Abstract (en)
The control component couples communication independently of features using intelligent network (IN). Preferably, the control component has a standardised interface on the basis of IN application part (INAP) to the IN. The component has an interface to feature program which takes information from a feature request descending from origin feature program for an information request to a Service Control Point (SCP). The response information from the SCP is used to generate a new feature request to a destination feature program.

Abstract (de)
Der Erfindung liegt die Aufgabe zugrunde, Features auch für IN-Dienste mithilfe von bearer unrelated Verbindungen zu ermöglichen. Diese Aufgabe wird durch eine Steuerkomponente in einem Service Switching Point gelöst, die eine featureunabhängige Kopplung der genannten bearer unrelated Verbindungen zwischen den Feature-Programmen durchführt. <IMAGE>
