CAiSE Forum 2013

Proceedings of the CAiSE'13 Forum at the 25th International Conference on Advanced Information Systems Engineering (CAiSE), Valencia, Spain, June 17-21, 2013

Preface

CAiSE 2013 was the 25th in the series of International Conferences on Advanced Information System Engineering. This year, the CAiSE conference wonders about what has changed since the last century, and what does it tell us about future trends in information systems engineering. As a matter of fact, information systems play, more than ever, a strategic role at the very core of organizations. More than ever, emerging innovative platforms, architectures and technologies raise new questions that need to be addressed in a thorough way by science. More than ever, results from within laboratories need to be shared across the academic community and industry to address new educational and business opportunities.

The CAiSE Forum 2013 is a place within the CAiSE conference for presenting and discussing new ideas and tools related to information systems engineering. Intended to serve as an interactive platform, the Forum aims at the presentation of fresh ideas, emerging new topics, controversial positions, as well as demonstration of innovative systems, tools and applications.

Two types of submissions have been invited to the Forum:

(1) Visionary short papers that present innovative research projects, which are still at a relatively early stage and do not necessarily include a full-scale validation.

(2) Demo papers describing innovative tools and prototypes that implement the results of research efforts.

The CAiSE Forum 2013 proceedings represent a collection of 21 excellent short research papers and demos. The selection of Forum papers was very competitive, due to the high standard of the submitted papers. Several innovative papers initially submitted to the CAiSE conference were selected for the CAiSE Forum to stimulate open discussions of high quality on on-going research.

We devote a special thanks to the members of the international program committee for providing excellent reviews of the submitted papers. Their dedicated work was vital for putting together a high-quality working conference.

Rébecca Deneckere and Henderik A. Proper
