RELATED PRODUCTS

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances. Such controls are covered under Controls, Primary Safety (MCCZ).

This category does not cover equipment intended for use in applications involving instruments for measurement, recording and/or control of process variables (such as temperature, pressure, flow, etc.) and auxiliary devices used with these instruments, such as sensors, transducers and valve operations. Such equipment is covered under Process Control Equipment, Electrical (QUYX).

This category does not cover programmable controllers intended for use in safety-related functions (i.e., functional safety applications). Such controllers are covered under Programmable Safety Controllers (NRGF).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 61131-2, "Programmable Controllers – Part 2: Equipment Requirements and Tests."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Programmable Controller" (or "Prog. Cntr.>").

For reconditioned products, the word "Reconditioned" or "Rebuilt" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE CONTROLLERS, RETROFIT, CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (NRCQ)

GENERAL

This category covers certified programmable controller retrofit kits intended for use in specified equipment in general industrial-use applications. This equipment is rated 600 V or less and is intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). This equipment is suitable for use in lieu of certified programmable controllers. These products have been investigated by UL to determine that, when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete unit.

These programmable controller retrofit kits require field assembly of modules or subassemblies, which are appropriately marked as indicated below.

Programmable controller retrofit kits are intended to be used to replace programmable controllers installed in the field using conversion modules, mounting hardware and associated wiring harnesses that permit the existing programmable controller wiring connectors to be used, allowing the remainder of the existing programmable controller to be replaced. The specific replacement programmable controller conversion modules, wiring harnesses, I/O modules, power-supply modules, etc., are identified as to which specific installed modules they are intended to replace.

A programmable controller utilizes a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and control of various industrial equipment through digital or analog inputs or outputs. This category also covers power sup-

Programmable Controllers, Retrofit, Classified for Use in Specified Equipment (NRCQ)—Continued

plies, central processing units, input and output accessories, interfaces, and programming or program diagnostic units associated with programmable control systems.

This category does not cover the retrofit of functional safety programmable controllers.

PRODUCT MARKINGS

Programmable controller retrofit kits are marked "Classified for use only with Model ____ [product identifier as indicated in the individual certifications]."

RELATED PRODUCTS

Programmable controllers are covered under Programmable Controllers (NRAQ).

Programmable controllers intended for use in functional safety applications are covered under Programmable Safety Controllers (NRGF).

Primary safety controls intended for programming and monitoring the operation of the burner on gas, gas-oil, or oil-fired appliances are covered under Controls, Primary Safety (MCCZ).

Equipment intended for use in applications involving instruments for measurement, recording and/or control of process variables (such as temperature, pressure, flow, etc.) and auxiliary devices used with these instruments, such as sensors, transducers and valve operations are covered under Process Control Equipment, Electrical (QUYX).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PROGRAMMABLE CONTROLLER, RETROFIT FOR USE ONLY WITH + IDENTIFIED IN MANUFACTURER'S INSTRUCTIONS
Control No.

+ **CONVERSION MODULE NO. XXX** or **WIRING CABLE MODULE NO. XXX**, or other appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE SAFETY CONTROLLERS (NRGF)

USE AND INSTALLATION

This category covers control equipment incorporating software for use in safety-related functions. These devices are primarily intended to detect unsafe conditions, to alert operators, and/or take action based on out-of-specification parameters to place the equipment-under-control or system into a safe configuration. These devices may additionally have facilities for performing functions such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs, including dedicated safety bus architecture.

This category also covers power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

This category does not cover wireless communication and nondedicated communication architecture.

These products fulfill their safety-related function only when used in accordance with the manufacturer's instructions. The equipment covered under this category has been found suitable for the implementation of safety-related control functions with a safety integrity level as stated in the manufacturer's documentation and as defined in IEC 61508-1, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 1: General Requirements," IEC 61508-2, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 2: Requirements for Electrical/Electronic/Programmable Electronic Safety-Related Systems," and IEC 61508-3, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 3: Software Requirements."

RATINGS

PRODUCT CATEGORIES BY CATEGORY CODE

Programmable Safety Controllers (NRGF)—Continued

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

RELATED PRODUCTS

This category does not cover programmable devices whose primary function is the control of industrial equipment. For those controls, see Programmable Controllers (NRAQ).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

- ANSI/UL 508, "Industrial Control Equipment"
- ANSI/UL 1998, "Software in Programmable Components"
- ANSI/NFPA 79 (2002), "Electrical Standard for Industrial Machinery"
- IEC 61508-1, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 1: General Requirements"
- IEC 61508-2, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 2: Requirements for Electrical/Electronic/Programmable Electronic Safety-Related Systems"
- IEC 61508-3, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 3: Software Requirements"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Programmable Safety Controller" or "Safety Related Control Device" (or "SRCDC").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTIVE RELAYS (NRGU)**GENERAL**

This category covers relays of types directly associated with power switchgear. Typical devices covered under this category are instantaneous-current relays, voltage-unbalance relays, high-speed differential relays, dc timing relays, time-overcurrent relays, reverse-power relays, and the like.

These devices are intended to make or transfer current only, and to operate only under abnormal conditions.

This category does not cover overload relays of types designed primarily for industrial control or types used with communication, traffic signaling, computer switching, or other equipment not intended for the direct control of power equipment. The ability of these relays to detect an internal arc or to provide additional protection for equipment or operating personnel has not been investigated. It has not been determined that these relays provide compliance with ANSI/NFPA 70E, "Electrical Safety in the Workplace."

Instrument transformers are not evaluated as part of the investigation, unless the manufacturer provides the instrument transformer as part of the protective relay.

These devices are intended for use in circuits rated 600 V maximum. They may be used to monitor circuits of higher voltage, when suitably rated instrument transformers are used in conjunction with these devices, such that the voltage input to the protective relay is 600 V or less.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic standard used to investigate products in this category that include ground-fault protection for equipment is ANSI/UL 1053, "Ground-Fault Sensing and Relaying Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.>").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

Protective Relays (NRGU)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROXIMITY SWITCHES (NRKH)**USE**

This category covers electronic switching devices that are actuated by position of an object without mechanical contact with the object. These proximity switches respond to inductive, capacitive, LED or photoelectric effects.

These devices are intended for use on industrial machinery or mass production industrial equipment as defined by ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

PRODUCT MARKINGS

The devices are marked with electrical ratings. At least one rating is marked on the product and additional ratings may be marked on an instruction sheet shipped with the device.

RELATED PRODUCTS

This category does not cover equipment intended for use in safety-related functions, such as electro-sensitive protective equipment (ESPE) for the safeguarding of machinery that presents a risk of personal injury (e.g., light curtains). Such equipment is covered under Electro-sensitive Protective Equipment (NIOZ).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and ANSI/UL 60947-5-2, "Low-Voltage Switchgear and Controlgear – Part 5-2: Control Circuit Devices and Switching Elements – Proximity Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Con. Eq.") or "Proximity Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, INDUSTRIAL CONTROL (NRNT)**GENERAL**

This category covers:

- Magnetically operated switches
- Manually operated switches
- Photoelectric switches
- Solid-state switches

These devices are intended for the direct control of nonmotor-rated loads. Open-type switches are certified for use as parts of equipment where the acceptability of the combination has been determined by UL or where open-type switches may be employed.

Switches have been tested to determine their acceptability for continuous operation at their marked rated load.

RELATED PRODUCTS

Switches intended for the direct control of motors are rated in horsepower and are covered under Motor Controllers, Magnetic (NLDX), Motor Controllers, Manual (NLRV) and Motor Controllers, Mechanically-operated and Solid-state (NMFT).

Switches intended for use in motor-control circuits are rated in pilot-duty code or volt-amperes and are covered under Auxiliary Devices (NKCR).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment," or ANSI/UL 60947-1, "Low-Voltage Switchgear and Controlgear – Part 1: General Rules," and ANSI/UL 60947-4-1A, "Low-Voltage Switchgear and Controlgear – Part 4-1A: Contactors and Motor-Starters – Electromechanical Contactors and Motor-Starters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Ser-

vice. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Industrial Control Switch" (or "Ind. Cont. Switch").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

This category covers the following devices for use in hazardous (classified) locations:

- Auxiliary devices
- Combination motor controllers
- Control assembly covers
- Control panels and assemblies
- Enclosed slip rings
- Flame-control panels
- Float- and pressure-operated motor controllers
- Magnetic motor controllers
- Manual motor controllers
- Miscellaneous motor controllers
- Motor controllers over 1500 volts
- Power circuit and motor-mounted apparatus
- Power conversion equipment
- Programmable controllers

Open-type equipment — Open-type industrial control equipment is intended for installation within a suitable enclosure. Examples of installation issues to consider when determining the suitability of the equipment enclosure include the following, as applicable: 1) the involved area classification, 2) protection against any specific environmental conditions, 3) thread engagement, and 4) whether a tool is required for opening of the enclosure. Installation requirements relating to the suitability of the enclosure are specified in the instructions or markings for the open-type equipment.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL PANELS AND ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS (NNNY)

GENERAL

This category covers control panels and assemblies consisting of enclosures and electrical components such as push-button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Lead wire seals are not required between the modular enclosures. However, conduit runs entering an assembly should be sealed in accordance with ANSI/NFPA 70, "National Electrical Code," unless factory-made seals are provided and the product is marked to so indicate.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor-running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS
LOCATIONS (NNGZ)

269

Control Panels and Assemblies for Use in Hazardous
Locations (NNNY)—*Continued*

ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on certified assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations and while heavily blanketed with combustible dust for Class II locations.

The plugs of the receptacle-plug combinations are for use with Type S, SO, ST or STO flexible cord with grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Assembly Body for Hazardous Locations," "Control Assembly Cover for Hazardous Locations" or "Control Panel for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Control Assembly Covers for Use in Hazardous Locations (NNRL)

USE AND INSTALLATION

This category covers control assembly covers consisting of devices such as push-button stations, pilot lights, snap switches, motor controllers or receptacles certified for use only with specific models of certified control assembly bodies or plugs for hazardous locations as specified in the installation instructions provided with the cover.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor-running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

The plugs are for use with Type S, SO, ST or STO flexible cord having a grounding conductor. The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Control Assembly Covers for Use in Hazardous Locations (NNRL)—Continued

should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which plugs and receptacles will be permitted for use. It is recognized that portable equipment should be used only where necessary. Receptacles and plugs certified for use in Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Control Panels and Assemblies for Use in Hazardous Locations (NNNY), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CONTROL ASSEMBLY COVER FOR USE IN HAZARDOUS LOCATIONS FOR USE WITH LISTED * SPECIFIED IN THE INSTALLATION INSTRUCTIONS PROVIDED WITH THE PRODUCT

Control No.

* CONTROL ASSEMBLY BODIES or PLUGS

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Flame-control Panels for Use in Hazardous Locations (NNTE)

GENERAL

This category covers flame-control panels intended for application in the control of fossil-fuel-burning equipment, such as incinerators, kilns and drying ovens. Flame-control panels have been certified only as to electrical fire and shock hazards. The compatibility of the panel with the controlled equipment from the standpoint of programming the burner(s) and preventing hazardous conditions due to firing of fuel has not been determined.

ADDITIONAL INFORMATION

For additional information, see Control Panels and Assemblies for Use in Hazardous Locations (NNNY), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FLAME-CONTROL PANEL FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSED SLIP RINGS FOR USE IN HAZARDOUS LOCATIONS (NNTR)

USE AND INSTALLATION

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Enclosed Slip Rings for Use in Hazardous Locations (NNTR)—Continued

This category covers enclosed slip rings intended to transfer power to industrial equipment.

A terminal compartment is provided for connection to threaded rigid conduit systems.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Slip Ring for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS (NNUX)

Motor controllers are Listed under the following categories with maximum ratings of 200 hp and/or 300 amp and 600 V:

- Auxiliary Devices
- Combination Motor Controllers
- Float- and Pressure-Operated Motor Controllers
- Magnetic Motor Controllers
- Manual Motor Controllers
- Miscellaneous Motor Controllers

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Auxiliary Devices for Use in Hazardous Locations (NOIV)

USE AND INSTALLATION

This category covers auxiliary devices intended for use in control circuits of magnetic motor controllers and the like, and consist of the following devices: machine-operated switches, push-button stations (including pilot lights and selector switches), magnetically operated switches, and miscellaneous manually operated switches.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Pilot lights without guards should be used only where not subject to breakage.

Enclosures furnished without mechanisms are marked to identify the mechanisms that are to be used.

RECONDITIONED PRODUCTS

This category also covers auxiliary devices that have been reconditioned. Reconditioned auxiliary devices may also be referred to as rebuilt. Reconditioned auxiliary devices are factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. The reconditioned auxiliary devices are subject to the same requirements as new auxiliary devices.

Auxiliary Devices for Use in Hazardous Locations (NOIV)—Continued

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosure for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq.,"; the words "Hazardous Locations" may be abbreviated "Haz. Loc."

For reconditioned products, the product name is preceded by "Reconditioned" or "Rebuilt."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Combination Motor Controllers for Use in Hazardous Locations (NOTH)

GENERAL

This category covers combination motor controllers, which provide the motor branch-circuit functions of the motor controller, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms which should be used.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosure for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Float- and Pressure-operated Motor Controllers for Use in Hazardous Locations (NOWT) USE

This category covers float- and pressure-operated switches, including vacuum-operated switches. These devices are for direct control of motors, use in control circuits of magnetic motor controllers and the like, and control of other types of loads.

Unless otherwise indicated on the individual products, these devices are intended for use only with air, water, or other nonhazardous fluids.

Unless otherwise indicated on the individual products, these devices are intended for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature.

These devices have not been investigated for use in connection with automatic sprinkler or similar protective equipment.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Hazardous Locations" or "Industrial Control Equipment for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Magnetic Motor Controllers for Use in Hazardous Locations (NPKR)

GENERAL

This category covers magnetic cross-the-line starters.

Safety of operation of oil immersed-type starters will be endangered should the oil level be below the minimum shown by the indicator. These devices should be installed with a certified sealing fitting adjacent to each opening where threaded rigid conduit is connected.

Enclosures furnished without mechanisms are marked to identify the mechanisms which should be used.

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Auxiliary Devices for Use in Hazardous Locations (NOIV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

272 INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Manual Motor Controllers for Use in Hazardous Locations (NPXZ)

GENERAL

This category covers manual across-the-line starters. Overload units are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

Miscellaneous Motor Controllers for Use in Hazardous Locations (NQLX)

USE

This category covers devices intended for direct control of motors. Unless otherwise indicated on the individual products, these devices are for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature. These devices have not been investigated for use in locations having automatic fire sprinklers.

RELATED PRODUCTS

Devices for use in control circuits of magnetic motor controllers and the like are covered under Auxiliary Devices for Use in Hazardous Locations (NOIV).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Power Conversion Equipment for Use in Hazardous Locations (NQMD)

USE

This category covers equipment that supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also includes power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Power Conversion Equipment for Use in Hazardous Locations (NQMD)–Continued

conversion equipment may be of the open or enclosed type. This equipment is intended for use in hazardous (classified) locations in accordance with Article 500 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Power conversion equipment incorporating overload protection for motors and not intended for remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection, such as thermal overload relays, or a thermally protected motor must be otherwise provided.

Power conversion equipment is marked with input and output electrical ratings.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508C, "Power Conversion Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" (or "Ind. Cont. Eq. for Use in Haz. Loc.") or "Power Conversion Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS OVER 1500 VOLTS FOR USE IN HAZARDOUS LOCATIONS (NRAA)

GENERAL

This category covers enclosed motor controllers having ac voltage ratings in the ranges of 2.2 kV to 2.5 kV or 3.8 kV to 5.0 kV, intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73 x 10⁶.

Motor controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, accordingly they are tested at six times the continuous current rating of the controller at rated voltage.

Some motor controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

These motor controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 347, "High Voltage Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word

“LISTED,” a control number, and the product name “High Voltage Industrial Control Equipment for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CIRCUIT AND MOTOR-MOUNTED APPARATUS FOR USE IN HAZARDOUS LOCATIONS (NRAD)

GENERAL

This category covers autotransformers, including motor-starting and variable-voltage types; battery chargers for industrial use; magnetically operated brakes; busbars; magnetically operated clutches; enclosed slip rings; lamp dimmers, including incandescent, fluorescent, mercury vapor, surgical light and theater use; phase converters; power factor correction equipment; power supplies for industrial use; reactors, including line chokes; and resistors, including motor-starting, rheostats, potentiometers, and high-impedance grounding types.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, “Industrial Control Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Industrial Control Equipment for Use in Hazardous Locations” (or “Ind. Cont. Eq. for Use in Hazardous Locations”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROGRAMMABLE CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS (NRAG)

GENERAL

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances.

This category does not cover programmable controllers intended for use in safety-related functions (i.e., functional-safety applications).

REBUILT PRODUCTS

This category also covers programmable controllers and their accessories that are rebuilt by the original manufacturer or the original manufacturer’s authorized manufacturer covered under this category. Rebuilt programmable controllers and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Programmable Controllers for Use in Hazardous Locations (NRAG)–Continued

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, “Industrial Control Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Industrial Control Equipment for Use in Hazardous Locations” (or “Ind. Cont. Eq. for Use in Haz. Loc.”), “Industrial Control Equipment for Hazardous Locations” (or “Ind. Cont. Eq. for Haz. Loc.”) or “Programmable Controller for Use in Hazardous Locations” (or “Prog. Cntrl. for Use in Haz. Loc.”), or other appropriate product name as shown in the individual Listings.

For rebuilt products the word “Rebuilt,” “Remanufactured,” “Reconditioned” or “Refurbished” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL CONTROL EQUIPMENT RELATING TO HAZARDOUS LOCATIONS (NRAW)

INDUSTRIAL CONTROL PANELS RELATING TO HAZARDOUS LOCATIONS (NRBX)

GENERAL

This category covers industrial control panels relating to hazardous locations, which are factory-wired assemblies of industrial control equipment such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit-protective devices.

Industrial control panels relating to hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

The investigation of industrial control panels relating to hazardous locations does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Industrial control panels for general use and for metal-working-machine tools for use in unclassified locations are covered under Industrial Control Panels (NITW).

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 508A, “Industrial Control Panels.”

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 698A, “Industrial Control Panels Relating to Hazardous (Classified) Locations.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

PRODUCT CATEGORIES BY CATEGORY CODE

Industrial Control Panels Relating to Hazardous Locations
(NRBX)—Continued

Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Panel Relating to Hazardous Locations" or "Enclosed Industrial Control Panel Relating to Hazardous Locations" and the statement "with Intrinsically Safe Circuit Extensions."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTOR CONTROLLERS RELATING TO
HAZARDOUS LOCATIONS (NRCY)****GENERAL**

This category covers auxiliary devices and magnetic motor controllers.

These devices are for use in unclassified (ordinary) locations. They contain intrinsically safe circuits intended for extension into hazardous (classified) locations.

Motor controllers incorporating thermal cutouts, thermal relays or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motor with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings, and at ten times motor full load running current for d-c horsepower ratings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Auxiliary Devices Relating to Hazardous
Locations (NRDZ)****USE**

This category covers devices intended for use in control circuits of magnetic motor controllers and the like.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II and III, Division 1, Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INDUSTRIAL CONTROL EQUIPMENT
RELATING TO ZONE CLASSIFIED
HAZARDOUS LOCATIONS (NRFA)****INDUSTRIAL CONTROL PANELS RELATING
TO ZONE CLASSIFIED HAZARDOUS
LOCATIONS (NRFG)****GENERAL**

This category covers industrial control panels relating to zone classified hazardous locations, which are factory-wired assemblies of industrial control equipment such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit-protective devices.

Industrial control panels relating to zone classified hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

The investigation of industrial control panels relating to zone classified hazardous locations does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Industrial control panels for general use and for metal-working-machine tools for use in unclassified locations are covered under Industrial Control Panels (NITW).

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 698A, "Industrial Control Panels Relating to Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Panel Relating to Zone Classified Hazardous Locations with Intrinsically Safe Circuit Extensions" or "Enclosed Industrial Control Panel Relating to Zone Classified Hazardous Locations with Intrinsically Safe Circuit Extensions." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INDUSTRIAL CONTROL EQUIPMENT
FOR USE IN ZONE CLASSIFIED
HAZARDOUS LOCATIONS (NWEX)**

The Listing covers the following products:

Control Panels and Assemblies

Motor Controllers

Programmable Controllers

Enclosed industrial control equipment is intended for use as indicated in the general guide information at the front of Part II of this directory.

Industrial Control Equipment is for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWEX)

Industrial Control Equipment, for which accessory kits are available for the field or distributor modification of the basic product or which may be assembled in many forms from separate components are marked to indicate the suitable accessories or separate components which may be used.

If the rating of the operating coil circuit of a magnetically operated industrial control device exceeds 125 volt-amperes, the coil circuit rating is marked on the device.

Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600 per cent of the overload relay current element trip rating. The designations "Class 10, Class 20 and Class 30" are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds. Overload relays with maximum tripping times of 10 or 30 seconds are marked Class 10 or Class 30 respectively. Overload relays with a maximum tripping time of 20 seconds may be marked Class 20. Overload relays with tripping times in excess of 30 seconds are marked with their maximum tripping times. All unmarked overload relays have a maximum tripping time of 20 seconds.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL PANELS AND ASSEMBLIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWFA)

USE AND INSTALLATION

This category covers control panels and assemblies consisting of enclosures and electrical components such as push button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product. Modular assemblies must be installed in accordance with the installation instructions provided with each part.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other certified ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for AC horsepower ratings and at 10 times motor full load running current for DC horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on certified assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations.

The plugs of the receptacle-plug combinations are for use with extra hard usage flexible cord with grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are indicated in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWEX)

Control Panels and Assemblies for Use in Zone Classified Hazardous Locations (NWFA)—Continued

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Panel for Use in Hazardous Locations," "Control Assembly Cover for Use in Hazardous Locations" or "Control Assembly Body for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSED SLIP RINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWFC)

USE AND INSTALLATION

This category covers enclosed slip rings intended to transfer power to industrial equipment.

A terminal compartment is provided for connection to threaded rigid conduit systems.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWEX) and Equipment for Use in and Relating to Class I, Zone 0, 1 and 2 Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, Zone 0, 1 and 2 Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Slip Ring for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR CONTROLLERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWFE)

Motor controllers are Listed under the following categories:

- Auxiliary Devices
- Combination Motor Controllers
- Float-and Pressure-Operated Motor Controllers
- Magnetic Motor Controllers
- Manual Motor Controllers
- Miscellaneous Motor Controllers

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

**Auxiliary Devices for Use in Zone Classified
Hazardous Locations (NWFN)**

GENERAL

This category covers devices such as machine-operated switches, push-button stations (including parts, such as pilot lights, meters, terminal blocks and selector switches), magnetically operated switches, and miscellaneous manually operated switches intended for use in control circuits of magnetic motor controllers, and the like.

Pilot lights without guards should be used only where not subject to breakage.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Enclosures furnished without mechanisms are marked to identify the mechanisms intended to be used.

REBUILT PRODUCTS

This category also covers auxiliary devices that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt auxiliary devices are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt auxiliary devices are subject to the same requirements as new auxiliary devices.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Combination Motor Controllers for Use in Zone
Classified Hazardous Locations (NWFP)**

GENERAL

This category covers combination motor controllers.

Combination motor controllers provide the motor branch-circuit functions of motor controller, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the certification of the controller.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure

**Combination Motor Controllers for Use in Zone Classified
Hazardous Locations (NWFP)—Continued**

for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations" or "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Magnetic Motor Controllers for Use in Zone
Classified Hazardous Locations (NWFR)**

USE

This category covers magnetic across-the-line starters.

The safety of operation of oil-immersed-type starters will be endangered should the oil level be below the minimum shown by indicator. These devices should be installed with a certified sealing fitting adjacent to each opening where threaded rigid conduit is connected.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Auxiliary Devices for Use in Zone Classified Hazardous Locations (NWFN).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Zone Classified Hazardous Locations (NWFP), Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWEX) and Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosures for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Manual Motor Controllers for Use in Zone
Classified Hazardous Locations (NWFU)**

GENERAL

This category covers manual across-the-line starters.

Overload units are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to the use of a controller for other certified ratings in order that proper overload units may be furnished.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment (or Ind. **INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE
CLASSIFIED HAZARDOUS LOCATIONS (NWEX)**
**Manual Motor Controllers for Use in Zone Classified
Hazardous Locations (NWFU)—Continued**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PROGRAMMABLE CONTROLLERS FOR
USE IN ZONE CLASSIFIED HAZARDOUS
LOCATIONS (NWGD)**
USE AND INSTALLATION

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user oriented instructions for specific functions such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also includes power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances.

RECONDITIONED PRODUCTS

This category also covers programmable controllers and their accessories that have been reconditioned. Reconditioned programmable controllers and their accessories are factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. The reconditioned programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWEX) and Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" (or "Ind. Cont. Eq. for Use in Haz. Loc.") or "Industrial Control Equipment for Hazardous Locations" (or "Ind. Cont. Eq. for Haz. Loc.") or other appropriate product name as shown in the individual Listings.

For reconditioned products the product name is preceded by the word "Reconditioned," "Rebuilt," "Remanufactured" or "Refurbished."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INFORMATION TECHNOLOGY
EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT
(NWGQ)**
USE

This category covers equipment, appliances and systems rated 600 V or less normally found in offices and other business establishments, residences (homes), educational facilities, and other similar environments classified as ordinary locations.

This equipment has been investigated for installation in information technology equipment (computer) rooms as defined in ANSI/NFPA 75, "Fire Protection of Information Technology Equipment," and Article 645 of ANSI/NFPA 70, "National Electrical Code" (NEC), unless the equipment is otherwise identified by a marking or instruction.

EQUIPMENT TYPES

Equipment may be electronic or electromechanical in design or a combination thereof.

**INFORMATION TECHNOLOGY EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT (NWGQ)**

277

Various groupings of equipment are covered under this category, such as:

Displays: Flat-panel displays, LCD displays, monitors, plasma displays.

Information processing equipment: Central processing units (CPUs), hand-held computers (personal assistants), laptop computers, notebook computers, pen-based computers, personal computers, point-of-sale terminals, scanners (including portable barcode scanners), servers, work stations. **Accessories:** Docking stations, flash memory cards, keyboards, mouse, PCMCIA-memory-modem cards, port replicators, trackballs.

Information storage equipment: Automated information storage equipment, CD-ROM/RW drives, disk drives, DVD drives, tape drives, optical drives.

Telecommunication equipment: Cellular site equipment, cordless telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems, powerline communication equipment, private automated branch exchanges (PABXs), telephone answering machines, telephone sets, voicemail systems, IP telephones, IP systems, wireless telephony systems.

Office appliances: Adding machines, bursters, calculators, collators, dication and transcribing machines, electric typewriters, erasers, folding, embossing and sealing machines, label printers, microfilm readers, motor-operated file cabinets, overhead projectors, paper cutters, paper shredders, pencil sharpeners, sorters, stackers, staplers.

Printers/Reproduction equipment: Copiers, duplicating machines, microfilm printers, mimeograph machines, plotters, printers.

Mailing, banking and currency-handling equipment: Cash registers, coin counters, feeders and dispensers, accounting machines, check-writing, -assigning, -dating, -inserting, -mailing, -numbering and -stamping machines, point-of-sale terminals.

Multimedia equipment/accessories: Cable modems, digital cameras, DLP projectors, LCD projectors, microphones, set-top boxes, speakers, video conferencing systems.

Network equipment: Baluns, bridges, fiber optic transceivers, hubs, nodes, Power over Ethernet (PoE) equipment (e.g., power source equipment [PSE] and powered devices [PD]), repeaters, routers, switches, transceivers.

Wireless (RF, infrared) transceiving equipment: RF modems, hand-held computers with integral transceivers.

Static-neutralizing equipment: Power units with discharge bars used with or within copiers, collators, film-plate processors, digital printers, duplicating machines and similar equipment.

Interconnecting cable assemblies: Cable assemblies intended for use beneath raised floors of computer rooms. These assemblies are also covered under Computer Interconnection Cable Assemblies (DVPJ).

Included within the above groupings is equipment which is battery powered, either by standard-size consumer-replaceable batteries (e.g., AA, C, D), or nonstandard sizes specified by manufacturer, type and ratings.

This category also covers power distribution units (PDUs) and computer power centers investigated as part of a computer system for use exclusively in information technology equipment (computer) rooms in accordance with Article 645 of the NEC. This equipment is connected to branch circuits unless otherwise indicated in the manufacturer's installation instructions, and it distributes power to other units in the computer system by means of interconnecting cable assemblies complying with one or more of the wiring methods outlined in Article 645 of the NEC. Many of these units require special installation, such as a separate transformer, special grounding methods, motor-generator equipment, air conditioning, etc. Such features are covered in the manufacturer's installation instructions.

INSTALLATION

Some equipment has been investigated for installation in a restricted access location, such as a dedicated equipment room or telecommunication equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions that state "To be installed only in a Restricted Access Location," or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment will also be marked "Suitable for mounting on concrete or other noncombustible surface only," or similar wording.

Equipment installed in a restricted access location generally receives power from a centralized d.c. power source. If field wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of the NEC.

Products such as LAN transceivers and baluns investigated for use in air-handling spaces are marked "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22, (C) of the National Electrical Code" or "Suitable for Use in Air Handling Spaces." These products have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and their Accessories Installed in Air-Handling Spaces." Products that bear the marking are suitable for installation in accordance with Section 300 of the NEC, Chapter 4 of ANSI/NFPA

**INFORMATION TECHNOLOGY EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT (NWGQ)**

90A, "Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

When certified equipment intended for use with a detachable power-supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit should be separately provided.

Equipment intended to be installed in closed and multiunit standard racks and cabinets has been determined to be suitable for use in ambient temperatures not exceeding the manufacturer's recommended ambient temperature as specified in the equipment's installation instructions.

Equipment identified with an Enclosure Type designation, or as "Rain-tight" or "Rainproof," is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

ACCESSORIES

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic certified equipment specified in the markings or instructions.

OUTPUT CONNECTORS/CIRCUITS

Class 2 circuits are marked "Class 2." All other output circuits, including those associated with the Universal Serial Bus (USB), IEEE 1394 bus and PS/2 connectors are limited-power circuits supplied by ANSI/UL 60950-1 limited-power sources, unless:

- the circuits are clearly telecommunication circuits (e.g., RJ series modular jack, 50-pin commercial connectors with insulation-piercing terminals). These circuits are limited to telecommunication network voltages (TNV) and are suitable for connection to the telecommunication network and distribution wiring in accordance with Article 800 of the NEC; or
- the circuits are marked, or otherwise identified in the installation instructions with the type of circuit (e.g., Class 1), intended cable type (e.g., DP-2) or specific equipment intended to be interconnected (e.g., mfr/model printer).

Limited-power circuits of certified ITE supplied by limited-power sources are recognized by Section 725.41(A)(4) of the NEC as being equivalent to Class 2 circuits for purposes of applying Article 725 Class 2 wiring requirements.

SPECIAL CONSIDERATIONS

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

Equipment investigated with respect to security or burglary resistance is covered under Access Control System Units (ALVY), Antitheft Alarms and Devices (ATJ) and other associated categories. Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security.

The burglary and theft protection features of coin-operated equipment, banking and currency-handling equipment, cash registers, coin counters and the like have not been investigated.

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems (TPEU). ATMs that have not been investigated for security protection are covered under Bank Equipment (BALT).

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

RELATED EQUIPMENT

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment (QPQY).

Uninterruptible power-supply (UPS) equipment intended for indoor and outdoor use that may be stationary or fixed is covered under Uninterruptible Power-supply Equipment (YEDU).

Automatic transfer switches intended for use in optional standby systems in accordance with Article 702 of the NEC are covered under Automatic Transfer Switches for use in Optional Standby Systems (WPXI).

Power supplies for information technology and telecommunication equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QGGQ) and Power Supplies, Telephone (QQJE).

Secondary (rechargeable) battery packs for use in transportable equipment are covered under Batteries, Household and Commercial (BBFS).

Static neutralizing equipment is covered under Static Neutralizing Equipment (VWWZ). High-voltage parts that may be accessible after installation have been investigated as limited-current circuits.

Air conditioning equipment for use in computer rooms or other areas in which information technology equipment is installed is covered under Air Conditioners, Special Purpose (ACVS) and Heating and Cooling Equipment (LZFE).

**INFORMATION TECHNOLOGY EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT (NWGQ)**

Fire-resistant materials, sprinklers, extinguishers and associated equipment intended for use in computer rooms is covered under Carbon Dioxide Extinguishers (FXHV) and Halogenated Agent Extinguishing System Units (GLER).

Filing cabinets covered under this category have not been investigated with respect to fire resistance or security. Fire-resistant filing cabinets are covered under Record Protection Equipment (RYPH).

Smoke detectors are covered under Smoke-automatic Fire Detectors (UROX); alarm equipment is covered under Single- and Multiple-station Smoke Alarms (UTGT).

Other equipment associated with information technology/processing but not intended for use in offices, residences or computer rooms is covered under Graphics Arts Equipment (KCQT), Inspection and Measuring Electrical Equipment (NYOK), Teaching and Instruction Equipment (WYFW), Laboratory Use Electrical Equipment (OGTK), Medical Equipment (PIDF), Marking and Coding Equipment, Electronic (PGBE) and Photographic Equipment (QINT). Other multimedia equipment and accessories are covered under Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ). Other telecommunication appliances and equipment is covered under Telephone Appliances and Equipment (WYQQ).

Modular assemblies of telecommunication equipment (e.g., racks, circuit card assemblies) designed for field installation by trained service personnel are covered under Custom-built Telecommunication Equipment (WYKM).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies, is covered under Communication Service Equipment (DUZO).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunication equipment that will be installed at a later time are covered under Information Technology and Telecommunication Equipment Cabinets, Enclosures and Racks (NWIN).

Power distribution products intended for indoor use as relocatable multiple-outlet extensions of a single branch circuit not for exclusive use of ITE and consisting of an attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles are mounted are covered under Relocatable Power Taps (XBYS).

Power distribution products intended for installation in modular furniture are covered under Furniture Power Distribution Units (IYNQ).

Equipment intended to protect against mains transients is covered under Surge-protective Devices (VZCA).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment - Safety - Part 1: General Requirements," in conjunction with ANSI/UL 60950-21, "Information Technology Equipment - Safety - Part 21: Remote Power Feeding," ANSI/UL 60950-22, "Information Technology Equipment - Safety - Part 22: Equipment to be Installed Outdoors," and/or ANSI/UL 60950-23, "Information Technology Equipment - Safety - Part 23: Large Data Storage Equipment."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and one of the following category identifiers: "UL 1950," "UL 60950," "UL 60950-1," "Information Technology Equipment" (or "Info. Tech. Equip.," "I.T.E." or "ITE"), "NWGQ," or the standard number with or without the "ANSI/UL" prefix (e.g., "ANSI/UL 60950-1," "60950-1"). The Listing Mark may also include one of the following product names: "Copier," "Modem," "Paper Shredder," "Personal Computer," "Cordless Telephone," or other appropriate product name as shown in the individual Listings.

The category identifier for field-installed accessories includes the word "Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWHC)

GENERAL

This category covers information technology equipment for use in hazardous (classified) locations such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and/or electronic.

SPECIAL CONSIDERATIONS

Card readers, badge readers and similar identification equipment covered under this category has not been investigated with respect to security or burglary resistance.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated. Hand-held transportable RF products that interconnect to the telecommunication network through RF transmitters/receivers are additionally investigated for short-term characteristics to ANSI/IEEE C95.1 (1999), "Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz."

RELATED EQUIPMENT

Graphic display and touch panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Zone Classified Hazardous Locations (NWGD).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Information Technology Equipment for Use in Hazardous Locations" (or "I.T.E. for Use in Hazardous Locations") or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NWHP)

GENERAL

This category covers information technology equipment such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and/or electronic.

REBUILT PRODUCTS

This category also covers information technology equipment that is rebuilt by the original manufacturer or the original manufacturer's authorized manufacturer covered under this category. Rebuilt information technology equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt information technol-

ogy equipment is subject to the same requirements as new information technology equipment, including production-line tests as applicable.

SPECIAL CONSIDERATIONS

Card readers, badge readers and similar identification equipment covered under this category have not been investigated with respect to security.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated. Hand-held transportable RF products that interconnect to the telecommunication network through RF transmitters/receivers are additionally investigated for short-term characteristics to ANSI/IEEE C95.1 (1999), "Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz."

RELATED EQUIPMENT

Graphic display and touch-panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Hazardous Locations (NRAG).

Card readers and data-entry-terminal equipment for information technology and telecommunications equipment is covered under Office Appliances and Business Equipment for Use in Hazardous Locations (QAVS).

Scanner and barcode-reader equipment for information technology and telecommunications equipment is covered under Data Processing Equipment, Electronic for Use in Hazardous Locations (ENWS).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Information Technology Equipment for Hazardous Locations" (or "Info. Tech. Equip. for Hazardous Locations," "Info. Tech. Equip. for Haz. Loc.," "I.T.E. for Hazardous Locations" or "I.T.E. for Haz. Loc.") or "Information Technology Equipment for Use in Hazardous Locations" (or "Info. Tech. Equip. for Use in Hazardous Locations," "Info. Tech. Equip. for Use in Haz. Loc.," "I.T.E. for Use in Hazardous Locations" or "I.T.E. for Use in Haz. Loc."), or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured," "Reconditioned" or "Refurbished" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIO/VIDEO, INFORMATION AND COMMUNICATION TECHNOLOGY EQUIPMENT CABINET, ENCLOSURE AND RACK SYSTEMS (NWIN)

GENERAL

This category covers cabinet, enclosure and rack/frame systems that are not complete but include components and assemblies that are intended to power, protect, heat, cool, or otherwise support information technology (IT) or telecommunications equipment, audio/video equipment (A/V), or the like that will be installed at a later time. They usually include mounting hardware, shelves or space for the installation of additional electronic equipment. These cabinet, enclosure and rack/frame systems are intended to be used by manufacturers in the construction of complete IT and communications equipment, or by service providers for the installation of network infrastructure equipment.

Equipment identified in the individual Listings as an enclosure is constructed to provide a degree of protection to personnel against accidental contact with equipment, parts involving a risk of personal injury or ener-

**AUDIO/VIDEO, INFORMATION AND COMMUNICATION
TECHNOLOGY EQUIPMENT CABINET, ENCLOSURE AND
RACK SYSTEMS (NWIN)**

280

gized parts. It is also constructed to minimize the spread of fire or flames from within and to provide a degree of protection to the enclosed equipment against physical damage or specified environmental conditions.

Equipment identified in the individual Listings as an equipment cabinet is a closed storage system with a surrounding case or housing that does not provide the degrees of protection of an enclosure. An equipment cabinet is used to store or mount equipment that is provided with its own enclosure or may be used in place of an equipment enclosure if in a restricted-access location that is limited to access by service personnel only. Equipment cabinets are intended for indoor installation only.

Equipment identified in the individual Listings as an equipment frame or equipment rack is an open-frame mounting system, usually either in a two-post or four-post frame design that does not provide the degrees of protection of an enclosure. A frame or rack is used to store or mount equipment that is provided with its own enclosure or is intended for use only in restricted-access locations limited to service personnel only. Frames and racks are intended for indoor installations only or in outdoor environments when additionally installed in a suitably rated enclosure.

A marking includes a configuration list, or diagram of the components, and assemblies provided with the product covered under the system category. It is the responsibility of the Authority Having Jurisdiction over the final installation to determine if the final configuration meets the necessary criteria for installation and use.

As appropriate, this equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and/or the applicable sections of ANSI C2, "National Electrical Safety Code." Equipment intended for installation in information technology equipment (computer) rooms is intended to be installed in accordance with ANSI/NFPA 75, "Fire Protection of Information Technology Equipment."

Equipment covered under this category includes, but is not limited to, indoor and outdoor cabinets and enclosures, racks, frames (nonenvironmentally controlled cabinets, pedestals, enclosures, etc.), and the like. For the purpose of identification in this Guide Information, all of the equipment (cabinets, racks and enclosures) covered under this category is referred to as "ITC equipment cabinets."

Equipment intended for outdoor use is marked with an Enclosure Type rating, or as "Raintight" or "Rainproof," and provides a degree of protection as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). The absence of a Type rating will presume no environmental conditions have been assessed, and will automatically designate the equipment with a "Type 0" rating. Cabinets and enclosures may incorporate multiple Type designations for differing compartments if marked on the equipment. In addition, equipment may optionally be investigated and marked for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)." IP codes are not intended to replace Type ratings.

Except for equipment identified with a specific temperature range, outdoor equipment has been investigated over a temperature range of -33°C to +40°C. The effects of insolation (solar loading) have also been considered.

For equipment containing Listed primary protectors for telecommunications circuits (see QVGV), the individual Listing information for the protectors should be consulted for information regarding the installation and use of the protectors.

INSTALLATION

Some ITC equipment cabinet, enclosure, and rack/frame systems have been investigated for installation in a restricted access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such ITC equipment is provided with a marking or installation instructions which state "To be installed only in a Restricted Access Location," or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment is also marked "Suitable for mounting on concrete or other noncombustible surface only," or similar wording.

Equipment installed in a restricted access location generally receives power from a centralized dc power source. If field-wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of the NEC.

All wiring is intended to conform to the NEC. Wiring in an IT equipment (computer) room is intended to conform to Article 645 of the NEC.

ACCESSORIES

Field-installed accessories to Listed equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with Listed equipment as specified in the markings or instructions.

PRODUCT MARKINGS

The product marking includes a configuration list or diagram of components and accessories when included with the product.

Equipment containing service equipment is marked with the service panel input and output ratings. Short-circuit capacity may additionally be investigated and marked.

**AUDIO/VIDEO, INFORMATION AND COMMUNICATION
TECHNOLOGY EQUIPMENT CABINET, ENCLOSURE AND RACK
SYSTEMS (NWIN)**

Equipment containing air conditioning or heat exchangers is marked with the BTU rating for the heat it can eliminate from the equipment interior. This rating is based solely on the manufacturer's specifications and has not been investigated or verified by UL. In addition, the heat-release data for any installed equipment that is part of the cabinet system is also included. The heat release from power supplies is specified for the power supply operating under full load (basically the inefficiency of the power conversion process) but the heat release from powered equipment not included as part of the cabinet system is not included.

Equipment containing ac or dc power supplies or distribution is marked with an appropriate electrical rating for the power it can provide to installed units.

Products investigated for use in other spaces used for environmental air (spaces not specifically fabricated for environmental air-handling purposes but used for air-handling purposes, such as a plenum) are marked "Suitable for Use in Other Space Used for Environmental Air (Plenums)," "Suitable for Use in Air-handling Spaces," or equivalent wording. When these products employ combustible outer enclosures they have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Products that bear one of the aforementioned markings are suitable for installation in accordance with Article 300 of the NEC, Chapter 4 of ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code." These enclosure systems are considered to have adequate fire-resistant and low-smoke-producing characteristics and limit the amount of smoke that can escape into the air-handling space.

FACTORS NOT INVESTIGATED

Other features that may affect the operation or performance of the installed equipment have not been investigated.

RELATED PRODUCTS

Complete ITC equipment cabinets are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ), Telephone Appliances and Equipment (WYQQ), Communication Service Equipment (DUZO), Custom-built Telecommunications Equipment (WYKM), Communications-circuit Accessories (DUXR), Audio and Video Equipment (AZU), Audio and Radio Equipment, Commercial (AZCY), Commercial Audio and Radio Equipment, Systems and Accessories (AZIX), Commercial Phonographs, Tape-playing and Recording Appliances and Accessories (AZQW), Audio/Video Apparatus (AZSQ), Closed-circuit Television Equipment (DRQH), Television/Video Equipment for Use in Health Care Facilities (KFCV), Video and Audio Equipment, Professional (ZCBB), and similar categories that cover complete equipment.

Cabinets and enclosures that do not include any additional components or assemblies may also be covered under Industrial Control Panels (NITW) and investigated to ANSI/UL 50, "Enclosures for Electrical Equipment."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2416, "Outline of Investigation for Audio/Video, Information and Communication Technology Equipment Cabinet, Enclosure and Rack Systems."

Outdoor Type ratings are investigated to ANSI/UL 50E, "Enclosures for Electrical Equipment, Environmental Considerations."

Alternative tests for "Raintight" and "Rainproof" designations are found in UL 2416.

Components, assemblies and subassemblies provided/installed as part of enclosure, cabinet or rack systems are investigated to the applicable UL requirements as appropriate for the component, assembly or subassembly. Some examples are:

Protectors for paired-conductor communications circuits (see QVGV) are investigated to ANSI/UL 497, "Protectors for Paired Conductor Communications Circuits."

Service equipment is investigated to UL 869A, "Reference Standard for Service Equipment."

Special-purpose air conditioners (see ACVS) are investigated to ANSI/UL 484, "Room Air Conditioners."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and one of the following product names: "Enclosure System," "Cabinet System," "Rack System," preceded by "Telecom," "Telecommunications," "Communications," "IT," "ITC," "A/V," "CATV," a specific application such as "Cell System," "Wireless" or "Remote Terminal," or other appropriate product name as shown in the individual Listings.

For field-installed accessories, the product name includes the word "Accessory."

TECHNOLOGY EQUIPMENT CABINET, ENCLOSURE AND
RACK SYSTEMS (NWIN)**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INSPECTION AND MEASURING
ELECTRICAL EQUIPMENT (NYOK)**

USE

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and making measurements and tests such as might be associated with manufacturing processes and quality control procedures.

FACTORS NOT INVESTIGATED

These products have been investigated with respect to risk of fire, shock and injury to persons. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Inspection and measuring equipment for specialized use is covered under appropriate product categories such as Garage Equipment (JGWV) and Photographic Equipment (QINT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use; Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment" or "Measuring Equipment," or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INSPECTION AND MEASURING
ELECTRICAL EQUIPMENT FOR USE
IN ZONE CLASSIFIED HAZARDOUS
LOCATIONS (NYPA)**

USE

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and making measurements and tests such as might be associated with manufacturing processes and quality-control procedures.

The accuracy of the equipment has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 3101-1, "Electrical and Measuring Test Equipment: Part 1: General Requirements".

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment for Use in Hazardous Locations" or "Measuring Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

**INSPECTION AND MEASURING ELECTRICAL EQUIPMENT FOR
USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NYPA) 281**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**INSPECTION AND MEASURING
ELECTRICAL EQUIPMENT, SPECIAL
INSPECTION EQUIPMENT (NYQD)**

GENERAL

This category covers portable, mobile, stationary, and fixed units or systems intended primarily for the purpose of identifying materials, examining and investigating materials, including x-ray scanning (luggage) units, and other equipment that uses special technologies to perform its function.

Equipment not covered under this category includes, but is not limited to, medical x-ray equipment (including x-ray equipment designed to operate on supply potentials of over 600 V), equipment incorporating unenclosed aerial conductors, separate devices, such as tables, timers, etc., that are not limited in design to x-ray applications, and equipment which is not necessary for successful operation of x-ray equipment. See Inspection and Measuring Electrical Equipment (NYOK) and Medical Equipment (PIDF).

This equipment has been Classified as to electrical fire, shock, and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in ANSI/NFPA 70, "National Electrical Code."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and must, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

FACTORS NOT INVESTIGATED

These products generate radiation or contain radioactive materials or involve working with toxic materials, or other potentially harmful technologies, where data regarding levels of exposure and physiological effects are not investigated. The accuracy of measured, analyzed or prepared quantities has not been investigated.

X-radiation safety and performance requirements are regulated under Public Law 90-602 and are enforced by the U.S. Department of Health, Education and Welfare. Compliance with the applicable regulations under conditions of normal and abnormal operation has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use: Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]

**WITH RESPECT TO ELECTRICAL FIRE, SHOCK AND MECHANICAL
HAZARDS ONLY**

Control No.

*** SPECIAL INSPECTION EQUIPMENT or SPECIAL MEASURING
EQUIPMENT, or the name of the specific type of product**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

INSTRUMENTATION TRAY CABLE (NYTT)

GENERAL

This category covers Type ITC instrumentation tray cable for use only in industrial establishments in accordance with Article 727 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of two or more insulated copper or thermocouple alloy conductors enclosed within a nonmetallic jacket. The cable may have a metal sheath or armor over the nonmetallic jacket, and may contain grounding conductors and/or optical fiber members.

The cable is rated 300 V and is intended for use on circuits rated 150 V or less and 5 A or less. The cable is certified in conductor sizes 22 to 12 AWG. Conductor sizes within a cable may be mixed.

Regarding cable seals outlined in Article 501 of the NEC, Type ITC cable has a sheath considered to be gas/vapor tight but the cable has not been investigated for inability to transmit gases through its core.

PRODUCT MARKINGS

The cable identification "TYPE ITC" and other markings are visible on the surface of the nonmetallic jacket.

Cable with thermocouple alloy conductors is intended for thermocouple extension use only and is so marked or has the marking "THCPL EXTN."

The temperature rating of the cable is 60°C unless otherwise marked on the cable.

Cable containing optical fiber members is identified with the suffix "OF."

Cable investigated in accordance with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is marked with the suffix "-LS."

Cable investigated for direct burial in the earth is marked "DIRECT BURIAL" (or "DIR BUR").

Cable permitted to be used between cable trays and utilization equipment in accordance with Section 727.4(5) of the NEC is surface marked with the supplementary letters "-ER" (formerly marked "Open Wiring").

Cable marked "Wet" or "Wet Location" is suitable for use in wet locations.

Cable for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D, and Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC is marked "Type ITC-HL."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2250, "Instrumentation Tray Cable."

The basic standard used to investigate cable marked "Type ITC-HL" in this category is ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Instrumentation Tray Cable, Type ITC."

See Cable for Use in Hazardous Locations (PIPP) for Certification Mark requirements for "Type ITC-HL."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSULATING DEVICES AND MATERIALS (NYYV)

INSULATING BUSHINGS (NZMT)

USE

This category covers insulating bushings intended for the protection of wire, cable and flexible cord where it passes through walls or barriers of metal.

RELATED PRODUCTS

Insulating bushings intended for use on the ends of conduit in boxes, gutters, etc. are covered under Conduit Fittings (DWTI).

Insulating bushings intended for use on the ends of rigid or flexible conduit, electrical metallic tubing, or armored cable, where a change to open wiring is made, are covered under Outlet Bushings and Fittings (QCRV).

Insulating Bushings (NZMT)—Continued

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 635, "Insulating Bushings."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Bushings" or "Insulated Bushing."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSULATING TAPE (OANZ)

USE

This category covers rubber insulating tape for insulating joints and splices in electrical conductors where an outer covering of protective material, such as friction tape, is intended to be applied over the insulating tape.

This category also covers thermoplastic tape intended for use as the sole insulation and covering of joints and splices in electrical conductors.

This tape is suitable as electrical insulation at not more than 600 V and at temperatures not exceeding 80°C (176°F).

PRODUCT MARKINGS

The wrapper or carton containing a single roll of tape, or the central paper core on which the tape is wrapped, is marked with (1) the manufacturer's name or trademark, (2) the catalog or type number, and (3) the words "For use at not more than 600 V and at not more than 80°C (176°F)," or an equivalent statement.

Tape determined to be flame retardant is marked "Flame Retardant."

Tape determined to be suitable for exposure to sunlight is marked "Sunlight Resistant."

Tape determined to be suitable to insulate splices while subjected to temperatures down to -10°C is marked "Cold Resistant."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 510, "Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Insulating Tape" (or "Insul. Tape"), "Electrical Tape" (or "Elec. Tape") or "Electrical Insulating Tape" (or "Elect. Insul. Tape"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INSULATING DEVICES AND MATERIALS, MISCELLANEOUS (OCDT)

GENERAL

This category covers miscellaneous insulating devices and materials, such as insulating caps, closures, covers and links.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 746A, "Polymeric Materials - Short Term Property Evaluations," ANSI/UL 746B, "Polymeric Materials - Long Term Property Evaluations," and ANSI/UL 746C, "Polymeric Materials - Use in Electrical Equipment Evaluations."

UL MARK

Insulating Devices and Materials, Miscellaneous (OCDT)—Continued

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Insulating Link," "Insulating Cover" or "Insulating Closure," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTERCOMMUNICATION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS, MARINE (ODJV)

TELEPHONES FOR USE IN HAZARDOUS LOCATIONS, MARINE (OEPX)

GENERAL

This category covers telephone sets with a handset-type transmitter and receiver, and sound-powered telephone handsets for installation with circuit wiring, except cord assembly, using wiring materials specified by the Electrical Engineering Regulations of Subchapter J, Title 46, Code of Federal Regulations, Parts 110 to 113 inclusive. The sound-powered telephones are intrinsically safe and should not be installed with any other equipment or wiring that may impart dangerous currents to them.

These telephones are intended for use on ocean-going vessels and are designed to operate without causing ignition of surrounding flammable gas or vapor-air atmospheres covered by the Class I, Divisions 1 and 2 hazardous locations groups under which they are certified. Telephones certified for use in any of the groups under Class II, Divisions 1 and 2 hazardous locations have been tested for dust-tightness and safe operation in the presence of the specific combustible dusts.

This category also covers telephones for use in Division 2 only of one or more of the hazardous locations groups. Such telephones are similar to those for Division 1 locations except that ordinary handsets are provided that do not have any switches or arcing parts. These telephones are marked with the words "Division 2 Only."

The handset and cord assembly should be carefully inspected and should be replaced if there is any evidence of damage or deterioration or corrosion.

Station equipment, power supply equipment, and protectors, when used with these telephones, should be located outside the hazardous area. Information with regard to telephone supply line protection is given in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Marine Products (AAMP) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Marine Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," a control number, and the product name "Telephone for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EQUIPMENT AND SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (OERX)

GENERAL

This category covers products and systems investigated for use in hazardous (classified) locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual certifications, together with nonincendive types of protection.

This equipment has not been investigated for performance of its intended function.

RELATED PRODUCTS

Gas detectors investigated for their performance relative to their ability to detect gas are covered under Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations (JTPX).

Equipment investigated for use only in the hazardous locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations," and ANSI/ISA-12.12.01, "Nonincendive Electrical Equipment for Use in Class I and II, Division 2 and Class III, Divisions 1 and 2 Hazardous (Classified) Locations."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY
Control No.

or

[PRODUCT NAME] FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY
Control No.

The words "HAZARDOUS LOCATIONS" may be abbreviated "HAZ. LOC."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ION GENERATORS (OETX)

GENERAL

This category covers portable air ionizers of the household and commercial types intended for emitting charged ions into the atmosphere. These appliances may or may not employ mechanical filters.

REBUILT PRODUCTS

This category also covers ion generators that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt ion generators are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt ion generators are subject to the same requirements as new ion generators.

FACTORS NOT INVESTIGATED

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

RELATED PRODUCTS

Electrostatic air cleaners and fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners (AGGZ).

Air-filtering appliances utilizing mechanical filtration only or ultraviolet/germicidal lamps are covered under Air-filtering Appliances (AEDX).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners (EOGX).

PRODUCT CATEGORIES BY CATEGORY CODE

Deodorizers intended to remove odors in specific applications by ozone generation are covered under Deodorizers, Ozone-generator Type (EOKL).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted (ABQK).

Power supplies intended for use in electrostatic air-cleaning equipment are covered under Power Supplies, Electrostatic Air-cleaning Equipment (QQCH2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 867, "Electrostatic Air Cleaners."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ion Generator," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (OEVX)

GENERAL

This category covers products and systems investigated as to intrinsic safety only, as it pertains to use in hazardous (classified) locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual certifications.

This equipment has not been investigated for performance of its intended function.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are ANSI/UL 60079-0, "Electrical Apparatus for Explosive Gas Atmospheres – Part 0: General Requirements," and ANSI/UL 60079-11, "Electrical Apparatus for Explosive Gas Atmospheres – Part 11: Intrinsic Safety 'i'."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS
ONLY AS TO INTRINSIC SAFETY
Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

IRRIGATION CABLE (OFFY)

GENERAL

This category covers irrigation cable for use with electrically driven or controlled irrigation machines in accordance with Article 675 of ANSI/NFPA 70, "National Electrical Code."

Irrigation cable used to interconnect enclosures on the structure of an irrigation machine is an assembly of stranded, insulated conductors with non-

hygroscopic fillers in a core of moisture and flame resistant, nonmetallic material overlaid with a metallic covering and jacketed with a moisture, corrosion and sunlight-resistant nonmetallic material. Irrigation cable is suitable for direct burial in the earth and may, optionally, be so marked.

This cable may consist of a composite of power, control and grounding conductors in sizes 18 AWG and larger, stranded copper, and is rated 75°C and 600 V.

RELATED PRODUCTS

Fittings for use with this cable are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1263, "Outline of Investigation for Irrigation Cables."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Irrigation Cables."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

IRRIGATION CABLE ASSEMBLIES (OFJZ)

USE

This category covers irrigation cable assemblies consisting of certified irrigation cable terminated at each end in special-purpose fittings, intended for use with irrigation equipment in accordance with Article 675 of ANSI/NFPA 70, "National Electrical Code" (NEC). These assemblies are connecting devices used to interconnect multiple parts of irrigation equipment as permitted by the NEC.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Irrigation Cable Assembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OGNA)

GENERAL

This category covers laboratory equipment and accessories designed for technological activities involving:

1. The measurement of physical or chemical properties of materials.
2. The measurement, control, and/or display of the functional performance of a piece of equipment.
3. Qualitative or quantitative constituent analysis of substances.
4. Preparation of materials for further analysis or measurements.

These products have been investigated with respect to risk of fire, shock, and injury to persons. The accuracy of measured, analyzed, or prepared quantities has not been investigated.

This category does not cover laboratory equipment intended for patient contact.

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, the necessary instructions are marked on the equipment or provided in the instructions.

RELATED PRODUCTS

Other equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory for Use in Hazardous Locations (KGIZ).

LABORATORY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OGNA)
ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use; Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-operated Laboratory Equipment for Use in Hazardous Locations" or "Laboratory Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY HOODS AND CABINETS (OGOY)

USE AND INSTALLATION

This category covers laboratory hoods, biological safety cabinets and laminar flow cabinets classified as to fire, electrical and mechanical hazards.

Laboratory hoods are intended to provide an enclosed counter top work area with exhaust for capture and removal of vapors, mists and particulate matter from the work area.

Biological safety cabinets are intended to provide an enclosed counter top work area for handling and containment of biological materials.

Laminar flow cabinets are ventilated, partially enclosed cabinets using laminar air flow and intended to provide "clean" air flow over the work surface.

These products have been investigated for fire, electrical and mechanical hazards only. Effectiveness and reliability of air flow for capture, containment and exhaust have not been investigated. Unless specifically marked on the equipment, suitability for use with perchloric acid, radiological materials, or the like has not been investigated.

Requirements for the installation of this equipment are included in NFPA 45-1982, "Fire Protection for Laboratories Using Chemicals."

PRODUCT MARKINGS

Laboratory hoods and cabinets are marked with (1) the manufacturer's name, trade name or trademark or other descriptive marking by which the organization responsible for the product may be identified, (2) a distinctive "catalog" or "model" number or the equivalent, (3) the electrical rating, and (4) the date or other dating period of manufacture not exceeding any three consecutive months.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1805, "Laboratory Hoods and Cabinets."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]
IN ACCORDANCE WITH UL 1805
Control No.

or

[PRODUCT IDENTITY]
AS TO FIRE, ELECTRICAL AND MECHANICAL HAZARDS ONLY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

LABORATORY HOODS AND CABINETS (OGOY)

285

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY-USE ELECTRICAL EQUIPMENT (OGTK)

USE

This category covers laboratory equipment used to measure, indicate, monitor or analyze substances, or to prepare materials, including in vitro diagnostic (IVD) equipment. Examples include but are not limited to blood/tissue/gas analyzers, centrifuges, hot plates and stirrers, sterilizers, fiber-optic illuminators and laboratory mixers.

MODULAR SYSTEMS

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to Listed equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

REBUILT PRODUCTS

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically Listed in the individual Listings. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment (PIDF).

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory (KQLR) and Measuring, Testing and Signal Generation Equipment (PICQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control and Laboratory Use - Part 1: General Requirements," and one or more of the following Particular Standards as applicable:

IEC 61010-2-010, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-010: Particular Requirements for Laboratory Equipment for the Heating of Materials"
IEC 61010-2-020, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-020: Particular Requirements for Laboratory Centrifuges"
IEC 61010-2-040, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-040: Particular Requirements for Sterilizers and Washer-Disinfectors Used to Treat Medical Materials"

IEC 61010-2-051, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-051: Particular Requirements for Laboratory Equipment for Mixing and Stirring"

IEC 61010-2-061, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-061: Particular Requirements for Laboratory Atomic Spectrometers with Thermal Atomization and Ionization"

IEC 61010-2-081, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-081: Particular Requirements for Automatic and Semi-Automatic Laboratory Equipment for Analysis and Other Purposes"

IEC 61010-2-101, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-101: Particular Requirements for In Vitro Diagnostic (IVD) Medical Equipment"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Equipment," or other appropriate product name as shown in the individual Listings.

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, "OGTK" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

For field-installed modules, accessories and subassemblies, the product name includes the word "Module," "Accessory" or "Subassembly" (e.g., "Laboratory Equipment Accessory").

For rebuilt equipment, the word "Rebuilt," "Remanufactured," "Refurbished" (or "Refurb") or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY ELECTRICAL EQUIPMENT FOR USE IN HEALTH CARE APPLICATIONS (OGUI)

USE

This category covers laboratory equipment for health care applications, used to measure, indicate, monitor or analyze substances, or to prepare materials. Examples include but are not limited to centrifuges, hot plates and stirrers, sterilizers, fiber-optic illuminators and laboratory mixers.

MODULAR SYSTEMS

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to Listed equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

REBUILT PRODUCTS

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically Listed in the individual Listings. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment (PIDF).

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory (KQLR), Measuring, Testing and Signal Generation Equipment (PICQ) and Laboratory Use Electrical Equipment (OGTK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 61010A-1, "Electrical Equipment for Laboratory Use – Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control and Laboratory Use – Part 1: General Requirements," and one or more of the following Particular Standards as applicable:

IEC 61010-2-010, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-010: Particular Requirements for Laboratory Equipment for the Heating of Materials"

IEC 61010-2-020, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-020: Particular Requirements for Laboratory Centrifuges"

IEC 61010-2-041, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-041: Particular Requirements for Autoclaves Using Steam for the Treatment of Medical Materials, and for Laboratory Processes"

IEC 61010-2-042, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-042: Particular Requirements for Autoclaves and Sterilizers Using Toxic Gas for the

Laboratory Electrical Equipment for Use in Health Care Applications (OGUI)–Continued

Treatment of Medical Materials, and for Laboratory Processes"

IEC 61010-2-043, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-043: Particular Requirements for Dry Heat Sterilizers Using Either Hot Air or Hot Inert Gas for the Treatment of Medical Materials, and for Laboratory Processes"

IEC 61010-2-045, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-045: Particular Requirements for Washer Disinfectors Used in Medical, Pharmaceutical, Veterinary and Laboratory Fields"

IEC 61010-2-051, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-051: Particular Requirements for Laboratory Equipment for Mixing and Stirring"

IEC 61010-2-061, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-061: Particular Requirements for Laboratory Atomic Spectrometers with Thermal Atomization and Ionization"

IEC 61010-2-081, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-081: Particular Requirements for Automatic and Semi-Automatic Laboratory Equipment for Analysis and Other Purposes"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Electrical Equipment for Use in Health Care Applications," or other appropriate product name as shown in the individual Listings.

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, "OGUI" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

For field-installed modules, accessories and subassemblies, the product name includes the word "Module," "Accessory" or "Subassembly" (e.g., "Laboratory Equipment Accessory").

For rebuilt equipment, the word "Rebuilt," "Remanufactured," "Refurbished" (or "Refurb") or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LABORATORY-USE ELECTRICAL EQUIPMENT, SPECIAL LABORATORY EQUIPMENT (OGVH)

GENERAL

This category covers laboratory equipment that uses special technologies to measure, indicate, monitor or analyze substances, or to prepare materials, or to sterilize materials or areas, and other laboratory equipment that uses special technologies to perform its function. Examples include but are not limited to room sterilizers, equipment sterilizers, disinfection equipment, laboratory air cleaners, and decontamination equipment.

This equipment has been Classified as to electrical fire, shock and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in ANSI/NFPA 70, "National Electrical Code."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation should, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons, and should also be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

MODULAR SYSTEMS

Special laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to Classified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically Classified in the individual Classifications. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment (PIDF).
Additional equipment that may be used in laboratories is covered under:
Heaters, Industrial and Laboratory (KQLR)
Laboratory Electrical Equipment for Use in Health Care Applications (OGU)
Laboratory In Vitro Diagnostic Electrical Equipment (OGUR)
Laboratory-use Electrical Equipment (OGTK)
Measuring, Testing and Signal-generation Equipment (PICQ)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]

AS TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY

Control No.

* **LABORATORY DISINFECTING EQUIPMENT, ROOM DECONTAMINATION EQUIPMENT, ROOM SANITIZER,** or other appropriate product name as shown in the individual Classifications

For field-installed modules, accessories and subassemblies, the product name includes the word "MODULE," "ACCESSORY" or "SUBASSEMBLY" (e.g., "ROOM SANITIZER ACCESSORY").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPOLDERS (OIMZ)

LAMPOLDERS, ELECTRIC DISCHARGE (OJAX)

Lampholders, Electric Discharge, Over 1000 Volts (OJOV)

USE

This category covers lampholders and electrode receptacles for use with electric discharge lamps and tubes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 496, "Lampholders," and ANSI/UL 879, "Electric Sign Components."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder" or "Electric Discharge Lampholder," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Electric Discharge, Over 1000 Volts (OJOV)–Continued

Manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Electric Discharge, 1000 Volts or Less (OKCT)

USE

This category covers lampholders and combination lampholders with starter holders intended for use with electric discharge or fluorescent lamps.

This category also covers GU24 and GU24-1 holders for fluorescent and LED self-ballasted lamps and lamp adapters with mating pin bases.

Lampholders for High Temperature — Thermoplastic lampholders investigated for use at temperatures greater than 90°C (194°F) are indicated in the individual certifications. These products are marked with "T#" (where "#" is the temperature rating).

RELATED PRODUCTS

Separate starter holders are covered under Holders for Automatic Starters (FLPZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder" or "Electric Discharge Lampholder," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPOLDERS, FITTINGS (OKQR)

USE

This category covers attachments and parts that modify lampholders for certain conditions of usage.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder Fitting" or "Shadeholder," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPOLDERS, INCANDESCENT (OLDZ)

Lampholders, Adapters (OLRX)

GENERAL

This category covers screw-shell lamp adapters. Included are male-to-female screw-shell adapters and screw-shell adapters provided with attachment-plug blades or receptacles.

PRODUCT CATEGORIES BY CATEGORY CODE

Lampholders, Adapters (OLRX)—Continued

RELATED PRODUCTS

For plug-in devices with a lampholder intended to be used as a nightlight, see Nightlights (QOYX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Adapter," "Lampholder Adapter" or "Incandescent Lampholder Adapter," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Candelabra and Miniature (OMFV)

GENERAL

This category covers screw-shell lampholders of the candelabra (E12) and miniature (E10) base sizes.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder," "Miniature Lampholder" or "Candelabra Lampholder."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Intermediate Base (OMTT)

GENERAL

This category covers screw-shell lampholders of the intermediate (E17) base size.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder," "Intermediate Lampholder" or "Incandescent Lampholder."

Lampholders, Intermediate Base (OMTT)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Medium Base (ONHR)

GENERAL

This category covers screw-shell lampholders of the admedium (E29) and medium (E26) base sizes.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

Admedium (E29) bases are not intended for use with ordinary incandescent lamps.

Switched lampholders are tested on circuits involving a potential to ground of 125 V.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder," "Medium Lampholder" or "Incandescent Lampholder."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Mogul Base (ONUZ)

GENERAL

This category covers screw-shell lampholders of the mogul (E39) base size. Switched lampholders are tested on circuits involving a potential to ground of 125 V.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder," "Mogul Lampholder" or "Incandescent Lampholder."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Lampholders, Miscellaneous (OOIX)

GENERAL

This category covers lampholders for lamps that employ other than the usual screw-shell bases or designed for specialized uses.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Lamp holders, Miscellaneous (OOIX)—Continued

The basic standard used to investigate products in this category is ANSI/UL 496, "Lamp holders."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lamp holder," "Miscellaneous Lamp holder" or "Incandescent Lamp holder."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS (OOKH)**LAMPS, SELF-BALLASTED AND LAMP ADAPTERS (OOLR)****USE AND INSTALLATION**

This category covers self-ballasted lamps consisting of a ballast, transformer or power supply, and an integrated or replaceable lamp, for direct connection to a lampholder. Products in this category employ various lamp technologies including, but not limited to, fluorescent lamps and high-intensity-discharge (HID) lamps. Devices with an integral lamp are termed "self-ballasted"; devices with a replaceable lamp are termed "adapters." These products are intended for operation at the voltage marked on the product.

This category also covers fluorescent lamp adapters intended as direct substitutes for specific fluorescent lamps (e.g., F40T12RS), and designed to operate a more energy-efficient fluorescent lamp directly from the existing ballast without modifying the luminaire (e.g., T12 to T5 lamp adapters).

This category does not cover:

- Self-ballasted lamps and lamp adapters rated 50 W or greater for installation in specific luminaires
- LED lamps

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. They are provided with ANSI lamp bases. ANSI base configurations are covered in standards such as NEMA_ANSLG C81.61, "Electrical Lamp Bases - Specifications for Bases (Caps) for Electric Lamps." When differentiating between low-voltage and line-voltage ANSI lamp bases, consideration is given to Tables 7.3.3.1 and 7.3.3.2 in ANSI/UL 1598, "Luminaires."

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have been investigated for use in the smaller of a 6- or 8-in. diameter, totally enclosed, recessed luminaire, if they will physically fit, unless marked not for use in a totally enclosed luminaire.

These products have not been investigated for use in emergency lighting equipment or exit signs.

RELATED PRODUCTS

Self-ballasted lamps and lamp adapters rated 50 W or greater for installation in specific luminaires are covered under Lamps, Self-ballasted and Lamp Adapters (OOLR2).

Self-ballasted light-emitting-diode (LED) lamps are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV).

LED lamps intended for specific luminaires or special applications are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV2).

User-replaceable solid-state (LED) light engines are covered under Solid-state Light Engines (OORA).

Solid-state (LED) light engines not intended for user replacement, or intended for specific luminaires or special applications are covered under Solid-state Light Engines (OORA2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1993, "Self-Ballasted Lamps and Lamp Adapters."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the prod-

Lamps, Self-ballasted and Lamp Adapters (OOLR)—Continued

uct is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Self-ballasted Lamp" or "Lamp Adapter," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS, SELF-BALLASTED, LIGHT-EMITTING-DIODE TYPE (OOLV)**USE AND INSTALLATION**

This category covers self-ballasted light-emitting-diode (LED) lamps, rated up to 277 V ac nominal, provided with ANSI lamp bases.

Self-ballasted lamps have integral control and driver circuitry allowing direct connection to a voltage source (e.g., mains, transformer) without the use of an external constant-current source such as a driver or ballast. Such lamps are intended for operation at their marked voltage(s).

This category also covers lamps intended as direct substitutes for specific fluorescent lamps, and designed to operate directly from the existing fluorescent ballast without modifying the luminaire.

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. They are provided with ANSI lamp bases. ANSI base configurations are covered in standards such as NEMA_ANSLG C81.61, "Electrical Lamp Bases - Specifications for Bases (Caps) for Electric Lamps." When differentiating between low-voltage and line-voltage ANSI lamp bases, consideration is given to Tables 7.3.3.1 and 7.3.3.2 in ANSI/UL 1598, "Luminaires."

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

LED lamps intended to replace or supplant traditional incandescent lamps have been investigated for use in the smaller of a 6 in. (150 mm) or 8 in. (200 mm) diameter, totally enclosed, recessed luminaire, if they will physically fit, unless marked not for use in a totally enclosed luminaire.

LED lamps intended to replace or supplant traditional fluorescent lamps have been investigated for use in totally enclosed lamp compartments with 1 in. (25.4 mm) of clearance around the sides and underneath the lamp, unless marked not for use in a totally enclosed luminaire.

Products marked "Suitable for Use in Open Luminaires" are intended to replace tungsten-halogen lamps in applications where the luminaire is open and does not require an additional lamp containment barrier.

These products have not been investigated for use in emergency lighting equipment or exit signs.

RELATED PRODUCTS

LED lamps intended for connection to constant-current power sources (e.g., LED drivers), or those intended for specific luminaires or special applications are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV2).

User-replaceable solid-state (LED) light engines are covered under Solid-state Light Engines (OORA).

Solid-state (LED) light engines not intended for user replacement, or intended for specific luminaires or special applications are covered under Solid-state Light Engines (OORA2).

LED retrofit kits intended for field installation in UL Listed luminaires or office-furnishing lights are covered under Light-emitting-diode Retrofit Luminaire Conversion Kits (IFAR).

Self-ballasted fluorescent and high-intensity-discharge (HID) lamps and lamp adapters are covered under Lamps, Self-ballasted and Lamp Adapters (OOLR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1993, "Self-Ballasted Lamps and Lamp Adapters," and ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduc-

Lamps, Self-ballasted, Light-emitting-diode Type (OOLV)—Continued

tion of this Directory) together with the word "LISTED," a control number, and the product name "LED Lamp," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS, SPECIALTY (OONB)

USE

This category covers specialty lamps, usually of the common bulb shapes, containing assemblies of light sources (such as miniature incandescent bulbs, light-emitting diodes) and associated electrical components, and provided with bases of various sizes, usually of the standard configurations covered in ANSI/ANSI C81.61, "American National Standard for Electrical Lamp Bases - Specifications for Bases (Caps) for Electric Lamps."

These lamps are intended for use in certified equipment, such as exit fixtures or exit lights, where the product marking specifies the use of a lamp covered under this category.

PRODUCT MARKINGS

The lamp or the smallest unit container is marked with the wattage, voltage, manufacturer's identification and catalog number.

FACTORS NOT INVESTIGATED

Interchangeability of these lamps with commonly available lamps has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SPECIALTY LAMP

FOR USE IN PRODUCTS MARKED

TO USE UL CLASSIFIED LAMP, ____ (+) ____ (++)

Control No.

(+) Company identification

(++) Lamp catalog number

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LAMPS, TUNGSTEN HALOGEN (OOOJ)

GENERAL

This category covers tungsten halogen lamps employing an integral shield that has only been investigated in accordance with the guard and shield requirements applicable to lighting products for use with tungsten halogen lamps.

These lamps may be used in all certified lighting products with or without a containment barrier where permitted by the product markings.

The lamp or the smallest unit container is marked with the wattage, voltage, lamp type, manufacturer and model number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TUNGSTEN HALOGEN LAMP

FOR PARTICLE CONTAINMENT ONLY

Control No.

Lamps, Tungsten Halogen (OOOJ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ORGANIC LIGHT-EMITTING-DIODE PANELS (OOQS)

USE

This category covers organic light-emitting-diode (OLED) panels intended for installation directly to a building structure. Unless otherwise marked, they are intended for connection to an isolating power source that limits the voltage to no more than 30 V ac or 60 V dc, and the current to no more than 5 A.

PRODUCT MARKINGS

These panels are marked either for use with a specific power source (manufacturer and model number) or with its electrical input ratings (voltage, frequency, current and wattage).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 8752, "Organic Light Emitting Diode (OLED) Panels."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "OLED Panel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLID-STATE LIGHT ENGINES (OORA)

USE AND INSTALLATION

This category covers user-replaceable, solid-state, light-emitting-diode (LED) light engines, which are solid-state light sources incorporating one or more LED packages or arrays, an LED driver and a mains connection system. They are intended for mains connection through a "defined fit system" of a compatible luminaire rated no more than 277 V to ground.

A "defined fit system" is identified by a marking or a proprietary or industry designation assigned to a light engine interface (i.e., base) and its intended holder to control interchangeability.

These products do not employ ANSI Standard base configurations (e.g., Edison base) that are typically used for incandescent or fluorescent lamps.

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have not been investigated for use in emergency lighting equipment or exit signs.

RATINGS

Solid-state light engines are rated in ac or dc volts, watts and amperes. If intended for ac supplies, they are additionally rated in frequency.

Where suitable for elevated ambient temperatures, solid-state light engines are marked with an ambient temperature rating.

RELATED PRODUCTS

Solid-state (LED) light engines not intended for user replacement, or intended for specific luminaires or special applications are covered under Solid-state Light Engines (OORA2).

Self-ballasted fluorescent or high-intensity-discharge (HID) lamps provided with bases standardized for incandescent and fluorescent luminaires are covered under Lamps, Self-ballasted and Lamp Adapters (OOLR).

Self-ballasted light-emitting-diode (LED) lamps provided with bases standardized for incandescent and fluorescent luminaires are covered under Lamps, Self-ballasted, Light-emitting-diode Type (OOLV).

LED retrofit kits intended for field installation in UL Listed luminaires or office-furnishing lights are covered under Light-emitting-diode Retrofit Luminaire Conversion Kits (IFAR).

LED light sources having provision for field wiring in accordance with ANSI/NFPA 70, "National Electrical Code," are luminaires and covered

LAMPS (OOKH)

Solid-state Light Engines (OORA)–Continued

under Light-emitting-diode Surface-mounted Luminaires (IFAM) or Light-emitting-diode Recessed Luminaires (IFAO).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1993, “Self-Ballasted Lamps and Lamp Adapters,” and ANSI/UL 8750, “Light Emitting Diode (LED) Equipment for Use in Lighting Products.”

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Solid-state Light Engine” or “LED Light Engine.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LEAK-DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OPDH)

GENERAL

This category covers leak-detection equipment, including control units, indicators, sensors, probes and auxiliary devices, used as part of leak-detection systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Leak Detection Equipment for Use in Hazardous Locations” or “Leak Detection Equipment (Associated Apparatus),” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHTING AND POWER EQUIPMENT, AUXILIARY (OUST)

USE AND INSTALLATION

This category covers equipment intended to be used in conjunction with a facility emergency lighting and power system. The equipment may consist of battery assemblies, unit equipment, remote light sources, illuminated signs, or related devices.

This equipment is for use in unclassified locations and is intended for indoor, dry locations only unless marked for damp or wet locations.

This equipment has not been investigated for compliance with the performance criteria of Article 700 of ANSI/NFPA 70, “National Electrical Code,” ANSI/NFPA 101, “Life Safety Code,” or the “Uniform Fire Code.”

LIGHTING AND POWER EQUIPMENT, AUXILIARY (OUST)

RELATED PRODUCTS

See Emergency Lighting and Power Equipment (FTBR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 924, “Emergency Lighting and Power Equipment.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Auxiliary Lighting Equipment” or “Auxiliary Power Equipment.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHTNING PROTECTION (OVGR)

LIGHTNING CONDUCTORS, AIR TERMINALS AND FITTINGS (OVTZ)

GENERAL

This category covers lightning-protection components intended to be installed to provide a lightning-protection system complying with UL 96A, “Installation Requirements for Lightning Protection Systems,” and ANSI/NFPA 780, “Installation of Lightning Protection Systems,” as evidenced by UL’s Master Label® Certificate. These components should be installed using the prescribed manufacturer’s installation instructions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 96, “Lightning Protection Components.”

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Lightning Conductor,” “Air Terminal” or “Fitting,” or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHTNING PROTECTION SYSTEM INSTALLATIONS (OWAY)

GENERAL

This category covers the installation of lightning protection systems on structures to protect them from damage by lightning. The issuance of a Master Label® Certificate is evidence that the installation of the lightning protection system (1) has been made by an installer that subscribes to UL’s Follow-Up Service, (2) employs materials subject to factory inspection service and bears the UL Mark, and (3) is subject to a field inspection program covering proper installation of the system.

RELATED PRODUCTS

Manufacturers of Listed ground rods suitable for use in installations of lightning protection equipment are covered under Grounding and Bonding Equipment (KDER).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate the lightning protection systems in this category are UL 96A, “Installation Requirements for Lightning Protection Systems,” or ANSI/NFPA 780, “Installation of Lightning Protection Systems,” or IEC 62305-1 (2010), “Protection Against Lightning – Part 1: General Principles,” and IEC 62305-3 (2010), “Protection Against Lightning – Part 3: Physical Damage to Structures and Life Hazard.”

PRODUCT CATEGORIES BY CATEGORY CODE

Lightning Protection System Installations (OWAY)—Continued

Inspection of the surge suppression may be excluded at the request of the installer.

UL CERTIFICATE

The Master Label® Certificate of UL is the only method provided by UL to identify lightning protection systems covered under its Certificate and Follow-Up Service. Installations for which Certificates are issued are considered by UL to be compliant with the applicable requirements at the time of issuance. The Certificate identifies the standard used for the investigation. The Master Label® Certificate is limited to five years from the date of issue and must be renewed to remain in effect.

At the request of the installer, surge protection may be excluded from the scope of the inspection. The Certificate specifically states this exclusion with one of the following statements, as applicable:

“Surge protection was not inspected.”

“The electrical service entrance surge protection system was not inspected.”

“The communication surge protection system was not inspected.”

The above wording is followed by the cautionary statement:

“Surge protection devices are an integral component of a complete lightning protection system and should be provided on all incoming and exiting electric, power, data, and communication services.”

UL maintains a factory inspection service for counterchecking conductors, air terminals and fittings, and also a field inspection service for counterchecking installations.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE-PROTECTIVE DEVICES CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (OWIW)

GENERAL

This category covers surge-protective devices (SPDs) rated 120/240 V maximum, intended to be connected to circuits having an available system short-circuit current of 10 kA maximum and suitable for use as plug-in devices in specified panelboards. The SPDs are certified for use in specified panelboards in accordance with the details on the SPD or in the publication provided with the SPD.

PRODUCT MARKINGS

The SPDs are marked on the side with the statement: “Classified for use only in specified panelboards where the available short-circuit current is 10 kA, 120/240 volts ac or less. Do not use in equipment connected to circuits having an available system short-circuit current in excess of 10 kA, 120/240 volts ac.”

In addition, one of the following statements (or the compatibility list) is marked on the side of the SPD: “For catalog numbers of compatible panelboards, refer to the installation instructions provided with the SPD.” or “For catalog numbers (or equivalent) of specified panelboards, refer to Publication No. ___ provided with this SPD.” The referenced publication is a compatibility list that tabulates the company name, catalog number and electrical ratings of the certified SPD, in addition to the company name and catalog number of the applicable UL-certified panelboards for which the certified SPD has been investigated for use. One copy of the compatibility list is provided with each SPD.

RELATED PRODUCTS

See Surge-protective Devices (VZCA), Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ) and Circuit Breakers, Molded Case, Classified for Use in Specified Equipment (DIXF).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1449, “Surge Protective Devices,” in addition to the requirements contained in Supplement SC of ANSI/UL 67, “Panelboards.”

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SURGE-PROTECTIVE DEVICES CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (OWIW)

[PRODUCT IDENTITY*]

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIMITED COMBUSTIBLE CABLE (OWKZ)

GENERAL

This category covers electrical and optical fiber cable that meets the limited combustible and smoke developed requirements for cable in ceiling cavity and raised floor plenums in accordance with ANSI/NFPA 90A, “Installation of Air Conditioning and Ventilating Systems.” This cable also meets the requirements for cable used in ducts, plenums and other spaces used for environmental air in accordance with Articles 725, 760, 770, 800, 820 and 830 of ANSI/NFPA 70, “National Electrical Code.”

This cable has a maximum Potential Heat value of 3500 Btu/lb when tested in accordance with NFPA 259, “Standard Test Method for Potential Heat of Building Materials.” This cable has a maximum smoke developed index of 50 and a maximum flame spread index of 25 when tested in accordance with ANSI/UL 723 (NFPA 255), “Test for Surface Burning Characteristics of Building Materials,” before and after exposure to elevated temperature and humidity. The cable also meets the requirements for plenum cable in one or more of the following product categories:

- Power-limited Circuit Cable (QPTZ) – Types CL2P or CL3P
- Communications Cable (DUZX) – Type CMP
- Power-limited Fire Alarm Cable (HNIR) – Type FPLP
- Nonpower-limited Fire Alarm Cable (HNHT) – Type NPLFP
- Optical Fiber Cable (QAYK) – Types OFNP or OFCP
- Community Antenna Television Cable (DVCS) – Type CATVP
- Network-powered Broadband Communications Cable (PWIP) – Type BLP

PRODUCT MARKINGS

This cable is identified by the marking “Limited Combustible FHC 25/50” on the surface of the jacket or on a marker tape under the jacket. This marking is immediately followed by one of the Type designations shown above. The cable also has the required markings including optional markings as indicated in the product categories referenced above. This cable may also be Verified for transmission performance if authorized in the product categories referenced above, and will bear the appropriate performance verification marking.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2424, “Outline of Investigation for Cable Marked ‘Limited Combustible.’”

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Limited Combustible Cable.”

Cable which is also Verified to the UL Data Transmission Performance Category Marking Program has the marking “Verified to UL Performance Category Program,” or the UL Verification Mark along with the words “Performance Category Program” together with the Listing Mark information on the tag, the reel, or the smallest unit container. Cable which is also Verified to another transmission performance specification has the marking “Verified in Accordance with [Specification name and/or number]” or the UL Verification Mark along with the applicable Specification name and/or number together with the Listing Mark information on the tag, the reel, or the smallest unit container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LINE ISOLATION MONITORS (OWLS)

GENERAL

This category covers line isolation monitors, with or without supplementary remote indicating units, designed to supervise the isolated power-supply circuits in hospital inhalation anesthetizing locations.

The monitor and supplementary indicating units are intended to be installed in any of the following locations in conformity with the applicable requirements of ANSI/NFPA 99, "Health Care Facilities Code," and ANSI/NFPA 70, "National Electrical Code":

- (a) Nonhazardous anesthetizing area
- (b) Above a hazardous area (5 ft or more above the floor)
- (c) Included as part of an isolated power-supply center

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1022, "Line Isolation Monitors."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Line Isolation Monitor" or "Line Isolation Monitor Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAPU)

GENERAL

This category covers devices such as low-voltage ac power circuit breakers, low-voltage dc power circuit breakers, low-voltage ac power circuit protectors, low-voltage ac integrally-fused power circuit breakers, and low-voltage power-switching device adapters.

Low-voltage power-switching devices have been investigated for continuous duty at 100% of their current ratings and are designed to provide service-entrance, feeder or branch-circuit protection. They may be manually and/or electrically operable.

These low-voltage power-switching devices, enclosures and adapters are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and are on a wiring diagram or other readily-visible location.

Stationary equipment is normally bus connected. However, terminal pads are provided which can accommodate field-installed pressure-wire connectors.

PRODUCT MARKINGS AND RATINGS

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and on the use of 75°C wire for higher amp-rated circuits.

Low-voltage power-switching devices suitable for use with an accessory are marked to indicate the accessory(s), the electrical rating and proper connections (if not obvious).

Low-voltage power-switching devices without enclosures are intended for use only in Listed enclosures or as part of other Listed equipment which has been and are marked for use with a specific low-voltage power switching device.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ACCESSORIES, LOW-VOLTAGE POWER-SWITCHING DEVICES (PAQF)

GENERAL

Accessories, Low-voltage Power-switching Devices (PAQF)—Continued

This category covers accessories such as shunt trip devices, undervoltage trip devices, alarm switches and auxiliary switches intended for field installation for use only with specific low-voltage power-switching devices. Correct combinations of low-voltage power-switching devices and accessories are indicated by markings on or with the accessory and/or the low-voltage power-switching device.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Breaker Accessory," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ADAPTERS, LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAQQ)

GENERAL

This category covers equipment designed to adapt low-voltage power-switching devices to receiving devices, such as individual enclosures, dead-front switchboards (switchgear), panelboards, etc. Field installation is intended only in those receiving devices which are specifically marked for their use.

These adapters have been investigated in conjunction with power-switching devices and have been found suitable to carry 100% of the current rating of the power-switching device, and to withstand the maximum fault-current levels specified on the power-switching device.

PRODUCT MARKINGS

The adapters are marked to indicate the power-switching device with which they may be used.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures," and ANSI/IEEE C37.20.1, "Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Switching Device Adapter."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RETROFIT LOW-VOLTAGE AC POWER-SWITCHING-DEVICE ADAPTERS CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (PAQR)

GENERAL

This category covers retrofit adapters for use in specified equipment, intended to adapt certified low-voltage power ac circuit breakers in place of those of another manufacturer. The specified equipment includes dead-front switchboards, switchgear, and the like. These retrofit adapters have been investigated in conjunction with low-voltage power AC circuit breakers and have been found suitable to carry 100% of the current rating of the low-voltage power AC circuit breakers, and to withstand the maximum fault-current levels specified on the low-voltage power ac circuit breakers.

PRODUCT MARKINGS

In addition to other required markings, the nameplate for these adapters is marked to indicate the specified equipment, including the manufacturer and model number or type, for which the adapters are intended.

RELATED PRODUCTS

See Retrofit Low-voltage AC Power Circuit Breakers Classified for Use in Specified Equipment (PASD) and Adapters, Low-voltage AC Power-switching Devices (PAQQ).

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," and ANSI/IEEE C37.59, "IEEE Standard Requirements for Conversion of Power Switchgear Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT LOW-VOLTAGE POWER-SWITCHING-DEVICE ADAPTER FOR USE ONLY IN EQUIPMENT AS DESIGNATED ON THE NAMEPLATE Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC FUSE DRAW-OUTS (PAQT)

GENERAL

This category covers fuse draw-outs intended to be installed in switchgear and connected in series with certified low-voltage ac power circuit breakers in order to extend the short-circuit current rating of the circuit breaker.

Fuse draw-outs consist of fuses or current limiters and an open fuse-trip device in a draw-out-type assembly. The open fuse-trip device will cause the associated circuit breaker to trip when any fuse or current limiter opens.

These devices have been investigated in combination with specific circuit breakers for use on circuits having an available fault current of 200,000 rms symmetrical amps, maximum, 3-phase.

PRODUCT MARKINGS

Fuse draw-outs are marked with maximum voltage, frequency, continuous current and short-circuit current ratings, and the type or catalog number designation of the circuit breaker with which it is intended to be used.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/NEMA C37.50, "Switchgear - Low Voltage AC Power Circuit Breakers Used in Enclosures - Test Procedures," and ANSI/IEEE C37.20.1, "Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illus-

Low-voltage AC Fuse Draw-outs (PAQT)—Continued

trated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Fuse Draw-Out."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER CIRCUIT BREAKERS (PAQX)

GENERAL

This category covers low-voltage power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection or serve as a disconnecting means. This category also covers power circuit breaker enclosures. They are covered by the classifications indicated by the label designation as follows:

Low-voltage ac power circuit breaker — Without enclosure, and with or without noninterchangeable trip devices.

Low-voltage ac power breaker frame — Frame only of power circuit breaker with provision for interchangeable trip devices. A certified low-voltage power circuit breaker frame is certified for use only with a certified low-voltage ac power circuit breaker trip device.

Low-voltage ac power circuit breaker trip device — Trip device only of a power circuit breaker having provisions for interchangeable trip devices.

Low-voltage ac power-switching device enclosure — Enclosure only for individual 1-, 2- or 3-pole power circuit breaker.

The frame size determines the maximum continuous-current rating for all parts of a low-voltage ac power circuit breaker except the coils of the direct-acting trip device. The rating of the trip device determines the actual continuous-current rating.

The trip devices may contain ground-fault current, longtime-delay overcurrent, short-time-delay overcurrent and instantaneous overcurrent trip elements that may be adjustable. The tolerance of the marked position of the longtime-delay overcurrent trip setting is plus or minus 10%.

A ground-fault current trip element is one that functions at all values of current at or above a predetermined value of fault current to ground.

An instantaneous overcurrent trip element is one that functions with no purposely delayed action at all values of current at or above a predetermined value of overcurrent.

A long-time overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time or instantaneous pick-up settings of the circuit breaker.

A short-time-delay overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time current rating of the circuit breaker.

Circuit breakers without trip devices cannot of themselves respond to overcurrent, short-circuit or ground faults and are marked "No Over-Current Protection Provided" or "If Over-Current Protection is Required, Use With Type ___ Protective Relays." Circuit breakers without trip devices can respond to overcurrent when properly connected to protective relays.

PRODUCT MARKINGS

Low-voltage ac power circuit breakers are marked with maximum voltage, frequency, continuous current, short-time current, short-circuit current (interrupting rating) and control-voltage ratings. The short-time current rating is the designated limit of fault current that the low-voltage ac power circuit breaker can successfully carry for a short interval. Other rating information, such as the nominal design voltage and time-delay overcurrent trip setting, may be provided.

The short-circuit current rating of a low-voltage ac power circuit breaker may be extended by connecting a low-voltage ac fuse draw-out in series. When such connection is used, the circuit breaker is provided with means for tripping by way of a signal from an open fuse-trip device. The open fuse-trip device may be either on the fuse draw-out or on the circuit breaker. Circuit breakers are marked with the catalog or type designation of the fuse draw-out with which they are intended to be used.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are: ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Low-Voltage AC Power Circuit Breakers Used in Enclosures," IEEE C37.13A (2012), "Low-Voltage AC Power Circuit Breakers Used in Enclosures — Amendment 1: Increase of Voltages to 1000 V AC and Below"

Low-voltage AC Power Circuit Breakers (PAQX)—Continued

IEEE C37.17 (2012), "Trip Systems for Low-Voltage (1000 V and Below) AC and General Purpose (1500 V and Below) DC Power Circuit Breakers"
ANSI/NEMA C37.50, "Switchgear - Low Voltage AC Power Circuit Breakers Used in Enclosures - Test Procedures."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Low-Voltage AC Power Circuit Breaker," "Low Voltage AC Power Breaker Frame," "Low Voltage AC Power Circuit Breaker Trip Unit" or "Low Voltage AC Power Switching Device Enclosure."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Secondary Network Protectors (PARZ)

USE

This category covers secondary network protectors for use in spot or grid networks rated 600 V or less. These protectors consist of a circuit breaker and its control equipment. They are used for automatically disconnecting a transformer from a secondary network in response to predetermined electrical conditions on the primary feeder or transformer. They are also used for connecting a transformer to a secondary network either through manual control or automatic control responsive to predetermined electrical conditions on the feeder and the secondary network.

PRODUCT MARKINGS

Each secondary network protector is marked with the company name, model number and its electrical ratings, which includes the maximum short circuit rating of the device.

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Circuit Breakers (PAQX), Low Voltage AC Power Switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is IEEE C57.12.44, "IEEE Standard Requirements for Secondary Network Protectors."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Secondary Network Protector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RETROFIT LOW-VOLTAGE AC POWER CIRCUIT BREAKERS CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (PASD)

GENERAL

This category covers retrofit low-voltage ac power circuit breakers of present design that have been modified and investigated for use in place of low-voltage power ac circuit breakers of another manufacturer. These circuit breakers are intended to be installed in equipment such as dead-front switchboards, switchgear, and the like.

PRODUCT MARKINGS

In addition to other required markings, the nameplate for these circuit breakers is marked to indicate the specified equipment, including the manufacturer and model number or type, for which the circuit breakers are intended.

RELATED PRODUCTS

See Low-voltage AC Power Circuit Breakers (PAQX) and Retrofit Low-voltage AC Power-switching-device Adapters Classified for Use in Specified Equipment (PAQR).

ADDITIONAL INFORMATION

Retrofit Low-voltage AC Power Circuit Breakers Classified for Use in Specified Equipment (PASD)—Continued

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," and ANSI/IEEE C37.59, "IEEE Standard Requirements for Conversion of Power Switchgear Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT LOW-VOLTAGE AC POWER CIRCUIT BREAKER FOR USE ONLY IN EQUIPMENT AS DESIGNATED ON THE NAMEPLATE
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC INTEGRALLY-FUSED POWER CIRCUIT BREAKERS (PASQ)

GENERAL

This category covers low-voltage ac integrally fused power circuit breakers rated 600 V maximum. Low-voltage ac integrally fused power circuit breakers include all the mechanical features of low-voltage ac power circuit breakers and, in addition, have current limiters or current-limiting fuses that function to increase the fault-current interrupting rating of the low-voltage ac integrally fused power circuit breakers.

These devices have been investigated for use on three-phase circuits having available fault currents of 200,000 rms symmetrical amps, maximum.

In addition to overcurrent trip elements of the low-voltage ac power circuit breakers, these are provided with an anti-single-phase tripping device that automatically opens the circuit breaker contacts in response to circuit interruption by the current limiter or the current-limiting fuse.

These devices are intended for use in certified switchgear or switchboards with certified adapters.

PRODUCT MARKINGS

Low-voltage ac integrally fused circuit breakers are marked with the maximum voltage, frequency, continuous current, short-circuit current (interrupting rating), intended fuse rating and type, and control voltage ratings. Other rating information, such as the nominal design voltage and time-delay overcurrent tripping setting, may be provided.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear - Low Voltage AC Power Circuit Breakers Used in Enclosures - Test Procedures."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Integrally Fused Power Circuit Breaker."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

LOW-VOLTAGE AC POWER CIRCUIT PROTECTORS (PATT)

GENERAL

This category covers low-voltage ac power circuit protectors rated 240 V or 480 V, investigated for use on circuits having available fault currents of 200,000 rms symmetrical amps maximum, three-phase.

Low-voltage ac power circuit protectors consist of a low-voltage ac power circuit breaker that has been modified to omit the direct-acting tripping device and to include a Class L current-limiting fuse in series with the load terminals of each pole.

PRODUCT MARKINGS

The low-voltage ac power circuit protectors are marked with maximum voltage, frequency, continuous current, short-circuit current and control voltage(s) ratings. Other rating information, such as switching current rating, may be provided.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/IEEE C37.29, "IEEE Standard for Low-Voltage AC Power Circuit Protectors Used in Enclosures," and ANSI/NEMA C37.52, "Test Procedures for Low Voltage AC Power Circuit Protectors Used in Enclosures."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Power Circuit Protector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE DC POWER CIRCUIT BREAKERS (PAXW)

USE

This category covers stationary and draw-out low-voltage dc power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection. Low-voltage dc power circuit breakers are separated into four types: general purpose, rectifier, high speed and semi-high speed.

These products are intended for use in certified switchgear or switchboards with certified adapters.

PRODUCT MARKINGS

These products are marked with the type of circuit breaker, frame size, rated maximum voltage, rated continuous current, rated peak current (when applicable), rated short-time current (where applicable), rated short-circuit current and rated control voltage.

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," and ANSI/IEEE C37.14, "Low-Voltage DC Power Circuit Breakers Used in Enclosures."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage DC Power Circuit Breaker."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRIP DEVICES CLASSIFIED FOR USE IN LOW-VOLTAGE AC POWER CIRCUIT BREAKERS (PAYK)

USE

Trip Devices Classified for Use in Low-voltage AC Power Circuit Breakers (PAYK)—Continued

This category covers trip devices suitable for use in place of the original trip device of a low-voltage ac power circuit breaker. Certification covers only the trip device in its ability to sense and respond to overcurrent and fault-current conditions.

This category does not cover the circuit breaker on which the trip device is mounted.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C37.59- (1996), "IEEE Standard Requirements for Conversion of Power Switchgear Equipment," which references ANSI/IEEE C37.13 (1990), "Low-Voltage AC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.17 (1997), "Trip Devices for AC and General Purpose DC Low Voltage Power Circuit Breakers," ANSI/NEMA C37.50 (1989), "Switchgear Low Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRIP DEVICE

IN ACCORDANCE WITH IEEE C37.59-[date]

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANAGEMENT EQUIPMENT, ENERGY (PAZX)

USE

This category covers energy management equipment that energizes or de-energizes electrical loads to achieve the desired use of electrical power. This equipment normally controls electrical loads by responding to sensors or transducers monitoring power consumption, by sequencing, by cycling the loads through the use of preprogrammed data logic circuits, or any combination thereof. Devices responding to signals from a utility company may receive the signals over the power lines or as radio signals.

Typical loads controlled are space heating, air conditioning, lighting and other similar loads.

Devices are intended to be used only within the manufacturer's brand and product series as indicated in the manufacturer's instructions. Exceptions are specifically identified.

FACTORS NOT INVESTIGATED

The effects of the controls on the performance ratings of the connected loads have not been investigated.

PRODUCT MARKINGS

"Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" and "Energy Management Equipment Accessory" require modular labeling. The marking on the individual subassembly, or smallest container, will make reference to 1) a wiring diagram for interconnection of a system, and 2) the various combinations of subassemblies that may be employed to comprise the system unit.

RELATED PRODUCTS

Signal system units incorporating energy management systems are covered under Signal System Units (UDTZ).

Switching devices operated by a clock mechanism and other similar type products used to energize or de-energize loads are covered under Switches, Clock Operated (WGZR).

Energy-usage-monitoring equipment (not controlling loads directly) is covered under Energy Usage Monitoring Systems (FTRZ).

Measurement equipment is covered under Measuring, Testing and Signal-generation Equipment (PICQ).

Temperature-indicating and -regulating switches are covered under Temperature-indicating and -Regulating Equipment (XAPX) and Controllers, Refrigeration (SDFY).

Nonindustrial photoelectric switches for lighting control and/or motion-sensitive switches intended for nonindustrial applications are covered under Switches, Photoelectric (WJCT).

Plug-in, locking-type photocontrols for use with area lighting intended for parking lot and roadway lighting are covered under Photocontrols, Plug-in, Locking Type (WJFX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 916, "Energy Management Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Energy Management Equipment," "Open Energy Management Equipment," "Enclosed Energy Management Equipment," "Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" or "Energy Management Equipment Accessory."

The word "Management" may be abbreviated "Mgmt" or "Mgt" (with or without a period); the word "Equipment" may be abbreviated "Equip" or "Eqpt" (with or without a period).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED HOME KITCHEN CABINETRY AND BATHTUB AND SHOWER UNITS (PDLT)

GENERAL

This category covers finished units, components, and/or materials have been Classified in accordance with the flammability requirements of the Federal Manufactured Home Construction and Safety Standards; Section 3280.203(b)(5) for kitchen cabinet doors, counter tops, back splashes, exposed bottoms, and end panels or Section 3280.203(b)(6) for plastic bath-tubs, shower units, and tub or shower doors.

The insulating, acoustical, structural, toxicity of products of combustion and other properties have not been investigated. The Classification pertains to the finished units, components, and/or materials themselves, and not to the structures in which they are installed.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MANUFACTURED HOME KITCHEN CABINETRY IN ACCORDANCE WITH FEDERAL MANUFACTURED HOME CONSTRUCTION AND SAFETY STANDARDS SECTION 3280.203(b)(5) WITH RESPECT TO FLAMMABILITY ONLY
Control No.

or

MANUFACTURED HOME BATHTUB AND SHOWER UNIT IN ACCORDANCE WITH FEDERAL MANUFACTURED HOME CONSTRUCTION AND SAFETY STANDARDS SECTION 3280.203(b)(6) WITH RESPECT TO FLAMMABILITY ONLY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED HOMES (PDOV)

GENERAL

This category covers manufactured homes, which are structures, transportable in one or more sections, built on a permanent chassis and designed to be used with or without a permanent foundation.

All manufactured homes include provisions for attachment to anchoring and tie-down devices and suitable piers and footings at the installation site.

Manufactured homes are intended for installation subject to approval by the Authority Having Jurisdiction.

RELATED PRODUCTS

Prefabricated modular buildings are covered under Composite Panels (QRSY).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

Manufactured homes intended for use as dwelling units have been classified in accordance with the Federal Department of Housing and Urban Development Manufactured Home Construction and Safety Standards, Title 24CFR, Part 3280, December 18, 1975.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MANUFACTURED HOME

SEE HUD LABEL

No.

One Classification Mark is applied near the data plate (single-wide) or near the data plate and at eye level in the largest bedroom closet of each additional transportable section (double- and triple-wide) of each manufactured home intended for use as a dwelling unit. In addition, information concerning the equipment and appliances factory furnished as part of the manufactured home is included on a data plate posted within the building.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MARINA AND BOATYARD CABLE (PDYQ)

USE

This category covers cable intended for use as flexible branch circuit and feeder wiring in marinas and boatyards in accordance with Article 555 of ANSI/NFPA 70, "National Electrical Code."

The cable is rated 600 V, 75°C and is suitable for exposure to sunlight, fresh water, salt water, gasoline, diesel fuel and lubricating oil.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 83, "Thermoplastic-Insulated Wires and Cables."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marina and Boatyard Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MARKING AND CODING EQUIPMENT, ELECTRONIC (PGBE)

USE AND INSTALLATION

This category covers electronic marking and coding equipment rated 600 V or less. Included in this category are ink jet printers or similar systems for production line labeling and/or coding. Units covered under this category normally are located in commercial or industrial environments. This equipment may be cord connected or have provision for field wiring. The units are marked with the type or types of ink for which they have been investigated.

RELATED PRODUCTS

Printing equipment intended for use in other applications is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ) or Graphic Arts Equipment (KCQT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1950, "Safety of Information Technology Equipment, Including Electrical Business Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Marking and Coding Equipment," "Ink Jet Coding Machine," "Ink Jet Marking Machine," "Laser Coding Machine" or "Laser Marking Machine."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MATTRESSES AND PADS, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (PHLV)

USE

This category covers mattresses and pads provided with a sheet covering made of cotton material coated with an electrically conductive natural or synthetic rubber, and intended for use in flammable anesthetizing locations where it is necessary for safety to avoid the accumulation of static electricity.

Tests indicate that the electrical resistance conforms to ANSI/NFPA 99, "Health Care Facilities Code," and that the mattresses and pads, when in contact with grounded objects, will prevent accumulation of dangerous amounts of static electrical charges.

As oil is injurious to rubber compounds and impairs the electrical conductive properties of these materials, contact with oil should be avoided.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Mattress Relating to Hazardous Locations" or "Electrically Conductive Pad Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEASURING, TESTING AND SIGNAL- GENERATION EQUIPMENT (PICQ)

GENERAL

This category covers equipment that generates electrical signals (transducers, waveform generators, and the like) or that measures, indicates and/or records electrical or nonelectrical signals, quantities, or other parameters generated by other equipment.

This equipment may incorporate circuits used to visually and audibly indicate various wiring conditions in 15 or 20 A branch circuits along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI) connected to the branch circuit, or for indicating that a branch circuit is connected to an arc-fault circuit interrupter (AFCI).

AFCI indicators operate by producing a waveform similar to an arc fault. Since these devices cannot produce an actual arc fault, an AFCI indicator may not trip every AFCI. AFCI indicators are provided with markings or instructions that state the following or equivalent: "CAUTION: AFCIs recognize characteristics unique to arcing, and AFCI indicators produce characteristics that mimic some forms of arcing. Therefore the indicator may provide a false indication that the AFCI is not functioning properly. If this occurs, recheck the operation of the AFCI using the test and reset buttons. The AFCI button test function will demonstrate proper operation."

Equipment intended to be installed only in process control panels is so identified.

Equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

Open-type measuring, testing and signal generation equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically Listed in the individual Listings. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

This category does not cover medical and dental or process control metering and testing equipment. Listings of equipment which measures the functional performance (nonelectrical or nonelectronic) of other equipment, the physical or chemical properties of materials or qualitative or quantitative constituent analysis of materials and preparation of materials for further analysis or measurement are covered under Laboratory Use Electrical Equipment (OGTK).

Additional Listings are covered under Electrical and Electronic Measuring and Testing Equipment (FHCW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010B-1, "Electrical Measuring and Test Equipment - Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control and Laboratory Use - Part 1: General Requirements," and IEC 61010-2-032, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-032: Particular Requirements for Hand-Held and Hand-Manipulated Current Sensors for Electrical Test and Measurement," as applicable.

Equipment incorporating circuits to indicate wiring conditions in branch circuits, GFCI functions, or to indicate that a branch circuit is connected to an AFCI is additionally investigated to UL 1436, "Outlet Circuit Testers and Similar Indicating Devices."

ADJUNCT SERVICE

UL provides a service for the Verification of measuring, testing and signal generation equipment that not only meets the appropriate requirements of UL but also has been investigated to Levels I, II, III and/or IV of Annexes A and B of Performance Specification TSB-155, "Transmission Performance Specifications for Field Testing of Unshielded Twisted-Pair Cabling Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Measuring and Testing Equipment," "Measuring Equipment," "Testing Equipment," "Signal Generation Equipment," or the name of the specific type of product as shown in the individual Listings, or combinations of the preceding identities. The product name may be preceded by the words "Open-type."

Combination Listing/Verification Mark — A Listing Mark combined with a Verification Mark is provided on products that have additionally been investigated to Levels I, II, III and/or IV of Annexes A and B of Performance Specification TSB-155. The combined Listing/Verification Mark consists of the Listing Mark elements detailed above and the statement "ALSO VERIFIED IN ACCORDANCE WITH LEVEL(S) * OF TSB-155."

* I, II, III and/or IV

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEASUREMENT EQUIPMENT CLASSIFIED FOR USE IN HAZARDOUS LOCATIONS (PICX)

GENERAL

This category covers equipment intended for measuring physical properties, such as thickness and density, on a production line.

This equipment has been investigated for risk of explosion, fire and electric shock only.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEASUREMENT EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL EQUIPMENT (PIDF)

USE AND INSTALLATION

This category covers equipment intended to diagnose, treat, or monitor a patient under medical supervision, and which makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer.

This equipment has been Classified with respect to electric shock, fire, mechanical and other specified hazards incident to its use in unclassified (ordinary) locations. The other specified hazards are those that are included in UL 60601-1 (formerly UL 2601-1) and the Particular and/or Collateral Standards to which the equipment has been investigated.

The wiring methods for installation of these products are covered by Article 517 of ANSI/NFPA 70, "National Electrical Code" (NEC). The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in the NEC.

The nature of some of this equipment, such as X-ray, nuclear imaging, and magnetic resonance equipment, is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

X-radiation safety and performance requirements are regulated under Public Law 90-602 and are enforced by the U.S. Department of Health and Human Services. These criteria are outlined in Code of Federal Regulations, Title 21, Parts 1000 to 1999. Compliance with the applicable regulations under the conditions of normal and abnormal operation has not been investigated by UL.

Some of the Medical Equipment Classifications are predicated on the provision of one of two alternate attachment plugs specifically referred to in Attachment Plugs, Fuseless (AXUT). One is a locking type identified by the marking "Hospital Only" and the other is a nonlocking type ANSI Standard configuration grounding type identified by the marking "Hospital Grade" and a green dot on the body. The identification is visible after installation on the flexible cord.

Baby incubators and similar equipment for use with oxygen-enriched atmospheres have been investigated with respect to the increased hazard resulting from the presence of oxygen and electrical parts within the equipment. Motor-operated beds are marked if they are suitable for use with oxygen.

Oil bath sterilizers and similar equipment have been investigated with respect to their use with oils such as are recommended by the sterilizer manufacturer.

Products covered under this category include equipment intended to be field installed, in accordance with the instructions provided, to Classified equipment of the same manufacturer. The field-installed equipment is appropriately marked as noted below.

Individual components of the end products in this category have been investigated to applicable UL component requirements. Also, investigation of components to applicable international component requirements has been performed by UL or other appropriate certifying agency (as determined by UL). UL Follow-Up Service at the end-product manufacturing facility also determines that such components continue to bear the appropriate designated certifying agency's mark.

REBUILT PRODUCTS

This category also covers medical equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt medical equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt medical equipment is subject to the same requirements as new medical equipment.

UNEVALUATED FACTORS

The physiological effects, beneficial or otherwise, which may be produced by this equipment have not been investigated.

RELATED PRODUCTS

Medical equipment that includes refrigerated components, such as refrigeration therapy equipment, is covered under Refrigerated Medical Equipment (SOPT).

Equipment investigated to determine its suitability for use in hazardous (classified) locations as defined in the NEC is covered under Medical Equipment for Use in Hazardous Locations (PINR).

For household health care equipment, see Personal Hygiene and Health Care Appliances (QGRZ). For heating pads, see Heating Pads, Electric (MNUV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60601-1 (formerly UL 2601-1), "Safety of Medical Electrical Equipment, Part 1: General Requirements." Note that although redesignated as UL 60601-1, UL 2601-1 is identical to UL 60601-1 except for formatting. Therefore, products identified as investigated to either standard are subject to identical technical requirements.

Particular Standards — UL 60601-1 contains requirements for safety which are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (IEC 60601-2-XX). However, unless otherwise indicated in the deviations, the requirements of a Particular Standard do not modify the deviations. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (IEC 60601-1-XX) such standard(s) may, optionally, also be used. Unless otherwise indicated in the deviations, the requirements of a Collateral Standard do not modify the deviations.

Product Marking (with respect to applicable standards) — As part of the Classification Mark, reference to UL 60601-1 and/or UL 2601-1 is included. For products that have been investigated to the applicable Particular (IEC 60601-2-XX) and/or Collateral (IEC 60601-1-XX) Standards, reference to these standards is made on the product or in the accompanying documents.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MEDICAL EQUIPMENT+
WITH RESPECT TO ELECTRICAL SHOCK, FIRE AND MECHANICAL
HAZARDS ONLY
IN ACCORDANCE WITH [standard*]
Control No.**

+ or other appropriate product name as shown in the individual Classifications

For rebuilt or remanufactured products the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name.

For field-installed products the words "Field Installed" precedes the product name.

Alternate Marking Options

1. The Classification Mark includes the UL symbol, the word "CLASSIFIED" above the UL symbol, the product name as described above, the phrase "SEE ACCOMPANYING DOCUMENTS," or the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 - Δ), the standard number* and a control number. As a minimum, the standard number* always includes UL 60601-1, UL 2601-1 or both. In addition, the product's accompanying documents will contain the complete Classification Mark.

2. For products with limited space for markings, the Classification Mark includes the UL symbol, the word "CLASSIFIED" above the UL symbol, the symbol of a triangle containing the exclamation point (IEC 348,

Symbol 14 - Δ), and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark.

3. For products (such as implantable devices) where the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or smallest unit container in which the product is packaged. The product's accompanying documents may also contain the complete Classification Mark.

