

Data Center Server

Reliable storage for large amounts of data

To meet the needs of data-intensive applications, Transcend's embedded storage solutions are implemented with 30µ" gold finger and Power Shield (PS) technology to ensure reliable operation and exceptional performance under extreme environments and unexpected power failure.

Unwavering performance

High speeds and large capacity support data-driven workload.

Trustworthy data transfer

PS technology and automatic ECC mechanism to overcome accidents and ensure reliability.

Quality assurance

In-house chip sorting process and rigorous temperature tests for stable operations.
