HOME

"The idea of the university, as it seems to me, consists in the Societas Magistrorum et Discipulorum; an association, by authority, of Masters, who are conspicuous in ability, learning, and devotion to study, for the intellectual guidance, in many subjects, of youthful Scholars who have been prepared for the freedom of investigation by prolonged discipline in literature and science."

– Daniel Coit Gilman, Johns Hopkins University's inaugural president *The Idea of the University, 1881*

I am thrilled to welcome you to the Johns Hopkins University catalogue!

Founded in 1876 as the nation's first research university, we have continued to follow our inaugural president's vision over the past 144 years to create a place where all students can make extraordinary discoveries, advance innovative solutions, and see their big ideas brought to life. Supported by peers and faculty who are among the most passionate, dedicated, and talented people in the world, Johns Hopkins students are motivated each day by this culture of fearless enthusiasm and pursuit of knowledge.

Current and prospective students are invited to review the detailed information about the many academic opportunities occurring across our nine academic divisions. The catalogue also serves to detail the university, school, department, and academic program policies and procedures in place as of June 2022.

We hope the catalogue provides both the information and inspiration for your academic journey here at Johns Hopkins!

Sincerely,

Stephen J. Gange, PhD
Executive Vice Provost for Academic Affairs & Professor

The Johns Hopkins University is accredited by The Middle States Commission on Higher Education. Information regarding accreditation can be found on the Office of the Provost website (https://provost.jhu.edu/education/accreditation-and-academic-compliance/).

For current faculty and contact information go to http://krieger.jhu.edu/publichealth/directory/

EXPLORE OUR PROGRAMS

Johns Hopkins University faculty and students study, teach, and learn across more than 400 programs in the arts and music, the humanities, the social and natural sciences, engineering, international studies, education, business, and the health professions.

Use the interactive program explorer to browse the programs that JHU offers. Sort by division and/or degree type, or use the keyword search to get started.

No results found, please try again. Reset selections.

UNIVERSITY-WIDE POLICIES AND INFORMATION

University-Wide Policies and Information

The University-wide Policies and Information section of the Academic Catalogue includes academic and non-academic university policies as of June 2022 that pertain to students across Johns Hopkins University. All students are responsible for observing relevant University policies and meeting relevant University requirements as they are set forth here and in other official University sources. The University reserves the right to add, remove, or revise policies whenever such an action is deemed appropriate or necessary. The most current version of each policy can be accessed in the online Policies and Document Library (https://www.jhu.edu/university-policies/), a searchable resource for all university-level policies, statements, and guidelines.

Please note that policies specific to each of the University's nine academic divisions are included within the Academic Catalogue. In addition to observing relevant University policies and requirements, students are expected to familiarize themselves with and adhere to any applicable policies and regulations that may be instituted by their individual school(s).

The Office of the University Registrar (OUR) collaborates with university partners and divisional leaders to publish this Academic Catalogue. The OUR also establishes university-wide operational guidelines pertaining to student record processes, management, and other components of the academic experience at the university in collaboration with other university partners. The operational guidelines and the mission statement of OUR is available on The Office of the University Registrar website (https://registrar.jhu.edu/).

Academic Policies and Information

Academic Calendar

JHU Academic Calendar

The 10-year academic calendar can be found on the Office of the University Registrar website (https://registrar.jhu.edu/academic-calendar/).

- The calendar was created in consultation with the School Deans' offices and registrars over the past three years
- The calendar will be set and published for ten years to enhance academic and administrative planning.
- These common calendars make it easier for students to contemplate and possibly take curricular offerings across the divisions.
- Students will be subject to tuition separately for summer programs.
- The start dates for semesters and the eight-week instructional periods are aligned. The non-compulsory summer terms continue to vary with fewer instructional patterns.
- Students should consult their division websites for school-specific dates and deadlines.

Academic Integrity Policies

Academic Integrity Policies

Responsible academic conduct is a central component of graduate and post-doctoral training and is essential to the core values of Johns Hopkins University. Students at The Johns Hopkins University are expected to meet the highest standards of academic excellence and ethical conduct. Each of the divisions of the University maintains an academic integrity policy, and students, faculty, and staff are required to promptly report known or suspected violations of the policy.

The policy for undergraduate students at KSAS and WSE can be found here. (https://studentaffairs.jhu.edu/policies-guidelines/undergrad-ethics/) The links below detail the specifics of the academic integrity policies that apply to graduate students and postdoctoral trainees for each division at the University. Cases of academic misconduct will be resolved using the policy from the student's division of enrollment.

Animal Care and Use Program

Overview

Animals that are used in research and teaching at Johns Hopkins University are covered by the Animal Care and Use Program. The Johns Hopkins program is designed to ensure that it is in compliance with the Animal Welfare Act regulations and Public Health Service (PHS) Policy on Humane Care and Use of Laboratory Animals. Johns Hopkins University has an approved PHS Assurance that describes the conduct of our animal care and use program. Johns Hopkins also maintains accreditation of our program by the private Association for the Assessment and Accreditation of Laboratory Animal Care (AAALAC) International. Our overarching goals are to assure that laboratory animals receive the highest quality care and to protect the health of people who work with and around animals at Johns Hopkins. We believe that excellence in research and teaching requires excellence in our animal care and use program.

The Animal Care and Use Program at Johns Hopkins is a University-wide program. It is comprised of multiple components, which cover animal housing and care, veterinary medical care, facilities management, training, occupational health, and assurance of compliance with federal and state laws and policies that govern use of animals in research and teaching. In general, the National Research Council's *Guide to the Care and Use of Laboratory Animals* serves as the primary source for standards for the Johns Hopkins Animal Care and Use Program. Additional detailed information regarding policies and guidance may be found on or through links from the Animal Care and Use Committee website (www.jhu.edu/animalcare (http://web.jhu.edu/animalcare/)).

For comprehensive information about this policy, please see the Animal Care and Use Program policy - PDF (https://policies.jhu.edu/doc/fetch.cfm/C5yxDfrs/).

Credit Hour Policy

Policy Statement

The Johns Hopkins University's nine academic divisions operate under a variety of semester and other term systems, in which credits (equivalently, credit hours) are awarded, and alternative systems with equivalent measures wherein credit hours are not awarded. The Credit Hour Policy ("Policy") codifies practices across Johns Hopkins University ("JHU" or "University") schools regarding the awarding of credit hours, in accordance with Federal, State, and accreditation guidelines. This Policy applies equally to all credit-bearing courses regardless of duration, mode of delivery, or instructional format.

Find the full Credit Hour Policy here (https://policies.jhu.edu/doc/fetch.cfm/jhiiy1jH/).

School of Nursing Specific Information

The School of Nursing Academic Credit Hour Policy describes how academic credits are calculated for clinical hours including laboratory clinical hours.

For clinical/laboratory experiences, one academic credit is equal to 4 hours of clinical/laboratory experience in all programs and tracks except the DNP Nurse Anesthesia Track. Thus, one clinical/laboratory/practicum credit hour is calculated as 4 clock hours per week per semester week, which is equal to 56 clock hours/semester for 1 credit.

One academic credit is equal to 8 hours in the clinical setting in the DNP nurse anesthesia track (112 clock hours).

This policy applies to students enrolled in a Johns Hopkins School of Nursing course.

FERPA

Family Educational Rights and Privacy Act (FERPA)

The Family Educational Rights and Privacy Act of 1974 (20 U.S.C. § 1232g; 34 CFR Part 99) (FERPA) is a federal law regarding the privacy of student education records and the related requirements of educational institutions, primarily in the areas of education record access and information release.

Educational institutions that receive funds under any program administered by the U.S. Secretary of Education must adhere to FERPA regulations. As a recipient of federal funding, Johns Hopkins University (JHU) and all schools operating within JHU are obligated to comply with FERPA.

Please see the Office of the University Registrar's FERPA Compliance (https://registrar.jhu.edu/ferpa-compliance/) website for comprehensive information pertaining to FERPA and JHU's FERPA compliance procedures; as well as JHU FERPA resources including the required Annual Notification of Rights (https://registrar.jhu.edu/annual-notification-of-rights/), FERPA-related forms (https://registrar.jhu.edu/ferpa-forms/), and FERPA FAQs (https://registrar.jhu.edu/ferpa-resources/).

PHD Specific Policies

PhD Specific Policies

The Doctor of Philosophy Board, formed in 2010, advises the Provost about university-wide issues pertaining to the Ph.D. and sets guidelines and policies that enhance the experience of all Ph.D. students. This Board also recommends Ph.D. candidates who have met the university-wide requirements for the Ph.D. for conferral to the President. The below policies apply to all Ph.D. students at Johns Hopkins.

PhD Mentoring Policies and Resources

- PhD Mentoring Policies and Resources (https://provost.jhu.edu/education/graduate-and-professional-education-resources/phd-mentoring-policies-and-resources/)

PhD Professional Development Policies and Resources

- PhD Professional Development Policies and Resources (https://provost.jhu.edu/education/graduate-and-professional-education-resources/phd-professional-development-policies-and-resources/)

University Requirements for PhD

- University Requirements for PhD (https://provost.jhu.edu/wp-content/uploads/2022/03/university-requirements-for-PhD-1.pdf)

Transcripts and Enrollment Verifications

Transcripts

To provide the best service possible and to maintain security of academic records, Official Electronic and Paper Transcripts can be ordered online through the National Student Clearinghouse (NSC), an authorized agent of Johns Hopkins University.

Electronic Transcripts

- Your transcript will be sent securely through the NSC (https://www.studentclearinghouse.org/) (a secure electronic alternative to the traditional paper transcript) in PDF format via email.
- The AAMC's American Medical College Application Service® (AMCAS®) and the Law School Admission Council now accept electronic transcripts from Johns Hopkins University.
- Electronic transcripts sent to the recipient are considered official upon delivery, but become unofficial if passed on to another recipient. The link will expire after 30 days.
- Order updates will be emailed to you, or you can check your order status history online with the NSC. (https://tsorder.studentclearinghouse.org/tyo/login/)

Paper Transcripts

- This service has been suspended by some Schools and will resume once operations return to normal.
- Your transcript will be mailed using specific domestic and international carriers - delivery varies based on destination.
- Order updates will be emailed to you, or you can check your order status history online with the NSC. (https://tsorder.studentclearinghouse.org/tyo/login/)

Enrollment and Degree Verifications

A verification certificate provides proof of enrollment or degree completion for a student's financial lender, insurance company, sponsor, employer etc.

Please note:

- Enrollment verifications may include the total number of credit hours taken, current and/or past semesters enrolled, and status for current and/or past terms.
- Degree verifications may include the program and major for degree(s) completed and date(s) of conferral.

Current Students

Current students may print an enrollment verification certificate by accessing the National Student Clearinghouse portal through SIS Self-Service.

Alumni & Third-Party

Alumni may request a degree verification through the National Student Clearinghouse (http://www.studentclearinghouse.org/).

Admission and Aid

Johns Hopkins University is America's first research university, founded on the belief that teaching and research are interdependent, and that a modern university must do both well.

Today, JHU remains a world leader in both teaching and research, with more than 24,000 undergraduate and graduate students studying with esteemed faculty members across nine world-class academic divisions.

Please visit the Office of Admissions website (https://www.jhu.edu/admissions/) for more information about how to apply to JHU. Additional information on the cost of attendance at JHU can also be found on the Office of Admissions website (https://www.jhu.edu/admissions/tuition/) and by following the links below.

Undergraduate Admission

Arts & Sciences/Engineering

Please visit the Undergraduate Admissions website for detailed information on admissions dates, deadlines, and processes. The Undergraduate Admissions website can be found here (https://apply.jhu.edu/application-process/).

Peabody Institute

Please visit the Peabody Institute Office of Admissions website for all admissions and auditions related questions and information.

Peabody Institute Admissions: https://peabody.jhu.edu/audition-apply/

Graduate Admission

JHU faculty and students study, teach, and learn in and across more than 180 programs regularly recognized as being among the nation's best. All nine of JHU's academic divisions offer full-time graduate programs.

Graduate Admissions: https://www.jhu.edu/admissions/graduate-admissions/

Tuition and Fees

Cost of Attendance at Johns Hopkins University

- Financial Aid (p. 45)

Undergraduate Programs

Undergraduate Arts & Sciences and Engineering

Johns Hopkins University is dedicated to enrolling the strongest students from all backgrounds each year, and it's our goal to enable students to make their college decision without being limited by their family's financial circumstances. The Office of Undergraduate Admissions and the Office of Student Financial Services are committed to removing barriers and providing opportunities through a combination of need-blind admissions, meeting 100% of demonstrated need, and no loans in financial aid packages.

Financial aid advisors in the Office of Student Financial Services are always available to guide students through the process. Reach them at 410-516-8028 or fin_aid@jhu.edu for more information.

Visit the Office of Student Accounts website (https://studentaffairs.jhu.edu/student-accounts/tuition-fees/) for the fall and spring semester tuition refund policy and deadlines.

The tuition refund policy and deadlines for summer courses are posted on the Summer Programs website (https://summerprograms.jhu.edu/).

Peabody Institute

Please visit the Peabody Institute website (https://peabody.jhu.edu/audition-apply/tuition-fees/) for an overview of all possible tuition and fees. If students would like to view more on the general cost of attendance at the Peabody Conservatory, please visit the Financial Aid page (http://peabody.jhu.edu/audition-apply/financial-aid-scholarships/prospective-students/cost-of-attendance/).

Financial Aid

Financial Aid at Johns Hopkins University

As an institution with a long-standing tradition of crossing academic boundaries and making new discoveries that have shaped the world around us, our commitment to supporting the best and brightest students is at the core of our mission. As we aim to bring the best to our campus, we are committed to making education affordable.

Our undergraduate students can receive the full Hopkins experience via our generous financial aid program. This includes grant and scholarship aid available for admitted students to meet their demonstrated financial need while enrolled. Likewise, our graduate students can take their research and education to a higher level by utilizing the numerous financial aid options available to finance the higher costs of pursing advanced degrees. These students can expect to finance their education through grants, highly competitive scholarships, loans, and payment options.

Johns Hopkins is dedicated to making education affordable to the most talented students who, in turn, can use their unique opportunities at Hopkins to make a lasting impact on the world. Our divisions offer a unique financial aid experience, and each are prepared to guide you through the entire process. To learn more about financing your education, please choose from the list of schools below.

Higher Education Act Disclosures

The Higher Education Act of 1965, as amended in 2008, includes many student disclosures and reporting requirements by universities. These requirements include statistics and/or information on the following subjects:

1. Retention and graduation rates;
2. Financial assistance available to students and requirements and restrictions imposed on Title IV aid;
3. Crime statistics;
4. Athletic program participation rates and financial support; and
5. Other institutional information including: the cost of attendance, accreditation and academic program data, facilities and services available to students with disabilities, and withdrawal and refund policies.

Higher Education Act Disclosures - "Student Right to Know"

Disclosures applicable to all students across Johns Hopkins University are outlined below. **University and School specific Student Diversity Data** can be found on the Office of Institutional Research Website (https://oir.jhu.edu/university-enrollment/).

- General Institutional Information (p. 46)
- Health and Safety Information (p. 47)
- Student Financial Assistance Information (p. 48)

Student Outcomes

- None at the University-level

- Services/Facilities available to Students with Disabilities (http://accessibility.jhu.edu/accommodations/student-accommodations/)
- State Authorization of Distance Education (NC-SARA) (p. 46)

State Authorization of Distance Education (NC-SARA)

State Authorization of Distance Education

Johns Hopkins University has been approved by the Maryland Higher Education Commission to participate in the National Council for State Authorization Reciprocity Agreements effective February 22, 2016. NC-SARA (http://nc-sara.org/) is a voluntary, regional approach to state oversight of postsecondary distance education.

Additional information can be found here (https://provost.jhu.edu/education/accreditation-and-academic-compliance/state-authorization-of-distance-education/).

Disclosures and Policies

NC-SARA

The following disclosures and policies pertains to students who enroll in Johns Hopkins University distance education programs as a condition of participating in NC-SARA.

The Johns Hopkins University encourages the complainant to seek resolutions to the allegations/grievances within the university's processes. If a complainant has exhausted JHU grievance procedures and the grievance has not been resolved, the complainant has the right to file a complaint with the Maryland Higher Education Commission, the state portal agency for SARA. The portal agency is responsible for further consideration and resolution.

Maryland Higher Education Commission, 6 North Liberty Street, 10th Floor, Baltimore, MD 21201

The JHU Academic Grievance Policy: Students and Postdoctoral Fellows can be found in the online JHU Policies and Document Library (https://policies.jhu.edu/doc/fetch.cfm/pYwNZVAg/).

The School of Medicine grievance policy can be accessed here: School of Medicine (http://www.hopkinsmedicine.org/som/faculty/policies/facultypolicies/grievance.html)

California

Students attending these out-of-state institutions can file those complaints online at www.dca.ca.gov (http://www.dca.ca.gov/) or call toll-free 833-942-1120.

Texas

The following disclosure pertains to students who enroll in Johns Hopkins School of Education Master of Science in Education program offered in Texas.

After exhausting Johns Hopkins' grievance/complaint process, current, former, and prospective students may initiate a complaint with THECB by submitting the required forms along with evidence of their completion of their institution's complaint procedures. Complaints may be submitted using one of the following three options:

- Completing the online student complaint form and uploading the required supporting documentation in Portable Document Format (PDF)

To access the online student complaint form, use the "Contact Us (https://www1.thecb.state.tx.us/Apps/CRAFT/Home/Create/)" link to submit an email with "Student Complaint Against a Higher Education Institution" selected as the Contact Reason. After submitting your email, wait a few moments for the online student complaint form to be automatically presented for your use.

- Sending the required Student Complaint and Release Forms (http://www.thecb.state.tx.us/reports/DocFetch.cfm?DocID=8616&Format=PDF) and supporting documentation as PDF attachments by email to studentcomplaints@thecb.state.tx.us

or

- Mailing printed forms and documentation to:

Texas Higher Education Coordinating Board
Office of General Counsel
P.O. Box 12788
Austin, Texas 78711-2788

Facsimile transmissions of student complaint forms are not accepted.

All submitted student complaint forms must include a signed Family Educational Rights and Privacy Act (FERPA) Consent and Release form and THECB Consent and Agreement Form. Submitted complaints regarding students with disabilities shall also include a signed Authorization to Disclose Medical Record Information (http://www.thecb.state.tx.us/reports/DocFetch.cfm?DocID=8145&Format=PDF) form.

Process: The first step in addressing a complaint is to follow Johns Hopkins' complaint procedures. If Johns Hopkins is unable to resolve the matter after you have exhausted their complaint and appeal processes, you may file a complaint with this Agency.

Health and Safety Information

Clery Act Disclosures

In compliance with the Jeanne Clery Disclosure of Campus Security Policy and Crime Statistics Act (commonly known as the Clery Act), the **Annual Security and Fire Safety Report** provides important information regarding campus safety, safety programs, and related policies. Also included in this report are crime statistics for the past three years. For a printed copy of this report please call 410-516-4631.

Additional resources, including **JHU Emergency Response guides**, **Timely Warning Policy** and **Missing Student Procedures** (see Annual Security and Fire Safety Report (https://publicsafety.jhu.edu/assets/uploads/sites/9/2020/05/annual_report_securityfiresafety.pdf)), can be found on the JHU Public Safety website (https://publicsafety.jhu.edu/compliance-and-crime-statistics/), and in the Office of Institutional Equity section (p. 48) of this catalogue.

Additional Health and Safety Information:

- Drug and Alcohol Abuse Prevention Program (https://studentaffairs.jhu.edu/chew/alcohol-and-other-drugs/)
- Inclement Weather Information (p. 47)
- Vaccinations (https://covidinfo.jhu.edu/health-safety/covid-vaccination-information/)

Inclement Weather Information

Inclement Weather

When there is an alteration or curtailment of the university operating schedule or the operating schedule of a designated unit, an official announcement will be made on the University Emergency Telephone Hotline and on the Johns Hopkins website at http://www.jhu.edu/alert (http://www.jhu.edu/alert/). Since conditions may vary in the geographic areas where Johns Hopkins has campuses, there may be times when the Required Attendance Policy is invoked for some campuses, departments or units and not others.

Carey Inclement Weather Information

In order to maintain the academic integrity of our programs, it is important that any class session that is missed due to weather, instructor illness or other emergency is made up, and that any missed material is covered. However, faculty members have considerable latitude over how the class sessions will be made up and have two options from which to choose.

They may:

- Plan and schedule a virtual class session
- Re-schedule the class period to a designated make-up day (Designated make-up days are scheduled at the end of each 8-week term or semester.)

Whenever a class session is cancelled, each faculty member may choose the appropriate make-up alternative for that particular class. The faculty member must notify the students in the class and the Office of Education about which option will be used to make up the class period.

This policy is designed to address those situations when a single class day has been cancelled. Weather emergencies or other events that result in multiple-day cancellations will be handled on a case-by-case basis. Please call the University Weather Emergency Line at 410-516-7781 or 1-800-548-9004 or visit jhu.edu/alert (https://jhu.edu/alert/) for more information.

School of Nursing Additional Information

The university and school will make every effort to remain open and hold classes at all scheduled times, however there are times when the university, campus or school operations must be interrupted. On-site classes will meet unless operation of the University or School has been officially curtailed. Students, faculty, and staff are not permitted on campus if the university or the school is closed except in the case of required attendance on-site personnel. In order to maintain the continuity of the School's academic mission, online courses will continue even if the university or school is closed or if a building closure is necessary. Some on-site courses may continue by utilizing distance learning technology.

Clinical hours missed when the university is closed do not need to be made up.

Student Financial Assistance Information

Student Financial Assistance Information

- Access to National Student Loan Data System for borrowers (https://studentaid.gov/)
- Inform all eligible borrowers of state grant assistance in their state of residence (http://www2.ed.gov/about/contacts/state/)
- Private Loan Disclosures and Self Certification Form for prospective borrowers (https://finaid.jhu.edu/graduate-aid/types-of-aid/)
- Student Loan Code of Conduct (http://pages.jh.edu/~news_info/policy/finaid_code.html)
- Summary of requirements for return of federal grant or loans - PDF Document (https://e-catalogue.jhu.edu/university-wide-policies-information/higher-education-act-disclosures/student-financial-assistance-information/Microsoft_Word_-_Return_of_Title_IV_Funds_Policy_062921_Letterhead.pdf)
- TEACH grant counseling (https://studentloans.gov/myDirectLoan/launchTeach.action/)

Office of Institutional Equity

About the Office of Institutional Equity

The Office of Institutional Equity (OIE) leads JHU efforts to foster an environment that is inclusive, respectful and free from discrimination and harassment. In its role, OIE ensures compliance with affirmative action and equal opportunity laws, investigates complaints of discrimination, harassment, and sexual misconduct, and serves as a central resource for those with disabilities or those who require religious accommodation. For more information, please visit OIE's Website (https://oie.jhu.edu/discrimination-and-harassment/).

- Discrimination and Harassment Policy and Procedures (p. 48)
- Equal Opportunity and Title IX Notice (p. 48)
- Sexual Misconduct (p. 48)

Discrimination and Harassment Policy and Procedures

The University is committed to maintaining learning and working environments that are free from all forms of discrimination and harassment (and related retaliation). Each member of the community is responsible for fostering civility, for being familiar with this policy, and for refraining from conduct that violates this policy.

The Office of Institutional Equity (OIE) maintains the University's Discrimination and Harassment Policies and Procedures (https://oie.jhu.edu/policies-and-laws/JHU-Discrimination-and-Harassment-Policy-and-Procedures-7.1.21-Present/). The comprehensive policies and procedures can be found here on OIE's website (https://oie.jhu.edu/discrimination-and-harassment/).

Equal Opportunity and Title IX Notice

The University's statement on Equal Opportunity and Title IX Notice for Students, Faculty, Staff and Applicants can be found here (https://oie.jhu.edu/policies-and-laws/jhu-policies/Equal_Opportunity_and_Title_IX_Notice/).

The University has adopted these statements concerning equal opportunity and Title IX to provide notice to students, faculty, staff, applicants for employment and admissions, and unions or other professional organizations holding collective bargaining or professional agreements with the University. This notice must be published in appropriate communications, such as university-wide and divisional websites, handbooks, catalogues and publications.

Sexual Misconduct

Sexual Misconduct

Johns Hopkins University (JHU) is committed to promoting a safe and supportive environment for each and every member of our community. If you have experienced sexual misconduct, we encourage you to reach out for support and medical care (https://sexualmisconduct.jhu.edu/). We are available to assist you if you would like to file a report with JHU and/or local law enforcement. The JHU complete Sexual Misconduct Policy and Procedures can be found on OIE's website (https://oie.jhu.edu/discrimination-and-harassment/) and the Sexual Misconduct Response and Prevention website (https://sexualmisconduct.jhu.edu/policies-laws/).

What is sexual misconduct?

The term “sexual misconduct” refers to both "Title IX Sexual Harassment (https://sexualmisconduct.jhu.edu/policies-laws/#Title%20IX%20Sexual%20Harassment)" and "Other Sexual Misconduct (https://sexualmisconduct.jhu.edu/policies-laws/#Other%20Sexual%20Misconduct)."

- More information on sexual misconduct (http://sexualassault.jhu.edu/policies-laws/)
- More information on supportive services (https://sexualmisconduct.jhu.edu/Connect/)
- Learn more about JHU's work on the National Academies of Science Action Collaborative on Preventing Sexual Harassment in Higher Education (http://sites.nationalacademies.org/sites/sexualharassmentcollaborative/)

Filing a sexual misconduct complaint

Individuals are encouraged to report sexual misconduct to the JHU Office of Institutional Equity (OIE). The information provided in a report will be kept as confidential as is reasonably possible.

- File a sexual misconduct complaint (https://forms.jh.edu/view.php?id=158633)
- What happens when a report is made to the Title IX Coordinator? (https://oie.jhu.edu/docs/Procedures%20Per%20New%20Title%20IX%20Regulations.pdf)

Rights, Privileges, and Responsibilities

Academic Grievance Policy: Students and Postdoctoral Fellows

Policy Statement

Johns Hopkins University seeks to provide a supportive educational, training, and professional environment. The University provides several avenues of redress for students and postdoctoral fellows who believe they have been adversely affected in their professional or educational activities as a result of an arbitrary or capricious act, or failure to act, or a violation of a University, division, school, or center procedure or regulation by their supervisor, department chair, center director, or other administrator or administrative body. The University encourages individuals involved in such disputes to resolve the matter informally. The purpose of this Policy is to provide a formal mechanism to resolve grievances of all students and postdoctoral fellows of the University. This Policy is only to be used to resolve serious matters which meet the definition of a “grievable” matter and cannot be resolved through informal discussions or processes, and is only to be applied after reasonable efforts have been made to settle the dispute informally.

Full Policy

The full policy (https://policies.jhu.edu/doc/fetch.cfm/pYwNZVAg/) can be found in the JHU Policy and Document Library.

New Child Accommodations for Full-Time Graduate Students and Postdoctoral Trainees

Policy Statement

Johns Hopkins University recognizes the importance of balancing the family and academic responsibilities faced by new parents and promoting the well-being of their families. The University is supportive of accommodating eligible full-time graduate students and full-time postdoctoral fellows, scholars and trainees (collectively “postdoctoral trainees”) who are expecting a new child. Consistent with grant funding policies that place a limit of 8 weeks for parental leave, all eligible full-time graduate students and postdoctoral trainees shall receive no less than 8 weeks of fully-paid new child accommodations.

Each school has in place provisions for taking a formal leave of absence, which is an option at any time for students and trainees who are new parents. Electing this option relieves students of all university responsibilities but comes with consequences that may suspend students' privileges and access to university benefits and resources. This option may also have visa consequences for international students. The goal of this Policy is to put in place a set of guidelines for full-time graduate students and postdoctoral trainees who have new family additions who do not elect a formal leave of absence.

Full Policy

The full policy (https://policies.jhu.edu/doc/fetch.cfm/MsN4wHC0/) can be found in the JHU Policy and Document Library.

Personal Relationships Policy

Policy Statement

The Johns Hopkins University (“JHU” or “University”) is committed to the personal, academic, and professional well-being and development of its students, trainees, faculty, staff, post-doctoral fellows, clinical residents, and all other members of the University community. In particular, the University is committed to fostering an environment that promotes academic and professional success for all members of its community by addressing behaviors that can undermine the important missions of our institution. The University seeks to create and maintain an atmosphere of mutual respect, collegiality, fairness, and trust. The Personal Relationships Policy (the "Policy") implements the University's commitment to maintaining the integrity of its educational and working environment. This Policy focuses on the conflict of interest that may exist when individuals simultaneously engage in both personal and professional relationships in which one individual has the potential to exert substantial academic or professional influence over the other.

Full Policy

The full policy (https://policies.jhu.edu/doc/fetch.cfm/HVZArki5/) can be found in the JHU Policy and Document Library.

Photography and Film Rights Policy

Policy Statement

Johns Hopkins University reserves the right to film or take photographs of faculty, staff, and students engaged in teaching, research, clinical practices, and other activities, as well as casual and portrait photography or film. These photographs and films will be used in such publications as catalogues, posters, advertisements, recruitment, and development materials as well as on the university's website, for various videos, or for distribution to local, state, or national media for promotional purposes. Classes will be photographed only with the permission of the faculty member.

Such photographs and film — including digital media — which will be kept in the files and archives of Johns Hopkins University, will remain available for use by the university without time limitations or restrictions. Faculty, students, and staff are made aware by virtue of this policy that the university reserves the right to alter photography and film for creative purposes. Faculty, students, and staff who do not want their photographs used in the manner(s) described in this policy statement should contact the Office of Communications by email at cpa@jhu.edu. Faculty and students are advised that persons in public places are deemed by law to have no expectation of privacy and are subject to being photographed by third parties. Such public places include both campus and off-campus environments, including those used to host university-organized events and functions. Johns Hopkins University has no control over the use of photographs or film taken by third parties, including without limitation the news media covering university activities.

Full Policy

The full policy (https://policies.jhu.edu/doc/fetch.cfm/exV8PxQ7/) can be found in the JHU Policy and Document Library.

Student Conduct Code

Student Conduct Code

The full student conduct code can be found on the Policies & Guidelines page of the Office of Student Affairs here: https://studentaffairs.jhu.edu/policies-guidelines/student-code/

The Johns Hopkins University Student Conduct Code applies to all students, including without limitation undergraduate and graduate students, and student groups/organizations, whether recognized by the University or not, in the following schools and divisions:

- Paul H. Nitze School of Advanced International Studies (SAIS) (http://www.sais-jhu.edu/)
- Krieger School of Arts and Sciences (KSAS) (https://krieger.jhu.edu/)
- Whiting School of Engineering (WSE) (https://engineering.jhu.edu/)
- Carey Business School (CBS) (http://carey.jhu.edu/)
- School of Education (SOE) (http://education.jhu.edu/)
- School of Medicine (SOM) (https://www.hopkinsmedicine.org/som/)
- School of Nursing (SON) (http://nursing.jhu.edu/)
- Bloomberg School of Public Health (BSPH) (http://www.jhsph.edu/)
- Peabody Institute (Peabody) (http://www.peabody.jhu.edu/)

The schools and divisions above must comply with, and ensure that their policies and procedures comply with, this Code. To the extent there is any inconsistency between divisional policies and procedures and this Code, this Code controls.

Student Disability Services (SDS)

Accessibility at Johns Hopkins University

As Johns Hopkins University works to foster diversity and build a campus culture of inclusion, it is committed to ensuring people with disabilities enjoy full participation in the university's programs, services, and benefits. JHU seeks the continuous improvement of accessibility on its campuses and in its activities, and prohibits unlawful discrimination on the basis of disability.

Request Accommodations

Johns Hopkins University is committed to providing access to its educational programs for all qualified students, including those with disabilities. For more information, students are encouraged to review the guidelines here and to contact the office or individual who coordinates disability accommodations for their school or program.

Accommodations for Undergraduate Students

Admitted undergraduate students with disabilities who plan to request accommodations and attend the Krieger School of Arts & Sciences (KSAS), Whiting School of Engineering (WSE), or Peabody Institute can contact Student Disability Services (SDS) Homewood to begin the process.

- Student Disability Services Website (http://web.jhu.edu/disabilities/) (Homewood)
  - Email: Student Disability Services (studentdisabilityservices@jhu.edu) (Homewood)
- **Peabody** Student Disability Services Website
- JHU Disability Documentation Guidelines (https://oie.jhu.edu/ada-compliance/documentation-guidelines/)

Accommodations for Graduate Students and Other Learners

In order to best serve the needs of students with disabilities in the various schools and programs of Johns Hopkins University, we have designated one or more staff members to work closely with students who require accommodations. Students should initiate requests for accommodation with the disability coordinator in their respective schools.

- Visit Student Disability Services Website (http://web.jhu.edu/disabilities/) (KSAS & WSE - Homewood)
- Contact the disability coordinator for your school (https://oie.jhu.edu/ada-compliance/disability-coordinator-list/)
- JHU Disability Documentation Guidelines (https://oie.jhu.edu/ada-compliance/documentation-guidelines/)

Student Health

Health Insurance Requirements

It is the policy of Johns Hopkins University that all[1] full-time students maintain adequate health insurance coverage to provide protection against unexpected accidents and illnesses. Most full-time students are automatically enrolled in a university student-sponsored health benefits plan, and the plan premium will be charged to your university student account, unless proof of comparable health insurance is provided for students eligible to waive.

Those who are eligible to waive the insurance must do so annually. International students with a F1 or J1 Visa status are **ineligible** to waive and are required to purchase the university plan, however, some permissions for insurance waivers for international students are permitted with proper evidence of a comparable plan.

There are some instances where a student's department covers the cost of health benefits. Please consult your departmental insurance administrator for specific cost-related questions.

[1] There are few exceptions to health insurance requirements based on degree program. Please consult your school's insurance website or contact your administrator for clarification.

Health Insurance Eligibility

Eligibility for the JHU health insurance plan is based on school enrollment. The program types are briefly described along with the applicable school affiliation. Please go to your school's insurance page through the links provided to understand further information about enrollment, rates, waiving processes, and other areas of interest.

Dental coverage is available from Delta Dental for all schools who didn't previously have coverage. For Carey Business School, Krieger School of Arts and Sciences, Peabody Institute, School of Advanced International Studies, School of Education, Whiting School of Engineering and School of Nursing, details on the coverage can be found here (https://hr.jhu.edu/benefits-worklife/health-life/student-health-benefits/delta-dental-plan/).

A vision plan is also available from EyeMed for students across the university; details on the coverage can be found here (https://hr.jhu.edu/benefits-worklife/health-life/student-health-benefits/eyemed-vision-plan/).

Student Health Benefits Plan, Administered by Wellfleet

Students in the following programs are eligible for the Wellfleet medical plan:

Advanced Academic Programs (https://advanced.jhu.edu/student-resources/student-services/student-health-insurance/) (AAP)

Carey Business School (https://carey.jhu.edu/student-experience/services-resources/student-health-benefits-plan/) (CBS)

Engineering for Professionals (https://ep.jhu.edu/student-services/other-services/student-health-insurance/) (EP)

Krieger School of Arts and Sciences (https://studentaffairs.jhu.edu/registrar/students/student-health-benefits/) (KSAS)

Peabody Institute (https://peabody.jhu.edu/life-at-peabody/student-life/health-wellness/) (Peabody)

School for Advanced International Studies (https://sais.jhu.edu/student-experience/wellbeing-and-support/) (SAIS)

School of Education (https://education.jhu.edu/student-resources/office-of-the-registrar/tuition-costs-and-benefits-information/health-insurance-information/) (SOE)

Whiting School of Engineering (https://studentaffairs.jhu.edu/registrar/students/student-health-benefits/) (WSE)

Plan Description

Students can use their student health insurance in and outside the Baltimore area. Wellfleet utilizes the Cigna PPO network, which has expansive options throughout the US and some countries. Visit the Wellfleet website (http://www.wellfleetstudent.com/) or call 1-877-657-5044. You can search for a provider by visiting the Cigna website (https://hcpdirectory.cigna.com/web/public/consumer/directory/search/?consumerCode=HDC001). Choose the type of search you want to conduct, and when prompted to "Login/Register," click "Continue as Guest." When prompted to "Please Select a Plan", enter location, hit "Continue", and then choose "PPO, Choice Fund PPO."

Students enrolled in KSAS, Peabody and WSE are eligible for health services from the Student Health and Wellness Center (https://studentaffairs.jhu.edu/student-health/) and SAIS students are eligible to receive health services from Georgetown University Student Health Services (https://studenthealth.georgetown.edu/medical-care/).

Deductibles

A deductible is the amount you must pay annually before your insurance begins to pay. Students who are eligible for treatment and referral from a university provider may receive a reduced deductible for qualifying referrals. Consult with the insurance specialist at your school for further questions. Otherwise, both in-network and out of network have a deductible of $150 per person. Deductibles reset each plan year. The Wellfleet plan year is August 15-August 14.

Out-of-Network Claims

A provider network is a list of health-care providers who are contracted by an insurance company and provide medical care to those enrolled in plans offered by that insurance company. The providers in the health insurance plan's network are called "in-network providers". Those providers who are out-of-network, may require additional costs.

Your Wellfleet network through Cigna has providers all over the country. However, if you need to go out-of-network, you can work with the SHWC to discuss claims processing and reimbursements. See the Wellfleet Student website for Johns Hopkins University (https://www.studentinsurance.com/Client/858/) for coverage percentages for in-network and out-of-network coverage as the percentage of coverage may differ.

Brief Mental Health Support

Students enrolled in the following schools are also eligible for short-term mental health support from the Johns Hopkins Student Assistance Program (https://jhsap.org/) (JHSAP).

- AAP
- CBS
- EP
- SOE
- SAIS

Students enrolled in the following schools are eligible for short-term mental health support from the JHU Counseling Center (https://studentaffairs.jhu.edu/counselingcenter/).

- KSAS
- Peabody

- WSE

Student Health Plan, Administered by the Johns Hopkins Employer Health Programs (EHP)

Students in the following programs are eligible for the EHP.

Bloomberg School of Public Health (https://www.jhsph.edu/offices-and-services/student-affairs/resources/student-insurance/student-health-plan.html) (BSPH)

School of Medicine (https://www.hopkinsmedicine.org/som/StudentInsurance/Index.html) (SoM)

School of Nursing (https://nursing.jhu.edu/information/current-student/student-affairs/health-safety/) (SoN)

Plan Description

The EHP Student Health Program has partnered with Multiplan (https://www.multiplan.us/) to provide covered services outside of Maryland as in-network when using a Multiplan participating provider. Learners can go online to the Multiplan website to find participating providers by zip code. Multiplan information is printed on the back of each EHP Student Health Program membership card. Members can also call EHP customer service at 410-424-4485 with any questions.

Students currently enrolled in the Student Health Program who are expected to graduate or permanently leave the University will receive written notification that they are automatically terminated from the plan. However, under the Consolidated Omnibus Budget Reconciliation Act (COBRA), students leaving or graduating from the University have the option of extending their existing coverage for up to 18 months. Students must contact the School of Medicine Registrar's Office via email at sombenefits@jhmi.edu within 60 days to be reinstated in COBRA and are responsible for all premiums.

All full-time on-campus students are billed a Health Clinic Fee for access University Health Services (https://www.hopkinsmedicine.org/uhs/), on-campus health center. The University Health Services Fee (UHS) is not insurance and students are billed the fee on a per-term basis. This fee grants students unlimited access to Primary Care Services as well as Mental Health Services at the UHS Clinic and is billed to all full-time on-campus students regardless of whether they are enrolled in the Student Health Plan.

Deductibles

A deductible is the amount you must pay before your insurance begins to pay. Deductibles remain the same in or out of network. Please consult your plan details for impacts of in-network or out-of-network visits on out-of-pocket expenses, co-pays, and co-insurance.

Out-of-Network Claims

A provider network is a list of health-care providers who are contracted by an insurance company and provide medical care to those enrolled in plans offered by that insurance company. The providers in the health insurance plan's network are called "in-network providers". Those providers who are out-of-network, may require additional costs.

A covered member can download claim forms (https://www.ehp.org/plan-benefits/member-forms/) from the EHP website.

Mental Health Support

BSPH, SoM, and SoN students are eligible for mental health support from UHS Mental Health (https://www.hopkinsmedicine.org/uhs/university_mental_health.html) or brief consultation with the Johns Hopkins Student Assistance Program (https://jhsap.org/) (JHSAP).

Veterans Affairs

https://registrar.jhu.edu/veterans/

Johns Hopkins is approved by the Maryland Higher Education Commission for the training of veterans, service members, eligible spouses and dependents under the provisions of the various federal laws pertaining to veterans' educational benefits. Johns Hopkins University also complies with Federal Law Section 103 (effective Aug. 1, 2019) which ensures that Johns Hopkins University will not impose any penalty, including the assessment of late fees, the denial of access to classes, libraries, or other institutional facilities, or the requirement that an eligible individual borrow additional funds, on any covered individual because of the individual's inability to meet their financial obligations to the institution due to the delayed disbursement funding from the VA under Chapter 31 or 33. Johns Hopkins University participates in the Principles of Excellence standards.

In order to prevent outstanding student accounts, Chapter 31 and 33 students are required to:

- Submit a COE or Statement of Benefits
- Complete the Third Party Payer VA certification request each semester
- Provide any additional information needed for certification

Contact the JHU Veterans Affairs office (https://registrar.jhu.edu/veterans/)to obtain information about veterans' benefits and enrollment procedures.

Standards of Progress

Continuation of VA payments depends on the student's meeting the university's academic standards for all students. The student must also meet any standards of progress which may be established by VA regulations.

Military TA

Johns Hopkins University is an approved University with the DOD MOU for use of Military TA. For guidance with utilizing Military tuition assistance please contact our team at veterans@jhu.edu .

If you are a veteran, active duty service member, or a military affiliated spouse/dependent, you may be eligible for education benefits offered by the Department of Veterans Affairs (https://www.va.gov/education/), including:

- Chapter 33: Post-9/11 GI Bill®
- Chapter 30: Montgomery GI Bill®
- Chapter 31: Vocational Rehabilitation & Employment
- Chapter 35: Dependents' Educational Assistance (DEA) Program
- Chapter 1606: Montgomery GI Bill®: Selected Reserve (MGIB-SR)

It is recommended that all veterans review the GI Bill® web site (https://benefits.va.gov/gibill/). For comprehensive VA Education Benefits counseling, or if you have questions pertaining to payment, availability of benefits, or approvals, please call the VA Education Call Center at 1-888-442-4551.

To request VA certification at JHU: Each semester please select Third Party Payer under your billing tab in the student system then select the VA chapter of benefits for the appropriate semester.

If you have questions about how your benefits will work at JHU, please contact our Veterans Affairs Office at veterans@jhu.edu or see information found on our Veterans Webpage (https://registrar.jhu.edu/veterans/).

GI Bill® is a registered trademark of the U.S. Department of Veterans Affairs (VA).

Yellow Ribbon

Johns Hopkins University participates in the yellow ribbon program please click her (https://registrar.jhu.edu/veterans/yellow-ribbon-program/)e to see rates and number of awards for each school.

BLOOMBERG SCHOOL OF PUBLIC HEALTH

The Johns Hopkins Bloomberg School of Public Health (http://www.jhsph.edu) has a big vision: Protecting Health, Saving Lives—*Millions at a Time*.

Since its founding in 1916, the Bloomberg School has advanced research, education and practice to create solutions to public health problems around the world.

Faculty, staff and students have helped eradicate smallpox, made water safe to drink, improved child survival, reduced the spread of HIV and uncovered the dangers of tobacco smoke.

Researchers and scientists are now discovering ways to eliminate malaria, increase healthy behavior, reduce the toll of chronic disease, improve the health of mothers and infants, and change the biology of aging.

Every day, the Bloomberg School works to keep millions around the world safe from illness and injury by pioneering new research, deploying knowledge in the field and educating tomorrow's public health leaders. Learn more through the Bloomberg School's strategic plan (https://www.jhsph.edu/about/strategic-plan/).

Faculty (https://www.jhsph.edu/faculty/directory/list/)

Departments

Accreditation

Every seven years, the Johns Hopkins Bloomberg School of Public Health is evaluated by the Council on Education for Public Health (CEPH), the independent accrediting agency for U.S. Schools of Public Health.

As part of this evaluation, the school constructs a self-study that comprehensively describes the school's organization, governance, resources, faculty, students, curriculum, research, and services. The self-study is reviewed by an external committee who visits the school and meets with a variety of stakeholders including faculty, students, staff, alumni, and external community representatives. This committee makes a recommendation to the CEPH Board on whether the school should continue to be accredited.

In 2015, the CEPH Board voted to renew the accreditation of the School for another seven year term, ending in 2022. This has since been extended to December 2023. The School will conduct a self-study in 2022 and a CEPH accreditation site visit will be conducted before December 2023.

Our thanks are extended to Stephen Gange, James Yager, Karen Charron and Yelizaveta Kalashnikova-Luby for their dedication and hard work during the 2015 re-accreditation process.

The final self-study and accreditation reports are available upon request by email at academicaffairs@jhu.edu.

Doctoral Programs

Master's Programs

Dual Degrees

Certificate Programs

Courses

PH.700.600. Basics of Bioethics. 2 Credits.
Offers an introduction to fundamental issues and approaches in bioethics, provides an overview of the history of the field, and highlights the events that led to the birth and growth of bioethics. Introduces theoretical approaches to bioethics, public health policy, research ethics, ethics of genetics and science, and clinical ethics. Provides students with opportunities to gain from the experience of some of the most respected scholars in the field of bioethics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.601. Foundations of Bioethics. 3 Credits.
Offers an introduction to central approaches and issues in bioethics. Includes a discussion of the history of the field and the issues that led to its birth and growth internationally. Introduces philosophical, empirical and non-empirical approaches to bioethics and core ethical issues in clinical care, public health, science and research. Provides a foundation for future study in bioethics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.602. Hot Topics in Bioethics. 3 Credits.
Offers a continuation of the exploration of ethical theory and its use in bioethics begun in "Introduction to Ethical Theory". Utilizes the conceptual and methodological tools from "Ethical Theory" in analyzing topics and cases currently being discussed in bioethics. Although topics will change from year to year, common themes include: discussion of legal changes concerning end of life; the ethics of new reproductive technologies; ethical challenges concerning genome-editing technologies; and global ethical challenges such as climate change and resource allocation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.603. Introduction to Ethical Theory. 3 Credits.
Explores the relationship between philosophical ethical theory and the practical world of bioethics. In particular, examines the classical accounts of moral obligation and virtue in the context of a variety of contemporary bioethical problems. Further presents the distinction between individual bioethics and collective bioethics, with the goal of determining how the theoretical grounding for these fields differ. The motivating questions are both methodological and substantive: First, how does theory contribute to bioethical investigations? And second, does reflection on ethical theory tell us what to do concerning particular, bioethical problems?
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.604. Methods in Bioethics. 3 Credits.
This course introduces some of the main methods used in bioethics research, scholarship and practice, including philosophical, legal, historical, religious, qualitative, and quantitative research methods. The strengths and weaknesses of each method in addressing bioethical questions or problems will be described. Each method will be illustrated with contemporary topical examples. In addition, one cross-cutting example of an issue addressed by all methods will be discussed.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.605. Critical Reasoning for Bioethics. 2 Credits.
Introduces critical thinking skills that are widely used in bioethics research and practice. Introduces argument mapping techniques and gives students practice extracting arguments from texts and mapping those arguments. Introduces students to common strengths and weaknesses of arguments and gives students practice in evaluating arguments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.606. Critical Reasoning for Bioethics II. 2 Credits.
This course builds on Critical Thinking in Bioethics Scholarship 1. It builds on student training in argument mapping, identifying common strengths and weaknesses of arguments and evaluating arguments, formulating good arguments and expressing them in text, and writing critical essays.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.621. Ethics in Clinical Practice: Fundamentals, Problems and Approaches. 3 Credits.
Offers students a) a theoretical and practical foundation for identifying and analyzing ethical issues arising in clinical medicine and b) a survey of important current issues and problems in clinical ethics with c) a focus on case analysis and application of principles to problems. Includes interactive content and case-based materials.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.622. Bioethics, Human Rights, and Global Health. 3 Credits.
Explores the theoretical justifications of human rights and their relationship to the contemporary human rights movement based in positive law and how human rights are operationalized. Reviews theories of human rights, evolution of human rights as law, and common ground and tensions between bioethics and legal approaches to human rights. Illustrates how bioethics and human rights concepts apply to key public health issues of our time, particularly as they relate to problems of inequality and inequity. Discuss issues including access to essential medicines, women's health, disease surveillance and response to pandemics, and health claims of immigrants, refugees and prisoners.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.623. Ethics and Decision-Making in Clinical Practice. 3 Credits.
Acquaints students with the ethical dimensions of healthcare decision-making by individuals, including shared decision-making in patient-provider encounters; decision-making in the context of incomplete information, patient disadvantage, distress or conflict; the understanding and approach of providers and systems to the ethical dimensions of decision-making; and relevant social and economic constraints on such decision-making. Explores topics in multiple settings, populations and health conditions, with the goal of making learners aware of the ethical implications of healthcare decisions, both in everyday practice and from a policy perspective.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.625. Bioethics and the Law. 3 Credits.
This course introduces students to the U.S. legal system and analyzes the relationship between law and bioethics. During the course, students will: (1) develop an understanding of the relevance of law for bioethics as a scholarly field and as a profession; (2) become familiar with legal structures, mechanisms, institutions, functions, and sources of law; (3) develop a critical appreciation of the complexity, flexibility, and evolution of law; and (4) develop a set of core legal skills applicable to bioethics scholarship and practice. Specific topic areas include legal duties of health care providers, end-of-life decisionmaking, ownership in body parts and informed consent, health inequities, assisted reproduction, and public health. No background in law is required to take this course.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.630. Food Ethics. 3 Credits.
Introduces students to the primary ethical challenges in the global food system and explores ethical issues in the United States food system. Provides students with the opportunity to think critically about a variety of conflicting views about the ethics of animal agriculture, healthy eating efforts and decision-making about food. Uses theories and tools from practical ethics, political philosophy, and theories of justice to shed light on these issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.632. Ethics, Policy, and Emerging Biomedical Technologies. 3 Credits.
Examines the ethics and policy issues raised by emerging biomedical technologies, including stem cell science, genetics/genomics, neuroscience, and synthetic biology. Integrates primers on the relevant science with discussion of the ethics and policy issues raised by the design, conduct and integration of the science into research, clinical care and commerce.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.641. Germs, Genes, Patients, and Populations. 3 Credits.
Explores past, present, and future ethical, legal, social and policy issues at the intersection of infectious disease and genomics. Due to the social nature of contagion, infectious disease challenges individualistic assumptions in bioethical models with public health dilemmas requiring attention to the relationships and interactions between hosts, vectors, pathogens, and environments. Focuses on the potential ethical, legal, and social implications of emerging genomic science and technology for infectious disease control. Each class focuses on a specific type of infectious disease highlighting different notions of disease causation and mode of transmission. Explores in three related contexts: research, clinical practice and public health. Addresses the enduring bioethical concerns about social responsibility, stigma, and the challenge of balancing individual interests and protections against risks of harms to others and to public health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.642. Vulnerability in Childhood -- from Ethics to Advocacy. 3 Credits.
Introduces students to the concept of vulnerability from an interdisciplinary lens of ethics, philosophy, medicine, and public health. Discusses how special protections for vulnerable populations can impact research and clinical care at the individual and population level. Presents examples of vulnerable populations of children (eg. children with medical complexity, children in foster care, transgender youth) in order to illustrate relevant ethical challenges faced by vulnerable populations. Introduces students to written media (eg. op-ed, letter to the editor) as a tool to advocate for vulnerable children.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.643. Understanding Addiction: Philosophy, Science, Ethics. 3 Credits.
Employs an inter-disciplinary approach to understand the nature of addiction, drawing on philosophy, psychological science, and the perspectives of people who struggle with addiction. Provides an overview of competing models of addiction and evaluates their theoretical foundations and supporting evidence. Explores the heterogeneity of individual-level decision-making in addiction. Distinguishes different ideas of responsibility and how they intersect with addiction research and individual and societal responses to addiction, including drug criminalization. Provides students with the opportunity for in-depth reflection on conceptual and ethical issues surrounding addiction, developing analytic and argumentative skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.644. Justice Theory and Health. 3 Credits.
Explores how to make the world a better and more just place from the standpoint of human rights & justice theory. Topics include the distinctive role of justice and structural justice in moral thought, theoretical foundations for human rights, the relationship between human rights & justice, & the related concepts of fairness, power and disadvantage. Explores these topics in the particular context of the pandemic.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.645. Fogarty Bioethics Fellows Seminar. 1 Credit.
Provides a small, interactive setting for discussion of research ethics, ethics committees, and ethics concepts among the trainees and between trainees and affiliated faculty. Divides sessions among the following activities: reviewing and critiquing journal articles related to research ethics; trainees' individual presentations on practicum research progress; guest speakers related to research ethics cases and/or concepts; and development and presentation of original case studies by each trainee. Includes topics standard of care, justice, inducements, research ethics committees, informed consent, and gender roles in research decisions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.663. Global Food Ethics and Policy. 2 Credits.
Examines global food systems and the policies that impact global food security, and broader aspects of sustainable development including public health, the environment and economies. Presents and critiques different food system policies that determine the availability, affordability, and nutritional quality of the food supply and influence the amount and combination of foods that people are willing and able to consume. Encourages use of critical thinking skills and debate to understand how policy and science interact with regard to food systems. Presents data, case studies and real-time challenges related to global food systems with an emphasis on the development of practical skills to analyze systems approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.665. Introduction to Ethics of U.S. and International Human Subject Research. 2 Credits.
Provides an introduction to the ethics of human subject research and allows participants to apply what they learn to case examples from the U.S. and international settings. Presents ethical principles and a framework for analysis. Reviews key U.S. and international regulations that guide the ethical conduct of research. Through lectures and moderated discussions, addresses a variety of issues including: informed consent for research participation; ethical aspects of study design; just selection of research subjects and duties of justice when working in resource poor settings; and the role and function of institutional review boards/ethics review committees. Uses case discussions to explore research in both domestic and international settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.667. Catastrophe Ethics: How to Respond to Public Health Disasters. 2 Credits.
Explores the ethics of responding to large, structural, public health disasters, or 'catastrophe ethics'. Investigates catastrophes with the following property: they are so large that no individual action or person can solve them; rather, they require coordination of large collectives. Focuses on climate change, the Covid-19 pandemic, and structural racism over the course of the week, asking two, overarching questions about each: what are we obligated to do in the face of such crises; and regardless of what we as a society do, what are we obligated to do in our private lives? Investigates the relationship between the structural and the individual answers.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.702. THE ETHICS OF MAKING BABIES. 2 Credits.
Examines one of the most morally significant decisions people face: whether or not to create a new person. Explores our pronatal outlook—a positive moral outlook on the activity of making babies. Considers why it is uncomfortable, and perhaps even threatening, to suggest that procreation is an activity that is subject to a whole variety of moral requirements. Engages students in asking and beginning to answer the question, is it permissible to create a new child.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.801. Bioethics Program Thesis Seminar. 3 Credits.
Provides students with the basic research and organizational skills needed for successful completion of the MBE thesis. Addresses skills needed to conduct a literature review, choose an appropriate topic, and construct a rigorous argument.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.820. Bioethics Program Thesis Research. 1 - 6 Credits.
Provides an opportunity for students to actively conduct research in bioethics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.830. Postdoctoral Research Berman Institute. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.840. Bioethics Program Independent Study. 2 Credits.
Provides students with a one-on-one independent study experience in which they independently review papers from the current literature and meet weekly with a departmental faculty member to discuss them. Offers opportunities for complementary activities which may include participating in related course discussions, seminars, conferences, etc. Culminates with the completion of a written document, typically a substantial paper.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.895. Bioethics Program Practicum. 3 Credits.
The MBE Practicum is a mentored, bioethics experience, which involves either field work with a practicing bioethicist, or applying one's bioethical training to a real-world environment.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.700.896. Clinical Ethics Practicum I. 1 Credit.
Introduces common ethical challenges in patient care that arise in different clinical settings, and the systems in place to address them. Explores the perspectives of patients, families, trainees and practicing clinicians on complex ethical dilemmas in clinical care. Presents different methods of analyzing ethical dilemmas in the care of patients, and different styles of communicating about them with patients.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.601. Biochemistry II. 5 Credits.
Examines the major metabolic pathways that are central to eukaryotic cell growth and maintenance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.602. Concepts of Molecular Biology. 4 Credits.
Discusses synthesis of macromolecules, the genetic code, regulation of gene expression and gene function, and recent advances in biotechnology.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.603. Molecular Biology of Pandemic Influenza. 3 Credits.
Explores how molecular biology is used to understand how specific respiratory viruses create pandemics. Begins with an analysis of the virus that caused the great public health catastrophe, the 1918 Spanish Influenza Pandemic and then examines more recent pandemic viruses, including SARS-Cov-2. Focuses on the use of molecular techniques in defining why specific mutations increase the virulence and pandemic potential of a virus, the pathological response of a host's immune system to a virulent virus and pathological interactions between two different respiratory pathogens. Emphasizes how molecular, pathophysiological and immunological studies may be used to predict a virus' pandemic potential. Reviews how governmental responses affect the spread of a disease with pandemic potential, including the response to SARS-CoV-2.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.604. Introduction to Molecular Biology. 3 Credits.
Molecular biology deals with how nucleic acids and proteins interact within the cell to promote proper growth, division, and development. This course will provide an overview of these processes, including DNA replication, repair, transcription, splicing, protein synthesis, and gene regulation in different organisms. We will also explore many biological tools that have been developed from molecular biology processes, such as DNA sequencing and gene editing (CRISPR-Cas9).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.605. Genome Integrity. 3 Credits.
Provides students with a broad base in fundamental principles of genome integrity. Examines connections between genome integrity, organism fitness, and human diseases and disorders. Addresses 1) Homologous recombination, (2) Non-homologous end joining, (3) Mismatch repair, (4) Transposable elements, (5) Topoisomerases, (6) Structural maintenance of chromosomes and (7) Chromosome segregation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.606. Cellular Stress in Physiology and Disease. 3 Credits.
Discuss molecular mechanisms through which eukaryotes maintain cellular homeostasis in response to stress. Stress response pathways are examined at the DNA, RNA, and protein levels; topics include stress and transcription, RNA processing, and protein quality control. Organelle-specific stress response, such as ER stress and mitochondrion stress responses, are also discussed. Additionally, molecular mechanisms of cellular responses to environmental stimuli, such as heat, hypoxic, oxidative, and starvation stressors, are examined.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.607. Premedical Seminars: Planning and Preparing for Medical School Application. 1 Credit.
Helps students prepare to apply to medical school. Covers specific topics to address the complex premedical journey, including planning the months/years leading up to the application, reviewing the application process, addressing the medical schools' expectations, medical school selection, writing the personal statement, requesting letters of evaluation, interviewing and more.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.608. Gene Editing, therapy and Manipulation. 3 Credits.
Introduces genes and genetics, and their role in the genetic basis of human health and disease. Explores the current status of gene editing and gene therapy technologies both in the context of therapeutics and as tools in the life sciences. A large focus of the class centers on the impact of CRISPR on these technologies. Discuss the ethical implications of these technologies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.610. Biochemistry I: Protein Structure and Enzyme Catalysis. 3 Credits.
Covers the physical and chemical properties of the amino acids, the various elements of protein structure, and the cooperative behavior of multimeric proteins. Explore the kinetics of enzyme-catalyzed reactions, and the active site mechanisms of representative classes of enzymes. Describes the molecular basis of action for selected enzyme inhibitor-based drugs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.613. Nucleic Acid Chemistry. 3 Credits.
Discusses nucleic acid structure, and also describes techniques for manipulating and analyzing nucleic acids, including gel electrophoresis, PCR, and DNA sequencing. Reviews methods used to synthesize nucleosides, nucleotides and oligonucleotides, and chemical reactions that lead to modifications of nucleic acids. Covers topics including DNA-drug interactions, antisense and antigene oligonucleotides, ribozymes and deoxyribozymes, DNA cages, DNA origami, DNA nanostructures, and DNA nanodevices.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.616. Advanced Concepts in Biochemistry, Cell and Molecular Biology. 1 - 2 Credits.
Provides a platform for students, postdoctoral fellows and faculty to present and discuss scientific papers from the current literature that deal with mechanisms underlying disease along with accompanying methods. Explores additional aspects that are relevant to conducting and conveying laboratory research, including study design and statistical analysis, manuscript and grant review, policy and practice, and risk assessment.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.620. Fundamentals of Reproductive Biology. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.622. Molecular and Cellular Mechanisms of Reproduction. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.624. Cancer Biology. 3 Credits.
Explores some of the key molecular and cellular aspects of the biology of cancer. Includes topics: cancer genetics, DNA damage, and cell signaling pathways including RAS and Epidermal Growth Factor Receptors. Covers a select set of current research areas that aim to further the understanding and treatment of cancer. Emphasizes how these molecular mechanisms are regulated, contribute to oncogenesis, and can be targeted therapeutically.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.625. Introduction to Cancer Biology. 3 Credits.
This Cancer Biology course will educate students on the principles of cancer biology, including the various genetic and molecular changes normal cells undergo during transformation into malignant cancer cells. To this end, this course will help students to gain an understanding of cellular and molecular mechanisms that go awry, thereby providing optimal conditions for cancer. We will explore the role of mutations in cancer cells, and how they lead to the dysregulation of essential biological properties like programmed cell death, cell proliferation and differentiation. We will also focus on the interface of cancer and medicine. Classical treatment methods will be compared with newer treatment strategies like targeted therapies. We will also explore the challenges associated with diagnosing cancers, as well as ways in which to prevent cancer.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.626. Principles of Cell Biology. 3 Credits.
Provides students with a basic understanding of the structure and functions of eukaryotic cells. Introduces students to new facts and vocabulary pertinent to cell biology, as well as experimental methods used by scientists to define and understand cell structure and functions. Highlights relationships between defects in basic cell functions and human diseases. Classroom time is divided into 8 formal lecture sessions, 3 less formal review/discussion/problem solving sessions, and 3 closed-book, in-class exams.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.627. Stem Cells and the Biology of Aging and Disease. 3 Credits.
Exposes students to cutting-edge topics in stem cell biology through a combination of lectures and discussions based on primary literature. Topics include basic stem cell biology in a invertebrate and vertebrate systems, including germline, neural, and epithelial stem cells; the regulation of stem cells by physiology and aging; the connection between stem cells, telomerase, and cancer; and ethical issues pertaining to potential therapeutic applications of stem cells.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.630. Fellowship Grant Writing for Students and Postdoctoral Fellows in Biomedical Research. 2 Credits.
Provides students and postdoc trainees with an overview of the entire fellowship application process, including how to write an effective research proposal and specific aims, how to prepare a NIH style biosketch and how to formulate an effective personal biography. Discusses the peer review process, how fellowship applications are judged and scored. The students and postdocs will gather to form an in-class study section where trainees have the opportunity to review grants in the style of NIH study sections.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.644. BMB SCM Laboratory Rotations. 4 - 8 Credits.
All departmental ScM students spend one to three terms, respectively, participating in the research activities of departmental faculty's laboratories. Students select appropriate rotations in consultation with their academic advisor and the ScM Program Director. The objective is to provide the opportunity for interaction with several faculty members, so that a thesis laboratory may be identified. The course aims to broaden a student's knowledge of laboratory techniques and skills, expose the student to a variety of research areas and to develop the ability to carry out a research project.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.720. Applying Reproductive Biology Literacy Through Service-Learning. 3 Credits.
Builds from "Fundamentals of Reproductive Biology" in 1st term (120.620.01). In this service-learning course, students have the opportunity to extend beyond hypothetical applications of what they have learned, and apply their "reproductive biology literacy" to help in a professional, real-world setting. The service component of this course is for students to produce deliverable(s) of use/value for a community-based organization (CBO), to be complemented by in-class activities to absorb and learn from these experiences in working with the CBO.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.800. MPH Capstone: Biochemistry and Molecular Biology. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.820. Thesis Research Biochemistry. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.821. MHS Student Research. 3 Credits.
Acquaints MHS students with basic research in the biomedical sciences through work under the guidance of a faculty member in the Department of Biochemistry and Molecular Biology, and provides an introduction to hands-on experience in laboratory research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.822. Seminars in Research in Biochemistry and Molecular Biology. 1 Credit.
Integrates academic training with current research in biochemistry and molecular biology and the implications of this research in addressing major public health concerns. Weekly presentations are held by researchers from JHU and other biomedical research institutions on the results of state of the art investigations conducted in their laboratories, emphasizing experimental design and methodology.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.825. Advanced MHS Student Research. 5 Credits.
Builds upon existing basic research skills in biomedical sciences and emphasizes more independent hands-on research working under the guidance of a faculty member in the Department of Biochemistry and Molecular Biology or affiliated principle investigator. Provides further experience for future research pursuits at JHU and beyond.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.829. Summer Thesis Research. 12 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.830. Postdoctoral Research Biochemistry. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.840. Special Studies and Research Biochemistry. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.850. Biochemical Techniques. 6 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.852. Core Research Literature. 1 - 2 Credits.
Provides a complement to the BCMB core curriculum. Student reads research papers relating to a core lecture topic. Discussions are led by a student while a faculty member from Biochemistry or MMI act as facilitator. Helps students to develop skills in reading the primary literature and provides an introduction to the experimental paradigms underlying the concepts presented in the core course.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.853. Summer Biochemical Techniques. 6 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.860. Thesis Preparation. 2 Credits.
Students engage in one-on-one independent study with a departmental faculty member who will be the student's thesis supervisor. Prepares students for completing the MHS using independent reading of papers from current literature, combined with meetings with the thesis supervisor to discuss the reading and how to recognize this research to develop the MHS thesis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.861. Special Topics in Biochemistry: X-Ray Crystallography-A Hands on Workshop. 3 Credits.
Enables students to carry out all key steps to successfully solve and refine a protein crystal structure. Theoretical aspects are followed by application to various problem sets. Topics include tricks for data collection, data processing and collection. Touches upon all standard techniques such as molecular replacement, SAD phasing and MAD phasing, both in theory and then applied in practical context with previously collected data. Identification of unknown ligand densities and model refinement lead to the last part of preparing publication quality figures using PyMol.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.870. Thesis in Biochemistry and Molecular Biology. 5 Credits.
In consultation with a faculty mentor from the Department of Biochemistry and Molecular Biology, students prepare a critical, scholarly paper on an assigned subject.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.872. Special Studies-Current Topics in BMB. 1 Credit.
Introduces students to the faculty and to current research being conducted in their respective laboratories within the Department of Biochemistry and Molecular Biology and by other training faculty of the Cancer Biology Training Program. Informs doctoral students about research opportunities in each laboratory and allows them to make informed decisions about their choices for laboratory rotations during their first year. Similarly, informs current MHS students who are considering the ScM Program during the second year about potential research opportunities in laboratories of BMB faculty. Provides time for faculty presentation, student questions and further discussion.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.120.895. MPH Practicum: Biochemistry and Molecular Biology. 1 - 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.604. Introduction to R for Public Health Researchers. 2 Credits.
Provides "hands-on" training for analyzing data in the R statistical software package, a popular open-source solution for data analysis and visualization. Covers data input/output, data management and manipulation, and constructing useful and informative graphics. Geared towards individuals who have never used R or have a little familiarity.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.605. Introduction to the SAS Statistical Package. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.606. Survival Analysis. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.607. Multilevel Models. 2 Credits.
Gives an overview of "multilevel statistical models" and their application in public health and biomedical research. Multilevel models are regression models in which the predictor and outcome variables can occur at multiple levels of aggregation: for example, at the personal, family, neighborhood, community and regional levels. They are used to ask questions about the influence of factors at different levels and about their interactions. Multilevel models also account for clustering of outcomes and measurement error in the predictor variables. Students focus on the main ideas and on examples of multi-level models from public health research. Students learn to formulate their substantive questions in terms of a multilevel model, to fit multilevel models using Stata during laboratory sessions and to interpret the results.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.608. Analysis of Longitudinal Data. 2 Credits.
Covers statistical models for drawing scientific inferences from longitudinal data. Topics include longitudinal study design; exploring longitudinal data; linear and generalized linear regression models for correlated data, including marginal, random effects, and transition models; and handling missing data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.609. Improving Precision and Power in Randomized Trials by Leveraging Baseline Variables. 0.5 Credits.
Explains what covariate adjustment is, how it works, when it may be useful to apply, and how to implement it (in a preplanned way that is robust to model misspecification) for a variety of scenarios. Demonstrates the impact of covariate adjustment using trial data sets in multiple disease areas. Provides step-by-step, clear documentation of how to apply the software in each setting. Applies the software tools on the different datasets in small groups.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.611. Statistical Reasoning in Public Health I. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.612. Statistical Reasoning in Public Health II. 3 Credits.
Provides a broad overview of biostatistical methods and concepts used in the public health sciences, emphasizing interpretation and concepts rather than calculations or mathematical details. Develops ability to read the scientific literature to critically evaluate study designs and methods of data analysis. Introduces basic concepts of statistical inference, including hypothesis testing, p-values, and confidence intervals. Includes topics: comparisons of means and proportions; the normal distribution; regression and correlation; confounding; concepts of study design, including randomization, sample size, and power considerations; logistic regression; and an overview of some methods in survival analysis. Draws examples of the use and abuse of statistical methods from the current biomedical literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.613. Data Analysis Workshop I. 2 Credits.
Emphasizes concepts and illustration of concepts applying a variety of analytic techniques to public health datasets in a computer laboratory using Stata statistical software. Learns basic methods of data organization/management and simple methods for data exploration, data editing, and graphical and tabular displays. Includes additional topics: comparison of means and proportions, simple linear regression and correlation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.614. Data Analysis Workshop II. 2 Credits.
Emphasizes concepts and illustration of concepts applying a variety of analytic techniques to public health datasets in a computer laboratory using Stata statistical software. Masters advanced methods of data analysis including analysis of variance, analysis of covariance, nonparametric methods for comparing groups, multiple linear regression, logistic regression, log-linear regression, and survival analysis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.615. Statistics for Laboratory Scientists I. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.616. Statistics for Laboratory Scientists II. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.620. Advanced Data Analysis Workshop. 2 Credits.
Covers methods for the organization, management, exploration, and statistical inference from data derived from multivariable regression models, including linear, logistic, Poisson and Cox regression models. Students apply these concepts to two or three public health data sets in a computer laboratory setting using STATA statistical software. Topics covered include generalized linear models, product-limit (Kaplan-Meier) estimation, Cox proportional hazards model.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.621. Statistical Methods in Public Health I. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.622. Statistical Methods in Public Health II. 4 Credits.
Presents use of confidence intervals and and hypothesis tests to draw scientific statistical inferences from public health data. Introduces generalized linear models, including linear regression and logististic regression models. Develops unadjusted analyses and analyses adjusted for possible confounders. Outlines methods for model building, fitting and checking assumptions. Focuses on the accurate statement of the scientific question, appropriate choice of generalized linear model, and correct interpretation of the estimated regression coefficients and confidence intervals to address the question.
Prerequisite(s): Must also register for lab, PH.140.922.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.623. Statistical Methods in Public Health III. 4 Credits.
Prerequisite(s): Must also enroll for PH.140.923
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.624. Statistical Methods in Public Health IV. 4 Credits.
Builds on the concepts, methods, and computing (Stata, R) covered in Statistical Methods 1,2, and 3. Focuses on investigating scientific questions via data analysis and clearly communicating the methodology and results. Uses examples from the contemporary and public health literature and allows students the opportunity to work with their own data over the duration of the class.
Prerequisite(s): Must also enrol for a lab, PH.140.924.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.628. Data Science for Public Health I. 4 Credits.
Presents the basics of data science using the R programming language. Teaches basic unix, version control, graphing and plotting techniques, creating interactive graphics, web app development, reproducible research tools and practices, resampling based statistics and artificial intelligence via deep learning, focusing on practical implementation specifically tied to computational tools and core fundamentals necessary for practical implementation. Culminates with a web app development project chosen by student (who will come out of this course sequence well-equipped to tackle many of the data science problems that they will see in their research).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.629. Data Science for Public Health II. 4 Credits.
Presents the basics of data science using the R programming language. Teaches basic unix, version control, graphing and plotting techniques, creating interactive graphics, web app development, reproducible research tools and practices, resampling based statistics and artificial intelligence via deep learning, focusing on practical implementation specifically tied to computational tools and core fundamentals necessary for practical implementation. Culminates with a web app development project chosen by student (who will come out of this course sequence well-equipped to tackle many of the data science problems that they will see in their research).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.630. Introduction to Data Management. 3 Credits.
Introduces students to the principles and skills required to collect and manage research data in a public health setting. Focuses on tools for collecting data that range from spreadsheets to web-based systems, database fundamentals, data collection form design, data entry screen design, proper coding of data, strategies for quality control and data cleaning, protection and sharing of data, and integrating data from external sources. Includes practical and hands-on exercises that require some entry-level computer programming.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.631. The SAS Statistical Package: A Survey for Statisticians. 3 Credits.
Introduces students to the SAS statistical package using the SAS Studio interface. Using examples of public health data students learn to write programs to summarize data and to perform statistical analyses. Using the interactive matrix language introduces computation within a matrix environment and the development of modular programming techniques.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.632. Introduction to the SAS Statistical Package. 3 Credits.
Introduces students with no experience with SAS. Familiarizes them with the skills needed for effective data management anddata analysis. Covers performing exploratory analysis on data including the creation of tables and graphs. Proceeds next to creating new datasets and altering old datasets. Covers building regression models (linear, logistic, and Poisson), interpreting results and criticizing such models, and attempting to improve them.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.633. Biostatistics in Medical Product Regulation. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.634. Non-Inferiority and Equivalence Clinical Trials. 2 Credits.
Presents the important differences between superiority trials and those intended to show either equivalent effect, or to show that one therapy is no worse than another (but might be better). Explores the problems of setting equivalence margins, preservation of some proportion of active control effect, and emphasizes the use of confidence intervals to interpret the results of studies. Discusses special issues of quality of the trial conduct, assay sensitivity, historical evidence of treatment effects and assumptions of constancy of treatment effects over time. Compares sample size requirements between superiority trials, equivalence trials and non-inferiority trials. Discusses the use of different analysis populations (ITT and per-protocol) and issues of changing conclusions between non-inferiority and superiority. Discusses the regulatory aspects of trial design and interpretation, and reviews existing regulatory guidance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.636. Scalable Computational Bioinformatics. 4 Credits.
Introduces the computational hardware and programming model upon which analysis tools and languages are based. Introduces and uses three main languages (Python, Perl, SQL) and their underlying rationale to develop computer science concepts such as data structures, algorithms, computational complexity, regular expressions, and knowledge representation. Draws examples and exercises from high-throughput sequence analysis, proteomics and modeling of biological systems. Reinforces key concepts through lectures with live computer demonstrations, weekly readings, and programming exercises. Has students working with a High Performance Compute Cluster and the Amazon cloud.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.638. Analysis of Biological Sequences. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.640. Statistical Methods for Sample Surveys. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.641. Survival Analysis. 3 Credits.
Introduces fundamental concepts, theory and methods in survival analysis. Emphasizes statistical tools and model interpretations which are useful in medical follow-up studies and in general time-to-event studies. Includes hazard function, survival function, different types of censoring, Kaplan-Meier estimate, log-rank test and its generalization. For parametric inference, includes likelihood estimation and the exponential, Weibull, log-logistic and other relevant distributions. Discusses in detail statistical methods and theory for the proportional hazard models (Cox model), with extensions to time-dependent covariates. Includes clinical and epidemiological examples (through class presentations). Introduces basic concepts and methods for competing risks data, including the cause-specific hazard models and other models based of cumulative incidence function (CIF). Illustrates various statistical procedures (through homework assignments).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.642. Design of Clinical Experiments. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.643. Practice of Statistical Consulting. 3 Credits.
Emphasizes the understanding of, and practical experience in, the spectrum of non-technical aspects of statistical consulting, the art and science of applying statistics to real-world problems. Discusses the elements of a consultation, from defining the research problem to providing final products to the client, interpersonal communication, reproducible work, ethics and consulting in different environments. Develops students' consulting skills via lectures, role-play opportunities, consulting sessions, and actual research projects. Acquaints students with practical consulting experience through shadowing and leading the Biostatistics Center's clinics on Friday mornings. Provides opportunities to work directly with Johns Hopkins researchers to elicit information about the research question, and to provide a presentation and final report to researchers.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.644. Statistical Machine Learning: Methods, Theory, and Applications. 4 Credits.
Introduces popular Machine Learning methods and emphasizes their practical usage for data analysis. Acquaints students with methods to evaluate statistical machine learning models defined in terms of algorithms or function approximations using basic coverage of their statistical and computational theoretical underpinnings. Topics covered include: regression and prediction, tree-based methods, overview of supervised learning theory, support vector machines, kernel methods, ensemble methods, clustering, visualization of large datasets and graphical models. Examples of method applications covered include cancer prognosis from microarray data, visualization and analysis of social network data, and graphical models for clinical decision-making.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.646. Essentials of Probability and Statistical Inference I: Probability. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.647. Essentials of Probability and Statistical Inference II: Statistical Inference. 4 Credits.
Introduces students to the theory of statistical inference. Includes the frequentist, Bayesian and likelihood approaches to statistical inference including estimation, testing hypotheses and interval estimation. Emphasizes rigorous analysis (including proofs), as well as interpretation of results and simulation for illustration.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.648. Essentials of Probability and Statistical Inference III: Theory of Modern Statistical Methods. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.649. Essentials of Probability and Statistical Inference IV. 4 Credits.
Builds on the concepts discussed in 140.646, 140.647, 140.648 to provide the theory for modern statistical methods such as linear models, generalized linear models, random effects models, and marginal regression models. Also discusses the theory of causal inference. De-emphasizes proofs and replaces them with extended discussion of interpretation of results and simulation for illustration.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.651. Methods in Biostatistics I. 4 Credits.
Presents fundamental concepts in applied probability, exploratory data analysis, and statistical inference, focusing on probability and analysis of one and two samples. Includes topics discrete and continuous probability models; expectation and variance; central limit theorem; inference, including hypothesis testing and confidence interval for means, proportions, and counts; maximum likelihood estimation; sample size determinations; elementary non-parametric methods; graphical displays; and data transformations. Introduces R and concepts are presented both from a theoretical, practical and computational perspective.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.652. Methods in Biostatistics II. 4 Credits.
Presents fundamental concepts in applied probability, exploratory data analysis, and statistical inference, focusing on probability and analysis of one and two samples. Includes discrete and continuous probability models; expectation and variance; central limit theorem; inference, including hypothesis testing and confidence for means, proportions, and counts; maximum likelihood estimation; sample size determinations; elementary non-parametric methods; graphical displays; and data transformations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.653. Methods in Biostatistics III. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.654. Methods in Biostatistics IV. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.655. Analysis of Longitudinal Data. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.656. Multilevel Statistical Models in Public Health. 4 Credits.
Explores conceptual and formal approaches to the design, analysis, and interpretation of studies with a “multilevel” or “hierarchical” (clustered) data structure (e.g., individuals in families in communities). Develops skills to implement and interpret random effects, variance component models that reflect the multi-level structure for both predictor and outcome variables. Includes topics: building hierarchies; interpretation of population-average and level-specific summaries; estimation and inference based on variance components; shrinkage estimation; discussion of special topics including centering, use of contextual variables, ecological bias, sample size and missing data within multilevel models. Supports STATA and R software.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.658. Statistics for Psychosocial Research: Structural Models. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.664. Causal Inference in Medicine and Public Health I. 4 Credits.
Presents an overview of methods for estimating causal effects: how to answer the question of “What is the effect of A on B?” Includes discussion of randomized designs, but with more emphasis on alternative designs for when randomization is infeasible: matching methods, propensity scores, regression discontinuity, and instrumental variables. Methods are motivated by examples from the health sciences, particularly mental health and community or school-level interventions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.665. Causal Inference in Medicine and Public Health II. 3 Credits.
Presents principles, methods, and applications in drawing cause-effect inferences with a focus on the health sciences. Building on the basis of 140.664, emphasizes statistical theory and design and addresses complications and extensions, aiming at cultivating students’ research skills in this area. Includes: detailed role of design for causal inference; role of models and likelihood perspective for ignorable treatment assignment; estimation of noncollapsible causal effects; statistical theory of propensity scores; use of propensity scores for estimating effect modification and for comparing multiple treatments while addressing regression to the mean; theory and methods of evaluating longitudinal treatments, including the role of sequentially ignorable designs and propensity scores; likelihood theory for instrumental variables and principal stratification designs and methods to deal with treatment noncompliance, direct and indirect effects, and censoring by death.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.673. INTRODUCTION TO STATISTICAL THEORY I. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.676. Biostatistical Analysis of Epidemiologic Data I: Basic Tools. 2 Credits.
Begins with a brief review of statistical estimation and probability distributions. Also included is an introduction to bootstrap methods of statistical estimation. Then, confidence intervals are explored in detail. The analysis of two of the most common and important biostatistical/epidemiological tools, namely 2 by 2 tables and 2 by k tables, follows. The roll of a variety of issues such as confounding variables, interaction, bias and independence, key elements in many statistical applications, are an additional focus of these discussions. Weighted averages are discussed particularly in the context of combining tables and estimates.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.677. Biostatistical Analysis of Epidemiologic Data II: Logistic Regression Analysis. 2 Credits.
Presents applications of regression techniques , starting with a review of simple linear regression, as a foundation. Followed by application to non-linear data using more general regression techniques. Then, a complete and extensive description of log-linear regression analysis (also called Poisson regression) and how it works, particularly for the application to count data and tables. Also included is the concept of quasi-independence and the analysis of incomplete tables. Logistic regression techniques are similarly described in detail with emphasis on application to epidemiologic binary outcome data in several contexts. All regression techniques are illustrated with applied examples.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.678. Biostatistics Analysis of Epidemiologic Data III. 2 Credits.
Discusses elementary survival analysis biostatistical tools such as the nonparametric techniques, life tables, Kaplan/Meire survival probabilities and cox regression. Equally, parametric approaches based on exponential and Weibull probability distributions are similarly discussed. Presents six statistical tools often useful in specific situations but rarely found in introductory texts. Two examples are the capture/recapture methods for estimating population sizes, both human and animal populations, and random response survey techniques that guarantee complete confidentially.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.686. Advanced Methods for Statistical Genetics and Genomics. 3 Credits.
Covers statistical methods and theory underlying advanced analysis of genetic and genomic data to address mechanistic hypotheses and to build models for prediction. Topics include methods for complex association testing, inference on genetic architecture using mixed model techniques, methods for understanding causal mechanisms using Mendelian randomization, and integrative genomic analysis and strategies for clinical translation using risk prediction models. Requires making presentations and critiquing published studies that have used advance statistical methods to make new scientific observations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.688. Statistics For Genomics. 3 Credits.
Covers the basics of R software and the key capabilities of the Bioconductor project (a widely used open source and open development software project for the analysis and comprehension of data arising from high-throughput experimentation in genomics and molecular biology and rooted in the open source statistical computing environment R), including importation and preprocessing of high-throughput data from microarrays and other platforms. Also introduces statistical concepts and tools necessary to interpret and critically evaluate the bioinformatics and computational biology literature. Includes an overview of of preprocessing and normalization, statistical inference, multiple comparison corrections, Bayesian Inference in the context of multiple comparisons, clustering, and classification/machine learning.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.689. Adaptive Enrichment Designs for Confirmatory Randomized Trials: Methods and Software. 1 Credit.
Provides an overview of the strengths and limitations of randomized trial designs that adaptively change enrollment criteria during a trial (adaptive enrichment designs) and have the potential to provide improved information about which subpopulations benefit from new treatments. Explains recent advances in statistical methods for these designs, and presents adaptive design software planning tools. Discusses FDA guidance documents on adaptive designs. Examines methods for improving precision of estimators of the average treatment effect, by leveraging information in baseline variables; these methods can be used in adaptive designs as well as standard (non-adaptive) trial designs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.698. Spatial Analysis III: Spatial Statistics. 4 Credits.
Introduces statistical techniques used to model, analyze, and interpret public health related spatial data. Analysis of spatially dependent data is cast into a general framework based on regression methodology. Topics covered include the geostatistical techniques of kriging and variogram analysis and point process methods for spatial case control and area-level analysis. Although the focus is on statistical modeling, students will also cover topics related to clustering and cluster detection of disease events. Although helpful, knowledge of specific GIS software is not required. Instruction in the public domain statistical package R/RStudio, (to be used for analysis), is provided.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.699. Spatial Analysis IV: Spatial Design and Application. 3 Credits.
Expands students' abilities to design, conduct and report the results of a complete public health related spatial analysis. Focuses on further developing and integrating components of the spatial science paradigm, Spatial Data, GIS and Spatial Statistics. Introduces relevant topics in GIS, spatial data technologies and spatial statistics not previously covered in Spatial Analysis I-III.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.711. Advanced Data Science I. 3 Credits.
In this course, we will focus on hands-on data analyses with a main objective of solving real-world problems. We will teach the necessary skills to gather, manage and analyze data using the R programming language. We will cover an introduction to data wrangling, exploratory data analysis, statistical inference and modeling, machine learning, and high-dimensional data analysis. We will also learn the necessary skills to develop data products including reproducible reports that can be used to effectively communicate results from data analyses. Students will train to become data scientists capable of both applied data analysis and critical evaluation of the next generation next generation of statistical methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.712. Advanced Data Science II. 3 Credits.
Builds on Advanced Data Science I by introducing the idea of data products and encouraging students to build products based on their data analyses.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.721. Probability Theory I. 3 Credits.
Presents the first part of the classical results of probability theory: measure spaces, LP spaces, probability measures, distributions, random variables, integration, and convergence theorems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.722. Probability Theory II. 3 Credits.
Presents the first part of the classical results of probability theory: independence, types of convergence, laws of large numbers, Borel-Cantelli lemmas, Kolmogorov's zero-one law, random series and rates of convergence. Also discusses characteristic functions and weak convergence.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.723. Probability Theory III. 3 Credits.
Presents the second part of the classical results of probability theory: central limit theorems, Poisson convergence, coupling, Stein-Chen method, densities, derivatives and conditional expectations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.724. Probability Theory IV. 3 Credits.
Covers basic stochastic processes including martingales and Markov chains, followed by consideration of Markov Chain Monte Carlo (MCMC) methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.731. Statistical Theory I. 4 Credits.
Introduces probability and inference, including random variables; probability distributions; transformations and sums of random variables; expectations, variances, and moments; properties of random samples; and hypothesis testing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.732. Statistical Theory II. 4 Credits.
Introduces modern statistical theory; sets principles of inference based on decision theory and likelihood (evidence) theory; derives the likelihood function based on design and model assumptions; derives the complete class theorem between Bayes and admissible estimators; derives minimal sufficient statistics as a necessary and sufficient reduction of data for accurate inference in parametric models; derives the minimal sufficient statistics in exponential families; introduces maximum likelihood and unbiased estimators; defines information and derives the Cramer-Rao variance bounds in parametric models; introduces empirical Bayes (shrinkage) estimators and compares to maximum likelihood in small-sample problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.733. Statistical Theory III. 4 Credits.
Derives the large sample distribution of the maximum likelihood estimator under standard regularity conditions; develops the delta method and the large sample distribution of functions of consistent estimators, including moment estimators; introduces the theory of estimation in semiparametric regression models based on increasing approximation of parametric models; develops likelihood intervals and confidence intervals with exact or approximate properties; develops hypothesis tests through decision theory.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.734. Statistical Theory IV. 4 Credits.
Focuses on the asymptotic behavior of estimators, tests, and confidence interval procedures. Specific topics include: M-estimators; consistency and asymptotic normality of estimators; influence functions; large-sample tests and confidence regions; nonparametric bootstrap
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.741. Advanced Survival Analysis. 3 Credits.
Introduces statistical models and methods useful for analyzing univariate and multivariate failure time data. Extends Survival Analysis I to topics on length-bias and prevalent samplings, martingale theory, multivariate survival data, time-dependent ROC analysis, and recurrent event processes. Emphasizes nonparametric and semiparametric approaches for modeling, estimation and inferential results. Clinical and epidemiological examples included in class presentation illustrate statistical procedures.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.742. Risk Prediction and Precision Medicine. 3 Credits.
Covers various topics for evaluating the performance of biomarkers to predict risk of clinical or disease outcome, specifically including: a. relative, absolute and competing risks for binary and time-to-disease outcomes; b. ROC/AUC biomarker inference with binary outcome; c. ROC/AUC biomarker inference with time-to-event outcome, with censoring and truncation; d. statistical methods and inference for case-control study designs; e. a few topics on precision medicine.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.751. Advanced Methods in Biostatistics I. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.752. Advanced Methods in Biostatistics II. 4 Credits.
Surveys basic statistical inference, estimates, tests and confidence intervals, and exploratory data analysis. Reviews probability distributions and likelihoods, independence and exchangeability, and modes of inference and inferential goals including minimizing MSE. Reviews linear algebra, develops the least squares approach to linear models through projections, and discusses connections with maximum likelihood. Covers linear, least squares regression, transforms, diagnostics, residual analysis, leverage and influence, model selection for estimation and predictive goals, departures from assumptions, efficiency and robustness, large sample theory, linear estimability, the Gauss Markov theorem, distribution theory under normality assumptions, and testing a linear hypothesis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.753. Advanced Methods in Biostatistics III. 4 Credits.
Introduces generalized linear model (GLM). Foundational topics include: contingency tables, logistic regression for binary and binomial data, models for polytomous data, Poisson log-linear model for count data, and GLM for exponential family. Introduces methods for model fitting, diagnosis, interpretation and inference and expands on those topics with techniques for handling overdispersion, quasi-likelihood and conditional likelihood. Introduces the role of quantitative methods and sciences in public health, including how to use them to describe and assess population health, and the critical importance of evidence in advancing public health knowledge.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.754. Advanced Methods in Biostatistics IV. 4 Credits.
Extends topics in 140.753 to encompass generalized linear mixed effects models. Introduces expectation-maximization and Markov Chain Monte Carlo. Introduces functional data analysis. Foundational topics include: linear mixed model, generalized linear mixed model, EM, MCMC, models for longitudinal data, and functional data analysis. Emphasizes both rigorous methodological development and practical data analytic strategies. Discusses the role of quantitative methods and sciences in public health, including how to use them to describe and assess population health, and the critical importance of evidence in advancing public health knowledge.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.762. Bayesian Methods I. 3 Credits.
Illustrates current approaches to Bayesian modeling and computation in statistics. Describes simple familiar models, such as those based on normal and binomial distributions, to illustrate concepts such as conjugate and noninformative prior distributions. Discusses aspects of modern Bayesian computational methods, including Markov Chain Monte Carlo methods (Gibbs' sampler) and their implementation and monitoring. Bayesian Methods I is the first term of a two term sequence. The second term offering, Bayesian Methods II (140.763), develops models of increasing complexity, including linear regression, generalized linear mixed effects, and hierarchical models.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.763. Bayesian Methods II. 3 Credits.
Builds upon the foundation laid in Bayesian Methods I (140.762). Discusses further current approaches to Bayesian modeling and computation in statistics. Describes and develops models of increasing complexity, including linear regression, generalized linear mixed effects, and hierarchical models. Acquaints students to advanced tools for fitting Bayesian models, including non-conjugate prior models. Includes examples of real statistical analyses.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.771. Advanced Statistical Theory I. 4 Credits.
Examines statistics as a discipline along the path towards making decisions. First examines the justification of statistics from axioms on informed preferences and its close connection to Bayesian theory, and then examines the role of standardizing intermediate steps, through various additional restrictions on estimation, and studies the properties of the resulting methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.772. Advanced Statistical Theory. 4 Credits.
Examines statistics as a discipline along the path towards making decisions. First examines the justification of statistics from axioms on informed preferences and its close connection to Bayesian theory, and then examines the role of standardizing intermediate steps, through various additional restrictions on estimation, and studies the properties of the resulting methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.773. Foundations of Statistical Inference. 4 Credits.
Investigates the foundations of statistics as applied to assessing the evidence provided by an observed set of data. Topics include: law of likelihood, the likelihood principle, evidence and the likelihood paradigm for statistical inference; failure of the Neyman-Pearson and Fisherian theories to evaluate evidence; marginal, conditional, profile and other likelihoods; and applications to common problems of inference.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.774. Foundations of Statistics II. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.776. Statistical Computing. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.778. Advanced Statistical Computing. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.800. MPH Capstone Biostatistics. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.820. Thesis Research Biostatistics. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.830. Postdoctoral Research Biostatistics. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.840. Special Studies and Research Biostatistics. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.850. Advanced Special Topics in Biostatistics. 1 - 22 Credits.
Exposes Biostatistics PhD students to advanced special topics that are not covered in the core courses. Comprises two- and four-week modules, with revolving instructors and topics. Possible topics include: theory underlying analysis for correlated data; latent variable modeling; advanced survival analysis; image analysis; time series; and likelihood inference.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.860. Current Topics in Biostatistics Research. 1 Credit.
Features presentations by Biostatistics faculty, postdocs and senior students on their research, with a focus on the public health and scientific questions driving the work, why the research makes a difference for the subject area and how to translate the research into practice. Offers an opportunity for discussion and clarification of key Biostatistical concepts being taught in the core courses and how they apply to problems in public health and science. Provides an opportunity for students and faculty to come together and discuss novel research questions and the role that Biostatisticians have in helping to support, enrich and promote solutions to these novel research questions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.895. MPH Practicum: Biostatistics. 1 - 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.921. Biostats Lab for 140.621.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.922. Lab for Biostats 140.622.
Prerequisite(s): Lab for PH.140.622
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.923. Lab for Biostats PH.140.623.
Prerequisite(s): Must also enroll for PH.140.623
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.924. Lab for Biostatatistics 140.624.
Prerequisite(s): Must also enrol for PH.140.624
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.936. Lab - Scalable Computational Bioinformatics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.941. Biostats Lab for 140.641.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.955. Lab for Biostat 140.655.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.958. Biostats Lab for 140.658.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.140.998. Lab for PH.140.698.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.631. Principles of Drug Development. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.673. Ethical and Regulatory Issues in Clinical Research. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.675. Outcomes and Effectiveness Research. 3 Credits.
Provides an overview of outcomes and effectiveness research. Emphasizes conceptual, design, and analytical aspects of research including policy implications. Covers both experimental (randomized) and observational designs. Addresses spectrum of outcomes and effectiveness research. Includes topics: qualitative research, cost-effectiveness and adaptive trial design.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.677. Database Design and Implementation in Clinical Research. 2 Credits.
Presents basic concepts of relational database design for clinical and basic research. Includes development of data collection forms, building databases for both “classic” and “longitudinal” projects using REDCap, data quality control, and data security.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.678. Introduction to Quality Improvement & Knowledge Translation Research. 3 Credits.
Introduces basic principles of quality improvement/knowledge translation (QI/KT) research. Focuses on efforts aimed at increasing the extent to which patients receive evidence-based therapies. Discusses the concepts, methods, and applications of QI/KT theory and explores real-world QI/KT projects. Outlines the development of a research proposal for a specific QI/KT topic. Critically appraises a published guideline. Systematically reviews literature around a QI/KT topic.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.703. Presentation Skills. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.710. Biomedical Writing I. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.711. Biomedical Writing II. 2 Credits.
Introduces the process of writing peer-reviewed research papers and provides a brief overview of grant proposal writing. Emphasizes a logical organization, clear writing, and an understanding of readers’ and reviewers’ expectations. Prepares selected sections of a first draft of a research paper based on their own research, and they receive feedback on their drafts through in-class discussion and written comments from the instructor.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.721. Principles of Grant Writing I. 2 Credits.
Considers the principles of successful clinical research strategies and the requirements of funding agencies. Identifies a defined research project together with a suitable team of mentors and collaborators. Develops a written research proposal in the format of a grant application which integrates the scientific principles of the GTPCI curriculum.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.722. Principles of Grant Writing II. 4 Credits.
Considers the principles of successful clinical research strategies and the requirements of funding agencies. Identifies a defined research project together with a suitable team of mentors and collaborators. Develops a written research proposal in the format of a grant application which integrates the scientific principles of the GTPCI curriculum.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.750. Introduction to Clinical Research. 2 Credits.
Provides an intensive introduction to clinical research methods, emphasizing epidemiological & biostatistical methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.751. Seminars in Clinical Investigation. 2 Credits.
Explores topics related to clinical investigation presented by faculty experts from within and outside of Johns Hopkins. Addresses issues related to biomeasurement, the design of randomized clinical trials, challenges with observational cohort studies, studies focusing on special populations (pediatric age group, pregnant subjects, international studies), and research fraud.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.801. Professional Goals and Objectives. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.820. Thesis Research in Clinical Investigation. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.840. Special Studies and Research in Clinical Investigation. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.390.855. Research Forum. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

EN.570.108. Introduction to Environmental Engineering and Design. 3 Credits.
Overview of environmental engineering including water/air quality issues, water supply/ wastewater treatment, hazardous/solid waste management, pollution prevention, global environmental issues, public health considerations/environmental laws, regulations and ethics.Cross-listed with Public Health Studies.