* Based on the certification coverage of the product, the standard may be UL 60601-1, UL 2601-1 or both, applicable Particular (IEC 60601-2-XX) and/or related Collateral (IEC 60601-1-XX) Standards for which the product has been found to comply by UL.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEDICAL EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (PINR)**

GENERAL

This category covers portable suction, pressure and anesthesia units, portable baby incubators, surgical devices and similar equipment designed for professional use by attendants in hospitals. This equipment has been investigated solely from the standpoint of electrical, fire, explosion, and accident hazards. Other hazards, such as physiological effects, have not been investigated.

Except for low-voltage battery-powered devices, connections to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

These devices are intended for use in accordance with ANSI/NFPA 99, "Health Care Facilities Code."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medical Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEDIUM-VOLTAGE POWER CABLE
(PITY)**

GENERAL

This category covers medium-voltage cable rated 2400 to 35,000 V intended for use and installation in accordance with Article 328 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable is single or multiconductor, aluminum or copper, with solid extruded dielectric insulation and may have an extruded jacket, metallic covering or combination of both over the single conductors or over the assembled conductors in a multiconductor power cable.

All insulated conductors rated higher than 2400 V have electrostatic shielding. Cable rated 2400 V is nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90 or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only" indicating suitability for use only in dry locations at 90°C maximum.

Cable marked "Oil Resistant I" or "Oil Resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "Sunlight Resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays in accordance with Article 392 of the NEC is marked "For Use in Cable Trays" (or "For CT Use").

Cable with aluminum conductors is marked with the word "Aluminum" (or "AL").

The cable is marked with the conductor size, voltage rating and insulation level (100% or 133%).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium-Voltage Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEDIUM-VOLTAGE CABLE
CLASSIFIED IN ACCORDANCE WITH
UL 1072, WITH METRIC CONDUCTOR
SIZES (PIVW)**

GENERAL

This category covers medium-voltage cable rated 2400 to 35,000 V and in conductor sizes 10 through 500 sq mm.

The cable complies with all requirements specified in ANSI/UL 1072, "Medium-Voltage Power Cables," except that metric conductor sizes are used instead of AWG sizes. The cable is for use in jurisdictions where metric conductor sizes are required or permitted.

The cable is single or multi-conductor, aluminum or copper, with solid extruded dielectric insulation. An extruded jacket, metallic covering, or combination of both may be provided over single conductors or over the assembled conductors in a multi-conductor power cable.

All insulated conductors rated higher than 2400 V have electrostatic shielding. Cable rated 2400 V is nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

**MEDIUM-VOLTAGE CABLE CLASSIFIED IN ACCORDANCE
WITH UL 1072, WITH METRIC CONDUCTOR SIZES (PIVV)**
PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90°C or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only."

Cable marked "oil resistant I" or "oil resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "sunlight resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays is marked "For CT Use" or "For Use In Cable Trays."

Cable with aluminum conductors is marked with the word "Aluminum" or the letters "AL."

Cable is marked with conductor size in sq mm, voltage rating and insulation level (100% or 133%).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Classification Mark of UL on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below:

**MEDIUM VOLTAGE CABLE
CLASSIFIED BY UNDERWRITERS LABORATORIES INC®
IN ACCORDANCE WITH UL 1072, WITH METRIC
CONDUCTOR SIZES**

No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE (PJAZ)

GENERAL

This category covers Type MC metal-clad cable. The cable is rated for use up to 2000 V, and certified in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum or copper-clad aluminum, and employs thermoset or thermoplastic insulated conductors. It is intended for installation in accordance with Article 330 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable consists of one or more insulated circuit conductors, a grounding path (grounding conductor, metal sheath, or combination thereof) as described below, one or more optional optical fiber members, and an overall metal sheath. The metal sheath is an interlocked metal tape, a corrugated metal tube, or a smooth metal tube. The metal sheath of single-conductor cable is nonferrous. A nonmetallic jacket may be provided under and/or over the metal sheath. Cable with metal armor, rated 2400 to 35,000 V is covered under Medium-voltage Power Cable (PITY) and is marked "Type MV or MC."

Cable with interlocked armor that has been determined to be suitable for use as a grounding means has interlocked aluminum or steel armor in direct contact with a single, full-sized, bare aluminum grounding/bonding conductor. This cable is marked to indicate that the armor/grounding conductor combination is suitable for ground. The equipment grounding conductor required within all other cable with interlocked armor may be insulated or bare, may be sectioned, and is located in the cable core but not in contact with the armor. Any additional grounding conductors of either design have green insulation. One insulated grounding conductor may be unmarked, one other may have only a yellow stripe and the balance have surface markings that indicate they are additional equipment grounding conductors or isolated grounding conductors.

The sheath of the smooth or corrugated tube Type MC cable or a combination of the sheath and a supplemental bare or unstriped green insulated conductor is suitable for use as the ground path required for equipment grounding. The supplemental grounding conductor may be sectioned. When sectioned, all sections are identical. Each additional green insulated grounding conductor has either a yellow stripe or a surface marking or both to indicate that it is an additional equipment or isolated grounding conductor. Additional grounding conductors, however marked, are not smaller than the required grounding conductor.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

METAL-CLAD CABLE (PJAZ)

301

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-clad AL." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked. Cable marked for direct burial is also considered acceptable for encasement in concrete.

Cable marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" (or "Oil Res II").

Cable containing one or more optical fiber members is marked "MC-OF."

Cable with a nonmetallic outer jacket that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," and all unjacketed metal-clad cable may be marked with the suffix "-LS."

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

Cable intended for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D; Class II, Division 1, Groups E, F and G; Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC, is marked "MC-HL." See Cable for Use in Hazardous Locations (PJPP) for Certification Mark requirements for cable marked "MC-HL."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1569, "Metal-Clad Cables."

Cable marked "MC-HL" has been additionally investigated to ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE CONNECTORS, TYPE MC (PJOX)

GENERAL

This category covers fittings for use with metal-clad cable, Type MC, employing (a) interlocking aluminum or steel tape, (b) interlocking aluminum or steel armor ground cable, (c) smooth aluminum tube, or (c) corrugated aluminum or copper tube. The interlocking aluminum or steel armor ground cable is intended for use as a ground and is marked "Armor is equipment grounding path component." This product is intended for installation and use in accordance with the following information and the limitations specified in Metal-clad Cable (PJAZ).

All male threaded fittings have only been investigated for use with lock-nuts.

Connector Selection — Connectors are intended to be selected in accordance with the size and type of cable for which they are designated. Bronze connectors are intended for use only with cable employing corrugated copper tube. Aluminum connectors are intended for use only with cable employing corrugated aluminum, interlocking aluminum or smooth aluminum tube, unless marked otherwise on the carton (see **PRODUCT MARKINGS** below).

Use in Concrete — Fittings made of aluminum are not considered suitable for use in concrete or cinder fill unless protected with asphalt paint or the equivalent. Fittings suitable for use in concrete are identified by a marking on the carton.

Grounding — Metal-clad-cable connector and cable combinations in the following table are suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Cable	Connector Type
Interlocking aluminum or steel armor ground cable	MCIA
Corrugated aluminum or copper tube	MCC
Smooth aluminum tube	MCS

Connector types are specifically identified on the manufacturer's product or on the smallest unit container in which the product is packaged.

Dry and Wet Locations — Nonmetallic parts, such as glands or seals, are suitable for use at a temperature of 90°C in dry and wet locations. The fittings are suitable for use in dry or wet locations unless marked otherwise (see **PRODUCT MARKINGS** below).

Use with Armored Cable — Metal-clad-cable connectors also suitable for use with armored cable, Type AC, are so marked on the device or carton. Certified armored cable, Type AC, is covered under Armored Cable Connectors, Type AC (AWSX).

Use with Flexible Metal Conduit — Metal-clad-cable connectors also suitable for use with flexible metal conduit, Types FMC, RWFMC and XRWFMC, are so marked on the device or carton. Certified flexible metal conduit connectors, Types FMC, RWFMC and XRWFMC, are covered under Conduit Fittings (DWTI).

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

PRODUCT MARKINGS

Metal-clad-cable fittings or the smallest unit shipping cartons are marked with (1) the range of cable diameters and the type of cable sheath (corrugated, interlocking or smooth), (2) the material of the sheath (aluminum, copper or steel) for which they have been investigated, (3) "Concrete-tight" if suitable for use in poured concrete, (4) "For Type AC Cable" (or equivalent wording) if suitable for that use, and (5) "For FE or AL (unless for use with both FMC, RWFMC or XRWFMC" (or equivalent wording). See the following table for additional carton markings. Metal-clad-cable fittings suitable for use only in dry locations are marked "Dry Locations" on the device and smallest unit carton.

Type of Metal-clad Cable	Abbreviation
Metal-clad interlocking armor cable	MCI
Metal-clad interlocking armor ground cable	MCI-A
Metal-clad continuous smooth sheath armor cable	MCS
Metal-clad continuous corrugated sheath armor cable	MCC
Metal-clad continuous corrugated sheath armor cable, flat	FLAT

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-clad (Type MC) Cable Connector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH UL 1569, WITH METRIC CONDUCTOR SIZES (PJPJ)

GENERAL

METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH UL 1569, WITH METRIC CONDUCTOR SIZES (PJPJ)

This category covers Type MC metal-clad cable. It is rated for use up to 2000 V, and certified in sizes 1.5 through 35 sq mm copper, 4.0 through 35 sq mm aluminum or copper-clad aluminum and employs thermoset or thermoplastic insulated conductors.

The cable complies with all the requirements specified in UL 1569, "Metal-Clad Cables," except that metric conductor sizes are used instead of AWG/kcmil sizes. This cable is for use in jurisdictions where metric conductor sizes are required or permitted.

Type MC cable is of three designs (a) interlocked metal tape, (b) corrugated tube and (c) smooth tube, and all are intended for aboveground use except when marked for direct burial.

The armor of the interlocked metal tape type may or may not be used for grounding. Interlocked armor constructions that may be used as a ground path have a grounding/bonding conductor outside the cable core and in direct contact with the armor. Interlocked armor constructions that are not intended as a ground path have a grounding conductor inside the cable core and not in contact with the armor. The tube of corrugated or smooth tube Type MC Cable in combination with the equipment grounding conductor, when provided, is suitable for grounding; otherwise the tube by itself is suitable for grounding.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and sq mm size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-Clad AL." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked.

Cable marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" (or "Oil Res II").

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1569, "Metal-Clad Cable."

UL MARK

The Classification Mark of UL on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below using the appropriate product name: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-Clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-Clad Aluminum Cable."

[PRODUCT NAME]

CLASSIFIED BY UNDERWRITERS LABORATORIES INC. IN ACCORDANCE WITH UL 1569, WITH METRIC CONDUCTOR SIZES

No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CABLE FOR USE IN HAZARDOUS LOCATIONS (PJPP)

GENERAL

This category covers Type MC-HL metal-clad cable and Type ITC-HL instrumentation tray cable for use in Class I and II hazardous (classified) locations.

Type MC-HL cable is rated up to 35,000 V, and Listed in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum, or copper-clad aluminum, and employs thermoset- or thermoplastic-insulated conductors. It is intended for installation in accordance with Articles 330, 501 502 and 505 of ANSI/NFPA 70, "National Electrical Code"

(NEC). Cable containing conductors rated 2 kV may be used in circuits operating at 2 kV, nominal or less, in accordance with Articles 600 and 490 of the NEC. Cable containing conductors rated 5,000 to 35,000 V is intended for installation and use in accordance with Articles 328, 501, 502 and 505 of the NEC.

Type MC-HL cable consists of two or more insulated conductors, one or more grounding conductors, and an overall gas/vapor tight continuous corrugated metallic sheath. A nonmetallic jacket is provided over the metal sheath.

The equipment grounding conductor required within Type MC-HL cable may be insulated or bare and may be sectioned. Any additional grounding conductors have green insulation.

Type ITC-HL cable is rated for use on circuits up to 150 V and 5 A. The conductors are size 22 AWG through 12 AWG copper or thermocouple alloy with thermostat or thermoplastic insulation. The cable is intended for installation in accordance with Articles, 501, 502, 505 and 727 of the NEC.

Type ITC-HL cable consists of two or more insulated conductors, with an overall gas-/vapor-tight continuous corrugated metallic sheath and with nonmetallic jackets both under and over the metal sheath. An equipment-grounding conductor may be provided within a Type ITC-HL cable and may be insulated or bare.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown on the surface of a nonmetallic jacket. The cable is marked as described in Metal-clad Cable (PJAZ) or Instrumentation Tray Cable (NYTT), except the suffix “-HL” follows “MC” or “ITC.”

RELATED PRODUCTS

See Cable Fittings for Use in Hazardous Locations (CYMX) and Cable Fittings for Use in Class I, Zone Classified Hazardous Locations (CYM).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1569, “Metal-Clad Cables,” ANSI/UL 2250, “Instrumentation Tray Cable,” and UL 2225, “Metal-Clad Cables and Cable-Sealing Fittings for Use in Hazardous (Classified) Locations.”

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name “Metal-clad Cable for Use in Hazardous Locations”; metal-clad cable that contains aluminum conductors has the product name “Metal-clad Aluminum Cable for Use in Hazardous Locations” or “Instrumentation Tray Cable for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-MOUNTING EQUIPMENT (PJSR)

This category covers meter-mounting equipment, which consists of an enclosure, wiring terminals and provision for fastening the meter to the equipment. Meter-mounting equipment does not include a meter, overcurrent devices, instrument transformers, arcing or switching parts, or the like. A meter socket may include provisions for installation of current transformers within the meter socket enclosure.

Meter-mounting equipment is marked with a continuous amp rating and may, in addition, have a maximum use (intermittent) amp rating of not more than 125% of the continuous amp rating. Meter-mounting equipment accommodating two or more meters is marked with a continuous current line bus rating (may also be referred to as an overall assembly rating) and may, in addition, have an overall maximum use (intermittent) line bus rating (or overall assembly rating) of not more than 125% of the continuous line bus rating.

This equipment is intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is on a wiring diagram or other readily visible location and is independent of any marking on a terminal connector unless the terminal connector is an integral, nonremovable part of the meter socket jaw.

Wire connectors in Listed meter-mounting equipment are intended to accommodate one conductor only unless use with more than one conductor is clearly indicated on the wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 75°C ampacities for wire as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code” (NEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Section 310.15(B)(6) of the NEC. Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

Meter-mounting equipment is marked with the enclosure type described in Electrical Equipment for Use in Ordinary Locations (AALZ).

A post-mounted meter socket, having an open bottom for the entry of underground conductors, is provided with:

- A marking showing the final grade level, which should be no less than 2 ft (0.6 m) above the lower end of the enclosure for a self-supported post and 18 in. (457 mm) for a separately supported post, and
- Instructions for setting the post in concrete or for securing to other mounting support.

A pedestal-mounted meter socket is intended to be mounted on a concrete base through which the underground conductors enter the enclosure by means of conduit. Mounting pedestals constructed of a coated aluminum base are provided with recommended installation procedures to avoid damage to the pedestal.

Meter-mounting equipment with a mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions for the use of sealing facilities.

Unless marked otherwise, meter-mounting equipment with a post or pedestal is not intended to serve as the sole support of a mast for overhead wiring.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER FITTINGS (PJVV)

GENERAL

This category covers meter fittings, which are designed to accommodate bolt-in type watt-hour meters and similar meters.

Ratings of certified meter fittings are limited to 600 V ac maximum and 400 A maximum.

Meter fittings are marked with their short-circuit current rating in rms symmetrical amps. For short-circuit ratings exceeding 10 kA rms symmetrical, the marking includes the type and rating of overcurrent protection to be used with the meter fitting.

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, “Meter Sockets.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Meter Fitting.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-SOCKET BASES (PJWT)

GENERAL

This category covers meter-socket bases, which are bases intended to accommodate plug-in-type watt-hour and similar meters rated for use with current transformers. They are designed to be installed, with the meter, inside enclosures to allow for connection in accordance with ANSI/NFPA 70, “National Electrical Code.”

Meter-socket bases are rated 600 V ac maximum. Meter-socket bases rated over 30 A are marked with their short-circuit-current rating in rms symmetrical amps. For short-circuit-current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter-socket Bases (PJWT)—Continued

Meter-socket bases are marked with a continuous amp rating and may, in addition, have a maximum use (intermittent) rating of not more than 125% of the continuous amp rating.

RELATED PRODUCTS

Meter sockets with meters protruding through the enclosure are covered under Meter Sockets (PJYZ).

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unenclosed Meter Socket."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METERING TRANSFORMER CABINETS (PJXS)

GENERAL

This category covers metering transformer cabinets, which consist of an enclosure and provisions for accommodating current transformers. They do not include the current transformers. They may have provision for the mounting of plug-in-type watt-hour meters. They may also include wiring terminals and buses to accommodate bus-type current transformers.

Metering transformer cabinet interiors are intended for field installation into enclosures. Unless marked for use in a specific enclosure, wiring space has not been investigated.

Ratings of certified metering transformer cabinets and interiors are limited to 600 V ac maximum and 6000 A maximum.

Metering transformer cabinets intended for use with specific metering transformer cabinet interiors and the interiors themselves are marked with their short-circuit-current rating in rms symmetrical amps.

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metering Transformer Cabinet" or "Metering Transformer Cabinet Interior."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER SOCKETS (PJYZ)

GENERAL

This category covers meter sockets, which are complete enclosures accommodating plug-in-type watt-hour and similar meters. They provide terminating means for conductors of wiring systems recognized by ANSI/NFPA 70, "National Electrical Code."

The tightening torque required for terminal screws is specified by a marking.

Terminal-wire connectors may be omitted and, if omitted, a marking specifies which connectors are intended to be used. Instructions for the field installation of connectors are provided with the connectors.

Meter sockets are suitable for supply wiring to enter the enclosure from either the top or the bottom, unless the meter socket is marked "Overhead Feed Only" or "Underground Feed Only," or the equivalent. The marking "Top Feed" is considered equivalent to "Overhead Feed," and "Bottom Feed" is considered equivalent to "Underground Feed."

Meter Sockets (PJYZ)—Continued

The ratings of these meter sockets are limited to 600 V ac maximum and to 400 A maximum through any one meter.

Meter sockets rated over 30 A are marked with their short-circuit-current rating in rms symmetrical amps. For short-circuit-current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter sockets are marked with a continuous amp rating and may in addition have a maximum use (intermittent) amp rating of not more than 125% of the continuous amp rating.

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Socket."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-SOCKET ACCESSORIES (PKAX)

GENERAL

The category covers accessories intended for use with meter sockets, such as jumper covers, meter-socket extenders or other equipment.

Ratings of certified meter-socket accessories are limited to 600 V ac and 400 A maximum.

Meter-socket accessories are only considered suitable for use in meter sockets with a short-circuit-current rating not exceeding 10 kA rms symmetrical, unless the accessory is otherwise marked.

RELATED PRODUCTS

See Meter Sockets (PJYZ).

ADDITIONAL INFORMATION

For additional information, see Meter-mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Socket Accessory," "Temporary Jumper Cover Accessory" or "Meter Socket Extender," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER-SOCKET ADAPTERS FOR COMMUNICATIONS EQUIPMENT (POBN)

GENERAL

This category covers wireline and wireless communications equipment, and power supplies powering such equipment, installed in a meter-socket adapter. These devices may be connected on the line side of the service disconnect in accordance with Section 230.82(9) of ANSI/NFPA 70, "National Electrical Code." These devices are associated with network communications equipment powered at the premises and may also be associated with Smart Grid applications. Equipment may be provided with one- or two-way communication, by means of power-line carrier signals, telephone, cable, wireless communication, or other methods. This equipment may additionally provide signals for the control of electrical loads or electrical power generation equipment in response to signals received from the utility or local communication networks.

METER-SOCKET ADAPTERS FOR COMMUNICATIONS EQUIPMENT (POBN)

Meter-socket adapters for communications equipment do not include a meter and do not perform the function of metering utility power for the purpose of revenue billing, but may be used for the communication of such information. This category does not cover the performance characteristics associated with the transmission of metering data.

Meter-socket adapters for communications equipment do not include overcurrent devices for the electrical service. Overcurrent protection is provided for the communications equipment. A means to disconnect the communications equipment from the supply is provided as either an integral part of the equipment, or the communications equipment is disconnected from the source by removal of the meter.

Ratings for that portion of the adapter associated with the incoming power circuit are limited to 600 V ac and 400 A maximum. Adapters are marked with a continuous-current rating for the power circuit and may, in addition, have a maximum use (intermittent) current rating of not more than 125% of the continuous-current rating. Adapters rated over 30 A are marked with their short-circuit-current rating in rms symmetrical amperes and the maximum voltage rating for each marked short-circuit-current rating. Adapters rated 30 A or less (intended for use with current transformers) are not required to be marked with a short-circuit-current rating.

Meter-socket adapters for communications equipment are only considered suitable for use in meter sockets with a short-circuit-current rating not exceeding 10 kA rms symmetrical, unless the device is otherwise marked.

Devices suitable for outdoor use are so marked.

RELATED PRODUCTS

Meter sockets and related accessories are covered under Meter Sockets (PJYZ) and Meter-socket Accessories (PKAX).

Meter-socket bases are covered under Meter-socket Bases (PJWT).

Incomplete assemblies intended for use in other equipment to provide for the mounting of watt-hour meters are covered under Meter-socket Bases and Associated Assemblies (POCQZ).

Meter fittings are covered under Meter Fittings (PJVV).

Electric utility meters are covered under Meters, Electric Utility (POCZ).

Meters and other equipment for metering of electricity, other than Type A and Type S meters, are covered under Energy Usage Monitoring Systems (FTRZ).

Metering transformer cabinets are covered under Metering Transformer Cabinets (PJXS).

Energy management equipment that does not include electric metering is covered under Management Equipment, Energy (PAZX).

Type 1 surge-protective devices intended for installation on the line side of the service disconnect in meter-socket enclosures or adapters are covered under Surge-protective Devices (VZCA).

Transfer switches intended for mounting in a meter base, on the line side of the service disconnect switch, are covered under Meter-mounted Transfer Switches (WPXV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets," in addition to the requirements contained in UL Subject 2745, "Outline of Investigation for Meter Socket Adapters for Communications Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter-socket Adapter for Communications Equipment" (or "Meter-socket Adapter for Comm Equip").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METERS, ELECTRIC UTILITY (POCZ)

USE AND INSTALLATION

This category covers electric utility meters that measure, monitor, record, transmit, or receive electrical energy generation or consumption information. The primary function of these devices is to monitor energy consumption for the purpose of revenue metering.

Meters covered under this category include detachable (Type S) meters and nondetachable bottom-connected (Type A) meters. Plug-in-type meters are intended for installation in meter sockets, meter-socket bases, metering transformer cabinets, or other equipment (such as panelboards) incorporating provisions for plug-in-type meters.

METERS, ELECTRIC UTILITY (POCZ)

These devices may communicate with other devices by means of power-line carrier, satellite/radio frequency, telephone, cable or other means. Communication may be one- or two-way communication. One-way communication is typically for the purposes of data collection and/or reporting, including automated meter reading (AMR) capability. Two-way communication is typically used as part of an advanced metering infrastructure (AMI), which may include signaling other equipment in the infrastructure to take some action in response to electrical demand. This category does not cover any portion of the AMI other than the meter.

The ratings of equipment in this category are limited to 600 V ac maximum, with a maximum of 400 A through any one meter.

These meters are intended for installation in unclassified locations. These meters may or may not be under the exclusive control of the serving electric utility.

RELATED PRODUCTS

Meter-mounting equipment is covered under the following categories:

- Meter Sockets (PJYZ)
- Meter-socket Bases (PJWT)
- Metering Transformer Cabinets (PJXS)
- Meter Fittings (PJVV)

Energy management equipment that does not include electric metering is covered under Management Equipment, Energy (PAZX).

Meters and other equipment for metering of electricity, other than Type A and Type S meters, are covered under Energy Usage Monitoring Systems (FTRZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2735, "Outline of Investigation for Electric Utility Meters."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Utility Meter."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MICROWAVE AND CABLE COMMUNICATION EQUIPMENT (POFV)

This category covers microwave communication equipment, cable communication equipment, communication antennas and antenna positioning equipment intended for household or commercial use.

This equipment has been investigated with respect to risk of fire, electric shock and personal injury. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury have included only the equipment specifically noted in the individual Listings.

Video tape recorders, video cameras and related accessories are covered under Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MICROWAVE COMMUNICATION EQUIPMENT CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (POVJ)

These products are retrofit kits consisting of parts intended for field installation in microwave communication equipment. These products have been evaluated by UL to determine that when installed in accordance with the manufacturer's instructions they do not adversely affect the operation of the Specified Equipment. The installation instructions provided with each kit provide the information identifying the specific equipment into which the kit may be installed.

Microwave Communication Equipment Classified for Use in Specified Equipment (POVJ)—Continued

For additional information, see Microwave and Cable Communication Equipment (POFV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic Standard used to investigate these retrofit kits is UL 1409, Low-Voltage Video Products Without Cathode Ray Tube Displays.

The Classification Mark of UL on the product is the only method provided by UL to identify products which have been produced under its Classification and Follow-Up Service.

Manufacturers Installation Instructions.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MINERAL-INSULATED CABLE ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS (POWD)

GENERAL

This category covers lengths of certified mineral-insulated metal-sheathed cable with one or both ends factory terminated with a certified mineral-insulated cable fitting. The fittings provide threaded connection of the cable to hazardous locations equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MINERAL-INSULATED CABLE FITTINGS FOR USE IN HAZARDOUS LOCATIONS (POWX)

GENERAL

This category covers termination fittings for providing threaded connection of mineral-insulated cable to hazardous locations equipment.

These fittings are provided with a screw-on pot for sealing ends of cable with a special compound supplied by the manufacturer of fittings and a connector having conduit threads for attachment to hazardous locations equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Fitting for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MINERAL-INSULATED METAL-SHEATHED CABLE (PPKV)

GENERAL

This category covers mineral-insulated (Type MI) metal-sheathed cable, which consists of one or more solid copper conductors insulated with highly compressed magnesium oxide and enclosed in a continuous copper or alloy steel sheath, with or without a nonmetallic jacket. It is intended for use in accordance with Article 332 of NFPA 70, "National Electrical Code." Cable rated 600 V is labeled in sizes 16 AWG to 500 kcmil single conductor, 16 to 4 AWG two and three conductor, 16 to 6 AWG four conductor, and 16 to 10 AWG seven conductor constructions. Cable rated 300 V is labeled in two, three, four and seven conductor, sizes 18 to 16 AWG, for use on signaling circuits.

The copper sheath is suitable as an equipment grounding conductor. For cable with alloy steel outer sheath one of the conductors is to be used for equipment grounding.

Nonmetallic jackets or coatings have not been investigated for resistance to corrosion.

PRODUCT MARKINGS

Information regarding voltage rating, cable Type, and conductor size is shown either on a tag affixed to the reel or carton, or on the surface of the metal sheath. If a nonmetallic jacket is used, the information is printed on the surface of the jacket.

Cable with nonmetallic jackets has the following marking on a tag affixed to the reel or carton: "Not suitable for use in Ducts, Plenums or Other Spaces used for environmental air."

Cable with nonmetallic jackets marked "Not suitable for use on or in buildings" has not been investigated for fire retardance but are sunlight resistant.

Cable with nonmetallic jackets that has been investigated for use in cable trays is surface marked "CT Use" or "Cable Tray Use" and may additionally be marked "Sunlight Resistant" if applicable.

RELATED PRODUCTS

Terminations especially investigated for use with this cable are covered under Mineral-insulated-cable Fittings (PPYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of UL on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Metal-Sheathed Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MINERAL-INSULATED CABLE FITTINGS (PPYT)

GENERAL

This category covers fittings intended for use with mineral-insulated cable (Type MI) and small-diameter mineral-insulated cable. These fittings are suitable for use at a maximum operating temperature of 90°C in dry locations and 60°C in wet locations. A complete box connector consists of a connector body and a screw-on potting fitting. These fittings are intended for installation and use in accordance with the following information and the limitations specified in Mineral-insulated Metal-sheathed Cable (PPKV).

Mineral-insulated Cable Fittings (PPYT)—*Continued*

All male threaded fittings have only been investigated for use with lock-nuts.

Screw-on Potting Fitting — The screw-on potting fitting to be used with the connector may be used separately as an end fitting for change to open wiring. The screw-on potting fitting is intended to be assembled with a special tool and consists of a screw-on pot, insulating cap, insulating sleeving, anchoring bead, and sealing compound.

Grounding — These fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Reusability — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Mineral-insulated Metal-sheathed Cable (PPKV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Fitting," "Connector" or "Box Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MODULAR DATA CENTERS (PQVA)**GENERAL**

This category covers modular data centers (MDC), which are self-contained assemblies of information technology equipment (ITE) installed within prefabricated enclosures. MDCs may be provided with integral support equipment such as power distribution units, HVAC equipment, standby power, illumination and the like, that are required for the operation of the ITE. In some cases, the support equipment may be housed in its own separate enclosure, and certified as part of the MDC system. Modular data centers, as covered under this category, are sometimes referred to as "containerized data centers."

MDCs are comprised of the enclosure, all equipment and components located within the enclosure, and all components mounted to the walls of the enclosure.

MDCs may permit the temporary entry of authorized personnel within the enclosure for service, maintenance and upgrading of the ITE and associated support equipment. They are not intended to provide an occupied space (as in an office) for personnel.

MDCs are investigated as complete equipment including subassemblies, power distribution, cabling, cooling system components, lighting and the like, installed within the enclosure. Consideration has also been given to emergency egress of maintenance personnel and working space around equipment. MDCs are not investigated as an ITE room as described in ANSI/NFPA 75, "Fire Protection of Information Technology Equipment," and Article 645 of ANSI/NFPA 70, "National Electrical Code" (NEC).

When provided, fire protection and detection equipment has been investigated for compliance with the appropriate codes and standards applying to these installations, such as ANSI/NFPA 72, "National Fire Alarm and Signaling Code," ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems," ANSI/NFPA 12A, "Halon 1301 Fire Extinguishing Systems," and ANSI/NFPA 2001, "Clean Agent Fire Extinguishing Systems."

This category does not cover preconfigured ITE rooms that are shipped as individual pieces of equipment or subassemblies and assembled on-site.

USE AND INSTALLATION

These MDCs are rated 600 V or less and are intended to be installed in accordance with the NEC.

MDCs are pre-configured and, except as permitted below, are pre-assembled at the manufacturing location and are shipped and installed intact, requiring only electrical, network and cooling system hookups (when external cooling equipment is used) at the installation site.

An MDC may be shipped from the factory unassembled, or disassembled to the degree necessary to facilitate shipment. In some cases, sub-assemblies may be shipped separately for final assembly at the installation site. In these cases, the following apply:

1. All of the parts are furnished or specified by the manufacturer.
2. The specific location of the assemblies in the MDC and their methods of installation are predetermined by the manufacturer and are not dependent upon installation personnel.
3. Electrical connections used to connect the field-installed components within the cabinet are accomplished by means of plugs and receptacles, or other means that are in compliance with the NEC.
4. Detailed step-by-step installation instructions are provided in the form of installation instructions or a detailed installation practice.
5. Parts and subassemblies are marked with the assembly manufacturer's company name or logo, and a part number (P/N) or other type designation.

An MDC may be constructed with empty space or bays or empty shelf or rack space for the installation of ITE that is not specifically defined by, or under the control of, the MDC manufacturer. The generic type of ITE, together with its installation, connection and maximum ratings, is defined by the MDC manufacturer and this information is included in the system drawings and schematics. Maximum permissible weight loads of the auxiliary ITE is predetermined by the MDC manufacturer and this information is included in the installation instructions and system diagrams for the MDC. A marking is provided as part of, or in the vicinity of, the main MDC nameplate stating the following or its equivalent: "ATTENTION! This MDC is provided with space for the installation of auxiliary IT equipment that is not evaluated as part of the MDC certification. Refer to [drawing /document number] for a complete list of equipment that is included as part of the certification of this MDC. Unevaluated equipment is subject to inspection and approval by local authorities having jurisdiction."

Field-installed accessories to certified equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic certified equipment specified in the markings or instructions.

MDCs are intended for fixed installation. Unless otherwise identified, MDCs are intended for indoor installation. MDCs intended for outdoor use are marked "Outdoor Use," "Raintight" or "Rainproof," or are provided with a NEMA environmental class rating.

MDCs are intended for installation subject to approval by the Authority Having Jurisdiction (AHJ). AHJs should also be consulted if installation requires structural loading considerations.

Information concerning field-wiring connections, mounting location, site preparation, installation clearances, etc., is marked on the MDC and/or is provided in detailed installation instructions accompanying each MDC.

Working space within an MDC is evaluated as part of the equipment investigation. Access and working space around electrical equipment that is accessible from the outside of the MDC (such as an outward-facing panelboard or field-wiring compartment) is intended to comply with the applicable requirements in 110.26 of the NEC after the installation of one or more MDCs at a site.

The installation and arrangement of one or more MDCs at a site should not interfere with exits provided in the MDC.

MDCs often require special installation, such as a separate transformer, special grounding methods, motor-generator equipment, external chillers, etc. Such features, if required, are covered in the manufacturer's installation instructions.

MDC systems consisting of the main MDC enclosure housing the ITE and one or more accessory enclosures for power, cooling, etc., are investigated as a system and are identified as such in the individual certifications. The relationship and interconnections between the parts of the system are clearly identified in the manufacturer's installation instructions. Interconnecting power, signaling and communications wire and cable not investigated as part of an MDC system is intended to be installed in accordance with the applicable provisions of the NEC. The accessory equipment is marked with a reference to, and the identification of, the equipment with which it is intended to be used.

FIRE-RESISTANCE RATINGS

A fire-resistance rating for the MDC enclosure is not required but may be provided. When provided, all parts of the outer enclosure are rated based on testing as a nonbearing wall in accordance with ANSI/UL 263, "Fire Tests of Building Construction and Materials." The rating, if provided, is included in the individual certifications.

WIRING DIAGRAMS

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

FACTORS NOT INVESTIGATED

Other features that may affect the operation or performance of the installed equipment have not been investigated.

Mechanical structures that may be part of the final installation such as ramps, ladders, stairs, platforms and the like have not been investigated.

RELATED PRODUCTS

The installation of electrical systems in commercial or industrial prefabricated buildings and units is covered under Commercial and Industrial Prefabricated Buildings and Units (QRXA).

Information processing equipment including equipment investigated for installation in information technology equipment (computer) rooms as defined in ANSI/NFPA 75, "Fire Protection of Information Technology Equipment," and Article 645 of the NEC is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

External chillers and other cooling systems that are not part of a modular data center are covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2755, "Outline of Investigation for Modular Data Centers."

The basic standard used to investigate individual ITE used in MDCs in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Modular Data Center."

The Listing Mark for field-installed accessories or other accessory equipment covered under this category includes the word "Accessory" (e.g., "Modular Data Center Accessory").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR-GENERATOR SETS (PQYW)

USE

This category covers indoor-use motor-generator sets and frequency converters intended for use in accordance with ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

This category does not cover electrical-generating equipment driven by gasoline, LP-gas, or diesel-fueled internal-combustion engines. These products are covered under Engine Generators (FTSR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," ANSI/UL 1004-1, "Rotating Electrical Machines – General Requirements," and UL 1248, "Engine-Generator Assemblies for Use in Recreational Vehicles."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-Generator Set" or "Flywheel Energy Storage System," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS (PRGY)

USE

This category covers three-phase motors:

- intended to be field installed in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code" (NEC),
- 5 hp and larger,
- classified as NEMA Medium or NEMA Large as defined in NEMA MG-1, "Motors and Generators,"
- where the motor overtemperature protection required by Part III of Article 430 of the NEC is intended to be provided by a separate overload device or control.

INSTALLATION

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to

the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate raintight or wet-location hubs that comply with the requirements in ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," are intended to be used.

A separable conduit hub and a closure fitting is marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identifies the parts for bonding and specifies the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

PRODUCT MARKINGS

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

These motors are marked with:

- the manufacturer's name or identification,
- the motor catalog or model number,
- the rated voltage,
- the full-load amperes, watts or kilowatts, or both,
- the rated speed,
- the rated horsepower or output wattage,
- the rated temperature rise or the insulation system class,
- the rated ambient temperature,
- the rated frequency, expressed in one of the following terms: hertz; Hz; ac-dc (frequency in Hz)/dc (e.g., 60/dc); ac only; direct current,
- the number of phases.
- A continuous-duty motor is marked "Continuous" (or "CONT").
- A direct-current motor is marked to indicate the winding type: straight shunt, stabilized shunt, compound or series.
- A multi-speed motor is marked with the amperes and horsepower at each speed.

These motors are marked to indicate the temperature rating (e.g., 60°C only, 60/75, or 75°C only) of the field-installed conductors for which the equipment has been investigated.

A motor manufactured at more than one factory is marked to uniquely identify the factory of manufacture.

Motors equipped with electrically-powered condensation prevention heaters are marked with the rated heater voltage, number of phases, and the rated power in watts.

Air-over motors are marked "Air Over" (or "AO") or "Air-Over Motor" (or "AOM").

An alternating-current motor is marked with a code letter to indicate the locked-rotor amperes in accordance with the NEC.

A wound-rotor induction motor is marked with the secondary volts and full-load amperes.

A motor rated for short-time or intermittent duty is marked on the nameplate with the words "intermittent duty" (or "int. duty") and with the time rating in minutes or hours, or a combination of minutes and hours. The rating may be for "On" time only or include specifications for both "On" and "Off" periods.

If the acceptability of a Type 2 or 3R enclosure is dependent upon a particular mounting orientation, the enclosure is marked to indicate the required orientation.

A cast-metal enclosure marked Type 3, 3R, or 3S is marked to indicate that, after determining the mounting position of the enclosure, any holes drilled in the field are intended to be located in the lowest part of the bottom wall.

Exception: If a manufacturer intends that a cast-metal enclosure be acceptable for field drilling and tapping of holes for conduit connections, the enclosure is marked to indicate the location and trade sizes of conduit for which the enclosure has been found to be acceptable. If counter-boring is necessary to accommodate certain sizes of conduit, such information is also given.

Note: The instructions for drilling and tapping may be provided on an instruction sheet provided with the enclosure or marked on the packaging carton.

MOTORS (PRGY)

Any environmental-type enclosure intended for use with conduit hubs, and/or other field-installed equipment, but shipped from the factory without them, is marked or provided with instructions that identify the type of equipment intended to be used to maintain the environmental integrity of the enclosure. This may be accomplished by identifying the necessary environmental type designation or by identifying the specific manufacturer and model number of the field-installed equipment.

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations (PTDR), Motors, Specialty for Use in Hazardous Locations (PUCJ), and Motors, Division 2 for Use in Hazardous Locations (PTHE).

Motors incomplete in construction and intended for factory installation are covered under Motors (PRGY2).

Products Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZWKG).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1004-1, "Rotating Electrical Machines – General Requirements."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, INVERTER DUTY (PRHJ)

USE

This category covers squirrel cage, polyphase induction motors intended for use with variable voltage and variable frequency controls (commonly referred to as inverters) that are:

1. three-phase,
2. intended to be field installed in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code" (NEC),
3. 5 hp and larger,
4. classified as NEMA Medium or NEMA Large as defined in NEMA MG-1, "Motors and Generators," and
5. where the motor overtemperature protection required by Part III of Article 430 of the NEC is intended to be provided by a separate overload device or control.

The requirements for this category are intended to investigate the suitability of the motor for normal use when fed from an inverter supply through a manufacturer-declared range of operating conditions.

This category does not cover:

1. the efficacy of motor-temperature protection under abnormal conditions,
2. the operation of a motor under unusual service conditions as described in Part 31 of NEMA MG-1, nor
3. the operation of a motor in hazardous (classified) locations.

Though the motors covered under this category may be provided with Recognized overtemperature protection, the suitability of the overtemperature protection has not been investigated and must be determined in the end-use application.

INSTALLATION

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions, or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate that raintight or wet-location hubs complying with the requirements in ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," are intended to be used.

MOTORS, INVERTER DUTY (PRHJ)

309

A separable conduit hub and a closure fitting is marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identify the parts for bonding and specify the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

PRODUCT MARKINGS

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

These motors are marked with:

1. the manufacturer's name or identification,
2. the motor catalog or model number,
3. the rated voltage,
4. the full-load amperes, watts or kilowatts, or both,
5. the rated speed,
6. the rated horsepower or output wattage,
7. the rated temperature rise or the insulation system class,
8. the rated ambient temperature,
9. the rated frequency, expressed in one of the following terms: hertz (or Hz); ac-dc (frequency in Hz)/dc (e.g., 60/dc); ac only; direct current, and
10. the number of phases.
11. A continuous-duty motor is marked "Continuous" (or "CONT").
12. A direct-current motor is marked to indicate the winding type: straight shunt, stabilized shunt, compound or series.
13. A multi-speed motor is marked with the amperes and horsepower at each speed.

These motors are marked to indicate the temperature rating (e.g., 60°C only, 60/75, or 75°C only) of the field-installed conductors for which the equipment has been investigated.

Motors equipped with electrically-powered, condensation-prevention heaters are marked with the rated heater voltage, number of phases, and the rated power in watts.

Air-over motors are marked "Air Over" (or "AO") or "Air-Over Motor" (or "AOM").

An alternating-current motor is marked with a code letter to indicate the locked-rotor amperes in accordance with the NEC.

A wound-rotor induction motor is marked with the secondary volts and full-load amperes.

A motor rated for short-time or intermittent duty is marked on the nameplate with the words "intermittent duty" (or "int. duty") and with the time rating in minutes or hours, or a combination of minutes and hours. The rating may be for "On" time only or include specifications for both "On" and "Off" periods.

If the acceptability of a Type 2 or 3R enclosure is dependent upon a particular mounting orientation, the enclosure is marked to indicate the required orientation.

A cast-metal enclosure marked Type 3, 3R or 3S is marked to indicate that, after determining the mounting position of the enclosure, any holes drilled in the field are intended to be located in the lowest part of the bottom wall.

Exception: If a manufacturer intends that a cast-metal enclosure be acceptable for field drilling and tapping of holes for conduit connections, the enclosure is marked to indicate the location and trade sizes of conduit for which the enclosure has been found to be acceptable. If counter-boring is necessary to accommodate certain sizes of conduit, such information is also given.

Note: The instructions for drilling and tapping may be provided on an instruction sheet provided with the enclosure or marked on the packaging carton.

Any environmental-type enclosure intended for use with conduit hubs and/or other field-installed equipment, but shipped from the factory without them, is marked or provided with instructions that identify the type of equipment intended to be used to maintain the environmental integrity of the enclosure. This may be accomplished by identifying the necessary environmental type designation or by identifying the specific manufacturer and model number of the field-installed equipment.

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations (PTDR), Motors, Specialty for Use in Hazardous Locations (PUCJ), and Motors, Division 2 for Use in Hazardous Locations (PTHE).

Motors incomplete in construction and intended for factory installation are covered under Motors (PRGY2).

Motors Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZWKG).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1004-1, "Rotating Electrical Machines - General Requirements," and ANSI/UL 1004-8, "Inverter Duty Motors."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inverter-duty Motor."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SERVO AND STEPPER MOTORS (PRHZ)

USE

This category covers:

servo motors, defined as motors specially designed and built, having a high speed of response and designed for use in feedback control systems (servomechanisms), typically for precision positioning, and **stepper motors**, defined as brushless, synchronous electric motors that can divide a full rotation into a large number of steps.

These motors are intended to be field installed in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code."

This category covers the suitability of the motor for normal use when fed from an appropriate controller (drive) through its manufacturer-declared normal operating region.

This category does not cover the efficacy of motor overtemperature protection under normal or abnormal conditions, or the operation of a motor in hazardous (classified) locations.

Though these motors may be provided with overtemperature protection, the suitability of the overtemperature protection has not been investigated.

INSTALLATION

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source. The instructions also provide information concerning the type of load the motor can operate and, if needed, the type of protection.

An enclosed-type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions, or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate that raintight or wet-location hubs complying with the requirements in ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," are intended to be used.

A separable conduit hub and a closure fitting is marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identify the parts for bonding and specify the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

PRODUCT MARKINGS

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

All motors covered under this category are marked with:

1. the manufacturer's name or identification,

2. the motor catalog or model number,
3. the rated voltage,
4. the full-load amperes, watts or kilowatts, or both,
5. the rated speed,
6. the rated horsepower or output wattage,
7. the rated temperature rise or the insulation system class, and
8. the rated ambient temperature.

Servo motors are additionally marked with:

1. the continuous stall current,
2. the maximum rotational speed, and
3. the words "Servo Motor."

Stepper motors are additionally marked with:

1. the holding torque,
2. the maximum rotational speed, and
3. the words "Stepper Motor."

RELATED PRODUCTS

Electronically protected motors are covered under Electronically Protected Motors (XDNW2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1004-1, "Rotating Electrical Machines - General Requirements," and ANSI/UL 1004-6, "Servo and Stepper Motors."

Where indicated in the individual Listings, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Servo Motor" or "Stepper Motor."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS AND GENERATORS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PRSN)

MOTORS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PRZA)

USE

This category covers motors.

The Certification Mark on a motor applies to the motor, but not to any equipment driving or driven by the motor. In the case of a motor-generator set provided with a common base, the motor and generator each will bear its respective Certification Mark.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard use to investigate products in this category is ANSI/UL 1004-1, "Rotating Electrical Machines - General Requirements."

The hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Use in Class I, Zone 0, 1 and 2 Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, SPECIALTY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PRZM)

USE AND INSTALLATION

This category covers specialty motors.

These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

Unless otherwise marked, these motors are intended for use in ambient temperatures within the range of -20°C (-4°F) to +40°C (+104°F).

The Certification Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1004-1, "Rotating Electrical Machines - General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Specialty Motor for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS AND GENERATORS FOR USE IN HAZARDOUS LOCATIONS (PSBV)

GENERATORS FOR USE IN HAZARDOUS LOCATIONS (PSPT)

GENERAL

This category covers generators for use in Class I, Groups C and D; Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, generators for use in Class I and Class II hazardous locations are intended for use in ambient temperature within the range of -25°C (-13°F) to +40°C (+104°F).

The Certification Mark on a generator applies to the generator, but not to any equipment driving or driven by the generator. In the case of a motor generator set provided with a common base, the motor and generator will each bear its respective Certification Mark.

RELATED PRODUCTS

For rebuilt generators see Motors and Generators, Rebuilt for Use in Hazardous Locations (PTKQ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Generator for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Generators for Use in Hazardous Locations (PSPT)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS FOR USE IN HAZARDOUS LOCATIONS (PTDR)

GENERAL

This category covers motors for use in Class I, Groups B, C and D; Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, motors for use in Class I and Class II hazardous locations are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Certification Mark on a motor applies to the motor, but not to any equipment driving or driven by the motor. In the case of a motor generator set provided with a common base, the motor and generator each will bear its respective Certification Mark.

Some motors are provided with Recognized inherent overheating protective devices.

RELATED PRODUCTS

For rebuilt motors, see Motors and Generators, Rebuilt for Use in Hazardous Locations (PTKQ).

Products Verified for energy efficiency are covered under Electric Motors for Use in Hazardous Locations Verified for Energy Efficiency (ZWKL).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, DIVISION 2 FOR USE IN HAZARDOUS LOCATIONS (PTHE)

GENERAL

This category covers electric motors for use in Class I, Division 2, Groups A, B, C and D, and Class II, Division 2, Groups F and G hazardous (classified) locations.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the motor is acceptable for Groups A, B, C and D. The motor is also marked with the operating-temperature code designating the maximum internal or external surface temperature determined at rated full-load steady-state conditions, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current interrupting contacts immersed in oil, located in a nonincendive circuit, or located in a purged and pressurized enclosure. If the motor is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor is de-energized, and vice versa. The maximum surface temperature of the space heater is marked on the motor, if the temperature exceeds 80% of the operating temperature of the motor.

For Class II, Division 2 locations, the enclosure is of the totally enclosed type. The motor is marked with the operating temperature or operating-temperature code designating the maximum full-load external temperature determined at rated full-load steady-state conditions when operating in free air (not dust blanketed), if the external temperature is greater than 100°C.

RELATED PRODUCTS

For Division 1 motors, see Motors for Use in Hazardous Locations (PTDR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

MOTORS AND GENERATORS FOR USE IN HAZARDOUS LOCATIONS (PSBV)

Motors, Division 2 for Use in Hazardous Locations (PTHE)–Continued

The basic requirements used to investigate products in this category are contained in UL Subject 1836, "Outline of Investigation for Electric Motors and Generators for Use in Class I, Division 2 and Class II, Division 2 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Division 2 Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS AND GENERATORS, REBUILT FOR USE IN HAZARDOUS LOCATIONS (PTKQ)

USE

This category covers rebuilt motors and generators for use in Class I, Groups B, C and D, and Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, rebuilt motors and generators for use in Class I and Class II hazardous locations are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Certification Mark on a rebuilt motor or generator applies to the motor or generator, but not to any equipment driven by or driving the motor or generator. In the case of a rebuilt motor-generator set provided with a common base, the motor and generator will each bear its respective Certification Mark.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Electric Motor for Hazardous Locations" or "Rebuilt Electric Generator for Hazardous Locations."

The Listing Mark on a rebuilt motor or generator applies to the motor or generator, but not to any equipment driven by or driving the motor or generator. In the case of a rebuilt motor-generator set provided with a common base, the motor and generator will each bear its respective Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS, SPECIALTY FOR USE IN HAZARDOUS LOCATIONS (PUCJ)

USE AND INSTALLATION

This category covers specialty motors for use in Class I, Groups B, C and D; Class II, Groups E, F and G hazardous (classified) locations.

These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

Unless otherwise marked, these motors are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Certification Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

MOTORS AND GENERATORS FOR USE IN HAZARDOUS LOCATIONS (PSBV)

Motors, Specialty for Use in Hazardous Locations (PUCJ)–Continued

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOUNTING POSTS AND PEDESTALS FOR DISTRIBUTION EQUIPMENT

(PUPR)

GENERAL

This category covers mounting posts and pedestals rated 600 V ac or less. They are intended to serve as a raceway for underground wiring that is being brought above grade to feed an outdoor electrical distribution device, such as a power outlet, panelboard, meter socket, circuit breaker enclosure or the like. They are intended to support the distribution device, which is installed either in the factory or in the field. They may contain electrical termination points for underground wiring and for wiring to the distribution device.

USE AND INSTALLATION

A mounting post is intended to be mounted in concrete at grade level or below, or is intended to be secured to some other mounting support.

A mounting pedestal is intended to be mounted to a concrete slab.

A mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions indicating the correct mounting procedure.

Unless marked otherwise, a mounting post or pedestal is intended to be self-supporting and is not intended to serve as the support of a mast for overhead wiring.

Investigation of posts and pedestals include a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

PRODUCT MARKINGS

Mounting posts and pedestals are marked to indicate the electrical distribution unit(s) with which they are intended to be used.

A mounting post is marked with a grade level line to which the post is intended to be encased.

Posts and pedestals are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and shall be on a wiring diagram or other readily visible location.

Unless the equipment is marked with both the size and temperature rating of wire to be used, the termination provisions on equipment are based on the use of 60°C wire ampacities for wire sizes 14-1 AWG, and 75°C wire ampacities for wire sizes 1/0 AWG and larger.

RELATED PRODUCTS

Termination boxes are covered under Termination Boxes (XCKT).

Equipment connected only by busbars to both input and output circuits and equipment known as "end cable tap boxes" are covered under Busways and Associated Fittings (CWFT).

Equipment containing switching devices, relays or overcurrent devices is covered under the appropriate category; see Switchboards, Dead-front (WEVZ), Industrial Control Panels (NITW) or Panelboards (QEUY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1773, "Termination Boxes."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mounting Post and Pedestal."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTIOUTLET ASSEMBLIES (PVG T)

GENERAL

This category covers multioutlet assemblies, accessories for use with multioutlet assemblies, and factory-assembled wiring kits intended for installation into multioutlet assemblies.

Multioutlet assemblies consist of an enclosure or raceway and outlet wiring devices that provide power for connection of utilization equipment. Multioutlet assemblies are intended for use in dry locations, other than hazardous (classified) locations, in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). Multioutlet assemblies are intended to be connected to permanently installed branch circuits operating at frequencies between 50 and 400 Hz and dc (direct current) circuits.

A multioutlet assembly may be provided with channels for additional power circuits, control circuits, power-limited circuits and communication-circuit wiring for audio, video and data.

Accessories are parts that may be added to a multioutlet assembly either by the manufacturer or by the installer to add functionality, e.g., hangers, retainers, luminaires, remote-control modules, signs.

Wiring kits are assemblies of conductors and devices, such as receptacle outlets, switches, etc., that are supplied as a wiring system for use in specific multioutlet assemblies.

A part used to connect, change direction, or terminate a multioutlet assembly (e.g., a transition coupler, an end cap, a corner, a tee, an adapter, a box) or a specific wiring device that completes the system is covered under Multioutlet Assembly Fittings (PVUR).

USE AND INSTALLATION

Multioutlet assemblies have not been investigated for use in general patient care areas or critical patient care areas of health care facilities as defined in Article 517 of the NEC.

Multioutlet assemblies are intended for installation in accordance with Article 380 of the NEC.

Instructions for Multioutlet Assemblies Investigated to UL Subject 111, "Outline of Investigation for Multioutlet Assemblies"

When installation instructions are not provided with the multioutlet assembly, the multioutlet assembly is marked with the following or equivalent: "Installation and operation instructions for model ___ are available at http://www.____.com/___/." The blanks are filled in with the model number and URL address where the actual instructions can be viewed, downloaded and/or printed.

A multioutlet assembly intended to be mounted on or into a work surface is investigated for use with one of the following specific types of work surfaces:

1. Dry-use work surface (e.g., office desk, table)
2. A work surface located directly adjacent to a lavatory or other water source (e.g., counter adjacent to a kitchen sink)

Hardware, accessories and fittings are provided with the multioutlet assembly or are specified in the instructions.

Instructions for the installation of accessories and wiring kits indicate the specific multioutlet assemblies for which they are intended to be used. Instructions are provided on or with the accessory or wiring kit.

PRODUCT MARKINGS

Specific Product Markings for Multioutlet Assemblies Investigated to ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings"

Separate channels may be provided in multioutlet assemblies where the product is marked to indicate the number, type and size of additional conductors that may be field installed.

Specific Product Markings for Multioutlet Assemblies Investigated to UL Subject 111

Multioutlet Assemblies Investigated to UL Subject 111

Multioutlet assemblies investigated to UL Subject 111 are marked with one of the following Type markings:

Type A — A multioutlet assembly that provides all the required parts and incorporates factory pre-wired power (mains) conductors to the wiring devices and accessories. The field-wiring connection consists of one of the following: conduit whip, armored cable, manufactured wiring system, office-furnishing wiring system, pigtail lead or terminal block, or is intended to terminate on installed device wiring terminals. Pre-wired communications wiring may be provided. No additional unwired raceways for power or communications conductors are provided. No field-wired accessories are provided for the system.

Type A1 — Identical to a Type A multioutlet assembly except additional unwired raceways for power and/or communications conductors may be provided, or accessories may be provided with the system but are not pre-wired or installed at the factory.

Type B — A multioutlet assembly that provides for the installation, routing and termination of the branch-circuit-conductor wiring within the multioutlet assembly in the field. Wiring devices, fittings and accessories are provided with the system but are not pre-wired and installed at the factory.

Type C — A multioutlet assembly that does not include factory-installed conductors, wiring devices or accessories, but has factory-provided openings for wiring devices or accessories. This type of multioutlet assembly is marked for use with the specific kit(s) that may be shipped with the multioutlet assembly or shipped separately from the multioutlet assembly for field installation.

A Type A1 or B multioutlet assembly provided with a raceway for field-installed conductors is marked "Field-wiring Raceway" or an equivalent statement on the cover or inside wall of the raceway. These assemblies are also marked, on their base or cover and in the installation instructions, with the number, type and size of insulated conductors for which the multioutlet assembly was investigated.

A wiring compartment of a multioutlet assembly intended for use only with Class 2 circuits is marked "For Class 2 Circuits Only."

A multioutlet assembly and component parts that are disassembled for shipment are marked to associate the separable parts. The following or equivalent statement is provided on the parts: "Multioutlet assembly part ___ for use with ___." The marking may be on the part or on the smallest unit container of parts.

Accessories

An electrical accessory that is a load on a circuit is marked with its electrical rating.

An accessory intended for installation on a suspended multioutlet assembly is marked with the weight of the accessory.

Wiring Kits

A wiring kit is marked with a flag label attached to the conductor(s) with a distinctive catalog number or the equivalent.

RELATED PRODUCTS

Raceway assemblies that incorporate ground-fault circuit interrupter receptacles and no other outlets are covered under Ground-fault Circuit Interrupters (KCXS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," or the requirements contained in UL Subject 111, "Outline of Investigation for Multioutlet Assemblies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multioutlet Assembly," "Multioutlet Assembly Accessory" or "Multioutlet Assembly Wiring Kit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTIOUTLET ASSEMBLY FITTINGS (PVUR)

USE AND INSTALLATION

This category covers multioutlet assembly fittings used to connect, change direction, or terminate a multioutlet assembly (e.g., a transition coupler, an end cap, a corner, a tee, an adapter, a box) or which are specific wiring devices that complete the system.

Multioutlet assembly fittings are intended for installation in accordance with Article 380 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Multioutlet Assemblies (PVG T) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," or the requirements contained in UL Subject 111, "Outline of Investigation for Multioutlet Assemblies."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

Multioutlet Assembly Fittings (PVUR)—*Continued*

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Outlet Assembly Fitting," "Elbow" or "End Fitting," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY (PVVA)

GENERAL

This category covers multi-point interconnection power cable assemblies intended for use in an industrial environment to distribute power to branch circuits, including motor branch circuits, of industrial machinery. The assemblies may consist of power cable assemblies, male and female power cable fittings, panel-mounted power cable/conductor fittings and feeder-tap power cable fittings used with industrial machinery in accordance with ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

This category does not cover male-to-male cable assemblies or multi-outlet fittings.

Product Types

The following products are covered under this category:

Power Cable Assemblies — These assemblies consist of a length of flexible cord or cable with a molded-on or assembled-on male or female power cable fitting on at least one end of the cable.

Male and Female Power Cable Fittings — These fittings are intended to be field-wired onto flexible cord or cable with either a male or female insert. The diameter and the wire size of the flexible cord or cable to which the fitting is intended to be assembled is marked on the individual fitting or on the smallest unit shipping container.

Panel-mounted Power Cable/Conductor Fittings — These fittings consist of a panel-mounted assembly with either a male or female insert. Each assembly is provided with a means to secure to an enclosure of the industrial machinery.

Feeder-tap Power Cable Fittings — These fittings are intended for feed-through termination to tray cable or other appropriate cable, together with either a female interconnection device to terminate to a cable assembly or to connect to flexible cord or cable suitable for hard use, that is the same size and ampacity as the feeder cable.

SPECIAL CONSIDERATIONS

The power cable assemblies and mating fittings are not intended to be used as a substitute for the fixed wiring of the building structure. The power cable assemblies and mating fittings may be connected to the fixed wiring of the building structure, using a feeder-tap fitting or male/female cable fittings.

These devices are intended for use only with the Listee's same line of products covered under this category.

Power cable assemblies and fittings covered under this category are not intended to make or interrupt current under load conditions.

These devices are intended for indoor use only, unless otherwise so identified.

RATINGS

These power cable assemblies are rated 600 V or less. Each power cable assembly and fitting is rated in volts and amperes. The electrical ratings are marked on each device or on a flag label affixed to each individual power cable assembly.

These power cable assemblies and fittings have been investigated for their marked short-circuit current rating. Power cable assemblies and fittings may specify a maximum ampere rating, type of overcurrent protective device, or both. Unless otherwise marked, the power cable assemblies and fittings are intended to be supplied from an overcurrent protective device of the maximum ampere rating permitted by Table 7.2.10.4 of ANSI/NFPA 79.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2237, "Multi-Point Interconnection Power Cable Assemblies for Industrial Machinery."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to

identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-point Interconnection Assembly," "Power Cable Assembly for Industrial Machinery" or "Power Cable Fitting for Industrial Machinery."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN HAZARDOUS LOCATIONS (PVVJ)

GENERAL

This category covers multi-point interconnection power cable assemblies intended for use in industrial establishments with restricted public access in locations that are classified as a Class I, Division 2 location. The assemblies may consist of power cable assemblies, power cable plugs and sockets, and panel-mounted power cable/conductor plugs and sockets used for interconnection

between one piece of electrical equipment and another piece of electrical equipment (by means of a cable or cord assembly involving plugs and sockets on both ends, or a plug and socket on one end and unterminated cable or cord on the other), or

between premises wiring and a piece of electrical equipment (by means of a cable or cord assembly involving a socket on the equipment end and unterminated cable or cord on the premises wiring end).

This interconnection is in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

Each cable assembly is provided with means to mechanically secure the plug or socket on either end of the cable assembly to the intended equipment plug or socket. The means used to provide this mechanical securement is constructed as follows:

1. separation shall be possible only with the aid of a tool,
2. when not secured, the means shall be captive to the cable assembly, and
3. a marking is provided that is likely to be readily visible after installation that reads, "WARNING - Do Not Connect or Disconnect When Energized," or equivalent.

Note: The warning marking may be on the securement means or on the cable assembly. It may be necessary to provide more than one warning marking for ready visibility.

Instructions are provided indicating that, should the cable assembly become separated from the intended equipment plug or socket, the part that remains energized is a socket outlet.

This category does not cover cable assemblies with plugs on both ends, but does cover cable assemblies with multiple sockets.

Product Types

The following products are covered under this category:

Power Cable Assemblies — These assemblies consist of a length of cord or cable as follows:

1. extra-hard-usage cord,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits.

Note: See the following Code references for additional details on these wiring methods:

For extra-hard-usage cord, see Article 400 of the NEC.

For instrumentation tray cable (Type ITC), see Article 727 of the NEC.

For power-limited tray cable (Type PLTC), see Article 725 of the NEC.

The cord or cable is terminated on at least one end with a molded-on or assembled-on plug or socket.

Power Cable Plugs and Sockets — These plugs and sockets are intended to be field wired or molded onto cord or cable as indicated under **Power Cable Assemblies** above, with either a male or female insert. The diameter and the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket, or the smallest unit shipping container.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN HAZARDOUS LOCATIONS (PVVJ)

Panel-mounted Power Cable/Conductor Plugs and Sockets — These plugs and sockets consist of a panel-mounted assembly with either a plug or socket. Each assembly is provided with a means to secure to an enclosure of the industrial machinery.

RATINGS

These power cable assemblies are rated based on the involved cord or cable as follows:

1. extra-hard-usage cord for applications involving circuits operating at 600 V or less and 60 A or less,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits operating at 150 V or less and 5 A or less, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power source.

Each power cable assembly and plug and socket is rated in volts and amperes. The electrical ratings are marked on each device or on a flag label affixed to each individual power cable assembly.

These power cable assemblies and plugs and sockets have been investigated for their marked short-circuit-current rating. Power cable assemblies and plugs and sockets may specify a maximum ampere rating, type of overcurrent protective device, or both. Unless otherwise marked, the power cable assemblies and plugs and sockets are intended to be supplied from an overcurrent protective device of the maximum ampere rating permitted by Table 7.2.10.4 of ANSI/NFPA 79.

SPECIAL CONSIDERATIONS

The power cable assemblies and mating plugs and sockets are not intended to be used as a substitute for the fixed wiring methods required by 501.10 of the NEC.

These power cable assemblies and mating plugs and sockets are intended for use only with the Listee's same line of power cable assemblies and mating plugs and sockets covered under this category.

Power cable assemblies and plugs and sockets covered under this category are not intended to make or interrupt current under load conditions.

These devices are intended for indoor use only, unless otherwise so identified.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations requirements used to investigate products in this category are contained in UL Subject 2237, "Outline of Investigation for Multi-Point Interconnection Power Cable Assemblies for Industrial Machinery."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Note: The unclassified locations use of the term "fitting" in UL Subject 2237 is equivalent to the hazardous (classified) locations use of the terms "plug" or "socket."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-point Interconnection Assembly for Industrial Machinery for Use in Hazardous Locations," "Power Cable Assembly for Industrial Machinery for Use in Hazardous Locations," "Power Cable Plug for Industrial Machinery for Use in Hazardous Locations" or "Power Cable Socket for Industrial Machinery for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PVVM)

GENERAL

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PVVM)

This category covers multi-point interconnection power cable assemblies intended for use in industrial establishments with restricted public access in locations that are classified as a Class I, Zone 2 location. The assemblies may consist of power cable assemblies, power cable plugs and sockets, and panel-mounted power cable/conductor plugs and sockets used for interconnection

between one piece of electrical equipment and another piece of electrical equipment (by means of a cable or cord assembly involving plugs and sockets on both ends, or a plug and socket on one end and unterminated cable or cord on the other), or between premises wiring and a piece of electrical equipment (by means of a cable or cord assembly involving a socket on the equipment end and unterminated cable or cord on the premises wiring end).

This interconnection is in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

Each cable assembly is provided with means to mechanically secure the plug or socket on either end of the cable assembly to the intended equipment plug or socket. The means used to provide this mechanical securement is constructed as follows:

1. separation shall be possible only with the aid of a tool,
2. when not secured, the means shall be captive to the cable assembly, and
3. a marking is provided that is likely to be readily visible after installation that reads, "WARNING - Do Not Connect or Disconnect When Energized," or equivalent.

Note: The warning marking may be on the securement means or on the cable assembly. It may be necessary to provide more than one warning marking for ready visibility.

Instructions are provided indicating that, should the cable assembly become separated from the intended equipment plug or socket, the part that remains energized is a socket outlet.

This category does not cover cable assemblies with plugs on both ends, but does cover cable assemblies with multiple sockets.

Product Types

The following products are covered under this category:

Power Cable Assemblies — These assemblies consist of a length of cord or cable as follows:

1. extra-hard-usage cord,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits.

Note: See the following Code references for additional details on these wiring methods:

- For extra-hard-usage cord, see Article 400 of the NEC.
- For instrumentation tray cable (Type ITC), see Article 727 of the NEC.
- For power-limited tray cable (Type PLTC), see Article 725 of the NEC.

The cord or cable is terminated on at least one end with a molded-on or assembled-on plug or socket.

Power Cable Plugs and Sockets — These plugs and sockets are intended to be field wired or molded onto cord or cable as indicated under **Power Cable Assemblies** above, with either a male or female insert. The diameter and the wire size of the field-wired cord or cable to which the plug or socket is intended to be assembled is indicated on the plug or socket, or the smallest unit shipping container.

Panel-mounted Power Cable/Conductor Plugs and Sockets — These plugs and sockets consist of a panel-mounted assembly with either a plug or socket. Each assembly is provided with a means to secure to an enclosure of the industrial machinery.

RATINGS

These power cable assemblies are rated based on the involved cord or cable as follows:

1. extra-hard-usage cord for applications involving circuits operating at 600 V or less and 60 A or less,
2. instrumentation tray cable (Type ITC) for applications involving instrumentation and control circuits operating at 150 V or less and 5 A or less, or
3. power-limited tray cable (Type PLTC) for applications involving remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power source.

Each power cable assembly and plug and socket is rated in volts and amperes. The electrical ratings are marked on each device or on a flag label affixed to each individual power cable assembly.

These power cable assemblies and plugs and sockets have been investigated for their marked short-circuit-current rating. Power cable assemblies and plugs and sockets may specify a maximum ampere rating, type of overcurrent protective device, or both. Unless otherwise marked, the power cable assemblies and plugs and sockets are intended to be supplied

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PVVM)

316

from an overcurrent protective device of the maximum ampere rating permitted by Table 7.2.10.4 of ANSI/NFPA 79.

SPECIAL CONSIDERATIONS

The power cable assemblies and mating plugs and sockets are not intended to be used as a substitute for the fixed wiring methods required by 505.15 of the NEC.

These power cable assemblies and mating plugs and sockets are intended for use only with the Listee's same line of power cable assemblies and mating plugs and sockets covered under this category.

Power cable assemblies and plugs and sockets covered under this category are not intended to make or interrupt current under load conditions.

These devices are intended for indoor use only, unless otherwise so identified.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations requirements used to investigate products in this category are contained in UL Subject 2237, "Outline of Investigation for Multi-Point Interconnection Power Cable Assemblies for Industrial Machinery."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

Note: The unclassified locations use of the term "fitting" in UL Subject 2237 is equivalent to the hazardous (classified) locations use of the terms "plug" or "socket."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-point Interconnection Assembly for Industrial Machinery for Use in Hazardous Locations," "Power Cable Assembly for Industrial Machinery for Use in Hazardous Locations," "Power Cable Plug for Industrial Machinery for Use in Hazardous Locations" or "Power Cable Socket for Industrial Machinery for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MUSICAL INSTRUMENTS (PWHZ)

USE

This category covers electrical devices that produce music under the direct control of the player. This category also covers accessories for use with musical instruments, such as rhythm generators, tone cabinets, music tuners, and the like.

RELATED PRODUCTS

Devices that reproduce music from records, magnetic tape or other recording media are covered under Commercial Audio and Radio Equipment, Systems and Accessories (AZIX) and Commercial Phonographs, Tape-playing and Recording Appliances and Accessories (AZQW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 469, "Musical Instruments and Accessories," UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use," or ANSI/UL 60065, "Audio, Video, and Similar Electronic Apparatus - Safety Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Musical Instrument," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NEON TRANSFORMERS AND POWER SUPPLIES (PWIK)

NEON TRANSFORMERS AND POWER SUPPLIES (PWIK)

USE

This category covers indoor and outdoor use neon transformers and power supplies intended for use with display signs, outline lighting and luminaires employing gas-filled glass tubing identified as neon or electric discharge tubing.

These transformers and power supplies have been investigated for the secondary-circuit ground-fault protection requirements in ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers neon transformer and power-supply accessories intended for use with specific neon transformers and power supplies.

PRODUCT MARKINGS

Transformers and power supplies covered under this category are marked "Indoors," "Outdoors," or "Weatherproof" or "WP." Products marked "Indoors" are only suitable for use indoors, and products marked "Outdoors" are suitable for use indoors or outdoors sheltered from rain, snow and the like by being located within a sign body, enclosure and the like. Products marked "Weatherproof" or "WP" do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 8 in association with the location designation "Indoors," "Outdoors," "Weatherproof" or "WP." These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

- **Type 2** - Neon supply with input and output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 3** - Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, and with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 4** - Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.
- **Type 5** - Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system and provided with integral receptacles for output connection.
- **Type 6** - Cord-connected neon supply provided with integral receptacles for output connection.
- **Type 7** - Cord-connected neon supply with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 8** - Cord-connected neon supply with enclosed output terminals or leads.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations (AALZ).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

Transformers and power supplies marked "For Moving Vehicle Use Only" are intended for use only in moving vehicles and not for use in a freestanding sign, or building-mounted sign or outline lighting product.

Neon transformer and power-supply accessories are marked "For Use With XXX Neon Transformer" or "For Use With XXX Neon Power Supply," where "XXX" indicates the model number, catalog number, part number, or other specific identifier of the neon transformer or neon power supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2161, "Neon Transformers and Power Supplies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Neon Transformer," "Neon Power Supply," "Neon Transformer Accessory" or "Neon Power Supply Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NETWORK-POWERED BROADBAND COMMUNICATIONS CABLE (PWIP)

USE

This category covers network-powered broadband communications cable, which is a jacketed single-conductor coaxial cable or a multiple-conductor jacketed cable, consisting of a combination of coaxial members, insulated conductors and/or optic fiber members. The cable is intended for use in low-power and medium-power circuits in accordance with Article 830 of ANSI/NFPA 70, "National Electrical Code" (NEC). All Types, with the exception of Types BLU and BMU, have been investigated for use where exposed to the direct rays of the sun.

PRODUCT MARKINGS

Network-powered broadband communications cable is identified by markings on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

BMU — Indicates medium-power cable intended for outdoor underground use in accordance with Section 830.151(C) of the NEC.

BM — Indicates medium-power cable intended for general use within buildings in accordance with Section 830.151(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," or as an alternative, the damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BMR — Indicates medium-power cable intended for use within buildings in vertical shafts in accordance with Section 830.151(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested in accordance with ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

BLP — Indicates low-power cable intended for use in ducts or plenums or other spaces used for environmental air in accordance with Section 830.154(B) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-propagation distance of 5 ft, when tested in accordance with ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

BLR — Indicates low-power cable intended for use within buildings in vertical shafts in accordance with Section 830.154(C) of the NEC. The flame propagation height of this cable is less than 12 ft. when tested in accordance with UL 1666.

BL — Indicates low-power cable intended for general use within buildings in accordance with Section 830.154(D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, or as an alternative, the damage height of this cable does not exceed 4 ft. 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BLU — Indicates low-power cable intended for outdoor underground use in accordance with Section 830.154(D)(3) of the NEC.

BLX — Indicates low-power cable intended for limited use within buildings in accordance with Sections 830.154(D)(2), (4) and (5) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

Cable that contains one or more optical-fiber members has the suffix "OF" added to the above.

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2261, "Outline of Investigation for Cables for Network-Powered Broadband Communications Systems."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Network-powered Broadband Communications Cable."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufac-

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE (PWVX)

USE

This category covers Types NM-B and NMC-B nonmetallic-sheathed cable, rated 600 V, intended for use in accordance with Article 334 of ANSI/NFPA 70, "National Electrical Code" (NEC), and certified in copper sizes 14 to 2 AWG inclusive and aluminum or copper-clad aluminum sizes 12 to 2 AWG inclusive.

This cable contains conductors rated 90°C; however, the ampacities of the cable are those of 60°C conductors as specified in Article 334 and Table 310.16 of the NEC.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surface marked "AL (CU-CLAD)" or "Cu-clad Al," and cable with aluminum conductors is surface marked "AL."

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays is appropriately marked. Cable marked for cable tray use may also have a supplementary sunlight resistant marking.

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked "ST1."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 719, "Nonmetallic-Sheathed Cables."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Nonmetallic-sheathed cable that contains copper or copper-clad aluminum conductors has the product name "Nonmetallic-sheathed Cable"; nonmetallic-sheathed cable that contains aluminum conductors has the product name "Nonmetallic-sheathed Aluminum Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED-CABLE CONNECTORS (PXJV)

GENERAL

This category covers connectors intended for use with nonmetallic-sheathed cable. These connectors are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations unless otherwise indicated on the carton. These connectors are intended for installation and use in accordance with the following information and the limitations specified in Nonmetallic-sheathed Cable (PWVX).

All male threaded fittings have only been investigated for use with lock-nuts.

Single Cable — If single-conductor Type UF cable is terminated with a fitting not specifically recognized for use with single-conductor cable, special care should be taken to ensure it is properly secured and not subject to change.

The individual certifications may have details about the size and number of the nonmetallic-sheathed cable each connector will secure.

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

Nonmetallic-sheathed-cable Connectors (PXJV)—Continued

MARKINGS

Connectors which are also suitable for use with service-entrance cable, flexible nonmetallic tubing or flexible cord are so indicated on the device or carton.

Except for duplex connectors or when otherwise marked on the carton to indicate connecting of more than one cable or cord, the connectors covered under this category have been investigated for connecting one cable or cord only.

RELATED PRODUCTS

Connectors covered under Armored Cable Connectors (AWSX), Conduit Fittings (DWTT) and Power and Control Tray Cable Connectors (QPOZ) are also suitable for use with nonmetallic-sheathed cable when specifically indicated on the device or carton.

Connectors suitable for flexible cord only are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

For additional information, see Nonmetallic-sheathed Cable (PWVX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Connector" (or "N.M. Cable Connector"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC EXTENSIONS (PXXT)

NONMETALLIC-EXTENSION FITTINGS (PYYZ)

USE

This category covers attachment-plug caps, receptacles for attachment plugs, and end caps for nonmetallic surface extensions, and wiring compartments, entrance bushings, bonding connectors, hangers, terminal fittings, support fittings, receptacles and lampholders for aerial cable.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," ANSI/UL 183, "Manufactured Wiring Systems," and ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Extension Fitting" (or "NM Extension Ftg.") or "End Cap," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC SURFACE EXTENSIONS (PZMX)

USE AND INSTALLATION

This category covers assemblies of two insulated circuit conductors with or without a grounding conductor within a nonmetallic jacket or extruded thermoplastic covering, intended for installation in accordance with Article

Nonmetallic Surface Extensions (PZMX)—Continued

382 of ANSI/NFPA 70, "National Electrical Code." Assemblies without a grounding conductor are marked "Intended for replacement use only."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," ANSI/UL 183, "Manufactured Wiring Systems," and ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Surface Extension."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE INTERCONNECTORS (QAAV)

GENERAL

This category covers self-contained interconnectors employing pressure cable connectors, insulation displacement or insulation piercing connectors for splicing or tapping nonmetallic (NM) sheathed cable. These interconnectors are intended for use in exposed or concealed locations in accordance with the following Articles of ANSI/NFPA 70, "National Electrical Code":

Article 545, *Manufactured Buildings*

Article 550, *Mobile Homes, Manufactured Homes, and Mobile Home Parks*

Article 551, *Recreational Vehicles and Recreational Vehicle Parks*

Article 334, *Nonmetallic-Sheathed Cable: Types NM, NMC, and NMS* (for tap devices)

These devices have been investigated for equivalency to Type NM cable in insulation and temperature rise, and for capability to withstand fault currents, vibration and mechanical shock that may occur during transport of the units in which they are used.

PRODUCT MARKINGS

The devices are marked with the Lister's name or identification, the catalog number or equivalent, and complete electrical ratings.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2256, "Outline of Investigation for Nonmetallic Sheathed Cable Interconnects."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Interconnector" (or "N.M. Cable Interconnector"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL SEATING SYSTEMS (QAHU)

GENERAL

This category covers single- or multiple-seating systems that may be provided with an integral table and contain electrical accessories, such as an electrical distribution system, and may also be provided with channels for routing communication wiring. The seating is intended to be permanently mounted to the building structure.

COMMERCIAL SEATING SYSTEMS (QAHU)

This category covers only the electrical hazards associated with the product.

RELATED PRODUCTS

Electrical accessories designed for field installation, such as receptacles, electrical distribution systems, power distribution elements, etc., are covered under Office Furnishings (QAWZ) and are marked to identify the specific seating system with which they have been investigated for use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1286, "Office Furnishings."

Where indicated in the individual certifications, commercial seating systems have also been investigated in accordance with one or more of the following standards:

1. State of California Department of Consumer Affairs Bureau of Home Furnishings and Thermal Insulation, Technical Bulletin 117, "The Test Procedure and Apparatus for Testing the Flame Retardance of Resilient Filling Materials Used in Upholstered Furniture" (2000)
2. For flammability in accordance with State of California Department of Consumer Affairs Bureau of Home Furnishings and Thermal Insulation, Technical Bulletin 133, "The Flammability Test Procedure for Seating Furniture for Use in Public Occupancies" (1991)
3. For strength and durability in accordance with ANSI/BIFMA No. X5.4, "The Standard for Office Furnishing Lounge Seating" (1997)

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**POWERED SEATING SYSTEM*
FOR ELECTRICAL HAZARD ONLY**

Control No.

* or other appropriate product name as shown in the individual Classifications

Where indicated in the individual Classifications, the Classification Mark will also include one or more of the following statements:

**ALSO CLASSIFIED IN ACCORDANCE WITH
THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS
BUREAU OF HOME FURNISHINGS AND THERMAL INSULATION
TECHNICAL BULLETIN 117 (2000)
and/or**

**ALSO CLASSIFIED IN ACCORDANCE WITH
THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS
BUREAU OF HOME FURNISHINGS AND THERMAL INSULATION
TECHNICAL BULLETIN 133 (1991)
and/or**

**ALSO CLASSIFIED IN ACCORDANCE WITH
THE STANDARD FOR OFFICE FURNITURE LOUNGE SEATING
ANSI/BIFMA No. X5.4-1997**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OFFICE APPLIANCES AND
BUSINESS EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (QAVS)**

GENERAL

This category covers equipment and appliances normally used in business establishments classified as hazardous locations. The equipment and appliances may be electromechanical and/or electronic.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

OFFICE APPLIANCES AND BUSINESS EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (QAVS)

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Office Appliance for Use in Hazardous Locations" or "Business Equipment for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHINGS (QAWZ)

USE AND INSTALLATION

This category covers office furnishings that consist of panels, study carrels, work stations and pedestal-style systems that may be mechanically interconnected to form an office furnishing system to be installed in accordance with Article 605 of ANSI/NFPA 70, "National Electrical Code" (NEC). They may be provided with an electrical distribution system, including switches and receptacles. They may contain channels for routing communication cable within the system components separate from power-circuit raceways. The systems may include filing cabinets, desks, work surfaces, shelves, storage units, etc., that have a particular electrical or mechanical function unique to an office furnishing system.

Products specifically designed and arranged for field installation in office furnishings such as lighting units, clocks, work surfaces, shelves, etc., are covered as accessories under Office Furnishing Accessories Certified for Use with Specified Equipment (QAXE) and are marked to identify the specific office furnishing with which they have been investigated.

The surface-burning characteristics of building materials employed in these assemblies is judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame-spread rating of 200 or less and 450 smoke index or less unless otherwise marked.

Office furnishing electrical systems may be suitable for connection to optional standby power systems in accordance with the NEC.

Office furnishing electrical systems are available in single-phase and three-phase wiring systems and may provide multi-circuit branch circuits to an office furnishing. Some office furnishings are connected to more than one source of supply, such as an uninterruptible power supply, in addition to the building service-entrance power.

When the office furnishing electrical system is supplied with hospital-grade receptacles, the office furnishing electrical system is not suitable for use in general patient care areas or critical patient care areas. The electrical system has not been investigated for use where Article 517 of the NEC requires hospital-grade components and redundant grounding systems.

REBUILT PRODUCTS

This category also covers office furnishings and office furnishing accessories that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt office furnishings and office furnishing accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt office furnishings and office furnishing accessories are subject to the same requirements as new office furnishings and office furnishing accessories.

INSTRUCTIONS AND PRODUCT MARKINGS

Finished surfaces have a flame-spread rating of 200 or less. When a smoke-developed rating exceeds 450, the system is marked "Smoke Developed Index Over 450."

Office furnishings are marked with one of the following type designations:

Type I — A system that includes all parts and contains pre-wired modular raceways and accessories necessitating only quick-connect type of electrical interconnections. A Type I system may be shipped with the accessories installed in the panel, or, where not factory installed, the accessory is intended for field installation and marked for use in the system. Means for permanent wiring connections to the branch-circuit supply are provided.

Type II — A system that provides raceways and devices for routing and termination of wiring. All wiring is installed in the field.

Type III — A system that is not intended to be wired and has no provision for routing and termination of wiring.

Each office furnishing accessory (work surface, cabinet or electrical system) that is shipped separately from the major office furnishing unit to which it is to be connected is marked "For Use with Office Furnishing System Series _____," in which the appropriate series or catalog number is designated. When separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

Each top- and base-feed wiring assembly is marked with a diagram or the equivalent, indicating the methods of connection to the branch circuit and the electrical rating.

Each top- and base-feed wiring assembly is marked with "WARNING" and the following or equivalent statement: "Risk of Fire or Electric Shock. It is possible for this office furnishing system to be connected to more than one source of supply. Disconnect all sources prior to any servicing."

Each convenience receptacle is marked by a letter, number, color, or similar designation to indicate the circuit in the system to which the receptacle is connected. The identification is consistent throughout any one office furnishing electrical system and with any markings on the diagram for the branch-circuit connections.

A wiring-system jumper (manufactured wiring system to office furnishing wiring system) is marked to identify the manufactured wiring system with which the jumper is intended to be used.

RELATED PRODUCTS

Partitions that extend to the ceiling or used to support the building structure are covered under Sections and Units (QQXX).

Composite panels certified with respect to the NEC and/or one or more model building codes, plumbing codes, state building codes or local building codes are covered under Composite Panels (QRSY).

Lighting units intended for use with office furnishings are covered under Office Furnishing Lights (QAXB).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1286, "Office Furnishings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Office Furnishing" or "Office Furnishing Accessory."

For rebuilt products, the word "Rebuilt" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHING LIGHTS (QAXB)

GENERAL

This category covers lights intended for use with office furnishings when installed in accordance with Articles 410 and 605 of ANSI/NFPA 70, "National Electrical Code." This category covers both freestanding and mounted lights that may be electrically or mechanically connected to an office furnishing. Products specifically designed and arranged for use with an individual design of office furnishing are marked to identify the specific office furnishing with which they have been investigated.

Products that require electrical assembly in the field are covered as kits or light accessories under the individual certifications. Kits and light accessories are completely wired to the extent permitted by the intended field installation, with all splices and connections completed and with all electrical components mounted.

A kit forms a complete office furnishing light when assembled in accordance with the instructions provided.

A light accessory and the required office furnishing or a combination of light accessories form a complete office furnishing light when assembled in accordance with the instructions provided.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

REBUILT PRODUCTS

This category also covers office furnishing lights that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt office furnishing lights are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt office furnishing lights are subject to the same requirements as new office furnishing lights.

RELATED PRODUCTS

Office furnishing lights investigated to ANSI/UL 153, "Portable Electric Luminaires," may also be covered under Luminaires, Portable (QOWZ).

Office furnishing light accessories investigated to ANSI/UL 153 may also be covered under Portable Luminaire Kits and Subassemblies (QPAU).

Office furnishing light accessories investigated to ANSI/UL 1598, "Luminaires," may also be covered under Luminaire Fittings (IFFX).

Office Furnishing Lights (QAXB)—Continued

ADDITIONAL INFORMATION

For additional information, see Office Furnishings (QAWZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 153, "Portable Electric Luminaires," ANSI/UL 1598, "Luminaires," and ANSI/UL 1286, "Office Furnishings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Office Furnishing Light," "Office Furnishing Light Kit," "Office Furnishing Light Accessory" or "Rebuilt Office Furnishing Light."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHING ACCESSORIES CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (QAXE)

USE AND INSTALLATION

This category covers office furnishing accessories, such as work surfaces and shelves, intended for field installation in specific combinations that have been investigated for use with the specific office furnishing systems.

These accessories have been investigated for use with other manufacturers' Listed office furnishings, as indicated in the Classification Mark or the referenced compatibility list.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1286, "Office Furnishings."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**FOR USE WITH SPECIFIED EQUIPMENT
FOR USE WITH UL LISTED * OFFICE FURNISHING PANEL SYSTEM
Control No.**

* Manufacturer's name and model no(s).

or

**FOR USE WITH SPECIFIED EQUIPMENT
FOR CATALOG NUMBERS OF COMPATIBLE EQUIPMENT,
REFER TO PUBLICATION NO. ___ PROVIDED WITH THIS PRODUCT.
IF ADDITIONAL INFORMATION IS NECESSARY, CONTACT THE
FACTORY.
Control No.**

The referenced publication is a compatibility list that tabulates the company names, catalog numbers and electrical ratings of the Classified accessories, and the company name(s) and catalog number(s) of the applicable UL Listed products with which the accessories have been investigated. One copy of the compatibility list and the installation instructions are provided with each accessory.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE (QAYK)

USE AND INSTALLATION

This category covers optical fiber cable which is a jacketed cable for use within buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). Where optical fiber is installed in a laser system, the system shall comply with the ANSI Z136 laser system safety standards.

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFCG — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCG except it contains no metallic members and no other electrically conductive materials.

OFNR — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNCR — This cable is the same as Type OFNR except it contains no metallic members and no other electrically conductive materials.

OFNCP — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNFP — This cable is the same as Type OFNCP except it contains no metallic members and no other electrically conductive materials.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1651, "Optical Fiber Cable."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable."

The Listing Mark for this category requires the use of a holographic label.

Cable also Verified to a performance specification under Optical Fiber Cable Verified in Accordance with National or International Specifications (QAZI) has the marking "Also Verified [Specification name and/or number]" together with the Listing Mark information on the tag, reel or smallest unit container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE, FIELD ASSEMBLED (QAZD)

USE AND INSTALLATION

This category covers field-assembled optical fiber cable, which is an on-site assembly of one or more optical fiber units and an optical fiber jacket. Field-assembled optical fiber cable is intended for installation in buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). The optical fiber jacket is installed in a manner

Optical Fiber Cable, Field Assembled (QAZD)—Continued

similar to conduit or raceway. Once the jacket is installed, the optical fiber units are inserted into the jacket, completing the assembly.

Laser systems in which optical fiber is installed comply with the following Laser Institute of America safety standards:

ANSI/LIA Z136.1, "Safe Use of Lasers"

ANSI/LIA Z136.2, "Safe Use of Optical Fiber Communication Systems Utilizing Laser Diode and LED Sources"

ANSI/LIA Z136.3, "Safe Use of Lasers in Health Care Facilities"

ANSI/LIA Z136.4, "Recommended Practice for Laser Safety Measurements for Hazard Evaluation"

ANSI/LIA Z136.5, "Safe Use of Lasers in Educational Institutions"

ANSI/LIA Z136.6, "Safe Use of Lasers Outdoors"

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket. This marking includes the Listee's name and catalog designation and one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFCG — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCG except it contains no metallic members and no other electrically conductive materials.

OFNR — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNCR — This cable is the same as Type OFNR except it contains no metallic members and no other electrically conductive materials.

OFNCP — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNFP — This cable is the same as Type OFNCP except it contains no metallic members and no other electrically conductive materials.

Cable marked "Sunlight Resistant" (or "Sun Res") may be exposed to the direct rays of the sun.

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged includes the following: "For Use Only with Optical Fiber Units, Cat. No.____, manufactured by [company name]."

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber units are packaged includes the following: "[Company name] Optical Fiber Unit, For Use Only With Optical Fiber Jacket Cat. No. ____, manufactured by [company name]."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1651, "Optical Fiber Cable."

UL MARK

The UL symbol on the optical fiber jacket and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Field Assembled Optical Fiber Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Optical Fiber Cable, Field Assembled (QAZD)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QAZI)

GENERAL

This category covers data transmission optical fiber cable whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications. This cable is not necessarily investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-20-CORE, "Generic Requirements for Optical Fiber and Optical Fiber Cable" (Issue 2 July 1998). Other performance specifications, applicable to optical fiber cable, may also be used by UL in Verification investigations.

UL MARK

The UL symbol with the word "VERIFIED" on the product and the Verification Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Fiber Cable," the Specification name(s) and/or number(s), and the date(s) of the Specification(s).

For optical fiber cable which is also Listed under Optical Fiber Cable (QAYK), the marking includes the appropriate Listing Mark and the text "Also Verified [Specification name(s) and/or number(s), date(s) of Specification(s)]."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/COAXIAL CABLE RACEWAY (QAZM)

USE AND INSTALLATION

This category covers raceway and fittings for installation of conductive and nonconductive optical fiber cable, communications cable, power-limited fire-alarm cable, signaling cable and coaxial cable in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). This raceway is intended for installation and use in accordance with the following information. The raceway is only suitable for the installation of the optical fiber, communications cable, signaling cable and coaxial cable noted in the following information. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceway or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends and fittings such as expansion joints, female and male adapters, and couplings.

A raceway marked "Plenum" is suitable for use in ducts, plenums or other spaces used for environmental air in accordance with the NEC when used to enclose optical fiber cable marked "OFNP" or "OFCP," communications cable marked "CMP" or "CMP-OF," power-limited fire-alarm cable marked "FPLP," signaling cable marked "CL2P" or "CL3P," and coaxial cable marked "CATVP." This raceway exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-spread distance of 5 ft when tested in accordance with the Test for Flame Propagation and Smoke-Density Values (Plenum) in ANSI/UL 2024.

"Signaling, Optical Fiber and Communications Raceways and Cable Routing Assemblies." This raceway is identified by a marking on the surface of the raceway or on a marker tape indicating "Plenum." A raceway marked "Plenum" is also suitable for installation in risers when used to enclose optical fiber cable marked "OFNP" or "OFNR," communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF," power-limited fire-alarm cable marked "FPLP" or "FPLR," signaling cable marked "CL2P," "CL3P," "CL2R" or "CL3R," and coaxial cable marked "CATVP" or "CATVR," and general-purpose use when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR," "OFNR," "OFNR," "OFNG" or "OFN," communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" or "CM-OF," power-limited fire-alarm cable marked "FPLP," "FPLR" or "FPL," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX."

A raceway marked "Riser" is suitable for installation in risers in accordance with the NEC when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR" or "OFNR," communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF," power-limited fire-alarm cable marked "FPLP" or "FPLR," signaling cable marked "CL2P," "CL3P," "CL2R" or "CL3R," and coaxial cable marked "CATVP" or "CATVR." This raceway has fire-resistant characteristics capable of preventing the carrying of fire from floor to floor. This raceway meets the test requirements of the Test for Flame Propagation (Riser) in ANSI/UL 2024. This raceway is identified by a marking on the surface of the raceway or on a marker tape indicating "Riser." A raceway marked "Riser" is also suitable for general-purpose use when used to enclose optical fiber cable marked "OFNP," "OFNR," "OFCP," "OFNR" or "OFN," communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" or "CM-OF," power-limited fire-alarm cable marked "FPLP," "FPLR" or "FPL," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX."

A raceway with neither the marking "Plenum" nor "Riser" is suitable for general-purpose use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR," "OFNR," "OFNR," "OFNG," "OFCG," "OFC" or "OFN," communications cable marked "CMG," "CMG-OF," "CM," "CM-OF," "CMR," "CMR-OF," "CMP" or "CMP-OF," power-limited fire-alarm cable marked "FPLP," "FPLR" or "FPL," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX." This raceway is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in ANSI/UL 2024.

Pliable raceway is a raceway that can be bent by hand without the use of tools. The smallest radius of the curve of the inner edge of any bend to which the raceway may be bent without cracking either on the outer surface or internally is not less than 2-1/2 times the outside diameter of the raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2024, "Signaling, Optical Fiber and Communications Raceways and Cable Routing Assemblies."

UL MARK

The UL symbol and the product name "Optical Fiber Raceway," "Communications Cable Raceway," "Signaling Cable Raceway," "Coaxial Cable Raceway" or "Optical Fiber/Communications/Signaling/Coaxial Cable Raceway" on the raceway, and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the appropriate product names as indicated above.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER RACEWAY ASSEMBLIES (QAZQ)

GENERAL

This category covers raceway assemblies intended for the installation of conductive and nonconductive optical fiber cable in accordance with ANSI/NFPA 70, "National Electrical Code." These raceway assemblies are intended for installation and use in accordance with the following information. The raceway may be provided with multiple inner ducts that are

Optical Fiber Raceway Assemblies (QAZQ)—Continued

assembled before shipment. Raceway systems differ in their inside and outside diameters and, therefore, are not interchangeable with other conduit or raceway systems. This category includes straight sections, elbows, bends, and fittings intended to be secured together by cement.

The raceway assemblies are designed for use under the following conditions, as indicated in the Certification Mark: (1) direct burial with or without being encased in concrete, (2) aboveground, or both (1) and (2).

The transition from an optical fiber raceway system to another conduit or raceway system has not been investigated.

The raceway system components have not been investigated for their ability to withstand exposure to reagents, unless specifically marked.

Aboveground raceway assemblies are suitable for exposed work where not subjected to physical damage and where expansion fittings are not necessary.

ADDITIONAL INFORMATION

For additional information, see Optical Fiber/Communications Cable Raceway (QAZM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 2024, "Signaling, Optical Fiber and Communications Raceways and Cable Routing Assemblies," and ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit and Fittings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Optical Fiber Raceway Assemblies, Underground," "Optical Fiber Raceway Assemblies, Underground for Concrete Encasement Only," "Optical Fiber Raceway Assemblies, Underground Direct Burial and Concrete Encasement" or "Optical Fiber Raceway Assemblies, Aboveground, Underground Direct Burial and Concrete Encasement."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OPTICAL FIBER/COMMUNICATIONS/
SIGNALING/COAXIAL CABLE
OUTLET BOXES (QAZR)**

USE AND INSTALLATION

This category covers outlet boxes and other device-mounting products intended to support outlets for use with or without raceways and fittings that contain nonconductive optical fiber cable, communications cable, signaling cable, and coaxial cable. These products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." The products and raceways are only suitable for the installation of the optical fiber, communications cable, signaling cable, and coaxial cable. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceways or fittings of other systems.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2269, "Outline of Investigation for Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Boxes."

UL MARK

The Listing Mark on the product, or the UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Outlet Box," "Communications Cable Outlet Box" or "Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OUTLET BOX ACCESSORIES FOR
USE IN HAZARDOUS LOCATIONS
(QAZV)**

GENERAL

This category covers conduit box bodies, flat and domed covers, fixture hanger covers, threaded extensions, sealing hub covers, and similar sub-assemblies of outlet boxes, fixture fittings and conduit fittings. They are intended to be assembled at the factory or in the field by the user to form a complete explosion-proof or dust-ignition-proof enclosure. Information on restrictions in the use and assembly of these devices is marked on each part.

RELATED PRODUCTS

See Outlet Boxes for Use in Hazardous Locations (QBCR), Conduit Fittings for Use in Hazardous Locations (EBNV) and Luminaire Fittings for Use in Hazardous Locations (IGIV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Box Accessory for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CABLE ROUTING ASSEMBLIES
(QBAA)**

USE AND INSTALLATION

This category covers routing assemblies for installation of conductive and nonconductive optical fiber cable, communications cable/wire, power-limited fire-alarm cable, community antenna television cable and low-power network-powered broadband communications cable. Cable-routing assemblies are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). Cable-routing assemblies are only suitable for the installation of cable/wire noted in the following information. Individual routing assembly systems differ in their construction and, therefore, their components are not interchangeable with other routing assemblies or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends, and fittings such as expansion joints, female and male adapters, and couplings.

These products may or may not incorporate end fixtures or covers.

Cable/Wire Type

Routing Assembly Marking/Use	Optical Fiber	Communications	Power-limited Fire Alarm	Community Antenna Television	Low-power Network-powered Broadband Communications
Plenum Riser	OFNP	CMP	FPLP	CATVP	BLP
	OFNR	CMR	FPLR	CATVR	BLR
	OFCP				
	OFNR				
None (general use)	OFNP	CMP	FPLP	CATVP	BLP
	OFNR	CMR	FPLR	CATVR	BLR
	OFN	CM, CMG	FPL	CATV	BL
	OFNG				
	OFCP	connect			
	OFNR	wire			

A routing assembly marked "Plenum" is suitable for use in fabricated ducts or other spaces used for environmental air (plenum) where used to support cable as identified in the table above. This "plenum" routing assembly exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft where tested in accordance with ANSI/UL 2024, "Signaling, Optical Fiber and Communications Raceways and Cable Routing Assemblies." A routing assembly marked "Plenum" is also suitable for installation in risers where used to support cable identified for riser use in the table above. A routing assembly marked "Plenum" is also suitable for general use where used to support any of the cable identified for general use in the table above.

A routing assembly marked "Riser" is suitable for installation in riser installations where used to support cable as identified in the table above. This "riser" routing assembly has fire-resistant characteristics capable of preventing the spread of fire from floor to floor. This "riser" routing assembly meets the test requirements of ANSI/UL 2024. A routing assembly marked "Riser" is also suitable for general use where used to support any of the cable identified for general use in the table above.

A routing assembly with neither the marking "Plenum" nor "Riser" is suitable for general use to support cable as identified in the table above. This "general use" routing assembly is resistant to the spread of fire where tested in accordance with the Vertical-Tray Flame Test (General Use) in ANSI/UL 2024.

RELATED PRODUCTS

Optical fiber and communications cable raceway intended to be installed in accordance with Sections 770.154(A) and 800.154(A) of the NEC is covered under Optical Fiber/Communications/Signaling/Coaxial Cable Raceway (QAZM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2024, "Signaling, Optical Fiber and Communications Raceways and Cable Routing Assemblies."

UL MARK

The UL symbol on the product and the complete Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "General-use Cable Routing Assembly," "Riser Cable Routing Assembly," "Plenum Cable Routing Assembly," "Optical Fiber Routing Assembly," "Communications Cable Routing Assembly" or "Optical Fiber/Communications Cable Routing Assembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES FOR USE IN HAZARDOUS LOCATIONS (QBCR)

GENERAL

This category covers conduit boxes for use in threaded rigid conduit or steel intermediate metal conduit wire raceways. They provide for splicing of

conductors, but conductors should not be sealed in conduit boxes. The boxes are marked to indicate when accessories such as unions and sealing fittings are furnished with the box.

Boxes marked "rain tight" have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in entrance of water.

Cast-aluminum alloy outlet boxes are not considered acceptable for installation in concrete or cinder fill unless protected with asphalt base paint or the equivalent.

RELATED PRODUCTS

See Conduit Fittings for Use in Hazardous Locations (EBNV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Box for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER BRANCHING DEVICES (QBEA)

GENERAL

This category covers optical fiber branching devices intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber branching devices include optical flexible circuits, fan-out devices, wavelength division multiplexers (WDM and DWDM) and other similar passive devices.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 746C, "Polymeric Materials - Use in Electrical Equipment Evaluations."

Branching devices employing optical fiber connectors have additionally been investigated to TIA-455-6-B, "FOTP-6 - Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

UL MARK

The Listing Mark of UL on the product, on the attached tag, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Branching Device."

For optical fiber branching devices which are also Verified to a performance specification under Optical Fiber Branching Devices Verified in Accordance with National or International Specifications (QBEN), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name and/or number]" or the UL Verification Mark along with [Specification name and/or number].

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER BRANCHING DEVICES VERIFIED IN
ACCORDANCE WITH NATIONAL OR INTERNATIONAL
SPECIFICATIONS (QBEN)

**OPTICAL FIBER BRANCHING
DEVICES VERIFIED IN
ACCORDANCE WITH NATIONAL OR
INTERNATIONAL SPECIFICATIONS
(QBEN)**

GENERAL

This category covers optical fiber branching devices whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

Optical fiber branching devices include optical flexible circuits, fan-out devices, wavelength division multiplexers (WDM and DWDM) and other similar passive devices. These devices are intended for residential and/or commercial applications as part of an optical fiber wiring system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-2866-CORE (Issue 1 June 1995), "Generic Requirements for Optical Fiber Ribbon Fanouts." Other performance specifications applicable to optical fiber cable assemblies and connector products may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of UL on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Fiber Branching Device," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber branching devices which are also Listed under Optical Fiber Branching Devices (QBFA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OPTICAL FIBER CABLE
ASSEMBLIES AND CONNECTORS
(QBFA)**

GENERAL

This category covers factory-assembled optical fiber cable assemblies and factory/field-installed connector products intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber cable assemblies consist of optical fiber cable and optical fiber cable connectors. When constructed with a certified cable identified by a marking on the surface of the jacket as a type permitted in Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC), optical fiber cable assemblies may be installed in accordance with that Article.

These assemblies have not been investigated for use in environmental air spaces in accordance with Sections 300.22(B) and (C) of the NEC unless specifically marked for the application.

Optical fiber cable connectors are intended for factory assembly or for field assembly by trained service personnel.

RELATED PRODUCTS

Optical fiber cable (without connectors) for use within buildings in accordance with Article 770 of the NEC is covered under Optical Fiber Cable (QAYK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate optical fiber connectors is ANSI/UL 746C, "Polymeric Materials - Use in Electrical Equipment Evaluations."

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS
(QBFA)

325

PRODUCT CATEGORIES BY CATEGORY CODE

The basic standards used to investigate optical fiber cable assemblies are ANSI/UL 1651, "Optical Fiber Cable" (where certified cable is employed) or ANSI/UL 2556, "Wire and Cable Test Methods" (for noncertified cable VW-1 rating) and, for connectors, ANSI/UL 746C and TIA-455-6-B, "FOTP-6 - Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

Cable assemblies marked suitable for use in air-handling spaces are additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces," if nonmetallic materials weighing more than 30 grams are used.

UL MARK

The Listing Mark of UL on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable Assembly" or "Optical Fiber Connector."

For optical fiber cable assemblies and optical fiber connectors which are also Verified to a performance specification under Optical Fiber Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (QBFA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name and/or number]," or the UL Verification Mark together with the Specification name and/or number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**OPTICAL FIBER CABLE
ASSEMBLIES AND CONNECTORS
VERIFIED IN ACCORDANCE WITH
NATIONAL OR INTERNATIONAL
SPECIFICATIONS (QBFA)**

GENERAL

This category covers optical fiber cable assemblies and connector products whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-326-CORE (Issue 3 September 1999), "Generic Requirements for Singlemode Optical Connectors and Jumper Assemblies." Other performance specifications, applicable to optical fiber cable assemblies and connector products, may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of UL on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Cable Assembly" or "Optical Fiber Connector," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber cable assemblies and optical fiber connectors which are also Listed under Optical Fiber Cable Assemblies and Connectors (QBFA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES AND FITTINGS (QBPZ)

ILLUMINATED COVER PLATES FOR FLUSH-MOUNTED WIRING DEVICES (QBSA)

GENERAL

This category covers illuminated cover plates for flush-mounted wiring devices. The cover plates have integral nonreplaceable light sources, such as neon, light-emitting diode (LED) or electroluminescent panel, and are intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Illuminated Cover Plate for Flush-mounted Wiring Devices."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES AND FITTINGS CLASSIFIED FOR FIRE RESISTANCE (QBWY)

GENERAL

This category covers special purpose boxes for installation in floors and nonmetallic outlet boxes for installation in walls and partitions and ceilings in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code" (NEC). They have shown a degree of fire resistance when installed in the particular floor(s) or wall(s) described for each Classified company. Boxes of the type Listed in UL's Electrical Construction Materials Directory have been investigated and found to comply with established electrical requirements and are so Listed.

This category includes Classifications for nonmetallic outlet and switch boxes for use in fire resistive rated wall or partition assemblies. The information provided for each Classification includes the model numbers for the Classified products, a description of the rated assemblies, the spacing limitations for the boxes and the installation details. Nonmetallic boxes should not be installed on opposite sides of walls or partitions of staggered stud construction unless Classified for use in such constructions.

Where indicated in the individual Classifications, products have also been investigated for heat and smoke release characteristics in accordance with UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Such products may be installed in air-handling spaces in accordance with Sec. 300.22(C) of the NEC. Authorities Having Jurisdiction should be consulted before installation.

FLOOR BOXES

Boxes for use with floors have been investigated for use with electrical receptacles fabricated of melamine, phenolic or urea materials, unless specified otherwise in the installation instructions and Classification information. Floor boxes and fittings are intended to be installed in accordance with installation instructions provided with the product.

Boxes with integral connectors for electric metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the box has been tested.

Floor boxes designated for floor installation as covered in the NEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor-cleaning operations. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both, and are provided with a marking on the carton to identify boxes of this type, such as "Floor Box" or "Floor Box, Concrete Tight," as appropriate.

WALL AND PARTITION AND CEILING BOXES

Nonmetallic outlet boxes investigated for installation in fire-resistive assemblies are provided with the appropriate Listing Mark for electrical products and other markings as described in Nonmetallic Outlet Boxes

Outlet Boxes and Fittings Classified for Fire Resistance (QBWY)—Continued

(QCMZ). Nonmetallic outlet boxes Classified for use in fire-resistive designs may have the following marking in the base of the box:

Class * hr, F, W and/or C

where * indicates the hourly rating, such as 1 hr or 2 hr and F = Floor, W = Wall and C = Ceiling.

The boxes are Classified for use in certain fire-resistive designs when installed in accordance with the details described for each Classified company. Any Listed metallic or nonmetallic cover is suitable for use with these nonmetallic boxes.

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings – ANSI/UL 263 (BXUV).

Outlet boxes that comply with established electrical requirements are Listed under Metallic Outlet Boxes (QCIT) and Nonmetallic Outlet Boxes (QCMZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 263, "Fire Tests of Building Construction and Materials," and Supplement SB ("Nonmetallic Boxes for Installation in Fire Resistance Rated Wall and Partition Assemblies") of ANSI/UL 514C, "Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers."

UL MARK

The Classification Mark of UL on the product or on each UL Classified steel floor and form unit with factory-installed floor boxes, or the UL symbol on the product and the Classification Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

OUTLET BOXES AND FITTINGS CLASSIFIED FOR FIRE RESISTANCE

DESIGN NOS. _____

SEE PRODUCT CATEGORY IN UL FIRE RESISTANCE DIRECTORY

Control No. _____

Where indicated in the individual Classifications, products may be marked "Suitable for use in air-handling spaces in accordance with Sec. 300.22(C) of the National Electrical Code" when investigated to determine suitability for such use.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METALLIC OUTLET BOXES (QCIT)

GENERAL

This category covers metallic mud rings, flush device boxes, conduit bodies, conduit boxes, floor boxes, outlet boxes, outlet box hoods, special-purpose boxes, extension rings, covers, and cover plates for flush-mounted wiring devices, intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code" (NEC). These products are also intended for installation and use in accordance with the following information.

MUD RINGS

A mud ring positions a flush-mounted wiring device flush with the finished wall surface. Mud rings may be provided with either a fixed or adjustable depth sleeve.

EXTENSION RINGS

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

USE IN FIRE-RATED ASSEMBLIES

Certified single- and double-gang metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in bearing and nonbearing

Metallic Outlet Boxes (QCIT)—Continued

wood stud and steel stud walls with ratings not exceeding 2 h. These walls have gypsum wallboard facings similar to those shown in Design Nos. U301, U411 and U425, as covered under Fire Resistance Ratings – ANSI/UL 263 (BXUV). The boxes are intended to be fastened to the studs with the openings in the wallboard facing cut so that the clearance between the boxes and the wallboard does not exceed 1/8 in. The boxes are intended to be installed so that the surface area of individual boxes does not exceed 16 sq in, and the aggregate surface area of the boxes does not exceed 100 sq in per 100 sq ft of wall surface.

Boxes located on opposite sides of walls or partitions are intended to be separated by a minimum horizontal distance of 24 in. This minimum separation distance between the boxes may be reduced when Wall-opening Protective Materials (QCSN) are installed according to the requirements of their certification.

The boxes are not intended to be installed on opposite sides of walls or partitions of staggered stud construction unless Wall-opening Protective Materials (QCSN) are installed with the boxes in accordance with certification requirements for the protective materials.

Certified metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in floor-ceiling and roof-ceiling assemblies with ratings not exceeding 2 h when these assemblies have gypsum wallboard membranes. The boxes are intended to be fastened to the joists with the openings in the wallboard facing cut so that the clearance between the boxes and the gypsum wallboard does not exceed 1/8 in. The boxes are intended to be installed so that the surface area of individual boxes does not exceed 16 sq in, and the aggregate surface area of the boxes does not exceed 100 sq in per 100 sq ft of ceiling surface.

CONDUIT BODIES

Conduit bodies that are provided with a volume marking can enclose splices, taps or devices. Conduit bodies that are not provided with a volume marking are covered under Conduit Fittings (DWTI). Conduit bodies certified for use with specific conduit body covers and conduit body covers certified for use with specific conduit bodies are covered under Conduit Bodies and Covers Certified for Use with Specified Equipment (QCKW).

CONCENTRIC OR ECCENTRIC KNOCKOUTS

All boxes with concentric or eccentric knockouts have been investigated for bonding and are suitable for bonding without any additional bonding means around concentric (or eccentric) knockouts where used in circuits above or below 250 V, and may be marked as such.

CLAMPS

Boxes may or may not be provided with clamps. When clamps are provided, the carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with armored cable ("A"); flexible metal conduit – "E," nonmetallic-sheathed cable – "N," or flexible tubing (loom) – "T." Clamps suitable for Type MC metal-clad cable are marked "MCI" for metal-clad interlocking armored cable, "MCI-A" for metal-clad interlocking armor ground cable, "MCS" for metal-clad continuous smooth-sheath cable, and "MCC" for metal-clad continuous corrugated-sheath cable. If suitable for all seven types, the clamp is marked "ALL." Clamps suitable for nonmetallic-sheathed cable are also suitable for multiconductor underground feeder and branch circuit cable where used in dry locations.

Clamps have been tested for securing only one cable per clamp, except multiple section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout.

GROUNDING

Clamps for armored cable, flexible metal conduit, metal-clad interlocking armor ground cable, metal-clad continuous smooth-sheath cable, or metal-clad continuous corrugated-sheath cable are considered suitable for grounding where installed in accordance with the NEC.

FIXTURE/LUMINAIRE SUPPORT

A box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire weighing 50 lbs or less is marked "FOR FIXTURE/LUMINAIRE SUPPORT" on the carton to indicate that the box is intended for fixture/luminaire support. A box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire weighing more than 50 lbs is marked with the weight of the fixture/luminaire to be supported. Metallic device boxes and device plaster rings have not been investigated for support of a ceiling fixture/luminaire unless marked for use in ceilings, walls, and with the weight of the product to be supported. Metallic device boxes or metallic device boxes intended to be installed in an existing structure have been investigated for the support of utilization equipment weighing not more than 6 lbs.

INTEGRAL CONNECTORS

Boxes with integral connectors for electrical metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the boxes have been tested.

CEILING-SUSPENDED-FAN SUPPORT

Metallic Outlet Boxes (QCIT)—Continued

A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing 35 lbs or less is marked "ACCEPTABLE FOR FAN SUPPORT" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing more than 35 lbs but not more than 70 lbs is marked "ACCEPTABLE FOR FAN SUPPORT OF 70 LBS OR LESS" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan is acceptable for use with a fixture/luminaire when provided with the above fixture/luminaire-support markings.

CONCRETE TIGHT

All metal boxes, except aluminum alloy boxes, are provided with corrosion protection suitable for installation in concrete. Aluminum alloy boxes covered under this category are not considered acceptable for installation in concrete or cinder fill unless protected by asphalt paint or the equivalent. Boxes designated as "concrete tight" may have no means of support other than the concrete and often accommodate covers at top and bottom.

FLOOR BOXES

Floor boxes designed for floor installation as covered in the NEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Covers with gaskets may be shipped separately from the boxes. Both products are provided with installation instructions. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs or both, and are provided with a marking on the carton to identify boxes of this type such as "Floor Box Cover," "Floor Box" or "Floor Box, Concrete Tight," as appropriate. Floor boxes may be provided with wiring devices.

WET AND DAMP LOCATIONS

Boxes and covers intended for use in wet locations as defined by the NEC are marked "Wet Location." Damp location boxes and covers are intended to be so located or equipped as to prevent water from entering or accumulating in the box and are marked "Damp Location." Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed, are marked "Wet Location Only When Cover Closed" and may be marked "Damp Location." Outlet box hoods intended for use in damp or wet locations are marked for each location and may be marked "Extra-Duty."

ENVIRONMENTAL INSTALLATION

Boxes may be marked with the environmental Enclosure Type number (1, 2, 3, 3R, etc.) as described in Electrical Equipment for Use in Ordinary Locations (AALZ).

Boxes marked with Enclosure Type 3X or "Corrosion Protection" provide the same level of protection as Type 3 enclosures, and are provided with an additional level of corrosion protection for the enclosure.

RELATED PRODUCTS

Outlet box assemblies that include certified outlet boxes and one or more of the following certified parts: wiring device, mud ring, cover plate, wet-location gasket and cover plate, wet-location gasket and outlet box hood, or other factory-assembled parts, are covered under Wiring Assemblies (QQYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514A, "Metallic Outlet Boxes," and ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Box," "Outlet Box and Cover," "Extension Ring," "Flush Device Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Conduit Bodies and Covers Classified for Use with Specified Equipment (QCKW)

GENERAL

This category covers Listed conduit body covers Classified for use with specified Listed conduit bodies, and Listed conduit bodies Classified for use with specified Listed conduit body covers, in accordance with the details described under **UL MARK**.

These products have been investigated for use in wet locations.

RELATED PRODUCTS

Products Classified under this category are also Listed under Metallic Outlet Boxes (QCTI).

ADDITIONAL INFORMATION

For additional information, see Metallic Outlet Boxes (QCTI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514A, "Metallic Outlet Boxes."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the complete Listing Mark for Metallic Outlet Boxes (QCTI) and the following additional information:

**ALSO CLASSIFIED BY UNDERWRITERS LABORATORIES INC.
FOR USE WITH UL LISTED [CONDUIT BODY] [CONDUIT BODY COVER]**

CATALOG NO. ___, [LISTEE'S NAME]

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC OUTLET BOXES (QCMZ)

GENERAL

This category covers nonmetallic flush device boxes, conduit bodies, conduit boxes, outlet boxes, outlet box and bar hanger assemblies, outlet box hoods, special-purpose boxes, extension rings, covers, and cover plates for flush-mounted wiring devices, intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code." These products are also intended for installation and use in accordance with the following information.

BOX EXTENDERS

Box extenders are components installed in or on a box that is mounted in a finished structure intended to extend the electrical enclosure up to the new finished surface. The box extender rests on the edge of the existing box (fixed depth) or extends into the box (adjustable depth). The flange of the box extender, if provided, rests on the finished surface.

EXTENSION RINGS

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

CONDUIT BODIES

Conduit bodies that are provided with a volume marking can enclose splices, taps or devices. Conduit bodies that are not provided with a volume marking are covered under Conduit Fittings (DWTT). Conduit bodies certified for use with specific conduit body covers and conduit body covers certified for use with specific conduit bodies are covered under Conduit Bodies and Covers Certified for Use with Specified Equipment (QCKW).

CLAMPS

Boxes may or may not be provided with clamps. When clamps are provided, the carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with nonmetallic-sheathed cable "N" or flexible tubing (loom) "T." Clamps suitable for nonmetallic-sheathed cable are also suitable for multiconductor underground feeder and branch circuit cable where used in dry locations unless the box or smallest unit carton is marked "Nonmetallic Sheathed Cable Only." Clamps have been tested for securing only one cable per clamp, except multiple section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout. All clamps are removed before the volume of the box is to be determined.

Boxes intended for use with nonmetallic-sheathed cable or open wiring are suitable for use with cable or wire rated 90°C or less, unless marked for a higher rated wire in degrees centigrade.

SINGLE-GANG BOX

Nonmetallic Outlet Boxes (QCMZ)—Continued

A box nominally 2-1/4 by 4 in. or smaller is intended for one or more nonmetallic-sheathed cables to enter through a single- or multiple-stage knockout opening.

FOR USE WITH RIGID NONMETALLIC CONDUIT

Nonmetallic boxes suitable for use with rigid nonmetallic conduit are provided with a marking on the carton to indicate the intended use, such as "For [Specific Type] Conduit." Such boxes, when so marked on the box or carton and provided with installation instructions, are intended for support by the specified conduit. Such boxes are inherently resistant to atmosphere containing common industrial corrosive agents and will withstand vapors or mists of caustic pickling acids, plating baths, and hydrofluoric and chromic acids. Nonmetallic boxes for use with rigid PVC conduit are suitable for use with wire rated 90°C or less.

Nonmetallic boxes suitable for use with rigid nonmetallic conduit are not intended to support equipment or to accommodate heat producing equipment.

FIXTURE/LUMINAIRE SUPPORT

A nonmetallic box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire weighing 50 lbs or less is marked "FOR FIXTURE/LUMINAIRE SUPPORT" on the carton. A nonmetallic box, with or without a bracket or bar hanger, intended for support of a fixture/luminaire weighing more than 50 lbs. is marked with the weight of the fixture/luminaire to be supported. Nonmetallic boxes and device plaster rings have not been investigated for support of a ceiling fixture/luminaire unless marked for use in ceilings, walls, and with the weight of the product to be supported. Nonmetallic device boxes or nonmetallic device boxes intended to be installed in an existing structure have been investigated for the support of utilization equipment weighing not more than 6 lbs.

CEILING-SUSPENDED-FAN SUPPORT

A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing 35 lbs or less is marked "ACCEPTABLE FOR FAN SUPPORT" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing more than 35 lbs. but not more than 70 lbs. is marked "ACCEPTABLE FOR FAN SUPPORT OF 70 lbs OR LESS" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan is acceptable for use with a fixture/luminaire when provided with the above fixture/luminaire support markings.

CONCRETE TIGHT

Boxes designated as "concrete tight" may have no means of support other than the concrete and often accommodate covers at top and bottom.

FLOOR BOXES

Floor boxes designed for floor installation as covered in ANSI/NFPA 70, "National Electrical Code" (NEC), are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor-cleaning operations. Covers with gaskets may be shipped separately from the boxes. Both products are provided with installation instructions. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type such as, "Floor Box Cover" or "Floor Box, Concrete Tight" as appropriate. Floor boxes may be provided with wiring devices.

WET AND DAMP LOCATIONS

Boxes and covers intended for use in wet locations as defined by the NEC are marked "Wet Location." Damp location boxes and covers are intended to be so located or equipped as to prevent water from entering or accumulating in the box and are marked "Damp Location." Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed, are marked "Wet Location Only When Cover Closed" and may be marked "Damp Location." Outlet box hoods intended for use in damp or wet locations are marked for each location and may be marked "Extra-Duty."

RELATED PRODUCTS

Outlet box assemblies that include certified outlet boxes and one or more of the following certified parts: wiring device, mud ring, cover plate, wet-location gasket and cover plate, wet-location gasket and outlet box hood, or other factory-assembled parts, are covered under Wiring Assemblies (QQYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514C, "Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers," and ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method pro-

Nonmetallic Outlet Boxes (QCMZ)—Continued

vided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Box," "Outlet Box and Cover," "Extension Ring," "Flush Device Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BUSHINGS AND FITTINGS (QCRV)

GENERAL

This category covers supports for outlet and flush device boxes; bushings for use in metal studs; fittings for use in or on outlet and flush device boxes, such as knockout reducers, seals and insulating inserts, and cord-grip attachments; insulating gaskets used behind cover plates for flush-mounted wiring devices to stop drafts; pulling grips, strain-relief grips and support grips; locknuts for conduit; sealing gaskets (washers), sealing rings, service-entrance heads for rigid conduit or electrical metallic tubing; cable riser supports; and bushings for use on the ends of rigid or flexible conduit, or electrical metallic tubing, where a change to open wiring is made.

All male threaded fittings have only been investigated for use with locknuts.

Service-entrance heads or hoods are intended to be used on rigid conduit or electrical metallic tubing that is mounted with the conductor openings facing toward the ground. Service-entrance heads or hoods are suitable for outdoor use and in wet locations.

Armored Cable Bushings — These bushings are used on armored cable between the conductors and the outer armor. They are a readily distinguishable bright color such as red, orange or yellow.

Bushings — These bushings are suitable for temperatures of 150°C if they are black or brown in color, 90°C if they are any other color unless specifically marked for a higher temperature. Other bushings are covered under Insulating Bushings (NZMT) and Conduit Fittings (DWTI). Service-entrance heads for use with service-entrance cable are covered under Service-entrance Cable Fittings (TYZX). Temporary wiring, such as round flexible cables or cords may be secured by the use of a connector suitable for use with flexible cord.

Floor Outlet Fittings — Floor outlet fittings are for use in concrete floors for coupling short lengths of exposed conduit to concealed systems when so installed that floor couplings do not come below surface of floor in which they are embedded and subject to the following restrictions: Elbow to be used only where conduit wires pass through fitting without splice, joint, or tap within fitting, and only where no more than one elbow is used in any conduit run. Tees to be used only where conductors are not drawn in until after main conduit installation is complete. If splices, joints, or taps are used in tees, conductors are intended to be looped that upon removing exposed conduit at floor coupling, splices, joints, or taps can readily be disconnected without interfering with other wiring within fitting.

Sealing Gaskets (Washers) — Sealing gaskets are intended for use with threaded rigid metal conduit and intermediate metal conduit with one sealing gasket on the outside and an ordinary locknut or sealing locknut on the opposite side of the enclosure for wet locations or liquid-tight applications. Sealing gaskets may also be used with certified wet location or liquid-tight fittings where so marked on the fitting carton.

Sealing Rings — Sealing rings have a sealing material contained within a metal retaining ring. Sealing rings are intended for installation only between a threaded fitting and the outside of an enclosure with the fitting secured by a locknut on the inside the enclosure. Sealing rings are intended for wet locations or liquid-tight applications where so marked on the product or product packaging.

Reusability — Bushings and fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

ENVIRONMENTAL ENCLOSURE TYPE RATINGS

Each fitting may be marked with one or more of the following Environmental Enclosure Type ratings for which it was investigated: Type 1, 2, 3R, 3S, 4, 4X, 5, 6, 6P, 12, 12K, 13. The intended uses for each Environmental Enclosure Type are indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

GROUNDING

Metal reducing washers are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code." Reducing washers are

Outlet Bushings and Fittings (QCRV)—Continued

intended for use with metal enclosures having a minimum thickness of 0.053 in. for non-service conductors only. Reducing washers may be installed in enclosures provided with concentric or eccentric knockouts, only after all of the concentric and eccentric rings have been removed. However, those enclosures containing concentric and eccentric knockouts that have been certified for bonding purposes may be used with reducing washers without all knockouts being removed.

CARTON MARKINGS

Fittings for use with flexible cords and marked "Liquid-Tight" on the carton indicates suitability for the use where directly exposed to oil spray or to rain.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514A, "Metallic Outlet Boxes," ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices," and ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit and Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the small unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Bushing," "Outlet Fitting," "Offset Adapter," "Bar Hanger," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WALL OPENING PROTECTIVE MATERIALS (QCSN)

USE AND INSTALLATION

This category covers proprietary compositions that are used to maintain the hourly ratings of fire-resistive walls and partitions containing flush-mounted devices, such as outlet boxes, electrical cabinets, and mechanical cabinets. The individual certifications indicate the specific applications and the method of installation for which the materials have been investigated.

Electrical devices are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

WALL OPENING PROTECTIVE MATERIAL

FIRE RESISTANCE CLASSIFICATION

SEE PRODUCT CATEGORY

IN UL FIRE RESISTANCE DIRECTORY

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET CIRCUIT TESTERS (QCYU)

GENERAL

This category covers portable devices with fixed attachment plug blades, or probes attached to flexible leads, used to indicate various wiring condi-

PRODUCT CATEGORIES BY CATEGORY CODE

tions in 15 or 20 A branch circuits by a pattern of lights or other similar means along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI) connected to the branch circuit, or for indicating that a branch circuit is connected to an arc-fault circuit interrupter (AFCI).

AFCI indicators operate by producing a waveform similar to an arc fault. Since these devices cannot produce an actual arc fault, an AFCI indicator may not trip every AFCI. AFCI indicators are provided with markings or instructions that state the following or equivalent: "**CAUTION:** AFCIs recognize characteristics unique to arcing, and AFCI indicators produce characteristics that mimic some forms of arcing. Therefore the indicator may provide a false indication that the AFCI is not functioning properly. If this occurs, recheck the operation of the AFCI using the test and reset buttons. The AFCI button test function will demonstrate proper operation."

These devices are not intended for use as comprehensive diagnostic instruments.

RELATED PRODUCTS

Ground-continuity-indicating devices constructed integral with cord-connector bodies for use on construction sites are covered under Attachment Plugs, Fuseless (AXUT) as "cord-connector bodies."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1436, "Outlet Circuit Testers."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Tester."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PACKAGED PUMPING SYSTEMS (QCZJ)

GENERAL

This category covers fluid handling systems consisting of pumps, electric motors, frequency drives, control valves, gauges and piping mounted on a structural steel base. They are used for plumbing boosters, heat transfer, hot water heating, HVAC chilled and hot water packages, irrigation, boiler feed and condensate packages, and similar applications.

This category also covers fountain pumping systems intended for connection to permanently-installed architectural and floating fountains. They are intended for installation in accordance with Article 680 or 682 of ANSI/NFPA 70, "National Electrical Code" (NEC). If provided with a control panel, its nameplate includes "Industrial Control Panel for Floating Fountain," "Industrial Control Panel for Permanently Installed Fountain" or "Fountain Control Panel."

RATINGS

Packaged pumping systems are rated 600 V or less. The supply input is rated in full load amperes, voltage, number of phases, frequency, and the rating of the largest motor load.

The system and components of the system are intended to be used within the rated working pressure and with the appropriate liquids in accordance with system markings.

SPECIAL CONSIDERATIONS

These pumping systems have not been investigated for the handling of hazardous materials or for use in hazardous (classified) locations as defined in the NEC.

RELATED PRODUCTS

Systems covered under this category may also be covered under Drinking Water System Components (FDNP). The investigation of drinking water system components is conducted with respect to contaminants that can be introduced into the drinking water supply from their base metal alloy, plastic resin, or other nonmetallic parts such as gaskets, seals, coatings, adhesives, filter media, cement linings or the like.

Systems investigated together with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment (LZFE) or Specialty Refrigeration Equipment (SROT).

Pumping equipment intended for fire service is covered under Fire Pump Motors (QXZF).

Pumps intended for use with combustible or flammable liquids, corrosive liquids, or aqueous solutions containing corrosive materials are covered under Power-operated Pumps (RBOG), or Pumps, Power Operated, Flammable Liquid (RCRX).

Prepackaged combinations of components, such as pumps, filters, heaters, blowers, lights and controls, intended for use with field-supplied hot tubs or spas are covered under Hot Tub and Spa Equipment Assemblies (WBYQ).

Pumps investigated for use with or in proximity to swimming pools or spas are covered under Pumps (WCSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," ANSI/UL 778, "Motor-Operated Water Pumps," and UL 508A, "Industrial Control Panels."

The basic standard used to investigate packaged pumping systems for heating and cooling equipment in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Packaged Pumping System" or "Packaged Fountain Pumping System."

The Listing Mark covers only the equipment mounted to the common structural frame.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINTING EQUIPMENT, AIR COMPRESSORS AND VACUUM PUMPS (QDFT)

This category covers painting equipment, air compressors and vacuum pumps intended for use on nominal system voltages of 600 V and less, except that where the appliances are driven by universal type motors or electromagnetic mechanisms the scope is limited to appliances rated for use on nominal system voltages of 250 V or less. These appliances are cord-connected or provided with means for field wiring connections.

This equipment is intended for household, commercial or industrial use as defined by ANSI/NFPA 70, "National Electrical Code" (NEC).

Paint sprayers present certain inherent hazards when flammable paint or liquid are sprayed, which cannot be guarded against by specific design features. The instructions and warnings supplied with and applicable to each piece of equipment should be carefully observed.

Appliances specified as double insulated are constructed with a special insulating system in lieu of grounding to comply with the provisions of the NEC. Such appliances are distinctively marked "Double-Insulated" or "Double Insulation."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPRESSORS, VACUUM PUMPS AND PNEUMATIC PAINT SPRAYERS (QDGS)

USE AND INSTALLATION

This category covers air compressors and vacuum pumps, including pneumatic-type paint sprayers.

Tank-type compressors of 3 hp or less or 30 gallons and less may employ tanks that are not certified by the American Society of Mechanical Engineers and are not marked with "U" or "UM," but have been investigated by UL for the application.

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

REBUILT PRODUCTS

This category also covers compressors, vacuum pumps and pneumatic paint sprayers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing

Compressors, Vacuum Pumps and Pneumatic Paint Sprayers (QDGS)—Continued

skills. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are subject to the same requirements as new compressors, vacuum pumps and pneumatic paint sprayers.

FACTORS NOT INVESTIGATED

This equipment has not been investigated for use as medical and dental equipment, or heating, air conditioning or refrigeration equipment.

RELATED PRODUCTS

High-pressure paint sprayers, paint mixers and paint pigment dispensers are covered under Painting Equipment (QDIQ).

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps (QDFT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1450, "Motor-Operated Air Compressors, Vacuum Pumps, and Painting Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Painting Equipment," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINTING EQUIPMENT (QDIQ)

USE

This category covers motor-operated equipment used for the preparation or application of paint, such as paint mixers, paint pigment dispensers, paint rollers and high-pressure airless paint sprayers.

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

REBUILT PRODUCTS

This category also covers painting equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt painting equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt painting equipment is subject to the same requirements as new painting equipment.

RELATED PRODUCTS

Paint heaters are covered under Heaters, Industrial and Laboratory (KQLR).

Pneumatic paint sprayers are covered under Compressors, Vacuum Pumps and Pneumatic Paint Sprayers (QDGS).

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps (QDFT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1450, "Motor-Operated Air Compressors, Vacuum Pumps, and Painting Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Painting Equipment" or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Painting Equipment (QDIQ)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINT SPRAY AND FINISHING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QEEA) PAINT-SPRAY BOOTHS WITHOUT FIRE-PROTECTION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (QEFA)

USE

This category covers paint spray booths for liquid and powder coating finishing processes as defined in Article 516 of NFPA 70, "National Electrical Code" (NEC) and in NFPA 33, "Spray Application Using Flammable and Combustible Materials." Some of the booths may alternatively be used for drying, and may utilize electric heating, gas, gas-oil, or an oil-fired heating system. The type of heating employed is indicated in the individual Listings.

These paint spray booths are intended for field erection indoors in accordance with instructions furnished by the manufacturer and the information marked on the equipment. They are intended to be installed and used in accordance with applicable requirements in NFPA 33 and Article 516 of the NEC. Paint spray booths located within a commercial garage are to be installed as defined in Article 511 of the NEC.

FIRE PROTECTION

Paint spray booths in this category are not provided with a factory installed automatic fire protection system. A UL Listed fire protection system is intended to be provided by the installer and approved by the Authority Having Jurisdiction prior to operation of the booth.

COATING MATERIALS

These paint spray booths are intended for spray operations using a single type of coating material. Due to the possibility of spontaneous ignition, different types of coating materials should not be alternately used unless all deposits of the first used material are removed from the booth and ducts, and all paint contaminated filters are replaced or cleaned prior to spraying with the second type of coating material.

The toxicity of coating materials that may be used and the ability of the spray booth to provide protection for the painter and/or booth operator from coating material fumes have not been evaluated. Proper precautions as recommended by the paint manufacturer should be followed.

PRODUCT MARKINGS

The main product nameplate for products in this category includes the statement: "A UL Listed Automatic Sprinkler System or other Listed Automatic Extinguishing System shall be provided by the installer and approved by the Authority Having Jurisdiction."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in NFPA 33, "Spray Application Using Flammable and Combustible Materials."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information, as appropriate: (A) "Paint Spray Booth Without Fire Protection System for Automobile Refinishing," (B) "Paint Spray Booth Without Fire Protection System" or (C) "Paint Spray Booth Without Fire Protection System for Use Only with (Company Name) Labeled (Gas) (Gas-Oil) (Oil) Burner Model(s). Maximum Input (BTU Per Hour) (Gals Per Hour). Refer to Burner Nameplate for Control and Fuel Specifications."

A paint spray booth that includes a burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information as outlined in (A) or (B).

A paint spray booth assembly intended for installation of the burner in the field bears a Listing Mark with the product name and information similar to the text in (C). The burner bears a separate Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINT-SPRAY BOOTHS WITH FIRE-PROTECTION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (QEFY)

USE

This category covers paint spray booths for liquid and powder coating finishing processes as defined in Article 516 of NFPA 70, "National Electrical Code" (NEC) and in NFPA 33, "Spray Application Using Flammable and Combustible Materials." Some of the booths may alternatively be used for drying, and may utilize electric heating, gas, gas-oil, or an oil-fired heating system. The type of heating employed is indicated in the individual Listings.

These paint spray booths are intended for field erection indoors in accordance with instructions furnished by the manufacturer and the information marked on the equipment. They are intended to be installed and used in accordance with applicable requirements in NFPA 33 and Article 516 of the NEC. Paint spray booths located within a commercial garage are to be installed as defined in Article 511 of the NEC.

FIRE PROTECTION

Paint spray booths are provided with either (1) an integral engineered fire extinguishing system that must be regularly inspected and/or recharged or (2) with automatic sprinklers that are connected to a separate water supply in accordance with NFPA 13, "Installation of Sprinkler Systems."

COATING MATERIALS

These paint spray booths are intended for spray operations using a single type of coating material. Due to the possibility of spontaneous ignition, different types of coating materials should not be alternately used unless all deposits of the first used material are removed from the booth and ducts, and all paint contaminated filters are replaced or cleaned prior to spraying with the second type of coating material.

The toxicity of coating materials that may be used and the ability of the spray booth to provide protection for the painter and/or booth operator from coating material fumes have not been evaluated. Proper precautions as recommended by the paint manufacturer should be followed.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in NFPA 33, "Spray Application Using Flammable and Combustible Materials."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information, as appropriate: (A) "Paint Spray Booth for Automobile Refinishing," (B) "Paint Spray Booth" or (C) "Paint Spray Booth for Use Only with (Company Name) Labeled (Gas) (Gas-Oil) (Oil) Burner Model(s). Maximum Input (BTU Per Hour) (Gals Per Hour). Refer to Burner Nameplate for Control and Fuel Specifications."

A paint spray booth that includes the burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information as outlined in (A) or (B).

A paint spray booth assembly intended for installation of the burner in the field bears a Listing Mark with the product name and information similar to the text in (C). The burner bears a separate Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS (QEUY)

USE, INSTALLATION AND MARKINGS

This category covers lighting and power panelboards rated 600 V or less. Panelboards are intended for mounting in cabinets, cutout boxes or enclosures designed for the purpose. The enclosure may be provided with the panel or provided separately. Only panelboards marked to indicate that they are for use in specific enclosures (identified by either catalog number or specific dimensional information) and panelboards labeled as "Enclosed Panelboards" have been investigated to determine that wiring space is adequate, or have been investigated for short-circuit-current ratings greater than 10,000 A rms symmetrical.

Enclosed panelboards identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Some enclosed panelboards have one or more openings for plug-in watt-hour or similar meters. Such panelboards, when marked for outdoor use have, except for the joint between the plug-in meter and opening, been investigated for rain tightness.

Some panelboards are suitable for use as service equipment and may be so marked. Such marking is part of the Certification Mark as noted below or is an integral part of other required markings. Panelboards marked to indicate that they are suitable for use as service equipment and which can be removed from the enclosure are marked to identify the specific enclosure in which they are intended to be installed. If the acceptability of such a panelboard for use as service equipment depends upon the condition of installation or use, the panelboard is marked to indicate those conditions.

Some panelboards incorporate neutrals factory bonded to the frame or enclosure. Such units are marked "Suitable Only for Use as Service Equipment."

Panelboards marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Panelboards are marked with their short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest interrupting rating of (1) any device installed or intended to be installed therein, and/or (2) any combination series-connected device. However, for combination series-connected devices, the short-circuit-current rating marked on the panelboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the panelboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the panelboard in accordance with the marked instructions.

Panelboards to which units (circuit breakers, switches, etc.) may be added in the field are marked with the name or trademark of the manufacturer and the catalog number or equivalent of those units that are intended to be installed in the field. Molded-case circuit breakers (see DIXE) may also be Classified and marked as being suitable for use in certain panelboards in place of or along with specific units marked on the panelboard.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches, other than fused power circuit devices, should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU) and fused power circuit devices (see IYSR) used in panelboards are suitable for continuous use at 100% of their rating.

Some panelboards may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram.

These panelboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors as well as copper conductors, the panelboard is marked "Use Copper or Aluminum Wire." A panelboard employing terminals or main or branch circuits units, individually marked "CU-AL," is marked as noted above or "Use Copper Wire Only." The latter statement indicates that wiring space or other factors make the panelboard unsuitable for aluminum conductors.

Unless the panelboard is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Section 310.15(B)(6) of the NEC. Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

Some panelboards, constructed with interlocked main switching and overcurrent protective devices, have been investigated for use in optional standby systems in accordance with Article 702 of the NEC and are marked "Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70," or, if provided within kit form, "Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70 when provided with interlock kit Cat No. _____."

CLASS CTL PANELBOARDS

Circuit-limiting panelboards (known as "Class CTL" panelboards) are identified by the words "Class CTL" on the UL Certification Mark.

Class CTL panelboards incorporate physical features which, in conjunction with the physical size, configuration, or other means provided in Class CTL circuit breakers, fuseholders or fusible switches, are designed to prevent the installation of more overcurrent protective poles than that number for which the device is designed and rated.

MARINE PANELBOARDS

Some certified enclosed panelboards in this category have been investigated for use aboard marine vessels over 65 ft in length in accordance with the Electrical Engineering Regulations of the United States Coast Guard Subchapter J CG-259 (46CFR Parts 110-113). Such enclosed panelboards are identified by a Certification Mark for marine vessels over 65 ft in length.

PANELBOARDS (QEUY)

The Electrical Engineering Regulations of the United States Coast Guard classify marine enclosed panelboards as “Non-watertight,” “Drip-proof” or “Watertight.”

A “Drip-proof” marine enclosed panelboard is so constructed that falling moisture or dirt does not interfere with the successful operation of the equipment.

A “Watertight” marine enclosed panelboard is so constructed that water does not enter the enclosure when subjected to a stream of water.

External means are provided for the operation of switches or circuit breakers in “Watertight” marine enclosed panelboards.

Marine enclosed panelboards classed “Drip-proof” or “Watertight” are marked to indicate this fact.

A marine enclosed panelboard for use in corrosive locations is marked “Suitable for Use in Corrosive Locations.”

RECREATIONAL VEHICLE (RV) PANELBOARDS

Some certified enclosed panelboards in this category have been investigated for RV use only. These panelboards generally consist of a line voltage/branch circuit section that complies with ANSI/UL 67, “Panelboards.” The low-voltage compartment, including the overall enclosure for that compartment, complies with ANSI/UL 458, “Power Converters/Inverters and Power Converter/Inverter Systems for Land Vehicles and Marine Crafts,” and is intended to be installed in accordance with Article 551 of the NEC. Such enclosed panelboards are identified by a Certification Mark for RVs. RV panelboards do not have integral converter or inverter functions. Devices having combination panelboard-inverter/converter capability are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

RELATED PRODUCTS

Large single panels, frames, or assemblies of panels on which are mounted on the face, back, or both, switches, overcurrent and other protective devices, buses, and usually instruments; accessible from the rear as well as from the front and not intended to be installed in cabinets are covered under Switchboards, Dead-front (WEVZ).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches (WPTZ).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels (NITW).

Distribution equipment containing only one circuit subdivision, unless also provided with a meter socket, is covered under Circuit Breakers, Molded Case and Circuit-breaker Enclosures (DIVQ).

Distribution equipment intended to serve as a means for distributing power required to operate mobile or temporarily installed equipment is covered under Power Outlets and Power Outlet Fittings (QPYV).

Factory-wired assemblies of controllers, timers, temperature-regulating equipment and the like, intended for control of equipment for use with swimming pools, hot tubs and/or spas are covered under Controls (WAWU).

Factory-wired assemblies intended for the control of architectural and floating fountains are covered under Architectural and Floating Fountains (AWEG).

Portable power distribution equipment is covered under Power Distribution Equipment, Portable (QPRW).

Devices having combination panelboard/inverter capability are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 67, “Panelboards.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Panelboard,” “Enclosed Panelboard,” “Marine, Enclosed Panelboard for Use on Vessels Over 65 Feet,” “Enclosed RV Panelboard.” The product name may include the wording “Class CTL” or “Suitable for Use as Service Equipment,” where appropriate. The product name “Enclosed Panelboard” covers both the panel and the enclosure with which it is provided.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS FOR USE IN HAZARDOUS LOCATIONS (QFIW) 333

PANELBOARDS FOR USE IN HAZARDOUS LOCATIONS (QFIW)

USE

This category covers enclosed panelboards under Class I and Class II groups of the manually operable, air-break type, employing circuit breakers having automatic overload protection.

These enclosed panelboards are intended for lighting and low-capacity power distribution.

These panelboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Each marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Enclosed Panelboard for Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS, LIGHT AND POWER FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (QFKR)

USE

This category covers enclosed panelboards of the manually operable, air-break type, employing circuit breakers having automatic overload protection, and intended for lighting and low-capacity power distribution.

These panelboards are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Each marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Enclosed Panelboard for Hazardous Locations” or “Enclosed Panelboard for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS, MODULAR (QFOF)

GENERAL

This category covers modular panelboards rated 600 V or less. A modular panelboard includes the following types of modules: an enclosed panelboard or a column type panelboard and one or more accessory modules, such as termination boxes, enclosed switches, circuit breaker enclosures,

PRODUCT CATEGORIES BY CATEGORY CODE

and the like. Each module has one or more openings in one or more sides of the enclosure for busbar connections or terminals for field wiring connections to other related modules. The modules are specifically designed for use with each other and, typically, they can be assembled in any sequence to meet various applications.

Each module of the system is marked for use with the other system modules, or each module is marked with a series designation common to all modules of a particular modular panelboard system.

Panelboard modules used in these modular panelboard systems are labeled "Panelboard Module" and all other system modules are labeled "Panelboard Accessory Module."

RELATED PRODUCTS

See Panelboards (QEUY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 67, "Panelboards." In addition, each accessory module is investigated to its applicable UL Standard.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Panelboard Module" or "Panelboard Accessory Module."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PASSENGER BOARDING BRIDGES (QGLA)

USE AND INSTALLATION

This category covers passenger boarding bridges intended to be installed at airport terminals. This equipment is for loading and unloading of aircraft passengers.

Passenger boarding bridges are assemblies of two or more component sections. These sections may include, but are not limited to, a rotunda, rotunda support, tunnel, rotating cab and driver or prime mover. The rotunda provides for the connection of the bridge to the airport terminal building. The cab provides for the connection of the bridge to the aircraft. The tunnel may consist of one or more sections having a telescoping construction to facilitate outward movement of the bridge to meet the aircraft. The driver or prime mover consists of one or more motors and drive train, which provide for proper positioning of the bridge to accommodate different types of aircraft and aircraft parking configurations. Bridges are provided with one or more services for connection to utility power. Power is supplied throughout the bridge by S- or SJ-type cable suitable for outdoor use and wire protected by rigid conduit with appropriate fittings or appropriate raceway. Electrical equipment within the bridge may include industrial control panels, disconnect switches, limit switches, proximity switches, luminaires, light switches, GFCI receptacles, alarms and smoke detectors. Bridges may be provided with optional equipment such as an air conditioner and power supply for the aircraft when the aircraft is parked. This equipment is normally attached to the underside of the bridge.

Bridges are completely assembled at the factory for inspection and functionality testing prior to shipping. Bridges are disassembled, shipped in sections, reassembled at the installation site and retested for functionality. As part of disassembly the air handler, aircraft power unit, and rotunda support may be removed. Bridges are provided with various control, monitoring, signaling and alarm devices to prevent movement of the bridge that would result in damage to the bridge, aircraft or airport structures and alert personnel in the vicinity of the bridge that bridge movement is imminent.

This category also covers accessories for passenger boarding bridges intended to be installed at gate areas of airport terminals. These accessories may be installed on or remote from the passenger boarding bridge. In either case they are associated with the operation of the passenger boarding bridge. The accessories include, but are not limited to, management systems for air-handling hoses, air-handling units, aircraft power units, and control, monitoring, signaling and alarm devices to regulate movement of the bridge.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Mechanical Equipment and Associated Products (AAMB).

REQUIREMENTS

The basic standards used to investigate passenger boarding bridges in this category are UL 508A, "Industrial Control Panels," and ANSI/UL 325, "Door, Drapery, Gate, Louver, and Window Operators and Systems."

The basic standard used to investigate passenger boarding bridge accessories in this category is UL 508A, in addition to the requirements contained in UL Subject 2011, "Outline of Investigation for Factory Automation Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Passenger Boarding Bridge" or "Passenger Boarding Bridge Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES (QGRQ)

This category covers cosmetic and grooming appliances and related equipment for use in beauty salons, barber shops, and residences. Appliances include barber chairs, curling irons, hair conditioning machines, hair dryers, manicure sets, permanent wave machines, shampoo machines, styling dryers, and untanglers (detanglers). These units are identified as to household or commercial use in the individual listings. Also see "Hair Clipping and Shaving Appliances." Heated caps, facial masks and mitts are covered under the requirements for "Heating Pads."

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES, COMMERCIAL (QGRT)

GENERAL

This category covers cosmetic and grooming appliances intended for commercial use in beauty salons, barber shops, nail care centers, and cosmetic studios. Appliances include hair dryers, barber chairs, wig and brush dryers, facial therapy units, hair spray systems, permanent wave machines, manicure sets, curling irons, cosmetology equipment, and hair conditioning machines.

FACTORS NOT INVESTIGATED

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

RELATED PRODUCTS

Hair clipping and shaving appliances are covered under Hair Clipping and Shaving Appliances (KEFX).

Heated caps, facial masks and mitts are covered under Heating Pads, Electric (MNUV).

Personal grooming appliances for household use are covered under Personal Grooming Appliances, Household (QGRW).

Hydromassage chairs and pedicure spas are covered under Plumbing Accessories (QMTX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1727, "Commercial Electric Personal Grooming Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illus-

PERSONAL GROOMING APPLIANCES (QGRQ)

Personal Grooming Appliances, Commercial (QGRT)—Continued

trated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL SUN AND HEAT EQUIPMENT (QGRX)

GENERAL

This category covers personal sun and heat equipment of the household and commercial variety, including tanning beds and booths for use in commercial tanning salons, intended for the production of ultraviolet (sun) radiation, infrared (heat) radiation, or both.

This category also covers sun equipment provided with UV-A and UV-B fluorescent and/or high-intensity discharge (HID) lamps.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, that may be produced by these lamps have not been investigated.

RELATED PRODUCTS

Sun and heat equipment intended for therapeutic use is covered under Medical Equipment (PIDF).

Sun and heat equipment of the household variety intended for portable use is covered under Sun and Heat Lamps (QPDY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 482, "Portable Sun/Heat Lamps." The limit for ultraviolet irradiation specified in ANSI/UL 482 is in agreement with the federal regulations specified in 21CFR1040.20, "Sun Lamp Products and Ultraviolet Lamps Intended for Use in Sun Lamp Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sun Bed," "Tanning Booth" or "Heat Unit," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL HYGIENE AND HEALTH CARE APPLIANCES (QGRZ)

USE

This category covers appliances, primarily cord connected, intended for use in households or similar locations, not necessarily under professional supervision, such as toothbrushes, oral irrigation appliances, denture cleaners, hydromassage units, facial cleaners, etc.

This category also covers toilet seat assemblies (including bidet seats) containing electrical features, such as heating and water-dispensing components, which are intended to connect to the already-provided plumbing accessories (toilet bowl).

FACTORS NOT INVESTIGATED

The physiological effects of the use of these appliances, beneficial or otherwise, has not been investigated.

RELATED PRODUCTS

Medical and dental equipment intended for professional use is covered under Medical Equipment (PIDF).

Other household-related equipment is covered under Personal Grooming Appliances (QGRQ), Heating Pads, Electric (MNUV), Massage and Exercise Machines (PGXX) and Personal Sun and Heat Equipment (QGRX).

Toilets are covered under Plumbing Accessories (QMTX).

Facial saunas are covered under Personal Grooming Appliances, Household (QGRW) and Personal Grooming Appliances, Commercial (QGRT).

ADDITIONAL INFORMATION

PERSONAL HYGIENE AND HEALTH CARE APPLIANCES (QGRZ)

335

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1431, "Personal Hygiene and Health Care Appliances," UL 1097, "Double Insulation Systems for Use in Electrical Equipment," and ANSI/UL 746C, "Polymeric Materials - Use in Electrical Equipment Evaluations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Personal Hygiene Appliance" or "Health Care Appliance," or the name of the specific product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL PROTECTIVE EQUIPMENT (QGSY)

INDUSTRIAL WORKERS' PROTECTIVE APPAREL (QGVW)

Protective Clothing for Electrical Workers (QGVZ)

USE

This category covers protective clothing intended to provide minimal protection to electrical workers exposed to momentary electric arc and related thermal hazards. This wearing apparel includes design characteristics that relate to its utility and that relate specifically to protection from exposure to momentary electric arc.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

The basic standard used to investigate products in this category is ASTM F1506, "Standard Performance Specification for Textile Materials for Wearing Apparel for Use by Electrical Workers Exposed to Momentary Arc and Related Thermal Hazards."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following information:

PROTECTIVE *
IN ACCORDANCE WITH THE
AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]

Control No.

The Classification Mark may be abbreviated as follows:

PROTECTIVE *
IN ACCORDANCE WITH
ASTM F1506, [latest revision date]

Control No.

* GARMENT, COAT, JACKET, OVERALLS, COVERALLS, SHIRT, PANTS or HOOD

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**DISTRIBUTED GENERATION POWER
SYSTEMS EQUIPMENT (QHWJ)****AC MODULES (QHYZ)****USE AND INSTALLATION**

This category covers AC modules that provide single-phase power at 50/60 Hz when exposed to sunlight. An AC module consists of a photovoltaic module and an integral static inverter that changes dc power to ac power. AC modules may be connected in parallel and are intended for operation interactive with an electric utility supply. They have been investigated to deenergize their output upon loss of utility power.

These modules are rated up to 600 V dc input; 10 kW, 120/240 V ac or less, single-phase output.

These modules and panels are intended for mounting on buildings or on ground supported frames. Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may adversely affect the roof-covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

AC modules are marked with the maximum size of dedicated branch circuit on which they may be installed and the maximum number of modules which may be connected in parallel.

Installation of the modules, including connection between the modules and the branch-circuit disconnecting means, is intended to be in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code," (NEC) including Article 690. Authorities Having Jurisdiction should be consulted as to the conformance with applicable building codes including the class of roof covering.

AC modules provided with integral ground-fault detection and interruption means required by Sec. 690-5 of the NEC are identified by a marking on the product.

FLAME CLASSES

When applicable, modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see UL's Roofing Materials and Systems Directory.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Utility Interactive AC Module" or "Utility Interactive Inverter Module."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**BUILDING-INTEGRATED PHOTOVOLTAIC
MODULES AND PANELS (QHJK)****USE AND INSTALLATION**

This category covers flat-plate building-integrated photovoltaic (BIPV) modules and panels intended for mounting integrally to the structural or protective surfaces of a building. BIPV modules and panels are investigated for one of three primary installation methods: (1) intended to serve as the roof, or as a majority component of the roofing system of a building, (2) intended to serve as part of a structural component of a building, such as a curtain wall, facade, atrium, skylight, etc., or (3) intended to serve as part of

**Building-integrated Photovoltaic Modules and Panels
(QHJK)—Continued**

a nonstructural component of a building, such as a curtain wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure.

When intended to serve as the roof, or as a majority component of the roofing system of a building, the BIPV module serves as a primary component of the building's fire resistance and waterproofing membrane. These functions have been investigated as appropriate to the extent of those functions served. Standards used in roofing system investigations have been employed as appropriate to the nature of construction and use of the system. Roofing-type BIPV products have been investigated to those roofing standards, as appropriate to their construction and use.

When intended to serve as part of a structural component of a building, such as a curtain wall, facade, atrium, skylight, etc., the BIPV module is assumed to serve as a primary component of the building's exterior surface and is accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required by ANSI/NFPA 70, "National Electrical Code" (NEC), either applied to the interior of the system or integral to the support structure. BIPV modules intended to be mounted or retained within a metallic support structure have been investigated to ANSI/UL 790, "Standard Test Methods for Fire Tests of Roof Coverings," for fire-resistance classification appropriate to the installation requirements (typically Class A). The combination of BIPV modules and the intended support structure should act as structurally reliable building components in terms of both loading and fire resistance.

When intended to serve as part of a nonstructural component of a building, such as a curtain wall, facade, atrium, skylight, etc., the BIPV module is assumed not to serve as a primary component of the building's exterior surface and is not accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required for structural BIPV systems, and the intended support structure should act as structurally reliable control of the module system alone, as required in ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels." BIPV modules have been investigated to ANSI/UL 790 for fire resistance.

In either the structural or nonstructural curtain wall, facade, atrium, skylight, etc. installation mode, the BIPV panel may be identified to be suitable for use with specific UL Classified BIPV mounting systems covered under Building-integrated Photovoltaic Mounting Systems (QHJQ).

The modules and panels are marked with manufacturer and model identification. The wiring system indicates the proper terminal polarity. The installation instructions supplied provides all required electrical data, such as voltages, currents, power ratings, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed) and appropriate means of connection between the modules and between the module array and the load, in accordance with the NEC.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the fire-resistance classification required.

FLAME CLASSES

When applicable, BIPV modules and panels intended for installation as a roofing system are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that are not installed as roofing systems are identified with respect to their fundamental resistance to external fire exposure, or are marked "Not Fire Rated." For significance of external fire exposure classes, see Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire-retardant-treated Wood (TFXX) and Roofing Systems (TGFU).

RELATED PRODUCTS

Framed PV modules or panels that include a mounting means as part of the product and are not intended to be installed into or as part of the building surface or structure are covered under Photovoltaic Modules and Panels (QIGU).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Building Materials (AABM) and Roofing Materials and Systems (AARM).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

BIPV modules and mounting systems integral to or in addition to a building's roof system are additionally investigated to ANSI/UL 790, "Standard Test Methods for Fire Tests of Roof Coverings," and/or UL 997, "Wind Resistance of Prepared Roof Covering Materials," as appropriate.

ADJUNCT SERVICE

UL provides a service for the Classification of building-integrated photovoltaic modules and panels that not only meet the appropriate requirements of UL but also have been investigated in accordance with one or more of the following design qualification standards:

IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic (PV) Modules - Design Qualification and Type Approval"

Building-integrated Photovoltaic Modules and Panels (QHZZ)–Continued

- EN 61215, “Crystalline Silicon Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval”
- IEC 61646, “Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval”
- EN 61646, “Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval”
- IEC 61730-1, “Photovoltaic (PV) Module Safety Qualification – Part 1: Requirements for Construction,” and IEC 61730-2, “Photovoltaic (PV) Module Safety Qualification – Part 2: Requirements for Testing”
- EN 61730-1, “Photovoltaic (PV) Module Safety Qualification – Part 1: Requirements for Construction,” and EN 61730-2, “Photovoltaic (PV) Module Safety Qualification – Part 2: Requirements for Testing”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “BIPV Module,” “BIPV Photovoltaic Panel,” “BIPV Roofing Product,” “BIPV Module for Use with Classified Structural Support Systems,” or other appropriate product name as shown in the individual Listings.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEC and/or EN design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: “ALSO CLASSIFIED IN ACCORDANCE WITH *,” where “*” is one or more of the following:

- IEC 61215-(issue date)
- EN 61215-(issue date)
- IEC 61646-(issue date)
- EN 61646-(issue date)
- IEC 61730-1-(issue date) and IEC 61730-2-(issue date)
- EN 61730-1-(issue date) and EN 61730-2-(issue date)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUILDING-INTEGRATED PHOTOVOLTAIC MOUNTING SYSTEMS (QHZZ)

USE AND INSTALLATION

This category covers building-integrated photovoltaic (BIPV) mounting systems intended for use with specific Listed BIPV modules and panels (see Building-integrated Photovoltaic Modules and Panels [QHZZ]) that have been investigated for mounting integral to the structure of a building. The systems have been investigated for electric shock and fire hazards only.

Installation of BIPV modules and mounting systems integral to or in addition to a building’s roof system may adversely affect the roof-covering materials’ resistance to external fire exposure if the module and mounting system combination has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules and mounting system have an equal or greater fire-resistance rating than the roof-covering material.

The installation of these BIPV mounting systems and related modules or panels is intended to be in accordance with ANSI/NFPA 70, “National Electrical Code,” in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

FLAME CLASSES

When applicable, BIPV modules and mounting systems intended for installation as part of a roof are marked “Class A,” “Class B” or “Class C” to denote their resistance to external fire exposure. Modules, panels and mounting systems that have not been identified with respect to their resistance to external fire exposure are marked “Not Fire Rated.” For significance of external fire exposure classes, see Prepared Roof-covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire-retardant-treated Wood (TFXX) and Roofing Systems (TGFU).

RELATED PRODUCTS

Rack-mounted PV modules or panels that include an integral mounting means not intended to be installed into or as part of the building structure or facade are covered under Photovoltaic Modules and Panels (QIGU).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

Building-integrated Photovoltaic Mounting Systems (QHZZ)–Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Building Materials (AABM) and Roofing Materials (AARM).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, “Flat-Plate Photovoltaic Modules and Panels.”

BIPV modules and mounting systems integral to or in addition to a building’s roof system are additionally investigated to ANSI/UL 790, “Standard Test Methods for Fire Tests of Roof Coverings,” and UL 997, “Wind Resistance of Prepared Roof Covering Materials,” as appropriate to the nature of construction and installation.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. DISTRIBUTED GENERATION WIRING SYSTEMS AND HARNESSSES (QHZZ)

USE AND INSTALLATION

This category covers distributed generation wiring systems and harnesses intended for use with specific distributed generation equipment/devices such as photovoltaic modules, inverters, solar trackers, etc., as identified in the individual certifications.

The installation of these distributed generation wiring harnesses is intended to be in accordance with ANSI/NFPA 70, “National Electrical Code,” in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

RELATED PRODUCTS

Photovoltaic modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

Low-concentration flat-plate modules are covered under Flat-plate, Low-concentration Photovoltaic Modules and Panels (QHZZ).

Photovoltaic concentrators are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

AC modules are covered under AC Modules (QHYZ).

Photovoltaic junction boxes are covered under Junction Boxes for Use in Photovoltaic Modules and Panels (QIJB2).

Photovoltaic connectors are covered under Connectors for Use in Photovoltaic Systems (QIQ2).

Multi-pole distributed generation connectors are covered under Multi-pole Connectors for Use in Photovoltaic Systems (QIFA2).

Inverters and other distributed generation power converters are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

Wind turbines are covered under Large Wind Turbine Generating Systems (ZGEA) and Small Wind Turbine Generating Systems (ZGEN).

Solar electric and thermal trackers are covered under Photovoltaic Solar Trackers (QIKA).

Combiner boxes are covered under Distributed Generation Power Systems Accessory Equipment (QIIO).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 9703, “Outline of Investigation for Distributed Generation Wiring Harnesses.”

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to

identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Distributed Generation Wiring Harness" (or "DG Wiring Harness"), "Distributed Generation Wiring System" (or "DG Wiring System"), "Photovoltaic Wiring Harness" (or "PV Wiring Harness") or "Photovoltaic Wiring System" (or "PV Wiring System").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLAT-PLATE, LOW-CONCENTRATION
PHOTOVOLTAIC MODULES AND PANELS
(QHJU)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels that concentrate natural sunlight by a factor of 3 or less. These products use lenses and/or reflectors internal to or mounted directly on the laminate to concentrate natural sunlight on photovoltaic cells to increase output power. These products are intended to be mounted on buildings or on ground-supported frames. Roof-mounted low-concentration modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface. Rack-mounted styles may also be installed separate from buildings. All low-concentration photovoltaic modules and panels are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC) and model building codes.

When mounted integral to a building's roof the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Low-concentration modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or assemblies generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and assemblies are marked to indicate terminal polarity, and maximum series overcurrent device rating. Installation of the modules and assemblies, including connection between the modules and the assemblies and the load, static inverters or controller is intended to be in accordance with the NEC. Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering.

FLAME CLASSES

When applicable, low-concentration modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and assemblies that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

RELATED PRODUCTS

Concentrator photovoltaic modules and assemblies with sunlight concentration of greater than 3x are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

Flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category for the concentration of sunlight on photovoltaic cells only are contained in UL Subject 8703, "Outline of Investigation for Concentrator Photovoltaic Modules and Assemblies."

The basic standard used to investigate products in this category, with the exception of concentration of sunlight on photovoltaic cells, is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word

(QHJU)—Continued

"LISTED," a control number, and the product name "Low-concentration Photovoltaic Module" or "Low-concentration Photovoltaic Panel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC CHARGE CONTROLLERS
(QIBP)

USE AND INSTALLATION

This category covers permanently-connected photovoltaic charge controllers that control the state of charge of storage batteries used in photovoltaic power systems.

Photovoltaic charge controllers are rated 600 V dc or less and are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," including Article 690.

These products include photovoltaic charge controller subassemblies for field installation in a specific terminal compartment in accordance with the instructions supplied with the subassembly. The markings identify the modules in which the subassemblies may be installed or the electrical rating parameters (e.g., V_{oc} and I_{sc}) of the modules with which they are to be used. The terminal compartments, modules and subassemblies are products of the same manufacturer.

Controllers having an enclosure that is identified with an enclosure type designation or as "Rain tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Charge Controller" or "Photovoltaic Charge Controller Subassembly," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONCENTRATOR PHOTOVOLTAIC
MODULES AND ASSEMBLIES (QICP)

USE AND INSTALLATION

This category covers concentrator photovoltaic (CPV) modules and assemblies. These products use lenses and reflectors to concentrate sunlight on photovoltaic cells to increase output power. These products can be self-supporting, mounted on buildings or ground-supported frames. Roof-mounted concentrator modules or assemblies are evaluated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface. All CPV systems are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and model building codes.

CPV modules and assemblies are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or assemblies generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and assemblies are marked to indicate terminal polarity, and maximum series overcurrent device rating. Installation of the modules and assemblies, including connection between the modules and the assemblies and the load, static inverters or controller is intended to be in accordance with the NEC. Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering.

FLAME CLASSES

When applicable, modules and assemblies are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules

Concentrator Photovoltaic Modules and Assemblies
(QICP)—Continued

and assemblies that have not been identified with respect to their resistance to external fire exposure are marked “Not Fire Rated.”

INSTALLATION CLASSES

The installation class for CPV modules and assemblies identifies the intended installation location as either general access areas designated “General,” or restricted access areas designated “Restricted.” General access units are able to be installed in open areas that may be contacted by the general public. Restricted access units are intended to be installed in areas that prevent general public access, such as a locked and fenced-in area.

RELATED PRODUCTS

Flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels (QIGU). AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 8703, “Outline of Investigation for Concentrator Photovoltaic Modules and Assemblies.”

ADJUNCT SERVICE

UL provides a service for the Classification of CPV modules and assemblies that not only meet the appropriate requirements of UL but also have been investigated to IEC 62108 (2007-12), “Concentrator Photovoltaic (CPV) Modules and Assemblies – Design Qualification and Type Approval.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Concentrator Photovoltaic Module” or “Concentrator Photovoltaic Assembly.”

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to IEC 62108 (2007-12). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: “ALSO CLASSIFIED IN ACCORDANCE WITH IEC 62108 (2007-12).”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC DC ARC-FAULT CIRCUIT
PROTECTION (QIDC)****GENERAL**

This category covers direct-current (dc) photovoltaic (PV) arc-fault circuit-protection devices intended for use in solar photovoltaic electrical energy systems as described in Article 690 of ANSI/NFPA 70, “National Electrical Code.” This protection is intended to mitigate the effects of arcing faults that may pose a risk of fire ignition under certain conditions if the arcing persists.

These devices are intended for use in circuits rated 1000 V or less. They are intended for use in dc electrical systems that are supplied by a PV source, such as a module with solar cells designed to generate dc power when exposed to sunlight.

These devices have been investigated to determine their ability to recognize and react to arcing faults. They have also been investigated to determine resistance to unwanted tripping because of the presence of arcing that occurs in control and utilization equipment under normal operating conditions, and to verify that operation is not unduly inhibited by the presence of loads and circuit characteristics that may mask or attenuate unwanted arcing.

PRODUCT TYPES

Products covered under this category include PV dc arc-fault circuit-interrupters (AFCI), PV dc arc-fault detectors, PV dc interrupting devices, and inverters, converters and charge controllers with integral arc-fault circuit-interrupter protection.

All of these products are further classified as a Type 1 or Type 2 device:

Type 1 — A device intended to detect or interrupt series arcing faults.

Type 2 — A device intended to detect or interrupt both series arcing faults and parallel arcing faults.

Photovoltaic DC Arc-fault Circuit Interrupters

These devices are intended to be installed in a solar PV energy system to interrupt power delivered to an arcing fault when an arcing fault is

Photovoltaic DC Arc-fault Circuit Protection
(QIDC)—Continued

detected by the AFCI. They are intended to provide arcing protection to the PV system and wiring against the unwanted effects of arcing.

Photovoltaic DC Arc-fault Detectors

These devices are intended to provide arcing protection to the PV system and wiring against the unwanted effects of arcing by enabling a separate interruption or shorting device to interrupt power delivered to an arcing fault.

Photovoltaic DC Interrupting Devices

These devices are intended for installation in a solar PV energy system to interrupt a detected arcing fault. The device is generally enabled by another device that detects arcing, such as an arc-fault detector. The device can perform an interruption or shorting function as appropriate to interrupt power delivered to an arcing fault.

**Inverters, Converters and Charge Controllers with Integral Arc-fault
Circuit-Interrupter Protection**

Inverters, converters and charge controllers with integral PV dc arc-fault circuit-interrupter protection are additionally investigated to UL 1741, “Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources,” and are covered under Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH).

PRODUCT MARKINGS

Products are marked “Type 1” or “Type 2” as appropriate. Products are additionally marked with the manufacturer’s name, trademark, or other suitable means of identification, a type or catalog designation, the electrical ratings in dc voltage and load capacity in dc amperes, and short-circuit rating.

AFcIs are marked with the appropriate product name as specified under **UL MARK** below, where visible after installation.

Inverters, converters and charge controllers with integral arc-fault circuit-interrupter protection are marked “Photovoltaic Arc-Fault Circuit-Protection” or equivalent, where visible after installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1699B, “Outline of Investigation for Photovoltaic (PV) DC Arc-Fault Circuit Protection.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Arc-fault Circuit Interrupter” (or “Photovoltaic AFCI” or “PV AFCI”), “Photovoltaic Arc-fault Detector” (or “Photovoltaic AFD” or “PV AFD”) or “Photovoltaic Interrupting Device” (or “Photovoltaic ID” or “PV ID”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC MODULES AND PANELS
(QIGU)****USE AND INSTALLATION**

This category covers flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames. Roof-mounted modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building’s roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building’s roof the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building’s waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building’s roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building’s roof system may or may not adversely affect the roof-covering materials’ resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. This category does not include AC modules; see AC Modules (QHYZ) for additional details. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal

Photovoltaic Modules and Panels (QIGU)—Continued

polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code."

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

ADJUNCT SERVICE

UL provides a service for the Classification of photovoltaic modules and panels that not only meet the appropriate requirements of UL but also have been investigated to one or more of the following design qualification standards:

- IEEE 1262, "IEEE Recommended Practice for Qualification of Photovoltaic (PV) Modules"
- IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic Modules - Design Qualification and Type Approval"
- IEC 61646, "Thin-film Terrestrial Photovoltaic Modules - Design Qualification and Approval"
- IEC 61730, "Photovoltaic (PV) Module Safety Qualification"
- EN 61730, "Photovoltaic (PV) Module Safety Qualification"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Module" or "Photovoltaic Panel."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to IEEE, IEC or EN design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one or more of the following:

- IEEE 1262-(issue date)
- IEC 61215-(issue date)
- IEC 61646-(issue date)
- IEC 61730-(issue date)
- EN 61730-(issue date)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS, REMANUFACTURED (QIGZ)

USE AND INSTALLATION

This category covers remanufactured flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames. Remanufactured flat-plate photovoltaic modules and panels are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Remanufactured flat-plate photovoltaic modules and panels are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Remanufactured flat-plate photovoltaic modules and panels are subject to the same requirements as new remanufactured flat-plate photovoltaic modules and panels.

Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Photovoltaic Modules and Panels, Remanufactured (QIGZ)—Continued

Installation of modules on or integral to a building's roof system may adversely affect the roof covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Remanufactured photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. This category does not cover AC modules; see AC Modules (QHYZ) for additional details. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code." Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roofing Systems (TGFU).

RELATED PRODUCTS

Additional Listings of flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Remanufactured Photovoltaic Module" or "Remanufactured Photovoltaic Panel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS WITH SYSTEM VOLTAGE RATINGS OVER 600 VOLTS (QIIA)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels with system voltage ratings above 600 V up to and including 1000 V.

These modules and panels are intended for mounting on ground-supported frames, and may be mounted on a building roof when the maximum system voltage of the photovoltaic installation is limited to 600 V. Roof-mounted modules and panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may or may not adversely affect the roof-covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with ANSI/NFPA 70, "National Elec-

Photovoltaic Modules and Panels with System Voltage Ratings Over 600 Volts (QIIA)—Continued

trical Code” (NEC). Note that installation with a maximum photovoltaic system voltage over 600 V is intended to comply with Article 690, Part IX of the NEC.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked “Class A,” “Class B” or “Class C” to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked “Not Fire Rated.” For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

RELATED PRODUCTS

AC modules are covered under AC Modules (QHYZ).

Modules and panels with maximum system voltage ratings of 600 V or less are covered under Photovoltaic Modules and Panels (QIGU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, “Flat-Plate Photovoltaic Modules and Panels.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Module Over 600 Volts” or “Photovoltaic Panel Over 600 Volts.”

For products additionally investigated for resistance to external fire exposure, the Listing Mark includes the words **Class A**, **Class B** or **Class C**, as appropriate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED GENERATION POWER SYSTEMS ACCESSORY EQUIPMENT (QIIO)

GENERAL

This category covers actuators, blocking diodes, conduit boxes, photovoltaic combiner boxes, controllers (control boxes), communication modules, disconnects, distribution panels and transition boxes.

This accessory equipment is intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code,” including Articles 690 and 692.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, “Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Distributed Generation Utility Interconnection Controller,” “Photovoltaic System Ground Fault Detector Interrupter,” “Photovoltaic System Transition Box,” “Photovoltaic Disconnect,” “Photovoltaic System Control Box,” “Distributed Generation System Distribution Panel,” “Distributed Generation Interface Module,” “Distributed Generation Communications Module,” “Photovoltaic Combiner Box,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED RESOURCE POWER SYSTEMS (QIJL)

GENERAL

This category covers permanently-connected distributed resource power systems, which may include combinations of components or products including, but not limited to, photovoltaic modules, fuel cells, synchronous generators, induction generators, batteries, energy-storage devices, inverters, converters, charge controllers, utility interconnection systems equipment and protection relays. This combination of equipment is intended to combine, convert, transform or relay energy from one or more ac or dc sources for use in stand-alone (not grid-connected to the Area EPS) and/or utility-interactive (grid-connected to the Area EPS) power systems to provide power to load/utilization equipment. Utility-interactive inverters and converters are intended to be installed in conjunction with an electric supply system Area EPS or an electric utility to supply energy to common loads.

Distributed resource power systems are factory- or field-wired assemblies in which the combination has been investigated for operation as a system assembly when installed in accordance with the manufacturer’s installation instructions.

These systems are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code.”

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Photovoltaic modules and panels are investigated to ANSI/UL 1703, “Flat-Plate Photovoltaic Modules and Panels,” and are also covered under Photovoltaic Modules and Panels (QIGU).

Equipment intended to provide a primary, secondary, or primary and secondary power source to specified or nonspecified loads in parallel or separate from the utility is investigated to UL 1741, “Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources,” and is also covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are utility interactive, stand-alone, multimode inverters or converters, interconnection system equipment and photovoltaic charge controllers.

Internal-combustion-engine-driven electrical generating (engine generator or microturbine) equipment that consumes fuels such as gasoline, natural gas, LP-gas, diesel etc., is investigated to ANSI/UL 2200, “Stationary Generator Engine Assemblies,” and is also covered under Engine Generators (FTSR).

These products may contain features or functions for combined heat and power production (CHP). CHP products that produce heat or perform a heat transfer function, in addition to electric power conversion, comply with the applicable requirements of ANSI/UL 1995, “Heating and Cooling Equipment,” ANSI/UL 834, “Heating, Water Supply, and Power Boilers – Electric,” UL 795, “Commercial-Industrial Gas Heating Equipment,” and/or UL Subject 1279, “Outline of Investigation for Solar Collectors.”

Batteries for energy-storage equipment are investigated to UL Subject 1973, “Outline of Investigation for Batteries for Use in Light Electric Rail (LER) Applications and Stationary Applications,” and are also covered under Batteries for Use in Light Electric Rail and Stationary Applications (BBFX).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Distributed Resource Power System” or “Photovoltaic Power System,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC SOLAR TRACKERS (QIKA)

USE AND INSTALLATION

This category covers photovoltaic (PV) solar trackers intended for use with specific PV modules, panels, concentrated PV devices, and specified module frames and mounting structures as identified in the individual Listings. PV solar trackers are investigated for one of two installation types: (1) ground mounted, or (2) intended to serve as part of a nonstructural component of a building. Trackers intended to be installed in readily accessible locations have been investigated for all mechanical hazards as defined in UL Subject 3703, “Outline of Investigation for Solar Trackers.” Products intended for installation in locations not readily accessible have

PRODUCT CATEGORIES BY CATEGORY CODE

Photovoltaic Solar Trackers (QJKA)–Continued

been investigated with consideration given to the mechanical hazard requirements of UL Subject 3703. The solar tracker and its functions have been investigated with respect to risk of electric shock and fire hazards, as well as the mechanical loading (and electrical bonding) of the solar-tracker platform in accordance with UL Subject 2703, “Outline of Investigation for Rack Mounting Systems and Clamping Devices for Flat-Plate Photovoltaic Modules and Panels.”

The installation of these solar trackers is intended to be in accordance with ANSI/NFPA 70, “National Electrical Code,” in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering.

CLASSES

When applicable, modules or panels are identified as Class A, B or C to denote their resistance to external fire exposure. Modules or panels that have not been identified with respect to their resistance to external fire exposure are marked “Not Fire Rated.” For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

RELATED PRODUCTS

PV modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

Photovoltaic concentrators are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 3703, “Outline of Investigation for Solar Trackers.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Photovoltaic Solar Tracker” (or “PV Solar Tracker”).

For products additionally investigated for resistance to external fire exposure, the Listing Mark includes the words CLASS A, CLASS B or CLASS C, as appropriate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATIC INVERTERS, CONVERTERS AND ACCESSORIES FOR USE IN INDEPENDENT POWER SYSTEMS (QIKH)

USE AND INSTALLATION

This category covers permanently-connected inverters and converters for use in electric power systems. Inverters are devices that change DC power to AC power. Converters are devices that accept AC or DC power input and convert it to another form of AC or DC power for direct utilization by a load or accumulation in an energy storage system (batteries, capacitors, etc.). Electric power systems are defined as facilities that deliver electric power to a load. Devices covered under this category are classed as Utility Interactive, Stand-alone or Multimode. Utility Interactive devices operate in parallel with the utility grid. Stand-alone devices are intended to operate independent of the utility grid. Multimode devices can operate as both or either Stand-alone (utility independent) or Utility Interactive devices. Optional accessories intended for use with these units are also covered under this category.

These products may contain energy storage devices and associated charge controllers.

These devices are intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.”

The devices may be connected to different types and combinations of distributed generation (DG) sources: generator sets, photovoltaic cells, fuel cells, wind and microturbines or other sources as specified in the manufacturer’s installation instructions.

Some devices in this category are intended to be installed and operated with an external transformer. Such devices are provided with markings and instructions to indicate the type of transformer required.

These products may require external output overcurrent protection, which is specified in product markings and installation instructions. The products

Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH)–Continued

require external overcurrent protection to be sized at 125% of the product output current rating unless otherwise specified.

These products may require that overcurrent protection be provided in the source circuits. These protection ratings are specified in the product installation instructions.

Devices containing charge controllers are provided with instructions to indicate the type of battery for which they are intended.

Units suitable for use with Listed field-installed accessories are marked to identify the specific accessories that may be used.

For units that are shipped in multiple sections where the end product requires that all of the sections be included and assembled to make a complete Listed product, the sections include the same end-product Listing Mark and are differentiated by section number as specified under UL MARK below.

For units that are shipped in multiple sections consisting of a complete end product and associated optional accessories investigated for use with the complete Listed end product, the complete end product has a single Listing Mark and the accessory(ies) are labeled as specified under UL MARK below with one of the applicable accessory markings.

SURGE TESTING

These products are investigated to surge categories for the Ring Wave and Combination Wave Surge Tests in IEEE C62.41.2-2002, “Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits.” These particular surge waveforms that are applied to the DG equipment are based upon distance between the DG equipment and the service-entrance equipment. These location categories have associated peak values of voltage and current for the standard surge-testing waveforms as noted below. A manufacturer may also choose to test at a custom value for the Ring Wave and Combination Wave. These values are stated in the individual Listings for the product tested.

Surge Category	STANDARD WAVEFORM PEAK VALUES	
	Ring Wave	Combination Wave
A	6 kV/0.20 kA	N/A
B	6 kV/0.50 kA	6 kV/3 kA
C	N/A	20 kV/10 kA

The standard surge-testing waveforms are as follows:

- “Standard 1.2/50 μs – 8/20 us Combination Wave”
- “Standard 0.5 μs – 100 kHz Ring Wave”

Refer to IEEE C62.41.2-2002 for additional details on standard wave parameters and tolerances.

CODES

The following summarizes and defines the codes shown in the individual Listings.

Source Type	ST
Fuel Cell	FC
Photovoltaic	PV
Microturbine	MT
Wind Turbine	WT
Hydro Turbine	HT
Battery	B
Gen Set	GS
Other	O
Output Type	OT
Utility Interactive	UI
Stand-alone	SA
Multimode Open Transition	MMOT
Multimode Closed Transition	MMCT
Charger	C
Utility Testing	UT
Has been investigated for anti-islanding	AI
Has been investigated for over/undervoltage and frequency fluctuations with fixed trip limits	FTL
Has been investigated for over/undervoltage and frequency fluctuations with adjustable trip limits	ATL

FIRMWARE VERSION AND CHECKSUM

Version Number — Identification number of the software elements that specifies the investigated software version and current release.

Checksum or Unique Identifier — A unique identifier stored in non-volatile memory computed as a function of the critical and supervisory sections of the software.

RELATED PRODUCTS

Power converters and inverters intended for use in recreational or land vehicles and the like are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

Power converters and inverters intended for use in marine craft are covered under Power Converters/Inverters and Power Converter/Inverter Systems, Marine (QPQL).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources." UL 1741 provides a direct reference to IEEE 1547, "IEEE Standard for Interconnecting Distributed Resources with Electric Power Systems," and IEEE 1547.1, "IEEE Standard Conformance Test Procedures for Equipment Interconnecting

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH)—Continued

Distributed Resources with Electric Power Systems," for the investigation of utility interconnection protection features and functions.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product designation. The product designation is the combination of the specific DG source and the type of inverter or converter product. Acceptable product designations include:

- "Fuel Cell Multimode Inverter"
 - "Fuel Cell Stand-alone Inverter"
 - "Fuel Cell Utility Interactive Inverter"
 - "Microturbine Multimode Inverter"
 - "Microturbine Stand-alone Inverter"
 - "Microturbine Utility Interactive Inverter"
 - "Photovoltaic Multimode Inverter"
 - "Photovoltaic Stand-alone Inverter"
 - "Photovoltaic Utility Interactive Inverter"
 - "Wind Turbine Multimode Inverter"
 - "Wind Turbine Stand-alone Inverter"
 - "Wind Turbine Utility Interactive Inverter"
- (or equivalent)

The product designation for accessories is one of the product designations noted above, preceded by the words "Accessory for."

For multi-piece units, the Listing Mark appears on each outside enclosure section constituting a complete inverter assembly eligible for Listing. The Listing Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the assembly. Each enclosure section of a Listed inverter assembly is provided with a "Section ___ of ___" marking, where the second blank indicates the total number of enclosure sections contained in the Listed inverter assembly and the first blank indicates the respective enclosure section number bearing the UL Mark.

If the source type does not appear in the product designation it must be indicated on the product as a separate marking.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOUNTING SYSTEMS, MOUNTING DEVICES, CLAMPING DEVICES AND GROUND LUGS FOR USE WITH PHOTOVOLTAIC MODULES AND PANELS (QIMS)

USE AND INSTALLATION

This category covers photovoltaic (PV) mounting systems, mounting devices, clamping devices (which may be for bonding and/or mechanical loading) and ground lugs intended for use with specific PV modules and panels and specified module frames and mounting structures as identified in the individual certifications. These systems and devices are investigated for one of two installation types: (1) ground mounted, or (2) intended to serve as part of a nonstructural component of a building, such as a stand-alone system on a building, curtain wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure. Both mounting systems and clamping devices may be investigated for mechanical mounting alone, or mechanical mounting and ground bonding as identified in the individual certifications. Ground lugs may be investigated for use with specific PV modules, specific PV module frames, or specific mounting-system rails.

The installation of these mounting systems, clamping devices or bonding devices is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code," in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes, including the class of roof covering.

FLAME CLASSES

When applicable, modules and panels are marked "Class A," "Class B" or "Class C" to denote their resistance to external fire exposure. Modules and panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

RELATED PRODUCTS

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

Mounting Systems, Mounting Devices, Clamping Devices and Ground Lugs for Use with Photovoltaic Modules and Panels (QIMS)—Continued

PV modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

Low-concentration flat-plate modules are covered under Flat-plate, Low-concentration Photovoltaic Modules and Panels (QHZU).

PV concentrators are covered under Concentrator Photovoltaic Modules and Assemblies (QICP).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2703, "Outline of Investigation for Rack Mounting Systems and Clamping Devices for Flat-Plate Photovoltaic Modules and Panels."

Ground lugs are additionally investigated to ANSI/UL 467, "Grounding and Bonding Equipment."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Photovoltaic Mounting System," "Photovoltaic Module Clamping Device," "Photovoltaic Mounting Device," "Photovoltaic Bonding Device," "Photovoltaic Mounting and Bonding Device" or "Photovoltaic Ground Lug." The word "Photovoltaic" may be abbreviated "PV."

For products additionally investigated for resistance to external fire exposure, the Listing Mark includes the words **CLASS A**, **CLASS B** or **CLASS C**, as appropriate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC LANTERNS, PORTABLE SOLAR, CERTIFIED FOR THE PV GAP MARK (QIMV)

GENERAL

This category covers portable solar photovoltaic (PV) lanterns, which are lighting systems that most often include the following components: lamps (fluorescent, LED, etc.), energy storage device (batteries, capacitors, etc.), switch, charger controllers, and PV cells or modules. With the exception of the PV module that may be integrated or separated, each system is placed in a suitable housing.

These PV lanterns are certified for the PV Global Approval Mark (GAP) as an extension of the CB Full Certification Scheme (CB-FCS) based on authorization from the International Electrotechnical Commission's System for Conformity Testing and Certification of Electrical Equipment and Components (IECEE). IECEE is the administrator of the PV Global Approval Program (PV GAP). This certification is in accordance with PVR 11A, "Portable Solar Photovoltaic (PV) Lanterns – Design Qualification and Type Approval." In addition to the CB Certification under the CB-FCS program, ISO 9000 registration and an ongoing product follow-up surveillance program are required. UL is a member of the IECEE, and is a National Certification Body (NCB). PVR 11A is in the Scope of UL's participation in the CB-FCS. IECEE has authorized UL to offer the PV GAP Quality Mark as described below on the basis of and as an extension to UL's CB-FCS program. The number "62" has been assigned to UL as a unique code to be applied to the certified product adjacent to the PV GAP Quality Mark and the PV GAP Seal in order to distinguish between the PV GAP Marks issued by UL and those granted by other NCBs.

This certification is not considered a safety certification. This certification is for design qualification and type approval of portable solar PV lanterns in accordance with PVR 11A.

REQUIREMENTS

The basic standard used to investigate products in this category is PVR 11A, "Portable Solar Photovoltaic (PV) Lanterns – Design Qualification and Type Approval."

PV GAP QUALITY MARK AND SEAL

The PV GAP Quality Mark and Seal issued by UL consists of the following images and the accompanying numeric code "62."

PHOTOVOLTAIC LANTERNS, PORTABLE SOLAR, CERTIFIED FOR THE PV GAP MARK (QIMV)

The PV GAP Quality Mark is applied to each component of the portable solar PV lantern system: 

The PV GAP Seal is applied to the portable solar PV lantern system as a whole: 

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC MODULES AND PANELS CERTIFIED FOR THE PV GAP MARK (QIMY)

GENERAL

This category covers flat-plate photovoltaic (PV) modules and panels intended for mounting on buildings or on ground-supported frames.

These PV modules and panels are certified for the PV Global Approval Mark (GAP) as an extension of the CB Full Certification Scheme (CB-FCS) based on authorization from the International Electrotechnical Commission's System for Conformity Testing and Certification of Electrical Equipment and Components (IECEE). IECEE is the administrator of the PV Global Approval Program (PV GAP). This certification is in accordance with IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic Modules – Design Qualification and Type Approval," and IEC 61646, "Thin-Film Terrestrial Photovoltaic Modules – Design Qualification and Type Approval." In addition to the CB Certification under the CB-FCS program, ISO 9000 registration and an ongoing product follow-up surveillance program are required. UL is a member of the IECEE, and is a National Certification Body (NCB). IEC 61215 and IEC 61646 are in the Scope of UL's participation in the CB-FCS. IECEE has authorized UL to offer the PV GAP Quality Mark as described below on the basis of and as an extension to UL's CB-FCS program. The number "62" has been assigned to UL as a unique code to be applied to the certified product adjacent to the PV GAP Quality Mark in order to distinguish between the PV GAP Marks issued by UL and those granted by other NCBs.

These products may also bear UL's Listing Mark for PV modules and panels; see Photovoltaic Modules and Panels (QIGU).

Although this certification may be issued in conjunction with a safety certification, this certification is not considered a safety certification. This certification is for design qualification and type approval of PV modules and panels in accordance with IEC 61215 and IEC 61646.

REQUIREMENTS

The basic standards used to investigate products in this category are IEC 61215, "Crystalline Silicon Terrestrial Photovoltaic Modules – Design Qualification and Type Approval," and IEC 61646, "Thin-Film Terrestrial Photovoltaic Modules – Design Qualification and Type Approval."

PV GAP QUALITY MARK

The PV GAP Quality Mark issued by UL consists of the following image and the accompanying numeric code "62," and is applied to each PV module and panel: 

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOGRAPHIC EQUIPMENT (QINT)

GENERAL

This category covers the following photographic equipment and accessories:

Motion picture projectors for use with 8 mm, 16 mm, 35 mm and larger motion picture film, including associated equipment suitable for use in projection booths. Users should consult with Authorities Having Jurisdiction for requirements on installation and use. 8 mm and 16 mm projectors are commonly of the portable type intended for nonprofessional use with slow-burning film only. Projectors for use with 35 mm or larger film are intended for professional use and may employ flammable (nitro-cellulose) or slow-burning (cellulose acetate or equivalent) films. Projectors for use with flammable films should be installed and used only in fire resistance booths as recommended by ANSI/NFPA 40, "Storage and Handling of Cellulose Nitrate Film." These projectors can be divided into two general classes of construction: (1) Complete assemblies, usually of the portable type, having all parts needed for projection of motion picture film, with or without facili-

PHOTOGRAPHIC EQUIPMENT (QINT)

ties for reproduction of sound recorded on films; and (2) Pedestal types which are intended for use with other certified components to form a complete machine, usually composed of a base, projection head and magazines with fire rollers.

Still-picture projectors for use with slides, pictures, drawings or similar stationary graphic material of a slow-burning classification, including opaque and overhead projectors and combination slide projectors or film strip projectors with phonograph or audio tape players.

Accessories intended for installation on projectors or employed in conjunction with viewing, editing or handling of films used with picture projectors.

Equipment intended for use in taking photographs, processing and handling of photographic film or photographic prints and accessory equipment including film dryers, cutters, sorters, rewinders and silver-recovery units.

Equipment intended to take photographs from video display units.

REBUILT PRODUCTS

This category also covers photographic equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt photographic equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt photographic equipment is subject to the same requirements as new photographic equipment.

RELATED PRODUCTS

For portable toy machines for use with slow-burning films, see Toys (XNIZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 122, "Photographic Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photographic Equipment" or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIN-AND-SLEEVE-TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS (QLGD)

RATINGS

Pin-and-sleeve-type plugs, receptacles and cable connectors are rated in 600 V or less, ac or dc, and in amps. Devices intended for use with motor loads are identified by a horsepower rating. Devices not intended for current interruption are marked "Do Not Disconnect Under Load," or with an equivalent statement.

Devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Devices having other voltage ratings are tested on circuits involving full-rated potential to ground, except for multiphase-rated devices, which are tested on circuits consistent with their voltage ratings, i.e., a 120/208 V, 3-phase device is tested on a circuit involving a potential to ground of 120 V.

Devices identified as "switch-rated plugs and receptacles suitable as motor circuit disconnect switches" incorporate a "switch" mechanism that has been additionally investigated for making and breaking a motor load. They have provision to open the electrical circuit without uncoupling the mated plug-and-receptacle housings (device enclosures). Such devices are investigated at six times the full load motor continuous current at rated voltage and are also identified by a horsepower rating. These devices have also been investigated for a minimum 10,000 A short-circuit make and withstand rating.

Devices identified as "switch-rated plugs and receptacles suitable as branch circuit disconnect switches" incorporate an integrally formed "switch" suitable for use in branch circuit switching applications. They have provision to open the electrical circuit without uncoupling the mated plug and receptacle housings. These devices have also been investigated for a minimum 10,000 A short-circuit make and withstand rating.

PIN-AND-SLEEVE-TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS (QLGD)

345

GROUNDING

Devices having a terminal identified by a green-colored finish or by the word "green" are grounding types. The pin or contact member connected to this terminal is for equipment grounding only.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS, PIN-AND-SLEEVE TYPE (QLHN)

GENERAL

This category covers pin-and-sleeve-type attachment-plug bodies, attachment plugs with and without fuses, cord connectors and adapters. These devices are intended for use with the same line of products covered under Receptacles, Pin-and-Sleeve Type (QLIW). Devices for use in specific combinations with other manufacturers' products are covered under Receptacle-Plug Combinations, Pin-and-Sleeve Type, Classified for Use in Specific Combinations (QLKH).

The termination provisions of these devices are based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). The ampacity of the flexible cord and cable is based on Section 400.5 and Tables 400.5(A) and 400.5(B) of the NEC. The conductors are sized as specified on the product or in the manufacturer's instructions provided with the device. Unless the product is marked with both the size and temperature rating of the flexible cord or cable to be used, the termination provisions are based on the use of 60°C flexible cord or cable.

This category does not cover devices to be molded on flexible cord or cable and unassembled devices to be factory assembled to flexible cord or cable.

ADDITIONAL INFORMATION

For additional information, see Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors (QLGD) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, "Outline of Investigation for Switch-Rated Plugs and Receptacles."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pin-and-Sleeve Attachment Plug," "Plug" or "Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES, PIN-AND-SLEEVE TYPE (QLIW)

GENERAL

This category covers pin-and-sleeve-type receptacles and other outlet devices intended for direct connection to wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC). It also covers other pin-and-sleeve-type receptacles, outlet devices and power inlets intended for use in appliances and other equipment.

These devices are intended for use with the same line of products covered under Attachment Plugs, Pin-and-Sleeve Type (QLHN). Devices for use in specific combinations with other manufacturers' products are covered under Receptacle-Plug Combinations, Pin-and-Sleeve Type, Classified for Use in Specific Combinations (QLKH).

The terminations of these devices are intended for use with copper conductors and are marked to indicate the conductor size and temperature rating of all field-installed conductors. Such markings are located where readily visible on the device or in a wiring diagram provided with the device. If no marking is provided, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in circuits rated more than 100 A as specified in Table 310.16 of the NEC.

Receptacles, Pin-and-Sleeve Type (QLIW)–Continued

Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (devices rated 100 A or less) or 75°C ampacity (devices rated over 100 A).

ADDITIONAL INFORMATION

For additional information, see Pin-and-Sleeve-type Plugs, Receptacles and Cable Connectors (QLGD) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, “Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type.”

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, “Outline of Investigation for Switch-Rated Plugs and Receptacles.”

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Pin-and-Sleeve Receptacle,” “Receptacle,” “Switch Receptacle,” “Power Inlet,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS, PIN-AND-SLEEVE TYPE, CLASSIFIED FOR USE IN SPECIFIC COMBINATIONS (QLKH)

USE

This category covers combinations of pin-and-sleeve-type plugs, receptacles, power inlets and connectors that have been investigated for use in specific combinations as indicated in the individual Classifications.

These combination devices have been investigated for use with other manufacturers’ Listed plugs, receptacles, connectors or power inlets. Basic Listings are covered under Attachment Plugs, Pin-and-Sleeve Type (QLHN) and Receptacles, Pin-and-Sleeve Type (QLIW), with additional Listings under Attachment Plugs, Fuseless (AXUT) and Receptacles for Plugs and Attachment Plugs (RTRT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, “Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type.”

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, “Outline of Investigation for Switch-Rated Plugs and Receptacles.”

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the appropriate Listing Mark, the statement “Also Classified by Underwriters Laboratories Inc. for use in specific combinations,” and one of the following statements as appropriate: “For use with UL Listed *, Catalog No. ____,” or “For catalog numbers of compatible devices, refer to Publication No. ____ provided with this device. If additional information is necessary contact the factory.”

* “Receptacle,” “Plug” or “Connector”

The referenced publication is a compatibility list, which tabulates the company name, catalog number and electrical ratings of the Classified device and the company name and catalog number of the applicable UL Listed product with which it has been investigated. One copy of the compatibility list is provided with each device.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLASTICS USED IN SEMICONDUCTOR TOOL CONSTRUCTION (QMTW)

GENERAL

This category covers plastic materials used in the semiconductor tool construction industry. Plastic in the form of sheets, panels and strips has been investigated with respect to flammability characteristics only. The structural, washability, light reflectivity, durability, toxicity or environmental impact of the products of combustion and other properties have not been investigated. In addition, the suitability of the materials to be fabricated has not been investigated.

The following flammability and physical properties are investigated and published in the individual certifications:

- Flame Propagation Index (FPI)
- Smoke Damage Index (SDI)
- Nominal Thickness (in.)
- Product Geometry
- Manufacturing Method

In addition to the above, the following data is available based on authorization of the test sponsor:

- Parallel Panel Test, Maximum Vertical Flame Propagation (ft.) (if required)
- Maximum Heat Release Rate (kW/m²)
- Maximum Smoke Release Rate (m²/sec)
- Critical Ignition Flux (kW/m²)
- Time Dependent Plot of Heat Release Rate
- Time Dependent Plot of Mass Loss Rate
- Time Dependent Plot of Smoke Obscuration
- Time Dependent Plot of CO Concentration
- Time to Ignition (sec)
- Flame Duration (sec)
- Total Smoke (m²)
- Mass Loss (%)
- Average Effective Heat of Combustion
- Average Specific Extinction Area

The materials are identified as “Nonpropagating – Class 1,” “Limited Propagating – Class 2” or “Slow Propagating – Class 3.” The individual certifications are defined as follows:

Test	Description	Nonpropagating, Class 1	Limited Propagating, Class 2	Slow Propagating, Class 3
Parallel Panel Test	Flame propagation	4 ft or less	8 ft or less	8 ft or less at 10 min
	Pooling of melted material	No	No	No
Heat and smoke release ^a	Fire propagation index (FPI)	6 or less	Parallel panel required	Parallel panel required
	Smoke damage index (SDI)	0.4 or less	0.4 or less	less than 1

^aASTM E1354 (1997), “Standard Test Method for Heat and Visible Smoke Release Rates for Materials and Products Using an Oxygen Consumption Calorimeter” (American Society for Testing and Materials, Philadelphia, PA)

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2360, “Test Methods for Determining the Combustibility Characteristics of Plastics Used in Semiconductor Tool Construction.” The combustibility characteristics provide data with regard to the Flame Propagation Index (FPI) and the Smoke Damage Index (SDI).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PLASTICS USED IN SEMICONDUCTOR TOOL CONSTRUCTION (QMTW)

PLASTIC FOR USE IN SEMICONDUCTOR TOOL CONSTRUCTION

Control No.

* the "propagating" statement "(Non-Propagating - Class 1," "Limited Propagating - Class 2," or "Slow Propagating - Class 3") applicable to the product

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES (QMTX)

GENERAL

This category covers plumbing accessories connected to or used with plumbing in commercial locations or residential occupancies, including irrigation equipment, sprinkler controls, water controls located in kitchens and bathrooms, electric faucets, toilet-flushing systems, lawn sprinklers, plumbing controls, hydromassage chairs and pedicure spas.

This category also covers toilets, bidets, and combination toilet/bidets. Products suitable for outdoor use and those for use with heated liquids are so marked.

These products have not been investigated with respect to the effect of their use with corrosive liquids or aqueous solutions containing corrosive materials.

REBUILT PRODUCTS

This category also covers plumbing accessories that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt plumbing accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt plumbing accessories are subject to the same requirements as new plumbing accessories.

RELATED PRODUCTS

Similar equipment for use with or in proximity to swimming pools or spas is covered under Swimming Pool and Spa Equipment (WABX).

Products and materials investigated for contact with drinking water are Classified to ANSI/NSF 61 and are covered under Drinking Water System Components (FDNP).

Plumbing fixture fittings investigated to ASME A112.18.1, ASSE 1014 and ASSE 1025 are covered under Plumbing Fixture Fittings (QNSQ).

Pumps are covered under Pumps, Electrically Operated, Liquid (REUZ). See also Pumping Equipment for Fire Service (QVUT).

Toilet seat assemblies (including bidet seats) containing electrical features, such as heating and water-dispensing components, that connect to separate plumbing features are covered under Personal Hygiene and Health Care Appliances (QGRZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1951, "Electric Plumbing Accessories."

ADJUNCT SERVICE

UL also provides a service for the Classification of plumbing accessories that not only meet the appropriate requirements of UL but have also been investigated in accordance with the following standards:

1. ANSI/ASME A112.19.7M, "Requirements for Whirlpool Bathtub Appliances."
2. Water retention test requirement from ANSI/ASME A112.19.7M.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Faucet" or "Lawn Sprinkler Control," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" precedes the product name.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from standards of the American National Standards Institute (ANSI). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above along with the following:

"ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one of the texts detailed below.

1. ANSI/ASME A112.19.7M-+
2. WATER RETENTION TEST REQUIREMENT FROM ANSI/ASME A112.19.7M-+

PLUMBING ACCESSORIES (QMTX)

+ Issue date of standard or latest addendum

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (QNHV)

GENERAL

This category covers pump assemblies and controls for use in pumping sewage. Assemblies exposed to sewage have constructions intended to reduce corrosion of enclosure parts and explosion-proof joints. They have not been investigated for use where severe corrosive conditions are likely to be present.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Unit for Use in Hazardous Locations" or "Submersible Sump Pump for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE ELECTRIC HAND LAMPS (QORX)

GENERAL

This category covers portable electric hand lamps of the incandescent, LED and fluorescent types, rated 125 V, 300 W or less. These products have a length of flexible cord and an attachment plug for connection to a source of supply, an insulating handle, a lamp guard if applicable, and provisions for temporary support. These products are not intended for outdoor use unless marked "Suitable for Wet Locations," or for use in hazardous (classified) locations or above hazardous locations as defined in ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Luminaires."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Hand Lamp."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LIGHTING PRODUCTS (QOTU)

GENERAL

This category covers lampshades, nightlights, light-emitting-diode (LED) nightlights, office furnishing lights, portable cabinet luminaires, portable cabinet LED luminaires, portable luminaire kits and subassemblies, portable luminaires, portable LED luminaires, portable work lights, and sun and heat lamps.

RELATED PRODUCTS

Portable lighting products and associated furnishings investigated for use together are covered under Furnishings, Household and Commercial (IYQX).

Portable lighting products used as hand lamps are covered under Portable Electric Hand Lamps (QORX) or Portable Hand Lamp Accessories (QOSV).

Portable lighting products intended for seasonal use are covered under Christmas Tree and Decorative Outfit Accessories (DGWU), Outfits, Decorative (DGXW) or Strings, Decorative Lighting (DGZZ).

Portable lighting products intended for use in hazardous (classified) locations are covered under Portable Lighting Units for Use in Hazardous Locations (QPKX).

Portable lighting products intended for temporary use (such as at construction sites or car sales lots) are covered under Temporary-lighting Strings (XBRT).

Portable lighting products intended for theatrical use are covered under Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ).

PORTABLE CABINET LIGHT-EMITTING-DIODE LUMINAIRES (QOVA)

USE AND INSTALLATION

This category covers surface- and recess-mounted portable cabinet light-emitting-diode (LED) luminaires intended for installation into open or enclosed portable cabinets, such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage LED lighting systems intended for installation under a shelf, cabinet or similar structural surface, in accordance with Article 411 of ANSI/NFPA 70, "National Electrical Code" (NEC), where the power supply is of the attachment plug equipped, cord-connected type, or is a direct-plug-in type.

This category also covers portable cabinet LED luminaire accessories, such as interconnecting cord sets and dimmer and switch assemblies, intended for use with portable cabinet LED luminaires.

A surface-mounted portable cabinet LED luminaire is also suitable for installation under a shelf or kitchen cabinet when the line voltage power-supply cord is not concealed.

These products are not intended for installation in recessed walls or ceilings, or in permanently installed cabinets where the wiring is concealed or passed through openings in the structure.

A portable cabinet LED luminaire connected to a Class 2 power supply that is suitable for installation inside a kitchen cabinet or other built-in furnishing is provided with instructions that advise:

1. the Class 2 power supply shall be located outside the cabinet and not concealed, and
2. the line voltage power-supply cord shall not be concealed or run through openings in the cabinets, walls, ceilings or floors.

Portable cabinet LED luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

A restrictive marking is provided for portable cabinet luminaires intended for use only in open-top cabinets. Portable cabinet luminaires without the restrictive marking are investigated for a 1/2 in. (13 mm) minimum clearance from the top.

RELATED PRODUCTS

LED luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passed through openings in the structure, are covered under Light-emitting-diode Surface-mounted Luminaires (IFAM) for surface mounting, or Light-emitting-diode Recessed Luminaires (IFAQ) for recessed mounting.

Low-voltage LED lighting systems intended for installation in accordance with Article 411 of the NEC in permanently installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR).

Portable cabinet LED luminaires investigated for use with specific cabinet or display designs are certified together with the cabinet or display as Furnishings, Household and Commercial (IYQX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Portable Cabinet Light-emitting-diode Luminaires (QOVA)—Continued

The basic standards used to investigate products in this category are ANSI/UL 153, "Portable Electric Luminaires," and ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Cabinet Light-emitting-diode Luminaire" (or "Portable Cabinet LED Luminaire") or "Portable Cabinet Light-emitting-diode Luminaire Accessory" (or "Portable Cabinet LED Luminaire Accessory").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE CABINET LUMINAIRES (QOVJ)

USE AND INSTALLATION

This category covers surface and recess-mounted portable cabinet luminaires intended for installation into open or enclosed portable cabinets such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of ANSI/NFPA 70, "National Electrical Code" (NEC), where the power supply is of the attachment plug equipped, cord-connected type, or is a direct plug-in type.

This category also covers portable cabinet luminaire accessories, such as interconnecting cord sets and dimmer and switch assemblies intended for use with portable cabinet luminaires.

A surface-mounted portable cabinet luminaire is also suitable for installation under a shelf or kitchen cabinet when the line voltage power-supply cord is not concealed.

These products are not intended for installation in recessed walls or ceilings, or in permanently installed cabinets where the wiring is concealed or passed through openings in the structure.

A portable cabinet luminaire connected to a Class 2 power supply that is suitable for installation inside a kitchen cabinet or other built-in furnishing is provided with instructions that advise:

1. the Class 2 power supply shall be located outside the cabinet and not concealed, and
2. the line voltage power-supply cord shall not be concealed or run through openings in the cabinets, walls, ceilings or floors.

Portable cabinet luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

A restrictive marking is provided for portable cabinet luminaires intended for use only in open top cabinets. Portable cabinet luminaires without the restrictive marking are investigated for a 13 mm (1/2 in.) minimum clearance from the top.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

RELATED PRODUCTS

Incandescent or fluorescent luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passed through openings in the structure, are covered under Incandescent Surface-mounted Luminaires (IEZR) or Fluorescent Surface-mounted Luminaires (IEUZ) for surface mounting, or Incandescent Recessed Luminaires (IEZX) or Fluorescent Recessed Luminaires (IEVV) for recessed mounting.

Low-voltage lighting systems intended for installation in accordance with Article 411 of the NEC in permanently installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Incandescent Luminaires and Fittings (IFDR).

Portable cabinet luminaires investigated for use with specific cabinet or display designs are certified together with the cabinet or display as Furnishings, Household and Commercial (IYQX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Portable Cabinet Luminaires (QOVJ)—Continued

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Cabinet Luminaire," "Portable Cabinet Light" or "Portable Cabinet Luminaire Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHT-EMITTING-DIODE LUMINAIRES, PORTABLE (QOVZ)

GENERAL

This category covers portable light-emitting-diode (LED) luminaires whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers low-voltage LED lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of the NEC, where the power supply is of the attachment-plug equipped, cord-connected type, or is a direct-plug-in type.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

PRODUCT MARKINGS

Products investigated as Convertible Units are marked to indicate acceptability as a LED luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Certification Mark, "SUITABLE FOR WET LOCATIONS."

RELATED PRODUCTS

Portable electric hand lamps are covered under Portable Electric Hand Lamps (QORX).

Nightlights are covered under Nightlights (QOYX).

Portable LED luminaires that comply with the requirements in ANSI/UL 48, "Electric Signs," may also be certified as Signs (UXYT).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies (QPAU).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 153, "Portable Electric Luminaires," and ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Light-emitting-diode Luminaire" (or "Portable LED Luminaire").

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES, PORTABLE (QOWZ)

GENERAL

This category covers portable luminaires (lamps) whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15

Luminaires, Portable (QOWZ)—Continued

or 20 A branch circuit and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers low-voltage lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of the NEC, where the power supply is of the attachment-plug-equipped, cord-connected type, or is a direct-plug-in type.

The individual certifications may include one or more Roman numerals (from II through XIV) that had previously been used to identify certain types of portable luminaires covered under that certification. This identification system is no longer in use, and these Roman numerals can be disregarded.

PRODUCT MARKINGS

Products investigated as Convertible Units are marked to indicate acceptability as a luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Certification Mark, "Suitable for Wet Locations."

REBUILT PRODUCTS

This category also covers portable luminaires that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt portable luminaires are factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt portable luminaires are subject to the same requirements as new portable luminaires.

RELATED PRODUCTS

Portable luminaires that comply with the requirements in ANSI/UL 48, "Electric Signs," may also be certified as Signs (UXYT).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies (QPAU).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Luminaire" or "Rebuilt Portable Luminaire."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NIGHTLIGHTS (QOYX)

USE

This category covers nightlights for direct-plug-in use in parallel-slot, general-purpose receptacles rated 15 or 20 A, 125 V.

RELATED PRODUCTS

Nightlights employing light-emitting-diode (LED) light sources may additionally be covered under Light-emitting-diode Nightlights (QOWC).

Lighting products intended for use as nightlights, but provided with a power-supply cord, are covered under Luminaires, Portable (QOWZ).

Parallel-blade-to-incandescent-lamp adapters are covered under Lampholders, Adapters (OLRX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1786, "Direct Plug-In Nightlights."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as

Nightlights (QOYX)—Continued

illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nightlight."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LUMINAIRE ACCESSORIES, KITS AND SUBASSEMBLIES (QPAU)

USE AND INSTALLATION

This category covers portable luminaire accessories, kits and subassemblies of the following types:

Portable Luminaire Accessory — The portable luminaire accessory is intended to be used with a portable luminaire and consists of components such as interconnecting cord sets, dimmer and switch assemblies, and conversion kits to enable the portable luminaire to be converted to a fixed unit (luminaire) in accordance with ANSI/UL 1598, "Luminaires."

Portable Luminaire Kit — The portable luminaire kit is intended to be used for making a complete portable luminaire using ordinary tools to assemble and/or attach the parts to a support base in accordance with the instructions provided with the kit. All parts needed to assemble the product in accordance with the instructions are provided.

Portable Luminaire Subassembly — The portable luminaire subassembly is intended to be used for modernizing, or replacing parts on existing luminaires in accordance with the instructions provided with the subassembly. It may also be used for constructing a new portable luminaire in accordance with the instructions provided with the subassembly. All electrical components needed to assemble the product in accordance with the instructions are provided.

MARKINGS AND INSTRUCTIONS

Portable luminaire accessory conversion kits are provided with mounting and installation instructions and markings to indicate that they are capable of being used as fixed units (luminaires) when used with the appropriate portable luminaires. The portable luminaires are identified by catalog or model number.

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Portable luminaire accessory conversion kits and their associated portable luminaires are additionally investigated to ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Portable Luminaire Accessory," "Portable Luminaire Kit," "Portable Lamp Subassembly" or "Portable Luminaire Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE WORK LIGHTS (QPCJ)

USE AND INSTALLATION

This category covers cord-and-plug-connected work lights for illumination of work areas, such as construction sites, loading docks and machinery work stations. Work lights are not intended to be hand held during use. Work lights are not intended for use in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code."

This category also covers work light accessories intended for use with specific work lights.

Work lights may be freestanding, clamp-on, or similar portable mounting means, or be provided with a means for mounting to a tool, machine or a similar movable object.

Portable Work Lights (QPCJ)—Continued

Work lights may be placed on combustible floors. Special care must be employed to avoid overturning and to keep away from draperies, furniture, etc.

PRODUCT MARKINGS

A work light marked "Dry Location Use" is intended to be used only in a dry location.

A work light marked "Suitable for Wet Location Use" is intended for use in a wet or dry location.

A work light marked "Suitable for Outdoor Use Only" is suitable for use in a wet location and is intended to be used only in an outdoor location.

RELATED PRODUCTS

Portable outdoor flood lights for illumination or landscape, outdoor decorations, patios and play areas are covered under Luminaires, Portable (QOWZ).

For other portable lighting products, see Luminaires, Portable (QOWZ) and Portable Electric Hand Lamps (QORX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Products employing LED light sources are additionally investigated to ANSI/UL 8750, "Light Emitting Diode (LED) Equipment for Use in Lighting Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Work Light," "Portable Work Light" or "Work Light Accessory."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SUN AND HEAT LAMPS (QPDY)

USE

This category covers portable sun and heat lamps of the household variety intended for the production of ultraviolet (sun) radiation, infrared (heat) radiation, or both.

FACTORS NOT INVESTIGATED

The physiological effects, beneficial or otherwise, which may be produced by these lamps have not been investigated.

RELATED PRODUCTS

Sun and heat lamps intended for professional use are covered under Medical Equipment (PIDF).

Sun and heat equipment for household and commercial use is covered under Personal Sun and Heat Equipment (QGRX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 482, "Portable Sun/Heat Lamps." The limit for ultraviolet irradiation specified in ANSI/UL 482 is in agreement with the federal regulations specified in 21CFR1040.20, "Sun Lamp Products and Ultraviolet Lamps Intended for Use in Sun Lamp Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Infrared Lamp," "Ultra-Violet Lamp," "Heat Lamp" or "Sun Lamp."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS (QPKX)

GENERAL

This category covers portable luminaires (lighting units). Portable luminaires have provision for connection of a three-conductor, flexible, extra-hard-usage cord having a grounding conductor, and are provided with a seal between the lamp compartment and the terminal enclosure.

Connections to the fixed portion of the supply require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, certified for the specified hazardous locations. The flexible cord connected to the units should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Lighting Unit for Hazardous Locations" or "Portable Luminaire for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE POWER CABLE (QPMU)

GENERAL

This category covers portable power cable constructed and certified for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). Portable power cable consists of either a single insulated conductor or two or more insulated conductors, with or without grounding conductors, with an overall fiber reinforced jacket. The insulation and jacket are thermost on Types G, G-GC and W, and thermoplastic elastomer on Type PPE.

This cable is used to supply power to mobile equipment and machinery and is rated 2000 V, 90°C (194°F) dry, and 60°C (140°F) where exposed to oil. For cable so marked, ratings of 60°C (140°F), 75°C (167°F), or 90°C (194°F) "wet" are also assigned. The term "wet" indicates that the cable is acceptable for immersion in water. Cable that has been investigated for use where exposed to the direct rays of the sun is marked "Sunlight Resistant" or "Sun Res."

Portable power cable employs flexible stranded copper conductors in a size range of 12 AWG to 500 kcmil, except for single conductor Type W and single conductor Type PPE which employs flexible stranded copper conductors in sizes 12 AWG to 1000 kcmil. Ampacities for portable power cable can be found in Table 400.5(B) of the NEC.

Type G — Contains 2 – 6 circuit conductors and a grounding conductor. The grounding conductor is either bare or covered with a green-colored braid or tape, and may either be a single conductor or be sectioned into two or more parts.

Type G-GC — Same as Type G except that the cable also contains one, 12 AWG or larger, yellow insulated conductor which is used as a ground check.

Type W — Contains 1 – 6 circuit conductors and may or may not contain a grounding conductor. If included, the grounding conductor is fully insulated.

Type PPE — Contains 1 – 6 circuit conductors and may or may not contain a grounding conductor. If included, the grounding conductor is fully insulated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1650, "Outline of Investigation for Portable Power Cable."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND CONTROL TRAY CABLE (QPOR)

GENERAL

This category covers Type TC power and control tray cable intended for use in accordance with Article 336 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of one or more pairs of thermocouple extension wires or two or more insulated conductors, with or without one or more grounding conductors, with or without one or more optical fiber members and covered with a nonmetallic jacket. A single grounding conductor may be insulated or bare and may be sectioned. Any additional grounding conductor is fully insulated and has a distinctive surface marking. The cable is rated 600 or 2000 V.

The cable is certified in conductor sizes 18 AWG to 1000 kcmil copper or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. Conductor sizes within a cable may be mixed. Thermocouple extension conductors are certified in sizes 24 to 12 AWG.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surfaced printed "AL (CU-CLAD)" or "Cu-clad Al."

Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors." For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

If the type designation of the conductors is marked on the outside surface of the cable, the temperature rating of the cable corresponds to the rating of the individual conductors. When this marking does not appear, the temperature rating of the cable is 60°C unless otherwise marked on the surface of the cable.

Cable investigated for use where exposed to direct rays of the sun is marked "sunlight resistant."

Cable investigated for direct burial in the earth is so identified.

Cable suitable for use between cable trays and utilization equipment in accordance with NEC 336.10(7) is surface marked with the suffix "-ER."

Cable consisting of thermocouple extension wires is surface marked "THCPL EXTN," "For thermocouple extension use only" or "Thermocouple extension wire only."

Cable surface marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is surface marked "Oil Resistant II" (or "Oil Res II").

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "-LS."

Cable containing optical fiber members is identified with the suffix "-OF."

Regarding cable seals outlined in Article 501 of the NEC, Type TC cable has a sheath which is considered to be gas/vapor tight but the cable has not been investigated for transmission of gases or vapors through its core.

RELATED PRODUCTS

Connectors and fittings for use with this cable are covered under Power and Control Tray Cable Connectors (QPOZ).

Some connectors and fittings covered under Outlet Bushings and Fittings (QCRV), Nonmetallic-sheathed-cable Connectors (PXJV) and Service-entrance-cable Fittings (TYZX) are also suitable for use with this cable when specifically marked on the device or carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1277, "Electrical Power and Control Tray Cables with Optional Optical-Fiber Members."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Power and control tray cable that contains copper or copper-clad aluminum conductors has the product name "Power and Control Tray Cable Type TC"; power and control tray cable that contains aluminum conductors has the product name "Aluminum Power and Control Tray Cable Type TC."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND CONTROL TRAY CABLE CONNECTORS (QPOZ)

USE

This category covers power and control tray cable connectors intended for use with Type TC cable. These connectors are intended for installation and use in accordance with the following information and the limitations specified in Power and Control Tray Cable (QPOR).

All male threaded fittings have only been investigated for use with lock-nuts.

Reusability — Connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

PRODUCT MARKINGS

The connector or smallest unit shipping carton for the connectors is marked with the smallest and largest cable diameters for which the connectors have been investigated. In addition, the connectors or cartons are marked "Dry Location," "Sunlight Resistant," "Oil Resistant I" or "Oil Resistant II." Cable connectors marked "Oil Resistant I" are suitable for exposure to mineral oil at 60°C. Cable connectors marked "Oil Resistant II" are suitable for exposure to mineral oil at 75°C.

Some connectors are also acceptable for use with armored cable, flexible metal conduit, nonmetallic-sheathed cable, cord or service-entrance cable when marked on the device or carton.

ADDITIONAL INFORMATION

For additional information, see Power and Control Tray Cable (QPOR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tray Cable Connector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CONVERTERS/INVERTERS AND POWER CONVERTER/INVERTER SYSTEMS (QPPY)

USE AND INSTALLATION

This category covers (1) fixed and stationary power converters, power inverters, power converter systems and power inverter systems for use in recreational vehicles in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), (2) portable, stationary and fixed power converters, power inverters, power converter systems and power inverter systems for use in land vehicles, and (3) accessories for power converters and power inverters.

Power converters are primarily rectifying units intended for connection to a 120 V or 120/240 V, 15 or 20 A branch circuit supplied from the recreational vehicle panelboard and designed to provide low direct voltage for equipment in the recreational vehicle. A power converter may also include a battery charging feature.

Power inverters are intended for connection to a battery source within a land vehicle. They are designed to supply ac voltage for equipment in a land vehicle. A power inverter may be provided with an ac transfer option to supply the output from an ac distribution system when the inverter is connected to such a system. A power inverter may also include a battery charger feature.

Power converter systems consist of a power converter and not more than three integral line voltage branch circuit protective devices unless marked "Distribution Panelboard." Power inverter systems consist of a power inverter and not more than three integral line voltage branch circuit protective devices unless marked "Distribution Panelboard." A main disconnecting means is provided if more than two branch circuit protective devices are incorporated.

A power converter system or power inverter system may serve the function of a distribution panelboard in a land vehicle. They are intended to be connected directly to an ac distribution system by means of a power-supply cord.

DISTRIBUTION PANELBOARDS

Some certified power converter systems or power inverter systems consist of a line voltage branch circuit section with more than three integral line voltage branch circuit protective devices. The line voltage compartment, including the overall enclosure for that compartment, complies with ANSI/UL 67, "Panelboards," and is intended to be installed in accordance with Article 551 of the NEC. Such power converter or inverter systems are identified as a "Distribution Panelboard" or the equivalent.

REBUILT PRODUCTS

This category also covers units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt units are subject to the same requirements as new products.

RELATED PRODUCTS

Land vehicle main distribution centers without integral power converter/inverter functions are covered under Panelboards (QEUY).

Power converters, power inverters, power converter systems and power inverter systems for use on a marine craft are covered under Power Converters/Inverters and Power Converter/Inverter Systems, Marine (QPQL).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 458, "Power Converters/Inverters and Power Converter/Inverter Systems for Land Vehicles and Marine Crafts."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Power Converter," "Power Inverter," "Power Converter System," "Power Inverter System," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER DISTRIBUTION BLOCKS (QPQS)

USE

This category covers power distribution blocks rated 600 V or less and intended to be used on the load side of service equipment.

Power distribution blocks are used for splicing and tapping conductors in metallic wireways, auxiliary gutters, cabinets, cutout boxes, termination boxes, and the like, or enclosures designed for the purpose in order to distribute power to separate circuits or loads.

A power distribution block consists of one or more terminal wire connectors mounted on an insulating base. Each connector has provisions for one or more incoming run conductors and multiple tap conductors. A tap con-

ductor is of the same or smaller size as the incoming run conductor. The connectors may be of the lay-in construction, which do not require the incoming run conductor to be terminated.

A power distribution block may be provided with an insulating cover.

INSTALLATION

Power distribution blocks are intended for use in installations covered by ANSI/NFPA 70, "National Electrical Code" (NEC), and installed using the manufacturer's installation instructions. Wiring space (75% cross-sectional fill), wire bending space, and final exposure of any uninsulated live parts are determined by the installer and Authority Having Jurisdiction at each installation in accordance with Section 376.56 of the NEC when the power distribution block is installed in the enclosure.

Power distribution blocks provided with an insulating cover have been investigated for nonexposure of uninsulated live parts in a wireway, whether or not the wireway cover is installed.

Installation instructions are provided for proper mounting and use.

PRODUCT MARKINGS AND RATINGS

Power distribution blocks are considered suitable for use on circuits having available fault current not greater than 10,000 rms symmetrical amps, unless marked with a larger value. Power distribution blocks are marked "Short-Circuit Current Rating" together with the value of the rating and the maximum voltage. A power distribution block may additionally be marked to identify an overcurrent protective device (fuse or circuit breaker) to be used ahead of the power distribution block.

Power distribution blocks are marked to indicate that they are for use in specific enclosures (identified by either catalog number or specific dimensional information).

Unless the power distribution block is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of the (NEC). Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

Power distribution blocks are marked with the following:

- a) the letters "AL" to indicate use with aluminum conductors only; "CU" to indicate for use with copper conductors only; or "CU" and "AL" to indicate for use with either type of conductor
- b) a "7" or "9" in conjunction with the "AL" or "AL-CU" marking. This marking corresponds with the marking on the individual connector (e.g., AL7CU, AL9)
- c) the torque associated with each conductor tightening means
- d) an ampere rating that signifies the maximum current per pole
- e) a voltage rating
- f) the wire size (or range) for each connector

An insulating cover of a power distribution block is marked with the catalog number of the of the power distribution block for which it is intended.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1953, "Outline of Investigation for Power Distribution Blocks."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Distribution Block."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER DISTRIBUTION CENTERS FOR COMMUNICATIONS EQUIPMENT (QPQY)

GENERAL

This category covers power distribution centers for communications equipment rated 600 V or less.

Power distribution centers contain equipment such as circuit breakers, supplementary protectors, contactors, fuses, switches, including pullout types and related accessory equipment.

Some centers incorporate constructions designed to provide safety for the operator. These centers are dead-front but may be open at the back,

bottom, top or sides. Other centers may employ special alarm indicating fuses that have exposed live parts extending through the front. The distribution centers that incorporate special alarm fuses or that are not provided with a complete enclosure are intended for installation in places accessible only to qualified persons and are so marked.

INSTALLATION

Some equipment has been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions, stating "To be installed only in a Restricted Access Location," or similar wording. Equipment installed in a restricted-access location generally receives power from a centralized dc power source. If field-wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of ANSI/NFPA 70, "National Electrical Code" (NEC).

A certified subassembly such as a fuse panel, circuit breaker panel or the like has been investigated for use in a power distribution center or cabinet and is suitable for field installation. The subassembly is installed in accordance with the manufacturer's installation instructions, and the catalog number or equivalent of the subassembly and power distribution center or cabinet is referenced in the instructions.

PRODUCT MARKINGS

Power distribution centers are marked with their short circuit current rating. This marking may be presented as a dc rating in amps, a description of the battery power supply, such as "Suitable For Use In Circuits Powered By Up To Five Banks Of 48 V, 200 A-Hr. Batteries," or a combination of both. A battery "bank" consists of a sufficient number of series-connected batteries to obtain the required system voltage. A number of "banks" are then wired in parallel to obtain the desired system A-Hr. capacity.

A distribution center having provision for the field installation of additional equipment such as circuit breakers, contactors, switches or the like is marked with the name or trademark of the manufacturer and the catalog number or equivalent of those devices that are intended to be installed in the field.

Power distribution centers are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 - 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.15(B)(16) of the NEC.

RELATED EQUIPMENT

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ) and Power Supplies, Telephone (QQJE).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950, "Safety of Information Technology Equipment," or ANSI/UL 60950-1, "Information Technology Equipment - Safety - Part 1: General Requirements" (1st edition), in addition to the requirements contained in UL Subject 1801, "Outline of Investigation for Power Distribution Centers for Communications Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Distribution Center for Communications Equipment" or "Power Distribution Center for Communications Equipment Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER DISTRIBUTION EQUIPMENT,
PORTABLE (QPRW)****USE**

This category covers portable power distribution units and devices, and portable power distribution panels intended for use in the following locations:

- Carnivals, circuses, fairs and similar locations in accordance with Article 525 of ANSI/NFPA 70, "National Electrical Code" (NEC)
- Exhibition halls or similar locations in accordance with Article 518 of the NEC
- Theaters, audience areas of motion picture and television studios and similar locations in accordance with Article 520 of the NEC
- Motion picture and television studios and similar locations in accordance with Article 530 of the NEC
- Temporary installations at construction sites in accordance with Article 590 of the NEC

RATINGS

This category covers units rated 600 V or less, single- or multi-phase. Units are rated maximum 1600 A.