EN.570.110. Introduction to Engineering for Sustainable Development. 3 Credits.

EN.570.201. Environmental Biology and Ecology. 3 Credits.
This course will cover basic topics in environmental biology and ecology for environmental engineering majors. The course will begin by describing the basic building blocks of life, cells and cellular components, which are common to all living things. We will then investigate factors that promote multicellularity, plant and animal physiology, and ecological principles that determine the distribution and function of organisms in the ecosystem.

EN.570.222. Environment and Society. 3 Credits.
Humans make their living in the environment. How we do that changes nature and changes us. This class explores human impacts on the environment, how we have thought about our relationship to nature over the millennia, and contemporary environmental discourses.

EN.570.239. Environmental Engineering Chemistry - Current and Emerging Topics. 3 Credits.
Students will utilize their chemistry knowledge to understand contemporary environmental issues in various media. Lectures will discuss the chemical phenomena leading to and resulting from air and water pollution issues. Climate change impacts to air and water chemistry will also be covered.

EN.570.303. Environmental Engineering Principles and Applications. 3 Credits.
Fundamentals and applications of physical, chemical, and biological processes in the natural environment and engineered systems. The first part of this class will cover material balances, chemical equilibrium, chemical kinetics, vapor pressure, dissolution, sorption, acid-base reactions, transport phenomena, reactor design, and water quality. The second part of this class focuses on the principles and design of water and wastewater treatment processes, such as coagulation, sedimentation, filtration, biological treatment processes, and disinfection.

EN.570.304. Environmental Engineering Laboratory. 3 Credits.
Introduction to laboratory measurements relevant to water supply and wastewater discharge, including pH and alkalinity, inorganic and organic contaminants in water, reactor analysis, bench testing for water treatment, and measurement and control of disinfection by-products.
Recommended Course Background: EN.570.210 or Instructor Permission.
Prerequisite: EN.570.303.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;EN.570.303

EN.570.305. Environmental Health and Engineering Systems Design. 4 Credits.
Techniques from systems analysis applied to environmental engineering design and management problems: reservoir management, power plant siting, nuclear waste management, air pollution control, and transportation planning. Design projects are required.

EN.570.320. Case Studies in Climate Change - A Field Course. 2 Credits.
In this interdisciplinary seminar class, we will discuss past, present, and future climate change. We will do so through several case studies on California; Eastern California is a hub of research on past climate change, and arguably few states are being more heavily impacted by current climate change than California. Throughout the first half of the course, we will learn how climate has changed in the past, the magnitude of those changes, the possible causes, and the physical and ecological impacts of past climate change. In the second half of the course, we will contrast past climate change with the impacts and severity of contemporary climate change. We will explore how climate change is stressing water resources, air quality, and ecological resilience across California, and we will critically evaluate how the state's recent policy initiatives are ameliorating (or exacerbating) these stresses.? This course has a 2-credit co-requisite in the spring semester where we will travel to Eastern California for a week-long field trip. Please email the instructor if you are interested in this course (smill191@jhu.edu) for more details on the co-requisite spring field trip.

EN.570.321. Case Studies in Climate Change - A Field Course. 2 Credits.
This is the 2 credit co-requisite course for EN.570.320 Case Studies in Climate Change offered in fall. In this course we will travel to Eastern California for a week-long field trip to explore how climate change is stressing water resources, air quality, and ecological resilience across California. We will critically evaluate how the state's recent policy initiatives are ameliorating (or exacerbating) these stresses. Please email the instructor if you are interested in this course (smill191@jhu.edu) for more details on the co-requisite.
EN.570.320

EN.570.334. Engineering Microeconomics. 3 Credits.
The course introduces the principles of microeconomics and engineering economics, and applications of those principles to environmental engineering and public policy analysis. The financial and economic implications of engineering designs and control policies are critical to their success. We introduce principles of engineering economics and microeconomics (demand and production theory) and their uses in engineering decision making.

EN.570.349. Water quality of rivers, lakes, and estuaries. 3 Credits.
Sustainably managing aquatic environments for ecosystem and public health in a changing climate requires us to understand the combined effect of multiple physical, chemical, and biological processes. This class will equip students to apply their understanding of environmental engineering principles to real-world water quality issues using computer simulation models. Emphasis will be placed on gaining insight by understanding fundamental assumptions and equations, and application to classical problems of oxygen demand and eutrophication. Advanced topics including pathogen and toxin dynamics will also be introduced.
EN.570.303

EN.570.350. Environmental Hazards and Health Risks. 3 Credits.
This course explores the concepts, assessment, and control of exposure to biological, physical and chemical hazards in the environment, the risk of adverse health outcomes resulting from such exposures, and the relationship between the exposures and health outcomes. These are placed in the context of the multi-disciplinary scientific field of environmental health as an essential component of the wider field of public health. The course is comprised of lectures, examples, group discussions, and group presentations. The proposed course will fill a gap in content and skill development in the issues and techniques relating to human health risk assessment. This course is targeted toward undergraduates who may not have had any exposure to environmental health science, and provides an introduction to environmental health using the framework of health risk assessment. The course first introduces the concepts of exposure to environmental hazards and biological dose, routes of exposure, statistical characterization of exposure variability in populations, and monitoring networks. The next set of concepts relate to hazard characterization, i.e., adverse health outcomes resulting from such exposures using a variety of types of data including in vitro and in vivo studies, and human epidemiological studies and their strengths and weaknesses. The next segment will deal with the quantitative characterization of the relationship between exposure/dose and the adverse health outcomes, i.e., the dose-response relationships, the metrics used for this, and quantitatively characterizing the health risks of a population. The course will introduce students to several tools including mathematical modeling of exposures and risk, and uncertainty analysis.
(AS.171.101) AND (AS.030.101 AND AS.030.102) AND (AS.110.108 AND AS.110.109)

EN.570.351. Introduction to Fluid Mechanics. 3 Credits.
Introduction to the use of the principles of continuity, momentum, and energy to fluid motion. Topics include hydrostatics, ideal-fluid flow, laminar flow, turbulent flow. Recommended Course Background: Statics, Dynamics, and AS.110.302
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

EN.570.353. Hydrology. 3 Credits.
The occurrence, distribution, movement, and properties of the waters of the Earth. Topics include precipitation, infiltration, evaporation, transpiration, groundwater, and streamflow. Analyzes include the frequency of floods and droughts, time-series analyzes, flood routing, and hydrologic synthesis and simulation. Recommended Course Background: AS.110.302, EN.570.351

EN.570.406. Environmental History. 3 Credits.
Environmental history explores the interactions between social change and environmental transformation, or the ways in which societies modify landscapes and are themselves affected by geological, climatological and changing ecological conditions. Topics include the relationship between climate change and human evolution, the environmental impacts of market-based commodity production and regional economic specialization; the relationship between urbanization and environmental change; how warfare affects and is affected by environmental conditions.
Area: Writing Intensive

EN.570.411. Engineering Microbiology. 4 Credits.
Fundamental aspects of microbiology and biochemistry as related to environmental pollution and water quality control processes, biogeochemical cycles, microbiological ecology, energetics and kinetics of microbial growth, and biological fate of pollutants.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

EN.570.412. Landscape Hydrology and Watershed Analysis. 3 Credits.
The purpose of this class is to understand the landscape-scale controls on the fluxes of water and waterborne materials through watersheds. This class differs from the Hydrology and Hydrologic Modeling classes in its focus on data analysis, and its embrace of the complexity of real landscapes. There will be significant quantitative components to the material taught, but emphasis will be on developing a greater sense of the way that landscapes “function”, and how this function is related to real-world issues of water resources and pollution. Students will gain an understanding of how climate, geologic and ecologic setting, and human impacts control the partitioning of water between different fates, the flowpaths through the landscape and the storage and residence time of water. They will also learn conceptual and practical tools for analyzing hydrologic and other landscape data, and integrating this data in a holistic approach to watershed analysis. The class will be of interest for students intending to go into watershed or landscape management, and anyone wishing to pursue research in hydrology, geomorphology or ecology at landscape and watershed scales. The class will include at least one field trip to an instrumented watershed. GIS skills will be an advantage but are not required.

EN.570.415. Current Trends in Environmental Microbiology. 3 Credits.
This course will highlight recent discoveries and advances in environmental microbiology such as the identification of novel microbes, changing paradigms in nitrogen cycling, single-cell activity methods and novel methods in microbial community analysis. We will explore these topics by reading and discussing the current literature, supported by short lectures and in class activities related to the topics. Background in microbiology or microbial ecology is recommended. This course will meet with EN.570.615.

EN.570.416. Data Analytics in Environmental Health and Engineering. 3 Credits.
Data analytics is a field of study involving computational statistics, data mining and machine learning, to explore data sets, explain phenomena and build predictive models. The course begins with an overview of some traditional analysis approaches including ordinary least squares regression and related topics, notably diagnostic testing, detection of outliers and methods to impute missing data. More recent developments are presented, including ridge regression. Generalized linear models follow, emphasizing logistic regression and including models for polytomous data. Variable subsetting is addressed through stepwise procedures and the LASSO. Supervised machine learning topics include the basic concepts of boosting and bagging and several techniques: Decision Trees, Classification and Regression Trees, Random Forests, Conditional Random Forests, Adaptive Boosting, Support Vector Machines and Neural Networks. Unsupervised machine learning approaches are addressed through applications using k-means Clustering, Partitioning Around Medoids and Association Rule Mining. Methods for assessing model predictive performance are introduced including Confusion Matrices, k-fold Cross-Validation and Receiver Operating Characteristic Curves. Public health and environmental applications are emphasized, with modeling techniques and analysis tools implemented in R.

EN.570.419. Environmental Engineering Design I. 2 Credits.
Through general lectures and case study examples, this course will expose students to some of the non-technical professional issues that they will face as professional engineers and in their second-semester senior design project.

EN.570.420. Air Pollution. 3 Credits.
The course consists of an introduction to the fundamental concepts of air pollution. Major topics of concern are aspects of atmospheric motion near the earth’s surface; basic thermodynamics of the atmosphere; atomospheric stability and turbulence; equations of mean motion in turbulent flow, mean flow in the surface boundary layer; mean flow, turbulence in the friction layer; diffusion in the atmosphere; statistical theory of turbulence; plume rise. Emphasis is place upon the role and utility of such topics in a systems analysis context, e.g., development of large and mesoscale air pollution abatement strategies. Comparisons of the fundamental concepts common to both air and water pollution are discussed. This course meets with EN.570.657, Air Pollution.

EN.570.421. Environmental Engineering Design II. 3 Credits.
Engineering design process from problem definition to final design. Team projects include written/oral presentations. Students will form small teams that work with local companies or government agencies in executing the project. Recommended Course Background: EN.570.303, EN.570.352, and EN.570.419
EN.570.419

EN.570.422. Resilience of Ecological Systems. 3 Credits.
The ability of ecosystems to recover from natural events and human actions is increasingly being threatened by climate change. This course is a study of ecosystems using mathematical models, with a particular focus on quantifying their resilience. We will model a number of ecosystems, including rainforests, lakes, temperate forests, savannas, and grasslands. We will analyze ecological phenomena that impact public health and commerce. These include lake eutrophication and anoxia, forest fires, and insect outbreaks. We will study whole-earth mathematical models, biodiversity, and models to study the spread and control of pandemics. New this semester will be game theory applications, urban ecosystems and environmental justice. In all cases, potential pro-active and reactive management and control approaches will be evaluated. Mathematical techniques will be introduced and developed in a context-sensitive manner. Undergraduate and graduate students are welcome to enroll. Recommended course background (i.e. potentially useful but not required): EN.553.291 or AS.110.302, or equivalent.

EN.570.426. Groundwater, Porous Media, and Hydrogeology. 3 Credits.
Fundamentals of groundwater flow and transport emphasizing groundwater as a major water resource, role of groundwater in the hydrologic cycle and as an agent of geologic processes, groundwater management, and groundwater contamination and its protection. Specific topics include the Darcy equation, storage of water in a porous medium, mass conservation and the groundwater flow equation, solutions to the groundwater flow equation, well hydraulics, unsaturated flow and vadose zone processes, contaminant transport, dispersion and adsorption. Assignments will include quantitative exercises requiring simple computer codes.
EN.570.351 or Equivalent

EN.570.428. Problems in Applied Economics. 3 Credits.
This course focuses on a monetary approach to national income determination and the balance of payments. Money and banking, as well as commodity and financial markets, are dealt with under both central banking, as well as alternative monetary regimes. Particular emphasis is placed on currency board systems. Students learn how to properly conduct substantive economic research, utilizing primary data sources, statistical techniques and lessons from economic history. Findings are presented in the form of either memoranda or working papers of publishable quality. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C.. Bloomberg certification is a pre-requisite.
Area: Writing Intensive
EN.660.203 AND AS.180.101 AND AS.180.102

EN.570.429. Methods in Microbial Community Analysis. 3 Credits.
This course will provide a practical knowledge of molecular methods used to identify microorganisms present with a sample and gain insight into their function and dynamics. It will provide theoretical background into how to identify microorganisms and infer functional capabilities from genetic material, practical knowledge of common molecular methods and computational skills needed to analyze the resulting sequence data. No background in molecular biology, computation or microbiology is necessary. Course objectives include (1) understanding key aspects of microbial community composition from literature reports; (2) recognizing major microbial taxonomic groups and understanding phylogenetic relationships; (3) developing molecular biology lab skills required to create gene amplicon libraries from an aquatic samples; (4) working knowledge of statistical methods used to associate taxonomic and functional gene information with specific environmental conditions. Recommended Course Background: Microeconomics, Introductory Statistics, Optimization.Open to undergraduates. Co-listed with EN.570.619

EN.570.441. Environmental Inorganic Chemistry. 3 Credits.
Advanced undergraduate/graduate course that explores the chemical transformations of elements of the periodic table. Thermodynamic, kinetic, and mechanistic tools needed to address the multiple chemical species and interfaces that are present in natural waters and water-based technological processes are emphasized. Ligand exchange, metal ion exchange, adsorption/desorption, precipitation/dissolution, electron and group transfer reactions, and other concepts from coordination chemistry will be covered. Applications include elemental sources and sinks in ocean waters, reactive transport in porous media, weathering and soil genesis, nutrient and toxic element uptake by organisms, water treatment chemistry, and rational design of synthetic chemicals.Co-listed with EN.570.641

EN.570.442. Environmental Organic Chemistry. 3 Credits.
Advanced undergraduate/graduate course focusing on processes that affect the behavior and fate of anthropogenic organic contaminants in aquatic environments. Students learn to predict chemical properties influencing transfers of organic chemicals between air, water, sediments, soil, and biota, based on a fundamental understanding of intermolecular interactions and thermodynamic principles.
AS.030.101 AND AS.030.102. Course in organic chemistry preferred.

EN.570.443. Aquatic and Biofluid Chemistry. 3 Credits.
Equilibrium speciation of natural waters, biofluids, and engineered systems. Topics include acids, bases, pH, and buffering; the precipitation and dissolution of solids; complexation and chelation; oxidation and reduction reactions; regulation and design. Intended for students from a variety of backgrounds. Recommended Course Background: One year of both Chemistry and Calculus. Meets with EN.570.643 (Aquatic and Biofluid Chemistry).

EN.570.445. Physical and Chemical Processes I. 3 Credits.
The application of basic physical and chemical concepts to the analysis of environmental engineering problems. Principles of chemical equilibrium and reaction, reaction engineering, interphase mass transfer, and adsorption are presented in the context of process design for unit operations in common use for water and wastewater treatment. Topics addressed include mass balances, hydraulic characteristics of reactors, reaction kinetics and reactor design, gas transfer processes (including both fundamentals of mass transfer and design analysis), and adsorption processes (including both fundamentals of adsorption and design analysis).
EN.570.303 or permission of instructor.

EN.570.446. Biological Process of Wastewater Treatment. 3 Credits.
Fundamentals and application of aerobic and anaerobic biological unit processes for the treatment of municipal and industrial wastewater. Recommended Course Background: EN.570.411

EN.570.448. Physical and Chemical Processes II. 3 Credits.
Fundamentals and applications of physical and chemical processes used in water and wastewater treatment. This class will cover particle interactions, coagulation, flocculation, granular media filtration, membrane processes, and emerging water treatment processes. Recommended Course Background: EN.570.445 or Permission Required.

EN.570.449. Social Theory for Engineers. 3 Credits.
Engineers work in a social context. This course addresses a number of questions about that social context. How should we understand how societies come about, how they evolve,and why the rules of the game are what they are? What is the relationship between the individual and society, what does it mean to be 'modern,' are there different forms of rationality? How might all this impinge on what it means to be an engineer?
Area: Writing Intensive

EN.570.451. Environmental Dispersion and Transport. 3 Credits.
The course will provide an overview of the basic foundations of transport and dispersion phenomena in the environment (surface water, groundwater, ocean and atmosphere). The emphasis will be on mathematical formulation of transport equations, analytical solutions, physical insights, methods of analysis of concentration data. The course will cover classical advection-diffusion concepts, shear dispersion phenomena, and transport in random velocity fields with applications to turbulent diffusion and macrodispersion in groundwater. Although numerical modeling is not the primary objective of the course, we will build a simple computational toolbox using random-walk particle tracking to visualize and quantify transport processes. Computation of analytical solutions will require MATLAB or python (or equivalent programming, although EXCEL may also suffice with macros). If time permits, we will touch upon reactive transport and non-Fickian transport formulations. Recommended course background in EN.553.291 Linear Algebra and Differential Equations and EN.570.351 Fluid Mechanics.

EN.570.452. Experimental Methods in Environmental Engineering and Chemistry. 4 Credits.
An advanced laboratory covering principles of modern analytical techniques and their applications to problems in environmental sciences. Topics include electrochemistry, spectrometry, gas and liquid chromatography. The course is directed to graduate students and advanced undergraduates in engineering and natural sciences.Co-listed with EN.570.652
Area: Writing Intensive
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;EN.570.443

EN.570.454. Geostatistics: Understanding Spatial Data. 3 Credits.
Spatial and geographic datasets are becoming increasingly common with improvements in data collection technologies. For example, satellites are able to collect more and more types of earth/environmental data, and web technologies (e.g., social media and e-commerce) provide vast new datasets on social, economic, and public health phenomena. However, many common statistical tools are ill-suited to spatial datasets; these datasets often exhibit complex spatial (and temporal) dependencies that require a special set of tools. In this course, students will learn how to quantitatively analyze, model, and predict spatial and spatiotemporal phenomena. Topics will include quantifying the spatial and temporal properties of data, interpolation and prediction, multivariate models, modeling uncertainty, measurement design, and strategies for very large datasets. We will draw examples from a wide variety of academic disciplines, including environmental engineering, earth science, public health, and political science. Pre-requisites: An introductory course in statistics is recommended. Knowledge of a scientific programming language (e.g., Matlab, R, or Python) will also be helpful.

EN.570.470. Applied Economics & Finance. 3 Credits.
This course focuses on company valuations, using a Probabilistic Discounted Cash Flow Model. Students use the model and primary data from financial statements filed with the Securities and Exchange Commission to calculate the value of publically-traded companies. Using Monte Carlo simulations, students also generate forecast scenarios, project likely share-price ranges and assess potential gains/losses. Stress is placed on using these simulations to diagnose the subjective market expectations contained in current objective market prices, and the robustness of these expectations. During the weekly seminar, students company valuations are reviewed and critiqued. A heavy emphasis is placed on research and writing. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C.. Bloomberg certification is a pre-requisite.
Area: Writing Intensive
EN.660.203 AND (EN.570.428 OR AS.360.528)

EN.570.490. Solid Waste Engineering and Management. 3 Credits.
This course covers advanced engineering and scientific concepts and principles applied to the management of municipal solid waste (MSW) to protect human health and the environment and the conservation of limited resources through resource recovery and recycling of waste material.

EN.570.491. Hazardous Waste Engineering and Management. 3 Credits.
This course addresses traditional and innovative technologies, concepts, and principles applied to the management of hazardous waste and site remediation to protect human health and the environment. Co-listed with EN.570.691

EN.570.492. Wolman Seminar - Undergraduates. 1 Credit.
Undergraduates only with permission of instructor.

EN.570.496. Urban and Environmental Systems. 3 Credits.
The mathematical techniques learned in EN.570.305 and EN.570.495 are applied to realistic problems in urban and environmental planning and management. Examples of such problems include the siting of public-sector and emergency facilities; natural areas management, protection and restoration; solid waste collection, disposal, and recycling; public health; the planning and design of energy and transportation systems; and cost allocation in environmental infrastructure development.

EN.570.497. Risk and Decision Analysis. 3 Credits.
This class introduces the decision analysis approach to making decisions under risk and uncertainty. Topics covered include decision trees, Bayes law, value of information analysis, elicitation of subjective probabilities, multiattribute utility, and their applications to environmental and energy problems. Textbook: R.T. Clemen, Making Hard Decisions, 2014. Recommended Course Background: introductory statistics and probability.

EN.570.501. Undergraduate Research. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

EN.570.502. Undergraduate Research. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

EN.570.504. Financial Market Research. 3 Credits.
This course investigates the workings of financial, foreign exchange, and commodity futures markets. Research is focused on price behavior, speculation, and hedging in these markets. Extensive research and writing of publishable quality are required. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. An approved research proposal is a pre-requisite.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

EN.570.505. Undergraduate Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

EN.570.590. Internship - Summer. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

EN.570.597. Undergraduate Research-Summer. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

EN.570.607. Energy Policy and Planning Models. 3 Credits.
Methods for optimizing operation and design of energy systems and for analyzing market impacts of energy and environmental policies are reviewed, emphasizing both theory and solution of actual models. Review of linear and nonlinear programming and complementarity methods for market simulation. Recommended Course Background: EN.570.493 and EN.570.495 or equivalent.

EN.570.610. Engineering Microbiology. 4 Credits.
Fundamental aspects of microbiology and biochemistry as related to environmental pollution and water quality control processes, biogeochemical cycles, microbiological ecology, energetics and kinetics of microbial growth, and biological fate of pollutants.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

EN.570.615. Current Trends in Environmental Microbiology. 3 Credits.
This course will highlight recent discoveries and advances in environmental microbiology such as the identification of novel microbes, changing paradigms in nitrogen cycling, single-cell activity methods and novel methods in microbial community analysis. We will explore these topics by reading and discussing the current literature, supported by short lectures and in class activities related to the topics. Background in microbiology or microbial ecology is recommended. This course will meet with EN.570.415

EN.570.616. Data Analytics in Environmental Health and Engineering. 3 Credits.
Data analytics is a field of study involving computational statistics, data mining and machinelearning, to explore data sets, explain phenomena and build predictive models. The coursebegins with an overview of some traditional analysis approaches including ordinary leastsquares regression and related topics, notably diagnostic testing, detection of outliers andmethods to impute missing data. More recent developments are presented, including ridgeregression. Generalized linear models follow, emphasizing logistic regression and includingmodels for polytomous data. Variable subsetting is addressed through stepwise procedures andthe LASSO. Supervised machine learning topics include the basic concepts of boosting andbagging and several techniques: Decision Trees, Classification and Regression Trees, RandomForests, Conditional Random Forests, Adaptive Boosting, Support Vector Machines and NeuralNetworks. Unsupervised machine learning approaches are addressed through applications usingk-means Clustering, Partitioning Around Medoids and Association Rule Mining. Methods forassessing model predictive performance are introduced including Confusion Matrices, k-foldCross-Validation and Receiver Operating Characteristic Curves. Public health andenvironmental applications are emphasized, with modeling techniques and analysis toolsimplemented in R. EN.570 616 meets with EN.570.416. Undergraduate (usually Senior) students should sign up for 416 with permission of instructor only.

EN.570.619. Methods in Microbial Community Analysis. 3 Credits.
This graduate level course will provide a practical knowledge of molecular methods used to identify microorganisms present with a sample and gain insight into their function and dynamics. It will provide theoretical background into how to identify microorganisms and infer functional capabilities from genetic material, practical knowledge of common molecular methods and computational skills needed to analyze the resulting sequence data. No background in molecular biology, computation or microbiology is necessary. Course objectives include (1) understanding key aspects of microbial community composition from literature reports; (2) recognizing major microbial taxonomic groups and understanding phylogenetic relationships; (3) developing molecular biology lab skills required to create gene amplicon libraries from an aquatic samples; (4) working knowledge of statistical methods used to associate taxonomic and functional gene information with specific environmental conditions. Recommended Course Background: Microeconomics, Introductory Statistics, Optimization.Co-listed with EN.570.429

EN.570.626. Groundwater, Porous Media, and Hydrogeology. 3 Credits.
Fundamentals of groundwater flow and transport emphasizing groundwater as a major water resource, role of groundwater in the hydrologic cycle and as an agent of geologic processes, groundwater management, and groundwater contamination and its protection. Specific topics include the Darcy equation, storage of water in a porous medium, mass conservation and the groundwater flow equation, solutions to the groundwater flow equation, well hydraulics, unsaturated flow and vadose zone processes, contaminant transport, dispersion and adsorption. Assignments will include quantitative exercises requiring simple computer codes. Recommended Course Background: A course in Differential Equations or Consent of Instructor.

EN.570.631. Collaborative Modeling for Resolving Water Resources Disputes. 3 Credits.
Overview of collaborative modeling in water resources, Economic issues in water resources disputes, Legal issues in water resources disputes, Biological/Environmental issues in water resources disputes, Water management in the Delaware Basin, Understanding and using the Delaware River Basin Commission's water management tool (an OASIS based model of the Delaware, Multi-objective water management, Understanding management trade-offs, Collaborative processes, Reality based negotiation skills, and Consensus building. Recommended Course Background: A strong interest in utilizing scientific tools to help resolve real-world disputes A background in general science – with at least two of the following disciplines: Biology, chemistry, physics, earth science, economics.

EN.570.641. Environmental Inorganic Chemistry. 3 Credits.
Advanced undergraduate/graduate course that explores the chemical transformations of elements of the periodic table. Thermodynamic, kinetic, and mechanistic tools needed to address the multiple chemical species and interfaces that are present in natural waters and water-based technological processes are emphasized. Ligand exchange, metal ion exchange, adsorption/desorption, precipitation/dissolution, electron and group transfer reactions, and other concepts from coordination chemistry will be covered. Applications include elemental sources and sinks in ocean waters, reactive transport in porous media, weathering and soil genesis, nutrient and toxic element uptake by organisms, water treatment chemistry, and rational design of synthetic chemicals. Co-listed with EN.570.441

EN.570.642. Environmental Organic Chemistry. 3 Credits.
Advanced undergraduate/graduate course focusing on processes that affect the behavior and fate of anthropogenic organic contaminants in aquatic environments. Students learn to predict chemical properties influencing transfers of organic chemicals between air, water, sediments, soil, and biota, based on a fundamental understanding of intermolecular interactions and thermodynamic principles. New prerequisites (grad students only): at least one year of undergraduate general chemistry, a course in organic chemistry preferred.

EN.570.643. Aquatic and Biofluid Chemistry. 3 Credits.
Equilibrium speciation of natural waters, biofluids, and engineered systems. Topics include acids, bases, pH, and buffering; the precipitation and dissolution of solids; complexation and chelation; oxidation and reduction reactions; regulation and design. Intended for students from a variety of backgrounds. Recommended Course Background: One year of both Chemistry and Calculus. Meets with EN.570.443 (Aquatic and Biofluid Chemistry)

EN.570.644. Physical and Chemical Processes. 3 Credits.
The application of basic physical and chemical concepts to the analysis of environmental engineering problems. Principles of chemical equilibrium and reaction, reaction engineering, interphase mass transfer, and adsorption are presented in the context of process design for unit operations in common use for water and wastewater treatment. Topics addressed include mass balances, hydraulic characteristics of reactors, reaction kinetics and reactor design, gas transfer processes (including both fundamentals of mass transfer and design analysis), and adsorption processes (including both fundamentals of adsorption and design analysis).

EN.570.647. Hydrologic Transport in the Environment. 3 Credits.
This course considers the transport of solutes and sediments by water through terrestrial landscapes, with an emphasis on the movement of nutrients and contaminants from the landscape into receiving water bodies like rivers, lakes and estuaries. The course will cover the theoretical approaches (advection-diffusion/dispersion, transit time distributions), the use of active and passive tracers to infer transport processes, analysis of water quality time series, runoff generation and flow pathways in watersheds, and the effect of climate variability on transport. Assessment is based on a semester project and in-class presentations. Seniors interested in joining the class must have Hydrology 570.353 and should contact the instructor.

EN.570.648. Physical and Chemical Processes II. 3 Credits.
Fundamentals and applications of physical and chemical processes used in water and wastewater treatment. This class will cover particle interactions, coagulation, flocculation, granular media filtration, membrane processes, and emerging water treatment processes. Recommended Course Background: EN.570.445 or Permission Required.

EN.570.649. Water quality of rivers, lakes, and estuaries. 3 Credits.
Sustainably managing aquatic environments for ecosystem and public health in a changing climate requires us to understand the combined effect of multiple physical, chemical, and biological processes. This class will equip students to apply their understanding of environmental engineering principles to real-world water quality issues using computer simulation models. Emphasis will be placed on gaining insight by understanding fundamental assumptions and equations, and application to classical problems of oxygen demand and eutrophication. Advanced topics including pathogen and toxin dynamics will also be introduced. Students should have taken EN.570.303 (or equivalent).

EN.570.650. Seminar on Critical Zone Science. 1 Credit.
Seminar class covering foundational literature and current research in soils, geomorphology, hydrology, ecology, geochemistry, biogeochemistry, and related topics. Each semester will focus on a particular theme. The course is pass-fail, with attendance and engagement required, as well as minimal writing assignments intended to encourage critical thinking.

EN.570.651. Environmental Transport and Dispersion. 3 Credits.
The course will provide an overview of the basic foundations of transport and dispersion phenomena in the environment (surface water, groundwater, ocean and atmosphere). The emphasis will be on mathematical formulation of transport equations, analytical solutions, physical insights, methods of analysis of concentration data. The course will cover classical advection-diffusion concepts, shear dispersion phenomena, and transport in random velocity fields with applications to turbulent diffusion and macrodispersion in groundwater. Although numerical modeling is not the primary objective of the course, we will build a simple computational toolbox using random-walk particle tracking to visualize and quantify transport processes. Computation of analytical solutions will require MATLAB or python (or equivalent programming, although EXCEL may also suffice with macros). If time permits, we will touch upon reactive transport and non-Fickian transport formulations. Recommended course background in EN.553.291 Linear Algebra and Differential Equations and EN.570.351 Fluid Mechanics.

EN.570.652. Experimental Methods in Environmental Engineering and Chemistry. 4 Credits.
An advanced laboratory covering principles of modern analytical techniques and their applications to problems in environmental sciences. Topics include electrochemistry, spectrometry, gas and liquid chromatography. The course is directed to graduate students and advanced undergraduates in engineering and natural sciences. Co-listed with EN.570.452
Area: Writing Intensive
EN.570.443 OR EN.570.643 OR permission of instructor.;Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

EN.570.653. Hydrology. 3 Credits.
The occurrence, distribution, movement, and properties of the waters of the Earth. Topics include precipitation, infiltration, evaporation, transpiration, groundwater, and streamflow. Analyzes include the frequency of floods and droughts, time-series analyzes, flood routing, and hydrologic synthesis and simulation. Recommended Course Background: AS.110.302, EN.570.351

EN.570.654. Geostatistics: Understanding Spatial Data. 3 Credits.
Spatial and geographic datasets are becoming increasingly common with improvements in data collection technologies. For example, satellites are able to collect more and more types of earth/environmental data, and web technologies (e.g., social media and e-commerce) provide vast new datasets on social, economic, and public health phenomena. However, many common statistical tools are ill-suited to spatial datasets; these datasets often exhibit complex spatial (and temporal) dependencies that require a special set of tools. In this course, students will learn how to quantitatively analyze, model, and predict spatial and spatiotemporal phenomena. Topics will include quantifying the spatial and temporal properties of data, interpolation and prediction, multivariate models, modeling uncertainty, measurement design, and strategies for very large datasets. We will draw examples from a wide variety of academic disciplines, including environmental engineering, earth science, public health, and political science. Pre-requisites: An introductory course in statistics is recommended. Knowledge of a scientific programming language (e.g., Matlab, R, or Python) will also be helpful.

EN.570.657. Air Pollution. 3 Credits.
The course consists of an introduction to the fundamental concepts of air pollution. Major topics of concern are aspects of atmospheric motion near the earth's surface; basic thermodynamics of the atmosphere; atomospheric stability and turbulence; equations of mean motion in turbulent flow, mean flow in the surface boundary layer; mean flow, turbulence in the friction layer; diffusion in the atmosphere; statistical theory of turbulence; plume rise. Emphasis is place upon the role and utility of such topics in a systems analysis context, e.g., development of large and mesoscale air pollution abatement strategies. Comparisons of the fundamental concepts common to both air and water pollution are discussed.

EN.570.690. Solid Waste Engineering and Management. 3 Credits.
This course covers advanced engineering and scientific concepts and principles applied to the management of municipal solid waste (MSW) to protect human health and the environment and the conservation of limited resources through resource recovery and recycling of waste material.

EN.570.691. Hazardous Waste Engineering and Management. 3 Credits.
This course addresses traditional and innovative technologies, concepts, and principles applied to the management of hazardous waste and site remediation to protect human health and the environment.

EN.570.695. Environmental Health and Engineering Systems Design. 3 Credits.
A collection of systems analytic techniques which are frequently used in the study of public decision making is presented. Emphasis is on mathematical programming techniques. Primarily linear programming, integer and mixed-integer programming, and multiobjective programming. Recommended Course Background: AS.110.106-AS.110.107/AS.110.109

EN.570.696. Urban and Environmental Systems. 3 Credits.
The mathematical techniques learned in EN.570.305 and EN.570.495 are applied to realistic problems in urban and environmental planning and management. Examples of such problems include the siting of public-sector and emergency facilities; natural areas management, protection and restoration; solid waste collection, disposal, and recycling; public health; the planning and design of energy and transportation systems; and cost allocation in environmental infrastructure development.

EN.570.697. Risk and Decision Analysis. 3 Credits.
This class introduces the decision analysis approach to making decisions under risk and uncertainty. Topics covered include decision trees, Bayes law, value of information analysis, elicitation of subjective probabilities, multiattribute utility, and their applications to environmental and energy problems. Textbook: R.T. Clemen, Making Hard Decisions, 2014. Recommended Course Background: introductory statistics and probability.

EN.570.800. Graduate Independent Study. 1 - 3 Credits.

EN.570.801. Doctoral Research. 3 - 20 Credits.

EN.570.803. Master's Research. 3 - 10 Credits.

EN.570.805. Jensen Internship. 3 Credits.
Restricted internship; reserved for students who have received the Jensen Fellowship.

EN.570.841. Wolman Seminar- Graduates. 1 Credit.

EN.570.873. Environmental Science & Management Seminar. 1 Credit.

EN.570.881. Environmental Engineering Seminar. 1 Credit.