Short-circuit Rating — Units are intended for connection to supplies with a maximum available fault current of 10,000 A.

PRODUCT MARKINGS

Accessibility — Units intended for use in areas not accessible by the general public are marked "For Use in Areas Not Readily Accessible by the General Public."

Conductors in Parallel — Units intended for paralleled conductors on a single circuit are marked "WARNING – Risk of Fire – Not for Multiple Circuits. Single Circuit with Parallel Conductors Only."

Duty Rating — Outputs are not suitable for continuous use unless marked otherwise.

Ground-fault Protection — Only those receptacles so marked are provided with ground-fault circuit protection for personnel.

Neutral Connection — Equipment rated for use on 3-phase, 4-wire with ground supplies and intended for use with electronic dimmers are marked "130 Percent Neutral – Suitable for Use with Electronic Dimmers." Equipment for use on both 208Y-/120-volt, 3-phase, 4-wire and 120-/240-volt, single-phase supplies at the full current rating on both systems are marked "200 Percent Neutral."

Qualified Personnel — Units intended for use by qualified personnel are marked "FOR USE BY QUALIFIED PERSONNEL ONLY" and "The routing of portable supply conductors, the making and breaking of supply connectors, and the energization and de-energization of supply services shall be performed by qualified personnel only."

Enclosure Type — Enclosures are marked with a Type designation indicating the external conditions for which they are intended. Intended uses for the various Type designations are indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). Enclosures may additionally be marked with descriptive terms such as "Raintight," "Watertight," "Corrosion Resistant" and the like.

Receptacle Ratings — Equipment with receptacles that are not suitable to be disconnected under load are marked "Do Not Disconnect Under Load," or other similar marking to indicate the limitation of the receptacle.

Single-pole Inlets and Outlets — Equipment with separate, single-pole devices for input or output and without sequential interlocking provisions are marked "WARNING — Risk of Electric Shock. Plug connection should be in the following order:

- a) Equipment grounding conductor connectors,
- b) Grounded circuit conductor connectors, and
- c) Ungrounded conductor connectors.

Disconnection should be in reverse order."

RELATED PRODUCTS

Units intended for use in theater or studio rigging immediately adjacent to stage luminaires are covered under Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ).

Portable cord-connected units rated 250 V ac or less, 20 A or less, intended for indoor use as multiple-outlet extensions of a branch circuit to a central location to supply laboratory equipment, a home workshop, home movie lighting control, etc., are covered under Relocatable Power Taps (XBYS).

Connector assemblies consisting of only factory-assembled plugs and cord connectors attached to extra-hard service cords or cables are covered under Cord Sets and Power-supply Cords (ELBZ).

Connector assemblies consisting of only factory-assembled plugs and cord connectors attached to extra-hard service cords or cables that are intended specifically and solely for undercarpet use at tradeshows are covered as undercarpet cord sets under Exhibition Display Units, Accessories (XNRU).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PORTABLE POWER DISTRIBUTION UNITS
AND DEVICES (QPSH)****GENERAL**

This category covers portable power distribution equipment of standard-sized type or configuration. Each unit has a marked model, type or catalog number.

Portable power distribution units are assemblies of Listed products, recognized components, or both, contained in complete electrical enclosures. They may incorporate disconnecting means, overcurrent devices, control components, receptacles for attachment plugs, stage and studio type inlets and connectors, and the like.

This category also covers cable-mounted busbar clamps for use with portable power distribution units as well as partially enclosed, plastic framed cable splicing blocks.

Busbar Clamps (Sister Lugs)

Busbar clamps are intended for use by qualified personnel only. Cable terminating to busbar clamps should be tied or otherwise supported so that flexing or strain on the conductors is not transmitted to the conductor termination at the busbar clamp. Solder lug-type units are not suitable to terminate an equipment grounding conductor. Busbar clamps are marked with their range of intended wire sizes and their maximum current rating.

Cable Splicing Blocks (Spiders)

Partially enclosed, plastic framed cable splicing blocks are suitable for outdoor use, damp locations. They are suitable to be exposed to rain or water spray when not energized. Following such an exposure they are intended to be dried and inspected prior to energization. They are intended for use by qualified personnel in areas not readily accessible by the general public. They are intended for installations covered by Articles 520 and 530 of ANSI/NFPA 70, "National Electrical Code."

Construction Site Units

Units identified as "Construction Site Portable Power Distribution Units" or with similar identifiers that are marked as providing ground-fault protection for personnel protect the output circuits in the presence of one or more of the following conditions:

1. Any two power supply conductors are reversed
2. There is an open circuit in either the grounded supply conductor or any of the ungrounded supply conductors

Protection is provided by exhibiting the performance characteristics of a Class A ground-fault circuit-interrupter or by de-energizing the protected output circuits.

ADDITIONAL INFORMATION

For additional information, see Power Distribution Equipment, Portable (QPRW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1640, "Portable Power-Distribution Units."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify portable power distribution units manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Distribution Unit" (or "Port Pwr Dist Unit") or "Construction Site Portable Power Distribution Unit" (or "Construction Site Port Pwr Dist Unit"). The word "Equipment" may be substituted for "Unit."

The Listing Mark for partially enclosed, plastic framed cable splicing blocks is the same as that specified above except the product name is "Open Frame Cable Splicing Block."

The Listing Mark of UL on the smallest unit container in which busbar clamps are packaged and additionally provided with the UL symbol on the busbar clamp is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Busbar Clamp."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PORTABLE POWER DISTRIBUTION PANELS
(QPSP)****USE**

This category covers portable power distribution panels built for specific applications.

POWER DISTRIBUTION EQUIPMENT, PORTABLE (QPRW)

Portable Power Distribution Panels (QPSM)—Continued

These products are assemblies of certified products and/or components, contained in complete electrical enclosures. They may incorporate disconnecting means, overcurrent devices, receptacles for attachment plugs, stage and studio type inlets and connectors, and the like.

These panels are intended for use in applications specified for portable power distribution units in ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Power Distribution Equipment, Portable (QPRW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1640, "Portable Power-Distribution Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Distribution Panel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-LIMITED CIRCUIT CABLE
(QPTZ)

USE

This category covers power-limited circuit cable intended for use in Class 2 or Class 3 circuits as described in Article 725 of ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Cable with a nonmetallic jacket is identified by a marking on the surface of the jacket or on a marker tape under the jacket. Cable with an outer metal sheath is identified by a marker tape under the armor. This marking includes one of the following Type designations:

CL2P or CL3P — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 725.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

CL2R or CL3R — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings in vertical shafts in accordance with Section 725.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

CL2 or CL3 — Indicates cable intended for general use in Class 2 or Class 3 circuits within buildings in accordance with Section 725.154(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

CL2X or CL3X — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings (1) where the cable is enclosed in raceway or noncombustible tubing, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, or (3) in one- or two-family or multi-family dwellings when the cable diameter is less than 0.25 in., in accordance with Section 725.154(E) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

PLTC — Indicates cable for use in Class 3 circuits within buildings that is suitable for use in cable trays, in accordance with Sections 725.154(C) and (D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1685.

Cable marked "direct burial," "for direct burial" or "dir bur" is suitable for direct burial in the earth.

Type PLTC cable and cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "wet" or "wet location" is suitable for use in wet locations.

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilation Systems," is surface marked "Limited Combustible."

POWER-LIMITED CIRCUIT CABLE (QPTZ)

355

Type PLTC cable permitted to be exposed between cable trays and utilization equipment in accordance with Section 725.61(D)(4) of the NEC is surface marked with the supplementary letters "-ER" (formerly marked "open wiring").

Cable marked "-CI (max voltage ____)" is suitable for use as circuit-integrity cable at the maximum voltage to ground indicated, in accordance with Section 725.179(F) of the NEC.

Cable marked "CI (max voltage ____)" is intended for use in free air only.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 13, "Power-Limited Circuit Cables."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power-limited Circuit Cable."

Cable verified to another transmission performance specification has the Marking "Verified In Accordance With [Specification name and/or number]" together with the Listing Mark information on the tag, reel or smallest unit container.

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER OUTLETS AND POWER-
OUTLET FITTINGS (QPYV)

GENERAL

This category covers power outlets and power-outlet fittings.

Power outlets are enclosed assemblies that may include components such as receptacles, circuit breakers, fuseholders, fused switches, buses, and watt-hour meter-mounting means. Power outlets are permanently installed and, although not restricted to such use, are intended for use:

- At outdoor locations, such as on farms, at building sites, and the like, where power is required to operate portable, mobile, or temporarily installed equipment
- To supply power to a mobile home or a recreational vehicle
- To supply shore power to boats

Power-outlet fittings may be panels or combination units incorporating receptacles, disconnecting means, overcurrent protection or other such devices. A separable mounting post or pedestal to which power outlets are to be mounted is also considered a fitting. Power-outlet fittings are intended for factory or field assembly into or in conjunction with specific power outlets. Power outlets are marked to indicate those fittings with which they are intended to be used.

USE AND INSTALLATION

Power outlets are mounted using a post or pedestal, each detailed as follows:

Post type power outlets are intended to be mounted in concrete at or below grade level, or intended to be secured to some other mounting support. The mounting post contains markings indicating the proper grade level.

Pedestal type power outlets are intended for mounting on a concrete slab.

Unless marked otherwise, a mounting post, pedestal or fitting is not intended to serve as the sole support of a mast for overhead wiring.

Power outlets are not intended for use in recreational vehicle parks or in marinas unless so marked.

Where intended for use as service equipment for mobile homes, temporary sites, marinas and boatyards, or any combination of these, the appropriate wording appears in the marking "Suitable For Use As Service Equipment For ____." Power outlets so marked for use as service equipment are provided with factory installed or field installable overcurrent protection and disconnecting means for service conductors, as well as means for grounding the service neutral conductor.

Power outlets not marked for a specific service use (as described in the previous paragraph) and not incorporating receptacles are suitable as ser-

vice equipment if marked "Suitable For Use As Service Equipment," or where the neutral is factory bonded to the enclosure, "Suitable For Use Only As Service Equipment."

Power outlets containing overcurrent protection are marked with their short-circuit current ratings in rms symmetrical amps.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fuses should not be loaded to exceed 80% of their current rating.

Investigation of a power outlet includes a test designed to simulate exposure to beating rain to determine that such exposure will not interfere with successful operation of the apparatus within the enclosure nor result in wetting of the exposed faces of receptacles and associated attachment plugs.

Power outlets are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code." Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

RELATED PRODUCTS

Portable power distribution equipment is covered under Portable Power Distribution Units and Devices (QPSH) and Portable Power Distribution Panels (QPSM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 231, "Power Outlets."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Outlet" or "Power Outlet Fitting."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES (QQAQ)

These categories cover the following types of power supplies intended for use in ordinary locations in accordance with the National Electrical Code.

- General Purpose Power Supplies
- Specialty Power Supplies
- Telephone Power Supplies
- Gas Tube Sign Power Supplies
- Information Technology Equipment Power Supplies

The investigation of a device covered in these categories does not include the effects it may have on the system or equipment connected thereto.

Power supplies intended as components of fire protective signaling systems and burglary protective signaling systems equipment are covered under their respective categories.

Power supplies for use in health care facilities are covered under under Power Supplies for use in Health Care Facilities, Guide KFCC.

Power supplies classified in accordance with IEC publications are covered under Power Supplies Classified In Accordance With IEC Publications, Guide QQQV.

Power supplies for use in recreational vehicles are listed in this directory under Power Converters and Power Converter Systems, Guide QPPY.

A power supply not covered under one of the above mentioned categories and for use with only a specific product may be covered under the category of the specific product.

The Listing Mark of UL on products covered under these categories does not extend to connected equipment.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, GENERAL PURPOSE (QQFU)

GENERAL

This category covers indoor- and outdoor-use power supplies having input ratings of not more than 600 V, direct and alternating current.

Power supplies identified with an enclosure type designation or as "Rain-tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Power supplies marked "Intended for Installation in a Protected Environment" or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1012, "Power Units Other Than Class 2."

Products investigated for use in air-handling spaces are marked "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22(C) of the National Electrical Code," or "Suitable for Use in Air-Handling Spaces," and have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Products that bear this marking are suitable for installation in accordance with Article 300 of ANSI/NFPA 70, "National Electrical Code," Chapter 4 of ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT (QQGQ)

GENERAL

This category covers power supplies rated 600 V or less, intended for use with information technology equipment (ITE) including electrical business equipment. End-use products that employ these types of power supplies are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

These power supplies are stand-alone units that deliver power to ITE via external interconnecting means.

This category also covers modular accessory power supplies. Such power supplies are types that are intended for field installation within personal computers, similar ITE, including telephone equipment. These modular power supplies are also provided with installation instructions relative to safe installation.

All power-supply types covered under this category are marked with input and output ratings that include the voltage and intended maximum load rating in amperes.

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is to be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the system or equipment to which it is connected.

REBUILT PRODUCTS

Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ)—Continued

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements," and ANSI/UL 60950-22, "Information Technology Equipment – Safety – Part 22: Equipment to be Installed Outdoors."

All low-voltage outputs (maximum 42.4 V peak or 60 V dc) are safety extra-low-voltage (SELV) as defined in ANSI/UL 60950-1, and, where noted in the test report, SELV for wet locations as defined in ANSI/UL 60950-22. An output marked "LPS" has been determined to have an output level at or below the limited power-source level specified in ANSI/UL 60950-1, as it relates to the requirements for equipment supplied by the output.

An output marked "Class 2" has additionally been investigated to ANSI/UL 1310, "Class 2 Power Units."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and the category identifier "Information Technology Equipment Power Supply" (or "I.T.E. Power Supply" or "ITE Power Supply"), "QQGQ Power Supply," or the standard number with or without the "ANSI/UL" prefix (e.g., "ANSI/UL 60950-1," "60950-1").

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word "Accessory."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, SPECIALTY (QIQI)

USE

This category covers indoor- and outdoor-use power supplies having input ratings of not more than 600 V, direct and alternating current.

These power supplies are intended for, but not necessarily limited to, specific uses such as to supply some household appliances, electroplating equipment, school laboratory equipment, pipe organs, cathodic protection equipment, power supply/battery charger combinations, and industrial equipment, including inverters and converters.

This category also covers permanently connected Class 2 power units. Other types of Class 2 power units are covered under Transformers, Class 2, Class 3 (XOKV) and Direct-plug-in and Cord-connected Class 2 Power Units (EPBU).

Power supplies identified with an enclosure type designation or as "Rain tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

PRODUCT MARKINGS

Power supplies marked "Intended for installation in a protected environment" or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

RELATED PRODUCTS

See Power Supplies, General Purpose (QQFU).

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

Power Supplies, Specialty (QQII)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1012, "Power Units Other Than Class 2."

Products with a marked Class 2 output have been additionally investigated to ANSI/UL 1310, "Class 2 Power Units."

Products investigated for use in air-handling spaces are marked "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22(C) of the National Electrical Code," or "Suitable for Use in Air-Handling Spaces," and have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Products that bear this marking are suitable for installation in accordance with Article 300 of ANSI/NFPA 70, "National Electrical Code," Chapter 4 of ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, TELEPHONE (QQJE)

GENERAL

This category covers telephone power supplies having input ratings of not more than 600 V, direct and alternating current, intended for use with telephone exchange equipment, telephone appliances, and telephone accessories.

REBUILT PRODUCTS

This category also covers telephone power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt telephone power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt telephone power supplies are subject to the same requirements as new telephone power supplies.

RELATED PRODUCTS

See Power Supplies, General Purpose (QQFU).

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1459, "Telephone Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Power Supply."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES FOR USE WITH AUDIO/VIDEO, INFORMATION AND COMMUNICATION TECHNOLOGY EQUIPMENT (QQJQ)

GENERAL

This category covers power supplies rated 600 V or less, intended for use with products covered under Audio/Video Equipment (AZOE), Communication Technology Equipment (AZOJ) and Information Technology Equipment (AZOT).

PRODUCT CATEGORIES BY CATEGORY CODE

Power Supplies for Use with Audio/Video, Information and Communication Technology Equipment (QQJQ)—Continued

These power supplies are stand-alone units that deliver power to the above end-use products via external interconnecting means.

This category also covers modular accessory power supplies. Such power supplies are types that are intended for field installation within computing, telecommunication, or similar equipment. These modular power supplies are also provided with installation instructions relative to safe installation.

All power-supply types covered under this category are marked with input and output ratings that include the voltage and intended maximum load rating in amperes.

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit will be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the specific system or equipment to which it is connected.

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 62368-1, "Audio/Video, Information and Communication Technology Equipment – Part 1: Safety Requirements."

All low-voltage outputs are Class 1 electrical energy sources (ES1) as defined in ANSI/UL 62368-1. An output marked "LPS," "PS1" or "PS2" has been determined to have an output level at or below the limited power-source level, Class 1 electrical power source (PS1) or Class 2 electrical power source (PS2), respectively, specified in ANSI/UL 62368-1, as it relates to the requirements for equipment supplied by the output.

An output marked "Class 2" has additionally been investigated to ANSI/UL 1310, "Class 2 Power Units."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply," or other appropriate product name as shown in the individual Listings.

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word "Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC UNDERGROUND CONDUIT WITH CONDUCTORS (QQRK)

USE AND INSTALLATION

This category covers cable, which is a factory assembly of one or more certified insulated wires or cables, and may include one or more insulated or bare equipment grounding conductor(s), all enclosed in a high-density polyethylene conduit, intended for underground installation in accordance with Article 354 of ANSI/NFPA 70, "National Electrical Code" (NEC), or for highway lighting, utility company installations and similar uses not within the scope of the NEC. This product is intended for installation and use in accordance with the following information.

The range of trade sizes is from 1/2 in. to 4 (metric designators 16 to 103) inclusive.

The product is intended for embedment in concrete and/or for direct burial in the earth to a depth specified in the NEC, or by the Authority Having Jurisdiction.

The product is provided in a continuous length on a reel and intended to be installed without splices underground. The ends of cable runs are intended to be stubbed-up through concrete or directly from earth into equipment enclosures, cabinets or lighting-pole bases.

Conductors in the cable are rated 600 V or higher and are suitable for use in wet and dry locations. The conductors fill the internal cross section of the tube in accordance with Chapter 9 of the NEC.

For cable rated 600 V through 35 kV, the voltage ratings of all conductors in a construction are the same. The ampacity of the conductors is to be

NONMETALLIC UNDERGROUND CONDUIT WITH CONDUCTORS (QQRK)

determined on the basis of the AWG size, the temperature ratings of the conductors, and the number of current-carrying conductors in the cable, in accordance with the NEC.

The smallest radius to which the cable may be bent in the installation is:

Trade Size	Metric Designator	Min Bending Radius (in.)
1/2	16	10
3/4	21	12
1	27	14
1-1/4	35	18
1-1/2	41	20
2	53	26
2-1/2	63	36
3	78	48
4	103	60

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1990, "Nonmetallic Underground Conduit with Conductors."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Preassembled Cable in Nonmetallic Conduit" or "Nonmetallic Underground Conduit with Conductors."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED ASSEMBLIES (QQRX)

This category covers prefabricated assemblies, which are factory-built assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.

Materials, including the methods used for the installation of electrical, mechanical, heating and plumbing equipment incorporated in these assemblies by their manufacturer, have been judged under the requirements of UL, which are based on ANSI/NFPA 70, "National Electrical Code," and model fire, building, plumbing and mechanical codes.

Authorities Having Jurisdiction should be consulted before installation.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED WIRING SYSTEMS (QQVX)

USE AND INSTALLATION

This category covers prefabricated wiring systems that may incorporate modular multipole connectors, AC cable, MC cable, flexible metal conduit, hard usage cord, outlet boxes, splitter assemblies, remote control switching assemblies and devices. The wiring systems cannot be field inspected by the Authority Having Jurisdiction (AHJ) without damage to the assembly.

Manufactured wiring systems suitable for patient care areas are intended for installation in accordance with Article 517 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These prefabricated modules and assemblies are intended for installation rearrangement and inspection in accessible locations in accordance with Article 604 of the NEC. AHJs should be consulted before installation.

This equipment is intended to be connected to supply circuits of up to 600 V ac and maximum rating of 40 A per circuit.

Materials, including the methods used for the installation of electrical, mechanical and heating equipment incorporated in these assemblies by their manufacturer, have been investigated to requirements of UL, which are based on the NEC, ANSI/NFPA 72, "National Fire Alarm Code," and model building and mechanical codes.

PRODUCT MARKINGS

Each bi-directional wiring assembly is marked "WARNING: Risk of Fire or Electric Shock," and the following or equivalent: "Do not electrically con-

Manufactured Wiring Systems (QQVX)—Continued

nect to more than one source of supply. Always determine that the wiring assembly is electrically connected to one and only one source of supply.”
 Manufactured wiring systems suitable for installation in patient care areas are marked “Suitable For Patient Care Areas of Health Care Facilities Other Than Anesthetizing Locations.”
 Manufactured wiring systems suitable for installation in ducts or plenums are marked “Acceptable for Use in Ducts or Plenums Used for Environmental Air.”
 Manufactured wiring systems suitable for installation in air-handling spaces other than ducts or plenums are marked “Acceptable for Use in Air-handling Spaces Other Than Ducts or Plenums.”
 Assemblies of manufactured wiring systems suitable for use in outdoor locations are marked “Outdoor.”

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 183, “Manufactured Wiring Systems.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Distribution Box” or “Tap Box,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECTIONS AND UNITS (QQXX)

USE AND INSTALLATION

This category covers factory-built assemblies for use within, or as part of, the structure of buildings for commercial, industrial and residential use. These assemblies may incorporate pre-installed electrical power distribution systems comprised of certified electrical components, which are usually concealed and may not be accessible for inspection at the installation site. Some assemblies may incorporate additional certified equipment. Special occupancies as specified in ANSI/NFPA 70, “National Electrical Code,” are not covered under this category.

The structural requirements vary with the type of building construction, occupancy and location of installation and are not investigated under this category.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Some assemblies covered under this category have additionally been investigated to ANSI/UL 723, “Test for Surface Burning Characteristics of Building Materials,” and may be marked with a designation “FHC X/Y” on the assembly that denotes these products have a flame-spread value of “X” or less and a smoke-developed value of “Y” or less.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, “National Electrical Code.”

The basic standard used to investigate products in this category for flame-spread and smoke-developed values is ANSI/UL 723, “Test for Surface Burning Characteristics of Building Materials.” Such products are noted in the individual certifications.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Prefabricated *.”

* The appropriate product name as shown in the individual Listings

One Listing Mark is applied to each section or unit.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRING ASSEMBLIES (QQYZ)

GENERAL

This category covers prefabricated wiring systems comprised of Listed electrical components that could be field assembled and inspected by an Authority Having Jurisdiction (AHJ), but are assembled in the factory prior to field installation.

Prefabricated wiring assemblies incorporate Listed conduit, tubing or cable, conductors and fittings intended for field installation in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC). They may be factory assembled to outlet or junction boxes, box-mounting brackets, and wiring devices.

Prefabricated wiring assemblies are marked with the conduit, tubing or cable type, and the conductor size and type to permit determination of their suitability for a specific application and ampacity in accordance with the NEC. A parts list is provided with each assembly to identify the extent of the product.

Materials, including the methods used for the installation of electrical, mechanical and heating equipment incorporated in these assemblies by their manufacturer, have been investigated to requirements of UL, which are based on the NEC, ANSI/NFPA 72, “National Fire Alarm Code,” and model building and mechanical codes.

Wiring Assembly Kits

Wiring assembly kits for final assembly in the field consist of a package that contains some or all: length(s) of Listed conduit, tubing or cable, Listed fittings appropriate for the type of conduit, tubing or cable, outlet or junction boxes, conductors, or other devices.

The packaging for wiring assembly kits is marked with the conduit, tubing, or cable size and type, and the conductor size and type, if provided, to permit determination of their suitability for a specific application and ampacity in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

Conduit Kits

Conduit kits for final assembly in the field consist of a package that contains some or all: length(s) of Listed conduit or tubing, Listed fittings appropriate for the type of conduit or tubing, outlet or junction boxes, or other devices.

The packaging for conduit kits is marked with the conduit or tubing size and type to permit determination of their suitability for a specific application in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

Surface Raceway Kits

Surface raceway kits for final assembly in the field consist of a package that contains some or all: length(s) of Listed surface metal or nonmetallic surface raceway, Listed fittings appropriate for the surface raceway, or other devices.

The packaging for surface raceway kits is marked with the raceway size and the number, type and size of conductors that may be installed in the Listed raceway, to permit determination of its suitability for a specific application in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

RELATED PRODUCTS

For products covered by Article 604 of the NEC, see Manufactured Wiring Systems (QQVX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, “National Electrical Code.”

UL MARK

The Listing Mark of UL on the factory-assembled wiring assembly or the packaging of a wiring assembly kit is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Wiring Assembly,” “Wiring Assembly Kit,” “Conduit Kit” or “Surface Raceway Kit.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED BUILDINGS (QRAR)

These are factory-built buildings, structures, and building assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.

They are intended for installation subject to approval by the Authority Having Jurisdiction.

The buildings, structures, and building assemblies have been investigated in accordance with one or more Model Codes (such as Building, Fire, Plumbing, Mechanical, Gas, Energy) and the National Electrical Code and/or a State Code and/or an applicable Building Code of the local jurisdiction. As an alternate, the building, structure, and building assemblies have been investigated in accordance with one or more specific areas of a code such as electrical, plumbing, mechanical, structural, etc.

When the Building Code does not include specific requirements for such features as air cooling and heating systems, fuel supply systems, chimney and venting systems, etc., the applicable requirements of the National Fire Codes are used.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPOSITE PANELS (QRSY) USE AND INSTALLATION

This category covers composite panels, which are factory-built panel assemblies intended for use within or as part of the structure of buildings for commercial, industrial and residential use. These assemblies incorporate pre-installed branch-circuit electrical power distribution systems that are usually concealed and may not be accessible for inspection at the installation site. Some panels incorporate audio, lighting, ventilation fans, and other certified utilization equipment.

The structural strength requirements vary with live loads, dead loads, and seismic conditions of each locality. Authorities Having Jurisdiction should be consulted with respect to their requirements for panel systems.

INSTALLATION INSTRUCTIONS

A copy of the installation and operation instructions are provided with each panel if shipped separately or with each set of panels intended to be installed as a system.

The composite panel system is provided with an assembly diagram and with an electrical diagram specifying the specific locations of the field-installed wiring connections, the connections between composite panel sections, factory-installed utilization equipment, and the intended field-wiring branch-circuit-conductor connection points of the panel system.

The installation instructions indicate which circuits are factory installed.

PRODUCT MARKINGS

Each input power feed conduit whip, cord or building field-wiring-connection point to the panel system is marked with a schematic wiring diagram or the equivalent, indicating the circuits and conductors provided and the required rating of the branch circuit to which it is to be connected.

A panel system with other than a single-phase circuit has the convenience receptacles and utilization equipment marked by a letter, number, color, or a similar designation to indicate the circuit in the system to which the receptacle or utilization equipment is connected.

Each panel system electrical accessory that is shipped separately from the major panel system to which it is to be connected is marked with respect to its intended use and interrelationship with the panel system; for example, "For Use with Composite Panel Series ____," in which the appropriate series or catalog number is designated. When separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1294, "Outline of Investigation for Composite Panels," and ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**COMPOSITE PANEL
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY
Control No.**

or

Composite Panels (QRSY)—Continued

COMPOSITE PANEL ACCESSORY FOR USE WITH PANEL SERIES [panel designation] AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL AND INDUSTRIAL PREFABRICATED BUILDINGS AND UNITS (QRXA)

GENERAL

This category covers the installation of electrical systems in commercial or industrial prefabricated buildings and units, including, but not limited to, power-distribution buildings and units, refrigeration building and units, guard sheds, toll and phone booths, drive-up ATM booths, canopy shelters, traffic-control booths, indoor data/cash offices, power-wall modules, sound-isolation buildings, water-pump-station buildings, stationary ITE server or data-center buildings, storage buildings (for other than hazardous materials), and other similar buildings and units.

These factory-built buildings and units incorporate pre-installed materials and equipment which, after installation, may be concealed and may not be accessible for inspection at the final installation site. The final site installation of these prefabricated buildings and units is subject to approval by the Authority Having Jurisdiction.

These prefabricated buildings and units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Each Subscriber must successfully complete an Initial Qualification Inspection for each manufacturing facility, demonstrating the capability to produce buildings or units conforming to UL program requirements. Each Subscriber's factory quality control system is audited on an annual basis. Each building or unit must be inspected during at least one stage of production for compliance with the applicable Articles of the NEC.

UL CERTIFICATE

The UL Certificate of Inspection is the only method provided by UL to identify prefabricated buildings and units inspected by UL under UL's Building Inspection Certificate Services Program.

The prefabricated buildings and units for which UL issues Certificates are considered by UL to comply with the applicable requirements of the NEC at the time of inspection. The Certificate is only valid when accompanied by a completed UL Inspection Report. The UL Inspection Report identifies applicable plan drawings that indicate all the equipment included in the building at the time of manufacturing. UL does not know what the effect of a modification to the electrical system or equipment, or to the construction of a prefabricated building or unit, subsequent to the inspection, may have on the safety of the product or the continued validity of the Certificate unless the modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to comply with the applicable requirements.

If the prefabricated building or unit is shipped in multiple sections or "knocked down," the number and description of the sections required to complete the building or unit are included on a building's nameplate. Instructions for completion of the building, including any wiring connections to be completed at the installation site, are also provided.

The Certificate is not transferable. UL reserves the right to void a Certificate at any time. The Certificate does not indicate compliance with any UL product certification program, nor does it entitle the Subscriber to use the UL Mark. UL assumes no liability for any loss that may result from failure of the equipment, incorrect certification, or nonconformity with requirements.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESS AND OTHER POWER-OPERATED MACHINE CONTROLS AND SYSTEMS (QUEQ)

This category covers controls and systems intended for industrial or commercial application on power-operated machines intended for such uses as pressing, punching, shearing or breaking operations. They may be designed for use on particular types of equipment such as pneumatic- or hydraulic-powered devices or mechanically operated part or full revolution types of machines. The control or system is intended to reduce the risk of bodily injury resulting from machine operation. The intended use of the control is noted in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESENCE-SENSING DEVICES (QUHP)

USE

This category covers presence-sensing devices intended for use in machine-control systems where they can be interconnected to the control system. Presence-sensing devices detect the presence of an object or body part and are used as a part of the machine safeguarding system to reduce the risk of bodily injury from moving machine parts.

Presence-sensing devices investigated for press initiation are noted in the individual Listings, and are intended to be in accordance with Section (11)(A) of 29CFR1910.217, "Mechanical Power Presses."

SPECIAL CONSIDERATIONS

These products are limited to use on part-revolution types of machines or machines where operation can be interrupted and motion stopped at any point in the machine operation cycle.

RELATED PRODUCTS

Presence-sensing devices employing active opto-electronic protective devices (AOPD) consisting of one or more light beams for the sensing function are covered under Active Opto-electronic Protective Devices (NIPF).

Presence-sensing devices employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) consisting of one or more laser scanners for the sensing function are covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM).

ADDITIONAL INFORMATION

For additional information, see Press and Other Power-operated Machine Controls and Systems (QUEQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and UL 991, "Tests for Safety-Related Controls Employing Solid-State Devices."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Presence Sensing Device."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESS CONTROLS (QUKQ)

USE

This category covers press controls intended for use in press control systems where they are interconnected with other components, such as push-button hand controls, valves, air cylinders, etc. When the press control or system is applied as intended, it is judged to be in accordance with Occupational Safety and Health Administration Standard Section 1910.217.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 79, "Electrical Standard for Industrial Machinery," in addition to Article 670 of ANSI/NFPA 70, "National Electrical Code."

Press Controls (QUKQ)—Continued

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Press Control."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT, ELECTRICAL (QUYX)

GENERAL

This category covers process control equipment rated 600 V maximum and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators).

Equipment intended to be installed only in process control panels is so identified.

Process control equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

Open-type process control equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Process control equipment intended for mounting in hazardous (classified) locations or with circuits that extend into hazardous (classified) locations is covered under Process Control Equipment for Use in Hazardous Locations (QUZW) and Process Control Equipment for Use in Zone Classified Hazardous Locations (QVAJ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Equipment - Part 1: General Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Process Control Equipment," "Open-type Process Control Equipment," "Process Control Enclosure," "Process Control Enclosure Part," "Process Control Subassembly," "Process Control Accessory," or other appropriate product name as shown in the individual Listings. The words "Process Control Equipment" may be abbreviated "Proc. Cont. Eq." When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, "QUYX" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QUZW)

USE AND INSTALLATION

This category covers process control equipment rated 600 V maximum and intended for use in accordance with ANSI/NFPA 70, "National Elec-

PROCESS CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QUZW)

362

trical Code.” These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators), including associated apparatus providing intrinsically safe outputs (e.g., barriers providing intrinsically safe circuit extensions).

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is certified as part of the system unless otherwise indicated and is used as intended.

Equipment intended to be installed only in process control panels is so identified in the individual certifications. Such equipment is not intended for field installation.

Safety may be affected if the manufacturer’s installation instructions are not followed.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Equipment investigated for use only in the hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

Process control equipment intended for use in unclassified locations is covered under Process Control Equipment, Electrical (QUYX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 61010-1, “Electrical Equipment for Measurement, Control, and Laboratory Use; Part 1: General Requirements.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Process Control Equipment for Use in Hazardous Locations,” “Process Control System for Use in Hazardous Locations,” “Process Control Unit for Use in Hazardous Locations,” “Process Control Equipment (Associated Apparatus),” “Process Control Unit (Associated Apparatus),” or other appropriate product name as shown in the individual Listings. The words “Hazardous Locations” may be abbreviated “Haz. Loc.” The words “Process Control Equipment” may be abbreviated “Proc. Cont. Eq.”

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, “QUZW” and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (QVAJ)

USE AND INSTALLATION

This category covers process control equipment rated 600 V maximum and intended for use in accordance with ANSI/NFPA 70, “National Electrical Code.” These products include instruments for measurement, recording and/or control of process variables (e.g., temperature, pressure, flow) and auxiliary devices used with these instruments (e.g., sensors, transducers, valve operators).

Equipment intended to be installed only in process control panels is so identified in the individual certifications. Such equipment is not intended for field installation.

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is certified as part of the system, unless otherwise indicated, and is used as intended.

Safety may be affected if the manufacturer’s installation instructions are not followed.

The investigation of process control equipment does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Equipment investigated for use only in hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

PROCESS CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (QVAJ)

Process control equipment intended for use in unclassified locations is covered under Process Control Equipment, Electrical (QUYX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 61010-1, “Electrical Equipment for Measurement, Control, and Laboratory Use; Part 1: General Requirements.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Process Control Equipment for Use in Hazardous Locations,” “Process Control System for Use in Hazardous Locations,” “Process Control Unit for Use in Hazardous Locations,” “Process Control Equipment (Associated Apparatus),” “Process Control Unit (Associated Apparatus),” or other appropriate product name as shown in the individual Listings. The words “Hazardous Locations” may be abbreviated “Haz. Loc.” The words “Process Control Equipment” may be abbreviated “Proc. Cont. Eq.”

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, “QVAJ” and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS (QV GK)

This category covers devices intended for use with telephone, telegraph, fire alarm (other than municipal circuits) and similar signaling circuits to discharge high potential currents to ground. These protectors are divided into four separate categories:

- Primary Protectors for Communication Circuits (QVGV)
- Primary Protectors for Coaxial Communications Circuits (QVKG)
- Protectors for Antenna Lead-in Conductors (QVLA)
- Secondary Protectors for Communication Circuits (QVRG)
- Isolated Loop Circuit Protectors for Communication Circuits (QV GQ)

The primary protectors are intended to be installed, used and maintained by operating communications companies that own the outside plant facilities that provide service to the subscriber premise. They are intended for installation as defined in Article 800 of ANSI/NFPA 70, “National Electrical Code” (NEC). A primary protector may be housed in its own enclosure or secured within a Listed compatible network interface box.

Primary coaxial protectors are intended for use on coaxial communications circuits and network-powered broadband communications systems as defined in Article 830 of the NEC. The protectors are typically installed by the public utility company that provides the service and are installed at the point of entry where the coaxial circuit enters the subscriber premises. The protector may be housed in its own enclosure or secured within a Listed compatible network interface box.

Protectors for antenna lead-in conductors are used to limit surges on the antenna lead-in cable that connects the antenna to the receiver/transmitter electronics. Typical applications include antenna installations for radio and television receiving equipment, amateur radio transmitting and receiving equipment, cellular telephone towers and WiMax or WiFi wireless networks.

A secondary protector may be installed, used and maintained by the customer, interconnecting company, or the operating company. A secondary protector must employ an overcurrent protection system, such as a line fuse.

The purpose of the isolated loop circuit protector is to suppress abnormal voltages caused by hazards such as lightning and other EMI transients. An isolated loop circuit protector is intended for use on data or communication lines that are not exposed to accidental contact with electric light or power conductors operating at over 300 V to ground.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRIMARY PROTECTORS FOR COMMUNICATIONS CIRCUITS (QVGV)

GENERAL

This category covers protectors intended for use on communication circuits as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electric light or power conductors operating at or over 300 V to ground as defined in the NEC. These devices may also be used to protect against electrical transients from an electromagnetic disturbance or higher than normal voltages induced on the communication circuits due to close proximity of the protected circuit to electric light or power conductors.

This category includes both fuse and fuseless protectors. Requirements for the location and installation of primary protectors are contained in the NEC. The individual Listings provide the following information: Protector block number, catalog numbers of arresters that may be employed in a Listed block, types of arresters, design features, maximum fusing wire that is used in series with the block, and indoor or outdoor use.

The maximum size fusing wire is indicated by the following alphabetical designations:

- A – 24 AWG, copper wire with thermoplastic insulation
- B – 22 AWG, copper wire with thermoplastic insulation
- C – 20 AWG, 40% copper-clad wire
- D – 26 AWG, copper wire with thermoplastic insulation

Protector blocks suitable for outdoor use are also suitable for use indoors. Blocks marked for indoor use are suitable for installation only indoors.

This category also covers network interface devices, which are two-compartment enclosures that serve to provide a demarcation between the equipment of the private residence and the outside plant. The first compartment, located on the incoming side of the telephone line, may employ a Listed compatible telephone protector, where the compatibility is determined by UL. The second compartment employs terminals and standard telephone jacks for use by the resident. Indoor and outdoor Listing is subject to the same requirements used in the investigation of telephone protectors.

RELATED PRODUCTS

Separate network interface devices intended for use without a protector are covered under Communication Circuit Accessories (DUXR).

Protectors intended for use with municipal fire alarm circuits are covered under Miscellaneous Devices (UXKV).

Secondary protectors intended for telephone, telegraph, fire alarm and similar signaling circuits are covered under Secondary Protectors for Communications Circuits (QVRG).

ADDITIONAL INFORMATION

For additional information, see Protectors (QV GK) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497, "Protectors for Paired-Conductor Communications Circuits."

Protectors that have been subjected to an 8/20, 10 kA surge have additionally been investigated to ANSI/NFPA 780, "Standard for the Installation of Lightning Protection Systems" (2004).

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Signal Circuit Protector," "Telephone Protector," "Network Interface Device" or "Signal Circuit Protector Enclosure."

The product name for protectors that comply with the 8/20, 10 kA surge test as required by ANSI/NFPA 780 includes "10 kA."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRIMARY PROTECTORS FOR COAXIAL COMMUNICATIONS CIRCUITS (QVKC)

GENERAL

This category covers primary coaxial protectors intended for use on coaxial communication circuits and network-powered broadband communications systems as defined in Article 830 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Primary Protectors for Coaxial Communications Circuits (QVKC)—Continued

The protectors are typically installed by the public utility company that provides the service and are installed at the point of entry where the coaxial circuit enters the subscriber premises.

The primary coaxial protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electric light or power conductors operating at over 300 V to ground as defined in Articles 800 and 830 of the NEC. These protectors may also be used to protect against electrical transients produced from electromagnetic disturbance on the communication circuits.

The primary coaxial protectors may also be used in low- and medium-network-powered sources as defined in the Limitations for Network-Powered Broadband Communications Systems Table of Article 830 of the NEC. The protectors are certified for use with a current-limiting or extinguishing device, or current-limiting or extinguishing component specified in the individual certifications and installation instructions. The current-limiting or extinguishing device, or current-limiting or extinguishing component may be employed within the protector or may be a separate device or component coordinated externally with the protector.

Coaxial protectors may be used indoors or outdoors. Coaxial protectors marked for outdoor use are also suitable for use indoors. Protectors marked for indoor use are intended for indoor installation only. The coaxial protectors may be installed within a certified enclosure or network interface device or may be installed as a stand-alone device.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497C, "Protectors for Coaxial Communications Circuits."

Protectors that have been subjected to an 8/20, 10 kA surge have additionally been investigated to ANSI/NFPA 780 (2004), "Standard for the Installation of Lightning Protection Systems."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Primary Coaxial Protector."

The product name for protectors that comply with the 8/20, 10 kA surge test as required by ANSI/NFPA 780 includes "10 kA."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECONDARY PROTECTORS FOR COMMUNICATIONS CIRCUITS (QVRG)

GENERAL

This category covers secondary protectors intended for use on communication circuits as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These protectors are intended to suppress abnormal voltage and/or current conditions that bypass the primary protector. These devices limit currents to less than the current-carrying capacity of Listed communication wire employed in the communication loop of the protected premise. Any overvoltage protection and/or grounding connection is intended to be electrically located on the equipment side of the protector's current-limiting means.

Secondary protectors covered in this category have been investigated for use only on the equipment side of a primary protector (QVGV) and are intended to be installed only on the protected portion of a communication circuit. In those cases where a primary protector is not required, as defined in Article 800 of the NEC, the secondary protector may be installed or connected into the communication circuit without the use of a primary protector.

The current-limiting, fusing or extinguishing operation may be accomplished by a current-protection device located within the secondary protector, or the secondary protector may be used with a "sneak current protector." A sneak current protector serves to limit abnormal fault current that is generated due to contact of the telephone lines with AC power lines. The sneak current protector is a separate device or module that is intended for mounting on a Listed compatible base assembly. This current-protection system may employ a fuse, current-limiting circuitry or other similar means to limit the abnormal fault current condition.

RELATED PRODUCTS

Secondary Protectors for Communications Circuits (QVRG)—Continued

Primary telephone protectors are covered under Primary Protectors for Communication Circuits (QVGV).

Other telephone equipment is covered under Telephone Appliances and Equipment (WYQQ).

Wire and cable intended to be permanently installed in a building in accordance with Article 800 of the NEC are covered under the appropriate wire and cable categories.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497A, "Secondary Protectors for Communications Circuits."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Secondary Protector," "Secondary Telephone Protector" or "Sneak Current Protector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS FOR USE IN HAZARDOUS LOCATIONS (QVSC) ISOLATED LOOP CIRCUIT PROTECTORS FOR USE IN HAZARDOUS LOCATIONS (QVSI)

USE

This category covers protectors intended for use on Class 2 or Class 3 remote control, signaling and power-limited circuits or fire-protection-signaling circuits as defined in Articles 725 and 760 of ANSI/NFPA 70, "National Electrical Code."

These protectors are intended as suppression devices for abnormal voltage conditions that may exist on the circuit due to electrical transients from an electromagnetic disturbance. These protectors are not intended for use on circuits exposed to accidental contact with electric light or power conductors operating at over 300 V to ground.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 497B, "Protectors for Data Communications and Fire-Alarm Circuits."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolated Loop Circuit Protector for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPING EQUIPMENT FOR FIRE SERVICE (QVUT)

The following information and listings relate to fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with the requirements of the Standard of the National Fire Protection Association for the Installation of Centrifugal Fire Pumps, NFPA 20.

Authorities having jurisdiction should be consulted before installation.

BATTERY CHARGERS FOR USE WITH INTERNAL COMBUSTION ENGINES DRIVING CENTRIFUGAL FIRE PUMPS (QWIR)

GENERAL

This category covers battery chargers intended for automatically controlling and maintaining the charge on batteries used to start internal-combustion engines driving centrifugal fire pumps. The equipment consists of rectifying stacks, transformers, controlling relays, switches and meters.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1236, "Battery Chargers for Charging Engine-Starter Batteries."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Battery Charger for Use with Fire Pumps."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE PUMP MOTORS (QXZF)

USE

This category covers motors intended for use in fire pump systems. These motors are used to drive centrifugal pumps used for fire service.

PRODUCT MARKINGS

This equipment is marked as follows:

1. Manufacturer's name or trademark
2. Factory identifier (if produced at more than one factory)
3. Model or catalog number
4. Rated voltage
5. Full-load input amperes or watts (or both)
6. Rated full-load speed
7. Rated temperature rise or the insulation system class
8. Rated ambient temperature
9. Time rating, or, if it is a continuous duty motor, then "Continuous" or "CONT"
10. Rated horsepower when 1/8 hp (93 W) or more
11. Code letter to indicate locked-rotor amperes in accordance with ANSI/NFPA 70, "National Electrical Code," for an alternating-current motor rated 1/2 hp (373 W output) or more
12. Secondary volts and full-load amperes, when product is a wound-rotor induction motor
13. Rated frequency expressed in one of the following terms: hertz (Hz), cycles per second (cps or c/s), ac-dc, (number of cycles)/dc (e.g., 60/dc), or ac only – or direct current; and, for a motor intended for use on a polyphase circuit, number of phases
14. Winding – straight shunt, stabilized shunt, compound, or series, for a direct-current motor;
15. Service factor (1.15 or less)
16. Amperes and horsepower at each speed, for a multi-speed motor other than a shaded-pole or a permanent-split-capacitor motor

ADDITIONAL INFORMATION

For additional information, see Pumping Equipment for Fire Service (QVUT) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1004-5, "Fire Pump Motors."

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Pump Motor."

Fire Pump Motors (QXZF)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE (QYZS)

GENERAL

This category covers fire pump controllers, circuit breakers for fire pump controllers, emergency manual operators and remote alarm panels.

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated in the individual certifications, these controllers are intended for use with spark-ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark-ignition internal combustion engines are intended for such engines installed prior to 1974.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

Fire pump controllers intended for starting and stopping additive pump motors are marked "Additive Pump Controller" or "Limited-service Additive Pump Controller."

Controllers intended for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers intended for squirrel-cage motors may be for across-the-line starting or reduced-voltage starting as indicated in the individual certifications.

"Limited-service controllers" are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required markings.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and ANSI/UL 218, "Fire Pump Controllers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Fire Pump Controller," "Limited Service Controller," "Additive Pump Controller," "Limited Service Additive Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE, OVER 600 VOLTS (QZGR)

GENERAL

This category covers fire pump controllers having ac voltage ratings in the range of 2.2 kV to 2.5 kV, 4.0 kV to 5.0 kV or 6.2 kV to 7.2 kV, intended for starting and stopping centrifugal fire pumps. These controllers are the automatic or nonautomatic type for electric-driven pumps.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

These fire pump controllers are intended for use with squirrel-cage motors rated 7.2 kV or less.

These controllers have been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73 x 10⁶.

Pump Controllers, Fire, Over 600 Volts (QZGR)—Continued

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Some fire pump controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

Controllers suitable for use as service equipment are so marked. Such marking is an integral part of other required markings.

These controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Fire pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 218, "Fire Pump Controllers," ANSI/UL 347, "High Voltage Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Fire Pump Controller" or "High Voltage Foam Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE, RESIDENTIAL (QZKE)

GENERAL

This category covers fire pump controllers intended for starting, stopping and protecting centrifugal fire pumps in one- and two-family dwellings and manufactured homes. These controllers are the automatic or non-automatic type for electric-driven pumps.

The equipment and systems employing these controllers are intended for installation and use in accordance with ANSI/NFPA 13D, "Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes."

Residential fire pump controllers are intended for use with squirrel-cage motors rated 250 V or less.

These controllers have been investigated for use on single-phase alternating-current circuits having available fault current levels not exceeding the short-circuit withstand rating appearing on the nameplate.

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Controllers suitable for use as service equipment are so marked. Such marking is an integral part of other required markings.

These controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Residential pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 218, "Fire Pump Controllers," ANSI/UL 508, "Industrial Control Equipment," and ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection," as applicable to limited-service fire pump controllers.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Fire Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPING EQUIPMENT FOR FIRE SERVICE FOR USE IN HAZARDOUS LOCATIONS (RAHW)

This category covers fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

FIRE PUMP CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS (RCYW)

USE

This category covers fire pump controllers, circuit breakers for fire pump controllers, and emergency manual operators.

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic types and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated, these controllers are intended for use with spark ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark ignition internal combustion engines are intended for such engines installed prior to 1974.

Controllers for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers for squirrel-cage motors may be used for across-the-line starting or reduced-voltage starting as indicated in the individual certifications.

Limited-service controllers are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required marking.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and ANSI/UL 218, "Fire Pump Controllers."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Fire Pump Controller for Use in Hazardous Locations," "Limited Service Controller for Use in Hazardous Locations," "Foam Pump Controller for Use in Hazardous Locations," "Limited Service Foam Pump Controller for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS, ELECTRICALLY OPERATED, LIQUID (REUZ)

USE

This category covers submersible and nonsubmersible pumps intended for household, commercial or industrial use, including pumps for fountains, circulation, sewage, effluent, wells, irrigation, building sites (contractor type), sumps and general utility.

The liquids for which a pump has been investigated are marked on the unit or are included in the installation instructions provided with the unit, unless the pump is obviously intended for use with water only, such as an irrigation pump.

Pumps suitable for outdoor use and those for use with heated water are so marked.

REBUILT PRODUCTS

This category also covers submersible and nonsubmersible pumps that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt submersible and nonsubmersible pumps are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt submersible and nonsubmersible pumps are subject to the same requirements as new submersible and nonsubmersible pumps.

RELATED PRODUCTS

Equipment covered under this category has not been investigated for use in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code." Reference to the Hazardous Locations Equipment Directory should be made for equipment that has been investigated for use in hazardous (classified) locations.

The products covered in this category have not been investigated with regard to the effect of their use with combustible or flammable liquids, corrosive liquids, or aqueous solutions containing corrosive materials. Such pumps are covered under Flammable Liquid Pumps (RBQR) and Power-operated Pumps (RBOG).

These pumps have not been investigated for use with or in proximity to swimming pools or spas. Such pumps are covered under Swimming Pool and Spa Equipment, Pumps (WCSX).

Pumping equipment for fire service is covered under Pumping Equipment for Fire Service (QVUT).

Pumps covered in this category have not been investigated for contact with drinking water. Pumps that have been investigated only for contact with drinking water are Classified in accordance with the requirements of ANSI/NSF 61, "Drinking Water System Components - Health Effects" and are covered under Drinking Water System Components (FDNP).

For evaporative cooler pumps, see Evaporative Cooler Retrofit Pumps (AGIS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 778, "Motor-Operated Water Pumps."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sump Pump," "Water Circulating Pump" or "Sewage Pump," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RFPW)

GENERAL

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas in accordance with ANSI/NFPA 496, "Purged and Pressurized Enclosures for Electrical Equipment." This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

TYPES

ANSI/NFPA 496 specifies the following pressurization types:

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RFPW)

- Type X** — Reduces the classification within an enclosure from Division 1 to unclassified
- Type Y** — Reduces the classification within an enclosure from Division 1 to Division 2
- Type Z** — Reduces the classification within an enclosure from Division 2 to unclassified

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS IN ACCORDANCE WITH THE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD FOR PURGED AND PRESSURIZED ENCLOSURES FOR ELECTRICAL EQUIPMENT NFPA 496

* **PURGE CONTROL** or **PURGE CONTROL ACCESSORY**, or other appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RFPZ)

GENERAL

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas.

There are three pressurization types:

- px** — Reduces the classification within an enclosure from Zone 1 to unclassified
- py** — Reduces the classification within an enclosure from Zone 1 to Zone 2
- pz** — Reduces the classification within an enclosure from Zone 2 to unclassified

This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/ISA-60079-2, "Electrical Apparatus for Explosive Gas Atmospheres - Part 2: Pressurized Enclosures 'p'."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS IN ACCORDANCE WITH ANSI/ISA-60079-2 ELECTRICAL APPARATUS FOR EXPLOSIVE GAS ATMOSPHERES - PART 2: PRESSURIZED ENCLOSURES 'p' Control No.

* **PURGE CONTROL** or **PURGE CONTROL ACCESSORY**, or other appropriate product name as shown in the individual Classifications.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RFPZ)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL QUICK-CONNECT TERMINALS (RFVW)

GENERAL

This category covers quick-connect tabs and quick-connect connectors constructed from plain or plated copper alloy or of nickel or nickel alloy, herein referred to as quick-connect terminals. They are additionally defined as follows:

Quick-connect Wiring Termination — An electrical connection consisting of a male tab and a female connector that can be readily engaged or disengaged without the use of a tool.

Terminal — An electrical connecting device consisting of either a connector or tab.

Tab — A terminal that is inserted in a connector, manufactured to specified tolerances, and intended to mate with a connector to establish a connection in an electrical circuit.

Connector — A terminal that is pushed onto a tab. Quick-connect terminals are intended for use with one or two copper conductors, 22-10 AWG. Ampacity for a two-wire combination is limited to the current associated with the largest of the two conductors.

Quick-connect terminals are not intended for disconnecting under load.

PRODUCT MARKINGS

Cartons containing quick-connect terminals are marked to indicate whether the tab or connector is suitable for the internal wiring of appliances, for field termination of conductors to electrical equipment, or for both.

Cartons containing quick-connect terminals are marked to indicate their suitability for termination of copper wire only.

Cartons containing insulated quick-connect terminals are marked with a voltage rating and the maximum operating temperature for which they have been found acceptable. The marked voltage rating may be 300 V maximum; 600 V maximum; or 600 V maximum building wire, 1000 V maximum signs or luminaires. An insulated terminal is additionally marked with the maximum operating temperature.

Quick-connect terminals to be assembled to wire using a special tool are intended to be assembled using the tool specified by the manufacturer or in the shipping carton. Such tools are identified by an appropriate marking.

RELATED PRODUCTS

Quick-connect tabs or connectors constructed from plated steel, or unplated steel of a corrosion-resistant alloy are covered under Electrical Quick-connect Terminals (RFVW2).

The separate molded insulating portion of a quick-connect terminal that is applied after its assembly to the conductor is covered under Connector Housings (ECCT2). Integral insulators to the quick-connect terminal are covered under this category as part of the quick-connect terminal.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 310, "Electrical Quick-Connect Terminals."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Quick-connect Tab" or "Quick-connect Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RACEWAY (RGKT)

CELLULAR CONCRETE FLOOR RACEWAY (RGYR)

USE AND INSTALLATION

This category covers cellular concrete floor raceway designed for the installation of electrical conductors in accordance with Article 372 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

Certified cellular concrete floor raceway has fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Precast Concrete Units (CFTV). Where header ducts and junction boxes are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Concrete Floor Raceway."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Concrete Floor Raceway Fittings (RHLZ)

USE AND INSTALLATION

This category covers cellular concrete floor raceway fittings designed for the installation of electrical conductors in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Cellular Concrete Floor Raceway (RGYR).

Certified cellular concrete floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Precast Concrete Units (CFTV). Where fittings are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Cellular Concrete Floor Raceway (RGYR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Concrete Floor Raceway Fitting," "End Closure" or "Wall Elbow," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CELLULAR METAL FLOOR RACEWAY (RHZX)

USE AND INSTALLATION

This category covers cellular metal floor raceway designed for the installation of electrical conductors in accordance with Article 374 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

Raceway may be factory constructed or consist of field-assembled components. Each component of field-assembled raceway is marked to identify its relation to the other components of the raceway.

Certified cellular metal floor raceway has fire-resistance ratings, as used in building construction, only when assembled in the manner described in the Designs covered under Steel Floor and Form Units (CHWX). Where header ducts and junction boxes are involved, these items must be shown in the Design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 209, "Cellular Metal Floor Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway," "Cellular Metal Floor Raceway Bottom" or "Cellular Metal Floor Raceway Cover Plate for Use with Listed Raceway Bottom," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Metal Floor Raceway Fittings (RINV)

USE AND INSTALLATION

This category covers cellular metal floor raceway fittings designed for the installation of electrical conductors in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Cellular Metal Floor Raceway (RHZX).

Raceway fittings may be factory constructed or consist of field-assembled components. Each component of a field-assembled raceway is marked to identify its relation to the other components of the raceway.

Certified cellular metal floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Steel Floor and Form Units (CHWX). Where fittings are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Cellular Metal Floor Raceway (RHZX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 209, "Cellular Metal Floor Electrical Raceways and Fittings".

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway Fitting," "End Closure" or "Grommet," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Metal Floor Raceway Fitting Cover Assemblies Classified for Use with Specified Equipment (RIOJ)

USE AND INSTALLATION

This category covers Listed cellular metal floor raceway fitting cover assemblies Classified for use with specified Listed cellular metal floor raceway fittings (see RINV), and Listed cellular metal floor raceway fittings Classified for use with specified Listed cellular metal floor raceway fitting cover assemblies, in accordance with the details described in the Classification Mark.

Cellular metal floor raceway fitting cover assemblies may be factory constructed or consist of field-assembled components. Each component of a field-assembled raceway cover assembly is marked to identify its relation to the other components of the raceway.

Listed cellular metal floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Steel Floor and Form Units (CHWX). Where fittings are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 209, "Cellular Metal Floor Raceway and Fittings."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Classification Mark for these products includes the complete Listing Mark for Cellular Metal Floor Raceway Fittings (RINV) and the following additional information:

**ALSO CLASSIFIED BY UNDERWRITERS LABORATORIES INC.
FOR USE WITH UL LISTED *
CATALOG NO. _____
[LISTEE'S NAME]**

*** CELLULAR METAL FLOOR RACEWAY FITTINGS or CELLULAR METAL FLOOR RACEWAY FITTING COVER ASSEMBLIES**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRUT-TYPE CHANNEL RACEWAY (RIUU)

USE

This category covers strut-type channel raceway for installation in dry locations only in accordance with Article 384 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

Raceway for use with lighting fixtures and/or other devices is marked to this effect on the raceway or on the package in which it is shipped.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5B, "Strut-Type Channel Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Strut-Type Channel Raceway," "Strut-Type Channel Raceway Base" or "Strut-Type Channel Raceway Closure Strip."

The Listing Mark is applied to each length or package of complete raceway, raceway closure strip (cover) or raceway base.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Strut-type Channel Raceway (RIUU)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Strut-type Channel Raceway Fittings (RIYG)

USE

This category covers fittings, such as adapters, boxes, elbows and tees, intended for use with the same manufacturer's strut-type channel raceway. These fittings are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code," and the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Strut-type Channel Raceway (RIUU).

PRODUCT MARKINGS

A fitting for supporting a fixture is marked "Suitable for a fixture not exceeding ____ kg (lb)." The specified fixture weight should not exceed 22.7 kg (50 lb). The marking is readily visible after the fitting has been mounted.

ADDITIONAL INFORMATION

For additional information, see Strut-type Channel Raceway (RIYG) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5B, "Strut-Type Channel Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Strut-Type Channel Raceway Fitting," "Elbow" or "Tee," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE METAL RACEWAY (RJBT)

USE

This category covers surface metal raceway intended for installation in accordance with Article 386 of ANSI/NFPA 70, "National Electrical Code" (NEC). This raceway is intended for installation and use in accordance with the following information.

GROUNDING

Surface metal raceway is considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC.

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

Raceway for use with lighting fixtures and/or other devices is marked to this effect on the raceway or on the package in which it is shipped.

RELATED PRODUCTS

Some luminaires covered under Fluorescent Surface-mounted Luminaires (IEUZ) are suitable for use as raceways.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5, "Surface Metal Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Metal Raceway," "Surface Metal Raceway Base for Use with Labeled Raceway Cover" or "Surface Metal Raceway Cover for Use with Labeled Raceway Base."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Surface Metal Raceway (RJBT)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Surface Metal Raceway Fittings (RJPR)

USE

This category covers surface metal raceway fittings intended for installation in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Surface Metal Raceway (RJBT).

GROUNDING

Surface metal raceway fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

A fitting for supporting a fixture is marked "Suitable for a fixture not exceeding ____ kg (lb)." The specified fixture weight should not exceed 22.7 kg (50 lb). The marking is readily visible after the fitting has been mounted.

ADDITIONAL INFORMATION

For additional information, see Surface Metal Raceway (RJBT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5, "Surface Metal Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Metal Raceways Fitting," "Hanger" or "Side Feed," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE NONMETALLIC RACEWAY (RJTX)

USE

This category covers surface nonmetallic raceway intended for installation in accordance with Article 388 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the certified raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

RELATED PRODUCTS

Some luminaires covered under Fluorescent Surface-mounted Luminaires (IEUZ) are suitable for use as raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Nonmetallic Raceway," "Surface Nonmetallic Raceway Base for Use with Labeled Raceway Cover" or "Surface Nonmetallic Raceway Cover for Use with Labeled Raceway Base."

The Listing Mark is applied to each length or package of complete raceway, raceway cover or raceway base.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Surface Nonmetallic Raceway Fittings (RJYT)

USE

Surface Nonmetallic Raceway Fittings (RJYT)—Continued

This category covers surface nonmetallic raceway fittings intended for installation in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Surface Nonmetallic Raceway (RJTX).

PRODUCT MARKINGS

A fitting for supporting a fixture is marked "Suitable for a fixture not exceeding ____ kg (lb)." The specified fixture weight should not exceed 22.7 kg (lb). The marking is readily visible after the fitting has been mounted.

ADDITIONAL INFORMATION

For additional information, see Surface Nonmetallic Raceway (RJTX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Nonmetallic Raceway Fitting," "Butt Joint Cover" or "End Cap," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE RACEWAY TRANSITION FITTINGS CLASSIFIED FOR USE WITH SPECIFIED PRODUCTS (RKBA)

USE AND INSTALLATION

This category covers surface metal raceway transition fittings certified for use with specific certified surface metal raceway, in accordance with the product installation instructions provided with the product and the details described in the Certification Mark. Transition fittings are intended only for use in transitioning from (connecting together) the certified company's certified raceway to another company's certified raceway.

Installation instructions are provided with the smallest unit container. These instructions indicate the method of mounting and securing the fitting to raceway sections, and include a scale drawing of the raceway, including identification of the raceway material, and provide instructions on the means by which the fitting is intended to be connected. The fitting, smallest unit container or installation instructions are marked with the maximum number, type and size of insulated conductors for which it is intended.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5, "Surface Metal Raceways and Fittings."

UL MARK

The Classification Mark of UL on the product and on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SURFACE RACEWAY TRANSITION FITTING FOR USE WITH SURFACE METAL RACEWAY UL LISTED + MANUFACTURED BY [COMPANY NAME]

Control No.

+ Appropriate Listed model or catalog number

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERFLOOR RACEWAY (RK CZ)

USE

This category covers metal underfloor duct systems designed for use as raceway for the installation of wire and cable in accordance with Article 390

Underfloor Raceway (RKCZ)—Continued

of ANSI/NFPA 70, “National Electrical Code,” and the manufacturer’s installation instructions. This raceway is intended for installation and use in accordance with the following information.

The raceway may consist of factory-constructed raceway or field-assembled components forming a raceway. Each component is provided with installation instructions to identify its relation to the other components of the raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 884, “Underfloor Raceways and Fittings.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Underfloor Raceway.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Underfloor Raceway Fittings (RKQX)

USE

This category covers underfloor raceway fittings for installation in underfloor raceway systems in accordance with the manufacturer’s installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Underfloor Raceway (RKCZ).

Each component is provided with installation instructions to identify its relation to the other components of the raceway system.

ADDITIONAL INFORMATION

For additional information, see Underfloor Raceway (RKCZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 884, “Underfloor Raceways and Fittings.”

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Underfloor Raceway Fitting,” “Raceway Adapter” or “Saddle Support,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES FOR USE IN HAZARDOUS LOCATIONS (RMGR)

GENERAL

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Radio Device for Use in Hazardous Locations” (or “RAD DEV for Use in Hazardous Locations” or “RAD DEV for Use in HAZ LOC”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES, REBUILT FOR USE IN HAZARDOUS LOCATIONS (RMGZ)

USE

This category covers rebuilt portable signal receivers, portable signal and voice receivers and portable voice transceivers. These products are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt products are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt products are subject to the same requirements as new products.

PRODUCT MARKINGS

These products are marked with the following:

The month and year that the product was repaired or rebuilt.

The standard number and edition to which the product was rebuilt,

as referenced under **REQUIREMENTS**.

RELATED PRODUCTS

See Radio Devices for Use in Hazardous Locations (RMGR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II, and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Rebuilt Radio Device for Use in Hazardous Locations” (or “Rebuilt RAD DEV for Use in Hazardous Locations” or “Rebuilt RAD DEV for HAZ LOC”) or “Repaired Radio Device for Use in Hazardous Locations” (or “Repaired RAD DEV for Use in Hazardous Locations” or “Repaired RAD DEV for HAZ LOC”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RMJA)

GENERAL

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product, or the Listing Mark on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a

372 RADIO DEVICES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RMJA)

control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE CLOSURES (RQYF)

GENERAL

This category covers receptacle closures for use with receptacles of ANSI/NEMA WD 6 (1997), "Wiring Devices - Dimensional Specifications," configurations 1-15R and 5-15R. Receptacle closures are products molded of insulating material that are intended to be used with a receptacle to cover the outlet slots a) to reduce drafts through a receptacle on an outside wall of a dwelling, or b) to restrict a child's access to energized contacts.

Receptacle closures that are intended to reduce drafts through a receptacle on an outside wall of a dwelling and that are not intended to restrict a child's access to energized contacts are packaged together with an insulating gasket to be fitted behind the receptacle cover plate. The packaging of such closures are marked to indicate their intended use.

Receptacle closures that are intended to restrict a child's access to energized contacts are not a substitute for adult supervision. The packaging of such closures contains a cautionary marking to this effect.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2255, "Receptacle Closures."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Closure" or "Receptacle Closure" or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

RECEPTACLE-ENCLOSURE COMBINATIONS WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS (RREG)

GENERAL

This category covers receptacle-enclosure combinations with plugs, which are intended for use in one or more of the following hazardous (classified) locations, as indicated on the product, in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC): Class I, Groups A, B, C and D; Class II, Groups E, F and G.

These products are (1) completely assembled at the factory, or (2) intended for final assembly in the field using components specified in the product certification. Assembly of the receptacle-enclosure combinations with plugs in the field is intended to be in accordance with the instructions provided with the product by the manufacturer.

The enclosures covered under this category are for threaded rigid conduit connection, and the conductors between the receptacle and the enclosure are factory sealed. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord connecting to the plugs should be frequently inspected and replaced when necessary. Terminal connection to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at the current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where insulation may be impaired by moisture, dirt or other foreign material.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

Receptacle-Enclosure Combinations with Plugs for Use in Hazardous Locations (RREG) - Continued

Authorities Having Jurisdiction should be consulted with regard to the conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

Receptacle-enclosure combinations with plugs certified for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts, as defined in Article 500 of the NEC.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RECEPTACLE-ENCLOSURE COMBINATION WITH PLUG FOR USE IN HAZARDOUS LOCATIONS AS TO EXPLOSION AND FIRE HAZARD ONLY CLASS ____, GROUP ____

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATION ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RRHS)

GENERAL

This category covers receptacles intended for use only with certified plugs, and plugs intended for use only with certified receptacles, as specified in the instructions provided with the product. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which plugs and receptacles will be permitted for use. It is recognized that portable equipment should be used only where necessary.

Receptacles and plugs certified for use in Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE WITH LISTED * SPECIFIED IN THE INSTRUCTIONS PROVIDED WITH THE PRODUCT

Control No.

*** RECEPTACLE or PLUG**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS (RROR)

GENERAL

This category covers receptacles with plugs for use as follows: Receptacles with plugs certified under Class I and Class II groups for Division 1 locations are provided with receptacle conduit boxes for threaded rigid conduit connection, and the conductors between receptacles and conduit boxes are factory sealed. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor. Receptacles certified for Class I, Division 2 locations only are intended for use with general purpose enclosures for supply connections. The supply conductors are factory sealed in the receptacles. The plugs for use with such receptacles are suitable for Class I, Division 1 locations.

Receptacles with plugs for groups under Class I hazardous locations have been subjected to endurance tests and overload operation tests in the presence of the specific flammable vapor-air atmospheres.

Receptacles with plugs for any of the groups under Class II hazardous locations have dust-tight terminal boxes and have been subjected to endurance tests and overload operation tests while heavily blanketed with combustible dust. Receptacles with plugs certified for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Some receptacles and plugs are certified for "Reverse Service" applications on marine vessels, for conformity to the installation and use provisions of the United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, "General Provisions," 46CFR111, "Electric Systems - General Requirements," 46CFR112, "Emergency Lighting and Power Systems," and 46CFR113, "Communication and Alarm Systems and Equipment," as identified in the individual certifications and marked on the product. Reverse service plugs and receptacles are not suitable for applications other than those governed by the above USCG regulations.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Plug for Hazardous Locations," "Receptacle Assembly for Hazardous Locations," "Reverse Service Plug for Hazardous Locations" or "Reverse Service Receptacle for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS INTERLOCKED WITH CIRCUIT BREAKERS FOR USE IN HAZARDOUS LOCATIONS (RSBZ)

GENERAL

This category covers receptacles with plugs interlocked with circuit breakers as follows:

Receptacles with plugs interlocked with circuit breakers certified under Class I and Class II groups are constructed with an interlocked circuit breaker and plug so that the plug cannot be withdrawn or inserted when the circuit breaker is closed. These devices have provision for connection of threaded rigid conduit to the circuit breaker compartments and the plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles with Plugs Interlocked with Circuit Breakers for Use in Hazardous Locations (RSBZ)–Continued

Receptacles with plugs interlocked with circuit breakers certified for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plugs and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Receptacle Interlocked with Circuit Breaker for Hazardous Locations" or "Plug for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN HAZARDOUS LOCATIONS (RSPX)

GENERAL

This category covers receptacles that are (1) completely assembled at the factory or (2) intended for final assembly in the field using components specified in the individual certifications. Final assembly of receptacles in the field is intended to be done in accordance with instructions provided with the product by the manufacturer.

Receptacles with plugs interlocked with switches certified under Class I and Class II groups are constructed with an interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit to the switch compartments. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles with plugs interlocked with switches certified for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

Devices that are provided with a factory seal of conductors between the switch and the conduit box are so identified on the individual products.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as

illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Receptacle Interlocked with Switch for Hazardous Locations," "Plug for Hazardous Locations," "Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations" or "Body Assembly for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RSUN)

RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RSZD)

USE

This category covers receptacles that are (1) completely assembled at the factory, or (2) intended for final assembly in the field using components specified in the individual certifications. Final assembly of receptacles in the field is intended to be done in accordance with instructions provided with the product by the manufacturer. Care should be taken to ensure that minimum IP ratings are maintained for field-assembled increased safety enclosures.

Receptacles with plugs interlocked with switches are constructed with an interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit or other suitable wiring method to the switch compartments. The plugs are for use with Type S, SO, ST or STO flexible cord having a grounding conductor.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices are permitted for use. Portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Receptacle Interlocked with Switch for Hazardous Locations," "Plug for Hazardous Locations," "Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations," "Body Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES (RTDV)

GENERAL

RECEPTACLES (RTDV)

This category covers the following attachment plug products: 1) receptacles for plugs and attachment plugs, 2) stage-type receptacles, 3) combination receptacles with switches, and 4) utility service receptacles.

The above products include the following:

Appliance, Equipment or Fixture Outlet — A female contact device for mounting on utilization equipment.

Receptacle — A female contact device intended to be installed on a wiring system to supply current to utilization equipment.

This category may also cover the following types of products of a non-standard configuration blade or slot configuration type, which are part of a manufacturer's line of wiring devices, including receptacles. Other similar devices are covered under Attachment Plugs, Fuseless (AXUT), Attachment Plugs with Switches (AYIR) and Attachment Plugs with Overload Protection (AYVZ).

Attachment Plug — A male contact device for the temporary connection of a flexible cord or cable to a receptacle, cord connector, or other female outlet device.

Cord Connector — A female contact device intended to be wired on flexible cord for use as an extension from an outlet to make a detachable electrical connection to an attachment plug or, as an appliance coupler, to a male inlet.

Male Inlet (Equipment Inlet, Motor Attachment Plug) — A male contact device intended to be mounted on utilization equipment to provide a detachable electrical connection to an appliance coupler or cord connector.

This category does not cover devices intended to be molded on flexible cord or wire, or unassembled devices intended to be factory assembled on flexible cord or wire. Such devices are complete only after installation of the flexible cord or wire and are investigated as part of a complete assembly.

RATINGS

These devices are rated 600 V or less, ac or dc; and 200 A or less. They may also be rated in horsepower as noted in the individual product categories.

Devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Devices having other voltage ratings are tested on circuits involving full rated potential to ground, except for multiphase rated devices, which are tested on circuits consistent with their voltage ratings (e.g., a 120/208 V, 3-phase device is tested on a circuit involving 120 V to ground).

Devices marked "Not for Current Interruption" are not intended to be disconnected while under load. They are intended to be installed in series with switches or other appropriate disconnecting means.

TERMINALS

The terminations of devices intended to be wired to flexible cord are based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). The ampacity of the flexible cord and cable is based on Section 400.5, Tables 400.5(A) and 400.5(B). The conductors are sized as specified on the product or in the manufacturer's instructions provided with the device. The terminations are based on the use of 60°C flexible cord or cable.

Unless stated otherwise in the individual product categories, the termination provisions of all other devices are based upon the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in circuits rated more than 100 A, as specified in Table 310.16 of the NEC.

GROUNDING

Devices having a terminal identified by a green-colored finish, the words "Green" or "Ground" (or the letters "G" or "GR"), or the symbol with or without the circle are grounding types. The blade, pin or contact member

connected to this terminal is for equipment grounding only.

ENCLOSURES

In general, devices having integral enclosures or installed as intended have been investigated for use indoors, in dry locations. All such Listed products provide a degree of protection against ordinary corrosion, accidental contact with live parts, and a limited amount of falling dirt. Some devices have been investigated for use in other operating environments when unmated and when mated with other devices in the same manufacturer's line of products. They are marked with one of the type designations 2 through 6, 12 and 13 indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). All outdoor types provide a degree of protection against rain, snow and sleet. Outdoor types are also suitable for use indoors if they meet the environmental conditions present. A device that complies

with the requirements for more than one type of enclosure may be marked with multiple designations. Complete use and mating information is provided in the installation instructions provided with each device.

WET AND DAMP LOCATIONS

Receptacles provided with integral outlet box covers or cover plates for flush-mounted wiring devices may be identified for use in damp or wet locations as defined in the Nec. If the cover provides protection only when it is closed, the combination is marked "Wet Location When Cover Closed" and may be marked "Damp Location."

RELATED PRODUCTS

This category does not cover pin-and-sleeve-type devices; see Attachment Plugs, Pin-and-Sleeve Type (QLHN) and Receptacles, Pin-and-Sleeve Type (QLIW).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES FOR PLUGS AND ATTACHMENT PLUGS (RTRT)

GENERAL

This category covers general-use receptacles for use in wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC), and outlets for use in appliances and fixtures. It also covers some attachment plugs, male inlets, and cord connectors with nonstandard slot or blade configurations which are part of a line of wiring devices including receptacles. Other similar attachment-plug devices are covered under Attachment Plugs (AXGV).

PRODUCT TYPES

Flush Receptacles — Flush receptacles are intended for mounting in or on an outlet box, an outlet-box cover or a cover plate for flush-mounted wiring devices for fixed installation on a branch circuit. They are not intended to be field mounted on outlet-box covers solely by the center cover-plate screw. They may be employed in damp and wet locations when installed in an appropriate enclosure. See Metallic Outlet Boxes (QCIT) and Nonmetallic Outlet Boxes (QCMZ) for information on outlet boxes and covers suitable for use in damp and wet locations.

Self-grounding Receptacles — Self-grounding receptacles have special integral means for establishing the grounding circuit between device yokes and (1) the grounded metallic flush-type boxes, or (2) the grounded nonmetallic flush-device boxes employing a grounding strap and terminal; without the use of bonding jumpers as permitted by Section 250.146(B) (formerly Exception No. 2 to Section 250-74) of the NEC. These devices are identified by the statement: "This receptacle is Listed by Underwriters Laboratories Inc. and has a special pressure spring clip to establish the grounding circuit between device yokes and (1) the grounded metallic flush-type boxes, or (2) the grounded nonmetallic flush device boxes employing a grounding strap and terminal; without the use of bonding jumpers as permitted by Section 250.146(B) of the National Electrical Code" (or equivalent wording), which may appear on the device or shipping carton.

Isolated Ground Receptacles — Grounding-type receptacles in which the grounding terminals are purposely insulated from the mounting means of receptacles and associated metal cover plates as permitted by Section 250.146(D) (formerly Exception No. 4 to Section 250-74) of the NEC are so identified by an orange triangle marked on the face of the receptacle.

Receptacles for Use in Hospitals — Receptacles for hospital use in other than hazardous (classified) locations in accordance with Article 517 of the NEC are identified (1) by the marking "Hospital Only" (used to identify a specific grounding locking configuration rated 20 A, 125 V used for the connection of mobile x-ray and similar equipment), or (2) by the marking "Hospital Grade" and a green dot on the face of the receptacle. The identification is visible during installation on the wiring system or, in the case of the appliance outlet, after installation on the utilization equipment.

Tamper-resistant Receptacles — Receptacles for use in dwelling units in accordance with the NEC, specifically, Section 406.12, or pediatric patient care areas in accordance with Article 517 of the NEC. Tamper-resistant receptacles are identified by the words "Tamper Resistant" (or the letters "TR") where they will be visible after installation with the cover plate removed. Tamper-resistant receptacles may be of the general grade, hospital grade or isolated ground type.

Self-contained Receptacles — Self-contained receptacles include an enclosure and mounting means intended for flush mounting without the use of a separate flush device or other outlet box. They are intended for use with Types NM and NMC cable in accordance with the NEC, specifically, Sections 300.15(E), 334.40(C), 545.10, 550.15(I) Exception, 551.47(E) Exception No. 1 and 552.48(E) Exception No. 1, and are so identified by specific markings on the carton in which they are packed. Devices employing insulation-displacement terminals are intended for assembly

Receptacles for Plugs and Attachment Plugs (RTRT)—Continued

with specific installation tools only. Reference must be made to the installation instructions regarding the proper tool and the number of cables (per entry) with which the devices are intended to be used.

Surface Receptacles — Surface receptacles include an enclosure and mounting means for surface mounting without the use of a separate outlet box. They are intended for connection to exposed nonmetallic-sheathed cable as permitted by Article 336 of the NEC. Some may also accept other wiring systems. Surface receptacles rated 50 A that employ enclosures of insulating materials are not intended for use in applications where they are likely to be subject to severe mechanical abuse.

Pendant Receptacles — Pendant receptacles include an enclosure with cover plate and strain-relief means, intended to be assembled at the end of flexible cord, for use in branch-circuit applications.

Display Receptacles — Display receptacles are provided with a cover plate for flush-mounted wiring devices or outlet-box cover and closure plug or plugs. They are intended for use in show window floors and similar locations where the device is not likely to be subjected to scrub water. They are not intended to be used as substitutes for floor boxes, which are covered under Metallic Outlet Boxes (QCIT) and Nonmetallic Outlet Boxes (QCMZ).

Weather-resistant Receptacles — Receptacles for use in wet and damp locations in accordance with Article 406 of the NEC. Weather-resistant receptacles are identified by the words "Weather Resistant" (or the letters "WR") where they will be visible after installation with the cover plate secured as intended.

Interchangeable (Modular) Receptacles — Interchangeable receptacles are flush receptacles that are assembled as single, duplex or triplex outlets in the field from a system of individual outlet modules, mounting yokes, and/or cover plates for flush-mounted wiring devices.

Appliance, Equipment and Fixture Outlets — When an outlet is installed in equipment with a conductive mounting surface, the face of the receptacle should project a minimum of 3/32 in. and a maximum of 3/16 in. from the mounting surface.

A receptacle employing an integral thermal-interruption mechanism is not intended for hospital locations or other locations where critical patient care equipment is used. Additionally, a receptacle employing an integral thermal-interruption mechanism has not been investigated for its ability to reduce the safety hazards caused by overheating and overloaded circuits.

A receptacle employing an integral thermal-interruption mechanism has been investigated to confirm the manufacturer's stated thermal-interruption temperature range.

Federal Specification — Some receptacles in this category have been investigated to Federal Specification W-C-596, "General Specification for Electrical Power Connectors."

TERMINALS

Terminals of 15 and 20 A receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Terminals of receptacles rated 30 A and above not marked "AL-CU" are for use with copper conductors only. Terminals of receptacles rated 30 A and above marked "AL-CU" are for use with aluminum, copper and copper-clad aluminum conductors.

Terminals marked "75 C" may be wired using the ampacities for conductors rated 75°C as well as conductors rated 60°C in Table 310.16 of the NEC.

Terminals of the wire-binding screw, setscrew, or screw-actuated back-wired clamping types are suitable for use with both solid and stranded building wires.

Terminals of a receptacle are permitted for use with certified field-installed crimped-on wire connectors or an assembly, if so identified by the manufacturer.

A receptacle may also be provided with conductor leads with factory-installed crimped-on connectors. Such connectors may be either attached to the receptacle terminal or are provided with the receptacle in the smallest unit shipping container and are suitable for use with the terminal of the receptacle.

Screwless terminal connectors of the conductor push-in type (also known as "push-in-terminals") are restricted to 15 A branch circuits and are for connection with 14 AWG solid copper wire only. They are not intended for use with aluminum or copper-clad aluminum wire, 14 AWG stranded copper wire, or 12 AWG solid or stranded copper wire.

Single and duplex receptacles rated 15 and 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors have been investigated to feed branch-circuit conductors connected to other outlets on a multi-outlet branch circuit, as follows:

- Back-wire (screw-actuated clamp type) terminations with multiple wire-access holes used concurrently to terminate more than one conductor

RECEPTACLES (RTDV)

Receptacles for Plugs and Attachment Plugs (RTRT)—Continued

- Side-wire (binding screw) terminals used concurrently with their respective push-in (screwless) terminations to terminate more than one conductor

Single and duplex receptacles rated 15 and 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors have not been investigated to feed branch-circuit conductors connected to other outlets on a multi-outlet branch circuit, as follows:

- Side-wire (binding screw) terminal with its associated back-wire (screw-actuated clamp type) terminal
- Multiple conductors under a single binding screw
- Multiple conductors in a single back-wire hole

Duplex receptacles rated 15 and 20 A that are provided with break-off tabs may have those tabs removed so that the two receptacles may be wired in a multi-wire branch circuit or multiple branch circuits.

HORSEPOWER RATINGS

In addition to ampere and voltage ratings, standard AC horsepower ratings corresponding to the ampere and voltage ratings for specific general-use receptacles not incorporating overcurrent protection or a switch are given in the table below. For a Design E motor rated more than 2 horsepower, it is necessary to use a receptacle having a horsepower rating not less than 1.4 times the standard AC horsepower rating. The NEMA configuration designation is included for reference. Devices of configurations other than those indicated in the table have horsepower ratings only if such ratings are marked on the device.

HORSEPOWER RATINGS FOR NEMA CONFIGURATION RECEPTACLES

Amps Rating	AC V Rating	No. of Phase	No. of Poles	No. of Wire	NEMA Dsg	HP Rating

%: Also suitable for 208 V motor applications at the indicated horsepower rating

For three-phase devices, the horsepower ratings indicated are for three-phase motor loads.

Refer to ANSI/NEMA WD 6 (2002), "Wiring Devices – Dimensional Specifications," for configurations of the NEMA designations.

ADDITIONAL INFORMATION

For additional information, see Receptacles (RTDV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

Where indicated in the individual certifications, receptacles have additionally been investigated to Federal Specification W-C-596, "General Specification for Electrical Power Connectors."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Attachment Plug," "Plug," "Receptacle" (or "Recept."), "Attachment Plug with Overload Protection," "Attachment Plug Fuseless," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES, STAGE TYPE (RUF)

USE

This category covers attachment plugs, cord connectors, equipment outlets, male inlets and receptacles intended for use in theater and stage applications in accordance with Articles 520 and 530 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Plug," "Connector," "Stage Type Plug," "Stage Type Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMBINATION RECEPTACLES WITH SWITCHES (RUSZ)

GENERAL

This category covers combination receptacle and switch devices on the same mounting yoke, intended for household, office and industrial applications.

These devices are marked as follows:

- a. Listee's name or identification on device
- b. Catalog number or equivalent on device or carton
- c. Complete electrical rating
- d. Terminal identification
- e. Date code
- f. Additional markings as required in the Reports

RELATED PRODUCTS

See Snap Switches (WJQR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 498, "Attachment Plugs and Receptacles," and ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Receptacle/Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SINGLE-POLE, LOCKING-TYPE SEPARABLE ATTACHMENT PLUGS, PANEL INLETS, PANEL OUTLETS, ADAPTERS AND ACCESSORIES (RUUS)

GENERAL

This category covers single-pole, locking-type separable attachment plugs, cord connectors, panel inlets, panel outlets, adapters and accessories, rated up to a maximum of 800 A and up to 600 V ac or dc. These devices are intended to provide power from feeders or branch circuits, or are for direct connection to feeders or branch circuits in accordance with ANSI/NFPA 70, "National Electrical Code."

These devices are not intended for use in hazardous (classified) locations.

Attachment plugs and cord connectors are intended for use with single-conductor cable, having copper conductors only.

Inlets and outlets are intended for use with single-conductor cable, having copper conductors only, or to copper busbars.

CURRENT INTERRUPTION

These devices are not intended for connection or disconnection under load conditions.

INTERMATEABILITY

Devices identified as Series 15, 16 or 18 are capable of being mated together between different Listees' lines of products. Devices that are not identified as Series 15, 16 or 18 are only intended to mate with the Listee's same line of products covered under this category.

Refer to Annex B of ANSI/UL 1691, "Single Pole Locking-Type Separable Connectors," for Series 15, 16 and 18 configurations.

ENVIRONMENTAL RATING

Devices identified as Series 15, 16 or 18 have a minimum environmental enclosure rating of Type 3R when mated, and are marked accordingly. Devices identified other than Series 15, 16 or 18 have a minimum rating of Type 1 and are marked accordingly.

ELECTRICAL RATING

Devices identified as Series 15 are rated 150 A maximum, 600 V maximum.

Devices identified as Series 16 or 18 are rated 400 A maximum, 600 V maximum.

Single-pole, Locking-type Separable Attachment Plugs, Panel Inlets, Panel Outlets, Adapters and Accessories (RUUS)—Continued

Devices identified other than Series 15, 16 or 18 are rated in ampere, voltage and frequency ac or ac/dc, or in maximum ampere, maximum voltage and frequency ac or ac/dc, and are so marked.

GROUNDING DEVICES

Devices designated for connection to the grounded circuit conductor are identified by a white-colored housing. The pin or contact member connected to this terminal is for the grounded conductor only.

Panel inlets and panel outlets designated for connection to the grounded circuit conductor are identified by either a white-colored housing or by housing surfaces colored white adjacent to both the grounded terminal and grounded pin or contact.

GROUNDING

Devices designated for connection to the grounding circuit conductor are identified by a green- or green/yellow-colored housing. The pin or contact member connected to this terminal is for the grounding conductor only.

Panel inlets and panel outlets designated for connection to the grounding circuit conductor are identified by either a green-colored housing or by housing surfaces colored green adjacent to both the grounding terminal and grounding pin or contact.

PRODUCT MARKINGS

These devices are marked with:

1. The Listee's name or identification
2. The electrical rating
3. The statement, "CAUTION – Risk of Electric Shock. Do Not Disconnect Under Load," or equivalent following the word "CAUTION"
4. Series 15, 16 or 18 configurations, if applicable
5. The environmental type rating(s)

ADDITIONAL INFORMATION

For additional information, see Receptacles (RTDV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1691, "Single Pole Locking-Type Separable Connectors."

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Attachment Plug," "Fuseless Attachment Plug," "Plug," "Receptacle" (or "Recept."), "Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UTILITY-SERVICE RECEPTACLES (RVNW)

GENERAL

This category covers utility-service receptacles having a unique, nonstandard contact configuration and utilizing the grounded neutral conductor of the supply as the equipment grounding conductor.

These receptacles are intended for mounting in a utility pole and for use in conjunction with a utility-service cord set (see Utility-service Cord Sets [ELFT]) only by authorized utility company personnel in obtaining temporary power from utility poles. They are rated as marked (e.g., 125 V, 15 A).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles," with regard to protection from the risk of electrical shock and the ability to function without overheating.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products which have been produced under its Classification and Follow-Up Service.

Utility Service Receptacles

Classified by

Underwriters Laboratories Inc.

as to Protection from Electric Shock
and Ability to Function Without Overheating
No.

Utility-service Receptacles (RVNW)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (SAOD)

USE AND INSTALLATION

This category covers cord reels intended for use with extra-hard-usage cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems. Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only when necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 355, "Cord Reels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD FOR USE IN HAZARDOUS LOCATIONS (SAOX)

GENERAL

This category covers cord reels for use with extra-hard-usage flexible cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 355, "Cord Reels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD AND CABLE (SBCV)

GENERAL

This category covers reels, usually spring-powered, to pay out and retract flexible cords and cables employed for supply of portable or mobile equipment.

Electrical ratings of reels are marked on the reels where readily visible. The electrical ratings for reels not supplied with cord are based upon the type, size, and length of cord or cable intended for use with the reel. The electrical ratings for reels complete with cord cover the complete assemblies.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 355, "Cord Reels."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel," "Cable Reel" or "Reel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT (SCER)

This category covers mechanical compression refrigeration systems and absorption-type refrigeration systems, including refrigerant-containing components and associated controls.

Some of this equipment may employ water to directly or indirectly cool the refrigerant condenser. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines.

In permanently-wired equipment employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protectors for motors) and other factory-installed motor-circuit components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Sections 430.53(C) and 440.22 of ANSI/NFPA 70, "National Electrical Code" (NEC). Such multimotor and combination load equipment is intended to be connected to a branch circuit protected by overcurrent devices which do not exceed the value marked on the data plate or attached wiring diagram. This marked protective-device rating is the maximum for which the equipment has been investigated and found acceptable. If the marking specifies circuit breakers or overcurrent-protective devices, the equipment can be protected by fuses, "HACR Type" circuit breakers, or any properly-sized circuit breakers.

Cord-connected equipment that requires circuit breakers or time-delay fuses to permit restarting is marked to this effect.

Requirements for the installation of refrigeration and air-conditioning equipment that may be field converted/retrofitted to use an alternative refrigerant are contained in the NEC and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION ACCESSORIES (SCSQ)

Controllers, Refrigeration (SDFY)

GENERAL

This category covers electrical controls designed for refrigeration and air-conditioning equipment and for room temperature or humidity regulation. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These devices respond directly or indirectly to changes in temperature, humidity, refrigerant level, or pressure to affect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Refrigeration controllers are certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a direct-current (noninductive) rating is specified.

Manual reset controls — An "M1" or "M2" marking indicates the following manual reset functions are provided:

- **M1** — Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.
- **M2** — Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

PRODUCT MARKINGS

Refrigeration controllers are marked with the company name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX). Refrigerant valves are covered under Valves, Electrically Operated (YIOZ).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-indicating and -Regulating Equipment (XAPX).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 873, "Temperature-Indicating and Regulating Equipment," or UL 60730-1, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," in addition to one of the following as applicable:

- ANSI/UL 60730-2-2, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors"
- UL 60730-2-3, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps"
- UL 60730-2-4, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors for Hermetic and Semi-Hermetic Motor-Compressors"
- UL 60730-2-6, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements"
- ANSI/UL 60730-2-9, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Temperature Sensing Controls"
- UL 60730-2-10A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Motor Starting Relays"
- UL 60730-2-13A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Humidity Sensing Controls"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word

Controllers, Refrigeration (SDFY)—Continued

"LISTED," a control number, and the product name "Refrigeration Controller," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BEVERAGE COOLERS AND BEVERAGE COOLER-DISPENSERS (SFWY)

GENERAL

This category covers beverage coolers and beverage cooler-dispensers. Beverage coolers are intended to be connected to a field-installed dispensing means. Beverage cooler-dispensers include a factory-installed dispensing means. These products may be self-contained, sectional or remote. Accessories intended for use with beverage coolers and beverage cooler-dispensers are also covered under this category.

INSTALLATION

This equipment is rated 600 V ac or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 34 and have been determined to comply with ANSI/UL 2182, "Refrigerants."

A beverage cooler or beverage cooler-dispenser of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained beverage cooler or beverage cooler-dispenser consists of a completely factory assembled and factory tested refrigeration system in which all the refrigerant-containing parts are connected at the factory.

A remote beverage cooler or beverage cooler-dispenser is intended to be connected to a field-installed condenser or condensing unit located remote from the beverage cooler or beverage cooler-dispenser.

Accessories for beverage coolers and beverage cooler-dispensers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Beverage coolers and beverage cooler-dispensers may be designed to accept accessories installed in the field. In such cases both the beverage cooler or beverage cooler-dispenser and the accessory are marked to relate the two for proper installation.

A section of a beverage cooler or beverage cooler-dispenser suitable for outdoor use is so marked. Sections not so marked are for indoor use only.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

REBUILT PRODUCTS

This category also covers beverage coolers and beverage cooler-dispensers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt beverage coolers and beverage cooler-dispensers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt beverage coolers and beverage cooler-dispensers are subject to the same requirements as new beverage coolers and beverage cooler-dispensers.

RELATED PRODUCTS

Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX).

Nonrefrigerated dispensing equipment is covered under Food-preparing Machines, Commercial (IPST).

Beverage coolers and dispensers for marine use are covered under Beverage Coolers and Beverage Cooler-Dispensers, Marine (SCEV).

ADDITIONAL INFORMATION

Beverage Coolers and Beverage Cooler-Dispensers (SFWY)—Continued

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers".

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Beverage Cooler," "Beverage Cooler-Dispenser" (for a self-contained unit) "Beverage Cooler Less Condenser," "Beverage Cooler-Dispenser Less Condenser," "Beverage Cooler Less Condensing Unit," "Beverage Cooler-Dispenser Less Condensing Unit" (for a remote beverage cooler or beverage cooler-dispenser), "Section of Beverage Cooler," "Section of Beverage Cooler-Dispenser" (for each section of a beverage cooler or beverage cooler-dispenser shipped separately from the factory, the function of which is essential to the basic operation of the beverage cooler or beverage cooler-dispenser), or "Accessory for Beverage Cooler or Beverage Cooler-Dispenser" (for a part or device, the function of which supplements or modifies the basic operation of the beverage cooler or beverage cooler-dispenser).

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND FREEZERS (SGKW)

GENERAL

This category covers commercial refrigerators and freezers such as display cases, reach-in cabinets, meat cases, frozen food and merchandising cabinets, food service carts and soda fountain units. These products may be self-contained, sectional or remote. Accessories intended for use with commercial refrigerators and freezers are also covered under this category.

INSTALLATION

This equipment is rated 600 V ac or less and is intended to be installed in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Certification Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants used have been determined to comply with ANSI/UL 2182, "Refrigerants."

Unitary refrigerators consist of a complete factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained refrigerator is a unitary refrigerator consisting of a completely factory assembled and factory tested refrigerating system in which all the refrigerant containing parts are permanently connected at the factory.

A remote refrigerator is a refrigerator intended to be connected to a field-installed condensing unit located remote from the refrigerator.

Remote refrigerators employing carbon dioxide as a refrigerant in a cascade refrigerating system or as a heat-transfer fluid are intended to be connected to a system utilizing pressure-relief valves to reduce the risk of over-pressure. The pressure-relief valves are typically supplied with or connected to the certified compressor rack (see LZFE) or receiver/heat exchanger used in the refrigeration system. The design pressure of the remote refrigerator should be not less than the design pressure of the associated CO₂ system components. The system design pressure is based on the operating pressure as referenced in clause 9.2.6 of ANSI/ASHRAE 15.

Accessories for commercial refrigerators and freezers are provided with instructions for installation into the product.

Commercial Refrigerators and Freezers (SGKW)—Continued

Authorities Having Jurisdiction should be consulted for requirements relating to sanitation and connection to water supply and waste disposal lines.

The U.S. Environmental Protection Agency's Significant New Alternatives Policy (SNAP) Program requirements should be consulted for refrigerators, freezers, and combination refrigerator-freezers in this category that employ a flammable refrigerant (ASHRAE 34 Class A2, A2L or A3). Authorities Having Jurisdiction should also be consulted for any additional requirements.

PRODUCT MARKINGS

Some equipment may be designed to accept accessories installed in the field. In such cases, both the commercial refrigerator or freezer and the accessory are marked to relate the two for proper installation.

Equipment or section(s) of the equipment suitable for outdoor installation are so marked. Units not so marked are for indoor use only.

Commercial refrigerators and freezers may employ a wireway to permit end-to-end installation. The wireway of such units is marked accordingly.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

Remote refrigerators employing carbon dioxide as a refrigerant in a cascade refrigerating system or as a heat-transfer fluid are marked to indicate their design pressure.

REBUILT PRODUCTS

This category also covers commercial refrigerators and freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial refrigerators and freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial refrigerators and freezers are subject to the same requirements as new commercial refrigerators and freezers.

RELATED PRODUCTS

Refrigerators and freezers for household use are covered under Household Refrigerators and Freezers (SHZZ) and Household Freezers (SHMR).

Specialized refrigerators or freezers are covered under Refrigerators and Freezers, Special Purpose (SOVQ).

Factory-assembled walk-in refrigerators and freezers are covered under Walk-in Units, Commercial (SQTV).

Door panel assemblies are covered under Door Panel Assemblies (FDIT).

Beverage coolers and beverage cooler-dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFWY).

Nonrefrigerated cabinets are covered under Wired Cabinets (ZNXR).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Commercial Refrigerator and/or Freezer" (for a self-contained unit), "Commercial Refrigerator and/or Freezer Less Condensing Unit" (for a remote unit), "Section of Commercial Refrigerator and/or Freezer" (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator or freezer), or "Accessory for Commercial Refrigerator and/or Freezer" (for each part of a commercial refrigerator shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator or freezer).

The Listing Mark for rebuilt commercial refrigerators and freezers also includes the word "Rebuilt," "Remanufactured" or "Reconditioned" preceding the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD FREEZERS (SHMR)

GENERAL

This category covers self-contained freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical com-

Household Freezers (SHMR)—Continued

pression type, absorption type or thermoelectric type. Accessories intended for use with household freezers are also covered under this category.

This category will be obsolete August 21, 2016. On or before this date, all household freezer certifications will be transferred to Household Refrigerators and Freezers (SHZZ).

INSTALLATION

This equipment is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase, alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household freezers are certified in three classes as follows:

Freestanding — A freezer intended for open type installation only, not including stacking, locating in closets, alcoves, or other confined spaces.

Recessed Installation — A freezer intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

Built-in Installation — A freezer intended to be permanently attached to or mounted in a wall, a cabinet or other surface of a building.

Accessories for household freezers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

The U.S. Environmental Protection Agency's Significant New Alternatives Policy (SNAP) Program requirements should be consulted for freezers in this category that employ a flammable refrigerant (ASHRAE 34 Class A2, A2L or A3). Authorities Having Jurisdiction should also be consulted for any additional requirements.

PRODUCT MARKINGS

Household freezers may be designed to accept accessories in the field. In such cases both the freezer and the accessory are marked to relate the two for proper installation.

A freezer intended for freestanding use is so marked on the unit. Each freezer intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

Household refrigerators are covered under Household Refrigerators and Freezers (SHZZ).

Household refrigerators for marine use are covered under Refrigerators, Household Type, Marine (SVQL).

Refrigerators and freezers for use in recreational vehicles are covered under Recreational Vehicle Refrigerators and Freezers (SKKQ).

Freezers for commercial use are covered under Commercial Refrigerators and Freezers (SGKW).

Refrigerators and freezers in combination with ranges, microwave ovens and/or sinks are covered under Kitchen Units, Refrigerated (SJPT).

Products Verified for energy efficiency are covered under Refrigerators, Freezers and Wine Chillers, Household Verified for Energy Efficiency (ZXJL).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Freezer" or "Accessory for Household Freezer."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD REFRIGERATORS AND FREEZERS (SHZZ)**GENERAL**

This category covers self-contained refrigerators, freezers, and combination refrigerator-freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical compression type, absorption

Household Refrigerators and Freezers (SHZZ)—Continued

type or thermoelectric type. Accessories intended for use with household refrigerators and freezers are also covered under this category.

INSTALLATION

This equipment is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase, alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household refrigerators, freezers, and combinations thereof are certified in three classes as follows:

Freestanding — Intended for open-type installation only, not including stacking, locating in closets, alcoves or other confined spaces.

Recessed Installation — Intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

Built-in Installation — Intended to be permanently attached to or mounted in a wall, a cabinet or other surface of a building.

Accessories are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted for requirements relating to connection to water supply lines.

The U.S. Environmental Protection Agency's Significant New Alternatives Policy (SNAP) Program requirements should be consulted for refrigerators, freezers, and combination refrigerator-freezers in this category that employ a flammable refrigerant (ASHRAE 34 Class A2, A2L or A3).

Authorities Having Jurisdiction should also be consulted for any additional requirements.

PRODUCT MARKINGS

Household refrigerators, freezers, and combinations thereof may be designed to accept accessories in the field. In such cases both the appliance and the accessory are marked to relate the two for proper installation.

A refrigerator, freezer, or combination thereof intended for freestanding use is so marked on the unit. Each appliance intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

RELATED PRODUCTS

Household freezers may be covered under Household Freezers (SHMR) until August 21, 2016.

Household refrigerators and freezers for marine use are covered under Refrigerators and Freezers, Marine (SVQL).

Refrigerators, freezers, and combinations thereof for use in recreational vehicles are covered under Recreational Vehicle Refrigerators and Freezers (SKKQ).

Refrigerators, freezers, and combinations thereof for commercial use are covered under Commercial Refrigerators and Freezers (SGKW).

Refrigerators in combination with ranges, microwave ovens and/or sinks are covered under Kitchen Units, Refrigerated (SJPT).

Products Verified for energy efficiency are covered under Refrigerators, Freezers and Wine Chillers, Household Verified for Energy Efficiency (ZXJL).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers," or ANSI/UL 60335-1, "Safety of Household and Similar Appliances, Part 1: General Requirements," and ANSI/UL 60335-2-24, "Household and Similar Electrical Appliances, Part 2: Particular Requirements for Refrigerating Appliances, Ice-Cream Appliances and Ice-Makers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Refrigerator," "Accessory for Household Refrigerator," "Household Freezer" or "Accessory for Household Freezer."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE CREAM MAKERS (SINX)

GENERAL

This category covers equipment intended for preparing products such as hard ice cream, soft-serve ice cream, milk shakes and sherbets, and may include means for dispensing the product directly into containers. These products may be self-contained or sectional. Accessories intended for use with ice cream makers are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code,” and ANSI/ASHRAE 15, “Safety Standard for Refrigeration Systems.”

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34-1992 (amendment), “Designation and Safety Classification of Refrigerants.” The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL’s Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 and have been determined to be non-flammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, “Refrigerants.”

Unitary ice cream makers consist of a complete factory-assembled and factory-tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice cream maker is a unitary ice cream maker consisting of a completely factory-assembled and factory-tested refrigerating system in which all the refrigerant-containing parts are permanently connected at the factory.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water-supply and waste-disposal lines.

PRODUCT MARKINGS

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

Equipment or sections of the equipment suitable for outdoor use are so marked. Units not so marked are for indoor use only.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the ice cream maker and the accessory are marked to relate the two for proper installation.

RELATED PRODUCTS

Ice cream makers (without a compressor) for household use are covered under Food Preparing Machines, Household (IPWZ).

Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX).

Nonrefrigerated dispensing equipment is covered under Food Preparing Machines, Commercial (IPST).

Beverage coolers and beverage cooler-dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFWY).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 621, “Ice Cream Makers.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Ice Cream Maker,” “Section of Ice Cream Maker” or “Accessory for Ice Cream Maker.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE MAKERS (SJBV)

GENERAL

Ice Makers (SJBV)—Continued

This category covers devices that automatically manufacture and harvest ice in cube, flake, or other readily usable form, with or without provision for storage or means of dispensing ice. These products may be self-contained or sectional. Accessories intended for use with ice makers are also covered under this category.

This category does not cover tray type ice makers, ice vending machines, or ice makers and ice maker kits used in household refrigerators and freezers. See **RELATED PRODUCTS** below.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code,” and ANSI/ASHRAE 15, “Safety Standard for Refrigeration Systems.”

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, “Designation and Safety Classification of Refrigerants.” The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL’s Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 34 and have been determined to comply with the requirements of ANSI/UL 2182, “Refrigerants.”

An ice maker of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice maker consists of a completely factory assembled and factory tested refrigerating system in which all the refrigerant-containing parts are permanently connected at the factory.

A remote ice maker is an ice maker intended to be connected to a field-installed condenser or condensing unit located remote from the ice maker.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Ice makers may be designed to accept accessories installed in the field. In such cases both the ice maker and the accessory are marked to relate the two for proper installation.

Ice makers or sections of ice makers suitable for outdoor installation are so marked. Ice makers or sections not so marked are for indoor use only.

RELATED PRODUCTS

Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX).

Ice makers for marine use are covered under Ice Makers, Marine (SAAH). Ice makers for installation into household refrigerators and freezers are Recognized under Specialty Refrigeration Equipment (SROT2).

Accessory ice-maker kits for installation into household refrigerators or freezers are covered under Household Refrigerators and Freezers (SHZZ) or Household Freezers (SHMR).

Products Verified for energy efficiency are covered under Ice Makers Verified for Energy Efficiency (ZWRP).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 563, “Ice Makers.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Ice Maker,” “Ice Maker Without Ice Storage Means” (for a self-contained unit), “Ice Maker Less Condenser,” “Ice Maker Without Ice Storage Means Less Condenser,” “Ice Maker Less Condensing Unit,” “Ice Maker Without Ice Storage Means Less Condensing Unit” (for a remote ice maker), “Section of Ice Maker” (for each section of an ice maker shipped separately from the factory, the function of which is essential to the basic operation of the ice maker), or “Accessory for Ice Maker” (for a part or device, the function of which supplements or modifies the basic operation of the ice maker).

Ice Makers (SJBV)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

KITCHEN UNITS, REFRIGERATED (SJPT)

GENERAL

This category covers refrigerators rated 250 V or less in combination with ranges, microwave ovens and/or sink units.

INSTALLATION

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines, if applicable.

PRODUCT MARKINGS

Kitchen units intended for recessed installation are marked to indicate the installation clearances.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the refrigerated kitchen unit and the accessory are marked to relate the two for proper installation.

RELATED PRODUCTS

Household refrigerators are covered under Household Refrigerators and Freezers (SHZZ).

Household freezers are covered under Household Freezers (SHMR).

Household refrigerators intended for marine use are covered under Refrigerators, Household Type, Marine (SVQL).

Refrigerators intended for use in recreational vehicles are covered under Recreational Vehicle Refrigerators and Freezers (SKKQ).

Refrigerators intended for commercial use are covered under Commercial Refrigerators and Freezers (SGKW).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

The basic standard used to investigate the electric range portion of products in this category is ANSI/UL 858, "Household Electric Ranges."

The basic standard used to investigate the microwave oven portion of products in this category is ANSI/UL 923, "Microwave Cooking Appliances."

The basic standards used to investigate the gas range portion of products in this category are ANSI Z21.1, "Household Cooking Gas Appliances," and ANSI Z21.57, "Recreational Vehicle Cooking Gas Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

RECREATIONAL VEHICLE REFRIGERATORS AND FREEZERS (SKKQ)

GENERAL

This category covers refrigerators, freezers, and combination refrigerator-freezers, rated 250 V or less ac and/or 30 V or less dc, intended for use in recreational vehicles.

INSTALLATION

Recreational Vehicle Refrigerators and Freezers (SKKQ)—Continued

These products are certified in two classes as follows:

Freestanding — A unit designed for installation in other than a confined space. Each unit intended for freestanding installation is so marked.

Recessed — A unit designed for installation in a confined space. Each unit intended for recessed installation has specified installation clearances, if clearances are required, marked on the unit.

These products are intended for installation in accordance with the manufacturer's instructions and as marked on the product. They are intended to be secured to the recreational vehicle structure.

RELATED PRODUCTS

Electric household refrigerators and freezers are covered under Household Refrigerators and Freezers (SHZZ) and Household Freezers (SHMR), respectively.

Gas-fired or combination gas/electric recreational vehicle refrigerators are covered under Refrigerators Using Gas Fuel (LPHR).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

REFRIGERANT-CONTAINING COMPONENTS (SKQZ)

Condensers, Refrigerant (SLSV)

GENERAL

This category covers refrigerant condensers intended to liquefy refrigerant vapor by removal of heat. They are air-cooled, evaporative or water-cooled types.

PRODUCT MARKINGS

All condensers are marked with the manufacturer's name, model number and the design pressure. Unless provided with a separate marking as indicated below, the products are also marked with the type(s) of refrigerant to be used.

Refrigerant condensers not marked to indicate the type of refrigerant used are provided with a marking that may be on a separate tag or label and attached to the unit cooler that reads "The design pressure marked on this component shall not be less than the installed system working pressure or less than the values outlined in ANSI/ASHRAE 15 for the charged refrigerant."

Finned tube assemblies incorporating a motor-driven fan (forced-air-cooled units) are also marked with the electrical rating. Forced-air-cooled condensers suitable for outdoor installation are so marked.

RELATED PRODUCTS

Water-cooled condensers intended for use as water heaters are covered under Refrigerant Heat Recovery Equipment (SOMU) or Heat Reclaimers, Refrigerant (SNLT).

Condenser receivers are covered under Receivers, Refrigerant (SOJV).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate forced-air-cooled condensers in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

The basic standard used to investigate all other condensers in this category is ANSI/UL 207, "Refrigerant-Containing Components and Accessories, Nonelectrical."

Condensers, Refrigerant (SLSV)—Continued

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Condenser."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATED MEDICAL EQUIPMENT (SOPT)

GENERAL

This category covers self-contained refrigerated medical equipment, such as oxygen therapy and thermia devices designated for professional use by personnel in hospitals, nursing homes, medical care centers, medical offices and similar health care facilities.

This equipment has been investigated for electric shock, fire and mechanical hazards. Other risks, including those that may result from use of this equipment in the presence of flammable anesthetics, have not been investigated.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

This equipment has been investigated to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer.

Patient care equipment employs one of two attachment-plug caps. One is a locking-type cap identified by the marking "Hospital Only" and the other is a nonlocking-type ANSI Standard configuration grounding type cap identified by the marking "Hospital Grade" and a green dot on the body of the cap. The identification is visible after installation on the flexible cord. Such products are marked to indicate they are to be connected to a receptacle marked "Hospital Only" or "Hospital Grade."

Oxygen therapy equipment has been investigated with respect to the increased risks resulting from the presence of oxygen and electrical parts within the equipment. In view of the practical design features, it is essential for safety that all possible sources of ignition be kept away from these devices. Possible sources of ignition, against which precautions should be taken, include open flames, matches, cigarettes, accumulations of static electricity and reducing valves on oxygen tanks, which occasionally project flame or sparks due to ignition or explosion of rubber valve seats. The canopy (tent), reducing valve, oxygen cylinders, etc., used with oxygen therapy equipment have not been investigated nor covered as part of the certified equipment.

FACTORS NOT INVESTIGATED

The effect on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

RELATED PRODUCTS

Equipment investigated to determine its suitability or safety for use where a flammable anesthetic is likely to be present is covered under Medical Equipment for Use in Hazardous Locations (PINR).

Nonrefrigerated medical equipment is covered under Medical Equipment (PIDF).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 416, "Refrigerated Medical Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

REFRIGERATED MEDICAL EQUIPMENT or REFRIGERATED OXYGEN THERAPY EQUIPMENT*

AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY

Control No.

* or other appropriate product name as shown in the individual Classifications

Refrigerated Medical Equipment (SOPT)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT COOLERS (SPLR)

GENERAL

This category covers unit coolers, which are direct cooling, factory made, enclosed assemblies consisting of a cooling element, fan(s) and motor(s), intended for the free circulation of air for refrigeration purposes. They may also incorporate means for defrosting of the cooling element.

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with ANSI/NFPA 70, "National Electrical Code."

This equipment is intended for use in refrigeration systems charged with the refrigerant indicated on the device, but has not been investigated from the standpoint of operation when associated with other equipment used to form the complete refrigeration system.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating and the design pressure. Unless provided with a separate marking as indicated below, the products are also marked with the type(s) of refrigerant to be used.

Unit coolers not marked to indicate the type of refrigerant used are provided with a marking that may be on a separate tag or label and attached to the unit cooler that reads "The design pressure marked on this component shall not be less than the installed system working pressure or less than the values outlined in ANSI/ASHRAE 15 for the charged refrigerant. After charging, mark the installed equipment with the refrigerant type and oil used," or equivalent.

A unit cooler with field wiring terminals is marked to indicate the type of conductors required for the field wiring.

RELATED PRODUCTS

Equipment intended for air-conditioning purposes is referenced as fan-coil units and covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 412, "Refrigeration Unit Coolers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unit Cooler."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNITS, REFRIGERATING (SPYZ)

GENERAL

This category covers complete refrigeration systems consisting of a hermetic motor-compressor, condenser, evaporator, refrigerant control, electrical controls, wiring and associated refrigerant-containing components including tubing, and may include a defrost system. These systems are primarily used to refrigerate cooling rooms and warehouses intended for the storage of food and other perishable products. These products may be self-contained or sectional. Accessories intended for use with refrigerating units are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code."

Refrigerating units consist of one or more factory-made sections. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

Accessories for refrigerating units are provided with instructions for installation into the product.