PH.180.600. Public Health Implications of Health as a Human Right. 2 Credits.
Applies a human rights framework to the analysis of key determinants of health status and PH policies, programs and practices. Readings and discussions explore health as a human right and its implications for PH research and practice. Focuses broadly on 3 areas: health as a human right, impact of public health policies, programs and practices on human rights; and collective health impact of human rights violations, whether gross violations in human conflict or insidious violations associated with mistreatment of marginalized groups. Topics include: international instruments defining human rights principles, their historical development and application; operationalization of the right to health and its consequences for public health practice; governmental obligations for health under international human rights law; linkages between health and human rights; application of the human rights framework to the design, implementation, and evaluation of PH programs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.601. Environmental Health. 5 Credits.
Summarizes the concepts and principles underlying environmental health sciences, characterizes the major environmental agents and vectors affecting public health, and introduces major ecologic, scientific, and political issues from selected topical areas of environmental health. Presents the major concepts and principles that are environmentally mediated and that constitute a risk to humans —emphasizing the chemical, biological, and physical agents and factors. Considers sources, environmental pathways of transmission, exposure-dose relationships, adverse health effects, and particularly susceptible populations. Identifies the principles and methods of risk assessment and risk management, and uses these as a unifying theme.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.602. Environment and Health in Low and Middle income Countries. 2 Credits.
Introduces students to how environmental health hazards can affect human health in low and middle income settings. The core concepts are: exposure assessment, environmental epidemiology, and risk communication. Topics include: heavy metals, water sanitation and hygiene, waterborne and related diseases, tropical diseases, energy resources and health, and air pollution.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.605. Food Systems Practicum. 4 Credits.
Students learn first-hand about food system sustainability issues by engaging with organizations working for positive change. They broaden their learning through classroom education, readings and assignments covering: food system sustainability, with emphasis on content areas relevant to student projects; skills and context relevant to working with these organizations; and reflection on service-learning experiences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.606. Case Studies in Food Production and Public Health. 4 Credits.
Focuses on food production practices in the United States and the associated public health risks and benefits; discussions on animal and crop agriculture and food processing encompass both historical practices and modern methods. Presents case studies which delve deeper into specific topics, including industrial food animal production, aquaculture, veterinary drugs, agricultural policy, chemical exposures, rural communities and food animal worker health, and sustainable production methods. Lectures draw from the literature, and from the firsthand experiences of lecturers in research translation and agricultural production.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.607. Climate Change and Public Health. 3 Credits.
Explores the science of how and why the climate is changing, as well as the likely and potential impacts of climate change on public health in developed and developing regions of the world. Discusses how rising sea levels;fossil fuels,worsening air quality; frequency and severity of weather-related disasters; and scarcity of food and drinking water are all influenced by the changing climate. Examinespolicy,behavior, mental health, social determinants of health,economics,sustainablestrategies for mitigation and adaptation, and the role public health professionals can play in these decisions. Synthesizes concepts and knowledge from multiple disciplines through a hands-on, translational project.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.608. Public Health Responses to Environmental incidents and Disasters. 3 Credits.
Focuses on population exposures to and health impacts of non-infectious agents. Prepares students for applying methodologies for public health response and acquiring skills in developing standardized protocols to effectively recognize, evaluate and respond to public health emergencies and reported clusters of disease. Presents basic aspects of applied environmental health and policy frameworks for decision-making in environmental health. Provides competencies in finding and using web-based data sources, applying geospatial and other methodologies in analyzing information on exposures and health outcomes; identifying resources for coordinated response to environmental incidents; and communicating findings to decision-makers and the public. Equips students to participate in responding to disasters, reported outbreaks and apparent clusters. Provides experience in establishing exposure registries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.609. Principles of Environmental Health. 4 Credits.
Presents concepts, principles, and applications underlying the field of environmental health. Topics include contaminant sources, fate and transport, exposure and dose, study design in toxicology, climate change, environmental justice, and the built environment. Emphasizes policy, practice, and systems-based approaches. Discussions and exercises focus on reviewing current environmental health issues in the media, evaluating peer-reviewed literature on these issues, and deliberating on potential opportunities for prevention and intervention.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.610. Applied Environmental Health Practice. 4 Credits.
Applies principles of environmental health to a real-world problem impacting a community in our own backyard. Investigates the driving forces that underlie these complex environmental health issues. Explores strategies for assessment and intervention. Integrates the lived experiences of community members and students wherever possible. Incorporates group work, so students are expected to coordinate schedules with each other and the community-based organization. Students practice skills in project management and data analysis —enacting theoretical principles of environmental health learned in previous classes—while working in a group setting. The combination of these practical skills and theoretical foundations are fundamental in today's professional practice.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.611. The Global Environment, Climate Change, and Public Health. 4 Credits.
Explores how global environmental issues such as global warming, urban sprawl, deforestation, mining, environmental refugees, biodiversity loss, and food security may cause increasing human harm. Provides an overview of the science and policy issues related to the changing environment, how environmental problems affect human health, and emphasizes potential solutions and sustainable development methods essential for resolving a myriad of environment-health problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.612. Advanced Environmental Health I. 4 Credits.
Addresses environmental contaminates originating from four environmental vectors, Air, Water, Soil, and Food, impact human health. Focuses on the foundational knowledge and methods in environmental health needed by doctoral students to prepare for advanced careers in environmental health including integration of multi-disciplinary approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.613. Teaching Environmental Health. 1 Credit.
Prepares students to excel in required teaching activities as part of their PhD program. Includes access to teaching resources, departmental best practices and faculty support. Reviews critical skills in teaching and communicating environmental health and engineering concepts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.614. Urban Agriculture and Public Health. 2 Credits.
Explores the connections between urban agriculture and public health using case studies around the United States. Examines the people, practices, policies, and public health significance of urban agriculture. Lectures and background reading provide an evidence-based introduction to the connections among public health, agriculture, community development and food justice. Students are expected to listen to online lecture(s), do readings, and quizzes before the course begins. The course be based at the Center for a Livable Future's Food System Lab, an urban farm at Cylburn Arboretum featuring an aquaponics system. Field trips to local food system sites, such as a farm, farmers market and community garden, and hands-on activities help students blend theory and practice. For a final project, students will translate what they learn in the course by exploring and reporting on aspects of their own local food environment.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.618. Law and Laboratory Animals: Statutes, Regulations and Policies. 3 Credits.
Examines the laws, regulations and policies that govern the relationship between biomedical institutions, laboratory researchers and animals that have developed over the past half-century. Focuses on the systems of governmental and self-regulation that are at the heart of the U.S. (and international) efforts to address ethical and societally beneficial laboratory animal use. Explores the ethical foundations of these laws and discusses the relationship between scientists, animals and society. Includes both in-person and online lectures by research scientists, veterinarians, and professionals who are experts in humane science. Features class discussions and case studies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.619. Drinking Water and Water Policy: Avoiding Another Flint. 1 Credit.
Provides an overview of the federal drinking water and clean water laws, as well as the resultant regulations from these laws. Considers the contaminants addressed by the regulations and the drinking water and wastewater treatment necessary to comply with the regulations. Explores the use of the Consumer Confidence Report (CCR) to understand what's in drinking water. Investigates current issues and problems facing the water sector, as well as some of the potential solutions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.620. Introduction to Food Systems and Public Health. 4 Credits.
Introduces the complex and challenging public health issue of food security (sufficient, safe and nutritious food for all) in a world where approximately 850 million people are under-nourished while over 2 billion are overweight or obese. Explores the connections among diet, our food system, the environment and public health, considering factors such as equity, population pressure and the historical, economic and political forces that have helped shape food systems. Considers approaches to achieving both local and global food security. Explores the important role public health professionals can play. Guest lecturers include experts from a variety of disciplines and experiences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.621. Protecting the Environment and Safeguarding Worker Health: A Problem-Based Approach. 3 Credits.
Examines environmental and worker health by introducing and analyzing four real world problems; Explores how evidence-based interventions are designed and implemented; Emphasizes the role that social justice and environmental equity play in establishing effective public health interventions; Reviews how science, communication, and policy interweave in environmental and occupational health decision-making; Shows how environmental and occupational health leaders act to address and solve problems and prepares students to tackle and design solutions for contemporary problems in environmental and occupational health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.622. Seafood and Public Health: from Production to Consumption. 2 Credits.
Explores trade-offs between sustainability and dietary recommendations to increase seafood intake based on health benefits. Introduces the complex nature of the changing global seafood supply, which is important to human nutrition but also raises concerns regarding environmental health, transparency, and human rights. Compares wild and farmed seafood production methods using a perspective grounded in food systems and public health. Examines approaches taken by governments and non-governmental organizations to address challenges in the global seafood supply, and the difficulty involved when focusing on the world's most traded food type. Emphasizes the importance of understanding the many ways seafood production and consumption impacts health, and roles for public health professionals in addressing these issues. Encourages application of critical thinking skills to complex issues through class discussions and written assignments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.623. Infectious Disease Threats to Global Health Security. 3 Credits.
This course will introduce students to the major health security threats that face the US and other countries and the strategies, policies and organizations that are in place to defend against them. Throughout the course, we will make notes of areas where approaches to health security have evolved. We will also examine where important gains in health security preparedness have been made and identify areas in which progress is still needed. Given their particular challenges and frequency with which they occur, preparedness for and response to biological threats to health security will be a large focus of this class. Discussions of other health security threats and sharing of experiences from students are welcome.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.624. Biotechnology and Health Security. 3 Credits.
Prepares students to examine the complex issues surrounding the security of advances in the biological sciences, and their impact on public health. Acquaints students with medical and public health options that may be possible as a result biotechnology advances—for example, to rid areas of malaria-carrying mosquitoes. Will also acquaint students with the difficult history of past bioweapons programs in the 20th century, and the continuing effect that history has on current biodefense and health security efforts. Introduces the concept of the dual-use dilemma—that is, how biotechnologies may have applications for good and harm—and explores how current biotechnology advances may be applied towards security aims, or could be misused. Topical issues in science and security policy, including genetically modified organism (GMO) controversies, will be explored, researched, and debated. Encourages application of critical thinking skills through class discussions and written assignments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.625. Community-Driven Epidemiology and Environmental Justice. 3 Credits.
Introduces principles, concepts, and methods in community-driven environmental justice research. Presents current environmental justice research and future research needs. Offers practice opportunities for active involvement in problem-solving in environmental justice research. Provides students an opportunity to develop facility with analytic methods needed to conduct research into community environmental justice concerns.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.626. Environmental Justice and Public Health Practice. 3 Credits.
Explores environmental justice through a historical, ethical and political lens with discussions on the impacts of environmental injustice on health disparities, particularly in low income and minority communities. Critical assessment of existing environmental justice approaches will be used to foster discussions and strategies for alleviating inequities in environmental exposure and disease at multiple levels and domains of public health. This course will highlight various approaches for public health officials, advocacy groups, health professionals, policymakers, and stakeholders to contribute to environmental justice, and guide students through integrating existing expertise into environmental justice solutions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.627. Lessons Learned in 1918 Pandemic Flu. 1 Credit.
Prepares students to examine the complex history surrounding the 1918 influenza pandemic, the public health response at that time, and compare to preparedness, today. Acquaints students with the realities of mass vaccination and medical countermeasure development. Topical issues related to influenza preparedness will be discussed, including an examination of what happened in the 1977 reemergence of H1N1 influenza, gain of function influenza experiments and other controversial influenza research, and the effectiveness of non-pharmaceutical interventions. Encourages application of critical thinking skills through class discussions and written assignments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.628. Introduction To Environmental and Occupational Health Law. 4 Credits.
Introduces the theory and practice of environmental and occupational health law. Examines the approaches and strategies that underlie federal (United States) and state environmental and occupational health laws and regulations. Focuses on the study of the most significant federal and state environmental and occupational health laws and regulations, such as the Clean Air Act, Occupational Safety and Health Act, Comprehensive Environmental Response, Compensation, and Liability Act, and workers' compensation laws, with a particular emphasis on how they can be utilized as public health tools. Introduces students to the institutions and agencies that administer worker and environmental protection programs, and acquaint students with international treaties and laws aimed at protecting the environment and workers.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.629. Environmental and Occupational Health Law and Policy. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.630. Chemical and Biological Weapons Threats: Science, Public Health, Policy. 3 Credits.
Provides a broad understanding of the application of scientific concepts of biological and chemical warfare agents to inform evidence-based public health action and policy-making. Reviews the scientific principles and outcomes of threat agent use. Includes topics such as scientific and clinical aspects of threats agents, history of past use, and overarching policies to control their use. Examines the public health aspects of preparedness, including national development, use, and sharing of medical countermeasures. Explains principles of preparedness and response using case studies. Builds skills in crafting evidence-based public health policy options in preparing and responding to chemical and biological threats.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.631. Environmental and Occupational Health Policy Seminar. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.632. Introduction to Molecular Toxicology. 3 Credits.
'Introduction to Molecular Toxicology' is a 3-credit online course that introduces toxicology at a molecular level. It is designed for students with minimal background in biology and toxicology. The course will review the molecular mechanisms of diseases associated with environmental exposures. The course will introduce the cellular signaling pathways involved in protection from effects of chronic exposure to environmental toxicants, including responses to stress and oxidative damage. The course will also review both genetic and epigenetic changes that are associated with disease pathogenesis. In addition, the course will present the most recent technological advances in the molecular tools available to study effects of environmental toxicants, including next generation sequencing, mass spectrometry, gene editing models and emerging alternative animal models.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.633. The Sociocultural Dimensions of Disasters. 3 Credits.
Provides an anthropological viewpoint on extreme events including natural disasters, outbreaks, and technological accidents. Explores the human hand in, and experience of disasters - phenomena that influenced by the ways people imagine, build, organize, and value their communities. Critically examines the present trend of more frequent and more severe disasters, as well as chronic disparities in people's abilities to withstand and to recover from mass tragedy. Introduces theories of social vulnerability and community resilience to inform policies on how to reduce the chances for, as well as consequences of disasters.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.634. Public Health Emergencies: Risk Communication and Decision Science. 3 Credits.
Explores the science of risk communication and decision making. Discusses risk perception, communication guidance, and news media portrayal of risks. Reviews existing guidance on risk decision making. Presents previous and current public health emergencies as practice-based examples of risk communication and decision making. Examines public health emergency scenarios to prepare students for communication and decision making in their future work.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.635. Seafood and Public Health: Global Trade, Nutrition and the Environment. 2 Credits.
Explores the (sea)food system with a multi-disciplinary approach and real world examples. Examines the local-to-global connections in the most internationally traded food commodity, and why this matters for food and nutrition security, as well as environmental health. Discusses how the seafood sector can create sustainable aquatic food systems that work for businesses, fish workers, and consumers. Focuses on low- and middle-income countries where seafood is key for food and livelihoods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.636. Human Rights and Health Seminar. 3 Credits.
Introduces students to human rights in general, health as a human right, impact of health policies, programs and practices on human rights, and collective impacts of human rights violations, whether gross violations in human conflict or insidious violations associated with mistreatment of individuals and marginalized groups.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.637. Refinement of Animal Experimentation: Essential to Reduce Animal Suffering and Enhance Scientific Rigor. 2 Credits.
Prepares students who work or plan to work with animal subjects in the laboratory. Explores how to comprehensively and adequately apply Refinement methods in practice. Focuses on current housing and husbandry standards and discusses the benefits of a 'culture of care' for animals. Examines current best approaches to the important experimental refinements, namely anesthesia, analgesia, pain assessment and management, health monitoring, and humane endpoints and killing methods. To further assess the quality of animal-based research, necessary refinements in planning, conduct, analysis and reporting practices of animal studies are reviewed. Presents potential barriers to the uptake and application of Refinement methods and how they are challenged.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.638. Animals in Research: Ethics. 1 Credit.
Introduces students to the principles of bioethics when using animals in biomedical research and testing. Discusses the most common ethical theories such as contractarianism, Kantianism and utilitarianism. Addresses ethical issues arising from the use of animals in biomedical research and emphasizes on the role the three Rs of animal experimentation (Replacement, Reduction and Refinement) play when conducting animal experiments. Explores the harms involved in animal studies and assesses these against the benefits (harm-benefit analysis, HBA). The HBA is considered to be a key ethical safeguard for animals and, thus, is discussed in detail. Prepares students for real-world problems they may face in the laboratory.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.639. Advanced Environmental Health II. 4 Credits.
Focuses on the foundational knowledge and methods and their application in environmental health and engineering needed by doctoral students to prepare for careers in environmental health. Frames how environmental contaminants originating from four environmental vectors, Air, Water, Soil and Food, impact human health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.640. Molecular Epidemiology and Biomarkers in Public Health. 4 Credits.
Emphasizes the scientific basis of molecular epidemiology and provides examples of the application of molecular biology, analytical chemistry, and toxicology to the study of chronic disease etiology and its public health application, including examples in human cancer, cardiovascular, immunological, and neurological diseases. Also discusses methodological and study design problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.641. Climate Change and Public Health Problem Solving Seminar: Global Challenges and Solutions for Mitigation, Adaptation, and Sustainability. 3 Credits.
Equips students with the skills to understand how to evaluate, assess, and design adaptation and mitigation strategies for global climate change impacts on public health. Features “real world” scenarios and case studies that are used to demonstrate the likely impacts of climate change on public health. Analyzes case studies and discusses how evidence-based science is deployed to combat the environmental health aspects of climate change. Gains a better understanding of the role that social justice and environmental equity play in the challenges that climate change brings. Emphasizes a systems-based approach, recognizing that climate change problem-solving methodology is multi-dimensional and multi-sectorial.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.644. Food System Resilience to Disasters: COVID-19, Climate Change, and Beyond. 2 Credits.
Provides an overview of the ways food systems have been impacted by COVID-19, actions to protect and improve food security, and the implications for public health. Engages students with guest speakers working at the cutting edge of food+COVID policy, practice and research, from community-based to global levels of action. Explores concepts of food systems, food system resilience, disaster management, and equity. Discusses how systemic factors (including poverty, racism and unsustainable food systems), affect outcomes, with application to climate change and other disasters. Reviews the strengths and limitations of responses in policy, practice, and research, primarily in the U.S. but also internationally. Challenges students to explore diverse perspectives and constraints; and to envision and design further responses addressing short-term emergency needs, adaptation of systems, and longer-term, deep, systemic change.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.647. The Health Effects of Indoor and Outdoor Air Pollution. 3 Credits.
Provides a broad understanding of air pollution, it's sources, transport and exposure. Examines important atmospheric chemistry and measurement methods. Discusses the relationship between air pollution and health effects. Includes topics such as oxidant pollutants, sulfur dioxide and acid aerosols, particulates, bioaerosols, volatile organic compounds, and indoor air pollution. Also covers host susceptibility factors, the influence of global warming, and regulation and public policy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.650. Fundamentals of Clinical Oncology for Public Health Practitioners. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.651. Energy, Environment, and Public Health. 2 Credits.
Examines why energy policy choices are so important to human health and well-being. Explores how the impacts of energy exploration, generation, and usage patterns are tied directly to economic prosperity, the condition of the environment, the health of the population, and even aspects of national and international security, for developed as well as developing nations. Discusses and presents potential solutions to the three biggest energy challenges: (1) meeting the basic energy needs of the world s poorest people in a more healthful manner, (2) de-carbonizing electricity generation, and (3) reducing oil dependence. Emphasizes that energy is the core of the environment problem and environment is the core of the energy problem.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.653. Climate Change: Avoiding Conflict and Improving Public Health. 3 Credits.
This course explores the potential for a changing climate to cause food and water shortages, forced migration, and conflict. Through a series of case studies of climate change-relevant crisis events around the world, we will examine the factors that led to the communities in question mustering resilience to survive and recover from the crisis vs. the factors that led to conflict. Through this analysis, we will identify a suite of resilience factors and strategies, such as community cohesion, ecosystem restoration, agricultural and water capture and storage, that could be built into policies to assist high risk areas in avoiding conflict.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.655. Baltimore Food Systems: A Case Study of Urban Food Environments. 4 Credits.
Challenges students to look closely at the environment of Baltimore City's complex food systems, and to consider what it would take to improve these systems to assure access for all to nutritious, adequate, affordable food, ideally with reduced environmental harm. Students "go backstage" with tour guides at sites including a supermarket, a corner store, an emergency food distribution center, and a farm connected to the city school system. Students learn about the types of food available at these sites, who uses them, relevant aspects of their operations, and site-relevant key barriers to, and opportunities for, providing access to healthier and more sustainably produced food. Students also conduct oral history interviews about food with elderly city residents to understand how food access has changed over the years. Class sessions engage students to think critically, and provide background and frameworks for understanding the experiential sessions. Throughout, students consider the relative impacts of access, demand, and stakeholder interests, and consider the relative strengths and weaknesses of voluntary, regulatory (governmental), legal and other strategies. Lectures and discussions consider applicability of lessons gained from the study of Baltimore to other food systems. For their final papers, students identify a problem and its key determinants, and they propose/analyze an option to address it. Students think critically about selected aspects of the city's food systems and food environments, identifying challenges and opportunities for change and incorporating lessons learned from other food systems and programs. Students also discuss implications beyond Baltimore
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.660. Introductory Principles of Environmental Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.661. Writing Scientific Papers I. 2 Credits.
Enables doctoral students to attain skills in writing successful scientific papers—that is, papers that are accepted by peer-reviewed journals. Confers skills in identifying and using online information sources. Informs participants on different publication options, including open source journals. Explains NIH requirements for notification and access. Through problem based learning and review of successful scientific papers, conveys the elements of successful scientific papers, including formats, data presentation, citations and acknowledgements. Demonstrates successful response to reviewer comments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.662. Writing Scientific Papers II. 2 Credits.
Enables doctoral students to attain skills in writing successful scientific papers—that is, papers that are accepted by peer-reviewed journals. Confers skills in identifying and using online information sources. Informs participants on different publication options, including open source journals. Explains NIH requirements for notification and access. Through problem based learning and review of successful scientific papers, conveys the elements of successful scientific papers, including formats, data presentation, citations and acknowledgements. Demonstrates successful response to reviewer comments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.663. Grant Writing I. 2 Credits.
Enables doctoral students to attain skills in writing successful funding proposals—that is, proposals that are likely to receive approval for funding. Introduces students to grant writing, funding sources, types of NIH grants, how to read an RFA, PA or other announcements, and develop a biosketch. Explores the requirements of a successful NIH style grant proposal.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.664. Grant Writing II. 2 Credits.
Enables doctoral students to attain skills in writing successful funding proposals—that is, proposals that are likely to receive approval for funding. Introduces students to grant writing, funding sources, types of NIH grants, how to read an RFA, PA or other announcements, and develop a biosketch. Explores the requirements of a successful NIH style grant proposal.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.670. Introduction to Public Health Emergency Preparedness. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.820. EHE Doctoral Thesis Research. 1 - 22 Credits.
Provides an opportunity to actively conduct research in environmental health
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.829. Summer Thesis Research. 12 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.840. EHE Doctoral Special Studies and Research. 1 - 22 Credits.
Provides a forum for students to receive feedback on their research ideas and projects. Acquaints students with research of leading environmental health experts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.841. SS/R: INTRODUCTION TO ENVIRONMENTAL HEALTH. 3 Credits.
Examines health issues, scientific understanding of causes, and possible future approaches to control of the major environmental health problems in industrialized and developing countries. Topics include physical, chemical, and biological agents of environmental contamination; solid and hazardous waste; susceptible populations; biomarkers and risk analysis; the scientific basis for policy decisions; and emerging global environmental health problems
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.860. EHE Student Seminar & Grand Rounds. 1 Credit.
Provides a forum for students to present their current research project and receive feedback from faculty and students. Introduces students to research of leading environmental health experts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.180.880. SPECIAL STUDIES IN ENVIRONMENTAL HEALTH/COMMUNITY OUTREACH. 1 - 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.181.845. MHS Special Studies & Research. 1 - 22 Credits.
Provides a forum for students to receive feedback on essay topics and outlines.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.181.850. MHS Essay. 1 Credit.
Provides the opportunity for the student to work with their adviser to formulate, research, finalize, and gain approval of the required essay.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.613. Exposure Assessment Techniques for Health Risk Management. 3 Credits.
Prepares the students to use techniques of exposure assessment to quantitatively estimate exposures in occupational and non-occupational settings. Students will be introduced to concepts of exposure variability and its implications for interpreting small exposure data sets. Students will apply advanced techniques such as mathematical modeling of exposures using exposure determinant information, analysis of variance for between- and within-subject variability, Monte Carlo analysis of uncertainty, Bayesian decision analysis using small data sets, exposure assessment strategies in occupational settings. Students will analyze case studies to assess exposures in real-life scenarios using multiple methods. Students will critically evaluate key scientific papers on exposure assessment strategies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.614. Industrial Hygiene Laboratory. 5 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.615. Airborne Particles. 4 Credits.
Describes the basics of airborne particles. Explores properties of gases, particle motion, size statistics, Brownian motion and diffusion, curvilinear motion of particles, particle deposition and clearance in the human respiratory system, filtration, aerosol samplers, and sampling methodology, optical properties and electrical properties of aerosols.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.617. Exposure Sciences for Health Risk Assessment. 4 Credits.
Prepares students to use techniques of exposure assessment in aid of epidemiological studies. Introduces students to core concepts including exposure variability and its implications for reconstructing historical exposures; sparse data and measurement errors; the exposure data matrix; methods for imputation of missing values; the relationship between exposure and tissue concentrations; the choice of exposure metric; and exposure-response relationships. Examines advanced techniques for imputing missing data while reconstructing exposures. Demonstrates the application of mathematical models of exposure using exposure determinant information and Bayesian methods. Considers exposure windows and exposure lagging. Focuses on using biologic models of how disease develops in response to exposure. Students critically evaluate exposure assessment strategies in selected epidemiological studies from the peer-reviewed literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.621. Introduction to Ergonomics. 4 Credits.
Introduces the fundamental principles of ergonomics, including terminology, concepts, and applications of physiology, anthropometry, biomechanics, psychology, and engineering to work place and work methods design. Emphasizes the complex relationships among workers, job demands, work place designs, and work methods. Prepares students for advanced study in safety science, industrial hygiene, injury prevention, industrial engineering, and safety and health management.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.622. Ventilation and Hazard Control. 4 Credits.
Covers the principles of industrial ventilation and engineering controls for airborne hazards. Provides competency in general ventilation and industrial ventilation design.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.623. Occupational Health Management. 3 Credits.
Examines modern Lean management methodology and how it can be leveraged to design and implement an effective health, safety, and environmental (HSE) management system in an organization. Dtresses Lean management methods and tools and how they impact organizational structure, SHE planning, risk assessment, training, and continuous HSE improvement.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.625. Principles of Occupational and Environmental Hygiene. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.626. Issues for Water and Sanitation in Tropical Environmental Health. 2 Credits.
Introduces major environmental health problems in the tropical areas of the world and discusses some solutions in detail. Covers engineering, human behavior, and public health approaches to providing potable water and sanitation including simple water supplies, sanitary latrines, the relationship of water supply and sanitation to diarrheal diseases, disaster sanitation, and techniques for disinfection. Demonstrates field treatment of water supplies and water microbiology. Each student develops a case study drawn from current events and designs a field project for an environmental control measure to reduce disease in a community. In addition, students develop a short (4-6 page) mock grant proposal designed to implement an integrated water and sanitation hygiene intervention of their choosing drawing on the lessons learned during this course.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.631. Principles of Occupational Safety. 2 Credits.
Introduces the organizational framework in which safety sciences are practiced in the U.S. Illustrates professional and scientific methodologies by focusing on selected, substantive areas of practice (systems safety, nature of accidents, electrical hazards, fire and fire suppression, explosions and explosives, and falls and walking and working surfaces).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.637. Noise and Other Physical Agents in the Environment. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.638. Environmental and Health Concerns in Water Use and Reuse. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.640. Food- and Water- Borne Diseases. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.641. AIR, WATER AND FOOD TOXINS. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.810. MS Field Placement. 1 - 22 Credits.
Focuses on a mentored, hands-on practical public health experience, which involves meaningful participation and interaction with public health professionals.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.845. EHE MS Special Studies and Research. 1 - 22 Credits.
Prepares students to identify and research the central issues in environmental health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.850. EHE MS Essay. 1 - 16 Credits.
Students work with their adviser to formulate, research, finalize, and gain approval of their master's essay, which is based on a required Independent Professional Project (IPP). Students write the essay as a professional report summarizing the findings of the IPP. This represents a substantive application of professional technical skills through the process of collecting and summarizing data and reviewing appropriate literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.182.860. Special Studies Seminar in Occupational and Environmental Hygiene. 1 Credit.
Presents seminars by faculty, students and invited speakers dealing with occupational and environmental hygiene professional practice and research. Provides examples of various occupational/environmental settings and associated worker hazards. Serves to integrate various courses taken as part of the online master's in OEH program and to familiarize students with state-of-the art professional practice procedures and guidelines. Provides a venue for master's students to present their final essays.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.183.631. Fundamentals of Human Physiology. 4 Credits.
Encompasses the integration of a variety of organ systems. Invites leading scientists from different fields of physiology to offer exceptional and up-to-date lectures that quickly move through the basic mechanistic principles. Applies basic mechanistic principles of each organ system to current public health issues and environmentally relevant topics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.183.638. Mechanisms of Cardiopulmonary Control. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.183.642. The Cardiopulmonary System Under Stress. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.183.643. Essentials of Pulmonary Function Measurements. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.183.825. EHE ScM Thesis Research. 1 - 22 Credits.
Provides an opportunity to actively conduct research in environmental health
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.183.840. EHE Scm Special Studies and Research. 1 - 22 Credits.
Provides a forum for students to receive feedback on research ideas and projects. ScM students enroll in this course prior to passing the written comprehensive exam.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.184.830. Postdoctoral Research Environmental Health and Engineering. 1 - 22 Credits.
Offers an opportunity for postdoctoral students to conduct research and write papers for publication.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.185.600. One Health Tools to Promote and Evaluate Healthy and Sustainable Communities. 3 Credits.
Students will learn and apply tools and principles of One Health, which is the interface of human health, animal health and environmental health, to promote and evaluate healthy and sustainable communities. Classes will cover methods central to the conduct of One Health research or programs, which includes study design, stakeholder participation, community engagement and program evaluation, and will cover topics of high relevance to One Health in a way that uses systems approaches and synthesis to join perspectives from the multiple disciplines. These topics include drivers—such as the food system and antimicrobial resistance—that can contribute to or detract from the health and sustainability of communities. Methods will be presented in the context of applications such as policy, regulation, and economics and will connect One Health techniques for knowledge integration and other approaches to the design of healthy communities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.185.601. One Health Seminar. 1 Credit.
Addresses global and domestic health challenges through a One Health lens, including practice-based approaches increasingly adopted by government agencies, non-governmental organizations and the tripartite (WHO, OIE, FAO). Engages experts in the field to discuss emerging topics and application of One Health approaches. Explores wide-ranging topics that include zoonotic infectious diseases, health security, preparedness, disaster response, climate change, planetary health, food systems, sustainability, chemical exposures, occupational health, health communication, and policy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.185.801. Exposure Sciences & Environmental Epi Journal Club. 1 Credit.
Provides a forum for students and multiple faculty to keep up-to-date on the latest environmental health research and get feedback on their research ideas and projects. Emphasizes active participation in discussions of the peer-reviewed literature, the most up-to-date research, and the process of research development.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.185.803. Health Security Journal Club. 1 Credit.
Provides a forum for students to engage with multiple faculty to discuss current topics in health security and global catastrophic biological risks. Emphasizes active participation in discussions related to peer-reviewed publications, as well as trends in research and policy, and offers an environment to contemplate and receive feedback on research development.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.185.805. Toxicology, Physiology & Molecular Mechanisms Journal Club & Seminar. 1 Credit.
Provides an opportunity for students and postdoctoral fellows to present scientific papers from the current literature dealing with mechanisms underlying environmental diseases and the methodologies used to study them. Papers are organized around specific themes selected by the course instructors.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.185.806. Advanced Concepts in Toxicology, Physiology & Molecular Mechanisms. 2 Credits.
Provides a platform for students, postdoctoral fellows and faculty to present and discuss impactful scientific papers from the current literature that deal with mechanisms underlying environmental disease along with accompanying methods. Explores additional aspects that are relevant to conducting and conveying laboratory research, including study design and statistical analysis, manuscript and grant review, policy and practice, and risk assessment. Outside speakers will also be invited to present on a topic relevant to advanced concepts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.185.810. Field Placement Esee. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.186.800. MPH Capstone: Environmental Health & Engineering. 2 Credits.
Provides students with the opportunity to work on a public health practice project on a chosen public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.186.895. MPH Practicum: EHE. 1 - 4 Credits.
The MPH Practicum is a mentored, hands-on practical public health experience, which involves meaningful participation and interaction with public health professionals.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.610. Public Health Toxicology. 4 Credits.
Examines basic concepts of toxicology as they apply to the effects of environmental agents present in air, water and food (e.g. chemicals, metals) on public health. Discusses the distribution, cellular uptake, metabolism, and elimination of toxic agents, as well as the fundamental principles governing the interaction of foreign chemicals with biological systems. Considers how population data on disease incidence (various cancers, lung, kidney, heart, etc.) can suggest possible etiologies and how genetic and epigenetic factors can influence risk for adverse health effects. Focuses on the application of hoe these concepts provide evidence relevant to the understanding and prevention of morbidity and mortality resulting from environmental exposures to toxic substances through presentation of case studies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.625. Animals in Research: Law, Policy, and Humane Sciences. 3 Credits.
Imparts fundamental knowledge about basic and applied (bio)medical research. Explores the main shortcomings of animal use in science. Discusses how to fully apply the 3R principles, and how to properly conduct experiments. Prepares students to critically appraise the validity of animal and non-animal models and methods in order to choose the best means for particular research interests.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.632. Molecular Toxicology. 4 Credits.
Reviews the mechanisms by which environmental toxicants cause chronic diseases such as cancer, COPD, asthma and heart diseases that impact public health. Topics include cell signaling pathways involved in oxidative and nitrosative stress, the microbiome, cell growth, cell death, DNA repair, inflammation and carcinogenesis in response to exposure to air pollutants, metals and other environmental toxicants. Presents most recent technological advances in the molecular and genetic tools available to study how environmental toxicants cause diseases, which includes omics technologies (genomics, proteomics and metabolomics), next-generation sequencing for gene expression and genetic variations, transgenic animals and emerging alternative animal models.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.633. Introduction to Environmental Genomics and Epigenomics. 3 Credits.
Presents the concept of the genetic and epigenetic data analysis in environmental health studies. Introduces not only single gene analysis but also genome-wide data searching. Also introduces cutting-edge analytical tools for 'omic' data not limited to genomics, but also for epigenomics, proteomics and metabolomics. Provides an introduction to the pathway analysis for 'omic' data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.634. Analysis for Environmental Genomics and Epigenomics. 1 Credit.
Emphasizes the analytical methods for genomic and epigenomic data analysis. Presents step-by-step instructions for searching and extracting databases and performing pathway analyses on existing genomic and/or epigenomic data. Acquaints students with 'omic' data analysis by participating group project that aims for proving the principle or generating new hypothesis for a selected research topic.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.640. Toxicology 21: Scientific Foundations. 1 Credit.
Provides students with fundamental knowledge of the emerging science driving new strategies for human risk assessment. Includes topics: toxicokinetics, xenobiotic activation and inactivation, systems biology, and databases for toxicity testing. Presents case studies that have used different data bases for toxicity testing. Offers hands-on experiences using the databases and other Web-based applications.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.645. Toxicology 21: Scientific Applications. 3 Credits.
Familiarizes students with the novel concepts being used to revamp regulatory toxicology in response to a breakthrough National Research Council Report "Toxicity Texting in the 21st Century: A Vision and a Strategy." Presents the latest developments in the toxicology field: moving away from animal testing toward human relevant, high content, high throughput integrative testing strategies. Active programs from EPA, NIH and the scientific community work-wide illustrate the dynamics of safety sciences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.650. Alternative Methods in Animal Testing. 3 Credits.
Discusses and evaluates strategies for reducing the number of animals utilized in basic and applied research. Addresses traditional in vitro methods, including cell culture and analytical chemistry as well as newer and evolving techniques such as informatics, genomics, proteomics, and metabolomics. Also discusses governmental regulatory processes for approving new testing methods, especially in vitro methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.655. Evidence-Based Toxicology. 3 Credits.
Provides students with fundamental knowledge about EBT approaches currently in use (or in development) that integrate and utilize diverse sources of data. These approaches include meta-analysis and systematic reviews, as used in evidence-based medicine. Introduces, explains and expands upon techniques such as risk of bias, QA/QC, good laboratory practice and validation, and the role that these tools and techniques play in assuring maximum confidence in evidence-based approaches
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.187.661. Environmental Health in Neurological and Mental Disorders. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.188.680. Fundamentals of Occupational Health. 3 Credits.
Introduces selected important topics in occupational health through lectures, readings, and class discussion. Provides an overview of the field, providing a survey of the history of occupational health; analysis of case studies in the history of asbestos, coal workers pneumoconiosis, and uranium mining; identification of the burden of occupational injuries and diseases; application of the toxicologic paradigm to activities in occupational health; analysis of occupational health hazards; identify the association between social, behavioral, and organizational factors and health outcomes in the workplace; identification of legal, regulatory, and ethical issues; analysis and research in clinical and non-clinical emerging issues in occupational health; and an introduction to the concepts of occupational health in developing countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.188.681. Onsite Evaluation of Workplace and Occupational Health Programs. 5 Credits.
Lectures, discussions, and visits to various industrial sites present approaches to evaluating the industrial environment, including industrial process, hazards, organization, and management structure. Stresses the importance of interdisciplinary cooperation in the development of occupational health programs, with reference to the U.S. workplace in the next decade.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.188.682. A Built Environment for A Healthy and Sustainable Future. 3 Credits.
Addresses the role that the built environment plays in public health. Examines how building design, community planning and design, land use, and transportation networks contribute to energy use, water supply degradation, climate change, ecosystem degradation, and public health. Explores the contributions of suburban sprawl to adverse environmental and public health outcomes. Examines how the built environment could and must change if we are to stabilize the climate and move into a sustainable future.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.188.686. Clinical Environmental and Occupational Toxicology. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.188.688. Global Sustainability & Health Seminar. 1 Credit.
Discusses the causes, consequences, and implications of key global environmental challenges that we are facing and that are likely to become more challenging over time. Addresses how land use (e.g., patterns of urban growth and suburban sprawl), energy use, food production and distribution, water use, and population growth are causing climate change, ecosystem degradation, biodiversity losses, species extinctions, and other resource depletion, and how all this is in turn is a threat to human health as individuals, in communities, and globally. Focuses on discussion and not lectures and will utilize a mix of movies, guest discussants, and student-directed discussions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.188.694. Health of Vulnerable Worker Populations. 3 Credits.
Discusses occupational safety and health program considerations for vulnerable populations, including all levels of prevention and using examples such as the health needs of women workers, shift workers, aging workers, workers' families, and workers with chronic diseases or impairments. Focuses on strategies for identifying and removing barriers that affect health and work performance, program development and management responsibilities, and cost issues related to selected preventive and rehabilitative programs. Presents relevant research findings on the ability of vulnerable populations to benefit from safe and healthy working lives.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.188.840. Special Studies and Research Environmental Health & Engineering. 1 - 22 Credits.
Prepares students to identify and research the central issues in environmental health
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.188.861. Advanced Topics in Toxicology and Physiology. 1 Credit.
Reviews the unique and advanced topics in toxicology and physiology. Presents students with guidelines for understanding the basic knowledge as well as the advanced methodology in toxicology and physiology. Prepares students to be able to identify the environmental health problems and present the critical reviews on the original peer-review papers in selected topics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.600. Stata Programming. 2 Credits.
Teaches Stata programming in a systematic way to students who have had exposure to Stata or another statistical package, but may not have the tools to perform complex analytical projects independently. Covers data management, programming concepts, procedural programming, Stata-specific commands and constructs, and project workflow.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.601. Principles of Epidemiology. 5 Credits.
Introduces principles and methods of epidemiologic investigation of infectious and noninfectious diseases. Illustrates methods by which studies of the distribution and dynamic behavior of disease in a population can contribute to an understanding of etiologic factors, modes of transmission, and pathogenesis. Presents different types of study design, including randomized trials, case-control and cohort studies, risk estimation, and causal inferences. Demonstrates the relationship between epidemiology and the development of policy. Laboratory problems provide experience in epidemiologic methods and inferences, illustrating a common-vehicle epidemic; the spread of infectious disease in school, home, and community; epidemiological aspects of a noninfectious disease; vaccination; the epidemiological approach to health services evaluation; rates of morbidity and mortality; sensitivity and specificity; and life table methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.602. Intermediate Epidemiology. 3 Credits.
Covers key principles, designs and methods of observational epidemiology studies. Includes a description of general designs of the main observational studies (birth cohort analysis, ecologic studies, cohort, case-based case-control studies, case-control studies within a defined cohort, and case-crossover studies), measures of disease frequency (cumulative incidence, rate and odds) and of association (relative risk, odds ratio), evaluation of confounding and interaction, types of bias, and the most often used methods of adjustment for confounding effects and their assumptions. Employs lectures and group discussions of exercise
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.604. Introduction to -Omics in Public Health. 2 Credits.
Introduces quantitative scientists to how "omics" can address public health questions. Reviews basic biology concepts for –omics with a focus on genomics, epigenomics, transcriptomics, and metabolomics. Presents commonly used –omic measurement methods and data preprocessing tools. Discusses challenges that may arise in data analysis due to data measurement issues as well as interpretation of results.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.606. Methods for Conducting Systematic Reviews and Meta-Analyses. 4 Credits.
Presents basic methods in the qualitative and quantitative meta-analysis, including formulating a hypothesis that can be addressed via meta-analysis, methods for searching the literature, abstracting information, and synthesizing the evidence. Includes Bayesian and likelihood approaches to meta-analysis quantitative methods. Emphasizes essential steps of conducting systematic reviews through hands-on exercises. Focuses on analytical skills in performing meta-analyses and network meta-analyses.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.607. Introduction to Cardiovascular Disease Epidemiology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.608. Using Big Data for Epidemiologic Research in Health Care. 0.5 Credits.
Demonstrates a practical approach to big data: where to find it, how to store and analyze it, and why to use it. Provides a technical overview of the utilization of big data with the inclusion of several case examples and inclusion of industry leaders in the application of big data to health care.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.609. Concepts and Methods in Infectious Disease Epidemiology. 3 Credits.
Develops deeper understanding of the concepts and quantitative methods unique to infectious disease epidemiology. Builds upon the concepts and methods of general epidemiology and knowledge of specific infectious diseases. Topics include disease emergence, transmissibility and the basic reproductive number, transmission patterns and serial intervals, seasonality, virulence, heterogeneity in hosts and pathogens, herd immunity, diagnosis of infectious diseases, co-infections, and phylodynamics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.610. The One Health Approach to Epidemiology and Global Public Health: Problem Solving Seminar. 3 Credits.
Introduces students to the One Health approach to public health research and practice, providing examples of how evidence shapes public health policy and health promotion, from the local to the global scale. Students will practice strategic thinking and decision making in translating evidence to behavior and policy and will have the opportunity to interact with guest speakers working in One Health fields.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.612. Epidemiologic Basis for Tuberculosis Control. 2 Credits.
Considers subjects and epidemiologic principles relevant to control measures against tuberculosis. Includes the following topics: diagnosis of TB infection and disease; risk factors and epidemiology; prevention by case-finding and treatment, vaccination, and preventive therapy; pediatric TB; TB modeling; and elements of control programs in low-, middle-, and high-income settings. Offers lectures, group discussions, and review of the tuberculosis literature as the primary components.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.613. Design and Conduct of Clinical Trials. 2 Credits.
Introduces clinical trial design in the context of epidemiological concepts, covers various topics in the design and conduct of clinical trials, and profiles clinical trials that illustrate these issues. Topics include the definition and history of clinical trials; trial designs, including phase III-IV, cross-over, factorial, and large, simple designs; internal and external validity; controls, randomization, and masking; ethical issues; introductions to data collection and management and analysis principles; monitoring of trials for safety and efficacy; and use of clinical trial data in healthcare decision-making.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.614. Conducting Epidemiologic Research. 2 Credits.
Covers applications of epidemiologic principles in the conduct of observational studies as taught in advanced epidemiologic methods. Focuses on developing skills to conduct and manage a research protocol, monitor data collection, manage data and disseminate results. Covers components of a clinical research team, responsibilities, expertise and tasks study members perform, and organizational, logistical and attitudinal issues that need to be addressed in producing an effective research group. Topics include infrastructure needed for single-site and multi-site studies, selection bias and analytical intent in the determination of populations and methods for recruitment, development of a manual of operations and forms for data collection and administration, data management tools, implementation and review of quality assurance, specimen repository tracking, and useful statistics for evaluating the progress of the study.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.615. Understanding the Relevance of New Analytical Methods to Epidemiological Research. 2 Credits.
Provides a basis for understanding how new analytic methods are relevant to epidemiologic research. Explores methods in "plain English" in order to focus on utility of the methods as well as how to interpret analyses as they are applied to research. Addresses the assumption of the methods and big picture pros and cons.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.616. Epidemiology of Aging. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.617. Pharmacoepidemiology. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.618. Epidemiology: the Basics. 3 Credits.
Introduces the population science of epidemiology, including methods and approaches to measurement and outcomes, study design and inference, risk estimation, and surveillance. Provides the essential elements of epidemiology as appropriate for public health scientists.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.619. Topics in Pharmacoepidemiology. 2 Credits.
Introduces the key elements of pharmacoepidemiology. Explores the utilization and effects of drugs in large numbers of people and the application of epidemiological methods to pharmacological issues. Focuses on questions of drug safety and effectiveness, concentrating on clinical patient outcomes and on evaluating the use of therapies. Applies the research methods of clinical epidemiology (e.g., randomized trials, cohort studies, case-control studies, use of secondary data, attention to biases and confounding, effects of non-adherence, active and passive surveillance for adverse events) to study medication exposures and outcomes.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.620. Principles of Clinical Epidemiology. 2 Credits.
Presents lectures and interactive sessions designed to expose students to basic principles of clinical epidemiology and introduce key methods utilized in clinical outcomes research. Focuses on principles and methods in clinical epidemiology which would be most utilized by clinicians/clinician researchers for screening and diagnosis of illness as well as for prognostication and decision-making. Introduces methods and issues in studying clinical epidemiology in health care settings (e.g. administrative data).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.623. Cancer Epidemiology, Prevention, and Control. 2 Credits.
Emphasizes the role of epidemiology in cancer prevention and control. Compares and contrasts the descriptive epidemiology, natural history, and pathologic and biologic characteristics of selected common cancers, as well as factors related to their etiology. Discusses the influence of environmental and genetic factors and their interplay on the development of cancer together with the epidemiologic issues involved in their investigation. Provides overview of problems involved in cancer prevention and screening.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.624. Etiology, Prevention, and Control of Cancer. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.627. Epidemiology of Infectious Diseases. 4 Credits.
Introduces the basic methods for infectious disease epidemiology and case studies of important disease syndromes and entities. Includes definitions and nomenclature, outbreak investigations, disease surveillance, case-control studies, cohort studies, laboratory diagnosis, molecular epidemiology, dynamics of transmission, and assessment of vaccine field effectiveness. Focuses case studies on acute respiratory infections, diarrheal diseases, hepatitis, HIV, tuberculosis, sexually transmitted diseases, malaria, and other vector-borne diseases.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.628. Social Epidemiology. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.629. The Epidemiology of LGBTQ Health. 3 Credits.
Introduces constructs of sexual orientation and gender identity in the context of public health. Explores historical, epidemiological, and social perspectives related to the physical and mental health of lesbian, gay, bisexual, transgender and queer (LGBTQ) individuals and communities. Orients students to current and historic epidemiological and contextual issues that shape what is known about LGBTQ health, presents an overview of LGBTQ health disparities and interventions, and develops a foundation for critical thinking about LGBTQ health research and intervention potential.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.630. Topics in Social Epidemiology. 2 Credits.
Provides a systematic and selective overview of conceptual approaches and research findings related to the impact of social context and social phenomena on health. Sessions highlight a different area of frontier social epidemiology research. Social processes examined include 1) social inequalities (including social class differences as well as the effects of income inequality), 2) social networks, 3) neighborhood and urban characteristics, 4) gender inequalities and 5) macro-social changes. Discusses global health approaches to social determinants of health including research experiences from different parts of the world. Includes discussion of methods related to the study of social epidemiology; however, this is not intended to be a methods course. Includes limited lecture matter and thorough group discussions on selected classic papers and latest readings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.633. Data Management in Clinical Trials. 3 Credits.
Acquaints students with important principles of the acquisition, management, and distribution of data in the clinical research environment. Focuses on real-world needs of investigators and emphasizes those issues that researchers need to understand to work effectively with other members of study teams, including coordinators, data entry staff, programmers, and data managers. Covers topics that apply to many studies, and discusses approaches ranging from small single-investigator trials using only a spreadsheet through international networks using sophisticated web-based data management systems, although does not focus on any particular type or size of study. Discusses the benefits and costs of alternatives rather than recommending particular courses of actions. Combines practical and hands-on exercises with advanced treatment of important concepts, although it does not focus on computer programming.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.635. Clinical Trials: Issues and Controversies. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.636. Epidemiology in Evidence-Based Policy. 2 Credits.
Focus on how scientific evidence in general and epidemiologic studies in particular are used to inform health and regulatory policies. Reviews the role of scientists and epidemiologists in translating evidence to practice and policy; examines how science fares in the legislative, regulatory, and judicial settings; addresses methodological issues related to types and availability of evidence to guide policy. Topics include nutrition recommendations (e.g. population-wide sodium intake), environmental policies; opioid epidemic (e.g. safe injection sites); tobacco control and e-cigarettes; health disparity (e.g., racial disparities in kidney transplantation); diabetes prevention; legal and policy implications of class action lawsuits (e.g., gun policy and local food policy); COVID-19 (e.g., evidence-informed policy making during a pandemic); and modelling to guide policy. Guest faculty, experts in their field, present examples, discuss their experiences using evidence to guide policy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.639. Assessing Epidemiologic Impact of Human Rights Violations. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.640. Eye Disease: Epidemiology and Control. 1 Credit.
Presents lectures and group discussions on the pathology, clinical manifestations, epidemiology, treatment, and control of the major blinding diseases, including diabetic retinopathy, cataract, glaucoma, trachoma, and age-related macular degeneration, as well as refractive error and ocular complications of Ebola and Zika.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.641. Healthcare Epidemiology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.644. Epidemiology of Diabetes and Obesity. 2 Credits.
Describes the epidemiology and prevention of diabetes, obesity, and associated complications. Discusses methodological issues associated with evaluating these in epidemiologic studies. Designed to cover the global epidemics of diabetes and obesity, environmental and genetic risk factors, as well as interventions to improve diabetes outcomes and weight management. Includes lectures from several expert faculty members in the School of Public Health and the School of Medicine
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.645. Introduction to Clinical Trials. 3 Credits.
Introduces clinical trial design in the context of epidemiological concepts, covers various topics in the design and conduct of clinical trials, and profiles clinical trials that illustrate these issues. Topics include the definition and history of clinical trials; trial designs, including phase I-IV, cross-over, factorial, and large, simple designs; internal and external validity; controls, randomization, and masking; ethical issues; data analysis principles; monitoring of accumulating safety and efficacy data; and use of data from randomized trials.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.646. Epidemiology and Public Health Impact of HIV and AIDS. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.648. Clinical Trials Management. 3 Credits.
Provides an overview of methods related to the day-to-day conduct of multicenter randomized clinical trials with an emphasis on the Coordinating Center perspective. Using case studies of multicenter clinical trials for illustration, emphasizes topics related to practical applications such as organizational models, use of standardization, and performance monitoring. Discussion of methods is encouraged, including alternatives to usual practice.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.650. Nutritional Epidemiology (Sum Epi). 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.651. Emerging Infections. 2 Credits.
Explores the factors promoting the emergence of new infectious diseases and the re-emergence of some of the more traditional infections. Evaluates agent, host, environmental and ecological factors in the emergence of infectious diseases. Presents methods of surveillance and early recognition of several important emerging infections. Includes discussions from lecturers with considerable experience in the investigation of specific emerging infections on the issues specific to emerging infections. Presents and discusses a paper describing an investigation of an Emerging Infection following each one-hour lecture. Presents, describes, and analyzes the factors related to the emergence of infectious diseases, new and old, that have emerged as important public health problems, or which have the potential for major epidemic spread. Explains possible methods for the rapid recognition, prevention, and control.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.653. Epidemiologic Inference in Outbreak Investigations. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.654. Epidemiology and Natural History of Human Viral Infections. 6 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.658. Critical Reading of Epidemiologic Literature. 1 Credit.
Develops skills in the critical reading of epidemiologic reports. Reviews key epidemiologic concepts and methods including bias, confounding and interaction. Identifies the key issues and common mistakes in the preparation of epidemiologic reports of empirical research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.660. Practical Skills in Conducting Research in Clinical Epidemiology and Investigation. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.663. Epidemiology Workshop: Interpreting and Using Epidemiologic Evidence. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.666. Foundations of Social Epidemiology. 3 Credits.
Presents applications of social epidemiologic concepts, introduced through weekly online lectures and readings, and the use of discussions and case studies. Prepares students to understand and appreciate the contribution of social factors to disease etiology, course, and the distribution of states of health in populations. Reviews the conceptual and theoretical underpinnings of social epidemiology from an historical perspective. Focuses on the scientific findings in the field from the 1970's until today; the influence of social context on behavior is well known and forms the backbone for most health promotion interventions. Delineates how the social environment influences behavior by shaping norms, reinforcing social control, providing environmental opportunity, and coping strategies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.667. Health Equity Research Methods to Address Social Determinants of Health. 4 Credits.
Introduces innovative methods, practical tools, and skills required to conduct evidence-based research that addresses the social determinants of health disparities. Draws on theoretical frameworks on fundamental values and principles, including social justice, human rights, the value of diverse ideas and stakeholder perspectives, inclusiveness, trustworthiness, behavioral and implementation science, and community-based participatory design. Uses lectures, panel discussions, and case-based examples to provide opportunities in obtaining feedback on ideas from experienced investigators.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.668. Topics in Infectious Disease Epidemiology. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.671. Topics in Management of Clinical Trials. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.674. Causal Inference: Emulating A Target Trial to Assess Comparative Effectiveness. 2 Credits.
Introduces students to a general framework for the assessment of comparative effectiveness and safety research. The framework, which can be applied to both observational data and randomized trials with imperfect adherence to the protocol, relies on the specification of a (hypothetical) target trial. Explores key challenges for comparative effectiveness research and critically reviews methods proposed to overcome those challenges. The methods are presented in the context of several case studies for cancer, cardiovascular, renal, and infectious diseases.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.676. Bayesian Adaptive Trials. 2 Credits.
Presents Bayesian adaptive designs and teaches students the skills and considerations necessary to construct such designs. Examines the operating characteristics of Bayesian adaptive designs and the benefits and costs of interim analyses, in particular within the regulatory framework.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.677. Infectious Disease Dynamics: Theoretical and Computational Approaches. 3 Credits.
Focuses on the dynamic processes that affect the spread of infectious disease. Presents basic conceptual approaches and a survey of specific theoretical and computational methods for simulating the spread of diseases. Specific topics include the effect of population heterogeneity on transmission, simulation of the impacts of interventions, social networks and the links between transmission dynamics and the evolution of pathogens. Particular methods include mathematical models, spatial-temporal analysis of epidemics, social network theory, genetic algorithms, individual based models and other tools of systems epidemiology. Concepts and methods are applied to historical epidemics, current emerging diseases and diseases of international public health importance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.678. Infectious disease transmission models for public health decision making. 3 Credits.
Studies global tobacco control methods in depth. Focuses on designing, implementing, and evaluating tobacco control interventions based on the need of a specific region or country. Highlights the use of multi-level solutions linking policy, communication, prevention, education, regulation, advocacy, and community organizing to address the interdisciplinary problem of tobacco use. Examines the aspects of tobacco use and tobacco control through lectures, case studies, presentations, and discussion.Upon successfully completing this course, students should be able to: • Perform a situational assessment of the tobacco control environment in a particular country including the health and economic burden of tobacco use in the country; • List criteria that can be used to determine the tobacco control priorities of a country, and evaluate the strengths and weaknesses of different criteria for setting tobacco control priorities; • Evaluate the strengths and weaknesses of various strategies to reduce tobacco use; •Select and define appropriate indicators for evaluating progress in implementing a tobacco control intervention; •Utilize acquired methods to plan, implement, evaluate, and lead a tobacco control interventions based on the need of a specific region or country; •Utilize acquired methods to formulate grant applications.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.680. Environmental and Occupational Epidemiology. 4 Credits.
Introduces the key health effects of environmental and occupational exposures and the epidemiologic methods used to identify and estimate those effects. Emphasizes the interplay of methodological issues, including the assessment of environmental exposures and the understanding of specific disease processes in identifying the health impact of environmental exposures in the population. Learns about environmental and occupational exposures (including water and air pollution, food contamination, ionizing radiation, persistent environmental pollutants and emergent environmental exposures) and key methodological issues relevant for these exposures in population studies (including study design, exposure assessment and biomonitoring, disease clusters, dose-response relationships, susceptibility, geographic analysis, and evidence synthesis).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.682. Pharmacoepidemiology Methods. 3 Credits.
Introduces the key elements of pharmacoepidemiology. Explores the utilization and effects of drugs in large numbers of people. Discusses the application of epidemiological methods to pharmacological issues. Focuses heavily on questions of drug safety and effectiveness, concentrating on clinical patient outcomes and on evaluating the use of therapies. Applies the research methods of clinical epidemiology (e.g., randomized trials, cohort studies, case-control studies, use of secondary data, attention to biases and confounding) to the content area of pharmacology (e.g., determinants of beneficial and adverse drug effects, effects of patient heterogeneity on drug effect, effects of non-adherence, active and passive surveillance for adverse events).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.683. Human Rights in Public Health Practice. 2 Credits.
Presents human rights as both a tool and an analytical framework for public health practice. Considers how concepts and values from human rights can enhance the work of public health professionals in a variety of realms. This includes the development of policy in public health, the design and implementation of programs, and identification of human rights obstacles to achieving public health goals and potential responses. Examines the relationship between traditional bioethics and human rights approaches to ethical questions and will conclude with discussions and controversies about the roles of public health professionals in advocacy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.684. Pharmacoepidemiology: Drug Utilization. 3 Credits.
Provides an overview of drug classification systems as well as a review of data sources used for drug utilization research. Reviews methods of investigating drug utilization and evaluating interventions to modify utilization, such as time-series designs and segmented regression analyses. Discusses varied patient, provider, practice and system-level determinants of prescription drug utilization, including their impact on costs and quality of care. Emphasizes the impact of drug formularies, marketing and promotion of drugs, health insurance exchanges, and emerging evidence of benefits and harms.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.686. Introduction to Systematic Reviews and Meta-Analysis. 2 Credits.
Reviews methods used by those performing systematic reviews and meta-analysis, including building a team, formulating a research question and hypothesis, methods for searching the literature, abstracting information, and synthesizing the evidence both qualitatively and quantitatively. Covers how to formulate an answerable research question, defining inclusion and exclusion criteria, searching for the evidence, data extraction, assessing the risk of bias in the underlying studies, qualitative synthesis, meta-analysis, sensitivity analysis, and assessing meta-bias. Acquaints students with a few practicalities of conducting a systematic review using hands-on exercises.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.687. Epidemiology of Kidney Disease. 2 Credits.
Studies kidney disease comprehensively, emphasizing chronic and end-stage kidney disease, since kidney disease is characterized as an epidemic worldwide, and the prevalence continues to rise. Highlights controversies and areas of ongoing and future research by reviewing findings from cohort studies, clinical trials, and landmark studies. Emphasizes methodological issues specific to the study of kidney disease.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.690. Epidemiologic Approaches to Hearing Loss and Public Health. 1 Credit.
Introduces biologic, epidemiologic and clinical aspects of aging-related declines in the auditory system. Demonstrates methods of assessment of auditory function for epidemiologic studies. Reviews current epidemiologic knowledge of sensory function and aging-related outcomes in older adults, including the epidemiology and consequences of dual sensory loss. Presents areas for future research and opportunities for intervention and prevention
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.692. Prisons, Public Health, and Human Rights. 2 Credits.
Explores the public health implications of mass incarceration and discusses the human rights and ethical ramifications of providing health care to men, women, and children in jails, prisons, and detention centers both in the United States and internationally. Takes a systems approach to addressing the basic health needs of the prison population, including infection control, care for acute and chronic medical conditions, and mental health care. Students apply problem-solving skills and explore the challenges of providing care in incarcerated settings. Emphasizes the roles of human rights principles and professional ethics in public health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.693. Investigation of Outbreaks. 2 Credits.
Learns how to detect, investigate, and interpret disease outbreaks. Focuses on application of epidemiological skills to develop hypotheses relevant to understanding source or reservoirs of infection, modes of spread and possible control measures. Includes simple epidemiological approaches for examining field data on outbreaks and deriving inferences. Reviews the main factors involved in the occurrence of an outbreak and steps in investigating an epidemic. Uses data from large and small epidemics to illustrate the main concepts and terminology.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.694. Power and Sample Size for the Design of Epidemiological Studies I. 1 Credit.
Systematically introduces students to sample size and power analysis for the most common epidemiological study designs. Provides participants with the key conceptual elements and practical tools for computing sample sizes to achieve a given level of precision and power in statistical tests.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.696. Spatial Analysis I: ArcGIS. 3 Credits.
Examines the use of Geographic Information System (GIS) software (ArcGIS Pro) as a tool for integrating, manipulating, and displaying public health-related spatial data. Covers mapping, geocoding, and manipulations related to data structures and topology. Introduces the spatial science paradigm: Spatial Data, GIS, and Spatial Statistics. Uses selected case studies to demonstrate concepts along this paradigm. Focuses on using GIS to generate and refine hypotheses about public health-related spatial data in preparation for a formal statistical analysis. Discusses topics related to spatial statistical modeling throughout (although not a required part of the curriculum). Includes both lecture and lab formats with GIS concepts and software-specific details demonstrated during the lab portions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.697. Spatial Analysis II: Spatial Data Technologies. 2 Credits.
Examines technologies for collecting, obtaining and creating spatial data. Technologies considered include, but are not limited to GPS, tablets, tracking devices, cell phones, Google Earth, remote sensing applications, and the Internet. Introduces software applications such as ArcGIS, QGIS, and R for integrating spatial data from the aforementioned technologies into useable forms for spatial analysis. Also covers metadata, data accuracy, and confidentiality/disclosure issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.698. Methods For Assessing Power, Privilege, and Public Health in the United States. 4 Credits.
Discusses emergent health issues and how the choice of measures for power, privilege, and inequality influence results in epidemiological research. Challenges you to reflect on how your own positions of privilege influence your interpretation of data and your public health practice. Provides an opportunity to apply epidemiology research skills to develop and execute a data-driven project on a real-world health problem that can will be presented and used by a community partner.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.699. Epidemiology of Sensory Loss in Aging. 3 Credits.
Introduces biologic, epidemiologic and clinical aspects of aging-related declines in the auditory, visual, and vestibular systems. Demonstrates methods of assessment of sensory function for epidemiologic studies. Reviews current epidemiologic knowledge of sensory function and aging-related outcomes in older adults, including the epidemiology and consequences of dual sensory loss. Presents areas for future research and opportunities for intervention and prevention.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.700. Advanced Stata Programming. 1 Credit.
Presents advanced topics in Stata Programming to expand upon the material in 340.600. Topics include simulations, advanced programming, file manipulation, and code optimization.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.701. Epidemiologic Applications of Gis. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.705. Advanced Seminar in Social Epidemiology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.706. Methods and Applications of Cohort Studies. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.710. Seminar in Disability Health Research. 2 Credits.
Examines disability and disability health within the context of public health research and policy to advance equity and social justice. Discusses the origins and current landscape of disability health research from the perspectives of key stakeholders, inclusive of researchers, advocates, policy makers, with a focus on including the perspectives of people with disability.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.715. Problems in the Design of Epidemiologic Studies: Proposal Development and Critique. 5 Credits.
Presents the methodologic and logistic problems involved in designing and conducting epidemiologic studies. Students participate in the preparation of a research protocol for a study in a human population. Offers an opportunity to critically evaluate the adequacy and scientific merit of research protocols, develop an appreciation of the ethical aspects of conducting research involving human subjects, and apply methods and principles learned in earlier (340.751 - 753) and current courses to specific epidemiologic problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.716. Implementation Science Concepts, Methods & Study Designs. 2 Credits.
Digs into how to conceptualize implementation science questions, define implementation outcomes, and leverage frameworks and designs to achieve public health impact.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.717. Health Survey Research Methods. 4 Credits.
Exposes students to the practical aspects of health survey research methods. Emphasizes the development of skills to design and administer a survey. Introduces formative research, sampling methods, questionnaire development, recruitment techniques, interviewer training, and quality assurance/quality control.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.721. Epidemiologic Inference in Public Health I. 5 Credits.
Introduces principles and methods of epidemiologic investigation of disease and other health states. Presents different types of study designs, including randomized trials, cohort and case-control studies; measurement of exposures and outcomes; risk estimation; surveillance; program evaluation; and causal inference. Discusses evaluation measures for screening programs and health interventions. Links epidemiologic inferences with the development of policy. Activities provide experience in applying epidemiologic methods, interpreting findings, and drawing inferences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.722. Epidemiologic Inference in Public Health II. 4 Credits.
Expands knowledge beyond introductory level epidemiologic concepts and methods material, using examples from the published literature. Emphasizes interpretation and the ability to critically evaluate issues related to populations/study design, measurement, population comparisons and inference, including: modern cohort study designs; advanced nested designs; novel techniques for exposure assessment; interpretation and utility of measures of impact; sources of bias and methods for their prevention; descriptive and analytical goals for observational study inference; the counterfactual model for defining exchangeability, cause, and confounding; and synthesis of inferences from observational studies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.723. Epidemiologic Practice Methods for Population Health Research. 2 Credits.
Introduces quantitative epidemiologic techniques applied by both academics and public health professionals to analyze and interpret routinely collected at the subpopulation level to target and address health inequities. Four modules include instruction in Stata and R, with topics including:1. Weighted Survey Analysis: Analytic techniques for the incorporation of weights in the analysis of survey data to make inferences about the target population.2. Calculating Life Expectancy: Calculation of single-decrement life tables using statistical programs as well as publically available Excel-based tools.3. Estimate Preventable Deaths: Econometric techniques for estimating preventable deaths and potential lives saved from risk factor modification.4. Conceptual Frameworks in Epidemiology: Apply graph theory to understand the relationships between variables in commonly-used causal frameworks. Understand the importance of using conceptual frameworks in guiding epidemiologic inquiry.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.724. Global Cancer Epidemiology. 2 Credits.
Examines the causes, incidence, and trends in cancer globally, with a perspective on the differences across settings. Provides an epidemiological foundation for understanding cancer statistics and engaging in international cancer research and control activities. Covers key concepts such as study designs for cancer epidemiology and interventions, use and meaning of common cancer statistics, levels of prevention, and cancer screening/use of diagnostic tests.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.725. Methods for Clinical and Translational Research. 1 Credit.
Provides an overview of the methods of translational research. Emphasizes developing skills in the interpretation and application of findings of translational research. Topics include study design, biomarkers, statistical analyses, validation strategies, and evidence synthesis methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.726. Implementation Research Methods to Address Real World Epidemiological Questions. 3 Credits.
Considers the use of observational data, including real-world program data, natural experiments and designs for interventions which cannot be ethically or practically randomized and experimental designs, focused on implementation and real-world effectiveness. Analyzes preference-based research methods, which can be observational or experimental, highlighting the importance of human-centered approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.727. Introduction to Health Survey Research Methods. 2 Credits.
Exposes students to the practical aspects of health survey research by emphasizing the development of skills to design and administer a survey questionnaire. Introduces students to formative research, questionnaire development, interviewer training, and quality assurance/quality control.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.728. Advanced Methods for Design and Analysis of Cohort Studies. 5 Credits.
Explores advanced methods useful for the design and analysis of cohort studies. Emphasizes methods for analyzing time-to-event data subject to staggered entries using advanced parametric and semi-parametric methods; analytical methods for incomplete observations in cohort studies; methods to measure effects of exposures on time-to-event using relative times and relative hazards; parametric survival analysis methods and taxonomy of hazard functions; coefficients of determination based on parametric models for survival data; regression methods for trajectories of biomarkers; methods for the analysis of interventions in observational studies: confounding by indication, marginal structural models for individual effectiveness; methods for estimating population effectiveness; and methods to jointly analyze longitudinal and survival data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.729. U.S. Based National Health Surveys: their Application and Associated Research Methods. 2 Credits.
Introduces the purpose and application of national health surveys, and the strengths and limitations of this type of data. Uses publicly available survey data collected by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS), including data from the National Health Interview Survey (NHIS) and National Health and Nutrition Examination Survey (NHANES) to provide practical experience in accessing the data files, designing and executing basic analysis using complex survey data and determining when and how to appropriately conduct age adjustment and trend analysis. While the class utilizes U.S.-based examples, the principles and methods covered are applicable to other settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.730. Assessment of Clinical Cardiovascular Disease. 2 Credits.
Familiarizes students with techniques used to detect and quantify the presence of clinical cardiovascular disease. Tour the hospital, and the dialysis, angiography, echocardiography, and vascular laboratories. Observe radiographic (CT and MRI) imaging of atherosclerosis and review gross and histological specimens of atherosclerosis in the pathology laboratory. Directly observe various cardiac imaging techniques performed including 1) cardiac echocardiography, 2) coronary or peripheral angiography, 3) coronary calcium scores and coronary CT angiography using multi-detector CT, 4) carotid and peripheral vascular studies using ultrasound, 5) the clinical assessment of blood pressure, and 6) DXA and anthropometric measures of body composition.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.731. Principles of Genetic Epidemiology 1. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.732. Principles of Genetic Epidemiology 2. 3 Credits.
Second offering in a three-part series of graduate courses in Genetic Epidemiology. Details the concepts of linkage disequilibrium and population genetics, including methods for admixture analysis useful for adjusting for individual variation in genetic ancestry/background. Presents the principles of genetic association analyses for quantitative and qualitative phenotypes for population-based studies. Details the concepts and tools related to confounding due to population stratification, and approaches for genome-wide association studies. Introduces methods for linkage analysis in families and use of high-throughput sequence data (whole exome and whole genome). Selected class sessions are dedicated to computer labs to illustrate the methods covered.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.733. Principles of Genetic Epidemiology 3. 3 Credits.
Concepts behind linkage and association studies in genome-wide studies, and demonstrates how they can be applied to complex qualitative and quantitative phenotypes (i.e. those where both genetic and environmental factors influence the phenotype). Introduces the principles underlying family-based and population-based study designs and analytical methods for both marker panels and sequencing data (whole exome and whole genome).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.734. Principles of Genetic Epi 4: Emerging and Advanced Methods. 2 Credits.
Discusses advanced topics in genetic epidemiology methods. Builds on the knowledge gained in Principles of Genetic Epidemiology 1-3. Students discuss the details of the methods they have learned, and are also exposed to cutting-edge topics not yet in the mainstream. Also covers emerging topics such as CNV analysis, epigenetic analysis, sequencing analysis, and admixture mapping. Students also carry out an independent analysis project through the term.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.744. Advanced Topics on Control and Prevention of HIV/AIDS. 4 Credits.
Focuses on directed readings and discussion on the science and pathogenesis of HIV/AIDS. Covers dynamics of the HIV epidemic in the populated world, difficulties and contrasts between clinical management of HIV/AIDS in developed and developing countries, prevention and control modalities against HIV/AIDS, and predicting patterns of future growth of the HIV/AIDS epidemic with special reference to global economic impact of HIV vaccine and eradication issues of HIV/AIDS.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.751. Epidemiologic Methods 1. 5 Credits.
Presents as the first course in the Epidemiologic Methods sequence. Introduces students to the principles and concepts used in epidemiologic research. Presents material in the context of an epidemiological framework with three major areas: populations and an introduction to study designs; measurement, including measures of accuracy and disease occurrence; and methods used for comparing populations. Illustrates synthesis lectures on how these elements come together in modern epidemiological research. Provides experience using laboratory exercises and assignments with applying concepts and calculations to problems drawn from real epidemiological data and published literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.752. Epidemiologic Methods 2. 5 Credits.
Second offering in the Epidemiologic Methods sequence. Builds on the concepts of epidemiologic reasoning, population health measures, validity, and study design taught in Epidemiologic Methods 1. Provides a detailed presentation of causal inference, study design and threats to validity (confounding, information bias and selection bias). Discusses a wide range of epidemiologic designs in detail, together with their advantages and limitations. Laboratory exercises, assignments, and the MiniProject provide experience with applying concepts and calculations to problems drawn from real epidemiological data and published literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.753. Epidemiologic Methods 3. 5 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.765. Professional Epidemiologic Methods: Epidemiologic intelligence and Population Health Assessments. 2 Credits.
Focuses on practical skills for epidemiological assessments of population health, which include methods for monitoring epidemiological profiles and health trends, using public health information systems for measuring health burden, developing epidemiological profiles and conducting health situation analyses.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.766. Professional Epidemiologic Methods: Surveillance. 2 Credits.
Covers epidemiological methods and analyses for public health surveillance, including novel measurement approaches for “real and near real time” surveillance, syndrome surveillance and surveillance of public health events. Students learn interpretation of analytic strategies including descriptive and inferential epidemiological methods for surveillance data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.767. Professional Epidemiologic Methods: Topics and Methods for Health Situation Analysis. 2 Credits.
Focuses on epidemiological methods and tools used in key health situation analyses. Includes the use of prospective epidemiological scenarios for monitoring health targets and indications. Also covers examples of health priority setting assessments; health needs assessments, and the methods for epidemiological stratification of public health problems. Laboratory exercises provide experience with applying concepts, methods and tools to problems drawn from real epidemiological data and published literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.768. Professional Epidemiologic Methods: Decision Making in Health Situation Analysis. 2 Credits.
Covers advanced health situation analyses for the evaluation of effectiveness of public health programs using real public health scenarios and available health information datasets. Covers selected epidemiological metrics for measuring social health inequalities and methods for informing evidence-based healthcare decision-making using epidemiologic data. Also addresses the role of available epidemiological evidence and translational research for public health programs. Laboratory exercises provide experience with applying concepts, methods and tools to problems drawn from real epidemiological data and published literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.769. Professional Epidemiology Methods. 4 Credits.
Trains future leaders using advanced epidemiological methods applied in modern public health practice, and provides students with the key epidemiological competencies for mid-level and senior-level epidemiologists. Covers examples of health priority assessments, health needs assessments, epidemiological stratification of public health problems, measuring health inequalities and evaluation of effectiveness of public health programs using real public health scenarios and available health information datasets. Also covers selected methods for translating epidemiologic data for decision-making. Addresses the role of available epidemiological evidence and translational research for public health programs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.770. Public Health Surveillance. 3 Credits.
Acquaints students with Public Health Surveillance, which is a core public health function essential for understanding and monitoring population health. Covers the theory, data collection methods, data analysis techniques, and presentation strategies of the systematic, continuous, analysis and interpretation of population health data to inform planning, implementation, and evaluation of public health practice. Students identify the different types of surveillance, and how each is applied in varied settings. Practical experiences/labs involve creating data collection tools, and reviewing how they can be applied in practice. Real-world surveillance data is used to illustrate methods for analysis, and how surveillance data should be presented to different audiences. Guests who are coordinating and conducting surveillance in different community settings lead interactive discussion sessions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.774. Advanced Theory and Methods in Epidemiology. 4 Credits.
Integrates and extends content taught in the Epidemiologic Methods 340.751-753 sequence. Focuses on the conceptual underpinnings and application of strategies for addressing key methodologic challenges that arise when carrying out epidemiologic research. Incorporates experiential learning components, including a term-long self-directed group research project, and provides resources for students to acquire a working knowledge of how to apply presented methodological tools.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.775. Measurement Theory and Techniques in Epidemiology. 4 Credits.
Reviews concepts, key assumptions, and published applications of measurement theory, including true scores and counterfactual outcomes, latent variables, and validity. Explores novel applications of item response theory to refinement of measures, assessment of differential item functioning, and calibration of metrics across diverse samples. Topics include analysis of novel types of data (biomarkers, high-dimensional data, administrative records, genetics), item response theory, latent growth curve models for longitudinal data and their extensions, and cross-study statistical harmonization and co-calibration. Draws examples from epidemiologic applications in the behavioral and social sciences. Offers students opportunities for applying lessons from didactic lectures in a laboratory setting using prepared examples.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.776. Study Design and Analysis for Causal Inference With Time-Varying Exposures. 3 Credits.
Presents a holistic framework for studying causal effects of time-varying exposures. Builds on 140.664 and 340.774 and explores how to articulate causal questions and clarifies assumptions needed to identify the effects of time-varying exposures. Distinguishes total effects of exposures at a given point in time from those that involve cumulative doses or adherence to dynamic treatment rules. Outlines design parameters such as eligibility, start of follow-up, and artificial censoring with data from cohorts or administrative healthcare records. Reviews the motivation, intuition, and application of advanced methods such as time-dependent propensity scores, marginal structural models, and the parametric g-formula to overcome time-varying confounding and selection-bias. Emphasizes practical application and robustness checks, guideposts for choosing among study designs and analytic methods, and comparative strengths for studies with an etiologic vs. translational focus.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.794. Power and Sample Size for the Design of Epidemiological Studies II. 1 Credit.
Introduces power and sample size (PSS) calculations for the design of more complicated studies, including survival or time-to-event outcomes, cluster randomized trials, studies with correlated outcomes, and non-inferiority trials. Introduces the use of simulation to conduct PSS calculations for the design of special situations where existing PSS tools do not directly apply. Showcases the design and conceptualization processes of real-world examples and how PSS statistical calculations serve as an integral component of the processes.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.800. MPH Capstone Epidemiology. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.802. Expert Searching for High Quality Evidence in The Online Environment. 2 Credits.
Introduces students to effective and efficient searching of the medical literature, in particular the skills and knowledge needed to produce an effective search in support of a systematic review of the medical literature. Discusses existing standards and evidence for these standards. Familiarizes students with software that helps with managing the results of literature searches. Addresses the competencies needed to complete comprehensive, systematic, transparent searches of the literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.803. Advanced Topics in Cardiovascular Disease Epidemiology. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.810. Field Placement Epidemiology. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.820. Thesis Research Epidemiology. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.830. Postdoctoral Research Epidemiology. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.840. Special Studies and Research Epidemiology. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.853. First Year Epidemiology Doctoral Seminar. 1 Credit.
Introduces current discussion, controversies, and applications of epidemiology. Reviews landmark papers and current literature and provides guided discussions of the materials. Focuses on exploring key paradigms that have influenced the field of epidemiology. Includes discussion of current trends influencing epidemiologic research and training, mentorship, controversies in the assessment of populations and outcomes, individual-level vs. population-health, and the relationship of epidemiology to the health care system.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.855. SS/R: Biological Basis of Cardiovascular Disease Epidemiology. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.860. Current Topics in Epidemiologic Research. 1 Credit.
Engages with staff, students, fellows, and faculty in the Department of Epidemiology for exposure to epidemiologic methods as applied in research settings. Provides a broader perspective on contemporary issues in epidemiology and its research, through presentations of current research in the field of epidemiology.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.861. Clinical Trials: Procedures, Design, and Interpretation of Results. 3 Credits.
Augments Introduction to Clinical Trials (340.645). Describes current standards for clinical trial protocols, consent procedures and describes regulatory requirements and expands upon design and analysis concepts presented in 340.645. Reviews key standards for clinical trial protocols, including the SPIRIT guidelines, recruitment and consent of participants, and principles for data acquisition and sharing. Covers regulatory requirements for drug development and adverse event monitoring as well as the statistical aspects of data monitoring for clinical trials. Provides more in-depth discussion of newer designs for clinical trials including non-inferiority design and adaptive designs. Investigates specific analysis issues for handling missing data, interim monitoring and cost-effectiveness. Addresses the synthesis of results from clinical trials in meta-analyses and the role of post-marketing surveillance in assessing drug safety.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.863. Doctoral Seminars in Epidemiology. 3 Credits.
Provides an opportunity for doctoral students to discuss challenges in epidemiology and apply methods and principles learned in didactic courses to formulate research questions and specific aims. Participates in the preparation of dissertation proposal components, develop skills to effectively communicate research questions, and critically evaluate the scientific merit of research proposals.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.865. Teaching Epidemiologic Methods and Concepts At the Graduate Level. 1 - 8 Credits.
Review and evaluate critical skills in teaching and communicating science, epidemiology, methods, and theory to a wide range of individuals. Provides a feedback mechanism for learning best practices in education at the graduate level.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.871. Welch Center Research Seminar. 1 Credit.
Students, postdoctoral fellows and faculty present contemporary epidemiological research articles, focusing on clinical and cardiovascular epidemiology. Emphasizes presentation skills and the ability to critically evaluate scientific papers. Uses a journal-club format in which one or more papers are distributed in advance. Participants are expected to read and discuss the assigned material. Media reporting/coverage in the lay and medical press is explicitly discussed related to the article. Provides a forum for the discussion of the appropriate use of statistical methods for various study designs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.872. Genetic Epidemiologic Seminars in Current Research and Methodology. 1 Credit.
Emphasizes the importance of reading, understanding, and discussing literature. Presents scientific papers from the current literature in genetic epidemiology (students, postdoctoral fellows, and faculty). Provides students the opportunity to interact with faculty regularly. Reviews current topics and methodology in genetic epidemiology with current faculty and research leaders and practitioners.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.873. Contact Tracing During the COVID-19 Pandemic. 1 Credit.
Provides basic elements and methodology of contact tracing and practical experience by executing these newly learned skills. Reviews current issues and concerns encountered by students. Evaluates and promulgates best practices in contact tracing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.874. Current Topics in Human Rights. 1 Credit.
Reviews a common framework for the analysis of comparative effectiveness and safety research CER randomized trials and observational studies, and presents several applications for cardiovascular, renal, and infectious diseases.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.895. MPH Practicum: Epidemiology. 1 - 5 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.901. Principles of Epidemiology Lab.
Lab for Principles of Epi
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.921. EPIDEMIOLOGIC INFERENCE IN PUBLIC HEALTH I Lab.
EPIDEMIOLOGIC INFERENCE IN PUBLIC HEALTH I LAB
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.951. EPI Methods 1 Lab.
Lab for PH.340.751
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.952. EPI Methods 2 Lab.
Lab for PH.340.752
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.340.953. Lab for Epi PH.340.753.
Lab for EPI 340.753
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.001. English for Academic Purposes I.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.002. English for Academic Purposes II.
Focuses on academic writing skills including documentation styles, and combines Saturday class meetings with online assignments and one individual conference.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.600. Living Science Ethics - Responsible Conduct of Research. 1 Credit.
Fosters the responsible conduct of scientific research using a combination of lectures, discussion and analysis of case studies. Includes topics: data management, conflict of interest, scientific misconduct, questionable research practices, responsible authorship, peer review, collaborations with peers and industry, trainee-mentor relationships, research ethics and regulatory requirements of the conduct of animal and human research, and the scientist as a responsible member of society.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.601. Implementation Research and Practice. 3 Credits.
Distinguishes implementation science from traditional research and practice. Combines didactic methods and group activities to explore the rapidly evolving topic of implementation as it pertains to public health research and practice. Provides an overview of the concepts, theories, tools, and methods used to advance implementation research and practice. Presents key principles of implementation science from a multidisciplinary perspective and provides practical applications of those principles in both practice and research-based settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.602. Interprofessional Education Activity.
Provides the opportunity to participate in a case study highlighting the essential role of teams and teamwork in building multi-sector collaborations and partnerships in population health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.603. Fundamentals of Immunology. 3 Credits.
Introduces the major molecular and cellular components of the immune system and provides a broad understanding of the biological concepts associated with the induction and regulation of innate and adaptive immune responses. Explores major mechanistic topic areas that include the innate recognition of pathogens, the molecular nature of antigens and antigen presentation; molecular basis for antibody and T-cell receptor structure and diversity; cytokine signaling in immune activation, T cell lineage commitment, cellular basis for antibody production, cellular basis for T cell activation and cellular immunity, and central and peripheral tolerance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.604. Qualitative Reasoning in Public Health. 2 Credits.
Provides students with a broad overview of qualitative methods and concepts used in the public health sciences. Emphasizes the conceptual foundations of qualitative research and how it is used in public health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.605. History of Public Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.606. Milestones in Public Health. 1 Credit.
Provides a broad overview of public health milestones through the lens of diverse public health faculty spanning from molecular biology, vaccine policy, injury, and micronutrient supplementation to health disparities, legal issues, bioethics, and health security. Reviews a milestone with each lecture as viewed by an individual faculty and provides opportunity for questions and discussion.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.607. MPH Seminar in Public Health Topics. 1 Credit.
Provides a broad overview of public health topics through lectures given by faculty across the Departments and Centers of the School. Provides exposure to these issues and discussions that may help students further refine their MPH interests, goals, and future projects.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.608. Problem Solving in Public Health. 4 Credits.
Uses divergent public health issues to illustrate a systematic problem solving process for use in addressing public health problems. The problem solving process includes defining the problem, measuring its magnitude, understanding the key determinants, developing a conceptual framework of the relationships between the key determinants, identifying and developing intervention and prevention strategies (either interventions or policies), setting priorities among intervention options, understanding barriers to implementation and evaluation, and developing an effective communication strategy. Consists of lectures, discussions, small-group exercises, a group project, and individual assignments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.609. Life and Death in Charm City: Histories of Public Health in Baltimore, 1750 to the Present. 3 Credits.
Critically explores a range of important topics in the history of public health in Baltimore from the mid-18th century to the present, including: migration and health; sewers and water supply; infectious disease control (for example, tuberculosis and STDs); housing and lead poisoning; rodent control. Recurrent themes are racial inequality, the geography of poverty and the multiple challenges of urban government. Focuses on the city of Baltimore, but the issues discussed are placed in their wider national and international contexts and take into account broad historical developments in the theory and practice of public health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.630. Public Health Biology. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.631. Biological Basis of Public Health. 3 Credits.
Discusses molecular, biochemical, cellular and immunological methodology and approaches for the mechanistic understanding, treatment and prevention of human diseases, and for understanding disease susceptibility. The focus will be on the application of biological methods and approaches to such critical issues as infectious disease, cancer, neurodegenerative disease, COPD, environmental toxicant effects on early development, and reproductive anomalies and their treatment.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.714. Secondary Uses of Electronic Health Record Data. 3 Credits.
Introduces students to concepts, methods, and issues related to the application of analytics to Electronic Health Record (EHR) data. Covers the use of EHR data to define and identify populations and sub-populations of patients, evaluate common metrics in health care, and improve patient safety and care quality. Emphasizes the use of EHR data in hospital settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.800. MPH Capstone Extradepartmental. 2 Credits.
The MPH capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.840. P.H. Special Studies and Research. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.844. Current Issues in Public Health: COVID-19 Pandemic Response. 2 Credits.
Provides students with expert information and insight around the current COVID-19 pandemic globally. This series will meet virtually, featuring experts on multiple clinical, epidemiological, and social elements of the novel coronavirus.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.845. Comprehensive Or Preliminary Oral Exam for Part Time International DRPH Students. 2 Credits.
Since US Immigration laws require that all International students must be enrolled full time when on campus, students must complete their departmental/program comprehensive examination or their School preliminary oral examination enrolled as a full-time student during the time period of the exam.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.850. MPH MBA Internship. 12 Credits.
MPH MBA Internship
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.853. Seminar for MPH Concentration in Social and Behavioral Sciences I. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.854. Seminar for MPH Concentration in Social and Behavioral Sciences II. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.855. MA Public Health Biology Thesis. 5 - 6 Credits.
Provides an opportunity for students to, in consultation with a faculty mentor from the Dept of Biochem and Molecular Bio, Environmental Health or Molecular Microbiology and Immunology, prepare a critical, scholarly paper on an agreed upon subject area.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.860. Academic & Research Ethics at BSPH.
Examines academic and research ethics at BSPH in a series of online interactive modules. Focuses on information about the academic ethics code and responsible conduct of research at the School. Explores issues of academic integrity such as proper ethical conduct and referencing, and discusses violations such as plagiarism and cheating, relative to case studies that illustrate situations faced by students and faculty in the academic setting. Addresses topics that include responsible conduct of research, authorship, data management, data ownership, guidelines for professional conduct, research fraud or scientific misconduct, federal and institutional guidelines related to research using human and animal subjects and ethical issues involving vulnerable subjects in research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.864. Baltimore Community Practicum. 1 - 4 Credits.
Conducts a project involving a defined denominator population at a community-based organization or local health department. Participates in seminar sessions that cover basic methods of outreach to community organizations, attitudes and values about the role of professionals in community-based work, the social contract required of service professionals, and the attitudes required for effective public health practice.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.865. Public Health Perspectives on Research. 2 Credits.
Introduces the substantive and methodologic bases for public health research, emphasizing the critical roles of the quantitative, qualitative, biologic, social, and behavioral sciences in improvement of public health. Highlights principles of high-quality research, including the value of a population perspective, interdisciplinary cooperation, the importance of new measurement techniques, and the interface between theory and practice. Gives students information about the interactions between the public and the researcher.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.867. Introduction to MPH Studies.
Introduces MPH students to their educational program. Includes enrichment seminars, required readingsand assignments, including the Goals Analysis requirement.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.870. SS/R: Occupational Medicine Residency-Practicum Year. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.880. SS/R: General Preventive Medicine Residency-MPH. 1 Credit.
Prepare residents in the theoretical, practical, and clinical knowledge and skills essential to leadership roles in the design, management, and evaluation of population-based approaches to health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.890. SS/R: General Preventive Medicine Residency-Residency Year. 6 - 16 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.895. MPH Practicum (Non Departmental). 1 - 4 Credits.
The MPH Practicum is a mentored, hands-on practical public health experience, which involves meaningful participation and interaction with public health professionals.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.550.908. Lab for Prob Solving 550.608.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.551.840. P.H. Special Studies and Research. 0.5 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.551.867. Designing an MPH Capstone Project. 1 Credit.
Discusses the importance of selecting the appropriate format for addressing different capstone topic. Reviews search strategies and data bases for a literature review. Provides tips for using a citation management software such as RefWorks in order to provide proper attribution to references. Introduces the basic strategies for writing a clear and concise capstone paper. Provides tips for presenting data in tables and graphs. Introduces the basic strategies for giving a good oral presentation. Presents tips for giving and receiving meaningful feedback. Introduces principles for the design of a good poster.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.551.895. Source Practicum Special Studies. 1 - 4 Credits.
Special studies for practicum activities with SOURCE and participating Baltimore City community-based organizations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.602. The Role of Quantitative Methods in Public Health. 0.5 Credits.
Covers the bases for the role of quantitative methods in public health, including how to formulate scientific questions quantitatively, different types of data, properties characterizing high or poor quality of measurements, the implications of statistical uncertainty, and the difference between association and causation. Uses illustrative case examples including the opioid epidemic and aging.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.603. The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health. 0.5 Credits.
Acquaints students with a broad overview of the use of qualitative research methods in public health. Explores the types of critical public health questions best addressed through a qualitative approach and introduces conceptual principles that are foundational to qualitative research. Exposes students to key issues in planning and conducting qualitative research, as well as strategies for analyzing qualitative data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.604. Causes and Trends in Morbidity and Mortality. 0.5 Credits.
Provides a broad understanding of the top causes of morbidity and mortality globally, in the U.S., and in Baltimore City, as well as the trends in these estimates. Introduces measurement of morbidity and mortality, and threats to the quality of measurements. Addresses the role of population characteristics (age, sex, region, race/ethnicity) in estimates and trends. Discusses case studies of major causes and trends in morbidity and mortality in defined populations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.605. The Science of Primary Secondary and Tertiary Prevention in Population Health. 0.5 Credits.
Provides a broad understanding of the different levels of public health prevention: primary, secondary, and tertiary and discusses the impact of each level on prevention in population health. Emphasizes the role of epidemiology in prevention and control; compares and contrasts the descriptive epidemiology, natural history, and pathologic and biologic characteristics as well as factors related to their etiology. Presents the impacts of recent advances in human genomics/genetics, immunology and metabolism on prevention strategies for chronic and acute disease. Introduces basic principles, theories, and methods in the field of prevention science. Identifies public health interventions that operate at multiple ecological levels, including the community, family, and individual. Introduces the role of resilience. Discusses case studies related to the prevention of different physical, mental, behavioral and infectious disease health problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.606. The Critical Importance of Evidence in Advancing Public Health Knowledge. 0.5 Credits.
Emphasizes the need to establish the credibility of the evidence, based on the rigor of the methods used in generating it (e.g., type of studies, rules of causality, the nature of errors) before employing evidence to advance knowledge, practice, or policy. Discusses the bases for debate about recommendations for particular interventions that impact a population's health, how to weigh their benefits and harms, the ethics of scientific conduct, and effective communication in building evidence. Uses illustrative case examples, such as breast and prostate cancer screening, vaccines for measles and cervical cancer, nutritional sodium reductions, and the opioid epidemic.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.607. Essentials of Environmental Health. 0.5 Credits.
Course Description: Summarizes the public health impact of environmental agents (e.g. chemical, biological, physical) present in air, water, soil, food, and the community. Discusses how these agents cause adverse health effects as well as ways to assess the risk of such effects and apply strategies for preventive interventions. Presents systems that have major impacts on environmental health, as well as applications of the science in the real domestic and international world. Through four modules: Foundations; Exposures in Air, Water and Food; Systems; and Cases, exemplifies effects of specific environmental exposures.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.608. Biologic, Genetic and Infectious Bases of Human Disease. 0.5 Credits.
Focuses on the basics of cellular and molecular biology, genetics, and infectious agents. Explains concepts that link basic biology to disease and population health. Illustrates application of biologic and genetic principles to population health using case studies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.609. Psychological and Behavioral Factors That Affect A Population's Health. 0.5 Credits.
Shows the role of behavior in health, drawing from smoking and other risk behaviors. Examines factors along the socioecological continuum that influence such behavior. Highlights key determinants for achieving behavior change to improve health outcomes, such as feasibility, self-efficacy and social support. Introduces common types of behavior change interventions, such as counseling and social marketing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.610. The Social Determinants of Health. 0.5 Credits.
Provides an overview of social, political, and economic influences on health and their role in producing health inequalities within and among populations. Emphasizes key axes of inequality: gender, race/ethnicity, and socioeconomic status. Explains conceptual foundations for social determinants of health and health inequalities. Summarizes evidence linking selected social, political, and economic factors to health and the pathways by which they influence health. Highlights importance of understanding social determinants of health, despite challenges of designing interventions targeting social determinants.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.611. Globalization and Population Health. 0.5 Credits.
Evaluates in depth the complex relationship between globalization and health. Discusses this relationship across the four main dimensions of globalization (economic, political, cultural and environmental). Examines the existing evidence on the impact of globalization on global burdens of disease. Explores the opportunities of globalization and strategies for mitigating its negative effects.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.612. Essentials of One Health. 0.5 Credits.
Introduces the principles of One Health, the interface of human health, animal health and environmental health. Examines the methods and tools for the conduct of One Health studies and the design of One Health programs. Uses a systems thinking approach to explore multiple topics including food systems, food and animal policies, One Health governance, and stakeholder engagement.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.621. Basic Resources Management for Public Health. 1 Credit.
Provides an overview of budgeting and resource management for public health practitioners working in health settings. Discusses the role and functions of governing bodies. Considers the types and categories of performance problems as well as how to determine causes of performance deviations and approaches for remedying them. Explores the tools and resources of budget and resource management.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.622. Creating, Implementing and Monitoring Budgets for Projects and Programs. 1 Credit.
Addresses strategies for creating budgets for projects and programs. Stresses the essential role of budgets in promoting the health of organizations and resource management. Explores how budgets are used to facilitate project and program management, including assessing whether high-quality outcomes are being achieved on time and within resource constraints or whether changes to the work plan, budget, or available resources are needed.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.623. Principles of Negotiation and Mediation for Public Health Professionals. 0.5 Credits.
Examines the theory and principles of negotiation and mediation. Through readings and didactic instruction, explores negotiation and mediation processes, models and techniques. Investigates verbal and nonverbal communication and persuasion as well as other factors that influence successfully negotiated compromises of complex public health issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.624. Applications of Negotiation and Mediation for Public Health Professionals. 0.5 Credits.
Offers students opportunities to apply negotiation and mediation principles and models to “get to yes” in their public health negotiation simulations. Uses a negotiation and mediation simulation that will enable students to practice the art of negotiating and examine their personal strengths and weaknesses in these processes.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.625. Building Collaborations Across Sectors to Improve Population Health. 0.5 Credits.
This course provides an overview of the essential role interprofessional teams in building multi-sector collaborations and partnerships in population health. Following deliberate, evidence-based methods for effective collaboration, the course identifies and discusses several key factors that can only be addressed through cross-sector efforts. These factors include the social determinants of health, complexity, context, and societal resistance. The Collective Impact Model, designed to tackle entrenched, socially complex issues, is introduced as an evidence-based for effective, large scale, sustainable change.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.626. Systems Thinking: Concepts and Methods. 0.5 Credits.
Provides students with an understanding of how to apply systems thinking in public health. Trains students on the fundamentals of systems thinking theory and offers opportunities to apply key methods and approaches to health policy and health questions. Prepares students to ask relevant research questions and apply systems thinking to describe, understand, and anticipate complex behavior. Examines how systems models can be critically appraised and communicated with others so public health policymakers can exercise a greater degree of wisdom and insight.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.644. Public Health Advocacy: Grassroots Organizing for Policy Change. 3 Credits.
Provides a practical introduction to grassroots organizing for policy change. Uses foundational literature and case studies to review the history of advocacy and organizing for public health. Introduces campaign planning and management, discusses the role of research and coalition-building, and explores different types of organizing. Prepares students to participate in and critically assess public health campaigns to change the policies and structures that set the contexts in which people make their decisions about health.Introduces students to two key areas of knowledge in public health practice: 1) the principles and methods of community organizing and 2) campaigning for policy and structural change. Includes a series of short assignments and group activities that will culminate in a final product: the creation of a campaign plan for changing public policy regarding a specific public health problem.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.600. Fundamentals of Health, Behavior and Society. 4 Credits.
Introduces students to a social ecological perspective of population health. Challenges students to address societal and structural forces such as socioeconomic position, racial and ethnic and gender sources of inequality as well as interpersonal processes reflected in norms, networks, and social capital. Focuses on behavior, communication, decision-making, and health outcomes at the individual, family, and community levels. Applies these social and behavioral perspectives to a better understanding of health problems and prepares students to develop effective public health interventions for individuals, families, communities, and populations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.601. Emerging Tobacco Products and Regulatory Approaches. 3 Credits.
This course provides students with an overview of tobacco product regulation, including cigarettes, smokeless tobacco, shisha, and emerging nicotine delivery systems, such as e-cigarettes and heated tobacco products. Students will explore tobacco regulatory frameworks and national policies; review past regulatory successes and emerging regulatory strategies; search industry patents to understand how product innovation is protected and presented; and study the tobacco industry’s tactics to counter tobacco regulation by critically assessing media stories.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.602. Evaluation of Workplace Health Promotion Programs. 2 Credits.
Provides an introduction to workplace health promotion (wellness) programs, including a practical measurement and evaluation guide. Explains the key elements of measurement: structure, process, and outcomes. Reviews rigorous techniques and principles used in applied research studies and how they can be adapted to workplace health promotion evaluations. Offers easy to implement techniques for conducting survey studies at the workplace.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.603. Introduction to Genetic Counseling Research. 1 Credit.
Acquaints first-year genetic counseling students with the thesis proposal development process. Provides an overview of the ongoing research opportunities at Johns Hopkins and the National Institutes of Health. Familiarizes students with possible collaborators.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.604. Harm Reduction: A Framework for Evidence-Based Policy and Practice. 3 Credits.
Discusses a variety of harm reduction strategies as they pertain to substance use issues. Introduces various programs that address substance use problems from a harm reduction perspective. Describes the evidence base supporting harm reduction programs. Explores the complicated legal and contextual issues associated with implementation of harm reduction programs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.605. Fundamental Tools for Promoting Health Equity. 3 Credits.
Prepare DrPH students to apply health equity frameworks and measurement tools in their everyday functions; Includes four components: definitions and historical perspectives of health equity, health disparity, and social justice; common theoretical frameworks and their applications to different aspects of health equity, health disparities, and social justice; measurement tools used for health equity and health disparities in context; strategies and policies to reduce health disparities and promote health equity; Students complete a final project in which they must propose a program based in theory and proven need within their professional capacity
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.606. Local and Global Best Practices in Health Equity Research Methods. 4 Credits.
Introduces students to innovative methods, practical tools, and skills required to conduct evidence-based research that promotes local and global health equity. Theoretical frameworks draw on fundamental values and principles, including human rights, social justice, the value of diverse ideas and perspectives, inclusiveness, trustworthiness, behavioral and implementation science, and participatory decision-making. Includes lectures, interactive panel discussions, case-based examples, and opportunities to obtain feedback on research ideas from experienced investigators.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.607. Introduction to the Video Production Process for Public Health Professionals. 1 Credit.
Introduces public health professionals to the five phases of the video production process: conceptualization, script writing, pre-production (e.g., scouting locations, casting), production (e.g., shooting, voice-over), post-production (e.g., editing, graphics). Acquaints students to the fundamentals of script writing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.608. Applying Systems Thinking to Obesity Prevention. 2 Credits.
Given the complexity of many public health problems, systems thinking is increasingly cited as an approach and competency needed to understand these problems. The field of obesity in particular has benefited from systems thinking, methods and modeling, however, the application of these methods remains in an inchoate stage. Students will explore various systems concepts such as leverage points, heterogeneity, complexity, adaptability, interdependence, and learn how those concepts have been applied in obesity and food system research. Students will learn which systems concepts are most useful for researching specific obesity topics and their limitations. Finally, students will explore how systems research concepts and models critically appraised and communicated with others so public health policy makers can exercise a greater degree of wisdom and insight.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.609. The Wellness Industry and Public Health: Partners Or Adversaries in Health Promotion?. 1 Credit.
Introduces students to the contemporary wellness industry in the US (including fitness and yoga) and explores the relevance of this industry for public health promotion. Describes core industry strategies for behavior change, and opportunities for public health evidence and research to inform industry practice. Content includes consideration of social media and the application of effective industry communication and motivation strategies for health promotion broadly defined.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.610. Housing Insecurity and Health. 3 Credits.
Introduces the issues of homelessness and its relationship to health. Presents factors leading to homelessness, myths about homelessness, barriers to accessing services, health problems that arise from homelessness, multidisciplinary approaches to health care from homeless persons, and advocacy strategies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.611. Under Pressure: Health, Wealth & Poverty. 3 Credits.
Explores the relationship between health, wealth, poverty, and public policy in the U.S. as well as internationally; assesses past and future strategies to remedy inequities in health and health care. Addresses theories of social class; distribution of poverty across gender, age, and ethnic/racial groups; antipoverty programs and their effects; effects of changes in health care organization on the poor; and possible modifications to provide greater equity. Investigates how a dramatically changing media landscape influences patterns of belief about the causes of poverty and its remedies. Synthesizes scientific evidence with a variety of genres and disciplines including: history, psychology, political science, religious thought, philosophy, geography, literary theory, popular culture, film/media studies, and music.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.612. Sociological Perspectives on Health. 3 Credits.
Presents sociological concepts, paradigms, and theories frequently cited or used as sources of basic ideas and assumptions in contemporary analyses of health behavior and health systems. Discusses the social construction of concepts and theories, especially those that apply to our understanding of health and illness, and the implications of sociological perspectives for public health, including social stratification, deviance, social control, role performance, and stress.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.613. Psychosocial Factors in Health and Illness. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.614. A New View: Improving Public Health Through innovative Social and Behavioral Tools and Approaches. 4 Credits.
Emphasizes real world integrative thinking, tools, and solutions in the pursuit of improving public health in the U.S. and internationally. Presents a global, multifaceted examination of health and illness, exploring the many factors that influence - or even determine - whether we remain healthy or become ill. Using biopsychosocial and environmental/ecological perspectives, explores the most prevalent diseases and health challenges confronting us today. Presents emerging views of health and illness being used in research, program and policy arenas. Examines factors such as socioeconomic status, ethnicity, stress, stigma, social support, coping, and politico-cultural influences through an array of contemporary issues, including: obesity, HIV/AIDS, women's health, bioterrorism, environmental public health, mental health and others. Presents innovative social and behavioral perspectives, tools and approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.615. Research Design in the Social and Behavioral Sciences. 3 Credits.
Provides an overview of the design and conduct of research in the social and behavioral sciences as applied to public health. Draws primarily from the research perspectives and methodologies of sociology, anthropology, and health promotion, students examine the formulation of a research question, selection of a research design, selection of a study site and population, issues and methods of data collection, and measurement validity and reliability. Evaluates the strengths and weaknesses of the major types of research design used in the social sciences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.616. Social and Behavioral Aspects of Public Health. 4 Credits.
Explores social influences on behavior and health. Teaches what research and experience in public health practice can tell us about how to affect social and structural change to improve the health of the public. Draws on theoretical, epidemiological, and case study evidence, uses specific health issues such as substance use, HIV, and stigma, and explores and illustrates the effects of social structures and practices on individual health status and behaviors. Develops a deeper understanding of the key concepts that inform a social and structural perspective on health, including race, class, gender, sexuality, socio-economic status, environments, and social networks and social capital. Also instructs and challenges students to think in terms of multi-level interventions that can influence these factors toward improved health outcomes.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.617. Foundations of University Teaching and Learning. 3 Credits.
This eight-week course will prepare participants to be effective teachers who: 1. Are knowledgeable about how learning takes place 2. Can develop and use appropriate active learning strategies in their classrooms 3. Can propose ways to make classrooms more inclusive and equitable
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.618. Using Software in Qualitative Research and Analysis. 1 Credit.
Introduces students to several qualitative data analysis software (QDAS) programs, including MAXQDA, Atlas.ti, NVivo, and Dedoose. Discusses the functions and limitations of qualitative data analysis software. Explores how QDAS can be used throughout a qualitative research project. Explains how to use QDAS for multi-media analysis, including images, video, and audio. Demonstrates how to use QDAS to organize data, produce reports, make comparisons, detect patterns, and facilitate analysis. Demonstrates how to use QDAS in team-based research projects for data coding and analysis. Prepares students to use QDAS to develop deeper insights into their data through visualization and mapping. Complements qualitative research methods and data analysis courses.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.619. Social Justice: Policy, Practice, and Research. 4 Credits.
Introduces students to social justice frameworks and operational definitions to apply to research, policy, and practice. Challenges students to address societal and structural forms of oppression across systems in efforts to center cultural values and practices when implementing public health policies or programs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.620. Program Planning for Health Behavior Change. 3 Credits.
Introduces students to different health behavior change theories addressing several levels of the Ecological Model. Students review and practice using program planning frameworks and needs assessments for designing effective interventions. Students choose a public health problem of their choice and design a behavior change intervention to address that problem. The process of creating the intervention is guided by a needs assessment and is theoretically informed.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.621. The Opioid Crisis: Problem Solving Seminar. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.622. Strategic Leadership Principles and Tools for Health System Transformation in Developing Countries. 4 Credits.
Introduces students to the principles of strategic leadership, placing these in the context of facilitating health systems change in developing countries. Covers the following topics: mental models and the household production of health, systems thinking and strategic leverage, personal mastery and commitment to change, action-learning principles and practice, shared vision and creative tension, the theory of constraints and root cause analysis, strategy design and key moves, implementation with accountability, and linking data to action. Develops leadership skills via interactive computer exercises using STARGuide software, small group work and class presentations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.623. Interprofessional Education Activity.
Provides the opportunity to participate in a case study highlighting the essential role of teams and teamwork in building multi-sector collaborations and partnerships in population health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.624. Genetic Counseling Cancer Standardized Patient Clinical Rotation. 4 Credits.
Prepares students for case preparation and genetic counseling in the cancer setting. Exposes students to a wide range of challenging counseling scenarios that require intermediate and some advanced counseling and communication skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.625. Injury and Violence Prevention: Behavior Change Strategies. 2 Credits.
Expands students' understanding of, and skills in planning, implementing, and evaluating injury and violence prevention programs. Both unintentional and intentional injuries have been the focus of a considerable body of behavioral science research and behavior change interventions. Students read and discuss selected examples of this work and enhance their skills in applying behavioral science principles and best practices to an injury or violence area of interest to them. Topics include historical overview of behavior change and the injury prevention field, as well as examples of behavior change theories, strategies, and methods that have been applied to selected injury and violence problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.627. Human-Centered Solutions to Public Health Challenges. 3 Credits.
Introduces design thinking, a transdisciplinary, human-centered, creative problem-solving approach, and its applications in public health. Focuses on engagement with a Baltimore-based organization to address a real design challenge based on a problem the organization is facing. Provides students with practice using the design thinking process to identify a product, service, or system that more effectively meets end-user needs and preferences. Includes empathetic research methods to uncover insights about the challenge and end-users' experiences, working with stakeholders to generate a range of potential solutions, prototyping, and testing promising solutions, and identifying key considerations for implementation and scale-up. Discusses real-world case studies with HCD practitioners from the Johns Hopkins Center for Communication Programs (CCP).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.630. Implementation and Sustainability of Community-Based Health Programs. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.631. Introduction to Community-Based Participatory Research: Principles and Methods. 3 Credits.
Introduces students to the fundamental principles of, rationale for, and key considerations in conducting community-based participatory research (CBPR). Offers knowledge of and skills in CBPR that emphasize the importance of community inclusion and partnership as a viable approach to constructing and increasing the acceptance of interventions and improving the health and well-being of populations. Also uses case-based learning as an approach for real world application of CBPR concepts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.635. Applications of innovative Methods in Local and Global Health Equity Research. 4 Credits.
Provides practical methods to develop, implement, and sustain successful health equity research programs in the United States and communities around the world. Introduces students to innovative methods, practical tools, and skills required to conduct rigorous health equity research and translate evidence-based strategies into practice and policy. Topics range from stakeholder engagement and behavioral intervention development to research methods in healthcare services for socially at-risk populations. Includes lectures, interactive discussions, case-based examples, and opportunities to obtain feedback on research ideas from experienced investigators.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.638. Scientific Writing in Health Sciences: Developing A Manuscript for Publication I. 3 Credits.
This course introduces and guides students in the writing of scientific manuscripts for publication in an area related to public health, particularly social and behavioral sciences. The goal of the course is to facilitate more effective writing of research articles using practical examples and peer feedback. Topics include: principles of good writing; tips for writing more efficiently; journal selection; co-author selection, and the anatomy of a manuscript. Students begin the course with a research question (purpose of study) and a summary of quantitative or qualitative (or mixed methods) data they would like to present in a scientific manuscript. This typically takes the form of summary tables. All analyses must be completed prior to the start of the course. Students end the course with at least two sections (e.g., methods and results) of a completed manuscript.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.639. Scientific Writing in Health Sciences: Developing A Manuscript for Publication II. 3 Credits.
This course guides students in the writing of scientific manuscripts for publication in an area related to social and behavioral sciences. The goal of the course is to facilitate more effective writing of research articles using practical examples and peer feedback. Topics include: completion of the manuscript; drafting a cover letter; the process of peer review; revising a manuscript; and proofs and ultimate publication. Students end the course with a completed manuscript for ready for submission to a journal for publication.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.640. Global Tobacco Control. 3 Credits.
Provides an overview of actions taken over 50 years that have led to tobacco control being the most successful public health initiative. Actions of tobacco control are directly linked to changes in societal norms so that smoking is no longer socially acceptable in the US and in other countries. This course presents evidence-based policies, regulations, advocacy and communication strategies responsible for these changes. Challenges still present include disparities as well as introduction of novel products (Juul). The influence of transnational tobacco industries will be discussed and their role in undermining governmental and international actions to control tobacco use.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.642. TOBACCO CONTROL LEADERSHIP. 2 Credits.
Through lectures and discussion students develop an understanding of the role of the tobacco control leader, and the essential knowledge and skills this role requires. Provides a framework for understanding the process of working effectively with and leading others. Emphasizes the role of the leader in leading change and developing a vision for the future of tobacco control.Upon successfully completing this course, students will be able to: • Explain the nature of organizational leadership;• Describe the requirements of effective public health and tobacco control leadership;• Apply principles and theories of leadership to current tobacco control issues and challenges;• Develop a personal philosophy and approach to the practice of leadership.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.645. Applying the Social Ecological Model in Tobacco Control and Climate Change. 3 Credits.
Compares the fields of tobacco control and climate change by describing the lessons learned from tobacco control—one of the most successful public health movements. Provides an overview of tobacco control research and advocacy approaches that form a comprehensive public health strategy and considers the use of the social ecological model to address the threats posed by climate change. Explores how both issues involve economic, social, environmental, and behavioral forces that require multi-level approaches from multiple sectors. Offers insight into industry and private sector interference that obfuscates scientific evidence, confuses the public, and stalls effective regulatory policy for both fields of study. Encourages critical comparative skills throughout to discuss how to improve public health approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.650. Introduction to Persuasive Communications: Theories and Practice. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.651. Health Literacy: Challenges and Strategies for Effective Communication. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.652. Interpersonal Influence in Medical Care. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.653. Contemporary Issues in Health Communication. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.654. Health Communication Programs I: Planning and Strategic Design. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.655. Health Communication Programs II: Implementation and Evaluation. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.656. Entertainment Education for Behavior Change and Development. 4 Credits.
Examines and teaches ways in which education can be subtly but effectively worked into both new and time-honored genres of entertainment in order to foster positive behavior change and life improvement in both developing countries and local environments. Develops students' ability to understand the ingredients of successful entertainment: emotions, empathy, efficacy and empowerment, and how these can be employed to enhance social and personal health and life skills. Examines methodology and develops skills needed to create a successful Entertainment-Education (E-E) project in entertainment (story, drama, etc.) formats with effective behavior change messages.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.657. Communication Strategies For Sexual Risk Reduction. 3 Credits.
Focuses on strengthening students' understanding of sexual risk-taking and provides a solid foundation in communication strategies for sexual risk-reduction from an international perspective. The literature and examples emphasize HIV and STI risk reduction. Adopts a seminar format and consists of readings, discussions, presentations, video viewing, case studies, and critiques of literature on sexual risk-taking and protective behaviors. Includes hands-on analyses and interpretation of empirical data on sexual risk-taking and development of a communication strategy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.658. Health Communication Planning and Management for Behavior Change. 3 Credits.
Provides an overview of concepts and theories in communication with a focus on health behavior change. Explains the importance of health behavior as a contributor to current public health problems and the role of behavior change communication; describes methods of communications needs assessment. Also provides the approaches, conceptual tools in planning and management of communication processes in hospitals and out-reach programs in health services, and to develop skills for effective communication with clients and other stakeholders.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.660. Latino Health: Measures and Predictors. 3 Credits.
Examines the measures and predictors of health for the US Latino population. Learns how psychosocial and other individual-level factors, as well as socio-political, community, and health care delivery factors influence an individual's success in accessing the health care system in a sustainable manner. Learns key steps to design, implement, and evaluate health care programs working to decrease the health disparities gap faced by Latinos in the US, by using case studies that take into consideration the heterogeneity of the Latino population.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.663. Media Advocacy and Public Health: Theory and Practice. 3 Credits.
Broadens students' understanding of health communication to include the strategic use of the news media to support community organizing to change public health policy. Builds on theoretical and empirical work in mass communications, and uses case examples in a number of health policy areas to show how the strategies and tools of media advocacy may be applied to specific public health policy campaigns. Ample opportunities are provided for students to "practice" media advocacy, in the form of writing letters to the editor and opinion pieces, role-playing interviews, and so on. Introduces students to research literature about news media forms and practices; to framing techniques to influence news content and gain access to news channels; and to the relationship between media advocacy and other forms of health communication
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.664. Knowledge Management for Effective Global Health Programs. 3 Credits.
Introduces participants to knowledge management (KM), behavioral science, and adaptive management principles, processes, and tools, and their applicability to the design and implementation of global health efforts. Demonstrates, through real-life examples, how KM, behavioral science, and adaptive management principles can be applied to strengthen public health systems and maximize available knowledge to reach public health objectives. Emphasizes the importance of culture and equity as drivers for program success.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.668. Policy Interventions for Health Behavior Change. 3 Credits.
Examines the major theoretical frameworks that are relevant to the development, enactment, implementation and evaluation of policy interventions that support healthy behavior change. Explores the roles of ideas, interests, institutions, key actors and ethics in the policy process are explored. Discusses how the environment can be influenced to improve the chances of implementing effective interventions to improve the public's health. Presents case studies to critically explore the strengths and limitations of policy change theories as they relate to current hot topics in the area of health, behavior and society.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.671. Introduction to Qualitative Research Methods. 3 Credits.
Introduces students to qualitative research methods applied to the investigation of public health issues. Explores the theoretical underpinnings of qualitative research, factors that influence the utility of a qualitative approach, and ethical considerations in qualitative research. Focuses on the qualitative interview and provides an overview of the practical skills and tools required for conducting qualitative interviews and analyzing qualitative data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.672. Organizing for Public Health with the Six Steps to Effective Advocacy: Turning Public Will into Public Policy. 3 Credits.
Introduces students to a key area of knowledge in public health practice: the principles and methods of community organizing and campaigning for policy and structural change. Focuses on how to mobilize the right people at the right time, with the right demands, to change public policies to promote health. Complements other courses in the school that look at advocating within policy processes or by using the mass media by placing these strategies in the context of the practical daily work and thinking of people who plan and carry out policy change campaigns at grassroots and grasstop levels.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.673. Introduction to Qualitative Data Analysis for Public Health. 2 Credits.
Introduces students to the analysis of interview and focus group data collected as part of qualitative public health research. Explores distinct analytic approaches and traditions, and compares the strengths and weaknesses of different analytic paradigms for different research questions. Introduces computer software for coding and managing data using freely available online demonstration of various software packages. Presents both theoretical and practical dimensions of qualitative data analysis. Emphasizes hands-on learning activities within the classroom to practice and apply concepts learned through readings, lectures, and discussion. Develops skills to conceptualize an analytic plan for qualitative data for future research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.675. Critical Analysis of Popular Diets and Dietary Supplements. 3 Credits.
Focuses on the dietary supplements and diets purporting to promote health, induce weight loss, or treat specific health concerns are widely used by Americans, which are often minimally regulated. Students apply the tools of nutritional science to a critical analysis of popular diets and supplements. Students explore the following: nutrient analysis, dissecting several example diets and supplements in class discussions, preparing a comprehensive written analysis of a specific diet or supplement of their choosing, and presenting their findings orally.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.677. Theory and Practice in Campaigning and Organizing for Public Health I. 4 Credits.
Provides a practical introduction to campaigning and organizing for public health. Combines experiential learning (through participation in an actual campaign) with traditional learning (online lectures, in-class discussions and readings). Uses case studies to review the history of organizing for public health. Introduces campaign planning and management, discusses the role of research and coalition-building, and explores different types of organizing. Part of a two-term sequence that prepares students to participate in and critically assess public health campaigns to change the policies and structures that set the contexts in which people make their decisions about health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.678. Theory and Practice in Campaigning and Organizing for Public Health II. 4 Credits.
Provides a practical introduction to campaigning and organizing for public health. Combines experiential learning (through participation in an actual campaign) with traditional learning (online lectures, in-class discussions and readings). Uses case studies to review the history of organizing for public health. Introduces campaign planning and management, discusses the role of research and coalition-building, and explores different types of organizing. Part of a two-term sequence that prepares students to participate in and critically assess public health campaigns to change the policies and structures that set the contexts in which people make their decisions about health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.679. Decolonization, Global Communication, and Public Health. 3 Credits.
Applies insights from anti-colonialist texts to the field of global health communication. Critically examines the intersection of theories of economic development, social change, and communication as applied to public health. Introduces the complex and dynamic role of global communication in the social determinants of health. Interrogates “development” discourses as applied to health communication in middle- and low-resource areas countries. Presents evaluations of communication interventions in low- and middle-resource nation-states. Investigates health communication endeavors abroad as well as in low-resource settings in the U.S.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.680. Social Ecological Approaches to Health Regimen Adherence in Chronic Conditions. 3 Credits.
Addresses social approaches to promoting sustained adherence to health regimens among persons living with chronic conditions. Addresses prescribed use of medications, lifestyle changes, and retention in healthcare over time among persons living with HIV/AIDS, hypertension, and other chronic conditions. Enables students to: (1) assess adherence to health regimens, (2) identify correlates of adherence at the individual, interpersonal, and social network levels, and (3) assess major approaches and components of medical adherence interventions, and their linkage to theories of behavior change. Explores social factors impacting vulnerable populations’ medical adherence and health disparities, drawing examples from both domestic and international contexts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.681. Gay, Bisexual and Other Men Who Have Sex With Men (MSM) and HIV: Theoretical Perspectives on the Us Epidemic. 3 Credits.
Introduces students to key epidemiological, conceptual and historical constructs critical to understanding and responding to the HIV epidemic among gay, bisexual and other MSM in the United States. Explores the role of social and ecological factors and theoretical constructs (e.g., race and ethnicity, intersectionality and minority stress, gender and masculinity, policy and structural changes, and other social determinants) on individual and population-level experience of the HIV epidemic. Provides an in-depth understanding of the challenges to prevention and care in these constituencies through lectures, readings, small group work, and a panel discussion with community stakeholders. Provides students with an ability to develop new lines of theory, research and practice to more effectively apply a socio-ecologic framework to the HIV epidemic and better respond to HIV as a public health issue.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.682. Integrating Children's Mental Health and Primary Care: A Social and Behavioral Science Perspective. 3 Credits.
Examines integration of mental health and primary care as both a solution to chronic shortfalls in the provision of children’s mental health services and an example of the processes involved in making change in complex systems. Frames the change process as taking place at three social-ecologic levels: how care is designed to bring about health behavior change at the client/patient/consumer level; how interventions are implemented to influence staff/clinician behavior at the organizational level; and incentives and barriers at the inter-organizational and health systems level. Uses this three-level framework to analyze a range of integration models (the medical home, collaborative and stepped care, task shifting, screening and brief intervention, and co-location of services). Uses examples largely from both ongoing programs in Maryland, Massachusetts, and Ohio with which the instructors are involved, as well as international programs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.683. Global Perspectives on LGBT Health. 3 Credits.
This course introduces and guides students in the writing of scientific manuscripts for publication in an area related to public health, particularly social and behavioral sciences. The goal of the course is to facilitate more effective writing of research articles using practical examples and peer feedback. Topics include: principles of good writing; tips for writing more efficiently; journal selection; co-author selection, and the anatomy of a manuscript. Students begin the course with a research question (purpose of study) and a summary of quantitative or qualitative (or mixed methods) data they would like to present in a scientific manuscript. This typically takes the form of summary tables. All analyses must be completed prior to the start of the course. Students end the course with at least two sections (e.g., methods and results) of a completed manuscript.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.684. Effective Risk Communication to Overcome Health Disparities During a Pandemic. 2 Credits.
Prepares students to develop effective risk communication strategies and materials for use during a pandemic. Reviews common theories of social and behavior change communication across the socioecological spectrum. Examines the disproportionate impact of pandemics on marginalized and vulnerable population groups. Challenges students to critically assess risk communication messages and approaches using an equity and disparities lens. Challenges students to develop communication strategies that mitigate the effects of social and structural disparities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.686. Advanced Quantitative Methods in The Social and Behavioral Sciences: A Practical Introduction. 4 Credits.
Presents advanced analytic methods relevant to the social ecological model and other theoretical frameworks common in the social and behavioral sciences. Emphasizes multilevel analyses, longitudinal analyses, and propensity score methods. Introduces factor analysis, analysis of experimental studies, structural equation modeling, and complex surveys. Explores the suitability of these methods to address different research questions and study designs. Provides discussions of underlying concepts and assumptions and presents key issues in their application. Illustrates methods through critical review of published articles and by working through examples in Stata. Presents resources for continued advanced study, including methods courses offered through the school.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.690. Ethnographic Fieldwork. 3 Credits.
Introduces students to ethnography as a method of qualitative research (fieldwork) and a product of this research (written accounts and monographs). Introduces skills and data collection methods fundamental to ethnographic fieldwork, particularly immersion, participant observation, writing field notes, and listening. Discusses what constitutes “the field” in ethnographic fieldwork, the holistic perspective, and “thick description.” Explores key theoretical and methodological issues in contemporary ethnographic fieldwork such as ethics, positionality, reflexivity, and power. Emphasizes the role of ethnographic research in public health. Prepares students to critically assess ethnographic writing. Combines lecture, discussion, and practical skill development.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.710. Concepts in Qualitative Research for Social and Behavioral Sciences. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.711. Doctoral Seminar in Mixed Methods for Public Health Research. 3 Credits.
Introduces doctoral students to emerging discussions and applications of mixed methods research in public health. Explores mixed methods as a third research paradigm that involves the utilization of both quantitative and qualitative methods within a single inquiry to enhance the researcher's abililty to understand the problem at hand. Fosters synthesis of and engaged reflection on qualitative and quantitative research training. Specific topics include: history and language of mixed methods research; relevant paradigms and epistemological debates; mixed methods design and research questions; and analysis and dissemination considerations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.712. Theory and Practice in Qualitative Data Analysis and Interpretation for The Social and Behavioral Sciences. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.721. Translating Research into Public Health Programs and Policy. 3 Credits.
Examines how behavioral research (especially intervention research) is used, and not used, by policy makers and program administrators to determine what public health services are delivered. Defines the major types of decisions made in determining services to deliver in public health programs and major decision analytic methods used to aid these selections. Includes these types of decisions: (1) how much to invest in service for one disease area relative to another, (2) determining if an intervention is affordable for large-scale delivery, and (3) choosing how much to invest in each of several different types of services within one disease area. Includes methods decision tree analysis, cost analysis, and cost-utility analysis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.722. Translating Research into Public Health Programs II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.733. Communication Network Analysis in Public Health Programs. 4 Credits.
Introduces the theory and method of network analysis, its application to public health, emphasizing the dissemination of public health information and the transmission of disease, and the influence of networks on health-related behavior.Introduces the theory and method of network analysis, its application to public health, emphasizing the dissemination of public health information and the transmission of disease, and the influence of networks on health-related behavior. The course consists of class lectures, discussions, labs, reading materials, and problem sets. Data analysis will be conducted using STATA, UCINET and Netdraw software packages. Students need to have the access to Window system to download a free version of UCINET and Netdraw.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.752. Children, Media, and Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.755. Health Communication Programs. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.800. MPH Capstone Health, Behavior and Society. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.810. Field Placement Health Behavior and Society. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.820. Thesis Research in Health Behavior and Society. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.830. Postdoctoral Research in Health Behavior and Society. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.840. Special Studies and Research in Health Behavior and Society. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.850. MHS Research Practicum in Health Behavior and Society. 1 - 16 Credits.
Introduces MHS Social Factors students to hands-on social science research for public health. Provides an opportunity to work extensively with a doctorally trained research mentor. Prepares students to participate in social science research initiatives. Builds students' research knowledge and skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.860. Graduate Seminar in Social and Behavioral Sciences. 2 Credits.
Explores and debates theoretical concepts and orientations in the social and behavioral sciences and their application to public health research and practice through readings, discussion, and writing assignments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.861. Graduate Seminar in Community-Based Research. 1 Credit.
Explores faculty-community partnership in community-based research (CBPR), education, and practice. Seminar topics may include CBPR principles and ethics, coalition and partnership building, implementation, dissemination, translation and sustainability, media and marketing, advocacy, policy, cultural diversity, collaborative grant writing, and publishing. Speakers include faculty and also community patrons.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.863. Doctoral Seminar in Social and Behavioral Research and Practice. 1 Credit.
Explores and critiques social and behavioral sciences research and practice, emphasizing key constructs and methods of department faculty through presentations, readings, and group discussions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.864. Critical Issues in Health Disparities. 1 Credit.
Provides an opportunity for students, postdoctoral trainees, and faculty to present scientific papers from the current and/or classic health disparities literature. Emphasizes presentation skills and the ability to critically evaluate scientific papers. Requires participants to read and discuss the assigned material.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.865. MSPH Seminar in Health Education and Health Promotion. 1 Credit.
Introduces a variety of topics important to the profession of health education and health promotion, including both historical and current issues. Presents role definitions and competencies, health education certification, professional organizations representing the field, and other health education and promotion resources. Prepares students for the field placement requirement in the second year of the program.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.866. Careers in Health Education and Health Promotion. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.867. MSPH Field Placement Preparation. 1 Credit.
Prepares students to fully understand the MSPH field placement requirements, processes, and opportunities, so that they may make the most of this professional preparation opportunity.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.868. Program Planning for Health Behavior Change Practicum. 2 Credits.
Explores program planning application through project-based experiential learning. Includes work in small groups to apply the PRECEDE-PROCEED needs assessment planning framework in a real world setting with a community-based organization or local government agency. Focuses on the basic methods of working with communities and community organizations, types of needs assessment tools, and the skills needed to develop these tools, through four seminar sessions and weekly sessions with community based organization representatives.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.870. HBS Research and Proposal Writing Process for Doctoral Students I. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.871. HBS Research and Proposal Writing Process for Doctoral Students II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.881. MHS Seminar in Social Factors in Health I. 1 Credit.
Introduces students to social science concepts in public health and to ongoing social factors research at JHSPH. Introduces students to key concepts and tools necessary to successfully complete the MHS in Social Factors in Health degree program.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.882. MHS Seminar in Social Factors in Health II. 1 Credit.
Provides additional skills in social science concepts for public health research. Introduces research methods for social factors research. Identifies current social factors research of interest to students.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.883. MHS in Social Factors in Health Seminar III. 1 Credit.
Upon successfully completing this course, students will be able to: 1) Identify a range of social scientific research approaches adopted by public health agencies. 2) Identify a range of public health agencies where social science research is conducted.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.884. MHS Seminar in Social Factors in Health IV. 1 Credit.
Advances students' understanding of the relationship between social factors and health outcomes and experiences. Exposes students to research pertinent to social factors in health. Provides MHS students with opportunities to explore applications of public health research skills in a variety of research and practice settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.410.895. MPH Practicum: Health Behavior and Society. 1 - 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.610. Practical Genetic Counseling. 2 Credits.
415.610 addresses the chromosomal basis of heredity, chromosomes and genes, tools of human molecular genetics, single gene inheritance, variation, polymorphism and mutation, genes in populations and genes in families. 415.611 presents the role of genetic counseling in health care and emphasizes the essential components of prenatal, pediatric, and adult genetics services. Indications for referral and genetics education and counseling components are illustrated using care examples. Clinical skills and tools are taught including family, medical and development history taking and pedigree construction. Additional case management skills such as the choice of laboratory and test interpretation, and issues in billing and reimbursment of genetic counseling services are addressed. 415.612 -613 expand on the previous two courses to examine the Hemoglobinapathics and Thalassemias as models of molecular pathology, the molecular/biochemical basis of genetic disease, genetics of cancer, gene mapping
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.611. Introduction to Human Genetics I. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.612. Introduction to Human Genetics II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.613. Introduction to Medical Genetics I. 2 Credits.
Provides a foundation in medical genetics. Focuses on teaching genetic disorders using a systems approach. Presents an overview of the disease process and differential diagnosis of related genetic disorders. Includes the following topics: birth defects/embryology, prenatal diagnosis, pulmonary disorders, muscle diseases, hemoglobinopathies, ocular diseases, kidney disorders, craniosynostoses, skin disorders, deafness, because knowledge of the genetic contribution to disorders within these categories is critical to the work of genetic counselors and medical geneticists. Prepares students for the board certification exam given by the American Board of Genetic Counseling upon completion of the ScM in genetic counseling.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.614. Introduction to Medical Genetics II. 2 Credits.
Builds upon the material in 415.613, and emphasizes other organ systems. Includes a patient panel where individuals discuss the impact of a genetic disorder on their lives and the lives of their family. Includes the following topics: neurogenetics, cardiac defects, cancer genetics, orofacial clefting, genitourinary disorders, skeletal dysplasias, connective tissue disorders because knowledge of the genetic contribution to disorders within these categories is critical to the work of genetic counselors and medical geneticists. Prepares students for the board certification exam given by the American Board of Genetic Counseling upon completion of the ScM in genetic counseling.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.619. New Genetic Technologies and Public Policy. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.620. Introduction to Genetic Counseling I. 2 Credits.
Compares definitions of genetic counseling (GC) with objectives and service outcomes. Explores counselor values as they relate to roles and responsibilities toward clients. Introduces ethical and policy issues specific to GC in conjunction with a research agenda. Discusses and practices basic tools, including interviewing, history gathering, and case assessment, and nondirective counseling approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.621. Introduction to Genetic Counseling II. 2 Credits.
Compares definitions of genetic counseling (GC) with objectives and service outcomes. Explores counselor values as they relate to roles and responsibilities toward clients. Introduces ethical and policy issues specific to GC in conjunction with a research agenda. Discusses and practices basic tools, including interviewing, history gathering, and case assessment, and nondirective counseling approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.624. Ethical, Legal and Social Implications in Genetics and Genomics Over Time. 3 Credits.
Examines the ethical, legal and social implications (ELSI) of human genetics and genomics through the lens of significant and field-defining periods and events in the history of the field. Examines the ELSI raised by those events, and how the events have shaped and defined the current state of the science and emerging scientific, ethical, policy and public health issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.630. Therapeutic Genetic Counseling I. 2 Credits.
Equips graduate students enrolled in the JHU/NHGRI Genetic Counseling Program with an applied psychological paradigm for genetic counseling. Defines and illustrates goals and the process of genetic counseling. Teaches students skills to assess clients' cognitive and affective responses to the genetic contribution to disease and risk. Defines components of a therapeutic relationship. Allows opportunities to practice establishing and acting on a therapeutic relationship.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.631. Therapeutic Genetic Counseling II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.640. Health Judgment and Decision Making. 2 Credits.
Provides a foundation in cognitive, emotional, and motivational processes underlying judgment and decision making in a variety of health contexts. Focuses on antecedents and consequences of adaptive and maladaptive health judgments and decisions, with particular attention to risk perception and communication, application of decisional heuristics, and personal beliefs underlying health decisions. Considers how people make decisions, how they respond to health information, and how they mentally represent illness, as well as how health teams make decisions. Prepares students to apply basic research on health judgment and decision-making to effective genetic counseling and other applied settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.650. Facilitating Family Adaptation to Loss and Disability I. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.651. Facilitating Family Adaptation to Loss and Disability II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.675. Cancer Genetics: Managing the Risks Through Testing and Counseling. 2 Credits.
Equips graduate students enrolled in the JHU/NHGRI genetic counseling program with principles of genetic components to common diseases, using cancer as the example for this course. Introduces key concepts throughout the course through case-based learning.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.701. Genetic Counseling Lab I. 2 Credits.
Explores interactive genetic counseling interventions as they apply to specific clinical settings and client needs. Presents key issues in client education for various medical specialties, and identifies research needs related to genetic counseling. Examines counseling issues through the use of role-plays.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.702. Genetic Counseling Lab II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.710. Medical Genetics and Genomic Medicine: from Diagnosis to Treatment I. 2 Credits.
Examines advances in the diagnosis of genetic disorders and treatments that result from genomic medicine. Focuses on examples from multiple malformation syndromes, autoinflammatory diseases, deletion/duplication syndromes, and Ras-opathies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.711. Medical Genetics and Genomic Medicine: from Diagnosis to Treatment II. 2 Credits.
Examines advances in the diagnois of genetic disorders and treatments that result with a focus on neurocutaneous syndromes, muscular dystrophies, connective tissue disorders and ciliopathies. Both terms aim to prepare students for the board certification exam given by the American Board of Genetic Counseling upon completion of the ScM in genetic counseling.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.820. Thesis Research: Genetic Counseling. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.840. SS/R: Genetic Counseling. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.851. Supervised Clinical Rotations: Genetic Counseling. 2 - 4 Credits.
Clinical placements in adult, pediatric, and prenatal genetic centers in the Baltimore-Washington area provide opportunity to learn about genetic conditions by their impact on individuals and their families, and about roles of the genetic counselor. Individual rotations are scheduled to achieve a wide range of clinical experiences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.861. Genetic Counseling Seminar: Topics in the Field. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.866. Current Topics in Molecular Genetics I. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.867. Current Topics in Molecular Genetics II. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.870. Genetic Counseling Clinical Supervision. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.880. Genetic Counseling Program Thesis Proposal Development I. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.881. Genetic Counseling Program Thesis Proposal Development II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.415.882. Genetic Counseling Program Thesis Proposal Development III. 2 Credits.
This is the third of a series of three courses designed to provide students with the skills needed to turn a research idea into a formally presented and orally defended thesis proposal. In this final course of the series, students will refine their working proposal for submission to the Executive Committee and prepare for the oral examination. They will be expected to have turned a nascent research idea into a workable proposal for the conduct of a research study that will constitute the ScM thesis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.600. Introduction to Health Policy. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.603. The Tools of Public Health Practice and Decision Making. 3 Credits.
Introduces the core functions of public health and the core competencies for public health professionals. Students assess their strengths and academic goals while building their toolbox of public health competencies. Uses case studies to examine the application of the competencies in public health practices. Provides an opportunity to apply knowledge by working in teams to assess a public health problem and propose potential solutions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.610. Public Health Policy. 4 Credits.
Introduces MPH students to the many opportunities in public health policy to improve the health of populations in communities around the world. Focuses on identifying decision-makers, framing problems and key questions, developing and evaluating policy options, and advocating for change. Provides an introduction to some major policy challenges facing public health, such as inequity, injury, tobacco, nutrition, addiction, and violence.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.615. The Tools of Public Health Practice. 1 Credit.
Introduces the challenges and rewards of public health practice. Presents and discusses the core functions and essential services of public health in the context of real world practice examples. Provides opportunities for application of the core competencies of public health professionals. Prepares students for their practicum experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.650. Crisis and Response in Public Health Policy and Practice. 3 Credits.
Studies the phenomenon of crises in public health. From a historical perspective, demonstrates how much of U.S. public health policy traces back to crises and responses that riveted public attention. Explains how substantial increases in FDA authority came about through serial crises in drug, device, food and tobacco markets. Shows that modern vaccine infrastructure emerged out of both disease and vaccine-related crises. From a management perspective, reviews how public health leaders at all levels respond to crises – the good, the bad and the ugly. From a strategic perspective, explores how health officials effectively manage crisis and response in order to win significant policy advances.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.651. Introduction to the U.S. Healthcare System. 4 Credits.
Focuses on the organization, financing, and delivery of healthcare in the U.S. Contrasts the private and public sectors and examines the effects of market competition and government regulation. Examines the ways that medical providers are paid, and explores the major issues currently facing physicians, hospitals, and the pharmaceutical industry. Discusses several potential small and large scale reforms to the U.S. healthcare system and evaluates their likely effects on healthcare spending, quality of care, and access to care.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.652. Politics of Health Policy. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.690. Designing your MPH Capstone as a Research Report. 4 Credits.
Discusses the importance of clearly articulating a research question and its associated aims. Reviews search strategies and data bases for a literature review and critical appraisal. Critically examines how students can design research plans to answer their research questions, provides tips for formulating a conceptual framework, define variables and decide how to measure them and select the most appropriate study design (taxonomy).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.712. Formulating Policy: Strategies and Systems of Policymaking in the 21st Century. 3 Credits.
Considers theories, strategies, and participants involved in formulating health and social policies. Discusses defining health and social problems, selecting and assessing policy options, and the role of stakeholders in policy process, as well as the context in which policy decisions are made. Analyzes case studies, discusses theories, participates in service-learning projects and writing exercises.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.713. Research and Evaluation Methods for Health Policy. 3 Credits.
Introduces basic principles and methods for undertaking scientifically rigorous research with a special emphasis on evaluations of interventions intended to improve health and safety. Focuses on evaluations of policy, health care delivery systems, and public health programs. Topics include the evaluation and health policy analysis; common research designs and their strengths and weaknesses; and internal and external validity with the intent of giving students the fundamental tools needed to conduct health policy evaluations and/or making them better consumers of research conducted by others.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.715. Advanced Research and Evaluation Methods in Health Policy. 4 Credits.
Introduces basic principles and methods for undertaking scientifically rigorous research with a special emphasis on evaluations of interventions intended to improve health and safety. Focuses on evaluation of health policies, health care delivery systems, and public health programs. Topics include the relationship between health services research, health policy research, health policy analysis and health program management; common research designs and their strengths and weaknesses; internal and external validity; survey research techniques; qualitative research methods; and basic cost effectiveness analysis with the intent of making students better conductors of research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.721. Foundations in Health Policy I. 2 Credits.
Familiarizes students with some of the foundational readings in health policy and provides an understanding of the theories and conceptual frameworks used in the development, implementation and analysis of health policies. Explores how different disciplines (political science, ethics, law, economics, sociology, behavioral sciences and history) inform thinking about the development, implementation and analysis of health policies that make a difference in the public's health. Emphasizes critical reading and thinking, informed debate with respect for a range of opinions, and communication skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.722. Foundations in Health Policy II. 2 Credits.
Familiarizes students with some of the foundational readings in health policy and provides an understanding of the theories and conceptual frameworks used in the development implementation and analysis of health policies. Explores how different disciplines (political science ethics law economics sociology behavioral sciences and history) inform thinking about the development implementation and analysis of health policies that make a difference in the public's health. Emphasizes critical reading and thinking informed debate with respect for a range of opinions and communication skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.723. Foundations in Health Policy III. 2 Credits.
Familiarizes students with some of the foundational readings in health policy and provides an understanding of the theories and conceptual frameworks used in the development, implementation and analysis of health policies. Explores how different disciplines (political science, ethics, law, economics, sociology, behavioral sciences and history) inform thinking about the development, implementation and analysis of health policies that make a difference in the public's health. Emphasizes critical reading and thinking, informed debate with respect for a range of opinions, and communication skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.724. Foundations in Health Policy IV. 1 Credit.
Supplements and builds upon the course entitled Health Policy Analysis and Synthesis. Students analyze and discuss in depth the materials presented in that course.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.741. PhD Seminar in Health Policy: Using Secondary Data to Conduct Health Policy Research. 1 Credit.
Provides a small class-size, doctoral-focused experience and examines some of the most common data sources used in the field to study health policy and management research topics. Emphasizes secondary data sources and discusses: (1) data structure and challenges with conducting research with secondary data; (2) developing research questions and testable hypotheses using these data sources; (3) strategies for data cleaning, work flow management, and replication; (4) data protection and storage related concerns; and (5) orally communicating strengths and weaknesses of datasets in the context of research talks. Exposes doctoral students to faculty research projects and the specific datasets being used to conduct this research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.750. Teaching, Learning and Leading – in the Classroom, in the Workplace and in the Community. 3 Credits.
Offers students opportunities for exploring how to design, develop, deliver, and evaluate educational approaches for a range of audiences and to attain professional aims. Considers a variety of approaches for integrating educational practices and strategies into professional practice. Engages students in developing educational philosophies and reflecting upon personal educational experiences and use of educational approaches for professional and leadership advancement. Presents strategies for designing an educational plan.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.800. MPH Capstone Health Policy and Management. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.801. The Role of Community-Based Organizations (Cbos) and Non-Governmental Organizations (Ngos) in Improving Global Public Health. 2 Credits.
This course provides an overview of some of the nation's major data collection efforts in households and healthcare establishments in the United States. The course introduces population-based and establishment-based surveys conducted by the National Center for Health Statistics, covering policy-relevant topics including health and nutritional status, health care access and utilization, and the provision of services in inpatient, outpatient, ambulatory, long-term, and hospice care settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.830. Postdoctoral Research Health Policy and Management. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.840. Special Studies and Research in HPM. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.860. Special Studies/Research: The Media and the Message: What Public Health Needs to Know about the News. 3 Credits.
Studies contemporary U.S. media through the lens of public health. Analyzes the economic, social and political forces behind the changing media landscape. Provides insight into how news is gathered and how coverage decisions are made. Reviews the current media landscape, provides insight on problems and potential solutions, with specific lessons for practitioners in public health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.862. Current Issues in Public Health. 1 Credit.
Faculty experts present public health topics of current interest in both industrialized and developing nations, such as health promotion and disease prevention, health care delivery systems, environmental problems and the spectrum of factors influencing the health status of populations and communities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.863. HPM Practicum. 2 - 3 Credits.
Provides PhD students in HPM with an integrated, practical experience, applying coursework and theory to real-world settings. Places students based on their individual goals and interests and preceptor needs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.870. The Research and Proposal Writing Process I. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.871. The Research and Proposal Writing Process II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.300.895. MPH Practicum: HPM. 1 - 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.615. Seminar in Health Disparities. 3 Credits.
Addresses the nature of racial and ethnic disparities in health status and introduces the research literature on race disparities. Develops an annotated bibliography of research on a minority health topic selected by the class and produces a literature review on that topic.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.627. Understanding and Preventing Violence. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.635. Policing and Public Health. 3 Credits.
Provides an overview of the history and evolution of policing in the United States and the intersections between policing and public health. Considers both short- and long-term policing impacts, both positive or negative, on the health and safety of communities and individuals through various interactions with the public. Explores how public safety is reimagined through a public health lens to understand the impacts of police on social determinants of health, justice, and equity. Examines needed reforms, police-community relationships, and strategies to co-create public safety
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.645. Health Advocacy. 3 Credits.
Prepares health professionals, (from government health officials, business leaders, non-profit organization representatives to scientists) to advance public health policy improvements. Through lectures, group exercises and a "mock" congressional hearing, students develop the skills to evaluate the policymaking process, create opportunities to inform and influence policymaking, and become more effective in translating and communicating in a policymaking environment.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.650. Crafting Effective Solutions to Gun Violence: Problem Solving Seminar. 3 Credits.
Provides a foundation of data, theory and perspectives on understanding gun violence within the United States. Students apply common public health methods for assessing risk and protective factors for multiple forms of gun violence at many levels (individual, family, community), assessing available evidence on prevention options, and determining how to enhance population-level success. Provides an understanding of the legal, political, and institutional constraints and opportunities for enacting policies to curb gun violence. Opportunities to develop plans to prevent gun violence with examples dealing with urban gun violence, domestic violence, and situations in which someone is threatening to commit an act of gun violence (e.g., school or workplace shooting) and develop creative public health alternatives to current approaches to gun violence that promote equity and justice as well as safety will be available.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.660. Connecting Public Health Research with the U.S. Policymaking Process. 3 Credits.
Considers the contradictory role of public health research in the U.S. policy making process. Examines the question of when does research influence the policy-making process and how is it verified and what role can and should researchers play in the process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.692. The Role of Community-Based Organizations (Cbos) and Non-Governmental Organizations (Ngos) in Improving Global Public Health. 3 Credits.
Provides students with a working knowledge of NGOs and CBOs in health and public health, both domestically and internationally. Acquires on-the-ground insights and skills important to those planning a public health career from public health research, to service delivery, to health policy and management, both novice and expert. Presents the roles of CBOs/NGOs in a variety of arenas, including infectious disease control, environmental health, and disaster and humanitarian response. Provides basic skills and lessons, from starting and sustaining an organization, to working with CBOs/NGOs to achieve and maximize the success of your particular public health goals. Discusses the roles of CBOs/NGOs within the larger contexts of globalization, world politics, and social development. Includes guest lectures from domestic and internationally recognized organizations such as the American Red Cross, the National AIDS Fund, and the Center for Disaster and Humanitarian Assistance Medicine.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.771. Case Studies in Communicating With The Media. 1 Credit.
Provides real-life examples of public health communications—both good and bad—and teaches practical skills for effectively sharing messages with the media in the era of "fake news." Students are exposed to techniques and guidelines to understand and handle the media during both crisis and non-crisis situations. Topics include: an overview of the media needs in a crisis, the essential elements of crisis communication plans, tips and techniques for spokespersons, common pitfalls to avoid, audience psychology, non verbal communication and techniques for communicating complex information to the lay audience. Students review videotapes of news coverage and participate in simulation exercises.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.772. Making Effective Public Presentations. 2 Credits.
Enhances skills to construct and deliver oral presentations with clarity and impact. Provides a template for "audience-centered" presentation construction with examples, tools and exercises. Provides individual assessment and feedback for each participant through videotaped exercises and a short formal presentation constructed during the course.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.820. Thesis Research in Health Policy and Management. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.301.861. Graduate Seminar in Health and Public Policy. 1 Credit.
Reviews and critiques current literature in health and public policy and evaluates studies from a methodological and conceptual basis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.302.610. State Healthcare Policy. 3 Credits.
Acquaints participants with the critical role states play in developing and implementing policies that affect both health and health care. Reviews how the role of states has evolved within the US federal system of government where states and the national government both have significant responsibilities. Drawing upon the experience of implementing the health insurance exchanges in Maryland and Alabama, participants assess how state differences affect the implementation of a major new national health program--the Affordable Care Act.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.302.675. Crisis Response in Public Health Practice: International Perspectives. 2 Credits.
Examines crises from the point of view of an agency leader responsible for designing and implementing an effective response while maintaining credibility and securing long-term policy change. Discusses recent crises including: global response to Ebola and Zika, responses to regulatory failures, foodborne outbreaks, and vaccine controversies. Offers students an opportunity to apply their knowledge by proposing a crisis response plan for a public health agency
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.302.843. SS/R: CRISIS RESPONSE IN PUBLIC HEALTH PRACTICE: INTERNATIONAL PERSPECTIVES. 2 Credits.
Examines crises from the point of view of an agency leader responsible for designing and implementing an effective response while maintaining credibility and securing long-term policy change. Discusses recent crises including: global response to Ebola and Zika, responses to regulatory failures, foodborne outbreaks, and vaccine controversies. Offers students an opportunity to apply their knowledge by proposing a crisis response plan for a public health agency.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.605. Public Health Policy: The Intersection of Science and Politics. 3 Credits.
Employs both lecture and interactive formats to explore the nature of the public health policy process, including how policy is a reflection of knowledge, political will and social strategy. Through presentations by instructors and guest speakers, offers examples of public health policy development highlighting the intersection of science and politics. Deepens and enriches the learning process through field trip(s) that actively engage students with Washington, D.C. public health advocates and policy makers with varying policy roles and perspectives.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.607. Public Health Practice. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.610. Issues in Injury and Violence Prevention. 2 Credits.
Addresses prominent sources of injury, including motor vehicles, falls, fires, and firearms. Explores the biological, behavioral, and social issues relating to injury and violence prevention and policy. Emphasizes basic strategies for preventing injuries and deaths in the workplace, home, travel, and recreation, and the relative effectiveness of various types of approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.615. Occupation Injury Prevention and Safety Policy and Practice. 2 Credits.
Provides a link between the public health approach to injury prevention, the traditions of safety science and engineering, and their relationship with ergonomics and biomechanics. Topics covered include identifying the injury problem; using surveillance and record-keeping systems; preventing injuries by government, unions, health departments, and industry; and comparing safety sciences and a public health approach to injury prevention.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.623. Fundamentals of Clinical Preventive Medicine. 3 Credits.
Examines the complex interplay between clinical preventive medicine, population medicine, and the practice of public health. Covers core topics for practice and for the preventive medicine board examination: prevention at the individual and community level; the evidence-based policy approach to prevention; and the creation and use of clinical governance standards and practice guidelines for prevention. Covers high-yield topics in short modules that focus on a clinical prevention frame, including the latest science and best practices in integrative medicine, chronic diseases, communicable diseases, injury and violence prevention. Covers prevention-based approaches to various issues of public health significance including the use of: mind-body medicine, lifestyle medicine, diet and nutrition wellness, motivational interviewing and health coaching, and evidence-based complementary and alternative medicine.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.630. Transportation Policy, Equity and Health. 2 Credits.
Provides an overview of the significant role of national politics on transportation safety policy in the United States. Using case studies of notable safety enhancement efforts in aviation, highway, and other transportation modes, students discover the significant roles and interactions of lobbyists, industry associations, politicians, and Federal Agencies in transportation safety research and subsequent safety improvement rulemaking. Through informal lectures, readings and a field trip to the Baltimore Washington International airport tower, students learn that transportation safety and injury prevention improvements often require significant efforts to successfully navigate the path from research findings to interventions that improve the traveling public's safety and health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.670. Principles and Practice of Injury Prevention. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.684. Health Impact Assessment. 3 Credits.
Since health impact assessment (HIA), is an approach that informs decision-makers about the potential health effects of proposed projects, programs, and policies made in areas outside of the health sector (e.g., education or housing), students learn about HIA through readings, lectures, and hands-on experience. Students study the rationale for conducting HIAs, review a range of analytic methods used to conduct HIAs analyze cases from international and domestic settings, understand its role in policymaking, and walk through the steps of how to conduct a HIA. Students then apply these skills through working on a HIA with a partnering organization.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.861. Graduate Seminar in Injury Research and Policy. 1 Credit.
Weekly seminar advances understanding of injury, violence, and resulting disabilities as public health problems. Topics include methodological approaches, substance use and overdose, occupational injury, violence prevention, and disability. Emerging topics as well as the application of policy, law and practice for injury and violence prevention are considered.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.864. SS/RES: SOCIAL INEQUALITIES IN HEALTH IN LIGHT OF ROAD TRAFFIC SAFETY. 3 Credits.
Provides an overview of the various manners in which the road traffic infrastructure and environment may contribute to the occurrence of accidents and injuries and also to social inequalities in mobility and safety. Examines analytic methods related to injury research and prevention using examples from both LMICs and HICs
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.305.865. Advanced Seminar in Injury Prevention. 2 Credits.
Broadens, advances, and challenges existing skills and knowledge of injury prevention students and/or multi-disciplined injury prevention practitioners. Elaborates on the 9 Core Competencies for Injury and Violence Prevention, as developed by the SAVIR-STIPDA Joint Committee on Infrastructure Development. In addition to interactive lecture, students are given as many opportunities as possible, within the constraints of the 2-day training, to practice skills through practical application sessions for a facilitated hands-on, skills-development experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.601. Introduction to Bioethics in Public Health Practice and Research. 1 Credit.
Introduces MPH students to the basic principles and frameworks for research and public health ethics as well as concepts in professional and research integrity as a public health professional. Explores both domestic and global health examples. Focuses on introductory material on public health ethics, research ethics and professional integrity.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.625. Ethical Issues in Health Policy: Public Health and Health Care. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.650. Public Health and the Law. 3 Credits.
Introduces non-lawyers to the important role played by the law in determining the public's health. Analyzes judicial opinions, statutes, and regulations in classroom discussions. Covers substantive legal topics including the balance between individual rights and public health initiatives, privacy, medical malpractice, and informed consent.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.655. Ethical Issues in Public Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.660. Legal and Public Health Issues in the Regulation of intimacy. 3 Credits.
Examines the ways in which the state regulates intimate and private relations and the justifications for such regulation. Particularly focuses on the attention paid to the public health and morality justifications offered by the state for the enactment and enforcement of privacy laws. Topics include: when state regulation of intimate decisions, actions and relationships is justified; the regulation of consensual sexual activity; the regulation of contraception and abortion; the regulation of same-sex sexual activity; and the regulation of same-sex marriage.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.662. Public Health Agencies: Law, Policy and Practice. 3 Credits.
Explores the important and expanding role that regulatory or administrative agencies, such as FDA and EPA, play in protecting and promoting the public's health. Examines agencies' ability to create and implement health policy, and discusses the legal limits on agency powers. Discusses how agencies develop regulations and employ other regulatory tools. Uses case studies to illustrate key concepts, such as the role of science in the regulatory process and the influence of politics on agency actions. Class sessions involve the interpretation and analysis of judicial opinions, regulations, and other administrative materials. Focuses on U.S. regulatory policy, but also examines examples and implications for international health policy. This course builds on the skills introduced in 306.650, and exposes students to new public health law and policy topics relevant to regulatory agencies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.663. Legal and Ethical Issues in Health Services Management. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.665. Research Ethics and integrity: U.S. and International Issues. 3 Credits.
Introduces ethical theory and principles, including ethics requirements when conducting research with human subjects in the U.S. and/or developing countries. Covers the following topics through lecture and case studies: ethical theory and principles; informed consent in research; Institutional Review Boards; the just selection of research participants; cultural relativism; genetic research; ethical issues in vaccine research; ethics and human rights; appropriate use of placebos; what is owed to research participants, communities, and countries after research is completed; the use of animals in research; and scientific and academic integrity. Familiarized students with research ethics in both the U.S. and global contexts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.670. Issues in LGBTQ Health Policy. 3 Credits.
Examines the impact and importance of health policy on the health, well-being, and lives of LGBTQ people. Explores how particular health policies, both historically and currently, have contributed to and/or reduced health disparities within LGBTQ communities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.861. Graduate Doctoral Seminar in Bioethics. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.306.864. Fogarty Bioethics Fellows Seminar. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.307.864. Mental Health Services and Systems Practicum I. 0.5 Credits.
Part I of a year-long practicum that complements traditional coursework by providing exposure to the real-world settings and organizations that compose the mental health care infrastructure. Through site visits and opportunities to interact with representatives from different components of the mental health care system, students will develop an understanding of the historical evolution of the mental health care system in the U.S. and be introduced to the various settings through which mental health services are delivered, including emergency psychiatric services, intensive outpatient treatment, psychiatric rehabilitation, and early intervention.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.307.865. Mental Health Services and Systems Practicum II. 0.5 Credits.
Part II of a year-long practicum that complements traditional coursework by providing exposure to the real-world settings and organizations that compose the mental health care infrastructure. Through this course, students will develop an understanding of the operational, organization, and financial aspects of service delivery, barriers to implementation of evidence-based services, and the interaction of other service settings (e.g., social services, criminal justice) with the mental health care system.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.600. SS/R: Managing the COVID-19 Pandemic: From Epidemiology to Policy. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.604. Effective Writing for Public Health Change. 3 Credits.
Sharpens writing skills for clear, effective public health communication. Introduces the key elements of successful writing, and how to successfully apply those fundamentals to different communication formats and goals, both traditional and modern. Writing and organization skills practiced through writing assignments focused on practical real-world examples students will face in their careers, including one-pagers, policy memos, and data summaries, including learning to edit, improve, and pressure test the work of others. Professional standards for accuracy, readability, structure, and style that help communicate more effectively and persuasively in the pursuit of public health goals will be presented.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.605. THE IMPACT OF THE FINANCIAL, ECONOMIC AND POLITICAL CRISES ON HEALTH, QUALITY OF LIFE AND WELL-BEING OF POPULATIONS. 3 Credits.
Analyzes the causes of the current worldwide crises, both in developed and developing countries, with a special emphasis on the United States, Canada and Europe. Focuses on the consequences of those crises on health and social policies that affect the quality of life, the well-being and the health of populations. Considers these issues from the political economy, social policy and health policy perspectives.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.610. The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.615. The Opioid Crisis: Problem Solving Seminar. 3 Credits.
Uses interactive case-based and problem-based strategies to provide an overview of the impact of the opioid crisis in the United States. Enables students to develop skills to address different aspects of the opioid crisis. Addresses topics including stigma attached to opioid use and treatment of opioid use disorders, the development of strategies to address such stigma, the importance of data in identifying opportunities for response, assessment of current policy options for addressing the opioid crisis in the United States, and addressing the political challenges to support effective policymaking. Prepares students to undertake data collection at the state level.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.630. U.S. Pharmaceutical Policy. 3 Credits.
Examines the pharmaceutical market and addresses the core issues related to pharmaceutical policy within the US health care system, such as drug pricing, regulation, and financing, drug coverage decisions, and ethical aspects of drug regulation. Considers the role of multiple health care system actors involved in and affected by pharmaceutical policy: drug manufacturers, drug regulation agencies, insurers, pharmaceutical benefits managers, health care providers, patients, families, and others. Provides an in-depth analysis of drug pricing strategies, coverage decisions, and access and affordability issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.650. Public Health Perspectives on U.S. Drug Policy. 3 Credits.
Presents a critical examination of U.S. drug policy through a public health lens. Course topics include: policy mechanisms for reducing drug-related harm; implications of various drug control policies on population health and wellbeing; drug control enforcement and the role of the criminal justice system; stigma and the politics of drug policy; the organization and financing of services for people who use substances, including treatment of substance use disorders; and policies and services targeting special populations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.660. Food Industry, Politics and Public Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.680. Health Care and Congress: Perspective From K Street. 2 Credits.
Introduces the roles and functions of the entire legislative process -- from bill introduction, to committee markup, to the enactment of legislation. Throughout this process, students also examine the essential role of congressional lobbyists in shaping health care policy stemming from coalition building, knowing your opponents, organizing grassroots and campaign contribution efforts, identifying key Members of Congress and staff, working with the Administration, testifying on Capitol Hill, and knowing what and what not to tell your constituency. Using a case-study approach, students walk through the process of how an idea goes from an organization into federal or state law.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.701. Effective Presentations and News Media Interviews: Practical Skills for Public Health Practitioners. 3 Credits.
Enhances skills to construct and deliver oral presentations with clarity and impact. Provides techniques and guidelines to increase your effectiveness in translating public health information to various audiences, as well as communicating through the news media during both crisis and non-crisis situations. Includes topics: basics of effective presentations, non-verbal communications, case studies, giving an interview, preparing talking points, advocacy and the news media, and communicating in a public health emergency. Reviews videotapes of news coverage and participate as spokespersons in on-camera simulation exercises.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.810. Field Placement Health Policy-MSPH. 1 - 22 Credits.
Provides students with an intensive “hands on” extension of their academic training under the guidance of one or two senior level health policy professionals and program faculty. Students gain a deeper understanding of how health policies affect the public’s health and further develop their professional health policy skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.842. SS/R: Emerging Dimensions of Social Determinants of Health Inequalites: A Transdiciplinary Integrated Approach. 3 Credits.
Introduces a novel transdisciplinary approach on Social Determinants of Health Inequities (SDHI). Provides an in-depth understanding of macro, meso and micro levels, all of which generate health inequities. Prepares students to examine the changes, causes, and potential policies to address systemic public health and equity-related subjects and the complex interactions between biology, behaviors, society and politics. Integrates a broad range of disciplines, ‘systems thinking’ practices, and methodological pluralism. Reviews research advances, including explanatory case studies and the evaluation of policies and interventions to reduce health inequities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.851. Phase Internship. 1 - 6 Credits.
Public Health Applications for Student Experience (PHASE), offers students the opportunity to gain real world public health practice experience. PHASE internships require students to synthesize, integrate and apply academic theory in public health practice settings. Through PHASE, students have the opportunity to learn first-hand how public health agencies function and engage in public health decision-making on a daily basis
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.852. Applied Health Policy Experience: Health Policy Internship. 2 Credits.
Provides JHSPH graduate students with experience and insight into the public health policy research and development process. Gains insight, while working directly with legislators, into the inner workings of the policy-making process including legal research, stakeholder engagement, and coalition building. Allows interns to provide legislative assistance to the policymaker throughout the legislative session, including legal research and analysis, stakeholder engagement, and writing testimony, bills and amendments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.308.867. MSPH Seminar in Health Policy. 1 Credit.
Introduces work undertaken in health policy settings and prepares MSPH. students in Health Policy and Management for the field placement requirement in the second year of the program.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.600. Evaluating Quality Improvement and Patient Safety Programs. 3 Credits.
Prepares students to evaluate Quality Improvement/Patient Safety (QI/PS), projects by developing their competencies in the following areas: 1) Critiquing evaluations of QI/PS projects; 2) Designing a robust evaluation of a QI/PS project; and 3) Conducting a small scale qualitative study.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.605. Health Issues for Aging Populations. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.609. Palliative and Hospice Care: Quality of Care and Health Policy. 2 Credits.
Addresses the policy problems related to improving access, quality and cost-effectiveness for palliative and hospice care within the current medical system, using case studies and workshop exercises. Also addresses the challenges and opportunities palliative and hospice care face under health reform. Considers questions such as: what communication strategies can be widely applied to help patients understand and choose care in accordance with their goals and values; how palliative care and hospice services should be delivered by accountable care organizations and medical homes; how palliative care can be integrated into the long-term care environment; and what quality measures should be integrated into performance measurement for all providers of the seriously ill.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.616. Introduction to Methods for Health Services Research and Evaluation I. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.617. Introduction to Methods for Health Services Research and Evaluation II. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.620. Managed Care and Health insurance. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.631. Population Health Informatics. 3 Credits.
Introduces students to concepts, methods, and issues related to the application of health information technology (HIT) to population health. Emphasizes the population health potential of comprehensive electronic health records (EHRs), personal health records (PHRs), mobile health and telemedicine devices; and consumer focused internet-based based tools. Covers the uses of HIT to define and identify populations and sub-populations of interest, describe the health status and needs of populations, improve the health of populations, and evaluate services provided to populations. Emphasizes the use of HIT within both local, regional and federal public health agencies and population-based private health care organizations such as integrated delivery systems and health insurance plans. Lessons are mainly US oriented but are also applicable to other high and middle income countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.635. Population Health: Analytic Methods and Visualization Techniques. 3 Credits.
Introduces students to concepts, methods, and issues related to the application of data science to population health. Covers the uses of informatics to define and identify populations and sub-populations of interest, and describe the health status and needs of them. Describes the process of analyzing population health data from checking data quality to developing predictive models of utilization. Examines different data sources / methods to risk stratify a population of interest and compares the advantage and disadvantages of each data source / method. Describes various techniques to visualize data quality, depict the denominator selection process, and illustrate the risk adjustment results for large populations
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.670. Comparative Health insurance. 3 Credits.
Provides an overview of the organization and financing of health systems in middle and high-income countries – focusing on population coverage, in terms of both how different groups are covered and the benefits package provided. Begins with a conceptual framework of financing flows in the health sector, and proceeds to identify a series of topics and case studies as the subject of specific lectures. Explores in depth the principal models for population coverage – including national health insurance, national health service, social insurance, private insurance, and mixed hybrid models. Provides case studies of health insurance coverage in specific countries, including the United Kingdom, France, Germany, Japan, Taiwan, Chile – with lessons drawn for transitional countries interested in expanding health insurance coverage
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.712. Assessing Health Status and Patient Outcomes. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.716. Advanced Methods in Health Services Research: Analysis. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.720. Applied Econometrics for Health Policy Research. 3 Credits.
Advanced econometrics course that builds on techniques introduced in the prerequisite courses. Topics addressed include techniques for risk adjustment and provider profiling, advanced topics in instrumental variables analysis, calculating appropriate marginal effects and standard errors, heterogeneous treatment effects, decomposition approaches, and methods of assessing the robustness of various estimates. Students work on independent research projects that provide hands-on exposure to research design and data analysis with Stata.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.730. Patient Safety and Medical Errors. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.731. Patient Safety in Developing Countries. 2 Credits.
Introduces students to the rapidly evolving field of patient safety in developing countries, focusing on health systems improvement. Explains the role of global organizations, national governments, institutions, local communities, and individuals in improving patient safety in developing countries. Reviews key global patient safety resources that can be utilized to enhance patient safety in developing country health systems. Students learn how to utilize a “problem solving paradigm” to patient safety, conduct a patient safety situational analysis, and develop an action plan for patient safety at the institutional level. Explores the use of patient safety partnerships between hospitals as a model for inter-continental collaboration.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.732. Human Factors in Patient Safety. 3 Credits.
Provides students with the essential concepts, methods and tools to enable them to design effective patient safety interventions and evaluate their impact.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.750. Applied Research Methods for Health Policy and Management. 3 Credits.
Helps Tsinghua DrPH cohort students synthesize methods content to conduct a valid statistical analysis applied to a Chinese-relevant data set or topic area. Students develop advanced skills in modeling and methods for conducting health policy, healthcare management, and health services research analysis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.861. Graduate Seminar in Health Services Research and Policy. 1 Credit.
Provides opportunity to learn about the PhD process, faculty research, discuss issues and concepts relevant to the field of health services research, and learn skills important for academic and professional success in the field of health services research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.864. Quality, Patient Safety, and Outcomes Research Practicum. 3 Credits.
Provides students in the Quality, Patient Safety, and Outcomes Research Certificate Program with an integrated experience in quality, patient safety, outcomes research, or a combination of the 3 domains in any one of a wide variety of settings in the health service delivery environment. Students are placed based on their individual goals and interests and the preceptors' needs. Students join an active work group and are supervised directly or indirectly by the practicum preceptor
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.871. Health Services and Outcomes for Aging Populations Practicum I. 0.5 Credits.
Focuses on Home-Based Care and provides an in-depth overview of home-based medical care, skilled home health care, and telehealth. Complements traditional coursework by providing exposure to the real-world settings and organizations that comprise aging services delivery and infrastructure.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.872. Health Services and Outcomes for Aging Populations Practicum II. 0.5 Credits.
Students work in small groups to apply the concepts learned in Knowledge Translation, I (309.870.11) to a practical case study of a knowledge translation problem.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.873. Health Services and Outcomes for Aging Populations Practicum III. 0.5 Credits.
Focuses on the importance of interdisciplinary care in the care of older adults. Complements traditional coursework by providing exposure to the real-world settings and organizations that comprise aging services delivery and infrastructure.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.309.874. Health Services and Outcomes for Aging Populations Practicum IV. 0.5 Credits.
Fourth of 4-term sequence. Focuses on issues associated with provision of long-term services and supports in the community, assisted living, nursing homes, and innovative models of care. Complements traditional coursework by providing exposure to the real-world settings and organizations that comprise aging services delivery and infrastructure.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.311.615. Quality of Medical Care. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.311.720. Tsinghua DRPH Capstone. 2 Credits.
Helps Tsinghua DrPH students synthesize course content with a specific focus on problem identification and the development of testable hypotheses; how to develop a conceptual model; approaches for conducting a literature review and synthesis. Provides an overview of the DrPH written qualifying examination.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.311.820. Thesis Research HPM-DRPH. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.311.861. Graduate Seminar in Health Care Management and Leadership. 1 Credit.
Provides opportunity to discuss concepts and issues related to organizational performance improvement, organizational performance indicators, and change strategies. Facilitates preparation for comprehensive exams and the design and conduct of dissertation projects.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.311.865. Tsinghua DRPH Seminar. 1 Credit.
Provides opportunity to learn about faculty research, discuss issues and concepts relevant to the field of health management and leadership, and learn skills important for academic and professional success in the field. Intended for DrPH students from the Tsinghua cohort.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.311.867. Tsinghua Graduate Seminar. 1 Credit.
Provides opportunity to discuss concepts and issues related to organizational performance improvement, organizational performance indicators, and change strategies. Facilitates preparation for comprehensive exams and the design and conduct of dissertation projects. Intended for DrPH students in the Tsinghua cohort program.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.600. Managing Health Services Organizations. 4 Credits.
Presents a framework for understanding and managing health services and health sector organizations. Discusses strategic and organizational management [e.g., health care environment, stakeholders and customers, missions, vision and values, governance, organizational structure and design]; management & performance improvement tools [e.g., budgeting and financial management, logistics, continuous quality improvement, balanced scorecard, logical framework, learning networks and collaboratives; management role and functions [e.g., leadership style, employee performance, decision-making, human resource management]
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.601. Fundamentals of Management for Health Care Organizations. 3 Credits.
Discusses how to manage in health care organizations, including management processes, organizational structures, and types of governance and management issues of U.S.-based health care delivery systems. Topics to be examined include introduction to health care systems; managing health care organizations; health care environments, administrative management responsibilities; approaches to performance improvement and financial management concepts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.602. Applied Methods for Optimizing Performance in Health Care Organizations. 2 Credits.
Performance Optimization Methods for Health Care Organizations is designed for MHA students who seek an understanding of continuous improvement in healthcare organizations. The content and framework of the course are designed to provide students with a broad exposure to current knowledge, competencies and management tools required for the effective operation of health care delivery systems. Focus is on how to apply continuous improvement tools and methodologies in various health care environments. Provides a detailed explanation of Lean and Six Sigma methodologies with opportunity to apply these skills to real world examples within health care settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.603. Fundamentals of Budgeting and Financial Management. 3 Credits.
Provides students with an understanding of budgeting as an important management tool. Focuses on budget development, evaluation of the financial status of a department or operating unit and the ability to determine what, if any, corrective actions need to be taken. Includes strategies for measuring and reporting skills. Considers the analytical tools used to support evaluation and decision-making including; volume adjusted variance analysis, benefit-cost ratio analysis, breakeven analysis, process flow analysis, benchmarking, and methods for building cost standards.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.604. Quantitative Tools for Managers. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.607. Quantitative Tools for Managers in Asia. 3 Credits.
Designed to provide concept and real-world application of quantitative tools (methods) commonly applied in the healthcare industry in Asia. Topics to be addressed include: facility location/payout, forecasting and financial analysis, re-engineering and utilization (productivity) management and quality matrix and improvement tools. Applications and case studies will focus specifically on the Asia-Pacific rim.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.610. Foundations of Organizational Leadership. 3 Credits.
Students develop an understanding of the role expectations of the organizational leader and the essential knowledge and skills the role requires. Provides a framework for understanding the process of working effectively with, influencing and leading others. Drawing from a variety of disciplines, emphasizes organizational effectiveness, developing a future vision and direction, leading change and building adaptive organizational cultures.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.617. Fundamentals of Financial Accounting. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.620. Performance Measurement in Health Care. 2 Credits.
Focuses on performance measurement for hospitals and describes key aspects and challenges of measurement initiatives in the current context of health care reform in general, and payment reform more specifically. Includes the faculty, all senior health care professionals from the trenches, describing the regulatory environment and Joint Commission and CMS requirements. Summarizes key measures used for public reporting and payment such as chart-abstracted clinical process, administrative data based outcomes, satisfaction, and efficiency. Highlights the advantages and disadvantages of each type of measure and discusses appropriate use of analytics and comparison data including patient satisfaction. Covers current public reporting and pay for performance initiatives and associated challenges. Includes emerging initiatives in the context of the electronic medical records, such as e-measures and meaningful use.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.621. Strategic Planning. 3 Credits.
Focuses on principles of strategic management and competitive analysis to support strategy development for health care organizations. Provides an understanding of how current business and management knowledge is applied to health care organizations to promote future success and competitive advantage. Examining contemporary theory and models, students learn to assess and develop an organization's mission and vision; perform an internal and external strategic assessment; evaluate competitive threats and responses; develop organizational strategies and measures of success; and evaluate the decision-making approaches best able to develop and execute the best strategies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.623. Financial Management in Health Care I. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.624. Financial Management in Health Care II. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.630. Healthcare Financial Management. 3 Credits.
Provides managers and professionals, both novice and experienced, with the financially quantitative knowledge needed for planning, controlling and managing in contemporary health care organizations under constantly changing conditions. Provides a foundation in the basic financial management skills as well as their advanced application. Introduces the basic business finance approaches to decision-making and governance. Provides students with a sound conceptual and applied understanding of the role that financial and cost management play in the business setting decision-making process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.633. Health Management Information Systems. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.635. Human Resources in Health Organizations. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.650. Non-Traditional & innovative Health Services Partnerships. 2 Credits.
Introduces innovative, non-traditional partnerships as an integral part of achieving a value-based healthcare system. Examines growing trends in healthcare and basic principles and practices of non-traditional partnerships. Discusses the method of building balanced business models to ensure obtainable milestones and returns for all parties. Presents lessons learned by industry leaders who have experienced establishing partnerships with multi-national corporate, investor, and strategic entities focusing on clinical services, population health and health/IT activities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.651. Principles and Applications of Advanced Payment Models in Population Health Management. 3 Credits.
Presents an overview of major issues related to the design, function, management, regulation, and evaluation of health insurance and managed care plans and implications for population health management. Provides a firm foundation in basic concepts pertaining to private and public sector health insurance/benefit plans. Includes key topics such as, population care delivery and payment innovations and management techniques, provider payment models, risk-sharing and other incentives for organizational integration, quality and accountability, cost-containment. Reviews innovative payment models and initiatives supporting health care providers and health care organizations in testing alternative care delivery in the context of three core strategies for improving the US health system: improving the way health care providers are paid, improving the way care is delivered, and increasing the availability of information to guide decision-making.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.655. Organizational Behavior and Management. 2 Credits.
Explores organizational behavior perspectives and theories, which provide the framework for the critical study of management, and the interpersonal skills and knowledge required by managers in the dynamic health sector. Students develop an approach to thinking about health sector organizations and their complexity. Emphasizes current thinking and the application of theory to practice in the areas of management, employee motivation, group behavior and team development, power and influence plus conflict management and negotiation skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.660. Marketing in Health Care Organizations. 3 Credits.
Introduces students to marketing concepts in health care through readings, guest speakers, small group exercises and individual study. Prepares students to conduct a situational analysis, understanding the market and consumer behavior as well as assessing the capabilities of the organization. Explores primary and secondary market research techniques. Discusses marketing strategy, including positioning and branding, program/service development, pricing, distribution, and promotion. Explains evaluation and measurement methods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.670. Negotiation in Health Care Settings. 3 Credits.
Addresses the basic skills needed for effective negotiation of business relationships in health care and other settings. Focuses on understanding and developing a systematic approach to preparing for, structuring, and negotiating key business relationships. Presents basic process and conflict management skills needed for effective negotiation of business relationships in health care. Also explores the ethics of negotiation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.675. Medical Practice Management. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.678. Introduction to Healthcare Quality and Patient Safety: A Management Perspective. 2 Credits.
Introduces students to the latest thinking on healthcare quality and patient safety improvement through didactic sessions, interactive exercises and case studies that have direct relevance for the public health practitioner, healthcare administrator or clinician. Focuses on the specific domains of healthcare quality and patient safety based on the strategies recommended by the Institute of Medicine report "To Err is Human."
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.693. Introduction to Comparative Effectiveness and Outcomes Research. 3 Credits.
Introduces students to the motivation and methods of comparative effectiveness research. Reviews the problems faced by decision makers across the US health care system, and the priority topics for investigation. Explains the role of stakeholders, including payors, manufacturers, health care organizations, professional groups, providers and patients. Explains study designs and methods used in effectiveness research, focusing in particular on observational studies. Also describes the policy implications of this research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.700. Leading Organizations. 3 Credits.
Focuses on the essential principles of personal and interpersonal leadership that can be used in an organizational setting to enhance performance, align and empower personnel, and assure organizational engagement. Applies leadership skills in a hands-on practical way that encourages students to challenge their own beliefs and assumptions about what constitutes leadership. Offers a comprehensive review of contemporary issues and perspectives on leadership. Explores multidisciplinary and systems-oriented approaches as well as classic leadership theory and evolving contemporary beliefs. Includes topics such as development of leadership theories, personal assessment and development, values and ethics, motivation, power, followership, group dynamics, multiculturalism in leadership, conflict resolution, performance excellence, and the change process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.701. Strategic Leadership and Decision Making. 3 Credits.
Examines how leaders formulate coherent and effective strategies for policy-making in a complex and unpredictable environment, consider planning, organization, persuasion, and adaptation to changing national and international pressures, as well as broader studies of strategic decision-making in the modern world. Considers what it means to be an effective strategist, policy-maker, agenda-setter, and change agent. Assess the difficulties involved with fulfilling these often difficult tasks within and outside of the organizational setting.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.702. Leading Change: Building and Empowering Teams. 3 Credits.
Examines the design, management, and leadership of teams in organizational settings. Focuses on the interpersonal processes and structural characteristics that influence the effectiveness of teams, the dynamics of intra-team relationships, and sharing of knowledge and information in teams. Participants will understand the theory and processes of group and team behavior to become successful leaders and adept in leading and managing groups and teams.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.703. Learning Organizations & Knowledge Management. 3 Credits.
Explores concepts of organizational learning, analyzes global research trends in how evidence-of-learning is captured in workplace settings around the world, and applies organizational learning models to foster and support innovative workplaces. Discusses how various factors such as diversity, complexity, crises, and increasingly advanced digital solutions (technology) change the pace in which an organization learns, adapts, and competes. Embraces a system perspective of learning at the organizational level-of-analysis grounded in the premise that innovation and sustainable change is contingent upon an organization’s ability to create management structures that apply, analyze, evaluate and convey information, enhance decision-making, and achieve desired results through continuous learning.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.810. MHA Residency. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.861. MHA Case Competition. 2 Credits.
Introduces students to the case competition early in the year as part of their seminar. Provides students with the opportunity to apply what they have learned in the classroom setting to a real-world case study.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.862. MHA Capstone. 1 Credit.
MHA students synthesize and integrate the knowledge and skills they have acquired throughout the program and their field placement to the examination and analysis of a current healthcare trend and its potential implications for health care services and delivery systems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.867. MHA Seminar. 1 Credit.
Presents major nutritional problems that influence the health, survival, and developmental capacity of populations in low and middle-income settings. Covers approaches implemented at the household, community, national, and international levels to improve nutritional status. Explores the degree to which malnutrition can be prevented or reduced prior to achieving high-income populations or certain economic development, through targeted public and private sector interventions that address the causes of malnutrition.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.869. Healthcare Consulting Practicum. 2 Credits.
Students are required to meet with the client (hospital sponsor of the consulting project) to develop an understanding of the project requirements. Prior to beginning the consulting engagement students will a) devise a plan for carrying out the consultancy, b) prepare a scope letter describing the project, the scope of work, deliverables, timeline and fee arrangement
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.873. SS/R: ADVANCED CONFLICT MANAGEMENT AND COACHING SKILLS. 1 Credit.
Builds upon the strategies and approaches presented in #312.871.97 SS/R - Leadership Skills: Negotiation & Conflict Management in Health Care. Part One teaches participants how to analyze, prepare for, and conduct a successful conversation or negotiation when emotions are running high. Uses case studies, experiential learning, group discussion, and lecture to introduce the “Difficult Conversation” framework developed by members of the Harvard Negotiation Project and a diagnostic tool for managing conflict. Participants are videotaped while participating in a conflict management simulation. Each participant receives an analysis and critique of her/his taped performance and a copy of their filmed simulation. Part Two equips participants with the skills needed to coach supervisees and colleagues through workplace conflicts and strengthen conflict management capacity in the organization. Develops understanding of and proficiency in the use of a conflict coaching framework by using lectures, case studies, group discussions and experiential learning.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.312.910. LAB for 312.810.
Lab for PH.312.810
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.601. Economic Evaluation I. 3 Credits.
Presents an introduction to the theory, methods, and application of economic evaluation in health care. Provides a specific focus on cost-effectiveness analysis, with an emphasis on identifying and measuring outcomes, understanding incremental cost-effectiveness ratios (ICERs), conducting sensitivity analyses, and incorporating time preferences. Considers decisions about the allocation of funds to different population segments or different types of programs, and to programs with great benefit for a few versus modest benefit for many. Prepares students for advanced topics in Economic Evaluation II-IV.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.602. Economic Evaluation II. 3 Credits.
Builds on the theory and methods taught in Economic Evaluation I to allow students to gain an understanding of intermediate topics in CEA. Provides students with experience of hands on development of decision trees. Focuses on having students become familiar with best practices in this growing field. Establishes the ability to critically appraise published work and construct simple cost-effectiveness models using Excel and other software. Prepares students for more complex modeling covered in Economic Evaluation III-IV.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.603. Economic Evaluation III. 3 Credits.
Builds upon the theoretical concepts taught in Economic Evaluation I-II by providing advanced content in the areas of decision analysis, cost-effectiveness, and alternative approaches of modeling research questions for these fields. Include approaches for calculation of costs and effectiveness measures using standard modeling methods. Compares outputs as a result of decision tree and Markov modeling and introduces sensitivity analysis. Includes group projects to produce a well-thought model on a topic of their own choosing in decision analysis or cost-effectiveness.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.604. Economic Evaluation IV. 3 Credits.
Builds upon the theoretical concepts taught in Economic Evaluation I-II and the methodological skills taught in Economic Evaluation III. Examines advanced methods, as well as areas of controversy with applications to international health. Explores methods for performing cost-effectiveness analysis (CEA) and benefit-cost analysis (BCA) with primary and secondary data. Examines alternatives to CEA, including cost-benefit analysis, stated preference methods, revealed preferences, and multi-criteria decision analysis. Emphasizes an applied experience in conducting economic analysis based on survey data as well as secondary data in a global context. Includes additional applications to adjust CEA to account for equity goals, to project program scale-up, and to account for "behavioral" agents.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.610. Health Economics for Managers. 3 Credits.
Applies the analytical tools of economics to issues in health care that are especially relevant to managers and leaders of health care organizations. Examines topics including: the use of economic incentives to influence health behavior; asymmetric information and the role of agency in health care; the application of behavioral economics to health care; government as payer and regulator, and equity/ethical considerations; the role of health insurance; and the theory of the firm as it applies to physicians, hospitals, and systems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.620. Introduction to Behavioral Economics: Theory and Practice. 3 Credits.
Explores the theoretical framework of behavioral economics, and applies that framework to issues in health and healthcare. Addresses elements of the theory of behavioral economics including: prospect theory, System 1/System 2 thinking, hyperbolic discounting, loss aversion, the endowment effect, framing and anchoring, mental accounting and commitment contracts, heuristics and biases, the power of the default, and pricing strategies. Applies these concepts to human behavior in general, as well as that of patients and physicians.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.641. Introduction to Health Economics. 3 Credits.
Introduces students to the application of economic tools to the interaction among the many stakeholders in the health care system and the public health system. Intended for those students who want an overview of health economics, but who do not expect to pursue additional courses in the field. Uses a standard health economics text as the main reading; also draws on articles from the popular press and professional journals that illustrate the tools of economics or their application to health care and public health issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.643. Health Economics. 3 Credits.
Introduces the analytical tools of economics and applies them to issues in healthcare. Topics include: resource allocation in health care; government as payor and regulator; asymmetric information and the role of agency; the market for health insurance; market structure and competitive strategy as it applies to health care organizations; the market for labor in health care; and the market for innovations and technology. Uses mainstream neoclassical microeconomic theory as the basis for analysis, but also explores the implications when the assumptions of this model are violated. Uses a standard health economics text as the main reading, but uses journal articles in the field to examine how the profession is analyzing health care and public health issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.644. Intermediate Health Economics. 3 Credits.
Building on the basic concepts and applications presented in Health Economics I, students in Health Economics II are exposed to some of the seminal topics in health economics, with a particular focus on the issues of human capital, economics of the household and the demand for healthy and risky behaviors. Topics include: the economic returns of education; economics of the household; the demand for health (Grossman Model); addiction; teen sex; obesity, the statistical value of a life, and fertility. While it will not be the focus of the class, some time will be spent on the dynamic modeling and econometric techniques that are used in the papers that we review. Teaching methods include lectures, group discussion and problem solving exercises, and hands on experiments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.653. Advanced Health Economics I. 2 Credits.
Covers seminal publications in health economics and is targeted towards advanced Ph.D. students. Describes theoretical models in health economics for the determinants of health and demand for healthcare services, the foundations for cost-effectiveness analysis, the supply of healthcare services in competitive, monopolistic, and government-regulated markets, and the provision of private and public health insurance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.654. Advanced Health Economics II. 2 Credits.
Covers seminal publications in health economics and is targeted towards advanced Ph.D. students. Describes theoretical models in health economics for the determinants of health and demand for healthcare services, the foundations for cost-effectiveness analysis, the supply of healthcare services in competitive, monopolistic, and government-regulated markets, and the provision of private and public health insurance
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.655. Advanced Health Economics III. 2 Credits.
Covers seminal publications in health economics and is targeted towards advanced Ph.D. students. Describes theoretical models in health economics for the determinants of health and demand for healthcare services, the foundations for cost-effectiveness analysis, the supply of healthcare services in competitive, monopolistic, and government-regulated markets, and the provision of private and public health insurance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.656. Advanced Health Economics IV. 2 Credits.
Covers seminal publications in health economics and is targeted towards advanced Ph.D. students. Describes theoretical models in health economics for the determinants of health and demand for healthcare services, the foundations for cost-effectiveness analysis, the supply of healthcare services in competitive, monopolistic, and government-regulated markets, and the provision of private and public health insurance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.685. The Economics of Tobacco Control. 1 Credit.
Introduces students to the economic tools and analysis used to confront the public health challenges caused by smoking. Reviews the evidence of the health and economic consequences of tobacco use. Emphasizes the rationale for increases in taxes, financial incentives to discontinue tobacco cultivation, and regulatory measures such as bans on smoking in public places and restrictions on access for minors. Provides economic tools and background information for public health specialists, policymakers, the news media, and others interested in using evidence-based policy to prioritize and address public health concerns related to tobacco control.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.790. Introduction to Economic Evaluation. 3 Credits.
Prepares students to read and interpret cost-effectiveness studies. Introduces the basic economic concepts that are needed in order to understand the recommendations from the United States Panel on Cost Effectiveness in Health and Medicine, such as the distinction between opportunity costs and budgetary costs. Considers review recommendations, particularly as they apply to cost-effectiveness research reports. Discusses the relationship between cost-effectiveness results and other elements of the health care policy decision-making process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.793. Extended Exercises in Cost Effectiveness. 2 Credits.
Provides students with experience in seven short exercises that explore a variety of aspects of cost-effectiveness analysis. Students learn how to link all the steps together to complete a full cost-effectiveness analysis from start to finish. During the two day course, students work in Microsoft Excel to setup a workbook that will allow them to complete a cost-effectiveness analysis, manipulate the results to explore multiple possible assumptions, and have the opportunity to share their work in a format that is easily accessible.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.861. Public Health Economics Seminar. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.313.865. MHS Capstone in Health Economics. 2 Credits.
Produce a scholarly paper that provides a meaningful contribution to knowledge of the health economics. Affords the opportunity to work under the direction of a research mentor and presenting research results to a group of peers.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.315.700. Health Information Systems: Design to Deployment. 3 Credits.
Reviews health information systems, such as patient records, patient monitoring, imaging, public health, educational, bioinformatics and scholarly systems. Teaches the core architectures and technologies of these core systems, focusing on commonalities and differences and design.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.315.703. Leading Change Through Health Informatics. 3 Credits.
This course will review the health information systems through case studies in the evaluation processes. Presents a framework for design and evaluation of systems based on user needs, functions performed, related information activities, and available technology. Skills taught include the use of measures and methods for qualitative and quantitative evaluation of information systems, including cost, performance, effectiveness and benefit/outcome determination.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.315.707. Introduction to Biomedical and Public Health Informatics. 3 Credits.
This course will contrast differences in roles, needs, and solutions among major players in the national and commercial health IT and informatics communities. The course will define public health informatics and explain why things do or don't happen in IT at the national and institutional levels. The course will apply available sources of data, information, and knowledge to address healthcare and public health problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.315.708. HIT Standards and Systems Interoperability. 3 Credits.
Students learn the data, information, and knowledge standards critical to the successful implementation of local, regional, and national health-related information systems. Target competencies are to identify the appropriate level of HITSP standards for an informatics problem, and select the appropriate standard within that level; create use cases and an organizational process to define an interoperability standard for a specific healthcare/regional situation; participate in a national standards-creation process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.315.709. Health Sciences Informatics, Knowledge Engineering and Decision Support. 3 Credits.
Provides a framework for understanding decision support in the workflow of the health sciences. Focuses on the types of support needed by different decision makers, and the features associated with those types of support. Discusses a variety of decision support algorithms, examining advantages and disadvantages of each, with a strong emphasis on decision analysis as the basic science of decision making. Students are expected to demonstrate facility with one algorithm in particular through the creation of a working prototype, and to articulate the evidence for efficacy and effectiveness of various types of decision support in health sciences and practice, in general.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.315.725. Applied Clinical Informatics. 3 Credits.
Introduces the field of Applied Clinical Informatics, which is focused on leveraging clinical information systems and technology to improve patient and family-centered care. Provides exposure to a range of clinical workflows as well as patient/caregiver needs and how these may be supported by health information technology. Topics include: Workflow analysis, clinical decision support (CDS), electronic health record (EHR) and patient portal best practices, health information exchange (HIE), integrated laboratory, imaging and pharmacy information, telehealth and digital health strategies, and evaluation. Considers topics in the appropriate context of care continuum, clinical care transitions, patient safety and care quality, regulatory requirements, information security, organizational governance and project management.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.315.727. Database Querying in Health. 3 Credits.
Introduces core concepts of relational databases using Structured Querying Language (SQL) along with terminologies related to clinical databases used in health information systems. Utilizes the Precision Medicine Analytics Platform with access to de-identified medical records of 70K patients with Diabetes with over 100 million data elements, including las, medications, encounters procedures, symptoms, and vitals. Focuses on answering clinical and research questions and discussion around effective data governance. Analyzes 3-yers of data to look for clinical and population-level management strategies for type 1 and type 2 diabetes. Includes analysis of a thorough data quality evaluation framework as well as identifying predictors for hospitalization and rehospitalization.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.317.600. Introduction to the Risk Sciences and Public Policy. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.317.605. Methods in Quantitative Risk Assessment. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.317.610. Risk Policy, Management and Communication. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.317.615. Topics in Risk Assessment. 2 Credits.
Uses a case study approach of a selected risk-based public health issue to integrate student's application of the skills in the risk sciences (risk assessment, risk management, and risk communication).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.317.700. Climate Change Adaptation in Public Health: Large World Cities. 3 Credits.
Provides an overview of the science behind climate change and highlights the particular risks of global mega-cities due to their concentrated populations, urban heat-island effect, frequent proximity to coasts and rivers, and locus of transport and trade. Uses the WHO and US CDC Guides to Vulnerability for Public Health and the UN Habitat Guide to Vulnerability Assessment for Cities to identify populations at greatest risk from climate impacts. Critically evaluates through case studies actual climate and health adaptive policies as they are implemented in real-life contexts in several large, innovative world cities including San Francisco, London, Rio de Janeiro, Durban, and Copenhagen.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.317.864. Advanced Topics in Climate Change Policy. 2 Credits.
Focuses on advanced issues at the forefront of climate change and public health policy and practice. Takes a complex-systems view that traverses the boundaries between sectors, spans government levels, and integrates perspectives across public and private actors. Topics to be determined each year according to faculty interest and student need. Uses case studies, policy analysis readings, and discussions to foster student learning.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.318.603. Applied Microeconomics for Policymaking. 3 Credits.
Introduces the basic principles of microeconomics by emphasizing applications to the solutions of public problems. Students examine how markets operate and the role of government intervention. Acquaints students with public versus private goods, externalities, information asymmetry and other issues. Provides a theoretical framework for addressing policy problems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.318.615. Program Evaluation for Public Policy I. 3 Credits.
Introduces the fundamental principles and practices involved in the design, implementation, and analysis of program evaluations. Topics to be considered include the evaluation of ongoing programs and test of new interventions being considered for broader adoption; determining whether programs are 'working'; procedures involved in implementing an evaluation in the field, including potential pitfalls; procedures for collecting and analyzing data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.318.616. Program Evaluation in Public Policy II. 3 Credits.
Introduces the fundamental principles and practices involved in the design, implementation, and analysis of program evaluations. Topics to be considered include the evaluation of ongoing programs and test of new interventions being considered for broader adoption; determining whether programs are 'working'; procedures involved in implementing an evaluation in the field, including potential pitfalls; procedures for collecting and analyzing data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.318.623. Social Policy for Vulnerable Populations in the U.S.. 3 Credits.
Explores the social determinants underlying poor health outcomes among vulnerable populations in the U.S. and considers policy approaches to address those determinants. Explores examples of vulnerable populations including but not limited to groups facing extreme poverty, homelessness, serious mental illness, addiction, and disability. Examines definitions of vulnerability; the array of social determinants contributing to poor health outcomes among vulnerable populations in the U.S.; current U.S. social policy approaches for vulnerable populations in the areas of healthcare, disability, poverty, housing, and criminal justice policy; and the politics of social policy in the US. Provides students with opportunities for integrating social policy concepts, theories, and frameworks through an in-depth analysis of the sources of vulnerability and related policy approaches to improve health and social outcomes in specific vulnerable populations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.318.625. Management of Nonprofit Organizations. 3 Credits.
Provides the necessary tools to effectively manage a nonprofit organization. Emphasizes financial, personnel and operations management, focusing on skills necessary to be an executive running a program within a large institution or heading an independent nonprofit agency. Addresses budgeting (both grant and organizational), reading and interpreting financial reports, grant writing techniques and staff and compensation management. Also examines how to work with the legal restraints and opportunities to maximize organizational effectiveness within the laws and regulations that make nonprofits different from the government and for-profit sectors.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.318.636. Urban Policy. 3 Credits.
Explores urban issues through a policy lens. Examines a wide range of urban characteristics and the challenges cities face from fiscal stress and governance to poverty, homelessness, and drugs. Explores policy remedies proposed or tried in the past, how well they have worked, and what other strategies may be tried.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.318.640. PRACTICAL POLITICS, POLICY AND PUBLIC HEALTH. 3 Credits.
Explores how one effectively influences policy and the connection between policy and politics. Addresses how the two are related via a practical and hands-on approach, focusing on effectiveness, influencing the legislative process, and practical skills. Addresses how to approach legislators and other policy makers, gain insight into the political process, understand how bills are drafted and amended, develop persuasive arguments, and build strategic political coalitions. A sample of issues, with a focus at the state level, include: insurance regulation, reproductive rights, mental health systems, air/water quality, programs for the disabled, and gun policy. Also considers non-health care issues, including education funding and policy, transportation, criminal justice system and jails, gambling/gaming, building development, and election law.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.318.864. Current Issues in Policy Analysis. 2 Credits.
Provides policy researchers with a set of analytical frameworks to gain a greater understanding of policy issues. Explores all aspects of a topical policy issue from its origins, transformations, and impact on health and social justice. Policy topics are determined each year according to faculty interest, student need, and policy saliency. Uses case studies, policy analysis readings, and discussions to foster student learning. Some sessions focus directly on translating policy research into policy alternatives while others focus on the political and social environment
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.319.600. Quality Management in Health Care. 3 Credits.
Teaches students the basic concepts of quality in health care, and also equips them with approaches and skills to implement sustainable quality assurance programs in the health system. Introduces students to various quality improvement approaches (QC, QA, CQI, TQM), role of standards and norms, use of quality improvement tools, methods of quality assessment, and approaches to operationalize and implement quality assurance programs. Explains the concepts of organization for quality improvement, including Quality Teams (QT) and Quality Control Circles (QCC).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.319.601. Health Information Management and Decision-Making. 3 Credits.
The course provides an overview of Health Information Management System, its structure and functions. Identify information needs and indicators in the health systems and public health. Describe uses of information for effective management of health services. Review framework and organizational structure of HMIS. Provide a critical review of current issues problems in information management in the health systems in the context of developing countries. Describes various decision models and reviews decision making process in health care; application of information in performance tracking and analysis; monitoring of services and programs, supervision and impact evaluation. The course emphasizes designing health information systems and uses of IT.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.319.602. Project Management and Evaluation. 3 Credits.
Covers basic concepts and principles of project management and project management cycles. Provides learning opportunities for developing project management skills, and translates modern management concepts into project planning and management using a Log Frame Approach (LFA). Describes implementation structure, coordination and supervision mechanisms, and project evaluation methods. Reviews human aspects of project management such as motivating people, team building, and improving personal influence and effectiveness
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.319.603. Strategic Management. 3 Credits.
Presents a practical framework for formulating, implementing and controlling organizational and program strategies in public health. Provides an overview of the sub-systems, processes and models in strategic management as applicable to public health and health care organizations. Critically reviews the major environmental trends affecting healthcare organizations. Discusses how to use internal and external environmental analysis to identify the bases of sustained competitive advantage. Presents frameworks for strategy formulation and implementation including SWOT analysis and decision logic.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.319.606. Health Economics and Cost Effectiveness. 3 Credits.
Introduces economic concepts and principles for better resource management in the health care sector. Examines the public finance approach to policy questions relating to the role of government and other stakeholders. Acquaints students with the methodologies of both cost and demand analyses. Demonstrates how to make use of such analyses in policy planning and evaluation, including practical skills in cost effectiveness analysis of public health services and programs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.319.607. Human Resources Management for Health. 3 Credits.
Focuses on the skills necessary for managing people in the health organizations and systems. Introduces concepts of human resource management in the context of organizations including organizational characteristics, learning organizations, human resource planning, recruitment and selection, job analysis and evaluation, performance appraisal, career planning, motivation, leadership, team work, and managing employee relations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.319.608. Finance Management, Accounting and Budgeting. 3 Credits.
Explains the role of budgeting as a key component of the administrative process. Describes basic financial management concepts and techniques, and provides a foundation for integrating these techniques into health care organizations. Presents strategies for evaluating the financial status of a department or health unit in order to determine whether corrective actions need to be taken. Presents various analytical methods in management decision making, including benefit/cost ratio analysis, variance analysis, and break-even analysis
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.319.610. Principles of Management in Public Health. 3 Credits.
Introduces the basic principles of management in the context of public health. Covers basic management functions such as planning, organizing, implementation, coordination, monitoring, supervision, leading and controlling. Explores strategic management and decision making tools. Addresses core management areas in public health – planning, human resources management, management information systems, logistics and supply chain, financial management and budgeting, communication, and organizational culture and behavior. Discusses concepts of leadership and motivation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.552.601. Foundational Principles of Public Health. 0.5 Credits.
Provides a broad systematic understanding of the executive practice of public health from its inception to modern day. Uses case studies, as well as ethical and public heath practice frameworks to provide students with a grounding in "what is public health practice," why it is important, and why it is contested.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.600. International Travel Preparation, Safety, & Wellness. 1 Credit.
Prepares students who aim to work and live overseas. Explores the epidemiology of common morbidity and mortality among travelers. Examines key prevention, safety, and travel medicine principles and services to contextualize risks and maintain wellness. Reviews applicable interventions, appropriate vaccines, and personal protection methods to prepare students to respond to expected and unexpected situations. Assists students with personal preparations for travel through country-specific assignments. Challenges students to examine travel health and safety priorities through case studies and discussions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.601. Foundations of International Health. 4 Credits.
Provides an overview of foundational approaches and issues in International Health, preparing students to gain the skills and attributes needed to work in global public health. Examines conditions faced by disadvantaged populations, primarily in low and middle income countries (LMICs), and pathways to achieving better health outcomes. Applies principles of health equity and social justice in analyzing global health policies and programs, and develops skills to apply different frameworks for diverse types of public health intervention. Students develop and articulate evidence-informed arguments concerning public health strategies in different contexts, and practice communication skills that demonstrate respect for other cultures and perspectives. They use a range of tools to prepare for work in global public health, including how to conduct situational analyses across a range of settings, how to analyze scale-up, sustainability, and equity, and how to move research into practice.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.605. Doctoral Seminar in International Health I. 3 Credits.
Explores topics of relevance to International Health, in a six-module format. Each module comprises a set of readings which are discussed in class by students working in groups. Each session is led by a group of students with facilitation by course faculty and guest faculty as appropriate to the topic. Modules include (1) Health and International Development (2)Transitions (demographic, epidemiologic, nutritional and migration), (3) Sanitation programs, (4) Disease Eradication Programs, past present and future , (5) Chronic Disease, a new challenge for programs, (6) Primary Health Care, history, evidence and future
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.606. Doctoral Seminar in International Health II. 3 Credits.
Discusses how to identify a thesis topic, write a proposal, seek funding, understand challenges in execution, and thesis format and write up. Students read five doctoral theses, one from each Department of International Health program, and student groups lead discussions with the former students and their thesis advisors in class.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.608. International and Global Health. 4 Credits.
Introduces students to an international perspective of health, disease, injury, and health systems. Develops requisite knowledge and understanding of globalization and health, global disease burden and international health scenario. Using case studies, students perform a comparative analysis of disease burden in various countries, health systems and policies, in developed and developing countries, health sector reforms and country experiences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.701. School-wide 2nd Year DRPH Seminar. 2 Credits.
Assists 2nd year DrPH students mastering skills related to study design and implementation, as preparation for work on their dissertation proposal. During the course of the year, this seminar series focuses on epistemology, alternative study designs, and how different study designs may best be suited to address different types of research questions. The course builds upon other methods classes and supports students to develop a draft research proposal of their own. While the course is designed to prepare students for their dissertation work, students can complete the course without having decided upon a dissertation topic.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.800. MPH Capstone International Health. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.810. Field Placement DRPH Program International Health. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.820. Thesis Research DRPH IH. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.840. Special Studies and Research DRPH Program International Health. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.842. Doctoral Independent Goals Analysis - International Health. 1 Credit.
Develop a doctoral academic plan through discussions with faculty advisor resulting in the development of a written document called the Individual Development Plan. Review course tracking sheet based on skills and methods student plans to learn. The IDP is a living document that is part of the student's self-assessment and departmental annual review. Supports the student's successful performance in the program and prepares students for their intended future career.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.220.895. MPH Practicum: International Health. 1 - 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.602. Applications in Managing Health Organizations in Low and Middle income Countries. 3 Credits.
Uses case studies, a simulation, and group-based activities, supplemented by required weekly online lectures and readings, students explore a variety of settings found in low and middle-income countries in which to apply management concepts. Examines: (1) organizational restructuring in response to decentralization, (2) environmental scanning ,(3) systems behavior in hospital organizations, (4) multiple approaches to group decision making, (5) managing to achieve agreement in health organizations, (6) preparing, implementing, and communicating a budget that is based on limited resources within a business, (7) performance improvement concepts and tools in a healthcare organization, and (8) the construct of a "balanced score card" for a health organization. Applies these concepts to the activities and assignments in this management skills learning lab.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.604. Case Studies in Management Decision-Making. 3 Credits.
Students analyze problems and develop strategies based on real dilemmas faced by decision-makers. Students formulate positions before class and actively participate in discussion during class. Cases come from both International and U.S. settings, and deal with issues such as: conflict between budget and program offices, working with governing boards, contracting between government and non-government providers, dysfunctional clinics, reforming hospitals, managing local politics, cutting budgets and collaborating in informal organizations. Develops skills in leadership, negotiation, analysis, communication, and human resource management.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.605. History of International Health and Development. 2 Credits.
Examines the history of western efforts to promote health and nutrition in the "developing world" from the beginnings of tropical medicine to recent efforts of disease eradication. Explores the various economic and political interests, as well as cultural assumptions, that have shaped the development of ideas and practices associated with international health in "developing" countries. Topics include history of international health organizations, strategies, and policies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.606. Training Methods and Continuing Education for Health Workers. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.607. Essential Skills for Women's Leadership in Global Health. 3 Credits.
Provides a robust understanding of the barriers women face in leadership and guides the development of solutions and strategies for individuals and institutions moving forward. Enhances knowledge about women's leadership in global health including barriers and models/frameworks that have been used to promote women in leadership. Distinguishes various leadership approaches and their implications in different cultural settings, highlighting diversity and intersectionality theories in particular. Builds essential skills including self-awareness, communication, and negotiation. Encourages a solutions-oriented mindset via the development of individual and institutional strategies. Utilizes case studies and discussion exercises that feature diverse organizational and societal contexts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.608. Managing Non-Governmental Organizations in the Health Sector. 3 Credits.
Familiarizes students with the key competencies required for managing NGOs in the health sector. Though many of the situations described in the lectures are taken from the instructor's experiences in managing international NGOs in developing countries, the material presented is applicable in organizational settings in developed countries as well. Topics correspond to the key responsibilities of NGO or health program directors. Lectures present guidelines, best practices, and management tools for the area of responsibility followed by a discussion of the lecturer's and students' experiences on those topics. Readings, which provide background information, are assigned for each class.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.610. Pharmaceuticals Management for Under-Served Populations. 3 Credits.
Students analyze problems and develop strategies based on real world drug management issues, including regulations, manufacture, procurement, distribution, safety, policy, financing and the unique aspects of international pharmaceutical trade, the role of the World Trade Organization -- Trade-Related Aspects of Intellectual Property Rights (WTO-TRIPS), government, NGOs and individuals in the selection and use of pharmaceutical products. Course materials are drawn from both developed and developing countries so that the student will be knowledgeable about the role of Essential Medicines and the formation of a National Drug Policy. Uses a multidisciplinary approach to provide students with an operational understanding of factors influencing access to and use of pharmaceuticals and other health commodities. Collectively, these materials and approaches are intended to stimulate critical thinking on how to improve access to and the use of pharmaceutical products.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.611. Food Security and Nutrition in Humanitarian Emergencies. 2 Credits.
Examines food aid, food insecurity, and nutritional deficiencies as they appear in different types of humanitarian emergencies. Discusses profiles of major international relief organizations involved in nutrition and food assistance and common programmatic interventions used in response to food crises. Emphasizes development of practical skills and knowledge that can be applied in field settings. Students learn to appraise and compare content, cost, and logistical considerations associated with large-scale feeding programs, and become familiar with nutrition surveys and curative nutrition programs. Factors contributing to food insecurity are considered and various response modalities, including in-kind assistance and cash-based approaches, discussed.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.612. Confronting the Burden of Injuries: A Global Perspective. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.613. Introduction to Humanitarian Emergencies. 3 Credits.
Introduces different types of humanitarian emergencies, humanitarian architecture and provides an overview of sectoral focus areas of humanitarian response. Informs students of the environment in which these emergencies occur and how public health responses in various types of emergencies and contexts differ. Explores mechanisms of preparedness, management of response to humanitarian emergencies and long-term recovery.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.614. International Political Science for Ph Practitioners. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.615. Health Emergencies in Large Populations (H.E.L.P.). 5 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.616. Ethics of Public Health Practice in Developing Countries. 2 Credits.
Provides a forum for discussion and deliberation about ethical issues in the practice of public health (including the conduct of research) in developing countries. Equips students to identify and analyze critical ethical issues and to consider systematically the ethical responsibilities of all parties involved.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.617. Behavioral Economics in Health Decisions. 2 Credits.
Prepares students to challenge superficial intuitive judgments that are attractive because they make obvious sense, but which overlook important considerations that demand more analytical assessment. Discusses human behaviors that then come into play in a more careful analysis, which are then examined for their legitimacy and reasonableness in resolving questions that are traditionally considered to be economic in nature. Develops ways to blend relevant behavioral factors with economic perspectives and methods to design balanced action strategies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.619. Introduction to Microeconomics. 3 Credits.
Introduces economics of the business enterprise, the household, and the industry. Topics include supply and demand, price and income elasticity, equilibrium of the firm, and the measurement of poverty and inequality.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.620. Applying Summary Measures of Population Health to Improve Health Systems. 3 Credits.
Explores the conceptual basis and application of summary measures of population health status. Presents approaches to measuring the burden of disease in populations and their use for guiding resource allocation and planning efficient and equitable health care systems. Lectures, discussions, and group exercises focus on composite indicators, exploring social and ethical value choices, and assessing the burden of disease at national level.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.621. Gender and Health: Foundational Theories and Applications. 2 Credits.
Provides a broad overview of the field of gender as applied to public health. Discusses the distinction between sex and gender and how they intertwine. Examines the effect of gender power relations on women's, men's, and gender minorities' health, including transgender and cisgender people. Prepares students to apply foundational theories in gender and health to a broad range of health topics. Presents strategies for incorporating gender analysis into health research and interventions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.622. Using Qualitative Methods for Program Planning and Evaluation. 1 Credit.
Introduces students to the role of qualitative methods in assessing population needs and designing acceptable interventions. Emphasizes the complementarity of qualitative and quantitative methods and how both should be combined for effective program design, implementation, monitoring, and evaluation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.623. Water, Sanitation and Hygiene in Humanitarian Emergencies. 2 Credits.
Water, sanitation and hygiene (WASH) is an essential component of humanitarian emergency planning and response. This course provides WASH introductory concepts, technical knowledge and practice in humanitarian contexts, including conflict, natural disasters and disease epidemics. Essential cross-cutting issues such as coordination, intersectoral planning and response as well as community and behavioral aspects are provided with examples from recent disasters.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.624. Urban Health in Developing Countries. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.625. Evaluation of District-Level Primary Health Care Implementation in Low-and Middle-income Settings. 3 Credits.
Prepares students to analyze local contexts and project implementation designs in order to develop evaluation plans that can be practically applied to programs in middle and low-resource settings. Discusses actual experiences of helping implementers design evaluations for district level programs, taking into consideration time and budget limitations. Focuses on developing pre-post evaluation plans that measure adequacy of implementation, based on evaluation conceptual frameworks, following theory of change logic. Explores choosing the proper evaluation methodology (i.e. Qualitative and/or Quantitative). Includes choosing appropriate indicators based on internationally accepted primary health care indicators. Explores alternatives for addressing mortality measurement.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.626. Introduction to Household Surveys for Evaluation of Primary Health Care Programs in Low- and Middle- Resource Settings. 3 Credits.
Introduces participants to fundamental skills needed to design and manage implementation of household surveys. Presents real world experiences of using the Knowledge, Practice, and Coverage (KPC) tool for household surveys in middle and low-resource settings. Includes constructing a questionnaire from standard KPC modules, indicator selection, sampling plan development, use of parallel sampling, household selection, management and oversight plan, and ethical considerations. Introduces participants to adjustments that can be made so that the survey can be implemented within time and budget constraints.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.627. Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries. 4 Credits.
Understands the clinical and social causes of high maternal and newborn mortality and morbidity. Exposes students to the clinical, program and policy interventions that address these issues, and evaluates the strength of the evidence supporting these interventions. Offers practical exercises for students to: 1.) understand the scope and epidemiology of both maternal and neonatal problems, and 2.) design and assess programmatic responses to address them. Upon completion, students will have the knowledge base to be able to contribute to program and policy responses with an informed perspective to avert maternal and newborn deaths in different contexts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.628. Psychological First Aid: Principles and Practice. 2 Credits.
Examines the psychological principles and practical guidelines for the provision of PFA as a means of fostering resilience in others. Provides in-person instruction in the RAPID model of PFA to students as well as practicing professional in a wide range of disciplines. The ability to assist people in acute distress is an essential aspect of healthcare, disaster relief, education, and leadership in all profession.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.629. Prospective policy analysis for health policy and systems research: methods and applications. 2 Credits.
Introduces learners to tools and methods to facilitate aspects of real-time policy analysis (from agenda setting, policy formulation, to policy implementation) and supports them to think through and plan to conduct a prospective policy analysis to a current public health problem, as well as to identify ways of engaging with the policy making process for the identified problem.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.630. Tackling the Intersectoral Challenge of Antimicrobial Resistance: Problem Solving Seminar. 3 Credits.
Examines antimicrobial resistance (AMR) as an intersectoral challenge, one that affects both our healthcare delivery and food systems. As a One Health issue, AMR also has an environmental dimension: up to 80% of some antimicrobials consumed by humans or food animals may be discharged into the environment. The incentives of traditional business models, where a drug company's revenues come from volume-based sales, are at odds with efforts to ensure access, but not excess use of antimicrobials. Some have called AMR an ongoing pandemic; others have noted the opportunity to invest in shared infrastructure, from infection control and prevention to integrated disease surveillance, that might address both future pandemics and AMR. Invites students to tackle this global health challenge by applying strategic planning tools to deepen one's appreciation and find creative solutions to AMR.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.631. Evaluation Methods for Injury Interventions. 3 Credits.
Prepares students to participate in the design/conduct of LMIC road safety program evaluations using standardized tools from the WHO, and to translate results for advocacy. Introduces the theory and use of these tools/study designs via lectures followed by case studies of how they have been used in LMICs. Students use EpiInfo to compile secondary data and do basic calculations to understand the burden of road crashes in an LMIC and then identify a plausible intervention and propose a study to evaluate its impact. Students work in groups to prepare an advocacy presentation based on a published program evaluation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.632. Introduction to Improving Quality in Public Health Practice. 1 Credit.
Prepares students to design and implement a program of performance and assessment in public health practice. Examines the historical and theoretical background of public health practice and quality improvement. Presents strategies for developing public health practice improvement strategies that can be implemented in a high or low income setting, in a public or private sector, in a national or a sub-national organization. Includes practical tools that can be adapted for local use. Compares top-down and bottom-up approaches to public health practice quality.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.633. Policy Advocacy in Low and Middle-income Countries: Application for Real World Challenges. 2 Credits.
Introduces fundamentals of policy advocacy with an emphasis on low- and middle-income countries. Reviews relevant frameworks, presents lessons learned from low- and middle-income countries case studies, and explains approaches for engaging both global and local stakeholders in influencing policy adoption or change. Provides students will skills necessary for developing and presenting an advocacy plan and to strengthen stakeholder engagement.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.634. Stress Management for Relief Workers. 2 Credits.
Provides an introduction to the need for, strategic principles of, and tactics for the provision of stress management and crisis intervention to relief workers. Emphasizes on providing assistance to others as well as self-care. Provides awareness of emotional stress faced by health workers providing humanitarian assistance in emergency situations. Includes topics signs and symptoms of stress disorders (critical-incident stress), components of critical-incidence management programs, and provision of services to prevent long-term mental health consequences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.635. Global Advances in Community-Oriented Primary Health Care. 3 Credits.
Introduces students to the origins and recent advances in community-oriented primary health care through case studies from both developing and developed countries. Like hands-on clinical bedside teaching, the course uses real cases to help students develop problem-solving skills in practical situations. Program examples all use community participatory and community-based approaches to address priority health problems. There is a strong focus on equity and empowerment in all cases discussed.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.636. High Performing Organizations in Lmic Settings. 3 Credits.
Provides an understanding of the core features, characteristics, systems and processes adopted by organizations that lead to high performance in LMIC settings. Introduces the Baldrige Performance Excellence Framework in Healthcare and utilizes a case study approach to share organizational best practices in setting standards, building robust processes and creating a culture of continuous improvement and excellence. Includes a contextual and cultural understanding of the LMIC settings that act as facilitators and/or barriers for high performance in LMIC settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.637. Health Information Systems. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.638. Health Systems Research and Evaluation in Developing Countries. 4 Credits.
Builds an understanding of the purpose and nature of health systems research and evaluation (HSRE) as a multi-disciplinary endeavor with scope for diverse inferences. Provides a landscape of the range of research questions and associated methodological approaches and study designs available for HSRE within health system building blocks and at various levels of the health system (macro, meso, micro). In addition, explores cross-cutting issues of equity and social justice, digital health applications and scientific rigor. Fosters the ability to develop different research strategies depending on the research question at hand and to read health systems research (HSR) critically.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.639. Health Care in Humanitarian Emergencies. 3 Credits.
Introduces the provision of basic health requirements for refugees other displaced populations. This includes the health of persons displaced by conflict as well as natural and man-made disasters. Although its main concern is with the health needs or those displaced in low and middle-income countries it also touches on the issue of persons resettled to developed countries. Addresses epidemiologic assessment, control of communicable and noncommunicable diseases, nutrition, mental health needs, establishing and managing health services, reproductive health services, ethical decision making, application of International Humanitarian law, and coordinating activities among agencies in international contexts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.640. Design and Implementation of Incident Management Systems in Low- and Middle-income Countries. 2 Credits.
Introduces students to the design and implementation of organizational structures, specifically the Incident Management Systems (IMS), established to support health emergency response efforts in low- and middle-income countries. Discusses the functions that enable governments and international agencies to effectively respond to health emergencies, including management, planning, operations, logistics, finance, and administration. Reviews effective and ineffective management components of health emergency response efforts using case studies that include the Ebola virus outbreak in West Africa and the COVID-19 epidemic in India. Focuses on the application of the IMS in the context of some management principles.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.641. Measurement Methods in Humanitarian Emergencies. 2 Credits.
Gives students an overview of selected field-based methods used in humanitarian emergencies to measure basic health indicators and demographic characteristics of affected populations. Upon completion, students can describe the assessment process in the various phases of humanitarian emergencies. Students are able to describe a variety of methods, both qualitative and quantitative, used in field-based assessments of humanitarian settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.642. Mental Health Aspects of Disaster: Public Health Preparedness and Response. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.643. Armed Conflict and Health. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.644. Econometric Methods for Evaluation of Health Programs. 4 Credits.
Introduces students to the application of common econometric methods available to address questions of concern to policy makers, administrators, managers, and program participants regarding evaluation of health programs in low and middle-income countries. Students learn to apply econometric methods in their research and to recognize the limitations in applying the same methods in estimating the impact of a policy intervention. Combines a theoretical development of methods and a numerical application involving continuous dependent variables. Emphasizes the correct use of data in framing relevant questions and understanding the importance as well as the limitations of data analysis in order to equip students with the quantitative skills necessary to evaluate policy alternatives.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.645. Large-scale Effectiveness Evaluations of Health Programs. 4 Credits.
Provides students with an understanding of how to apply systems thinking in public health. Trains students on the fundamentals of systems thinking theory and offers an opportunity to apply key methods and approaches to health policy and health questions. Prepares students to ask relevant research questions and apply a systems thinking lens to describe, understand, and anticipate complex behavior. Examines how systems models can be critically appraised and communicated with others so public health policy makers can exercise a greater degree of wisdom and insight.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.646. Health Systems in Low and Middle income Countries. 3 Credits.
Explores health systems in low and middle income countries (LMICs), and examines approaches to improving the performance of health systems. Focuses on frameworks, tools, skills, and strategies to understand, influence, and evaluate health systems in LMICs. Identifies key institutions, functions, and performance issues for national and local health systems. By using frameworks and tools, students gain experience in systematically analyzing health systems and methods to plan, implement, and evaluate changes in health systems in a variety of settings, including countries in various levels of demographic, epidemiologic and economic transitions. Covers key controversies in health systems, including issues in monitoring health systems performance, the role of the public sector, dealing with unregulated private health markets, linking priority health programs and health systems, raising accountability in the health system, etc.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.647. Advanced Topics in Economic Evaluation & Modeling for Global Health. 3 Credits.
Presents evaluation techniques to compare health system interventions in international health. Focuses on addressing existing constraints in health systems development, given key policy goals as quality, equity and efficiency. Presents both qualitative and quantitative approaches to evaluate interventions to better inform policy how to improve system performance and functions. Identifies policy goals, actor groups, system functions and ways to assess improvement strategies related to policy goals using existing systems frameworks. Covers key constraints in systems performance such as: effective prevention and treatment programs, patient compliance, health worker performance, inequitable access, collective financing, choosing priorities, and community-level interventions. Comparative methods draw on a mix of epidemiology, health economics, disease modeling, services research, and qualitative techniques.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.650. Health Policy Analysis in Low and Middle income Countries. 3 Credits.
Provides an overview of political frameworks and theories related to policy development and offers practical perspectives on their application to health policy in low and middle income countries (LMICs). Analyzes the political economy of health policy, (ie. how the political environment and country institutions policy development). Introduces the main actors, processes and contextual features that are typical of policy development and implementation in LMICs. Topics encompass national policy and planning frameworks; aid harmonization and alignment; the role of policy networks (particularly civil society actors); policy implementers and their role in shaping policy; and mechanisms for global health policy development. Final sessions focus on practical strategies to strengthen policy processes. Teaching draws upon examples from different diseases, services and health systems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.651. Econometrics I. 4 Credits.
Introduces students to the application of basic statistical methods to economic analyses. They use econometrics to support or reject theories from economics using empirical observation. Students cover the basic concepts behind linear regression models by studying cases where the dependent variable is continuous and is a linear function of the parameters of interest. Improves students' ability to conduct economic analysis using observational data, as economic studies rarely benefit from the availability of controlled experiments. Exercises provide hands-on experience in implementing well-crafted empirical analysis. Students learn to employ tools and methods and compare the results with respect to those obtained from initial estimations based on very restricted assumptions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.652. Financing Health Systems for Universal Health Coverage. 3 Credits.
Teaches the financing of health care in low and middle-income countries with the goal of achieving universal health coverage. The course is built around four themes of financing health systems: revenue sources, pooling, purchasing and provision of healthcare. Using this framework students will learn how to evaluate country health financing systems. Progressing through these themes students will learn to use metrics related to health financing, use household surveys to estimate some of these metrics, and also have an in-depth understanding of health financing systems of select countries. At the end of this course students will have a good understanding of health financing for a career in global health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.653. Hospital-Based Injury/Trauma Surveillance in Low- and Middle-income Countries. 3 Credits.
Examines the high, and growing, global injury burden with a focus on low- and middle-income countries. Establishes the need for and complexities of establishing and maintaining reliable injury surveillance systems in LMIC. Focuses on training students on the fundamentals of an injury surveillance system in LMIC settings– data needs, collection, coding, processing and use, as well as on evaluation of such systems, and how to sustain them. Prepares students to participate in designing and sustaining hospital-based injury/trauma surveillance systems in LMIC to inform health program planning at the local and national level. Uses case studies to compare and contrast injury surveillance systems in different LMIC settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.654. Systems Thinking in Public Health: Applications of Key Methods and Approaches. 3 Credits.
Provides students with an understanding of how to apply systems thinking in public health. Trains students on the fundamentals of systems thinking theory and offers an opportunity to apply key methods and approaches to health policy and health questions. Prepares students to ask relevant research questions and apply a systems thinking lens to describe, understand, and anticipate complex behavior. Examines how systems models can be critically appraised and communicated with others so public health policy makers can exercise a greater degree of wisdom and insight.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.655. Surgical Care Needs in Low and Middle Income Countries. 2 Credits.
Explores the components of health systems related to surgical care. Focuses on the global burden of surgical disease and trauma, and deficiencies in surgical capacity in LMICs. Case studies from the US, Sierra Leone and Rwanda illustrate common surgical conditions and needed components for a comprehensive health system. Specific topics include surgical care for Women's Health, obstetrical or gynecological injury, and trauma care. Discusses the importance of planning for surgical interventions in disaster management and conflict , including the difference between war surgery and military surgery. Also addresses the economic cost and benefit of surgery and surgical care in LMICs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.656. Conceptual and Evidential Foundations of Health Equity and Social Justice. 4 Credits.
Explores the conceptual bases of health equity and the underlying social justice, human rights, and disparity models for defining health equity. Examines strategies for promoting health equity and the strength of evidence supporting these strategies. Translates various causal models for defining health equity into research and practice frameworks. Presents integrative examples applying relevant concepts to identify causes, consequences, and solutions of health inequities in various contexts.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.657. Disease and Program Costing in Global Health Programs. 3 Credits.
Provides a solid foundation in the key concepts and methods used for costing in global contexts with a focus on practice and policy. Focuses on defining costs and rationales for costing, quantifying the cost, defining the disease case, and identifying cost components that vary by country and settings. Discusses the challenges of costing in low- and middle-income settings and prepares students to design and execute a cost analysis on a global health program and on a disease. Helps students frame cost data and economic evidence for policymaking and advocacy. Includes topics such as taxonomy of costs, perspectives, epidemiological considerations, evaluating data sources, patient/caregiver economic survey design, analysis methods, and dissemination techniques.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.658. Globalization: Challenges and Opportunities for Future Health Systems. 2 Credits.
Everything in life has positive and negative effects, and globalization is just one example of this reality. This course evaluates how globalization creates challenges and opportunities for health systems and health outcomes in general. Students discuss evidence on globalization and health, and propose strategies to leverage its opportunities and mitigates its risks.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.659. Introduction to Health Systems Modeling. 2 Credits.
Introduces students to mathematical and computational modeling and simulation methods to better understand, evaluate, and improve health systems. Addresses the basic concepts of mathematical and computational modeling and simulation and how they may apply to health systems. Covers the basics of economic and operational modeling and simulation, and introduces advanced Microsoft Excel features and the VenSim software.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.660. Systems Science in Public Health: Basic Modeling and Simulation Methods. 3 Credits.
Introduces students to mathematical and computational modeling and simulation methods that can help public health decision makers better understand and improve various systems in public health. Addresses the basic concepts of mathematical and computational modeling and simulation. Covers probability theory, decision analysis, Markov models, compartment models, and systems dynamics models, as well as basics of economic and operational modeling. Introduces TreeAge, and VenSim software. Offers examples of public health systems including both communicable and non-communicable disease control programs (e.g., vaccines, medications, and non-pharmaceutical interventions), dietary and physical activity behaviors and interventions, and healthcare systems and healthcare policy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.661. Project Development for Primary Health Care in Developing Countries. 4 Credits.
Allows participants to design a Primary Health Care (PHC) project in a low or middle-income country. Students learn how to navigate needs and limitations, and utilize resources available. Focuses on project design, project implementation and evaluation. Students select one of several Request for Proposals (RFA) for a specific situation, conduct a needs assessment, create a problem statement, set goals and objectives, and a theory of change for this proposed project. Students learn how to address community participation, human resources and their training and supervision, project information, approaches to sustainability, logistics of service delivery, project budgeting and financial management, monitoring, and evaluation, and finally close out of a project. At the conclusion, students develop a proposal ready for submission to a donor that embodies their PHC project design responsive to the RFA.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.662. Globalization and Health: Economic Development. 3 Credits.
Explores how economic development affects global burden of disease and human capital. Focuses on the relationship between economic growth, health, human capital achievement, and socioeconomic inequalities in health. Divided into three parts; the first part examines the effect of wealth on health, as well as, how better health influences human capital and income. The second part examines socioeconomic inequalities in health, primarily focusing on theories of how income inequalities affect health, and the measurement of socioeconomic inequalities in health. Finally, the third and last part examines policy strategies to improve investments in human capital and reduce income inequalities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.663. Globalization and Health: Framework for Analysis. 3 Credits.
Evaluates in depth the influence of globalization on population health across the four main dimensions of globalization (economic, political, cultural and environmental). Teaches the use of analytical tools to observe the impact of globalization on population health using Global Burden of Disease data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.664. Prevention of Unintentional Injuries in American Indian Communities. 2 Credits.
Introduces the basic skills and knowledge required to address the injury burden in the Native American Community. Based upon the nine Core Competencies for Injury and Violence Prevention, provides students with opportunities to practice these skills through application sessions. Prepares students to enter a network of injury prevention colleagues with a specific interest in the prevention of injuries in the Native American community.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.665. Early Childhood Intervention in Tribal Communities. 2 Credits.
Examines a constellation of economic, social, historical and cultural challenges to American Indian families that potentially compromise optimal early child development. Reviews opportunities for tribal grantees to assess needs and develop early childhood intervention strategies funded through the Affordable Health Care Act. Explores methods and theoretical approaches to early childhood development and intervention research in tribal contexts. Considers optimal systems of early childhood care in low resource settings. Examines unique aspects of tribal research and culture, emphasizing the importance of community-based and community-engaged approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.666. Introduction to American Indian Health Research Ethics. 2 Credits.
Introduces students to the ethics of human subject research specific to working with American Indian communities. Also introduces ethical theory and principles, followed by a brief history of research ethics in Indian Country. Topics covered in lectures and moderated discussions include the importance of health research in Indian Country, informed consent for research participation, role and function of institutional and ethic review
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.667. An Interdisciplinary Approach to Understanding the Health of Native Americans. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.668. COVID-19 & Infectious Disease Outbreaks in Native American Communities. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.669. American Indian Health Policy. 2 Credits.
Examines the historical, social, political, legal and economic factors and values that have influenced the development and implementation of health policy pertaining to American Indian and Alaska Natives. Focuses on the four substantive areas that form the analytic basis for many of the issues in health policy and management: economics and financing; need and demand; politics/ethics/law; and quality/effectiveness. Discusses the unique relationship between the U.S. federal government and American Indian tribes. Addresses key policy and advocacy issues impacting Tribal communities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.670. Collecting, Analyzing and Using Public Health Data in Native American Communities. 3 Credits.
Introduces Native American tribal health leaders, health professionals, health paraprofessionals and others interested in Native American health concerns to the basic concepts of epidemiology and biostatistics. Designed for persons who may not have previous formal training in epidemiology or biostatistics, but may be working to determine or to address tribal priorities for health care, or working in, or interested in clinical research or public health within tribal communities. Prepares students for the core epidemiology and biostatistics courses offered by the School of Public Health. Teaches participants how to collect, analyze and use community data to address public health problems. Participants are asked to work on datasets from tribal communities to apply the principles taught during the course. Individuals do not have be Native American nor work with Native American communities to participate in the course since the concepts can be translated to many public health settings; howe
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.671. Introduction to Quantitative and Qualitative Research for American Indian Health. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.672. Introduction to Data Management Using American Indian Health Data. 2 Credits.
Introduces Native American tribal health leaders, health professionals, health paraprofessionals, and others interested in Native American health concerns to the basic concepts of data management. Designed for persons who may not have previous formal training in data management but may be working to determine or to address tribal priorities for health care, or working or interested in clinical research or public health within tribal communities. Designed to prepare students for the core courses on data management methods offered by the School of Public Health. Introduces students to basic principles and methods of data management using examples pertinent to American Indian health. Individuals do not have to be Native American, nor work with Native American communities, to participate in the course since the concepts can be translated to many public health settings; however, the examples and assignments will be drawn from Native American settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.673. Mental Health in American Indian Communities. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.679. Introduction to Design and Implementation of Digital Health Programs in Lmic Settings. 2 Credits.
Provides an understanding of different types of digital interventions in healthcare. Reviews existing "global goods" and tools that are helpful in planning digital programs. Examines effective implementation strategies to make digital programs effective using case studies. Reviews critical team skills needed for implementation and scale. Explores emerging analytic methodologies to monitor digital programs. Prepares students to become effective decision-makers and digital health leaders.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.681. Global Health Entrepreneurship: from Ideas to innovations.. 3 Credits.
Teaches how to think about possibilities to make a difference in the global health community. Looks at how organizations like Medicine Sans Frontiers, Gates Foundation, and other smaller but impactful NGOs and Foundations had their roots in a team of public health-minded individuals who learned the business of global health and created organizations that fit their vision of how to make a difference in the world. Guides students through the process of idea conception, team and partner building, global health ethics, marketing/branding, finance and other fundamental pieces of creating, building and maintaining a successful global health start-up. Prepares students to conceptualize, design, build and manage sustainable and innovative global public health initiatives specifically focusing on critical and often missed topics such as marketing, budgeting / financial management, fundraising, legal and governance issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.685. Modeling and Simulation for Health Workforce Analysis. 2 Credits.
Introduces modeling tools and statistical techniques to simulate health workforce scenarios. Equips students to analyze the impact of health workforce policies and programs on population health. Focuses on the production, training, distribution, and retention of health workers for primary care in low- and middle-income countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.688. Social and Behavioral Foundations of Primary Health Care. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.690. Strengthening Primary Health Care Across the World: Problem Solving Seminar. 3 Credits.
Uses interactive case-based and problem-based strategies to provide a 360 degree perspective on the challenges that typically undermine PHC strengthening, from articulating the relationship between PHC and the rest of the health system to measuring the impact of PHC. Equips students to develop pragmatic strategies that can address inequity in health systems, and promotes inclusion within public health programs through the use of primary health care strategies. Addresses multiple aspects of PHC strengthening from building coalitions to support primary health care, to engaging communities in the delivery of PHC services, to the use of implementation research to fine tune PHC strategies. Focuses on genuine country experiences and problems this seminar draws upon relevant bodies of theory from health systems, social and behavioral theory, social epidemiology, social justice and political science to craft practical strategies to strengthen PHC across the world.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.691. Human Resilience: Public Health Perspectives. 2 Credits.
Examines the nature of human resilience while focusing on how it may be fostered within organizations, communities, and individuals. Focuses upon building resilience systems while touching upon fostering individual resilience. Builds "cultures of resilience" by discussing building organizational and community cultures of resilience drawing not only upon social and community psychology, but also management and leadership tactics that may be employed to foster such cultures in healthcare, public safety, international aid organizations, and communities in general. Fosters resilience in others, developing essential leadership skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.695. Seminar in Humanitarian Health. 0.5 Credits.
Introduces important and evolving issues in global humanitarian health from various perspectives including experts, practitioner, policymakers and academics. Examines trending issues such as new emergencies, politics, human rights, humanitarian architecture, leadership, cash transfers, innovative financing among others. Prepares students to explore practicums, internships, develop capstone projects, and apply to careers in the humanitarian health field.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.700. Public Engagement Practices for Scientists (Peps) in International Settings. 2 Credits.
Introduces the fundamentals of PEPS and its importance for public health professionals. Explores applications of quantitative and qualitative methods from other public health disciplines to assess and improve PEPS. Analyzes different frameworks to plan, implement, and assess PEPS, with a focus on low income, global settings. Provides opportunities to practice designing and evaluating PEPS within five engagement goal areas: (1) increasing scientist to scientist engagement, (2) increasing uptake of interventions, (3) increasing evidence-informed public health policy, (4) increasing minority populations into public health science workforce, and (5) increasing capacity of public health science workforce.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.701. Applications to Gender Analysis Within Health Research and Interventions. 2 Credits.
Introduces gender analysis as an integral part of health research and interventions. Focuses on teaching students on how to incorporate gender analysis into health research and interventions. Explores: (1) theoretical approaches to gender and health, including intersectionality, masculinities, and non-binary approaches; (2) how gender and gender relations affects health needs, risks, experiences, and outcomes; and (3) ways in which gender analysis can be incorporated into health research and interventions, including the use of gender frameworks and questions, gender assessments, and transformative approaches. Examples will cover a range of international settings, with a focus on low-and-middle income country settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.702. Introduction to Gender Analysis Within Health Systems Research in Lmic Settings. 2 Credits.
Introduces gender analysis as an integral part of health systems research (HSR). Focuses on training students on how to incorporate gender analysis into HSR in LMIC settings. Explores how gender analysis can be incorporated into: (1) HSR content, i.e. the substantive focus of HSR – through the use of sex disaggregated data, gender frameworks and gender analysis questions; (2) HSR process – how HSR itself is imbued by power relations during data collection and analysis; and 3) HSR outcomes – how gender inequities in health systems can be transformed progressively or at least not exacerbated.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.705. Monitoring and Evaluation of Health Systems Strengthening in Low and Middle income Countries. 3 Credits.
Covers the essentials of monitoring and evaluating health systems strengthening in LMICs. The class analyzes the development of theories of change, and their application to the design of monitoring and evaluation systems, as well as alternative approaches to evaluating equity impacts. The development of monitoring indicators, use of quantitative techniques and the integration of M&E into health systems decision making will all be addressed.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.710. Designing Transformative innovation for Global Health. 2 Credits.
Familiarizes students with policy analysis tools to help position innovation of technologies or institutions for transformative potential. Demonstrates the application of principles of design guided by public policy and public health concerns to adapt such innovation in resource-limited settings. Considers technologies that are potentially transformative for improving health and narrowing disparities—making water potable, cook stoves more efficient and less polluting, and point-of-care diagnostics more available in local clinics. Examines the context of what makes innovation potentially transformative. Enables students to apply key policy tools such as stakeholder, value chain and market analyses as well as systems thinking, and consider how to structure and critique prize competitions, innovative financing approaches, and public-private partnerships.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.711. Managing District Health Systems in Low and Middle Income Countries. 3 Credits.
Provides a broad understanding of the application of basic principles of health management and leadership at the sub-national level. Focuses on strengthening of district health systems by managing health services through planning and program development and generation and management of resources. Acquaints strategic approaches in effective service delivery with emphasis on forecasting, problem analysis, managing change, supportive supervision and skills development. Discusses issues in implementing and evaluating national health programs, translating national health priorities into action.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.712. Leadership & Management in Humanitarian Health. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.722. Quality Assurance Management Methods for Developing Countries. 4 Credits.
Presents the principles and practice of total quality management methods for health systems in developing countries. Emphasizes integrated district-level health systems management; fostering a genuine team approach in the face of an authoritarian tradition; central importance of community governance; interventions performed according to standards and in an equitable fashion; introducing a measurement-based approach to problem solving, emphasizing analysis of service delivery process and outcome; and developing operational research as an integral component of the management system.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.801. Health Systems Program Seminar I. 1 Credit.
Familiarizes Health Systems students with ongoing faculty research and activities, professionals and organizations in the field of international health, and provides a forum for discussion for current topics in health systems and international health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.802. Health Systems Graduate Seminar 2. 1 Credit.
Familiarizes Health Systems students with ongoing faculty research and their areas of research, professionals and organizations in the field of international health, and provides a forum for discussion for current topics in health systems and international health. Focuses on topics like injuries, evaluation of health programs, health systems strengthening, universal health coverage, among other topics
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.803. Health Systems Graduate Seminar 3. 1 Credit.
Familiarizes Health Systems students with ongoing faculty research and their areas of research, professionals and organizations in the field of international health, and provides a forum for discussion for current topics in health systems and international health. Focuses on topics like globalization and health, social determinants of health, primary health care, health security, among others.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.804. Health Systems Graduate Seminar 4. 1 Credit.
Familiarizes Health Systems students with ongoing faculty research and their areas of research, professionals and organizations in the field of international health, and provides a forum for discussion for current topics in health systems and international health. Discusses topics on evidence and public health knowledge, connection between animal and human health, humanitarian health, health financing, among others.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.810. Health Systems Practicum. 1 - 22 Credits.
Complements and reinforces the didactic portion of the MSPH program. Provides students with an opportunity to apply the knowledge gained during the first year, to develop skills in management of health programs in low- and middle-income countries according to individually designed learning objectives, and to work as part of a team in an applied research or practice project. Students are placed in a variety of professional settings, which may include: government, non-government organizations (NGOs), multi-lateral, private, and/or for-profit sector. Provide opportunity for feedback for student performance and placement experience
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.820. Thesis Research Health Systems. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.830. Postdoctoral Research Health Systems. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.840. Special Studies and Research Health Systems. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.850. Msph Capstone Health Systems. 2 - 16 Credits.
Offers students an opportunity to integrate and apply program skills and competencies to a public health problem in a format that approximates a professional practice experience. Fosters students' ability to produce scholarly papers that provide a meaningful contribution to knowledge of the health of underserved populations. Guides students' development of tangible evidence of expertise that addresses specific applied topics relevant to international health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.861. Doctoral Seminar in Health Systems. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.221.945. Large-scale Effectiveness Evaluations of Health Programs Lab.
A complimentary lab course to 221.645.01 LARGE-SCALE EFFECTIVENESS EVALUATIONS OF HEALTH PROGRAMS. This lab will be used to have in-depth discussions and also have students apply some of what they have learned in lectures through structured exercises.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.630. Nutrition, Infection and Immunity. 3 Credits.
Provides an overview of the relationships between nutrition and immune function, with a focus on established and emerging public health problems. Reviews assessment methods for immune function in the context of public health nutrition research. Discusses the impact of the immune response on nutrient metabolism, nutritional status, and interpretation of biomarkers. Examines the deleterious effects of malnutrition on host barrier defenses and innate, humoral, cell-mediated immunity, and mucosal immunity. Presents case studies on the synergistic and antagonistic interactions between the immune response and malnutrition. Provides self-study materials covering the basic tenets of immunology and nutritional status assessment, for students with limited background in immunology or nutrition.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.641. Principles of Human Nutrition in Public Health. 4 Credits.
Prepares students for integrating the biology of nutrition in solving public health problems globally, with application to public health research, policy and practice. It summarizes the history of nutritional sciences as related to public health and provides an integrated overview of the physiological functions of energy, macronutrients and micronutrients that influence health, and risk for disease. Topics include dietary sources and nutrient requirements, absorption, metabolism, and function. The course covers advances in the use of novel assessment techniques and biomarkers in the diagnoses of deficiency and nutritional status, and describes the dynamics of the nutrition transition occurring globally and dietary underpinnings of overweight and non-communicable disease risks. Also covers emerging topics linking nutrition, immunity, gut health and the microbiome.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.642. Assessment of Nutritional Status. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.644. Cellular Biochemistry of Nutrients. 3 Credits.
Students learn biochemical processes of cellular macromolecules, such as DNA, RNA and protein synthesis, with particular emphasis on the function of essential nutrients in these processes. Covers biochemical aspects of carbohydrate, protein, and fat metabolism, and introduces essential concepts of molecular biology, such as structure and function of intracellular organelles and fundamental cellular processes. Topics also include nutritional and hormonal regulation of gene expression and concepts of detoxification to give the nutrition student a full appreciation of the relevance of nutritional biochemistry studies and cells to population perspectives. The course structure consists of core lectures led by faculty..
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.647. Nutrition Epidemiology. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.649. International Nutrition. 3 Credits.
Presents major nutritional problems that influence the health, survival, and developmental capacity of populations in low and middle-income settings. Covers approaches implemented at the household, community, national, and international levels to improve nutritional status. Explores the degree to which malnutrition can be prevented or reduced prior to achieving high-income populations or certain economic development, through targeted public and private sector interventions that address the causes of malnutrition.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.651. Nutrients in Biological Systems. 2 Credits.
Provides in-depth review of the metabolism of major macro- or micronutrients and their functional roles in a variety of biological systems. Focuses on biochemical or molecular mechanisms of how nutrients influence health and disease at the cell, tissue, organ, and regulatory network levels. Discusses emerging nutritional -omics studies and biomarkers to provide a global view of complex interactions between nutrients and genes, proteins, metabolites, and gut microbiota.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.652. Nutrition in Disease Treatment and Prevention. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.653. Food Technology and Health. 3 Credits.
Discusses nutritional, chemical, physical, and technological perspectives of food, food ingredients, food quality, food safety, and the regulation thereof. Focuses on the core constituents of foods, and examines the non-nutritional (phytochemical, flavor, pigment, texture and fragrance) constituents of whole foods and food products and their impact on health. Evaluates food delivery and production systems, and specific eating patterns. Students evaluate dietary patterns and develop dietary strategies for specific individual, family, and community dietary needs based upon knowledge of ingredient nutrient composition and ethnic food consumption issues and trends.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.654. Food, Culture, and Nutrition. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.655. Nutrition and Life Stages. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.657. Food and Nutrition Policy. 2 Credits.
Examines the policy making process underlying large-scale governmental, bilateral, and multilateral agency policies and initiatives that directly or indirectly affect 1) the availability and quality of food and 2) the health and nutrition status of populations. Draws examples from the United States as well as low and middle income countries. Includes discussions led by faculty and guest lecturers with diverse experience in developing and implementing food and nutrition policies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.658. Critical Thinking in Nutrition. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.659. Critical Thinking in Nutrition II. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.660. ADVANCED NUTRITIONAL EPIDEMIOLOGY. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.661. Designing Healthy Diets. 2 Credits.
Examines the factors influencing dietary patterns and food choices in the U.S. and internationally. Focuses on modifying recipes, calculation of nutritional information for foods and recipes, and on planning, analyzing and evaluating dietary choices and patterns using the Nutrition Data System for Research (NDSR) software program and food composition tables, so that they meet guidelines for overall health and wellbeing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.662. Obesity in Public Health. 3 Credits.
Examines obesity as a public health problem, (including prevalence, trends and disparities as well as the health, psychosocial, and economic consequences of obesity and its associated co-morbidities). Explores physiologic, psychological, economic, and cultural drivers of food consumption. Identifies key issues and approaches for current and future public health and environmental approaches to obesity
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.664. Food insecurity and nutrition: Partnering with community organizations to make change. 2 Credits.
Provides the opportunity to learn about community-based public health efforts to improve food security and diet quality and factors that influence food choices across the socio-ecological framework. Works with a community organization that provides community outreach services aimed at addressing food insecurity, improving diet quality, or addressing other nutritional needs of the population(s) they serve. Assesses the food environment and food access landscape for the population the organization they work with serves, and familiarize themselves with other organizations also serving that population. Gains practical experience developing innovative program elements to advance food access and nutrition services while accounting for real world considerations organizations face.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.665. Planning for Food Systems and Public Health. 3 Credits.
Introduces urban and regional planning as an integral part of addressing structural determinants of food and nutrition disparities. Examines the network of actors, infrastructure, resources, power relationships, and local government policies that influence health inequalities in food systems in communities of the US and globally. Includes topics related to food security such as land use, food production, gentrification, environmental sustainability, conflict and trauma, and mobility and transportation. Encourages students' critical thinking in how to reimagine and reshape food and community systems for social, economic, and health equity.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.679. Food Insecurity and Nutrition: Partnering with Community Organizations to make change. 2 Credits.
Provides students the opportunity to learn about community-based public health efforts to improve food security and diet quality and factors that influence food choices across the socio-ecological framework. Works with a community organization that provides community outreach services aimed at addressing food insecurity, improving diet quality, or addressing other nutritional needs of the population(s) they serve. Assesses the food environment and food access landscape for the population the organization they work with serves, and familiarize themselves with other organizations also serving that population. Gains practical experience developing innovative program elements to advance food access and nutrition services while accounting for real world considerations organizations face.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.810. Human Nutrition Practicum. 1 - 22 Credits.
Complements and reinforces the didactic portion of the MSPH program. Provides students with an opportunity to apply the knowledge gained during the first year, to develop field, laboratory, or clinical skills related to nutrition research or programs according to individually designed learning objectives, and to work as part of a team in an applied research or practice project. Students are placed in a variety of professional settings, which may include: government, non-government organizations (NGOs), university projects, and multi-lateral, private, and/or for-profit sector. Practicum locations exist in the US and typically most regions of the world. Provide opportunity for feedback for student performance and placement experience
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.815. Human Nutrition - Registered Dietitian (RD) Program Practicum. 1 - 16 Credits.
Provides a combination of didactic instruction, competency-based learning activities and supervised experiential learning at clinical facilities, community and public health organizations. Learning experiences include lectures/presentations, group discussions, peer learning and case-based scenarios in preparation for applying knowledge in the practice of dietetics. The practicum engages the student, the practicum site, and the faculty/preceptors in shared responsibility for the provision and acquisition of competencies across a broad spectrum of dietetic practice settings including clinical, food service and community nutrition, culminating in an 8-week public health nutrition experience. Led by the Johns Hopkins Health System Clinical Nutrition Department, the practicum extends from June (following the first 4 terms of coursework) to March of the next calendar year (3rd term of the subsequent academic year).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.820. Thesis Research Human Nutrition. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.830. Postdoctoral Research Human Nutrition. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.840. Special Studies and Research Human Nutrition. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.850. Msph Capstone Human Nutrition. 2 - 16 Credits.
Offers students an opportunity to integrate and apply program skills and competencies to a public health problem in a format that approximates a professional practice experience. Fosters students' ability to produce scholarly papers that provide a meaningful contribution to knowledge of the health of underserved populations. Guides students' development of tangible evidence of expertise that addresses specific applied topics relevant to international health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.860. Graduate Nutrition Seminar. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.222.861. Doctoral Seminar in Proposal Development. 1 Credit.
Facilitates doctoral students in the development of research ideas and their dissertation proposals. Incudes the following topics that will vary by term: how to develop a research idea, and components of a solid research proposal – background, design, methods, sample size, analysis, writing to different audiences, research designs in nutrition, ethical review, funding sources and requirements, budgeting, staff management, thesis and manuscript preparation, and professional development.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.600. Application of Spatial Analysis Tools to Inform Decision-Making in Lmics. 4 Credits.
Applies spatial analysis tools relevant for policy decision-making in resource-poor settings. Analyzes the concepts and techniques of Geographic Information Systems (GIS) and Exploratory Spatial Data Analysis (ESDA) with a global health focus. Introduces both descriptive and analytical functions of GIS along with additional spatial and geographic concepts including: cartographic communication automated mapping characteristics map projections geocoding coordinate systems the nature of spatial public health data and spatial statistical methods. Provides students with an opportunity to gain hands-on experience in the use of ArcGIS QGIS Geoda SatScan and Geographically Weighted Regression for spatial data analysis and mapping.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.603. Controlling Infectious Disease-1851 to the Present. 3 Credits.
Discusses advanced topics in the field of global health exploring the development of the first international sanitary conferences to responses to present day public health emergencies of international concern. Acquaints students with the colonial roots of international health, the rise of disease eradication strategies and contemporary responses to global epidemics. Introduces students with the histories and roles of several global health institutions such as the World Health Organization, the Pan-American Health Bureau, the World Bank and others.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.615. Digital Health Strategies to Control COVID19. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.620. Domestic Immigrant Health Issues and Emerging Diseases. 2 Credits.
Focuses on diseases prominent in domestic immigrant populations. Areas of emphasis are epidemiology, diagnosis, clinical presentations, pathophysiology, strategies for treatment and control, and effects on immigrant populations. Principal diseases covered include diarrheal diseases, tuberculosis, HIV/AIDS, Cysticercosis, Chagas, and Malaria. Covers how the U.S. handles emerging diseases such as Ebola, Nipah, and Zika (e.g., Ebola in volunteers, etc). Examines special topics such as the effects of climate change on infectious disease.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.621. Design and Implementation of Global Digital Health interventions. 3 Credits.
Provides an understanding of different types of digital interventions in healthcare. Reviews existing "global goods" and tools that are helpful in planning digital programs. Examines effective implementation strategies to make digital programs effective using case studies. Reviews critical team skills needed for implementation and scale. Explores emerging analytic methodologies to monitor digital programs. Prepares students to become effective decision-makers and digital health leaders.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.622. Design and Implementation of Global Digital Health Interventions II. 3 Credits.
Reviews necessary components of the digital health ecosystem that need to be addressed in order to develop and implement a successful digital health intervention. Provides an understanding of the different methods used to develop digital health interventions, including user-centered design. Explains the frameworks for the monitoring, evaluating, and reporting evaluation of digital health programs and interventions. Provides hands-on experience in developing digital data collection tools. Reviews components of successfully scaled digital health programs using both case studies and established guidelines.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.626. Special Topics in Global Digital Health. 1 Credit.
Offers a series of seminars on global digital health-related topics - including ethical, legal, and social issues of global digital health, behavioral economics and digital applications, innovative methods in digital health, among others. Includes leading digital health experts at JHU, from other institutions, organizations, government agencies, and industry. Provides the student with an understanding the global digital health context, covering scientific, social, economic, political, and ethical dimensions of the context.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.630. The Practice of Public Health Through Vaccine Case Studies: Problem Solving Seminar. 3 Credits.
Presents several historic vaccine case studies highlighting challenges in emerging science, program design and evaluation, management, policy and communication. Examines decision-making surrounded by scientific uncertainty, controversy and competing public health priorities. Explores the challenges of developing policy and practice decisions within the constraints of emerging and uncertain science. Challenges students to make policy decisions and develop programmatic and communication strategies in real world settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.632. Methods for Planning and Implementing Evaluations of Large-Scale Health Programs in Low and Middle income Countries. 4 Credits.
Prepares students to design, implement, and analyze large-scale evaluations of health programs, focusing on low and middle income settings. Provides students with the skills to conduct household surveys, assessments of provider readiness and quality of care, and documentation of contextual factors, as well as overall planning, design, and analysis of program evaluations. Focuses on adaptation, development, and refinement of project-specific tools; sampling and sample size calculations; and various analytical methods appropriate for program evaluations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.660. Tropical Medicine and Parasitology. 4 Credits.