PRODUCT MARKINGS

Units, Refrigerating (SPYZ)—Continued

The condensing sections of refrigerating units suitable for outdoor installation are so marked. Sections not marked as suitable for outdoor installation are for indoor use only.

Refrigerating units may be designed to accept accessories in the field. In such cases both the refrigerating unit and the accessory are marked to relate the two for proper installation.

REBUILT PRODUCTS

This category also covers refrigerating units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt refrigerating units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt refrigerating units are subject to the same requirements as new refrigerating units.

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers (SGKW).

Nonelectrical insulated wall panels are covered under Building Units (BLBT).

Door and frame assemblies for walk-in coolers are covered under Door Panel Assemblies (FDIT).

Factory assembled walk-in refrigerators and freezers are covered under Walk-in Units, Commercial (SQTV).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 427, "Refrigerating Units."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerating Unit" (for a self contained unit), "Section of Refrigerating Unit" (for a part or device, the function of which is essential to the basic operation of the refrigerating unit), or "Accessory for Refrigerating Unit" (for each part of a refrigerating unit shipped separately from the factory, the function of which supplements or modifies the basic operation of the refrigerating unit).

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES, REFRIGERATED (SQMX)

GENERAL

This category covers refrigerated vending machines designed for connection to alternating-current circuits rated not more than 600 V, and which incorporate refrigeration systems of the air cooled or water-cooled type employing hermetic refrigerant motor-compressors.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

Some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants comply with ANSI/UL 2182, "Refrigerants."

This equipment consists of a complete refrigeration system and associated electrical controls for the system and for delivery of the product.

Accessories, such as a coin/currency mechanism and debit/credit card readers, may be field installed. Unless proper and obvious installation of the accessory is evident, instructions for installing the accessory are provided as part of the vending machine.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

Vending Machines, Refrigerated (SQMX)—Continued

Where the equipment employs connection to a compressed carbon dioxide source, this category does not cover compressed carbon dioxide cylinders.

Some of this equipment employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is certified with respect to hazards exclusive of those of the replaceable pressurized container(s).

The burglary and theft features of these machines have not been investigated unless specifically indicated in the individual certification.

REBUILT PRODUCTS

This category also covers refrigerated vending machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt refrigerated vending machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt refrigerated vending machines are subject to the same requirements as new refrigerated vending machines.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

The venders are marked on or adjacent to the electrical rating plate with one of the following: "For Indoor Use Only," "Suitable for Protected Locations - See Installation Instructions" or "Suitable for Outdoor Use." Complete instructions appear on a vender intended for use in a protected location, indicating the manufacturer's recommendations concerning the use and/or installation of any canopies, marquees, shelters, etc. which may be necessary for the protection of the vender. The instructions may be located inside the vender if they are accessible through the front door.

RELATED PRODUCTS

For certifications of machines that vend nonrefrigerated products, see Vending Machines (YWXV), or the specific category covering the equipment involved.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 541, "Refrigerated Vending Machines."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerated Vending Machine."

For rebuilt products, the word "Rebuilt" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WALK-IN UNITS, COMMERCIAL (SQTV)

GENERAL

This category covers commercial walk-in refrigerators and freezers that are completely factory assembled. Accessories intended for use with walk-in units are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

These units may contain refrigerant-containing components. If refrigerant-containing components are employed, all of the refrigerant-containing parts are permanently connected at the factory and tested for leakage prior to leaving the factory.

All refrigerants that may be employed in this equipment have been investigated to ANSI/ASHRAE 15 and have been determined to be non-flammable or practically nonflammable in accordance with ANSI/UL 2182, "Refrigerants."

Accessories for walk-in units are provided with instructions for installation into the product.

Authorities Having Jurisdiction (AHJ) should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines. AHJs should also be consulted if local installations require structural loading considerations.

PRODUCT MARKINGS

PRODUCT CATEGORIES BY CATEGORY CODE

Walk-in Units, Commercial (SQTV)—Continued

Some equipment may be designed to accept accessories installed in the field. In such cases, both the commercial walk-in unit and the accessory are marked to relate the two for proper installation.

Equipment or sections of the equipment suitable for outdoor installation are so marked. Units not so marked are for indoor use only. Units marked suitable for outdoor installation have not been investigated with respect to wind, snow or other structural loading.

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers (SGKW). Nonelectrical insulated wall panels are covered under Building Units (BLBT). Door and frame assemblies for walk-in coolers are covered under Door Panel Assemblies (FDIT). Refrigeration units are covered under Units, Refrigerating (SPYZ).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 471, "Commercial Refrigerators and Freezers," and UL 427, "Refrigerating Units."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Walk-in Unit" or "Accessory for Commercial Walk-in Unit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER COOLERS (SRAV)**Drinking-water Coolers (SRJX)****GENERAL**

This category covers bottle- and pressure-type drinking-water coolers rated up to 250 V. The coolers are provided with a complete refrigeration system and associated electrical controls, and may also include means for heating water.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

Some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Certification Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants comply with ANSI/UL 2182, "Refrigerants."

These products may contain water purification parts or system(s). However, the parts or system(s) used to purify the water have not been investigated to determine their effectiveness in purifying water unless specifically stated in the individual certifications.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

RELATED PRODUCTS

See Drinking Water System Components (FDNP) and Drinking Water Treatment Units (FDQD).

Water coolers intended for use in hazardous (classified) locations are covered under Water Coolers for Use in Hazardous Locations (SUFT).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 399, "Drinking-Water Coolers."

UL MARK

Drinking-water Coolers (SRJX)—Continued

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drinking Water Cooler."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL PROCESSING LIQUID COOLERS (SRFR)**GENERAL**

This category covers coolers intended to condition water or other fluids used for developing photographic film, cooling or thawing bulk product, cooling medical equipment, such as magnetic resonance imagers (MRI) or computer axial topography (CAT) scanners, and similar processes. The fluids intended for use in these coolers are limited to glycol, water, and water with additives. These coolers are not intended for the cooling of potable water. These coolers are provided with a complete refrigeration system and associated electrical controls and may also incorporate means for heating and circulating the water or other fluid.

If intended to be connected to the water supply, Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection.

PRODUCT MARKINGS

These coolers are marked with the manufacturer's name, model number, electrical rating, the refrigerant type, and the high- and low-side design pressures.

A cooler with field wiring terminals is marked to indicate the type of conductors required for the field wiring.

RELATED PRODUCTS

Bottle- and pressure-type potable water coolers are covered under Drinking Water Coolers (SRJX).

Nonrefrigerated fluid-handling systems are covered under Packaged Pumping Systems (QCZ).

Other types of specialized refrigerators are covered under Specialty Refrigeration Equipment (SROT).

Water or liquid chillers specifically for use in semiconductor processing systems are covered under Semiconductor Manufacturing Equipment, Miscellaneous (TWTZ).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Processing Liquid Cooler."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (SSCR)

ACCESSORIES, REFRIGERATION FOR USE IN HAZARDOUS LOCATIONS (SSPZ)

Controllers, Refrigeration for Use in Hazardous Locations (STDX)

GENERAL

This category covers temperature- and pressure-operated controllers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigeration Controller for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND FREEZERS FOR USE IN HAZARDOUS LOCATIONS (STRV)

GENERAL

This category covers commercial refrigerators and freezers of the self-contained reach-in type, having provision for connection to threaded rigid conduit.

In the storage of any chemicals in the refrigerators and freezers, consideration should be given to the inherent decomposition and reaction hazards of the chemicals.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Refrigerator and/or Freezer for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER COOLERS FOR USE IN HAZARDOUS LOCATIONS (SUFT)

GENERAL

This category covers bottled water and line-supplied types of water coolers.

These appliances are self-contained units with a complete refrigeration system and associated electrical controls. The refrigeration system has provision for connection to threaded rigid conduit.

Appliances intended to be connected to external water sources have not been investigated with respect to pollution of water supply through reverse action due to low water pressure or other reasons.

Water Coolers for Use in Hazardous Locations (SUFT)—Continued

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Water Cooler for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)

This category covers equipment designed for the detection, initiation, notification and control of signals indicative of fire, supervisory, watchman, releasing operation, and the control of the flow of smoke.

This category also covers service companies who are capable of certifying systems that comply with nationally recognized installation standards.

This equipment is intended to be installed, maintained, and operated as system arrangements in conformity with the following:

- ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems"
- ANSI/NFPA 12A, "Halon 1301 Fire Extinguishing Systems"
- ANSI/NFPA 13, "Installation of Sprinkler Systems"
- ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
- ANSI/NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems"
- ANSI/NFPA 17, "Dry Chemical Extinguishing Systems"
- ANSI/NFPA 17A, "Wet Chemical Extinguishing Systems"
- ANSI/NFPA 72, "National Fire Alarm Code"
- ANSI/NFPA 92A, "Recommended Practice for Smoke-Control Systems"
- ANSI/NFPA 92B, "Guide for Smoke Management Systems in Malls, Atria, and Large Areas"

Users of this equipment should consult Authorities Having Jurisdiction (AHJ) concerning the particular types to be used, number and location of appliances, character and installation of wiring, methods to be followed in the receipt and disposition of signals, keeping of records, rendering of reports, and all other details having a bearing on adequate installation, maintenance and use of the system to be employed.

Listed equipment is subjected to investigation to determine its suitability for its intended service and for installation, maintenance and use in conformity with the applicable NFPA standards, with particular regard to design and construction, practicability of application and reliability of performance in addition to the possible electrical hazards involved in its use.

A complete system is considered to be a combination of interrelated signal-initiating devices, signal-transmitting devices, signal-notification appliances and control unit installed in accordance with regulations enforced by the AHJ who determines the suitability of the installation for its particular application. The Listing indicates that wiring diagrams have been submitted with the equipment, which provide details for interconnecting it to other interrelated devices for the intended application. The interconnection details are shown on the equipment or are in a separate installation document provided with the equipment and referenced in the marking on the equipment by drawing number and issue date and/or revision level.

Equipment may be used in different combinations to form a system. All Listed equipment forming the system may be either of one manufacturer or of different manufacturers. The installation wiring diagram provided as a part of the Listed equipment should be consulted for specific details.

A system formed of separately Listed parts to provide a central station fire alarm system may be certificated by a company Listed under Central Station Protective Signaling Services (UUFX).

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES
(SYKJ)**

388

A system formed of separately Listed parts to provide a local, auxiliary, remote station, or proprietary fire alarm system may be certificated by a company Listed under Local, Auxiliary, Remote Station, and Proprietary Protective Signaling Services (UUIS).

Products may be Classified in accordance with the applicable Parts of European Norm (EN) 54, "Fire Detection and Fire Alarm Systems." For additional information, see Fire Detection and Alarm Equipment Classified in Accordance with International Publications (UTHN).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUDIBLE-SIGNAL APPLIANCES (ULSZ)

GENERAL

This category covers electrically operated bells, buzzers, horns and similar signal-sounding appliances for fire-protective signaling service. These appliances are marked with an audibility rating.

Audible-signal appliances intended for fire alarm service, public mode, are rated a minimum 75 dB(A) at 10 ft. Audible-signal appliances intended for fire alarm service, private mode only, are rated a minimum 45 dB(A) at 10 ft.

These appliances are not to be confused with audible-signal appliances for general signaling (nonfire alarm) use, which are covered under Audible-signal Appliances, General Signal (UCST).

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Audible Signal Appliance," "Audible Signaling Appliance - Private Mode Only," "Audible Signal Appliance Accessory" or "Audible Signaling Appliance Subassembly."

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 464, "Audible Signal Appliances."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling" or "and Emergency Signaling," as appropriate (e.g., "Fire Alarm and Emergency Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- F - Fire Alarm Equipment
- G - General Signaling Equipment
- E - Emergency Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL UNITS, SYSTEM (UOJZ)

GENERAL

This category covers electrical control units for fire-protective signaling systems to be employed in indoor locations in accordance with ANSI/NFPA 72, "National Fire Alarm Code."

Products investigated for outdoor locations are identified in the individual certifications with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

A control unit consists of a unit assembly of electrical parts having provision for connection of power-supply circuits routed through the control unit equipment by a prescribed scheme of circuiting. The circuits are extended to separate devices by which the operating parts of the control units are actuated for signals and to separate or incorporated appliances by which the signals are indicated, so as to form a coordinated system combination for definite signaling services.

The Listee of a control unit furnishes the related actuating devices and signal-indicating appliances for use with the control unit or indicates the

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)

Control Units, System (UOJZ)—Continued

particular devices and appliances required and supplies any instructions necessary to complete their interconnection at the installation.

The individual certifications indicate that wiring diagrams have been submitted with the control unit, along with information regarding its intended application, and the unit has been tested with representative actuating devices and signal-indicating devices to be used with it as an interrelated assembly. Reference is made in the marking of the control unit to the wiring diagram showing complete information except when the installation wiring diagram is secured to the control unit.

Identification of the information in the individual certifications is as follows:

- Local System Type (L)
- Local System Type with Shunt Type Connection to Master Box (LS)
- Auxiliary System Type (A)
- Remote Station System Type (RS)
- Proprietary System Type (P)
- Central Station System Type (CS)
- Protected Premise Unit (Protected Premises Unit or PPU)
- Supervising Station Unit (Receiving Unit or RU)

System Control Unit with Emergency Voice Communication — A system control unit with emergency voice communication consists of a control unit that employs a speaker system in lieu of conventional general alarm-indicating circuits. The control unit may also have additional provision for telephone communication by use of hand sets. A tape deck with a pre-recorded message may also be employed as a supplementary feature.

System Control Unit with Emergency Telephone Communication — A system control unit with emergency telephone communication consists of a control unit with conventional general alarm-indicating circuits and additionally employs telephone communication circuits to remote telephone hand sets for emergency communication during a fire condition, usually for use by fire department personnel.

The types of devices that can be connected for the service indicated in the individual certifications for each type control unit are as follows:

- A - Automatic fire alarm: Thermostats, smoke detectors, etc.
- M - Manual fire alarm: Manually-operated boxes
- WF - Waterflow alarm: Waterflow switches
- SS - Supervisory: Gate valves, water-level switches, temperature switches, carbon monoxide detectors, residential fire alarm control units, etc.
- WSS - Watchman's supervisory service

The type of signaling service applicable to each type of control unit is as follows:

- C - Coded
- NC - Noncoded
- M - March Time
- MX - Multiplex
- 1W-RF - Radio Frequency (one-way private radio)
- 2W-RF - Radio Frequency (two-way private radio)
- Rev Pol - Reverse Polarity
- DAC - Digital Alarm Communicator
- OT - Other Transmission Technologies

Where more than one type of control unit is indicated for a model number, such as Type Fire Alarm (L, LS, A, RS), that particular model is suitable for all the indicated applications. The change from one type to another may be made by deletion or addition of a panel or module inside the control unit cabinet or revisions to operating software to provide the additional function. In other cases a control unit may be suitable for a dual function without any panel changes, such as a Type Fire Alarm (P, RS).

Authorities Having Jurisdiction should be consulted before installation or revision.

PRODUCT MARKINGS

Each complete product is marked to indicate its intended use. This consists of the word "Commercial," followed by "Protected-Premises Control Unit" or "Supervising Station Control Unit," consistent with the description in the individual certifications.

RELATED PRODUCTS

For additional information regarding central station systems, see Central Station Protective Signaling Services (UUFX).

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

ADJUNCT SERVICE

UL provides a service for the certification of control units that not only meet the requirements of ANSI/UL 864, but also have been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010), "Control Panel Standard - Features for False Alarm Reduction." See Control Panels, SIA False Alarm Reduction (AMTB).

UL MARK

Control Units, System (UOJZ)—Continued

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The Listing Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S – Security Equipment
- F – Fire Alarm Equipment
- HN – Hospital Signaling and Nurse Call Equipment
- G – General Signaling Equipment
- E – Emergency Signaling Equipment
- EM – Enclosed Energy Management Equipment
- IT – Information Technology Equipment
- T – Telephone Equipment

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and one of the following statements as appropriate:

- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2007
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2010

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EMERGENCY COMMUNICATION AND RELOCATION EQUIPMENT (UOQY)

GENERAL

This category covers units intended to be installed as a system for providing emergency voice communication on either a selective or general basis, within multiple-unit installations.

Specific appliances or appliance groups intended for use with this equipment are identified in the individual certifications. Instructions describing interconnection at the installation site are provided with the product, including wiring diagrams.

This equipment is intended to be installed in areas specified by ANSI/NFPA 72, "National Fire Alarm Code." Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

RELATED PRODUCTS

This equipment differs from Control Unit Accessories, System Equipment (UOXX), providing similar service, in that operation of the equipment is not dependent upon connection to a fire-alarm control unit.

Amplifiers included within or connected to this equipment to form systems are covered under Speakers and Amplifiers for Fire Protective Signal-

Emergency Communication and Relocation Equipment (UOQY)—Continued

ing Systems (UEAY) or, as components for use in emergency communication system applications, under Emergency Communication and Relocation Equipment (UOQY).

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The Listing Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S – Security Equipment
- F – Fire Alarm Equipment
- HN – Hospital Signaling and Nurse Call Equipment
- G – General Signaling Equipment
- E – Emergency Signaling Equipment
- EM – Enclosed Energy Management Equipment
- IT – Information Technology Equipment
- T – Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL UNIT ACCESSORIES, SYSTEM (UOXX)

GENERAL

This category covers electrical units intended for use with fire-protective signaling systems employed in indoor locations in accordance with ANSI/NFPA 70, "National Electrical Code."

Products investigated for outdoor locations are identified in the individual certifications with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

Only amplifiers covered under this category have been investigated for use in fire alarm communication system applications. Speakers for use with amplifiers that have been investigated for fire alarm service applications are covered under Speakers and Amplifiers for Fire Protective Signaling Systems (UUMW).

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information regarding central station service, see Central Station Protective Signaling Services (UUFX).

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

ADJUNCT SERVICE

PRODUCT CATEGORIES BY CATEGORY CODE

Control Unit Accessories, System (UOXX)—Continued

UL provides a service for the certification of control unit accessories that not only meet the requirements of ANSI/UL 864, but also have been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010), "Control Panel Standard - Features for False Alarm Reduction." See Control Panels, SIA False Alarm Reduction (AMTB).

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and one of the following statements as appropriate:

- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2007
- ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2010

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DETECTORS, AUTOMATIC FIRE (UPLV)

These are either individual devices or prescribed combinations of devices designed to detect flame, heat, smoke, or combustion gases resulting from a fire and to automatically operate electrical signaling contacts. The signaling contacts may be integral parts of an individual device or parts of a separate device to which the detecting element is connected as an extended component.

The signaling contacts of the detector are intended to be connected to the circuit conductors of fire protective signaling systems recognized by the National Fire Protection Association Standards, so that the fire alarm signal initiated by the detector will be indicated by the system.

The kind of system (central station, proprietary, auxiliary, remote station or local) with which the detector can be used depends upon the design of the signaling circuit to which the detector contacts are intended to be connected. A detector may have non-coded signaling contacts connected directly to the actuating circuit of system control unit or to the actuating circuit of an electrically operated transmitter which will transmit coded signals over the signaling line circuit of a local, auxiliary, proprietary, remote station, or central station system.

Detectors, Automatic Fire (UPLV)—Continued

The wiring diagram of the transmitter or system control unit with which the detector is used will indicate the circuit application of the detector.

A combination type detector depends upon two or more related but separate pieces of equipment which are designed to be installed together so as to form a complete detector.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke-automatic Fire Detectors (UROX)

GENERAL

This category covers detecting combinations designed to detect smoke particles. Smoke detectors may or may not be designed to be connected to fire alarm system control units (see APPLICATIONS).

A heat detector and/or an audible-signaling appliance may be provided integral with the detector.

The primary function of duct detectors is to shut down the blowers and/or dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic and smoke damage from distribution of smoke. Duct detectors are not intended as a substitute for open-area protection.

The level of toxicity produced by the combustibles at which smoke detectors actuate has not been investigated.

DETECTOR TYPES

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Projected Beam (PB) — A light beam is projected across the space of area to be protected.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

APPLICATIONS

Open-area Protection (OAP) — Requires detector connection to a compatible system control unit for operation.

Releasing Service (RS) — Intended for detector connection only to releasing devices, such as electromagnetic door holders, fire dampers, etc.

Open-area Protection with Releasing Service (OAP/RS) — Incorporates supplementary switching contacts for additional connection to releasing devices.

Duct Detector [D (ST)] — Intended for installation on the side of a duct. Employs sampling tubes that extend into the duct.

Duct Detector [D (I)] — For installation inside a duct.

COMPATIBILITY WITH CONTROL UNITS

Smoke detectors for open-area protection are intended to be connected to the initiating device circuit of a fire alarm system control unit.

Multiple-wire detectors, employing power-supply terminals or leads that do not obtain power from the initiating-device circuit of a system control unit, are compatible with the initiating device circuits of any certified system control unit if (1) failure of the power to the detector is supervised at the control unit, and (2) the smoke detector is powered from a "Regulated" power-supply output, or a "Special Application" power-supply output for which the voltage outputs have been investigated. Compatible models for "Special Application" outputs are indicated on the installation wiring diagram of the control unit and/or detectors.

Two-wire detectors, whose power-supply terminals or leads are the same as the signaling terminals, and obtain power from the initiating-device circuit of a system control unit, are investigated for compatibility either by test or a review of the circuit parameters of both the detector and control unit. Certification is restricted only to those control units with which such an investigation was made. Interconnection limitations and compatible models are indicated on the installation wiring diagram of control unit and/or detectors.

INSTALLATION

Refer to ANSI/NFPA 72, "National Fire Alarm Code," and ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," for installation, maintenance, and testing guidelines.

Smoke-automatic Fire Detectors (UROX)—Continued

Spacings — Although there are no assigned spacings to these detectors, test fires, using the maximum amount of combustible for the risk involved, may be employed. See ANSI/NFPA 72 for additional guidelines.

Environmental Considerations — Open-area detectors are intended for indoor use only where normal ceiling temperatures [max 37.8°C (100°F)] prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted (false) alarms.

Duct detectors are intended to be installed in ducts of heating, ventilating, and air conditioning systems where temperatures at the detector do not exceed 37.8°C (100°F).

Ionization detectors should not be used in an environment of high-level radiation unless tests in the actual environment have shown that the radiation will not interfere with operation of the detectors.

Effect of Velocity — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. The performance of photoelectric-type detectors is not affected by velocity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Stability Test — In view of the innumerable environmental conditions that exist in the field, it is recommended that the stability of detectors be monitored prior to connection to a fire alarm system for at least three months or more to screen out locations of detectors where unwanted (false) alarms may occur. Relocation of the detectors, use of a detector with a different principle of operation, or a change in the sensitivity setting where permitted in the marking of the detector may be required.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of one of the following:

For nonseparable heads and bases:

1. Smoke Detector (+) for Open Area Protection
2. Smoke Detector (+) for Open Area Protection. Also Suitable for Releasing Device Service.
3. Smoke Detector (+) for Releasing Device Service
4. Smoke Detector (+) for Duct Application

For separable heads:

1. Smoke Detector Head (+) for Use with a (*) UL Listed Base
2. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base
3. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base. Also Suitable for Duct Application.
4. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base. Also Suitable for Releasing Device Service.
5. Smoke Detector Head (+) for Releasing Device Service When Used with a (*) UL Listed Base
6. Smoke Detector Head (+) for Duct Application When Used with a (*) UL Listed Base
7. Smoke Detector Head When Used with a (*) UL Listed Smoke Duct Detector Housing

For separable bases and duct housing:

1. Detector Base (+) for Use with a (*) UL Listed Head
2. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head
3. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Duct Application.
4. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Releasing Device Service.
5. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Releasing Device Service and Duct Application.
6. Detector Base (+) for Releasing Device Service When Used with a (*) UL Listed Head
7. Smoke-Duct Detector Housing for Use with (*) UL Listed Head

For separable system assemblies:

1. Smoke Detector Projected Beam System Unit
 2. Smoke Detector Air Sampling System Unit
 3. Smoke Detector for Duct Application Subassembly
- + To be inserted when applicable: "with Integral Audible Signal," "with Integral Heat Detector" or "with Integral Audible Signal and Heat Detector"

* Company name or File No. (Sxxxx)
Detectors marked with the designation "with Integral Audible Signal" include an audible-signaling appliance in the unit (head or base), which is energized under an alarm condition.

Detectors marked with the designation "with Integral Heat Detector" include a heat detector in the unit, which is connected internally to the smoke detector alarm circuit. Actuation of the head detector results in the same alarm signal as obtained from the smoke detector.

RELATED PRODUCTS

Smoke-automatic Fire Detectors (UROX)—Continued

Combination door closers and holders incorporating automatic smoke detection components are covered under Combination Fire Door Closers and Holders (GTIS).

ADDITIONAL INFORMATION

For additional information, see Detectors, Automatic Fire (UPLV), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate open-area and releasing-service detectors in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

The basic standard used to investigate duct detectors in this category is ANSI/UL 268A, "Smoke Detectors for Duct Application."

UL MARK

A two-Listing-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Listing Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F - Fire Alarm Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke-automatic Fire Detector Accessories (URRQ)

GENERAL

This category covers smoke detector accessories, which are devices employed to supplement smoke detector operation when connected as part of a fire alarm system or used to validate smoke detector operation. The interconnection is indicated on the installation wiring diagram associated with the detector.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Smoke-automatic Fire Detectors (UROX), Detectors, Automatic Fire (UPLV), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

Smoke-automatic Fire Detector Accessories (URRQ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke Detectors for Special Applications (URXG)
USE AND INSTALLATION

This category covers smoke-automatic fire detectors employing a special construction different from conventional detectors and designed to detect products of combustion in a specific location. These detectors are not intended as a substitute for open-area protection.

These detectors are intended to be installed in accordance with the manufacturer's installation instructions, in a manner acceptable to the Authority Having Jurisdiction and in accordance with ANSI/NFPA 72, "National Fire Alarm Code," or other NFPA Standards that may apply, such as for extinguishing system applications. The sensitivity rating of the detector should be taken into consideration with regard to installation in an area to be protected under operating conditions to guard against false alarms. The detectors may be connected to the initiating-device circuits of certified control units that provide audible-alarm signals, or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

Effect of Velocity — The velocities indicated in the individual certifications are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Detector Types

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air analyzed for fire products.

Video Image Smoke Detector (VI) — Intended to detect the image of smoke from a fire in the area of view covered by a video camera.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Smoke Detector for Special Application" or "Smoke Detector Accessory for Special Application."

ADDITIONAL INFORMATION

For additional information, see Smoke-automatic Fire Detectors (UROX), Detectors, Automatic Fire (UPLV), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category (with the exception of video image smoke detectors) are ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems," and ANSI/UL 268A, "Smoke Detectors for Duct Application."

The basic requirements used to investigate video image smoke detectors in this category are contained in UL Subject 268B, "Outline of Investigation for Video Image Smoke Detectors."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F - Fire Alarm Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

Smoke Detectors for Special Applications (URXG)—Continued

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE ALARM DEVICES, SINGLE AND MULTIPLE STATION, AND ACCESSORIES (UTER)

The following listings cover single- and multiple-station heat and smoke detectors and related accessories intended to be installed in ordinary indoor locations in accordance with Chapter 2 of the National Fire Protection Association Standard No. 72 titled the National Fire Alarm Code.

The levels of toxicity produced by the combustibles at which single- and multiple-station fire alarm devices are actuated have not been investigated by UL.

For a description of the applicable Listing Mark refer to the sub-categories Single- and Multiple-Station Heat Detectors (UTFS) and Single- and Multiple-Station Smoke Detectors (UTGI).

Single- and Multiple-station Heat Detectors (UTFS)

USE AND INSTALLATION

This category covers single- and multiple-station heat detectors intended to be employed in indoor locations.

Single-station Type — Single-station heat detectors are self-contained units incorporating a releasing mechanism, operating mechanism, and an alarm mechanism. In operation, heat actuates the releasing element, permitting stored energy (stored compressed gas or spring) embodied in the unit to sound an alarm. Temperature ratings and spacing limitations are given in the individual certifications.

Multiple-station Type — Multiple-station heat detectors are intended for use in fire alarm systems. They include thermally-sensitive detector units that initiate a signal by releasing compressed gas from a storage cylinder through an alarm mechanism (or horn) to sound an audible signal. These devices are interconnected by tubing.

Both single- and multiple-station units employing compressed gas as the operating mechanism employ a sight glass or visual indicator to check for loss of contents by leakage, tampering or operation.

The individual certifications note the limitations on the maximum length of tubing between the gas storage cylinder, detector units, alarm mechanisms and other system components, and on operating-temperature ratings, spacing limitations (sensitivity), and other details pertinent to the use of these devices.

Ordinarily these devices are intended for locations where normal ceiling temperatures prevail (below 100°F). Locations where temperatures at ceiling are likely to be unduly high, from sources of heat other than fire conditions, such as boiler rooms, demand special consideration. Under these conditions, alarm devices operating normally at higher temperatures and capable of withstanding high temperatures for long periods of time may be required. Care should be exercised to select alarm devices having the proper temperature rating to guard against false alarms from premature operation:

For ceiling temperatures not exceeding 100°F, the 136 to 165°F (ordinary) rating devices are recommended.

For ceiling temperatures exceeding 100°F, but not 150°F, the 174 to 212°F (intermediate) rating devices are recommended.

The spacings specified in the individual certifications are for flat, smooth ceiling construction of ordinary height, generally regarded as the most favorable condition for distribution of heated air currents resulting from a fire. Under other forms of ceiling constructions, reduced spacing of alarm devices may be required.

The placement and spacing of alarm devices should be based on consideration of the ceiling construction, ceiling height, room or space areas, space subdivision, the normal ceiling temperature, possible exposure of the devices to abnormal heat conditions, and to draft conditions likely to be encountered at the time of a fire.

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 539, "Single and Multiple Station Heat Alarms."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names

Single- and Multiple-station Heat Detectors (UTFS)—Continued

as appropriate: “Single Station Heat Detector,” “Multiple-Station Heat Detector,” “Single- and/or Multiple-Station Heat Detector” or “Single- and/or Multiple-Station Heat Detector Accessory.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Single- and Multiple-station Smoke Alarms (UTGT)

USE

This category covers single- and multiple-station smoke alarms intended to be employed in indoor locations where sensitivity testing and maintenance of alarms, per section 10.4.4 of ANSI/NFPA 72, “National Fire Alarm Code” (2007), is required by code, Authorities Having Jurisdiction, or other requirement.

This category also covers single- and multiple-station smoke alarms that have been performance tested to a minimum 10-year extended battery life under normal ambient conditions. Unless otherwise noted in the individual certifications, the alarms are intended for flush-mounted installation only, and are not intended for use on surface-mounted boxes.

This category also covers supplementary devices and accessories for use with these units, such as a remote horn. These products are identified in the individual certifications.

ALARM TYPES

Single Station — Self-contained units that incorporate a smoke chamber, an optional heat detector, and related electrical components to initiate an audible alarm signal from the unit when abnormal smoke or heat (when a supplementary heat detector is provided) actuates the unit. These devices may be energized from a commercial power-supply source by means of permanent wiring in accordance with ANSI/NFPA 70, “National Electrical Code,” flexible power-supply cord, use of limited-energy cable or equivalent wiring connected to the output of a suitable Class 2 power supply, or by one or more batteries.

Where a battery is employed as the main supply, its depletion below the level at which an alarm signal would be obtained is indicated by a distinctive audible trouble signal which persists for at least seven days.

Multiple Station — Similar to single-station units but provided with leads or terminals (or integral RF transmitter/receiver units) to permit the interconnection of single-station units so that actuation of any one unit results in actuation of the audible alarms of all units. The installation instructions (manual) indicate the maximum number of units that can be interconnected.

Refer to Chapter 11 of ANSI/NFPA 72 and the instruction manual provided with each smoke alarm for installation data. ANSI/NFPA 72 includes installation requirements of fire warning equipment in family living units. This is intended to cover living areas only and not common usage areas of multifamily buildings such as corridors, lobbies, stairwells, etc.

Travel Alarm — Consists of a battery-operated smoke alarm provided with a mounting bracket for top of door mounting only. May also consist of a battery-operated single-station smoke alarm with the addition of a mounting bracket. The difference is indicated in the UL Certification Mark.

Alarm for Recreational Vehicles — ANSI/UL 217, “Single and Multiple Station Smoke Alarms,” applies, except more stringent environmental tests are conducted.

Alarm for Recreational Boats — ANSI/UL 217 applies, except more stringent environmental tests are conducted.

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 217, “Single and Multiple Station Smoke Alarms.”

Products in this category marked “For The Hearing Impaired” have additionally been investigated to ANSI/UL 1971, “Signaling Devices for the Hearing Impaired.”

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate:

- “Single-station Smoke Alarm”
- “Multiple-station Smoke Alarm”

Single- and Multiple-station Smoke Alarms (UTGT)—Continued

- “Single- and/or Multiple-station Smoke Alarm”
- “Single- and/or Multiple-station Smoke Alarm Accessory”
- “Travel Smoke Alarm”
- “Single-station Smoke Alarm – Also Suitable as a Travel Smoke Alarm”
- “Single-station Smoke Alarm – Also Suitable for Use in Recreational Vehicles”
- “Single-station Smoke Alarm – Also Suitable for Use in Recreational Boats”
- “Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit”
- “Single-station Smoke Alarm – Also Suitable as a Single-station Carbon Monoxide Alarm”
- “Multiple-station Smoke Alarm – Also Suitable as a Multiple-station Carbon Monoxide Alarm”
- “Single- and/or Multiple-station Smoke Alarm – Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Alarm”
- “Single-station Smoke Alarm – Also Suitable as a Commercial Residential Smoke Alarm”
- “Multiple-station Smoke Alarm – Also Suitable as a Commercial Residential Multiple-station Smoke Alarm”

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is one of the following:

- “Single-station Smoke Alarm and Household Burglar Alarm Unit”
- “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit”
- “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit, Home Health Care Control Unit, and Signal Appliance Control Unit”
- “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit Accessory, Personal Call Unit, and Signal Appliance Environment Transmitter”
- “Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit”
- “Single-station Smoke Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit”
- “Single-station Smoke and/or Carbon Monoxide Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit”

Any of the preceding product names may include “for the Hearing Impaired” for products so identified in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION (UTHV)

USE AND INSTALLATION

This category covers fixed-temperature, heat-actuated-type detectors employing a special construction different from conventional thermostats and designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected as identified in the installation instructions, and in accordance with the Authority Having Jurisdiction and ANSI/NFPA 70, “National Electrical Code,” or other NFPA Standards that may apply, such as for extinguishing system applications. The temperature rating of the detector should be taken into consideration with regard to installation in the ambient temperature of the equipment to be protected under operating conditions to guard against false alarms. The detectors are intended to be connected to the initiating device circuits of certified control units that provide audible alarm signals or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term “Heat Actuated Device for Special Application,” “Control Unit for Special Application” or “Control Unit Accessory for Special Application.”

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 521, “Heat Detectors for Fire Protective Signaling Systems.”

UL MARK

Heat-actuated Devices for Special Application
(UTHV)—Continued

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F – Fire Alarm Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HOUSEHOLD FIRE-WARNING SYSTEM
UNITS (UTLQ)**

This category covers the individual units that are interconnected to form an electrically-operated household fire-warning system. These units include a main control unit (with integral or separate power supply) and related accessories intended for connection to the control unit.

Additional equipment and materials, such as bells, horns, heat detectors, smoke detectors, and limited-energy fire detector circuit wiring, may be required in various applications to complete a system. Such products are covered under Audible-signal Appliances (ULSZ), Smoke-automatic Fire Detectors (UROX), Heat-automatic Fire Detectors (UQGS) and Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER).

The units comprising a system are intended to be installed in accordance with the applicable requirements of Chapter 2 of ANSI/NFPA 72, "National Fire Alarm Code." Authorities Having Jurisdiction should be notified of the installation.

At least one smoke detector is required to be provided in a household fire-warning system. The smoke detector can be either electrically wired to and operated from the control unit, or be a separately-operated device, such as an electrically-operated single-station fire alarm device.

An installation drawing and/or detailed instructions are employed as the controlling factor to assure proper installation and interconnection among units. This material may be attached to the control unit, provided detached, or included as part of an instruction booklet.

An instruction booklet illustrating typical installation layouts, operation, maintenance, servicing and test procedures is supplied with the main control unit. Printed information for a household emergency evacuation plan may be separate or included as part of the booklet.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Control Units and Accessories, Household
System Type (UTOU)**

USE AND INSTALLATION

This category covers control units and accessories intended to be used as part of a household fire-warning system.

Control Unit — Consists of a unit assembly of electrical parts having provision for connection of a power supply, signal-actuating devices (thermostats, smoke detectors, switches, etc.), and signal-indicating devices (bells, horns, etc.).

Combination Control Unit — A control unit may additionally include circuit facilities for connection to burglar-alarm devices to form a combination fire-burglary control unit. In such a combination unit the fire-alarm signal takes precedence over the burglar-alarm signal and a distinction between alarm signals is required. A common trouble signal may be employed for both.

Modular Control or Combination Unit — A control unit may be pre-wired at the factory or assembled from readily installed modules. A certified burglary module can be added after the unit is installed to expand the system capability. The installation diagram indicates the type and number of modules that can be employed in a control unit.

PRODUCT MARKINGS

Control Units and Accessories, Household System Type
(UTOU)—Continued

Each product is marked to indicate its intended use. This consists of the term "Household" or "Residential" and the specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Household Fire-warning System Units (UTLQ), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 985, "Household Fire-Warning System Units."

ADJUNCT SERVICE

UL provides a service for the certification of control units and accessories for use in household fire-warning systems that not only meet the requirements of ANSI/UL 985, but also have been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010), "Control Panel Standard - Features for False Alarm Reduction." See Control Panels, SIA False Alarm Reduction (AMTB).

UL MARK

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Information Technology or Telephone categories. When applicable, the product name may include "and General Signaling," "and Emergency Signaling," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment

F – Fire Alarm Equipment

G – General Signaling Equipment

E – Emergency Signaling Equipment

IT – Information Technology Equipment

T – Telephone Equipment

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01 (2000, 2007 or 2010). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and one of the following statements as appropriate:

ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000

ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2007

ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2010

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-SUPPLY UNITS (UTRZ)

USE

This category covers power-supply units intended for application as components of fire-protective signaling systems.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1481, "Power Supplies for Fire-Protective Signaling Systems."

UL MARK

Power-supply Units (UTRZ)—Continued

The Signaling Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The Listing Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S - Security Equipment
- F - Fire Alarm Equipment
- HN - Hospital Signaling and Nurse Call Equipment
- G - General Signaling Equipment
- E - Emergency Signaling Equipment
- EM - Enclosed Energy Management Equipment
- IT - Information Technology Equipment
- T - Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPEAKERS AND AMPLIFIERS FOR FIRE-PROTECTIVE SIGNALING SYSTEMS (UUMW)

USE AND INSTALLATION

This category covers speakers, amplifiers and their accessories investigated for use in fire alarm and/or emergency communication systems. Speakers have been investigated for audible output of 75dBA or greater measured at 10 ft. when powered from a source of pink noise over a range of 400 - 4000 Hz. The units are marked with a minimum audibility rating.

Accessories, such as enclosures, have been investigated with respect to both mechanical and acoustical consideration when used with speakers specified in the individual certifications.

Where a certified product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual certifications and each part bears a separate Certification Mark. The marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

Amplifiers have been investigated with respect to specified input/output parameters in a variety of tests, including harmonic distortion. These products are not to be confused with amplifiers tested as elements of control unit adjunct systems for personnel emergency relocation and evacuation; see Control Unit Accessories, System (UOXX). Amplifiers used in adjunct systems are suitable for use only in specified configurations.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual certifications.

Speakers and/or amplifiers and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual certifications. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

PRODUCT MARKINGS

LOOK FOR THE UL MARK ON PRODUCT

Speakers and Amplifiers for Fire-protective Signaling Systems (UUMW)—Continued

Each product is marked to indicate its intended use as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1480, "Speakers for Fire Protective Signaling Systems," and UL 1711, "Amplifiers for Fire Protective Signaling Systems."

The basic standard used to investigate nonmetallic materials of products marked suitable for use in air-handling spaces in this category is UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

UL MARK

The Signaling Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling," as appropriate (e.g., "Fire Alarm and General Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- F - Fire Alarm Equipment
- G - General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RELEASING DEVICE EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (TBCX)

Releasing Devices with accessory equipment are designed to release operating weights or air or water under pressure in the functioning of fire protection and fire alarm equipment.

They are available in both heat responsive (automatic) and manual types. The heat responsive types may be had in either fixed temperature or rate-of-rise types or a combination of these two.

The heat responsive portions of releasing devices are integral parts of some patterns. In other patterns they are separate parts, such as air chambers which are mounted in the fire area and connected by small-bore tubing to the releasing device; or thermostatically operated electric switches (thermostats) mounted in the fire area and connected by an electric wiring circuit to the releasing device. Devices which have normally open contacts are listed as "Heat-Automatic Fire Detectors" and those which have normally closed contacts are listed as "Heat Detectors for Releasing Device Service."

Proper location and spacing of the auxiliary heat responsive devices (heat detectors, air chambers, tubing, etc.) involve consideration of service conditions throughout the area to be protected - such as ceiling construction, subdivisions of areas (including closets, small rooms, etc.) normal temperatures, high temperatures (if existent), resulting from manufacturing processes or other causes and draft conditions. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations. Individual Listings should be consulted for details of spacing and locations of the heat responsive devices.

Authorities Having Jurisdiction should be consulted in all cases before installation of systems or devices.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

RELEASING DEVICE EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (TBCX)

HEAT DETECTORS FOR RELEASING DEVICE SERVICE FOR USE IN HAZARDOUS LOCATIONS (TBGR)

GENERAL

This category covers heat detectors having normally closed circuit contacts used for thermo-responsive elements of releasing systems. They are intended to be installed in accordance with ANSI/NFPA 72, "National Fire Alarm Code."

These heat detectors have been investigated for indoor use only unless otherwise indicated in the individual certifications.

The operating principles included in the individual certifications are coded as follows:

- ROR – Rate of rise
- FT – Fixed temperature
- ROR-FT – Combination rate of rise and fixed temperature
- RC – Rate compensation

RELATED PRODUCTS

Heat detectors having normally open contacts are covered under Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment for Use in Hazardous Locations (TBCX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Detector for Releasing Device Service for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RELEASING DEVICES FOR USE IN HAZARDOUS LOCATIONS (TBJW)

GENERAL

This category covers releasing devices intended for use in supporting and releasing loads in connection with automatic operating devices or systems where loads at release lever hook do not exceed those specified in the individual certifications.

This category also covers releasing devices intended for use as a means of releasing air or water under pressure from a piping system confining and conducting that pressure through pipes or tubing to operate any connected pressure-operated mechanism.

A releasing device and its associated detection system may be adjusted to compensate for more or less severe ambient temperature changes by different settings of the release, or by varying the size of the compensating vents in the system to increase or decrease the rate of built-up pressure caused by exposure to some given temperature rise. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations.

RELATED PRODUCTS

See Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR) and Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment for Use in Hazardous Locations (TBCX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

vice. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Releasing Device for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REPACKAGED ELECTRICAL CONSTRUCTION EQUIPMENT (TEOZ)

GENERAL

This category covers repackaged Listed and Classified electrical construction equipment.

Required user instructions and ratings are marked on or packed with the smallest unit container in which the product is packaged.

Listed wire or cable that has been subjected to processing or respooling subsequent to its manufacture is covered under Processed Wire (ZKLU).

Lightning conductors, air terminals and fittings (see OVTZ) are intended for installation in Listed lightning protection systems and are not eligible for repackaging.

Products under UL's Listed by Report Service may require special descriptions and recommended methods of installation and are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are referenced in Repackaged Product Program Requirements at www.ul.com

UL MARK

The Listing or Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing or Classification and Follow-Up Service.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name.

The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), a control number, the appropriate product name, and information pertaining to the scope of the Classification (e.g., "AS TO ELECTRIC SHOCK AND MECHANICAL INJURY," "IN ACCORDANCE WITH IEEE C37.59").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROBOTS AND ROBOTIC EQUIPMENT (TETZ)

GENERAL

This category covers robots, integrated work cells, programmable production equipment, remote sensing equipment, robotic servo power supplies, and similar equipment.

This equipment has been investigated with respect to risks of electric shock, fire and injury to persons.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1740, "Robots and Robotic Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Robot," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROTARY AUTOMATIC PRODUCT-FILLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (TONI)

GENERAL

This category covers equipment for automatically filling fluids into aerosol cans, bottles and similar containers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rotary Automatic Product Filling Equipment for Hazardous Locations" or "Product Filling Equipment for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SANITATION, FOOD SERVICE EQUIPMENT (TSQS)

COMMERCIAL COOKING, RETHERMALIZATION AND POWERED HOT-FOOD-HOLDING AND -TRANSPORT EQUIPMENT (TSQT)

USE

This category covers cooking and hot-food-holding equipment, including brewers, steam tables, griddles, broilers, ovens, fryers, food warmers, and similar equipment intended for commercial use.

PRODUCT MARKINGS

Equipment may be marked with use limitations or may provide guidance on intended application.

Rethermalization equipment is provided with a marking that specifies the maximum capacity of the unit.

Equipment provided with a security package for installation in areas where security may be a concern is marked "Intended for use only in environments where security is a concern, such as correctional facilities, mental health facilities, or some schools."

RELATED PRODUCTS

Electric equipment and warming and serving equipment intended for commercial use and investigated to UL Safety Standards is covered under Commercial Cooking Appliances (KNGT) and Custom-built Food Service Equipment (KNNS).

Gas-fired food service equipment is covered under Gas-fired Food Service Equipment (LGQX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 4, "Commercial Cooking, Rethermalization and Hot Food Holding and Transport Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification

Commercial Cooking, Rethermalization and Powered Hot-food-holding and -Transport Equipment (TSQT)—Continued

and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

[PRODUCT IDENTITY*]

NSF/ANSI 4

Control No.

* **COOKING EQUIPMENT** or **HOT FOOD STORAGE EQUIPMENT**, or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 4" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOOD EQUIPMENT (TSQU)

USE

This category covers equipment for handling and processing food in food service applications. Products covered include tables, counters, hoods, shelves, cutting boards, wheels, casters, food shields, sinks and utensils intended for commercial use.

This category also covers custom equipment designed and manufactured for a specific installation or application. Specific types of custom equipment are identified in the individual Classifications. They may contain components, design or performance features covered by other applicable NSF standards.

This category does not cover hybrid equipment (e.g., a food transport cabinet with the capability to both heat and refrigerate food) that is not custom equipment. Such equipment is covered by NSF/ANSI 169, "Special Purpose Food Equipment and Devices."

PRODUCT MARKINGS

Equipment provided with a security package for installation in areas where security may be a concern is marked "Intended for use only in environments where security is a concern, such as correctional facilities, mental health facilities, or some schools."

RELATED PRODUCTS

Electric cooking equipment intended for commercial use and investigated to UL Safety Standards is covered under Commercial Cooking Appliances (KNGT) and Custom-built Food Service Equipment (KNNS).

Refrigerators and freezers intended for commercial use and investigated to UL Safety Standards are covered under Commercial Refrigerators and Freezers (SGKW).

Gas-fired food service equipment is covered under Gas-fired Food Service Equipment (LGQX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 2, "Food Equipment."

As appropriate, additional requirements for specific design and performance features are obtained from relevant NSF standards. These include but are not limited to:

NSF/ANSI 4, "Commercial Cooking, Rethermalization, and Powered Hot Food Holding and Transport Equipment"

NSF/ANSI 7, "Commercial Refrigerators and Freezers"

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

FABRICATED FOOD SERVICE EQUIPMENT*

NSF/ANSI 2

Control No.

* or other appropriate product name as shown in the individual Classifications (e.g., **HOTEL PAN, CUSTOM COUNTER**)

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 2" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer

Food Equipment (TSQU)—Continued

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND STORAGE FREEZERS (TSQV)

GENERAL

This category covers refrigerators and storage freezers, or components for use in these units, intended for commercial use.

Equipment intended solely for storing and/or displaying certain types of products is required to have a permanently attached label indicating what the intended products are. These products include 1) packaged food products, except ice cream and frozen desserts; and 2) nonpotentially hazardous, bottled or canned food and beverage products (e.g., beverage coolers).

Refrigerated buffet units, refrigerated food preparation units, and similar open-top refrigeration equipment is required to have permanent labels indicating that the equipment is intended for use in rooms having an ambient temperature of 30°C (86°F) or less. Display cases, for example, units intended to be installed in the customer service area, and not in the kitchen, that have glass doors only, also have this marking.

Equipment storing potentially hazardous food or beverages (except ice cream and other frozen desserts) including open-top equipment has been subject to performance testing to verify storage temperatures and compressor run time.

Prefabricated walk-in and roll-in refrigerators and storage freezers are not required to be tested. Adequate performance of these units is assured through the proper determination of refrigeration equipment demands.

Unit coolers for installation in walk-in or reach-in refrigerators and storage freezers have been investigated for design, construction and materials only.

PRODUCT MARKINGS

Equipment intended solely for the storage and display of packaged food products (other than self-service display refrigerators or units intended solely for the storage and display of ice cream and other frozen desserts) is marked "This equipment is intended for the storage and display of packaged products only."

Beverage coolers are marked "This equipment is intended for the storage and display of nonpotentially hazardous, bottled or canned products only."

Refrigerated buffet units, refrigerated food preparation units, and similar open-top refrigeration equipment are marked to indicate that the equipment is intended for use in rooms having an ambient temperature of 86°F (30°C) or less.

Type I display refrigerators are marked to indicate that the equipment is intended for use in an area where the environmental conditions are controlled and maintained so that the ambient temperature typically does not exceed 75°F (24°C).

Type II display refrigerators are marked to indicate that the equipment is intended for use in an area where the environmental conditions are controlled and maintained so that the ambient temperature typically does not exceed 80°F (27°C).

Display refrigerators intended solely for the display of foods that are not potentially hazardous are marked "This display refrigerator is not for the display of potentially hazardous foods."

Prefabricated walk-in and roll-in refrigerators and freezers used for the storage of food in the original sealed package are marked "This equipment is intended for the storage of food in the original sealed package only."

RELATED PRODUCTS

Refrigerators and freezers intended for commercial use and investigated to UL Safety Standards are covered under Commercial Refrigerators and Freezers (SGKW).

Unit coolers intended for commercial use and investigated to UL Safety Standards are covered under Unit Coolers (SPLR).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 7, "Commercial Refrigerators and Storage Freezers."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

[PRODUCT IDENTITY]*

NSF/ANSI 7

Control No.

* COMMERCIAL REFRIGERATOR, COMMERCIAL STORAGE FREEZER, COMMERCIAL REFRIGERATOR AND STORAGE FREEZER, or other appropriate product name as shown in the individual Classification

Commercial Refrigerators and Storage Freezers (TSQV)—Continued

tions. The product name is to be preceded with the text "Component of" when the product covered is not a complete refrigerator or freezer as defined by NSF/ANSI 7.

For those products which are also Listed by UL under Commercial Refrigerators and Freezers (SGKW), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 7" below the EPH Mark.

For those products which are also Listed by UL under Unit Coolers (SPLR), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 7" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DOORS AND DOOR-OPERATOR SYSTEMS FOR USE IN MEAT AND POULTRY PLANTS (TSRC)

GENERAL

This category covers doors and door-operator systems Classified with respect to their materials of construction and sanitary design for use in regulated meat and poultry plants.

Authorities Having Jurisdiction should be consulted regarding suitability of this equipment for use in specific applications.

These products have not been investigated for electrical, fire or casualty hazards unless the product also bears UL's Listing Mark of Safety. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to these hazards.

RELATED PRODUCTS

For doors and door operators investigated to UL Safety Standards, see Door, Drapery, Gate, Louver, and Window Operators and Systems (FDDR).

For food-service equipment investigated for compliance with ANSI/NSF Standards, see Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment (TSQT), Food Equipment (TSQU), Commercial Refrigerators and Storage Freezers (TSQV) and Commercial Powered Food Preparation Equipment, Sanitation (DUIA).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

Doors and door-operator systems are investigated in accordance with the Code of Federal Regulations, 9 CFR, Parts 308 and 381, and the Federal Register, Vol. 62, No. 164, Appendix A, "Guidelines on the Establishment of Facilities and Equipment" (issued August 25, 1997).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

[PRODUCT IDENTITY]*

FOR SANITATION IN ACCORDANCE WITH 9CFR, PARTS 308 AND 381, AND FED. REG. VOL. 62, NO. 164, APPENDIX A (AUGUST 25, 1997)

Control No.

* DOOR, DOOR OPERATOR SYSTEM, DOOR AND DOOR OPERATOR SYSTEM, or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by UL under Door, Drapery, Gate, Louver, and Window Operators and Systems (FDDR), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "For sanitation in accordance with 9CFR, Parts 308 and 381, and Fed. Reg. Vol. 62, No. 164, Appendix A (August 25, 1997)" in close proximity to the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FREEZERS, DISPENSING (TSRE)

USE

This category covers dispensing freezers intended for commercial use. The types of freezers include:

1. Dispensing freezers that process and freeze previously pasteurized

Freezers, Dispensing (TSRE)—Continued

product, such as soft ice cream, yogurt and custard, then dispense that product directly into a consumer's container

2. Dispensing freezers that dispense premanufactured frozen product, such as ice cream, directly into a consumer's container
3. Batch-dispensing freezers

PRODUCT MARKINGS

Each dispensing freezer is marked with the manufacturer's recommended cleaning and sanitizing procedures.

Batch-dispensing freezers are not designed for product storage and are marked that a single batch of product should not remain in the unit for longer than one hour.

RELATED PRODUCTS

Dispensing freezers intended for commercial use and investigated to UL Safety Standards are covered under Ice Cream Makers (SINX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 6, "Dispensing Freezers."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

DISPENSING FREEZER*

NSF/ANSI 6
Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by UL under Ice Cream Makers (SINX), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 6" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE-MAKING EQUIPMENT, AUTOMATIC (TSVG)

USE

This category covers automatic ice makers intended for commercial use. This category also covers commercial equipment used to process, convey, dispense and hold ice.

PRODUCT MARKINGS

Automatic ice-making equipment is marked with the manufacturer's recommended cleaning and sanitization procedures.

RELATED PRODUCTS

Ice makers intended for commercial use and investigated to UL Safety Standards are covered under Ice Makers (SJBV).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 12, "Automatic Ice Making Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

AUTOMATIC ICE MAKER*

NSF/ANSI 12
Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by UL under Ice Makers (SJBV), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 12" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Ice-making Equipment, Automatic (TSVG)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOOD- AND BEVERAGE-DISPENSING EQUIPMENT, MANUAL (TSXL)

GENERAL

This category covers equipment and/or devices intended for commercial use that dispense food or beverages in bulk or portions. Equipment directly connected to the potable water supply is intended to comply with local plumbing codes.

This category does not cover vending machines, dispensing freezers, bulk milk-dispensing equipment, beer taps (valves) or coffee urns.

PRODUCT MARKINGS

Dispensing equipment designed without temperature-controlled storage of potentially hazardous foods or beverages is marked "This machine is designed only for use with a specific product and container combination. The use of a product and container combination not recommended by the manufacturer may result in consumer illness." In addition, it identifies the product and container combinations for which the equipment is approved, or directs the operator to consult the manufacturer of the equipment for appropriate product and container combinations.

RELATED PRODUCTS

Beverage coolers and beverage-cooler dispensers are covered under Beverage Coolers and Beverage-Cooler Dispensers (SFWY).

Coffee machines investigated to sanitation requirements are covered under Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment (TSQT).

Coffee urns investigated to sanitation requirements are covered under Food Equipment (TSQU).

Commercial bulk milk-dispensing equipment investigated to sanitation requirements is covered under Milk-dispensing Equipment, Commercial, Bulk (TSXQ).

Vending machines for food and beverages investigated to sanitation requirements are covered under Vending Machines for Food and Beverages (TSYA).

Valves, beer taps, and other special beverage-dispensing devices investigated to sanitation requirements are covered under Special Purpose Food Equipment and Devices, Sanitation (VCZU).

Vending machines are covered under Vending Machines (YW XV).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 18, "Manual Food and Beverage Dispensing Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

MANUAL DISPENSING EQUIPMENT*

NSF/ANSI 18
Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 18" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MILK-DISPENSING EQUIPMENT, BULK, COMMERCIAL (TSXQ)

GENERAL

This category covers bulk-milk-dispensing equipment, dispensing servings of milk or milk products by manual or machine actuation, intended for commercial use.

Milk-dispensing Equipment, Bulk, Commercial (TSXQ)—Continued

This category does not cover dispensing freezers, vending machines or manual food- and beverage-dispensing devices. Bulk-milk dispensers are marked to indicate that the equipment is intended for use in rooms having an ambient temperature of 86°F (30°C) or less.

RELATED PRODUCTS

Beverage coolers and dispensers intended for commercial use and investigated to UL Safety Standards are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFWY).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 20, "Commercial Bulk Milk Dispensing Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

COMMERCIAL BULK-MILK-DISPENSING EQUIPMENT*
NSF/ANSI 20
Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by UL under Beverage Coolers and Beverage Cooler-Dispensers (SFWY), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 20" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CURTAINS FOR USE IN COMMERCIAL FOOD-SERVICE ENTRANCEWAYS (TSXT)

USE

This category covers air curtains intended for use over service and customer entryways and windows in commercial food-service establishments.

PRODUCT MARKINGS

These air curtains are provided with the manufacturer's instructions specifying the maximum design width and height of the opening to be protected.

RELATED PRODUCTS

Nonheating-type electric air-curtain fans intended for commercial use and investigated to UL Safety Standards are covered under Fans, Electric (GPWW); heating-type electric air-curtain fans are covered under Air Heaters, Room, Fixed and Location-dedicated (KKWS).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 37, "Air Curtains for Entranceways in Food and Food Service Establishments."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

AIR CURTAIN
FOR USE IN COMMERCIAL FOOD SERVICE ENTRANCEWAYS*
NSF/ANSI 37
Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 37" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

Air Curtains for Use in Commercial Food-service Entranceways (TSXT)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RESIDENTIAL DISHWASHERS (TSXU)

USE AND INSTALLATION

This category covers dishwashers intended for residential use. A residential dishwasher is designed and constructed to wash and sanitize dishes by means of a spray wash and a sanitizing rinse. It is intended for use in a private home or other location that is not a food establishment as defined by Section 1.201-10 of the United States FDA Food Code.

Each dishwasher is provided with a means to indicate that the sanitization cycle has been successfully completed when sanitization is selected.

Authorities Having Jurisdiction should be consulted with respect to requirements for connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Residential dishwashers are marked "Certified residential dishwashers are not intended for licensed food establishments."

RELATED PRODUCTS

For dishwashers intended for residential use investigated to UL Safety Standards, see Dishwashers, Household (DM1Y); for dishwashers intended for commercial use, see Commercial Warewashing Equipment (TSXV).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

These products have been investigated for public health and sanitation requirements in accordance with NSF/ANSI 184, "Residential Equipment - Residential Dishwashers."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

RESIDENTIAL DISHWASHER
NSF/ANSI 184
Control No.

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 184" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL WAREWASHING EQUIPMENT (TSXV)
GENERAL

This category covers stationary rack- and conveyor-type warewashing equipment intended for commercial use. Typical ware includes dishes, glasses, pots, pans and utensils. Cleaning is accomplished by spray of detergent solutions and water, with sanitizing effected through exposure to hot water and/or chemical sanitizing solutions.

RELATED PRODUCTS

For electric, steam and gas-fired dishwashers and glasswashers intended for commercial use investigated to UL Safety Standards, see Dishwashers, Commercial (DMGR).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

These products have been investigated for sanitation requirements in accordance with NSF/ANSI 3, "Commercial Warewashing Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

COMMERCIAL WAREWASHING EQUIPMENT*
NSF/ANSI 3
Control No.

* or other appropriate product name as shown in the individual Classifications

Commercial Warewashing Equipment (TSXV)—Continued

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text “NSF/ANSI 3” below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHATTER CONTAINMENT OF LAMPS FOR USE IN REGULATED FOOD ESTABLISHMENTS (TSXX)

USE

This category covers shatter protection and protected lamps intended for use in food applications to reduce the risk of adulteration of food caused by broken glass. These products are Classified for design and construction characteristics relating to sanitation and performance of the shatter-protection means.

The types of shatter protection covered under this category include shields, guards, globes, tubes and sleeves. Also covered are integrally-protected lamps employing coatings applied directly to the lamp.

This category does not cover luminaires (lighting fixtures), lampholders or other apparatus that support the lamps and/or shatter-containment mechanism.

The breakage of lamps in food establishments, including processing environments and retail facilities, can present a risk of adulteration to exposed food. Protection against adulteration is addressed in 21CFR110, “Current Good Manufacturing Practice in Manufacturing, Packing, or Holding Human Food,” and the U.S. FDA Food Code, Chapter 6, Subpart 6-202.11, “Light Bulbs, Protective Shielding.”

Lamps are fragile and can break regardless of the precautions taken to avoid this, including use of a shatter-containment system. Therefore the performance of the containment systems under use conditions is only investigated to determine whether the risk of food adulteration is mitigated when such systems are installed and used as intended. Producers are then able to demonstrate performance under use conditions and provide uniform guidance to facility operators and personnel on the intended applications for the shatter-containment system.

These lamps are Classified for use in three types of environments: general use, high temperature and low temperature. General use correlates with facility lighting. Low-temperature lamps are conditioned at water-freezing temperatures, while high-temperature lamps are conditioned at temperatures representative for commercial cooking applications.

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2007A, “Outline of Investigation for Shatter Containment of Lamps for Use in Regulated Food Establishments.”

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

LAMP*
AS TO + ONLY
Control No.

* or other appropriate product name as shown in the individual Classifications

+ **SHATTER CONTAINMENT** or **SHATTER PROTECTION**

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text “AS TO + ONLY” below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES FOR FOOD AND BEVERAGES (TSYA)

GENERAL

This category covers food and beverage vending machines that dispense unit servings of food or beverages, in bulk or in packages, upon insertion of a coin, paper currency, token, card, key or by manual operation. These machines are intended for commercial use.

RELATED PRODUCTS

For vending machines intended for commercial use investigated to UL Safety Standards, see Vending Machines (YWXV) and Vending Machines, Refrigerated (SQMX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 25, “Vending Machines for Food and Beverages.”

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

VENDING MACHINE FOR FOOD AND BEVERAGES*
NSF/ANSI 25
Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by UL under Vending Machines (YWXV) or Vending Machines, Refrigerated (SQMX), the marking includes the appropriate Listing Mark, the EPH Mark, and the text “NSF/ANSI 25” below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER HEATERS, HOT-WATER-SUPPLY BOILERS AND HEAT-RECOVERY EQUIPMENT (TSYO)

GENERAL

This category covers commercial water heaters and hot water supply boilers operated by electricity, gas and/or oil, and heat recovery equipment. The equipment provides hot water for washing, sanitizing and other purposes in food service applications. It is intended that the manufacturer provide instructions for installation, operation and maintenance of the equipment. For those units with recirculation systems supplied by the manufacturer, it is intended that the manufacturer provide guidelines for the acceptable method(s) of installation and recirculation.

This category does not cover boilers used for space heating.

RELATED PRODUCTS

For electrically-operated equipment investigated to UL Safety Standards, see the following categories:

Commercial Storage Tank and Booster Water Heaters (KSBZ)
Miscellaneous Water Heaters (KSGR)
Boilers, Electric (BDJS)

For gas-fired and/or oil-fired equipment investigated to UL Safety Standards, see the following categories:

Gas-fired Water Heaters, Commercial-Industrial (LUYW)
Gas-Oil-fired Water Heaters (LVCQ)
Oil-fired Water Heaters (LVFV)
Gas-fired Boiler Assemblies (KVTR)
Gas-Oil-fired Boiler Assemblies (KWGZ)
Oil-fired Boiler Assemblies (KWUX)
Waste-heat Recovery Boiler Assemblies (KXFJ)

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 5, “Water Heaters, Hot Water Supply Boilers, and Heat Recovery Equipment.”

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

Water Heaters, Hot-water-supply Boilers and Heat-recovery Equipment (TSYO)—Continued**WATER HEATER*
NSF/ANSI 5
Control No.**

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 5" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH)**USE**

This category covers equipment and accessories used in the manufacturing, metrology, assembly and testing of semiconductor products. Equipment intended for both semiconductor-product-related use and non-semiconductor-product-related use may be covered under this category, as well as in the applicable non-semiconductor categories. These products do not include equipment intended only for non-semiconductor-product-related use.

FACTORS NOT INVESTIGATED

The accuracy or quality characteristics of any measured, analyzed or prepared quantities have not been investigated. The sound-pressure levels and physiological effects of the radio frequency have not been investigated.

REQUIREMENTS

This equipment has only been investigated for use in unclassified locations as defined in ANSI/NFPA 70, "National Electrical Code" (NEC). Equipment that has been investigated to determine its suitability for use in hazardous (classified) locations as defined in the NEC may be found in the Hazardous Locations Equipment Directory.

This equipment may also have been investigated to SEMI®S2-XX, "Safety Guidelines for Semiconductor Manufacturing Equipment," where "XX" is the edition date. Such equipment bears the marking, "Design evaluated by UL in accordance with Safety Guidelines for Semiconductor Manufacturing Equipment, SEMI® S2-XX. See accompanying report for details." This marking is located adjacent to the UL Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUTOMATION AND WAFER-HANDLING EQUIPMENT (TWPV)**GENERAL**

This category covers automated production equipment, remote sensing equipment, robotic servo power supplies, wafer-handling equipment and the like. Equipment covered under this category includes, but is not limited to, equipment involving:

- Wafer Sorters
- Front Opening Universal Ports (FOUP)
- Wafer Transport Systems
- Wafer Loaders
- Standard Mechanical Interfacers (SMIF)
- Other Handling and Transfer Equipment

RELATED PRODUCTS

For apparatus designated as robotic equipment, see Robots and Robotic Equipment (TETZ).

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2011, "Outline of Investigation for Factory Automation Equipment," or UL 3121-1, "Process Control Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Ser-

Automation and Wafer-handling Equipment (TWPV)—Continued

vice. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the category identifier "Semiconductor Manufacturing Equip" or "TWPV." The Listing Mark may also include the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL PANELS (TWRP)**USE**

The category covers control panels and equipment used to provide power and control to semiconductor process equipment. The Certification Mark for these products covers both the enclosure and the panel provided with it. The panels may be provided with RF power supplies, DC power supplies, control transformers, motor controllers, overload devices, contactors, a main disconnect device and emergency power off (EPO). Semiconductor manufacturing equipment control panels have been certified only as to electrical fire and shock hazards incident to their use in ordinary locations. The compatibility of the panel with the controlled equipment from the standpoint of other potential hazards has not been investigated.

Control panels are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

RELATED PRODUCTS

For industrial control panels for general use, see Industrial Control Panels (NITW) and Industrial Control Equipment (NIMX).

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 508A, "Industrial Control Panels." In addition, the following applicable requirements from SEMI S2-XX are applied, where XX is the issue date of SEMI S2: Safety-related Interlocks, Electrical, Emergency Shutdown, Hazard Warnings, Ergonomics, Seismic, and Documentation.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]

AS TO FIRE AND ELECTRIC SHOCK ONLY

Control No.

* CONTROL PANEL FOR SEMICONDUCTOR MANUFACTURING EQUIPMENT or SEMICONDUCTOR MANUFACTURING EQUIPMENT CONTROL PANEL

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIQUID-CHEMICAL DISTRIBUTION SYSTEMS (TWSP)**GENERAL**

This category covers equipment designed for activities involving control of liquid chemicals used in wafer processing, such as mixing, dispensing, and waste management.

These units may include a complete distribution system consisting of pumps, liquid-chemical-containing components (e.g. tubing), and associated electrical controls, or modules of such a system.

This equipment is limited to the use of nonflammable liquids. Semiconductor process chemicals present certain inherent hazards. Such inherent hazards, such as toxicity, have not been investigated. The instructions and warnings supplied with and applicable to each piece of equipment should be carefully observed.

The liquid-chemical pumps used in this equipment may be individually covered under Power-operated Chemical Pumps (RBOG) and are intended for liquid transfer or loop systems. Limitations of use, including chemical service and pressure and temperature ratings, are indicated in the individual certifications and are marked on the pump.

SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH)

Liquid-chemical Distribution Systems (TWSP)—Continued

This equipment is marked with the following information: "For *, ____ psi max, ____ °F," where "*" is the name of the chemical.

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 3121-1, "Process Control Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the category identifier "Semiconductor Manufacturing Equip" or "TWSP." The Listing Mark may also include the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MISCELLANEOUS SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWTZ)**GENERAL**

This category covers miscellaneous semiconductor manufacturing equipment including, but not limited to, equipment involving commercial processing water chillers, cryogenic refrigeration systems, cryopumps and compressors, heat exchangers, recirculators, turbo molecular pumps, and water heaters.

USE

Water chillers, heaters, heat exchangers and recirculators are intended for cooling and tempering water used in semiconductor processing system (PVD, CVD, Etcher, etc.). These units may be provided with a complete refrigeration system (consisting of a hermetic motor-compressor, condenser, evaporator, refrigerant control, electrical controls, wiring and associated refrigerant-containing components including tubing) and associated electrical controls, and may also incorporate means for heating and circulating water.

Vacuum pumps/accessories, turbo molecular pumps, cryopumps and compressors are intended for use on nominal system voltages of 600 V or less, except for equipment driven by an electromagnetic mechanism, which is for use on nominal system voltages of 250 V or less.

SUPPLY CONNECTIONS

These appliances are cord-connected or provided with means for field wiring connections.

SPECIAL INSTRUCTIONS

For equipment with refrigeration systems, documentation (instructions and warnings) supplied with the equipment identifies the investigated refrigerants.

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

Equipment containing refrigeration systems or components thereof are investigated to UL 61010A-1, "Electrical Equipment for Laboratory Use; Part 1: General Requirements," ANSI/UL 471, "Commercial Refrigerators and Freezers", and ANSI/UL 1995, "Heating and Cooling Equipment".

Heat exchangers and water heaters are investigated to UL 61010A-1 and UL 1995.

Equipment containing air compressors or vacuum pumps are investigated to UL 61010A-1 and UL 1450, "Motor-Operated Air Compressors, Vacuum Pumps, and Painting Equipment."

Other miscellaneous equipment is investigated to the standards indicated in the individual certifications covering the equipment.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the category identifier "Semiconductor Manufacturing Equip" or "TWTZ." The Listing Mark may also include the appropriate product name as shown in the individual Listings.

SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH) 403

Miscellaneous Semiconductor Manufacturing Equipment (TWTZ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS EQUIPMENT (TWWT)**GENERAL**

This category covers semiconductor process equipment, process management equipment, and process signaling equipment. Equipment covered under this category includes, but is not limited to, equipment involving:

Chemical Mechanical Planarization (CMP)
Chemical Vapor Deposition (CVD)
Dry Etching
Epitaxy
Ion Implantation
Liquid Heating
Lithography
Photomasking
Physical Vapor Deposition (PVD)
Spin/Rinse Drying
Vacuum Deposition (Evaporation/Sputtering)
Wet Etching
Scrubbers

This equipment may use liquid chemicals to complete a process. Equipment that does not utilize liquid chemicals for a process (i.e., serves only to distribute, store, or prepare the liquid chemicals) is covered under Liquid Chemical Distribution System Equipment (TWSP). Process equipment has been certified only as to fire and electric shock hazards incident to their use. The chemical hazards associated with this equipment (e.g., compatibility, inhalation, ingestion, contact) have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 3121-1, "Process Control Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[CATEGORY IDENTIFIER*]**AS TO FIRE AND ELECTRIC SHOCK ONLY****Control No.***** SEMICONDUCTOR MANUFACTURING EQUIP or TWWT**

The Classification Mark may also include the appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEMICONDUCTOR MANUFACTURING EQUIPMENT, LIMITED PRODUCTION (TWWU)**USE**

This category covers equipment and accessories that are of limited production. Equipment bearing the limited-production Certification Mark is not under routine Follow-Up Service.

This equipment has been certified only as to electrical fire and shock hazards incident to its use in unclassified locations.

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and ANSI/NFPA 79, "Electrical Standard for Industrial Machinery," in addition to the requirements contained in UL Subject 2011, "Outline of Investigation for Factory Automation Equipment."

404 SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH)

Semiconductor Manufacturing Equipment, Limited Production (TWWU)—Continued

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LIMITED-PRODUCTION SEMICONDUCTOR MANUFACTURING EQUIPMENT
AS TO ELECTRICAL FIRE AND SHOCK HAZARDS ONLY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SERVICE CABLE (TXKT)

SERVICE-ENTRANCE CABLE (TYLZ)

GENERAL

This category covers service-entrance cable designated Type SE and Type USE for use in accordance with Article 338 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Service-entrance cable, rated 600 V, is certified in sizes 14 AWG and larger for copper, and 12 AWG and larger for aluminum or copper-clad aluminum. The cable is designated as follows:

Type SE — Indicates cable for aboveground installation. Both the individual insulated conductors and the outer jacket or finish of Type SE are suitable for use where exposed to sun. Type SE cable contains Type RHW, RHW-2, XHHW, XHHW-2, THWN or THWN-2 conductors. Maximum size is 4/0 AWG copper or 300 kcmil aluminum or copper-clad aluminum.

Types USE and USE-2 — Indicates cable for underground installation including direct burial in the earth. Maximum size is 2000 kcmil. Cable in sizes 4/0 AWG copper, aluminum or copper-clad aluminum and smaller and having all conductors insulated is suitable for all of the underground uses for which Type UF cable is permitted by the NEC. Multiconductor Type USE cable contains conductors with insulation equivalent to RHW or XHHW. Multiconductor Type USE-2 contains insulation equivalent to RHW-2 or XHHW-2 and is rated 90°C wet or dry. Single- and multiconductor Types USE and USE-2 are not suitable for use in premises. Single- and multiconductor Types USE and USE-2 are not suitable aboveground except to terminate at the service equipment or metering equipment. Both the insulation and the outer covering, when used, on single- and multiconductor Types USE and USE-2, are suitable for use where exposed to sun.

Submersible Water Pump Cable — Indicates a multiconductor cable in which 2, 3 or 4 single-conductor Type USE or USE-2 cables are provided in a flat or twisted assembly. The cable is certified in sizes 14 AWG to 4/0 AWG inclusive, copper, and 12 AWG to 4/0 AWG inclusive, aluminum or copper-clad aluminum. The cable is tag marked "For use within the well casing for wiring deep-well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The insulation may also be surface marked "Pump Cable." The cable may be directly buried in the earth in conjunction with this use.

For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Based upon tests which have been made involving the maximum heating that can be produced, an uninsulated conductor employed in a service cable assembly is considered to have the same current-carrying capacity as the insulated conductors even though it may be smaller in size.

PRODUCT MARKINGS

The Type designation of the conductors may be marked on the surface of the cable. When used, this marking indicates that the temperature rating for the cable corresponds to the temperature rating of the conductors. When this marking does not appear, the temperature rating of the cable is 75°C.

Cable acceptable for installation in cable trays is so marked.

Cable may employ copper, aluminum, or copper-clad aluminum conductors. Cable with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

SERVICE CABLE (TXKT)

Service-entrance Cable (TYLZ)—Continued

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 854, "Service-Entrance Cables."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Service-entrance cable that contains copper or copper-clad aluminum conductor(s) has the product name "Service-Entrance Cable"; service-entrance cable that contains aluminum conductors has the product name "Aluminum Service-Entrance Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Service-entrance Cable Fittings (TYZX)

GENERAL

This category covers service-entrance-cable connectors and service-entrance heads or hoods suitable for use with service-entrance cable. This cable is intended for installation and use in accordance with the following information.

The individual certifications for each connector used with nonmetallic-sheathed cable may have details about the size and number of the nonmetallic-sheathed cable it will secure.

All male threaded fittings have only been investigated for use with lock-nuts.

Service-entrance heads or hoods are intended to be used on service-entrance cable that is mounted in a vertical position. Service-entrance heads or hoods are suitable for outdoor use and in wet locations.

Reusability — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

MARKINGS

Some connectors are also acceptable for use with flexible cord, flexible nonmetallic tubing or nonmetallic-sheathed cable as indicated on the device or carton. Connectors for use with nonmetallic-sheathed cable are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations. Unless marked otherwise on the carton, the connectors are suitable for connection of only one cable per cable entry.

Rubber and neoprene gland-type fittings suitable for wet locations are identified by a "Wet Location" marking on the carton.

Fittings are marked on the carton with the cable range sizes for which the fitting is intended to be used.

RELATED PRODUCTS

Fittings covered under Power and Control Tray Cable Connectors (QPOZ), Nonmetallic-sheathed Cable Connectors (PXJV), Conduit Fittings (DWTT) and Armored Cable Connectors (AWSX) are also suitable for use with service-entrance cable when specifically indicated on the device or carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Service Entrance Cable Fitting," "Connector" or "Service Entrance Head," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHIPBOARD CABLE, MARINE (UBVZ)

USE AND INSTALLATION

This category covers cable for installation and use aboard marine vessels, fixed and floating offshore petroleum facilities and mobile offshore drilling units (MODUs) in accordance with United States Coast Guard Electrical Engineering Regulation 46CFR111.60, "Wiring Materials and Methods." This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

The cable covered under this category is distribution cable rated 600 V, 1 kV, 2 kV or 5 kV, 5–35 kV shielded, control cable rated 600 V, 1 kV, and signal and instrumentation cable rated 300 V.

PRODUCT MARKINGS

Cable is surface marked with temperature and voltage rating and the cable Type designation.

Cable surface marked with a low-temperature rating complies with low-temperature bending and low-temperature impact tests.

Cable surface marked "FT4" complies with the requirements of the CSA FT4 Flame Test.

Cable that has a continuous corrugated aluminum armor is identified by the marking "CWCMC" in addition to the cable Type designation.

ADDITIONAL INFORMATION

For additional information, see Marine Products (AAMP) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1309, "Marine Shipboard Cable."

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEEE 1580-2001" complies with the construction and performance requirements of that international standard.

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEEE 45-1998" complies with the construction and performance requirements of that international standard.

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEC 60092 Part No. [specify appropriate Part No.]" complies with the construction and performance requirements of that international standard.

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marine Shipboard Cable."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEEE 1580-2001, IEEE 45-1998, or IEC 60092 Part No. 350, 353, 354, 373, 374, 375 and/or 376. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and "ALSO CLASSIFIED IN ACCORDANCE WITH [Specification name and number]."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHIPBOARD CABLE FITTINGS, MARINE (UBWE)

USE AND INSTALLATION

This category covers fittings intended for use with marine shipboard cable with and without metal wire armor and with and without nonmetallic jacket over the metal wire armor. No splices of conductors are intended to be made in the fittings. Restrictions on application, position, and/or location of the fittings are indicated in the manufacturer's instructions.

All male threaded fittings have only been investigated for use with lock-nuts.

These fittings are intended for use on mobile offshore oil rigs and drilling platforms. Investigations of these fittings include an evaluation for conformity to the installation and use provisions of United States Coast Guard Electrical Engineering Regulation 46CFR111.60, "Wiring Materials and Methods," as applied by the Authority Having Jurisdiction.

Reusability — Fittings have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Shipboard Cable, Marine (UBVZ), Marine Products (AAMP) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Shipboard Cable Fittings, Marine (UBWE)—Continued

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Marine Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Shipboard Cable Fitting," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHIPBOARD CABLE, MARINE, CLASSIFIED IN ACCORDANCE WITH INTERNATIONAL SPECIFICATIONS (UBWK)

GENERAL

This category covers marine shipboard cable whose construction and performance characteristics have been determined by UL to be in accordance with one or more of the following standards:

- IEEE 45 (1998), "IEEE Recommended Practice for Electric Installations on Shipboard"
- IEEE 1580 (2001), "IEEE Recommended Practice for Marine Cable for Use on Shipboard and Fixed or Floating Platforms"
- IEC 60092-350, "Electrical Installations in Ships – Part 350: Shipboard Power Cables - General Construction and Test Requirements"
- IEC 60092-353, "Electrical Installations in Ships – Part 353: Single and Multicore Non-Radial Field Power Cables with Extruded Solid Insulation for Rated Voltages 1 kV and 3 kV"
- IEC 60092-354, "Electrical Installations in Ships – Part 354: Single- and Three-Core Power Cables with Extruded Solid Insulation for Rated Voltages 6 kV, 10 kV and 15 kV"
- IEC 60092-373, "Shipboard Telecommunication Cables and Radio-Frequency Cables Shipboard Flexible Coaxial Cables"
- IEC 60092-374, "Shipboard Telecommunication Cables and Radio-Frequency Cables Telephone Cables for Non-Essential Communication Services"
- IEC 60092-375, "Shipboard Telecommunication Cables and Radio-Frequency Cables General Instrumentation, Control and Communication Cables"
- IEC 60092-376, "Electrical Installations in Ships Part 376: Shipboard Multicore Cables for Control Circuits"

This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MARINE SHIPBOARD CABLE IN ACCORDANCE WITH [appropriate Specification name and number as noted above] No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES (UCEV)

This category covers equipment intended for general utility signaling, such as paging and intercommunication, and has been investigated only with regard to electrical fire and accident hazard.

AUDIBLE-SIGNAL APPLIANCES, GENERAL SIGNAL (UCST)

GENERAL

This category covers electrically operated bells, buzzers, horns and similar signal-sounding appliances intended for general signaling only. These devices may differ from audible-signal appliances intended for fire-protective signaling service in construction, and are not required to be marked with an audibility rating.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Audible Signal Appliance for General Signaling (Nonfire-Alarm) Use" or "Audible Signal Appliance Subassembly for General Signaling (Nonfire-Alarm) Use."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 464, "Audible Signal Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

G - General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL SYSTEM UNITS (UDTZ)

USE

This category covers units intended to be used in combinations with related certified equipment to form installed systems for general-utility signaling purposes. The units have been investigated only for hazard of fire and electric shock and are not associated with property protection and/or life safety. The general-purpose signaling nature of each product is categorized as Type NM (Nonmonitored).

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the phrase "Type NM" and a the specific use description as indicated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2017, "General-Purpose Signaling Devices and Systems."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the Signaling Mark is also included. The Signaling Mark consists of the Listing Mark elements detailed above, with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and Emergency Signaling" or "and Fire Alarm," as appropriate (e.g., "General Signaling and Fire Alarm Equipment").

Some of these products are also Listed under Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Enclosed Energy Management," "and Temperature-

Signal System Units (UDTZ)—Continued

indicating," "and Temperature-regulating," "and Information Technology" or "and Telephone," as appropriate (e.g., "General Signaling and Telephone Equipment").

For products also bearing the Signaling Mark, the product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F - Fire Alarm Equipment

HN - Hospital Signaling and Nurse Call Equipment

G - General Signaling Equipment

E - Emergency Signaling Equipment

EM - Enclosed Energy Management Equipment

IT - Information Technology Equipment

T - Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPEAKERS (UEAY)

USE AND INSTALLATION

This category covers speakers investigated for use in general-utility signaling applications with respect to risk of fire and electric shock.

Where a certified product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual certifications, and each part bears a separate Certification Mark. Marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual certifications.

Speakers and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual certifications. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Signaling Speaker," "Signaling Speaker Enclosure" or "Signaling Speaker Accessory."

RELATED PRODUCTS

Devices intended for use in fire alarm and/or emergency communication systems are covered under Speakers and Amplifiers for Fire Protective Signaling Systems (UUMW). These devices are also suitable for use in general-utility signaling applications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1480, "Speakers for Fire Alarm, Emergency, and Commercial and Professional Use."

The basic standard used to investigate nonmetallic materials of products marked suitable for use in air-handling spaces is UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

G - General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VISUAL-SIGNAL APPLIANCES (UEES)

USE AND INSTALLATION

This category covers visual-signal appliances and accessories intended for use in general-signaling applications. These devices have been investigated with respect to risk of fire and shock.

Accessories, such as enclosures and back boxes, and the products with which they are compatible are identified in the individual certifications.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual certifications. The marking on each part references installation instructions which show assembly and installation of the parts to form a certified product.

These products are intended for indoor use only unless otherwise specifically marked.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Visual Signaling Appliance" or "Visual Signaling Appliance Accessory."

RELATED PRODUCTS

Devices intended for use in fire alarm and/or emergency-protective signaling applications are covered under Visual-signal Appliances for Fire Protective Signaling Systems (UVAV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1638, "Visual Signaling Appliances – Private-Mode Emergency and General Utility Signaling."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

G – General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES, MISCELLANEOUS (UEHX)

GENERAL

This category covers miscellaneous signaling appliance units that have been investigated only for hazard of fire and electric shock and are not associated with property protection and/or life safety. The general-purpose signaling nature of each product is categorized as Type NM (Nonmonitored).

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the phrase "Type NM" and a the specific use description as indicated in the individual certifications.

RELATED PRODUCTS

For information regarding Emergency Signaling, see Emergency Alarm Equipment (FSVW), Emergency Alarm System Control Units (FSZI) and Emergency Alarm System Accessories (FSYB).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2017, "General-Purpose Signaling Devices and Systems."

UL MARK

The Listing Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the Signaling Mark is also included. The Signaling Mark consists of the Listing Mark elements detailed above, with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL

Signal Appliances, Miscellaneous (UEHX)–Continued

symbol. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and Emergency Signaling" or "and Fire Alarm," as appropriate (e.g., "General Signaling and Fire Alarm Equipment").

Some of these products are also Listed under Security categories. When applicable, the Security Mark is also included. The Security Mark consists of the Listing Mark elements detailed above, with the word "SECURITY" above the UL symbol and the word "LISTED" below the UL symbol. When applicable, the product name may include "and Security" (e.g., "General Signaling and Security Equipment").

Some of these products are also Listed under Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "General Signaling and Telephone Equipment").

For products also bearing the Signaling Mark, the product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

S – Security Equipment

F – Fire Alarm Equipment

HN – Hospital Signaling and Nurse Call Equipment

G – General Signaling Equipment

E – Emergency Signaling Equipment

EM – Enclosed Energy Management Equipment

IT – Information Technology Equipment

T – Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UFXR)

Equipment for use in hazardous locations investigated for fire-protective signaling service also appears under Signal and Fire Alarm Equipment and Services (SYK) in the Fire Protection Equipment Directory.

AUDIBLE-SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UGKZ)

GENERAL

This category covers audible-signal appliances, such as bells, sirens and horns.

Audible-signal appliances certified for use in any of the groups under Class I hazardous locations have been investigated with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. Those for use in any of the groups under Class II hazardous locations have been investigated for dust-tightness and have been subjected to operation tests to establish safety of operation in the presence of the specific combustible dusts, and also to establish that they will function as intended with dust accumulated on external parts.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Audible Signal Appliance for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

EXTINGUISHING SYSTEM ATTACHMENTS FOR USE IN HAZARDOUS LOCATIONS (UGYX)

GENERAL

This category covers devices having electrical signaling contacts that are designed for attachment to extinguishing system equipment so as to provide (1) alarm signals indicating discharge of extinguishing means, and (2) supervisory signals indicating abnormal conditions of extinguishing system equipment and restoration to normal.

The signal contacts of these attachments may be of the noncoded or coded type.

Devices classed as noncoded types have contacts that perform a switching function and are intended for connection to actuating circuits of a separate electrically operated transmitter or to the signaling line circuit of a separate electrical control unit by which their action is indicated.

Devices classed as coded types have contacts that perform a coded signaling impulse function resulting from the operation of a transmitting mechanism, which is a part of the attachment, and are intended for connection to the signaling line circuit of a separate electrical control unit by which their action is indicated.

ATTACHMENT TYPES

Attachments for automatic sprinkler systems are classed as follows:

Waterflow Alarm Signal Types

Alarm Dry-pipe Valve Attachment — Mechanically operated on lifting of alarm valve clapper or pressure operated by suitable connection to alarm or dry-pipe valve piping trim.

Waterflow Indicator — Paddle operated.

Special Attachment — Type not included by above class.

Supervisory Signal Types

Valve Position Signal Attachment — Operated by mechanical linkage to movable parts of valve.

Water Level Signal Attachment — Operated by tank float.

Pressure Signal Attachment — Operated by pressure change of air, steam or water.

Temperature Signal Attachment — Operated by water or air temperature change.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Extinguishing System Attachment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE ALARM DEVICES FOR USE IN HAZARDOUS LOCATIONS (UHMV)

USE AND INSTALLATION

This category covers coded and noncoded fire alarm boxes and fire and watch boxes for use with private fire alarm systems.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Alarm Box for Hazardous Locations" or "Fire and Watch Box for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

Fire Alarm Devices for Use in Hazardous Locations (UHMV)—Continued

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLAME-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS (UIAZ)

USE AND INSTALLATION

This category covers fire detectors designed to detect flames, either in infrared or ultraviolet regions.

Each detector provides signaling contacts for connection to a signal-indicating appliance, electrically actuated transmitters, or a system control unit to form a fire alarm system as indicated by the installation wiring diagram supplied with the unit.

Each unit is intended to be installed in accordance with the manufacturer's control drawing, the Authority Having Jurisdiction, and ANSI/NFPA 72, "National Fire Alarm Code," or other NFPA standards that may apply.

Detector Location

The location of flame detectors should be based on an engineering survey of the conditions to be anticipated in service and the principle of operation. Detectors should be installed only after a thorough study has been made of the area or premises to be protected (whether in planning or construction stage) and of the life and property values involved. Prior to engineering, a layout of an installation and a copy of the manufacturer's technical bulletin should be obtained and reviewed to determine recommended detector locations. Consideration should be given to all features which could have a bearing on the location and sensitivity of the detectors, including such pertinent factors as coverage in partitioned sections, ceiling heights, and overlapping of areas of cone coverage to provide maximum protection. Test flames should be employed to check proper detector location.

Environmental Considerations

Where indicated in the individual certifications, detectors are intended for indoor and/or outdoor use. For indoor use, detectors should be located in areas where normal ceiling temperatures prevail. For outdoor use, detectors should be located such that an accumulation of snow, dirt, or road film is not likely to occur on the lens. Accordingly, detectors should be located under a building overhang or positioned on a downward angle to minimize the occurrence of such conditions.

Detectors should not be installed where unwanted false alarms are likely to occur, such as other sources of ultraviolet or infrared radiation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flame-automatic Fire Detector for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND INDICATORS FOR USE IN HAZARDOUS LOCATIONS (UIOR)

GENERAL

This category covers electronic-type ground indicators, the ratings of which are given on the individual product. These devices indicate by audible or visible signals whether an adequate connection to gasoline tank trucks, tank cars, or drums has been established for dissipation of static electricity.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

Ground Indicators for Use in Hazardous Locations (UIOR)—Continued

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground Indicator for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION FOR USE IN HAZARDOUS LOCATIONS (UIPV)

USE AND INSTALLATION

This category covers fixed-temperature, heat-actuated-type detectors employing special constructions designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected in indoor locations in a manner acceptable to the Authority Having Jurisdiction and in accordance with ANSI/NFPA 72, "National Fire Alarm Code," or other NFPA standards that may apply, such as for extinguishing-system applications. The temperature rating of the detector should be taken into consideration with regard to installation in specific ambient environments under operating conditions of the equipment to be protected. The detectors are intended to be connected to the initiating-device circuits of certified control units that provide audible-alarm signals or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

Spacings for Equipment Protection — Reference should be made to the manufacturer's installation drawings and instructions. Spacings for smooth ceilings with large bays are included in the individual certifications.

RELATED PRODUCTS

For open-area protection, see Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat-actuated Device for Special Application for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS (UIRV)

USE AND INSTALLATION

This category covers fire alarm heat detectors only, and not the wiring or other appliances of which they form a part.

Fire alarm heat detectors are of the fixed temperature (FT), rate of rise (ROR), combination fixed temperature and rate-of-rise (ROR-FT), or rate compensation (RC) type. There are basically two types: (1) A spot-pattern-type detector is one in which the thermally sensitive element is a compact unit of small area; (2) a line-pattern-type detector is one in which the thermally sensitive element is continuous along a line.

These heat detectors are intended for locations where normal ceiling temperatures prevail (below 100°F). Locations where temperatures at ceiling

Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV)—Continued

are likely to be unduly high (from sources of heat other than fire conditions, such as boiler rooms, dry kilns, etc.) demand special consideration and selection of heat detectors operating normally at higher temperatures, and which are capable of withstanding high temperatures for long periods of time. Care should be exercised to select heat detectors having the proper temperature rating to guard against false alarms from premature operation:

For ceiling temperatures not exceeding 100°F, install 135 to 165°F (ordinary) rating thermostats

For ceiling temperatures exceeding 100°F, but not 150°F, install intermediate 175 to 225°F rating thermostats

For ceiling temperatures exceeding 150°F, but not 225°F, install 250 to 300°F (high) rating thermostats

For ceiling temperatures exceeding 225°F, but not 300°F, install 325 to 360°F (extra high) rating thermostats

Low-degree-rated heat detectors are intended only for installation in areas having controlled temperature conditions at least 20°F below rating.

The spacings specified are for flat, smooth-ceiling construction of ordinary height, generally regarded as the most favorable condition for distribution of heated air currents resulting from a fire. Under other forms of ceiling construction reduced spacing of thermostats may be required. The fire tests conducted to determine the suitability of the spacings are conducted in a 60 x 60 ft room having a 15 ft 9 in. high smooth ceiling and minimum air movement. The test fire (denatured alcohol) is located approximately 3 ft above the floor and of a magnitude so that sprinkler operation is obtained in approximately two minutes. For comparative purposes, automatic sprinklers rated 160°F are installed on a 10 x 10 ft spacing schedule in an upright position with the deflectors approximately 7 in. below the ceiling. At the maximum permissible spacing for the heat detectors, they must operate prior to operation of the sprinklers.

The placement and spacing of thermostatic devices should be based on consideration of the ceiling construction, ceiling height, room or space areas, space subdivisions, the normal room temperature, possible exposure of the devices to abnormal heat, such as may be produced by manufacturing processes or equipment and to draft conditions likely to be encountered at the time of a fire.

For certifications that include references to "rain tight type," the devices have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

These detectors are intended to be installed in accordance with ANSI/NFPA 72, "National Fire Alarm Code." Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Heat detectors having normally closed contacts used in special applications are covered under Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Detection Heat Detector for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL SYSTEM UNITS FOR USE IN HAZARDOUS LOCATIONS (UJFT)

GENERAL

This category covers units intended to be used in combinations with related certified equipment to form installed systems for general-utility-signaling purposes.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Magnetic-operated Contact for Use in Hazardous Locations," "Signal Relay for Use in Hazardous Locations" or "Monitor Unit (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNALING EQUIPMENT ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (UJQO)
USE

This category covers retrofit devices in kits consisting of parts and/or sub-assemblies, installation/instruction manuals, and retaining means, intended for field installation in UL-certified audible-signaling appliances for use in hazardous locations. These products have been investigated to determine that when used in accordance with the manufacturer's instructions they do not adversely affect the operation of the complete unit.

PRODUCT MARKINGS

Retrofit devices are marked with electrical and environmental ratings as specified in the individual Reports.

ADDITIONAL INFORMATION

For additional information, see Signal Appliances for Use in Hazardous Locations (UFXR) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 464, "Audible Signal Appliances," or ANSI/UL 1480, "Speakers for Fire Alarm, Emergency, and Commercial and Professional Use."

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UFXR)
Signaling Equipment Accessories for Use in Hazardous Locations (UJQO)—Continued

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

AUDIBLE SIGNAL RETROFIT KIT FOR USE WITH LISTED [model number(s)] ONLY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SMOKE-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS (UJRN)
GENERAL

This category covers detecting combinations designed to detect smoke particles. Smoke detectors may or may not be designed to be connected to fire alarm system control units. See APPLICATIONS below.

A heat detector and/or an audible signaling appliance may be provided integral with the detector.

The primary function of duct detectors is to shut down the blowers and/or dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic and smoke damage from distribution of smoke. Duct detectors are not intended as a substitute for open-area protection.

The level of toxicity produced by the combustibles at which smoke detectors actuate has not been investigated.

DETECTOR TYPES

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Projected Beam (PB) — A light beam is projected across the space of the area to be protected.

Integral Radio Frequency Transmitter (RF) — Uses an integral radio frequency transmitter to communicate with a receiver in the fire alarm control panel, in place of a wired connection.

APPLICATIONS

Duct Detector [D(I)] — For installation inside the duct.

Duct Detector [D(ST)] — Intended for installation on the side of the duct. Employs sampling tubes that extend into the duct.

Open-area Protection (OAP) — Requires detector connection to a compatible system control unit for operation.

Releasing Service (RS) — Intended for detector connection only to releasing devices, such as electromagnetic door holders, fire dampers, etc.

Open-area Protection with Releasing Service (OAP/RS) — Incorporates supplementary switching contacts for additional connection to releasing devices.

Special Application (SA) — For installation in nonstandard locations, as noted in the individual Listings.

COMPATIBILITY WITH CONTROL UNITS

Smoke detectors investigated for open-area protection are intended to be connected to the initiating device circuit of a fire alarm system control unit.

Multiple-wire detectors, employing power-supply terminals or leads that do not obtain power from the initiating device circuit of a system control unit, are compatible with any Listed system control unit if failure of the power to the detector is supervised at the control unit.

Two-wire detectors, whose power-supply terminals or leads are the same as the signaling terminals, and obtain power from the initiating device cir-

Smoke-automatic Fire Detectors for Use in Hazardous Locations (UJRN)—Continued

cuit of a system control unit, are investigated for compatibility either by test or a review of the circuit parameters of both the detector and control unit. Listing is restricted only to those control units with which such an investigation was made. Interconnection limitations and compatible models are indicated on the installation wiring diagram of the control unit and/or the detectors.

INSTALLATION

Standards — Refer to ANSI/NFPA 72, “National Fire Alarm Code,” and ANSI/NFPA 90A, “Standard for the Installation of Air-Conditioning and Ventilating Systems,” for installation, maintenance and testing guidelines.

Spacings — Although there are no assigned spacings to these detectors, test fires, using the maximum amount of combustible for the risk involved, may be employed. See ANSI/NFPA 72 for additional guidelines.

Environmental Considerations — Open-area detectors are intended for indoor use only where normal ceiling temperatures [max 37.8°C (100°F)] prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted (false) alarms.

Duct detectors are intended to be installed in ducts of heating, ventilating, and air conditioning systems where temperatures at the detector do not exceed 37.8°C (100°F).

Ionization detectors should not be used in an environment of high-level radiation unless tests in the actual environment have shown that the radiation will not interfere with operation of the detectors.

Effect of Velocity — The velocities indicated in the individual Listings are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. The performance of photoelectric-type detectors is not affected by velocity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, “Smoke Detectors for Duct Application.”

Stability Test — Since there are innumerable environmental conditions that exist in the field, it is recommended that the stability of detectors be monitored prior to connection to a fire alarm system for at least three months or more to screen out locations of detectors where unwanted alarms may occur. Relocation of the detectors, use of a detector with a different principle of operation, or a change in the sensitivity setting where permitted in the marking of the detector, may be required.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate open area and releasing service detectors in this category is ANSI/UL 268, “Smoke Detectors for Fire Alarm Signaling Systems.”

The basic unclassified locations standard used to investigate duct detectors in this category is ANSI/UL 268A, “Smoke Detectors for Duct Application.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate:

Nonseparable Heads and Bases

- Smoke-automatic Fire Detector for Use in Hazardous Locations (+) for Open-area Protection
- Smoke-automatic Fire Detector for Use in Hazardous Locations (+) for Open-area Protection (Also Suitable for Releasing Device Service)
- Smoke-automatic Fire Detector for Use in Hazardous Locations (+) for Releasing Device Service
- Smoke-automatic Fire Detector for Use in Hazardous Locations (+) for Duct Application

Separable Heads

- Smoke-automatic Fire Detector Air-sampling System Unit for Use in Hazardous Locations
- Smoke-automatic Fire Detector for Duct Application Subassembly for Use in Hazardous Locations

* Company name or File no. (EXXXXX)

+ To be inserted when applicable: “with Integral Audible Signal,” “with Integral Heat Detector” or “with Integral Audible Signal and Heat Detector”

Detectors with the designation “with Integral Audible Signal” in the product name include an audible signaling appliance in the unit (head or base), which is energized under an alarm condition.

Detectors with the designation “with Integral Heat Detector” in the product name include a heat detector in the unit, which is connected internally to the smoke detector alarm circuit. Actuation of the heat detector results in the same alarm signal as obtained from the smoke detector.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VISUAL-SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UJTK)

GENERAL

This category covers visual-signal appliances, such as rotating beacons and strobe lights, intended for use in general-signal applications, and sub-assemblies of visual-signal appliances intended for final assembly into visual-signal appliances.

Subassemblies, such as mounting bodies, globes and guards, and the products with which they are compatible are identified in the individual certifications.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual certifications. Marking on each part references installation instructions which show assembly and installation of the parts to form a certified product.

Visual-signal appliances certified for use in any of the groups under Class I hazardous locations have been tested with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. Those for use in any of the groups under Class II hazardous locations have been tested for dust-tightness and have been subjected to operation tests to establish safety of operation in the presence of the specific combustible dusts and also to establish that they will function as intended with dust accumulated on external parts.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1638, “Visual Signaling Appliances - Private-Mode Emergency and General Utility Signaling.”

PRODUCT CATEGORIES BY CATEGORY CODE

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UFXR)

Visual-signal Appliances for Use in Hazardous Locations (UJTK)–Continued

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Visual-signal Appliance for Use in Hazardous Locations" or "Visual-signal Appliance Subassembly for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (UXUQ)

AUDIBLE-SIGNAL APPLIANCES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (UXVF)

GENERAL

This category covers audible-signal devices, such as bells, sirens and horns.

Audible-signal devices certified for use in any of the zones under Class I hazardous locations have been tested with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Audible Signal Appliance for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VISUAL-SIGNAL APPLIANCES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (UXVU)

GENERAL

This category covers visual-signal devices, such as rotating beacons and strobe lights.

Visual-signal devices certified for use in any of the zones under Class I hazardous locations have been tested with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

SIGNAL APPLIANCES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (UXUQ)

Visual-signal Appliances for Use in Zone Classified Hazardous Locations (UXVU)–Continued

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Visual Signal Appliance for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. SIGNALING APPLIANCES AND EQUIPMENT FOR THE HEARING IMPAIRED FOR USE IN HAZARDOUS LOCATIONS (UXWC)

GENERAL

This category covers visual-signaling appliances, vibrators or other sensory apparatus and associated equipment investigated for fire-protective-signaling services to alert hearing-impaired persons, and subassemblies of signaling appliances intended for final assembly into signaling appliances.

Subassemblies, such as mounting bodies, globes and guards, and the products with which they are compatible are identified in the individual certifications.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual certifications. Marking on each part references installation instructions that show assembly and installation of the parts to form a certified product.

These signaling appliances are intended to be used in conjunction with certified compatible fire-alarm-control units, alarm-initiating devices and the like. The interconnection, use and installation requirements of the products are intended to be in accordance with ANSI/NFPA 72, "National Fire Alarm Code."

The signaling appliances in this category have been investigated as to their ability to alert most hearing-impaired persons. However, since the ability of signal recognition varies among individuals, the effectiveness of alerting a person can only be ensured by actual testing of that person with the installed signaling appliance.

Visual-signaling appliances covered under this category are intended to be used in the "Public Operating Mode" as defined in ANSI/NFPA 72.

RELATED PRODUCTS

Visual-signaling appliances intended to be used in the "Private Mode" are covered under Visual-signal Devices for Use in Hazardous Locations (UJTK).

This category does not cover signaling devices for the hearing impaired that are an integral part of other alarm-initiating or alarm-indicating devices. When such a combination exists, suitability as a signaling appliance for the hearing impaired will be noted in the individual certifications of the primary product. Refer to Audible-signal Devices for Use in Hazardous Locations (UGKZ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1971, "Signaling Devices for the Hearing Impaired."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Signaling Appliance for the Hearing Impaired for Use in Hazardous Locations," "Signaling Appliance Accessory for the Hearing Impaired for Use in Hazardous Locations" or "Signaling Appliance Subassembly for the Hearing Impaired for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

**SIGNALING APPLIANCES AND EQUIPMENT FOR THE
HEARING IMPAIRED FOR USE IN HAZARDOUS LOCATIONS
(UXWC)**

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNS (UXYT)

USE AND INSTALLATION

This category covers electric signs employing incandescent lamps, LEDs (light-emitting diodes), electro-luminescent panels, neon tubing, fluorescent lamps, high-intensity-discharge lamps or combinations thereof for installation in accordance with Article 600 of ANSI/NFPA 70, "National Electrical Code."

Cord-and-plug-connected signs do not have provision for permanent mounting to a building or structure. Due to servicing considerations, specific types of cord and plug-connected signs are intended and have provision for installation on end-use equipment.

Signs or sections of a sign forming a complete enclosure intended for permanent connection to a source of supply are provided with permanent means for attachment to a building, to a support or to a hanging rig. The mounting hardware, poles and other structural components of a sign have not been evaluated with respect to local variable conditions such as local wind and snow loading or soil conditions.

Electric signs, of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each major subassembly bears an "Electric Sign Section" Certification Mark. Sign faces, trim and mounting hardware are not considered major subassemblies. Each sign has installation instructions describing or illustrating the proper assembly, mounting and connection of the sign sections. The acceptability of the assembled sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

Signs intended for permanent installation and which have been investigated for indoor use only are so marked. Cord-connected signs investigated for outdoor use are marked "Outdoor." Signs for outline lighting are marked "Outdoor Sign for Outline Lighting."

Signs, sign sections or outline lighting marked "The neon supply(ies) complies(y) with the secondary ground-fault protection requirements of UL 2161" are provided with neon transformers and power supplies that comply with the secondary fault protection requirements specified in UL 2161, "Neon Transformers and Power Supplies."

REBUILT PRODUCTS

This category also covers signs that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt signs are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt signs are subject to the same requirements as new signs.

RELATED PRODUCTS

Accessories intended for use in certified signs are covered under Sign Accessories (UYMR).

Retrofit conversions intended to be field installed in certified electric signs are covered under Sign Conversions, Retrofit (UYWU).

Changing message center signs may contain integral controllers or may be intended for use with externally connected controllers. Externally connected controllers are covered under Sign Controllers, Message Centers (UYTQ).

This category does not cover billboard illumination, exit lights, skeletal neon tubing for show windows, or illuminated clocks rated 600 V or less.

Field-assembled neon systems used in display windows, outline lighting, or skeletal neon signs are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled (UZBL).

Field-assembled cold cathode electric discharge lighting systems that provide general illumination are covered under Electric Discharge Lighting Systems, Cold Cathode (IFAY).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field-installed Neon Outline Lighting Systems (UYAM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 48, "Electric Signs."

Electric signs that comply with the requirements in UL 153, "Portable Electric Lamps," may also be certified as Portable Lamps (QOWZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Indoor Electric Sign," "Electric Sign" or "Electric Sign Section."

For rebuilt signs the word "Rebuilt" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIELD-INSTALLED NEON OUTLINE LIGHTING SYSTEMS (UYAM)

This category covers neon outline lighting systems that incorporate neon tubing with ferrule type end caps which are electrically connected to the output of a transformer, power supply or ballast by ferrule type lampholders. Each transformer or power supply in the system has a maximum output current rating of 300 mA. These systems are for installation in accordance with Article 600 of the National Electrical Code.

These lighting systems outline or call attention to architectural details of a room or building.

Neon outline lighting systems are provided as a system of parts that are field installed. These systems are installed using tools and techniques available only to an electrician. The systems are provided with installation instructions which define the scope of the system and method for installation. It is intended that the system installation instructions be retained with the installation to which they apply.

The Listing of a neon outline lighting system does not constitute approval of the design which is the responsibility of the manufacturer and the Authority Having Jurisdiction nor approval of the installation. The final acceptance of the field installed neon outline lighting system is the responsibility of the Authority Having Jurisdiction.

These systems are intended for permanent installation indoors unless marked as "Suitable for Outdoor Locations".

Neon outline lighting systems marked "The neon supply(ies) complies(y) with the secondary ground-fault protection requirements of UL 2161" are provided with neon transformers and power supplies that comply with the secondary ground-fault protection requirements specified in the Standard for "Neon Transformers and Power Supplies", UL 2161.

This category does not cover neon tubing for display windows or signs which are covered under category Signs (UXYT).

This category does not cover field assembled neon systems in display windows, outline lighting, or skeletal neon signs which are covered under the category of "Field Assembled Skeletal Neon Signs and Outline Lighting Systems", (UZBL)

This category does not cover cold cathode electric discharge lighting systems for general illumination which are covered under the category "Electric Discharge Lighting Systems, Cold Cathode", (IFAY).

Outline lighting of the incandescent, HID or fluorescent type fabricated in factory-built sections is covered under the category Signs (UXYT).

Lighting systems operating at 1000V or less are covered under categories Fluorescent Fixtures (IEUZ), HID Fixtures (IEXT), and Incandescent Fixtures (IEZR).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is ANSI/UL 48, "Electric Signs."

The Listing Mark of UL on each transformer and transformer enclosure, and the containers in which the remaining neon outline lighting system parts are packaged, or on the remaining neon outline lighting system parts themselves, referencing a specific field-installed neon outline system number is the only method provided by UL to identify neon outline lighting systems manufactured under its Listing and Follow-Up Services. The Listing mark for these systems includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, the product name, "Field Installed Neon Outline Lighting System Part", and the words "The Listing of this neon outline lighting system is contingent upon installation according to the specifications of (Listee's Name), System No. _____ and the National Electrical Code".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNS, CHANGING MESSAGE (UYFS)

GENERAL

This category covers illuminated and nonilluminated changing-message signs intended to be installed and connected to an electrical supply source in accordance with ANSI/NFPA 70, "National Electrical Code."

Illuminated changing-message signs include incandescent, fluorescent, HID (high intensity discharge), electric discharge tubing (including neon) LED (light emitting diode), and other sources of illumination.

Signs, Changing Message (UYFS)–Continued

Nonilluminated changing-message signs include scrolling, flipper, LCD (liquid crystal display), and similar types that are generally motor operated or electronically controlled.

Sign Section — The changing-message signs may be divided into sections. Each section of the sign bears a “Changing Message Sign Section” Certification Mark that states in combination with the Certification Mark “Section ___ of ___.” The first blank space identifies the number of the section, and the second blank space identifies the total number of sections required to constitute a complete changing-message sign. Suitable installation instructions describing or illustrating the proper assembly, mounting, and connection of the numbered sign sections are provided.

SIGN INSTALLATION MARKINGS

Indoor/Outdoor Use — Permanently connected changing-message signs are investigated and intended for use outdoors unless marked “For Indoor Use Only.” Cord-connected changing-message signs are investigated and intended for use indoors unless marked “Portable Outdoor Changing Message Sign.”

Trailer Mounted — Changing-message signs intended to be trailer mounted are marked “Trailer On Which Sign May Be Mounted Has Not Been Investigated.”

Orientation Marking — A changing-message sign intended for outdoor use that is not provided with construction features to ensure proper orientation is marked to indicate the proper mounting position.

Wall Mounted — A changing-message sign for outdoor use, wall mounting and provided with drain holes along the bottom edge of the back of the sign, and marked “Maintain 1/2 Inch Clearance Between All Drain Openings And The Mounting Surface” is intended to be installed so that the drain holes are not covered by the building surface.

REBUILT PRODUCTS

This category also covers rebuilt changing-message signs which have been reconditioned or rebuilt. Such changing-message signs have been factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Reconditioned or rebuilt changing-message signs are subject to the same requirements as new changing-message signs.

RELATED PRODUCTS

Components and parts intended for use on or with changing-message signs are covered under Sign Accessories (UYMR), Sign Conversions Retrofit (UYWU), and Sign Controllers, Message Centers (UYTQ).

Changing-message signs may also be covered under Signs (UXYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSU/UL 48, “Electric Signs,” and UL 1433, “Control Centers for Changing Message Type Electric Signs.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Indoor Changing Message Sign,” “Changing Message Sign” or “Changing Message Sign Section.”

For rebuilt products, the word “Rebuilt” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN ACCESSORIES (UYMR)

USE

This category covers sign components, such as combinations of frame plastic panels with metal or plastic characters; sign-rotating equipment for use in electric signs where weather protection and electrical enclosures are provided by the sign; ballast lead covers or enclosures intended to provide weather and mechanical protection to leads of outdoor ballasts; fluorescent U-tube and lampholder assemblies consisting of lampholders in sheet-metal brackets with spring and loaded rod and hook assemblies with or without a ballast; insulating caps for use on electrode receptacles to provide electrical insulation; low-voltage power supplies consisting of assemblies of Class 2 transformers, an enclosure and a power-supply cord; and kickback bases intended for indoor use and provided with a receptacle for connection of a related display and provided with a power-supply cord.

RELATED PRODUCTS

Lampholders and electrode receptacles are covered under Lampholders, Electric Discharge, Over 1000 Volts (OJOV).

ADDITIONAL INFORMATION

Sign Accessories (UYMR)–Continued

For additional information, see Signs (UXYT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 879, “Electric Sign Components.” This standard supersedes ANSI/UL 48, “Electric Signs,” and ANSI/UL 73, “Motor-Operated Appliances,” which formerly contained the requirements for sign components.

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Sign Accessory.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN COMPONENTS CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (UYTA)

USE AND INSTALLATION

This category covers specific components Classified for use with components manufactured by others, such as:

Listed GTO cable surface marked “Integral Sleeve” that is also Classified for use with specific Listed or Recognized Component neon electrode boots; and Listed or Recognized Component neon electrode boots that are also Classified for use with specific Listed GTO cable surface marked “Integral Sleeve.”

The combination of the GTO cable with integral sleeve and neon electrode boot complies with the enclosure requirements for:

- a) the splice between neon tubing electrode leads and GTO cable, and
- b) the GTO cable leading to the splice.

These products are provided with installation instructions that define the scope of the system and method of installation.

ADDITIONAL INFORMATION

For additional information, see Signs (UXYT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 879B, “Outline of Investigation for Polymeric Enclosure Systems for the Splice Between Neon Tubing Electrode Leads and GTO Cable, and the GTO Cable Leading to the Splice.”

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the following additional information:

[PRODUCT IDENTITY*]

CAT. NO. ___ FOR USE ONLY WITH THE SPECIFIED *

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN CONTROLLERS, MESSAGE CENTERS (UYTQ)

GENERAL

This category covers control panels or units intended for changing-message signs.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1433, "Control Centers for Changing Message Type Electric Signs."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sign Controller," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN CONVERSIONS, RETROFIT (UYWU)

USE AND INSTALLATION

This category covers retrofit sign conversions consisting of subassemblies or kits intended for field installation in certified signs. There are several types of sign conversions as specified below.

Scrolling units (motor-operated message assemblies), devices to change the type of illumination (such as from incandescent to fluorescent), or combinations thereof consist of subassemblies intended for field installation in specific certified permanently connected electric signs. The conversion identifies the catalog number (or other description) and company name of the sign in which it is intended to be used.

Light-emitting-diode (LED) kits consist of the power source, the LEDs and the LED mounting means necessary to change the type of illumination originally contained in the sign to LED illumination. The kit installation instructions specify the type of sign in which the kit is intended to be installed.

These retrofit sign conversions have been investigated to determine that, when used in accordance with the manufacturer's instructions provided with the retrofit device, they do not adversely affect the operation of the complete electric sign.

ADDITIONAL INFORMATION

For additional information, see Signs (UXYT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate retrofit sign conversions in this category is ANSI/UL 48, "Electric Signs."

The basic requirements used to investigate retrofit sign conversion LED kits in this category are contained in UL Subject 879A, "Outline of Investigation for LED Kits."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT SIGN CONVERSION
FOR USE ONLY WITH SIGN
MODEL ____ MANUFACTURED BY ____
Control No.

or

RETROFIT SIGN CONVERSION LED KIT
FOR USE ONLY IN ACCORDANCE WITH KIT INSTRUCTIONS
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN FLASHERS (UYZZ)

USE AND INSTALLATION

This category covers flashing devices intended to control incandescent lamps or gas-tube-sign transformers.

Sign Flashers (UYZZ)—Continued

The installation of open-type flashing devices in electric signs is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code," as follows: (a) within a standard cutout box or cabinet, or (b) within an enclosed compartment, accessible and weatherproof, of metal at least as thick as that of the sign itself and located in or on the body or structure of the sign.

Flashing devices of the thermostatic type are intended to control incandescent lamps and are for indoor use only.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 48, "Electric Signs," UL 1433, "Control Centers for Changing Message Type Electric Signs," and ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Sign Flasher," "Blinker," "Winker," "Flasher," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SKELETAL NEON SIGN AND OUTLINE LIGHTING SYSTEMS, FIELD ASSEMBLED (UZBL)

GENERAL

The presence of the Listing Mark ("Field Assembled Skeletal Neon Sign System" or "Field Assembled Skeletal Neon Outline Lighting System") is evidence that the installation of the skeletal neon sign or outline lighting system (1) has been assembled and installed by an installer who is authorized by UL to apply UL Listing Marks described below and who subscribes to UL's Follow-Up Service; (2) employs materials and components subject to a factory inspection service bearing the UL Mark; and (3) is subject to a field inspection program covering proper installation of the system.

These systems are field assembled for permanent installation in accordance with Article 600 of ANSI/NFPA 70, "National Electrical Code."

These systems are intended for outdoor use unless marked for indoor use.

Skeletal neon signs and outline lighting systems marked "The neon supply(ies) complies(y) with the secondary ground-fault protection requirements of UL 2161" are provided with neon transformers and power supplies that comply with the secondary ground-fault protection requirements specified in UL 2161, "Neon Transformers and Power Supplies."

The Listing of a system does not constitute approval of the completed assembly and installation which is the responsibility of the installer and the Authority Having Jurisdiction.

RELATED PRODUCTS

Field-assembled cold cathode electric-discharge lighting systems that provide general illumination are covered under Electric-discharge Lighting Systems, Cold Cathode (IFAY).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field-installed Neon Outline Lighting Systems (UYAM).

Factory-assembled neon signs and outline lighting or sectional signs that require some field assembly are covered under Signs (UXYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate the systems in this category is ANSI/UL 48, "Electric Signs."

UL MARK

The Listing Mark on the transformer or power-supply enclosure is the only method provided by UL to identify that a field-assembled skeletal neon sign or outline lighting system is covered under its Listing and Follow-Up Service. The Listing Mark for these systems includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product identity "Field

Skeletal Neon Sign and Outline Lighting Systems, Field Assembled (UZBL)—*Continued*

Assembled Skeletal Neon Sign System” or “Field Assembled Skeletal Neon Outline Lighting System,” the installing company name or logo, date of installation, and location.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLENOIDS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (VAMH)

USE

This category covers solenoids for installation on valves. The solenoids are incomplete devices inasmuch as the plungers or pistons are intended to actuate an external valve or other equipment. This category covers the solenoid only and not the valve or other equipment to which the solenoids are mounted.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 429, “Electrically Operated Valves.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Solenoid for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLENOIDS FOR USE IN HAZARDOUS LOCATIONS (VAPT)

USE

This category covers solenoids intended for connection to threaded rigid conduit. These solenoids may include the plungers or pistons intended to actuate an external valve or other equipment. This category covers the solenoid only and not the valve or other equipment to which the solenoids are mounted.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 429, “Electrically Operated Valves.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Solenoid for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLENOID PUMPS FOR USE IN HAZARDOUS LOCATIONS (VAWS)

GENERAL

This category covers solenoid pumps for connection to threaded rigid conduit. The solenoid pumps are complete devices intended to actuate an external metering device or other equipment. These category covers the solenoid pump only and not the metering device or other equipment to which the solenoid pumps are mounted.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Solenoid Pump for Use in Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLVENT DISTILLATION UNITS FOR USE IN HAZARDOUS LOCATIONS (VBFY)

GENERAL

This category covers solvent distillation units with a maximum capacity of 60 gal (227 l), which are intended to recycle nonflammable, flammable or combustible solvents. These units have only been investigated for use with the solvent(s) indicated in the instruction manual provided with the unit. In addition, these units are marked to indicate the solvent(s) or with a statement referencing the instruction manual.

This equipment is intended for installation and use in accordance with ANSI/NFPA 70, “National Electrical Code,” ANSI/NFPA 30, “Flammable and Combustible Liquids Code,” and the “Uniform Fire Code,” published by the International Fire Code Institute.

This category does not cover carbon-bed units, units intended to be installed outdoors, units intended to distill solvents containing nitrocellulose or other unstable reactives, or units intended for high-volume distillation processes typical of the petrochemical or distilled spirits industries.

The storage, use and disposal of any flammable or combustible solvents and hazardous materials used with or produced by the equipment, the physiological effects of these solvents and hazardous wastes, and the purity of the recycled solvent have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 2208, “Solvent Distillation Units.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Solvent Distillation Unit for Use in Hazardous Locations,” or equivalent.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-METERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (VBYC)

GENERAL

This category covers equipment that measures and stores the ambient noise levels in industrial areas.

RELATED PRODUCTS

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations appears under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Noise Dosimeter" or "Sound Level Meter," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-METERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (VBYX)

USE AND INSTALLATION

This category covers sound-metering equipment that measures and stores the ambient noise levels in industrial areas.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuits as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are identified in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Noise Dosimeter for Use in Hazardous Locations," "Sound Level Meter for Use in Hazardous Locations" or "Sound Level Meter (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-RECORDING AND -REPRODUCING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (VCSV)

USE

This category covers speakers and similar equipment intended for use in sound-recording and -reproducing systems.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sound-recording Equipment for Use in Hazardous Locations" or "Sound-reproducing Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES FOR USE IN HAZARDOUS LOCATIONS (VQNT)

These listings cover devices and equipment for use in sprinkler systems and water spray systems.

These devices and equipment should be installed in compliance with the Standards of National Fire Protection Association, NFPA 13 for Sprinkler Systems, NFPA 15 for Water Spray Systems for Fire Protection, and NFPA 16 for Foam-Water Sprinkler and Spray Systems. Inspection authorities having jurisdiction should be consulted regarding use of these listed devices and equipment before installation.

These systems also appear under "Sprinkler Systems and Water Spray System Devices" in UL's Fire Protection Equipment List.

SPECIAL SYSTEM WATER CONTROL VALVES AND SYSTEM ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (VQRZ)

Class I - See description of devices in this grouping on Guide Card VQWV.

Special System Water Control Valves for Use in Hazardous Locations (VQWV)

USE AND INSTALLATION

This category covers valves intended for controlling water flow to sprinkler and water-spray systems. Unless otherwise stated, deluge valves are intended to be installed in the vertical position only.

These valves are intended to be installed in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems," ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection," or ANSI/NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems." Authorities Having Jurisdiction should be consulted regarding use of these Listed devices and equipment before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Deluge Valve for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Special System Water Control Valves for Use in Hazardous Locations (VQWV)—*Continued*

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, PRESSURE FOR USE IN HAZARDOUS LOCATIONS (VRBR)

USE

This category covers pressure-operated switches intended for connection with sprinkler equipment, water-spray systems and like protection systems, as a means of initiating electrical alarms upon flow of water in the equipment or for actuation of other auxiliary equipment.

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices for Use in Hazardous Locations (VQNT) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pressure Switch for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATIC NEUTRALIZING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (VXDY)

USE AND INSTALLATION

This category covers high-voltage power units and discharge bars designed for individual installation on equipment in hazardous locations where static charges are generated during operation.

Due to the nature of these installations, high-voltage parts are necessarily exposed and cannot be completely shielded from contact.

Care should be taken to follow the instructions provided with the equipment regarding the installation of static neutralizers, including proper grounding of the equipment; operating personnel should be carefully instructed regarding its correct operation and maintenance.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Static Neutralizing Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPILL CONTAINMENT FOR STATIONARY LEAD-ACID BATTERY SYSTEMS (VXMB)

GENERAL

This category covers spill containment for stationary lead-acid battery systems investigated for liquid tightness and electrolyte pH neutralization capability in accordance with Chapter 52 of ANSI/NFPA 1, "Uniform Fire Code," and acid resistance in accordance with OSHA 1926.441(a)(4), "Battery Locations and Battery Charging."

These systems are intended to provide a reliable means of containment for hazardous material liquids in the event of electrolyte leakage from stationary lead-acid battery systems.

Requirements for spill detection, spill clean-up, containment dimensions, containment capacity, neutralizer capacity and ventilation are included in the applicable federal or local governing codes, such as Chapter 52 of ANSI/NFPA 1, and OSHA 1926.441.

INSTALLATION

These systems are field assembled and require complete written installation instructions to ensure proper assembly.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2436, "Outline of Investigation for Spill Containment for Stationary Lead-Acid Battery Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spill Containment for Stationary Lead-Acid Battery Systems," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRAPS, RESTRAINT, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (VZAR)

USE

This category covers restraint straps made from electrically conductive natural or synthetic rubber, intended for use in hospital operating rooms where accumulation of charges of static electricity presents a hazard due to the possibility of static sparks being formed in the presence of flammable anesthetic-air mixtures.

Tests indicate that these restraint straps in lengths used in hospital operating rooms are sufficiently electrically conductive to equalize electrostatic charges between electrical conductors connected thereby.

As oil is injurious to rubber compounds and impairs the electrical conductive properties of these materials, contact with oil should be avoided.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Restraint Straps Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE-PROTECTIVE DEVICES (VZCA)

GENERAL

This category covers surge-protective devices (SPDs) designed for repeated limiting of transient-voltage surges as specified in the standard on 50 or 60 Hz power circuits not exceeding 1000 V ac, or 1500 V dc, including photovoltaic applications (PV SPDs). SPDs are identified with one of the following type designations:

Type 1 — Permanently connected SPDs intended for installation between the secondary of the service transformer and the line side of the service equipment overcurrent device, as well as the load side, including watt-hour meter socket enclosures and intended to be installed without an external overcurrent-protective device.

Type 2 — Permanently connected SPDs intended for installation on the load side of the service equipment overcurrent device, including SPDs located at the branch panel.

Type 3 — Point-of-utilization SPDs, installed at a minimum conductor length of 10 m (30 ft) from the electrical service panel to the point of utilization, e.g., cord-connected, direct-plug-in, receptacle-type and SPDs installed at the utilization equipment being protected. The distance (10 m) is exclusive of conductors provided with or used to attach SPDs.

SPDs have been investigated to verify that the average of the transient-voltage surges is limited to the Voltage Protection Rating (VPR) marked on the product.

Voltage Protection Rating (VPR) — A rating selected from a list of preferred values as given in Table 63.1 of ANSI/UL 1449 and assigned to each mode of protection. The value of the VPR is determined as the nearest highest value taken from Table 63.1 to the measured limiting voltage determined during the transient-voltage surge suppression test using the combination wave generator at a setting of 6 kV, 3 kA.

Mode(s) — Refers to the pair of electrical connections where the VPR applies. The term "ALL" indicates that the VPR applies to all combinations of pairs of electrical connections.

SPD Type Testing

Type 1 and 2 SPDs are subjected to a Nominal Discharge Current test where an 8 x 20 μ s surge current (magnitude specified by the manufacturer) is impressed through the SPD.

Type 3 SPDs are subjected to an Operating Duty Cycle test with a combination wave at 6 kV/3 kA.

PRODUCT MARKINGS

The following information is marked on Type 1, 2 and 3 SPDs:

Electrical ratings, including the operating voltage rating (volts), ac power frequency (Hz) and number of phases or dc. For a two-port SPD, the ratings include the load current rating (amperes).

Voltage Protection Rating (VPR) in volts.

Nominal Discharge Current (I_n) Rating in amps or kA — for Type 1 and 2 SPDs.

Maximum Continuous Operating Voltage Rating (MCOV) in volts — for Type 1 and 2 SPDs.

Short-circuit Current Rating (SCCR) in amps or kA — for Type 1 and 2 SPDs.

PV SPDs are marked, "For Use in Photovoltaic Systems Only," or the equivalent.

SPDs investigated for general dc applications may also be marked, "Suitable for Use in Photovoltaic Systems."

FACTORS NOT INVESTIGATED

The effect of the suppressor on connected loads, the effect of the suppressor on harmonic distortion of the supply voltage, and the adequacy of the suppression level to protect connected equipment from damage due to transient-voltage surges has not been investigated.

RELATED PRODUCTS

Cord-connected SPDs employing cord sets provided with leakage-current detection and interruption are covered under Cord Sets with Leakage-current Detection and Interruption (ELGN).

Cord-connected SPDs employing ground-fault circuit interrupters are covered under Ground-fault Circuit Interrupters (KCXS).

Cord-connected and direct-plug-in SPDs are not intended for use with medical, dental or health care facilities equipment.

Component SPDs (Type 4), including discrete components as well as component assemblies, are covered under Surge-protective Devices (VZCA2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1449, "Surge Protective Devices" (3rd edition).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Protective Device" (or "SPD").

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE ARRESTERS OVER 1000 VOLTS (VZQK)

GENERAL

This category covers surge arresters rated over 1000 V ac, intended to repeatedly limit the voltage surges on 48 – 62 Hz power circuits and to afford protection against surge-related damage to wiring systems and/or to downstream equipment.

Surge arresters are categorized by their intended application and prescribed test requirements. These categories are station, intermediate, distribution heavy duty, distribution normal duty, and distribution light duty.

RELATED PRODUCTS

Surge-protective devices rated up to 1000 V are covered under Surge-protective Devices (VZCA).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate metal-oxide surge arresters in this category is ANSI/IEEE C62.11, "Metal-Oxide Surge Arresters for AC Power Circuits."

All other types of surge arresters in this category are investigated to IEEE C62.1, "Gapped Silicon-Carbide Surge Arresters for AC Power Circuits."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Arrester," "Distribution Normal-duty Surge Arrester" or "Station Class Surge Arrester."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE PROTECTORS AND ISOLATORS FOR USE ON CATHODICALLY PROTECTED SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (VZQO)

GENERAL

This category covers surge protectors and isolators used to provide ac grounding and dc blocking for cathodic protection of underground pipelines and similar installations in hazardous locations. They may also be used to minimize galvanic corrosion between structures of dissimilar metals.

These devices have been investigated for providing effective grounding-path characteristics as noted in Section 250-2(d) of ANSI/NFPA 70, "National Electrical Code" (NEC, 1999 edition). Additionally, these devices have been investigated for providing isolation of objectionable dc ground currents as noted in Section 250-6(e) of the NEC (1999 edition). Manufacturers of these devices provide installation instructions and maintenance information to assure proper installation and continuous protection of the equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

SURGE PROTECTORS AND ISOLATORS FOR USE ON CATHODICALLY PROTECTED SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (VZQO)

420

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Protector for Use in Hazardous Locations," "Overvoltage Protector for Use in Hazardous Locations," or "Polarization Cell Replacement Unit for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE VEHICLE CABLE (VZSA)

BATTERY LEAD WIRE (VZSE)

GENERAL

This category covers single-conductor battery leads intended for use in internal-combustion-engine-powered industrial trucks and electric-battery-powered industrial trucks. The wire is rated 60, 75, 90 or 105°C (140, 167, 194 or 221 °F) and 30, 48, 60, 90 or 150 V dc.

PRODUCT MARKINGS

Battery lead wire is marked with the cable type and the manufacturer's name or other identification, conductor size, temperature rating and voltage rating.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2726, "Outline of Investigation for Battery Lead Wire."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Battery Lead Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE BATTERY CABLE CLASSIFIED IN ACCORDANCE WITH SAE J1127 (VZSL)

GENERAL

This category covers low-voltage battery cable intended for use in surface vehicle electrical systems. The cable consists of a single insulated conductor and is rated 60 V dc (25 V ac), 80 or 125°C.

PRODUCT MARKINGS

Low-voltage battery cable is marked with the cable type and the manufacturer's name or other identification.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is SAE J1127, "Low Voltage Battery Cable."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

SURFACE VEHICLE CABLE (VZSA)

Low-voltage Battery Cable Classified in Accordance with SAE J1127 (VZSL)—Continued

LOW-VOLTAGE BATTERY CABLE IN ACCORDANCE WITH SAE J1127

Issue No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ON-BOARD CABLE (VZSR)

GENERAL

This category covers single-conductor or single, coaxial cable intended for the connection of components in an electric vehicle. The cable is rated 60, 75, 90 or 105°C (140, 167, 194 or 221°F), 300 or 600 V ac or dc, -30°C (-22°F), oil resistant, water resistant, and suitable for exposure to battery acid.

PRODUCT MARKINGS

On-board cable is marked with the catalog number, the manufacturer's name or other identification, conductor size, temperature rating and voltage rating. Optional markings may include "VW-1," "-40C," and one or more of the codes noted below to designate that the cable is suitable for a specific fluid or environmental exposure if the cable has been investigated for the specified rating.

Fluid or Environmental Exposure	Optional Marking Code
Sunlight	W
Gasoline	G
Ethanol blend	E
Diesel fuel	D
Power-steering fluid	S
Auto transmission fluid	T
Engine coolant	A
Brake fluid	B

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2733, "Outline of Investigation for Surface Vehicle On-Board Cable."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "On-board Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRUCTURED CABLING PROGRAMS (VZYY)

GENERAL

A structured cabling system is a field-assembled set of cabling and connectivity products that integrates the data, voice, video, and various management systems of a building (such as building automation systems, safety alarms, security access, energy systems, etc.).

Structured cabling systems are investigated under UL's Performance Verification Service, and the performance standards used in the investigation can be proprietary manufacturer standards, industry standards, or the UL XTR Structured Cabling Program (VZZL).

Performance Verification testing includes passive and/or active testing of the Permanent Link, Basic Link or Channel (system). Passive testing employs a reference signal that is transmitted through the system under test. Transmission performance of the system is investigated against the applicable performance standard. Active testing employs packets of 8-bit hexadecimal or binary formatted data, which is transmitted through the system under test, in order to detect the presence of bit errors in the data packet.

STRUCTURED CABLING PROGRAMS (VZYY)

These systems may be tested in a laboratory environment or in the field as installed cabling as described in the individual Structured Cabling Program categories.

The cabling and connectivity products contained in a structured cabling system may be supplied by one or more manufacturers.

Structured cabling systems are commonly referred to as "Solutions," and this terminology is used to identify systems that have been Verified for performance under the individual Structured Cabling Programs. Typical Solution configurations are defined as follows:

Permanent Link — A 90-meter horizontal run of cable terminating in a telecommunications outlet connector or either a transition point (TP) connector or consolidation point (CP) connector at one end and in a telecommunications cross connection at the other end. The total Solution length is 90 meters.

Basic Link — A 90-meter horizontal run of cable terminating in a telecommunications outlet connector or either a transition point (TP) connector or consolidation point (CP) connector at one end and in a telecommunications cross connection at the other end with 2-meter patch cords at each end. The total Solution length is 94 meters.

Channel — A 90-meter horizontal run of cable terminating in a telecommunications outlet connector or either a transition point (TP) connector plus a 5-meter patch cord or consolidation point (CP) connector plus a 5-meter patch cord at one end and in a telecommunications cross connection plus a 5-meter patch cord at the other end with 2-meter patch cords at each end. The total Solution length is 100 meters.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UL XTR STRUCTURED CABLING PROGRAM (VZZL)

GENERAL

This category covers field-assembled structured cabling systems (referred to as "Solutions") whose signal transmission characteristics have been investigated in accordance with the UL XTR Structured Cabling Program.

The UL XTR Program investigates how a Solution's transmission performance affects live data as it interacts with active network components. Solutions investigated for performance under the UL XTR Program have been investigated for the expanded performance properties necessary to maintain true data throughput and component interoperability.

The UL XTR Test Program requires testing of the Solution's horizontal cable, patch cords and connecting hardware, as well as passive channel, active channel and expanded active channel testing.

ADDITIONAL INFORMATION

For additional information, see Structured Cabling Programs (VZYY) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is the UL XTR Specification.

Components used in the Solution are also required to be UL Listed for Safety and UL Verified for Performance in accordance with the Standards shown below:

Safety		
Component	Standard	Guide
Cable	ANSI/UL 444, "Communications Cables"	DUXZ
Connecting Hardware	ANSI/UL 1863, "Communications-Circuit Accessories"	DUXR
Patch Cords	ANSI/UL 1863	DUXR

Performance Verification

Component	Standard	Guide
Category 5e Cable	ANSI/TIA/ EIA-568-B.2, "Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted-Pair Cabling Components Revision of ANSI/ TIA/EIA-568-A"	DUXZ

STRUCTURED CABLING PROGRAMS (VZYY)

UL XTR Structured Cabling Program (VZZL)—Continued

Component	Standard	Guide
Category 6 Cable	ANSI/TIA/ EIA-568-B.2-1, "Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted Pair Cabling Components Addendum 1 - Transmission Performance Specifications for 4-Pair 100 Category 6 Cabling Addendum No. 1 to ANSI/TIA/ EIA-568-B.2"	DUXZ
Category 5e Connecting Hardware	ANSI/TIA/ EIA-568-B.2	DUXR
Category 6 Connecting Hardware	ANSI/TIA/ EIA-568-B.2-1	DUXR
Category 5e Patch Cords	ANSI/TIA/ EIA-568-B.2	DUXR
Category 6 Patch Cords	ANSI/TIA/ EIA-568-B.2-1	DUXR

UL MARK

The Verification Mark of UL on the Bill of Lading, the Bulk Shipment Certificate, or on UL's Certificate of Conformity Assessment is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," the term "UL XTR Program," a control number, and the Solution name and part number. The Verification Mark (label) is not applied directly to Solutions that have been investigated for performance under the UL XTR Program, since these products are field assembled.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROPRIETARY STRUCTURED CABLING PROGRAMS (VZZX)

GENERAL

This category covers field-assembled structured cabling systems (referred to as "Solutions") whose signal transmission characteristics have been investigated in accordance with proprietary manufacturer network cabling standards or industry standards.

Performance Verification testing includes passive and/or active testing of the Permanent Link, Basic Link or Channel. If the performance standard specifies active testing, the investigation will review how a Solution's transmission performance affects live data as it interacts with active network components. Solutions subjected to active testing have been investigated for the performance properties necessary to maintain true data throughput and component interoperability.

ADDITIONAL INFORMATION

For additional information, see Structured Cabling Programs (VZYY) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Components used in the Solution are also required to be UL Listed for Safety and UL Verified for Performance in accordance with the Standards shown below:

Safety		
Component	Standard	Guide
Cable	ANSI/UL 444, "Communications Cables"	DUXZ
Connecting Hardware	ANSI/UL 1863, "Communications-Circuit Accessories"	DUXR
Patch Cords	ANSI/UL 1863	DUXR

Performance Verification

PRODUCT CATEGORIES BY CATEGORY CODE

Proprietary Structured Cabling Programs (VZZX)–Continued

Component	Standard	Guide
Category 5e Cable	ANSI/TIA/ EIA-568-B.2, "Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted-Pair Cabling Components Revision of ANSI/ TIA/EIA-568-A"	DUZX
Category 6 Cable	ANSI/TIA/ EIA-568-B.2-1, "Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted Pair Cabling Components Addendum 1 – Transmission Performance Specifications for 4-Pair 100 Category 6 Cabling Addendum No. 1 to ANSI/TIA/ EIA-568-B.2"	DUZX
Category 5e Connecting Hardware	ANSI/TIA/ EIA-568-B.2	DUXR

UL MARK

The Verification Mark of UL on the Bill of Lading, the Bulk Shipment Certificate, or on UL's Certificate of Conformity Assessment is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," the name of the Performance Standard, a control number, and the Solution name and part number. The Verification Mark (label) is not applied directly to Solutions that have been investigated for performance under this category, since these products are field assembled.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA EQUIPMENT (WABX)

USE

This category covers equipment for use with swimming pools, decorative pools, wading pools, therapeutic pools, and hot tubs and spas in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers self-contained hot tubs and spas, as well as cord-connected portable appliances for use with aboveground storable swimming pools, hot tubs and spas.

Information concerning the suitability of the equipment for use indoors or outdoors is given in the General Information Section for each individual category.

RELATED PRODUCTS

Ground-fault circuit interrupters intended for use with swimming pool equipment are covered under Ground-fault Circuit Interrupters (KCXS).

Suction fittings are covered under Suction Fittings for Swimming Pools, Wading Pools, Spas and Hot Tubs (SEBS).

Fountains covered by Article 680, Part E, of the NEC are covered under Architectural and Floating Fountains (AWEG).

Speakers intended for installation underwater in swimming pools are covered under Speakers (UEAY).

BLOWERS (WAGN)

USE AND INSTALLATION

This category covers equipment intended to introduce pressurized air into spas and hot tubs to create a hydromassage effect. They are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

These products are acceptable for both indoor and outdoor use unless marked otherwise. They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

To avoid water contacting live electrical parts, these products are intended to be installed in accordance with the manufacturer's instructions and permanently mounted at least 12 in. above the overflow level of the spa or hot tub.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Blower," "Hot Tub Blower" or "Spa/Hot Tub Blower."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROLS (WAWU)

USE

This category covers controllers, timers, temperature-regulating equipment, etc., for control of equipment intended for use with swimming pools, hot tubs and spas. This category also covers control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools.

These products are acceptable for both indoor and outdoor use unless marked "For Indoor Use Only."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Controller" or "Swimming Pool Controller," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COVERS FOR SWIMMING POOLS AND SPAS (WBAH)

USE AND INSTALLATION

This category covers manual and power safety covers intended for use with swimming pools, spas and hot tubs, as well as covers of other than the safety type, as defined in ASTM F1346, "Standard Performance Specification for Safety Covers and Labeling Requirements for All Covers for Swimming Pools, Spas and Hot Tubs."

The ability of the manual or power safety cover to perform its intended function is dependent upon proper installation. Installation should be performed by a qualified installer using the manufacturer's instructions. Authorities Having Jurisdiction should be consulted before installation.

PRODUCT TYPES

Covers for Swimming Pools and Spas (WBAH)—*Continued*

Manual Safety Covers — A manual safety cover is a barrier that is manually placed over the water. It is intended to impede access to the contained body of water. It is provided with a means for removing significant levels of collected surface water.

Power Safety Covers — A power safety cover is a barrier that can be placed over the water area and removed with a motorized mechanism. It is intended to impede access to the contained body of water. It is provided with a means for removing significant levels of collected surface water. A power safety cover includes an operator that is covered under Swimming Pool and Spa Cover Operators, Electric (WDDJ).

Other Covers — A cover of other than the safety type, such as an energy conservation or a solar energy cover, is a cover that has been investigated in accordance with only the materials, manufacture and labeling requirements of ASTM F1346. Covers of this type are not intended to impede access to the contained body of water. Such covers are marked "This Is Not A Safety Cover."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ASTM F1346, "Standard Performance Specification for Safety Covers and Labeling Requirements for All Covers for Swimming Pools, Spas and Hot Tubs."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]
IN ACCORDANCE WITH ASTM F1346-[issue date]
Control No.

* MANUAL SAFETY COVER, POWER SAFETY COVER or POOL COVER

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES AND FORMING SHELLS (WBBD)**USE**

This category covers luminaires and forming shells for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code" (NEC).

ACCESSORIES

This category also covers accessory devices and kits intended to be field installed for the purpose of modernizing a luminaire, such as to convert the luminaire from incandescent to LED technology. These accessories include instructions that identify the specific luminaire(s) for which the accessory is intended and that do not require special knowledge or skills beyond that normally required for user maintenance activities, such as lamp replacement. After installation of a certified accessory, the installed luminaire is expected to comply with the same requirements and perform in a comparable manner as a new luminaire, relative to safety risks.

REBUILT PRODUCTS

This category also covers dry-niche, wet-niche, and no-niche underwater luminaires for swimming pools that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt dry-niche, wet-niche, and no-niche underwater luminaires for swimming pools are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt dry-niche, wet-niche, and no-niche underwater luminaires for swimming pools are subject to the same requirements as new dry-niche, wet-niche, and no-niche underwater luminaires for swimming pools.

PRODUCT MARKINGS

Luminaires are marked to indicate their suitability for use in fresh water, sea water, or both. Luminaires marked as suitable for use in fresh water are also considered suitable for use in salt-treated water. Luminaires investigated for operation only while submerged in water are marked, where visible after installation, "CAUTION To reduce the risk of electric shock submerge before lighting" or the equivalent. Additional markings for specific types of luminaires are described below.

PRODUCT TYPES AND INSTALLATION

Dry-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires have been investigated for permanent installation only in

Luminaires and Forming Shells (WBBD)—*Continued*

the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the top of the lens not less than 450 mm (18 in.) below the normal water level unless otherwise marked. These luminaires are designed for servicing from the rear in a passageway behind the pool or spa wall or, if mounted in the bottom of a pool or spa, in a tunnel underneath the pool or spa. The luminaire may include (1) a factory-installed length of flexible cord terminating in an attachment plug, and (2) an attachment-plug receptacle for connection of the branch-circuit conductors.

Wet-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires, with the mating forming shell (luminaire housing), have been investigated for installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the top of the lens not less than 450 mm (18 in.) below the normal water level unless otherwise marked. These luminaires have been investigated for installation in a permanently installed forming shell (luminaire housing) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper forming shells with which they have been investigated for use. These luminaires are provided with a factory installed, permanently attached flexible cord with an exposed length of not less than 3.6 m (12 ft). The flexible cord is confined in the forming shell by the luminaire and permits the luminaire to be removed from the forming shell and to be lifted to the pool or spa deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 3.6 m (12 ft) long cord will not permit luminaire removal from the forming shell and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored in the forming shell.

Forming Shell (Housing) for Wet-niche Underwater Luminaires for Swimming Pools and Spas — These are structures designed to support a mating wet-niche luminaire, for mounting in a pool structure. Forming shells are marked to indicate the luminaires with which the forming shells have been investigated for use.

No-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires have been investigated for mounting to a bracket permanently secured in or on the pool or spa wall or bottom where the luminaire will be completely surrounded by water, and are marked to indicate the mounting bracket for which they have been investigated for use. The information provided above for wet-niche luminaires regarding installation location and the provided flexible cord also applies to no-niche luminaires.

Mounting Brackets for No-niche Underwater Luminaires for Swimming Pools and Spas — These are structures designed to support a mating no-niche luminaire, for mounting in or on a pool structure. Mounting brackets are marked to indicate the luminaires with which the mounting brackets have been investigated for use.

Underwater Luminaires for Aboveground Storable Swimming Pools — These luminaires are a type of through-wall lighting assembly as described in Article 680 of the NEC. They have been investigated for use with an aboveground storable pool (a pool that is constructed on or above the ground and is capable of holding water to a maximum depth of 1.0 m (42 in.), or a pool with nonmetallic, molded polymeric walls regardless of dimension). They include all three of the following factory-provided parts:

1. Lamp assembly for temporary installation on or through the wall of an aboveground pool
2. Transformer or ground-fault circuit interrupter assembly provided with a 0.9 m – 1.8 m (3 – 6 ft) power-supply cord for connection to a source of supply and for temporary mounting away from the pool (the remote assembly)
3. Jacketed flexible cord of not less than 7.6 m (25 ft) in length connecting the lamp assembly and the remote assembly

These luminaires have been investigated for installation with the top of the lens not less than 200 mm (8 in.) below the top of the pool. A hole through the pool wall may be required for luminaire installation. Unless otherwise indicated in the luminaire's installation instructions, the luminaire design has been investigated for the lower edge of any hole that a luminaire installer must cut in the pool wall to be no more than 360 mm (14 in.) below the top of the pool wall. The pool wall manufacturer may provide, at a greater depth, a properly sized hole or a reinforced wall section designed for field-cutting a properly sized hole for a luminaire or plumbing fitting. Unless otherwise marked for a maximum installation depth, these luminaires have been investigated for installation in such a hole at a greater depth where the pool installation instructions provide for the hole placement and usage.

Underwater Luminaires for Aboveground Nonstorable Swimming Pools — These luminaires are a type of through-wall lighting assembly as

Luminaires and Forming Shells (WBBDT)—Continued

described in Article 680 of the NEC. They have been investigated for permanent installation through or on the wall of an aboveground nonstorable pool. The information provided above for underwater luminaires for aboveground storable swimming pools regarding installation depth and using an existing hole or cutting a new hole for installation also applies to underwater luminaires for aboveground nonstorable swimming pools.

Convertible Underwater Luminaires for Aboveground Swimming Pools — These luminaires are initially configured as an underwater luminaire for aboveground storable swimming pool for use as described above. They include provisions for the one-time field conversion of the luminaire to an underwater luminaire for aboveground nonstorable swimming pool for use as described above. Once converted, these luminaires are not suitable for being modified back to their original configuration.

Fiber Optic Luminaires for Swimming Pools and Spas — These luminaires consist of a lamp/electrical enclosure that has been investigated for permanent mounting not less than 1.5 m (5 ft) from the pool or spa wall and a fiber optic element and associated fittings to transmit the light to the pool or spa. The lamp/electrical enclosure has been investigated for installation above the level at which water splashed from the pool or spa or from another source may collect.

SUPPLY-CIRCUIT CURRENT RATING

An underwater luminaire for aboveground storable swimming pools has been investigated for connection to the branch circuit specified in the NEC for receptacles having a blade configuration corresponding to the blade configuration of the luminaire attachment plug. For all other luminaires, unless marked to identify a permitted greater or required lower maximum supply-circuit current rating, a luminaire with a voltage and current rating shown in the table below has been investigated for installation on a supply circuit rated not more than as specified in the table. A luminaire with a voltage or current rating not covered by the table is marked to identify the maximum supply-circuit current rating for its installation.

Maximum Current Rating for Supply Circuit (Except as Specified in Preceding Paragraph)

Luminaire Voltage Rating	Luminaire Current Rating	Max Current Rating for Luminaire Supply Circuit
15 V ac or less	25 A or less	25 A
110 V ac - 120 V ac	16 A or less	20 A
110 V ac - 120 V ac	More than 16 A, not more than 24 A	30 A

RELATED PRODUCTS

See Submersible Luminaires (IFEV) for underwater luminaires intended for use in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons.

See Swimming Pool and Spa Transformers (WDGV) for transformers for use to supply swimming pool and spa luminaires. See Potting Compounds (WCRY) for compounds for the user to encapsulate grounding and bonding conductor splices in swimming pool, spa or fountain equipment, including luminaires, forming shells and junction boxes.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment (WABX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 676, "Underwater Luminaires and Submersible Junction Boxes."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate:

- "Dry-niche Underwater Luminaire for Swimming Pool"
- "Rebuilt Dry-niche Underwater Luminaire for Swimming Pool"
- "Wet-niche Underwater Luminaire for Swimming Pool"
- "Rebuilt Wet-niche Underwater Luminaire for Swimming Pool"
- "Forming Shell (or Housing) for Wet-niche Luminaire"
- "No-niche Underwater Luminaire for Swimming Pool"
- "Rebuilt No-niche Underwater Luminaire for Swimming Pool"
- "Mounting Bracket for No-niche Luminaire"
- "Underwater Luminaire for Aboveground Storable Swimming Pool"
- "Underwater Luminaire for Aboveground Nonstorable Swimming Pool"

Luminaires and Forming Shells (WBBDT)—Continued

- "Convertible Underwater Luminaire for Aboveground Swimming Pool"
- "Fiber Optic Luminaire for Swimming Pool"
- "Underwater Luminaire Accessory"

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS (WBRR)

USE

This category covers heaters intended for permanent installation in or adjacent to swimming pools or spas.

These products have not been investigated for outdoor use unless they are marked "For Outdoor Use," or equivalent, in which case they are acceptable for both outdoor and indoor use.

RELATED PRODUCTS

Heaters intended for use with hydromassage bathtubs are covered under Hydromassage Bathtubs (NCHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1261, "Electric Water Heaters for Pools and Tubs."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Heater" or "Spa Heater."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOT TUB AND SPA EQUIPMENT ASSEMBLIES (WBYQ)

USE AND INSTALLATION

This category covers equipment assemblies intended for use with non-self-contained spas and hot tubs, rated 250 V or less, for household or commercial use indoors, outdoors, or both.

This category also covers equipment assemblies that do not contain a water heater and do not contain a water temperature-regulating control or a water temperature-limiting control. A water heater, a temperature-regulating control and a temperature-limiting control should be provided in the final installation and their adequacy determined by the Authority Having Jurisdiction.

Equipment assemblies may be cord-and-plug connected, convertible, or permanently wired. Convertible equipment assemblies are shipped from the factory with a power-supply cord but designed for field conversion to a permanently wired configuration, for 120 V, 240 V, or either rating. Once a convertible equipment assembly is converted to permanently wired, it is not intended to be returned to a cord-connected configuration.

Equipment assemblies are prepackaged combinations of various components, such as pumps, filters, heaters, blowers, lights and controls, and are designed for use with field-supplied tubs. Equipment assemblies are designed for installation and use in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." Equipment assemblies should be installed at least 5 feet from the inside walls of a spa or hot tub and be connected by nonmetallic pipe only.

Equipment assemblies have not been investigated for below-grade installation.

Equipment assemblies have not been investigated for use within an outer enclosure or under the skirt of a spa or hot tub unless so marked.

Equipment assemblies that contain a gas-fired water heater have not been investigated for indoor use, for use within an outer enclosure, or for use under the skirt of a spa or hot tub unless so marked.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

Hot Tub and Spa Equipment Assemblies (WBYQ)–Continued

The basic standard used to investigate products in this category is ANSI/UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Equipment Assembly for Spa/Hot Tub," "Hot Tub Equipment Assembly" or "Spa Equipment Assembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL JUNCTION BOXES (WCEZ)

USE

This category covers junction boxes intended for use with underwater swimming pool and spa luminaires. The boxes are acceptable for both outdoor and indoor use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1241, "Junction Boxes for Swimming Pool Luminaires."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Junction Box."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OZONE GENERATORS (WCKA)

USE AND INSTALLATION

This category covers ozone generators rated 600 V or less and intended for use in the treatment of nonpotable water in swimming pools, and in spas and hot tubs of other than the self-contained type.

These products have been found suitable for use in wet and damp locations as well as dry locations unless marked "For Use in Dry Locations Only."

These products have been investigated with respect to risk of electric shock, fire and mechanical injury only.

Ozone generators involve features of installation and use not ordinarily present in electrical utilization equipment. Such features are covered in the manufacturer's installation instructions. The installation is intended to be in accordance with the manufacturer's instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

Maximum ozone threshold limit recommendations are set by the American Conference of Governmental Industrial Hygienists as found in 21CFR801.415, "Maximum Acceptable Level of Ozone." Compliance with the applicable regulations under conditions of normal and abnormal operation has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment (WABX), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1563, "Electric Spas, Equipment Assemblies and Associated Equipment."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Ozone Generators (WCKA)–Continued

OZONE GENERATOR WITH RESPECT TO RISK OF ELECTRIC SHOCK, FIRE AND MECHANICAL INJURY ONLY

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA EQUIPMENT CLASSIFIED IN ACCORDANCE WITH NSF 50 (WCNZ)

USE

This category covers pool and spa equipment, such as filters, centrifugal pumps, surface skimmers, ozone generators, chemical feeding equipment, chlorinators and other units installed in water circulation and filtration systems of pools, spas and hot tubs.

RELATED PRODUCTS

Some products covered under this category may also be covered under Water Treatment Equipment (WDLO), Swimming Pool and Spa Equipment, Miscellaneous (WDUT) or Pumps (WCSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 50, "Circulation System Components and Related Materials for Swimming Pools, Spas/Hot Tubs."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]

IN ACCORDANCE WITH NSF/ANSI 50-[issue date]

Control No.

* **SWIMMING POOL FILTER, OZONE GENERATOR, SPA CHLORINATOR** or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by UL under another category, the marking includes the appropriate Listing or Classification Mark and the statement "ALSO CLASSIFIED IN ACCORDANCE WITH NSF/ANSI 50-[issue date]."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POTTING COMPOUNDS (WCRY)

USE

This category covers compounds intended to be used to encapsulate grounding and bonding conductor splices or terminations in swimming pool, spa or fountain equipment such as fixtures, fixture housings, and junction boxes where the splices or terminations may be exposed to salt-free swimming pool or fountain water and sunlight for varying lengths of time, including continuous exposure. This category also covers potting compounds used to fill underwater junction boxes.

These compounds have been investigated for their resistance to the deteriorating effects of salt-free swimming pool and fountain water and ultraviolet light. They have also been investigated for their ability to adhere to typical metals, such as copper alloy, stainless steel and to plastic. The container or package is marked to identify the materials to which the compound has been determined to suitably adhere.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 676A, "Outline of Investigation for Potting Compounds for Swimming Pool, Fountain, and Spa Equipment."

UL MARK

Potting Compounds (WCRY)—Continued

The Listing Mark of UL on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool, Fountain and Spa Equipment Conductor Splice Potting Compound" (any of the locations may be omitted).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS (WCSX)

GENERAL

This category covers pumps for circulating the water in swimming pools, hot tubs and spas. These products are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

These products are acceptable for both outdoor and indoor use unless marked otherwise, and have been investigated for use with either permanently installed pools or storable pools.

Pumps investigated for permanently installed pools are so identified and are additionally marked "Do Not Use With Storable Pools." Permanently installed pool pumps are intended to be permanently connected to the water circulation system and they may be permanently wired or provided with a 3-ft nondetachable power-supply cord terminating in a grounding-type attachment plug. The attachment plug may be of the locking or non-locking type. Units provided with locking-type attachment plugs are intended to be installed at least 5 ft from the inside walls of the pool and are marked accordingly. Units provided with a nonlocking-type attachment plug are intended to be installed at least 10 ft from the inside walls of the pool and are marked accordingly. Permanently installed pool pumps are provided with an accessible pressure-wire connector for equipotential bonding.

Pumps investigated for storable pools are so identified and are additionally marked "Do Not Use With Permanently Installed Pools." Storable pool pumps are intended to be connected to a water circulation system constructed so that the pump may be readily disassembled from the system for storage and future reassembly to its original integrity. Storable pool pumps are provided with a minimum 25-ft nondetachable power-supply cord terminating in a grounding-type attachment plug, are double insulated, have no accessible grounded metal parts, have inaccessible noncurrent-carrying metal parts connected to the grounding conductor of the supply cord, and do not have an equipotential bonding connector.

These pumps may be provided with integral filters. The suitability of the filters to clean water has not been determined.

REBUILT PRODUCTS

This category also covers pumps that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt pumps are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt pumps are subject to the same requirements as new pumps.

RELATED PRODUCTS

Filters investigated to NSF/ANSI 50, "Circulation System Components and Related Materials for Swimming Pools, Spas/Hot Tubs," are covered under Swimming Pool and Spa Equipment Certified in Accordance with NSF 50 (WCNZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1081, "Swimming Pool Pumps, Filters, and Chlorinators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Pump," "Spa Pump" or "Swimming Pool or Spa Pump," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

Pumps (WCSX)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SELF-CONTAINED SPAS (WCZW)

USE AND INSTALLATION

This category covers self-contained spas for aboveground use, for household or commercial use, and for both indoor and outdoor use, unless marked otherwise. These spas are not designed or intended to have the water drained after each use. They are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

A self-contained spa is a continuous-duty appliance in which all control, water-heating and water-circulating equipment is an integral part of the product, located entirely under the spa skirt.

Self-contained spas may be cord connected, convertible, or permanently wired. A convertible spa is shipped from the factory with a power-supply cord but is designed for field conversion to a permanently wired configuration, either 120 V, 240 V, or both. Once a convertible spa is converted to permanently wired, it is not intended to be returned to a cord-connected configuration.

Self-contained spas may be provided with electric or gas heaters. Spas with gas heaters are intended for permanent wiring and permanent installation, and are intended for outdoor use only.

Each spa is provided with a marking on the wiring diagram in the field-wiring compartment or in the installation instructions or on a separate configuration sheet, to identify the major components of the spa when manufactured. The configuration sheet and the installation instructions are intended to be available during installation and inspection.

Self-contained spas may be shipped completely assembled or in knock-down form.

Knockdown spas are packaged by major component in multiple cartons to aid in shipping. They consist of a completely assembled and plumbed tub and an equipment package. The skirt may be attached to the tub or it may be provided in prefabricated sections for assembly in the field. The equipment package is completely assembled, pre-wired and plumbed. Connections are made by union fittings or similar quick-disconnect plumbing that does not require tools or special materials. All cartons used to ship a knock-down spa are marked to indicate the contents, the spa model, and the total number of required cartons.

Self-contained spas are provided with skimmers and/or suction fittings such that the completed spa complies with the material requirements, physical testing, hair entrapment and body entrapment test requirements of ANSI/ASME A112.19.8b (2009), "Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs."

RELATED PRODUCTS

Hydromassage bathtubs are covered under Hydromassage Bathtubs (NCHX).

Factory-made assemblies of pumps, heaters, blowers, lights and controls intended for use with field-supplied hot tubs and spas are covered under Hot Tub and Spa Equipment Assemblies (WBQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Self Contained Spa."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA COVER OPERATORS, ELECTRIC (WDDJ)

USE AND INSTALLATION

This category covers electrically driven cover operators intended for use with swimming pools and spas, together with controls for use with such operators. The cover operators generally consist of a motor-driven apparatus used to move the covering material. These operators are intended to be installed in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." These products have been found suitable for both indoor and outdoor use.

SWIMMING POOL AND SPA EQUIPMENT (WABX)

Swimming Pool and Spa Cover Operators, Electric (WDDJ)—Continued

RELATED PRODUCTS

Some products covered under this category may incorporate pool covers certified under Covers for Swimming Pools and Spas (WBAH). Unless certified as a power safety cover under WBAH, a cover provided with the operator has not been investigated as a safety cover.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2452, "Outline of Investigation for Electric Swimming Pool and Spa Cover Operators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Cover Operator," "Spa Cover Operator" or "Pool Cover Operator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA TRANSFORMERS (WDGV)

USE

This category covers field-installed, air-cooled swimming pool and spa transformers and dc-output power supplies of the isolated two-winding type having a grounded metal barrier between the primary and secondary windings, and intended to supply swimming pool, spa or submersible (fountain) luminaires in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." The input is rated a nominal 120 V; the secondary is rated 15 V ac or less or 30 V dc or less and 1000 VA or less.

These products are provided with a power-supply cord or have provisions for conduit connection to the branch-circuit supply. Transformers not provided with a power-supply cord are provided with leads or with studs or terminal pads to which certified pressure-wire connectors can be factory or field installed to accommodate field wiring. Wire-binding screws or studs with cupped washers should be used for copper wire 10 AWG max.

Transformers provided with a power-supply cord are intended for supplying low-voltage submersible (fountain) luminaires as indicated by a marking on the transformer. They are not intended for use with a swimming pool or spa luminaires.

Unless marked otherwise, these transformers are not suitable for connection to a conduit which extends directly to a wet-niche or no-niche luminaire.

These products have not been investigated for outdoor use, unless marked "For Outdoor Use" or equivalent, in which case they are acceptable for both outdoor and indoor use.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment (WABX), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 379, "Outline of Investigation for Transformers for Fountain, Swimming Pool, and Spa Luminaires."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Fountain Transformer," "Swimming Pool Transformer," "Spa Transformer" or "Fountain, Swimming Pool or Spa Transformer."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER TREATMENT EQUIPMENT (WDLC)

USE AND INSTALLATION

SWIMMING POOL AND SPA EQUIPMENT (WABX)

Water Treatment Equipment (WDLC)—Continued

This category covers chlorinators, brominators, ozone generators, ion generators, and similar equipment intended to sanitize water in pools, spas and hot tubs. This category also covers equipment designed to monitor water chemistry in pools, spas and hot tubs, with or without the capability of adding chemicals to the water to adjust water chemistry. These products are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

These products are acceptable for both indoor and outdoor use unless marked otherwise. They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

FACTORS NOT INVESTIGATED

The ability of this equipment to sanitize pool and spa water has not been investigated.

RELATED PRODUCTS

Equipment investigated for sanitation is covered under Pool and Spa Equipment Certified in Accordance with NSF 50 (WCNZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1081, "Swimming Pool Pumps, Filters, and Chlorinators," and ANSI/UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Chlorinator," "Spa Chlorinator" or "Swimming Pool and Spa Chlorinator," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA EQUIPMENT, MISCELLANEOUS (WDUT)

GENERAL

This category covers accessory equipment for swimming pools, hot tubs and spas, such as valves and pool cover drain pumps.

This category also covers swimming pool equipotential bonding kits intended to provide an intentional conductive bond to the pool water in accordance with Section 680.26.(C) of ANSI/NFPA 70, "National Electrical Code."

Unless marked otherwise, these products are acceptable for both indoor and outdoor use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment," and ANSI/UL 1081, "Swimming Pool Pumps, Filters and Chlorinators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pool Cover Operator," "Pool Valve Actuator" or "Pool Freeze Protector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SUCTION FITTINGS FOR SWIMMING POOLS, WADING POOLS, SPAS AND HOT TUBS (WEBS)

USE AND INSTALLATION

This category covers suction fittings intended for use in swimming pools, wading pools, in-ground and self-contained spas, hot tubs, and similar installations.

These fittings have been investigated for resistance to hair, body, finger and limb entrapment.

Suction fittings have been investigated for both indoor and outdoor use. They are intended to be installed following the instructions that are packaged with each fitting.

Self-contained spa fittings are intended only for installation in self-contained, factory-produced spas. They are intended for plumbing with at least two fittings per pump.

RATINGS

Each suction fitting is marked with a water-flow rate in gallons per minute. This rate must equal or exceed the maximum flow rate of the pump(s) used in the water circulating system.

PRODUCT MARKINGS

These fittings are marked with the intended installation position: "Wall Only," "Floor Only" or "Wall or Floor." They may additionally be marked with the statement, "For Single or Multiple Drain Use," "For Single Drain Use" or "For Multiple Drain Use Only."

Self-contained spa fittings are marked "For Use in Self-Contained Factory Manufactured Spas Only" and "For Multiple Outlet Use Only."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/APSP-16 (2011), "Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs."

Note: Fittings complying with ANSI/APSP-16 are also considered to comply with ANSI/ASME A112.19.8b (2009), "Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Suction Fitting" (or "Sw Pool Sctn Ftn").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHBOARDS (WEIR)

SWITCHBOARDS, DEAD-FRONT (WEVZ)

GENERAL

This category covers dead-front switchboards rated 600 V or less. Switchboards are large single panels, structural frames or assemblies of panels or structural frames on which may be mounted, on the face or back or both: switches, overcurrent, and other protective devices, buses, and instruments. Switchboards may be accessible from the rear as well as from the front and are not intended to be installed in cabinets.

A **switchboard section** is that portion of a switchboard which is prevented by the structural framework from being physically separated into smaller units. Framework that is welded or joined with steel rivets over 1/4 in. in diameter is considered to constitute a single section.

A **switchboard enclosure** is intended to enclose one or more switchboard sections or switchboard interiors, or is intended to provide auxiliary wiring space for an adjacent switchboard section.

A **switchboard interior** is intended to be field installed in a switchboard enclosure to become the equivalent of a dead-front switchboard section.

USE, INSTALLATION AND RATINGS

Electrical Ratings

Each switchboard section is marked with the current rating of the supply bus. Within a group of sections, a through or splice bus is not required to be marked with its rating. The ampacity of the through bus and supply bus supplying the next section may be reduced but should not be less than the supply rating of the next section. The current rating of the through and

Switchboards, Dead-front (WEVZ)—Continued

splice bus in the last section of a group (which might be used in the future to supply an additional section) is shown in the switchboard section marking if the through or splice bus rating is less than the supply rating of that section. The current rating of the section bus is also included in the marking. The adequacy of the supply, through, splice, or section bus current rating with respect to the calculated load current using the appropriate diversity factors noted in Section 230.42 and Article 220 of ANSI/NFPA 70, "National Electrical Code" (NEC), can only be determined by the Authority Having Jurisdiction (AHJ) at the final installation.

Short-circuit Ratings

Dead-front switchboard sections or interiors are marked with their short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest short-circuit rating of (1) any switchboard section connected in series, or (2) the lowest interrupting rating of any device installed or intended to be installed therein. However, for combination series-connected devices, the short-circuit-current rating marked on the switchboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the switchboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the switchboard in accordance with the marked instructions. In many cases the short-circuit ratings are associated with instructions for securing supply wiring within the switchboard.

Service Equipment

The marking "Suitable for Use as Service Equipment" appears on each switchboard section or switchboard interior containing one or more service disconnects optionally intended for use at a service.

A switchboard section or interior marked for use at services as indicated above may also be used to provide the main control and means of cutoff for a separately derived system or a separate building.

A switchboard section or interior intended for use with multiple sources of supply and marked "Service Equipment" is provided with a means to disconnect load conductors from all sources of supply terminated in that section. Multiple-section switchboard assemblies intended for use with multiple sources may not be provided with a means to disconnect from all sources of supply; alternate nonservice sources may terminate in a nonservice-rated section. Only disconnects provided in sections marked "Service Equipment" have been investigated as being suitable for use as a means to disconnect and isolate load conductors from the source of supply.

Some switchboard sections or interiors incorporate neutrals factory bonded to the enclosure. Such units are marked "Suitable Only for Use as Service Equipment."

Some switchboards may have terminals or provisions for terminals, marked as taps, located on the supply side of the service disconnecting means. The suitability of these terminals as taps connected on the supply side of the service disconnect is intended to be determined in accordance with the NEC.

Ground-fault Protection

Some switchboard sections may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking such as on a wiring diagram or on the relaying equipment. Instructions are provided for on-site testing of the ground-fault protection at the time of installation.

Overcurrent Protection

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches other than fused power circuit devices should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU) and fused power circuit devices (see IYSR) used in switchboards are suitable for continuous use at 100% of their rating.

Field-installed Equipment

A switchboard section or interior may have provision for field installation of additional suitable equipment such as branch, splice or through buses, meter socket bases, circuit breakers, switches, panelboards, and terminal connectors. The switchboard section or interior is marked with the name or trademark of the manufacturer and the catalog number or equivalent of such equipment that is intended to be installed in the field. A switchboard section or interior may also have provision for utility-installed current transformers and metering equipment.

Installation

A switchboard section or enclosure investigated to determine that it is rainproof is marked "Type 3R" and may also be marked "Rainproof."

A section or enclosure suitable for connection to a busway is marked to indicate the manufacturer and type of busway.

The acceptability of conduit stubs serving unit sections, with respect to wiring space and spacing from live parts, can be determined only by the AHJ at the final installation.

In some cases, field drilling of holes in the ground bus may be needed to add additional grounding terminals.

Field Terminations

Switchboards, Dead-front (WEVZ)—Continued

Dead-front switchboard sections covered under this category are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Aluminum conductors may be used if such marking is independent of any marking on terminal connectors and if it appears on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Table 310.16 of the NEC. Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

Switchboards may have terminals or provisions for terminals located on the supply side of the service disconnecting means. These terminals or provisions for terminals are marked “TAP,” and the switchboard is marked to indicate the specific terminals or terminal kits intended to be field installed. The suitability of equipment connected to these taps is to be determined in accordance with NEC Sections 230.46, 230.82, 690.64(A), 701.11(E) and 705.12 by the AHJ at the final installation.

RELATED PRODUCTS

Single panels or groups of panel units designed for assembly in the form of a single panel, including buses and automatic overcurrent devices, and equipped with or without switches for the control of light, heat, or power circuits; designed to be placed in a cabinet or cutout box placed in or against a wall, partition, or other support; and accessible only from the front are covered under Panelboards (QEUY).

Theater switchboards, incandescent lighting switchboards with dimmers, and laboratory switchboards are covered under Switchboards, Special Purpose (WFJX).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches (WPTZ).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels (NITW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 891, “Switchboards.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Dead Front Switchboard Section,” “Switchboard Interior” or “Switchboard Enclosure.” The Listing Mark for dead-front switchboard sections includes the statement “___ of ___.” The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchboard. The second space is stamped with the total number of sections in the switchboard (including sections not bearing a UL Listing Mark).

The Listing Mark covers only the section so marked; it does not cover other sections included in the complete switchboard.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHBOARDS, SPECIAL PURPOSE (WFJX)

USE, INSTALLATION AND MARKINGS

This category covers theater switchboards, incandescent lighting switchboards with dimmers, and laboratory switchboards rated 600 V or less.

These switchboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code.” Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

Short-circuit Rating

Switchboards, Special Purpose (WFJX)—Continued

Special purpose switchboards are marked with their short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest interrupting rating of any device installed or intended to be installed therein. However, for combination series-connected devices, the short-circuit-current rating marked on the switchboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the switchboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the switchboard in accordance with the marked instructions. In the case of rack-type theater-dimming switchboards with removable modules, the rating may depend on the use of specific dimming modules. These dimming modules are marked on the switchboard. In many cases the short-circuit ratings are associated with instructions for securing supply wiring within the switchboard.

Duty Rating

Theater-dimming switchboards have been investigated to operate continuously at 100% of their marked input rating.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 891, “Switchboards.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Laboratory Switchboard,” “Theater Switchboard” or “Incandescent Lighting Switchboard,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES (WFXV)

PULLOUT SWITCHES, DETACHABLE TYPE (WGEU)

USE AND INSTALLATION

This category covers switches having detachable pullout heads, with or without fuseholders, for cartridge fuses. These switches may be enclosed or nonenclosed.

Nonenclosed switches are intended for use in other assemblies, such as panelboards, service equipment, or the like.

Enclosed pullout switches may contain meter sockets and/or neutral assemblies and contain more than one independent switch without connection between switches.

Some enclosed pullout switches incorporate neutrals that are factory bonded to the enclosure. Such switches are marked “Suitable Only for Use as Service Equipment.”

Enclosed pullout switches marked for use as service equipment may also be used to provide the main control and means of cutoff for a separately derived system or for a second building.

Class CTL pullout switches have the physical size, configuration or other means which, in conjunction with the physical means provided in a Class CTL assembly, are designed to prevent the installation of more switch poles than that number for which the assembly is designed and rated.

Class CTL pullout switches may be identified by the words “Class CTL” or “CTL” on the switch as part of the marking.

Enclosed pullout switches that are rain-tight or rainproof are marked accordingly.

These pullout switches are intended for use with copper conductors unless marked to indicate that certain terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on the terminal connectors and appear on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code.” Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

RATINGS

Ratings of enclosed or nonenclosed pullout switches are limited to 600 V or less, 400 A or less.

PRODUCT CATEGORIES BY CATEGORY CODE

Pullout Switches, Detachable Type (WGEU)—Continued

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused pullout switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits."

Pullout switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Pullout switches with amp ratings only are suitable for general use only.

Pullout switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not intended for use as motor controllers.

Motor-circuit pullout switches are intended for use only in motor circuits and are marked "Motor-Circuit Pullout Switch."

Horsepower ratings are associated with particular voltages and number of phases. A horsepower-rated switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some pullout switches have dual horsepower ratings, the larger of which is based on the use of fuses with time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches marked "Suitable For Use On A Circuit Capable of Delivering Not More Than ___ Amps, RMS, Symmetrical, ___ Volts Maximum: Use Class ___ Fuses Having An Interrupting Rating Of No Less Than The Maximum Available Short-Circuit Current Of The Circuit," have been investigated for the additional rating indicated.

Some enclosed pullout switches are suitable for use as service switches. Such switches are marked "Suitable For Use As Service Equipment."

Enclosed pullout switches with the neutral bonded to the frame or enclosure at the factory are marked "Suitable Only for Use as Service Equipment."

RELATED PRODUCTS

Products with similar uses are covered under Switches, Enclosed (WIA), Motor Controllers, Manual (NLRV), Switches, Dead-front (WHXS) and Switches, Open Type (WHTY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1429, "Pullout Switches."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Pullout Switch," "Enclosed Pullout Switch," "Motor Circuit Pullout Switch" or "Enclosed Motor Circuit Pullout Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, AUTOMATIC (WGLT)**Switches, Clock Operated (WGZR)****GENERAL**

This category covers mechanically driven, clock-operated switches (timers). These devices are actuated by clockwork, by a gear train, by electrically wound spring motor, or the equivalent. The switching circuit includes separable contacts (air gap).

This category does not cover electronic timers or electronic solid-state switching devices.

Clock-operated switches may be marked with the following:

Manufacturer's name, trademark or identifier (visible after installation)
Model number (visible after installation)
Factory code (if the device is produced at more than one location)
Electrical ratings, including: volts, hertz, amps, load type (visible after installation)

Lamp load maximum ratings are indicated or is one-tenth of the full amp rating

Electrical loads, when applicable, are indicated as follows:

"Tungsten" (or "T") for tungsten-filament-lamp loads
"Resistance only" (or "R") for noninductive resistance loads
"Inductive" (or "H") for inductive loads, such as IT equipment and appliances
"Pilot duty" (or "PD") for magnet-coil loads

Switches, Clock Operated (WGZR)—Continued

Clock-operated switches marked "Replace with Type HPN cord only" are suitably rated for SP-2 replacement cord

Permanently connected devices may be marked as follows:

Terminals are identified so that it is obvious how to connect the conductors or correspond to the wiring diagram (provided with the device).

"For supply connections, use ___ AWG or larger wire suitable for at least ___°C (___°F)," or equivalent. If no wire size is provided, 14 AWG was used; if no temperature is provided, 60°C wire was used.

"AL" or "Use aluminum wire only" identifies terminals for aluminum supply wire only.

"CU" or "Use copper wire only" identifies terminals for copper supply wire only.

"CU-AL" or "AL-CU" or "Use copper or aluminum wire" identifies terminals for copper or aluminum supply wire.

"Use copper wire only except at terminals ___" identifies a specific terminal wired to a conductor other than copper. Identification of specific terminals is required.

RATINGS

Clock-operated switches are rated for ac, dc, or both, and may be rated up to 600 V.

RELATED PRODUCTS

Appliance switches investigated to ANSI/UL 61058-1, "Switches for Appliances - Part 1: General Requirements," and special-use switches investigated to ANSI/UL 1054, "Special-Use Switches," are covered under Switches, Appliance and Special Use (WOYR).

General-use snap switches or flush-mounted switches installed in a wiring system per ANSI/NFPA 70, "National Electrical Code," are covered under Switches, Surface (WOKT) and Switches, Flush (WMUZ), respectively.

Manual motor controllers are covered under Motor Controllers, Manual (NLRV).

Switches for industrial applications are covered under Power Circuit and Motor-mounted Apparatus (NMTR).

Nonindustrial photoelectric switches for lighting control and/or motion-sensitive switches intended for nonindustrial applications are covered under Switches, Photoelectric (WJCT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 917, "Clock-Operated Switches."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clock Operated Switch" or "Timer Switch."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, OPEN TYPE (WHTY)**USE AND INSTALLATION**

This category covers open-type switches without an enclosure that are provided with a handle operator. These switches may be provided with fuseholders for plug- or cartridge-type fuses. These switches are intended for installation in a panelboard, switchboard, motor control center, industrial control panel or the like, or for installation in a certified cabinet or a cutout box in accordance with the switch installation instructions, or without an enclosure where acceptable.

These switches are intended to be mounted in enclosures such that they are manually operable by means of an external handle without opening the enclosure. Externally-operated handles mounted to the sidewall of an enclosure or through the cover of an enclosure are intended to be installed in accordance with the switch installation instructions. Open-type switches may be factory or field installed, and minimum enclosure size provided with the switch installation instructions may not incorporate the space necessary for the deflection of conductors entering or leaving the enclosure. The need for, and adequacy of, wire-bending space at terminals should be determined at the time of installation.

These switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Switches, Open Type (WHTY)—Continued

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code.” Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

RATINGS

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

Ratings of certified open-type switches are limited to 4000 A, 500 hp, 600 V. Open-type switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked “For Isolating Use Only – Do Not Open Under Load.”

Open-type switches with horsepower ratings in addition to ampere ratings are suitable for use in motor circuits as well as for general use. Open-type switches with ampere ratings only are intended for general use only. Open-type motor circuit switches are intended for use only in motor circuits and are marked “Motor-Circuit Switch.”

Open-type switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Ratings of certified open-type motor circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some open-type switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

RELATED PRODUCTS

Products with similar uses are covered under Switches, Enclosed (WIA), Switches, Molded Case (WJAZ), Motor Controllers, Manual (NLRV), Pullout Switches, Detachable Type (WGUE), Switches, Knife (WIOV) and Switches, Dead-front (WHXS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 98A, “Outline of Investigation for Open-Type Switches.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Open Type Switch” or “Open Type Motor-Circuit Switch.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, OPEN TYPE FOR USE IN PHOTOVOLTAIC SYSTEMS (WHVA)

USE AND INSTALLATION

This category covers open-type switches without an enclosure that are provided with a handle operator intended for use in photovoltaic (PV) systems. These switches may be provided with fuseholders for PV fuses and may be electrically tripped. These switches are intended for installation in a panelboard, switchboard or the like, or for installation in a certified cabinet or a cutout box in accordance with the PV switch installation instructions and Article 690 of ANSI/NFPA 70, “National Electrical Code” (NEC).

Open-type PV switches are intended for use in ambient temperatures between -20 and 50°C.

Open-type unfused PV switches are rated for continuous operation at their marked ampere rating.

Open-type fused PV switches are intended only for use with PV fuses and are rated for continuous load current not to exceed 80% of the maximum ampere rating of the PV fuse marked for use with the device.

Switches, Open Type for Use in Photovoltaic Systems (WHVA)—Continued

These open-type switches are intended to be mounted in enclosures such that they are manually operable by means of an external handle without opening the enclosure. Externally-operated handles mounted to the side-wall of an enclosure or through the cover of an enclosure are intended to be installed in accordance with the open-type switch installation instructions. Open-type switches may be factory or field installed, and minimum enclosure size provided with the switch installation instructions may not incorporate the space necessary for the deflection of conductors entering or leaving the enclosure. The need for, and adequacy of, wire-bending space at terminals should be determined at the time of installation.

These open-type switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless an open-type switch is marked to indicate otherwise, the termination provisions are based on the use of 75°C ampacities as specified in Table 310.15(B)(16) of the NEC. Termination provisions are determined based on values provided in Table 310.15(B)(16) or Section 310.15(B)(2) of the NEC.

PRODUCT MARKINGS

Open-type PV switches are marked with the maximum electrical ratings, including a voltage rating up to 1000 V dc maximum, current rating, and short-circuit-current rating.

Open-type PV switches are marked “Photovoltaic” or “PV Disconnect Switch” and may, in addition, be marked “Suitable for Use in Photovoltaic Systems in Accordance with Article 690 of the NEC.”

Multipole open-type PV switches not intended for individual circuits on each pole are marked with a diagram or other verbiage detailing the correct electrical connections.

Open-type PV switches are marked for use with 75°C copper and/or aluminum conductors, the allowable wire range, and wire type.

Open-type PV switches are marked “-20 to 50°C.”

Open-type fusible PV switches are marked “This switch is suitable for use in a PV system capable of delivering not more than ___ amperes, when protected by ___ PV fuses [type and manufacturer] rated ___ amperes maximum” (or the equivalent).

Open-type PV switches that do not isolate the fuseholders are marked “WARNING – ELECTRICAL SHOCK HAZARD. THIS SWITCH DOES NOT DE-ENERGIZE BOTH THE LINE AND LOAD SIDE OF THE FUSE-HOLDERS WHEN IN THE OPEN POSITION” (or the equivalent).

RELATED PRODUCTS

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 98A, “Outline of Investigation for Open-Type Switches,” and UL Subject 98B, “Outline of Investigation for Enclosed and Dead-Front Switches for Use in Photovoltaic Systems.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Open-type Photovoltaic Switch” (or “Open-type PV Switch”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, DEAD-FRONT (WHXS)

USE AND INSTALLATION

This category covers dead-front switches having all current-carrying parts enclosed when mounted in an enclosed panelboard, dead-front switchboard or the like. These switches may be provided with fuseholders for plug- or cartridge-type fuses. These switches are manually operable by means of external handles without opening the enclosure or are hinged pullout switches.

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

Switches, Dead-front (WHXS)—Continued

These switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code.” Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

RATINGS

Ratings of certified dead-front switches are limited to 4000 A, 500 hp, 600 V. Dead-front switches rated 800 or 1200 A at more than 250 V at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked “For Isolating Use Only — Do Not Open Under Load.”

Dead-front switches with horsepower ratings in addition to ampere ratings are suitable for use in motor circuits as well as for general use. Dead-front switches with ampere ratings only are intended for general use only.

Some hinged pullout switches achieve an “off” position only by leaving the door open. These switches are restricted to use only as a single main in a panel board or the like and are rated not higher than 200 A and 250 V.

Dead-front switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Enclosed motor-circuit switches are intended for use only in motor circuits and are marked “Motor-circuit Switch.”

Ratings of certified dead-front motor-circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some dead-front switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

RELATED PRODUCTS

Switches mounted in an enclosure in which all current-carrying parts are enclosed and which are operable without opening the enclosure are covered under Switches, Enclosed (WIAX).

Switches that have blade-jaw-type construction where all blade joints are subject to high clamping pressure when the switch is closed by means of a bolt, cam or similar mechanical action (referred to as bolted-pressure contact switches), and switches that have butt-type contacts with a spring-charged mechanism (referred to as high-pressure butt-type contact switches) are covered under Fused Power Circuit Devices (IYSR).

Detachable-head pullout switches are covered under Pullout Switches, Detachable Type (WGEU).

Open-type knife switches are covered under Switches, Knife (WIOV).

Dead-front switches intended for use aboard marine vessels are covered under Switches, Enclosed, Marine (WIZZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 98, “Enclosed and Dead-Front Switches.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Dead-front Switch,” “Dead-front Motor-circuit Switch” or “Hinged Pullout Switch.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, DEAD-FRONT FOR USE IN PHOTOVOLTAIC SYSTEMS (WHXX)

GENERAL

This category covers dead-front switches having all current-carrying parts enclosed when mounted in a certified enclosure or as part of other certified equipment, for use in photovoltaic (PV) systems. These switches may be

Switches, Dead-front for Use in Photovoltaic Systems (WHXX)—Continued

provided with fuseholders for fuses. These switches are manually operable without opening the enclosure and are suitable for use as disconnects in accordance with Article 690 of ANSI/NFPA 70, “National Electrical Code” (NEC).

Dead-front PV switches are rated up to 1000 V maximum and are intended for use in ambient temperatures between -20 and 50°C.

Dead-front unfused PV switches are rated for continuous operation at their marked ampere rating.

Dead-front fused PV switches are intended only for use with PV fuses and are rated for continuous load current not to exceed 80% of the maximum ampere rating of the PV fuse marked for use with the device.

PRODUCT MARKINGS

Dead-front PV switches are marked with the maximum intended electrical ratings, including a voltage rating up to 1000 V dc maximum, current rating, and short-circuit interrupting rating.

Dead-front PV switches are marked “Photovoltaic” (or “PV”) and may, in addition, be marked “Suitable for Use in Photovoltaic Systems in Accordance with Article 690 of the NEC.”

Multipole dead-front PV switches not intended for individual circuits on each pole are marked with a diagram or other verbiage detailing the correct electrical connections.

Dead-front PV switches are marked for use with copper conductors only, the allowable wire range, and wire type.

Dead-front PV switches are marked “-20 to 50°C.”

Enclosed fusible PV switches are marked “This switch is suitable for use in a PV system capable of delivering not more than ___ amperes, when protected by ___ PV fuses [type and manufacturer] rated ___ amperes maximum,” or the equivalent.

Switches that do not isolate the fuseholders are marked as follows or the equivalent: “WARNING - ELECTRICAL SHOCK HAZARD. THIS SWITCH DOES NOT DE-ENERGIZE BOTH THE LINE AND LOAD SIDE OF THE FUSEHOLDERS WHEN IN THE OPEN POSITION.”

RELATED PRODUCTS

See Switches, Dead-front (WHXS) and Switches, Enclosed for Use in Photovoltaic Systems (WIBO).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 98B, “Outline of Investigation for Enclosed and Dead-Front Switches for Use in Photovoltaic Systems.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Dead-front Photovoltaic Switch” (or “Dead-front PV Switch”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, ENCLOSED (WIAX)

USE AND INSTALLATION

This category covers enclosed switches and enclosed motor-circuit switches that are externally operable without opening the enclosure. These switches may be provided with fuseholders for plug- or cartridge-type fuses and may be electrically tripped.

These switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code.” Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

RATINGS

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Enclosed switches identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Switches, Enclosed (WIAX)—Continued

Fused enclosed switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

Ratings of certified enclosed switches are limited to 4000 A, 500 hp, 600 V. Enclosed switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked “For Isolating Use Only — Do Not Open Under Load.”

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use. Enclosed motor-circuit switches are intended for use only in motor circuits and are marked “Motor-circuit Switch.”

Double-throw switches that have been investigated for switching a common load from a normal supply to an optional standby system are marked “Suitable for Use in Accordance with Article 702 of the National Electrical Code” or “Suitable for Use in Accordance with NFPA 70.”

Enclosed switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not intended for use as motor controllers.

Ratings of certified enclosed motor-circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some enclosed switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

Enclosed switches may also be suitable for use as service switches. Such switches are marked “Suitable for Use as Service Equipment.”

Some enclosed switches incorporate neutrals factory bonded to the enclosure. Such switches are marked “Suitable Only for Use as Service Equipment.”

Enclosed switches marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system, or for a second building.

Electrically tripped switches may be provided with ground-fault sensing and relaying equipment.

Switches suitable for use with ground-fault protection but the ground-fault protection sensors or relaying equipment (or both) are located in a separate enclosure are marked “Suitable for Ground Fault Protection When Combined with Class ____ (or Manufacturer and Cat. No.) Ground Fault Sensing Element,” or the equivalent.

Switches intended for use with Class I ground-fault sensing and relaying equipment include those that are capable of interrupting 12 times their rated current or that have integral means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability.

Switches for use with Class II ground-fault sensing and relaying equipment are capable of interrupting 10 times their rated current and are intended for use in ground-fault protection systems where means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability are incorporated within the ground-fault sensing and relaying equipment.

RELATED PRODUCTS

Dead-front switches having all current-carrying parts enclosed when mounted in an enclosed panelboard, dead-front switchboard or the like are covered under Switches, Enclosed (WHXS).

Switches that have blade-jaw-type construction where all blade joints are subject to high clamping pressure when the switch is closed by means of a bolt, cam or similar mechanical action (referred to as bolted-pressure contact switches), and switches that have butt-type contacts with a spring-charged mechanism (referred to as high-pressure butt-type contact switches) are covered under Fused Power Circuit Devices (YSR).

Detachable-head pullout switches are covered under Pullout Switches, Detachable Type (WGEU).

Open-type knife switches are covered under Switches, Knife (WIOV).

Enclosed switches intended for use aboard marine vessels are covered under Switches, Enclosed, Marine (WIZZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 98, “Enclosed and Dead-Front Switches.”

UL MARK

Switches, Enclosed (WIAX)—Continued

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Enclosed Switch” or “Enclosed Motor-circuit Switch.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, ENCLOSED FOR USE IN PHOTOVOLTAIC SYSTEMS (WIBC)**GENERAL**

This category covers enclosed switches that are operable without opening the enclosure, intended for use in photovoltaic (PV) systems. These PV switches may be provided with fuseholders for PV fuses and may be electrically tripped. PV switches are suitable for use as disconnects and fusible PV switches are suitable for use as disconnects with overcurrent protection in accordance with Article 690 of ANSI/NFPA 70, “National Electrical Code” (NEC).

Enclosed PV switches are intended for use in ambient temperatures between -20 and 50°C.

Enclosed unfused PV switches are rated for continuous operation at their marked ampere rating.

Enclosed fused PV switches are intended only for use with PV fuses and are rated for continuous load current not to exceed 80% of the maximum ampere rating of the PV fuse marked for use with the device.

PRODUCT MARKINGS

Enclosed PV switches are marked with the maximum electrical ratings, including a voltage rating up to 1000 V dc maximum, current rating, and short-circuit-current rating.

Enclosed PV switches are marked “Photovoltaic” or “PV Disconnect Switch” and may, in addition, be marked “Suitable for Use in Photovoltaic Systems in Accordance with Article 690 of the NEC.”

Multipole enclosed PV switches not intended for individual circuits on each pole are marked with a diagram or other verbiage detailing the correct electrical connections.

Enclosed PV switches are marked for use with copper conductors only, the allowable wire range, and wire type.

Enclosed PV switches are marked “-20 to 50°C.”

Enclosed switches are identified with an Enclosure Type designation as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Enclosed fusible PV switches are marked “This switch is suitable for use in a PV system capable of delivering not more than ____ amperes, when protected by ____ PV fuses [type and manufacturer] rated ____ amperes maximum,” or the equivalent.

Switches that do not isolate the fuseholders are marked as follows, or the equivalent: “WARNING – ELECTRICAL SHOCK HAZARD. THIS SWITCH DOES NOT DE-ENERGIZE BOTH THE LINE AND LOAD SIDE OF THE FUSEHOLDERS WHEN IN THE OPEN POSITION.”

RELATED PRODUCTS

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 98B, “Outline of Investigation for Enclosed and Dead-Front Switches for Use in Photovoltaic Systems.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Enclosed Photovoltaic Switch” (or “Enclosed PV Switch”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, KNIFE (WIOV)

USE AND INSTALLATION

This category covers open-type knife switches. Knife switches may be provided with or without fuseholders for plug fuses or for cartridge fuses. Knife switches may have individual bases intended for either front or rear wiring connection or may have switch parts without bases that are intended for mounting on switchboards and panelboards. Knife switches may be single- or multiple-pole, and with or without quick-break or auxiliary contacts, except where such contacts are specifically required.

Knife switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Knife switches are provided with one of the following means for field connection:

- Terminal pads to which pressure wire connectors can be factory or field installed
- Terminal pads for the connection of busbars
- Wire-binding screws (when intended for the connection of a 10 AWG or smaller wire)

Knife switches without a base and intended for mounting on a panelboard, switchboard, or the like are not required to be provided with a means for field connection.

RATINGS

Standard voltage ratings for knife switches are: 125, 250, 250 dc – 500 ac, 500 ac and 600. For 125, 250 and 600 V, unless otherwise indicated in the marking, the rating includes both alternating and direct currents.

Standard current ratings for knife switches are: 30, 60, 100, 200, 400, 600, 800, 1200, 1600, 2000, 2500, 3000, 4000, 5000 and 6000 A.

Knife switches are not intended for interrupting current of more than 1200 A when the potential rating is 250 V or less, nor are they intended for interrupting current of more than 600 A when the potential rating is more than 250 V. Switches having ratings greater than these limits are marked “For Disconnecting Use Only.” Knife switches that are not intended for interrupting current, but have ratings lower than those limits specified above are marked “For Isolating Use Only.”

Knife switches are marked with a short-circuit current rating in rms symmetrical amperes.

RELATED PRODUCTS

Switches with knife-blade action are also covered under the following:

Switches mounted in an enclosure in which all current-carrying parts are enclosed, and which are operable without opening the enclosure are covered under Switches, Enclosed (WIAX).

Switches that have all current-carrying parts enclosed when mounted in an enclosed panelboard, dead-front switchboard or the like, and that are manually operable by means of external handles without opening the enclosure are covered under Switches, Dead-front (WHXS).

Switches that have blade-jaw-type construction where all blade joints are subject to high clamping pressure when the switch is closed by means of a bolt, cam or similar mechanical action (referred to as a bolted-pressure contact switch) and switches that have butt-type contacts with a spring-charged mechanism (referred to as a high-pressure butt-type contact switch) are covered under Fused Power-circuit Devices (WIOV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 363, “Knife Switches.”

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Knife Switch.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, LOAD INTERRUPTER AND ISOLATING, OVER 600 VOLTS (WIQG)

GENERAL

This category covers enclosed medium-voltage load-interrupter and isolating switches having ac voltage ratings from 4.76 kV through 38 kV, with continuous current ratings up to 3000 A. These switches are intended for

Switches, Load Interrupter and Isolating, Over 600 Volts (WIQG)–Continued

installation in accordance with ANSI/NFPA 70, “National Electrical Code.” Load-interrupter switches are rated 200 through 1200 A and may be provided with or without fuses. Switches rated more than 1200 A at any voltage and those rated more than 600 A at 27 kV or greater are isolating only. These switches are available in either stationary or draw-out versions.

These switches are generally three-pole devices; however some switches may be one- or two-pole. Enclosures may be either ventilated or nonventilated.

An enclosure investigated to determine that it is rainproof is marked “Rainproof,” “Outdoor” or “3R.”

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked “Category A” are intended to be installed in areas accessible to the unsupervised general public; enclosures marked “Category B” are intended to be installed in areas accessible to authorized personnel only; enclosures marked “Category C” are intended for use in areas accessible to qualified personnel only.

Unless specifically marked otherwise, these switches are intended for use on three-phase circuits where the nominal voltage to ground is 0.58 times the line-to-line voltage.

Switches may or may not be provided with magnetizing current-interrupting ratings.

Switches may or may not be provided with cable charging ratings.

Load-interrupter switches are marked with a fault close rating. They should not be used on circuits having available fault currents in excess of the fault close rating. When provided with some fuses, it may be necessary for the supply circuit to have an available fault current that is less than the fault close rating of the switch due to the limited interrupting ability of the fuses. Switches are marked as follows on the outside of the enclosure: “SUITABLE FOR USE ON A CIRCUIT CAPABLE OF DELIVERING NOT MORE THAN ___ RMS SYMMETRICAL AMPS.”

These switches may consist of a single freestanding vertical section or they may consist of several abutting vertical sections intended for interconnection by a horizontal bus. When provided with a horizontal bus, each vertical section is marked with the ampacity of the horizontal bus in amps. Switches that are intended to be part of such a line-up are provided with a “___ of ___” marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing a UL Listing Mark) and the first blank indicates the position (reading from left to right) of the vertical section bearing the marking.

A section, with only horizontal bus or with no installed equipment, may be provided. This section is identified as an enclosure and is numbered as part of a line-up.

ARC-RESISTANT LOAD-INTERRUPTER SWITCHGEAR

Switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear may be designed to vent overpressure gases either into the surrounding area or through an exhaust duct outside of the building.

Where overpressure gases are vented in the surrounding areas, the arc-resistant switchgear has been investigated for installation in buildings that have sufficient overhead space and minimum distance from adjacent walls to permit venting without reflecting arc products, as specified in the installation instructions provided by the manufacturer.

When provided with an exhaust duct, overhead space and minimum distance from adjacent walls are not specified. Exhaust ducts provided in the installation are intended to be as specified in the installation instructions provided by the manufacturer.

Arc-resistant switchgear is marked with one of the Accessibility Type designations noted below based upon the construction of the switchgear investigated.

Type 1 designates switchgear with arc-resistant construction at the front only.

Type 1B designates switchgear with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

Type 2 designates switchgear with arc-resistant construction at the front, sides and rear.

Type 2B designates switchgear with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/NEMA C37.58 (2003), “Indoor AC Medium-Voltage Switches for Use in Metal-Enclosed Switchgear – Conformance Test Procedures,” ANSI/

Switches, Load Interrupter and Isolating, Over 600 Volts (WIQG)—Continued

NEMA C37.57 (2003), "Metal-Enclosed Interrupter Switchgear Assemblies - Conformance Testing," and ANSI/IEEE C37.20.3 (2001), "Metal-Enclosed Interrupter Switchgear."

Metal-enclosed switchgear Classified as "arc resistant" has additionally been investigated to IEEE C37.20.7 (2007), "Guide for Testing Metal-Enclosed Switchgear Rated Up to 38 kV for Internal Arcing Faults."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Isolating Switch," "Metal-Enclosed Interrupter Switchgear," "Metal Enclosed Switchgear," "Load Interrupter Switch" or "Load Interrupter Switchgear."

In an assembly of products the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark covers only the sections included in the assembly.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on metal-enclosed switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

ARC-RESISTANT SWITCHGEAR

ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or removable units. Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, MOLDED CASE (WJAZ)

GENERAL

This category covers fused and unfused molded-case switches.

The maximum voltage rating of a molded-case switch is 600 V.

Unfused switches are tested to determine their acceptability for continuous operation at their marked rated load.

Unfused switches are tested under overload conditions at six times amp rating to cover motor-circuit applications and are suitable for use as motor-circuit disconnects per Section 430.109 of ANSI/NFPA 70, "National Electrical Code."

Fused switches are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings and at four times motor full-load running current for direct-current ratings.

USE AND INSTALLATION

Unfused two-pole molded-case switches marked to indicate suitability for use on 3-phase circuits have been investigated for controlling 3-phase, corner-grounded delta circuits.

These switches are for use with copper conductors, unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any markings on terminal connectors and are readily visible.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire where wire sizes 14-1 AWG are used, and 75°C wire where wire sizes 1/0 AWG and larger are used.

Molded-case switches without enclosures are intended for use in certified circuit-breaker enclosures, or as a part of other certified equipment or where open-type molded-case switches are acceptable.

Some unfused switches have a release mechanism that causes the switch to open automatically to protect itself in the event of a short-circuit current fault. Such switches are marked to indicate that they may open.

Some enclosed molded-case switches may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected will be identified by a marking, such as on a wiring diagram.

Certified molded-case switches may be mounted in any position.

Switches, Molded Case (WJAZ)—Continued

Line-and-load markings on a molded-case switch are intended to limit connections to those as marked.

Molded-case switches may be equipped with factory-installed accessories, such as alarm and auxiliary switches, remotely energized electrically operated trip mechanisms, and electrical operators.

PRODUCT MARKINGS

No overcurrent protection is provided by the unfused switches and they are marked with a short-circuit current withstand rating.

The fused switches have one or more replaceable fuses to provide overcurrent protection and they are marked with a short-circuit current interrupting rating.

Fused switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed."

Some enclosed molded-case switches are marked as suitable for use as service equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Molded Case Switch" (or "M.C.S.") or "Fused Molded Case Switch" (or "Fused M.C.S.>").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, MOLDED CASE, FOR USE IN PHOTOVOLTAIC SYSTEMS (WJBE)

GENERAL

This category covers fused and unfused molded-case switches for use in dc photovoltaic (PV) systems. Unfused PV switches are suitable for use as disconnects and fusible PV switches are suitable for use as disconnects with overcurrent protection in accordance with Article 690 of ANSI/NFPA 70, "National Electrical Code." These switches are intended for use with certified enclosures or as part of other certified equipment.

PV molded-case switches are rated up to 1000 V dc maximum and are rated for continuous-load operation at their marked ampere rating.

PV molded-case switches are intended for use in ambient temperatures between -20 and 50°C.

A multi-pole PV molded-case switch is intended for individual circuits on each pole unless marked otherwise.

A PV molded-case switch may be mounted in a certified circuit-breaker enclosure or as a part of other certified equipment. The enclosure or equipment may be identified with an enclosure-type designation. The enclosure-type designations are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

A PV molded-case switch may be mounted in any position unless marked to indicate otherwise. If, however, the switch is mounted so that the handle is operated vertically rather than rotationally or horizontally, the up position of the handle should be in the "on" position.

The short-circuit rating on a molded-case switch included in a piece of equipment does not automatically qualify the equipment in which the molded-case switch is installed for use on circuits with higher available currents than the rating of the equipment itself.

PRODUCT MARKINGS

PV molded-case switches are marked with the maximum intended electrical ratings, including a voltage rating up to 1000 V dc maximum, current rating, and short-circuit current rating.

PV molded-case switches are marked "Photovoltaic" (or "PV") and fused PV switches may, in addition, be marked "Suitable for Use in Photovoltaic Systems in Accordance with Article 690 of the NEC," or equivalent.

A multi-pole PV molded-case switch is intended for individual circuits on each pole unless specifically marked with a diagram or other verbiage detailing the correct electrical connections.

PV molded-case switches are marked for use with copper conductors only, the allowable wire range, wire type and stranding if different from building wire.

Switches, Molded Case, for Use in Photovoltaic Systems (WJBE)—Continued

If pressure-terminal connectors are not provided on a molded-case switch as shipped, the molded-case switch is marked stating which pressure-terminal connectors or component terminal kits are acceptable for use with the molded-case switch.

A PV molded-case switch intended only for use within a ventilated enclosure is marked with the specific certified enclosure for which it is intended, or the size of the enclosure and the location and size of the ventilation openings.

Some molded-case switches have a release mechanism that causes the switch to open automatically to protect itself in the event of a short-circuit current fault. Such switches are marked to indicate that they may open.

A PV molded-case switch may be identified with a circuit-breaker enclosure marked with an enclosure-type designation. See Electrical Equipment for Use in Ordinary Locations (AALZ).

A molded-case switch that includes an accessory device, whether attached to the switch by the manufacturer of the molded-case switch or by others, is marked to indicate the presence of that accessory.

Where the accessory is a shunt trip device that is suitable for operation with ground-fault sensing and relaying equipment, such suitability is indicated in the marking of the molded-case switch.

PV molded-case switches are marked "50°C."

ADDITIONAL INFORMATION

For additional information, see Molded-case Switches (WJAZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 489B, "Outline of Investigation for Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures for Use with Photovoltaic (PV) Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Molded-case Switch" or "Enclosed Photovoltaic Molded-case Switch." The words "Molded-case Switch" may be abbreviated "M.C.S." and the word "Photovoltaic" may be abbreviated "PV."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, PHOTOELECTRIC (WJCT)

GENERAL

This category covers photoelectric switches and motion detectors (light-sensitive or presence-sensitive types) intended for use in nonindustrial locations, rated maximum 300 V, 2000 VA, and protected by branch-circuit protection not to exceed 20 A.

Switches investigated for the control of tungsten-filament-lamp loads are marked "Tungsten." Switches investigated for the control of the applicable ballast loads (such as fluorescent) are marked "Magnetic Ballast" or "Electronic Ballast."

The investigation of devices identified as "Raintight" or "Rainproof" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water. Devices marked "Raintight" or "Rainproof" are also suitable for wet locations. Devices marked "Indoor Use Only" are suitable for indoor dry locations only.

These switches have been tested to determine their acceptability for continuous operation at their marked load rating.

RELATED PRODUCTS

Photoelectric switches and motion detectors designed to provide protection for mercantile premises, stock rooms, safes, vaults, etc., are covered under Intrusion-detection Units (ANSR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 773A, "Nonindustrial Photoelectric Switches for Lighting Control."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illus-

Switches, Photoelectric (WJCT)—Continued

trated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photoelectric Switch" or "Motion Detector Switch."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Photocontrols, Plug-in, Locking Type (WJFX)

USE

This category covers plug-in, locking-type photocontrols for use on outdoor-type electric lighting fixtures used for both street lighting and area lighting (lighting of parking lots and similar applications).

Unless marked specifically "Tungsten" or "Ballast," these products are suitable for use with either type of fixture, rated not more than the rating of the photocontrol. The voltage rating is 480 V ac maximum.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 773, "Plug-In Locking Type Photocontrols for Use with Area Lighting."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photocontroller," "Photocontroller Shorting Plug" or "Photocontroller Open Circuit Plug."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SNAP SWITCHES (WJQR)

GENERAL

This category covers general-use snap switches, which are so constructed that they can be installed in flush device boxes or on outlet box covers or otherwise used in connection with wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC).

Door switches are investigated for use only in combination with a specific switch, special switch box and cover. See Switches, Door (WLFV).

Flush snap switches investigated for use without separate outlet boxes with nonmetallic-sheathed cable, Types NM, NMC, NM-B and NMC-B cable in accordance with the NEC, are so identified by a specific marking on the carton in which they are packed.

Snap switches have not been investigated for switching a load between two alternate sources of supply. Double-throw enclosed switches (see Switches, Enclosed [WJAX]) or switches Listed as transfer switches (see Transfer Switches [WPTZ] and Emergency Lighting and Power Equipment [FTBR]) should be used for this purpose.

Multi-pole, general-use snap switches have not been investigated for more than single-circuit operation unless marked "2-circuit" or "3-circuit."

Snap switches without a grounding connection are intended for replacement use only in accordance with NEC 404.9, Exception to (B).

General-use snap switches are classified into two categories: AC-DC general use and AC general use. AC general-use switches are marked "AC" to limit their use to alternating-current circuits. AC-DC general-use switches are not so limited; no such marking is required or generally provided.

AC-DC GENERAL-USE SNAP SWITCHES

The standard amp and voltage ratings for an AC-DC general-use snap switch for controlling direct- or alternating-current circuits are given in Table I. While many of these snap switches will operate successfully on circuits that have some reactance, in general, an inductive load should not exceed one-half the amp rating of the switch at the voltage involved. However, some of these snap switches are marked with additional horsepower ratings at one or more voltages, which indicate that a switch so marked has been tested for the control of a motor of the horsepower and voltage rating indicated. Such a snap switch has been tested for the control of tungsten-filament lamp loads and is marked with the letter "T" as part of the suitable tungsten-filament lamp load rating at 125 V.

Table I

SWITCHES (WFXV)

Snap Switches (WJQR)—Continued

Snap Switch Ratings in Amperes Corresponding to Direct-Current Potentials

125 V	250 V	600 V	125 V	250 V	600 V
—	—	1	—	10	—
3*	1*	—	20	10	—
—	—	2	—	20	10
5*	2*	—	—	—	20
—	—	3	—	20	—
5 or 6	3	—	30**	20	—
—	5	3	40	20	—
—	—	5	—	30	20
—	5	—	—	—	30
10	5	—	—	30	—
—	10	5	60	30	—
—	—	10	—	60	—

Note: The above ratings apply equally when these switches are used on alternating-current circuits

* These dual ratings may be assigned only to a three-way, four-way, two-circuit, three-circuit, or a fixture switch

** A panelboard switch may be rated at 30 A, 125 V, without the corresponding 250 V rating

AC GENERAL-USE SNAP SWITCHES

An AC general-use snap switch has a marked current and voltage rating only for alternating current, which is one of the ratings given in Table II, and is intended for installation in a flush device box (flush snap switch), mounting on an outlet box cover, or surface mounting (surface snap switch).

AC general-use snap switches are tested for the control of resistive, inductive (including electric discharge lamp) and tungsten-filament lamp loads at 120 V up to the full current rating of the switch, and for motor loads up to 80% of the amp rating of the switch, but not exceeding 2 hp.

Table II

AC Snap Switch Ratings in Amperes Corresponding to Alternating-Current Potentials

120 V AC	120 - 277 V AC	277 V AC
15	—	—
20	—	—
30	—	—
—	15	—
—	20	—
—	30	—
20	—	15
30	—	15
30	—	20

Snap switches rated 240 or 250 V that are intended for use on circuits involving a nominal potential to ground of 120 or 125 V, respectively, are tested on such circuits and are marked with the voltage rating "240" or "250" (no underlining). Snap switches rated 240 or 250 V that are suitable for use at full potential to ground are marked with the voltage rating 240 or 250 (double underlining). Snap switches having voltage ratings other than 240 or 250 V are tested on circuits involving full rated potential to ground.

Terminals of 15 A and 20 A switches not marked "CO/ALR" are intended for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Terminals of the wire-binding screw, setscrew, or screw-actuated back-wired clamping types are suitable for use with solid building wires unless otherwise indicated either on the device or in the installation instructions.

Terminals of a flush snap switch are permitted for use with Listed field-installed crimped-on wire connectors or an assembly, if so identified by the manufacturer.

A flush snap switch may also be provided with conductor leads with factory-installed crimped-on connectors. Such connectors may be either attached to the flush snap switch terminal or are provided with the flush snap switch in the smallest unit shipping container and are suitable for use with the terminal of the flush snap switch.

Screwless terminal connectors of the conductor push-in type (also known as "push-in terminals") are restricted to 15 A branch circuits and are intended for connection with 14 AWG solid copper wire only. They are not intended for use with aluminum or copper-clad aluminum wire, 14 AWG stranded copper wire, or 12 AWG solid or stranded copper wire.

Terminals of switches rated 30 A and above not marked "AL-CU" are intended for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL-CU" are for use with aluminum, copper and copper-clad aluminum conductors.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufac-

SWITCHES (WFXV)

Snap Switches (WJQR)—Continued

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Door (WLFV)

USE

This category covers snap switches intended for use in door jambs.

This category covers an assembly consisting of a switch, special switch box and cover. The special switch box is not an outlet box. It is only intended to terminate the switch leads. It is not intended for any other type of field wiring.

PRODUCT MARKINGS

Certified door switches are marked with the Listee's name or trademark and electrical rating in a location where readily visible after installation. An ac-only door switch, if rated in wattage, is marked "For use with incandescent lighting only" where visible after installation.

The catalog designation is marked on the assembly, on the package, or on a stuffer sheet packaged with each assembly.

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of UL on the assembly, or the UL symbol stamped or molded into the assembly and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the assembly, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the assembly. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Fixture, Socket and Special Mechanism Types (WMHR)

USE

This category covers fixture, socket and special-mechanism-type switches intended for use in appliances, electric fixtures and portable lamps.

PRODUCT MARKINGS

The devices are marked as follows:

- a. Listee's name or identification on device.
- b. Catalog number or equivalent on device or carton.
- c. Complete electrical rating on device.
- d. Switches intended for control of tungsten filament lamps on both direct and alternating current are marked with the letter "T," located to indicate that it applies only to the rating at 125 V. AC/DC switches intended for the control of electric discharge lamps are marked with the letter "F." A switch may be marked with both letters to indicate both uses.
- e. Switches intended for appliance use are marked "FOR APPLIANCE USE."

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch," "Fixture Snap Switch" or "Fixture Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

PRODUCT CATEGORIES BY CATEGORY CODE

Switches, Fixture, Socket and Special Mechanism Types (WMHR)–Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Flush (WMUZ)

USE

This category covers snap switches intended for mounting in flush device boxes, and also switches investigated for use without separate outlet boxes with Types NM and NMC cable.

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Pendant (WNIX)

GENERAL

This category covers pendant switches, through-cord switches, and combination pendant switches with attachment-plug receptacles.

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Surface (WOKT)

GENERAL

This category covers snap switches intended for surface mounting, unless otherwise stated in the individual certifications.

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

Switches, Surface (WOKT)–Continued

UL MARK

The Listing Mark of UL on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFER SWITCHES (WPTZ)

GENERAL

This category covers automatic and nonautomatic transfer switches, including associated control devices, with maximum ratings of 600 V ac and transfer equipment rated more than 600 V ac but not more than 38 kV.

Transfer switches rated for total system transfer are marked "Suitable for control of motors, electric discharge lamps, tungsten filament lamps, and electric heating equipment where the sum of motor full-load ampere ratings and the ampere ratings of other loads do not exceed the ampere rating of the switch and the tungsten load does not exceed ___ percent of the switch rating."

Transfer switches have been investigated for load switching and inrush capability and for a number of cycles of operation based on their intended use which, in the case of an automatic transfer switch, is expected to include scheduled test operations switching full load.

Automatic transfer switches are required to be designed so that the load cannot remain simultaneously disconnected from both the normal and alternate sources when either or both sources are available, except that transfer switches marked "SUITABLE FOR USE AS SERVICE EQUIPMENT" are provided with externally accessible means to independently disconnect each source intended to be a service.

Automatic transfer switches transfer a common load from a normal supply to an alternate supply in the event of failure of the normal supply, and automatically return the load to the normal supply when the normal supply is reestablished.

Additional sensing devices that may initiate or delay transfer have been investigated in accordance with the manufacturer's marked operating values.

Automatic transfer switches may have a switching contact to initiate the starting of an engine generator set.

Some transfer switches may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram.

Transfer switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is indicated on a wiring diagram or other readily visible location.

TRANSFER SWITCHES RATED 600 V OR LESS

Listed transfer switches without enclosures are intended for use as part of other equipment or where open-type devices are acceptable. These devices have the Listing Mark applied to the transfer switch panel. Markings or instructions are provided for open transfer switches to indicate the minimum size enclosure into which the open transfer switch should be installed.

When the Listing Mark is applied to the enclosure of an enclosed transfer switch or bypass switch, it indicates the Listing of the complete enclosed assembly.

Transfer switches intended for use as service equipment are marked "SUITABLE FOR USE AS SERVICE EQUIPMENT."

Transfer switches intended to be connected as service equipment for the normal source only may be provided with a disconnect for the normal source only, in which case the transfer switch is marked "Suitable for use as service equipment – NORMAL source only. An additional disconnect must be readily available for the alternate source, unless the alternate source is an accessible generator and can be readily shut down."

Transfer switches are not intended for connection to a supply capable of delivering currents in excess of the maximum available rms symmetrical amperes (short-circuit current) marked on the transfer switch.

Transfer switches having manual operators accessible only by opening the enclosure are not intended for manual operation under load.

Transfer Switches (WPTZ)—Continued

Unless the device is marked otherwise, the wiring space and terminations are based on 60°C wire for switches rated 100 A or less, and 75°C for switches rated more than 100 A.

Overcurrent/Short-circuit Protection

Transfer switches without integral overcurrent protective devices are suitable for continuous use at 100% of rated current. Transfer switches incorporating integral overcurrent devices are suitable for continuous use at 100% of rated current unless restricted to use at 80% of rated current, as indicated by the marking "CONTINUOUS LOAD CURRENT NOT TO EXCEED 80 PERCENT OF SWITCH RATING" on the switch.

Transfer switches provided with integral overcurrent protection are marked "This transfer switch is rated for use on a circuit capable of delivering not more than ___ rms symmetrical amperes, ___ volts maximum," where the blanks are filled with the available short-circuit current and voltage for which the switch was tested.

Transfer switches not provided with integral overcurrent protection are marked in accordance with a), b) or c) below.

- a) "When protected by ___ ampere maximum Class ___ fuse or Type ___ circuit breaker rated no more than ___ amperes, this transfer switch is rated for use on a circuit capable of delivering not more than ___ rms symmetrical amperes, ___ volts maximum." The first two blanks in this marking are filled with the maximum ampere rating and Class of fuse to be used. The third blank is filled with the specific circuit breaker to be used, including the manufacturer and type designation of the circuit breaker. The fourth blank is filled with the maximum current rating of the circuit breaker. Transfer switches may be marked with only the fuse information or the circuit breaker information, when investigated for use only with fuses or circuit breakers, respectively.
- b) "When protected by a circuit breaker rated no more than ___ amperes, this transfer switch is rated for use on a circuit capable of delivering not more than 10 kA rms symmetrical amperes, ___ volts maximum." The first blank is filled with the maximum current rating of circuit breaker, and the second blank is filled with the maximum circuit voltage. Transfer switches that bear this marking are intended only for use with a molded-case circuit breaker as the overcurrent protection, and may not be rated more than 400 A.
- c) "When protected by a circuit breaker without an adjustable short-time response only or by fuses, this transfer switch is rated for use on a circuit capable of delivering no more than ___ rms symmetrical amperes, ___ volts maximum."

Transfer switches may be marked with an optional short-time current rating. Short-time current is the maximum amount of fault current a switch has been shown to withstand at a specified voltage for a given amount of time and remain functional (including the ability to carry full rated current).

TRANSFER EQUIPMENT RATED OVER 600 V

Transfer equipment rated over 600 V is investigated only as a completely enclosed assembly.

Transfer equipment rated over 600 V is suitable for use on circuits having available fault currents not exceeding the rating marked on the equipment.

Transfer switches rated over 600 V intended for use as service equipment may be marked "SUITABLE FOR USE AS SERVICE EQUIPMENT."

Unless transfer equipment rated over 600 V is marked otherwise, the wiring space and terminations are based on the use of Type MV90 conductors. The ampacity of Type MV90 conductors is specified in Tables 310.75 and 310.76 of ANSI/NFPA 70, "National Electrical Code."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Accessories, Transfer Switch (WPVQ)

GENERAL

This category covers accessories intended for use with transfer switches rated 600 V or less, including bypass/isolation switches, status indicator panels, enclosed power inlets, and other accessories intended solely for use with certified transfer switches. These accessories are intended for use in conjunction with transfer switches, but are not intended to modify the function or construction of the transfer switch itself.

Bypass switches permit testing and maintenance of emergency system components that could not be otherwise maintained without disruption of important functions. The bypass switching sequence is manually initiated.

A transfer and bypass/isolation switch for use in emergency systems consists of a transfer switch suitable for emergency systems, and with the transfer switch isolated or disconnected the bypass/isolation switch func-

Accessories, Transfer Switch (WPVQ)—Continued

tions as an independent nonautomatic transfer switch and allows the load to be connected to either power source.

Enclosed power inlets are intended for use in standby systems to facilitate cord connection of portable generators for use during temporary outages of utility power. Inlets are intended to be remotely mounted from the transfer switch and connected to the "alternate source" terminals of the transfer switch, such that the blades or pins of the inlet are energized only through the use of a cord connection to a portable generator. Inlets are fully enclosed, such that there are no accessible energized parts with the cord connector in place. Inlets are not intended for use indoors, but may be intended for use in protected areas, such as covered porches or detached garages. Inlets intended for use where exposed to weather are marked Type 3, 3R, 3S, 4, 4X, 6 or 6P, and have been determined to be suitable for outdoor use.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Transfer Switch Accessory," "Transfer and Bypass/Isolation Switch," "Bypass/Isolation Switch," "Bypass/Transfer Switch," "Transfer and Bypass/Isolation Switch for Emergency Systems" or "Enclosed Power Inlet."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Automatic Transfer Switches for Use in Emergency Systems (WPWR)

USE

This category covers automatic transfer switches, rated 600 V or less, intended for use in emergency systems in accordance with Articles 517 and 700 of ANSI/NFPA 70, "National Electrical Code" (NEC). These transfer switches are also suitable for use in legally required standby systems and in optional standby systems in accordance with Articles 701 and 702, respectively, of the NEC.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Transfer Switch for Emergency Systems."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Automatic Transfer Switches for Use in Optional Standby Systems (WPXT)

USE

This category covers automatic transfer switches with a maximum rating of 600 V ac, intended for use in optional standby systems in accordance with Article 702 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

Automatic Transfer Switches for Use in Optional Standby Systems (WPXT)—Continued**UL MARK**

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Transfer Switch for Use in Optional Standby Systems."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Meter-mounted Transfer Switches (WPXW)**USE**

This category covers transfer switches rated 600 V or less, intended for mounting in a meter base, on the line side of the service disconnect switch. These transfer switches are intended to transfer the loads connected to the load side of the meter from the normal utility supply to an alternate supply, consisting of a portable generator that is temporarily cord connected to the meter-mounted transfer switch. These devices are not intended for use in emergency systems or in legally required standby systems.

The installation of these devices is intended to be under the exclusive control of the serving utility, and is not considered under the purview of ANSI/NFPA 70, "National Electrical Code." As such, these devices are not considered service equipment.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1008M, "Outline of Investigation for Transfer Switch Equipment, Meter Mounted."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter-mounted Transfer Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Automatic Transfer Switches Over 600 Volts (WPYC)**USE**

This category covers automatic transfer switches intended for use in systems rated more than 600 V ac. An automatic transfer switch automatically transfers a load to another source of power when the original source fails and will automatically retransfer the load to the original source under desired conditions.

SWITCH TYPES

These switches may be of the fixed preferential, nonpreferential or selective-preferential type.

A fixed-preferential type switch automatically transfers to the original source when it is available.

A nonpreferential type switch retransfers the load to the original source only when the second or emergency source fails.

A selective-preferential type switch is a type in which either source may be selected as the preferred source and which will retransfer the load to the preferred source upon its reenergization.

CONSTRUCTION

The basic switching devices in this equipment may be circuit breakers, load interrupter switches or contactors. The number of expected operations under load is dependent on the type and of switching device used, and the continuous current rating thereof.

The equipment covered under this category is completely enclosed. The equipment may be metal-enclosed, metal-clad or other construction.

An enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R." Enclosures may be either nonventilated or ventilated.

This equipment is intended to be installed in areas accessible to qualified personnel only ("Category C") unless the enclosures are marked "Category

Automatic Transfer Switches Over 600 Volts (WPYC)—Continued

A" or "Category B." Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first vertical section of a line-up.

RATINGS

These switches are rated over 600 V, up to 38 kV. Assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. This marking appears on each vertical section bearing the UL Mark.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1008A, "Outline of Investigation for Transfer Switch Equipment, Over 600 Volts."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Transfer Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Nonautomatic Transfer Switches (WPYV)**USE**

This category covers nonautomatic transfer switches, rated 600 V or less, intended to transfer a common load from a normal supply to an alternate supply of an equipment system in accordance with Sections 517.34 and 517.43 of ANSI/NFPA 70, "National Electrical Code" (NEC), or to an optional standby system in accordance with Article 702 of the NEC.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Non-Automatic Transfer Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WQNV)

Switches rated in horsepower have been tested with respect to interruption of the maximum operating overload current of motors of the same horsepower and voltage ratings. When rated in amps and volts only the switches have not been investigated with respect to use in motor circuits.

SWITCHES, CLOCK OPERATED FOR USE IN HAZARDOUS LOCATIONS (WRBT)**GENERAL**

This category covers clock-operated switches certified with horsepower ratings tested at rated voltage and at six times motor full-load running current for ac ratings, and at ten times motor full-load running current for dc ratings.

SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WQNV)

Switches, Clock Operated for Use in Hazardous Locations (WRBT)—Continued

Clock-operated switches certified with pilot-duty ratings are intended for control of electromagnetic loads, such as a solenoid of a motor controller or electrically operated valve, and are tested with an appropriate electromagnetic load.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clock Operated Switch for Use in Hazardous Locations," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSED SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WRPR)

GENERAL

This category covers enclosed switches, with or without fuseholders, intended for plug or cartridge fuses. Enclosed switch ratings are limited to 3600 A, 500 hp, 600 V.

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use.

Enclosed switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and the use of 75°C wire for higher-amp-rated circuits.

Enclosed motor-circuit switches and enclosed switches with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 98, "Enclosed and Dead-Front Switches."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Switch for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SNAP SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WSQX)

GENERAL

This category covers snap switches that are limited to 30 A, 600 V, ac; 60 A, 250 V, ac or dc; and not more than 2 hp at 600 V or less, ac, 250 V or less, dc.

SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WQNV) 441

Snap Switches for Use in Hazardous Locations (WSQX)—Continued

Snap switches with horsepower ratings have been tested with respect to interruption of maximum overload currents of motors of the same horsepower and voltage ratings.

Snap switches having a "T" rating are capable of controlling tungsten-filament-lamp loads corresponding to the 125 V rating of the switches.

Snap switches provided with a factory seal of conductors entering the switch enclosure are so identified by a marking on the product.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Snap Switch for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, MISCELLANEOUS FOR USE IN HAZARDOUS LOCATIONS (WTEV)

GENERAL

This category covers various types of switches, such as bin-level indicators, flow switches, limit switches, vibration switches, and the like. The switches in this category are not fused. The suitability of these switches for use on high-capacity circuits has not been investigated.

Switches with amp ratings are intended for general use. Switches with horsepower ratings are suitable for use in motor circuits.

Switches certified with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for ac ratings and at four times motor full-load running current for dc ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flow Switch for Use in Hazardous Locations" or "Limit Switch for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WTSN)

Switches rated in horsepower have been tested with respect to interruption of the maximum operating overload current of motors of the same horsepower and voltage ratings. When rated in amps and volts only the switches have not been investigated with respect to use in motor circuits.

PRODUCT CATEGORIES BY CATEGORY CODE

SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WTSN)
ENCLOSED SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WUGF)
GENERAL

This category covers enclosed switches either with or without fuseholders for plug or cartridge fuses. Enclosed switch ratings are limited to 3600 A, 500 hp, 600 V.

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use.

Enclosed switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and the use of 75°C wire for higher-amp-rated circuits.

Enclosed motor-circuit switches and enclosed switches with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Switch for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR ASSEMBLIES, METAL ENCLOSED, LOW-VOLTAGE-POWER CIRCUIT-BREAKER TYPE (WUTZ)
GENERAL

This category covers metal-enclosed, low-voltage-power, circuit-breaker switchgear rated up to 600 V ac, nominal.

These switchgear assemblies are completely enclosed on all sides and top with sheet metal (except for ventilation openings and inspection windows) and may contain the following: (1) low-voltage-power circuit breakers, either fused or unfused, (2) bare and/or insulated busbars and connections, (3) instrument and control power transformers, (4) instruments, meters and relays, and (5) control wiring and accessory devices.