Provides a broad overview of select tropical medicine and public health issues. Highlights specific tropical diseases and case studies stressing diagnosis, treatment, and implementation of preventive and control measures. Introduces students to clinical tropical medicine and travel medicine. Includes specific topics: the etiology, biology, epidemiology, and clinical presentation of enteritides, intestinal protozoa and helminths, cysticercosis and hydatid disease, hepatitis, viral and arboviral infections, and malaria. Includes practical lab experience in parasitology and diagnosis. Prepares students working with current and emerging health problems in developing countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.662. Vaccine Development and Application. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.663. Infectious Diseases and Child Survival. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.664. Design and Conduct of Community Trials. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.667. Chronic Diseases in Low and Middle income Countries: Prevalence and Epidemiology. 4 Credits.
Introduces students to the major transitional diseases in low and middle income countries. Lectures detail specific chronic diseases, stressing such areas as significance, prevention, diagnosis and management. Includes both traditional lectures as well as case studies. Gains basic foundation of the epidemiology and challenges in the management of chronic diseases in low and middle income countries, which prepares them to work with research programs and international organizations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.668. Chronic Diseases in Low and Middle income Countries: Study Design and Metrics. 4 Credits.
Provides public health students and medical researchers with the necessary skills to engage in study design and conduct, analytic methods, and use of metrics to help conduct research on chronic diseases in low and middle income countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.672. Data Mgmt Methods in Health Research Studies. 5 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.680. Global Disease Control Programs and Policies. 4 Credits.
Presents the history, social and political context, organization, technical content, funding and evaluation of current, major, global initiatives for disease control. Emphasizes programs focused on health problems of the developing world and includes, initiatives for vaccines and immunization, non-communicable diseases, safe motherhood and reproductive health, malaria, Neglected Tropical Diseases, HIV, emerging infectious diseases, TB, tobacco control, nutritional interventions and injury control. Also examines the process of policy formulation and resource allocation to international health and disease control.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.682. Clinical and Epidemiologic Aspects of Tropical Diseases. 4 Credits.
Focuses on infectious diseases that disproportionately affect those in developing countries. Some of these are major killers, others are neglected tropical diseases not covered in other courses. Discusses the epidemiological and clinical aspects of each disease, including diagnosis and treatment. Introduces students to the major infectious diseases that are prevalent and of public health importance in tropical and developing countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.684. Vector-Borne Diseases in the Tropics. 4 Credits.
Focuses on vector-borne diseases prominent in tropical infections. Emphasizes global epidemiology, diagnosis, clinical presentations, pathophysiology, and treatment of microorganisms as well as characterization and control of vectors. Integrates clinical cases and pathology through laboratory sessions. Covers principal diseases including malaria, African and American trypansomiasis, leishmaniasis, filariasis, yellow fever, dengue, hemorrhagic fevers, Bartonella, Lyme, Rickettsial, plague and toxoplasmosis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.685. Tuberculosis, HIV and Other Chronic Infections in the Tropics. 4 Credits.
Covers the history, clinical presentation, epidemiological factors, new diagnostic techniques, treatment, and control of tuberculosis. Addresses pathophysiology, clinical presentation, ecology, and effects of HIV/AIDS on developing countries, their populations, and resource utilization. Includes additional topics such as other chronic infections that have global public health importance. Emphasizes integrating policies addressing TB, HIV/AIDS, other infections and poverty in resource-poor settings and how these interactions influence control strategies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.686. Child and Public Health in the Tropics. 4 Credits.
Introduces students to the major global causes of child mortality and the strategies and interventions to reduce child mortality. Includes specific topics: malaria, HIV, measles, pneumonia, diarrhea, neonatal disorders and nutritional deficiencies. Additional topics may include maternal mortality, eye diseases, demography and anthropometry. Focuses on and emphasizes a theme through the different lectures, with the tension and balance between horizontal approaches to child survival, such as Integrated Management of Childhood Illness (IMCI), and vertical programs such as disease eradication programs. Discusses several papers published as part of the Lancet Child Survival and Lancet Neonatal Survival series, and gain hands-on experience applying different child survival strategies using the Lives Saved Tool (LiST).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.687. Vaccine Policy Issues. 3 Credits.
Examines current domestic and international policy issues in vaccine research, development, manufacturing, supply, licensure, delivery, and utilization. Includes topics: priorities for funding vaccine research and development, ensuring an adequate supply of safe and effective vaccines, vaccine financing and new vaccine introduction decision-making, ethics, and compulsory vaccination. Emphasizes the identification of important vaccine policy issues and the formulation and evaluation of policies to address these issues. Presents the roles, responsibilities, and policy positions of key immunization stakeholders via guest lectures by a wide array of experts who have worked for/with important vaccine stakeholders (e.g., UNICEF, The Bill and Melinda Gates Foundation, US Government, and GAVI Alliance). Learns skills including developing a Policy Paper. Includes readings relevant scientific papers and publications of U.S. and international agencies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.688. Intestinal Infections in the Tropics. 4 Credits.
Provides an overview of the epidemiology, presentation, and effects of microbial, protozoan, and viral intestinal infections, including Salmonella, Shigella, cholera, typhoid, rotavirus, amebiasis, dysentery, H. pylori, Campylobacter, Cryptopsoridium, Cyclospora, and Giardia. Addresses clinical presentation, life cycle, distribution, prevention, and treatment of intestinal helminthes, including Ascaris, Trichuris, Strongyloides, and hookworm. Addresses interactions between parasites, diarrhea, and malnutrition along with treatment, prevention and control strategies, and oral rehydration therapy. Covers Cysticercosis and hydatid disease. Includes laboratory sessions and practical lab experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.689. Biologic Basis of Vaccine Development. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.690. The Design and Analysis of Cluster Randomized Trials. 2 Credits.
Covers the major concepts and methods in the design and analysis of trial in which the unit of randomization is a group of participants. Focuses on design: discusses unmatched, matched, stepped wedge, and other approaches, with particular attention paid to randomization and sample size considerations. Presents a variety of methods for the analysis of these correlated-outcomes studies. Includes special aspects of infectious disease interventions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.705. Good Clinical Practice: A Vaccine Trials Perspective. 4 Credits.
Acquaints students with the regulatory and ethical standards of conducting trials in accordance with FDA Code of Federal Regulations and ICH GCP Guidelines. Provides students with background and resources needed to conduct clinical trials in healthy populations. Students complete a project based on a real-world vaccine trial focusing on logistical and operational components of protocol design, informed consent process, recruitment considerations, human subjects protection including adverse event assessments and reporting. Additional concepts include the responsibilities of ethical review committees, principal investigators, and sponsors; investigational product management and preparation; data collection methods; quality assurance and quality control (QA/QC). Contributors to the course have experience conducting clinical trials research in various settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.801. Global Disease Epidemiology and Control Program Seminar 1. 1 Credit.
Introduces students to the diverse projects and research activities led by faculty in the Global Disease Epidemiology and Control (GDEC) program. Presents key institutes and centers working to improve international health and introduces faculty-led case studies to identify challenges in ongoing research and practice initiatives. Examines and reflects on the history of prevention and control activities using the book, "A History of Global Health," by Randall M. Packard as a framework.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.802. Global Disease Epidemiology and Control Program Seminar 2. 1 Credit.
Introduces students to skills and resources for career development within the field of international health. Provides an opportunity for students to focus in on these skills such as giving presentations, tailoring their resume to a public health audience and developing their publication profile. Prepares students for the practicum application process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.803. Global Disease Epidemiology and Control Program Seminar 3. 1 Credit.
Explores a variety of tools and methods applied by GDEC faculty to conduct public health research with a focus on hands-on skills building. Specific sessions address: data sources, including datasets that are publicly available; development of a basic statistical plan; use and interpretation of modeling tools; field data collection; data visualization strategies, and data management considerations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.804. Global Disease Epidemiology and Control Program Seminar 4. 1 Credit.
Prepares students for the activities and requirements of the second year of the MSPH program including the practicum and beyond. Presents best practices and workshop for conducting a strategic literature search. Explains the role and resources of the Institutional review Board (IRB) Explores the continuum of qualitative to quantitative research and programs. Explores practicum and capstone requirements and documentation. Establishes second year MSPH milestones within CoursePlus Portfolio.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.810. Global Disease Epidemiology and Control Practicum. 1 - 22 Credits.
Complements and reinforces the didactic portion of the MSPH program. Provides students with an opportunity to apply the knowledge gained during the first year, to develop skills in epidemiologic and data analysis skills applied to diseases of importance in low and middle income countries according to individually designed learning objectives, and to work as part of a team in an applied research or practice project. Students are placed in a variety of professional settings, which may include: government, non-government organizations (NGOs), multi-lateral, private, and/or for-profit sector. Provide opportunity for feedback for student performance and placement experience
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.820. Thesis Research Disease Control. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.830. Postdoctoral Research Disease Control. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.840. Special Studies and Research Disease Control. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.850. Msph Capstone Global Disease Epidemiology and Control. 2 - 16 Credits.
This course is offered so that MSPH students who are working on their capstone (formerly MSPH essay) can register for credits with their academic advisors. This allows the Department and academic advisors to better track 2nd year MSPH students on their progress towards completing degree requirements. This also allow 2nd year students to more formally block time off in their academic terms to complete their capstone.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.860. Global Disease Epidemiology and Control Program Seminar 2. 1 Credit.
Introduces students to skills and resources for career development within the field of international health. Provides an opportunity for students to focus in on these skills such as giving presentations, tailoring their resume to a public health audience and developing their publication profile. Prepares students for the practicum application process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.861. Global Disease Epidemiology and Control Program Doctoral Seminar. 1 Credit.
Creates a focused, small group environment for the entering PhD students, which actively engages them in relevant, challenging content necessary for success in the PhD program. Seminar supports and extends beyond those topics taught in the classroom setting. The doctoral student education does not merely consist of successful completion of required courses--each student is expected to become a leading scientific expert during the years spent at JHU. It provides an opportunity to engage with senior faculty and move meaningfully toward selection of a dissertation topic and the skills necessary to successfully complete the PhD.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.866. Special Topics in Program Evaluation in International Health. 1 Credit.
Acquaints students with current or on-going examples of large scale evaluations, and the practitioners or organizations that are the key players in implementation and evaluations of maternal and child health programs in low and middle income countries. Provides students with the skills to articulate current methodological issues around program planning, implementation and evaluation. Discusses key publications related to program implementation and evaluation. Introduces student to the various roles and responsibilities of a public health expert in the field of program evaluation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.223.867. Special Topics in Vaccine Science. 1 Credit.
Offers a series of seminars (4 per term) on research and access of vaccine against infectious diseases of global importance including COVID-19, emerging infections, childhood illnesses, and other important vaccine-preventable illnesses. Covers scientific, social, economic, political, and ethical dimensions of vaccine research, development and access. Includes leading vaccine experts at JHU, and from other institutions, organizations, government agencies and industry present seminars. Provides the student with an understanding of the pathways leading to development and utilization of vaccines with public health impact.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.605. Indigenous Health. 2 Credits.
Examines Indigenous Health through a public health lens. Critically evaluates the historical, social, cultural, and political determinants of Indigenous health utilizing various Indigenous theoretical frameworks. Provide students with an understanding of Indigenous research methodologies and prevention/interventions programs employed to promote and strengthen the overall health status of Indigenous populations globally.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.630. The Obesity Epidemic Problem Solving Seminar: What We Can Learn from Native American Communities. 3 Credits.
Provides an overview of trends in obesity in the US, examines use/limitations of data from national surveys and describes how the epidemic varies geographically, by race/ethnicity and socio-economic status. Lectures and activities survey the complex, multi-faceted set of factors that contribute to the obesity epidemic and propagate disparities. Case studies in Native American communities, where some of the highest obesity rates exist, illustrate the importance of community collaboration and inclusion of culture in developing public health programs and policies. This class analyzes how the integration of knowledge, cultural norms and values, and engagement of multiple stakeholders is critical to shaping effective programs and policies. Course prepares students to identify and assess communities with obesity risk factors and propose culturally sensitive strategies to decrease obesity and eliminate underlying health disparities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.689. Health Behavior Change At the Individual, Household and Community Levels. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.690. Qualitative Research Theory and Methods. 3 Credits.
Introduces practical skills for conducting qualitative research in domestic and international settings. Provides an overview of theoretical foundations of qualitative research and different methodologies for qualitative inquiry, including programmatic qualitative research, grounded theory, ethnography, phenomenology, narrative analysis, and case studies. Enables students to develop, interpret, and evaluate three common qualitative data collection methods: in-depth interviews, focus groups, and observation. Emphasizes understanding the basic principles and techniques critical for conduct, including question formation, tool design, sampling, data generation, ethics, and quality. Critically assesses the use of qualitative methods in the published health literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.691. Qualitative Data Analysis. 3 Credits.
Combines lecture, hands-on exercises, and work with individual datasets to guide students through several approaches to managing and analyzing qualitative data in the context of both international and domestic public health research. Offers instruction in how to create efficient and accessible qualitative databases, apply different coding and other analytic strategies to different types of qualitative data, write analytical memos, and present qualitative results in forms appropriate for different target audiences, both academic and programmatic. Provides a brief introduction to the use of computer-aided qualitative data analysis software (CAQDAS).
Prerequisite(s): Must also enroll for PH.224.991
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.692. Methods in Formative Research and Human Centered Design for Intervention Development. 4 Credits.
Examines how to conduct formative research and human-centered design and apply its findings in the design, implementation, and evaluation of public health interventions. Prepares students with conceptual and methodological understanding that can be applied across a diverse range of public health traditions from social science to clinical research including implementation science, program evaluation, community diagnosis, and translational research. Presents and explores method case studies and the use of the data collected to develop tailored, more effective behavioral and community interventions, implementation models, and valid and reliable measurements. Discusses cross-cutting issues in study design, community entry and involvement, data sharing and use, as well as staff development and supervision. Examples presented and analyzed include HIV and malaria prevention and control, Aedes aegypti control, and global maternal and child health care-seeking programs and services.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.694. Mental Health Intervention Programming in Low and Middle-Income Countries. 3 Credits.
Introduces students to mental illness symptoms and syndromes found across contexts and the variety of strategies used to treat such symptoms. Discusses mental health services as an integral part of global health program development. Addresses methods of adapting and developing interventions in low-resource countries and humanitarian contexts, as well as research designs used to evaluate these interventions. Challenges students to use critical and creative thinking skills throughout to discuss the issues involved in this relatively new field. Focuses on cross-cultural challenges in conducting mental health research in these settings. Topics covered include an overview of mental health issues in low-resource countries and humanitarian contexts; cross-cultural challenges; developing, modifying and disseminating prevention and intervention strategies; and the interplay between mental health and related topics such as nutrition, fitness and diabetes; HIV; substance abuse; and violence.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.697. Qualitative Research Practicum I: Partnerships and Protocol Development. 2 Credits.
Places students in teams collaborating with a local community-based organization or JHU faculty member to develop a qualitative research project. Introduces key topics in qualitative research including conducting field research, developing study protocol s and data collection instruments, and interacting with qualitative research participants and collaborators. Addresses the practical aspects of qualitative study design (e.g. choosing between data collection methods, resolving logistical challenges, and operationalizing an iterative research design) as well as the practical aspects of ethical review (including the JHSPH IRB and school ethical review processes). Prepares students to develop the components needed to begin the qualitative research project conducted in 224.698.01: Qualitative Research Practicum II: Collecting Qualitative Data and 224.699.01:Qualitative Research Practicum III: Analyzing and Writing Qualitative Findings (NOTE: concurrent or prior enrollment required).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.698. Qualitative Research Practicum II: Collecting Qualitative Data. 2 Credits.
Enables students to begin data collection and analysis for a qualitative research project in collaboration with a local community-based organization or JHU faculty. Discusses the informed consent process, common problems in qualitative data collection (interviews, focus groups, observation) and strategies for addressing them, how to make iterative changes to data collection methods, and different approaches to transcription and translation. Includes a debriefing with qualitative data collectors.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.699. Qualitative Research Practicum III: Analyzing and Writing Qualitative Findings. 2 Credits.
Enables students to complete data collection, analysis and write-up of results from a qualitative research project in collaboration with a local community-based organization or JHU faculty. Discusses common challenges in qualitative research including analysis of qualitative data, writing qualitative papers and reports, presenting qualitative findings, and ethical issues related to fieldwork and authorship.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.801. Building Resilience During Times of Uncertainty: An Evidence-Based Guide to Strengthen Your Personal Agency. 1 Credit.
Draws content from positive psychology, neuroscience, and mindfulness to teach the science and practice of building positive mental habits and fostering personal agency. Through a series of interactive sessions that review the scientific basis for these concepts as well as self-reflective exercises, students experience a personal journey to understand where they are now, where they would like to be and the mental tools to get there. Exposes students to several cognitive strategies and practical tools that can help navigate daily challenges, increase positive emotions, decrease stress and plan for the future.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.810. Social and Behavioral Interventions Practicum. 1 - 22 Credits.
Complements and reinforces the didactic portion of the MSPH program. Provides students with an opportunity to apply the knowledge gained during the first year, to develop skills in the development, implementation, and evaluation of social and behavioral global health interventions, according to individually designed learning objectives, and to work as part of a team in an applied research or practice project. Students are placed in a variety of professional settings, which may include: government, non-government organizations (NGOs), multi-lateral, private, and/or for-profit sector. Provide opportunity for feedback for student performance and placement experience
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.820. Thesis Res Soc & Beh Interv. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.830. Postdoctoral Research Social and Behavioral Interventions. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.840. Special Studies and Research Social and Behavioral Interventions. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.850. Msph Capstone Social and Behavioral Interventions. 2 - 16 Credits.
Offers students an opportunity to integrate and apply program skills and competencies to a public health problem in a format that approximates a professional practice experience. Fosters students' ability to produce scholarly papers that provide a meaningful contribution to knowledge of the health of underserved populations. Guides students' development of tangible evidence of expertise that addresses specific applied topics relevant to international health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.860. Social and Behavioral Interventions Program Seminar I:Applied Social Science & Global Health. 1 Credit.
Discusses the history and philosophy of social sciences in public health. Students read the book "Global Health: Why Cultural Perceptions, Social Representations, and Biopolitics Matter" by Mark Nichter. This book serves as a starting point for a series of discussions on why a thorough understanding of the historical, cultural, social and economic context is important in global public health practice; how globalization affects global burden of disease, health equity, and relationship with the social and physical environment; and the role of applied social science theory and methods in shaping and evaluating social and behavioral interventions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.861. Social and Behavioral Interventions Program Seminar II: Participatory Approaches and the Role of Community. 1 Credit.
Provides an overview of participatory methods as they apply in international health, and discusses the role of community in social and behavioral international health interventions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.862. Social and Behavioral Interventions Program Seminar III: Intervention Case Studies. 1 Credit.
Discusses intervention case studies examining formative research, implementation process, or monitoring and evaluation aspects. Relevant readings illustrating one or more of these aspects are provided by the SBI faculty, advanced students or other guests who will be leading each of the sessions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.863. Doctoral Seminar in Research Methods in Applied Medical Anthropology I. 4 Credits.
Discusses and explores advanced topics in qualitative methods, including participant observation, interviews and focus groups, content analysis, discourse analysis, and online ethnography. Discusses theories in medical anthropology that are particularly useful in the design and analysis of international health interventions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.864. Doctoral Seminar in Research Methods in Applied Medical Anthropology II. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.865. Doctoral Seminar in Behavior, Change and Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.866. Social and Behavioral Interventions Doctoral Proposal Development Seminar. 2 Credits.
Guides students through the process of developing a dissertation proposal for the doctoral degree in SBI. Introduces the proposal requirements and provides information about the oral defense, including forming committees. Sessions include discussions of students' projects to help define the scope of a dissertation, understand how to use conceptual frameworks, approach the literature review, research methods, and analytic plan. Also discusses research ethics. Students work with the faculty instructor and in pairs and/or small groups to critique each others' proposals during the process of developing their own proposals.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.990. LAB for IH 224.690.
lab for PH.224.690
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.224.991. LAB FOR IH PH.224.691.
Lab for PH.224.691
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.600. Racism and Public Mental Health. 1 Credit.
Presents a multi-level understanding of the effects of racism on mental health among historically marginalized racial and ethnic populations. Prepares students to gain introductory knowledge of racism, from a historical and empirical perspective, as a fundamental cause of mental health disparities. Addresses and discusses the personal and vicarious influence of racism on specific psychiatric disorders such as depression, anxiety, schizophrenia, and suicidal thoughts and behaviors.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.602. The Epidemiology of Substance Use and Related Problems. 3 Credits.
Presents an overview of the epidemiology of drug and alcohol dependence and its relevance to public health. Reviews trends in estimates of prevalence and incidence of drug and alcohol use and problems related to use. Examines factors that might influence subgroup variation and health disparities in drug use outcomes using a dynamic approach that addresses changes over time and across the life course. Explores the universe of suspected causal influences and mechanisms ranging from genetic to societal influences using a model in which transitions in stages of drug involvement are influenced by interactions between individual susceptibility and social environmental factors. Presents research methodology and recent innovations in drug and alcohol epidemiologic research. The goal of this course is further understanding of the usefulness of epidemiology for shedding light on the natural history of drug and alcohol use and the relevance of epidemiologic research to basic and clinical research
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.603. Psychiatric Epidemiology. 3 Credits.
Reviews descriptive and analytic epidemiology for major mental disorders. Examines issues of classification and nosology of psychiatric disorders, operational case definitions and measurement techniques, prevalence and incidence rates, natural history, risk factor research and plausible explanations for credible risk factors. Considers aspects of psychiatric epidemiology that illustrate important problems and concepts in epidemiology generally.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.604. Seminars in Research in Public Mental Health. 1 Credit.
Integrates academic training with current research in public mental health, including etiological, epidemiologic and intervention research for mental and behavioral disorders across the lifespan. Features presentations by researchers from JHU and other research and practice institutions on the results of state of the art investigations of mental and behavioral health problems and issues of public health significance, emphasizing experimental design and methodology for analysis and discussion.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.605. Doctoral Seminar in Public Mental Health. 1 Credit.
Explores and critiques public mental health research and practice, emphasizing key constructs and methods with department faculty through presentations, readings, and group discussions. Develops professional development skills for careers in public mental health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.606. Digital and Mobile Health Research in Public Mental Health. 3 Credits.
Introduces students to digital and mobile health (mHealth) research in mental health. Covers a wide range of digital health topics and studies on mental and behavioral health conditions. Topics will include using digital health for research participant recruitment, assessment and data collection, as well as mental and behavioral health intervention development and delivery. Offers hands-on experience in digital and mobile health study design and data collection. Provides students a comprehensive overview over of the digital and mobile health field in mental health and encourages creative thinking about how these research methods can be applied.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.607. PREVENTION of MENTAL DISORDERS: PUBLIC HEALTH InterVENTIONS. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.608. School-Based Preventive Interventions and Research. 1 Credit.
Participants will have an an understanding of school-based prevention and research including the theoretical frameworks supporting schools as a context to address public health; the barriers and challenges to implementation of evidence-based interventions in schools; methodological implications of school-based research; and sources of funding for conducting school-based research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.609. Climate Change and Mental Health: Research, Practice, and Policy Perspectives. 3 Credits.
This course will introduce mental health concepts of disorder, distress, well-being, and resilience in the context of climate change. Online course sessions will be structured around three pillars: 1) climate change exposures and their impacts on mental health and well-being, 2) social and environmental justice in climate change and mental health, 3) resilience, psychosocial adaptation, and action. Lectures will be given by research, policy, and mental health practice experts. Research findings on direct and indirect mental health and psychosocial impacts of chronic and acute climate change exposures will be presented. Sessions will explore inequalities in climate change impacts on mental health with examples provided from across local and global social and economic contexts. Individual and community-level resilience, psychosocial adaptation, and areas of priority action will be defined, highlighted, and discussed.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.610. Knowledge for Managing County and Local Mental Health, Substance Use, and Developmental Disability Authorities. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.611. Writing Publishable Manuscripts for the Social and Behavioral Sciences. 2 Credits.
Provides training in the preparation of manuscripts for submission to peer-reviewed journals, with a focus on empirical papers and systematic reviews. Develops students' ability to serve as reviewers and critically evaluate the written work of peers. Covers topics relevant to effective communication and dissemination of ideas, including journal selection, preparation of cover letters, and responses to reviewers. Incorporates student critiques of other students' works in progress and writing accountability group (WAG) activities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.612. Introduction to Behavioral and Psychiatric Genetics. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.613. Mental Health and the Gut. 2 Credits.
Explores the strong, bidirectional communication between the gastrointestinal tract and the brain. Reviews the role of the microbiome in shaping brain health, the link between gastrointestinal symptoms and mental health, and new and seminal research on the brain-gut connection in specific psychiatric disorders such as schizophrenia, depression, and autism spectrum disorders. Students will learn to read and critique literature on this subject, and will learn the basics of how to design and analyze a study on the microbiome and mental health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.614. Advanced Latent Variable Modeling: Matching Model To Question. 3 Credits.
Reviews concepts, key assumptions, and published applications of advanced latent variable methods commonly used in psychology or mental health research including growth mixture models, latent class analysis with covariates and distal outcomes, and latent transition analysis. Acquaints students with the current state of science related to latent variable methods, which is a quickly advancing field, and gives students the tools they need to build an appropriate latent model for their research question. Topics include growth mixture modeling, latent class regression, latent transition analysis, multi-level models, and measurement invariance. Presents students with examples from psychological, mental health, and developmental datasets with applications in the behavioral and social sciences. Students will apply lessons from didactic lectures in assignments and class projects.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.615. Mental and behavioral health: from birth to early adulthood. 1 Credit.
Introduces students to the field of developmental psychopathology and its fundamental concepts and theoretical perspectives, including sensitive periods and the role of early experiences, risk, and resilience, and developmental pathways. Addresses factors that contribute to the development of psychopathology, including temperament, genetics, neurobiological processes, and social influences at the family, peer, and neighborhood levels. Discusses the contributions of individual-specific and contextual factors on the development of internalizing, externalizing, and substance use disorders across the childhood, adolescent, and emerging adulthood years.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.617. Psychopathology for Public Health. 3 Credits.
Examines the major mental disorders, emphasizing the current thinking regarding their essential features and their assessment in public health research. Class sessions include lectures by the instructor and by experts in particular disorders. Reviews best-practice non-pharmacological and pharmacological approaches to the treatment of disorders, and commonly-utilized measures in public health and clinical contexts, including self- and informant-report measures, clinician-administered scales, and structured interviews.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.618. Mental Health in Later Life. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.619. Psychiatric Genomics. 3 Credits.
Addresses the rapidly changing landscape of the study of complex genetics diseases. Students explore the current state of the quantitative issues in complex disease genetics, so that they can translate their experiences into research practice. Analyzes genome-wide association scans, epigenetics, and next-generation sequencing, as well as approaches to power calculation, including the use of simulation. Students study the current literature as well as examples from real data sets. In addition to learning the analytic techniques, students also become familiar with the assumptions and limitations of these approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.620. Qualitative and Quantitative Methods for Mental Health and Psychosocial Research in Low Resource Settings. 3 Credits.
Introduces mental health as an integral part of global health research, including using qualitative and quantitative methods to conduct needs assessments and to monitor and evaluate interventions. Presents and critiques qualitative strategies for integrating local cultural perspectives into research models. Examines qualitative and quantitative methods of adapting psychiatric assessment tools for use cross-culturally and presents challenges for developing interventions for use in low-resource contexts. Encourages use of critical and creative thinking skills throughout to discuss the issues involved in this important area of study.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.621. Mixed Methods for Research in Public Health. 2 Credits.
Introduces students to the field of mixed methods research, which can be thought of as research in which investigators combine quantitative and qualitative research techniques, methods, approaches, concepts or language into a single study or program of research. Focuses on applications in mental health services research. Acquaints student with the logic of inquiry, which includes the use of induction (discovery of patterns), deduction (testing theories and hypotheses), and abduction (uncovering and relying on the best of a set of explanations for understanding results). Explores which questions lend themselves to mixed methods research. Discusses mixed designs and methods, and writing. Students critique mixed methods manuscripts and proposals, and can outline a mixed methods study based on their own program of research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.622. Neuroimaging: Methods and Applications in Mental and Behavioral Health. 3 Credits.
Provides an introduction to neuroimaging methods, relevance and possible implementations of these methods and background to critically evaluate neuroimaging applications in mental and behavioral health research. Introduces basic principles of neuroimaging as applied to human subjects research and specifically public health research. Reviews various imaging applications in the context of their specific methods, source of signal, goals and limitations, and research design and statistics and relevance to mental and behavioral health. Encourages critical evaluation of neuroimaging methods in public mental and behavioral health through review of published studies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.623. Brain and Behavior in Mental Disorders. 3 Credits.
Examines the onset and clinical symptoms of mental disorders over the life course of the developing and aging brain to illustrate neurobiological systems involved in thinking, feeling, and acting. Increases understanding of behavioral disorders, their assessment, neurobiological underpinnings, and systemic influences. Reviews some common disorders, discussion (1) clinical and case studies; (2) definitions and diagnostic methods; treatment, epidemiologic evidence regarding etiology, and (3)challenges to examining brain-behavior relationships across disorders.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.625. Mobile Mental Health Research: Planning and Conducting Ecological Momentary Assessment. 1 Credit.
Introduces mobile health (mHealth) approaches and methods to study human health behavior and mental health in near real-time and everyday life. Provides a brief overview of Ecological Momentary Assessment (EMA) studies and critical study design considerations. Gives students hands on experience setting up a small EMA study using freely available online software and smartphone apps.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.626. Propensity Score Methods in Non-Experimental Research in Mental Health. 1 Credit.
Discusses the importance of the careful design of non-experimental studies, and the role of propensity scores in that design, with the main goal of providing practical guidance on the use of propensity scores in mental health research. Covers the primary ways of using propensity scores to adjust for confounders when estimating the effect of a particular “cause” or “intervention,” including weighting, sub classification, and matching. Examines issues such as how to specify and estimate the propensity score model, selecting covariates to include in the model, and diagnostics. Draws examples from school-based prevention research, drug abuse and dependence, and non-randomized treatment trials, among others. Primarily emphasizes non-experimental studies; however, also discusses applications to randomized trials.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.628. Gaps and Opportunities in Public Mental Health: A Systems Approach. 3 Credits.
Acquaints students with mental health systems and the development of a comprehensive approach to the delivery of services to a variety of vulnerable populations living in difficult conditions in the community. Topics include a survey of the variety of current mental health services and evidence-based approaches, the impact on services of governance, organization and financing of services including a primer on Medicaid and Medicare, the link between poverty and mental health and the use of jails as mental asylums, the development of a competent workforce and an introduction to international community mental health issues. Features discussion and problem solving and involves a high degree of interaction between the participants as well as several field trips.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.629. Mental Health in General Medical Settings. 1 Credit.
Provides an overview of barriers to mental health care. Introduces evidence-based models of integrated physical and mental health care. Describes an array of mental health interventions that can be delivered in general medical settings (e.g., screening, brief intervention, case management, etc.), and evaluates the evidence supporting the use of such interventions. Explores integrated care in special settings (e.g., low- and middle-income countries, substance use care, emergency department).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.630. Stigma and Mental Health: Issues and Interventions. 1 Credit.
Provides a broad understanding of the interrelationship between stigma and mental health. Focuses on health consequences of stigma for individuals living with mental health disorders. Introduces students to intervention strategies for reducing mental health-related stigma at different health systems and ecological levels, with a focus on the role of mental health service users in stigma reduction. Prepares students to incorporate anti-stigma approaches into their own work.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.631. LATENT CLASS ANALYSIS AND REGRESSION FOR MENTAL HEALTH RESEARCH. 2 Credits.
Addresses latent class analysis, a latent variable method often used in Mental Health research to identify latent groups of individuals based on patterns of categorical observed variables. Use of additional variables to predict latent class membership will also be explored. Includes discussion of examples from the mental health literature as well as hands-on model-fitting using MPLUS. Latent class analysis is a method of modeling categorical latent variables, such as psychiatric diagnoses, as a function of a set of categorical observed variables.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.632. Grant Writing: NIH and Other Funding Sources. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.633. DEVELOPING AND USING LOGIC MODELS/THEORY OF CHANGE FOR BEHAVIORAL HEALTH AND VIOLENCE PREVENTION PROGRAMS. 1 Credit.
Developing and Using Logic Models/Theory of Change for Behavioral Health and Violence Prevention Programs. Introduces the concept of the logic model/theory of change in the development of programming and in the creation of grant applications. Reviews logic models/theory of change strategies from existing programming related to the prevention of behavioral health problems/violence or the treatment/remediation of behavioral health problems/violence/trauma. Discusses strategies for using the logic model/theory of change to build effective teams.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.634. Stigma and Public Health: Issues and Interventions. 3 Credits.
Provides a broad understanding of the public health impact of stigma and discrimination related to a variety of identities and health conditions. Introduces students to frameworks for understanding stigma (including intersectionality), strategies for characterizing and measuring stigma, and intervention approaches for reducing stigma and discrimination at different ecological levels with the goal of improving health equity, access to quality healthcare services, and promoting psychosocial wellbeing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.635. Conflict Resolution Skills in Mental Health. 1 Credit.
Examines the dimensions of conflict in the mental health field including, but not limited to assessing one's personal conflict style; dynamics and elements of negotiation; power disparities; conflicting parties' positions, needs, and interests; Mediation--stages, behaving as a mediator, facilitating agreements; dealing with impasse; techniques to re-frame disputes; dealing with high emotions; ethical dilemmas; conflict coaching; and designing conflict prevention and resolution systems in mental health agencies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.636. Methods for Handling Missing Data in Psychosocial Research. 1 Credit.
Since analyses that use just the individuals for whom data is observed can lead to bias and misleading results, students discuss types of missing data, and its implications on analyses. Covers solutions for dealing with attrition (non-response) and missingness on individual items. These solutions include weighting approaches for unit non-response and imputation approaches for item non-response. Emphasizes practical implementation of the proposed strategies, including discussion of software to implement imputation approaches. Examples come from school-based prevention research as well as drug abuse and dependence.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.637. Causal Mediation Analysis. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.638. The Science of Narrative: Why Storytelling Is Important to Research. 1 Credit.
Introduces the basic components of storytelling. Examines the science within the narrative arts. Challenges students to present the art within public health sciences. Emphasizes critical perspective on how nuances and merits of public health research should be expressed to relevant audiences, including community members and policymakers. Explores why storytelling is a powerful modality for conveying uncommon knowledge and insight in a manner that appreciates common experiences. Prepares students to combine data and narrative while acknowledging both as essential to effective public health advocacy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.639. The Intersection of Mental and Physical Health. 3 Credits.
Addresses the epidemiology, consequences, measurement, and implications for health service delivery of co-morbidity of mental and physical disorders. Employs a conceptual framework that emphasizes the potential psychological, behavioral, social, and biological mechanisms through which mental and medical illness interact to cause disability and death. This model has implications for development of new service delivery models that integrate the care of mental health disorders into the care of medical conditions such as cancer, cardiovascular disease, and diabetes. Students interact with investigators and clinicians in lecture format, examine case studies, and generate a paper related to a medical-psychiatric co-morbidity of their choosing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.640. Childhood Victimization: A Public Health Perspective. 3 Credits.
Examines childhood victimization across a wide spectrum of victimizations, including sexual and physical abuse, peer and sibling assaults, witnessing domestic violence and verbal abuse and neglect. Acquaints students with the epidemiology of childhood victimization, reviews existing victim and perpetrator-focused interventions, and explores established emerging prevention strategies. Reviews legal policies aimed at reducing childhood victimization, their strengths and weaknesses, and challenges to the notion that childhood victimization is, or can be, effectively addressed solely or primarily via criminal justice interventions
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.641. The Epidemiology of Substance Use and Related Problems. 1 Credit.
resents an overview of the epidemiology of substance use and substance use disorders within a public health framework. Initially we review how drugs are classified and regulated and then we examine trends in estimates of prevalence of use and use disorders. Covers the most common drugs of abuse, including alcohol, tobacco/nicotine, cannabis, opioids, and cocaine. Included are lectures from those with expertise in specific drugs or areas of study within substance use epidemiology.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.642. Manuscript Writing for the Social and Behavioral Sciences. 1 Credit.
Trains students to prepare manuscripts for submission to peer-reviewed journals with a focus on empirical papers. Discusses topics relevant to effective communication and dissemination of ideas, including journal selection.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.643. The Science of Narrative: Intersectionality of Storytelling and Public Health. 2 Credits.
Introduces the basic components, concepts, and frameworks of storytelling. Examines the science within the narrative arts. Challenges students to present the art within public health sciences. Emphasizes critical perspective on how nuances and merits of public health research should be expressed to relevant audiences, including community members and policymakers. Explores why storytelling is a powerful modality for conveying uncommon knowledge and insight in a manner that appreciates common experiences. Explores approaches that capture narratives for health research and practice. Prepares students to combine data and narrative while acknowledging both as essential to effective public health advocacy. Encourages a re-imagination of public health's epistemology, pedagogy, and methodology.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.646. Autism Spectrum Disorder in Public Health. 2 Credits.
Since the number of children with an autism spectrum disorder (ASD) has increased dramatically over the past two decades and is now a major public health issue, students learn about the state of the science of autism epidemiological and etiological research, and the emerging questions for Public Health. Students also learn about prescriptive epidemiology, genetics, environmental risk factors, and prognosis of ASD, as well as long-term outcomes.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.647. Childhood Victimization: An Overview of Public Health Efforts. 1 Credit.
Examines childhood victimization from a public health perspective. Familiarizes students with public health strategies used to address three related domains: detection and prevention, treating victims, and offender interventions. Challenges students to critically examine policy and practice, using cases such as the Penn State sex abuse scandal. Uses small group break-out sessions to help familiarize students with the public health approach to violence prevention.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.648. Child and Adolescent Psychopathology. 1 Credit.
Reviews, in detail, the current and historic role of government as funder, regulator, and provider of mental health services in the United States. Highlights a number of critical dimensions of public mental health programs, including, but not limited to, the organization of services for children, adults, and aging adults; substance abuse services; specialty services designed to enhance long-term recovery support and community integration; supported housing; and integrated behavioral health and primary care. Focuses on the role other public agencies, working in parallel and integrated with public behavioral health agencies, such as Social Services, Social Security, Corrections, Juvenile Justice, Public Health, and Medicaid. Features an overview of public agencies, peer (current and former mental health clients) operated services.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.649. Investigating Behavioral Health Outbreaks and Epidemics. 1 Credit.
Introduces outbreak investigation, with a focus on outbreaks and epidemics of behavioral health problems such as substance use, mental health, violence, and neurocognitive disorders. Provides hands-on experience through a practice investigation that uses examples and data from a real outbreak of lung injuries linked to use of e-cigarettes.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.650. Methods in Implementation Science. 3 Credits.
Introduces methods, research designs and evaluation approaches that can be used to study implementation science questions. Includes an introduction of methods such as mixed-methods, measurement validity and reliability, randomized and non-randomized designs, and simulation studies using examples from mental and behavioral health settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.651. How to Derive a Polygenic Risk Score. 2 Credits.
Explores what polygenic risk scores are, and what they have revealed to date about human genetic mental health outcomes, with computer laboratory exercises to step-by-step develop the tools needed to create and analyze these scores with genetic study data. Includes creating summary statistics and descriptive figures.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.655. Applying the DHHS Healthy People 2020 Model of Health Determinants. 1 Credit.
Presents the model of health determinants, and focuses on the effects on population health and community and personal wellbeing. Explores the health determinants model introduced by the US. Department of Health and Human Services Healthy People 2020 Committee. Discusses the model which links negative social and physical determinants of health, such as abuse, lack of social support, or poor-quality living conditions, with trauma responses, and then with behavioral and health conditions. Discusses population health as an approach to understanding and intervening in this system to prevent trauma and subsequent illness. Examines the dimensions of wellbeing to reflect subsequent health status.Introduces and explores the model and several areas of application.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.657. Statistics for Psychosocial Research: Measurement. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.658. Mental Health and Psychosocial Support in International Humanitarian Settings. 2 Credits.
Explores key issues in the development and evaluation of mental health and psychosocial support interventions with populations affected by humanitarian crises, such as natural disasters and armed conflicts. Discusses such questions as: ‘how do populations in diverse socio-cultural settings define mental health in the context of humanitarian crises?’; ‘How can we build on existing resources and practices that promote mental health in humanitarian crises?’; ‘What is known from epidemiological and intervention studies about common mental health problems and effective interventions in humanitarian settings?’. Challenges participants to reflect on translating science to practice, and vice versa. Course methods entail a mix of multimedia presentations and case discussions, focusing on real-world experiences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.659. Current Issues in Military Mental Health. 1 Credit.
Explores issues in mental health affecting U.S. military personnel and veterans over more than a decade of war. Presents an overview of the epidemiology of mental disorders and suicide within military populations. Critically reviews existing epidemiological studies and the current military psychiatric epidemiology literature. Introduces military mental health data systems used for surveillance and research. Discusses challenges in prevention and service delivery. Explores the significance of traumatic brain injury. Reviews evolving practices in deployment mental health screening. Addresses controversial topics including the practice of polypsychopharmacy, multiple deployments, recruitment, retention, and separation policies, and the role of the all-volunteer force. Examines current issues in the care of military veterans, including homelessness, suicide, and substance abuse.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.660. Grant Writing for the Social and Behavioral Sciences. 3 Credits.
Targets the development of effective research proposals in public mental health, including the identification of research questions, factors related to significance and innovation, study design, and analytic approaches. Reviews of research proposals and articles address issues such as topic selection, sample selection, measurement , and analytic strategies. Reviews strengths and weakness of proposals and studies and considers recent advances in epidemiologic and statistical methods as alternative approaches for addressing research questions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.661. Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.662. Public Mental Health. 2 Credits.
Provides an overview and framework for the full spectrum of public mental health. Presents key concepts in public health applied to mental and behavioral health and disorders. Discusses the causes and consequences of mental health disorders, the frameworks for understanding the origins of these disorders, strategies for treatment and prevention, and issues related to health services and policy for mental and behavioral health
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.663. Mental and Behavioral Clinical Practice Exposure. 2 Credits.
Introduces students to the mental health/behavioral care clinical settings. Acquaints students with the therapeutic relationship that exists between clinician and patient. Presents opportunities for shadowing and research partnerships with clinicians. Provides access to potential clinical data sets for exploration and analysis. Emphasizes practical hands-on experience over didactic secondary exposure. Challenges student notions of the psychiatric patient and their care, while destigmatizing both the illnesses and the treatment processes. Encourages creative hypothesis generation grown from observation of solvable challenges experienced in the field.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.664. Introduction to Mental Health Services. 3 Credits.
Examines issues in mental health care utilization, including definition of need for mental health care, concerns about the treatment gap in the community, treatment seeking and barriers to care (most importantly stigma and financial barriers) and treatment seeking models and predictors of mental health treatment-seeking in community settings. Introduces students to the study of delivery of mental health care, including historical trends in the delivery of mental health care in the US, the mental health care system's governance and financing, quality and outcomes of mental health care and mental health services for children and older adults and treatment services for substance disorders.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.665. Climate Change and Mental Health. 1 Credit.
Introduces mental health concepts of disorder, distress, well-being, and resilience that warrant consideration in the context of climate change. Structured around chronic and acute climate change exposures, including rising temperatures, rising sea levels, and disasters, such as floods, hurricanes, and wildfires. Explores mental health impacts of particular climate change exposures with examples from across high-, middle-, and low-resource contexts. Includes discussion of social inequalities on the impacts of climate change on mental health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.666. Sleep and Public Health. 1 Credit.
Provides a foundation of knowledge concerning the basics of sleep, how sleep changes across the lifespan, how it is measured, its links to physical and mental health, important sociodemographic sleep disparities, and implications for public health and policy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.667. Mental Health and the Law. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.668. Complex Systems Thinking in Aging Research: Fundamentals and Methods. 1 Credit.
Trains students on the fundamentals of systems thinking. Considers key aging-related health outcomes from a systems science lens. Examines basic systems models (dynamic models, agent-based models, social network models). Examines application of systems thinking on evaluating health programs and polices.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.669. Epidemiology of Major Mental Disorders. 2 Credits.
Presents an overview of the epidemiology of anxiety and mood disorders, schizophrenia and associated syndromes, affective psychosis including bipolar disorder, and dementia and related syndromes. Prepares students who have basic knowledge of the clinical features of the syndromes, but will touch briefly on issues of assessment in the context of epidemiology. It includes the fundamentals of descriptive epidemiology for each syndrome (prevalence, incidence, natural history); consequences of the syndromes for impairment, disability, and general health; and an assessment of risk factors for the syndromes, including a discussion of the genetic epidemiology of the syndromes. Examines the special conceptual challenges for the field of epidemiology which are presented by the mental disorders.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.670. Creating Trauma Informed and Healing Policies and Practices. 1 Credit.
Provides a broad overview of the challenges presented by traumas including COVID-19 and violence. Reviews how trauma, including COVID-19 and violence, impacts clients, patients, participants in programs or community activities, and those leading these services, supports, and activities. Describes policies and practices that are healing and trauma-informed. Examines opportunities and challenges for creating more healing and trauma-informed organizations, programs, and policies and the challenges encountered. Prepares students to positively impact their own programs, organizations, and activities and to provide consultation to others interested in creating more healing and trauma informed polices, practices, and activities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.671. Traumatic Pasts but Hopeful Futures: Resilience and Positive Youth Development in the Context of School-Based Mental Health. 1 Credit.
Introduces research on resilience and youth development that addresses adolescent mental and behavioral health for at-risk youth using the definitions, theories, and measurement of resilience. Focuses on how a framework of positive youth development can inform school-based, universal interventions to build youth resilience, promote self-efficacy, and reduce disparities in youth mental health. Includes discussion of how we can use these frameworks to address mental and behavioral health inequities are exacerbated by the COVID-19 epidemic and protests against structural racism and police brutality.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.672. Evaluation of Mental Health Service Systems. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.673. Prevention Research in Mental Health. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.674. Suicide As A Public Health Problem. 3 Credits.
Introduces students to the following content areas with regard to suicide: history and theories; epidemiology; etiological factors and mechanisms; clinical phenomenology and comorbid disorders; assessment of suicidal behaviors; special populations; preventive and treatment interventions; ethical issues on the conduct of research on suicidal populations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.675. Suicide Prevention: Problem Solving Seminar. 3 Credits.
Explores the following suicide-related topics: history, frameworks and theories; epidemiology, etiological factors and mechanisms; national and local suicide data sources; policy and preventive interventions; high-risk populations; common barriers and challenges to implementing and sustaining suicide prevention. Introduces leadership and management competencies including organizational change and strategic plans. Presents strategies for designing systems-level interventions. Engages students in interprofessional team approaches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.677. Translation of Mental Health Research Into Field-based Public Health Interventions. 2 Credits.
Provides a broad overview of how evidence-based mental and behavioral health interventions are being interwoven into education, health, and community programs in the United States and around the world in order to prevent or intervene with issues of interpersonal violence and trauma-related disorders and promote well-being and mental health resiliency. Introduces examples for different populations across the lifecourse and in different US and global contexts. Addresses challenges of integrating and scaling up interventions in non-clinical settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.680. Promoting Mental Health and Preventing Mental Disorders in Low- and Middle-income Countries. 3 Credits.
Focuses on research and intervention approaches in low- and middle-income countries in the field of mental health prevention and promotion. Particularly emphasizes populations exposed to adversity, and challenges students to bridge the gap between research and practice in this area. Discusses the determinants of mental health, and how they can be targeted: at different life stages and different socio-ecological levels (e.g., family, school, and neighborhood). Addresses such questions as 'What is resilience, and how can it be promoted?', 'How can interventions prevent depression in women exposed to intimate partner violence?', and 'How do poverty, violence and malnutrition impact mental health?'. Uses real-world examples, and follows a case method approach.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.681. Mental Health and Psychosocial Needs of Refugees After Resettlement in High income Countries. 1 Credit.
Provides a broad understanding of the refugee resettlement process and presents data on the epidemiology of mental health and psychosocial problems among refugees resettled in high income countries like the U.S. Introduces methods for measurement and evaluation of these problems and prepares students to be able to design mental health studies among this population. Explores mental health treatment options and service utilization among resettled refugees in high income countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.682. PRINCIPLES AND PRACTICES OF HARMONIZATION IN MENTAL HEALTH RESEARCH. 2 Credits.
Introduces concepts and key assumptions of item response theory (IRT). Explores novel applications of IRT to refinement of measures, assessment of differential item functioning, computer adaptive testing, and calibration of metrics across diverse samples. Students apply lessons from didactic lectures in a laboratory setting using prepared examples. Original data are welcome.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.685. Introduction to Screening for Behavioral Health Conditions. 1 Credit.
Describes the application of screening to different behavioral health conditions across the life course. Reviews key psychometric properties of screening tools. Introduces the desired diagnostic, treatment, and health-related outcomes of screening. Discusses possible harms and drawbacks of behavioral health screening for different stakeholders. Encourages critical thinking when reading empirical research.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.688. Public Health and the Good Life. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.690. Applications and Analysis of Epigenetic Data in Public Health Research. 1 Credit.
Presents applications of epigenetic measurement in public health research. Begins by providing a rationale for such work, then describing measurement tools, from single-site methylation typing, to array-based methods, and whole-genome sequencing. Study design options, quality control analyses, and association analyses will then be presented. Examples based on both mental and physical health outcomes will be used.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.698. Strategies for Success: Public Mental Health Career Development and Beyond. 1 Credit.
Provides MHS students with the structure, resources, and support needed to start building a career in Public Mental Health. Explores career options, resume development, interview skills, networking, and salary negotiation through lectures and small-group activities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.700. Public Health Approaches in Autism and Developmental Disabilities. 3 Credits.
Examines public health approaches to the assessment, etiology, services, and policy issues related to autism and developmental disabilities. Introduces the state of the science of autism and developmental disabilities epidemiology, and emerging questions for Public Health. Includes presentations and discussions of current information on descriptive epidemiology, genetics, environmental risk factors, and prognosis of ASD. Presents research on long-term outcomes in individuals with ASD. Provides an overview of research progress to date and points to challenges as we work to learn more about this enigmatic neurodevelopmental disability.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.800. MPH Capstone Mental Health. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.802. Seminar on Aging, Cognition and Neurodegenerative Disorders. 2 Credits.
Addresses age-related cognitive and neuropsychiatric disorders that are of particular importance with the rapid expansion of the aging population. Focuses on the major domains of cognition and comparison of the age-related changes that occur in each cognitive domain. Includes emphasis on contrasting the major neurodegenerative disorders related to age and describing the clinical presentation and pattern of cognitive change in each condition. Participants address current strategies for maximizing cognitive function with age and treatment strategies for the primary neurodegenerative disorders. Examines and identifies gaps in knowledge and research approaches to fill these gaps. Explores concepts of cognitive systems, animal and imaging models, and neuropathological changes associated with aging and with disease.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.805. Seminar on Statistical Methods for Mental Health. 1 Credit.
Discusses recent advances in statistical methods in mental health. Includes student and faculty presentations as well as discussions of recent articles in the literature. Includes topics: missing data, longitudinal data analysis, causal inference, and measurement.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.811. MHS Thesis in Mental Health: from Proposal to Publication I. 1 Credit.
Students are required to conduct a systematic review of the literature or a data-driven paper in partial fulfillment of the Master of Health Science (MHS) degree in the Department of Mental Health. Students will be provided with basic research and organizational skills needed for successful completion of the MHS project. Topics include: conducting a systematic review or literature review for data driven papers, selecting an appropriate research design, and interpreting findings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.812. MHS Thesis in Mental Health: from Proposal to Publication II. 1 Credit.
Students are required to conduct a systematic review of the literature or data-driven paper in partial fulfillment of the Master of Health Science (MHS) degree in the Department of Mental Health. Emphasis is placed on revision and dissemination of the final project. Topics include: Selecting an outlet for dissemination (e.g., journal submission, conference presentation) and writing assignments (e.g., cover letter, abstract for conference).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.820. Thesis Research Mental Health. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.830. Postdoctoral Research Mental Health. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.840. Special Studies and Research Mental Health. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.895. MPH Practicum: Mental Health. 1 - 4 Credits.
The MPH Practicum is a mentored, hands-on practical public health experience, which involves meaningful participation and interaction with public health professionals.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.330.990. Computer Lab: Epigenetic Data in Public Health Research. 1 Credit.
Offers hands-on computer lab experience analyzing epigenetics data using quality control and statistical association analyses presented in the course, 330.690 Applications and Analysis of Epigenetic Data in Public Health Research. Real and simulated data will be used to demonstrate software that will implement particular programs. Software applications will primarily use the R statistical environment and packages in BioConductor.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.600. Introduction to the Biomedical Sciences. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.601. Vector-Borne Disease Control. 3 Credits.
Addresses various vector-borne disease control strategies that target any of the complex interactions between the pathogen, vector and host. Emphasizes on malaria, dengue and other arboviral diseases, as well as Chagas, leishmaniasis and schistosomiasis. Discusses some examples of control strategies such as current and future prophylactic, therapeutic and transmission-blocking vaccines and drugs, vector control, and vector-targeted pathogen transmission control. Addresses interactions between control methods and factors that influence efficacy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.603. Biology of the Next Pandemic. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.606. Major Global Infectious Diseases: Prospects for Control. 2 Credits.
Provides in-depth information on the basic pathogenic mechanisms of selected infectious diseases that continue to be of major public health importance worldwide, with an emphasis on underlying problems for development of effective public health interventions. Includes topics: HIV/AIDS, malaria, tuberculosis, measles, as well as infectious disease hazards that may become important in the future. Obtains a working knowledge of the biology of these diseases, including prospects for their effective management and control at both the individual and public health level, and of basic human immunology and vaccinology
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.607. Methods in life sciences, literature and practice. 2 Credits.
Focuses on understanding laboratory research technologies and applying this knowledge to evaluate current scientific literature. Achieves these goals through in-depth small group discussions with a range of faculty expertise, weekly assigned reading, short projects, short writing assignments or other activities. Includes both faculty and student leaders for each session; some sessions held in Core facilities. Includes topic areas: molecular biology, genomics, protein structure and strategies to evaluate the literature (primarily term 1), microscopy technologies, image analysis, flow cytometry and lab notebook archiving (primarily in term 2), cell biology, organelle dynamics, cell signaling, data management and experimental design (primarily term 3).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.611. Principles of Immunology I. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.612. Principles of Immunology II. 3 Credits.
Introduces biological concepts of immunology; molecular nature of antigens; molecular basis for antibody and T-cell receptor structure and diversity; complement; hypersensitivity reactions; cellular basis for the immune response; cell-mediated immunity; adhesion molecules and coreceptors cell activation; cytokines and other soluble mediators; major histocompatibility complex (MHC) antigens; tumor immunology; transplantation immunobiology; mechanisms of resistance to microorganisms; tolerance; autoimmunity; and immuno-deficiency.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.613. Techniques in Molecular Biology. 3 Credits.
During five days of intensive hands-on laboratory instruction, students develop skills in the use of modern laboratory investigative tools in the area of molecular biology. They learn how to perform polymerase chain reaction (PCR) DNA amplification, quantitative PCR, DNA and protein gel chromatography, Western blotting, transformation of bacteria, and expression of heterologous proteins by bacteria.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.615. Critically Reviewing the Scientific Literature. 2 Credits.
Unlike the typical literature review course, focuses specifically on literature that is flawed in the approach or methods used to examine a scientific question and examines how well the conclusions drawn are justified by the data. Oral discussions of assigned literature are accompanied by weekly 2-3 page written reviews, which provides opportunities for students to get feedback on their writing skills, as well as their critical reading skills.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.623. Fundamental Virology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.624. Advanced Virology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.625. Scientific Grant Writing. 2 Credits.
Covers the critical components of a scientific grant application, common errors in grantsmanship and how to avoid them, grant application review criteria, ethics related to grant writing and reviewing, and identification of funding sources. Students prepare a short (5-page) draft proposal and a revision of this proposal following review. Proposal topics are selected by the students and developed with the instructor. Students also prepare critiques of other students' anonymous, instructor-edited proposals for discussion in class.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.627. Pathogenesis of Bacterial Infections. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.631. Immunology, Infection and Disease. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.633. Autoimmune Diseases of the Endocrine Glands. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.635. Biology of Parasitism. 5 Credits.
Presents a biological basis of parasitic lifestyles with concurrent laboratory including host responses and parasite evasion of host defense mechanisms, transmission, epidemiology, diagnosis, clinical manifestations, pathology, treatment, and control of the major helminthic and protozoan infections of man
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.636. Evolution of Infectious Disease. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.650. Vector Biology and Vector-Borne Diseases. 3 Credits.
Presents the principles of transmission of human and animal pathogens by insects, mites and ticks. Covers basic arthropod biology with special attention to biological properties of vectors and their interactions with pathogens, basic components of arbopathogen disease cycles and principles of pathogen transmission dynamics. Special topics include emerging pathogens, vector genetics, traditional and next generation control strategies and venomous arthropods.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.653. Molecular Biology Literature. 2 Credits.
Discusses over two sessions the assigned paper from historic or current scientific literature. Covers only the methodologies and how they work in the first session, the second covers the scientific advancements achieved with these methods. Includes both student and faculty discussion leaders for each session.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.654. Current Literature in Microbial Immunity. 1 Credit.
Current Literature in Microbial Immunity is designed primarily for Master's level students to provide an overview of the current state of research relating to topics in microbial immunity.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.656. Malariology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.657. Vector Biology and Disease Ecology Literature. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.658. Advanced Malariology. 2 Credits.
Presents current controversies and issues in malaria research and control in format of topical lecture and discussion each week. Weekly topics include Epidemiology, Pathogenesis, Mosquitoes, Drugs, Diagnostics, Vaccines, Elimination and Control and Economics of Different Interventions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.663. Biological Response to Biomaterials. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.665. Biological Basis of Aging. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.700. How Do We Know? - Theory and Practice of Science. 3 Credits.
Examines the nature and philosophical foundations of science using an interdisciplinary approach that emphasizes critical thinking and storytelling; discusses the principles of good scientific practice – rigor, reproducibility and responsibility (the 3R's) - by exploring revolutionary discoveries in the life, public health and natural sciences; elaborates the relationship between theory, practice and serendipity in scientific discovery, and concludes with a discussion of the role of scientists in society.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.701. Anatomy of Scientific Error. 3 Credits.
Examines sources of error in scientific practice (misconduct or honest mistakes, methodological or systematic errors). Presents real-world examples to analyze errors that cause problems in science across the disciplines. Introduces methodological and mathematical approaches to error reduction. Explores the review- and retraction mechanisms for journal articles and grants as methods of science self-correction. Discusses historic and contemporary cases where errors constitute sources of innovation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.704. Critical Dissection of the Scientific Literature: Taking the Scalpel to Journal Articles. 3 Credits.
Challenges the classical format of a journal club by preparing students to critically evaluate literature across the science disciplines. Acquaints students with concrete applications of the 3 R's of good scientific practice: rigor, responsibility, and reproducibility. Discusses techniques for effective research literature analysis and evaluation. Emphasizes in-depth understanding of journal article preparation, data evaluation, and the context of conclusions and discussion points within a given research field.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.705. Fundamentals of Quantitative Reasoning in the Biomedical and Health Sciences. 3 Credits.
Provides a broad introduction to interdisciplinary, scientific reasoning using current problems from science and society. Explores the fundamentals of basic probability and statistics using real-world datasets from a variety of basic science disciplines. Introduces data analysis and visualization in the natural and biomedical sciences. Explains the importance of computational and quantitative methods for hypothesis testing in science, technology, and daily life.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.707. Evidence-Based Teaching in the Biomedical and Health Sciences: Foundations. 3 Credits.
Acquaints students interested in teaching in biomedical and health professional settings with the foundations of how adults learn as well as the science of learning. Explores practical applications of evidence-based teaching techniques most relevant to the biomedical and public health professions. Discusses a variety of assessment techniques, and their alignment with learning objectives and educational strategies using state of the art course design.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.708. Evidence-Based Teaching in the Biomedical and Health Sciences – Practice. 3 Credits.
Provides students interested in gaining hands-on teaching experience with opportunities to plan and develop classroom materials on self-selected topics and deliver them in an interdisciplinary classroom setting, mentored by professional educators. Explores evidence-based instructional and assessment strategies to meet identified learner needs in the life and health sciences. Introduces students to a growing community of educational practitioners and scholars across the JHBSPH departments and JH divisions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.709. Evidence-Based Mentoring. 3 Credits.
Examines the literature on evidence-based mentoring. Introduces participants to authentic mentoring situations taken from real-life cases, enriched by practitioner interviews. Discusses responsibilities, reciprocities, and trust-building in mentor-mentee relationships. Emphasizes and nurtures mentorship practices based on self-responsibility, personal growth, active listening, social intelligence, mutual support, goal setting, ethics and equitable leadership, and cultural sensitivity. Focuses on collaborative, reflective practice with the goal of developing one's own, unique mentorship philosophy. Acquaints participants with the benefits of mutual peer support through an inclusive community of practice.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.710. Communication Practice for Health Science Professionals. 3 Credits.
Introduces students to current trends in presentation design and delivery. Focuses on narrative-oriented thinking to improve information dissemination. Emphasizes clarity and simplicity in communication practice in multiple settings, targeting both lay and interdisciplinary expert audiences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.711. Principles of Neuroimmunology. 3 Credits.
Briefly covers the role of specific cells of the central nervous system (CNS), immune functions of CNS cells, and trafficking of leukocytes into the CNS, both in health and disease. Subsequently, it discusses various immune cells, e.g. monocytes, T cells, B cells, inflammatory molecules such as cytokines, chemokines, metalloproteinases, and prostaglandins in more detail, focusing on their role in either protecting from neurological disease or in causing CNS disease pathologies, including cognitive dysfunction. Presentations from experts in the field address topics and diseases, such as multiple sclerosis (MS), the blood brain barrier (BBB), HIV and other neurotropic microbes in eliciting neurological disease and emerging neurotropic infections.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.712. Clinical Immunology. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.713. R3 Writing Seminar for Graduate Students. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.715. Unleash Your Writing Superpower: Crafting Clear, Concise and Persuasive Prose. 3 Credits.
Introduces a system of planning, organization, writing and revision. Emphasizes the importance of defining the message, audience and purpose for any piece of writing. Illuminates the basic elements of good writing. Focuses on clear, concise and persuasive writing. Explores the use of rhetoric and storytelling to maximize a piece of writing's impact. Emphasizes best practices in various forms of writing.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.717. Graduate Immunology: the Immune Response. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.720. Communications Primer for the Public Health Sciences. 1 Credit.
Acquaints students with the basics of effective oral and written communications in the form of brief exercises. Focuses on clarity and simplicity in presentation practice across disciplines and cultures to emphasize central messages. Introduces students to writing succinctly for advocacy using "compelling writers strategies" for opinion pieces and short speeches.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.730. Civility and Professionalism in the Workplace. 1 Credit.
Discusses how to create an inclusive and welcoming workplace atmosphere. Emphasizes culturally sensitive and respectful communication. Familiarizes participants with workplace expectations, acceptable behaviors, and general professional deportment.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.800. MPH Capstone Molecular Microbiology and Immunology. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.801. Topics in Immunology I. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.802. Topics in Immunology II. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.810. Field Placement Molecular Microbiology and Immunology. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.811. Field Studies in Ecology and Behavior. 3 - 6 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.812. The Performance of Leadership: Foundations. 2 Credits.
Explores leader and leadership as one's natural self-expression through the ontological/phenomenological model in which ontology is the study or science of the nature and function of being (as in "being a leader"), and phenomenology is the method of direct access used to study and research the nature and function of being (as in being's impact on "exercising leadership effectively"). Introduces a new conversational domain and transformative learning paradigm for leadership. Encourages discovery through discussion, exercises, and assignments. Prepares students to develop the skills necessary to create positive, effective, and sustainable change.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.813. SURVIVAL SKILLS FOR ACADEMIA IN THE LAB SCIENCES. 2 Credits.
Aimed at providing MMI and other lab sciences with the skills necessary to present and publish data and to find post-docs and/or jobs in the laboratory sciences. Topics include time management and organization, preparing effective conference presentations, manuscripts, and curriculum vitae, networking, interviewing, and getting hired.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.815. The Business of Academic Biomedical Research. 1 Credit.
Addresses topics related to business aspects of academic biomedical research, and focuses specifically on organizational, managerial, political, strategic and economical characteristics of academic biomedical research. Prepares students for a career in academic biomedical research by discussing essential features for success, other than the actual science.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.820. Thesis Research Molecular Microbiology and Immunology. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.821. Research Forum in Molecular Microbiology and Immunology. 1 Credit.
Prepares students for their future careers by creating a forum in which they can practice the essential skills of scientific communication. Focuses on the oral presentation of research findings resulting from laboratory investigations or literature review to faculty and fellow students. Examines the students' ability to condense and communicate background, hypotheses, experimental design, result presentation, and data analysis in a timed presentation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.822. Seminars in Research in Molecular Microbiology and Immunology. 1 Credit.
Integrates academic training with current research in microbiology, immunology, and infectious diseases. Presents results of state of the art investigations of microbial diseases of public health significance, emphasizing experimental design and methodology for analysis and discussion by researchers from JHU and other biomedical research institutions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.829. Summer Thesis Research. 12 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.830. Postdoc Research MMI. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.840. SS/R: Mol Microbiology & Imm. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.844. Causation. 3 Credits.
Acquaints students with the central concept of causation across the biomedical and public health disciplines. Discusses how cause and effect relationships govern today's research and evidence-based decision-making based on the social, physical, political, and economic determinants of health. Compares how fields and sub-disciplines in biomedicine and public health approach causation using research case examples that illustrate major morbidity and mortality-related health problems. Examines strategies to mitigate the limitations of causal inference.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.848. Community-Based Practice Through Civic Engagement. 2 Credits.
Examines a participatory, online service-learning approach to enable students regardless of geographical location to engage in real-word, community-based, educational projects. Acquaint students to work with Baltimore-based community organizations through critical reflection on issues of equity and professional practice. Emphasizes the application of professional skills to real-world issues. Discusses the limitations and ethical aspects inherent to civic engagement work. Prepares students to develop evaluation plans and materials for the organizations' identified programs. Emphasizes translation of experiences with Baltimore Community-based organizations into local contexts. Focuses on building reciprocal partnerships that reach beyond "consultancy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.851. Laboratory Rotations. 4 - 8 Credits.
All departmental Sc.M. and doctoral students spend one and three terms, respectively, participating in the research activities of departmental faculty's laboratories. Students select appropriate rotations in consultation with their academic advisors and the departmental Graduate Program Committee.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.855. Pandemics of the 20Th Century. 1 Credit.
Focuses on major pandemics in the human population that have occurred in the 20th century: the 1918 influenza pandemic; the emergence of HIV; the severe acute respiratory distress syndrome (SARS) outbreak of 2002-03; and viral hepatitis (hepatitis B and C viruses). For each pandemic, discussion groups cover a clinical-, public health- and pathogen-oriented reading topic in order to give students a broad understanding of the overall importance of each, as well as to compare and contrast the key aspects of each disease. Focuses on acute and chronic diseases, as well as diseases with different routes of transmission and incubation times between infection and disease. Provides a comprehensive overview of how each pandemic emerged, what key factors dictated spread in the population, and how each pathogen induced disease.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.895. MPH Practicum: MMI. 1 - 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.260.935. Lab for MMI 260.635. 3 Credits.
Laboratory sessions examine living and preserved parasites, gross pathology, histopathology, and vectors. Journal discussions based on research papers and topics of fundamental importance to parasitology will involve student participation in a seminar format.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.601. Seminars in Public Health. 2 Credits.
Introduces the basic principles of the practice of public health at the local, regional, national, and international levels. Uncovers relevant public health topics through a combination of presentations by experts, discussions, and lectures. Focuses on the core competencies required for the effective assessment and improvement of the health and well-being of communities. Explores the public health approach to describing the health of a population, including the importance of understanding the social and cultural context surrounding every community. Covers a broad spectrum of population-based, prevention-oriented issues relevant to public health in the private and public sectors of both domestic and international communities, including global health promotion, disease prevention, health care delivery systems, environmental issues, and the spectrum of factors influencing the health status of populations and communities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.602. Seminars in Public Health: Advanced Topics. 2 Credits.
Expands upon the 1st term of Seminars in Public Health to focus on how to effect public health change. Uses a combination of expert presentations and engaging discussions to explore topics including identification of key stakeholders, acknowledging competing governance priorities, and gathering support for population-level interventions. Explores the dissemination of public health messages, understanding key aspects of speaking to a range of stakeholder audiences and utilizing available communication tools. Focuses on examples of successful advocacy for change, and key lessons learned. Encourages students to utilize the public health approach discussed over the two terms to refine their future career goals.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.611. Professional Development Workshops: Effective online Searching. 2 Credits.
Introduces and explores online sources for finding high-quality, full-text research articles. Also prepares students to use advanced search techniques efficiently within these sources and to manage references using tools such as RefWorks, EndNote, Zotero and Mendeley. Finally, students learn about tools available to use to stay current on topics related to the public health field.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.612. Professional Development: Writing for Results. 2 Credits.
Professional Development: Writing for Results: Introduces a systematic approach to writing— from planning and organization to revision and completion. Emphasizes the importance of defining the message and understanding the audience and purpose. Examines the basic elements of good writing. Focuses on clarity, concision and style. Explores the use of rhetoric and storytelling to maximize a piece of writing's impact. Emphasizes best practices in various forms of writing, including emails, memos, reports, proposals and op-eds.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.701. Introduction to Epidemiology. 4 Credits.
Introduces principles and methods of epidemiologic investigation of diseases. Illustrates methods by which studies of the distribution and transmission of diseases in populations (including disease outbreaks and epidemics) can contribute to an understanding of etiologic factors and modes of transmission. Covers various study designs, including randomized trials, case-control and cohort studies, as well as risk estimation and causal inference. Discusses applications of epidemiology to solving public health problems, such as identifying sources and strategies for control of disease outbreaks, applying research findings to policy and practice, and program evaluation. Explores quantitative and analytic methods including life tables, disease surveillance, measures of morbidity and mortality, and measures of diagnostic test accuracy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.702. Intermediate Epidemiology. 4 Credits.
Expands knowledge beyond introductory level epidemiologic concepts and methods material using examples from the published literature. Emphasizes interpretation and the ability to critically evaluate issues related to populations/study design, measurement, population comparisons and inference, including modern cohort study designs; advanced nested designs; novel techniques for exposure assessment; interpretation and utility of measures of impact; sources of bias and methods for their prevention; descriptive and analytical goals for observational study inference; the counterfactual model for defining exchangeability, cause, and confounding; and synthesis of inferences from observational studies as compared with randomized clinical trials.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.709. Statistical Concepts in Public Health 1. 3 Credits.
Provides students with a broad overview of Biostatistical methods and concepts used in the public health sciences. Emphasizes the interpretation and conceptual foundations of statistical estimation and inference. Covers summary measures, measures of association, confidence intervals, p-values, and statistical power.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.710. Statistical Concepts in Public Health 2. 3 Credits.
Provides a broad overview of biostatistical methods and concepts used in the public health sciences, emphasizing interpretation and concepts rather than calculations or mathematical details. Develops ability to read the scientific literature to critically evaluate study designs and methods of data analysis. Introduces basic concepts of statistical inference, including hypothesis testing, p-values, and confidence intervals. Topics include comparisons of means and proportions; the normal distribution; regression and correlation; confounding; concepts of study design, including randomization, sample size, and power considerations; logistic regression; and an overview of some methods in survival analysis. Draws examples of the use and abuse of statistical methods from the current biomedical literature.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.711. Public Health Statistics I. 4 Credits.
Provides students with a broad overview of Biostatistical methods and concepts used in the public health sciences. Emphasizes the interpretation and conceptual foundations of statistical estimation and inference. Covers summary measures, measures of association, confidence intervals, p-values, and statistical power. The software package R will be incorporated into the course learning experiences, and students will be able to use R for a portion of each of the four class homework assignments.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.600.712. Public Health Statistics II. 4 Credits.
Employs a conceptual framework to highlight the similarities and differences between linear, logistic and Cox Proportional Hazards methods, in terms of usage and the interpretations of results from such models. Provides details for these regression approaches in the “simple” scenario, involving relating an outcome to single predictor. Following this overview of simple regression, explores the use of multiple regression models to compare and contrast confounding and effect modification, produce adjusted and stratum-specific estimates, and allow for better prediction of an outcome via the use of multiple predictors. Offers a brief introduction to linear spline models and propensity score methods for adjustment. T
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.601.731. Spatial Analysis for Public Health. 4 Credits.
Introduces the field of spatial analysis for public health. Examines concepts through the use of ArcGIS Geographic Information System (GIS) mapping software as a tool for integrating, manipulating, and displaying public health related spatial data. Covers GIS topics including mapping, geocoding, and manipulations related to data structures and topology. Introduces the spatial science paradigm: Spatial Data, GIS, and Spatial Statistics and uses selected case studies to demonstrate concepts along the paradigm. Focuses on using GIS to generate and refine hypotheses about public health related spatial data in preparation for follow up analyses.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.601.732. Spatial Data Technologies for Mapping. 4 Credits.
Examines technologies for collecting, obtaining and creating spatial data. Considers technologies including GPS, tablets, tracking devices, cell phones, Google Earth, remote sensing applications, and the Internet. Integrates spatial data from the aforementioned technologies into ArcGIS for spatial analysis. Introduces other GIS related software applications such as ArcGIS Online, QGIS and R. Explores relevant properties of spatial data such as format, metadata, and spatial data accuracy. Covers additional topics and concepts that reinforce the spatial science paradigm: Spatial Data, GIS, and Spatial Statistics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.601.733. Applied Spatial Statistics. 4 Credits.
Introduces statistical techniques used to model, analyze, and interpret public health related spatial data. Casts analysis of spatially dependent data into a general framework based on regression methodology. Covers the geostatistical techniques of kriging and variogram analysis, point process methods for spatial event and case control data, and area-level analysis. Focuses on statistical modeling and topics relating to clustering and cluster detection of health related events. Provides an introduction to the public domain statistical software R, to be used for analysis. Reinforces skills and concepts related to the spatial science paradigm: Spatial Data, GIS, and Spatial Statistics.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.601.734. Spatial Applications. 4 Credits.
Focuses on further developing and integrating components of the spatial science paradigm: Spatial Data, GIS and Spatial Statistics. Provides an opportunity for students to gain a working knowledge of resources for conducting spatial analysis (e.g., literature, software, and data). Expands students’ abilities to design and conduct spatial analysis by providing data for reproduction, and in some cases, extension of analyses from existing studies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.601.805. Spatial Analysis Journal Club. 2 Credits.
This course will involve reading and critically evaluating the application and interpretation of spatial statistical methodology in published public health literature. Focus will be on understanding how the epidemiological/public health objectives translate into spatial statistical analyses. Literature reviews will also include outlines detailing spatial statistical methods and analyses that can be applied as an extended and/or alternative analysis.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.601.880. Spatial Analysis integrative Activity. 4 Credits.
This course will involve the research, analysis and writing of a complete and independent spatial analysis project. Intermediate outlines, hypotheses and objectives produced in previous classes will be finalized. No new material will be covered. The finalized project will follow journal article format including an abstract, and introduction/background, methods, results and conclusion sections. The final project will represent an integrated and synthesized assessment of the spatial science paradigm (Spatial Data, GIS, Spatial Statistics) applied to a relevant public health problem.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.601.931. Spatial Analysis Lab 1. 2 Credits.
Expands on GIS concepts and skills previously learned with more hands-on practice with epidemiological applications. Focuses on translating an epidemiological problem or getting into a set of spatial objectives that align with our spatial science paradigm. Surveys and summarizes the literature on spatial applications in public health. Prepares students to design a protocol to help identify a public health problem and accompanying data for their MAS Integrative Activity.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.601.932. Spatial Analysis Lab 2. 2 Credits.
Applies spatial concepts and skills towards identifying a public health project that can be the focus of the MAS Integrative Activity. Prepares students to translate projects into a set of spatial objectives that align with the spatial science paradigm. Details out the mechanisms and processes needed for collecting, creating and/or obtaining necessary supporting data for the chosen project.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.631. Essentials of Population Health Management. 3 Credits.
Population health refers to outcomes for a group of individuals. Acquaints students with key concepts related to maintaining the health and wellness of populations. Examines the importance of determinants of health, including medical care, public health, genetics, personal behaviors and lifestyle, and a broad range of social, environmental, and economic factors. Explores this broad view of the determinants of population health and its impact on organizations that may not think of themselves as being in the business of health, such as housing organizations, employers, schools, and others who make decisions and create environments that can help or hinder good health. Population health management (PHM) has emerged as an important strategy for healthcare providers and payers. This course examines the challenges and opportunities to improving health within and across populations, as well as models of value-driven accountable care.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.651. Principles and Applications of Advanced Payment Models in Population Health Management. 3 Credits.
Presents an overview of major issues related to the design, function, management, regulation, and evaluation of health insurance and managed care plans and implications for population health management. Provides a firm foundation in basic concepts pertaining to private and public sector health insurance/benefit plans. Key topics include population care delivery and payment innovations and management techniques, provider payment models, risk-sharing and other incentives for organizational integration, quality and accountability, cost-containment. Innovative payment models and initiatives supporting health care providers and health care organizations in testing alternative care delivery and payment models are reviewed in the context of three core strategies for improving the US health system: improving the way health care providers are paid, improving the way care is delivered, and increasing the availability of information to guide decision-making.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.671. Collective Impact: Developing and Leading Community Partnerships to Improve Population Health. 3 Credits.
Identifies the elements necessary to create a culture of collaboration. Following deliberate, evidence-based methods, evaluates components of cultural transformation. Examines strategies related to building infrastructure for collaboration, including application of the Collective Impact Framework.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.681. Applications in Accountable Care: Assessing Quality and Effectiveness of Population Health initiatives. 3 Credits.
This course examines approaches by health plans, employers, and providers to evaluate population health management initiatives, define and measure quality from a population perspective, and assess the impact of Delivery System Reform and multi-payer alignment on outcomes examine new approaches to outcome and cost measurement. By focusing on the role of value measurement as part of a strategic agenda to transform quality and costs, participants will learn how to enable systematic improvement in the care delivery process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.691. Managing Health Across the Continuum: Contemporary Models and Applications of Care Coordination and Management. 3 Credits.
Understanding gained from the evolution of care management models has prompted the need for a more comprehensive approach to managing the health of populations. The continuum of care refers to the concept of managing individuals with various levels and intensity of health services from prevention to chronic disease management and end of life care. In order to manage health across the "community" continuum, health management strategies need to align with data collected from Community Health Needs Assessments and other sources to target identified health risks across the continuum. This course incorporates concepts from various models (e.g. Triple Aim) and provides a framework to transform care delivery. It examines the concepts and strategies of care management, analyzes strategies aimed at primary and secondary prevention, and evaluates models and efforts to expand care management accountability into the community.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.701. Applied Concepts and Foundations of High Performance for Population Health. 3 Credits.
Provides students with an understanding of the core features, characteristics, values, culture, and systems that lead to high performance for population health. Introduces evidence-based approaches such as the Baldrige framework that allow organizations to address performance gaps and develop robust processes and a culture of continuous improvement and excellence to improve the health of populations. Utilizes a case study approach to share best practices within population health that lead to sustained high performance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.711. Health Behavior: Improving Health Through Health Education/Promotion. 3 Credits.
Provides students with an overview of the field of health education/health promotion and an opportunity to develop skills in needs assessment and program planning. Reviews the importance of health behavior as a contributor to current public health problems, as well as the role of health education and health promotion in addressing these problems. Learns how to use planning frameworks (PRECEDE/PROCEED and Social Marketing) for conducting needs assessments and designing health promotion programs. Introduces theories of health behavior change and their applications to health behavior change interventions described. Presents examples of health education and health promotion programs from health care and community settings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.721. Organizing for Public Health: A Systems Approach. 2 Credits.
Systems thinking, (ST), is a holistic approach to analyzing how components of complex systems interact and adapt. Through systems thinking we can understand how societies organize themselves to achieve collective health goals and how different actors contribute to policy outcomes. Provides students with an understanding of how to apply ST in public health. Trains students on the fundamentals of ST theory and offers an opportunity to apply key methods and approaches to health policy and health questions. Prepares students to ask relevant research questions and apply a ST lens to describe, understand, and anticipate complex behavior. Examines how systems models can be critically appraised and communicated with others so public health policy makers can exercise a greater degree of wisdom and insight.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.731. Population and Consumer Health Informatics. 3 Credits.
Introduces students to concepts, methods, and issues related to the application of health information technology (HIT) to population health. Emphasizes the population health potential of comprehensive electronic health records (EHRs), personal health records (PHRs), mobile health and telemedicine devices; and, consumer focused internet-based tools. Covers the uses of HIT to define and identify populations and sub-populations of interest, and describe the health status and needs of populations. Emphasizes the use of HIT within both local, regional and federal public health agencies and population-based private health care organizations such as integrated delivery systems and health insurance plans. Lessons are mainly U.S. oriented but are also applicable to other high and middle income countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.741. Behavioral Economics and Risk: Value-Based Payment Methods and incentives. 4 Credits.
Provides students with tools from mainstream and behavioral economics that can be used for managing population health. Demonstrates the value – and limitations – of these approaches for influencing the decision-making of providers and the health behaviors of individuals, with particular attention to value-based payment methods and incentives. Examines the influence of payment design on provider and patient behaviors and applies concepts of behavioral economics to evaluate and propose essential elements of effective payment models and incentives designed to improve health and reduce costs. Draws on articles from the popular press and professional journals that illustrate how these approaches have been applied in experimental and real situations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.751. The Built Environment: Influences and Challenges to Improving Population Health. 3 Credits.
Focuses on describing the relations between the urban and suburban built environments in the U.S., with emphasis on land use and transportation infrastructure, access to healthy food, access to green space and recreational opportunities, and exposures to air pollution and noise that accompany these community designs all of which have been shown to have an impact on community health. Explores the use of Health Impact Assessments for assessing the programs and policies that do not traditionally evaluate public health outcomes.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.761. Value-Based Concepts of Socially-Responsible Leadership. 3 Credits.
Focuses on the essential principles of personal and interpersonal leadership that can be used in and across organizational settings to enhance performance, align and empower relevant stakeholders, and assure multisector organizational engagement. Provides students with opportunities to learn and apply leadership skills in a manner that encourages them to challenge their own beliefs and assumptions about what constitutes leadership. Offers a comprehensive review of contemporary issues and perspectives on leadership including multidisciplinary and systems-oriented approaches as well as classic leadership theory and evolving contemporary beliefs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.602.880. Population Health Management integrative Activity. 4 Credits.
Emphasizes the research, analysis, and writing of a complete and independent population health management strategy. Prepares students to draw upon the relevant evidence-based concepts of population health and population health management provided through the curriculum. Covers no new material. Focuses on the finalized project, in the format of a consulting report to senior leadership and will contain an executive summary in addition to, introduction, background, assessment and analysis, findings, and recommendation sections. Challenges students to produce a final project paper that will represent an integrated and synthesized assessment of population health management paradigm of Know-Engage-Manage as applied to a defined community.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.651. Case Studies in Quality and Patient Safety. 2 Credits.
• Provides an understanding of the approaches undertaken by US and international health care organizations (HCOs) to institute quality and patient safety initiatives in patient care • Explores the extent, relevance and impact of the HCO's structure and strategy on quality and patient safety functions, • Introduces the Baldrige Performance Excellence framework to assess the quality and patient safety functions, • Describes the quality and safety domains using case studies of different HCOs in the US and international settings, • Emphasizes how the internal HCO culture and external HCO environment serve as facilitators or barriers for implementing quality and patient safety initiatives, and • Highlights key HCO roles senior- and middle-level management play both at the institutional and departmental levels to enable effective practical implementation of quality and patient safety initiatives, including resource allocation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.701. Introduction to Quality of Care for Practitioners. 4 Credits.
Introduces quality issues, including quality assessment and assurance performed by clinicians, health systems, professional societies, and government and other third party organizations who pay for care. Provides a basis to evaluate the effectiveness of quality assessment and assurance activities. Describes different approaches to quality improvement and evaluation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.702. Quality Improvement Tools. 3 Credits.
Describes, demonstrates and trains in the use of key tools used at leading institutions to improve quality of care and patient safety. These will include the Comprehensive Unit-based Safety Program (CUSP), Plan Do Study Act (PDSA), Translating Research into Practice (TRiP), Human Factors Analysis and Classification System (HFACS), Systems Engineering Initiative for Patient Safety (SEIPS), Lean Six Sigma, Management Discussion & Analysis (MD&A), Safer Matrix, briefings, debriefings and TeamSTEPPS©. Presents a framework and strategies for the successful implementation of quality improvement interventions, including specific approaches, methods, structures and resources to promote uptake of the components of an intervention. Learners will gain first hand experience through role playing, individual and group exercises and simulations with each of the techniques.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.711. Science of Patient Safety. 4 Credits.
Provides an introduction to the science of safety and how it relates to problems with patient safety in health care. Explores the extent, nature and impact of safety problems. Introduces definitions for key concepts including error, adverse event, and harm. Provides a framework for understanding factors that cause, mitigate, and prevent errors and patient harm. Emphasizes the role of both individuals and systems in improving patient safety. Explains the importance of achieving a culture of safety, and the concept of high reliability in health care organizations. Points to roles that involve the practical application of this knowledge.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.721. Leadership for Change and Patient Safety and Quality Improvement. 3 Credits.
Describes, demonstrates and builds competence in leadership to support organizational quality and safety, and support transformational change. Explores organizational theory and frameworks for leadership and management. Explains the importance of vision, mission, and strategies for organizations. Describes organizational culture and articulates the role of exploring values and creating a shared vision in developing a culture of patient safety. Explains the roles of top managers, technical leaders and unit managers in safety improvement. Demonstrates the use of analytics in leading and management safety and quality improvement. Describes practices to engage leaders and staff to improve patient safety. Introduces topics including conflict management, negotiation, transparency, managing transitions, and innovation in health care.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.731. Measurement and Evaluation in Quality and Safety. 4 Credits.
Provides an overview of principles of good measurement and introduces applied evaluation methods for real world patient safety and quality improvement efforts that seek to implement evidence-based healthcare. Familiarizes students with important factors that influence success or failure in improvement efforts. Discusses implementation concepts and social and cultural phenomena and how to measure them. Prepares students to conduct initial data gathering, analysis and reporting in the Measurement Lab course.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.751. Infection Prevention in Healthcare Settings. 2 Credits.
Introduces hospital epidemiology, infection prevention and antimicrobial stewardship as core components of quality care, including standards and indicators, appropriate strategies and indicators to measure hospital-acquired infection in the U.S. and internationally, key methods for preventing the transmission of infection in healthcare facilities and components and benefits of antimicrobial stewardship programs. Provides a basis to plan effective hospital epidemiology, infection prevention and antimicrobial stewardship activities.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.880. Patient Safety and Healthcare Quality integrative Activity. 4 Credits.
This course will involve the research, analysis and writing of a complete and independent quality and patient safety improvement project. Concepts around the science of quality of medical care, patient safety and measurement will be heavily utilized. No new material will be covered. The finalized project will follow journal article format including an abstract, introduction/background, Literature review, methods, results and conclusion sections. The final project paper will represent an integrated and synthesized assessment of the quality and patient safety paradigm (Q&PS problem—Evidence—Intervention---assessment) applied to a relevant setting within the healthcare delivery process.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.603.931. Measurement Lab in Quality & Safety. 2 Credits.
Familiarizes students with different data sources and measurement methods to assess health care quality and patient safety. Data sources include both secondary data, including from administrative claims, medical records, and malpractice claims, and primary data including from cohorts, surveys, direct observation and clinical monitoring. Introduces different methods to measure structure, process and outcome, including both quantitative and qualitative data. Describes methods to analyze these data including techniques related to risk adjustment.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.601. Public Health Humanitarian Emergencies. 4 Credits.
Introduces different types of humanitarian emergencies, humanitarian architecture and provides an overview of sectoral focus areas of humanitarian response. Informs students of the environment in which these emergencies occur and how public health responses in various types of emergencies and contexts differ. The course explores mechanisms of preparedness, management of response to acute and prolonged humanitarian emergencies as well as long-term recovery.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.603. Ethics in Global Health Practice. 2 Credits.
Equips students to identify and analyze critical ethical issues in global health practice. It provides a forum for discussion of and deliberation about these issues, enabling students to explore a range of possible solutions. Students will practice using central concepts and frameworks of public health ethics to consider systematically the responsibilities of public health professionals in real-world global health cases.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.604. Global Epidemiology Policies and Programs. 3 Credits.
Presents the history, social and political context, organization, technical content, funding and evaluation of current, major, global initiatives for disease control. Emphasizes programs focused on health problems of the developing world and includes, initiatives for vaccines and immunization, non-communicable diseases, safe motherhood and reproductive health, malaria, Neglected Tropical Diseases, HIV, emerging infectious diseases, TB, tobacco control, nutritional interventions and injury control. Also examines the process of policy formulation and resource allocation to international health and disease control.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.621. Design and Planning of Primary Health Care Projects. 4 Credits.
Help participants to design a Primary Health Care (PHC) project in a low or middle-income country consider its implementation and evaluation. Selects one of several Request for Proposals (RFA) for a specific situation, conduct a needs assessment, create a problem statement, set goals and objectives, and a theory of change for this proposed project. In the course you will learn how to address community participation, human resources and their training and supervision, project information, approaches to sustainability, logistics of service delivery, project budgeting and financial management, monitoring, and evaluation, and finally close out of a project. Develops a proposal ready for submission to a donor that embodies your PHC project design responsive to the RFA at the conclusion.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.641. Disaster Preparedness. 2 Credits.
Introduces public health emergency preparedness concepts and procedures that are relevant for natural disasters, technological disasters, terrorism, and emerging threats such as infectious disease outbreaks and pandemics. Describes the roles of various agencies and organizations engaged in emergency preparedness and response and global health security. Describes the interactions across these agencies and organizations that help to ensure public health and safety. Provides an overview of methods to address different types of public health emergencies, including both planning and response perspectives with a focus on recent domestic and international public health emergencies and their consequences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.651. Introduction of Water, Sanitation and Hygiene in Emergencies. 2 Credits.
Introduces water, sanitation and hygiene (WASH) concepts, technical knowledge and practice in emergencies, including natural disasters and humanitarian emergencies. Addresses the importance of intersectoral collaboration among all sectors with an emphasis on WASH, health and nutrition. Focuses on community and behavioral aspects using examples from recent disasters. Describes the roles and coordination frameworks of all actors including Government, United Nations, international and national non-governmental organizations, and donors. Illustrates monitoring and evaluation various WASH methodologies and practices.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.701. Assessment Approaches in Humanitarian Settings. 3 Credits.
The goal of the course is to give students an overview of selected field-based methods used in humanitarian emergencies to measure basic health indicators and demographic characteristics of affected populations. Upon completion, students will be able to describe the assessment process in the various phases of humanitarian emergencies. Students will also be able to describe a variety of methods, both qualitative and quantitative, used in field-based assessments of humanitarian emergencies. These include: qualitative assessments, quantitative surveys. population estimation, and site planning.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.715. Health Needs and Service Provision in Humanitarian Emergencies. 3 Credits.
Addresses the health needs and the provision of health care to populations affected by disasters. Discusses such areas as who provides humanitarian assistance and how it is paid for. Explores strategies for assessing health needs. Considers a variety of topics including the use of information, water and sanitation, reproductive health, food and nutrition, and the provision of health services.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.721. Securing Food Assistance and Nutrition in Humanitarian Emergencies. 2 Credits.
Introduces food security, including the components of food security, causes for the deterioration of food security in humanitarian emergencies and nutritional deficiencies in humanitarian settings. Provides an overview of food and nutrition standards, nutrition surveys and response programming, including organizations involved in nutrition and food assistance and common programmatic interventions and policies used in response to food crises. Topics covered include food assistance strategies, including in-kind assistance, cash transfers and livelihoods programming, as well as preventative and curative nutrition programs. Focuses on recent and past food and nutrition crises to illustrate important concepts and utilizes a field-based approach to guide discussions and consider applications of concepts to real life humanitarian crises.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.731. Management and Leadership in Humanitarian Health. 2 Credits.
Examines an array of management and leadership models. Applies management and leadership theories and models to multiple humanitarian contexts. Assesses students' management and leadership styles and how they may affect humanitarian work. Discusses organizational structures and design as well as culture, and how they can affect humanitarian response.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.741. Human Rights in Humanitarian Emergencies. 2 Credits.
The goal of the course is to give students an introduction to human rights as an analytical framework, a tool, and a source of ethical guidance in humanitarian emergencies. The focus is on how human rights violations may cause, and shape the context of, humanitarian emergencies and how an examination of human rights frameworks and rights-based programs can guide researchers and practitioners to make ethical decisions in their work.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.751. Mental Health and Psychosocial Support in Low-Resource Humanitarian Emergencies. 2 Credits.
Explores key issues in the development and evaluation of mental health and psychosocial support interventions with populations affected by humanitarian crises, such as natural disasters and armed conflicts. Discusses such questions as: 'how do populations in diverse socio-cultural settings define mental health in the context of humanitarian crises?'; 'How can we build on existing resources and practices that promote mental health in humanitarian crises?'; 'What is known from epidemiological and intervention studies about common mental health problems and effective interventions in humanitarian settings?'. Challenges participants to reflect on translating science to practice, and vice versa. Course methods entail a mix of multimedia presentations and case discussions, focusing on real-world experiences.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.771. Social & Cultural Basis for Community and Primary Health Programs. 3 Credits.
Introduces students to the social and cultural aspects of global health programming at community, organizational, and policy levels. Utilizes social and behavioral theories to understand change processes and health program implementation with a particular focus on low- and middle-income countries, and underserved populations. Identifies the factors that promote and inhibit community involvement in PHC program development and implementation. Provides a foundation for planning appropriate Primary Health Care (PHC) programs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.604.880. Humanitarian Health integrative Activity. 4 Credits.
Requires students to synthesize knowledge and skills in humanitarian health on a project topic that demonstrates mastery program competencies. Completes a project on a selected aspect of humanitarian health, using one of a variety of formats including: 1) literature review; 2) program/operational plan; 3) program evaluation; 4) policy analysis; 5) research proposal; or 6) research report using data from a de-identified public data set. Presents results in the form of a final paper and an oral presentation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.605.621. Tobacco Prevention and Control. 3 Credits.
Introduces tobacco control strategies, policies, and practices to provide an understanding of what is being done to address this public health problem. Provides a historical context in which to understand the consequences of smoking and tobacco use. Provides a framework to understand how tobacco control has evolved and includes practical approaches for tobacco prevention, control, cessation, advocacy, surveillance, and evaluation being implemented in the U.S. and in other countries. Discusses the transnational tobacco companies and their role in undermining actions to control tobacco use. Examines international tobacco control issues and the Framework Convention on Tobacco Control (FCTC) using lectures, case studies, and discussion.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.605.651. Strategic Communication Planning. 4 Credits.
Focuses on the step-by-step design, implementation, evaluation, and critique of communication programs designed to change behavior relevant to tobacco control Allows students to create actual health communication campaigns guided by P-Process worksheets. The course will explore the concept of stages applied to tobacco control – strategic defensive, stalemate, strategic offensive and consolidation. At the individual level, the course will sharpen approaches to specific audience segments such as non-smoker unlikely to smoke, non-smoker likely to smoke, occasional smoker and established smoker.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.605.671. Tobacco Regulatory Science. 4 Credits.
Presents an overview of tobacco product regulation, including cigarettes, smokeless tobacco, shisha, and emerging nicotine delivery systems, such as e-cigarettes. Provides students a working knowledge of tobacco regulatory frameworks, including the Framework Convention of Tobacco Control (Articles 9 and 10), and national policies, including the Family Smoking Prevention and Tobacco Control Act. Students learn about past regulatory successes, including fire-safe cigarettes, flavor and menthol bans, and emerging strategies to limit nicotine content. Prepares students to search industry patents to understand how product innovation is protected and presented. Examines the tobacco industry's tactics to counter tobacco regulation by critically assessing media stories.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.605.701. Leadership in Tobacco Control. 2 Credits.
Through lectures, discussion, and exercises, students develop an understanding of the role of the tobacco control leader in policy development and implementation and the essential knowledge and skills this role requires. The course provides a framework for understanding the process of working effectively with and leading others and emphasizes the role of the leader in leading change and developing a vision for the future of tobacco control.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.605.735. Quantitative Methods for Tobacco Control. 4 Credits.
Quantitative Methods for Tobacco Control teaches students about the quantitative methods that are most often used in tobacco control and tobacco-related research. Topics to be covered will include study designs and methods commonly used in tobacco control research, including methods to assess the burden of tobacco-related disease and evaluate prevention and cessation interventions. Students have the opportunity to apply these new skills in interpreting and presenting quantitative data.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.605.745. Qualitative Methods for Tobacco Control. 3 Credits.
• Reviews the methods and rationale for incorporating qualitative approaches into tobacco control research. • Explores the main principles of qualitative research and consider how these principles shape the questions to which qualitative methods can best be applied in tobacco control research. • Introduces applied research techniques used in tobacco control, including observational studies, focus group discussion, in-depth interviews, and documents analysis. • Describes techniques to analyze qualitative data collection and disseminate findings.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.605.751. Implementation: Making Change Happen in Tobacco Control. 3 Credits.
Provides an introduction to implementation science in the context of tobacco control. Identifies the challenges associated with tobacco control policy/program implementation and highlights how implementation science can address them. Discusses commonly used implementation frameworks and emphasizes implementation determinants, strategies, and outcomes that may help guide implementation efforts. Examines key implementation topics in the context of tobacco control including industry interference, enforcement and compliance.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.606.601. Fundamentals in Global Health Practice. 4 Credits.
Global health requires practitioners to be well versed in understanding health systems, the controlling disease, and improving the health of mothers and children, and vulnerable populations. This course provides an introduction to these issues. Students will have an opportunity to apply these skills by analyzing the health situation in select low and middle-income countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.606.651. Seminars in Health Management Information Systems for Low- and Middle-Income Countries. 1 Credit.
Covers basic components of health information management systems (HMIS) in low-and middle-income countries (LMICs) including vital registration, routine service data, health surveys and surveillance systems. Offers an overview of the use of HMIS data for decision making in LMICs. Describes processes for collecting data through HMIS in LMICs and considers challenges to the quality of HMIS in LMICs with an eye toward strengthening these systems.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.607.701. Health and Safety Preparation for Global Health Assignments. 1 Credit.
Whether you've traveled before or not, living and working internationally can be challenging. Learn how best to prepare and make the most of your time. Explores health and wellness concerns for travelers. Examines key prevention, safety, and travel medicine principles and services to contextualize risks and maintain wellness. Reviews applicable interventions, appropriate vaccines, and personal protection methods to prepare students to respond to expected and unexpected situations. Assists students with personal preparations for travel through country-specific assignments. Challenges students to examine travel health and safety priorities through case studies and discussions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.607.704. Essential Medicines, Commodities and Supplies Needed for Community Level Primary Health Care Interventions. 2 Credits.
Primary health care programs in low and middle-income countries require essential health commodities be made available at the community level. Logistic systems need to be developed to ensure that commodities are adequately estimated and delivered. In addition, systems for safely maintaining and monitoring stocks are needed at the community level.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.607.711. Applying Evaluation to More Effectively Reach Communities Through Primary Health Care. 3 Credits.
Presents fundamental concepts and approaches for evaluating primary health care programs in low- and middle- income countries. Prepares students to analyze real-world programs so that they can make basic decisions resulting in evaluation designs that can be practically applied. Discusses actual experiences of working with implementers to design evaluations that balance methodological rigor with restraints of time and budget. Includes fundamental concepts such as choosing indicators, objectives and appropriate study designs; working with implementers who may not be evaluation experts; and understanding context.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.607.721. Urban Primary Health Care in Low and Middle-income Countries. 3 Credits.
Presents emergent public health issues related to the rapid growth of urban population in low- and middle-income countries. Explores the inadequacy of conventional health services for meeting the needs of the urban poor. Presents selected cases studies as examples of primary health care approaches that effectively addressed the public health consequences of rapid urbanization.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.607.724. Applying Household Surveys to Primary Health Care Programs. 3 Credits.
Introduces participants to fundamental skills needed to design and manage implementation of household surveys. Presents real world experiences of using the Knowledge, Practice, and Coverage (KPC) tool for household surveys in middle and low-resource settings. Includes constructing a questionnaire from standard KPC modules, indicator selection, sampling plan development, use of parallel sampling, household selection, management and oversight plan, and ethical considerations. Introduces participants to adjustments that can be made so that the survey can be implemented within time and budget constraints.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.607.735. Planning Training and Learning Programs for Community Health Workers. 4 Credits.
Discusses the skills required for planning, designing, and evaluating training and learning programs for CHWs. Explores how training and learning needs are determined by CHWs, their communities, and national contexts. Provides students with an opportunity to design a training guide based upon an assessment of CHW's learning needs. Demonstrates how to outline a formative, summative, and follow-up evaluation plan for CHW training and learning needs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.607.751. Building Community Capacity for Primary Health Care in Low and Middle-Income Countries. 3 Credits.
This course, coming near the end of the MAS in Community Based PHC, reinforces an understanding of the origins and recent advances in community-oriented PHC through case studies from low- and middle-income countries. Focuses on problem-solving skills in practical situations by connecting case experiences with the contexts where students are working or will work in the future. Examines strategies and frameworks to assess and enhance community-based approaches to building community capacity. Explores current events and emerging opportunities and challenges for community based PHC.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.607.880. Integrative Activity in Community-Based Primary Health Care. 4 Credits.
This course will enable the learner to apply skills obtained through the coursework in the MAS in Community-Based Primary Health Care to design or update a community based PHC program in a real life community. Learners will select a community where they have lived or worked and obtain data and reports to analyze the social, cultural, epidemiological and demographic profile of the community and use this information to design strategies that involvement community members in improving their health. Learners will draw on previous course materials and independent desk review to produce a program strategy/plan document that includes human and material resource development and an evaluation component.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.608.705. Emerging Trends in Pharmaceutical Systems Strengthening. 3 Credits.
Explores pharmaceuticals management and universal health coverage effective, feasible frameworks and possible metrics to measure capacity and accountability. Considers the big picture in pharmaceutical systems: pharma regulatory harmonization and convergence; country, global, and donor financing policies; and sustainability strategies. Presents and contrasts different countries regulatory systems for medicines. Introduces the importance of pharmaceutical harmonization convergence/reliance. Addresses selected challenges within the pharmaceutical services delivery framework among under-served and within LMIC populations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.608.712. Frameworks and Tools for Health Systems in Global Settings. 3 Credits.
Explores health systems in global settings, with a focus on low and middle income (LMIC) contexts, and examines approaches to improving the performance of health systems. Focuses on frameworks, tools, skills, and strategies to understand, influence, and evaluate health systems in LMICs. Identifies key institutions, functions, and performance issues for national and local health systems. By using frameworks and tools, students gain experience in systematically analyzing health systems and methods to plan, implement, and evaluate changes in health systems in a variety of settings, including countries in various levels of demographic, epidemiologic and economic transitions. Covers key controversies in health systems, including issues in monitoring health systems performance, the role of the public sector, dealing with unregulated private health markets, linking priority health programs and health systems, raising accountability in the health system, etc.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.608.725. Quality Management Concepts and Tools for Healthcare in Low and Middle income Countries. 4 Credits.
Presents the concepts, principles, and tools of total quality management methods for health systems in low and middle income economies. Emphasizes integrated health systems management; fostering a genuine team approach in the face of an hierarchical tradition; central importance of community governance; interventions designed based on evidence and standards of practice and in an equitable fashion; introducing a measurement-based approach to problem solving, emphasizing analysis of service delivery process and outcome; and integrating implementation science as an integral component of the management system.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.608.771. Non-Governmental Organizations and the Administration of Global Health Programs. 3 Credits.
Students will describe the practical challenges and philosophical dilemmas faced by NGOs operating in low- and middle-income countries, and basic concepts in the administration of global health programs. Simulation exercises will allow students to experience and analyze real-world scenarios faced by NGO managers and leaders. The first half of the course will focus on the role of NGOs in the health sector, situating a manager’s responsibilities in the broader context of the development and humanitarian environment. The second half will focus on the internal workings of an NGO and the day-to-day challenges of managing strategy, finances, human resources, and accountability.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.608.880. Integrative Activity in Global Health Planning and Management. 4 Credits.
This course will enable the learner to apply skills obtained through the coursework in the MAS in Global Health Planning and management to identify and address an organizational problem or need in a real life organization that focuses on underserved people in aa global health setting. Learners will select an organization where they have worked and obtain data and reports to analyze the environmental, structural, human, technical and policy characteristics of the organization and use this information to design strategies for improving organizational functioning. Learners will draw on previous course materials and independent desk review to produce a program strategy/plan document that includes human and material resource strengthening and an evaluation component.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.600. Principles of Population Change. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.601. Critically Evaluating the Science for Policy and Practice. 2 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.602. Basic Demography and Population Dynamics. 3 Credits.
Acquaints students with global population trends and patterns; population and health. Enhances technical skills and knowledge regarding use of demographic data for policy analysis development, program strategies and priorities. Examines measures and indicators of nuptiality, fertility, mortality and migration, and migrant health issues. Provides skills in making population estimation and projection.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.603. Demographic Methods for Public Health. 4 Credits.
Teaches students the basic methods demographers use to describe populations and analyze population change. Introduces the concept of a population, describes the demographic approach to populations, and identifies sources of population data. Covers four sets of methods with broad applicability in public health: 1) techniques for describing population composition, distribution, and growth; 2) methods to compare populations (age-period-cohort approaches and standardization and decomposition of rates); 3) single-decrement life tables; and 4) the cohort-component method for population projection. Covers the basic tools used to study the fundamental population processes of fertility, mortality, and migration.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.604. Life Course Perspectives on Health. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.605. Advanced Demographic Methods in Public Health. 4 Credits.
Covers six areas regarding population studies including: population composition, fertility, migration, population projections, an introduction to stable populations, and measures of population health. Draws examples from data from both developed and developing countries.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.607. Youth Voice in Public Health. 1 Credit.
Examines how project-based and surveillance data can be used by policy-makers and program administrators to determine needed public health services for youth. Defines the major types of data available for decision making and gaps in available data systems including the determinants of health inequities. Highlights the need for young people to collect, interpret and define data for decision-making in public health and explores the developmentally appropriate conditions for authentic youth engagement in the process. Features young people and adult leaders from the Center's Youth Advisory Board in leadership roles.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.610. Substance Use in Women and Families. 3 Credits.
Introduces students to the complex etiology of substance use in women and the impact of substance use on women and their children and families. Provides an overview of the biopsychosocial risk and protective factors for substance use disorders in women. Explores the etiology, epidemiology, data sources, interventions, and policies for women who use substances and their families, from a life course perspective.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.611. Fundamentals of Program Evaluation. 4 Credits.
Familiarizes students with different types of program evaluation, including formative research, process evaluation, impact assessment, cost analysis, and theory-based evaluations. Gains practical experience through a series of exercises involving the design of a logic model, selection of indicators and data sources, and the design of an evaluation plan to measure both a process and impact evaluation. Covers experimental, quasi-experimental, and non-experimental study designs, including the strengths and limitations of each.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.612. Applications in Program Monitoring and Evaluation. 4 Credits.
Builds on 380.611, Fundamentals of Program Evaluation and partially fulfills the MPH practicum requirement. The Fundamentals course prepared students to explain major concepts in program evaluation, perform fundamental tasks in evaluation, and write a basic evaluation plan. This course introduces advanced evaluation methods using concrete illustrations from real world evaluations of public health initiatives. Class sessions will integrate lectures with case studies, experiential learning activities, and reflection. Students will develop enhanced skills in the design of appropriate evaluation plans for specific community-based public health programs, with an emphasis on problem solving to address challenges and promote the usefulness of results. This course includes a service learning component.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.616. Child Health Epidemiology. 3 Credits.
Explores conditions and diseases that compromise children's health from birth (congenital anomalies) through adolescence (violence/bullying). Presents methodological challenges to estimating the burden of disease, including the strengths and weaknesses of standardized outcome measures. Analyzes preventive strategies and treatment modalities considering the social context of disease. Encourages creative thinking about needed research and discusses the public health implication of childhood disease. Focuses on domestic health but presents data on the global burden of childhood conditions/diseases, when available.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.620. A Coalition-based SMART Approach to Public Health Advocacy. 3 Credits.
Introduces the coalition-based SMART model of advocacy as an approach for improving public health outcomes and changing public health policies. Examines international case studies in which advocacy focused on decision-makers played a central role and includes lectures from seasoned advocates. Using reproductive health examples, presents foundational advocacy frameworks and enables students to work through advocacy strategies that are adaptive to a variety of health areas.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.623. Adolescent Health and Development. 3 Credits.
Consists of online recorded lectures and panel discussions, readings, LiveTalks, and two written assignments focused on an adolescent public health issue of your choosing. Lectures, readings, and discussion explore a variety of aspects of adolescence health and development. Paper assignments enhance knowledge of public health issues affecting adolescents, as well as evidence-based solutions and interventions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.624. Maternal and Child Health Legislation and Programs. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.625. Evidence and Opportunities to Mitigate Childhood Adversity and Promote Well-Being. 3 Credits.
Introduces students to a range of scientific, programmatic and policy evidence related to childhood adversity and well-being. Examines evidence-based interventions and common elements of approaches to both prevent and mitigate the impact of adversity and promote resilience and well-being among children, families and communities. Interventions and programs will focus on communities, public health and health care settings, with a special focus on young children and children with special health care needs. Students evaluate policies, frameworks, interventions and research drawing on conceptual models and evidence related to the successful implementation and scaling of public health and services programs and policies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.628. Public Health Perspectives On Abortion. 3 Credits.
This course provides students with an overview of abortion practice in the United States and worldwide from a public health perspective. Lectures and readings enable students to critically evaluate current research, public health practice, and policy related to abortion, and to speak knowledgeably and accurately on these issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.633. Promoting Equity for Adolescents and Emerging Adults: Problem-Solving Seminar. 3 Credits.
Introduces the scope, unequal distribution, and negative impacts of disconnection from school and the workforce among young people in the United States (“opportunity youth”). Discusses the importance of different sectors and stakeholders for promoting success and eliminating inequalities in outcomes among adolescents and young adults. Highlights the importance of involving young people in all phases of research and policy making. Describes communication strategies for addressing diverse stakeholders, including individuals at all levels of health literacy, for purposes of influencing behavior and policies for adolescents and young adults. Summarizes promising strategies for preventing youth disconnection and re-engaging young people who have become disconnected from school and the workforce.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.635. Urban Health in Contemporary America. 4 Credits.
Introduces students to the historical forces associated with the rise of the modern city and the fundamental characteristics of urban living in the U.S. Discusses the impact of the increase in urban settings on population health. Examines contexts of the urban environment that shape health including: the physical environment, housing, education, discrimination and racism, policing, and safety. Explores the complexity and diversity of the determinants of health among domestic urban populations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.640. Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth. 3 Credits.
Uses experienced practitioners, community leaders, and community members to expose students to a wide range of domestic youth health, welfare issues and interventions through an asset lens. Using an asset-based approach, the class highlights domestic youth challenges (e.g., disconnection, homelessness, LGBTQ status and justice involvement) and aims to expose students to thoughts, voices, and perspectives from a variety of different backgrounds. Class sessions feature ample discussion, expert lecturers, youth voices, and an examination of existing programs in and out of Baltimore City. Some students are concurrently enrolled in a practicum component of the course. Classroom discussion will focus on the experiences of practitioners and students and the issues they see youth in the community facing. Overall both practicum and non-practicum students alike will have the chance to read, reflect and discuss programs and interventions that positively impact youth domestically.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.642. Child Health and Development. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.650. Demographic Methods for Measuring Health and Longevity. 4 Credits.
Covers demographic methods commonly used to understand how long people live and how this varies over time, across space, and between population groups. Explores the construction of life tables to calculate life expectancy, and understand its determinants. Introduces multi-state methods to calculate what proportion of their life individuals spend in good health, or affected by various illnesses and limitations. Emphasizes the practical application of these methods to the analysis of several large demographic datasets.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.651. Methods and Measures in Population Studies. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.655. Social and Economic Aspects of Human Fertility. 3 Credits.
Studying fertility is integral to population studies and understanding population changes and dynamics (along with mortality and migration). Offers an essential background for those studying women’s, infant and perinatal health. Covers social and economic theories of fertility change, explores fertility transitions across geographic contexts, examines major distal and intermediate determinants of fertility, and considers policies affecting fertility globally. Based on a mix of lectures, readings, and interactive discussion among students and faculty.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.661. Clinical Aspects of Maternal and Newborn Health. 3 Credits.
Presents morbidity and mortality in the mother, fetus, and newborn and the health care practices utilized to prevent, diagnose, and treat morbidities. Guest speakers in clinical care present lectures from the clinical perspective; course instructors present the public health perspective.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.662. Critiquing the Research Literature in Maternal, Neonatal, and Reproductive Health. 4 Credits.
Discusses the sources of data and analytic and conceptual basis for methodological approaches to the study of maternal, neonatal, and reproductive health. Evaluates selected research articles in maternal, neonatal, and reproductive health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.663. Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies. 3 Credits.
Explores gender-based violence (GBV), including intimate partner violence, sexual violence, and sex trafficking. Topics include the following as they relate to GBV: epidemiology, theoretical frameworks, structural risks and gender equity, policy, prevention and intervention, perpetrators, populations with unique needs, and health consequences spanning sexual and reproductive health, STI, and HIV. Prepares students to undertake meaningful scholarly, community-based, programmatic or policy work in the field. Emphasizes active learning and facilitates application of knowledge and skills gained to real world issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.664. Reproductive and Perinatal Epidemiology. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.665. Family Planning Policies and Programs. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.666. Women's Health. 3 Credits.
Provides an overview of leading topics in women’s health with an emphasis on the US and other developed settings. Examines leading sources of morbidity and mortality through age-gender-race/ethnicity-disaggregated data. For each topic, we examine historical context, risk factors, prevention, and treatment. Considers health from biological, lifecourse, and social determinants perspectives, including via frameworks of women’s health disparities and intersectionality that address inequities in interpersonal, social, political and economic power. Major topics include: non-communicable diseases (cardiovascular disease, cancer), immunology, infectious disease, preventive health, aging, mental health, and violence.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.667. Women's Health Policy. 3 Credits.
Provides an overview of selected, timely policy issues related to women’s health in both developed and developing countries. It covers the history of selected policy concerns, frameworks for viewing these concerns, and specific policies related to women’s health issues such as family planning, gender-based violence, welfare reform, employment and workplace conditions, and disabilities. Topics may change yearly depending on the primacy of the topic or issue.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.668. International Perspectives on Women, Gender, and Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.670. Religion, Spirituality and Public Health. 3 Credits.
Presents a broad overview of the ways in which religion and spirituality affect health, both generally and with a particular focus on fertility, family planning and adolescent health. Investigates the outreach of religious organizations tackling public health issues in domestic urban settings and internationally. Examines prescriptions for how faith-based organizations can be more integrated into governmental and NGO public health campaigns.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.697. Health and Wellbeing of the Urban Poor: Labor Markets, Safety Nets, and the Criminal Justice System. 3 Credits.
Examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. Covers the major theoretical explanations scholars have advanced to explain the persistence of urban poverty in the U.S. including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Discusses consequences, particularly related to health and wellbeing of the urban poor. Within each topic area, introduces students to a range of interventions aimed at alleviating urban poverty.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.701. Accessing Demographic and Population Health Data. 2 Credits.
Provides students with the skills and tools needed to access and use publicly available datasets that are commonly used in demographic and population health research. Introduces online databases and provides instruction on how to use online data analysis platforms to generate commonly used population health indicators quickly and easily. Features two online databases: 1) CDC Wonder: an online database published by CDC that includes data on all deaths and births in the United States; and 2) IPUMS: an online database platform that contains data from over 750 censuses and surveys from around the world.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.703. Prospective Birth Cohort Studies and Developmental Origins of Health and Disease. 2 Credits.
Introduces prospective birth cohort studies related to the developmental origins of health and disease. Provides overview of major US and international birth cohort studies. Compares advantages and disadvantages of their different study designs. Reviews specific considerations in conducting such studies, including field data and bio-sample collection and long-term follow-up. Explains importance of collecting sensitive and specific biomarkers. Emphasizes link between study design and interpretation of study data and thus to understanding the developmental origins of health and disease.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.707. Advocating for Global Reproductive Health. 2 Credits.
Introduces students to policy analysis and advocacy in reproductive health, with a focus on international family planning. Analyzes policymaking processes and ways to influence these processes through evidence-based advocacy within foreign and domestic political and financial environments. Provides first-hand knowledge of effective advocacy efforts and tools. Emphasizes practical application of the Advance Family Planning SMART approach to advocacy, which centers on advocacy objectives that are Specific, Measurable, Achievable, Relevant, and Time-bound (SMART).
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.708. Strategic Leadership Principles and Tools for Health System Transformation in PFRH. 2 Credits.
Introduces principles of strategic leadership in the context of facilitating health systems change in low resource settings. Introduces mental models and the household production of health, systems thinking and strategic leverage, personal mastery and commitment to change, action-learning principles and practice, shared vision and creative tension, the theory of constraints and root cause analysis, strategy design and key moves, implementation with accountability, and linking data to action. Develops leadership skills via interactive workbook exercises, small group work and class presentations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.709. Introduction to Program Evaluation in PFRH. 1 Credit.
Familiarizes students with the basic concepts of program evaluation. Teaches skills in writing goals and SMART objectives, as well as developing logic models and creating a plan for a process evaluation.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.710. Public Health Perspectives on Abortion Policy. 1 Credit.
Provides students with an overview of abortion practice in the United States and worldwide from a public health perspective. Enables students to critically evaluate current research, public health practice, and policy related to abortion, and to speak knowledgeably and accurately on these issues.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.711. Issues in Survey Research Design. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.712. Methods in Analysis of Large Population Surveys. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.720. Masculinity, Sexual Behavior & Health: Adolescence & Beyond. 3 Credits.
Focuses on male health with particular attention to sexual and reproductive health and healthcare use among adolescents, extending throughout the lifespan. Assesses the principal health concerns for sexual and reproductive health, the associated population-based risk factors, and the relative impact of each risk factor. Examines the meaning of masculinity and the impact of masculinity beliefs on males' health and healthcare use. Evaluates strategies to promote population health including the policies and programs or health care delivery that address health concerns and behavior for male sexual and reproductive health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.721. Schools and Health. 3 Credits.
Highlights K-12 schools as public health contexts in 3 ways: as contexts for shaping youth development and behavioral outcomes, for the delivery of health information and services, and for research. Lays a foundation for the connections between health and education by discussing the reciprocal relationship between a young person's health and their educational outcomes including the role that school health can play in addressing disparities in education and health. Explores school context using the ten-component Whole School, Whole Community, Whole Child (WSCC) framework developed by the CDC and the Association for Supervision and Curriculum Development.? Using the framework, explores established standards and practices for schools, opportunities for intervention in schools, and challenges to implementation, evaluation, and research in schools. Dives into the debates around school openings and COVID mitigation measures.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.725. The Social Context of Adolescent Health and Development. 3 Credits.
Recognizes the social ecological model, social determinants of health tenants and the life course perspective as tools to understanding adolescent health. Explores the influences of contexts, such as neighborhoods, education and families, on adolescent health and well-being. Examines empirical work to consider the role of context in prevention and interventions aimed at adolescents.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.740. Nutrition Programs, Policy and Politics in the United States: the Impact on Maternal, Child and Family Health. 3 Credits.
Addresses nutrition programs, policies, and politics in the US, and their impact on economically disadvantaged mothers, children, and families. Defines and explores food insecurity. Examines nutrition programs directed at high-risk populations. Reviews the administrative and political considerations of nutrition programs and discusses the nutritional impact on health, growth and development. Discusses corporate and commercial interests, their role in shaping the political discussion and their impact on food and nutrition policy.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.742. Family - Health, Public Health and Policy. 3 Credits.
Focuses on understanding how programs and policies are likely to affect the capacities of families to develop and maintain health, and on teaching students to apply analytic methods to evaluate the relative value and impact of various programs or policies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.744. Nutrition and Growth in Maternal and Child Health. 3 Credits.
Examines the impact of nutritional status on growth, development, intellectual performance, health status, and the onset and progress of chronic diseases. Considers ethnic, cultural, and environmental issues related to food intake as well as the relationship between physical activity and health. Examines the origin and basis for the identification and assessment of community need using the national nutrition monitoring system. Reviews federally funded nutrition program outcomes and their policy implication.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.747. International Adolescent Health. 3 Credits.
Focuses on the major health issues that affect adolescents and the effective interventions/policies to address these issues in the developing world. Explores the meaning and health of adolescence from various contexts around the world through lectures, readings, video clips, panels, and discussions .
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.749. Adolescent Sexual and Reproductive Health. 3 Credits.
Explores key topics in adolescent sexual and reproductive health (ASRH). Includes topics ranging from the impact of adolescent physical, sexual, and social development on sexual risk-taking behavior to policy and ethical issues influencing adolescent sexual health outcomes. Discusses important clinical topics such as contraception, teen pregnancy, abortion, and sexually transmitted infections using a public health framework from a domestic and global perspective. Explores the role of key social determinants of health and their intersectional functionality in shaping the context through which sexual and reproductive health is operationalized in an effort to develop effective public health solutions to problems facing vulnerable youth.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.750. Migration and Health: Concepts, Rates, and Relationships. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.755. Population Dynamics and Public Health. 2 Credits.
Provides an introduction to population dynamics, the processes by which populations change, as a foundation for understanding population health. Students will learn how births, deaths, and migrations determine the size, growth, age-sex structure, and geographic location of populations. Students will review the proximate and indirect causes of population change and assess their socioeconomic, environmental, and public health consequences. Students will calculate and interpret basic measures used to describe populations and measure population dynamics, and learn the main sources of population data and their strengths and limitations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.756. Poverty, Economic Development, and Health. 4 Credits.
Introduces students to leading theories in economic development and in the macroeconomic determinants of the health of populations, communities, and individuals. Reviews both historical and current cases to answer the following questions: What is economic development? How does economic development occur? Which aspects of development improve and which aspects are detrimental to human health? Can policymakers plot more “hygienic” plans for economic development? Do investments in health and family planning cause economies to prosper?
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.758. Demographic Estimation for Developing Countries. 4 Credits.
Introduces students to defects or deficiencies often experienced in demographic data for developing countries, and how to quantify the magnitude of errors. Describes approaches to data adjustment, with emphasizing the underlying theory and modeling. Also describes unconventional or indirect methods for estimating basic demographic parameters from robust indicators. Heavily emphasizes practical applications and quantitative calculations.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.760. Clinical Aspects of Reproductive Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.761. Sexually Transmitted Infections in Public Health Practice. 4 Credits.
Considers features of sexually transmitted diseases relevant to their control, reviewing the natural history of the infections and laboratory diagnosis. Emphasizes public health practice control measures, including policy, behavior intervention, and medical screening/treatment intervention of sexually transmitted diseases.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.762. HIV Infection in Women, Children, and Adolescents. 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.765. Preventing Infant Mortality and Promoting the Health of Women, Infants and Children. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.767. Couples and Reproductive Health. 3 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.768. Selected Topics in Women’s Health and Women’s Health Policy. 4 Credits.
Discusses major health concerns among women in developed and developing countries within a life course framework that integrates biological determinants of health and the social, cultural and economic contexts of women’s lives. Examines a spectrum of current health and policy concerns, and may include family planning, preventive services for women, chronic disease, migration, gender-based violence, and disability. Also includes historical perspectives and a gender justice framework for viewing health policies.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.771. Understanding and Changing International Reproductive Health Policy. 3 Credits.
Introduces students to policy analysis and issues in reproductive health, with a focus on international family planning. Teaches how to analyze policymaking processes and ways to influence these processes through evidence-based advocacy. Uses case studies and other readings to analyze policies within the current political and foreign and domestic financial environment. Provides first-hand knowledge of effective advocacy efforts and tools. Focuses on Family Planning 2030 (FP2030), the international partnership launched in 2012. Presents an "insider's" perspective reflecting their experience and draws from the advocacy approach of the Advance Family Planning (AFP) multi-country initiative. Includes practical application of the SMART Advocacy approach as a core part of the course.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.777. Global Population Change and Local Public Health Needs: Problem Solving Seminar. 3 Credits.
Describes global and national population trends, examines their causes, and considers their consequences. Explains why population change in a local area may differ from changes observed in the nation as a whole. Reviews major sources of population data and key measurement concepts. In a series of case studies, analyzes data to describe population changes in both domestic and international settings. Students use these data to develop a strategic plan for addressing the changing public health needs of a local population and to design a system-level intervention for meeting those needs.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.800. MPH Capstone Population, Family and Reproductive Health. 2 Credits.
The MPH Capstone is an opportunity for students to work on public health practice projects that are of particular interest to them. The goal is for students to apply the skills and competencies they have acquired to a public health problem that simulates a professional practice experience.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.810. Field Placement in Population, Family and Reproductive Health. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.816. SS/R: Population, Family and Reproductive Health Master's Seminar. 1 Credit.
Prepares students to identify and research the central issues in Population, Family and Reproductive Health.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.817. PFRH First Year Doctoral Seminar Part 1. 1 Credit.
Facilitates students' transitions into the PFRH doctoral program. Reviews program requirements and school and departmental resources. Hones skills students need for success in a doctoral program. Develops students' abilities to formulate scientific questions and understandings of the scientific process. Guides students as they focus their areas of research interest.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.820. Thesis Research PFRH. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.821. PFRH Proposal Writing Seminar. 2 Credits.
Focuses on development of dissertation project, writing dissertation proposal, and preparation for Department and Schoolwide Preliminary Exams. Explains dissertation expectations and requirements. Reviews dissertation proposal structure and components. Discusses evaluation of existing research, identification of gaps and topics, and design of research projects. Emphasizes clear communication of ideas. Provides opportunity to present work-in-progress and receive peer feedback. Introduces proposal assessment through review of peers' work. Provides forum to practice Preliminary Exam presentation including answering questions.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.822. PFRH First Year Doctoral Seminar Part 2. 1 Credit.
Examines and demystifies the research process using case examples from existing research conducted by faculty members within the department. Introduces departmental and school-wide resources for conducting effective literature searches, developing sound research designs, funding research, addressing IRB concerns, and disseminating research findings. Encourages the use of critical and creative thinking skills to develop personal research agendas.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.823. Research Seminar in Population, Family and Reproductive Health I. 2 Credits.
Provides experience in critical evaluation of historical and contemporary research pertinent to Population, Family and Reproductive Health. Addresses a range of topics, drawing on research from multiple academic disciplines. Critique and discusses conceptual frameworks and empirical articles and examine the methodological and disciplinary perspectives of the research or articles..
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.824. Research Seminar in Population, Family and Reproductive Health II. 2 Credits.
Provides experience in critical evaluation of historical and contemporary research pertinent to the focal areas within Population, Family and Reproductive Health. Addresses a range of topics, drawing on research from multiple academic disciplines. Students and faculty critique and discuss conceptual frameworks and empirical articles and examine their methodological and disciplinary perspectives of the research or articles related to the focal areas.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.830. Postdoctoral Research in Population, Family and Reproductive Health. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.840. Special Studies in PFRH. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.850. PFRH Master's Essay. 3 - 6 Credits.
This is a required course for all master's students in PFRH. The goal of the essay is for students to apply the skills and knowledge acquired during their academic program to a public health problem or concern of interest to them.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.870. PFRH Special Studies in Public Health Practice. 1 - 22 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.880. Lessons in Leadership: Applications for Population, Family and Reproductive Health I. 1 Credit.
Focuses on instruments and tools that assess leadership styles, strengths and weaknesses. Explores communication strategies used by effective leaders and interview public health leaders to identify how they approach their work. Opportunity to read studies in leadership.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.881. Lessons in Leadership: Applications for Population, Family and Reproductive Health II. 1 Credit.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.882. Lessons in Leadership: Applications for Population, Family and Reproductive Health III. 1 Credit.
Focuses on instruments and tools that assess leadership styles, strengths and weaknesses. Explores communication strategies used by effective leaders and interview public health leaders to identify how they approach their work. Opportunity to read studies in leadership.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.883. Lessons in Leadership: Applications for Population, Family and Reproductive Health IV. 1 Credit.
Focuses on instruments and tools that assess leadership styles, strengths and weaknesses. Explores communication strategies used by effective leaders and interview public health leaders to identify how they approach their work. Opportunity to read studies in leadership.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.895. MPH Practicum: PFRH. 1 - 4 Credits.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