The low-voltage-power circuit breakers are contained in individual grounded metal compartments and are controlled either remotely or from the front of the enclosure. The circuit breakers may be stationary or of the draw-out type.

These switchgear assemblies may consist of a single vertical section housing one or more individual low-voltage-power circuit-breaker compartments or auxiliary compartments, along with the associated busbar structure, or may consist of several abutting sections interconnected by horizontal buses.

The auxiliary compartments may house such auxiliary equipment as potential transformers, control power transformers, or other miscellaneous devices.

These switchgear assemblies are marked with the following ratings or with a reference to a drawing which is included with the product and marked with the following ratings: (1) rated maximum voltage, (2) rated frequency, (3) rated insulation level, (4) rated continuous current, (5) rated short-time current, and (6) rated short-circuit current.

Low-voltage-power switching devices used in these switchgear assemblies are suitable for continuous use at 100% of their continuous-current rating.

The marking "Suitable for Use as Service Equipment" appears on each switchgear section or assembly optionally intended for use at a service.

A switchgear section marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Generally this switchgear is shipped without wire connectors and the busbar terminations are provided with standard bolt-hole patterns. The suitability

SWITCHGEAR ASSEMBLIES, METAL ENCLOSED, LOW-VOLTAGE-POWER CIRCUIT-BREAKER TYPE (WUTZ)

ity of the wire connectors installed must be determined by Authorities Having Jurisdiction at the time of final inspection.

A switchgear section investigated to determine if it is rainproof is marked "Rainproof."

The individual power circuit-breaker compartments or adapters are intended to accommodate a low-voltage-power circuit breaker and are marked to indicate the type(s) of circuit breaker that may be installed.

Individual auxiliary compartments are intended to house control components such as meters, instrument and/or control power transformers, and the like.

Low-voltage-power circuit-breaker switchgear assemblies are generally provided with shop drawings or the like that include circuit and connection diagrams of the assembly, continuous-current ratings of the main and section buses, details of control and ground-fault protection (if provided) circuits, etc.

ARC-RESISTANT SWITCHGEAR

Metal-enclosed switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended, may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear has been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant switchgear is marked with an Accessibility Type designation of Type 1 or 2, 1B or 2B, 1C or 2C, or 1D based upon the construction and the standard used for the investigation.

Type 1 denotes that arcing does not cause holes in the freely accessible front of the enclosure.

Type 2 denotes that arcing does not cause holes in the freely accessible front, sides and rear of the enclosure.

Type 1B denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls isolating the low-voltage control or instrument compartments.

Type 2B denotes that arcing does not cause holes in the freely accessible front, sides and rear of the enclosure or in the walls isolating the low-voltage control or instrument compartments.

Type 1C denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls separating the compartment in which the arc is initiated from all adjacent compartments.

Type 2C denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls separating the compartment in which the arc is initiated from all adjacent compartments, except that a fault in the main busbar compartment is allowed to propagate into the main busbar compartment of adjacent vertical sections.

Type 1D denotes that arcing does not cause holes in the freely accessible front and any other surface of the enclosure under investigation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1558, "Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear," and IEEE C37.20.1, "IEEE Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

The basic standard used to investigate switchgear Classified as "arc resistant" is IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low-Voltage Power Circuit Breaker Switchgear Section," "Low-Voltage Power Circuit Breaker Compartment" or "Low-Voltage Power Circuit Breaker Auxiliary Compartment."

The Listing Mark for low-voltage-power circuit-breaker switchgear sections also includes the marking "___ of ___." The first blank is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchgear assembly. The second blank is stamped with the total number of sections in the switchgear assembly. Only those sections and compartments that bear the Listing Mark are covered under UL's Follow-Up Service.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

ARC-RESISTANT SWITCHGEAR

ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7

SWITCHGEAR ASSEMBLIES, METAL ENCLOSED, LOW-VOLTAGE-POWER CIRCUIT-BREAKER TYPE (WUTZ)

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a “_____ of _____” marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR OVER 600 VOLTS (WVDA)

ARC-RESISTANT SWITCHGEAR

Switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be classified as arc-resistant switchgear.

Arc-resistant switchgear may be designed to vent overpressure gases either into the surrounding area or through an exhaust duct outside of the building.

Where overpressure gases are vented in the surrounding areas, the arc-resistant switchgear has been investigated for installation in buildings that have sufficient overhead space and minimum distance from adjacent walls to permit venting without reflecting arc products, as specified in the installation instructions provided by the manufacturer.

When provided with an exhaust duct, overhead space and minimum distance from adjacent walls are not specified. Exhaust ducts provided in the installation are intended to be as specified in the installation instructions provided by the manufacturer.

Arc-resistant switchgear is marked with an Accessibility Type designation based upon the construction and the standard to which the switchgear is investigated.

When investigated in accordance with EEMAC G14-1, “EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault,” the Accessibility Types may be A, B or C.

Type A designates switchgear with arc-resistant construction at the front only.

Type B designates switchgear with arc-resistant construction at the front, sides and rear. None of these Type designations imply that the equipment maintains its intended degree of protection when operated with any door or cover, including low-voltage control or instrument compartment doors or covers open.

Type C designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell or adjacent cells. In Type C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

When investigated in accordance with IEEE C37.20.7, “IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults,” the Accessibility Types may be 1, 1B, 1C, 1D-SR, 1D-SL, 1D-R, 2, 2B or 2C.

Type 1 designates switchgear with arc-resistant construction at the front only.

Type 1B designates switchgear with arc-resistant construction at the front, and the low-voltage control or instrument compartment(s).

Types 1D-SR, 1D-SL, 1D-R designate switchgear with arc-resistant construction in the front; and at the right side (SR), left side (SL) or the rear (R), respectively.

Type 1C designates switchgear with arc-resistant construction at the front, and between compartments within the same cell or adjacent cells. In Type 1C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

Type 2 designates switchgear with arc-resistant construction at the front, sides and rear.

Type 2B designates switchgear with arc-resistant construction at the front, sides, rear and the low-voltage control or instrument compartment(s).

Type 2C designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell or adjacent cells. In Type 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

SWITCHGEAR OVER 600 VOLTS (WVDA)

443

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR, GAS-INSULATED TYPE, OVER 600 VOLTS (WVEK)

GENERAL

This category covers indoor medium-voltage switchgear where gas, typically sulfur hexafluoride (SF₆), is used as the insulating medium. The term “indoor” does not preclude the use of this equipment in outdoor enclosures, but rather defines the class of equipment. This equipment includes circuit breakers that are specifically intended to provide feeder or branch-circuit overcurrent protection. This equipment is not intended for use as service entrance equipment. These devices are intended for installation in accordance with ANSI/NFPA 70, “National Electrical Code.”

CIRCUIT BREAKERS

The circuit breakers are three-pole devices, fixed, trip-free. Interruption may take place in a gas-filled chamber or in a vacuum interrupter that is in a gas-filled chamber. Each circuit breaker pole may be housed separately.

Each circuit breaker is connected to an isolating/grounding switch that can connect the circuit breaker to the circuit, disconnect the circuit breaker, or ground the load circuit through the circuit breaker.

Circuit Breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a “close-and-latch” rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. Circuit breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit breakers are marked with an interrupting rating “I” in rms symmetrical amperes that is applicable at the maximum rated voltage. Circuit breakers using the rating structure of ANSI/IEEE C37.06 (1987), “AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis Preferred Ratings and Related Required Capabilities,” are also provided with a “K” factor for determining the interrupting rating at a use voltage lower than the maximum rated voltage. The circuit breaker may interrupt a current greater than “I” by a factor up to the value of “K,” at a voltage reduced from the maximum rated voltage, “V max” by the same factor, or at a lower voltage, as depicted in Illustration 1 of Circuit Breakers and Metal-clad Switchgear Over 600 Volts (DLAH). Circuit breakers using the rating structure of ANSI/IEEE C37.06 (1997) or later do not have a “K” factor, or are marked with a “K” factor of 1.0.

Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

GAS-INSULATED SWITCHGEAR

This switchgear may consist of several gas-filled compartments connected together. Gas-filled compartments are isolated from each other by gas seals. The compartments are electrically connected together and grounded. A compartment may house a circuit breaker, a length of bus, or a switch. A dual bus system, with isolating switches, may be provided.

A vertical section may consist of a circuit breaker, a switch, a bus compartment and a control compartment. A vertical section may be a single freestanding section or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus.

Each vertical section of a line-up of abutting vertical sections is provided with a “_____ of _____” marking where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Listing Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Listing Mark.

Auxiliary equipment such as potential transformers and current transformers are factory installed. Other auxiliary equipment such as protective relays and the like are separately enclosed within the switchgear. They are not typically in gas-insulated compartments.

The output of these current sensors is connected to either protective relays or similar sensing and relaying equipment that is typically panel mounted or located behind a dead front.

Gas-insulated Switchgear Ratings

Switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amperes. This marking appears on each vertical section bearing the UL Listing Mark.

ARC-RESISTANT SWITCHGEAR

Metal-clad switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the

Switchgear, Gas-insulated Type, Over 600 Volts (WVEK)—Continued

enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

ENCLOSURES

The standard enclosure for the parts operating at medium voltage consists of the metal housing that contains the gas-insulating medium. The enclosures are intended for indoor applications.

An additional enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R." These enclosures may be either nonventilated or ventilated. Enclosures intended for outdoor use are marked to indicate the exposure Category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

ADDITIONAL INFORMATION

For additional information, see Switchgear Over 600 Volts (WVDA) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are IEEE C37.20.2 (1993), "Standard for Metal-Clad Switchgear," ANSI/NEMA C37.54 (2002), "Indoor Alternating Current High-Voltage Circuit Breakers Applied as Removable Elements in Metal-Enclosed Switchgear – Conformance Test Procedures," and ANSI/NEMA C37.55 (2002), "Switchgear – Medium Voltage Metal-Clad Assemblies – Conformance Test Procedures." Circuit breakers investigated prior to 2002 were investigated to ANSI/NEMA C37.54 (1987).

Switchgear Classified as "arc resistant" has additionally been investigated to EEMAC G14-1, "EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault," or IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults," as indicated in the Classification Mark.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas Insulated Switchgear."

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed circuit breakers; it does not cover other vertical sections included in the assembly or removable circuit breakers.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

**ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH
[standard designation and date]**

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking, where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHGEAR, METAL ENCLOSED, OVER
600 VOLTS (WVGN)****GENERAL**

This category covers medium-voltage, metal-enclosed switchgear where air is used as the primary insulating medium. This does not preclude the use of gas within the switching chamber of a switch or circuit breaker used

Switchgear, Metal Enclosed, Over 600 Volts (WVGN)—Continued

in the switchgear. This equipment may include load-break switches, or circuit breakers that are specifically intended to provide feeder or branch-circuit overcurrent protection. This equipment may also include isolating-type switches that are interlocked with circuit breakers or load-break switches. These devices are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

CIRCUIT BREAKERS

Circuit breakers are three-pole, fixed-type devices. Interruption may take place in a vacuum interrupter, in a gas-filled chamber, or in a vacuum interrupter that is in a gas-filled chamber. Each circuit-breaker pole may be housed separately.

Each circuit breaker is connected to an isolating/grounding switch that can connect the circuit breaker to the circuit, disconnect the circuit breaker, or ground the load circuit through the circuit breaker.

Circuit-breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a "close-and-latch" rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. The preferred maximum voltage ratings for circuit breakers are 4.76, 8.25, 15, 27 or 38 kV with preferred continuous current ratings of 1200, 2000 or 3000 A. Circuit breakers may have ratings other than these preferred ratings.

Circuit breakers are marked with an interrupting rating "I" in rms symmetrical amperes that is applicable at the maximum rated voltage. Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

SWITCHES

Switches are three-pole, gang-operated-type devices. Interruption may take place in air, or in a gas-filled chamber. The switches provide either a load break or isolating function, and may also provide a means to ground the load conductors. Switches intended for isolation only are interlocked with a device that has been investigated for switching of loads.

Switch Ratings

Each switch is provided with a marking that indicates the switch ratings. This marking includes the rated maximum voltage and continuous current rating of the switch. The preferred maximum voltage ratings for switches are 4.76, 8.25, 15, 27 or 38 kV with preferred continuous current ratings of 200, 600, 1200, 2000 or 3000 A. Switches may have ratings other than these preferred ratings. Switches are also marked with a momentary withstand rating, expressed in rms asymmetrical amperes (kA).

Load-break-type switches are marked with a fault-making rating, expressed in rms asymmetrical amperes, which is applicable at the maximum rated voltage. Unless specifically marked otherwise, these switches are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

METAL-ENCLOSED SWITCHGEAR

Vertical sections may consist of a circuit breaker, a switch, a bus compartment and a control compartment. Vertical sections may be single freestanding sections or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus.

Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

Auxiliary equipment, such as potential transformers and current transformers, are factory installed. Other auxiliary equipment, such as protective relays and the like, are separately enclosed within the switchgear. They are not typically in gas-insulated chambers.

The output of each potential and current transformer is connected to either protective relays or similar sensing and relaying equipment that is typically panel mounted or located behind a dead front.

Metal-enclosed Switchgear Ratings

Switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amperes. This marking appears on each vertical section bearing the UL Mark.

ARC-RESISTANT SWITCHGEAR

Metal-enclosed switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

ENCLOSURES

The standard enclosure for the parts operating at medium voltage consists of the metal housing that contains the switches, circuit breakers, and auxiliary equipment. The enclosures are intended for indoor applications unless marked otherwise.

SWITCHGEAR OVER 600 VOLTS (WVDA)

Switchgear, Metal Enclosed, Over 600 Volts (WVGN)—Continued

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only.

When intended for outdoor use, an enclosure is investigated to determine that it is rainproof and is marked "Rainproof" or "Outdoor." These enclosures may be either nonventilated or ventilated.

The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

ADDITIONAL INFORMATION

For additional information, see Switchgear Over 600 Volts (WVDA) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

- ANSI/IEEE 1247 (2005), "IEEE Standard for Interrupter Switches for Alternating Current Rated Above 1000 Volts"
- ANSI/IEEE C37.20.3 (2001), "Metal-Enclosed Interrupter Switchgear"
- ANSI/IEEE C37.20.4 (2001), "Standard for Indoor AC Switches (1 kV – 38 kV) for Use in Metal-Enclosed Switchgear"
- ANSI/NEMA C37.54 (2002), "For Indoor Alternating Current High-Voltage Circuit Breakers Applied as Removable Elements in Metal-Enclosed Switchgear – Conformance Test Procedures"
- ANSI/NEMA C37.57 (2003), "Metal-Enclosed Interrupter Switchgear Assemblies – Conformance Testing"
- ANSI/NEMA C37.58 (2003), "Indoor AC Medium-Voltage Switches for Use in Metal-Enclosed Switchgear – Conformance Test Procedures"

Switchgear Classified as "arc resistant" has additionally been investigated to EEMAC G14-1, "EEMAC Procedure for Testing the Resistance of Metal Clad Switchgear Under Conditions of Arcing Due to an Internal Fault," or IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults," as indicated in the Classification Mark.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-enclosed Switchgear, Over 600 V."

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed-mount switches or fixed-mount circuit breakers; it does not cover other vertical sections included in the assembly, or removable switches or circuit breakers.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of UL on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the Listing Mark noted above and the following additional information:

**ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH
[standard designation and date]**

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking, where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWITCHGEAR, PAD MOUNTED,
SUBSURFACE AND VAULT OVER 600
VOLTS (WVHN)**

GENERAL

SWITCHGEAR OVER 600 VOLTS (WVDA)

445

Switchgear, Pad Mounted, Subsurface and Vault Over 600 Volts (WVHN)—Continued

This category covers medium-voltage, pad-mounted, subsurface and vault switchgear having ac voltage ratings up to 38 kV ac maximum. For purposes of this category, pad-mounted, subsurface and vault switchgear may be designated as distribution switchgear (DSG).

Pad-mounted switchgear is an enclosed switchgear assembly in which all energized parts are insulated and completely enclosed within a grounded shield system when separable connectors are in place.

Pad-mounted switchgear is intended for installation in outdoor, above-ground areas accessible to the unsupervised general public in accordance with ANSI/NFPA 70, "National Electrical Code." Although intended for outdoor use, this equipment is not precluded from being used indoors.

Subsurface switchgear is a submersible switching assembly suitable for application in a below-grade enclosure and is normally surface operable. Subsurface switchgear may be provided as open equipment.

Vault switchgear is open type (unenclosed), partially enclosed, or enclosed-type switchgear intended to be installed in an electrical vault, in which the switch and accessories are operable from inside a vault.

Each assembly of DSG includes one or more "ways." A "way" is a three-phase or single-phase circuit connection to the bus, which may contain combinations of switches and protective devices or may be solid bus.

DSG may use oil, air, or another gas (such as SF₆) as the insulating medium for the entire assembly, or for portions of the assembly, such as individual switches.

DSG is intended to be cable connected using separable insulated connector systems complying with IEEE 386, "Separable Insulated Connector Systems for Power Distribution Systems Above 600 V."

ENCLOSURES

The enclosures of pad-mounted switchgear are provided with security features such as pentahead securing bolts and padlocking provisions on all access doors.

Pad-mounted switchgear has not been investigated for installation in coastal environments unless so marked. Coastal environments are those land areas within 2500 ft of the mean high-water line.

Tanks and cabinets of submersible equipment are made of corrosion-resistant materials or provided with impact- and corrosion-resistant finishes. No additional investigation of enclosures for subsurface or vault-type switchgear is included under this category.

SWITCHES

Switches may be single- or three-phase, dead-front or live-front, pad-mounted, subsurface or vault. Switches may be provided with or without protective devices, such as fuses or fault interrupters.

Switch Ratings

Each switch within DSG has the following ratings: continuous current, load-switching current, loop-switching current, cable-charging switching current, and transformer-magnetizing switching current.

The preferred continuous-current ratings of load-interrupter switches within DSG are 200, 400 and 600 A, but switches may be investigated for ratings other than the preferred ratings.

PRODUCT MARKINGS

All DSG is marked with:

- a) Name of the manufacturer and type designation
- b) Model, style number and catalog number (if any)
- c) Unique serial number
- d) Date of manufacture (month and year)
- e) Rated maximum voltage
- f) Rated power frequency
- g) Rated lightning-impulse withstand voltage (BIL)
- h) Rated power-frequency withstand voltage
- i) Rated short-circuit current
- j) Total weight, including insulating medium
- k) Type and quantity of insulating medium
- l) Three-line schematic diagram

The marked rated maximum voltage is no greater than the voltage rating of the lowest rated "way." The equipment is also marked with a description of the type of equipment, for example, "Pad-mounted Fused Switch" or "Fused Load-break Way." The nameplate may be located on the exterior of the equipment or within an interior compartment.

Each "way" is marked with the manufacturer and type designation of switch and manufacturer and type designation of fuse mounting. In addition, a "way" may be marked with maximum voltage and short-circuit current. The maximum voltage and short-circuit current ratings are optional since they are part of the overall marking of the DSG.

Three-phase DSG containing one or more "ways" with components rated for phase-to-ground voltage (maximum voltage divided by 1.732), such as fuses, single-phase switches, or fused load-break devices, is marked with the designation "Grd-Y" (grounded-wye) added to the maximum voltage.

Each "switched way," "fused-switched way," or "fused load-break way" is marked with the following ratings: continuous current, load-switching

Switchgear, Pad Mounted, Subsurface and Vault Over 600 Volts (WVHN)–Continued

current, loop-switching current, cable-charging switching current, and transformer-magnetizing switching current.

Each “fused way” or “tapped way” is marked with the continuous current rating of the “way.”

Each enclosure is marked **DANGER – HIGH VOLTAGE – KEEP OUT.**

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C37.74 (2003), “Standard Requirements for Subsurface, Vault, and Pad-Mounted Load-Interrupter Switchgear and Fused Load-Interrupter Switchgear for Alternating Current Systems Up to 38 kV.”

Pad-mounted switchgear is additionally investigated to ANSI/IEEE C57.12.28 (2005), “Pad-Mounted Equipment – Enclosure Integrity.”

Enclosures for pad-mounted switchgear intended for installation in coastal areas are additionally investigated to IEEE C57.12.29 (2005), “Pad-Mounted Equipment – Enclosure Integrity for Coastal Environments.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Pad-mounted Switchgear,” “Subsurface Switchgear” or “Vault Switchgear.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TABLES, UTILITY (WWJT)

GENERAL

This category covers tea or coffee tables, lightweight kitchen and utility tables, portable ironing boards, projector tables, and portable cabinets and desks, all with permanently attached receptacles, and with a separable cord set or permanently attached power-supply cord. Except for projector tables that may contain a small lamp for previewing slides, the units contain no electrical load other than optional pilot lights.

RELATED PRODUCTS

Carts intended for use with audio-, video-, or television-type products that have a shelf more than 39.37 in. (1 m) above the floor and that are intended for use in schools, institutions, and the like are covered under Carts, Tall Institutional (CZWK).

Carts, stands, racks, shelves, and the like intended for household or commercial use with audio-, video-, or television-type products such as television carts, audio racks, wall-mounted or ceiling-hung shelves, and television pedestals are covered under Carts and Stands for Household, Commercial and Professional Use (CZUV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 498, “Attachment Plugs and Receptacles,” ANSI/UL 817, “Cord Sets and Power-Supply Cords,” and UL 1363, “Relocatable Power Taps.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Utility Table,” “Projector Table,” “Desk,” “Drafting Table,” “Portable Utility Cabinet,” “Ironing Board With Supply Cord,” or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TANK-MONITORING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (WWQS)

GENERAL

This category covers tank-monitoring equipment, including control units, indicators, sensors, transmitters, liquid-level probes and auxiliary devices used for tank monitoring or as part of tank-monitoring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuits as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Tank Monitoring Equipment for Use in Hazardous Locations” or “Tank Monitoring Equipment (Associated Apparatus),” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TANK-MONITORING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WWQZ)

GENERAL

This category covers tank-monitoring equipment, including control units, indicators, sensors, transmitters, liquid-level probes and auxiliary devices used for tank monitoring or as part of tank-monitoring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Tank-monitoring Equipment for Use in Hazardous Locations” or “Tank-monitoring Equipment (Associated Apparatus),” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELECOMMUNICATIONS EQUIPMENT (WYIE)

Listing of the following products appear in this section:
Custom-built Telecommunications Equipment

Telephone Appliances and Equipment
Telephones, Cellular

Telephone power supplies are covered under Power Supplies, Telephone (QQJE). Telecommunications equipment covered under this category has not been investigated for use in computer/information technology rooms as defined in the "Standard for the Protection of Electronic Computer/Data Processing Equipment", NFPA 75. Computers and related equipment, including telecommunications equipment, that interface with electronic data processing systems and are intended for use in computer/information technology rooms are covered under Data Processing Equipment, Electronic (EMRT) or Information Technology Equipment (NWGQ).

Telecommunications equipment identified as suitable for outdoor locations is marked with an enclosure type designation or as "Rain tight" or "Rainproof" and is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). Telecommunications equipment not marked as suitable for outdoor locations is for indoor use only and the acceptability of such equipment when installed in semi-protected or otherwise shielded locations is determined by the Authority Having Jurisdiction.

Unless marked to indicate special circuit characteristics (such as "Class 2" or "Class 3") or another specific function (such as "keyboard"), telecommunications-type output connectors (such as RJ-series modular jacks, 50-pin commercial connectors, and insulation piercing terminals) of telecommunications equipment are limited to telecommunications-circuit levels and are suitable for connection to typical telecommunications networks and distribution wiring installed in accordance with Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Certain types of telecommunications equipment are intended to be installed on telecommunications lines protected by a secondary protector and are marked to indicate this fact. Secondary protectors are Listed under Secondary Protectors for Communication Circuits (QVRG).

Certain types of telecommunications equipment are Listed as accessories for use only with other Listed equipment or systems and are identified by the word "Accessory."

Telecommunications equipment and their accessories that are suitable for mounting in air-handling spaces, as covered by Section 300.22(C) of the NEC, are specifically identified by markings on the product and in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CUSTOM-BUILT TELECOMMUNICATIONS EQUIPMENT (WYKM)

GENERAL

This category covers custom-built, modular telecommunications equipment and accessories that include various combinations of cabinets, racks, circuit card assemblies, power supplies, and the like designed for field installation by trained service personnel. They are intended for installation in accordance with Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

This equipment is intended to be installed and maintained by local exchange carriers (LECs), inter-exchange carriers (IXCs), and similar operating telecommunications companies, which provide service to the subscriber's premise and access to the public network.

INSTALLATION

Custom-built telecommunications equipment is intended to be installed only in restricted access locations, such as equipment rooms or closets, where access is limited to trained service personnel, unless it is installed in a certified rack, cabinet, or similar enclosure identified with the installation code "E."

Some units may have accessible parts (such as the output terminals of a low-power, ring-generator power supply) that operate at Class 3 voltage levels. The location of these units either in the restricted access location or in the final system configuration is intended to be such that unintentional contact with these parts is unlikely.

Unless identified with the installation code "B" or "E," custom-built telecommunications equipment is intended to be installed only over a non-combustible surface or in a certified rack, cabinet, or similar enclosure that is identified with the installation code "B" or "E."

Custom-built telecommunications equipment is intended to be configured in a system and installed in accordance with the manufacturer's installation instructions and the network carrier's installation practices. In order to ensure proper coordination of the individual units in the final installation, letter codes are provided to identify significant input, output, and installation parameters. These are divided into three categories: Power Codes (PC), Telecommunications Codes (TC), and Installation Codes (IC).

Power Codes (PC)

Custom-built Telecommunications Equipment
(WYKM)—Continued

Power codes provide information relating to the type of power required to be supplied to the unit (input) or the type of power supplied by the unit (output).

C — As an input code, this designation requires the power inputs to the unit to be limited to normal telecommunications levels. Acceptable sources of power are certified telephone power supplies identified as having "Level C" outputs, certified custom-built telecommunications equipment with an output code "C," or communications line powering from certified telephone equipment or the public network. As an output code, this designation indicates that the outputs are limited to normal telecommunications levels (Level C) and are suitable for connection to typical telecommunications networks and distribution wiring that are installed in accordance with Article 800 of the NEC.

F — As an input code, this designation requires the power inputs to the unit to be provided with overcurrent protection or be otherwise power limited. Acceptable sources of power are certified telephone power supplies identified as having "Class 2" or "Level C" outputs, a certified Class 2 power source, or certified custom-built telecommunications equipment with an output code of "F" or "C." As an output code, this designation indicates that the unit provides power-limited outputs that are intended to be used for custom-built telecommunications equipment in the same system. These outputs have not been investigated as Class 2 circuits or communications circuits unless identified as such.

L — As an input code, this designation requires that, with overcurrent protection bypassed, the power source supplying the unit be limited to 250 VA and the current source be limited to 1000 V max. Acceptable types of limited power sources are certified Class 2 power supplies, a certified telephone power supply with outputs identified as being source limited, or certified custom-built telecommunications equipment with a power output code "L."

As an output code, this designation indicates that, with overcurrent protection bypassed, the unit provides power outputs that are source limited to 250 VA with the current limited to 1000 V max.

The following table summarizes acceptable power sources for units with input power codes C, F and L.

Power Source	May Supply Unit With An Input Power Code:
Output power code "L"	L
Output power code "F"	F
Output power code "C"	L, F, C
Class 2 power source	L, F
Communications circuits (e.g., public network)	L, F, C
Certified telephone power supplies with identified "Level C" outputs	L, F, C
Certified telephone power supplies with identified "source-limited" outputs	L

Telecommunications Codes (TC)

Telecommunications codes provide information relating to the characteristics of the telecommunications circuits that may be connected to the unit.

T — Provided as an output code, this designation indicates that the equipment provides isolation from "exposed" circuits requiring protection in accordance with Section 800.30 of the NEC.

X — As an input code or as an output code, this designation indicates that the input or output telecommunications circuits are suitable for connection to "exposed" circuits requiring protection in accordance with Section 800.30 of the NEC. Absence of this code is an indication that the equipment is intended to be isolated from "exposed" circuits by equipment with an output code designation "T."

Installation Codes (IC)

Installation codes provide information relating to the location and/or installation of the unit.

A — Where provided, this designation indicates that additional information is provided regarding the installation of the unit. Such information may be provided in the form of a permanent tag or information sheet attached to the unit.

B — Where provided, this designation indicates that the equipment provides side and bottom enclosures that minimize the risk of spread of fire. Cabinets, racks, and similar equipment identified with an installation code "B" are not intended to completely enclose or limit accessibility to certified subassemblies mounted within the enclosure and are, therefore, not intended for use outside of restricted access locations.

E — Where provided, this designation indicates that the equipment provides a complete enclosure for parts that may present a risk of electric shock, electrical energy/high current levels, or fire and limits

Custom-built Telecommunications Equipment (WYKM)–Continued

accessibility to these parts. Cabinets, racks, and similar equipment identified with an installation code “E” are intended to enclose and limit accessibility to certified subassemblies mounted within the enclosure and may be used outside of restricted access locations.

Marking on Units

The codes are marked in the following format:

Power Code (PC)	In	Out
Telecommunications Code (TC)	F	C
Installation Code (IC)	X	T, X
	A	—

In this example, the “F” Power Code (PC) for the input indicates that the power inputs require overcurrent protection from the equipment that provides power to this unit. The “C” Power Code (PC) for the output indicates that the outputs are limited to levels compatible with communications wiring systems. The “X” input Telecommunications Code (TC) means that the communications circuit inputs are suitable for connection to exposed circuits. The “T” Telecommunications Code (TC) for the output indicates that the unit provides isolation between the exposed circuits connected at the input and the telecommunications output ports. The “X” Telecommunications Code (TC) for the output indicates that the output circuits are also suitable for connection to exposed circuits. The “A” Installation Code (IC) indicates that additional important information is provided on a tag or an attached information sheet. The lack of any other installation codes indicates that the equipment should be installed in restricted access locations over a noncombustible surface or mounted in a suitable enclosure with an “E” or “B” installation code.

Power supplies and assemblies containing power supplies or power distribution components are marked with electrical ratings. Assemblies that present a load on the power system are marked with a load or input rating. The total load ratings for any system should not exceed the power supply/distribution ratings.

Custom-built telecommunications equipment is intended to be installed or situated in a location or position that does not cause excessive heat build-up or interfere with its proper ventilation.

RELATED EQUIPMENT

Complete telephone equipment (e.g., PABXs, telephones, telephone answering machines) is covered under Telephone Appliances and Equipment (WYQQ) or Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Information technology equipment is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies, and similar network communications companies is covered under Communications Service Equipment (DUZO).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunications equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunications equipment that will be installed at a later time, are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems (NWIN).

For additional information, see Telecommunications Equipment (WYIE) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1459, “Telephone Equipment,” or ANSI/UL 60950 or ANSI/UL 60950-1, “Safety of Information Technology Equipment,” and ANSI/UL 60950-21, “Safety of Information Technology Equipment – Remote Power Feeding,” as appropriate.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Custom-built Telecommunication Equipment” (or “Custom Tel Eq.” or “Custom Telecom”).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONES, CELLULAR (WYLR)
USE

This category covers hand-held cellular telephones, transportable cellular telephones, and cellular telephone voice-dialers that may be used in house-

Telephones, Cellular (WYLR)–Continued

holds or commercial establishments, or on a vehicle, boat or the like where the telephone interconnects with the telephone network through a radio transmitter and receiver.

FACTORS NOT INVESTIGATED

Possible physiological effects of these devices have not been investigated.

RELATED PRODUCTS

Cell site equipment and similar equipment that forms the “base station” for a cellular communications network, and incorporates the interface to the wired telecommunications network, controllers, amplifiers, and transmitting/receiving equipment is covered under Telephone Appliances and Equipment (WYQQ) or Information Technology Equipment Including Electrical Business Equipment (NWGQ).

ADDITIONAL INFORMATION

For additional information, see Telecommunications Equipment (WYIE) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 6500, “Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use,” UL 60065, “Audio, Video and Similar Electronic Apparatus – Safety Requirements,” UL 1492, “Audio-Video Products and Accessories,” or UL 60950 or UL 60950-1, “Safety of Information Technology Equipment,” as well as the product certification requirements to current FCC Regulations.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Cellular Telephone” (or “Telephone, Cellular”) or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONE APPLIANCES AND EQUIPMENT (WYQQ)

GENERAL

This category covers appliances and equipment intended to be electrically connected to a telecommunications network that has an operating voltage to ground that does not exceed 200 V peak, 300 V peak-to-peak or 150 V rms, installed or used in accordance with ANSI/NFPA 70, “National Electrical Code.”

EQUIPMENT TYPES

Examples of equipment covered under this category include:

- Telephones, telephone answering devices, and telephone dialers that do not deliver a recorded message.
- Key telephone systems, automatic telephone call sequencers, customer administration panels, four-wire channel terminating units, intelligent switching subsystems, message transmitters, mounting shelves, PABX (private automatic branch exchange) systems, phone line TV interface systems, remote telephone base stations, telecontrollers, terminals, terminal sets, WATS boxes and cordless telephones.

INSTALLATION

Certain types of telephone appliances and equipment have been investigated for installation only over a noncombustible surface and are marked as such.

Certain types of telephone appliances and equipment have been investigated for installation only in restricted access locations, such as equipment rooms or closets, where access is limited to trained service personnel, and are marked as such.

RELATED EQUIPMENT

Information technology equipment, including other telecommunications appliances and equipment, is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Modular assemblies (e.g., racks, circuit card assemblies) designed for field installation by trained service personnel are covered under Custom-built Telecommunications Equipment (WYKM).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communications companies is covered under Communications Service Equipment (DUZO).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunications equipment, but include components and assemblies that are intended to power, protect, heat, cool or oth-

TELECOMMUNICATIONS EQUIPMENT (WYIE)

Telephone Appliances and Equipment (WYQQ)—Continued

erwise support IT or telecommunications equipment that will be installed at a later time, are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems (NWIN).

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment (QPQY).

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ) and Power Supplies, Telephone (QQJE).

Accessories and Subassemblies

Field-installed accessories and subassemblies (component assemblies) to certified equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

ADDITIONAL INFORMATION

For additional information, see Telecommunications Equipment (WYIE) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1459, "Telephone Equipment."

Certain types of equipment have been investigated for installation in an environmental air space and are provided with a marking or installation instruction, which states "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22(C) of the National Electrical Code," or similar wording. In such cases, UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and their Accessories Installed in Air-Handling Spaces," has been applied.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telephone Appliance," "Telephone Equipment," "Telecommunication Equipment," "Telephone Answering Appliance," "Telephone Call Diverter," "Automatic Dialer," or other appropriate product name as shown in the individual Listings.

The product name for field-installed accessories or subassemblies is provided with the additional word "Accessory" or "Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WYMG)

GENERAL

This category covers telemetering transmitter coil assemblies, small generators, pulse generators, fluid-flow indicators and meters, transmitter and receiver units employing selsyn motors, and similar equipment.

The investigation of telemetering equipment marked "Raintight" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

Telemetering equipment provided with a factory seal of conductors entering the device enclosure is so identified on the product.

RELATED PRODUCTS

Equipment investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names:

TELEMETERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WYMG)

"Telemetering Equipment for Use in Hazardous Locations," "Section of Telemetering Equipment for Use in Hazardous Locations," "Telemetering Equipment Relating to Hazardous Locations," "Section of Telemetering Equipment Relating to Hazardous Locations," an appropriate abbreviation, or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (WYMV)

GENERAL

This category covers telemetering transmitter coil assemblies, small generators, pulse generators, fluid-flow indicators and meters, transmitter and receiver units employing selsyn motors, and similar equipment.

Investigation of telemetering equipment marked "Rain tight" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

Telemetering equipment provided with a factory seal of conductors entering the device enclosure is so identified on the product.

RELATED PRODUCTS

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations appears under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product, or the UL symbol on the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telemetering Equipment for Use in Hazardous Locations," "Section of Telemetering Equipment for Use in Hazardous Locations," "Telemetering Equipment Relating to Hazardous Locations" or "Section of Telemetering Equipment Relating to Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (WYOS)

GENERAL

This category covers retrofit devices and kits consisting of parts and/or subassemblies intended for field installation in certified telemetering equipment. These products have been investigated to determine that when used in accordance with the manufacturer's instructions they do not adversely affect the operation of the complete unit.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

450 **TELEMETERING EQUIPMENT ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (WYOS)**

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**[PRODUCT IDENTITY*]
FOR USE WITH [specified product]
Control No.**

* The appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONE EQUIPMENT, LEGACY INSTALLATIONS (WYXR)

USE

This category covers equipment with remote feeding telecommunication circuits intended for backwards compatibility in legacy telecommunication equipment.

This equipment is limited to that which forms part of a telecommunication network up to and including the demarcation point. The circuitry associated with this type of equipment is intended to be installed and located in service access areas only, which may or may not be provided by the equipment housing. This equipment is generally considered central office equipment, though it may be deployed elsewhere in similarly controlled environments.

PRODUCT TYPES

Examples of types of equipment covered under this category are:

- Circuit packs or cards with existing or new technologies designed to be installed into shelf assemblies that form part of a service provider's existing infrastructure.
- Shelf assemblies intended as replacements for existing shelf assemblies mounted in frame line-ups that form part of a service provider's existing infrastructure.
- Shelf assemblies or enclosures intended as replacements for existing service provider infrastructure equipment that are required to be compatible with cards or circuit packs already in service.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2391, "Outline of Investigation for Equipment with Remote Feeding Telecommunication Circuits Intended for Backwards Compatibility in Legacy Telecommunication Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Pack" or "Shelf Assembly," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONES FOR USE IN HAZARDOUS LOCATIONS (WZAT)

USE AND INSTALLATION

This category covers telephones, sound-powered telephones, and communication equipment and systems. Unless identified as intrinsically safe or for use in Division 2 locations only, the equipment is of the explosion-proof design.

The handset and cord assembly should be carefully inspected and should be replaced if there is any evidence of damage or deterioration.

The equipment should be installed in accordance with the installation instructions provided with the product and in accordance with ANSI/NFPA 70, "National Electrical Code."

TELEPHONES FOR USE IN HAZARDOUS LOCATIONS (WZAT)

Station equipment, power-supply equipment, protectors, and other equipment as detailed in the installation instructions should be located outside the hazardous area.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONE ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (WZOR)

USE

This category covers dialing units, push-button stations, relays, snap switches, and also conduit boxes having terminal blocks for connection to telephone sets.

ADDITIONAL INFORMATION

For additional information, see Telephones for Use in Hazardous Locations (WZAT) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Accessory for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND SIMILAR USE (XAAA)

AUTOMATIC ELECTRICAL PRESSURE-SENSING CONTROLS (XAAK)

GENERAL

This category covers automatic electrical pressure-sensing controls with a minimum gauge pressure rating of -8.7 psi and a maximum gauge pressure rating of 609.6 psi intended for use in, on, or in association with equipment for household and similar use for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover pressure-sensing in-line cord controls and automatic electrical pressure-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

Automatic Electrical Pressure-sensing Controls (XAAK)—Continued

The automatic electrical pressure-sensing controls incorporate electronic devices. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Ratings — These pressure-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Automatic electrical pressure-sensing controls are marked with the company's name or trademark, a distinctive catalog number, and electrical ratings (e.g., volts, amps, hertz, psi, load type). Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Automatic electrical pressure-sensing controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety (MCCZ), Switches (MFHX) and Controls, Limit (MBPR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," and UL 60730-2-6, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Electrical Pressure-sensing Control."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC ACTUATORS (XABE)

GENERAL

This category covers electric actuators intended for use in, on, or in association with equipment for household and similar use for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover electric actuators intended exclusively for industrial applications.

The individual certifications of electric actuators do not include valves or other connected mechanical loads. Motors used in electric actuators are investigated to the appropriate motor standards.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The electric actuators incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Electric actuators intended for plenum use are investigated for the application and their fire-resistance and low-smoke-producing characteristics in accordance with UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

Electric Actuators (XABE)—Continued

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Ratings — These electric actuators have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Electric actuators are marked with the company's name or trademark, a distinctive catalog number, and electrical and thermal ratings (e.g., volts, amps, hertz, torque, temperature). Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

See Releasing Devices for Use in Hazardous Locations (TBJW), Temperature-indicating and -Regulating Equipment for Use in Hazardous Locations (XBDV) and Carbon Dioxide Extinguishing System Units, General Use (FYJR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," and UL 60730-2-14, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Electric Actuators."

Where indicated in the individual certifications, electric actuators have also been investigated to the long-term holding test in ANSI/UL 555S, "Smoke Dampers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat," "Temperature Limiter" or "Thermal Cut-out," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HUMIDITY-SENSING CONTROLS (XACI)

GENERAL

This category covers automatic electric humidity-sensing controls intended for use in, on, or in association with equipment for household and similar use, including electrical controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover automatic electrical humidity-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The humidity-sensing controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Ratings — These humidity-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Humidity-sensing controls are marked with the company's name or trademark, a distinctive catalog number, and electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature). Additional markings may be required based on the individual certification reports.

Humidity-sensing Controls (XACI)—Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," and UL 60730-2-13A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Humidity Sensing Controls."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Humidity-sensing Control" or "Room Humidistat," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MISCELLANEOUS CONTROLS (XACN)**GENERAL**

This category covers automatic electrical controls for use in, on, or in association with equipment for household and similar use, including controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover automatic electrical controls intended exclusively for industrial applications.

These controls are mechanically or electrically operated, and are responsive to or control such characteristics as temperature, pressure, passage of time, humidity, light, electrostatic effects, flow or liquid level, current, voltage, acceleration and the like. Automatic controls that do not specifically fall under the scope of other product categories are covered under this category.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Ratings — These automatic electrical controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing. An input/output circuit that fulfills the requirements for both SELV and limited-energy not exceeding 15 W is considered to address the risk of fire and electric shock. An input/output circuit is marked "Class 2" when the electrical characteristics of the circuits meet the requirements in Article 725 of the NEC, specifically Table 11(A) or 11(B) in Chapter 9, under normal and single-component fault operating condition.

PRODUCT MARKINGS

Automatic electrical controls are marked with the company's name or trademark, a distinctive catalog number, and electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature). Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Automatic controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety (MCCZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," in addition to one or more of the following:
UL 60730-2-2, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Foot-actuated Control" or "Electronic Protective Control," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TEMPERATURE-SENSING CONTROLS
(XACX)****GENERAL**

This category covers automatic electrical temperature-sensing controls for use in, on, or in association with equipment for household and similar use, including electrical controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover automatic electrical temperature-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical temperature-sensing controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Equipment intended for agricultural use — Controls marked to indicate use in agricultural buildings in accordance with Article 547 of the NEC have been tested in the environmental conditions of 547.1(A) and 547.1(B) of the NEC.

**AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD
AND SIMILAR USE (XAAA)**
Temperature-sensing Controls (XACX)—Continued

Ratings — These temperature-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

The basic standards used to investigate products in this category are UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," and UL 60730-2-9, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Temperature Sensing Controls."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat," "Temperature Limiter" or "Thermal Cut-out," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT (XAPX)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These devices respond directly or indirectly to changes in temperature, humidity, or pressure to affect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Temperature-indicating and -regulating equipment is certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a direct-current (noninductive) rating is specified.

Manual reset controls — An "M1" or "M2" marking indicates the following manual reset functions are provided:

- **M1** — Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.
- **M2** — Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

Room thermostats — Room thermostats intended for the direct control of electric space-heating equipment that are to be permanently connected electrically and are provided with a marked or implied "off" position, disconnect all ungrounded poles of the supply circuit when adjusted to the "off" position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Equipment intended for agricultural use — A control marked to indicate use in agricultural buildings in accordance with Article 547 of the NEC has been tested in the environmental conditions of Paragraph 547.1(A) and 547.1(B) of the NEC.

**TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT
(XAPX)**

453

Motor operators — The individual certifications of motor operators do not include valves or other connected mechanical loads.

PRODUCT MARKINGS

Temperature-indicating and -regulating equipment is marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX).

Controls for refrigeration and air conditioning (except remote, wall-mounted room thermostats) are covered under Controllers, Refrigeration (SDFY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 873, "Temperature-Indicating and -Regulating Equipment," or UL 60730-1, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," in addition to one of the following as applicable:

- ANSI/UL 60730-2-2, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors"
 - UL 60730-2-3, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps"
 - UL 60730-2-4, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors for Hermetic and Semi-Hermetic Motor-Compressors"
 - UL 60730-2-6, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements"
 - ANSI/UL 60730-2-9, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Temperature Sensing Controls"
 - UL 60730-2-10A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Motor Starting Relays"
 - UL 60730-2-11A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Energy Regulators"
 - UL 60730-2-12A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Electrically Operated Door Locks"
 - UL 60730-2-13A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Humidity Sensing Controls"
 - UL 60730-2-14, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Electric Actuators"
- Where indicated in the individual certifications, electric actuators have also been investigated to the long-term holding test in ANSI/UL 555S, "Smoke Dampers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Temperature Indicating Equipment," "Temperature Regulating Equipment" or "Temperature-indicating and -Regulating Equipment" (or "Temp. Ind. and Reg. Equip."), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT, ELECTRICAL (XATJ)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control or equipment or appli-

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT, ELECTRICAL (XATJ)

ance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Temperature-indicating and regulating equipment is certified with a maximum rating of 600 V. A control rated in amperes is tested with an inductive (75-80% power factor) load for alternating current ratings unless a direct current (noninductive) rating is specified.

Manual reset controls — An “M1” or “M2” marking indicates the following manual reset functions are provided:

- **M1** – Controls that automatically reset to the “closed” position after normal operating conditions have been restored, if the reset means is held in the “reset” position.
- **M2** – Controls that do not automatically reset to the “closed” position if the reset means is held in the “reset” position.

Room thermostats — Room thermostats intended for the direct control of electric space heating equipment that are to be permanently connected electrically and are provided with a marked or implied “off” position, disconnect all ungrounded poles of the supply circuit when adjusted to the “off” position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as “Rain tight” or “Rainproof” is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Equipment intended for agricultural use — A control marked to indicate use in agricultural buildings in accordance with Article 547 of the NEC has been tested in the environmental conditions of 547.1(A) and 547.1(B) of the NEC.

Motor operators — The certifications of motor operators do not include valves or other connected mechanical loads.

PRODUCT MARKINGS

Temperature-indicating and regulating equipment is marked with the company’s name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual certification reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60730-1A, “Automatic Electrical Controls for Household and Similar Use; Part 1: General Requirements,” together with the following appropriate Part 2 Standards:

- UL 60730-2-3, “Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps”
- UL 60730-2-4, “Particular Requirements for Thermal Motor Protectors for Motor-Compressors of Hermetic and Semi-Hermetic Type”
- UL 60730-2-6, “Particular Requirements for Automatic Electrical Pressure Sensing Controls Including Mechanical Requirements”
- UL 60730-2-9, “Particular Requirements for Temperature Sensing Controls”
- UL 60730-2-10A, “Particular Requirements for Motor Starting Relays”
- UL 60730-2-13A, “Particular Requirements for Humidity Sensing Controls”
- UL 60730-2-14, “Particular Requirements for Electric Actuators”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Temperature Indicating Equipment” or “Temperature Regulating Equipment,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (XBAI)

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (XBAI)

USE AND INSTALLATION

This category covers electrical controls for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. These devices respond directly or indirectly to changes in temperature, humidity, or pressure to affect temperature control, or equipment or appliance operation, etc.

RATINGS

Temperature-indicating and -regulating equipment is certified with a maximum rating of 600 V.

Controls intended for across-the-line motor starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for alternating-current motor ratings and at ten times motor full load running current for direct-current motor ratings.

A switching device rated in “pilot duty” is intended for control of electromagnetic loads, such as the solenoid of a motor controller or electrically operated valve, and is tested with an appropriate electromagnetic load.

A control rated in amps is tested with an inductive (75 – 80% power factor) load for alternating-current ratings unless a noninductive rating is specified, and with a noninductive load for a direct-current rating.

The certifications of motor operators do not include valves or other connected mechanical loads.

The thermostats in the individual certifications can be adjusted, or are preset to operate at various temperature settings. The exterior surfaces of the equipment to which the thermostats, or remote bulbs of the thermostats, are attached should not exceed the maximum safe temperature for the hazardous locations involved.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 873, “Temperature-Indicating and -Regulating Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Thermostat for Use in Hazardous Locations,” “Temperature-indicating Equipment for Use in Hazardous Locations” or “Temperature-indicating Equipment (Associated Apparatus),” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (XBDV)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control, or equipment or appliance operation, etc.

Temperature-indicating and -regulating equipment is certified with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a non-inductive rating is specified, and with a noninductive load for a direct-current rating.

Controls intended for across-the-line motor starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and

at six times motor full-load running current for alternating-current motor ratings, and at ten times motor full-load running current for direct-current motor ratings.

A switching device rated in "pilot duty" is intended for control of electromagnetic loads, such as the solenoid of a motor controller or electrically-operated valve, and is tested with an appropriate electromagnetic load.

The motor operators in this category do not include valves or other connected mechanical loads.

The thermostats covered under this category can be adjusted, or are preset to operate at various temperature settings. The exterior surfaces of the equipment to which the thermostats, or remote bulbs of the thermostats, are attached should not exceed the maximum safe temperature for the hazardous locations involved.

Equipment marked "rain tight" has been subjected to tests designed to simulate exposure to a beating rain to determine that such exposure will not result in entrance of water.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 873, "Temperature-Indicating and -Regulating Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat for Use in Hazardous Locations," "Temperature-indicating Equipment for Use in Hazardous Locations" or "Temperature-indicating Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TEMPORARY-LIGHTING STRINGS
(XBRT)**

USE AND INSTALLATION

This category covers temporary-lighting strings rated 20 A, 125 V, intended for use indoors and outdoors to provide temporary illumination in accordance with Article 590 of ANSI/NFPA 70, "National Electrical Code."

Temporary-lighting strings consist of a factory assembly of flexible cord or cable incorporating a series of Edison-base lampholders provided with lamp guards. The flexible cord may be terminated at one end with an attachment plug, for connection to the source of supply, and with a cord connector at the opposite end. If an attachment plug is not provided, the temporary-lighting string is provided with instructions for proper connection to the source of supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1088, "Temporary Lighting Strings."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Temporary Lighting String."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELOCATABLE POWER TAPS
(XBYS)**

USE AND INSTALLATION

This category covers relocatable power taps rated 250 V ac or less, 20 A or less. They are intended for indoor use as relocatable multiple outlet extensions of a single branch circuit to supply laboratory equipment, home workshops, home movie lighting controls, musical instrumentation, and to provide outlet receptacles for computers, audio and video equipment, and other equipment.

Relocatable power taps consist of:

- a) One attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles may be mounted, or
- b) One attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles may be mounted. Up to six lengths of flexible cord, not exceeding 1-1/2 ft in length, may exit the enclosure with each length terminating in a separate, single cord connector, or
- c) One attachment plug and a single length of flexible cord terminated in an enclosure in which one or more receptacles may be mounted. A second enclosure in which one or more receptacles may be mounted that is interconnected to the first enclosure with flexible cord, maximum 1-1/2 ft long, may be employed. An interconnected switch housing may also be employed to remotely control the relocatable power tap, provided that the length of the flexible cord between the enclosure and switch housing is not greater than 6 ft.

They may, in addition, be provided with fuses or other supplementary overcurrent protection, switches, suppression components and/or indicator lights in any combination, or connections for cable, communications, telephone and/or antenna.

Relocatable power taps are intended to be directly connected to a permanently installed branch circuit receptacle. Relocatable power taps are not intended to be series connected (daisy chained) to other relocatable power taps or to extension cords.

Relocatable power taps are not intended for use at construction sites and similar locations.

Relocatable power taps are not intended to be permanently secured to building structures, tables, work benches or similar structures, nor are they intended to be used as a substitute for fixed wiring. The cords of relocatable power taps are not intended to be routed through walls, windows, ceilings, floors or similar openings.

The length of the power-supply cord, as measured from the outside surface of the enclosure of the relocatable power tap to the plane of the face of the attachment plug, should not exceed 25 ft (7.62 m) nor be less than 1.5 ft (0.46 m).

Relocatable power taps have not been investigated and are not intended for use with general patient care areas or critical patient care areas of health care facilities as defined in Article 517 of ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

Relocatable power taps employing cord sets provided with leakage-current detection and interruption are covered under Cord Sets with Leakage-current Detection and Interruption (ELGN).

Portable ground-fault circuit interrupters are covered under Ground-fault Circuit Interrupters (KCXS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1363, "Relocatable Power Taps."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Relocatable Power Tap," "Power Tap" or "Outlet Strip."

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TERMINATION BOXES (XCKT)

GENERAL

This category covers termination boxes rated 600 V or less that consist of lengths of busbars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors or both, or with provision for inlet assemblies for incoming conductors. Termination boxes are intended to be used in accordance with ANSI/NFPA 70, "National Electrical Code." Termination boxes have a rating in amperes based on the size of the bus located within the termination box.

Termination boxes do not contain switching devices, overcurrent protective devices, or any control components (see **RELATED PRODUCTS**).

This category also covers termination bases to be field installed in termination boxes, and termination boxes in which termination bases are to be field installed.

USE AND INSTALLATION

Termination boxes rated and marked for use on the line side of service equipment may also be used on the load side of service equipment. Termination boxes not marked for use on the line side of service equipment and rated 100 A or less are only for use on the load side of service equipment.

Termination boxes may have knockouts or openings for the connection of cable fittings, conduit or electrical metallic tubing. They may also have openings for connection with openings in other equipment, such as meter sockets, panelboards, switch or circuit breaker enclosures, wireways, raceways and the like.

Termination boxes provided with inlet assemblies may consist of a single multi-pole inlet assembly or multiple single-pole inlets installed in a completely enclosed assembly. Single multi-pole inlets are suitable for connection and disconnection under load. Single-pole inlets are not intended to be used for the connection to, disconnection from, or transfer of loads.

Termination boxes are generally freestanding structures or can be mounted on to a post or pedestal.

A mounting post is intended to be mounted in concrete at grade level or below or is intended to be secured to some other mounting support. A mounting post is marked with a grade level line to which the post should be encased.

A mounting pedestal is intended to be mounted to a concrete slab.

A mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions indicating the correct mounting procedure.

Unless marked otherwise, a mounting post or pedestal is intended to be self-supporting, and is not intended to serve as the support of a mast for overhead wiring.

PRODUCT MARKINGS

Termination boxes are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Termination boxes intended for use with field-installed wire connectors are marked stating which pressure terminal connectors, component terminal assemblies or termination bases are to be used.

Factory-installed field wiring connectors requiring the use of a special tool (such as crimp connectors) are provided with instructions concerning the proper tool to be used for the termination of conductors.

Termination boxes are marked with their short-circuit current ratings in rms symmetrical amps and with the words "Short-Circuit Current Rating."

Termination boxes are marked with an enclosure type as described in Electrical Equipment for Use in Ordinary Locations (AALZ). Termination boxes marked with an enclosure Type designation of Type 3, 3S, 4, 4X, 6 or 6P may additionally be marked "Raintight." A termination box marked Type 3R may additionally be marked "Rainproof."

Termination boxes suitable for use on the line side of service equipment are marked "Suitable for Use on the Line Side of Service Equipment," or equivalent.

RELATED PRODUCTS

Equipment connected only by busbars to both input and output circuits and equipment known as "end cable tap boxes" are covered under Busways and Associated Fittings (CWFT).

Equipment containing switching devices, relays or overcurrent devices is covered under the appropriate category; see Switchboards (WEIR), Industrial Control Equipment (NIMX) or Panelboards (QEUY).

Posts or pedestals intended to support and feed distribution equipment such as a power outlet, panelboard, or circuit breaker enclosure are covered under Mounting Posts and Pedestals for Distribution Equipment (PUPR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1773, "Termination Boxes."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Ser-

vice. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Termination Box," or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMAL BARRIER SYSTEMS (XCLF)

GENERAL

Thermal barrier systems consist of components and materials intended for installation as protection for electrical wiring systems specified in the individual system designs with respect to heat transmission from exterior fire exposure. The specifications for the thermal barrier systems and their assembly are important details in the development of the ratings. Information concerning these details are described in the individual systems. System components identified with an (*) in the description text are Classified under the Classification and Follow-Up Service Program of UL. Such components and names of manufacturers who are authorized to apply the Classification Mark are identified under the specific product category.

Ratings apply only to the entire thermal barrier system. Individual components and materials are designed for use in a specific system(s) for which corresponding ratings have been developed and are not intended to be interchanged between systems. Ratings are not assigned to individual system components or materials.

Classification of these thermal barrier systems contemplates installation in interior environments with representative heating and air conditioning, unless stated otherwise in the individual Classifications.

The products used in these systems are intended to be installed in accordance with the applicable accompanying instructions. Authorities Having Jurisdiction should be consulted as to the specific requirements covering the installation and use of these Classified systems.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BATTS AND BLANKETS (XCLR)

USE AND INSTALLATION

This category covers insulating batts and blankets used to wrap electrical wiring systems in accordance with the application instructions provided with the product, and as specified in the individual thermal barrier system.

Authorities Having Jurisdiction should be consulted before installation.

FACTORS NOT INVESTIGATED

Properties of these materials, other than the degree of fire resistance to specific electrical wiring systems, have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate the thermal barrier systems in which these products are installed is ASTM E1725 (2008), "Standard Test Methods for Fire Tests of Fire-Resistive Barrier Systems for Electrical System Components."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

BATTS AND BLANKETS FOR USE IN THERMAL BARRIER SYSTEMS SEE UL FIRE RESISTANCE DIRECTORY

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMAL PROTECTION FOR MOTORS (XCSZ)

ELECTRONICALLY PROTECTED MOTORS WITH INTEGRAL CONTROLLERS FOR INDUSTRIAL USE (XDNZ)

GENERAL

This category covers industrial-use motors:

- intended to be field installed in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code,"
- intended only for industrial use,
- having an electronic control, integral to the motor, and
- where the control provides overtemperature protection for the motor.

These motors are controlled and protected by:

- solid-state motor starters/controllers that are integral to the motor, and/or
- open or enclosed equipment integral to the motor that supply power to control a motor or motors operating at a frequency or voltage different than that of the input supply.

These motors comply with the requirements for running and locked-rotor protection, or comply with the requirements for locked-rotor protection only and are for use where running protection is not required.

The solid-state circuitry providing the protection for products covered under this category has not been investigated for reliability.

INSTALLATION

All motors are provided with installation information that indicates the proper methods to secure the motor and electrically connect the motor to the power source.

Motors covered under this category are not intended to be installed in an enclosure unless a marking on the motor, the installation instructions or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

When conduit hubs are not provided for a Type 2, 3, 3R, 3S or 5 enclosure, the enclosure, the instruction sheet provided with the enclosure, or the packaging carton is marked to indicate raintight or wet-location hubs that comply with the requirements in ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," are intended to be used.

A separable conduit hub and a closure fitting are marked with the manufacturer's name or trademark and the catalog number or equivalent. Such a hub or fitting may be shipped separately, and any gasket, hardware, and instructions necessary for installation is shipped with the fitting or packaged with the enclosure.

An enclosure marked Type 4, 4X, 6 or 6P is provided with instructions for use of the watertight connection if the connection is not mounted on the enclosure.

Installation instructions are provided with an enclosure intended for field assembly of the bonding means that identifies the parts for bonding and specifies the method of installation.

Instructions are provided with the enclosure indicating that when installed in a Type 2 or 3R environment, the drain hole plug is intended to be removed.

PRODUCT MARKINGS

An enclosed-type motor has the Enclosure Type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

These motors are marked with:

- Manufacturer's name or identification.
- Motor catalog or model number.
- Rated voltage.
- Full-load amperes, watts or kilowatts, or both.
- Rate speed.
- Rated horsepower or output wattage.
- Rated temperature rise or the insulation system class.
- Rated ambient temperature.
- Rated frequency, expressed in one of the following terms: hertz (Hz); ac-dc (frequency in Hz)/dc (e.g., 60/dc); ac only; direct current.
- Number of phases.
- A continuous-duty motor is marked "Continuous" (or "CONT").
- A direct-current motor is marked to indicate the winding type: straight shunt, stabilized shunt, compound or series.
- A multi-speed motor is marked with the amperes and horsepower at each speed.

These motors are marked to indicate the temperature rating (e.g., 60°C only, 60/75, or 75°C only) of the field-installed conductors for which the equipment has been investigated.

A motor manufactured at more than one factory is marked to uniquely identify the factory of manufacture.

Electronically Protected Motors with Integral Controllers for Industrial Use (XDNZ)—Continued

Motors equipped with electrically powered condensation-prevention heaters are marked with the rated heater voltage, number of phases, and the rated power in watts.

Air-over motors are marked "Air Over" (or "AO") or "Air-Over Motor" (or "AOM").

An alternating-current motor is marked with a code letter to indicate the locked-rotor amperes in accordance with the NEC.

A wound-rotor induction motor is marked with the secondary volts and full-load amperes.

A motor rated for short-time or intermittent duty is marked on the nameplate with the words "intermittent duty" (or "int. duty") and with the time rating in minutes or hours, or a combination of minutes and hours. The rating may be for "On" time only or include specifications for both "On" and "Off" periods.

If the acceptability of a Type 2 or 3R enclosure is dependent upon a particular mounting orientation, the enclosure is marked to indicate the required orientation.

A cast-metal enclosure marked Type 3, 3R or 3S is marked to indicate that, after determining the mounting position of the enclosure, any holes drilled in the field are intended to be located in the lowest part of the bottom wall.

Exception: If a manufacturer intends that a cast-metal enclosure be acceptable for field drilling and tapping of holes for conduit connections, the enclosure is marked to indicate the location and trade sizes of conduit for which the enclosure has been found to be acceptable. If counter-boring is necessary to accommodate certain sizes of conduit, such information is also given.

Note: The instructions for drilling and tapping may be provided on an instruction sheet provided with the enclosure or marked on the packaging carton.

Any environmental-type enclosure intended for use with conduit hubs, and/or other field-installed equipment, but shipped from the factory without them, is marked or provided with instructions that identify the type of equipment intended to be used to maintain the environmental integrity of the enclosure. This may be accomplished by identifying the necessary environmental type designation or by identifying the specific manufacturer and model number of the field-installed equipment.

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations (PTDR), Motors, Specialty for Use in Hazardous Locations (PUCJ), and Motors, Division 2 for Use in Hazardous Locations (PTHE).

Similar motors incomplete in construction and intended for factory installation are covered under Electronically Protected Motors with Integral Controllers for Industrial Use (XDNZ).

Electronically protected motors intended for residential or commercial use are covered under Electronically Protected Motors (XDNW).

Electronically controlled motors are covered under Motors (PRGY or PRGY).

Products Verified for energy efficiency are covered under Electric Motors Verified for Energy Efficiency (ZWK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

- ANSI/UL 2111, "Overheating Protection for Motors"
- ANSI/UL 1004-1, "Rotating Electrical Machines - General Requirements"
- ANSI/UL 1004-3, "Thermally Protected Motors"
- ANSI/UL 1004-7, "Electronically Protected Motors"
- ANSI/UL 508, "Industrial Control Equipment"
- ANSI/UL 508C, "Power Conversion Equipment"

Where indicated in the individual certifications, the spacings provided within these motors have additionally been investigated to ANSI/UL 840, "Insulation Coordination Including Clearances and Creepage Distances for Electrical Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electronically Protected Motor for Industrial Use."

THROUGH-PENETRATION FIRESTOP SYSTEMS (XHEZ)

GENERAL

This category covers firestop systems, which are specific constructions consisting of a wall or floor assembly, a penetrating item passing through an opening in the wall or floor assembly, and the materials designed to prevent the spread of fire through the openings. The specifications for materials in a firestop system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems. Additionally, the substitution or elimination of components required in a system should not be made unless specifically permitted in the individual system or in these general guidelines.

The firestop systems covered under this category have been investigated with a positive furnace pressure differential of at least 0.01 in. of water maintained at a distance of 12 in. below horizontal test assemblies and 0.78 in. below the fill materials surrounding the penetrating items passing through vertical test assemblies. The Classifications of firestop systems contemplate installation in heated and air conditioned environments unless stated otherwise in the description of the system.

ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops," defines the criteria for hourly F, T, L and W ratings for firestop systems. The F-rating criteria prohibits flame passage through the system and requires acceptable hose-stream test performance. The T-rating criteria prohibits flame passage through the system and requires the maximum temperature rise on the unexposed surface of the wall or floor assembly, on the penetrating item and on the fill material not to exceed 325°F (181°C) above ambient, and requires acceptable hose-stream test performance.

The L-rating criteria determines the amount of air leakage, in cu feet per minute per square foot of opening (CFM/sq ft) or in cu feet per minute per unit (CFM/unit) for fixed-size opening units, through the firestop system at ambient and/or 400°F air temperatures at an air-pressure differential of 0.30 in. W.C. The L ratings are intended to assist Authorities Having Jurisdiction and others in determining the suitability of firestop systems for the protection of penetrations and miscellaneous openings in floors and smoke barriers for the purpose of restricting the movement of smoke in accordance with ANSI/NFPA 101, "Life Safety Code."

The Class 1 W rating determines the capability of the firestop system to maintain watertightness of the penetration through a floor or wall construction at ambient air conditions under 3 ft of water pressure head (1.3 psi) for a period of 72 hours. The W rating may be applicable for building structures whose floors are subjected to incidental standing water and/or for buildings that house critical equipment as described in ANSI/NFPA 75, "Fire Protection of Information Technology Equipment," and ANSI/NFPA 76, "Fire Protection of Telecommunications Facilities."

Acceptance is based upon the ability of the firestop system to withstand the applied pressure without the passage of any water through the firestop system. After the Class 1 watertightness test, the firestop system is conditioned in accordance with the requirements of ANSI/UL 1479 and the fire and hose stream tests described in the standard are conducted.

The W rating is intended to assist Authorities Having Jurisdiction and others in determining the suitability of firestop systems in applications where submersion in water may be a factor.

Materials used in the firestop systems are intended to be installed in accordance with the manufacturer's instructions provided with the materials. The structural integrity of the floor or wall assembly needs to be investigated when providing openings for the penetrating items. The fill, void or cavity material thickness published in the fire-resistance designs is measured wet and may be susceptible to a percentage of shrinkage during the curing process. Firestop systems are investigated after the fill, void or cavity materials are fully cured. Refer to the individual Classifications under Fill, Void or Cavity Materials (XHHW) for the investigated percentage of shrinkage.

The minimum and/or maximum annular space referenced in the firestop system must be maintained in order to achieve the hourly rating of the system. The annular space of a penetrating item through a rectangular opening is determined by measuring the distance from the closest point of the penetrating item to a point perpendicular to each of the four sides of the opening. The diagonal dimension is not intended to represent the annular space of a rectangular opening. The annular space between multiple penetrating items within a rectangular opening is determined by measuring the closest point of one penetrating item to the closest point of the adjacent penetrating item.

ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," contains requirements on the use of fire dampers in conjunction with ventilation ducts. Unless specifically indicated as part of the Classification of

the damper, the annular space around the damper sleeve should not be firestopped with the materials described herein.

The systems covered under this category are Classified with respect to (1) installation in a wall only, (2) installation in a floor only or (3) installation in either a wall or a floor. Unless otherwise indicated in the systems, the ratings for firestop systems installed in walls apply when either face of the wall is exposed to fire. The ratings for firestop systems installed in a floor apply when the underside or ceiling surface is exposed to fire.

The hourly fire-endurance rating of the walls and floors incorporating these systems are not indicated. Volume 1 of the Fire Resistance Directory covers the hourly fire-endurance ratings of floor and wall assemblies. Firestop systems that specify installation in concrete floors may include installation in floors consisting of fluted or corrugated steel deck topped with structural concrete, provided that (1) the concrete topping thickness measured above the top plane of the steel deck is equal to or greater than the minimum concrete thickness specified in the system, and (2) the firestop system does not require any portion of the forming material or fill material to extend below the bottom plane of the floor.

Some firestop systems specify the use of hollow-core precast concrete unit floor assemblies. Where not specified, firestop systems utilizing caulk, sealant, putty or spray materials installed over a mineral wool or ceramic blanket may be installed in hollow-core floors, provided that (1) the thickness of the hollow-core floor is equal to or greater than the minimum concrete thickness specified in the system, (2) the maximum size of the opening is 7 in. diameter or 7 in. by 7 in., and (3) any cores of the precast concrete units penetrated as a result of the firestop system are sealed with a minimum 4 in. depth of either firmly packed minimum 4 pcf mineral wool or ceramic fiber blanket, or concrete, grout or mortar. Additionally, firestop systems utilizing a firestop device or wrap strips/steel collar installed around the penetrant beneath the floor may be installed in hollow-core floors, provided that (1) the thickness of the hollow-core floor is equal to or greater than the minimum concrete thickness specified in the system, and (2) the maximum size of the opening is 7 in. diameter or 7 in. by 7 in.

ANSI/NFPA 70, "National Electrical Code" (NEC), contains requirements for permissible installation and percentages of electrical conductor fill for conduit, cable trays and other electrical conductor raceways.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.

PENETRATING ITEMS

When the penetrating item is indicated as being conduit, the conduit is intended for use as a raceway for electrical conductors in accordance with the NEC. Electrical conductors may be used without conduit only when permitted by and installed in accordance with the NEC, and when the conductors are specifically described in the firestop system. The maximum conductor size and the maximum number of conductors in the individual cables are specified in each system. All electrical conductors are intended to be copper unless indicated otherwise in the system.

When the penetrating item is indicated as being pipe, the pipe is intended for the transport of gases, liquids and the like. The maximum diameter, the minimum wall thickness and the specific material for conduit and pipes are specified in each system. All nonmetallic pipe is intended to be of the solid-core type unless indicated otherwise in the system.

Further specifications for the various types of penetrating items may be found in the documents referenced below:

Penetrating Item	Document
Electrical metallic tubing (EMT)	ANSI/UL 797
Intermediate metal conduit (IMC)	ANSI/UL 1242
Rigid metal conduit	ANSI/UL 6
Copper tubing	ASTM B88
Copper pipe	ASTM B42
Flexible metal conduit	ANSI/UL 1
Liquid-tight flexible nonmetallic conduit	ANSI/UL 1660
Rigid nonmetallic PVC conduit	ANSI/UL 651
Electrical nonmetallic tubing (ENT)	ANSI/UL 1653
Cross-linked polyethylene (PEX) tubing	ANSI/ASTM D2737
Solid-core polyvinyl chloride (PVC) pipe	ANSI/ASTM D1785 and ANSI/ASTM D2665
Cellular-core polyvinyl chloride (PVC) pipe	ANSI/ASTM F891
Chlorinated polyvinyl chloride (CPVC) pipe	ANSI/ASTM F442
Solid-core acrylonitrile butadiene styrene (ABS) pipe	ANSI/ASTM D1527 and ANSI/ASTM D2661
Cellular-core acrylonitrile butadiene styrene (ABS) pipe	ANSI/ASTM F628
Polybutylene (PB) pipe	ASTM D3000
Polyvinylidene fluoride (PVDF) pipe	ANSI/ASTM F1673
Fiberglass pipe	ANSI/ASTM D2997

Where the individual system specifies the penetrating item is to be rigidly supported on both sides of wall or floor, the support system should be designed based upon the premise the firestop system provides no support.

THROUGH-PENETRATION FIRESTOP SYSTEMS (XHEZ)

Where the penetrating item is indicated as a metallic pipe, conduit, tube, duct or cable, and the firestop system consists of a fill material (such as sealants, putty or mortar) and a packing material, the penetrant may pass through the opening in the wall or floor assembly at an angle, provided the annular space is maintained on both sides of the wall or floor assembly. In all other cases, except where otherwise indicated in the system, the penetrating item should penetrate the wall or floor assembly at a 90° angle.

Some systems do not include penetrating items. These firestop systems are intended to be used to seal openings where the penetrating items have been removed or where the penetrating items have not yet been installed.

FORMING MATERIALS

Forming materials specified for a firestop system should not be removed after cure of the fill material, unless removal is specified in the description of the system.

The installation contractor and Authority Having Jurisdiction should ensure the specified properties of the packing and/or forming material are satisfied as noted in the individual Classifications. Such properties may include material type (mineral wool, backer rod, fiberglass, etc.), physical properties (size, density, etc.) and installation (depth, orientation, compression, etc.). Attention should also be given to ensure the installed material matches the manufacturer (where applicable) in the individual Classifications. The material and attributes are critical to the performance of the system and the ability of such system to satisfy the conditions of acceptance in ANSI/UL 1479 and the local building code. The fire-resistance rating of the system is dependent upon the use and installation of the materials specified within the respective system.

FILL MATERIALS

When more than one fill, void or cavity material is specified under a single item number within a firestop system, it is intended that any single one of the materials may be used.

CONDUCTOR AMPACITY

Where indicated in the system, the ampacity reduction due to the firestop system has been determined in accordance with UL Subject 1712, "Outline of Investigation for Tests for Ampacity of Insulated Electrical Conductors Installed in Fire Protective Systems." If not specified in the individual system, the effect of the firestop system on the ampacity of electrical conductors has not been investigated.

NUMBERING SYSTEM

The systems are identified in this category by an alpha-numeric identification system. The alpha components identify the type of assembly being penetrated and the numeric component identifies the type of penetrating item.

The first alpha component is an F, W or C. The F signifies a floor is being penetrated, the W signifies a wall is being penetrated, and C signifies either a floor or a wall is being penetrated.

The second alpha component may be any letter. The significance of the letter used is:

Letter	Description
A	Concrete floors with a minimum thickness less than or equal to 5 in.
B	Concrete floors with a minimum thickness greater than 5 in.
C	Framed floors
D	Steel decks in marine vessels
E	Floor-ceiling assemblies consisting of concrete with membrane protection
F through I	Not used at present time
J	Concrete or masonry walls with a minimum thickness less than or equal to 8 in.
K	Concrete or masonry walls with a minimum thickness greater than 8 in.
L	Framed walls
M	Bulkheads in marine vessels
N	Composite panel walls
O through Z	Not used at present time

The numeric component uses sequential numbers to identify the penetrating item. The significance of the number used is:

No. Range	Description
0000-0999	No penetrating items
1000-1999	Metallic pipe, conduit or tubing
2000-2999	Nonmetallic pipe, conduit or tubing
3000-3999	Electrical cable
4000-4999	Cable trays with electrical cable
5000-5999	Insulated pipe
6000-6999	Miscellaneous electrical penetrants, such as busducts
7000-7999	Miscellaneous mechanical penetrants, such as air ducts

THROUGH-PENETRATION FIRESTOP SYSTEMS (XHEZ)

No. Range	Description
8000-8999	Groupings of penetrations, including any combination of items listed above
9000-9999	Not used at present time

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1479 (ASTM E814 [2002]), "Fire Tests of Through-Penetration Firestops."

Where indicated in the individual Classifications under Joint Systems (XHBN) and Fill, Void or Cavity Materials (XHHW), fill, void or cavity materials have also been investigated to ASTM C1241 (2000), "Standard Test Method for Volume Shrinkage of Latex Sealants During Cure."

UL MARK

Those materials identified by an (*) in the system description text are eligible to be produced under the Follow-Up Service Program of UL. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FILL, VOID OR CAVITY MATERIALS (XHHW)

USE AND INSTALLATION

This category covers fill, void or cavity materials, which are proprietary materials investigated for use in joint systems, perimeter fire-containment systems and firestop systems. Except as specified below, properties of the fill, void or cavity materials other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

These materials are intended for installation at a job site in accordance with the application instructions provided with the product and with the instructions specified in the individual joint system, perimeter fire-containment system or through-penetration firestop system.

The fill, void or cavity material thickness published in the fire-resistance designs is measured wet and may be susceptible to a percentage of shrinkage during the curing process. Firestop systems are investigated after the fill, void or cavity materials are fully cured. Refer to the individual certifications for the investigated percentage of shrinkage.

Authorities Having Jurisdiction should be consulted before installation. Where indicated in the individual certifications, products covered under this category have also been evaluated by ICC Evaluation Service (ICC-ES).

RELATED PRODUCTS

See Joint Systems (XHBN), Perimeter Fire-containment Systems (XHDC) and Through-penetration Firestop Systems (XHEZ).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXRH).

REQUIREMENTS

The basic standards used to investigate the systems in which these products are installed are ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops," ANSI/UL 2079, "Tests for Fire Resistance of Building Joint Systems," and ANSI/ASTM E2307 (2004), "Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus."

Where indicated in the individual certifications, fill, void or cavity materials have additionally been investigated to ANSI/ASTM E136 (2011), "Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C," and/or ASTM C1241 (2000), "Standard Test Method for Volume Shrinkage of Latex Sealants During Cure."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

For fill, void or cavity materials investigated for use in through-penetration firestop systems:

PRODUCT CATEGORIES BY CATEGORY CODE

**FILL, VOID OR CAVITY MATERIAL
FOR USE IN THROUGH-PENETRATION FIRESTOP SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY**

Control No.

For fill, void or cavity materials investigated for use in joint systems:

**FILL, VOID OR CAVITY MATERIAL
FOR USE IN JOINT SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY**

Control No.

For fill, void or cavity materials investigated for use in perimeter fire-containment systems:

**FILL, VOID OR CAVITY MATERIAL
FOR USE IN PERIMETER FIRE CONTAINMENT SYSTEMS

Control No.

Where applicable, the following statement(s) may be added to any of the Classification Marks shown above:

**ALSO CLASSIFIED IN ACCORDANCE WITH ASTM E136
STANDARD TEST METHOD FOR BEHAVIOR OF MATERIALS
IN A VERTICAL TUBE FURNACE AT 750°C**

**ALSO CLASSIFIED IN ACCORDANCE WITH ASTM C1241
STANDARD TEST METHOD FOR VOLUME SHRINKAGE
OF LATEX SEALANTS DURING CURE**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRESTOP DEVICES (XHJI)

USE AND INSTALLATION

This category covers firestop devices, which are factory-built products intended to provide a degree of fire resistance to openings in fire-resistive walls or floors to accommodate penetrating items, such as electrical cable, cable trays, conduit and pipe.

Firestop devices are intended to be installed in accordance with the instructions provided with the device and the instructions specified in the individual through-penetration firestop system. Certification of these firestop devices contemplates installation within a heated and air-conditioned environment, unless stated otherwise in the individual certifications.

Properties of the firestop devices other than their capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated. Some certifications include the effect the firestop device has on the ampacity rating of electrical conductors.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

See Fire-resistance Ratings – ANSI/UL 263 (BXUV) and Through-penetration Firestop Systems (XHEZ).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**FIRESTOP DEVICE

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FORMING MATERIALS (XHKU)

USE AND INSTALLATION

This category covers forming materials investigated for use in firestop systems, joint systems and perimeter fire-containment systems. The forming materials are manufactured from proprietary materials, processed into the form of boards or sheets and formed into various sizes and shapes.

Properties of the forming materials other than their capacity to provide a degree of the fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

These materials are used as a form and seal to prevent leakage during the installation and curing of some fill, void or cavity materials and should be installed in accordance with the instructions specified in the individual joint system, perimeter fire-containment system or through-penetration firestop system. After installation, forming materials are left in place and, together with the fill material, provide a degree of fire resistance for the opening.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

See Fire-resistance Ratings – ANSI/UL 263 (BXUV), Joint Systems (XHBN), Perimeter Fire-containment Systems (XHDG) and Through-penetration Firestop Systems (XHEZ).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXRH).

REQUIREMENTS

The basic standards used to investigate the systems in which these products are installed are ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops," ANSI/UL 2079, "Tests for Fire Resistance of Building Joint Systems," and ANSI/ASTM E2307 (2004), "Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus."

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THROUGH-PENETRATING PRODUCTS (XHLY)

USE AND INSTALLATION

This category covers through-penetrating products that are proprietary products (cable, conduit, pipe and tubing) whose fire-resistive properties have been investigated for specific applications in which they pass through openings in fire-rated walls or floors, or both, within a building.

Unless otherwise specified, properties of the through-penetrating products other than their capacity to provide a degree of fire resistance to openings in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

THROUGH-PENETRATING PRODUCTS (XHLY)

RELATED PRODUCTS

For information on related products, see Fire-resistance Ratings – ANSI/UL 263 (BXUV) and Through-penetration Firestop Systems (XHEZ).

ADDITIONAL INFORMATION

For additional information, see Fire-resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is ANSI/UL 1479, “Fire Tests of Through-Penetration Firestops.”

Where indicated in the individual certifications, products have also been investigated for heat and smoke release characteristics in accordance with UL 2043, “Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.” Through-penetrating products and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual certifications.

Where indicated in the individual certifications, products have also been investigated to determine their suitability for exposure to ultraviolet light in accordance with ANSI/UL 746C, “Polymeric Materials – Use in Electrical Equipment Evaluations.”

UL MARK

The Classification Mark of UL on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TIME-INDICATING AND -RECORDING
APPLIANCES FOR USE IN
HAZARDOUS LOCATIONS (XIAZ)

GENERAL

This category covers electric clocks and chart drives.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electric Clock for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TIRES, ELECTRICALLY-CONDUCTIVE
RUBBER, INDUSTRIAL, RELATING
TO HAZARDOUS LOCATIONS (XJCV)

GENERAL

This category covers solid industrial tires made of electrically conductive rubber specially developed and compounded to have an electrical conductivity adequate to readily dissipate static electricity. The conductive-rubber

TIRES, ELECTRICALLY-CONDUCTIVE RUBBER, INDUSTRIAL,
RELATING TO HAZARDOUS LOCATIONS (XJCV)

tires are vulcanized to metal rims or wheels. They are intended for use on industrial trucks that may be operated in hazardous locations where static sparks would introduce a fire and explosion hazard.

In order for static charges to pass from equipment fitted with the tires, it is necessary that the various parts of the equipment be conductive, and electrically connected together, and that the equipment be operated on an adequately conductive surface or flooring (see Flooring, Electrically Conductive, Relating to Hazardous Locations [INFZ]).

Liquid gasoline and oil are injurious to rubber compounds, and impair the electrically conductive properties of these tires. Accordingly, contact of the tires with liquid gasoline or oil, and the use of floor oils and oily sweeping compounds, should be avoided. Insulating floor waxes should not be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 583, “Electric-Battery-Powered Industrial Trucks,” and UL 1067, “Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electrically Conductive Rubber Industrial Tire Relating to Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TOOLS (XJXX)

TOOLS FOR USE IN HAZARDOUS
LOCATIONS (XKVL)

PORTABLE ELECTRIC TOOLS FOR USE IN
HAZARDOUS LOCATIONS (XKWH)

USE

This category covers cord-connected and battery-operated power tools intended for securing fasteners. This category does not cover tools such as drills, grinders, circular saws or other equipment that, under normal operation, may produce arcs, sparks or hot surfaces.

This category does not cover attachments such as grinding wheels, sanders, polishers or other attachments that may be offered by the manufacturer to perform operations other than intended by the design of the basic tool.

The load on certain tools varies within a wide range. Accordingly, the amp rating marked on such a tool may not be the maximum current that can be drawn by the tool under normal use conditions, but is rather an indication of the thermal capacity of the motor employed. It is indicative of the loading to which the tool may be continuously subjected without causing overheating.

The use of some tools involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the certified tools.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are ANSI/UL 60745-1, “Hand-Held Motor-Operated Electric Tools – Safety – Part 1: General Requirements,” and ANSI/UL 60745-2-2, “Hand-Held Motor-Operated Electric Tools – Safety – Part 2-2: Particular Requirements for Screwdrivers and Impact Wrenches.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Portable Electric Tools for Use in Hazardous Locations (XKWH)–Continued

Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tool for Use in Hazardous Locations," "Portable Tool for Use in Hazardous Locations" or "Portable Electric Tool for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRADESHOW EQUIPMENT (XNRI)

This category covers equipment intended for indoor use for the purpose of illuminating, animating, activating, or displaying with respect to temporary expositions, exhibits, show conventions, meetings or assemblies. These units are for temporary construction and display at exposition events and are intended to be installed and used in accordance with Article 518 of ANSI/NFPA 70, "National Electrical Code." The requirements of the Authorities Having Jurisdiction should be consulted regarding use of these devices and equipment before installation.

EXHIBITION DISPLAY UNITS, ACCESSORIES (XNRU)

USE

This category covers accessories consisting of equipment that is complete and is specifically and solely for use in the tradeshow industry as peripheral or related devices. This includes convention-center cord sets.

A convention-center cord set is one of the following types:

Parallel Type — The cord provided is a flat, jacketed, parallel conductor, extra-hard-usage type provided with an attachment plug on one end and a load fitting on the opposite end and is typically used for installation under a carpet.

Booth Stringer Type — The cord provided is a jacketed, round, extra-hard-usage type provided with an attachment plug on one end and convenience receptacle outlets along the length of the cord set to provide power for lighting and displays.

PRODUCT MARKINGS

A convention-center cord set of the Parallel type is marked "Parallel Convention Center Cable for Temporary Tradeshow Use Only" on the surface of the cord, spaced at intervals not greater than 6 ft (1.83 m) apart.

A convention-center cord set of the Booth Stringer type is marked "Booth Stringer Convention Center Cable for Temporary Tradeshow Use Only" on the surface of the cord, spaced at intervals not greater than 6 ft (1.83 m) apart.

ADDITIONAL INFORMATION

For additional information, see Tradeshow Equipment (XNRI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate convention-center cord sets are ANSI/UL 2305, "Exhibition Display Units, Fabrication and Installation," ANSI/UL 817, "Cord Sets and Power-Supply Cords," and ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhibition Display Unit – Accessories."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXHIBITION DISPLAY UNITS, CUSTOM (XNSA)

USE AND INSTALLATION

This category covers devices consisting of custom-built panels, sections or complete exhibition display units.

Custom exhibition display units are uniquely designed for display at a particular exhibition, show, meeting or assembly. The unique construction design is intended to be used for a particular product, service or organization.

Exhibition Display Units, Custom (XNSA)–Continued

Custom exhibition display units are built partially or wholly on site.

SURFACE-BURNING CHARACTERISTICS

The surface-burning characteristics of building materials employed in these assemblies is judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame-spread rating of 200 or less and, unless otherwise marked, a smoke-developed rating of 200 or less.

ADDITIONAL INFORMATION

For additional information, see Tradeshow Equipment (XNRI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2305, "Exhibition Display Units – Fabrication and Installation."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhibition Display Unit – Custom."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXHIBITION DISPLAY UNITS, PORTABLE AND MODULAR (XNSN)

USE AND INSTALLATION

This category covers portable tradeshow displays, hanging components and other exhibit assemblies that may be interconnected to form an exhibition display unit.

Portable exhibition display units are intended to be moved. They are hand carried and set up without tools and/or a ladder. They do not require trained personnel to setup.

Modular exhibition display units are systems consisting of a series of components that are tubular in design, and are mechanically connected together to form the supporting structure of an exhibition display unit or portion of a unit. A modular system uses a locking means of connection whereby the strength and integrity of the connection is maintained. Elements of these systems are intended to be used repeatedly in various configurations.

SURFACE-BURNING CHARACTERISTICS

The surface-burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame-spread rating of 200 or less and, unless otherwise marked, a smoke-developed rating of 200 or less.

ADDITIONAL INFORMATION

For additional information, see Tradeshow Equipment (XNRI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2305, "Exhibition Display Units – Fabrication and Installation."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhibition Display Unit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXHIBITION DISPLAY UNITS, REBUILT (XNST)

GENERAL

This category covers rebuilt exhibition display units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt exhibition display units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt exhibition display units are subject to the same requirements as new exhibition display units.

TRADESHOW EQUIPMENT (XNRI)

Exhibition Display Units, Rebuilt (XNST)—Continued

RELATED PRODUCTS

See Exhibition Display Units, Custom (XNSA) and Exhibition Display Units, Portable and Modular (XNSN).

ADDITIONAL INFORMATION

For additional information, see Tradeshow Equipment (XNRI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2305, "Exhibition Display Units - Fabrication and Installation."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Exhibition Display Unit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRAFFIC SIGNAL CABLE CLASSIFIED IN ACCORDANCE WITH IMSA SPECIFICATIONS (XNTL)

GENERAL

This category covers cable investigated in accordance with International Municipal Signal Association (IMSA) specifications. The cable is intended for installation as aerial cable or in underground conduit as part of a traffic signal system. This cable employs a color-code scheme that permits a conductor with green insulation to be used for other than grounding purposes.

This cable has not been investigated for flammability. This cable is not suitable for use as a substitute for cable or wiring systems covered in ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

- IMSA Specification 19-1 (1991), "Polyethylene Insulated, Polyvinyl Chloride Jacketed Signal Cable"
- IMSA Specification 19-2 (1991), "Paired, Polyethylene Insulated, Polyvinyl Chloride Jacketed Communication Cable with Electrical Shield"
- IMSA Specification 19-5 (1991), "Polyethylene Insulated, Polyethylene Belted, Copper Shielded, Polyvinyl Chloride Jacketed Signal Cable"
- IMSA Specification 19-6 (1991), "Paired, Polyethylene Insulated, Polyethylene Belted, Copper Shielded, Polyvinyl Chloride Jacketed Communication Cable"
- IMSA Specification 20-1 (1991), "Polyethylene Insulated, Polyethylene Jacketed Signal Cable"
- IMSA Specification 20-2 (1991), "Paired, Polyethylene Insulated, Polyethylene Jacket, Communication Cable with Electrical Shielding"
- IMSA Specification 20-5 (1991), "Polyethylene Insulated, Polyethylene Belted, Copper Shielded, Polyethylene Jacketed Signal Cable"
- IMSA Specification 20-6 (1991), "Paired, Polyethylene Insulated, Polyethylene Belted, Copper Shielded, Polyethylene Jacketed Communications Cable"
- IMSA Specification 26-2 (1991), "Neoprene Covered, Hard Drawn Copper Line Wire"
- IMSA Specification 26-3 (1991), "High Density Polyethylene Covered Hard Drawn Copper Line Wire"
- IMSA Specification 26-4 (1991), "Polyvinyl Chloride Covered Hard Drawn Copper Line Wire"
- IMSA Specification 29-1 (1991), "High Density Polyethylene Covered Hard Drawn Copper Two Conductor Parallel Line Wire"
- IMSA Specification 29-3 (1991), "High Density Polyethylene Covered, Red Polyvinyl Chloride Jacketed Hard Drawn Copper Two Conductor Parallel Line Wire"
- IMSA Specification 39-2 (1991), "Paired, Polyethylene Insulated, Polyvinyl Chloride Jacketed Communication Cable with Electrical Shielding"
- IMSA Specification 39-6 (1991), "Paired, Polyethylene Insulated, Polyethylene Belted, Polyvinyl Chloride Jacketed Communication Cable with Electrical Shielding"

IMSA Specification 40-6 (1991), "Paired, Polyethylene Insulated, Polyethylene Belted, Polyethylene Jacketed Communication Cable with Electrical Shielding"

IMSA Specification 50-2 (1991), "Polyethylene Insulated, Polyethylene Jacketed, Loop Detector Lead-In Cable"

IMSA Specification 51-1 (1991), "Polyvinyl Chloride Insulated, Nylon Jacketed Loop Detector Wire"

IMSA Specification 51-3 (1991), "Cross Linked Polyethylene Insulated Loop Detector Wire"

IMSA Specification 51-5 (1997), "Polyvinyl Chloride Insulated, Nylon Jacketed, Loosely Encased in a Polyvinyl Chloride or a Polyethylene Tube Loop Detector Wire"

UL MARK

The Classification Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products is as illustrated below:

TRAFFIC SIGNAL CABLE

CLASSIFIED BY UNDERWRITERS LABORATORIES INC.®
IN ACCORDANCE WITH IMSA SPECIFICATIONS XX-X

No.

In addition, the Classification Mark may include the UL symbol (as illustrated in the Introduction of this Directory).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRAILING CABLE CLASSIFIED IN ACCORDANCE WITH DIN PUBLICATION DIN VDE 0250 PART 813 (XNUA)

GENERAL

This category covers trailing cable intended to provide power to the boom on shipyard container cranes. The cable consists of insulated conductors, ground conductors and ground check conductors twisted together with an overall jacket. The conductor stranding is intended to be in accordance with Class 5 DIN VDE 0295-1992, "Conductors of Cables, Wires and Flexible Cords for Power Installation." The cable is rated 0.6/1 kV to 20/35 kV.

This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Trailing cable is marked with the cable construction code followed by the manufacturer's name or other identification and year of manufacture. The cable construction code consists of:

NTM@WOU-# % \$ — trailing cable with one rubber sheath, or

NTS@WOU-# % \$ — trailing cable with two rubber sheaths,

where @ is any number of the abbreviations below that designate the structural elements contained in the cable. The abbreviations are ordered as they appear from the inside to the outside of the cable:

K — rubber cross in the core of the cable

C — conductive metal casing over the stranded cores or between the inner and outer sheath

CG — conductive nonmetallic casing over the stranded cores or between the inner and outer sheath

CE — conductive metal casing over the insulation of the outer conductors

CGE — conductive nonmetallic casing over the insulation of the outer conductors

R — round wire armoring

RL — armoring consisting of round litz wire

/3 — protective conductor uniformly distributed in the interstices

/3E — protective conductor uniformly distributed over the insulation of the outer conductor

KON — concentric protective conductor between the inner and outer sheath

ST — control cores within the cable

FM — telecommunication lines within the cable

OL — monitoring conductor within the cable,

where # is "J" for a core with a green/yellow marking and "O" is a core without a green/yellow marking.

464 TRAILING CABLE CLASSIFIED IN ACCORDANCE WITH DIN PUBLICATION DIN VDE 0250 PART 813 (XNUA)

where % is the number and size of the conductors, and where \$ is the rated voltage.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is DIN Publication DIN VDE 0250 Part 813-1985, "Insulated Power Cables – Trailing Cable."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRAILING CABLE

CLASSIFIED IN ACCORDANCE WITH DIN PUBLICATION DIN VDE 0250 PART 813 No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFER SWITCHES FOR USE IN FIRE PUMP MOTOR CIRCUITS (XNVE)

GENERAL

This category covers separately mounted, open and enclosed automatic transfer switches intended for use in fire pump motor circuits, including associated control devices, with a maximum rating of 600 V ac.

These transfer switches are intended for use in fire pump motor circuits covered by ANSI/NFPA 20, "Installation of Stationary Pumps for Fire Protection," and Article 695 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Fire pump power transfer switches are automatic transfer switches that transfer a fire pump motor load from a normal supply to an alternate (on-site generated or second utility) supply in the event of failure of the normal supply, and automatically return the load to the normal supply when the normal supply is reestablished. No other loads, other than the fire pump motor, are intended to be connected to the fire pump power transfer switch.

If not marked to indicate that the alternate source is a second utility, the alternate source is considered to be an on-site generated supply. Such transfer switches include frequency sensing and sensing of at least one phase of the alternate (generator-set) source to enable transfer to the alternate source. Such transfer switches have a switching contact(s) to initiate the starting of an engine generator set. Such transfer switches may include a disconnect switch or an isolating switch for the alternate source (generator set). If it does, this transfer switch is equipped with pilot contacts for supervision and pilot contacts to override the engine start signal.

Additional sensing devices that may initiate or delay transfer have been investigated in accordance with the manufacturer's marked operating values.

The enclosure of an enclosed transfer switch has been investigated for its ability to protect against water dripping on the enclosure from the downward vertical.

Transfer switches investigated for their suitability for use as service equipment are marked "SUITABLE FOR USE AS SERVICE EQUIPMENT."

Transfer switches are required to be designed so that the load cannot remain simultaneously disconnected for both the normal and alternative sources when either or both sources are available, except that transfer switches marked "SUITABLE FOR USE AS SERVICE EQUIPMENT" are provided with accessible means to independently disconnect both the normal and alternate sources. Alarm pilot contacts are provided to supervise the position of these disconnects.

These transfer switches are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

These transfer switches may be marked to indicate that protection is intended to be provided by fuses or by an inverse time circuit breaker. If there is no marking of a protective device type, transfer switches are considered suitably protected by either type of device. Transfer switches may be marked with a maximum rating of protective device. If not marked with a rating, the transfer switches are considered suitably protected by a protective device of the maximum rating required by Article 695 of the NEC.

Transfer switches have been investigated for load switching and inrush capability and for a number of cycles of operation based on their intended use which includes scheduled test operations switching full load.

RELATED PRODUCTS

TRANSFER SWITCHES FOR USE IN FIRE PUMP MOTOR CIRCUITS (XNVE)

Fire pump controller assemblies with a transfer switch are covered under Pump Controllers, Fire (QYZS).

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Pump Power Transfer Switch."

The Listing Mark is applied to the switch panel on transfer switches investigated without regard to the enclosure in which they are mounted. When the Listing Mark is applied to the enclosure of an enclosed transfer switch, it indicates the Listing of the complete enclosed assembly.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS (XNWX) ENERGY-MONITORING CURRENT TRANSFORMERS (XOBA)

GENERAL

This category covers open-type current transformers intended for field installation within distribution and control equipment such as panelboards, switchboards, industrial control equipment, and energy-monitoring/management equipment, to measure current on a branch circuit. These transformers are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These open-type current transformers are rated for use in either 250 V ac or 600 V ac line-to-line circuits.

Current-transformer-conductor leads are considered Class 1 circuits, as defined by the NEC, and are intended to be installed in accordance with NEC Chapter 3 wiring methods. Isolation for the user is intended to be provided at the termination.

INSTALLATION INSTRUCTIONS

The installation instructions may include the following:

- Intended use of the equipment
- Electrical ratings:
 - Primary voltage, either 250 V or 600 V
 - Frequency(ies)
 - Primary current rating
 - Secondary voltage rating
- Model designation
- Name and address of manufacturer or supplier from whom technical assistance may be obtained
- Maximum ambient rating, if investigated for greater than 40°C
- Maximum intended elevation, if investigated for more than 2000 m
- Instructions for the installation and removal of the current transformer, which include the following statements:
 - Always open or disconnect circuit from power-distribution system (or service) of building before installing or servicing current transformers.
 - The current transformers may not be installed in equipment where they exceed 75 percent of the wiring space of any cross-sectional area within the equipment.
 - Restrict installation of current transformer in an area where it would block ventilation openings.
 - Restrict installation of current transformer in area of breaker arc venting.
 - "Not suitable for Class 2 wiring methods" and "Not intended for connection to Class 2 equipment."
 - Secure current transformer and route conductors so that they do not directly contact live terminals or bus.
 - The word "WARNING" and the following (or equivalent) statement: "To reduce the risk of electric shock, always open or disconnect circuit from power-distribution system (or service) of building before installing or servicing current transformers."

PRODUCT MARKINGS

Current transformers investigated for use in a service-entrance location may be marked "Service Entrance."

Current transformers marked "Service Entrance" may additionally be marked "Overvoltage Category IV" (or "CAT IV"). Non-service-entrance types may be marked "Overvoltage Category III" (or "CAT III").

Energy-monitoring Current Transformers (XOBA)–Continued

Current transformers investigated for installation in an environment where only nonconductive pollution occurs are marked “Controlled Environment” or “Pollution Degree 2.”

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL 2808, “Outline of Investigation for Energy Monitoring Current Transformers.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Energy-monitoring Current Transformer” (or “Energy-monitoring CT”). The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, CLASS 2 AND CLASS 3 (XOKV)

GENERAL

This category covers transformers with secondary voltage limits of 30 V rms for Class 2 and 150 V rms for Class 3 in accordance with ANSI/NFPA 70, “National Electrical Code” (NEC), and intended for connection to essentially sinusoidal supply sources.

These transformers are intended for use in Class 2 or Class 3 remote control and signal circuits in accordance with Article 725 of the NEC.

A Class 2 or Class 3 transformer that is inherently limited has an impedance within the transformer that limits the current output to a particular maximum value. It may or may not be provided with a thermostat or other temperature-sensitive device to limit its maximum temperature.

A Class 2 or Class 3 transformer that is not inherently limited does not have an impedance to limit the maximum current output to a specified value. The maximum power is limited by an overcurrent-protective device.

A Class 2 or Class 3 transformer that includes a separate current-limiting impedance, such as a resistor or positive temperature coefficient device (PTC), is covered by these requirements.

PRODUCT MARKINGS

A Class 2 or Class 3 transformer is marked “Class 2” or “Class 3,” respectively.

Class 2 transformers with open circuit secondary voltages in excess of 15 V rms or 21.2 V peak but not in excess of 30 V rms or 42.4 V peak, are marked “Class 2 Not Wet, Class 3 Wet,” to indicate that wet contact is likely. Class 3 wiring methods are intended to be used, in accordance with Article 725 of the NEC.

These transformers are legibly and permanently marked with the manufacturer’s name, trade name or trademark; the date or other dating period of manufacture not exceeding any three consecutive months; a distinctive catalog number or the equivalent; and the electrical rating.

The electrical rating includes:

- The primary voltage
- Frequency
- The voltage and volt-ampere or amperes for each secondary winding

Transformers provided with an insulation system investigated to ANSI/UL 1446, “Systems of Insulating Materials – General,” or intended for use in the United States, are marked “ISC-x-US,” where:

- “ISC” stands for “Insulation System Class”
- “x” is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)
- “US” represents the country in which the transformer is intended to be used

Transformers provided with an insulation system investigated to ANSI/UL 1446 and CAN/CSA-C22.2 No. 0, “General Requirements – Canadian Electrical Code, Part II,” or intended for use in the United States and Canada, are marked “ISC-x,” where:

- “ISC” stands for “Insulation System Class”
- “x” is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

Transformers are marked to indicate which terminals or leads are for primary and which are for secondary windings. Secondary winding connections are identified one from another.

Transformers, Class 2 and Class 3 (XOKV)–Continued

A transformer with multiple secondary windings having an output exceeding 21.2 or 42.4 V peak is marked, where readily visible after installation, with the word “WARNING,” and the following or equivalent: “Risk of electric shock or fire. Do not interconnect secondary windings.”

A transformer is marked to indicate the proper replacement part and procedure for a required replaceable protective device.

A transformer rated less than 110 V and not intended for use on a 110-120 V circuit is marked “For use only on (intended voltage) circuits.”

Where higher temperature-rated field wiring is required, the transformer is marked “Use wire rated for at least [75 or 90]C.”

Transformers intended for installation with open wiring or concealed knob and tube wiring in accordance with Articles 320 and 324 of the NEC, are marked “Suitable for use in accordance with Articles 320 and 324 of the NEC.”

Transformers intended for mounting in a conduit knockout and that have no means for maintaining a bonding path between the transformer and the equipment grounding conductor when the transformer is installed in a nonmetallic box are marked “Install in Metal Box Only.”

RELATED PRODUCTS

Direct-plug-in Class 2 transformers are covered under Direct-plug-in and Cord-connected Class 2 Power Units (EPBU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5085-1, “Low Voltage Transformers – Part 1: General Requirements,” and ANSI/UL 5085-3, “Low Voltage Transformers – Part 3: Class 2 and Class 3 Transformers.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Class 2 Transformer,” “Class 2 Not Wet, Class 3 Wet Transformer” or “Class 3 Transformer.” The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DIMMER (XOYT)

GENERAL

This category covers dimmer-type, air-cooled, variable-voltage autotransformers and reactors, intended for dimming portable electric lamps and electric lighting fixtures used in nonindustrial branch-lighting circuits of not more than 120 V, and having overcurrent protection of not more than 20 A. They are furnished in enclosures having means for conduit connection and may be provided with a control switch.

RELATED PRODUCTS

Industrial-type dimmers are covered under Power Circuit and Motor-mounted Apparatus (NMTR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 506, “Specialty Transformers,” and ANSI/UL 508, “Industrial Control Equipment.”

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Dimmer Transformer,” “Tungsten Lamp Dimmer” or “Fluorescent Lamp Dimmer,” or other appropriate product name. The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Transformers, Dimmer (XOYT)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DISTRIBUTION, DRY TYPE, OVER 600 VOLTS (XPFS)

USE AND INSTALLATION

This category covers dry-type distribution transformers, including solid-cast and resin-encapsulated transformers rated 69 kV class or less, single- and three-phase.

This category also covers series-connected, dry-type, air-core, single-phase and three-phase outdoor and indoor reactors rated 69 kV class or less. Dry-type, air-core reactors are self-cooled by natural air convection.

Both the primary and secondary voltage ratings may be greater than 600 V. The transformers may be provided with surge arresters.

Transformers provided with forced-air (fan-cooled) ratings are provided with alarm contacts for remote indication of overtemperature.

These transformers are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

Transformers having exposed live parts, such as at high-voltage bushings, are intended for installation in places accessible only to qualified persons, as defined in the NEC.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1562, "Transformers, Distribution, Dry-Type - Over 600 Volts," or ANSI/IEEE C57.16 (1996), "Standard Requirements, Terminology, and Test Code for Dry-Type Air-Core Series-Connected Reactors."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Distribution Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

The "Distribution Transformer" Listing Mark covers both the transformer and the enclosure.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DISTRIBUTION, LIQUID-FILLED TYPE, OVER 600 VOLTS (XPLH)

USE AND INSTALLATION

This category covers liquid-filled, distribution type, pad-mounted and substation-type transformers, rated 69 kV class or less, single- and three-phase.

The voltages in the highest voltage winding are greater than 600 V. The transformers may be provided with surge arresters.

Transformers provided with forced-air (fan-cooled) ratings are provided with alarm contacts for remote indication of overtemperature.

These transformers are intended for installation in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code" (NEC).

Transformers having exposed live parts, such as at high-voltage bushings, are intended for installation in places accessible only to qualified persons, as defined in the NEC.

The type of liquid used is identified on the transformer nameplate. Additional information on the fluid used is provided in Material Safety Data Sheets (MSDS) available from the transformer manufacturer.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C57.12.00 (2010), "Standard General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers."

In addition to ANSI/IEEE C57.12.00 (2010), the following standards are also used to investigate pad-mounted types:

ANSI/IEEE C57.12.22 (1993), "Transformers - Pad-Mounted, Compartmental-Type, Self-Cooled Three-Phase Distribution Transformers with High-Voltage Bushings, 2500 kVA and Smaller: High Voltage, 34,500 Grd Y/19,920 Volts and Below; Low-Voltage, 480 Volts and Below"

Transformers, Distribution, Liquid-filled Type, Over 600 Volts (XPLH)—Continued

ANSI/IEEE C57.12.26 (1992), "Pad-Mounted, Compartmental-Type, Self-Cooled, Three-Phase Distribution Transformers for Use with Separable Insulated High-Voltage Connectors (34,500 Grd Y/19,920 V and Below; 2500 kVA and Smaller)"

ANSI/IEEE C57.12.28 (2005), "Pad-Mounted Equipment - Enclosure Integrity"

ADJUNCT SERVICE

UL provides a service for the Classification of liquid-filled, distribution type, pad-mounted and substation-type transformers, rated 69 kV class or less, single- and three-phase, that not only meet the appropriate requirements of UL but also have been investigated in accordance with Section 450.23 of the NEC.

These transformers are provided with a UL Classified "Less-Flammable Liquid" that has a fire point not less than 300°C, and are marked to identify the product name and flammability rating of the liquid that is provided, whether the liquid may evolve flammable gases when decomposed by an electric arc (as applicable), and with all use restrictions provided for in the Classification of the liquid. See Transformer Fluids (EOVK) and Dielectric Mediums (EOUV) for additional information. Use restrictions may include information such as limits on the overcurrent protection to be used in the transformer primary.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid-filled Distribution Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

The "Liquid-filled Distribution Transformer" Listing Mark covers both the transformer and the enclosure.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with Section 450.23 of the NEC. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking:

ALSO CLASSIFIED FOR USE AS LESS-FLAMMABLE LIQUID-INSULATED TRANSFORMER IN ACCORDANCE WITH SEC. 450-23 OF THE NATIONAL ELECTRICAL CODE (NEC)

AND MARKED USE RESTRICTIONS ON THE TRANSFORMER

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, GENERAL PURPOSE (XPTQ)

USE

This category covers transformers of the compound filled, exposed core or open core, coil construction, general purpose and industrial control types, rated 600 V or less. Step-up, step-down, insulated and autotransformer types, as well as air-cooled reactors, are also included.

Open core and coil power transformers for use in industrial control equipment are identified as "Industrial Control Transformers."

These transformers have been investigated for use on sinusoidal supply circuits only. They have not been investigated for use where a significant nonsinusoidal content is present, such as that which may occur with uninterruptible power supplies, data processing equipment and solid-state motor speed controllers.

General purpose transformers are suitable for use in a maximum 25°C ambient unless otherwise marked. Industrial control transformers are suitable for use in a 40°C ambient.

A transformer intended for elevated voltage use is marked to indicate that one or more windings may be operated at an elevated voltage, in either an isolated or autotransformer mode, as appropriate. Such marking includes the limit of the elevated voltage, the current (amp) limits, and references as to where further connection detail may be found. Such further detail includes typical connection diagrams and methods of relating winding current to total load kVA. Elevated voltage is that situation in which a voltage between a winding (including its subordinate parts such as terminals) and other conductive parts of the transformer exceeds the voltage of the winding.

Some transformers are marked to specify a minimum distance to a wall.

General purpose transformers are provided with leads, or with studs or terminal pads to which certified pressure wire connectors can be factory or

Transformers, General Purpose (XPTQ)—Continued

field installed to accommodate field wiring. Wire-binding screws or studs with cupped washers may be used for copper wire 10 AWG max.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for sizes 14-1 AWG, and 75°C wire for sizes 1/0 AWG and larger.

In cases where the nature of the construction of the transformer is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installations or use, suitable special instructions are marked on the transformer.

PRODUCT MARKINGS

All transformers are marked with the following:

- The primary voltage (or voltages) and frequency
- Number of phases
- All secondary voltages
- The secondary capacity in amperes or volt-amperes

Transformers provided with an insulation system investigated to ANSI/UL 1446, "Systems of Insulating Materials – General," or intended for use in the United States, are marked "ISC-x-US," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

"US" represents the country in which the transformer is intended to be used

Transformers provided with an insulation system investigated to ANSI/UL 1446 and CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," or intended for use in the United States and Canada, are marked "ISC-x," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

Autotransformers are marked "AUTOTRANSFORMER."

Distribution-system transformers are provided with a wiring diagram.

Transformers weighing more than 100 lbs (45 kg) are marked with their weight in pounds (kg).

Transformers rated 25 kVA or more are marked with the percent impedance.

Transformers are marked with the environmental enclosure Type number (Type 1, Type 2, Type 3R or Type 3RX).

RELATED PRODUCTS

Transformers of the air-cooled, dry, ventilated and nonventilated types are covered under Power and General Purpose Transformers, Dry Type (XQNX).

Reactors used for dimming, and variable voltage autotransformers are covered under Power Circuit and Motor-mounted Apparatus (NMTR) or, for nonindustrial types, Transformers, Dimmers (XOYT).

Voltage regulators are covered under Power Supplies, General Purpose (QQFU).

Swimming pool transformers are covered under Swimming Pool and Spa Transformers (WDGV).

Ballasts for mercury lamps and fluorescent lamps are covered under High-intensity-discharge Lamp Ballasts (FLCR) and Fluorescent Lamp Ballasts (FKVS), respectively.

Ignition transformers are covered under Transformers, Ignition (XPZZ).

Liquid-filled transformers are covered under Transformers, Distribution, Liquid-filled Type, Over 600 V (XPLH).

Class 2 and 3 transformers are covered under Transformers, Class 2 and Class 3 (XOKV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 506, "Specialty Transformers," or ANSI/UL 5085-1, "Low Voltage Transformers – Part 1: General Requirements," and ANSI/UL 5085-2, "Low Voltage Transformers – Part 2: General Purpose Transformers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "General Purpose Transformer," "Industrial Control Transformer," "Air Cooled Reactor," "Auto-Transformer," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Transformers, General Purpose (XPTQ)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, IGNITION (XPZZ)**USE**

This category covers ignition transformers designed for use on gas- or oil-burning equipment where the acceptability of the combination has been determined by UL. The transformers are designed for connection to supply circuits operating at not over 600 V and, unless otherwise indicated in the individual certifications, are of the air-cooled, step-up type.

Interchangeable transformers certified as Class 6, 10, 12 or 14 have been investigated to determine that their ignition characteristics are such that they may be interchanged with other certified transformers of like class and secondary grounding on certified oil or gas burners employing single spark gaps without further ignition performance tests.

Noninterchangeable transformers are intended for specific applications or include ignition characteristics that preclude their interchangeability. Noninterchangeable transformers are acceptable only on specific gas- or oil-burning equipment with which they are tested.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 506, "Specialty Transformers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Interchangeable Ignition Transformer" or "Noninterchangeable Ignition Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

A green background identifies the Listing Mark for interchangeable transformers; a red background identifies the Listing Mark for noninterchangeable transformers.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND GENERAL-PURPOSE TRANSFORMERS, DRY TYPE (XQNX)**USE AND INSTALLATION**

This category covers transformers of the air-cooled, dry, ventilated and nonventilated types rated 600 V or less. Step-up, step-down, insulated, and autotransformer types, as well as air-cooled reactors, are also included.

The transformers and reactors are provided with leads, or with studs or terminal pads to which certified pressure-wire connectors can be factory or field installed to accommodate field wiring. The adequacy of the wire-bending space, in accordance with Article 312 of ANSI/NFPA 70, "National Electrical Code" (NEC), has not been determined and should be investigated at the time of installation.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for sizes 14-1 AWG and 75°C wire for sizes 1/0 AWG and larger.

Unless otherwise marked, these transformers have not been investigated for use where a significant nonsinusoidal current is present. Examples of equipment that may draw nonsinusoidal currents are uninterruptible power supplies, electronic ballasts, data processing equipment and solid-state motor speed controllers.

K factor-rated transformers have not been investigated for use with harmonic loads where the rms current of any single harmonic higher than the tenth is greater than 1/h of the fundamental rms current.

The transformer ratings are based on installation in a maximum 40°C ambient unless otherwise marked.

Transformers with ventilating openings should be installed so that the ventilating openings are not blocked. Some transformers are marked to specify a minimum distance to a wall.