PH.380.955. PFRH Lab for 380.755.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

Academic Calendar

2022-2023 Academic Calendar

Regular Summer Term
T July 5 - F Aug 26

Summer Institute Term
T May 31- F Aug 26 (Class Days - variable)

Date	Event
M Feb 14	Registration Begins for Summer Institute Terms
M April 4	Registration Begins for Regular Summer Term
M May 30	MEMORIAL DAY HOLIDAY
T May 31	Summer Institutes Begin
Sun June 5	Internet-Based/Part-Time MPH New Student Orientation
M June 20	JUNETEENTH HOLIDAY RECESS
F July 1	Regular Summer Term Registration Ends
TH June 30– F July 1	NEW STUDENT ORIENTATION
M July 4	INDEPENDENCE DAY HOLIDAY RECESS
T July 5	Instruction Begins for Summer Term
T July 5 - M July 11	Regular Summer Add Period
T July 5 - M July 18	Regular Summer Drop Period
F Aug 26	Last Class Day of Regular Summer Term

1st Term
M Aug 29 - M Oct 24 (40 class days)

Date	Event
M Apr 11	1st Term Registration Begins for Continuing and Special Students
F Aug 26	1st Term Registration Ends for Continuing and Special Students
W Aug 24 - F Aug 26	NEW STUDENT ORIENTATION
M Aug 29	Instruction Begins for 1st Term
M Sept 5	LABOR DAY Holiday
M Aug 29 – F Sept 2	Add Period
M Aug 29 – F Sept 9	Drop Period
M Oct 24	Last Class Day of 1st Term

2nd Term
W Oct 26 - F Dec 23 (40 class days)

Date	Event
M Apr 11	2nd Term Registration Begins
F Oct 21	2nd Term Registration Ends
W Oct 26	Instruction Begins for 2nd Term
W Oct 26 – T Nov 1	Add Period
W Oct 26 – T Nov 8	Drop Period
W Nov 23 – Su Nov 27	THANKSGIVING RECESS
F Dec 23	Last Class Day of 2nd Term

Winter Intersession
W Jan 4 - F Jan 20

Date	Event
M Jan 3	INTERNET-BASED/PART-TIME MPH NEW STUDENT ORIENTATION
M Oct 3	Winter Intersession Registration Begins
F Dec 30	Winter Intersession Registration Ends
M Jan 16	MARTIN LUTHER KING, JR. HOLIDAY RECESS

3rd Term
M Jan 23 - F Mar 17 (40 class days)

Date	Event
M Nov 14	Registration Begins for 3rd Term
F Jan 20	3rd Term Registration Ends

M Jan 23	Instruction Begins for 3rd Term
M Jan 23 - F Jan 27	Add Period
M Jan 23 – F Feb 3	Drop Period
F Mar 17	Last Class Day of 3rd Term
M Mar 20 - F Mar 24	SPRING RECESS

4th Term
M March 27 - F May 19 (40 class days)

Date	Event
M Nov 14	Registration Begins for 4th Term
F Mar 24	4th Term Registration Ends
M Mar 27	Instruction Begins for 4th Term
M Mar 27 – F March 31	Add Period
M Mar 27 – F Apr 7	Drop Period
F May 19	Last Class Day of 4th Term
T May 23	PUBLIC HEALTH CONVOCATION
Th May 25	UNIVERSITY COMMENCEMENT
F June 30	RESIDENCY PROGRAM ENDS

All JHU divisions begin fall terms on Monday, August 29, 2022 and spring terms on M January 23, 2023.

APHA Nov. 6-9, 2022

Admissions

Services Overview

The Admissions Office is the go-to resource for students who are interested in exploring a public health education at the Johns Hopkins Bloomberg School of Public Health. We support the School's mission and excellence in public health by ensuring that the best candidates from all backgrounds and around the world have the resources and information they need to apply and matriculate successfully.

Start your journey here (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/) for information on the application process. International applicants (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/international-applicants/) may have slightly different application requirements.

Contact Us

Johns Hopkins Bloomberg School of Public Health
Admissions Services Office
615 N. Wolfe Street, E1002
Baltimore, MD 21205
bsph.admission@jhu.edu
410-955-3543
Admissions Services answers phone inquiries from 9am to 12pm (Eastern time), Monday through Friday. We do our best to answer all calls during this time, but if we cannot get to your call, please leave a message and we will get back to you as soon as possible.

CEPH Requirements

I. According to the requirements of the Council on Education for Public Health (CEPH), all BSPH degree students must be grounded in foundational public health knowledge. Grounding in foundational public health knowledge is measured by the student's achievement of the learning objectives listed below, or higher-level versions of the same objectives.

Profession & Science of Public Health

1. Explain public health history, philosophy and values
2. Identify the core functions of public health and the 10 Essential Services
3. Explain the role of quantitative and qualitative methods and sciences in describing and assessing a population's health
4. List major causes and trends of morbidity and mortality in the US or other community relevant to the school or program
5. Discuss the science of primary, secondary and tertiary prevention in population health, including health promotion, screening, etc.
6. Explain the critical importance of evidence in advancing public health knowledge

Factors Related to Human Health

1. Explain effects of environmental factors on a population's health
2. Explain biological and genetic factors that affect a population's health
3. Explain behavioral and psychological factors that affect a population's health
4. Explain the social, political and economic determinants of health and how they contribute to population health and health inequities
5. Explain how globalization affects global burdens of disease
6. Explain an ecological perspective on the connections among human health, animal health and ecosystem health (eg, One Health)

II. In addition to the CEPH learning objectives, graduating students in professional master's degrees must demonstrate their ability to perform foundational competencies. These CEPH competencies are informed by the traditional public health core knowledge areas, (biostatistics, epidemiology, social and behavioral sciences, health services administration and environmental health sciences), as well as cross-cutting and emerging public health areas.

Evidence-based Approaches to Public Health

1. Apply epidemiological methods to settings and situations in public health practice
2. Select quantitative and qualitative data collection methods appropriate for a given public health context
3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate
4. Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

1. Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings

2. Discuss the means by which structural bias, social inequities and racism undermine health and create challenges to achieving health equity at organizational, community and systemic levels

Planning & Management to Promote Health

1. Assess population needs, assets and capacities that affect communities' health
2. Apply awareness of cultural values and practices to the design, implementation or critique of public health policies or programs
3. Design a population-based policy, program, project or intervention
4. Explain basic principles and tools of budget and resource management
5. Select methods to evaluate public health programs

Policy in Public Health

1. Discuss the policy-making process, including the roles of ethics and evidence
2. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
3. Advocate for political, social or economic policies and programs that will improve health in diverse populations
4. Evaluate policies for their impact on public health and health equity

Leadership

1. Apply leadership and/or management principles to address a relevant issue
2. Apply negotiation and mediation skills to address organizational or community challenges

Communication

1. Select communication strategies for different audiences and sectors
2. Communicate audience-appropriate public health content, both in writing and through oral presentation
3. Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

1. Integrate perspectives from other sectors and/or professions to promote and advance population health

Systems Thinking

1. Apply a systems thinking tool to visually represent a public health issue in a format other than standard narrative

III. In addition to the CEPH learning objectives, graduating DrPH students must demonstrate their ability to perform foundational competencies outlined below.

Data & Analysis

1. Explain qualitative, quantitative, mixed methods and policy analysis research and evaluation methods to address health issues at multiple (individual, group, organization, community and population) levels
2. Design a qualitative, quantitative, mixed methods, policy analysis or evaluation project to address a public health issue
3. Explain the use and limitations of surveillance systems and national surveys in assessing, monitoring and evaluating policies and programs and to address a population's health

Leadership, Management & Governance

1. Propose strategies for health improvement and elimination of health inequities by organizing stakeholders, including researchers, practitioners, community leaders and other partners
2. Communicate public health science to diverse stakeholders, including individuals at all levels of health literacy, for purposes of influencing behavior and policies
3. Integrate knowledge, approaches, methods, values and potential contributions from multiple professions, sectors and systems in addressing public health problems
4. Create a strategic plan
5. Facilitate shared decision making through negotiation and consensus-building methods
6. Create organizational change strategies
7. Propose strategies to promote inclusion and equity within public health programs, policies, and systems
8. Assess one's own strengths and weaknesses in leadership capacities, including cultural proficiency
9. Propose human, fiscal, and other resources to achieve a strategic goal
10. Cultivate new resources and revenue streams to achieve a strategic goal

Policy & Programs

1. Design a system-level intervention to address a public health issue
2. Integrate knowledge of cultural values and practices in the design of public health policies and programs
3. Integrate scientific information, legal and regulatory approaches, ethical frameworks and varied stakeholder interests in policy development and analysis
4. Propose interprofessional and/or intersectoral team approaches to improving public health

Education & Workforce Development

1. Assess an audience's knowledge and learning needs
2. Deliver training or educational experiences that promote learning in academic, organizational or community settings
3. Use best practice modalities in pedagogical practices

Departments

Department of Biochemistry and Molecular Biology

About

The Department of Biochemistry and Molecular Biology (https://www.jhsph.edu/departments/biochemistry-and-molecular-biology/) conducts research to discover and characterize the fundamental biological processes relevant to health and disease.

Faculty and students work together to increase knowledge of the biochemical and molecular bases of normal and abnormal cellular processes and to train highly qualified scientists who—through research, teaching and service—continue to provide new insights into the biomedical issues that have a profound impact on public health.

Programs

Biochemistry and Molecular Biology, MHS

The Master of Health (M.H.S.) Program

Overview

The Master of Health Science (MHS) degree program is designed for students interested in graduate-level preparation for careers in medicine, biomedical research, public health, and related health sciences.

Our MHS students pursue advanced graduate work, a career in medicine, or positions in industry or public health. The MHS in the Department of Biochemistry and Molecular Biology includes courses within a core curriculum focused around biochemistry, molecular biology, reproductive biology, and the biology of disease and public health.

Program Requirements

Course location and modality is found on the BSPH website (https://www.jhsph.edu/courses/).

Course Requirements

Code	Title	Credits
School-wide Required Courses		
PH.550.865	Public Health Perspectives on Research [1]	2
Select a minimum of three credits of basic epidemiology from the following:		3
PH.340.721	Epidemiologic Inference in Public Health I [2]	
PH.340.751	Epidemiologic Methods 1 [3]	
Council on Education for Public Health Accreditation Required Courses		
All of the following **must** be taken: [4]		
PH.552.601	Foundational Principles of Public Health (1st & 3rd term)	0.5
PH.552.602	The Role of Quantitative Methods in Public Health (2nd term)	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (1st & 3rd term)	0.5
PH.552.604	Causes and Trends in Morbidity and Mortality (2nd term)	0.5
PH.552.605	The Science of Primary Secondary and Tertiary Prevention in Population Health (2nd term)	0.5
PH.552.606	The Critical Importance of Evidence in Advancing Public Health Knowledge (2nd term)	0.5
PH.552.607	Essentials of Environmental Health (1st term)	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health (1st & 3rd term)	0.5
PH.552.610	The Social Determinants of Health (2nd & 4th term)	0.5
PH.552.611	Globalization and Population Health (2nd & 4th term)	0.5
PH.552.612	Essentials of One Health (1st term)	0.5
Departmental Required Courses		
PH.120.600		5
PH.120.601	Biochemistry II: Major Metabolic Pathways	5
PH.120.602	Concepts of Molecular Biology (1st term)	4
PH.120.872	Special Studies-Current Topics in BMB (pass/fail)	1
PH.120.624	Cancer Biology (4th term)	3
Select at least five of the following upper-level BMB courses, while also taking at least one BMB course each term:		15-16
PH.120.603	Molecular Biology of Pandemic Influenza (2nd term)	
PH.120.620	Fundamentals of Reproductive Biology (1st term)	
PH.120.626	Principles of Cell Biology (2nd term)	
PH.120.608	Gene Editing, therapy and Manipulation (3rd term)	
PH.120.613	Nucleic Acid Chemistry (3rd term)	
PH.120.606	Cellular Stress in Physiology and Disease (4th term)	
PH.120.622	Molecular and Cellular Mechanisms of Reproduction (4th term)	
PH.120.605	Genome Integrity (4th term)	
Thesis Requirement		
PH.120.860	Thesis Preparation (3rd term, pass/fail)	2
PH.120.870	Thesis in Biochemistry and Molecular Biology (4th term)	5
Total Credits		**50.5-51.5**

1 An online, 2 credit pass/fail course in 2nd term, required of all BSPH students, except those in the MPH program

2 1st term or online 3rd term – This is a good "all-purpose" epidemiology course, designed for a wide audience of SPH students.

3 1st term – This course is more advanced than PH.340.721 Epidemiologic Inference in Public Health I in terms of the statistics background that is expected. Please see the course site in the course catalogue for further information on the statistics prerequisites.

Council on Education for Public Health Accreditation Required Courses

- Please note that 552.XXX are 0.5 credit courses and are required of all MHS students. While the credits for each of these courses do not count towards your total number of credit hours they **must** be completed to fulfill your degree. These courses are Pass/Fail, and to receive credit for each of them, you *must* earn a **Pass** in each to fulfill your degree requirements. Failure to pass any of these courses may preclude you from graduating in May.
- These courses are offered online only, and many of them are offered during two different terms – either 1st and 3rd or 2nd and 4th. You may add in as many as you wish per term; yet, I encourage you to be mindful of how many you are taking, particularly in light of the other coursework you have during the given term.

Waivers

Waivers from the School's epidemiology can be granted in the following circumstances:

- If you took Course AS.280.350 Fundamentals of Epidemiology, (offered at the Homewood campus), you can be granted a waiver from the School's requirement to take an epidemiology course. Please contact Vicki Keller or Erika Vaitekunas and they will arrange with the Registrar's office to have this noted in your records. However, be advised that no course credit is given.
- If you have previously taken a graduate level course in epidemiology at a U.S.-based, accredited school of public health, you can be granted a waiver from the School's epidemiology requirement. Please contact Vicki Keller or Erika Vaitekunas and they will arrange with the Registrar's office to have this noted in your records. However, be advised that no course credit is given.
- If you have previously taken an epidemiology course, but not graduate-level or at an U.S.-accredited school of public health, then the Department of Epidemiology offers a waiver exam. The contact for information about this exam is Allyn Arnold, instructor in the Department of Epidemiology (aarnold2@jhu.edu). If the student passes the waiver exam, the student is waived of the requirement to take basic epidemiology, and this waiver is noted in the student's

academic record with Records and Registration (however, no course credit is given for passing the waiver exam).

Term by Term Breakdown of Course Requirements

Course	Title	Credits
First Year		
First Term		
Required		
PH.120.872	Special Studies-Current Topics in BMB (pass/fail)	1
PH.120.602	Concepts of Molecular Biology [1]	4
PH.120.620	Fundamentals of Reproductive Biology [1]	3
Optional		
PH.120.600	[2]	
	Credits	**8**
Second Term		
Required		
Select at least one of these upper-level BMB courses (a minimum of five are required):		3
PH.120.603	Molecular Biology of Pandemic Influenza [3,4]	
PH.120.626	Principles of Cell Biology [3,5]	
Optional		
PH.120.601	Biochemistry II: Major Metabolic Pathways [6]	
	Credits	**3**
Third Term		
Required		
PH.120.860	Thesis Preparation (pass/fail)	2
Select at least one of the following upper-level courses (a minimum of five are required):		3
PH.120.608	Gene Editing, therapy and Manipulation [3,7]	
PH.120.613	Nucleic Acid Chemistry [3,8]	
PH.120.627	Stem Cells and the Biology of Aging and Disease [3,9]	
	Credits	**5**
Fourth Term		
Required		
PH.120.624	Cancer Biology [1]	3
PH.120.870	Thesis in Biochemistry and Molecular Biology [1]	5
Select one of the following upper-level BMB courses (a minimum of five are required) if needed:		
PH.120.624	Cancer Biology [1,10]	
PH.120.606	Cellular Stress in Physiology and Disease [11]	
PH.120.622	Molecular and Cellular Mechanisms of Reproduction [12]	
	Credits	**8**
	Total Credits	**24**

1 **Required BMB courses must be taken for a grade** (not Pass/Fail or for Audit credit)

2 Usually required for PH.120.601 Biochemistry II: Major Metabolic Pathways Biochemistry I and II are fundamental biochemistry courses and are excellent options for students who would like a biochemistry refresher for taking/re-taking the MCAT.

3 Satisfies the MHS degree requirement as one of the five upper-level courses

4 Literature-based course addressing one of the most interesting examples of the intersection of public health and the basic biomedical sciences.

5 Topics-based cell biology course; good choice for students who will be taking/re-taking the MCAT.

6 Second half of Biochemistry, continues from Biochemistry I (although it is not a strict requirement to take Biochemistry I in order to take Biochemistry II)

7 Addresses the genetic basis of health and disease, with emphasis on treating conditions with gene therapy or cutting-edge genome editing techniques.

8 Good choice for students with a strong chemistry background or seeking to build on their chemistry background; addresses the syntheses and chemical modifications of nucleotides, oligonucleotides, and nucleic acids, and in the application of oligonucleotides to solving problems in biology.

9 Covers topics in this cutting-edge area of biomedical science relevant to regenerative medicine, and reproductive and cancer biology.

10 Examines topics such as DNA repair, chromosome maintenance, and cell cycle control as these apply to cancer and other diseases.

11 Addresses the emerging, hot area of biomedical science on the "cell biology of stress" – events like cellular stress sensing pathways and stress response pathways, pertinent to many diseases and pathological states, such as neurodegeneration. Feedback from recent MHS alums is that this course material on oxidative stress is highly relevant to medical school!

12 For students interested in reproductive biology and health; this course builds on PH.120.620 Fundamentals of Reproductive Biology, in 1st term.

You must take a minimum of four of the upper-level BMB courses for a letter grade (and you are urged to take *all* for a letter grade, as P/F in a letter-graded course really doesn't do your credentials much good!).

Note: If you have previously taken any of these BMB courses (e.g., in satisfaction of your undergraduate degree or as a special student at Hopkins):

- If you have previously taken any of BMB courses, you do not have to re-take the course (nor are you allowed to take the course over again and have it count toward your Master's degree). If you are placing out of a BMB course, then you satisfy your requirement for BMB-based courses by taking *one additional BMB course for each course that you placed out of. You should **take a minimum of eight BMB classes over the four terms** of the academic year*.

Thesis Requirements

The **independent study MHS thesis** is completed by BMB MHS students. This thesis is a literature review (see details below), and there are two components that students register for as part of this process:

- You must complete and receive a P (Pass) in Course PH.120.860 Thesis Preparation, in 3rd term.
- You must receive a grade of **B or better on the thesis** to be eligible for the MHS degree. The grade you receive on the thesis will show in your transcript for Course PH.120.870 Thesis in Biochemistry and

Molecular Biology in 4th term, and will figure in to your cumulative GPA.

Term By Term Required and Other Courses

Notes:

1. Please be aware that ***course information can and does change*** (e.g., days/times, instructors, sometimes even if the course is going to be offered at all – and sometimes with little notice). For the most up-to-date information on course times, instructors, prerequisites, requirements for instructor permission, etc., ***go to the School's course search engine***: www.jhsph.edu/courses (https://www.jhsph.edu/courses/)
2. Many of the courses listed here have been ***recommended by previous MHS students or are noted here for various reasons of interest to BMB MHS students*** *(e.g., relevance to medicine and/or public health and/or MCAT, biological areas of interest, etc.).* ***But this is by no means a comprehensive list!*** *There are hundreds of great courses in the School of Public Health -- feel free to shop around with the course search engine to see the many other options.*

Course	Title	Credits
First Year		
First Term		
Before Labor Day to late October		
BMB Required Courses		
PH.120.602	Concepts of Molecular Biology	4
PH.120.620	Fundamentals of Reproductive Biology	3
PH.120.872	Special Studies-Current Topics in BMB (pass/fail)	1
BMB Optional 1st Term Course		
PH.120.600		
BSPH Epidemiology Required Courses		
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.340.751	Epidemiologic Methods 1	5
Various 1st Term Courses of Interest		
PH.120.821	MHS Student Research (pass/fail) [1]	
PH.140.611	Statistical Reasoning in Public Health I	
PH.140.621	Statistical Methods in Public Health I	
PH.180.609	Principles of Environmental Health [2,3]	
PH.180.611	The Global Environment, Climate Change, and Public Health	
PH.187.610	Public Health Toxicology	
PH.221.613	Introduction to Humanitarian Emergencies	
PH.260.611	Principles of Immunology I [4,5]	
PH.260.623	Fundamental Virology	
PH.260.636	Evolution of Infectious Disease	
PH.300.651	Introduction to the U.S. Healthcare System	
PH.330.662	Public Mental Health	
PH.380.604	Life Course Perspectives on Health	
PH.410.600	Fundamentals of Health, Behavior and Society	
PH.410.612	Sociological Perspectives on Health	
PH.550.630	Public Health Biology	
	Credits	**18**
Second Term		
Late October to just before the December holiday season		
School-wide Required Course for all BSPH Students Not in the MPH Program		
PH.550.865	Public Health Perspectives on Research (online, pass/fail)	2
BMB Upper-level Courses		
PH.120.603	Molecular Biology of Pandemic Influenza	3
PH.120.626	Principles of Cell Biology	3
BMB Optional 2nd term Course		
PH.120.601	Biochemistry II: Major Metabolic Pathways	
Various 2nd term Courses of Interest		
PH.120.821	MHS Student Research (pass/fail) [1]	
PH.120.720	Applying Reproductive Biology Literacy Through Service-Learning [6]	
PH.140.612	Statistical Reasoning in Public Health II [7]	
PH.140.622	Statistical Methods in Public Health II [8]	
PH.180.650	Fundamentals of Clinical Oncology for Public Health Practitioners	
PH.180.610	Applied Environmental Health Practice [3,6,9]	
PH.183.631	Fundamentals of Human Physiology	
PH.187.632	Molecular Toxicology [10]	
PH.187.610	Public Health Toxicology (online)	
PH.223.662	Vaccine Development and Application	
PH.260.612	Principles of Immunology II (5,9)	
PH.260.631	Immunology, Infection and Disease	
PH.260.635	Biology of Parasitism	
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond	
PH.410.611	Under Pressure: Health, Wealth & Poverty	
	Credits	**8**
Third Term		
Mid-January to Mid-March		
BMB Required Courses		
PH.120.860	Thesis Preparation (pass/fail)	2
BMB Upper-level Courses		
PH.120.608	Gene Editing, therapy and Manipulation	3
PH.120.613	Nucleic Acid Chemistry	3
PH.120.627	Stem Cells and the Biology of Aging and Disease [3]	3
BSPH Epidemiology Required Courses		
PH.340.721	Epidemiologic Inference in Public Health I (online)	5
Various 3rd Term Courses of Interest		
PH.120.821	MHS Student Research (pass/fail) [1]	
PH.140.615	Statistics for Laboratory Scientists I	
PH.182.640	Food- and Water- Borne Diseases	
PH.183.638	Mechanisms of Cardiopulmonary Control	
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth [11]	
PH.221.635	Global Advances in Community-Oriented Primary Health Care	
PH.223.687	Vaccine Policy Issues	

PH.260.627	Pathogenesis of Bacterial Infections	
PH.260.635	Biology of Parasitism	
PH.260.650	Vector Biology and Vector-Borne Diseases	
PH.260.656	Malariology	
PH.260.665	Biological Basis of Aging	
PH.308.610	The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life [6]	
PH.330.661	Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders	
PH.340.607	Introduction to Cardiovascular Disease Epidemiology	
PH.380.665	Family Planning Policies and Programs	
PH.380.760	Clinical Aspects of Reproductive Health	
PH.410.610	Housing Insecurity and Health	
PH.410.613	Psychosocial Factors in Health and Illness	
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication	
	Credits	**16**
Fourth Term		
Mid/end of March to mid/end of May		
BMB Required Courses		
PH.120.624	Cancer Biology [3]	3
PH.120.870	Thesis in Biochemistry and Molecular Biology [12]	5
Additional BMB Courses		
(if still need courses for the minimum of five upper-level BMB courses)		
PH.120.606	Cellular Stress in Physiology and Disease	
PH.120.622	Molecular and Cellular Mechanisms of Reproduction	
PH.120.605	Genome Integrity [3]	
Other 4th Term Courses of Interest		
PH.120.821	MHS Student Research (pass/fail) [1]	
PH.140.616	Statistics for Laboratory Scientists II	
PH.183.631	Fundamentals of Human Physiology (online)	
PH.183.642	The Cardiopulmonary System Under Stress	
PH.187.661	Environmental Health in Neurological and Mental Disorders [10]	
PH.223.682	Clinical and Epidemiologic Aspects of Tropical Diseases	
PH.260.656	Malariology	
PH.260.712	Clinical Immunology [6]	
PH.223.689	Biologic Basis of Vaccine Development [14]	
PH.300.651	Introduction to the U.S. Healthcare System (online)	
PH.380.667	Women's Health Policy	
PH.380.762	HIV Infection in Women, Children, and Adolescents	
PH.410.652	Interpersonal Influence in Medical Care	
	Credits	**8**
	Total Credits	**50**

1 Research in a BMB faculty member's lab
2 Continues in second term, PH.180.610 Applied Environmental Health Practice consent of instructor required
3 Online course will not satisfy the requirements for the MHS program
4 Prerequisite: course in Advanced Biology continues in second term, PH.260.612 Principles of Immunology II
5 Recommended only for students with a very strong biology background
6 Consent of instructor required
7 Continuation from PH.140.611 Statistical Reasoning in Public Health I, in 1st term
8 Continuation from PH.140.621 Statistical Methods in Public Health I, in 1st term
9 Continuation from first term
10 Prerequisite: PH.187.610 Public Health Toxicology, a basic course in molecular biology, or consent of instructor
11 Also has an optional, complementary practicum component in 3rd and 4th term
12 This is how you get your grade for the MHS thesis.
13 Prerequisite: PH.260.623 Fundamental Virology or instructor consent required
14 Prerequisite PH.260.611 Principles of Immunology I-112 or equivalent knowledge of principles of modern immunology

The M.H.S. Thesis

The MHS thesis is the culminating experience of the degree and should "*provide new knowledge and/or a critical synthesis and integration of existing knowledge*" (as described by the Policy and Procedure manual of the Bloomberg School of Public Health). This is a *library-based* thesis – meaning the thesis does not involve independent research in a laboratory, but instead requires a synthesis of the scientific literature, in the style of a review article. It is also possible that the thesis could take on elements of a research proposal.

You get a grade for the MHS thesis. Your thesis grade will show on your transcript and will figure in to your cumulative GPA, through a five-credit thesis 'course' listed for 4th term, PH.120.870 Thesis in Biochemistry and Molecular Biology. Although the grade is assigned in 4th term, you will be working on your thesis for significantly more than one term. (Indeed, if you only work on the thesis starting over spring break before 4th term, you are very likely not to get a passing grade.)

Procedure and Rules for the MHS Thesis

1. A list of thesis topics will be distributed. You will select your top **3-4 topics** from this list. The deadline for submitting your choices will be in 2nd term; you will receive email notifications to your JHU email account about this. (Note: There is no advantage to handing a list in sooner than this date, i.e,. there is no "first come, first served.")
2. You will be assigned one of your topic choices, and a thesis supervisor to advise on this topic; you will know your topic and thesis supervisor by approximately midway through 2nd term.
3. You then should consult with their thesis supervisor regarding topic, tips for starting your work, etc. The MHS thesis is intended to be an **independent study project** in which you work **one-on-one with your faculty supervisor** to assist your research as needed. There are several important milestones and deadlines related to the MHS thesis:

Milestone	Deadline
Students submit 5 topics of interest via BMB Masters Resource CoursePlus site	Monday, September 26, 2022, 11:59 PM
Student notification of topic and advisor	Friday, October 7, 2022, 11:59 PM
Meeting 1 - Required organizational meeting with thesis supervisor to discuss topic, overall thesis work plan, and work plan for developing the 2-4 page outline	No later than Friday, October 28, 2022, 5:00 PM
Meeting 2 - Progress report with thesis supervisor at least once by Week 2 of 3rd term (and before the end of 2nd term is encouraged, so that you can work more on your general outline over winter break)	Before Friday, December 16, 2022; before the end of 2nd term if possible
2-4 page initial outline due – email to thesis supervisor, and also submit via CoursePlus website for PH.120.860	No later than Friday, January 27, 2023, 11:59 PM (sooner is encouraged)
Meeting 3 - Progress report with thesis advisor at least once by end of Week 5 of 3rd term – get feedback on general outline and discuss the detailed outline/rough draft	Before Friday, February 17, 2023
~10+ page detailed outline or partial rough draft, with references (consult your thesis supervisor on what they prefer), – email to thesis supervisor and also submit through CoursePlus website for PH.120.860	No later than Friday, March 10, 2023, 11:59 PM (sooner is encouraged)
Meeting 4 - Progress report with thesis supervisor at least once by end of Week 2 of 4th term - feedback on detailed outline or partial draft	No later than Friday, March 24, 2022
Final Thesis Due (20-30 pages long, not counting figures, references) – hard copy or e-copy to thesis supervisor and secondary reader, and submit e-copy through CoursePlus website for PH.120.870	Friday, April 14, 2023, 11:59 PM

4. Document uploads will use dropboxes associated with the appropriate CoursePlus course site, for PH.120.860 Thesis Preparation in 3rd term and PH.120.870 Thesis in Biochemistry and Molecular Biology in 4th term.
5. The work-in-progress document – i.e., the detailed outline ***or*** partial rough draft due (depending on which your thesis supervisor on what s/he prefers), including references. This document must be submitted to your thesis supervisor by email **and** submitted to the CoursePlus dropbox by 11:59 PM of the Monday of the week between 3rd and 4th terms to get a Pass for Course PH.120.860 Thesis Preparation.
6. **Final MHS thesis is due *by* Sunday, April 14, 2023, 11:59 PM.** Communicate with your thesis supervisor and secondary reader to determine if they prefer a hard copy or an e-copy. You also must submit a PDF version to the CoursePlus website for PH.120.870 Thesis in Biochemistry and Molecular Biology, to be saved for departmental records. You may also use CoursePlus to upload your thesis to your academic portfolio.
7. Thesis grade: **You must receive an A or B on the MHS thesis to be eligible for the MHS degree.** As noted above, your grade on your thesis will show on your transcript and figure in to your cumulative GPA, for the five-credit course PH.120.870 Thesis in Biochemistry and Molecular Biology. **The grade you get on the thesis that you hand in on April 14, 2023 is the final grade that goes and stays on your transcript, and figures in to your cumulative GPA.**
   ***If you receive a C or D on the thesis,* you are not eligible for the MHS degree for May graduation. However, you have the option to re-write the thesis if you still wish to be eligible for the MHS degree.**Re-written theses must be submitted to your thesis supervisor, your secondary reader, and the BMB academic affairs office (Vicki Keller and Erika Vaitekunas); the absolute last date that the re-written thesis can be submitted is **August 1**. This re-written thesis must be of A or B grade quality to make you eligible for the MHS degree. Although the grade of C or D will stay on your transcript, the department will submit a letter to Records and Registration to note that you have satisfactorily completed the thesis requirement.
   If you receive an F on the MHS thesis*, you will be permanently ineligible for the MHS degree; *there is no rectifying this deficiency (theses that receive an F are not eligible for a re-write). The draft that you hand in on **April 14, 2023** must get a D or better for you to have the option of receiving the MHS degree in the future.
8. **Theses handed in after the due date:**
   Students should do everything in their power to stay on target for the April due date for MHS thesis submission. If a health or personal emergency develops that will prevent you from submitting your thesis by the deadline, you must provide documentation of this emergency (e.g., from a healthcare professional and/or from the Office of Student Affairs). Also be advised that *you will not be eligible for spring graduation and marching in our Convocation ceremonies*. You will receive an Incomplete for PH.120.870 Thesis in Biochemistry and Molecular Biology. Completion of your thesis by August 1 and receiving a grade of A or B will make you eligible for summer degree conferral. Be advised that grades of Incomplete for PH.120.870 Thesis in Biochemistry and Molecular Biology have to be resolved by 120 days after the conclusion of 4th term.
   Students handing in the thesis late *without* a valid excuse will automatically receive a **D** for Course PH.120.870 Thesis in Biochemistry and Molecular Biology. This grade will stay on your transcript and will figure in to your cumulative GPA. If you wish to be eligible for the MHS degree, you will have to re-write the thesis; this must be handed in to your thesis supervisor, your secondary reader, the BMB academic affairs office (Vicki Keller and Erika Vaitekunas) *by* **August 1**, so that you can be eligible for summer degree conferral. This re-written thesis must be an A or B grade quality to make you eligible for the MHS degree. Although the grade of D will stay on your transcript, the department will submit a letter to Records and Registration to note that you have satisfactorily completed the thesis requirement.

General Guidelines for the MHS Thesis

- Length - 20-30 pages (not counting bibliography or figures)
  - Note: A thesis shorter than 20 pages typically will not provide sufficient depth and breadth to earn an A. If your thesis is going to be longer than 30 pages, you should discuss this with your

thesis supervisor and either get approval for a longer thesis, or discuss how to shorten the thesis.
- Double-spaced with one-inch margins
- Must include an **abstract** of 250 words or less at the beginning.
- Font - Arial, Times, Times New Roman, etc. (i.e., nothing crazy looking), size 12 (nothing too tiny, nothing too large).
- For hard copies, binding is not necessary, but certainly welcome.
- Organization varies depending on topic, but a general format could include
  - Introduction
  - Background
  - The state of the field currently -- including what's known, and what's *controversial* and/or *unknown*
  - Where the field is going (to address controversies and unknowns)
  - Conclusions/summary
    Note: Headings and subheadings can be used to distinguish sections and subsections. A table of contents may be included to highlight these sections and subsections.
- **References:** ~40-100 referenced works (will vary widely, depending on the topic)
- **Reference formats** (for using RefWorks or other bibliographic software, you may select the *Journal of Cell Biology* as style)
  - *In-text citations* (at the end of sentence or phrase needing a citation):
    - If one author: A monoclonal antibody that recognizes Protein X inhibits viral fusion with cells (Jones, 2003).
    - If two authors: A monoclonal antibody that recognizes Protein X inhibits viral fusion with cells (Jones and Smith, 2003).
    - If 3+ authors: A monoclonal antibody that recognizes Protein X inhibits viral fusion with cells (Jones et al., 2003).
  - *Bibliography list of references at the end of the thesis*
    Alphabetical by first author's last name, formatted as follows: Lastname1 A., Lastname2 B., Lastname3, C. (Year) Title of paper. *Journal name (or abbrev.)* Vol.#: page#-page#.
- You are *strongly urged* to use ***bibliographic software***; this will be significantly easier for you than typing all your references into your outlines and thesis drafts or trying to keep the papers you find and read organized without software. The web-based bibliographic software **RefWorks** is available free to JHU students through Welch Library. Other bibliographic software options include Reference Manager, EndNote, and Mendeley (www.mendeley.com (http://www.mendeley.com)).
  Links for various services available from Welch Medical Library (http://welch.jhmi.edu):
  - **Welch Library classes and tutorials:** welch.jhmi.edu/welchone/Classes-and-Lectures (http://welch.jhmi.edu/welchone/Classes-and-Lectures/)
    Online tutorials and schedule of classes for using various services and databases
  - **Welch Library's information on RefWorks:**
    Online tutorials available through:
    welch.jhmi.edu/welchone/Online-Tutorials-and-Guides (http://welch.jhmi.edu/welchone/Online-Tutorials-and-Guides/)
  - **Portal for using RefWorks:** Under the "Services" tab at welch.jhmi.edu/welchone/ (http://welch.jhmi.edu/welchone/)
- **Illustrations:** Illustrations are allowed in the thesis. Figures must include a figure legend. You should consult with your thesis supervisor about including figures and in what format – particularly if your thesis supervisor is comfortable with you using a figure from a published work, or whether you should draw your own illustration (and provide attribution for the inspiration). If you do an exact duplication of a figure (by copy and paste) that was published somewhere, you must provide a citation, with some phrase in the figure legend like "taken from Smith et al., 2014." If you draw your own illustration that is roughly based on one or more figures that have been published, you should cite this as, "adapted from Smith et al., 2014 and Comsnogle et al., 2010."
- **Working with others** – You should verify with your thesis supervisor, but in general, most thesis supervisors will be supportive of you working with your fellow MHS students, such as exchanging thesis drafts with a friend and checking each other's draft for readability, grammar, typos, etc.

Crucial issue with referencing and with illustrations –Must avoid plagiarism!!!

Information from the School's Policies and Procedures:
Policy and Procedure Memorandum Students - 1
Subject: Academic Ethics

https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/Pages/default.aspx

Constitution of the Academic Ethics Board of the Bloomberg School of Public Health

Article Two. Definitions

Section Two.

Plagiarism is defined as taking for one's own use the words, ideas, concepts or data of another without proper attribution. Plagiarism includes both direct use or paraphrasing of the words, thoughts or concepts of another without proper attribution. Proper attribution includes:

1. use of quotation marks or single-spacing and indentation for words or phrases directly taken from another source, accompanied by proper reference to that source,
2. proper reference to any source from which ideas, concepts, or data are taken even if the exact words are not reproduced.

Tips for working on the MHS thesis:

- **Meet with your thesis supervisor early and regularly.** This is important for getting tips on where to get started, and how to make progress. With regard to getting started, there are many different ways to consider, which are based on you, the topic, and your thesis supervisor. Examples include:
  - Use PubMed or other literature database search (e.g., Google Scholar) with keywords related to your topic.
  - Use PubMed to search for a few authors' names to PubMed, to see what leaders in the field are doing
  - Thesis supervisor might assign a couple review articles for overview
  - Thesis supervisor might assign 2-5 research papers to get you started on a few key issues in the field.
- Start collecting papers, review and original research – and dive in and start reading.
- Start jotting down ideas, key concepts, important issues, etc. that come up in these papers.

- Continue meeting with your thesis supervisor and feedback during your regular progress report meetings.
- As your ideas of thesis content start coming together, start working on an **outline**. A short outline is part of the required work in 3rd term on the thesis. It is highly recommended that you include references during your outlining, both to organize your thoughts and to keep track of citations.
- Make modifications/additions in response to thesis supervisor's comments.
- Start writing from your outline. Text can be broken into sections and subsections, with headings for each section / subsection.

Academic Requirements

- Must have a **minimum of 16 credits per term** for full-time status, and **64 total credits** to graduate.
- Of the 16 credits per term, *up to four credits each term can be **BMB Special Studies (120.840**, listed as "Special Studies and Research Biochemistry")*. This means that a *minimum of 12 credits* must be non-Special Studies courses. Part of the purpose of Special Studies (120.840) credits is to give you credit for the time you spend in various activities, even though these activities are not formal specific courses for which you get grades (e.g., seminars, meetings, other enrichment activities).
- While a few online courses are offered to MHS students through our department, a large number of online course offerings are available to you through the School. Be advised that many **medical schools do NOT accept online courses**, particularly those that are required and/or recommended courses for entrance into medical school. You may want to check with the AAMC website or your choice schools' admissions requirements to determine their online course acceptance preferences.
- The maximum number of credits in one term is 22, unless a student gets permission from the program director (Dr. Roza Selimyan; rselimyan@jhu.edu) to take more than 22 credits in a given term.
- An MHS student must have a minimum cumulative G.P.A. of **2.75** to graduate. Additionally, maintaining a cumulative GPA of 2.75 is required to remain in sufficient academic standing for receiving federal financial aid (known as *Satisfactory Academic Progress*, or SAP).

A student with a cumulative GPA below 2.75 will be:

1. Be placed on departmental academic probation. The student will be required to meet with the program director, Dr. Roza Selimyan, to discuss classes, study needs, and factors that could be addressed to enhance academic performance.
2. Prepare an academic plan for the coming term that identifies specific tactics to start an upward trend in academic performance. Be advised that students who are receiving **federal financial aid** who have a cumulative GPA below 2.75 are asked to prepare an academic plan as part of their ***Satisfactory Academic Progress* suspension appeal**. This academic plan for the Satisfactory Academic Progress suspension appeal can also be used as the plan for departmental academic probation.

- D or F in any class or failure to have a cumulative GPA of 2.25 is *grounds for dismissal* (note: this differs from automatic dismissal). Also be advised that that no credits are received for a course in which a student receives an F, and therefore a course in which a student receives an F will not count toward the 64 credits one needs to graduate.

The Master of Health Science (MHS) degree program is designed for students interested in graduate-level preparation for careers in medicine, biomedical research, public health, and related health sciences. Our MHS students pursue advanced graduate work, a career in medicine, or positions in industry or public health.

The MHS program is completed in one academic year (late August through mid May). The program's flexible curriculum allows opportunity to take courses throughout the Bloomberg School of Public Health. Because of the School's unique academic calendar (https://www.jhsph.edu/academics/calendar/2019-2020.html)with four eight-weeks terms, students have ample opportunity to take a rich variety of courses.

The MHS in the Department of Biochemistry and Molecular Biology includes courses within a core curriculum focused around biochemistry, molecular biology, reproductive biology, and the biology of disease and public health. The remainder of the courses are electives- that can be chosen based on interests and career goals. Students have extensive opportunities to have one-on-one interaction with faculty and staff, for advising, career guidance, and thesis preparation. The department also has a part-time pre-health advisor who leads workshops through the academic year to prepare students for applying to medical school or other professional schools in healthcare.

Biochemistry and Molecular Biology, ScM

The Master of Science (ScM) Program

Overview

The Department of Biochemistry and Molecular Biology offers two different master's degrees: The Master of Health Science (**MHS**) and the Master of Science (**ScM**). For the ScM degree, MHS students transfer to the ScM program and continue in a second year after completion of the first-year coursework. In this second year, students conduct laboratory research in one of the BMB primary appointment faculty members. The active labs with available space and appropriate projects for ScM students will vary from year to year, but can include Drs. Bailey, Cai, Culotta, Kavran, Leung, Matunis, Nayar, Rebecca, Wan, and Wang, as well as joint BMB appointees with training privileges, Marsha Wills-Karp, Photini Sinnis, Sabra Klein, Sean Prigge, Ann Hamacher-Brady, and Alan Meeker. The ScM degree work culminates in the writing of an ScM thesis (literature review and research report). Students start their research in June after the MHS coursework year, and then complete their research and thesis in the next spring-summer (~12-13 months). Tuition is reduced for the ScM year as compared to what students pay for the MHS coursework year. This typically is ~25% of the MHS year tuition. Questions about the ScM program can be directed to, Dr. Roza Selimyan (director of the ScM program) or the Academic Program Coordinator.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

The majority of ScM students who start their research in June will finish their degree work in June or July of the next year. This is because it takes

12-13 months to accumulate enough data for the ScM thesis, and then to write the thesis and have it approved by your adviser and thesis reader. Be advised that it is unusual, although not impossible, to get the ScM degree completed in time for May graduation (see details on deadlines below).

Academic Year 2022-23

Due Dates for Summer Conferral (August 26, 2022)

JUNE 10, 2022

- All academic requirements for the degree (except for submission of the thesis) have been fulfilled

JUNE 17, 2022

- Appointment of Thesis Readers for has been submitted to the Office of Records and Registration

AUGUST 26, 2022

- Thesis Acceptance Letters have been submitted to the Office of Records and Registration
- The Office of Records and Registration has received approval of submitted electronic copy of dissertation has received from the Sheridan Library

Due Dates for Fall Conferral (December 30, 2022)

OCTOBER 14, 2022

- All academic requirements for the degree (except for submission of the thesis) have been fulfilled

OCTOBER 28, 2022

- Appointment of Thesis Readers for has been submitted to the Office of Records and Registration

DECEMBER 16, 2022

- Thesis Acceptance Letters have been submitted to the Office of Records and Registration
- The Office of Records and Registration has received approval of submitted electronic copy of dissertation has received from the Sheridan Library

Due Dates for Spring Conferral (May 25, 2023)

FEBRUARY 10, 2023

- All academic requirements for the degree (except for submission of the thesis) have been fulfilled

march 17, 2023

- Appointment of Thesis Readers for has been submitted to the Office of Records and Registration

May 5, 2023

- Thesis Acceptance Letters have been submitted to the Office of Records and Registration
- The Office of Records and Registration has received approval of submitted electronic copy of dissertation has received from the Sheridan Library

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Presentation of Work at Departmental Retreat and Other Venues

ScM students are *required to present their work at the spring BMB departmental research retrea*t. ScM students are also encouraged to present their work at other venues, including the departmental colloquium, multi-lab group meetings, and regional/national scientific meetings.

Appointment of Thesis Readers

The ScM thesis must be read and approved by a committee of two readers. **Be advised that the appointment of readers for a ScM thesis is more formal than that of the MHS thesis**, with a form that must be submitted to the Office of Records and Registration by a specific deadline.

The following form must be submitted to the Office of Records and Registration: https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/MastersCandidateInformation/Documents/ScM%20-%20MBe%20Appointment%20of%20Thesis%20Readers%20Form.pdf (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/MastersCandidateInformation/%20Documents/ScM%20-%20MBe%20Appointment%20of%20Thesis%20Readers%20Form.pdf)

Or go to my.jhsph.edu (http://my.jhsph.edu):

- At the main page, select the *Offices* tab,
- pull down to *Student Affairs*
- On the main Student Affairs page, select *Records and Registration* (under the heading "Offices")
- Scroll the bottom of this next page to "Other Areas" and select "*Masters Candidate Information*"
- Look for the document, "**ScM - MBe Appointment of Thesis Readers Form**"

Approximate deadlines for submission for different completion dates and degree conferral are below. *We encourage all ScM students regardless of anticipated degree completion to submit the Appointment of Thesis Readers Form in **mid-February***.

Event	Deadline
For spring degree conferral (and marching in Convocation ceremonies)	Mid-February
For US citizens and permanent residents only -	Last day of 4th term
For submission by June 30, to have thesis submission covered by 4th term tuition	
For summer degree conferral	Mid-June[1]
For fall degree conferral	Mid-October[1]

[1] The deadlines for Academic year 2019-2020 (for summer and fall degree conferral) will be released in spring of 2020.

The exact date changes from year to year; be sure to check the Office of Records and Registration site on my.jhsph.edu (http://my.jhsph.edu) **for the dates.**

The URL for deadlines for Academic Year 2019-2020 will be made available here (***copy and paste this address***): https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/MastersCandidateInformation/

Documents/Forms/AllItems.aspx (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/MastersCandidateInformation/%20Documents/Forms/AllItems.aspx)

The ScM thesis reader committee consists of two members, one of which is the student's advisor. The second member **must** be a full-time (professor, scientist, lecturer, instructor of any rank), emeriti, or adjunct faculty from any BSPH or JHU department, including the student's sponsoring department. However, only one adjunct may serve on the committee of thesis readers. Visiting faculty may not serve on the committee.

Completion and Submission of the ScM Thesis

Be advised that submission of the ScM thesis is a more structured and formalized process than is submission of the MHS thesis.

You must remain registered until your final thesis is submitted and until all your committee members' letters are on file in the Office of Records and Registration. Students also must be registered for at least *two consecutive terms* leading up to submission of the thesis and completion of the ScM degree.

Non-US citizens/permanent residents: You must ensure that your student visa will be current throughout your completion of the degree. If you will not be completing the program as originally scheduled and your visa is expiring, please note that it is crucial to be in contact with the Office of International Services (OIS; http://ois.jhu.edu/) to stay on top of any impending deadlines, regarding your visa, potential application for Optional Practical Training (OPT), etc. It is essential to keep your supervisor and BMB administration informed.

Thesis Preparation and Submission Process

- The thesis must formatted according to University specifications.
  - Basic information - http://guides.library.jhu.edu/etd (http://guides.library.jhu.edu/etd/)
  - Formatting the thesis - http://guides.library.jhu.edu/etd/formatting (http://guides.library.jhu.edu/etd/formatting/)
  - It will also be helpful to look at past ScM theses. The BMB McCollum Reading Room (W8017) has copies of past students' theses. Your advisor may have copies from past students as well.
- ScM students work closely with their advisor to write the ScM thesis. The ScM advisor will read drafts, and ultimately, the ScM advisor must approve the version that is distributed to the other thesis reader.
- Once the thesis is acceptable to the advisor and approved by the advisor for distribution, the student then provides a copy of the ScM thesis to the other thesis reader.
  - It is recommended that you give your readers this near-final, advisor-approved version of your thesis *approximately three weeks before the date you need to submit the final copy*. This gives the readers plenty of time to read your thesis, provide critique, and for you to revise your thesis in response to their feedback as necessary.
- The student must incorporate recommended thesis revisions from the thesis readers.
- The final thesis, incorporating the thesis readers' revisions, is then submitted by the student electronically to JHU Sheridan libraries through the ETD process (ETD = Electronic Thesis and Dissertation - http://guides.library.jhu.edu/etd (http://guides.library.jhu.edu/etd/)).
- The final thesis must be submitted and verified by the indicated deadlines for degree conferral. ***Be advised that sometimes verification can take a couple days, so you do not want to wait right up to the very last day*.**
- The two members of the thesis reader committee must submit thesis acceptance letters to the Office of Records and Registration by the indicated deadlines for degree conferral.

Approximate deadlines for submission + verification of final thesis and acceptance letters from advisor and thesis reader:

Event	Deadline
For spring degree conferral (and marching in Convocation ceremonies)	Third Friday in April
For US citizens and permanent residents only -	Last working day in June
To have thesis submission covered by 4th term tuition	
For summer degree conferral (requires paying summer term tuition)	Mid-August[1]
For fall degree conferral (requires paying 1st term, and if necessary, 2nd term tuition)	Mid-December[1]

[1] The deadlines for each Academic Year 2019-2020 (for summer and fall degree conferral) are released at the end of the previous academic year. To find this, go to my.jhsph.edu (http://my.jhsph.edu):

- At the main page, select the *Offices* tab,
- Pull down to *Student Affairs*
- On the main Student Affairs page, select *Records and Registration* (under the heading "Offices")
- Scroll the bottom of this next page to "Other Areas" and select "*Masters Candidate Information*"
- Look for the appropriate Due Dates document.

The exact deadlines change from year to year; be sure to check the Office of Records and Registration site on my.jhsph.edu **(**http://my.jhsph.edu**) for the dates.**

The URL for the document with deadlines for the academic year: publichealth.jhu.edu/academics/academic-calendar (https://publichealth.jhu.edu/academics/academic-calendar/)

Program Policies

Master's students must register for a minimum 16 credits each term. These credits include didactic courses, special studies, thesis research, seminars, etc. While a minimum of 64 credits are required by the School for a Master's degree, due to this Departmental requirement, BMB ScM students will exceed that number at the time of graduation. Course requirements and suggestions for electives are summarized in the next section.

In core courses, Master's students must receive a 'C' or higher. A student who earns a grade below that threshold in a course listed as a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the ScM Director. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards.

To remain in good academic standing, Master's students must maintain a minimum grade point average of 2.75. If a student's GPA falls below the requirement, the student will be placed on academic probation. School policy states that a Master's student cannot graduate with a GPA lower than 2.75.

Educational Objectives:

Key educational objectives for ScM students include:

1) develop knowledge through coursework focused around biochemistry, molecular and cellular biology, reproductive biology, and the biology of disease and public health

2) develop skills for the critical evaluation of scientific literature

3) develop literature-based analytical and research skills

4) develop the ability to communicate scientific information orally and in writing. Additional educational objectives for ScM students include development of laboratory and analytical skills required to effectively conduct laboratory research

Biochemistry and Molecular Biology, PhD

Introduction

The PhD Program in the Department of Biochemistry and Molecular Biology is designed for students interested in graduate-level preparation for careers in biomedical and health sciences research. Emphasizing molecular studies of multiprotein systems, molecular and cellular biology, and biochemical nutrition, the research of our doctoral students has applications to cancer, aging, neurological diseases, and environmentally-based diseases.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Required Coursework

All Ph.D. students in the training program have a common core curriculum during their first and second years as outlined in Table 1. Students who are supported by the National Cancer Institute training grant in their second year or beyond are also required to take **ME.510.760 Fundamentals in Cancer: Cause to Cure** offered by the Sidney Kimmel Comprehensive Cancer Center, or an equivalent course. Students should consult with the departmental Academic Program Manager regarding course availability.

A rich array of seminar programs and journal clubs are also available to all students. Students may also elect, in consultation with their thesis adviser, to take additional coursework in their chosen area of interest. In addition to registering for required coursework, students also register for thesis research once they have chosen a thesis adviser.

All students, regardless of year, are required to attend the bi-weekly BMB Seminar Series given on Mondays at noon throughout the academic year and the annual BMB Retreat. Students who have completed their first year of study are also required to participate in the weekly journal club and attend the monthly BMB Colloquium series each academic year.

Table 1. Course Requirements for BMB Ph.D. Students

Course	Title	Credits
First Year		
First Term		
ME.100.709	Macromolecular Structure and Analysis (Macromolecular Structure and Analysis)	3
ME.100.710	Biochemical and Biophysical Principles (Biochemical and Biophysical Principles)	3
PH.120.850	Biochemical Techniques (laboratory rotations)	6
PH.120.852	Core Research Literature	2
PH.120.872	Special Studies-Current Topics in BMB	1
PH.120.840	Special Studies and Research Biochemistry	2
PH.550.860	Academic & Research Ethics at BSPH	0
	Credits	**17**
Second Term		
ME.260.709	Molecular Biology and Genomics (Molecular Biology and Genomics)	3
ME.800.707	Computational Biology and Bioinformatics (Computational Biology and Bioinformatics)	3
ME.260.708	Fundamentals of Genetics	2
ME.330.709	Organic Mechanisms in Biology (Organic Mechanisms in Biology - taken either year 1 or 2 at student's discretion)	2
PH.120.850	Biochemical Techniques (lab rotations)	6
PH.120.840	Special Studies and Research Biochemistry	2
PH.120.852	Core Research Literature	2
	Credits	**20**
Third Term		
ME.110.728	Cell Structure and Dynamics (Cell Structure and Dynamics)	3
ME.360.728	Pathways and Regulation (Pathways and Regulation)	2
PH.120.850	Biochemical Techniques (laboratory rotations)	6
PH.120.840	Special Studies and Research Biochemistry	2
PH.120.852	Core Research Literature	2
	Credits	**15**
Fourth Term		
PH.120.624	Cancer Biology	3
PH.120.850	Biochemical Techniques (laboratory rotations)	6
PH.120.840	Special Studies and Research Biochemistry	2
PH.120.852	Core Research Literature	2
	Credits	**13**
Second Year		
First Term		
PH.120.840	Special Studies and Research Biochemistry (variable credit)	1 - 22
PH.120.820	Thesis Research Biochemistry	1 - 22
PH.550.600	Living Science Ethics - Responsible Conduct of Research	1
	Credits	**1**

Second Term		
PH.120.840	Special Studies and Research Biochemistry (variable credit)	1 - 22
PH.120.820	Thesis Research Biochemistry (variable credit)	1 - 22
PH.550.865	Public Health Perspectives on Research	2
	Credits	**2**
Third Term		
PH.120.840	Special Studies and Research Biochemistry (variable credit)	1 - 22
PH.120.820	Thesis Research Biochemistry (variable credit)	1 - 22
	Credits	**0**
Fourth Term		
PH.120.840	Special Studies and Research Biochemistry (variable credit)	1 - 22
PH.120.820	Thesis Research Biochemistry (variable credit)	1 - 22
	Credits	**0**
	Total Credits	**68**

Notes:

- Courses designated ME are offered by the School of Medicine and those designated PH are offered by the Bloomberg School of Public Health.
- Special Studies and Research/BMB = Monday Departmental Seminar Series
- Current Research Literature 4th term = Thesis proposal writing workshop

Additional Requirements

- Three (3) credits of a course in Epidemiology (PH.340.618 Epidemiology: the Basics – offered in 4th term).
- Six (6) credits of course work outside BMB but within BSPH. **Note: PH.500 series courses do not count toward this requirement.**

Laboratory Rotations

During their first year, students spend approximately one-half of their time conducting bench research during four laboratory rotations. Each rotation lasts eight weeks. The purpose of these rotations is to familiarize the student with research activities performed by faculty members in the program and to allow the student to make an informed decision in choosing a thesis adviser. Each rotation will be assigned by the Program Director, Dr. Michael Matunis, with input from the student, as follows:

- For the first rotation, students will receive a list during the summer of laboratories available for rotations. After receiving this list, students will provide the Program Academic Manager, with the names of three labs for possible rotation assignment. Assignments will be made by the Program Director in consultation with the Program Steering Committee.
- For the second through fourth rotations, students are required to meet with available faculty and discuss possible rotations during the two weeks prior to the end of their current rotation. Following these discussions, students will provide the Academic Office, with the names of three labs for possible rotation assignment. This list must be submitted one week prior to the end of the current rotation. Rotation assignments will be determined by the Program Director in consultation with the Program Steering Committee.

Students are allowed to rotate only once in any given lab. Normally, the rotations will be distributed so there is only one rotation student per laboratory. This rule may be waived if there are unusual circumstances. To assist students in rotation choices, the department offers a one-credit course titled "Current Topics in BMB" held twice a week (12:00-1:00 PM) during the first term of the academic year, in which training faculty introduce students to their ongoing research.

Students will be given a specific research project at the beginning of each laboratory rotation. The student is expected to acquire the necessary background information to carry out the project through literature reviews and discussions with the faculty adviser and other lab members. In carrying out the project, the student can also expect hands-on assistance as required from the faculty heading the lab and their trainees.

At the end of each rotation, first year students present a report on their rotation project before the faculty and other interested parties. Each student will write a brief abstract which is to be submitted to the Academic Program Manager on the day before the rotation report. During the rotation report, students give an oral presentation lasting 10 minutes. A five-minute question period follows each oral presentation. Each student is also required to complete a rotation self-evaluation form at the end of each rotation (Appendix I). The completed form should be discussed in person with the faculty adviser who will provide their own assessment of the student's understanding of the project, effort, interest and technical abilities in carrying out the project. The faculty's assessment, including an overall evaluation of the rotation, will be documented on the final page of the form. **The signed form together with the updated "Milestones Tracker" form must be returned to, and briefly discussed with, the student's first year faculty adviser within one week of the end of each rotation.**

Satisfactory Academic Progress and Laboratory Rotation Performance

- Students must receive a grade of B or better in each of the eight core (ME) courses listed in Table 1 and in Cancer Biology. Accumulation of two or more C's or lower in these courses is grounds for dismissal from the program. If a student receives a C or lower grade in any of these nine courses, then the student must repeat the course and receive a B or better grade the second time.
- The School of Public Health requires Ph.D. candidates to achieve a final GPA of 3.0 or higher for graduation.
- Students must also receive satisfactory evaluations for each of the four laboratory rotations. Receiving two or more "poor" evaluations is grounds for dismissal from the program.
- Academic progress and laboratory rotation performances will be evaluated by the Program Steering Committee in early April, prior to the completion of the 4th rotation. Students who have met both academic and laboratory rotation standards will be notified and permitted to select a laboratory for thesis research. Students who have not met these standards may be dismissed from the program.

Selecting a Thesis Adviser

As a general policy, only one student may enter a given laboratory in any one year. Exceptions to this policy are made when circumstances warrant. Students are expected to meet with potential thesis lab advisers during the two weeks prior to the end of the fourth rotation and discuss the possibility of joining that lab for their thesis studies. Following these meetings, students will provide the Academic Program Manager, with the names of possible thesis advisers. Names must be submitted one week prior to the end of the fourth rotation. Students are required to meet and discuss thesis lab choices with the Program Director, Dr. Matunis, during the last week of the final rotation. Thesis lab placements will then be formalized between the student and adviser following this discussion. Every effort will be made to give students their first choice of thesis research lab.

Thesis Proposal/Oral Exam

Students must successfully pass one program examination (step 1, by October 15) and one oral practice examination (step 2, by November 15) before they are permitted to take the university Preliminary Oral Exam (step 3, by April 30) (see Table 2 (p. 191) for a summary of completion dates). The first of these steps, the program examination, is a two-part written/oral exam that must be based on the student's doctoral thesis project. Students are asked to write a six-page research proposal that follows the format of a NIH F31 fellowship. This proposal shall be written with close guidance from the thesis adviser during the summer/early fall of the second year. The completed proposal will be submitted by the first week of October of the second year to a committee consisting of the student's thesis adviser and two other JHU faculty members that may be within or outside of BMB. The student must present the research proposal and defend the rationale and experimental plan during an oral exam that must take place before October 15th of the second year. The committee will provide instructive feedback and recommended changes for a revised written proposal that the student submits by November 15th. Once the revised proposal is approved by the committee, the student has passed the departmental written and oral exam requirement. Full details of the examination process are provided in Appendix II (p. 192). Additionally, detailed instructions on how to develop and write the research proposal shall be disseminated as part of the Current Research Literature class taken in the 4th quarter.

Preparation for Preliminary Oral Exam

Students are required to successfully pass a university administered Preliminary Oral Exam (described below) to be officially accepted as candidates for the Ph.D. degree. In preparation for this exam, students are required to schedule an oral examination practice session within 4 months of completing their Thesis Proposal/ Oral exam (by March 31). This practice session should be held no later than 1 month prior to the Preliminary Oral Examination. The purpose of the practice session is to help assess exam readiness. The student will select a committee consisting of their Ph.D. thesis adviser and five peers. These five peers should be pre-doctoral students who have already taken and passed their oral exam, and/or postdoctoral students. No more than two of the peers can be from the student's own laboratory. Scientific diversity is highly encouraged. The role of the adviser is to ensure that the practice session emulates the official Preliminary Oral Examination mandated by the university, and to provide feedback and guidance to the student for the final stages of their preparation. A form (available from the BMB academic office) attesting that the practice session has taken place must be signed and dated by the members of the committee, including the student's adviser, and filed with the Academic Office. The student is allowed to finalize the faculty panel and schedule the Preliminary Oral Examination prior to the oral examination practice session. However, the practice session must be completed before the official examination.

Preliminary Oral Examination

The Preliminary Oral Examination is a university-administered examination that is designed to test the student's breadth and depth of knowledge in their area of study. Students must pass this examination to officially become candidates for the Ph.D. degree. The examining committee must:

1. consist of at least five voting members, no more than three of whom may be from the department sponsoring the candidate; **the student's thesis adviser will not be a member of the examining committee**;
2. be comprised of duly appointed faculty members of Johns Hopkins University departments and must hold, at the time of selection, an appointment at the rank of Assistant Professor, Assistant Research Professor or Assistant Public Health Professor or higher;
3. be comprised of three departments of Johns Hopkins University, two being from the Bloomberg School of Public Health; and
4. include a faculty member outside of BMB who has a rank of Associate or Full Professor, Research Professor or Public Health Professor; there must be at least one member who has neither a primary nor joint appointment in BMB.

The Chair of the committee is appointed by the Senior Associate Dean for Graduate Affairs. The senior faculty member outside of the student's department will normally serve as Chair and must hold the rank of Associate or Full Professor. One adjunct faculty member or Scientist track faculty member may serve on the Committee but may not serve as Chair. Once a Ph.D. candidate's Examination Committee has been approved by the Office of Academic Affairs, substitution of Committee members may not be made without prior approval of that office. Students are encouraged to select their committee members and two alternates in consultation with their thesis adviser. Forms must be completed at least one month prior to the exam and submitted to the office of Academic Affairs.

Students then meet with their committee to take the oral exam. During the oral examination, each faculty member of the committee is given an opportunity to ask questions designed to probe the student's understanding of the basic principles of biochemistry, molecular and cellular biology and ability to conduct hypothesis driven research. The examination has three possible outcomes: unconditional pass; conditional pass; or failure. In cases of conditional pass, students may be required to take additional coursework, or write an essay to remove the condition. If the student fails the Preliminary Oral Examination and is permitted a re-examination, the student must be re-examined within one year. **The Preliminary Oral Examination should be completed by April 30th of the second academic year.**

Thesis Advisory Committee

Upon successfully completing the Preliminary Oral Examination, a Thesis Advisory Committee is formed to monitor the student's progress on their thesis research. The committee consists of at least three faculty members (typically four) including the student's thesis adviser. Members of the committee may have primary appointments in BMB or in other departments of the university. Students are encouraged to select members of their committee in consultation with their thesis adviser. In addition to regularly scheduled meetings with their Thesis Advisory Committees, students are also encouraged to consult regularly with their committee members for advice, as necessary.

Students are required to meet with their Thesis Advisory Committees at least once each year, beginning from the time that they select a thesis lab in April. Thesis committee meetings will be conducted using the following format:

1. Students will designate one committee member as the chair – this should be the most senior BMB faculty member on the committee,

excluding the thesis adviser. If the thesis adviser is the only BMB faculty member on the committee, the chair should be the most senior faculty member from outside of the department.

2. The student "Annual Thesis Committee Meeting Form" (Appendix III) will be completed and mailed to all committee members at least one day in advance of the meeting.
3. The meeting begins with the student stepping out of the room, allowing for a private discussion between committee members.
4. The meeting proceeds with the student presenting research progress and any other relevant information related to meeting individual development plans and progress toward graduation.
5. Following completion of the student presentation, the committee chair will lead a discussion that summarizes the committee's views on student progress and recommendations for continued success and timely completion. Specific points in the committee's "Annual Thesis Committee Meeting Form" (Appendix IV) will also be discussed and the form will be completed by the chair and signed by all committee members before the end of the meeting. The student will retain a copy of the form and return a copy to the Program Academic Manager.
6. The meeting concludes with the thesis adviser stepping out the room, allowing for a private discussion between the student and all other committee members.

Individual Development Plans

After joining a thesis research laboratory, all pre-doctoral trainees and their preceptors are required to participate in an Individual Development Plan (IDP) process on an annual basis. The form being used for this purpose is provided in Appendix V. As part of this process, trainees and their mentor discuss the following elements during a confidential, face-to-face meeting set up specifically for the IDP purpose:

1. career goals;
2. assessment of relevant skills, ranging from proficiency at the lab bench to knowledge of the literature, oral presentation, writing, leadership, collegiality, etc., as they relate to these goals;
3. list the achievements of the last year;
4. set specific goals relating to productivity, training, and professional development for the upcoming year; and
5. discuss time to graduation and preparation for post-graduation professional life. Completed IDP forms are to be sent to the IDP Program Director, Dr. Valeria Culotta.

Thesis Preparation

Once a target date for completion of the thesis project has been set by the Thesis Advisory Committee, the student should begin preparing to write their thesis. The thesis must consist of novel and publishable research findings, and may contain material that has already been published by the student during the course of the thesis project.

The thesis will be evaluated by a Thesis Committee composed of four readers that include the student's thesis adviser. Two committee members must have a primary faculty appointment in a department other than BMB. The readers should have a rank of Assistant Professor or higher. A minimum of three departments of Johns Hopkins University, two from the School of Public Health, must be represented. Two readers must be primarily affiliated with BMB. At least one member must have neither a primary nor joint appointment in BMB. The committee may be increased to five members, provided that the above conditions are satisfied for four readers.

The committee and the required Final Oral Examination Form must be submitted to the BMB Academic Office at least one month prior to the date of the thesis defense. The thesis, accompanied by a letter from the student's adviser signifying that the thesis is ready for distribution to the committee, should be submitted to the Thesis Committee at least two weeks prior to the thesis defense.

Thesis Defense

The thesis defense consists of a seminar in which the student presents some or all of the findings of their thesis project. This seminar, which is sponsored by BMB, is open to the public. Immediately after the seminar, the student will meet privately with the Thesis Committee. The Committee will ask questions about the thesis and will inform the student if the thesis is satisfactory. Following any necessary revisions, the student will submit the final thesis to the School of Public Health Registrar. Thesis fees are the responsibility of the student, unless their mentor agrees to pay them.

Table 2. Summary of Program Milestones and Completion Dates

PhD Program Milestones	Completion Dates
Laboratory rotations (year one)	(Specific dates vary)
	1st: September/October
	2nd: November/December
	3rd: January/February
	4th: March/April
Thesis lab selection (year one)	April 15
Thesis proposal / oral exam (year two)	Oral defense: October 15
	Revised proposal: November 15
Departmental practice POE (year two)	Before March 31
University POE (year two)	Before April 30 (within one month of practice POE)
Thesis Advisory Committee Meetings (years three to completion)	Annual
Individual Development Plans (year two to completion)	Annual
Thesis defense	To be determined / Maximum of 7 years

Laboratory Notebooks

While different laboratories may use different kinds of physical (or online) notebooks, all share certain fundamentals. A proper laboratory notebook is an accurate, contemporaneous, permanent, and legible record of the student's deeds and thoughts regarding their research project. This notebook is the property of the laboratory and should not leave the laboratory, though students are free to make and take copies. The student's notebook will be consulted by others to establish what the student did, and to find out how they did it, often long after the student has gone. So, if a student has not developed good record-keeping habits, this is an excellent time to begin. Consult the faculty preceptors for guidance and please refer to the Bloomberg School of Public Health Student Handbook (publichealth.jhu.edu/offices-and-services/office-of-student-affairs) for Policy and Procedures on the subject of Academic Ethics.

Appendix II

Thesis Research Proposal / Oral Exam

In completion of the departmental written and oral exam requirements

All students that matriculated as of fall 2014 must prepare a research proposal that meets the requirements of the "Research Training Plan" section of an NIH F31 grant application. Specific guidelines for preparing this proposal, as detailed in the F31 grant application guide, are attached below. Other specifics and a timeline for completing the proposal and oral exam are as follows:

May – September, Year 1: Student works full-time in their chosen thesis lab to generate the preliminary data and ideas for developing a research proposal. The mentor must work closely with the student in defining the research project to pursue. The student and mentor choose a committee of two additional faculty that will act as additional consultants for the student, reviewers of the written proposal and serve as members of an oral examination committee. These faculty members may come from within the BMB department or from outside the department should they provide special expertise in the research area and in writing fellowships. Over the summer the student should schedule the oral exam component of the proposal that should occur within the first two weeks of October (see below).

September – October, Year 2: The student writes the first draft of the proposal. The mentor is expected to play an active role in proposal development and coaching the student to write in a clear, concise, study section-friendly manner. The adviser should not write the proposal but provide guidance and feedback through several drafts. Consultation with other committee members is also encouraged.

October 1st-15th, Year 2: The student submits their proposal to the committee at least one week in advance of the oral exam which must be scheduled no later than October 15th. For this oral exam, the student presents in a chalk talk format, the rationale and experimental sections of the research plan. The committee will test the student's ability to defend the proposed experiments – is the rationale sufficiently compelling to support the experiments proposed? The committee will also provide guidance as how to re-structure the proposal as needed and improve the research plan.

October 15th – November 15th, Year 2: The student prepares a revised version of the proposal that addresses concerns and incorporates suggestions by the committee. The adviser should work closely with the student in assembling this revised application. The revised application must be submitted to the committee no later than November 15th for review. Following approval of this revised application, and satisfactorily completing the oral exam component, the student has officially passed the departmental written and oral exam requirement.

Additional comments: This exercise is designed to help students prepare quality research proposals that can be submitted as fellowship applications for funding considerations. It is expected that a majority (but not all) students will choose to submit their proposals to the NIH and the exam requirement will be completed in time for the December 8th F31 deadline. Other students may choose alternative funding sources, but regardless, the exam requirements remain the same: A minimum 6-page research plan with separate Specific Aims page as outlined below. Students seeking non-NIH funding sources should be able to re-format the proposal as needed to meet the specific agency requirements.

The reviewing committee should be considered as a continual resource for the student. Prior to submitting the fellowship for funding considerations, the student is recommended to solicit feedback from their committee on all aspects of the fellowship application including pages that address selection of sponsor and institution, description of research experience, etc.

Appendix VI

Timeline Summary

Time	Description
May – September, yr 1	Define specific aims of the proposal, identify two committee members, generate preliminary data
September – October, yr 2	Prepare first written draft of the proposal
October 1st-15th, yr 2	Submit the proposal to examining committee, schedule and complete oral exam
October 15th – November 15th	Submit revised proposal for review by the committee

Guidelines for Preparing the Proposal (Verbiage Taken Directly from NIH Guidelines)

The Research Training Plan should include sufficient information needed for evaluation of the project, independent of any other document (e.g., previous application). Be specific and informative, and avoid redundancies. This section should be well-formulated and presented in sufficient detail that it can be evaluated for both its research training potential and scientific merit. It is important that it be developed in collaboration with your sponsor, but it should be written by you, the fellowship applicant.

The following page limits apply (All page limits include all tables, graphs, figures, diagrams and charts).

- Specific Aims – limited to one page.
- Research Strategy – limited to six pages (does **not** include the Bibliography and References Cited section).

Be succinct and remember that there is no requirement to use all six pages allotted to the Research Strategy. Note that the Research Training Plan may include graphic images of gels, micrographs, photographs, etc.; however these images may not be included in an Appendix.

Note: Begin each text section of the Research Training Plan with a section header (e.g., Specific Aims, Research Strategy).

Specific Aims are limited to one page.

State concisely the goals of the proposed research and summarize the expected outcome(s), including the impact that the results of the proposed research will exert on the research field(s) involved. List succinctly the specific objectives of the research proposed, e.g., to test a stated hypothesis, create a novel design, solve a specific problem, challenge an existing paradigm or clinical practice, address a critical barrier to progress in the field, or develop new technology.

Research Strategy is limited to six pages.

Organize the Research Strategy in the specified order using the instructions provided below. Start each section with the appropriate section heading — Significance, Innovation, Approach. Cite published experimental details in the Research Strategy section and provide the full reference in the Bibliography and References Cited section (there is not page limit to the Bibliography and References Cited section).

Significance

- Explain the importance of the problem or critical barrier to progress in the field that the proposed project addresses.
- Explain how the proposed project will improve scientific knowledge, technical capability, and/or clinical practice in one or more broad fields.
- Describe how the concepts, methods, technologies, treatments, services, or preventative interventions that drive this field will be changed if the proposed aims are achieved.

Innovation

Fellowship applications should not include an Innovation section unless specified in the FOA.

Approach

- Describe the overall strategy, methodology, and analyses to be used to accomplish the specific aims of the project. Unless addressed separately in Item 14 (Resource Sharing Plan), include how the data will be collected, analyzed, and interpreted as well as any resource sharing plans as appropriate.
- Discuss potential problems, alternative strategies, and benchmarks for success anticipated to achieve the aims.
- If the project is in the early stages of development, describe any strategy to establish feasibility, and address the management of any high risk aspects of the proposed work.
- Point out any procedures, situations, or materials that may be hazardous to personnel and precautions to be exercised. A full discussion on the use of select agents should appear in Item 15, below.
- If research on Human Embryonic Stem Cells (hESCs) is proposed but an approved cell line from the NIH hESC Registry cannot be identified, provide a strong justification for why an appropriate cell line cannot be chosen from the Registry at this time.

If an applicant has multiple Specific Aims, then the applicant may address Significance, Innovation and Approach for each Specific Aim individually, or may address Significance, Innovation and Approach for all of the Specific Aims collectively.

As applicable, also include the following information as part of the Research Strategy, keeping within the three sections listed above: Significance, Innovation, and Approach.

Preliminary Studies for New Applications.

For new applications, include information on preliminary studies, if any. Discuss the applicant's preliminary studies, data and/or experience pertinent to this application. When applicable, provide a succinct account of published and unpublished results, indicating progress toward their achievement.

Course Requirement Specific to the NCI-funded Training Grant

Cancer Training Grant: Training in Areas Fundamental to Cancer Research

- Fundamentals of Cancer (ME.510.706 Fundamentals of Cancer: Cause to Cure – 1st and 2nd terms)

See Program Academic Coordinator regarding course availability or alternatives

RESPONSIBLE CONDUCT OF RESEARCH

All research students must complete courses in the responsible conduct of research before graduation. Currently, the online course PH.550.860 Academic & Research Ethics at BSPH must be completed by all students during the first term of matriculation. Students must also take the course PH.550.600 Living Science Ethics - Responsible Conduct of Research, in the 1st term of their second year. Students should refer to the Bloomberg School of Public Health Student Handbook (publichealth.jhu.edu/offices-and-services/office-of-student-affairs (https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs/))for Policy and Procedures on the subject of Academic Ethics.

Satisfactory Academic Progress and Laboratory Rotation Performance

1) Students must receive a grade of B or better in each of the eight core (ME) courses listed in Table 1 and in Cancer Biology. Accumulation of two or more C's or lower in these courses is grounds for dismissal from the program. If a student receives a C or lower grade in any of these nine courses, they must repeat the course and receive a B or better grade the second time.

2) The School of Public Health requires Ph.D. candidates to achieve a final GPA of 3.0 or higher for graduation.

3) Students must also receive satisfactory evaluations for each of the four laboratory rotations. Receiving two or more "poor" evaluations is grounds for dismissal from the program. Academic progress and laboratory rotation performances will be evaluated by the Program Steering Committee in early April, prior to the completion of the 4th rotation. Students who have met both academic and laboratory rotation standards will be notified and permitted to select a laboratory for thesis research. Students who have not met these standards may be dismissed from the program.

The goals of the Department of Biochemistry and Molecular Biology (BMB) are to increase current knowledge of the biochemical and molecular basis of normal and abnormal cellular processes relevant to public health and medicine, and to train highly qualified scientists who, through research, teaching, and service will continue to provide new insights into the biochemical, molecular, and biophysical underpinnings of biomedical issues that have an impact on the health of the public.

Research activities in BMB span a broad range of topics including DNA replication and repair pathways (genome integrity), cellular stress responses, reproductive biology, stem cells, cell differentiation, aging, cancer, and chronic diseases. The department is also home to a structural biology technological platform with ongoing efforts focusing on cell signaling and genome engineering and integrity.

Non-Degree Training

The postdoctoral fellowship program provides concentrated training with individual faculty from the Department of Biochemistry and Molecular Biology. BMB offers Postdoctoral opportunities in research areas including cellular and molecular biology, biochemistry, molecular genetics, structural biology, developmental and reproductive biology, enzymology, molecular biophysics, molecular endocrinology, chemical biology, epigenetics, post-translational modifications, and inflammation and stress response biology.

Furthermore, BMB hosts a Postdoctoral Training Program in Cancer Research in collaboration with members of the Sidney Kimmel Comprehensive Cancer Center. This program provides training in basic biochemical, biophysical and molecular biological approaches that can be applied to critical problems in cancer biology. In addition to carrying out a traditional laboratory-based project, trainees will receive training and participate in activities that provide an introduction to current topics in the clinical aspects of the cancer problem and their relationships to public health. This is a two-year training program intended for individuals in the first two years of their post-graduate careers. Qualified applicants will select a laboratory in which to carry out their research project from among the preceptors of the training program. Trainees in this program will have the opportunity to audit courses specifically related to current trends in cancer research including "Fundamentals of Cancer-Cause to Cure", a course offered by the Sidney Kimmel Comprehensive Cancer Center.

In addition to their laboratory research and didactic training opportunities, trainees will also participate in the following learning activities:

Cancer Biology Seminar Series-seminars covering topics in cancer research will be presented by invited researchers throughout the academic year as part of the weekly BMB seminar series.

BMB Journal Club-this journal club meets weekly throughout the academic year to discuss basic research papers relevant to topics in cancer research.

Oncology Ground Rounds-trainees have the opportunity to attend four Oncology Grand Rounds each year in the Sidney Kimmel Comprehensive Cancer Center. These consist of case presentations followed by discussion of relevant research or clinical issues.

Cancer Center Fellow Research Day-trainees can attend this one-day meeting, which is sponsored by the Sidney Kimmel Comprehensive Cancer Center. This event provides an opportunity for trainees to present a poster about their research project.

Department of Biostatistics

About

Johns Hopkins Bloomberg School of Public Health's Department of Biostatistics (https://www.jhsph.edu/departments/biostatistics/) is the oldest department of its kind in the world and has long been considered as one of the best. With a rich history (https://www.jhsph.edu/departments/biostatistics/about-us/history/) of outstanding contributions in both research and education, we are dedicated to:

- advancing statistical and data science
- making discoveries to improve health by partnering with our colleagues in other science domains
- providing an innovative and outstanding biostatistics education for those seeking to be conversant with concepts as well as for users and experts in the application and development of new methodology

The discipline of biostatistics creates and applies methods for quantitative research in the health sciences. Our faculty conducts research across the spectrum of statistical science, from foundations of inference to the discovery of new methodology for health applications, leadership in data-driven health discovery, and creation of data science pipelines and tools. Our designs and analytic methods enable health scientists and professionals working in academia, government, industry, research and elsewhere to efficiently acquire knowledge and draw valid conclusions from their ever-expanding sources of information.

Our department offers an intellectually vibrant and interpersonally collegial environment that's conducive to learning and discovery.

Programs

Our department is committed to a safe and welcoming environment for all members of our community and, indeed, for everyone with whom we interact. Click here (https://www.jhsph.edu/departments/biostatistics/about-us/Department%20of%20Biostatistics%20Code%20of%20Conduct.pdf) to view our policy on harassment and discrimination.

Students and postdoctoral fellows in the Bloomberg School of Public Health are expected to abide by the highest levels of academic and research integrity (click here (p. 634) to view the Johns Hopkins Academic Ethics Code).

All students and postdoctoral fellows must complete an online module (https://www.jhsph.edu/offices-and-services/office-of-academic-affairs/academic-integrity/academic-ethics.html) to familiarize themselves with this code.

As stated in the Academic Ethics Code, "violations of academic integrity include, but are not limited to: cheating; plagiarism; knowingly furnishing false information to any agent of the University for inclusion in the academic record; violation of the rights and welfare of animal or human subjects in research; and misconduct as a member of either School or University committees or recognized groups or organizations."

For a Biostatistics student or postdoctoral fellow, abiding by the Academic Ethics code includes:

- Completing work on one's own when an individual assignment or examination is given in a course.
- Providing proper attribution to others' work by providing citations with quotations and giving proper references for all data analysis projects, research proposals and dissertations and theses.

Biostatistics, MHS

Overview

The Johns Hopkins Department of Biostatistics MHS program is intended for outstanding individuals with prior professional experience or a professional degree (ie, PhD or MD) seeking a one-year intensive course of study in biostatistical theory and methods. It is also open to students concurrently enrolled in a doctoral program at the Bloomberg School of Public Health. MHS graduates:

- Design research studies of human health and disease.
- Design and implement data management systems, pipelines and tools.

- Design and implement tabular and graphical displays of quantitative information.
- Draw inferences from quantitative data.
- Use statistical reasoning and theory to deal effectively with non-standard statistical problems.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

The MHS program involves one year of coursework (64 units) in biostatistics and other courses. Students are required to take a year-end comprehensive written examination. Students must demonstrate competence in material covered by the courses:

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Code	Title	Credits
PH.140.651	Methods in Biostatistics I	4
PH.140.652	Methods in Biostatistics II	4
PH.140.653	Methods in Biostatistics III	4
PH.140.654	Methods in Biostatistics IV	4
PH.140.646	Essentials of Probability and Statistical Inference I: Probability	4
PH.140.647	Essentials of Probability and Statistical Inference II: Statistical Inference	4
PH.140.648	Essentials of Probability and Statistical Inference III: Theory of Modern Statistical Methods	4
PH.140.649	Essentials of Probability and Statistical Inference IV	4
PH.340.721	Epidemiologic Inference in Public Health I	5
Total Credits		**37**

A culminating data analysis project, documenting the statistical ideas and skills developed in the coursework, is also required.

Concurrent School-Wide Master of Health Science Program in Biostatistics

The object of this program is to provide doctoral students in other departments with the opportunity to pursue an MHS program in Biostatistics concurrently with their doctoral program. The administrative requirements and certifications by the faculty as set forth in the existing Policy and Procedure Memoranda for the respective doctoral degrees apply to the doctoral degree requirements of the concurrent School-wide Doctoral/Master of Health Science program in Biostatistics.

Students must have been accepted into one of the doctoral programs at Johns Hopkins University. With the primary department's approval, the student may apply to the Master of Health Science program in Biostatistics. Students already in residence may also apply to the program. Specific details about sequencing of courses, etc., will be arranged in conjunction with the doctoral program involved. Core course requirements consist of successful (graded) completion of the 651 and 646 sequences; these classes should be taken over the course of the student's first two or three years in residence in the doctoral program. Three additional (graded) statistical electives are required (introductory statistics courses excluded; other quantitative courses may serve as substitutes upon approval of the graduate program). Sixty-four total credits of coursework in Biostatistics or other areas are required.

Additionally, students must attend Biostatistics departmental seminars (https://www.jhsph.edu/departments/biostatistics/about-us/news-and-seminars/seminars/), take a written comprehensive examination, and complete a culminating data analysis project. Upon satisfactory completion of these requirements, the student is then eligible for award of the Master of Health Science in Biostatistics degree.

Before they will be awarded the MHS degree, students whose primary department is NOT in the Bloomberg School of Public Health will also need to:

1. register and pay tuition for two credits of special studies research (PH.140.840 Special Studies and Research Biostatistics) as a School of Public Health student during a summer term;
2. complete a course on the responsible conduct of research (ie, PH.550.860 Academic & Research Ethics at BSPH or PH.306.665 Research Ethics and integrity: U.S. and International Issues); and
3. complete all of the following half-credit, online courses: 552.601 (Foundational Principles of Public Health); 552.603 (Role of Qualitative Methods and Science in Describing and Assessing a Population's Health); 552.607 (Essentials of Environmental Health); 552.608 (Biologic, Genetic and Infectious Bases of Human Disease); 552.609 (Psychological and Behavioral Factors That Affect a Population's Health); 552.610 (Social Determinants of Health); 552.611 (Globalization and Population Health); and 552.612 (Essentials of One Health).

There is a brief (one-page) application that interested students will need to fill out and have approved by their advisor and department chair. Prospective students should wait to apply until they have completed one term of either the 651 or 646 sequences, but they must apply before they have completed one-half of the required coursework.

For further information about the concurrent school-wide Master of Health Science Program in Biostatistics, or to request an application, please contact Mary Joy Argo (margo@jhsph.edu), academic administrator for the Department of Biostatistics.

The department may accept a few students who do not seek degrees (special students and postdoctoral fellows) for periods of at least one academic year. This provision is intended for mature students who wish to undertake specialized study or research.

The Department offers a weekly seminar (https://www.jhsph.edu/departments/biostatistics/about-us/news-and-seminars/seminars/) program featuring recent work by outstanding statistical scientists from around the world. Attendance is required for all graduate students. The seminar on the first Wednesday of each month is the "Biostatistics Grand Rounds," which features statistical analyses addressing important public health questions.

Sample Curriculum

The curriculum is essentially the same as that for ScM candidates, with the exception that MHS students do not write a thesis but instead, prepare a culminating data analysis project.

During their time in the program, MHS students may choose from a wide range of elective courses to meet their educational needs.

Code	Title	Credits
Students specifically interested in clinical trials may want to consider the courses:		
PH.140.642	Design of Clinical Experiments	3
PH.340.645	Introduction to Clinical Trials	3
Students specifically interested in learning the SAS statistical package may want to consider the course:		
PH.140.632	Introduction to the SAS Statistical Package	3

Click here to search for course schedules and descriptions (https://www.jhsph.edu/courses/).

Master's Student Academic Standing Guide

This document covers policies regarding academic performance of MHS students that are specific to the Department of Biostatistics. Students also must satisfy the academic standing requirements of the University and Bloomberg School of Public Health. Master's students are expected to maintain a grade point average of no less than 2.75 throughout their studies, to meet the minimum grade threshold of a C in required courses, and to complete academic requirements within established deadlines.

Departmental Master's Comprehensive Exam

The Departmental master's exam is taken at the end of the first year of study (typically in early June). The Departmental master's exam is administered only once a year.

The grading of the Departmental exam is as follows. Passing scores are determined by exam writers after grading with examiners blinded from student names. Students who pass all sections of the exam pass the exam. Students failing one or more sections will be discussed by the faculty as a whole. This discussion will include exam and course performance in the first year. Possible resolutions include: declaring the student as passing the exam, declaring the student as having failed the exam, take-home remediation of sections of the exam or a full retake (only available if it is the student's first attempt at the exam).

In the event of a retake of the exam, students are allowed one retake. Student retakes typically occur in the following year, with exceptions occurring when mitigating circumstances are present, such as a leave of absence. In the event of a failure in the retake, the student will be asked to leave the MHS program.

Relevant to stand-alone MHS degree candidates: Students who fail the exam are not eligible to receive the 75% tuition reduction for their second year of study. Failing the exam typically results in at least one extra academic year without the tuition reduction.

Often students who will not receive the 75% tuition reduction in their second year consider switching to part time status. Such a switch must be discussed and approved with the graduate committee. Further, it should be noted that part-time status is often not an option for foreign students due to visa issues and residency requirements.

Upon successful completion of the Master of Health Science in Biostatistics, students will have mastered the following competencies:

- Design research studies of human health and disease.
- Design and implement data management systems, pipelines and tools.
- Design and implement tabular and graphical displays of quantitative information.
- Draw inferences from quantitative data.
- Use statistical reasoning and theory to deal effectively with non-standard statistical problems.

Biostatistics, ScM

The Johns Hopkins Department of Biostatistics ScM program is intended for individuals who have demonstrated excellence at the undergraduate level in quantitative or biological sciences and prepares them for a career as a professional statistician. Typically, ScM graduates assume positions in research or professional settings as scientific project coordinators and data analysts where they:

- Design research studies of human health and disease.
- Design and implement data management systems, pipelines and tools.
- Design and implement tabular and graphical displays of quantitative information.
- Draw inferences from quantitative data.
- Use statistical reasoning and theory to deal effectively with non-standard statistical problems.
- Perform major statistical analyses to address public health or statistical research questions.
- Assist statistical researchers in the conduct of original, methodologic research.

More detailed information is available below, in the Department of Biostatistics Student Handbook, and in the School's Policies and Procedures Memorandum for the ScM degree.

Program Overview

The ScM program typically takes two years, with the first year spent in didactic coursework and the second year spent working closely with a departmental faculty member in a master's thesis project and completing elective courses that are in-line with the individual student's interests.

Program Requirements

Student Evaluations

The Department is committed to providing every opportunity for its ScM students to successfully complete this academic program. To support students in progressing toward the degree, a comprehensive written examination is given at the end of the first year.

Seminars

The Department offers a weekly seminar program (https://www.jhsph.edu/departments/biostatistics/about-us/news-and-seminars/seminars/) featuring recent work by outstanding statistical scientists from around the world. Attendance is required for all graduate students. One seminar per month may be designated to be part of the Biostatistics "Grand Rounds" series, which features statistical analyses addressing important public health questions.

In addition, first year graduate students are required to complete the Current Topics in Biostatistics Research course, where faculty, postdocs and senior students from the Department present their research, with a focus on the public health and scientific questions driving the work, why the research makes a difference for the subject area and how to translate the research into practice.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Recommended Curriculum

The second year curriculum is considerably less course-intensive than the first, as thesis development becomes a priority during this year. However, we encourage students to avail themselves of the array of biostatistical electives that are available[8] and to be mindful of completing the School's extra-departmental course requirements and new requirements for students who **have not** already taken 3 credits of Epidemiology coursework and PH.550.865 Public Health Perspectives on Research[9].

Course	Title	Credits
First Year		
August		
PH.260.600	Introduction to the Biomedical Sciences [1]	4
	Credits	**4**
First Term		
PH.140.651	Methods in Biostatistics I [2]	4
PH.140.646	Essentials of Probability and Statistical Inference I: Probability [2]	4

PH.140.820	Thesis Research Biostatistics (credits as needed in order to get to at least 16 credits tota)	
PH.140.840	Special Studies and Research Biostatistics (credits as needed in order to get to at least 16 credits tota)	
	Credits	**10-31**
Third Term		
Electives [8]		
Epidemiology Courses (at least 3 credits), if applicable [9]		3
"Cells to Society" modules, if applicable [9]		
Select one or both of the following:		1-22
PH.140.820	Thesis Research Biostatistics (credits as needed in order to get to at least 16 credits total)	

PH.140.840	Special Studies and Research Biostatistics (credits as needed in order to get to at least 16 credits total)	
	Credits	**4-25**
Fourth Term		
Electives [8]		
Epidemiology Courses (at least 3 credits), if applicable [9]		3
"Cells to Society" modules, if applicable [9]		
Select one or both of the following:		1-22
PH.140.820	Thesis Research Biostatistics (credits as needed in order to get to at least 16 credits total)	
PH.140.840	Special Studies and Research Biostatistics (credits as needed in order to get to at least 16 credits total)	
	Credits	**4-25**
	Total Credits	**88-256**

1. The credits of this course count toward the first term.
2. The sequences *Methods in Biostatistics I – IV* (140.651-654) and *Essentials of Probability and Statistical Inference I – IV* (140.646- 649) are required course sequences for the 1st year. Per school policy, for students to remain in satisfactory academic standing students must meet the minimum grade threshold of a C in required courses.
3. Only recommended for those with some prior programming experience with a language such as C/C++, perl, java, python etc. Please consult the course instructor.
4. Although this course is offered in subsequent terms, incoming students are required to take this during their first term and will not be able to register for 2nd term until they have done so.
5. Students who have earned an MPH from a domestic university within the last 10 years may waive this requirement.
6. The courses Advanced Data Science (140.711-712) and PH.140.643 Practice of Statistical Consulting are required course sequences for the 2nd year. Per school policy, for students to remain in satisfactory academic standing students must meet the minimum grade threshold of a C in required courses.
7. Although this course is offered in subsequent terms, continuing students who have not previously taken the course are required to take this during 1st term of 2019-20 and will not be able to register for 2nd term until they have done so.
8. Note that PH.140.641 Survival Analysis and PH.140.741 Advanced Survival Analysis will be taught in terms 1 and 2, PH.140.630 Introduction to Data Management in term 2, PH.140.631 The SAS Statistical Package: A Survey for Statisticians in term 3, PH.140.642 Design of Clinical Experiments in term 3, and PH.340.694 Power and Sample Size for the Design of Epidemiological Studies I in term 3. Please consult the SPH course search engine (http://www.jhsph.edu/courses (http://www.jhsph.edu/courses/)) to identify additional Biostatistics electives that are available.
9. Students who **have not** already taken 3 credits of Epidemiology coursework and PH.550.865 Public Health Perspectives on Research must complete at least 3 credits of Epidemiology coursework, the online module PH.552.608 Biologic, Genetic and Infectious Bases of Human Disease, and any 3 of the following “Cells to Society” online modules (PH.552.601 Foundational Principles of Public Health, PH.552.603 The Role of Qualitative Methods and Science in Describing and Assessing a Population’s Health, PH.552.607 Essentials of Environmental Health, PH.552.609 Psychological and Behavioral Factors That Affect A Population’s Health, PH.552.610 The Social Determinants of Health, PH.552.611 Globalization and Population Health, PH.552.612 Essentials of One Health).

Additional Notes and Requirements

First Year

- Students must enroll in a minimum of 16 credits per term. The 16 credits can be reached by enrolling for special studies credit (PH.140.840 Special Studies and Research Biostatistics). These special studies must have a clearly defined objective.
- By the end of the first year, students **must** have earned 12 credits in non-Biostatistics courses (of which 6 credits must come from SPH courses). Special studies (800-level) courses in another department do **not** count toward this requirement. The courses Responsible Conduct of Research, Academic and Research Ethics at JHSPH, and Public Health Perspectives on Research do **not** count toward this requirement. Public Health extradepartmental courses (beginning with a “550” course number) do **not** count toward this requirement. Credits earned from the Introduction to Biomedical Sciences course **do** count.
- All students must attend the departmental seminar series.
- There will be a qualifying exam (multi-hour in-class exam followed by a 3-day take-home data analysis project) during the first half of June of the 1st year.
- Please consult our Master’s Student Academic Standing Guide (http://www.biostat.jhsph.edu/academics/program/ScM_MHS_academic_expectations.pdf) for more detailed information about academic requirements and expectations.

Second Year

- Students must enroll for a minimum of 16 credits per term. The 16 credits can be reached by enrolling for special studies credit. These special studies must have a clearly defined objective.
- Students should immediately start the process of identifying a thesis topic/adviser.
- In order for ScM students to graduate from the Bloomberg School of Public Health: Students **must** have earned 12 credits in non-Biostatistics courses (of which 6 credits must come from SPH courses). Special studies (800-level) courses in another department do **not** count toward this requirement. The courses PH.550.860 Academic & Research Ethics at BSPH and PH.552.602 The Role of Quantitative Methods in Public Health do **not** count toward this requirement.
- Please consult our Master’s Student Academic Standing Guide for more detailed information about academic
- requirements and expectations.
- Click here (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/MastersCandidateInformation/Documents/DueDatesScM%20MBe%20and%202022_23.pdf) for a timetable for completion of ScM requirements during the 2022-23 academic year.

Electives

During their time in the program, ScM students may choose from a wide range of elective courses to meet their educational needs.

Code	Title	Credits
Students specifically interested in clinical trials may want to consider the courses:		
PH.140.642	Design of Clinical Experiments	3
PH.340.645	Introduction to Clinical Trials	3

Students specifically interested in learning the SAS statistical package may want to consider the course:		
PH.140.632	Introduction to the SAS Statistical Package	3

Click here to search for course times and descriptions (https://www.jhsph.edu/courses/).

Master's Student Academic Standing Guide

This document covers policies regarding academic performance of master's students that are specific to the Department of Biostatistics. Students also must satisfy the academic standing requirements of the University and Bloomberg School of Public Health. Master's students are expected to maintain a grade point average of no less than 2.75 throughout their studies, to meet the minimum grade threshold of a C in required courses, and to complete academic requirements within established deadlines.

Departmental Master's Comprehensive Exam

The Departmental master's exam is taken at the end of the first year of study (typically the third Monday following the end of the 4th term). The Departmental master's exam is administered only once a year.

The grading of the Departmental exam is as follows. Passing scores are determined by exam writers after grading with examiners blinded from student names. Students who pass all sections of the exam pass the exam. Students failing one or more sections will be discussed by the faculty as a whole. This discussion will include exam and course performance in the first year. Possible resolutions include: declaring the student as passing the exam, declaring the student as having failed the exam, take-home remediation of sections of the exam or a full retake (only available if it is the student's first attempt at the exam).

In the event of a retake of the exam, students are allowed one retake. Student retakes typically occur in the following year, with exceptions occurring when mitigating circumstances are present, such as a leave of absence. In the event of a failure in the retake, the student will be asked to leave their master's program or switch to another program (for example from ScM to MHS).

Students who fail the exam are not eligible to receive the 75% tuition reduction for their second year of study. Failing the exam typically results in at least one extra academic year without the tuition reduction.

Often students who will not receive the 75% tuition reduction in their second year consider switching to part time status. Such a switch must be discussed and approved with the graduate committee. Further, it should be noted that part-time status is often not an option for foreign students due to visa issues and residency requirements.

Upon successful completion of the Master of Science in Biostatistics, students will have mastered the following competencies:

- Design research studies of human health and disease.
- Design and implement data management systems, pipelines and tools.
- Design and implement tabular and graphical displays of quantitative information.
- Draw inferences from quantitative data.
- Use statistical reasoning and theory to deal effectively with non-standard statistical problems.
- Perform major statistical analyses to address public health or statistical research questions.
- Assist statistical researchers in the conduct of original, methodologic research.

Biostatistics, PhD

Program Overview

The PhD program of the Johns Hopkins Department of Biostatistics provides training in biostatistical methodology and practice, grounded both in the theory of probability and statistics and in advanced data science. The program is unique in its broad emphasis spanning the foundations of statistical reasoning through data science and in providing rigorous training in both real analysis-based probability and statistics, equivalent to what is provided in most departments of mathematical statistics, and in data science principles and practice.

The Department of Biostatistics PhD program prepares persons who have demonstrated excellence in mathematics, engineering, and the natural or social sciences to become research biostatisticians in academia, industry, or government. PhD graduates:

- Conduct and publish original research on the theory, methodology and practice of biostatistics and data science;
- Translate methodological advances into software and other tools by which to disseminate these into practice;
- Apply innovative theory and methods to the solution of public health problems;
- Serve as expert biostatisticians and data scientists on collaborative teams of investigators addressing key public health questions;
- Teach biostatistics and data science effectively to health professionals and scientists as well as to graduate students in biostatistics.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

The core curriculum consists of the following components:

Code	Title	Credits
A one-year sequence on biostatistical methodology		
PH.140.751	Advanced Methods in Biostatistics I	3
PH.140.752	Advanced Methods in Biostatistics II	4
PH.140.753	Advanced Methods in Biostatistics III	4
PH.140.754	Advanced Methods in Biostatistics IV	4
A one-year sequence on probability		
EN.553.720	Probability Theory I	4
PH.140.723	Probability Theory III	3
PH.140.724	Probability Theory IV	3
A one-year sequence on foundations and theory of statistical science		
PH.140.731	Statistical Theory I	4
PH.140.732	Statistical Theory II	4
PH.140.733	Statistical Theory III	4
PH.140.734	Statistical Theory IV	4

A two-term sequence on advanced data science		
PH.140.711	Advanced Data Science I	3
PH.140.712	Advanced Data Science II	3
PH.340.721	Epidemiologic Inference in Public Health I	5

Student Evaluations

The Department is committed to providing every opportunity for its students to successfully complete the academic program of their choice. To support students in progressing toward the degree and to further their educational experience, the Department offers a comprehensive written examination at the end of the first year and a practice oral exam, usually taken no later than six months after the end of the fourth term of the second year. See the Department of Biostatistics Student Handbook for more details about the first-year PhD comprehensive exam.

The main purpose of the practice examination is to evaluate students' ability to communicate statistical ideas and concepts. Students should prepare a paper/proposal related to their potential thesis topic. In addition, the University requires students to successfully complete a preliminary oral examination, typically taken at the beginning of the third year where a thesis proposal is presented and discussed, and an oral thesis defense, where the completed thesis is defended in a public forum.

Research and Teaching Assistantships

The Department of Biostatistics offers teaching and research assistantships to its PhD students on a competitive basis. All PhD applicants (US and international) are ranked based upon their merits; top candidates are offered assistantships which last five years and include full tuition, health insurance, and a living stipend starting at a minimum of $27,000 per year over the five years of study. Students in their second year and following are required to apprentice with faculty as research and teaching assistants for up to 19 hours per week: Students find the teaching and research assistantships to be the most valuable part of their PhD experience. At AY22-23 rates, students who engage in 40 hour per week research assistantships during non-academic periods earn a stipend of approximately $40,000 per year.

Seminars

The Department offers a weekly seminar program (https://www.jhsph.edu/departments/biostatistics/about-us/news-and-seminars/seminars/) featuring recent work by outstanding statistical scientists from around the world. Attendance is required for all graduate students. One seminar per month may be designated to be part of the Biostatistics "Grand Rounds" series, which features statistical analyses addressing important public health questions.

In addition, first year graduate students are required to complete the Current Topics in Biostatistics Research course (140.860 (https://www.jhsph.edu/courses/course/34636/2022/140.860.01/current-topics-in-biostatistics-research/)), where faculty, postdoctoral fellows, and senior students from the Department present their research, with a focus on the public health and scientific questions driving the work, why the research makes a difference for the subject area and how to translate the research into practice.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Recommended Curriculum

First Year PhD Students

Some students, based on a placement assessment and in consultation with their adviser and graduate program committee, may opt to take the first year of the ScM curriculum and defer the PhD curriculum until their second year. Students who opt for this route typically also are required to successfully complete the ScM qualifying exam.

Second Year PhD Students

Students joining the PhD program on and after August 1, 2018, are required to take a minimum of 16 credits of advanced elective courses in Biostatistics or other related disciplines (e.g. computer science). Students joining the PhD program on or before July 31, 2018, are **not** required but are encouraged to take 16 credits in advanced elective courses. Please consult our List of Elective Courses for PhD Students for recommended elective courses.

Curriculum

Course	Title	Credits
First Year		
August		
PH.260.600	Introduction to the Biomedical Sciences [1]	4
	Credits	**4**
First Term		
PH.140.751	Advanced Methods in Biostatistics I [2]	3
EN.553.720	Probability Theory I [2]	4
PH.140.731	Statistical Theory I [2]	4
PH.140.776	Statistical Computing	3
PH.550.860	Academic & Research Ethics at BSPH [3]	0
PH.140.840	Special Studies and Research Biostatistics (Credits as needed in order to get to al least 16 credits total)	1 - 22
PH.140.860	Current Topics in Biostatistics Research	1
	Credits	**16-37**
Second Term		
PH.140.752	Advanced Methods in Biostatistics II [2]	4
EN.553.720	Probability Theory I [2]	4
PH.140.732	Statistical Theory II [2]	4
Electives		
PH.140.840	Special Studies and Research Biostatistics (Credits as needed in order to get to al least 16 credits total)	1 - 22
PH.140.860	Current Topics in Biostatistics Research	1
	Credits	**14-35**
Third Term		
PH.140.753	Advanced Methods in Biostatistics III [2]	4
PH.140.723	Probability Theory III [2]	3
PH.140.733	Statistical Theory III [2]	4
Electives		
PH.140.840	Special Studies and Research Biostatistics (Credits as needed in order to get to al least 16 credits total)	1 - 22
PH.140.860	Current Topics in Biostatistics Research	1
	Credits	**13-34**

Fourth Term		
PH.140.754	Advanced Methods in Biostatistics IV [2]	4
PH.140.724	Probability Theory IV [2]	3
PH.140.734	Statistical Theory IV [2]	4
Electives		
PH.140.840	Special Studies and Research Biostatistics (Credits as needed in order to get to al least 16 credits total)	1 - 22
PH.140.860	Current Topics in Biostatistics Research	1
	Credits	**13-34**
Second Year		
First Term		
PH.140.711	Advanced Data Science I [4]	3
PH.140.776	Statistical Computing (if not taken the first year)	3
PH.340.721	Epidemiologic Inference in Public Health I (if not taken the first year)	5
PH.550.600	Living Science Ethics - Responsible Conduct of Research [5]	2
"Cell to Society" modules, if applicable [6]		
PH.550.860	Academic & Research Ethics at BSPH (if not taken in a previous term) [7]	0
Electives		
PH.140.840	Special Studies and Research Biostatistics (credits as needed in order to get to at least 16 credits total)	1 - 22
	Credits	**14-35**
Second Term		
PH.140.712	Advanced Data Science II [4]	3
"Cell to Society" modules, if applicable		6
Electives		
PH.140.840	Special Studies and Research Biostatistics (credits as needed in order to get to least 16 credits total)	1 - 22
	Credits	**10-31**
Third Term		
Electives		
"Cell to Society" modules, if applicable [6]		
Select one or both of the following:		1-22
PH.140.820	Thesis Research Biostatistics (credits as needed in order to get to at least 16 credits total)	
PH.140.840	Special Studies and Research Biostatistics (credits as needed in order to get to at least 16 credits total)	
	Credits	**1-22**
Fourth Term		
Electives		
"Cells to Society" modules, if applicable [6]		
Select one or both of the following:		1-22
PH.140.820	Thesis Research Biostatistics (credits as needed in order to get to at least 16 credits total)	
PH.140.840	Special Studies and Research Biostatistics (credits as needed in order to get to at least 16 credits total)	
	Credits	**1-22**
Third Year		
Coursework in scientific/statistical electives/special studies for a minimum of 16 credits per term		64
	Credits	**64**
Fourth Year		
Coursework in scientific/statistical electives/special studies for a minimum of 16 credits per term		64
	Credits	**64**
	Total Credits	**214-382**

1 The credits of this course count toward the first term.

2 The sequences *Advanced Methods in Biostatistics I – IV* (140.751-754), *Probability Theory I-IV* (553.720-140.723-724), and *Statistical Theory I-IV* (140.731-734) are required course sequences for the 1st year. Per school policy, for students to remain in satisfactory academic standing students must meet the minimum grade threshold of a B in required courses.

3 Although this course is offered in subsequent terms, incoming students are required to take this during their first term and will not be able to register for 2nd term until they have done so.

4 The courses *Advanced Data Science I-II* (140.711-712) are required course sequences for the 2nd year. Per school policy, for students to remain in satisfactory academic standing students must meet the minimum grade threshold of a B in required courses.

5 Students may take the 3rd term course PH.306.665 Research Ethics and integrity: U.S. and International Issues in lieu of PH.550.600 Living Science Ethics - Responsible Conduct of Research.

6 Students who **have not** already taken 3 credits of Epidemiology coursework and PH.550.865 Public Health Perspectives on Research must complete at least 3 credits of Epidemiology coursework, the online module PH.552.608 Biologic, Genetic and Infectious Bases of Human Disease, and any 3 of the following “Cells to Society” online modules (PH.552.601 Foundational Principles of Public Health, PH.552.603 The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health, PH.552.607 Essentials of Environmental Health, PH.552.609 Psychological and Behavioral Factors That Affect A Population's Health, PH.552.610 The Social Determinants of Health, PH.552.611 Globalization and Population Health, PH.552.612 Essentials of One Health).

7 Although this course is offered in subsequent terms, continuing students who have not previously taken the course are required to take this during 1st term of 2021-22 and will not be able to register for 2nd term until they have done so.

Additional Notes

First Year

- Students must enroll in a minimum of 16 credits per term. The 16 credits can be reached by enrolling for special studies credit PH.140.840 Special Studies and Research Biostatistics. These special studies must have a clearly defined objective.
- It is strongly recommended that by the end of the first year, students should have earned 12 credits in non-Biostatistics courses (of which 6 credits must come from SPH courses). Special studies (800-level) courses in another department do **not** count toward this requirement. The courses Responsible Conduct of Research, Academic and

Research Ethics at JHSPH, and Public Health Perspectives on Research do **not** count toward this requirement. Public Health extradepartmental courses (beginning with a “550” course number) do **not** count toward this requirement. Credits earned from the Introduction to Biomedical Sciences course **do** count.
- By no later than the end of the fall term in the fourth year in-program, and in advance of scheduling the final oral exam (i.e. thesis defense), students **must** have earned a minimum of 16 credits from advanced elective courses in Biostatistics or other related disciplines (e.g. computer science). The course sequences *Advanced Methods in Biostatistics I – IV* (140.751-754), *Probability Theory I-IV* (553.720-140.723-724), *Statistical Theory I-IV* (140.731-734), and *Advanced Data Science I-II* (140.711-712) do **not** count toward this requirement. Please consult our List of Elective Courses for PhD Students for recognized elective courses. Students may take courses not included in this list, but they **must** first consult and obtain approval from both their adviser and the graduate program committee.
- All students are expected to obtain training in the statistics/science interface (see attached).
- All students must attend the weekly Biostatistics seminar series.
- There will be a qualifying exam (multiple-hour in-class exam) within the first two weeks of June at the end of the 1st year.
- Please consult our Doctoral Student Academic Standing Guide for more detailed information about academic requirements and expectations.

Second Year

- In order for PhD students to graduate from the Bloomberg School of Public Health: At least 18 credit units of formal coursework are required in courses outside the student’s primary department. At least nine of these credits must be taken in the School of Public Health. Students must also satisfactorily complete the courses PH.550.860 Academic & Research Ethics at BSPH and PH.550.600 Living Science Ethics - Responsible Conduct of Research.
- Students must enroll for a minimum of 16 credits per term. The 16 credits can be reached by enrolling for special studies credit. These special studies must have a clearly defined objective.
- All students are expected to obtain training in the statistics/science interface (see Expectations of Doctoral Students Regarding Training at the Statistics-Science Interface).
- Students are required to attend departmental seminars and participate in a working group.
- During the course of the second year, students should start the process of identifying a thesis topic/adviser with the expectation that they start the thesis work at the beginning of their third year.
- In order to take the preliminary schoolwide oral exam (usually to be held no later than end of December of the 3rd year), students should prepare a paper/proposal related to their potential thesis topic.
- When selecting a preliminary oral exam committee, note that at least two members are expected to be non-statistical scientists and the chair must approve the committee.
- Please consult our Doctoral Student Academic Standing Guide for more detailed information about academic requirements and expectations.

Other Notes

In order for PhD students to graduate from the Bloomberg School of Public Health: At least 18 credit units of formal coursework are required in courses outside the student’s primary department. At least nine of these credits must be taken in the School of Public Health. Additionally, PhD candidates will successfully complete the courses PH.550.600 Living Science Ethics - Responsible Conduct of Research, PH.550.860 Academic & Research Ethics at BSPH, and PH.550.865 Public Health Perspectives on Research. A waiver to the requirement for Public Health Perspectives is given automatically if a student earned an MPH from a U.S. institution within the last ten years.

For PhD students matriculating in 2018-19 and later: By no later than the end of the fall term of Year 4, and in advance of scheduling the thesis defense, students **must** have earned a minimum of 16 credits from advanced elective courses in Biostatistics or other related disciplines (e.g. Computer Science). The course sequences Advanced Methods in Biostatistics I – IV (140.751-754), Probability Theory I-IV (553.720-140.723-724), Statistical Theory I-IV (140.731-734), and Advanced Data Science I-II (140.711-712) do **not** count toward this requirement. Please consult our List of Elective Courses for PhD Students (https://www.biostat.jhsph.edu/research/publication/handbook/PhD/Elective_Courses_PhD.pdf) for recognized courses. Students may take courses not included in this list, but they **must** first consult with and obtain approval from both their adviser and the graduate program committee. Elective courses **must** be taken for either a letter grade or pass/fail.

Doctoral Student Academic Standing Guide

This document covers policies regarding academic performance of doctoral students that are specific to the Department of Biostatistics. Students also must satisfy the academic standing requirements of the Johns Hopkins University and Bloomberg School of Public Health.

Academic Standing and Exams

Doctoral students are expected to stay in good academic standing throughout their PhD studies.

Students are expected to maintain grades of B or higher in core classes. Any core class with a grade lower than a B will need to be retaken.

First year students maintaining B grades in core classes can sit for the first year Departmental exam. Students with any grades lower than a B in core classes must receive approval from the graduate committee to sit for the exams. In the event that students are denied, possible resolutions include postponing the exam for one year, switching to a master’s program or being required to leave the doctoral program based on a consideration by the faculty of overall academic performance.

In the event of a failure of the exam, students are allowed one retake. Student retakes typically occur in the following year, with exceptions occurring when mitigating circumstances are present, such as a leave of absence. In the event of a failure in the retake, the student will be asked to leave the doctoral program, typically with the option to join the master’s program. The exams, either a first take or retake, are only given once per year at the start of the summer break (typically in early June).

The grading of the Departmental exam is as follows. Passing scores are determined by exam writers after grading with examiners blinded from student names. Students who pass all sections of the exam pass the exam. Students failing one or more sections will be discussed by the faculty as a whole. This discussion will include exam and course performance. Possible resolutions include: declaring the student as passing the exam, declaring the student as having failed the exam, take-home remediation of sections of the exam or a full retake (only available if it is the student's first attempt at the exam).

To maintain good academic standing students must complete their school-wide preliminary oral exam by the end of their third academic year, before the start of the first term of their fourth year (typically late August or early September depending on that year's academic calendar).

Full funding for tuition and stipend is provided to PhD students for five years. Students are expected to finish their doctoral programs within this time. Students who do not finish within five years may continue in the program for up to two additional years. In these cases a 75% departmental tuition scholarship is provided, but students are responsible for the remaining tuition, their own health insurance, and living expenses. Personal office space cannot be guaranteed for students beyond the five-year point. Common areas (Biostatistics Library, Genome Cafe) remain available for use by these students.

Program Changes from PhD to ScM or MHS

In the event that a doctoral student switches to the ScM or MHS programs the following should be noted.

Funded doctoral students forfeit their funding in the event of a program switch.

Students have the option of switching to part time status after switching programs. However, visa residency requirements of maintaining full-time student status typically prevent foreign students from being able to switch to part time.

MHS and ScM students receive a 75% tuition reduction in their second year provided that they have taken 12 credits of courses outside of the Department (of which at least 6 credit hours must come from the School of Public Health courses) and have passed their Departmental exams. Doctoral students considering a program switch should appropriately plan their first year coursework to ensure eligibility for the tuition reduction in their second year. The 75% tuition remission is contingent on passing the first year exams at the master's level. PhD students who take the doctoral exam and then elect, or are asked to switch to, a master's program will be informed whether their performance on the doctoral exam constitutes a pass at the master's level. Students who are deemed to have not passed at the master's level, will be asked to take the master's Departmental exam in the subsequent year to fulfill the requirements of the master's program and will not be eligible for the tuition reduction until the exam requirements have been met. Students will be allowed this one administration of the master's exam in these circumstances.

Upon successful completion of the Doctor of Philosophy in Biostatistics, students will have mastered the following competencies:

- Conduct and publish original research on the theory, methodology and practice of biostatistics and data science;
- Translate methodological advances into software and other tools by which to disseminate these into practice;
- Apply innovative theory and methods to the solution of public health problems;
- Serve as expert biostatisticians on collaborative teams of investigators addressing key public health questions;
- Teach biostatistics effectively to health professionals and scientists as well as to graduate students in biostatistics.

Department of Environmental Health and Engineering

About

The Department of Environmental Health and Engineering (https://ehe.jhu.edu/) (EHE) is a collaborative hybrid uniquely designed to lead pioneering research and fuel technology translation as it prepares the next generation of scholars to solve critical and complex issues at the interface of public health and engineering.

EHE's mission is to improve the health of the Earth and its inhabitants. EHE's academic and research activities span the science of biological processes, environmental engineering, environmental and health policy, and data analytics. With its accomplished faculty and visionary students, EHE is poised to use its broad and deep expertise to propel discovery and innovation, as well as to inspire and educate scholars of the 21st century and beyond.

Our broad, multidisciplinary approach creates a collaborative and supportive learning atmosphere for students with diverse backgrounds and interests, while assisting them in developing lifetime careers in environmental and public health research and practice. Our graduates work in academic research institutions, health agencies, health departments, and private industry organizations that are leaders in environmental and occupational health in the U.S. and in many countries around the world.

These areas offer students many opportunities for course selection, research, and training in a setting that enables students to pursue a wide range of environmental health science interests. Our relationships with the Johns Hopkins School of Medicine (https://www.hopkinsmedicine.org/som/), the Whiting School of Engineering (https://engineering.jhu.edu/), and the School of Nursing (https://nursing.jhu.edu/) ensure that our research can be rapidly translated into prevention strategies. In addition, our Department houses a number of centers including the Johns Hopkins Water Institute (https://water.jhu.edu/), Education and Research Center for Occupational Safety and Health (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-education-and-research-center-for-occupational-safety-and-health/), Center for a Livable Future (CLF) (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-center-for-a-livable-future/), the Center for Alternatives to Animal Testing (CAAT) (https://caat.jhsph.edu/), the Center for Health Security (https://www.centerforhealthsecurity.org/), and the Center for Public Health Preparedness (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-center-for-public-health-preparedness/) enhancing our unique academic environment.

Programs

Policies

Students are expected to adhere to the schoolwide policies on academics, research, and student life (p. 633) in addition to departmental policies. Students who fail to follow or meet the established policies may be subject to dismissal.

SIS Account

Students are responsible for monitoring their SIS account (http://sis.jhu.edu/sswf/) on a monthly basis so that problems may be resolved in a timely manner. The Department may deposit funds for tuition and certain fees into accounts, but the student is responsible for charges related to expenses that are not covered by the Department. These charges include late registration fees, even when the Department pays for tuition costs. More information can be found on the Student Accounts (http://www.jhsph.edu/offices-and-services/student-accounts-and-business-services/) website.

Course Registration

It is the student's responsibility to register for courses during the appropriate time periods specified by the Office of Records and Registration (https://www.jhsph.edu/offices-and-services/student-affairs/records-and-registration/) (and available on the academic calendar). Students are expected to discuss course plans with their adviser before registration and confirm registration details with their adviser every term. Regardless of funding sources such as grants, stipends, etc., students are responsible for any applicable fees if they do not register properly.

Course Waivers

Waiver requests will be considered when a student has taken a similar, graduate-level course(s), with a passing grade, in another division of JHU or another university. A waiver will not be granted for courses in which the student received less than a B or did not receive a letter grade. Please note that approval of a waiver does not reduce the total number of credits a student is required to earn to meet graduation requirements.

Students must complete the course waiver request form and include documentation (i.e. transcript and syllabus) to support the request. Waivers and substitutions are only approved by the student matters subcommittee, not the adviser. The academic coordinator will notify the student of the outcome.

International Travel

Graduate students at the Johns Hopkins Bloomberg School of Public Health, may have an opportunity to supplement their education or conduct research in another country. These opportunities often enrich the academic curriculum, contribute to dissertation research, and allow students to apply the knowledge they obtain in the classroom to the world's communities. While the School encourages participation in these kinds of experiences, international tensions can be high and the resources on the international travel website (https://ssc.jhmi.edu/travel/) are provided to assist students in making an informed decision.

Students are not obligated to travel internationally, and each student has the right to decline to travel abroad. If the student is supported by a research project that requires such travel and the student chooses not to travel, the student may be removed from that project following discussions with the principal investigator and the EHE program or track directors.

Graduate students who decide to travel abroad must demonstrate that they understand and voluntarily accept the risks inherent in international travel. To do so, students must first receive the appropriate departmental approvals for the trip through their adviser and program or track director(s). Once approved, students must complete the following steps:

1. Review the JHSPH Student Travel Handbook and student-related information on the JHU International Travel site (https://ssc.jhmi.edu/travel/).
2. Consult the Department of State website at http://travel.state.gov. Information on U.S. embassies, travel advisories (https://travel.state.gov/content/travel/en/traveladvisories/traveladvisories.html), and the availability of transportation should the situation in a country deteriorate may be found on this site.
3. Register your travels with the JHU International Travel Registry (https://travelregistry.johnshopkins.edu/Travel/).
4. Complete the International Travel Checklist and Graduate Student Study Release form. Submit both documents to the academic coordinator at least one week in advance of your proposed travel date.

When traveling in an area where regular communication is difficult, students are encouraged to maintain contact with their adviser and/or the academic coordinator.

Environmental Health, MHS

MHS in Environmental Health

The Master of Health Science provides a firm academic foundation in the field of environmental health.

The program primarily targets individuals holding a bachelor's degree who see a place for environmental health in their future academic or career goals. In addition to coursework, MHS students prepare an essay addressing an environmental health problem and make a formal presentation on the topic to an audience of faculty and students.

Some graduates pursue doctoral degrees in public health, medicine, and law, while others head to governmental agencies, NGOs, and the private sector. The program may also accommodate the educational needs of those already working in these sectors, who want to develop a stronger knowledge base in environmental health.

If desired, the MHS further offers specialization in the following areas (https://ehe.jhu.edu/graduate/masters-programs/master-of-health-science-in-environmental-health/):

- Food Systems, Water, and Environmental Sustainability
- Health Security
- Pre-medicine
- Population Environmental Health
- Toxicology for Human Risk Assessment

Program Director:
Megan Latshaw, PhD, MHS

Program Requirements

MHS students formally meet as a group four times during the academic year. These meetings aim to build community, provide professional development, and share information about administrative, course, or other programmatic issues. Attendance is mandatory for MHS students, as is attendance at the EHE Grand Rounds seminars scheduled on the second Friday of each month, and at the master's presentations in May. This attendance, along with monthly check-ins with advisers, and meeting deadlines for the essay, forms the basis of the grade for special studies courses PH.181.845 MHS Special Studies & Research and PH.181.850 MHS Essay. Students who do not successfully complete the requirements for the special studies courses face dismissal from the program.

Coursework

Students consult the course list and obtain formal approval from their faculty adviser prior to registration. Required core courses include environmental health, toxicology, epidemiology, risk sciences, and statistics. Electives allow students to select courses according to their interests and career goals.

Generally, full-time students register for at least 16 credits per term in order to reach the 64-credit requirement for the degree. Students should discuss with their adviser the options which meet the biostatistics and epidemiology course requirements. In order to substitute a recommended course with something not listed, approval must be granted by the program director. Students may also consider earning certificates (http://www.jhsph.edu/academics/certificate-programs/) in addition to the MHS.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

PH.340.680	Environmental and Occupational Epidemiology	4

Essay and Presentation

MHS students must write an essay and present a summary of it during a formal symposium. The essay serves as an integrating experience for students, representing a substantive application of analytic and technical skills learned during the degree program. The content addresses a current environmental health problem pertinent to the educational goals of the student and approved by the adviser. The essay is not a research paper or thesis, but rather an informative and in-depth literature review that includes potential solutions to the problem. Ideally students will work with community-based organizations, governmental agencies, or researchers on a real-world issue. A more detailed guidance document for the essay will be shared with students during their second term and they can find the most recent essay guidance and policy in the handbook.

The student will meet with the adviser throughout the essay-writing process in order to ensure fulfillment of essay requirements, as well as assure that the essay is properly prepared for presentation and final approval. The essay must be reviewed and approved by the adviser and one other faculty member or expert chosen by the student and approved by the adviser.

All students completing the MHS are required to make at least one presentation of their essay to an audience of faculty and students of the Department.

MHS Policies

Advisers

All master's students will be assigned an adviser who serves as the primary contact for the Department, assists the student with course selection each term, approves their essay or thesis, and helps interpret Departmental and School policies. The student is free to change advisers, but this change must be approved by the program director and sent to the academic coordinator via email.

Assessment of Progress

Students must meet minimum academic standards to remain in the master's program. Each term the student should review grades from the previous term with their adviser. Specific goals will be determined following this review. A student who is experiencing academic difficulty will be notified in writing if they are expected to achieve a specific GPA during the upcoming term. Failure to meet any of the following criteria is grounds for dismissal from the program.

Cumulative GPA

The School requires master's students to maintain a minimum 2.75 cumulative grade point average. Students with a GPA falling below 2.75 will be placed on academic warning and will have one term of registration in which to raise their GPA above the threshold for their degree. The academic coordinator will notify students placed on academic warning and their performance will be reviewed by the Educational Programs Committee (EPC).

All recommendations about academic standing will be then presented to the Department's Executive Committee for final disposition. Students not meeting the minimum GPA after one term may be granted additional term(s) on academic warning if academic progress has been shown in the cumulative GPA; that approval beyond one term must be reported to the School's Committee on Academic Standards. Students on academic warning must meet with their academic adviser and program director (or academic coordinator) each term to review their academic plan and receive approval for their course schedule prior to registering for courses. Students with a cumulative GPA below the minimum may not register for more than 18 credits per term. Any repeated courses count towards this 18-credit limit.

Grades in Core Courses

Students must earn a minimum grade on a set of required program-specific core courses: "Pass" for courses offered only on a pass/fail basis: "C" or higher for master's students for courses offered for letter grading. A student who earns a grade below that threshold in a course that meets a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the program director. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards.

Department Retreat

Each January, the EHE faculty and students attend a retreat on research currently being conducted in the department. The retreat ends with a keynote talk from an investigator outside of EHE. The retreat provides master's students the chance to learn more about research being conducted in the department. Attending the retreat, including talks and poster sessions, is expected for ScM students and optional for MHS students.

Bachelor's/MHS Credit Transfer

Bachelor's/MHS students who take JHSPH courses as an undergraduate may transfer up to one-half, but no more than 16 JHSPH credits to the MHS program. Online courses do not count towards this requirement. Students must earn a grade of B or higher in courses transferred to fulfill a program requirement; grades of C may only be transferred towards elective credits.

MHS to ScM Transfer Process

Students who are interested in transferring to the ScM program may begin the process to do so at the start of term 2. Identification of an appropriate and willing faculty research mentor (https://ehe.jhu.edu/graduate/masters-programs/master-of-science-in-environmental-health/program-faculty-research-advisers.html) serves as an essential step in the process, which should be initiated as early as possible, preferably while an applicant to the MHS program.

By the middle of term 2, MHS students submit a ScM transfer request form. The form includes a brief explanation of how the ScM research opportunity fits with the student's educational and research goals. The proposed research faculty needs to provide a letter of willingness to assume the role and responsibilities of ScM thesis adviser (this person may or may not be the current MHS adviser). Students must demonstrate excellent academic success at the graduate level in the first two terms of the year (minimum GPA of 3.0).

A sub-group of the ScM research faculty (program director and 2-3 others) will review the request to confirm that the requirements have been met and, based on that input, the program director will approve or disapprove of the request for degree transfer. The Office of Records and Registration will be notified of the degree transfer, effective term 3.

Graduates have competence in the following:

1. toxicology
2. statistical evaluation of data
3. epidemiological studies in environmental health
4. risk sciences and public policy
5. research ethics
6. public health perspectives in research

Environmental Health, SCM

ScM in Environmental Health

The Master of Science (ScM) in Environmental Health (https://ehe.jhu.edu/graduate/masters-programs/master-of-science-in-environmental-health/) is intended for individuals with a strong interest in pursuing research in one of the various areas within environmental health. Typically, students have prior hands-on experience in laboratory, field or population-based investigations that they would like to build upon. ScM students write a thesis that is based on original research carried out by the student under the direction of a faculty adviser.

Graduates of the program are well-prepared to transition directly into opportunities for further training and research through doctoral degree programs in their primary areas of interest. For those wishing to apply their knowledge and research skills in the field of environmental health prior to pursuing advanced degrees, the ScM will position graduates to compete for research positions in the private sector, federal agencies and non-governmental organizations.

Program Director:
Megan Latshaw, PhD, MHS

Program Requirements

Coursework

Each term, students should register for at least 16 credits in order to reach the 64-credit requirement. Students reach this 16-credit-per-term minimum by first registering for the required courses, then choosing among the elective courses. Please refer to the course directory (https://www.jhsph.edu/courses/) for the most current course information. Students should consult their adviser about options for meeting the biostatistics and epidemiology course requirements.

After completing fourth-term coursework and successfully passing the comprehensive exam, the student begins a year-long research project under the direction of their adviser. During the second year, full-time enrollment must be maintained by taking a minimum of 16 credits of PH.183.825 EHE ScM Thesis Research in each of the four terms. Students are required to participate in all journal clubs, seminars, and meetings deemed necessary by the faculty research adviser. Students will be expected to complete the program at the end of the fourth term of their second year.

Students must successfully complete 64-credits of coursework and successfully passed the comprehensive exam to be considered for the Master's Tuition Scholarship (MTS) (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/funding-and-scholarships/) in the second year. Students must meet all curriculum, grade, GPA, and registration requirements.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Research Proposal

During the first year of the program, ScM students draft a proposal for their research project. The product, formatted similar to a NIH R21 or F32 research proposal, includes an in-depth review of the literature and presents the key components of the research plan. Students will enroll in PH.183.840 EHE Scm Special Studies and Research which allows the adviser to evaluate the student's progress in completing the proposal. Further guidance is provided at the start of the academic year.

Comprehensive Examination

Upon completion of first year coursework, ScM students complete the comprehensive examination. The comprehensive examination requires the student to demonstrate their knowledge of the proposed research – its rationale, approaches, and methodologies – as well as its relevance and potential contributions within the broader perspective of environmental health. The research proposal serves as the written basis for the comprehensive examination. Students must pass the comprehensive examination prior to beginning the research year of the program and to be eligible for the second year Master's Tuition Scholarship (MTS) (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/funding-and-scholarships/).

Thesis and Presentation

The ScM degree requires successful completion of a research project and the writing of a master's thesis based on that work. The research will be completed under the direction of a faculty mentor (research adviser) who is a member of the Department of Environmental Health and Engineering. The work must represent an original hypothesis-driven investigation on a topic of interest to the student and agreed upon by the adviser. The format will adhere to University guidelines which can be found on the Johns Hopkins Sheridan Libraries website (https://www.library.jhu.edu/library-services/electronic-theses-dissertations/). The document quality must be suitable for publication in a peer-reviewed scientific journal.

Students are required to present their research during the MHS & ScM student presentation days in May. Presentations should be 10 minutes in length followed by 5 minutes of questions and answers from faculty and students.

ScM Policies

Advisers

All master's students will be assigned an adviser, who serves as the primary contact for the Department, assists the student with course selection each term, approves their essay or thesis, and helps interpret Departmental and School policies. The student is free to change advisers, but this change must be approved by the program director and sent to the academic coordinator via email. For students in the ScM, initially-assigned advisers may change when a student transitions from the MHS to the ScM program at the end of term 2 in the first year of the program.

Assessment of Progress

Students must meet minimum academic standards to remain in the master's program. Each term the student should review grades from the previous term with their adviser. Specific goals will be determined following this review. A student who is experiencing academic difficulty will be notified in writing if they are expected to achieve a specific GPA during the upcoming term. Failure to meet any of the following criteria is grounds for dismissal from the program.

Cumulative GPA

The School requires master's students to maintain a minimum 2.75 cumulative grade point average. Students with a GPA falling below 2.75 will be placed on academic warning and will have one term of registration in which to raise their GPA above the threshold for their degree. The academic coordinator will notify students placed on academic warning and their performance will be reviewed by the Educational Programs Committee (EPC). All recommendations about academic standing will be then presented to the Department's Executive Committee for final disposition. Students not meeting the minimum GPA after one term may be granted additional term(s) on academic warning if academic progress has been shown in the cumulative GPA; that approval beyond one term must be reported to the School's Committee on Academic Standards. Students on academic warning must meet with their academic adviser and program director (or academic coordinator) each term to review their academic plan and receive approval for their course schedule prior to registering for courses. Students with a cumulative GPA below the minimum may not register for more than 18 credits per term. Any repeated courses count towards this 18-credit limit.

Grades in Core Courses

Students must earn a minimum grade on a set of required program-specific core courses: "Pass" for courses offered only on a pass/fail basis: "C" or higher for master's students for courses offered for letter grading. A student who earns a grade below that threshold in a course that meets a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the program director. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards.

Department Retreat

Each January, the EHE faculty and students attend a retreat that includes faculty presentations and student posters on research currently be conducted in the department. The retreat ends with a keynote talk from an investigator outside of EHE. The retreat provides both ScM and MHS students with the chance to meet faculty and students and learn more about research being conducted in the department. Attending the retreat, including talks and poster sessions, is expected for ScM students and optional for MHS students.

Toxicology for Human Risk Assessment, MS

The Master of Science (MS) in Toxicology for Human Risk Assessment is the only program of its kind in the United States. Our innovative master's program equips graduates with the knowledge and skills needed to begin or advance their career as professionals in the evolving field of human health and environmental risk assessment.

The MS program consists of:

- Coursework in the fundamental concepts and testing approaches used in classic risk assessment processes, as well as those used in the new paradigm for toxicity in the 21st Century (https://jhu.pure.elsevier.com/en/publications/food-for-thought-toxicity-testing-in-the-21st-century-beyond-envi-6/), and
- A seven- to twelve-month internship with a government agency, non-governmental organization, industry, or private sector group.

Students enrolled in the program may also complete the Certificate in Risk Sciences and Public Policy. (p. 628)

Program Director:
Joseph Bressler, PhD

Curriculum

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

The curriculum consists of a core of program-required coursework that is taken during the first year of the program. Courses are offered in four 8-week terms from the beginning of September to mid-May. Courses related to the internship and to the capstone essay will be completed in the second year.

Internship

Students in this professional MS degree program will be expected to assume independent responsibility for a professional project that will be carried out off-site at a governmental agency, nongovernmental organization or industry or private sector company. Specific opportunities will be identified by the student in conjunction with the adviser. The minimum requirements for the internship will be a duration of four months (two academic terms) in conjunction with 32 course credits of special studies and research. The student will be directed in the internship experience by an on-site mentor with whom the adviser will communicate regularly to follow and support the student's progress and success in achieving the agreed-upon goals of the independent project. If agreeable to the student and sponsor, the overall length of the project period may extend beyond the minimum necessary for completion of the internship requirements of the MS degree program.

Master's Essay and Presentation

Students in professional programs at the Johns Hopkins School of Public Health are required to successfully complete and submit a culminating project that demonstrates integration of the skills developed during the coursework and internship experiences. For students in this program, this project takes the form of an in-depth capstone essay.

The topic of the essay will typically be linked to the specific or general focus of the internship experience and will be chosen in consultation with the adviser, who must approve it. The format of the essay will conform to standards set by the Department and may vary to accommodate the nature of the topic. Students are encouraged to select a topic that will lend itself to publication in a scientific journal. Following approval of the essay, students will make a formal presentation of the essay to departmental faculty and students to complete the requirements for the MS degree.

Academic Standards

Students must meet minimum satisfactory academic standards to remain in the MS program. To meet these standards, students must maintain a minimum 2.75 cumulative grade point average, and retake any required coursework in which they earn a grade of "D" or "F". If a student receives a grade of "D" or "F" twice in the same required course, they may not repeat the course a third time. If the course is a required core course with no other options, the student will be dismissed from the program.

Upon completion of the program, students will be able to:

- Explain and interpret epidemiologic studies to support risk assessment and decision making;
- Elaborate commonly used public health measures, such as relative risk, attributable risk and relative hazards, and select appropriate statistical methods for estimating such measures in the presence of covariates;
- Interpret descriptive and inferential statistics resulting from data analysis and draw relevant conclusions;
- Interpret studies that use bioinformatic techniques;
- Evaluate and interpret traditional toxicological studies;
- Elaborate novel methodological approaches in toxicology;
- Apply and integrate epidemiological, traditional and novel toxicological studies to support risk assessment;
- Define the major environmental agents (i.e., environmental chemical, biological, and physical that cause adverse effects on human health) and their sources, natural and anthropomorphic;
- Discuss the transport and fate of major environmental agents in the environment, and identify the carriers or vectors (air, water, soil, and food) that promote the transfer of these agents from various environments (e.g. occupational setting) to the human;
- Describe the toxicokinetics of major environmental agents including routes of entry, metabolism, storage, and excretion;
- Describe the toxicodynamics of major environmental agents, including toxicological pathways and the mechanisms by which agents exert adverse health effects, and the use of in vitro models for predicting the magnitude of adverse effects;
- Describe approaches for in vitro to in vivo modeling of toxicokinetics;
- Summarize areas of emerging science for risk assessment (personalized toxicology, chemical mixture toxicology, systems toxicology, multi-natured stressor mixtures);
- Use systematic approaches for combining and evaluating toxicokinetic and toxicodynamic evidence;
- Evaluate evidence-based toxicology studies and studies conducted using other systematic approaches;
- Utilize exposure and epidemiologic and traditional and novel toxicological data to conduct a risk assessment;
- Communicate and translate science to general audiences and policymakers;
- Describe key risk management practices in the US and internationally;
- Explain the application of evidence used to make environmental health decisions, setting of standards and guidance;
- Summarize the function of federal agencies in public health practices and decision making.

Environmental Health, PhD

PhD in Environmental Health

Students in the PhD program pursue one of the following tracks:

Environmental Sustainability, Resilience, and Health (https://publichealth.jhu.edu/academics/phd-in-environmental-health/track-in-environmental-sustainability-resilience-and-health/)

The Environmental Sustainability, Resilience and Health (ESRH) track aims to cultivate innovative public health scientists and engineers who address urgent challenges at the intersection of climate, sustainability, resilience, and equity. Students in the track will research anthropogenic drivers and other factors that exacerbate ecological crises, and interventions aimed at adapting to threats and minimizing the diverse impacts on human well-being, with emphasis on equity. Additionally, students focus on how global environmental changes affect human societies, infrastructure, and ecosystems, as well as strategies for adapting to evolving public health threats.

Exposure Sciences and Environmental Epidemiology (https://publichealth.jhu.edu/academics/phd-in-environmental-health/track-in-exposure-sciences-and-environmental-epidemiology/)

The track in Exposure Sciences and Environmental Epidemiology offers research and training opportunities in key topic areas relevant to environmental and occupational health. These areas include air, water, the food system, early life exposures, metals and synthetic chemicals, environmental microbiology, the built environment, global environmental health, molecular and integrated epidemiology, and the investigation of susceptibility factors, occupational health, and effective interventions.

Health Security (https://publichealth.jhu.edu/academics/phd-in-environmental-health/track-in-health-security/)

The track in Health Security focuses on research and training in a wide, complementary range of topics aimed to reduce health security threats and their impacts, and to increase community resilience to global catastrophic biological risks. Students in this track will focus on identifying major health security risks, applying risk assessment principles to address health security risks, identifying and assessing current initiatives to improve health security, evaluating the effectiveness of health security strategies, and communicating information to inform policy.

Toxicology, Physiology & Molecular Mechanisms (https://publichealth.jhu.edu/academics/phd-in-environmental-health/track-in-toxicology-physiology-and-molecular-mechanisms/)

Basic research in this track is focused on discovering novel molecular mechanisms that drive the pathophysiology of major chronic diseases to develop prevention and therapeutic strategies to improve public health. Students in this track will engage in academic training in specific areas of environmental health with in-depth courses in molecular, toxicologic, physiologic, immunologic, and pathophysiologic sciences.

PhD Requirements

The following information regarding doctoral requirements serves as a general guide to Departmental policies and procedures and is subject to change.

Core Coursework

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

The School and the Department have specified a series of required core courses to be completed by all PhD students. PhD students are required to complete at least 64 credits of formal coursework (i.e., not special studies). At least 18 credits of formal coursework are required in courses outside the student's primary department. At least nine of these credits must be taken in the School of Public Health.

Code	Title	Credits
CORE CURRICULUM		
YEAR 1		
PH.550.860	Academic & Research Ethics at BSPH	0
PH.180.612	Advanced Environmental Health I	4
PH.180.639	Advanced Environmental Health II	4
PH.187.610	Public Health Toxicology	4
PH.317.600	Introduction to the Risk Sciences and Public Policy	4
Epidemiology (See track requirements)		5
Biostatistics (See track requirements)		3-4
YEAR 2		
PH.550.600	Living Science Ethics - Responsible Conduct of Research	1
PH.180.661	Writing Scientific Papers I	2
PH.180.662	Writing Scientific Papers II	2
PH.180.663	Grant Writing I	2
PH.180.664	Grant Writing II	2
EN.570.616	Data Analytics in Environmental Health and Engineering	3
ALL YEARS & TERMS		
PH.180.860	EHE Student Seminar & Grand Rounds	1
PH.180.840	EHE Doctoral Special Studies and Research	Varies

Note: The School's Satisfactory Academic Performance policy requires doctoral students to maintain a minimum GPA of 3.0 and to have a B or greater in program core courses. Please refer to the following track-specific sections for additional course requirements.

Track-Specific Coursework

Environmental Sustainability, Resilience, and Health

Code	Title	Credits
Required Courses		
PH.180.611	The Global Environment, Climate Change, and Public Health	4
PH.180.620	Introduction to Food Systems and Public Health	4
PH.188.682	A Built Environment for A Healthy and Sustainable Future	3
EN.570.607	Energy Policy and Planning Models	3
At least 9 credits in chosen topic area		**9**
Climate Change		
PH.180.607	Climate Change and Public Health	3
PH.188.688	Global Sustainability & Health Seminar	1
PH.180.653	Climate Change: Avoiding Conflict and Improving Public Health	3
PH.410.645	Applying the Social Ecological Model in Tobacco Control and Climate Change	3
PH.330.609	Climate Change and Mental Health: Research, Practice, and Policy Perspectives	3
Food Systems		
PH.180.644	Food System Resilience to Disasters: COVID-19, Climate Change, and Beyond	2
PH.180.606	Case Studies in Food Production and Public Health	4
PH.180.655	Baltimore Food Systems: A Case Study of Urban Food Environments	4
PH.182.640	Food- and Water- Borne Diseases	3
PH.222.653	Food Technology and Health	3
PH.222.654	Food, Culture, and Nutrition	4
PH.180.605	Food Systems Practicum	4
PH.185.600	One Health Tools to Promote and Evaluate Healthy and Sustainable Communities	3
PH.700.630	Food Ethics	3
Built Environment		
PH.305.630	Transportation Policy, Equity and Health	2
PH.318.636	Urban Policy	3
PH.180.655	Baltimore Food Systems: A Case Study of Urban Food Environments	4
EN.575.734	Smart Growth Strategies for Sustainable Cities	3
Air		

EN.570.657	Air Pollution	3
PH.180.611	The Global Environment, Climate Change, and Public Health	4
PH.188.688	Global Sustainability & Health Seminar	1
PH.182.615	Airborne Particles	4
PH.182.613	Exposure Assessment Techniques for Health Risk Management	3
PH.305.630	Transportation Policy, Equity and Health	2
Energy		
PH.180.651	Energy, Environment, and Public Health	2
EN.530.664	Energy Systems Analysis (graduate)	3
EN.570.657	Air Pollution	3
Water		
PH.182.640	Food- and Water- Borne Diseases	3
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health	2
EN.570.631	Collaborative Modeling for Resolving Water Resources Disputes	3
EN.570.653	Hydrology	3
EN.575.711	Climate Change and Global Environmental Sustainability	3
EN.575.714	Water Resources Management	3
EN.575.731	Water Resources Planning	3
Recommended Courses in Diversity, Equity, and Inclusion		
PH.180.625	Community-Driven Epidemiology and Environmental Justice	3
PH.180.626	Environmental Justice and Public Health Practice	3
PH.180.621	Protecting the Environment and Safeguarding Worker Health: A Problem-Based Approach	3
PH.180.602	Environment and Health in Low and Middle income Countries	2
PH.410.606	Local and Global Best Practices in Health Equity Research Methods	4

Exposure Sciences and Environmental Epidemiology

Students receiving funding from the NIOSH Education and Research Center (ERC) may be required to complete additional coursework. Contact your adviser for more information.