The suitability of the transformer circuit grounding, grounding electrode connections, and equipment grounding connections in accordance with Article 250 of the NEC should be determined by the Authority Having Jurisdiction at the time of installation.

Power and General-purpose Transformers, Dry Type (XQNX)—Continued

In cases where the nature or construction of the transformer is such that special precautions beyond the requirements of the NEC must be observed in installations or use, suitable special instructions are marked on the transformer.

PRODUCT MARKINGS

All transformers are marked with the following:

1. A distinctive catalog or model number (or the equivalent)
2. The electrical ratings, which include the following:
 - a) Number of phases
 - b) Frequency(ies) in Hz
 - c) Primary voltage(s)
 - d) Secondary voltage(s)
 - e) Tap voltage(s)
 - f) kVA rating(s)
 - g) Secondary capacity in amperes and the elevated voltage limit (maximum voltage to ground) of the winding (for a transformer rated for elevated use)
3. The temperature class for the insulation system used
4. Their weight in pounds (kg)

Transformers investigated for use where significant nonsinusoidal current is present are marked "Suitable for nonsinusoidal current load with K factor not to exceed ____," where the blank is filled in with one of the standard K factor ratings of 4, 9, 13, 20, 30, 40 or 50. (The K factor specified is the summation of the per unit rms current at harmonic "h" squared times the harmonic order squared.)

If transformers are provided with a temperature sensor, the transformers are marked with the electrical rating of the temperature sensor.

Autotransformers are marked "AUTOTRANSFORMER."

Transformers rated 25 kVA or more are marked with the percent impedance.

Transformers provided with an enclosure are marked with the environmental type number(s).

RELATED PRODUCTS

Reactors used for dimming, and variable-voltage autotransformers are covered under Power Circuit and Motor-mounted Apparatus (NMTR) or, for nonindustrial types, Transformers, Dimmers (XOYT).

Voltage regulators are covered under Power Supplies, General Purpose (QQFU).

Swimming pool transformers are covered under Swimming Pool and Spa Transformers (WDGV).

Ballasts for mercury lamps and fluorescent lamps are covered under High-intensity-discharge Lamp Ballasts (FLCR) and Fluorescent Lamp Ballasts (FKVS), respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1561, "Dry-Type General Purpose and Power Transformers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Transformer," "Air-Cooled Power Transformer" or "Dry Type General Purpose and Power Transformer," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, TOY (XRBV)

GENERAL

This category covers direct-plug-in or cord-connected portable, step-down transformers of the low-secondary-voltage type suitable for supplying current to electrically operated toys or hobby sets.

ACCESSORIES

An accessory to a certified toy or hobby transformer is provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic certified toy or hobby transformer specified in the markings or instructions. Such accessories serve to provide conditioning or control of the transformer output voltage, current or power.

ADDITIONAL INFORMATION

Transformers, Toy (XRBV)—Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 697, "Toy Transformers".

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Toy Transformer," "Hobby Transformer," "Toy Transformer Accessory" or "Hobby Transformer Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS FOR USE IN HAZARDOUS LOCATIONS (XPAF)

TRANSFORMERS, GENERAL PURPOSE FOR USE IN HAZARDOUS LOCATIONS (XPJF)

GENERAL

This category covers transformers of the compound filled, exposed core or open core and coil construction (industrial control type) type, rated 600 V or less. Step-up, step-down, insulated, and autotransformer types, as well as air-cooled reactors, are also included. Autotransformers are so marked.

These transformers have been investigated for use on sinusoidal supply circuits only. They have not been investigated for use where a significant nonsinusoidal content is present such as that which may occur with uninterruptible power supplies, data processing equipment and solid-state motor-speed controllers.

General-purpose transformers are provided with leads, or with studs or terminal pads to which certified pressure-wire connectors can be factory or field installed to accommodate field wiring. Wire-binding screws or studs with cupped washers may be used for copper wire 10 AWG max.

PRODUCT MARKINGS

A transformer intended for elevated voltage use is marked to indicate that one or more windings may be operated at an elevated voltage, in either an isolated or autotransformer mode, as appropriate. Such marking includes the limit of the elevated voltage, the current (amp) limits, and references as to where further connection detail may be found. Such further detail includes typical connection diagrams and methods of relating winding current to total load kVA. Elevated voltage is that situation in which a voltage between a winding (including its subordinate parts such as terminals) and other conductive parts of the transformer exceeds the voltage of the winding.

Some transformers are marked to specify a minimum distance to a wall. Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for size 14–1 AWG, and 75°C wire for size 1/0 AWG and larger.

In cases where the nature of the construction of the transformer is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installations or use, suitable special instructions are marked on the transformer.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are ANSI/UL 506, "Specialty Transformers," ANSI/UL 1012, "Power Units Other Than Class 2," and ANSI/UL 1561, "Dry-Type General Purpose and Power Transformers."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "General Purpose Transformer for Use in Hazardous Locations," "Industrial

TRANSFORMERS FOR USE IN HAZARDOUS LOCATIONS (XPAF)

Transformers, General Purpose for Use in Hazardous Locations (XPJF)–Continued

Control Transformer for Use in Hazardous Locations,” “Air Cooled Reactor for Use in Hazardous Locations,” “Auto-Transformer for Use in Hazardous Locations,” or other appropriate product name as shown in the individual Listings. The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DISTRIBUTION, LIQUID-FILLED TYPE, OVER 600 VOLTS FOR USE IN HAZARDOUS LOCATIONS (XPLP)

USE

This category covers liquid-filled, distribution type, pad-mounted and substation type transformers, 69 kV class or less, single- and three-phase. Both the primary and secondary voltage ratings may be greater than 600 V. The transformers may be provided with surge arresters.

The transformers may be provided with fan-cooling accessories. The use of a fan-cooling accessory permits the transformer to experience temporary overloads without exceeding the maximum temperature rating of the transformer insulation system. Transformers equipped with a fan-cooling accessory are marked to indicate that they must be connected to an attended annunciator device and that provision must be made for automatic load shedding in the event of overtemperature.

The type of liquid used is identified on the transformer nameplate. Additional information on the fluid used is provided in Material Safety Data Sheets (MSDS Sheets) available from the transformer manufacturer.

These transformers are intended for installation in accordance with the requirements of ANSI/NFPA 70, “National Electrical Code.”

RELATED PRODUCTS

Liquid-filled-type distribution transformers over 600 V investigated for use in unclassified locations are covered under Transformers, Distribution, Liquid-filled Type, Over 600 Volts (XPLH).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/IEEE C57.12.00 (2010), “Standard General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers.”

In addition to ANSI/IEEE C57.12.00 (2010), the following unclassified locations standards are also used to investigate pad-mounted types: ANSI/IEEE C57.12.22 (1993), “Transformers – Pad-Mounted, Compartmental-Type, Self-Cooled Three-Phase Distribution Transformers with High-Voltage Bushings, 2500 kVA and Smaller: High Voltage, 34,500 Grd Y/19,920 Volts and Below; Low-Voltage, 480 Volts and Below”

ANSI/IEEE C57.12.26 (1992), “Pad-Mounted, Compartmental-Type, Self-Cooled, Three-Phase Distribution Transformers for Use with Separable Insulated High-Voltage Connectors (34,500 Grd Y/19,920 V and Below; 2500 kVA and Smaller)”

ANSI/IEEE C57.12.28 (2005), “Pad-Mounted Equipment – Enclosure Integrity”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Liquid-filled Distribution Transformer for Use in Hazardous Locations” (or “Liquid-filled Distribution Transformer for Use in Haz. Loc.”). The word “Transformer” may be abbreviated “XFMR,” “XFRMR” or “XFORMER.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE-PROTECTIVE DEVICE/PANELBOARD EXTENSION MODULES CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (XUPD)

SURGE-PROTECTIVE DEVICE/PANELBOARD EXTENSION MODULES CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (XUPD)

GENERAL

This category covers surge-protective devices (SPDs) contained within panelboard extension enclosures. They are suitable for use with specific certified panelboards in accordance with the details described on the SPD/Panelboard extension module or as provided in the publication provided with the SPD.

SPD/Panelboard extension modules are marked, where visible after installation, “Classified for use only in specified panelboards. For catalog numbers (or equivalent) of specified panelboards, refer to Publication No. ___ provided with this SPD/Panelboard extension module. If additional information is necessary, contact [SPD/Panelboard extension module manufacturer’s name].”

The referenced publication is a compatibility list that tabulates the company name, catalog number, number of poles and electrical ratings of the SPD/Panelboard extension modules, in addition to the company name and catalog number of the applicable certified panelboards in which the SPD/Panelboard extension modules have been investigated for use. The compatibility list also details the maximum permissible voltage and maximum available short-circuit current of the supply system to the panelboard. The SPD/Panelboard extension module is not suitable for the specified application if the system supply characteristics exceed the maximum values indicated in the compatibility list. One copy of the compatibility list is provided with each SPD/Panelboard extension module.

For additional information on SPD type designations, ratings and markings, see Surge-protective Devices (VZCA) and Panelboards (QEUJ).

The following information appears in the individual Reports available from the manufacturer:

Electrical ratings, including the operating voltage rating (volts), ac power frequency (Hz) and number of phases.

Voltage Protection Rating (VPR) in volts.

Nominal Discharge Current (I_n) Rating in amps or kA.

Maximum Continuous Operating Voltage Rating (MCOV) in volts.

Short-circuit-current Rating (SCCR) in amps or kA.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1449, “Surge Protective Devices,” and ANSI/UL 67, “Panelboards.”

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol and the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory) on the front, visible surface of the SPD/Panelboard extension module. The Classification Mark also includes the product identity “SPD/PANELBOARD EXTENSION MODULE,” together with a control number on the side of the SPD/Panelboard extension module.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSIT APPLICATION EQUIPMENT AND SYSTEMS (XUPY)

This category covers switches, controllers and other equipment intended for use in transit system applications.

POWER RECTIFIERS (XUSP)

GENERAL

This category covers power rectifiers having output voltage ratings up to 750 V dc and power ratings up to 5000 kW. These power rectifiers are intended for use in transit power systems where they are installed in areas that are protected from the elements and not accessible to unqualified personnel.

These power rectifiers are powered by transformers with low-voltage windings in configurations that allow the rectifiers to produce 6 or 12

PRODUCT CATEGORIES BY CATEGORY CODE

TRANSIT APPLICATION EQUIPMENT AND SYSTEMS
(XUPY)

470

Power Rectifiers (XUSP)—Continued

pulse outputs. The input configuration is identified on the nameplate. The configurations are defined in the standards referenced below.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI C34.2 (1968), "Practices and Requirements for Semiconductor Power Rectifiers," and NEMA RI9 (1968), "Silicon Rectifier Units for Transportation Power Supplies."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Rectifier."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, ISOLATING (XUTE)

USE AND INSTALLATION

This category covers single-pole switches intended to isolate sections of track as needed for maintenance or similar functions.

These switches may be open types or enclosed and may be either manually or motor operated.

Open-type switches are intended for installation in electrical enclosures in accordance with product markings and any accompanying instructions.

RATINGS

These switches are rated 6000 A and 1000 V dc maximum.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 98, "Enclosed and Dead-Front Switches," with the requirements adjusted for ratings not covered in the standard.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Transit System Isolating Switch" or "Transit System Sectionalizing Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRASH COMPACTORS (XUTS)

This category covers equipment intended to reduce the volume of trash by means of mechanical compaction.

COMMERCIAL TRASH COMPACTORS (XUUC)

USE AND INSTALLATION

This category covers commercial-use compactors for reducing the volume of trash by mechanical compaction prior to disposal. They may be provided with a facility to tie the compacted trash into bales. They are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." These compactors are motor operated and are provided with overcurrent or overheating protective devices.

Commercial-use compactors are intended to be installed, maintained and operated by competent personnel who are fully instructed concerning the hazards involved.

Horizontal-type compactors do not include the waste container or the feed hopper. These components are provided at the time of installation and are intended to be in accordance with ANSI Z245.30 (1999), "Waste Containers - Safety Requirements," and ANSI Z245.2 (2004), "Stationary Compactors - Safety Requirements for Installation, Maintenance and Operation."

RELATED PRODUCTS

TRASH COMPACTORS (XUTS)

Commercial Trash Compactors (XUUC)—Continued

Trash compactors for household use are covered under Household Trash Compactors (XUUM).

Paper shredders for home or office use are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ). Waste disposers are covered under Waste Disposers (ZDHR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 73, "Motor-Operated Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Compactor," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD TRASH COMPACTORS (XUUM)

GENERAL

This category covers household-use compactors for reducing the volume of trash by mechanical compaction prior to disposal. These compactors are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." These motor-operated compactors are rated 250 V or less and are provided with overcurrent or overheating protective devices.

RELATED PRODUCTS

Trash compactors for commercial use are covered under Commercial Trash Compactors (XUUC).

Paper shredders for home or office use are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ). Waste disposers are covered under Waste Disposers (ZDHR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1086, "Household Trash Compactors."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Trash Compactor," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRUCKS, INDUSTRIAL FOR USE IN HAZARDOUS LOCATIONS (XVHY)

Powered industrial trucks include fork trucks, tractors, motorized hand trucks, platform trucks, towing tractors and other specialized types powered by electric motors or internal combustion engines.

They have been classified with regard to specific hazards as indicated in the General Information for each of the following categories.

Except for compressed natural gas fueled industrial trucks, they are intended for use in accordance with the Standard of the National Fire Protection Association for type designations, areas of use, maintenance, and operation of Powered Industrial Trucks, NFPA 505. Compressed natural gas fueled industrial trucks are for use in designated areas where they have been judged acceptable by the Authority Having Jurisdiction.

TRUCKS, INDUSTRIAL, TYPE EX FOR USE IN HAZARDOUS LOCATIONS (XXGV)

GENERAL

This category covers electrical industrial riding or walking-type lift trucks, platform trucks, towing tractors, etc., with a storage battery as the source of power. These trucks and tractors are provided with safeguards to reduce the possibility of ignition of hazardous atmospheres by mechanical or friction sparks. Since such sparks can also be generated by the parts handled, pushed or towed by the classified equipment, suitable precautions should be taken to reduce the possibility of such sparks.

This category does not cover hauled or towed attachments or equipment that is not a part of the truck or tractor.

Certified storage batteries specified by the electric truck manufacturers are intended to be used with the trucks. The batteries are each provided with a receptacle and plug interlocked with a switch that does not permit insertion or withdrawal of the plug unless the switch is in the "off" position, or a receptacle with provision for locking the plug in the receptacle to deter removal by unauthorized persons. Normal levels of electrolytes should be maintained at all times and proper fuses used in the battery fuse enclosure.

At least two of the wheels on these trucks are electrically conductive. Liquid gasoline and oil is injurious to rubber compounds and impairs the electrically conductive properties of the tires. The use of floor oils and oily sweeping compounds should be avoided.

ADDITIONAL INFORMATION

For additional information, see Trucks, Industrial for Use in Hazardous Locations (XVHY) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 583, "Electric-Battery-Powered Industrial Trucks."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**TYPE EX INDUSTRIAL TRUCK
CLASS ___ GROUP ___ HAZARDOUS LOCATIONS ONLY
AS TO FIRE, ELECTRIC SHOCK AND EXPLOSION HAZARDS
No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STORAGE BATTERIES, TRUCKS, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (XXIY)

GENERAL

This category covers storage batteries intended for use with Type EX industrial trucks. They are provided with explosion-proof and/or dust-ignition-proof fuse enclosure and interlock switches to prevent insertion or withdrawal of the battery cable plug under load.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 583, "Electric-Battery-Powered Industrial Trucks."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**ELECTRIC TRUCK STORAGE BATTERY
AS TO FIRE, ELECTRIC SHOCK AND EXPLOSION HAZARDS ONLY
CLASS ___ GROUP ___ HAZARDOUS LOCATIONS
Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for

Storage Batteries, Trucks, Electric for Use in Hazardous Locations (XXIY)—Continued

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRUCKS, INDUSTRIAL (XVHZ)

This category covers powered industrial trucks, which include fork trucks, tractors, motorized hand trucks, platform trucks, towing tractors and other specialized types powered by electric motors or internal combustion engines.

STORAGE BATTERIES, TRUCKS, ELECTRIC (XXHW)

USE AND INSTALLATION

This category covers Types E, EE and EO storage batteries intended for use in Types E, ES and EE industrial trucks where the installation and use is intended to be in accordance with the marking on the end product.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 583, "Electric-Battery-Powered Industrial Trucks."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**STORAGE BATTERY TYPE * FOR USE IN INDUSTRIAL TRUCKS AS TO FIRE AND ELECTRIC SHOCK HAZARD ONLY
Control No.**

* E, EE or EO

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TUBING AND HOSE, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (YDGG)

USE

This category covers tubing and reinforced hose of electrically conductive plastic or natural or synthetic rubber for conveying gases or vapors in flammable anesthetizing locations where it is necessary for safety to avoid accumulation of static electricity. Unless otherwise indicated with the product, they are intended for use with air of anesthetic-air mixtures at comparatively low pressure.

Tests indicate that this tubing and hose in lengths used in flammable anesthetizing locations is sufficiently electrically conductive to equalize electrostatic charges between the electrical conductors to which they are connected.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Hose Relating to Hazardous Locations" or "Electrically Conductive Tubing Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

TUNNEL-DRILLING GUIDANCE SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (YDUE)

USE AND INSTALLATION

This category covers tunnel-drilling guidance systems consisting of instruments for indication, monitoring and/or recording of level, direction and inclination of tunnel-drilling machines and the like.

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is certified as part of the system unless otherwise indicated and is used as intended.

This equipment is intended to be installed in a "controlled area" as defined by ANSI Z136.1, "Safe Use of Lasers," where access is limited to trained operator and service personnel. This equipment is intended to be provided with a marking or installation instructions which state "To Be Installed Only in a Controlled Area," or similar wording.

With regard to laser radiation hazards, the final installation site location and compliance with final installation site location requirements have not been investigated. The United States Occupational and Safety Act (OSHA) requires the final installation site facility to be in compliance with ANSI Z136.1. ANSI Z136.1 requires the final installation site facility to employ a Laser Safety Officer (LSO) adequately trained in laser safety. It is the responsibility of the LSO to ensure this equipment is installed and operating in compliance with ANSI Z136.1. However, equipment covered under this category has been determined to incorporate all provisions for final installation site location requirements, for example, a remote interlock connector is required, and, equipment covered under this category has been determined to incorporate a remote interlock connector. It is the responsibility of the final installation site LSO to ensure the remote interlock connector is connected, operational, and functioning as required.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Laser radiation hazards — 21CFR1010, "Performance Standards for Electronic Products: General," and 21CFR1040, "Performance Standards for Light-Emitting Products," or, as an alternative, the 21CFR1010 and 21CFR1040 parts utilizing CDRH Laser Notice 50 (LN50), or, as an alternative, 21CFR1010 and 21CFR1040 with an approved variance, by the Director of the CDRH, to the International Electrotechnical Commission, IEC 60825-1, with Amendment 1 and Amendment 2, "Safety of Laser Products."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tunnel Drilling Guidance System for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERGROUND FEEDER AND BRANCH CIRCUIT CABLE (YDUX)

GENERAL

This category covers underground feeder and branch-circuit cable, rated 600 V, in sizes 14 to 4/0 AWG inclusive, copper, and 12 to 4/0 AWG inclusive, aluminum or copper-clad aluminum, for single and multiple conductor cables. It is designated as Type UF cable and is intended for use in accordance with Article 340 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Some multi-conductor cable is surface marked with the suffix "B" immediately following the type letters to indicate the usage of conductors employing 90°C rated insulation.

Such cable may also be installed as Nonmetallic-sheathed Cable, per Section 340.10(4) of the NEC. The ampacities of Type UF cable, with or without the suffix "B," are those of 60°C rated conductors as specified in the latest edition of the NEC.

Submersible Water Pump Cable — Indicates multi-conductor cable in which 2, 3 or 4 single-conductor Type UF cables are provided in a flat or twisted assembly. The cable is certified in sizes from 14 AWG to 4/0 AWG inclusive, copper, and from 12 AWG to 4/0 AWG inclusive, aluminum or copper-clad aluminum. The cable is tag marked "For use within the well casing for wiring deep well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The insulation may also be surface marked "Pump Cable." The cable may be directly buried in the earth in conjunction with this use.

This cable may employ copper, aluminum, or copper-clad aluminum conductors. Cable with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors." For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

This cable may be terminated at boxes and other enclosures by using nonmetallic-sheathed cable connectors (see Nonmetallic-sheathed Cable Connectors [PXJV]).

Cable suitable for exposure to direct rays of the sun is indicated by tag marking and marking on the surface of the cable with the designation "Sunlight Resistant."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 493, "Thermoplastic-Insulated Underground Feeder and Branch-Circuit Cables."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Underground feeder cable that contains copper or copper-clad aluminum conductors has the product name "Underground Feeder Cable"; underground feeder cable that contains aluminum conductors has the product name "Aluminum Underground Feeder Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNINTERRUPTIBLE POWER-SUPPLY EQUIPMENT (YEDU)

USE AND INSTALLATION

This category covers indoor- and outdoor-use uninterruptible power-supply (UPS) equipment that may be stationary or fixed. This equipment is rated 600 V or less and is intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers large UPS equipment requiring field assembly of modules or subassemblies, which are appropriately marked as indicated below.

A UPS is used to provide alternating-current power to a load for some period of time in the event of a utility power failure. In addition, it may provide a more constant voltage and frequency supply to the load, reducing the effects of utility voltage and frequency variations.

These products include the following equipment intended for use with a UPS: (1) battery supply modules with or without batteries, (2) remote status panels, (3) bypass switches, (4) maintenance bypass switches, (5) battery circuit disconnect switches, (6) rectifier and power conversion units, and (7) power distribution panels.

The investigation of UPS equipment does not include the effects on the load that may be caused by momentary disruption of alternating-current power.

A UPS identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Products suitable for use in computer rooms in accordance with ANSI/NFPA 75, "Fire Protection of Information Technology Equipment," are marked "Suitable for Computer Room Applications," or the equivalent.

This category does not cover a UPS intended as a component of a fire-protective or burglary-protective signaling system.

REBUILT PRODUCTS

This category also covers UPS equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt UPS equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt UPS equipment is subject to the same requirements as new UPS equipment.

RELATED PRODUCTS

UPS systems for use with professional medical and dental equipment are covered under Uninterruptible Power Supplies for Use in Health Care Facilities (KFFG).

Battery-powered emergency equipment for controlling lighting and/or power in accordance with Article 700 of the NEC is covered under Emergency Lighting and Power Equipment (FTBR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1778, "Uninterruptible Power Supply Equipment" (2nd ed.), or ANSI/UL 1778, "Uninterruptible Power Systems" (4th ed.).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Uninterruptible Power Supply" (or "UPS"), "UPS Battery Supply," "UPS Status Panel," "UPS Transfer Switch," "UPS Inverter," "UPS Rectifier/Charger," "UPS Equipment Enclosure," "UPS Equipment Part," "UPS Equipment Subassembly," "UPS Equipment Accessory," "UPS Power Distribution Panel," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MAINTENANCE SERVICE FOR UNINTERRUPTIBLE POWER-SUPPLY SYSTEMS (YEET)

This category covers service companies Certificated as maintenance service providers for uninterruptible power-supply (UPS) equipment in the field.

Service companies that are covered in the directory have demonstrated their capability for maintaining field installed UPS equipment in accordance with the requirements established by their internal maintenance documentation.

Each UPS system covered by a Certificate is required to be maintained by the service company responsible for issuing the Certificate. A UPS system is considered to be included in this program only if it is covered by a current Certificate.

The Certificate serves as evidence that the service company (1) is covered as a Maintenance Service Company for UPS Equipment; (2) is authorized to issue the Certificate for the serviced equipment as representation that the equipment is in compliance with requirements established by their internal documentation that has been reviewed by UL; and (3) is subject to UL's field countercheck program whereby periodic inspections are made of representative serviced equipment in the field and at the maintenance service company to verify correctness of the certificated practices.

The maintenance service Certificate indicates identification and location (address) of the serviced equipment, and the service center from which it was issued. Each Certificate also bears a unique serial number and the period of time covered by the Certificate.

Periodic quality audits at the central maintenance service company's location are conducted by UL to verify that the necessary documentation and records are in place for each service location. The Certificate of UL is the only method provided by UL to identify field installed equipment under its Certificated Maintenance and Follow-Up Service.

Appearance of a company's name in the Directory does not mean that all UPS systems serviced by that company are covered under the Certifi-

Maintenance Service for Uninterruptible Power-supply Systems (YEET)—Continued

cated Maintenance Service. Only the systems for which a Certificate has been properly issued are covered under UL's Certificated Maintenance Service.

UL makes no representations or warranties, expressed or implied, that the UPS system will prevent any loss, or that the system will in all cases provide the protection for which it is installed or intended. The Certificate only evidences that UL conducts countercheck field inspections of representative serviced equipment. UL does not assume or undertake to discharge any liability of the maintenance service company or any other party. UL is not an insurer and assumes no liability for any loss which may result from failure of the equipment, incorrect certification, nonconformity with requirements, cancellation of the Certificate, or withdrawal of the company from UL's Directory prior to the expiration appearing on the Certificate. If servicing is found not in conformity with requirements, it shall be corrected or the Certificate is subject to cancellation.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNINTERRUPTIBLE POWER-SUPPLY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (YEEU)

USE AND INSTALLATION

This category covers indoor- and outdoor-use uninterruptible power-supply (UPS) equipment that may be stationary or fixed. This equipment is rated 600 V or less and is intended for use in accordance with ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

UPS equipment intended for use in unclassified locations is covered under Uninterruptible Power-supply Equipment (YEDU).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1778, "Uninterruptible Power Supply Equipment" (2nd ed.), or ANSI/UL 1778, "Uninterruptible Power Systems" (4th ed.).

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Uninterruptible Power Supply for Use in Hazardous Locations," "UPS Battery Supply for Use in Hazardous Locations," "UPS Status Panel for Use in Hazardous Locations," "UPS Transfer Switch for Use in Hazardous Locations," "UPS Inverter for Use in Hazardous Locations," "UPS Rectifier/Charger for Use in Hazardous Locations," "UPS Equipment Enclosure for Use in Hazardous Locations," "UPS Equipment Part for Use in Hazardous Locations," "UPS Equipment Subassembly for Use in Hazardous Locations," "UPS Equipment Accessory for Use in Hazardous Locations" or "UPS Power Distribution Panel for Use in Hazardous Locations." The words "Hazardous Locations" may be abbreviated "Haz. Loc."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT SUBSTATIONS (YEFR)

GENERAL

This category covers unit substations rated 600 V or less intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and in accordance with the installation instructions provided on the unit substation.

PRODUCT CATEGORIES BY CATEGORY CODE

A unit substation consists of a transformer in combination with primary and/or secondary overcurrent protective devices or switching devices housed in a single enclosure.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fuses should not be loaded to exceed 80% of their current rating.

Some unit substations are suitable for use as service equipment and are so marked. Such marking is part of the Certification Mark as noted below, or is an integral part of other required markings.

Certified unit substations are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking shall be independent of any marking on terminal connectors and shall be on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors, the marking will indicate "Use copper or aluminum wire." A unit substation employing terminals for main or branch circuit units individually marked "Cu-A1" will be marked "Use copper-Al wire" or "Use copper wire only." The latter statement indicates that wiring space or other factors make the unit substation unsuitable for aluminum conductors.

Unless the unit substation is marked with both the size and temperature rating of wire to be used, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG and 75°C ampacities for wire 1/0 AWG and larger.

Unit substations have the secondary neutral bonded to the enclosure and have provision on the neutral for connection of a grounding conductor. A terminal is also provided on the enclosure near the line terminals for use with an equipment grounding conductor between the unit substation and the enclosure of equipment on the line side of the unit substation for use when a metallic conduit system is not provided.

The suitability of unit substations for use on high capacity circuits has not been investigated.

Unit substations are marked with enclosure type number 1, 2 or 3R as described in Electrical Equipment for Use in Ordinary Locations (AALZ).

Unit substations marked with enclosure type 3RX provide the same level of protection as type 3R enclosures, and are provided with an additional level of corrosion protection for the enclosure.

A unit substation marked "Type 3R" may also be marked "Rainproof."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1062, "Unit Substations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unit Substation."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT SUBSTATIONS OVER 600 VOLTS (YEFV)

USE AND INSTALLATION

This category covers three-phase articulated and integral unit substations for step-down operation. Articulated substations are rated through 10,000 kVA, at primary voltages of 601 V through 38 kV (nominal 35 kV). Integral substations are rated through 2500 kVA at primary voltages of 601 V through 38 kV.

Articulated unit substations consist of a transformer section(s) together with an input section(s), an output section(s), or both. Transition sections may also be provided. These unit substations are designed, coordinated and assembled as multiple self-enclosed pieces of equipment intended for connection in the field.

Integral unit substations consist of a transformer section(s) together with an input section(s), an output section(s), or both. Transition sections may also be provided. These unit substations are designed, coordinated and assembled as a single self-enclosed piece of equipment. Sections may be shipped separately.

An articulated unit substation may consist of several separately certified pieces of equipment. Only those sections provided with unit substation Certification Marks have been investigated as part of an articulated unit substation. The suitability of other assemblies will need to be determined by the Authority Having Jurisdiction.

The transformer section(s) house the three-phase power transformer(s) for step-down operation. These unit substation transformers are ventilated dry-type or cast resin type.

The input sections may consist of a terminal chamber, metal-clad switchgear, or metal-enclosed interrupter switchgear.

The output sections may consist of metal-clad switchgear, metal-enclosed interrupter switchgear, a motor control center, molded-case circuit breaker equipment, fused switch equipment, a dead-front switchboard, a panelboard or similar types of distribution or control equipment.

A transition section may be located between a transformer section and an input section, between a transformer section and an output section, between different types of input sections, or between different types of output sections. Transition sections may be integral parts of two adjacent sections, an integral part of one of the sections, or a separate section.

The transformer ratings determine the kVA and voltage capabilities of the overall integral unit substation.

These unit substations are intended for installation in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code," and in accordance with the installation instructions provided on the equipment.

PRODUCT MARKINGS

A master nameplate is mounted on an external surface of the enclosure and visible after normal installation of the equipment. This master nameplate includes the following information as a minimum: manufacturer's name and equipment identification number, kVA rating or ratings if force cooled, primary and secondary lightning impulse withstand voltage (BIL) ratings, primary and secondary voltage ratings, primary and secondary continuous current ratings, transformer design impedance, and total weight. If metal-clad switchgear or metal-enclosed interrupter switchgear is connected to the transformer primary, the nameplate also includes a short-time current carrying rating and momentary current rating.

Each section of the unit substation also has its own rating based on the requirements in standards applicable for that section of the equipment. These individual section ratings are coordinated to be equal to or greater than the rating of the unit substation.

The enclosure of the integral unit substation or the several enclosures of an articulated unit substation are marked to indicate the exposure category (A, B or C) for which it is intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; and enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only.

An enclosure which has been investigated to determine it is rainproof is marked "Rainproof," "Outdoor" or "3R." The enclosure may be either non-ventilated or ventilated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate articulated unit substations in this category is ANSI/IEEE C37.121 (1989), "Switchgear - Unit Substations - Requirements."

The basic standards used to investigate integral unit substations in this category are:

- IEEE C37.20.2 (1999), "Metal-Clad Switchgear"
- ANSI/NEMA C37.55 (2002), "Switchgear - Medium Voltage Metal-Clad Assemblies - Conformance Test Procedures"
- ANSI/IEEE C37.20.3 (2001), "Metal-Enclosed Interrupter Switchgear"
- ANSI/NEMA C37.57 (2003), "Switchgear - Metal-Enclosed Interrupter Switchgear Assemblies - Conformance Testing"
- UL 1562, "Transformers, Distribution, Dry-Type - Over 600 Volts"
- IEEE C57.12.00 (2010), "General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers"

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Unit Substation Section," and "___ of ___," where the first space is stamped with a number indicating the position (reading from left to right) that the section occupies in the series of sections constituting the unit substation, and the second space indicates the total number of sections which are provided as part of the unit substation.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS
(YTSX)

VALVES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (YTSX)

GENERAL

This category covers electrically operated valves (designated as general-purpose valves or safety valves). Such valves that may be equipped with complementary or optional mechanical actuators are also covered under this category.

General-purpose valves are intended to control the flow of fluids, but should not be depended upon to act as safety valves. They may be normally closed or normally open valves.

Safety valves are normally closed valves of the "On" and "Off" type, intended to be actuated by a safety control or an emergency device to prevent the unsafe delivery of fluids. They may also be used as general-purpose valves. Multiple-port valves may be designated as safety valves only with respect to their normally closed port.

Unless otherwise indicated, these valves are intended for connection to rigid conduit in an ambient temperature normally prevailing in habitable spaces and for handling fluids at a temperature not exceeding 25°C (77°F).

Identification of the specific fluid(s) for which the valve is certified, together with the fluid temperature and ambient temperature ratings, is (1) included in installation instructions, (2) shown on the smallest carton in which the valve is packaged, or (3) marked on the valve or on a tag attached to the valve.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 429, "Electrically Operated Valves."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Purpose Valve for Hazardous Locations" or "Safety Valve for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES (YWXV)

GENERAL

This category covers commercial vending machines, which include payment-accepting machines for vending nonrefrigerated food and beverages, general merchandise, etc.

This equipment may be either cord or permanently connected to the source of supply in accordance with ANSI/NFPA 70, "National Electrical Code."

Vending machines of certain types are designated for permanent connection to water supplies and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

Accessories, such as a coin/currency mechanism and debit/credit card readers, may be field installed. Unless proper and obvious installation of the accessory is evident, instructions for installing the accessory are provided as part of the vending machine.

The burglary and theft protection features of these machines have not been investigated unless specifically indicated in the individual certifications.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number and electrical rating.

These appliances are marked on or adjacent to the electrical rating plate with one of the following: "Suitable for Indoor Use Only," "Suitable for Protected Locations — See Installation Instructions" or "Suitable for Outdoor Use." Complete instructions appear on an appliance intended for use in a protected location, indicating the manufacturer's recommendations concerning the use or installation, or both, of any canopy, marquee, shelter, etc., that may be necessary for the protection of the appliance. The instructions may be located inside the appliance if they are accessible through the front door.

VENDING MACHINES (YWXV)

475

REBUILT PRODUCTS

This category also covers vending machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt vending machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt vending machines are subject to the same requirements as new vending machines.

RELATED PRODUCTS

Machines for vending refrigerated food and beverages are covered under Vending Machines, Refrigerated (SQMX).

Games, rides and similar payment-accepting amusement products are covered under Amusement and Gaming Machines (ASMU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 751, "Vending Machines."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Vending Machine," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENTILATING EQUIPMENT FOR COMMERCIAL COOKING APPLIANCES (YXLT)

Ventilating equipment includes Exhaust Hoods With or Without Exhaust Dampers, Power Ventilators for Restaurant Exhaust Appliances, Grease Ducts, Grease Duct Enclosures, and Hood and Duct Accessories intended for installation in ventilating systems serving commercial cooking equipment. This equipment is intended for installation in accordance with the National Fire Protection Association Standard for the Installation of Equipment for the Removal of Smoke and Grease Laden Vapors from Commercial Cooking Equipment, NFPA 96, or other recognized codes or standards as indicated for the individual product categories.

In addition, Recirculating Ductless Hoods for Use with Specified Commercial Cooking Appliances are also included in this Section.

EXHAUST HOODS WITH EXHAUST DAMPERS (YXZR)

GENERAL

This category covers exhaust hoods with exhaust dampers intended to be installed over commercial cooking equipment. These hoods are provided with fire-actuated exhaust dampers. They have been investigated to determine that they are capable of preventing the exhaust duct gas temperatures from exceeding 375°F and the passage of flame into the exhaust duct under conditions simulating a fire in the cooking area under a hood. Electrical components, if provided, are investigated as part of the certification of the hood assembly.

Exhaust hoods with exhaust dampers may be provided with manually or automatically operated cleaning or washing systems. These systems are not investigated for grease-extraction efficiency. These systems are not investigated for their suitability as fire-extinguishing-system units for the protection of grease-removal devices and hoods, unless specifically indicated in the individual certifications and product markings on the hood.

Exhaust hoods with exhaust dampers may be provided with sprinklers or automatic spray nozzle assemblies for protection of unlimited length of grease duct in accordance with ANSI/NFPA 13, "Installation of Sprinkler Systems." If provided, it will be indicated in the individual certifications and product markings on the hood. The sprinklers or automatic spray nozzle assemblies intended for the protection of grease ducts are intended to be installed in accordance with ANSI/NFPA 13.

These devices are intended for installation in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations," and ANSI/NFPA 70, "National Electrical Code."

All exhaust hoods with exhaust dampers are marked relative to minimum exhaust air flow and maximum supply air flow directed into the

Exhaust Hoods with Exhaust Dampers (YXZR)—Continued

hood and/or out the bottom (if provided). Air-flow rates are established under draft-free laboratory conditions. Greater exhaust and/or lesser supply air-flow rates may be required for each specific installation to obtain complete vapor and smoke removal.

Exhaust hoods provided with integral installed sprinklers or automatic spray nozzle assemblies for the protection of unlimited length of grease ducts are marked "Supplied With Factory Installed (Sprinklers) (Spray Nozzles) for the protection of unlimited length of Grease Duct having a maximum duct (diameter) (perimeter) of (inches) (feet). Connect to NFPA 13 sprinkler system water supply only."

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

The basic standard used to investigate products in this category is ANSI/UL 710, "Exhaust Hoods for Commercial Cooking Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names:

- (A) "Exhaust Hood with Exhaust Damper"
- (B) "Hood Assembly for Exhaust Hood with Exhaust Damper for Use Only with [Company Name] Labeled Sub-Assembly for Exhaust Hood with Exhaust Damper Part No. ____"
- (C) "Sub-Assembly for Exhaust Hood with Exhaust Damper, Part No. ____ for Use Only with [Company Name] Labeled Hood Assembly for Exhaust Hood with Exhaust Damper"

Exhaust hoods with exhaust dampers that are complete in one factory-built assembly bear a Listing Mark with a product name similar to (A).

Exhaust hoods with exhaust dampers that consist of a hood assembly and one or more sub-assemblies bear a Listing Mark with the product name shown in (B) on the hood assembly and a Listing Mark with the product name shown in (C) on each sub-assembly.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOODS/RECIRCULATING SYSTEMS FOR USE WITH SPECIFIED COMMERCIAL COOKING APPLIANCES (YZCT)

USE AND INSTALLATION

This category covers products intended for installation with specific certified commercial cooking appliances, such as fryers, griddles, broilers and other appliances, that are installed in commercial establishments where food is prepared.

Recirculating systems consist of a fan, collection hood, and an air-filtering system consisting of a grease filter, and may incorporate other air-filtering devices. These systems incorporate a fire-extinguishing system that has been investigated with the specified cooking equipment.

These recirculating systems are intended for venting filtered cooking effluent into the room in which the equipment is located. These products are not intended for connection to a ducted exhaust system.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Products intended for connection to a ducted exhaust system are covered under Exhaust Hoods with Exhaust Dampers (YXZR) and Exhaust Hoods Without Exhaust Dampers (YYCW).

Commercial cooking appliances with integral recirculating ventilation systems are covered under Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNKG).

Commercial cooking appliances with integral systems for limiting the emission of grease-laden air are covered under Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air (KNLZ).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 710B, "Recirculating Systems" (formerly ANSI/UL 197 Supplement SB, "Commercial Electric Cooking Appliances with Recirculating Systems") and ANSI/UL 197, "Commercial Electric Cooking Appliances."

UL MARK

Hoods/Recirculating Systems for Use with Specified Commercial Cooking Appliances (YZCT)—Continued

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME*]

FOR USE WITH UL LISTED [Company name] MODEL(S) COMMERCIAL COOKING APPLIANCE(S)

Control No.

* RECIRCULATING SYSTEM or DUCTLESS HOOD

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER VENTILATORS FOR RESTAURANT EXHAUST APPLIANCES (YZHW)

GENERAL

This category covers power roof- and wall-mounted ventilators and proximity-type ventilators consisting of an impeller and motor in a housing. Roof- and wall-mounted ventilators have a weather-resistant housing and are supported by a weather-resistant steel base designed to fit, by means of a steel curb, over a roof- or wall-exhaust duct opening for venting restaurant cooking appliances.

These ventilators are designed for the removal of smoke and grease-laden vapors at an exhaust air temperature not exceeding the maximum temperature indicated in the individual certifications and on the certified device.

Power ventilators for restaurant exhaust appliances are intended for installation in accordance with ANSI/NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations." Authorities Having Jurisdiction should be consulted to determine that these appliances are acceptable for use in any given location.

Proximity-type ventilators have an enclosure and are positioned adjacent to the cooking appliance that they serve.

RELATED PRODUCTS

Other types of power ventilators are covered under Ventilators, Power (ZACT).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 705, "Power Ventilators," in addition to the requirements contained in UL Subject 762, "Outline of Investigation for Power Roof Ventilators for Restaurant Exhaust Appliances."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator for Restaurant Exhaust Appliances."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENTILATORS, POWER (ZACT)

GENERAL

This category covers roof- and wall-mounted power ventilators and duct fans consisting of an impeller and motor installed in a housing. Roof- and wall-mounted power ventilators have a weather-resistant housing and are supported by a weather-resistant base intended to fit, by means of a curb, over a wall or roof opening.

These ventilators are intended primarily for commercial or industrial use and are for the purpose of ventilation only. These ventilators consist of exhaust-type and makeup-air-type devices. Makeup-air-type ventilators equipped for evaporative cooling are covered under Humidifiers (AHIV).

Duct fans intended to move heated air are investigated to determine the effect of heated air on electrical components and are marked with the maximum temperature of the air.

VENTILATORS, POWER (ZACT)

Power ventilators intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components.

These ventilators have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with the Authority Having Jurisdiction.

RELATED PRODUCTS

Ventilators intended for the primary removal of grease-laden vapors and residues over restaurant cooking appliances are covered under Power Ventilators for Restaurant Exhaust Appliances (YZHW).

For other types of fans and blowers, see Fans, Electric (GPWV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 705, "Power Ventilators."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL MATERIAL HANDLERS (ZAJJ)

USE

This category covers industrial material handlers intended for continuous movement of material-laden air.

This equipment is intended for exhausting, material conveying, pollution control and air circulation, and is certified as to risk of electric shock and mechanical hazards only.

Industrial material handlers are intended to be installed in accordance with the installation instructions packaged with the equipment and ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Ventilators, Power (ZACT), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 705, "Power Ventilators."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**INDUSTRIAL MATERIAL HANDLER
AS TO ELECTRIC SHOCK AND MECHANICAL HAZARD ONLY
Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VENTILATORS, POWER FOR USE IN
HAZARDOUS LOCATIONS (ZANE)**

GENERAL

This category covers roof- and wall-mounted power ventilators and duct fans consisting of an impeller and motor installed in a housing. Roof- and wall-mounted power ventilators have a weather-resistant housing and are supported by a weather-resistant base intended to fit, usually by means of a curb, over a wall or roof opening. Power ventilators consist of an assembly of UL-certified parts.

These ventilators are intended for industrial use and are for the purpose of ventilation only. These ventilators consist of exhaust type and makeup air type devices. Makeup air-type ventilators are not equipped for evaporative cooling.

**VENTILATORS, POWER FOR USE IN HAZARDOUS LOCATIONS
(ZANE)**

Power ventilators intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components.

These ventilators have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with the Authority Having Jurisdiction.

These ventilators are not intended for the primary removal of grease-laden vapors and residues over restaurant cooking appliances.

Metallic impellers are constructed of medium brass or aluminum, with a hardness not over Rockwell B66. Belt-driven power ventilators are investigated for the potential risk of ignition from temperature as a result of belt slippage.

Duct fans intended to move heated air are investigated to determine the effect of heated air on electrical components and are marked with the maximum temperature of the air.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 705, "Power Ventilators."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**ELECTRICAL INDUSTRIAL
VIBRATORS FOR USE IN
HAZARDOUS LOCATIONS (ZBRX)**

USE

This category covers devices designed to produce controlled vibration by electromagnetic means or motor-rotor eccentrics, and that have provisions for mounting to impart the vibrating motion to industrial material-handling equipment, such as sieves and hoppers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations," or the requirements contained in UL Subject 1836, "Outline of Investigation for Electric Motors and Generators for Use in Class I, Division 2 and Class II, Division 2 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Industrial Vibrator for Hazardous Locations," "Industrial Vibrator for Hazardous Locations" or "Industrial Vibrator-Motor for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRODUCT CATEGORIES BY CATEGORY CODE

ELECTRICAL INDUSTRIAL VIBRATORS FOR USE IN HAZARDOUS LOCATIONS (ZBRX)

VIDEO AND AUDIO EQUIPMENT, PROFESSIONAL (ZCZY)

USE AND INSTALLATION

This category covers video and audio monitoring, processing, receiving, recording, and reproducing equipment and accessories intended for use and maintenance by technically trained professional personnel in broadcast and recording studios, remote field locations, head end facilities, or similar controlled access locations.

Many of these units and systems require special installation such as a separate transformer, power supply, special grounding methods, special mounting, special cable construction, or interconnection between units by means of one or more of the wiring methods outlined in ANSI/NFPA 70, "National Electrical Code." Such features are covered in the manufacturer's installation instructions.

Information concerning field-wiring connections, mounting location, mounting method, clearances, servicing, and the like, are marked on the unit or specified in instructions accompanying the unit.

PRODUCT TYPES

Professional video and audio equipment includes video and audio tape recorders, editing, processing and amplification equipment, signal transmission equipment, television cameras, video monitors, and the like.

Accessory equipment includes wall-mounting brackets, console enclosures, battery packs, and racks intended for use with professional video and audio equipment.

RELATED PRODUCTS

For video tape recorders, video cameras and related accessories intended for household or commercial use, see Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

For television receivers, commercial and household video monitors and video products incorporating a cathode ray tube display, see Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

For household audio tape recorders and players, and related accessories, see Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ). For commercial audio and radio equipment, systems and accessories, see Commercial Audio and Radio Equipment, Systems and Accessories (AZJX), and also Audio/Video Apparatus (AZSQ). For commercial phonographs, tape playing and recording equipment, see Commercial Phonographs, Tape Playing and Recording Appliances and Accessories (AZQW) and Audio/Video Apparatus (AZSQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1419, "Professional Video and Audio Equipment."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Professional Video Equipment," "Professional Audio Equipment" or "Professional Video Product," or other appropriate product name as shown in the individual Listings.

Equipment rack systems consist of an equipment rack and one or more audio or video components such as amplifiers, equalizers, VCRs and similar equipment. Each component installed in the rack that does not bear the UL Mark is identified by type and model number on a tag that is permanently attached to the rack. If all components installed in the rack bear the UL Listing Mark, the tag is not required.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VISCOMETERS FOR USE IN HAZARDOUS LOCATIONS (ZCFV)

USE AND INSTALLATION

This category covers portable instruments for determining viscosities of fluids in locations where specified flammable gases or vapors may be present.

The flexible cord connected to the units should be frequently inspected and replaced when necessary.

VISCOMETERS FOR USE IN HAZARDOUS LOCATIONS (ZCFV)

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Viscometer for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS (ZDHR)

USE AND INSTALLATION

This category covers waste disposers intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Commercial waste disposers, because of the volume of material handled and the manner in which they are utilized, do not necessarily incorporate the safeguards which are a part of the household type. Commercial units are intended to be utilized only by competent personnel who are fully instructed concerning the hazards involved.

RELATED PRODUCTS

For incinerator-type waste disposers, see Incinerators, Special Type (NEGT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 430, "Waste Disposers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waste Disposer," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS, PULPER TYPE (ZDIB)

GENERAL

This category covers commercial pulper-type waste disposers that are intended to grind food waste, food-service products such as paper, cardboard, plastic utensils and wrapping materials, and general office waste.

The waste materials are ground in a chamber supplied with running water to produce a slurry, which is then conveyed to a waterpress assembly by an auger-type drive. Excess water is pressed out of the pulpy waste, and the waste water is discharged into a sanitary drain or recycled back to the grinding chamber. The de-watered pulp is disposed of in a waste container.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 430, "Waste Disposers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pulper-type Waste Disposer," or other appropriate product name as shown in the individual Listings.

Waste Disposers, Pulper Type (ZDIB)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS, REPLACEMENT TYPE, HOUSEHOLD (ZDIF)**GENERAL**

This category covers replacement waste disposers intended to replace specific manufacturers' certified waste disposers (see ZDHR). They are intended for field installation using existing sink-mounting hardware.

These units are rated 150 V or less and are intended to convert primarily organic types of waste material to a form that can be accommodated by a soil pipe attached to household plumbing systems. These units are motor operated and are provided with overcurrent or overheating protective devices.

The performance and design of these units have been determined to comply with ANSI/ASSE 1008/AHAM FWD-2PR (1989), "Plumbing Requirements for Household Food Waste Disposer Units," when installed as intended with the appropriate sink-mounting hardware.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 430, "Waste Disposers."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**REPLACEMENT WASTE DISPOSER
FOR USE WITH [identification of specified product]
Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS, SINK MOUNTED (ZDII)**USE AND INSTALLATION**

This category covers waste disposers for household or commercial use which are intended to convert primarily organic types of waste material to a form that can be accommodated by the soil pipe attached to plumbing systems. These units are motor operated and are provided with overcurrent or overheating protective devices. These products are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code."

The performance and design of household food-waste disposers have been determined to comply with the latest edition of ANSI/ASSE 1008, "Performance Requirements for Plumbing Aspects of Residential Food Waste Disposer Units," which covers household food-waste disposers installed in a kitchen sink, supplied with water from the sink faucet, and discharged into the plumbing drainage system.

Commercial waste disposers having provisions for mounting to a 3-1/2 in. diameter sink flange or opening and to a 1-1/2 in. diameter or less trade size plumbing drain have also been determined to comply with ANSI/ASSE 1008.

RELATED PRODUCTS

For other types of waste disposers, see Waste Disposers, Pulper Type (ZDIB).

For replacement waste disposers, see Waste Disposers, Replacement Type, Household (ZDIF).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 430, "Waste Disposers."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

Waste Disposers, Sink Mounted (ZDII)—Continued

Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waste Disposer," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIND TURBINE GENERATING SYSTEMS (ZGAA)**INSTALLATION OF LIGHTNING PROTECTION SYSTEMS FOR WIND TURBINES (ZGBI)****GENERAL**

This category covers the installation of lightning protection systems for wind turbines to protect them from damage by lightning. The issuance of a UL Certificate is evidence that the installation of the lightning protection system (1) has been made by an installer that subscribes to UL's Follow-Up Service, (2) employs lightning protection assemblies and components subject to factory inspection service and bears the UL Mark, and (3) is subject to a field inspection program covering proper installation of the system. The wind turbine assemblies that incorporate lightning protection components are covered under Lightning Protection Assemblies for Wind Turbines (ZGBS).

RELATED PRODUCTS

See:

Lightning Conductors, Air Terminals and Fittings (OVTZ)
Lightning Protection System Installations (OWAY)
Lightning Protection Assemblies for Wind Turbines (ZGBS)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 780 (2010), "Installation of Lightning Protection Systems," or IEC 61400-24 (2011), "Wind Turbines - Part 24: Lightning Protection."

UL CERTIFICATE

The UL Certificate is the only method provided by UL to identify lightning protection systems covered under its Certificate and Follow-Up Service. Installations for which Certificates are issued are considered by UL to be compliant with the applicable requirements at the time of issuance. The Certificate is limited to the number of years for which it has been issued and must be renewed to remain in effect.

UL maintains a factory inspection service for counterchecking conductors, air terminals and fittings, and also a field inspection service for counterchecking installations.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LARGE WIND TURBINE GENERATING ASSEMBLIES, CONSTRUCTION ONLY (ZGBP)**USE AND INSTALLATION**

This category covers large wind turbine generating assemblies (WTGA) investigated for compliance of internal and external electrical hardware to applicable component standards, and interconnection of the electrical hardware to applicable standards or codes.

Large WTGA are defined as turbines with a rotor-swept area larger than 200 m² (16 m rotor diameter).

Large WTGA consist of various electrical hardware components and subassemblies constructed and interconnected in accordance with electrical safety requirements to create a complete wind turbine. These systems are most often assembled on-site in multiple sections.

The electrical equipment systems covered under this category are intended for installation in accordance with Article 705 of ANSI/NFPA 70, "National Electrical Code."

Large Wind Turbine Generating Assemblies, Construction Only (ZGBP)—Continued

Component converters and safety-related control systems may be suitable for this assembly construction category; as these component investigations vary in the type and level of testing to which they are subjected by the component standard, additional testing may be needed in the wind turbine system to address their performance. Systems covered under Large Wind Turbine Generating Systems (ZGAA) have undergone this system testing.

RELATED PRODUCTS

Small Wind Turbine Generating Systems (ZGEN)
Wind Turbine Inverters and Converters (ZGFA)
Wind Turbine Generating System Components (ZGFN2)
Static Inverters and Converters for Use in Independent Power Systems (QIKH)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 6140, "Outline of Investigation for Wind Turbine Generating Systems."

UL MARK

The Classification Mark of UL on the major subassemblies of the wind turbine is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LARGE WIND TURBINE GENERATING ASSEMBLY IN ACCORDANCE WITH UL SUBJECT 1640

+ SUBASSEMBLY

++ OF +++ TOTAL SUBASSEMBLIES

Control No.

+ Name of subassembly (e.g., NACELLE, BLADE, TOWER SECTION)

++, +++ Indicates the number of assemblies included in the complete wind turbine (e.g., 1 of 5, 2 of 5, 3 of 5)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHTNING PROTECTION ASSEMBLIES FOR WIND TURBINES (ZGBS)

GENERAL

This category covers lightning protection assemblies intended for installation as part of Installation of Lightning Protection Systems for Wind Turbines (ZGBI). These assemblies are intended to be part of an overall system that is built into wind turbines to protect them from damage caused by lightning.

RELATED PRODUCTS

Wind Turbine Generating System Components (ZGFN2)
Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH)

For manufacturers of Listed ground rods suitable for use in installations of lightning protection equipment, see Grounding and Bonding Equipment (KDER).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 780 (2011), "Installation of Lightning Protection Systems," or IEC 61400-24 (2010), "Wind Turbines - Part 24: Lightning Protection."

UL Subject 6140, "Outline of Investigation for Wind Turbine Generating Systems," references these standards for turbines that incorporate lightning protection.

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the

Lightning Protection Assemblies for Wind Turbines (ZGBS)—Continued

UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LIGHTNING PROTECTION * FOR WIND TURBINES IN ACCORDANCE WITH **

Control No.

* ASSEMBLY, BLADE, NACELLE, TOWER, or other appropriate product name as shown in the individual Classifications

** ANSI/NFPA 780 or IEC 61400-24

For multi-piece units, the Classification Mark appears on each outside enclosure section constituting a complete system eligible for Classification. The Classification Mark covers only the enclosure section to which it is affixed; it does not cover other enclosure sections included in the system. Each enclosure section of a Classified system is provided with a "Section ___ of ___" marking, where the second blank indicates the total number of enclosure sections contained in the Classified system and the first blank indicates the respective enclosure section number bearing the UL Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIND TURBINE SAFETY-RELATED CONTROL SYSTEM EQUIPMENT (ZGCP)

GENERAL

This category covers wind turbine safety-related control system equipment for large and small wind turbine generating systems (WTGS). Wind turbine safety-related control system equipment is intended for use with specific wind turbine generating systems.

The electrical equipment covered under this category is intended for installation in accordance with Article 705 of ANSI/NFPA 70, "National Electrical Code."

WTGS safety-related control system equipment is investigated to perform specific wind turbine control and protection functions to maintain the overall system within the manufacturer's specified operational limits. These control and protection functions are investigated with respect to risk of electric shock and fire, and electrical response time. The electrical subassemblies that address power transfer control and protection functions investigated under this category are intended to be coordinated with a mechanical and structural evaluation of the WTGS in accordance with standards such as IEC 61400 Set, "Wind Turbine Generating Systems," or "Guideline for the Certification of Wind Turbines" (published by Germanischer Lloyd WindEnergie GmbH).

The safety-related control system (SRCS), as defined in UL Subject 6140, "Outline of Investigation for Wind Turbine Generating Systems," embodies the "Control System" and "Protection System" functions defined in IEC 61400 and "Guideline for the Certification of Wind Turbines."

FIRMWARE VERSION AND CHECKSUM

Version Number — Identification number of the software elements that specifies the investigated software version and current release.

Checksum or Unique Identifier — A unique identifier stored in nonvolatile memory computed as a function of the critical and supervisory sections of the software.

WIND TURBINE DRIVE-TRAIN SYSTEMS AND EQUIPMENT (ZGDT)

USE AND INSTALLATION

This category covers wind turbine drive-train systems and equipment investigated with respect to risk of electric shock and fire. These assemblies are intended to be coordinated with a separate mechanical and structural investigation of the wind turbine generating system in accordance with standards such as IEC 61400-1, "Wind Turbine Generating Systems," or "Guideline for the Certification of Wind Turbines" (published by Germanischer Lloyd WindEnergie GmbH).

These drive-train systems and equipment may be suitable for use within Large Wind Turbine Generating Assemblies, Construction Only (ZGBP) based upon the drive-train ratings. Additional testing of the drive-train system and equipment may be necessary to determine its performance within the end-product turbine to establish certification under Large Wind Turbine Generating Systems (ZGEA).

The wind turbine drive train contains equipment and combinations of equipment such as gearboxes (with associated heaters, lubrication system and sensors), generators (with associated heating, lubrication system and sensors), blade-pitch systems, yaw motors (electrical), slip rings, or other rotating electrical components that transfer to power controls or communication between rotating or moving parts. This equipment is intended to be installed in compliance with the enclosure mounting, spacing and segregation requirements of the overall wind turbine.

LARGE WIND TURBINE GENERATING SYSTEMS (ZGEA)

GENERAL

This category covers large wind turbine generating systems (WTGS) investigated for risk of fire and shock, including safety-related control system electrical performance and grid interconnection performance.

Large WTGS are defined as wind turbines with a rotor-swept area larger than 200 m² (16 m rotor diameter). Large WTGS consist of various electrical hardware subassemblies and safety-related control systems constructed and interconnected in accordance with electrical safety requirements to create a complete wind turbine. These systems are typically assembled on-site in multiple sections.

Safety-related control system performance is defined as the electrical hardware and software operation of the controls and protection functions up to the electromechanical interface of the associated power and control circuits. The ability of the mechanical systems to perform control and protection functions has not been investigated.

Electric utility grid interconnection performance is investigated to limits defined by the manufacturer for synchronization, overvoltage, undervoltage, overfrequency, underfrequency, clearing times, reconnect time, power factor, DC injection, harmonic distortion, unintentional islanding, power range and low-voltage ride-through (if provided).

The electrical equipment systems covered under this category are intended for installation in accordance with Article 705 of ANSI/NFPA 70, "National Electrical Code."

FIRMWARE VERSION AND CHECKSUM

Firmware version and checksum are identified for all critical program-mable components. Verification and tracking are most often addressed within the individual certifications for Wind Turbine Inverters and Converters (ZGFA) and Wind Turbine Safety-related Control Systems (ZGCP).

Version Number — Identification number of the software elements that specifies the investigated software version and current release.

Checksum or Unique Identifier — A unique identifier stored in nonvola-tile memory computed as a function of the critical and supervisory sections of the software.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 6140, "Outline of Investigation for Wind Turbine Generating Systems."

UL MARK

The Classification Mark of UL on the major subassemblies of the wind turbine is the only method provided by UL to identify products manufac-tured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LARGE WIND TURBINE GENERATING SYSTEM IN ACCORDANCE WITH UL SUBJECT 6140

+ SUBASSEMBLY
++ OF +++ TOTAL SUBASSEMBLIES
Control No.

+ Name of subassembly (e.g., NACELLE, BLADE, BASE SECTION, TOWER SECTION)

++, +++ Indicates the number of assemblies included in the complete wind turbine (e.g., 1 of 5, 2 of 5, 3 of 5)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SMALL WIND TURBINE GENERATING SYSTEMS (ZGEN)

GENERAL

Small Wind Turbine Generating Systems (ZGEN)—Continued

This category covers small wind turbine generating systems (WTGS) investigated for risk of fire and shock, including safety-related control sys-tem electrical performance and utility (grid) interconnection performance for Utility Interactive models.

Small wind turbines are considered to be wind turbines where a user or service person cannot or is not intended to enter the turbine to operate it or perform maintenance.

Safety-related control system performance is defined as the electrical hard-ware and software operation of the controls and protection functions up to the electromechanical interface of the associated power and control circuits.

Wind turbines provided with an inverter or converter are classed as Util-ity Interactive, Stand-alone or Multimode. Utility Interactive devices operate in parallel with the utility grid. Stand-alone devices are intended to operate independent of the utility grid. Multimode devices can operate as both or either Stand-alone (utility independent) or Utility Interactive (grid-tie).

Electric utility grid interconnection performance is investigated to IEEE 1547, "IEEE Standard for Interconnecting Distributed Resources with Electric Power Systems."

Mounting means, support structures, wind turbine blades and/or rotors are investigated only to the extent that they include the necessary electrical components to comply with the applicable electrical safety standards.

These devices are intended for installation in accordance with Articles 694 and 705 of ANSI/NFPA 70, "National Electrical Code."

Some devices in this category are intended to be installed and operated with an external transformer. Such devices are provided with markings and instructions to indicate the type of transformer required.

These devices may require external output overcurrent protection, which is specified in product markings and installation instructions.

CODES

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIND TURBINE INVERTERS AND CONVERTERS (ZGFA)

GENERAL

This category covers permanently-connected inverters and converters intended for use in wind-generated electric power systems. Inverters are devices that change DC power to AC power. Converters are devices that accept AC or DC power input and convert it to another form of AC or DC power for direct utilization by a load or accumulation in an energy storage system (batteries, capacitors, etc.). Wind-power systems are defined as facilities that deliver wind-generated electric power to a load. Devices covered under this category are classed as Utility Interactive, Stand-alone or Multimode. Utility Interactive devices operate in parallel with the utility grid. Stand-alone devices are intended to operate independent of the utility grid. Multimode devices can operate as both or either Stand-alone (utility independent) or Utility Interactive devices.

These products may contain energy storage devices and associated charge controllers.

The electrical equipment systems covered under this category are intended for installation in accordance with Article 705 of ANSI/NFPA 70, "National Electrical Code."

Some devices in this category are intended to be installed and operated with an external transformer. Such devices are provided with markings and instructions to indicate the type of transformer required.

These devices may require external input and/or output overcurrent protection, which is specified in product markings and installation instructions.

When applicable, wind turbine converters may be identified as wind turbine safety-related controls systems to denote their additional Classification for wind turbine control and protection functions. For details on wind turbine safety-related control system functions, see Wind Turbine Safety-related Control System Equipment (ZGCP).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 6141, "Outline of Investigation for Wind Turbine Converters and Interconnection Systems Equipment."

UL Subject 6141 requires that all converters be investigated for both normal and abnormal conditions associated with the application (less electric utility "grid" interconnection protection). For electric-utility-connected con-

Wind Turbine Inverters and Converters (ZGFA)—Continued

verters this includes the investigation of the unit's ability to parallel two sources of power, operate during normal utility operating conditions, provide a minimum level of output power quality including DC injection, and operate safely during abnormal utility grid conditions defined by the manufacturer's specified product ratings.

UL Subject 6141 contains direct references to UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and IEEE 1547, "IEEE Standard for Interconnecting Distributed Resources with Electric Power Systems," to address the most common distribution level utility grid interconnection protection requirements. UL Subject 6141 also allows for the use of IEC 61400-21, "Wind Turbines - Part 21: Measurement and Assessment of Power Quality Characteristics of Grid Connected Wind Turbines" (2nd Edition), to investigate converters intended to provide electric utility grid support via low-voltage ride-through (LVRT).

Products that have not been investigated for electric utility "grid" interconnection protection are marked to indicate that the electric utility grid interconnection protection functions have not been investigated and need to be addressed at the end installation with the local utility Authority Having Jurisdiction per local codes and standards. This will often require the installation of additional electric utility interconnection protection equipment and field testing per the local utility interconnection requirements.

ADJUNCT SERVICE

UL provides a service for the Classification of wind turbine inverters and converters that not only meet the requirements of UL Subject 6141 but also have been investigated for wind turbine safety-related control system functions in accordance with UL Subject 6140, "Outline of Investigation for Wind Turbine Generating Systems."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name. The product name is the combination of the specific DG source and the type of inverter or converter product. Acceptable product designations include:

- "Wind Turbine Utility Interactive Inverter"
- "Wind Turbine Stand-alone Converter"
- "Wind Turbine Multimode Inverter"

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with UL Subject 6140. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the statement "ALSO CLASSIFIED IN ACCORDANCE WITH UL SUBJECT 6140."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIND TURBINE TOWER ASSEMBLIES (ZGTA)

USE AND INSTALLATION

This category covers wind turbine tower assemblies investigated with respect to risk of electric shock and fire. These assemblies are intended to be coordinated with a separate mechanical and structural investigation of the wind turbine generating system in accordance with standards such as IEC 61400-1, "Wind Turbine Generating Systems," or "Guideline for the Certification of Wind Turbines" (published by Germanischer Lloyd WindEnergie GmbH).

These tower assemblies may be suitable for use within Large Wind Turbine Generating Assemblies, Construction Only (ZGBP) based upon the drive-train ratings. Additional testing of the drive-train system and equipment may be necessary to determine its performance within the end-product turbine to establish certification under Large Wind Turbine Generating Systems (ZGEA).

The wind turbine tower contains equipment and combinations of equipment such as lights, service power outlets, communication devices, cable trays, wireways, busways, etc. This equipment is intended to be installed in compliance with the installation, mounting, spacing and segregation requirements of the overall wind turbine as specified by the manufacturer.

Wind Turbine Tower Assemblies (ZGTA)—Continued

Static Inverters, Converters and Accessories for Use in Independent Power Systems (QIKH)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 6140, "Outline of Investigation for Wind Turbine Generating Systems."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**WIND TURBINE TOWER ASSEMBLY
AS TO ELECTRIC SHOCK AND FIRE HAZARDS ONLY
Control No.**

For multi-piece units, the Classification Mark appears on each tower section constituting a complete system eligible for Classification. The Classification Mark covers only the tower section to which it is affixed; it does not cover other tower sections included in the system. Each tower section of a Classified system is provided with a "Section ____ of ____" marking, where the second blank indicates the total number of tower sections contained in the Classified tower system and the first blank indicates the respective tower section number bearing the UL Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**WIND TURBINE GENERATING SYSTEM
SUBASSEMBLIES (ZGZJ)**

USE

This category covers subassemblies, such as blades, towers, generators, gear boxes, control panels and yaw drives, intended for field installation for use only with specific wind turbine generating systems.

PRODUCT MARKINGS

The correct combination of wind turbine generating systems and subassemblies is indicated by markings on or with the subassembly and/or the wind turbine generating system.

RELATED PRODUCTS

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is investigated to UL 1741, "Inverters, Converters, and Controllers for Use in Independent Power Systems," and covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are Utility Interactive, Stand-alone, Multi-mode inverters or converters, and Interconnection System Equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is IEC 61400-1, "Wind Turbines – Part 1: Design Requirements," or IEC 61400-2, "Wind Turbine Generator Systems – Part 2: Safety of Small Wind Turbines," or other applicable standard(s).

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIND TURBINE TRAY CABLE (ZGZN)**GENERAL**

This category covers wind turbine tray cable intended for use in accordance with Article 336 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of one or more pairs of thermocouple extension wire or two or more insulated conductors, with or without one or more grounding conductors, with or without one or more optical fiber members and covered with a nonmetallic jacket. A single grounding conductor may be insulated or bare and may be sectioned. Any additional grounding conductors are fully insulated and have a distinctive surface marking. The cable is rated 90 – 200°C dry and optionally rated 90°C wet, 1000 V.

The cable is certified in conductor sizes 18 AWG to 1000 kcmil copper, or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. Conductor sizes within a cable may be mixed. Thermocouple extension conductors are certified in sizes 24 to 12 AWG.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surfaced printed "AL (CU-CLAD)" or "Cu-clad AL."

Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "Compact Copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors bear the marking "Terminate with connectors identified for use with compact-stranded copper conductors." For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The dry and wet temperature rating(s) of the cable is marked on the surface of the cable.

Cable investigated for use where exposed to direct rays of the sun is marked "Sunlight Resistant."

Cable consisting of thermocouple extension wire is surface marked "THCPL EXTN," "For thermocouple extension use only" or "Thermocouple extension wire only."

Cable surface marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is surface marked "Oil Resistant II" (or "Oil Res II").

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "-LS."

Cable containing optical fiber members is identified with the suffix "-OF."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2277, "Outline of Investigation for Flexible Motor Supply Cable and Wind Turbine Tray Cable."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wind Turbine Tray Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING MACHINES (ZGLZ)**USE**

This category covers portable and stationary transformer-type arc-welding equipment rated 600 V or less. This equipment is intended to be installed in accordance with Article 630 of ANSI/NFPA 70, "National Electrical Code."

Some arc-welding machines have a so-called "welding-range" involving an excess secondary-current output capacity beyond that indicated by the

marked secondary rating on the machines. This excess capacity (generally not more than 150% of the marked output capacity) is usually supplied by means of one or more secondary taps in addition to the tap or taps intended for normal output current; and the higher currents thus available are intended to provide for heavier welding work, including the use of larger size electrodes. This excess capacity is somewhat analogous to the inherent overload capacity of motors and transformers, and it is not covered at present by any definite requirements and is not investigated. However, the abuse of this excess current capacity — the overloading of a welding machine, except for relatively short periods of time — may be hazardous and should receive careful consideration by all those concerned.

RELATED PRODUCTS

See Motor Generator Sets (PQYW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 551, "Transformer-Type Arc-Welding Machines".

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Machine," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING MACHINE ACCESSORIES (ZGPU)**USE**

This category covers products designed to be used with certified arc-welding machines, such as wire feeders and vacuum units for welding-smoke removal. This category also covers arc-cutting equipment, such as arc-cutting power supplies, for industrial applications. These products are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Welding Machines (ZGLZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 551, "Transformer Type Arc-Welding Machines."

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Machine Accessory;" or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WHEELCHAIR LIFTS AND STAIRWAY CHAIRLIFTS (ZGUW)**USE**

This category covers permanently connected vertical and inclined wheelchair platform lifts and inclined stairway chairlifts for use by the physically disabled in both commercial and private residence locations.

This category also covers indoor, cord-connected, inclined stairway chairlifts for use by the physically disabled in private residence locations.

This category also covers outdoor, cord-connected, vertical platform lifts for use by the physically disabled in commercial locations.

Cord-connected lifts are intended to be installed as stationary devices.

This category does not cover portable lifts.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic standards used to investigate products in this category are ASME A18.1 (1999), "Safety Code for Platform Lifts and Stairway Chair-

lifts," ASME A17.5 (1996), "Elevator and Escalator Electrical Equipment," and other UL requirements appropriate for the type of equipment involved.

UL MARK

The Listing Mark of UL on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wheelchair Lift" or "Stairway Chairlift," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE (ZGZX)

This category covers insulated wire intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code." Construction details are specified in the individual wire categories.

BUS DROP CABLE (ZIMX)**GENERAL**

This category covers multiple-conductor bus drop cable as described in Sec. 368.56(B) of ANSI/NFPA 70, "National Electrical Code" (NEC), and intended for use in accordance with Article 368 and other applicable parts of the NEC. The cable consists of three or four Type TW, THW, THHN and THWN, or XHHW, RHW and RHH conductors cabled together with a grounding conductor with an overall jacket. The cable is rated 600 V, 60, 75, 90 or 105°C.

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C.

Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "Water Resistant" is suitable for immersion in water.

Cable marked "Outdoor" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 509, "Outline of Investigation for Bus Drop Cable."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Bus Drop Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FESTOON CABLE (ZIFP)**GENERAL**

This category covers single- and multiple-conductor festoon cable intended for use and installation in accordance with Article 610 of ANSI/NFPA 70, "National Electrical Code." The cable consists of one or more insulated conductors cabled together with an overall jacket. The cable is rated 600 V, 60, 75, 90 or 105°C.

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C.

Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "Outdoor" or "Outdoor Use" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2273, "Outline of Investigation for Festoon Cables."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products

WIRE (ZGZX)

Festoon Cable (ZIPF)—Continued

manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Festoon Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIXTURE WIRE (ZIPR)

GENERAL

This category covers fixture wire for use in accordance with Article 402 of ANSI/NFPA 70, "National Electrical Code."

All conductors are copper; however, fixture wire having a temperature rating higher than 90°C may employ nickel.

Thermoplastic compounds tend to stiffen at temperatures below -10°C (14°F) and care should be taken in handling at such temperatures.

Gasoline-resistant wire has been tested at 23°C when immersed in gasoline. It is considered inherently resistant to gasoline vapors within the limits of the temperature rating of the wire type.

Gasoline-resistant TFN or TFFN — Indicates a TFN and TFFN conductor with a jacket of extruded nylon suitable for exposure to mineral oil, and to liquid gasoline and gasoline vapors at ordinary ambient temperature. It is identified by tag marking and by printing on the insulation or nylon jacket with the designation "Type TFN (TFFN) Gasoline and Oil Resistant I" if suitable for exposure to mineral oil at 60°C, or "Type TFFN (TFFN) Gasoline and Oil Resistant II" if suitable for exposure to mineral oil at 75°C.

Wire that complies with a special Vertical Flame Test is marked "VW-1." Fixture wire is designated as follows:

60°C maximum operating temperature	Thermoplastic-insulated wire: 600 V, 18-16 AWG: Types TF, TFF
75°C maximum operating temperature	Thermoset-insulated, heat-resistant wire: 600 V, 18-16 AWG: Types RFH-2, FFH-2
90°C maximum operating temperature	Thermoplastic-insulated wire: 600 V, 18-16 AWG: Types TFN, TFFN Thermoset-insulated, heat-resistant wire: 600 V, 18-16 AWG: Types RFHH-2, RFHH-3
150°C maximum operating temperature	Silicone rubber-insulated wire: 300 V, 18 AWG: Type SFF-1 600 V, 18-14 AWG: Type SFF-2 Fluorinated ethylene propylene-insulated wire: 600 V, 18-14 AWG: Types PFF, PGFF Polytetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type PTFE Cross-linked polyolefin-insulated wire: 300 V, 18-10 AWG: Types XF, XFF Ethylene tetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Types ZF, ZFF
200°C maximum operating temperature	Silicone rubber-insulated wire: 300 V, 18 AWG: Type SF-1 600 V, 18-14 AWG: Type SF-2 Fluorinated ethylene propylene-insulated wire: 600 V, 18-14 AWG: Types PF, PGF Aromatic polyimide tape insulated wire: 300 V, 18-10 AWG: Types KF-1, KFF-1 600 V, 18-10 AWG: Types KF-2, KFF-2 Ethylene tetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type ZHF
250°C maximum operating temperature	Polytetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type PTF

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 66, "Fixture Wire."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the

WIRE (ZGZX)

Fixture Wire (ZIPR)—Continued

Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fixture Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE CORD (ZJ CZ)

GENERAL

This category covers flexible cord constructed and certified for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). All conductors are stranded copper, except for tinsel cord.

Voltage Ratings

"Clock Cord" is rated 125 V.

Types C (14 - 10 AWG), PD (14 - 10 AWG), E (12 - 2 AWG), ETT (12 - 2 AWG), ETP (12 - 2 AWG), EO (12 - 2 AWG), S, SO, SOO, SOW, SOOW, ST, STO, STOO, STW, STOW, STOOW, SE, SEO, SEOO, SEW, SEOW and SEOOW are rated 600 V.

Types C (18 - 16 AWG), PD (18 - 16 AWG) "Shaver cord," E (20 - 12 AWG), ETT (20 - 12 AWG), ETP (20 - 12 AWG), EO (20 - 12 AWG), SV, SVO, SVOO, SVE, SVEO, SVEOO, SVT, SVTO, SVTOO, SJ, SJO, SJOO, SJOW, SJOOW, SJE, SJEI, SJEIO, SJEIOO, SJEIOW, SJEIOOW, SJT, SJTO, SJTOO, SJTOW, SJTOOW, SPT-1, SPT-1W, SPT-2, SPT-2W, SPT-3, SPE-1, SPE-2, SPE-3, SP-1, SP-2, SP-3, NISP-1, NISP-2, NISP-1, NISP-2, NISPE-1, NISPE-2, XTW, CXTW, SRD, SRDE, SRDT, TPT, TST, HPD, HPN, HSI, HSJO, HSJOW, HSJOO and HSJOOW are rated 300 V.

Types E, EO, ETT and ETP in 12 AWG are rated 300 or 600 V, depending on insulation thickness.

Conductor Sizes

The conductor size ranges are as specified in the NEC with the following exceptions:

Types HSJOW and HSJOOW have the same conductor size range as HSJO and HSJOO, respectively.

Types XTW, 22 - 18 AWG; CXTW, 22 - 18 AWG; "Clock Cord," 20 AWG; and "Shaver Cord," 27 and 20 AWG.

Temperature Ratings

Types C, PD, SP-1, SP-2, SP-3, NISP-1, NISP-2, SRD, E, EO, ETP, ETT, TPT, TST and "Shaver Cord" are rated 60°C.

Types XTW and CXTW are rated 105°C.

Types SPE-1, SPE-2, SPE-3, SVE, SVEO, SVEOO, SJE, SJEI, SJEIO, SJEIOW, SJEIOOW, SE, SEO, SEOO, SEW, SEOW, SEOOW, NISPE-1, NISPE-2, SRDE, HPD, HPN, HSI, HSJO, HSJOW, HSJOO and HSJOOW are rated 90 or 105°C.

"Clock Cord" is rated 60 or 105°C.

Types SV, SVO and SVOO are rated 60, 75 or 90°C.

Types S, SO, SOO, SOW, SOOW, SJ, SJO, SJOO, SJOW, SJOOW, SVT, SVTO, SVTOO, SJT, SJTO, SJTOO, SJTW, SJTOW, SJTOOW, ST, STO, STOO, STW, STOW, STOOW, NISP-1, NISP-2, SPT-1, SPT-1W, SPT-2, SPT-2W, SPT-3, and SRDT are rated 60, 75, 90 or 105°C.

Cord Types or Characteristics Not Covered by the NEC

Type XTW is a parallel assembly of two to six conductors intended for use in decorative-lighting equipment.

Type CXTW is a single conductor or twisted assembly of two conductors intended for use in decorative-lighting equipment.

"Clock Cord," which has no Type designation, is similar to Type XTW except for conductor size.

"Shaver Cord," which has no Type designation, is similar to Type TPT except for the conductor configuration.

Types HSJOW and HSJOOW are outdoor-use versions of types HSJO and HSJOO, respectively.

Types SPT-1W and SPT-2W may contain three conductors.

Types S, SO, SOO, SOW, SOOW, SJ, SJO, SJOO, SJOW, SJOOW, SVT, SVTO, SVTOO, SJT, SJTO, SJTOO, SJTW, SJTOW, SJTOOW, ST, STO, STOO, STW, STOW, STOOW, NISP-1, NISP-2, SPT-1, SPT-1W, SPT-2, SPT-2W, SPT-3, SRDT, SPE-1, SPE-2, SPE-3, SVE, SVEO, SVEOO, SJE, SJEI, SJEIO, SJEIOW, SJEIOOW, SE, SEO, SEOO, SEW, SEOW, SEOOW, NISPE-1, NISPE-2, SRDE, HPD, HPN, HSI, HSJO, HSJOW, HSJOO, HSJOOW, SP-1, SP-2, SP-3, NISP-1, NISP-2, SRD, SV, SVO and SVOO, 18 - 14 AWG may be additionally suffixed "-R."

Compatibility

Due to possible incompatibility, TPE material of a styrenic type is, in some cases, not suitable for use in cords where direct contact with PVC can occur. A separator is one acceptable means of avoiding direct contact. Other combinations of materials that could be incompatible, if any, are as yet undetected.

PRODUCT MARKINGS

PRODUCT CATEGORIES BY CATEGORY CODE

Flexible Cord (ZICZ)–Continued

All cord is surface printed with “UL” in a circle or parentheses, the type designation, temperature rating, voltage rating, flame rating, size and number of conductors.

Cord marked “For Mobile Home Use,” “For Recreational Vehicle Use” or “For Mobile Home and Recreational Vehicle Use,” followed by the current rating in amps, indicates suitability for use in mobile homes or recreational vehicles.

“W” indicates suitability for use outdoors and for immersion in water. The low-temperature rating for this cord is -40°C unless otherwise marked on the cord with optional ratings of -50, -60 or -70°C. The low-temperature ratings are determined by means of a bend test (not a suppleness test) at the given temperature. The cord may be additionally marked “Water Resistant.”

“VW-1” indicates that the cord complies with a Vertical Flame Test. Cord that has been investigated for leakage currents between the circuit conductor and the grounding conductor, and between the circuit conductor and the outer surface of the jacket, may have the values so marked on the cable jacket.

Cord investigated for mobile home use, recreational vehicle use, or mobile home and recreational vehicle use, or cord investigated for leakage current between conductors, may have the ampacity of the cord marked on the cord. In all other cases, the ampacity of the cord is not marked on the surface of the cord.

Designated cord types found in the NEC rated 300 or 600 V and 18 – 14 AWG may be suffixed by “-R.” This suffix indicates that the cord complies with additional mechanical abuse testing required by some appliance standards, including cord-connected fans and heaters.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 62, “Flexible Cords and Cables.”

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flexible Cord.”

The Listing Mark for this category requires the use of a holographic label.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE MOTOR SUPPLY CABLE (ZJFH)**GENERAL**

This category covers flexible motor supply cable (flexible FVD servo cable) intended for use with variable frequency drives subjected to nonlinear power distortions in accordance with the applicable parts of ANSI/NFPA 70, “National Electrical Code.” The cable consists of two or more insulated conductors, with or without one or more grounding conductors, and covered with a nonmetallic jacket. A single grounding conductor may be insulated or bare and may be sectioned. Any additional grounding conductors are fully insulated and have a distinctive surface marking. The cable is rated 90°C, 1000 or 2000 V.

The cable is certified as a single conductor in sizes 22 AWG to 500 kcmil copper, and as a multiple-conductor cable in sizes 22 to 4/0 AWG. Conductor sizes within a cable may be mixed. Thermocouple extension conductors are certified in sizes 24 to 12 AWG.

PRODUCT MARKINGS

The temperature rating of the cable, 90°C, is marked on the surface of the cable.

Cable investigated for use where exposed to direct rays of the sun is marked “Sunlight Resistant.”

Cable consisting of thermocouple extension wire is surface marked “THCPL EXTN,” “For thermocouple extension use only” or “Thermocouple extension wire only.”

Cable surface marked “Oil Resistant I” (or “Oil Res I”) is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is surface marked “Oil Resistant II” (or “Oil Res II”).

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, “Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables,” is surface marked with the suffix “-LS.”

Cable containing optical fiber members is identified with the suffix “-OF.”

ADDITIONAL INFORMATION**Flexible Motor Supply Cable (ZJFH)–Continued**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2277, “Outline of Investigation for Flexible Motor Supply Cable and Wind Turbine Tray Cable.”

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Flexible Motor Supply Cable.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS-TUBE-SIGN CABLE (ZJQX)**USE AND INSTALLATION**

This category covers gas-tube-sign cable certified as single conductor Type GTO-5, GTO-10 or GTO-15 rated 105°C – 250°C (221°F – 482°F) in sizes 18 – 10 AWG copper. The voltage rating of the cable in sizes 18 – 15 AWG is not intended to exceed 10,000 V. The voltage rating of the cable in sizes 14 – 10 AWG is not intended to be less than 10,001 V. This cable is intended for use with gas-tube systems for signs, outline lighting, and interior lighting in accordance with ANSI/NFPA 70, “National Electrical Code,” and ANSI/UL 48, “Electric Signs.”

PRODUCT MARKINGS

The cable is marked with a means of identifying the organization responsible for the manufacture of the cable, maximum voltage for which it is rated (5000 V, 10,000 V or 15,000 V), the maximum temperature and the AWG size.

Cable that complies with the requirements for GTO cable employing an integral sleeve is surface marked “Integral Sleeve.”

ADDITIONAL INFORMATION

For conductor terminal information and additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 814, “Gas-Tube-Sign Cable.”

GTO cable identified and marked “Integral Sleeve” used in enclosure assemblies with other neon sign components has also been investigated to ANSI/UL 879, “Electric Sign Components.”

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” and the product name “Gas-Tube-Sign Cable.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

IRRIGATION FEEDER, CONTROL AND SIGNAL CABLE (ZJVK)**USE**

This category covers irrigation feeder, control and signal cable rated 300 or 600 V, 60 or 75°C. The insulated-conductor sizes are 18 AWG – 250 kcmil, solid or stranded copper. This cable is intended for direct burial and is used to:

- Supply power to irrigation machines (feeder cable),
- Send power and/or signals to irrigation machines (control cable), and/or
- Supply guidance to irrigation machines (signal cable).

This cable is not intended for indoor use or for any existing uses covered by ANSI/NFPA 70, “National Electrical Code.”

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Irrigation Feeder, Control and Signal Cable (ZJVK)—Continued

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2571, "Outline of Investigation for Irrigation Feeder, Control, and Signal Cables."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Irrigation Feeder Cable," "Irrigation Control Cable" or "Irrigation Signal Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MACHINE-TOOL WIRE (ZKHZ)**GENERAL**

This category covers machine-tool wire and cable, which is all-thermoplastic Type MTW 600 V wire and cable for use as specified in ANSI/NFPA 70, "National Electrical Code," and NFPA 79, "Electrical Standard for Industrial Machinery." The finished wire or cable is flame retardant and suitable for use at 90°C (194°F) and lower temperatures in dry locations, and at 60°C (140°F) and lower temperatures where exposed to moisture, oil or coolants, that is, to cutting oils and the like.

The single-conductor constructions are:

- Construction A — All PVC-insulated
- Construction B — PVC-insulated with a nylon jacket

Both constructions are labeled in sizes 22 AWG to 1000 kcmil inclusive, stranded copper.

The multiple-conductor constructions consist of assemblies of these single-conductor constructions enclosed by a PVC jacket.

Single- and multiple-conductor wire and cable employing 16-10 AWG conductors having the stranding for flexing service are surface marked "flexing" or "Class K." This marking is optional for smaller conductors intended for flexing service.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1063, "Machine-Tool Wires and Cables."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Machine Tool Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PENDANT CABLE (ZKKA)**USE**

This category covers multiple-conductor cable intended for use indoors and outdoors as vertical-drop cable from a crane or hoist down to a pendant push-button station, or as a control cable in a crane and hoist system in accordance with Article 610 of ANSI/NFPA 70, "National Electrical Code." The wire is rated 300 or 600 V, and 60, 75, 90 or 105°C.

PRODUCT MARKINGS

The cable is marked with the Listee's name, trade name or file number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2562, "Outline of Investigation for Pendant Cable."

UL MARK

The Listing Mark of UL on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is

Pendant Cable (ZKKA)—Continued

the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pendant Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC WIRE (ZKLA)**GENERAL**

This category covers single-conductor, insulated and integrally or nonintegrally jacketed, sunlight-resistant photovoltaic (PV) wire intended for interconnection wiring of grounded and ungrounded PV power systems as described in Section 690.31(A) and other applicable parts of ANSI/NFPA 70, "National Electrical Code."

PV wire is rated 600, 1000 or 2000 V, and is suitable for ac and dc systems. This wire is rated 90, 105, 125 or 150°C dry and 90°C wet. PV wire employs 12 AWG – 2000 kcmil stranded aluminum or copper-clad aluminum, or 18 AWG – 2000 kcmil stranded copper conductors.

PRODUCT MARKINGS

PV wire is marked on the outer surface of the insulation with the manufacturer's identification, the words "Photovoltaic Wire" (or "PV Wire"), voltage rating, conductor size, dry and wet temperature ratings, the words "Sunlight Resistant" (or "SUN RES"), nominal outside diameter, and date code (if not marked on the tag). PV wire having aluminum conductors is marked "AL," with or without "ACM." PV wire having copper-clad conductors is marked "ALUMINUM (COPPER-CLAD)" (or "AL (CU-CLAD)") or "COPPER-CLAD ALUMINUM" (or "CU-CLAD AL"). PV wire complying with the VW-1 flame test is marked "VW-1." PV wire complying with a cold impact test is marked "-40 C." PV wire may also optionally be marked "Direct Burial" (or "Dir Bur"), or "for direct burial" if it complies with crush and impact tests.

Each package of PV wire is tagged or marked with the manufacturer's identification, the words "Photovoltaic Wire" (or "PV Wire"), voltage rating, conductor size, dry and wet temperature ratings, "Sunlight Resistant" (or "SUN RES"), and date code (if not marked on the wire). If the PV wire contains aluminum conductors the tag is also marked "Aluminum" (or "AL"), or the markings are overprinted with the words "aluminum conductors," with the additional marking "ACM" being optional. PV wire having copper-clad conductors has a tag marking of "ALUMINUM (COPPER-CLAD)" (or "AL (CU-CLAD)") or "COPPER-CLAD ALUMINUM" (or "CU-CLAD AL") and the following statements:

1. "Copper-clad aluminum shall be used only with equipment marked to indicate that it is for use with aluminum conductors. Terminate copper-clad aluminum with pressure wire connectors marked AL-CU or CC-CU."
2. "Where physical contact between any combination of copper-clad aluminum, copper, and aluminum of a type marked for such intermixed use and the connection shall be limited to dry locations only."

PV wire complying with the VW-1 flame test is marked "VW-1" on the tag. PV wire complying with a cold impact test is marked "-40 C" on the tag. PV wire may also optionally be marked "Direct Burial" (or "Dir Bur"), or "for direct burial" if it complies with crush and impact tests.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 4703, "Outline of Investigation for Photovoltaic Wire."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESSED WIRE (ZKLU)

GENERAL

This category covers Listed wire, flexible cord and cable, and Classified cable that has been subjected to processing subsequent to Labeling and identified as either processed wire or processed wire - respooled.

Listed wire, flexible cord and cable identified as "Listed Processed Wire" has been cut into certain lengths from which the insulation may be stripped from one or both ends. The stripped ends may be soldered or tinned and may have simple terminals of the eyelet, ring, open spade or quick-connect type attached by crimping, soldering or welding.

These lengths may be packaged for further processing. Single lengths of Listed processed wire and cable may be paralleled with other insulated wire and cable and may be held together by an open binder.

Products identified as "Listed Processed Wire - Respooled" are single, continuous lengths of Listed wire, flexible cord or cable cut from a longer length and coiled or placed on a spool or reel.

Products identified as "Classified Processed Wire" are Classified cable that has been cut into certain lengths from which the insulation may be stripped from one or both ends. These lengths may be packaged for further processing. Single lengths of Classified processed wire may be paralleled with other insulated cable and may be held together by an open binder.

Products identified as "Classified Processed Wire - Respooled" are single, continuous lengths of Classified cable cut from a long length and coiled or placed on a spool or reel.

The tag markings from the wire spooler reel (e.g., voltage, temperature, insulation thickness, usage) are provided on the processed wire tag attached to the product.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 62, "Flexible Cord and Fixture Wire," ANSI/UL 66, "Fixture Wire," ANSI/UL 83, "Thermoplastic-Insulated Wires and Cables," or ANSI/UL 44, "Thermoset-Insulated Wires and Cables," and ANSI/UL 486A-486B, "Wire Connectors," or ANSI/UL 486C, "Splicing Wire Connectors."

UL MARK

The Listing or Classification Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing or Classification and Follow-Up Service. The Listing or Classification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED" or "CLASSIFIED" respectively, a control number, and the product name "Processed Wire" or "Processed Wire - Respooled."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECREATIONAL VEHICLE CABLE, LOW VOLTAGE (ZKRU)

GENERAL

This category covers single-conductor, multi-conductor parallel and jacketed flat, parallel or round multiple-conductor recreational vehicle cable rated 90°C or higher, intended for use in low-voltage circuits as described in Article 551 and other applicable parts of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C. Cable marked "Outdoor" or "Outdoor Use" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2276, "Outline of Investigation for Recreational Vehicle Cable."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Recreational Vehicle Cable, Low Voltage."

Recreational Vehicle Cable, Low Voltage (ZKRU)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELECOMMUNICATION CENTRAL OFFICE POWER, BATTERY AND DISTRIBUTION CABLE (ZKSB)

USE

This category covers one- and two-conductor telecommunication central office power, battery and distribution cable for use in telecommunication central office power plants. The cable is rated 75, 90 or 105°C dry, optionally 60, 75 or 90°C wet, and 600, 1000 or 2000 V.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2731, "Outline of Investigation for Telecommunication Central Office Power, Battery, and Distribution Cables."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telecommunication Central Office Power, Battery and Distribution Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONE SERVICE DROP WIRE (ZKSG)

USE

This category covers single-pair and multiple-pair telephone drop wire intended for use as overhead conductors that extend telephone circuits (1) from the last utility pole or other outdoor support to the protector(s) within the building or other structure served, and (2) between buildings or other structures on the premises served. This wire is intended for use in accordance with Article 800 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

The wire is marked with the Listee's name, trade name or file number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 523, "Outline of Investigation for Telephone Service Drop Wire."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Service Drop Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMOSET-INSULATED WIRE (ZKST)

GENERAL

This category covers thermoset-insulated wire and cable (tabulated below) which is flame retardant and rated 600 V, except for Types RHH, RHW and RHW-2 which may be rated 2000 V. The voltage rating is marked on the outer surface of the wire or cable.

PRODUCT MARKINGS

Thermoset-insulated Wire (ZKST)—Continued

RHW — Indicates a single conductor having a thermoset insulation, with or without a nonmetallic covering, rated 75°C dry, 75°C wet.

RHW-2 — Indicates a single conductor with the same description as Type RHW, except that it is rated 90°C dry, 90°C wet.

RHH — Indicates a single conductor with the same description as Type RHW, except that it is rated 90°C dry only.

XHH — Indicates a single conductor having a cross-linked synthetic polymer insulation with no overall covering provided, rated 90°C dry.

XHHW — Indicates a single conductor with the same description as Type XHH, except that it is rated 90°C dry, 75°C wet.

XHHW-2 — Indicates a single conductor with the same description as Type XHH, except that it is rated 90°C dry, 90°C wet.

SA — Indicates a single conductor having thermosetting silicone rubber insulation and a nonmetallic covering rated 90°C dry, general use, 200°C dry, special applications.

SIS — Indicates a single conductor having thermosetting insulation with no overall covering provided rated 90°C dry, for switchboard wiring only.

D — Used as a suffix indicating a twin wire having two insulated conductors laid parallel under an outer nonmetallic covering.

M — Used as a suffix indicating a cable having two or more insulated single conductors twisted together under an outer nonmetallic covering.

This wire, in sizes mentioned below, may employ copper, aluminum, or copper-clad aluminum conductors. Wire with copper-clad aluminum conductors is surface printed "Cu-Clad Al" or "AL (CU-CLAD)." Wire with aluminum conductors is surface printed "AL."

In addition to the required AWG or kcmil size, the metric equivalent may be marked on the wire, e.g. "6 AWG (13.3 MM²)" or "13.3 MM² (6 AWG)."

Types RHH, RHW, RHW-2, XHH, XHHW, XHHW-2 and SA are certified in sizes 14 AWG through 2000 kcmil copper, and 12 AWG through 2000 kcmil aluminum or copper-clad aluminum. Type SIS is certified in sizes 14 through 4/0 AWG copper, and 12 through 4/0 AWG aluminum or copper-clad aluminum.

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Wire bearing multiple type designations is suitable for the temperature associated with each use. For example, a wire marked "RHH or RHW" is suitable for 90°C in dry locations, and 75°C in wet locations.

Wire marked "GR I" or "GR II" has been tested at 23°C when immersed in gasoline and in oil at 60°C and 75°C, respectively. Wire marked "PR I" or "PR II" has been tested for immersion in oil at 60°C and 75°C, respectively.

Wire and cable marked "CT" complies with a Vertical-Tray Flame Test. Wire and cable marked "SR" complies with an artificial weathering test. The "CT" marking, with or without the "SR" marking, pertains to single conductor sizes 4 through 1 AWG for grounding conductors only, single conductor sizes 1/0 AWG and larger, and all sizes of multiconductor Types RHH, RHW, RHW-2, XHH, XHHW and XHHW-2.

Wire marked "VW-1" complies with a Vertical Flame Test; all others comply with a Horizontal Flame Test.

Wire that complies with the Limited Smoke Test requirements specified in ANSI/UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked "ST1."

Wire and cable marked "-40 C" complies with a cold impact test conducted at that temperature. This does not necessarily mean that the cable can be easily installed at that temperature. Different installation conditions and configurations require that care be taken when installing cable at low temperatures.

Submersible Water Pump Cable — Indicates multiconductor cable in which two, three or four Type RHW, RHW-2, XHHW or XHHW-2 conductors are provided in a flat or twisted assembly. The cable is certified in sizes from 14 AWG through 500 kcmil copper, and from 12 AWG through 500 kcmil aluminum or copper-clad aluminum. The cable is tag marked, "For use within the well casing for wiring deep-well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The surface of the wire may also be marked "Pump Cable." The cable has not been investigated for direct burial in the earth unless the single conductors carry an additional "Type USE" or "Type USE-2" marking.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 44, "Thermoset-Insulated Wires and Cables."

UL MARK

Thermoset-insulated Wire (ZKST)—Continued

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Thermoset-insulated wire that contains copper or copper-clad aluminum conductors has the product name "Insulated Wire"; thermoset-insulated wire that contains aluminum conductors has the product name "Insulated Aluminum Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMOPLASTIC-INSULATED WIRE (ZLGR)**USE**

This category covers thermoplastic-insulated wire for use in accordance with Article 310 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT TYPES

Thermoplastic-insulated wire is rated 600 V and is designated as follows:

TW — Indicates a single conductor having flame-retardant, moisture-resistant thermoplastic insulation. The wire is rated 60°C wet or dry.

THHN — Indicates a single conductor having flame-retardant and heat-resistant thermoplastic insulation with a jacket of extruded nylon or equivalent material. The wire is rated 90°C dry only.

THW — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation. The wire is rated 75°C wet or dry.

THW-2 — Same as THW except that the wire is rated 90°C wet or dry.

THHW — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation. The wire is rated 90°C dry and 75°C wet.

THWN — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation with a jacket of extruded nylon or equivalent material. The wire is rated 75°C wet or dry. THWN wire suitable for exposure to mineral oil and to liquid gasoline and gasoline vapors at ordinary ambient temperature is marked "Gasoline and Oil Resistant I" if suitable for exposure to mineral oil at 60°C, or "Gasoline and Oil Resistant II" if the compound is suitable for exposure to mineral oil at 75°C. Gasoline resistant wire has been tested at 23°C when immersed in gasoline. It is considered inherently resistant to gasoline vapors within the limits of the temperature rating.

THWN-2 — Same as THWN except that the wire is rated 90°C wet or dry.

FEP — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (fluorinated ethylene propylene) insulation. Type FEP wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower temperatures for special applications.

FEPB — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (fluorinated ethylene propylene) insulation with a glass braid. Type FEPB wire is suitable for general use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower temperatures for special applications.

PFA — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (perfluoroalkoxy) insulation. Type PFA wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower for special applications.

PFAH — Indicates a single, nickel or nickel-coated copper conductor having flame-retardant and heat-resistant thermoplastic (perfluoroalkoxy) insulation. The PFAH is suitable for use at 250°C and lower temperatures only for leads within apparatus or within raceways connected to apparatus, in dry locations only.

TFE — Indicates a single, nickel-coated copper or nickel base alloy conductor having flame-retardant and heat-resistant thermoplastic (polytetrafluoroethylene) insulation. Type TFE wire is suitable for use at 250°C and lower temperatures in dry locations as leads within apparatus or within raceways connected to apparatus or as open wiring.

Z — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (ethylene tetrafluoroethylene) insulation. Type Z wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 150°C and lower temperatures for special applications.

Thermoplastic-insulated Wire (ZLGR)—Continued

ZW — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (ethylene tetrafluoroethylene) insulation. Type ZW wire is suitable for use in dry locations at 90°C or wet locations at 75°C. It is also suitable for use in dry locations at 150°C and lower temperatures for special applications.

ZW-2 — Same as ZW except that the wire is rated 90°C wet or dry.

TBS — Indicates a single conductor switchboard wire having thermoplastic insulation and a flame-retardant nonmetallic covering. Type TBS is suitable for use at 90°C and lower temperatures in dry locations.

PRODUCT MARKINGS

Types TW, THW, THW-2, THHN, THHW, THWN, THWN-2, PFA, PFAH and Z in sizes 4 to 1 AWG for grounding conductors only and in sizes 1/0 AWG and larger for circuit and grounding conductors that are marked "Cable Tray Use" or "CT" comply with a vertical-tray cable flame test. Wire so marked may additionally be marked "Sunlight Resistant" indicating compliance with an artificial weathering test.

Types TW, THW, THW-2, THHN, THHW, THWN and THWN-2 in all sizes that are marked "Sunlight Resistant" comply with an artificial weathering test.

Wire suitable for exposure to mineral oil is marked "Oil Resistant I" for 60°C oil resistance, or "Oil Resistant II" for 75°C oil resistance, on the surface of the wire. An Oil Resistant marking, by itself, does not include resistance to gasoline or similar light petroleum solvents.

Wire that complies with a special vertical flame test is surface marked "VW-1."

Constructions in this category that comply with a flame and smoke test (as described in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables") may have the additional marking "ST1" indicating "Limited Smoke." (Note: The suffix "-LS," added to the Type letters, has also been used to indicate Limited Smoke. Effective November 15, 2004, only "ST1" may be used.)

In place of three of the markings described above, the following multinational markings may be used:

"SR" in place of "Sunlight Resistant"

"PR" in place of "Oil Resistant"

"GR" in place of "Gasoline and Oil Resistant"

Submersible Pump Cable — Indicates multiconductor cable consisting of two or three flat or two to six twisted insulated conductors with or without an overall jacket. The cable is labeled in size 14 AWG to 500 kcmil copper, and 12 AWG to 500 kcmil aluminum or copper-clad aluminum. The cable is tag marked "For Wiring Only Between Equipment Located at Water Well Heads and Motors of Installed Deep-Well Submersible Water Pumps." The insulation is surface marked "Submersible Pump Cable." The cable has not been investigated for direct burial in the earth.

Wire, in sizes mentioned below, may employ copper or aluminum, or copper-clad aluminum conductors. Wire with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad AL." Wire with aluminum conductors is surface printed "AL."

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for product employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

SIZE AND CONDUCTOR INFORMATION

Types TW, THW and THW-2 are certified in sizes 14 AWG to 2000 kcmil copper and 12 AWG to 2000 kcmil aluminum or copper-clad aluminum.

Types THHN, THWN, THWN-2 and THHW are certified in sizes 14 AWG to 1000 kcmil copper and 12 AWG to 1000 kcmil aluminum or copper-clad aluminum.

Types TA, TBS, PFA, PFAH and Z are certified in sizes 14 to 4/0 AWG copper and 12 to 4/0 AWG aluminum or copper-clad aluminum.

Types ZW, ZW-2, FEP and FEPB are certified in sizes 14 to 2 AWG copper and 12 to 2 AWG aluminum or copper-clad aluminum.

ADDITIONAL INFORMATION

For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 83, "Thermoplastic-insulated Wires and Cables."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Thermoplastic-insulated wire that contains copper or copper-clad aluminum conductors has the product name "Insulated Wire"; thermoplastic-insulated wire that contains aluminum conductors has the product name "Insulated Aluminum Wire."

Thermoplastic-insulated Wire (ZLGR)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERGROUND LOW-ENERGY CIRCUIT CABLE (ZLIA)**USE**

This category covers single- and multiple-conductor cable intended for direct burial in accordance with ANSI/NFPA 70, "National Electrical Code." The wire is rated 30 V or 150 V and 60°C.

PRODUCT MARKINGS

The wire is marked with the Listee's name, trade name or file number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1493, "Outline of Investigation for Underground Low-Energy Circuit Cable."

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underground Low-energy Circuit Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING CABLE (ZMAY)**GENERAL**

This category covers welding cable, which is a single-conductor cable intended for use in the secondary circuit of electric welders in accordance with Article 630, Part IV of ANSI/NFPA 70, "National Electrical Code." The conductors are flexible-stranded copper, 8 AWG through 500 kcmil, the individual strands of which are 34 through 30 AWG.

RATINGS

Welding cable is rated 60, 75 or 90°C and 100 or 600 V.

PRODUCT MARKINGS

The voltage and temperature ratings, if higher than 100 V and 60°C, respectively, are identified by printing on the surface of the insulation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1276, "Outline of Investigation for Welding Cable."

UL MARK

The UL symbol on the product and the Listing Mark of UL on the attached tag, the coil, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE, SPECIAL PURPOSE (ZMHX)**GENERAL**

This category covers different wire and cable products, each intended for the particular application marked on the product, tag, carton or reel.

Included in this category are:

Aircraft Ground Support Cable

Wire, Special Purpose (ZMHX)—Continued

Battery Lead Wire
 Brake Control Cable
 Burglar Alarm Cable
 Cathodic-protection Cable
 Crane and Hoist Optical Fiber Cable
 DLO Cable
 Flexible Power Feed Cable
 Golf Course Sprinkler System Wire
 Induction Heating Cable
 Inductive Detector Lead-in Cable
 Insulated Grounding Conductors
 Irrigation Machine Feeder Cable
 Low-ohmic Distribution Cable
 Litz Wire
 Marine Cable
 Mine Power Feeder Cable
 Mineral-insulated Metal-sheathed Control Cable
 Pendant Cable
 PVC-jacketed, Thermoplastic Polyolefin-jacketed and Thermoplastic
 CPE-jacketed Thermoset-insulated Wire
 Railroad Underground Power Cable
 RF Coaxial Cable
 SAE Wire Types TWP, GPT, HDT, TXL, GXL and SXL
 Satellite Antenna-Cable
 Shore Power Cable
 Slotted Coaxial Cable
 Solar Panel Wire
 Strobe Flash-head Cable
 Submersible Pump Cable (TPE or PE insulation)
 Surge Protection Cable
 Telephone Central Office Power Cable
 Tower and Case Wire
 Tracer Wire
 Track Wire
 Traction Power Cable
 Undercarpet Data Cable
 Underground Low-energy-circuit Cable
 Underground Signal Cable
 Vault Lacing Cable
 Wireless Antenna Interface Cable

PRODUCT MARKINGS

Information regarding installation, ampacity, etc., where appropriate, is included in the marking found on the tag, reel or carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

ANSI/UL 44, "Thermoset-Insulated Wires and Cables"
 ANSI/UL 62, "Flexible Cords and Cables"
 ANSI/UL 66, "Fixture Wire"
 ANSI/UL 83, "Thermoplastic-Insulated Wires and Cables"
 ANSI/UL 493, "Thermoplastic-Insulated Underground Feeder and Branch-Circuit Cables"
 ANSI/UL 854, "Service-Entrance Cables"
 ANSI/UL 1072, "Medium-Voltage Power Cables"
 UL 1309, "Marine Shipboard Cable"
 ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords"
 SAE 1128, "Surface Vehicle Standard"

UL MARK

The Listing Mark of UL on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product identifier, such as "Tracer Wire." The term "Special Purpose Wire" is not used.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE CONNECTORS (ZMKQ)**CRIMP TOOLS CLASSIFIED FOR USE WITH SPECIFIED WIRE CONNECTORS (ZMLS)****USE**

This category covers crimp tools suitable for use with specific certified Grounding and Bonding Equipment (KDER), Electrical Quick-connect Terminals (RFVW), Wire Connectors and Soldering Lugs (ZMVV) and Wire-connector Adapters (ZMOW) in accordance with the Certification Mark and a compatibility list provided with the tool.

The inside cover of the tool storage case or a permanently attached label to the tool itself contains a compatibility list that tabulates the company name and catalog number of the crimp tool and the company name, catalog number, wire size and number of crimps of the applicable certified grounding and bonding connectors, quick-connect terminals, wire connectors and wire-connector adapters for which the crimp tool has been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1976, "Outline of Investigation for Crimp Tools for Use with Wire Connectors."

UL MARK

The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CRIMP TOOL

FOR USE WITH UL LISTED GROUNDING AND BONDING CONNECTORS,

QUICK CONNECT TERMINALS, WIRE CONNECTORS AND/OR WIRE CONNECTOR ADAPTERS IDENTIFIED IN THE INSTRUCTIONS PROVIDED

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POLE SPLICING WIRE CONNECTORS (ZMNA)**USE AND INSTALLATION**

This category covers insulated multi-pole mating and nonmating splicing wire connectors intended for field wiring and factory wiring. Multi-pole splicing wire connectors are intended to facilitate the connection of hard-wired utilization equipment (e.g., prefabricated wiring assemblies, ceiling fans, smoke detectors, lighting products) to the branch-circuit conductors of buildings. They are multi-polarity devices used to connect to two or more branch-circuit conductors.

This category also covers luminaire disconnects, which are intended to be used:

1. internal to luminaires to facilitate replacement of the ballast, or
2. for LED retrofit applications.

Luminaire disconnects are not intended to be directly attached to the branch-circuit conductors for the purpose of interrupting (making and breaking) branch circuits other than those for the luminaire associated with the disconnect. Luminaire disconnects may have one or more conductors per contact.

Mating connectors consist of two separable mating members (usually consisting of a male/female connection) that can be readily engaged or disengaged without the use of tools. They are provided with a latching mechanism and are physically keyed to maintain correct polarity. Luminaire disconnects need not be provided with a latch or locking mechanism, and have not been investigated as latching- or locking-type devices.

Nonmating connectors are single devices used to facilitate the direct connection to the branch-circuit conductors.

Multi-pole splicing wire connectors are not intended to be permanently mounted. They are floating in an outlet, junction box or within a piece of equipment, such as a luminaire.

These wire connectors are suitable for currents not exceeding the ampacity of insulated conductors or the rated ampacity of the connector.

These wire connectors are intended for use in installations covered by ANSI/NFPA 70, "National Electrical Code."

Multi-pole Splicing Wire Connectors (ZMNA)—Continued

Reusability — These connectors have not been investigated for reusability, except for spring-action-type connectors without the one-time-use-only marking.

Make and break — These wire connectors have been subjected to 10 operations of making and breaking 150% of current.

Box fill — These wire connectors have not been investigated for volume (box fill) and their acceptance in this capacity should be determined by the Authority Having Jurisdiction.

Use of specific tools — A specific tool and die used to assemble a multi-pole splicing wire connector to a conductor is identified on the connector, or on or within the unit container of the connector. The identification consists of a catalog or type designation, color coding, die index number, or equivalent means.

Multiple crimping operations — The number of crimps necessary to make a connection using the specific tool is identified on the connector, or on or within the unit container of the connector. Absence of information implies a single crimp.

Conductor strip length — Multi-pole splicing wire connectors requiring a specific strip length have this information identified on the connector, or on or within the unit container of the connector, on an insulating cover, or on the tool or tool-carrying case.

PRODUCT MARKINGS AND RATINGS

Wire size — Multi-pole splicing wire connectors are rated for copper conductors only. The wire size or wire range is marked on the connector, or on or within the unit container.

Multi-pole splicing wire connectors have not been investigated for use with aluminum conductors.

Multiple conductors — Multi-pole splicing wire connectors generally accommodate a single conductor under each clamping mechanism unless otherwise identified (e.g., the number of conductors located parenthetically in front of the wire size or range). Some connectors may have a single-conductor wire range as well as a second multiple-conductor wire range.

Wire stranding — Unless clearly marked "Solid," "SOL," "Stranded" or "STR" for a given wire size, wire range or wire combination, conductors in the range 10–30 AWG are both solid and stranded, and 6–8 AWG are for stranded wire only.

Stranded conductor Class — Multi-pole splicing wire connectors are rated for use with stranded Class B concentric, Class B compressed, and Class C concentric copper conductors.

Strip length — Multi-pole splicing wire connectors are marked with an insulation strip length for the conductor before assembly to the wire connector.

Conductor material — Multi-pole splicing wire connectors are marked "CU" or "Copper Wire Only."

Ampacity level — Other than luminaire disconnects, multi-pole splicing wire connectors are suitable for currents not exceeding the ampacity of insulated conductors rated 90°C. Use of higher-temperature-rated conductors is permitted, provided the ampacity levels continue to be based on the 90°C ratings.

Assigned ampere rating — A luminaire disconnect is marked with its assigned ampere rating.

Luminaire disconnect — Multi-pole splicing wire connectors are intended to hot disconnect a ballast within a luminaire and are marked "Luminaire Disconnect."

Insulation temperature rating (maximum operating temperature) — Insulated multi-pole splicing wire connectors are marked with an insulation temperature rating. Insulated connectors, insulating caps and insulating covers that have an insulation temperature greater than the connector ampacity level are marked "Temperature Rating of Insulating Material °C."

Voltage rating — Insulated multi-pole splicing wire connectors are marked with a voltage rating on the device or the unit container.

Flammability rating — Insulated multi-pole splicing wire connectors may be additionally marked with a flammability rating of V-2, V-1, V-0, VTM-2, VTM-1 or VTM-0.

Assigned torque rating — Multi-pole splicing wire connectors may be marked with an assigned torque value for which the connector was investigated.

Circuit identification — Unless provided with color-coded integral lead wires, multi-pole splicing wire connectors are marked to identify each terminal with the intended conductor polarity (e.g., G, B, W, L1, L2). Color-coded integral lead wires may also be used for circuit identification. The ground terminal, if provided, is marked with the international symbol for ground or with "G," "GR," "GND," "Ground," "Grounding," or similar marking. An integral lead wire for grounding is color-coded green.

One-time use — Multi-pole splicing wire connectors employing spring-action-type terminations and intended for one-time use only are marked "One-Time Use Only - Do Not Reuse," or the equivalent.