Grade and GPA Requirements

Doctoral students must earn a minimum grade on a set of required program-specific core courses: "Pass" for courses offered only on a pass/fail basis: "B" or higher for courses offered for letter grading. A student who earns a grade below that threshold in a course that meets a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the track directors. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards.

The School requires doctoral students to maintain a minimum 3.0 cumulative GPA. Students with a GPA falling below 3.0 will be placed on academic warning and will have one term of registration in which to raise their GPA above the threshold for their degree.

Teaching Assistant Requirement

Teaching assistant positions provide students with an opportunity to develop their teaching and interpersonal skills, to work professionally with faculty and fellow students, and to contribute service to the Department. All PhD students are required to serve as TA for an 8-week term SPH course each year during their second, third, and fourth year of the program, or for a single full-semester WSE course each year. Only EHE courses may be used to fulfill this requirement and students must be enrolled in courses on a full-time basis. The academic coordinator maintains a list of EHE courses that are approved to fulfill the TA requirement. Students must receive approval from their adviser prior to accepting a TA position and must notify the academic coordinator prior to the start of the course for the course chosen to fulfill the TA requirement. Students are required to complete the online TA training during their first year in the program. The academic coordinator will verify the student has completed the training prior to starting a TA position.

A student will only become eligible for compensation of future TAships once they have satisfied the yearly TA requirement.

Code	Title	Credits
Students must register in each term or semester in which they complete their required TAship.		
PH.180.613	Teaching Environmental Health	1

Individual Development Plan

The University Doctoral Board requires that each doctoral student will be reviewed annually during each year of their doctoral program. This requirement is also in line with a 2014 National Institute of Health notice strongly encouraging the development of an institutional policy on Individual Development Plans (IDPs) for all graduate students supported by NIH funds. The IDP addresses two needs. First, it provides a structure to systematically identify training needs and competencies, establish goals and take stock of year-by-year progress. Thus, IDPs help doctoral students stay on track with their research as well as paper and grant writing and skills development. Second, there are many career options for individuals who have obtained a PhD in Environmental Health. The IDP helps doctoral students plan and prepare for their post-PhD future. In both areas, IDPs can serve as a tool to facilitate communication between trainees and their mentors.

Goals and benefits

An annual IDP as part of a broader mentoring program will give the trainee a framework for self-assessment, planning, and communication:

- Assessing current skills, interests, and strengths and their progress in the program;
- Establishing target dates for academic and research milestones;
- Developing a plan for skill development to meet academic and professional goals;
- Set goals and sub-goals for the next year, including how to spend their time;
- Defining in detail the approach they plan to take in order to obtain the specific skills and strengths needed (e.g. courses, technical skills, teaching, supervision) along with an anticipated time frame for obtaining those skills and strengths;
- Helping define career goals and create annual plans to reach goals;
- Providing a tool that can be used to provide structure for conversations between the student and their mentor;
- Communicating and collaborating with colleagues and potential employers about evolving goals and related skills;
- Using the IDP to make sure student and adviser expectations are clearly outlined and in agreement so that there are no big surprises, particularly towards the end of doctoral training;
- The IDP is meant as a living document, to be modified as the student moves through the program to help solidify goals and plans.

Students are encouraged to take advantage of this opportunity to reflect on their success and challenges from the previous year and work towards key milestones and anticipate challenges in the coming year(s). They are encouraged to use the questions in the IDP as a starting place for thinking; they should not feel the need to respond to all questions, if some are less relevant for the individual, and the student should feel free to also consider addressing other aspects not included in the structured IDP questions.

IDP AND ANNUAL REVIEW COMPONENTS

The annual review will have three components:

1. Student self-assessment and IDP
2. Monitoring of progress in the program
3. Written feedback from the department to the student.

STUDENT SELF-ASSESSMENT AND IDP

At the start of each academic year students will complete or update the self-assessment and IDP. They will meet with their adviser in person to discuss the IDP no later than the end of fall semester/2nd term. If insufficient progress is being made (e.g. failing grades, inadequate progress), the student may be placed on probation prior to the start of the spring semester/3rd term.

Students in the second year and beyond will document their accomplishments from the past year and note specifically any accomplishment(s) and activities not presently reported (i.e. papers in review/published, posters presented, presentations or guest lectures given, and/or grant proposals in progress, submitted or funded). Students should note if they had any teaching assistant (TA) duties.

Students should include short- and long-term research/academic/ professional goals, for the next year and beyond, how their progress in the past year has contributed to those goals, how their planned activities in the next year will contribute to their longer-term goals, and any impediments they see to reaching those goals.

Students should note issues that could impede their progress in the program or in terms of their broader professional goals. Students should also identify and discuss new activities and opportunities that could assist them in achieving their goals.

MONITORING STUDENT PROGRESS IN THE PROGRAM

If the student has not completed their qualifying written and oral exams, then the student will schedule an in-person meeting with their adviser and another faculty member, if desired (e.g. co-adviser or track director), to review the IDP. If the student has completed their qualifying written and oral exams, then this meeting will be done in conjunction with a thesis advisory committee meeting. There should be mention of a timeline for meeting program goals and degree completion; and any concern regarding performance. Funding, research changes, TA expectations, etc. should be confirmed and clarified as well. Concerns, questions and needed clarifications should be addressed in this meeting. If there are irreconcilable concerns between the student and adviser, the track directors should be consulted with next steps potentially engaging the Departmental chair in the discussions. After the meeting, the student will write a brief summary of their goals and plans for the next year and sends it to their adviser for their comments and feedback. The completed form is then emailed to the academic coordinator as documentation that the IDP was completed and discussed between student and adviser. Students who have successfully passed the School-wide preliminary oral exam will meet with their thesis advisory committee every six months until program completion. A report of each meeting will be documented on Form C- Thesis Advisory Committee Meeting Evaluation and submitted to the academic coordinator to be include in the students file.

DEPARTMENTAL FEEDBACK TO THE STUDENT

Each year the Department will provide written feedback to the student. Feedback will be in the form of a letter detailing the student's progress and deficiencies, evidence of completion of the IDP process and discussion, and summary of specific goals and expectations for the next year.

REPORTING AND RECORDS

The Department is responsible for initiating the IDP/annual review process and ensuring its completion even if a student or adviser does not comply or engage in the process.If a student does not respond to requests to participate in the annual review process, a note will be placed with the Department's tracking system citing that the student did not comply. Non-compliance will result in probation. In the event the adviser is unable or unwilling to complete the annual review process the department will select another faculty member to complete the review. The Department chair will discuss the implications of non-compliance of faculty mentors with the IDP process.

Milestones

Written Comprehensive Examination

A written comprehensive exam is required of all doctoral students. The examination will be taken upon completion of the EHE-required PhD core courses and a substantial proportion of the track-required courses. The track directors will send written notification of the successful completion of the examination to the academic coordinator. If a student fails the exam they can be terminated from the program. Track directors will decide if a student will be permitted to re- take the exam, and if so, whether they will be examined on a particularly weak area or be required to take another complete exam comprised of new questions. Only one reexamination may be permitted. Failing the reexamination will result in termination from the program. Doctoral students who are not able to continue in the program may request a transfer to the MHS or ScM.

Research Proposal

All PhD students are required to develop a written proposal to prepare for the preliminary oral examinations. The proposal will be in the form of a standard NIH or other funding agency format. In general, the grant proposal will be drafted as a component of the Writing Scientific Papers and Grant Writing courses. It is the responsibility of the adviser to inform the student if there are any track-specific deviations from this requirement.

Departmental Practice Oral Evaluation

In preparation for taking the School-wide preliminary oral examination, all PhD students of the Department of Environmental Health and Engineering are required to achieve satisfactory performance on a Departmental practice oral evaluation. This evaluation provides an opportunity for the student to demonstrate the effective verbal communication skills and the ability to engage in scientific exchange that will be tested on the official formal School-wide preliminary oral examination..

The evaluating committee will consist of five faculty members with primary or joint appointments in EHE: four from the student's track (including the adviser) and one from within the Department but outside the student's track. The most senior faculty member (excluding the student's adviser) will serve as the chair of the evaluation process. Students should work with their adviser to select the faculty composition and exam time and complete the Departmental oral evaluation form.

School-wide Preliminary Oral Examination

The School-wide preliminary oral examination (POE), administered by the School's Office of Academic Affairs under University guidelines, determines whether the student has the ability, depth, breadth, and knowledge to undertake significant doctoral-level research in their specialized area of interest. The examination should be taken at the earliest feasible time, no later than the end of the student's third year in residence, and before significant engagement in dissertation research.

The School provides guidance for conduct of the preliminary oral exam for PhD students (https://my.jhsph.edu/StudentDocuments/JHSPH-PhDPreliminaryOralExam-Guidance-28July2018.pdf). The student and their adviser are responsible for initiating arrangements for this examination. Requests for scheduling the exam must be sent to the School's Office of Records and Registration at least one month prior to the examination; therefore, the form must be submitted in advance of this time to the academic coordinator. All members of the committee must be present at the scheduled exam location. If the student fails the preliminary oral examination and is permitted a re-examination, they must be re-examined within one year.

Thesis Advisory Committee

Upon successful completion of the preliminary oral examination, a thesis advisory committee will be formed to provide continuity in the evaluation of progress and development of the student. The principal responsibilities of the committee are to review the student's dissertation proposal, to advise and guide the student's research, and to read and evaluate the student's final dissertation. Students work in consultation with their adviser and/or track directors to select members of the committee. The committee consists of the student's adviser and two to four other faculty members from both inside and/or outside the student's Department with expertise in areas relating to the proposed research of the student. Membership of the committee may change as dictated by the needs of the student and direction of the research.

It is required that the student will meet formally at least twice per year (every six months) with the committee, beginning six months after the successful completion of the school-wide preliminary oral examination and continuously until the final defense. At these meetings, the student will present progress on their thesis project and the committee will offer advice. For each meeting, an evaluation (completed Form C - Thesis Advisory Committee) of the student's development and progress will be prepared by the adviser in consultation with the committee, discussed with the student, and submitted to the academic program administrator to be included in the student's file. As the thesis project progresses, the committee may indicate a target date for completion of the thesis research. Noncompliance with committee meeting requirements is grounds for dismissal from the program.

Final Oral Defense and Public Seminar

The committee of thesis readers shall conduct the oral defense of the thesis after the thesis advisory committee agrees that the candidate is ready for the formal defense (also known as final oral exam or FOE). During this defense the committee shall evaluate:

I.The originality and publication potential of the research;

II.The candidate's understanding of the details of the methodologic and analytic work;

III.The final quality of the written thesis document.

The final oral examination is a defense of the thesis before a committee of at least four readers. Guidance on committee composition can be found on the doctoral candidate information page. Once a date for the defense has been agreed upon by the committee of thesis readers, a formal request for the final oral defense should be submitted to the Office of Records and Registration at least one month prior to the exam date. This should be submitted in advance of the one-month period to the academic coordinator for processing. The adviser will confirm that the thesis is in a final form, is ready to be submitted to the readers, and that all other School and Department requirements for the degree have been fulfilled. Readers must have at least one month to read the thesis before the final examination is held as they might have suggested revisions as well. All doctoral candidates are required to give a formal presentation of their completed thesis work at a public seminar.

Doctoral students will have up to 30 days after the final defense to make corrections and submit their electronic dissertation. All doctoral students must remain registered during this time. If the funding has not gone over the total number of years allotted, they will receive stipend and health insurance coverage for these 30 days. After the 30 days, they will be terminated from payroll as a graduate student in the Department. Students on the School health plan are responsible for cancelling their insurance and should contact Student Accounts.

The Department requires one bound copy of the dissertation. The School recommends using Thesis on Demand. The binding should be black with the students name, degree, and year on the spine; dissertation title and name on the front. The Department does not cover the cost of electronic thesis submission or binding. All Departmental copies are placed in an accessible Departmental archive.

PhD Program Policies

Time to Completion

PhD students have seven years from the time of matriculation to complete their degree requirements. However, it is expected that all doctoral students will have completed the program within five years after matriculation. Students will receive a maximum of five years of funding from the program, dependent on continued satisfactory progress. Student funding beyond five years is not available. A formally approved leave of absence does not count toward this time.

Faculty Advisers

PhD students are assigned a faculty adviser once they are admitted to the program. The adviser serves as the primary contact for the Department and will assist the student with course selection each term, planning research rotations if appropriate, preparation of journal club and seminar presentations, and the interpretation of Departmental and School policies. This initial, or academic, adviser may or may not become the student's research adviser. As early as the first year, a thesis research adviser is selected to serve as the student's adviser for the conduct of their research. This selection, however, does not exclude significant interactions with other members of the faculty. The faculty adviser must approve student registration and course plans (as applicable). At the end of each academic year, the adviser and the student must review academic progress and determine plans that will keep the student on track toward graduation. This information is also reviewed by the student's doctoral track director(s) and the academic coordinator. If the student wants to change advisers, they must discuss the reasons with their track director(s) and submit a request to the academic program administrator. Such changes are considered upon mutual agreement and availability of an appropriate adviser. Changes will be noted on the students' transcript.

Doctoral Registration

In addition to the School's residency requirement, full-time doctoral students in the Department must register on a continuous basis for a minimum of 16-credits each academic term. Registration is not required during the summer* or interim sessions and tuition funding is typically not provided for these terms. All students are required to discuss course registration with their adviser prior to the start of each term. Full-time students who fail to register by the published deadlines during a regular academic term will incur a late registration fee from the School that must be paid by the student. If a student still does not register after the add/drop deadline for the term, they will be considered withdrawn by the School and the Department. Note: Some students will be registered by the Department during the summer term for administrative purposes; however, this registration does not imply that didactic courses will be funded.

Assessment of Progress

In order to monitor and document adequate academic performance and progress, a review of the doctoral student's grades and activities is carried out continually. This information is reviewed by the adviser, the doctoral track directors and the academic coordinator. In addition to maintaining satisfactory academic progress and being in good standing with departmental standards, each student must successfully complete a comprehensive written examination, departmental practice oral evaluation, and the school-wide preliminary oral examination. Failure to successfully complete any of these requirements will be grounds for dismissal from the program.

Seminars and Retreat

In addition to attendance at formal courses, students are required to attend Departmental and program seminars and track journal club. Students are also required to attend the EHE Grand Rounds in which Hopkins faculty, scientists from other institutions, and alumni are invited to present cutting-edge research findings. In addition, students will attend and present (once per year in years 2-4) their ongoing research at the EHE Student Seminar series and attend the annual Departmental research retreat.

Attendance

Students are required to attend all classes, including journal clubs and seminars, and actively participate. Scheduling conflicts that arise must be discussed with the student's adviser. Since research and practice are fundamental parts of the curriculum, it is required that students will work (with the approval of their adviser) in the laboratory, or pursue other research, including participation in public health practice opportunities during term breaks. Non-compliance with attendance is grounds for probation or dismissal from the program.

Vacation

Students will take no more than two weeks' vacation per academic year (University holidays are approved time off and are not included in the two weeks' vacation). Students must discuss all plans for vacation or other absences with their adviser. Non-compliance with vacation is grounds for probation or dismissal from the program.

Learning Outcomes

Training Competencies

The goal of PhD training in EHE is to, through core and track-specific courses, research rotations, qualifying examinations, and mentored research, prepare graduates to be independent investigators who engage in scholarship that creates new knowledge, use research to transform practice and improve environmental health, and effectively communicate research findings.

We expect graduates of the PhD program to be able to:

1. Describe all aspects of the environmental health paradigm (from sources to health effects) for a range of agents and stressors and scales from local to global
2. Identify common environmental health hazards and risks
3. Understand the interdisciplinary nature of environmental health research
4. Explain core epidemiological concepts
5. Explain the role of law, policy, and regulations in environmental health protection
6. Explain concepts of risk assessment and management to assess and control environmental health risks
7. Utilize statistical techniques to support research designs and perform data analyses
8. Write and critique a grant proposal in the NIH format
9. Evaluate and critique a body of literature in order to assess the state of knowledge and research gaps
10. Develop a specialized area of knowledge within one of the Department's academic tracks
11. Develop a set of research tools and skills needed to conduct independent research
12. Develop, conduct, and defend original research that is worthy of publication and leads to a completed thesis
13. Communicate research results to technical and lay audiences
14. Translate research findings into practice

Non-Degree Training

Certificate Programs

Four certificate programs are offered by the Department of Environmental Health and Engineering:

- Climate and Health (https://www.jhsph.edu/academics/certificate-programs/certificates-for-hopkins-and-non-degree-students/climate-change-and-public-health-certificate.html)
- Environmental and Occupational Health (https://www.jhsph.edu/academics/certificate-programs/certificates-for-hopkins-and-non-degree-students/environmental-and-occupational-health.html)
- Food Systems, the Environment and Public Health (https://www.jhsph.edu/academics/certificate-programs/certificates-for-hopkins-and-non-degree-students/food-system-envir-publ-health.html)
- Humane Sciences and Toxicology Policy (https://publichealth.jhu.edu/academics/humane-sciences-and-toxicology-policy-certificate-program/)
- Product Stewardship for Sustainability (https://publichealth.jhu.edu/academics/product-stewardship-for-sustainability-certificate-program/)

Postdoctoral Opportunities

Postdoctoral fellows spend virtually all their time conducting research in the laboratory of their faculty mentor. While the focus is on conducting research, in consultation with their faculty mentor, postdoctoral fellows have the opportunity to take selected courses that may advance their training and research capabilities. Attending and giving seminars, journal clubs, and participating in research retreats are also an integral part of the postdoctoral training experience.

A prospective postdoctoral candidate should directly contact a member of the Department of Environmental Health and Engineering faculty (https://ehe.jhu.edu/people/faculty/) with whom they wish to work. The faculty member will request letters of reference and an interview may be required as well. Once the faculty member decides to accept a postdoctoral fellow, the departmental chair or administrator is notified for approval, including verification of adequate funding for the postdoctoral candidate. Once the department approves the appointment, an acceptance letter with details on funding and terms of appointment is sent to the postdoctoral candidate.

Summer Institute in Environmental Health and Engineering

The Summer Institute courses (https://ehe.jhu.edu/non-degree-programs/summer-institute-in-environmental-health-and-engineering/) are designed for practicing public health professionals with responsibilities for health, safety, and environmental matters in government agencies, non-government organizations, and industry; and for students who are interested in learning more about environmental health sciences concepts. The courses may be taken for academic or non-credit. The Summer Institute in Environmental Health and Engineering is held in June.

Department of Epidemiology

About

The mission of the Department of Epidemiology (https://www.jhsph.edu/departments/epidemiology/) is to improve the public's health by training epidemiologists and by advancing knowledge concerning the causes and prevention of disease and the promotion of health. As the oldest autonomous academic department of epidemiology in the world, the Department of Epidemiology at the Johns Hopkins Bloomberg School of Public Health has maintained leadership in fulfilling this mission.

The Goals of the Department are to

- Provide the highest quality education in epidemiology and thus prepare the next generation of epidemiologists
- Advance the science of epidemiology by developing new methods and applications
- Use epidemiologic methods to investigate the etiology of disease in human populations
- Use epidemiologic methods to evaluate health care delivery, prevention, and health promotion programs
- Develop methodologies for translating epidemiologic research findings into clinical medicine
- Develop approaches for applying the findings of epidemiologic research in the formulation of public policy and participate in formulating and evaluating the effects of such policy

Students gain proficiency in study designs, measurement, and inference to illuminate the distribution and determinants of health states—as they identify and evaluate strategies for the prevention and control of disease in human populations. Faculty continue to honor the legacy of excellence set forth in the early days of the Department's founding—bolstering our growth, development, and numerous contributions to the field. A history of the Department (https://www.jhsph.edu/departments/epidemiology/about/history.html), as well as a complete list of affiliated Centers and Institutes, may be found on the Department's website: https://publichealth.jhu.edu/departments/epidemiology (https://publichealth.jhu.edu/departments/epidemiology/).

Departmental Governance

Chair and Vice-Chairs

Responsible (https://my.jhsph.edu/sites/EPI/committeerolesandresponsibilities/default.aspx) for leading the academic and research vision for the Department

- Chair: David D. Celentano, ScD; Charles Armstrong Chair and Professor (https://www.jhsph.edu/faculty/directory/profile/122/david-d-celentano/)
- Vice-Chair for Research and Administration: Shruti H. Mehta, PhD; Professor
- Vice-Chair for IDARE (Inclusion, Diversity, Anti-Racism, and Equity): Otis Brawley, MD; Bloomberg Distinguished Professor (https://publichealth.jhu.edu/faculty/3877/otis-brawley/)
- Vice-Chair for Educational Programs: Stephan Ehrhardt, MD; Associate Professor (https://publichealth.jhu.edu/faculty/2694/stephan-ehrhardt/)
- Vice-Chair for Faculty: Priya Duggal, PhD; Professor (https://publichealth.jhu.edu/faculty/2134/priya-duggal/)

Faculty Executive Committee

The faculty executive committee members are elected and appointed by the chairs and the faculty of the department to represent the faculty and take on the responsibility and work of formulating solutions/policies for any Department issues, so options can be clearly and succinctly presented to the full faculty for discussion and decisions.

Research Track Directors

The Tracks were established to help trainees develop their expertise and specialize in different areas of epidemiologic research. The tracks help to establish the curriculum and provide trainees with guidance in major domains of epidemiology. The Tracks also help the Department student body to develop a sense of camaraderie and passion around these 8 domains:

- Cancer Epidemiology: Kala Visvanthan, MD; Professor (https://www.jhsph.edu/faculty/directory/profile/1129/kala-visvanathan/)
- Cardiovascular and Clinical Epidemiology: Liz Selvin, PhD; Professor (https://www.jhsph.edu/faculty/directory/profile/1882/elizabeth-selvin/)
- Clinical Trials and Evidence Synthesis: Ann Margret Ervin, PhD; Associate Scientist (https://publichealth.jhu.edu/faculty/1881/ann-margret-ervin/)
- Environmental Epidemiology: Eliseo Guallar, MD, DrPH; Professor (https://www.jhsph.edu/faculty/directory/profile/844/eliseo-guallar/)
- Epidemiology of Aging: Jennifer A. Schrack, PhD; Associate Professor (https://www.jhsph.edu/faculty/directory/profile/2686/jennifer-a-schrack/)
- General Epidemiology and Methodology: Bryan Lau, PhD; Associate Professor (https://www.jhsph.edu/faculty/directory/profile/1592/bryan-lau/)

- Genetic Epidemiology: Christine Ladd-Acosta, PhD; Associate Professor (https://publichealth.jhu.edu/faculty/2787/christine-m-ladd-acosta/)
- Infectious Disease Epidemiology: Becky Lynn Genberg; PhD; Associate Professor

Degree and Program Directors

- Post-Doctoral Fellowships Co-Directors: Casey M. Rebholz, PhD; Associate Professor (https://publichealth.jhu.edu/faculty/3208/casey-m-rebholz/) and Josef Coresh, MD, PhD; George W Comstock Professor (https://publichealth.jhu.edu/faculty/155/josef-coresh/)
- Doctoral Program Co-Directors: Eliseo Guallar, MD, DrPH; Professor (https://www.jhsph.edu/faculty/directory/profile/844/eliseo-guallar/)and Anne F. Rositch, PhD; Associate Professor (https://www.jhsph.edu/faculty/directory/profile/3087/anne-fortino-rositch/)
- Masters Program Co-Directors: Corinne Joshu, PhD; Associate Professor (https://www.jhsph.edu/faculty/directory/profile/2436/corinne-e-joshu/) and Catherine Sutcliffe, PhD; Associate Scientist (https://www.jhsph.edu/faculty/directory/profile/2280/catherine-gayle-sutcliffe/)
- BA-MHS Program Co-Director: Aruna Chandran, MD; Senior Scientist (https://publichealth.jhu.edu/faculty/1612/aruna-chandran/)

Epidemiology Administration

Central Administration oversees the Department's policy-making, financial management, research administration, human resources and payroll, and degree program leadership.

General Admin E-mail Contact: EPIADMINAP@jhu.edu

- Department Administrator: Thomas P. Bogdan
- Assistant Administrator & Sr. Financial Manager: April Hawkins
- Financial Manager: Steven D Bonaccorsi
- Human Resources information (BHRSCustomerServices@jhu.edu)

Academic Support Core and Student Funding

The Academic Support Core (https://www.jhsph.edu/departments/epidemiology/academic-support-core/) oversees the advancement of epidemiologic education and research for students and faculty through the coordination, management, and dissemination of Departmental courses, programs, and communications.

General Academic Core E-mail Contact: jhsph.epiasc@jhu.edu

- Director of Graduate Education and Instructor: Laura Camarata, MPH
- Senior Financial Manager, Matthew Miller
- Instructor: Ayesha Khan, DrPH
- Instructor: Allyn Arnold, SCM
- Communications Associate, Jonathan Eichberger, MA
- Senior Academic Program Manager: Frances S Burman, MSEd
- Academic Program Manager: Justin Switzer, MLS
- Senior Academic Program Coordinator: Ebony A Moore
- Academic Program Coordinator: Julie Thorne
- Academic Program Coordinator / Student Funding Coordinator: Jordan Meredith
- Academic Services Assistant: Sheila Small

Epidemiology Student Organization

Organization

The Epidemiology Student Organization (https://www.jhsph.edu/departments/epidemiology/eso/) (ESO) was established in 1982 to facilitate student-to-student and student-to-faculty communication in the department and to advocate for student needs. The organization is composed of all students associated with the Department of Epidemiology. It is a forum for planning various student activities, ranging from volunteer opportunities to social activities. The organization is open to new ideas and initiatives from the student body, and all epidemiology students are encouraged to actively participate in ESO activities. ESO meetings are open and encouraged to all students and are generally held on the first Monday of the month from 12:15-1:20 PM. E-mail Contact JHSPH.ESO@jhu.edu.

Alumni Engagement

Please join our alumni network (https://www.jhsph.edu/alumni/)for engagement opportunities, career news and information, and events around the world.

Professional Organizations

Students are strongly encouraged to join professional organizations related to their topical research interests and to attend and present their research at scientific conferences sponsored by those organizations. For a list of conferences of Interest as provided by Track Directors, please visit the Epi Intranet Site's (https://my.jhsph.edu/sites/EPI/default.aspx) *Epi Academic Resources* section ("JHSPH EPI Conferences of Interest").

Society for Epidemiologic Research

The Society for Epidemiologic Research (SER), established in 1968, provides a forum for sharing the latest in epidemiologic research and for student research presentations. The SER sponsors the *American Journal of Epidemiology* and *Epidemiologic Reviews*, and the annual SER meeting, which includes the John C. Cassel Memorial Lecture and contributed papers, symposia, and posters on a wide range of epidemiologic issues. Each year SER selects a limited number of students from the abstracts submitted to the annual conference to participate in an intense peer review/professional training workshop in which the students work with the faculty. This pre-conference activity provides the students with a venue to polish their work and provides an extra level of support and training at the professional level. Students are strongly encouraged to join the organization. The department has a limited amount of bulk memberships that can be requested by doctoral students in their second through fourth years, free of charge to the doctoral student. Applications are available online (https://epiresearch.org/).

American College of Epidemiology

The American College of Epidemiology (ACE) is a professional organization whose mission is to develop criteria for professional recognition of epidemiologists and to address their professional concerns. Its goals are to advocate policies and actions that enhance the science and practice of epidemiology; promote the professional development of epidemiologists through educational initiatives; to recognize excellence in epidemiology, and to develop and maintain an active membership base of both Fellows and Members representative of all aspects of epidemiology. Students are encouraged to participate as student (associate) members and are recognized annually through the Student Prize Paper for excellence in research. The Annual Awardee is invited to present their paper at the annual meeting. Information on the ACE is available online at https://www.acepidemiology.org (https://www.acepidemiology.org/)

American Public Health Association

The American Public Health Association (APHA) serves as the umbrella organization for public health and publishes the *American Journal of Public Health*, a print newsletter. The annual conference draws over 10,000 attendees and the APHA offers career search and mentoring services to become familiar with the profession. More information can be found online at https://www.apha.org/.

Scientific Publications:

American Journal of Epidemiology (AJE)

The *American Journal of Epidemiology* is the premier epidemiological journal devoted to the publication of empirical research findings, opinion pieces, and methodological developments in the field of epidemiological research. It is a peer-reviewed journal aimed at both fellow epidemiologists and those who use epidemiological data, including public health workers and clinicians. http://www.oxfordjournals.org/our_journals/aje/about.html. The *American Journal of Epidemiology* is published on behalf of the Department of Epidemiology and has been based in the department since its inception in 1920.

Epidemiologic Reviews

Epidemiologic Reviews, a sister publication of the *American Journal of Epidemiology*, is devoted to publishing comprehensive and critical reviews on specific themes once a year. Recent issues included the topics The Obesity Epidemic, Epidemiologic Research on Health Disparities, and Epidemiologic Approaches to Global Health. Department Chair, David Celentano, Professor of Epidemiology, currently serves as the Editor-in-Chief. http://epirev.oxfordjournals.org/

Research Focus

The Department is loosely grouped around 8 research focus "homes" called tracks. Tracks (https://www.jhsph.edu/departments/epidemiology/tracks/) are the substantive and methodologic educational units of the Department. They comprise faculty, staff, students, and fellows. The Department has eight tracks, each of which has a curriculum beyond the Department's core curriculum. Tracks are led by Track Directors. Each Track holds Journal Clubs, Research-in-Progress meetings, and other activities that Track students are expected to attend. These activities are opportunities to engage and interact with Track faculty, other students, and post-doctoral fellows, and to participate and present in the topic area of the student's Track. These opportunities are open to all students in the Department. Students are encouraged to attend activities of interest outside of their Track as well.

Cancer Epidemiology

Cancer epidemiology is the study of the distribution, frequency, and determinants of cancer and disease progression in populations worldwide. A greater understanding of the factors that impact cancer is crucial to developing effective preventive strategies to control the disease and minimize its burden. The cancer epidemiology track provides in-depth training in population-based, clinical epidemiology research related to cancer prevention, screening, early detection, and disease progression, with a focus on the more common cancers. Our graduates have made successful transitions to positions in academia, government, and private sector organizations. The track benefits from its close links with the Sidney Kimmel Comprehensive Cancer Center at Johns Hopkins, an NCI-supported training grant in cancer epidemiology, prevention, and control, community and clinical cohort studies, as well as national/international collaborations.

Cardiovascular and Clinical Epidemiology

Cardiovascular and clinical epidemiology includes the study of the determinants and distribution of cardiovascular diseases and other leading causes of disease burden in the population and approaches to their control. Training focuses on the use of epidemiologic methods in clinical research as well as interdisciplinary training on the epidemiology of cardiovascular disease. The program integrates knowledge on all aspects of disease etiology and control, including biology, behavior, prevention, and treatment. The main didactic course focuses on risk factors for cardiovascular disease and strategies for prevention. Seminar-style courses offer a more in-depth understanding of disease pathophysiology and clinical management and the role of epidemiology in informing clinical practice. Training emphasizes active participation in research and translational epidemiology using a collaborative approach, which is enhanced by close relationships between the Department of Epidemiology and clinical departments of the Johns Hopkins School of Medicine at the Johns Hopkins Hospital. The curriculum is designed to accommodate both clinical fellows who are interested in receiving a degree from the Department of Epidemiology and students who may not have a formal background in clinical medicine. A number of large ongoing cohort studies and clinical trials provide a rich environment for the conduct of research.

Clinical Trials and Evidence Synthesis

Randomized clinical trials and their synthesis using systematic reviews are important to evaluate interventions. The Clinical Trials and Evidence Synthesis (CTES) Track focuses on research and teaching of key methods that make clinical trials less prone to confounding and some biases than observational study designs. Systematic Review Methodology is another cornerstone of the track. CTES offers a modern curriculum, journal clubs, research in progress meetings, a seminar series, and hands-on training with clinical trialists and systematic reviewers. CTES faculty and post-docs have been coordinating large, often international multicenter clinical trials across a variety of content areas like pulmonary medicine, gastroenterology, ophthalmology, neurology, psychiatry, and infectious diseases for decades. These trials and modern approaches to evidence synthesis like network meta-analysis offer ample opportunities for training, scientific discourse, and methods development.

Environmental Epidemiology

Environmental Epidemiology concentrates on the impact of environmental exposures on health and disease states in human populations. Environmental Epidemiology is a multidisciplinary activity that integrates epidemiological methods, assessment of environmental exposures, and understanding of specific disease processes to identify the health consequences of environmental exposures. Environmental Epidemiology provides basic information for risk assessment, risk communication, and environmental health policy decisions and has a central role in identifying, implementing, and evaluating strategies for the prevention and control of environmental exposures. Training in Environmental Epidemiology emphasizes active participation in large population research projects, with close collaborations across the School and with national and international collaborators.

Epidemiology of Aging

The Epidemiology of Aging is the study of disease distributions and trends that are most prominent in older adults. The primary focus of the program is studying contributors to – and consequences of – age-related physical and cognitive decline. A secondary focus of the program is on the interaction of aging with disease processes, including but not limited to Alzheimer's disease, cancer, and HIV. In addition to the core curriculum, students are encouraged to engage in monthly journal clubs, bi-monthly research-in-progress seminars, and monthly seminars on aging with invited experts both internally and externally to Johns Hopkins. The Center on Aging and Health is an additional valuable resource that provides students the opportunity to interact with faculty across multiple disciplines within the Schools of Public Health, Nursing, and Medicine, and to engage in ongoing research projects. COAH is also home to the Epidemiology of Aging and Biostatistics training program, which includes T-32 funding for eligible students.

General Epidemiology and Methodology

General Epidemiology and Methodology is designed for individuals who seek to be a generalist rather than focus on a specific area (e.g., genetics or trials) or specific disease area (e.g., cancer). Therefore, students within General Epidemiology and Methodology are able to individually tailor their educational focus. To help achieve this, within General Epidemiology and Methodology we have three sub-tracks: a) individualized, b) methodological, and c) pharmacoepidemiology.

For the individualized sub-track, students can design their own educational programs in conjunction with their advisers. Students focusing on methodology often would like to position themselves at the intersection of epidemiological methods and biostatistics. Therefore, the recommended courses within the methodology track reflect this emphasis. Doctoral students with a methodology focus are highly encouraged to take the 140.651-140.654 Methods in Biostatistics series (in the second year). Furthermore, doctoral students with a methodology focus are encouraged to take the Biostatistics 140.646 - 140.649 series on probability and statistical inference and apply for the Concurrent School-Wide Master of Health Science Program in Biostatistics (https://publichealth.jhu.edu/academics/mhs-dept-of-biostatistics/concurrent-school-wide-master-of-health-science-program-in-biostatistics/) program.

The last sub-track focuses on pharmacoepidemiology, which is the study of the utilization and effects of drugs at the population level. The training focuses on providing students with the core knowledge of pharmacoepidemiology and drug safety. Finally, the burgeoning field of Social Epidemiology is housed within General Epidemiology. Students interested in measuring the social, demographic, and structural factors that impact population health and health equity are encouraged to meet with our social epidemiology faculty, select from several electives to provide a strong basis in the field, and participate in the school-wide Social Epidemiology Student Organization and Journal Club.

Genetic Epidemiology

Genetic Epidemiology is the study of the human genome and its role in complex diseases. Genetic Epidemiology focuses on the study of genetic and environmental factors and their interaction in complex diseases and in normal variations. Emphasis is on understanding the methodology and approach to designing, executing, and analyzing human genetic studies. This includes didactic learning, hands-on learning with real data, and discussion of literature. Training is broad-based and collaborative and encourages participation in research from faculty in the Johns Hopkins Bloomberg School of Public Health, the Institute of Genetic Medicine, and the School of Medicine.

Infectious Disease Epidemiology

Infectious disease epidemiology is the study of the distribution and control of infectious diseases in humans. It is a diverse field with studies ranging from cohort studies of chronic infections such as HIV to mathematical modeling of disease transmission to the emergence of disease across the human-animal interface. The infectious disease track's curriculum reflects the diversity of infectious disease epidemiology, with required classes focusing on critical biomedical knowledge and methodological techniques to provide a strong foundation for students with a diverse focus on problems in epidemiological research and practice. These include courses providing a broad overview of important infectious diseases and methods for their study, how the human body responds to pathogen exposure, and study design. In addition to the core courses, the track conducts regular journal clubs and research in progress meetings for students and faculty to exchange ideas and discuss the latest developments in the field. The large and diverse faculty affiliated with the track also affords students numerous opportunities to engage with individual research groups on topics.

Programs / Departmental offerings (https://www.jhsph.edu/departments/epidemiology/programs/)

Summer Institute

The Graduate Summer Institute in Epidemiology and Biostatistics (https://www.jhsph.edu/departments/epidemiology/continuing-education/graduate-summer-institute-of-epidemiology-and-biostatistics/) offers short, intensive courses in epidemiology and biostatistics intended to develop an understanding of the principles, methodologic strategies, and practical aspects of epidemiological research. The Department has offered the Summer Institute Program since 1983 and has trained thousands of students from the U.S. and around the world. Institute participants include students, clinicians, public health practitioners, physicians in training, and those considering a career in public health. Current postdoctoral fellows and degree-seeking students in epidemiology must pay 100% of institute tuition themselves. The minimum credits registration and its associated postdoctoral tuition apply in terms 1-4. Summer Institutes are outside of terms 1-4.

Statement on Inclusion and Diversity

JHSPH Epidemiology believes in Equity, Diversity & Civility, and is dedicated to developing solutions and responses that are meaningful, sustainable, and that do not duplicate activities that are already being done elsewhere in the School. (https://www.jhsph.edu/about/school-wide-initiatives/diversity-and-inclusion/) The Department of Epidemiology denounces individual and systemic racism in all its forms. Developing meaningful and lasting solutions requires collaboration, research, and time. The department's full statement on Racism as a Public Health Problem (https://www.jhsph.edu/departments/epidemiology/_pdf/Letter_on_Racism.pdf), a video (https://youtu.be/W16dp1UNsMc/) of our intent, and accompanying commitments, can be found on the Epidemiology Intranet Site (https://my.jhsph.edu/sites/EPI/Pages/Epi-Combatting-and-Addressing-Racism.aspx) ("Epidemiology Statement - Racism is a Public Health Problem").

Department diversity and inclusion activities fall under three broad overarching goals:

- Communicating epidemiologic science to broad audiences;
- Addressing how diversity influences our epidemiology practice and honoring the diversity in the audiences of our science; and
- Fostering a culture of diversity and inclusion in the Department

Each goal includes short-term and long-term activities for faculty, students, and staff. Some of these activities have already begun and others are still in the planning phase. These activities below are only those that are sponsored or led by the Department; please see 'Diversity and Inclusion Additional Resources (https://www.jhsph.edu/about/school-wide-initiatives/diversity-and-inclusion/resources/)' for a list of other resources offered through BSPH that are outside of the Department.

GOAL 1: Communicating epidemiologic science to broad audiences

- Host a series on "Communication of Epidemiologic Data" that can be embedded into Current Topics and would be open to faculty, staff, and students. Additionally, the department is exploring interactive workshops that could be held at Epidemiology Student Organization (ESO) meetings that follow-up on the topics discussed in a larger session
- Review the epidemiology core competencies and explore which competencies could be expanded to include a diversity component

GOAL 2: Addressing how diversity influences epidemiology practice and honoring the diversity in the audiences of our science

- Educate course instructors about how diversity by sex, gender identity, sexual orientation, race/ethnicity, discrimination, religion, socio-economic position, and populations that are understudied influences which epidemiological methods are used and the interpretation of study results
- Expand course offerings on diverse populations and allow student interaction with the populations studied through service-learning courses
- The Department supports a Community Engagement Liaison who coordinates Day at the Market (https://ictr.johnshopkins.edu/community-engagement/programs/day-at-the-market/) opportunities, which students should join. These are Johns Hopkins-coordinated outreach and education sessions to reach community members about health topics every Wednesday. Other sponsors include the Department of Environmental Health and Engineering, the Sidney Kimmel Comprehensive Cancer Center at Johns Hopkins, and the Institute for Clinical and Translational Research
- Starting in 1st term of the Academic Year, The Director of Graduate Education (Laura Camarata) directs a Special Studies (340.840) on Community Engagement, giving students credit for participating in the Hopkins Day at the Market
- The Department recommends that master's and doctoral students register for this special studies course once during their degree program. Contact Laura Camarata at lcamarata@jhu.edu for more information

GOAL 3: Fostering a culture of diversity and inclusion in the Department

- To open up the discussion about diversity and inclusion in the Department
- Offer diversity and inclusion training for faculty and staff
- Host student-led workshops and small group discussions on diversity
- Epidemiology Student Organization (ESO) would like to ensure that the group of students who plan activities and events reflect the diversity of the Department and the communities served. If students are interested in helping to develop or plan these events in the coming year or be otherwise involved in ESO events, please contact JHSPH.eso@jhu.edu

Inclusion, Diversity, Equity, and Science (Epi IDEAS) Workgroup

Formed in November 2016 to address the needs of students, staff, and faculty to make a difference in the academic and research life of the department and school. Specifically, to

- Liaise between students, student leaders, and departmental leadership about challenges and opportunities for inclusion, diversity, and equity
- Review and offer suggestions for curricular needs on interpreting scientific findings through a lens of diversity and inclusion
- Design activities that encourage inclusion, diversity, and equity
- Promote a safe learning environment within the Department

The Epi IDEAS group has Epidemiology students, faculty, and staff representation. For more information, contact the Director of Graduate Education, Laura Camarata (lcamarata@jhu.edu).

    - Includes an East Medical Campus Location at Reed Hall, Suite 403, 1620 McElderry Street, Baltimore, MD 21205

Conduct and Training

All students, staff, and faculty are expected to abide by the academic (p. 634), behavioral, (p. 648) and research conduct (p. 651) policies of the School and University.

Academic & Research Ethics (and Avoiding Plagiarism) Course Requirement

All students must complete 550.860.82 Academic & Research Ethics (https://www.jhsph.edu/courses/course/29897/2020/550.860.82/academic-research-ethics-at-jhsph/) prior to or during the first term of enrollment in the School. Students must complete the Avoiding Plagiarism training (https://guides.library.jhu.edu/avoidingplagiarism/) developed by JHU's Sheridan Libraries and is an online course. Students must submit the completion certificates as proof of completion of these pieces of training. Subsequent terms registration can be blocked awaiting the completion of these courses.

- Certificate from JHU for the Avoiding Plagiarism module
- Certificate from SPH for completion of the Responsible Conduct of Research module

Students must also send a copy of the certificates to the Senior Academic Program Manager, Frances Burman (FranBurman@jhu.edu) with their name and "Academic & Research Ethics Requirement" in the subject line of the e-mail.

Office of Institutional Equity

The Office of Institutional Equity (https://oie.jhu.edu/) handles many issues. Specifically, this office handles Discrimination and Harassment (https://oie.jhu.edu/discrimination-and-harassment/), Sexual Misconduct (https://oie.jhu.edu/sexual-misconduct/), ADA Compliance and Disability Accommodations (https://oie.jhu.edu/ada-compliance/), Religious Accommodations (https://oie.jhu.edu/religious-accommodations/), and Training (https://oie.jhu.edu/training/). All students must complete Title IX and Harassment Prevention Training (http://lms14.learnshare.com/authenticate/Login.ClientDetect.aspx?Redir=%2fl.aspx%3fCID%3d89%26A%3d1%26T%3d568688). Further, the Department of Epidemiology requires Unconscious Bias Training (https://hr.jhu.edu/learn-grow/diversity-and-inclusion-training/) as well. OIE also defines Confidential Resources (https://oie.jhu.edu/confidential-resources/) and houses the Roadmap to Diversity and Inclusion (https://oie.jhu.edu/diversity/roadmap-on-diversity-inclusion/), the JHU Diversity Leadership Council (https://diversity.jhu.edu/diversity-at-jhu/diversity-leadership-council/), and the office of the Vice Provost for Institutional Equity (https://diversity.jhu.edu/).

Communication

All communications between the Department and the students are conducted via email to the JH.edu address. Therefore, students are required to activate and monitor their emails and respond to requests politely and in a timely fashion. Staff and faculty endeavor to do the same. The Johns Hopkins University-hosted email is an official form of Department-related communication. Students have the responsibility to stay current in this communication while enrolled and recognize that certain communications may be time-critical. Failure to check for messages and failure to receive messages due to full mailboxes, spam filtering, lapses in service, or auto-forwarded email, etc., are not acceptable excuses for missing official communications. Graduates are expected to convert their emails through the Alumni Office (https://alumni.jhu.edu/alumniemail/injhed/).

Academic Policies

The Department of Epidemiology encourages students to identify questions and concerns, research these through this catalogue and the School website, and bring nuanced questions to the Office of the Senior Academic Program Manager, the Director of Graduate Education, or their academic adviser for discussion. All requests for changes to program, track, advising, courses, and departmental requirements should be submitted in writing with the endorsement of the academic adviser for review by the Admissions and Credentials Committee via email in care of FranBurman@jhu.edu.

Advising Changes

The adviser has the responsibility of assisting the student in designing an academic program that meets the student's goals within the framework of the requirements of the Department and School. The adviser guides the student to appropriate resources and research opportunities. The adviser is the first point of contact in resolving academic problems and concerns. For a variety of reasons, a student/faculty member may wish to change adviser/advisee. Student-initiated changes of adviser should be made with the Academic Office, please see Departmental Forms (https://my.jhsph.edu/sites/EPI/Departmental%20Forms/Forms/Public%20listing.aspx) ("Change or Add New Adviser or co-Adviser Form (https://my.jhsph.edu/sites/EPI/Departmental%20Forms/Change%20or%20Add%20Adviser%20or%20Co-adviser%20Form.pdf)"). It is the student's responsibility to meet with the current adviser and the intended or additional adviser prior to the request and to obtain the signatures of both faculty members prior to submitting the request. Please note that epidemiology degree-seeking students seeking a primary adviser change must retain a faculty member with a full-time primary appointment in Epidemiology. Faculty wishing to initiate a change should use the same form and will need to submit a report of the student's progress at the time of this request.

Enrollment Requirements

Masters and doctoral students are considered full-time students and must maintain a minimum registration of 16 credits per term continuously during terms one through four through completion of all degree requirements. Students wishing to drop below 16 credits must consult with their adviser and the Senior Academic Program Manager. International students must also consult the Office for International Services. The minimum credits registration and its associated tuition apply in terms one through four. Summer Term and Summer and Winter Intersessions are outside of terms one through four and, therefore; tuition for Summer and the Intersession or Institutes is the responsibility of the student.

Leave of Absence

The School offers mechanisms for students who need to take medical or other caregiving/care-receiving leaves throughout the program. Students wishing to explore their options should discuss their situations with the Senior Academic Program Manager or the Director of Graduate Education, review the policy statement, (https://www.jhsph.edu/offices-and-services/student-affairs/resources/student-policies/_documents/Academic_Leave_of_Absence.pdf) and file the appropriate Leave-of-Absence form available from the Office of Registration and Records.

Program Changes

Students are expected to complete the degree program they entered based on the review by the Admissions Committee at the time of acceptance to the program. In rare instances, students may request changes to their degree program. It is the student's responsibility to meet with the current adviser and the co-directors of the intended program prior to the request and to obtain the signatures signifying endorsements prior to submission to the Admissions Committee. Transfers from the MHS and SCM to the PhD program are not permitted. Students enrolled in our masters' programs must complete their degree requirements prior to enrolling in the PhD program.

Track changes

Students may find that their research focus changes between the time of application through the time of matriculation. Students may change tracks by submitting the request form (https://my.jhsph.edu/sites/EPI/Departmental%20Forms/Change%20or%20Add%20Adviser%20or%20Co-adviser%20Form.pdf) to the Senior Academic Program Manager through the second term of their first year (December 31), provided they have completed the required courses (offered thus far) for the new Track. Changes to Tracks after this time require the request form, (https://my.jhsph.edu/sites/EPI/Departmental%20Forms/Change%20or%20Add%20Adviser%20or%20Co-adviser%20Form.pdf) letter of request, a plan for completing the courses required of the new track, and written approval from the adviser and intended track's Director. Occasionally, this may require a change in advisers as well. Other instances requiring a change in track include failure of track-related courses or the track-specific section of the comprehensive examination (Part B) and should be discussed with the Senior Academic Program Manager, the adviser, and the current and intended track directors.

Course waivers

The Department expects students to have some familiarity with the field prior to enrollment. In the case where students have successfully completed the coursework required by the track, the director may approve that coursework. The Johns Hopkins University system does not accept transfer credits but does accept previous knowledge. Therefore, students may request waivers of required coursework thus providing time to take additional relevant coursework. Graduate students who believe they have passed equivalent graduate-level courses (with a grade of B or higher) at other institutions may apply for a waiver for courses. Request Forms (https://my.jhsph.edu/sites/EPI/Departmental%20Forms/Course%20Waiver%20Form.pdf) should be sent to the Senior Academic Program Manager, Frances Burman. Requests must include a clear rationale, a course syllabus, and a transcript (unofficial is okay) from the institution where the course was taken. Waiver requests require adviser and primary instructor (if Epidemiology course) consent, as well as approval from the Admissions and Credentials Committee. Waivers of Track required courses require approval from the Track director as well. The Epidemiologic Methods sequence 340.751-753 and completion of either 140.621-624 or 140.651-654 Biostatistics series may not be waived.

Primary Data Collection Waiver

The Curriculum Committee of the Department of Epidemiology acknowledges that in the era of "Big Data", many important research questions can be satisfactorily answered and insights gained from pooling large data sets. As these are often long-standing collaborative research studies, they would be impossible to complete by one student during a training program. Therefore, the department developed policy and waiver documents to be developed and discussed by the thesis advisory committee and included in the doctoral proposal document. Students can access these under the PhD Policies section of this catalogue.

Teaching Assistantship requirement substitutions

Requests to substitute a methods course for a topical course or an online modality for an on-campus modality should be made by a letter of request and endorsement from the adviser to the Curriculum Committee after discussion with the director of graduate education, Laura Camarata.

Student Evaluations

The evaluation of satisfactory academic progress and the individual course letter grades are handled at the School level and tied to federal regulations. Therefore, any student who earns a grade of C or lower or a cumulative grade point average below the minimum for the degree program is *automatically reviewed* by the Departmental Admissions and Credentials Committee, the track and program directors, and the Schoolwide Committee on Academic Standards (http://www.jhsph.edu/offices-and-services/office-of-academic-affairs/) (CAS). Students whose grades fall below the minimum standard should submit an explanation and waiver request but *should be prepared to retake the course if necessary*. For students receiving financial aid, the Office of Financial Aid will also review any C grades or grade point cumulative averages below the minimum for the degree, *which may result in loss of financial aid for the upcoming term*. To that end, the Senior Academic Program Manager, along with the Departmental Admissions and Credentials Committee, review mid-term grades for the 340.751, 340.752, and 340.753 courses, and the biostatistics series, and contact students whose work may place them in jeopardy for the above review. The Department policy remains that students are permitted "1 free C" without placement on academic probation. However, students who earn C in any of 340.751-753 and/or 140.621-624 or 140.651-654 may be required to retake that course in the following year next year unless:

- Students obtain an A in at least one of the subsequent courses of the series without receiving another C (or any lower grade);
- Students pass the comprehensive exam at the appropriate level for their degree program prior to the following year

Students are expected to earn As and Bs in Epidemiology coursework, (minimum equivalency of 80%) maintain a cumulative GPA (2.75 for master's; 3.0 for doctoral), and pass the Department Comprehensive exams at the designated level. Other grounds for removal from degree candidacy include

- Any grade of D or F in a required course;
- Two grades of C in required courses;
- Two grades of D or F or any combination thereof in elective courses;
- Failure to maintain a minimum cumulative GPA of 2.75 for masters and 3.0 for doctoral students;
- Failure on one or both parts of the Department comprehensive exam;
- Failure to maintain progress on dissertation research/thesis projects; or
- Academic or behavioral ethics violations

In such cases, after reviewing the student's performance, the Departmental Admissions and Credentials Committee will make a decision regarding the student's continuation in the program and notify the Department Chair for a final decision. Occasionally, students may be placed on academic probation within the department prior to dismissal. This time period will permit students to attempt to bring their GPA above 2.75 for masters and 3.0 for doctoral programs. Conversely, any student whose GPA removes them from academic probation will be notified and reported to the Admissions and Credentials Committee.

Students may choose to withdraw from the degree program or School at any time but should consult with their adviser and the Senior Academic Program Manager prior to making this decision. Failure to maintain registration is considered a withdrawal from the School.

The Department fully expects that students will be able to handle the course load; however, if students experience being overwhelmed, they are encouraged to contact their adviser(s), The Director of Graduate Education, Laura Camarata, lcamarata@jhu.edu (office 443-287-2723), the Senior Academic Program Manager, Frances Burman, FranBurman@jhu.edu (office 410-955-3926), the Office of Student Life (http://www.jhsph.edu/offices-and-services/office-of-student-life/) (410-502- 2487), and/or JHSAP (http://jhsap.org/) (443-287-7000).

Student Funding

Students registered full-time in the School are eligible for consideration for a number of scholarships, research fellowships, and awards offered by the various departments of the School. Most of these are listed in the School's catalogue. Notices generally begin appearing on bulletin boards and as email announcements throughout the School during the second term. Applications should follow the instructions provided by the announcements. These awards are usually made in early spring for the upcoming academic year. A full list of such scholarships can be found on the School's website, (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/funding-and-scholarships (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/funding-and-scholarships/)), which was developed by the School to help students identify and secure outside sources of support for tuition and academic research. The Student Funding Guide (https://www.jhsph.edu/offices-and-services/student-affairs/financial-aid/_documents/Funding%20Resource%20Guide_2122.pdf) is updated annually and serves a critical purpose in outlining support for graduate students.

Room W1101, (410) 955-5725, jhsph.bursar@jhu.edu

Masters Level

The School (not the Department) provides Master's Tuition Scholarships in the 2nd year in the amount of 75% tuition scholarships for students who have completed the first-year curriculum (and 64 credits) and who have passed the Department comprehensive exams. The Master's Tuition Scholarship covers four terms only and is only awarded when students have registered for a minimum of 16 credits per term. Incoming students must select the distribution of the MTS (either 25% of tuition in year one and 50% tuition in year two or 75% tuition in year two) at the time of acceptance and intent to enroll. The distribution cannot be changed after enrollment. Additionally, students in the Epidemiology MHS and ScM programs qualify for some of the endowments.

Doctoral Level

The Department of Epidemiology is committed to helping students pay for their graduate education. Sources of student support are outlined in this Handbook. Incoming doctoral students are considered for all possible training grant positions and tuition support both in the Department and at the School. The doctoral program is a 4-year program. The exception is for students who received a JHSPH master's degree within the 3 years prior to doctoral matriculation, including having completed the first-year Department of Epidemiology course curriculum and passed the Department of Epidemiology's comprehensive examination; such a student will enter as a second-year doctoral student and their doctoral program is 3 years. The Department will provide 100% tuition support for 4 years, unless the doctoral student enters as a second-year student, in which case, the Department will provide 100% tuition support for 3 years. For all years of tuition support, the Department will also cover the costs of individual-level JHSPH student health insurance (if elected), and the University's UHS clinic fee. Continued support beyond the first year is contingent on the successful completion of 64 credits with a 3.0 GPA and must earn a grade of "B" or higher in all required courses in the core departmental curriculum that are offered for letter grading and a "Pass" grade for those only offered on a pass/fail basis. In addition, students must successfully pass the Department's comprehensive examination.

Each spring, students are asked to complete a student funding plan and thesis timeline regarding their anticipated needs for the upcoming year. It is assumed that students who do not submit the form(s) on time do not require tuition funds from the Department. Students receiving any of the support mentioned above (including those in training grant positions) must request tuition support for each year of the program. The Student Financial Coordinator (Matthew Miller) handles all tuition requests for the Department and the Admissions and Credentials Committee. Additionally, doctoral students qualify for some of the endowments.

Selection of all funding packages is made by the Admissions and Credentials Committee prior to the start of the academic year and is not subject to revision based on exceptional academic performance. However, continued funding support is contingent on satisfactory progress in one's doctoral program. All students must remain full-time (a minimum of 16 credits per term) during the standard academic year throughout the program to qualify for Department tuition support; part-time tuition scholarships (<16 credits/term) will not be permitted. In addition, the tuition scholarship does not apply to either the summer term or to various summer or winter institutes held in JHSPH. Finally, Department tuition support may not be repurposed for other uses (for example as a stipend) in the event of alternative funding.

Special Note: Students under special circumstances (new child-parent, poor health, extended family emergencies, etc.) may request an official Leave of Absence (p. 641) period from their program. It is expected that the student will pay the required leave of absence fee ($50 per term). Those who take a leave of absence MAY be eligible to request funding terms beyond the normal period of support provided satisfactory progress has been achieved. All extended support must be granted by the Admissions and Credentials Committee which will determine if adequate progress has been achieved to warrant support. For example, a student who went on Leave of Absence for two terms (as caring for a new child) during their third year of support MAY be eligible to request those lost two terms of Department support during their return to full-time student status, provided the student is close to the defense of their thesis.

Grant Application Assistance:

This policy applies to any Department student proposal (for dissertation, fellowship, stipend support, or otherwise) by which an external agency would award monies to the student through the University. The student must schedule an initial meeting with the Student Funding Coordinator ***at least 45-60 days prior to the due date*** of the proposal to discuss the terms of the application and to be oriented to internal procedures. Any application brought to the Student Funding Coordinator's attention less than 30 days prior to the due date will not be considered. The student should send a copy of the PA (Program Announcement) or terms and Conditions to the Student Funding Coordinator prior to the meeting for review. The Student Funding Coordinator will assist the student with the cover page, budget, and any administrative or technical questions. Students must work with their mentors or advisers to develop an acceptable research proposal (science). The mentor or adviser must acknowledge a draft of the science (aims and research methods); certifying that it has met acceptable standards for submission before it is submitted to the Department Chair for final approval. A copy of the research proposal/science (Specific Aims and Research Strategy only) affirmed by the adviser/mentor must be submitted to the Department Chair (W6041) ***no later than 10 business days prior to the due date*** for review. The adviser/mentor (not the student) should e-mail this document to their attention certifying that the science has met an acceptable review. The student should immediately schedule a second meeting with the Student Funding Coordinator to review the final proposal and complete a JHURA internal information/compliance worksheet. *This second meeting should take place at least 5-7 business days prior to the due date* so the Student Funding Coordinator has time to obtain the necessary e-signatures (Department Administrator, Department Chair). The application (minus the science) must be submitted along with a signed information sheet to Johns Hopkins University Research Administration (JHURA) ***no later than 5 business days prior to the due date for review***.

Endowed Funds / Current Use Scholarships / NIH Training Grants (https://www.jhsph.edu/departments/epidemiology/training-programs/)

The following awards are sponsored by the Department of Epidemiology for degree candidates in the Department. Requests for nomination are issued every December, and applications are received and reviewed by the Department's Honors and Awards Committee; award recipients are notified in the spring.

Open to Epidemiology MHS, ScM, and doctoral students:

Miriam Brailey Fund: The fund is named after Dr. Brailey, the first woman to be named to the Department's faculty. It was established by Dr. Jonathan Samet in 2000. The fund is designated as incoming support for graduate training and research in the Department of Epidemiology and will support members of underserved populations.

Charlotte Ferencz Scholarship: Dr. Ferencz devoted her professional life to unraveling the enormously complex issues posed by congenital heart disease. This scholarship supports students' research projects in the field of maternal and child health epidemiology. The intention of the Scholarship is to have the research, which may be part of the faculty's work, lead to a student's doctoral or master's thesis.

The Abe Lilienfeld Scholarship Fund: This endowment was established by Johns Alexander, MD, MPH, in memory of this distinguished former faculty member. Preference will be given to outstanding students in the area of applied epidemiology.

The Dorothy and Arthur Samet Student Support Fund in Epidemiology This endowment was established by Dr. Jonathan Samet in 1996 to create a general fund to support student research or other activities. No application procedure is required; faculty members will nominate a qualified student. The award is presented to masters or doctoral students whose dissertation research and/or extracurricular activities, exemplify a significant contribution in the field of epidemiology.

Louis I. Dublin and Thomas D. Dublin Fund for the Advancement of Epidemiology and Biostatistics: The award in Biostatistics and Epidemiology will support graduate student research. The award is open to current and new students in both departments. Selections will alternate annually between Epidemiology and Biostatistics. The winner of this award will be selected by the Department of Biostatistics. Per the website, the application material is due in February.

Student Travel Support Fund in Epidemiology: This fund supports student travel to present at conferences, symposiums, and the Society of Epidemiologic Research annual meeting. The poster or presentation must be directly related to the dissertation and be accepted by the symposium or conference. It is a one-time award per student. The review will be ongoing throughout the year. Applicants will submit a letter requesting funds, a copy of their abstract, a letter of acceptance from the conference, and a travel budget of up to $750 to the Student Financial Coordinator for distribution to the Honors and Awards members. Doctoral students can include any directly-related travel costs in the up to $750 budget. Master's students and Postdoctoral fellows can only submit for registration costs up to a $500 allowance. Student applicants must be degree candidates in the Department of Epidemiology (MHS, ScM, PhD, or Postdoctoral) at the time of the conference to receive funds.

The Marilyn Menkes Book Award: The Marilyn Menkes Book Award was established in 1988 by friends and colleagues of Dr. Marilyn Spivak Menkes to commemorate her personal integrity and academic excellence. Each year, the Epidemiology Student Organization organizes a call for nominees and the vote on the awardee. The award is a $100 prize toward the purchase of a book selected by the winner and presented to the recipient at the Department of Epidemiology's annual awards reception. Balloting is generally held during the third term each year.

Reserved for Current Masters (MHS and SCM students Only)

The Trudy Bush Fund: Family and friends of Dr. Trudy Bush, a former faculty member in the Department of Epidemiology, have created this fund in her memory to support a student pursuing an MHS or ScM degree in the Department of Epidemiology with a specialization in women's health.

The Nancy Fink Scholarship and Service Award: The award was established to honor the memory of Nancy Fink, a beloved faculty member of the Welch Center and a Senior Scientist in the Department of Epidemiology and jointly in the Department of Medicine, who passed away in 2010. The fund supports an accomplished master's student in the Department.

Anna Huffstutler Stiles Scholarship: Created by Dr. H. M. "Mac" Stiles in memory of his mother, Anna Huffstutler Stiles, this scholarship will support graduate students in the Department of Epidemiology. Preference will be given to an outstanding second-year master's student.

Reserved for Current Epidemiology doctoral students Only

Dr. and Mrs. Roscoe Moore Jr. Scholarship: Dr. and Mrs. Roscoe Moore established this fund in 2000. The fund will be used to support doctoral students. All eligible students are considered with preference given to graduates of historically black colleges and universities.

The Charlotte Silverman Award: This award was established by Dr. Silverman in 1996 to acknowledge scholarly endeavors related to epidemiology and public policy with the goal of improving the health of communities. This award is designed to recognize Department of Epidemiology doctoral students and newer faculty for outreach projects involving significant research, education, and/or service.

The Jean Coombs Award: This endowment was established by the estate of Jean Coombs (PhD '78). Preference is given to a doctoral student whose dissertation research concerns cancer or childhood diseases.

The Ellen B. Gold Fund for Epidemiology: Income from the fund supports graduate students in the Department of Epidemiology. At least one award will be given each year to an academically outstanding doctoral student with financial need, who is within their first five years of studies.

Doctoral Thesis Research Fund: The Department awards approximately 10 research grants each year to enable doctoral students to conduct research in the field of Epidemiology. The grant is designated for start-up funds of up to $5,000 for doctoral thesis research and may be used for basic costs such as photocopying, buying of materials and supplies, payment of interviewers, etc. Application forms (contact the Student Financial Coordinator for details) should be completed including a statement of whether or not the project could be conducted without the Department funding, include the itemized budget, and include the 3-5 page thesis proposal. Applications should be submitted to the Student Financial Coordinator's Office (W6510) upon the successful completion of the preliminary oral examination and IRB approval. Applications are reviewed by the members of the Honor and Awards Committee in a review cycle (to be determined). Students must be post-oral doctoral degree candidates in the Department of Epidemiology at the time of support. Applications should be received on October 31st and March 31st of each year respectively.

Incoming PhD Students in Epidemiology

The Admissions and Credentials Committee considers all doctoral applicants for all possible funds and support. Applicants may indicate that they wish to be considered for specific grants but this is not required.

The Mary Meyers Scholars Program in Epidemiology: The Department of Epidemiology is pleased to have a generous and competitive scholarship program designed to identify, select, and support outstanding doctoral applicants. Selected incoming doctoral students will receive tuition support and stipend support. The program is open only to new students enrolling at JHSPH for the first time. The program provides a stipend and a full-tuition grant to cover the first year of the doctoral program for the selected candidates. The Department expects to fund 1-2 students annually. Priority is granted to the very top candidates in reproductive and infant and child health from each entering class. Further funds may be available to the initial awardees for their subsequent years of study on a competitive renewal process. The Honors and Awards Committee will review and award continuing support if warranted. The Scholars Program was originally established in 1981 by Dr. Meyer's family and friends as a lasting memorial to an associate professor who gave much to students and to the School. Through the continued generosity of her family, the Mary Meyer Award is now known as the Mary Meyer Scholars Program.

The Robert Dyar Award: Dr. Robert Dyar (MPH '37, DrPH '38) established this award to support the Department of Epidemiology students who are concurrently pursuing medical degrees and who demonstrate a commitment to incorporating these fields in their research and future careers. The award is designed for incoming Epidemiology graduate students who have completed medical education or who have or are concurrently seeking medical degrees and is open to Doctoral applicants. Funds will be used to offset tuition or for a stipend.

Harvey M. Meyerhoff Fellowship in Cancer Prevention: This endowment was established by the Joseph Meyerhoff Family Charitable Funds in 2003 to assist with cancer prevention efforts. Income from this fund will support a stipend or tuition for a doctoral student in the Department of Epidemiology whose research focuses on the epidemiology of cancer and cancer prevention.

Levy/Russo Doctoral Scholarship in Epidemiology: The "current use" scholarship supports one doctoral student in emerging infectious diseases with a stipend for four years.

Current NIH Training Grants supporting Epidemiology Students

This listing may not reflect all NIH grants supporting the Department of Epidemiology students but is accurate as of June 2020.

NIH NRSA T32 Training Grants (Pre- and Postdoctoral Fellowships)

The Department offers a limited number of NIH-supported, pre-and postdoctoral fellowship opportunities for U.S. citizens or U.S. permanent residents. Decisions regarding the distribution of funds for tuition and stipend support are made by Committees representing the various training grants and headed by the principal investigators listed.

Epidemiology and Biostatistics of Aging Training Program: Dr. Karen Bandeen-Roche

Cancer Epidemiology, Prevention, and Control Training Program: Dr. Elizabeth Platz

Cardiovascular Epidemiology Institutional Training Program: Drs. Josef Coresh, Elizabeth Selvin, and Shoshana Ballew

Johns Hopkins HIV Epidemiology Prevention Sciences Training Program: Drs. Chris Beyrer and Shruti Mehta

NHLBI Training Program in Pharmacoepidemiology: Drs. Caleb Alexander and Jodi Segal

Renal Disease Epidemiology Training Grant (postdoctoral only): Dr. Lawrence Appel and Christine Mitchell

Training Awards (Non-NIH)

MD-GEM: The Maryland Genetics, Epidemiology, and Medicine Training Program (predoctoral only): Drs. Priya Duggal and David Valle; *Sponsored by the Burroughs Welcome Fund*

Cochlear Center for Hearing and Public Health: Drs. Frank Lin and Jennifer Deal
https://www.jhucochlearcenter.org/students.html

Additional training mechanisms available through the **Welch Center for Prevention Epidemiology and Clinical Research:**

- Graduate Training Programs in Clinical Investigation (http://www.jhsph.edu/academics/graduate-training-programs-in-clinical-investigation/)
- Clinical Research and Epidemiology in Diabetes and Endocrinology (http://www.jhsph.edu/research/centers-and-institutes/welch-center-for-prevention-epidemiology-and-clinical-research/training/training-programs/clinical-research-and-epidemiology-in-diabetes-and-endocrinology/index.html (http://www.jhsph.edu/research/centers-and-institutes/welch-center-for-prevention-epidemiology-and-clinical-research/training/training-programs/clinical-research-and-epidemiology-in-diabetes-and-endocrinology/))

Upon notification of selection to receive support, the student should direct fiscal questions to the Student Financial Coordinator (mimille16@jhu.edu). Additionally, departmental students may be supported on grants housed in other departments or schools within the University. However, it is necessary that this information be relayed to the Student Financial Coordinator for administrative purposes.

NIH F-Level Individual Predoctoral National Research Service Awards (NRSAs)

As a result of the advisory Biomedical Research Workforce Working Group to the NIH Director, nearly all NIH institutes and centers offer individual predoctoral (F30 and F31) NRSA fellowships. The Department encourages each eligible graduate student to apply for individual fellowship grants. Interested students should first talk with their adviser(s) and the Student Financial Coordinator. Individual institute and center information and guidelines may differ from one another and can be explored at:

- https://grants.nih.gov/grants/guide/pa-files/PA-19-195.html: (Parent F31 for predoctoral fellowships)
- https://grants.nih.gov/grants/guide/pa-files/PA-19-196.html (F31 to Promote Diversity predoctoral fellowships)

The Department hosts an annual information session at the start of the third term, hosted by recent successful student applicants to F-level awards, and in partnership with the Student Financial Coordinator, designed to prepare interested applicants to make a decision about whether, and when, to apply for an F-level grant. The Student Financial Coordinator also keeps a repository of supplemental items and is current on best practices and policies.

Donations / Giving

The Department greatly appreciates its alumni and friends and welcomes your support (https://www.jhsph.edu/giving/) in all ways. To find a way to support our mission, our students, and our research, please contact the Development Office. (jhsph.development@jhu.edu)

Epidemiology, MHS

Master of Health Science Degree Programs

Ideal for individuals with strong science and mathematics skills who may or may not have research experience, the MHS in Epidemiology is a two-year, intensive academic degree program that focuses on applying epidemiological and biostatistical methods to a variety of current public health issues. Successful applicants are those individuals who are motivated to use advanced quantitative methods to analyze public health information and use a translational approach to communicate results. Students select and specialize in one of the research tracks listed below and complete at least 64 credit units in epidemiology, biostatistics, and elective courses, pass a written comprehensive exam, produce a high-quality thesis, and present their research during the annual poster symposium. Graduates from the MHS go on to positions in research coordination, government, and policy work, consulting or pharmaceutical research, or pursue doctoral degrees after some years of work experience in a variety of fields.

https://publichealth.jhu.edu/departments/epidemiology/programs (https://publichealth.jhu.edu/departments/epidemiology/programs/)

Bachelors/MHS

The Bachelors/MHS degree is designed for undergraduate students at Johns Hopkins University who are majoring in Public Health Studies (https://krieger.jhu.edu/publichealth/academics/bamasters-program/) and who are interested in pursuing an advanced degree at JHSPH and prepares students for further graduate work or prominent careers in research and science. The benefit of the Bachelors/MHS is that it allows Johns Hopkins University undergraduates (only) to take BSPH courses during their undergraduate program and apply up to 16 credits accumulated as undergraduates into the MHS program. Students who complete the undergraduate degree at JHU enroll as MHS candidates and follow the MHS program, with a compressed version of the master's degree encouraged.

Academic Advising

Master's students are each assigned a group academic adviser for the first three terms of the program. The Group Master Adviser is an academic adviser who meets with a group of advisees regularly to discuss academic issues, progress, development, and goals in the degree program.

The Group Master Adviser is a faculty member in the Department of Epidemiology but may/may not be from the advisee's Track. Throughout the Spring, the track directors, with input from the students and faculty, assign the student a thesis adviser. The thesis adviser may be a faculty member with a primary or joint appointment in the Department of Epidemiology. If the thesis adviser has a joint appointment in the Department, a faculty member with a primary appointment in the department must co-advise with the thesis adviser, and serve as the primary adviser of record.

All Master's students are required to meet with their thesis advisers regularly. Students should work with their thesis advisers to develop a timeline for completing their thesis research by the required deadlines. Students are expected to begin thesis research in the summer after their first year.

Academic Year 2022-23 Applies to MA, MAS, MHA, MHS, MS and MSPH

Due Dates for Summer Conferral (August 26, 2022)

JUNE 10, 2022

- Special Project, Scholarly Report, Paper or Thesis has been submitted to the Department Chair or Adviser

August 26, 2022

- Department Chair has:
    - Indicated in writing to the Office of Records and Registration that all degree requirements have been fulfilled
    - Certified the student's eligibility for award of degree

Due Dates for Fall Conferral (December 30, 2022)

October 21, 2022

- Special Project, Scholarly Report, Paper or Thesis has been submitted to the Department Chair or Adviser

December 16, 2022

- Department Chair has:
    - Indicated in writing to the Office of Records and Registration that all degree requirements have been fulfilled
    - Certified the student's eligibility for award of degree

Due Dates for Spring Conferral (May 25, 2023)

April 7, 2023

- Special Project, Scholarly Report, Paper or Thesis has been submitted to the Department Chair or Adviser

May 5, 2023

- Department Chair has:
    - Indicated in writing to the Office of Records and Registration that all degree requirements have been fulfilled
    - Certified the student's eligibility for award of degree

Degree Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Residency / Registration Requirement

A minimum of 64 credits is required to complete either the MHS degree. The residency requirement is four consecutive terms of at least 16 credits each. Residency must be completed during the first year of the program. Other than for BA/MHS students, the MHS degree program usually requires two years of full-time registration to complete the required coursework and thesis but may, under unique circumstances, be completed in 14-months.

Non-Class Requirements

TRACK-SPECIFIC ACTIVITIES MASTERS

Each Track holds journal clubs, research-in-progress meetings, and other activities, that those Track students are expected to attend (list included in this Student Handbook). These activities are opportunities to engage and interact with Track faculty, fellow students, and post-doctoral fellows, and to participate and present in the topic area of the Track. All master's students are expected to participate in their Track. If a student for some reason wishes to switch tracks during the course of their degree, they must schedule a meeting with the Senior Academic Program Manager, Frances Burman (FranBurman @jhu.edu (FranBurman@jhu.edu)) to ascertain whether a switch is feasible to still meet graduation requirements in time and to complete a formal form.

QUARTERLY MASTER'S MEETINGS

The Master's Program Co-Directors host quarterly meetings with all of the first and second-year Master's students. These meetings provide a forum to learn about academic policies and deadlines, for students to raise questions and concerns, and for all to hear the answers. All Master's students are expected to attend.

Core Coursework (Required for All Epidemiology MHS and Bachelors/MHS Students)

The Masters Level Core Requirements are listed by year and term for all Epidemiology Master of Health Science students. A minimum of 64 credits is required. To broaden perspective and to enhance the student's capabilities for work in public health or disease-related fields, at least 12 credits of coursework are required in courses from at least one department outside the student's primary department. At least 6 of these credits must be taken in BSPH. Full-time students should register for a minimum of 16 credits and a maximum of 22 credits each term.

BA/MHS Course Prerequisites

Applicants to the formal combined BA/MHS program enrolled in the JHU KSAS Public Health Studies program should complete (earning a B or higher) the coursework below prior to application to the BA/MHS program.

1. Calculus or an additional math course completed during enrollment at JHU,
2. Biology or an additional science course completed during enrollment at JHU,
3. AS.280.101 Introduction to Public Health,
4. AS.280.345 Public Health Biostatistics,
5. AS.280.350 Fundamentals of Epidemiology.

Applications are processed through SOPHAS Express and are due no later than July 1 before the applicant's senior year. Applicants admitted to the formal program should complete the Biostatistics courses PH.140.621-140.624 during their senior year.

Cells to Society Courses [CEPH Core Requirements]

A full list of courses and term offerings is located online (https://www.jhsph.edu/course-directory/cells-to-society-courses.html). Epidemiology degree students are required to complete these 8 of the 12 sessions. Each course is 0.5 credits and is offered only online. Many of these courses can be used as introductions to full-term courses offered in multiple modalities throughout the year.

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.610	The Social Determinants of Health	0.5
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5

REQUIRED CORE COURSEWORK (subject to change)

Course	Title	Credits
First Year		
First Term		
Summer Before Year 1		
Online Incoming Epi Students 2020 Orientation includes:		
Introduction to Online Learning		
Sexual Harassment and Sexual Violence Prevention Training (Title IX)		
Unconscious Bias Training		
First Term		
PH.140.621 or PH.140.651	Statistical Methods in Public Health I or Methods in Biostatistics I	4
PH.340.751	Epidemiologic Methods 1	5
PH.340.860	Current Topics in Epidemiologic Research	1
Select recommended and elective courses to total 16 credits per term		6
	Credits	**16**
Second Term		
PH.140.622 or PH.140.652	Statistical Methods in Public Health II or Methods in Biostatistics II	4
PH.340.752	Epidemiologic Methods 2	5
PH.340.860	Current Topics in Epidemiologic Research	1
PH.550.865	Public Health Perspectives on Research [1]	2
Select recommended and elective courses to total 16 credits per term		4
	Credits	**16**
Third Term		
PH.140.623	Statistical Methods in Public Health III	4
PH.140.653	Methods in Biostatistics III	4
PH.340.753	Epidemiologic Methods 3	5
PH.340.860	Current Topics in Epidemiologic Research	1
Select recommended and elective courses to total 16 credits per term		2
	Credits	**16**
Fourth Term		
PH.140.624 or PH.140.654	Statistical Methods in Public Health IV or Methods in Biostatistics IV	4
PH.340.723	Epidemiologic Practice Methods for Population Health Research	2
PH.340.820	Thesis Research Epidemiology (varies)	1 - 3
PH.340.860	Current Topics in Epidemiologic Research	1
Select recommended and elective courses to total 16 credits per term		8
Department Comprehensive Examination		
Pass Parts A&B - immediately following Fourth Term		
	Credits	**16-18**
Second Year		
First Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 22
	Credits	**1-22**
Second Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 22
	Credits	**1-22**
Third Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 22
	Credits	**1-22**
Fourth Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 22
	Credits	**1-22**
	Total Credits	**68-154**

[1] May be waived if student holds MPH from a CEPH accredited program in past 10 yrs

COURSES THAT MEET THE "OUTSIDE TRACK REQUIREMENT"

All students must complete one introductory topical epidemiology course outside of the chosen track. Choices below:

Code	Title	Credits
Select one of the following:		3-4
PH.340.616	Epidemiology of Aging (Term 1)	
PH.340.731	Principles of Genetic Epidemiology 1 (Term 1)	
PH.340.682	Pharmacoepidemiology Methods (Term 2)	
PH.330.603	Psychiatric Epidemiology (Term 2)	
PH.340.624	Etiology, Prevention, and Control of Cancer (Term 2)	
PH.340.627	Epidemiology of Infectious Diseases (Term 2)	
PH.340.645	Introduction to Clinical Trials (Term 2)	
PH.340.699	Epidemiology of Sensory Loss in Aging (Term 3)	
PH.340.607	Introduction to Cardiovascular Disease Epidemiology (Term 3)	
PH.340.680	Environmental and Occupational Epidemiology (Term 4)	
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	
PH.340.666	Foundations of Social Epidemiology (Term 4)	
Total Credits		**3-4**

DEPARTMENT-WIDE RECOMMENDED COURSES

Code	Title	Credits
PH.340.860	Current Topics in Epidemiologic Research (Term 1-4, credits variable) [2]	1
PH.340.770	Public Health Surveillance (Term 2)	3
PH.340.769	Professional Epidemiology Methods (Term 3)	4
PH.340.840	Special Studies and Research Epidemiology (Term 1-4, credits variable) [1]	1 - 8

[1] 1 term, can be taken in any term 1 through 4
[2] Recommended for all four terms during year 2

Specific track requirements will be cross-referenced with the e-catalogue and course system before listing below.

Track Course Requirements (subject to change)

Each track requires additional coursework as below and the course content is covered on the annual Comprehensive Exams.

Cancer Epidemiology

Courses Required for Masters Students in Cancer Epidemiology
First Year

Term 1: PH.340.731 Principles of Genetic Epidemiology 1

Term 2: PH.340.732 Principles of Genetic Epidemiology 2
PH.340.624 Etiology, Prevention, and Control of Cancer

Second Year

Term 1: ME.510.706 Fundamentals of Cancer: Cause to Cure **or** PH.120.624 Cancer Biology

Term 2: ME.510.706 Fundamentals of Cancer: Cause to Cure **or** PH.180.650 Fundamentals of Clinical Oncology for Public Health Practitioners

Term 3: PH.180.640 Molecular Epidemiology and Biomarkers in Public Health

Recommended courses for masters students in Cancer Epidemiology
[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1: PH.340.616 Epidemiology of Aging 3 cr
PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3 cr
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5 cr
Term 2: PH.340.774 Advanced Theory and Methods in Epidemiology 4 cr
PH.140.630 Introduction to Data Management 3 cr
PH.180.650 Fundamentals of Clinical Oncology for Public Health Practitioners 3 cr
PH.330.603 Psychiatric Epidemiology 3 cr
PH.340.645 Introduction to Clinical Trials 3 cr
PH.340.666 Foundations of Social Epidemiology* 3 cr (alt yrs offered 4th term)
PH.340.682 Pharmacoepidemiology Methods 3 cr* alternates every other year online (4) and in-person (2)

Term 3: PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses 4 cr
PH.340.694 Power and Sample Size for the Design of Epidemiological Studies I 1 cr

Term 4: PH.140.632 Introduction to the SAS Statistical Package 3 cr
PH.340.680 Environmental and Occupational Epidemiology 4 cr
PH.120.624 Cancer Biology 3 cr
PH.380.664 Reproductive and Perinatal Epidemiology 4 cr

Cardiovascular and Clinical Epidemiology

Courses Required for masters students in Cardiovascular and Clinical Epidemiology
Required Courses for Students focusing in Cardiovascular Epidemiology
First Year

(Students WITHOUT a background in biology or medicine:PH.260.600 Introduction to the Biomedical Sciences (offered over the summer prior to enrollment) **OR** PH.550.630 Public Health Biology
AND PH.340.855 SS/R: Biological Basis of Cardiovascular Disease Epidemiology
AND PH.340.730 Assessment of Clinical Cardiovascular Disease (alternate years 3rd term))

Term 1: PH.340.871 Welch Center Research Seminar (2 terms required)

Term 2: PH.340.871 Welch Center Research Seminar (2 terms required)
PH.340.645 Introduction to Clinical Trials

Term 3: PH.340.871 Welch Center Research Seminar (2 terms required)
PH.340.607 Introduction to Cardiovascular Disease Epidemiology

Term 4: PH.340.871 Welch Center Research Seminar (2 terms required)
PH.340.803 Advanced Topics in Cardiovascular Disease Epidemiology

Second Year

please consider recommended courses appropriate to augment your knowledge in fields of interest

Required Courses for Students focusing in Clinical Epidemiology
First Year

(Students WITHOUT a background in biology or medicine:)
PH.260.600 Introduction to the Biomedical Sciences (offered over the summer prior to enrollment) **OR**PH.550.630 Public Health Biology

Term 1: PH.340.871 Welch Center Research Seminar (2 terms required)

Term 2: PH.340.871 Welch Center Research Seminar (2 terms required)
PH.340.645 Introduction to Clinical Trials
PH.340.620 Principles of Clinical Epidemiology

Term 3: PH.340.871 Welch Center Research Seminar (2 terms required)

Term 4: PH.340.871 Welch Center Research Seminar (2 terms required)

Second Year

please consider recommended courses appropriate to augment your knowledge in fields of interest

Recommended courses for masters students in Cardiovascular and Clinical Epidemiology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Course number / Course Name / Credits

Term 1: PH.340.687 Epidemiology of Kidney Disease 2

PH.340.731 Principles of Genetic Epidemiology 1 4

PH.340.616 Epidemiology of Aging 3 (alternates online and in-person every other year)

Term 2: PH.340.624 Etiology, Prevention, and Control of Cancer 4

PH.340.627 Epidemiology of Infectious Diseases 4

Term 3: PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4

PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses* 4 *usually taken in Year 2

Term 4: PH.340.644 Epidemiology of Diabetes and Obesity 3

Skills Courses (can be taken Year 1 or later with commensurate progress in Biostats series)

Term 4: PH.340.600 Stata Programming (4th term, 2 credits) 2

Term 4: PH.140.632 Introduction to the SAS Statistical Package 3

Advanced Methods Courses (recommended in Year 2, review course catalogue for prerequisites)

Term 1: PH.140.641 Survival Analysis 3

PH.140.776 Statistical Computing 3

PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3

Term 2: PH.340.717 Health Survey Research Methods 4

Term 3: PH.140.655 Analysis of Longitudinal Data 4

PH.140.664 Causal Inference in Medicine and Public Health I 4

Recommended courses for Master's students with a focus in Cardiovascular Epidemiology

Term 1: PH.140.651 Methods in Biostatistics I 4

Term 2: PH.140.652 Methods in Biostatistics II 4

PH.340.620 Principles of Clinical Epidemiology 2

Term 3: PH.140.653 Methods in Biostatistics III 4

Term 4: PH.140.654 Methods in Biostatistics IV 4

Recommended courses for Master's students with a focus in Clinical Epidemiology

Term 2: PH.309.712 Assessing Health Status and Patient Outcomes 3

Term 3: PH.340.607 Introduction to Cardiovascular Disease Epidemiology 4

PH.340.730 Assessment of Clinical Cardiovascular Disease 2

Term 4: PH.340.803 Advanced Topics in Cardiovascular Disease Epidemiology 2

PH.340.855 SS/R: Biological Basis of Cardiovascular Disease Epidemiology 2 *

(Incoming students with a U.S. medical degree will be waived automatically. Other students who believe they may qualify for a waiver from the requirement based on their previous course work should consult with the track director)

Clinical Trials and Evidence Synthesis

Courses Required for Masters Students in Clinical Trials and Evidence Synthesis
First Year

Term 2: PH.340.645 Introduction to Clinical Trials 3

Term 3: PH.340.633 Data Management in Clinical Trials 3

Term 4: PH.340.648 Clinical Trials Management 3

Second Year

Term 3: PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses 4
PH.140.655 Analysis of Longitudinal Data 4

Recommended courses for masters students in Clinical Trials and Evidence Synthesis
Course number / Course Name / Credits

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1: PH.140.651 Methods in Biostatistics I 4

PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4
PH.317.605 Methods in Quantitative Risk Assessment 4

Term 4: PH.188.681 Onsite Evaluation of Workplace and Occupational Health Programs 5
PH.317.615 Topics in Risk Assessment 2

Epidemiology of Aging

Courses Required for Masters Students in Epidemiology of Aging
First Year

Term 1: PH.340.616 Epidemiology of Aging

Recommended courses for masters students in Epidemiology of Aging
Course number / Course Name / Credits

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

First Year

each term PH.330.802 Seminar on Aging, Cognition and Neurodegenerative Disorders 1

Term 1:PH.140.641 Survival Analysis 3
PH.380.604 Life Course Perspectives on Health 4

Term 2: PH.340.620 Principles of Clinical Epidemiology 2
PH.340.666 Foundations of Social Epidemiology 3
PH.380.603 Demographic Methods for Public Health 4

Term 3: PH.340.699 Epidemiology of Sensory Loss in Aging 3
PH.260.665 Biological Basis of Aging++ 3

Term 4: PH.330.623 Brain and Behavior in Mental Disorders 3
PH.140.656 Multilevel Statistical Models in Public Health 4
PH.330.618 Mental Health in Later Life++ 3

++offered every other year

Second Year

Term 1: PH.330.657 Statistics for Psychosocial Research: Measurement 4
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5

Term 2: PH.140.658 Statistics for Psychosocial Research: Structural Models 4
PH.309.605 Health Issues for Aging Populations 3

Term 3: PH.140.655 Analysis of Longitudinal Data 4

General Epidemiology and Methodology

Courses Required for Masters Students in General Epidemiology and Methodology
First Year

Term 1: PH.340.731 Principles of Genetic Epidemiology 1 4
(recommended for year 1 but may be taken in year 2, satisfies the out-of-track requirement as well)

Term 2: PH.340.645 Introduction to Clinical Trials 3
(recommended for year 1 but may be taken in year 2)

Second Year

CHOOSE AT LEAST TWO of these 3 courses in PH research skills:

Term 1: PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3
Term 2: PH.340.717 Health Survey Research Methods 4
Term 3: PH.340.648 Clinical Trials Management 3

Recommended courses for masters students in General Epidemiology and Methodology
[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Master's Students with a Methodology Focus:

Term 1: PH.330.657 Statistics for Psychosocial Research: Measurement 4
PH.340.646 Epidemiology and Public Health Impact of HIV and AIDS 4
PH.340.616 Epidemiology of Aging 3
PH.340.653 Epidemiologic Inference in Outbreak Investigations 3

Term 2: PH.140.658 Statistics for Psychosocial Research: Structural Models 4
PH.183.631 Fundamentals of Human Physiology 4
PH.260.631 Immunology, Infection and Disease 3
PH.330.603 Psychiatric Epidemiology 3
PH.340.620 Principles of Clinical Epidemiology 2
PH.340.624 Etiology, Prevention, and Control of Cancer 4
PH.340.666 Foundations of Social Epidemiology* 3
PH.340.732 Principles of Genetic Epidemiology 2 3

Term 3: PH.140.640 Statistical Methods for Sample Surveys 3
PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4
PH.222.647 Nutrition Epidemiology 3
PH.224.690 Qualitative Research Theory and Methods 3
PH.309.616 Introduction to Methods for Health Services Research and Evaluation I 2
PH.340.607 Introduction to Cardiovascular Disease Epidemiology 4
PH.340.609 Concepts and Methods in Infectious Disease Epidemiology 3
PH.340.733 Principles of Genetic Epidemiology 3 3

Term 4: PH.140.656 Multilevel Statistical Models in Public Health 4
PH.224.691 Qualitative Data Analysis 3
PH.309.617 Introduction to Methods for Health Services Research and Evaluation II 2
PH.340.641 Healthcare Epidemiology 4
PH.340.677 Infectious Disease Dynamics: Theoretical and Computational Approaches 3
PH.340.680 Environmental and Occupational Epidemiology 4
PH.380.664 Reproductive and Perinatal Epidemiology 4
PH.390.675 Outcomes and Effectiveness Research 3

*alternates online and in-person every other year
++ alternate year course

Second Year courses:

Term 1: PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5

Term 2: PH.340.774 Advanced Theory and Methods in Epidemiology 4

Term 3: PH.140.664 Causal Inference in Medicine and Public Health I 4
PH.140.655 Analysis of Longitudinal Data 4
PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses 4

Recommended statistical programming computing courses:

Term 1: PH.140.776 Statistical Computing 3

Term 4: PH.140.632 Introduction to the SAS Statistical Package 3
PH.340.600 Stata Programming 2

Master's Students with a Pharmacoepidemiology and Drug Safety Focus:
Strongly Recommended courses for Masters Students with a Pharmacoepidemiology Focus:

Term 1: PH.317.600 Introduction to the Risk Sciences and Public Policy 4
PH.390.631 Principles of Drug Development 2

Term 2: PH.317.610 Risk Policy, Management and Communication 3

Term 3: PH.140.664 Causal Inference in Medicine and Public Health I 4
PH.340.684 Pharmacoepidemiology: Drug Utilization 3 (alternate year format)
PH.221.610 Pharmaceuticals Management for Under-Served Populations 3

Term 4: PH.410.680 Social Ecological Approaches to Health Regimen Adherence in Chronic Conditions 3

Recommended courses for Masters Students with a Pharmacoepidemiology Focus:

Term 1: PH.317.605 Methods in Quantitative Risk Assessment 4
Term 4: PH.317.615 Topics in Risk Assessment 2

the following courses are offered outside of BSPH and require interdivisional registration and instructor permission

AS.410.651 Clinical Development of Drugs and Biologics 4
AS.410.627 Translational Biotechnology: From Intellectual Property to Licensing 4
ME.330.809 Analytic Methods for Clinical Pharmacology variable
NR.110.508 Clinical Pharmacology 3

Individualized Focus:
Students designing their own educational programs should, in conjunction with their advisor, choose three to four graduate-level courses (taken for a letter grade) in their field from among the offerings of the University in addition to taking the GEM Required courses listed above.

Genetic Epidemiology

Courses Required for Masters Students in Genetic Epidemiology
First Year

Term 1: PH.340.731 Principles of Genetic Epidemiology 1 4

Term 2: PH.340.732 Principles of Genetic Epidemiology 2 3

Term 3: PH.340.733 Principles of Genetic Epidemiology 3 3

Term 4: PH.340.734 Principles of Genetic Epi 4: Emerging and Advanced Methods 2

Second Year

Term 1: PH.120.602 Concepts of Molecular Biology (Pass/Fail, or Grade) 4

Recommended courses for masters students in Genetic Epidemiology
Analytic Methods Courses (ideal for year 2):

Term 1: PH.140.641 Survival Analysis 3
PH.140.651 Methods in Biostatistics I* 4

PH.140.776 Statistical Computing 3

Term 2: PH.140.638 Analysis of Biological Sequences 3
PH.140.652 Methods in Biostatistics II 4
PH.140.778 Advanced Statistical Computing 3
PH.340.774 Advanced Theory and Methods in Epidemiology* 4

Term 3: PH.140.644 Statistical Machine Learning: Methods, Theory, and Applications 4
PH.140.653 Methods in Biostatistics III 4
PH.140.655 Analysis of Longitudinal Data 4

Term 4: PH.140.688 Statistics For Genomics 3

Biology and Molecular Methods Courses:

Term 1: PH.260.611 Principles of Immunology I 4

Term 2: PH.260.612 Principles of Immunology II 4
PH.183.631 Fundamentals of Human Physiology 4 (*For non-physician trained students only)

Term 3: PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4

Term 4: PH.120.608 Gene Editing, therapy and Manipulation 3

Topic-Specific Electives:

Term 3: PH.340.775 Measurement Theory and Techniques in Epidemiology 4

Term 4: PH.330.619 Psychiatric Genomics 3
PH.415.624 Ethical, Legal and Social Implications in Genetics and Genomics Over Time 3 (offered in alternate years)

Infectious Disease Epidemiology

Courses Required for Masters Students in Infectious Disease Epidemiology First Year

Term 1: PH.340.653 Epidemiologic Inference in Outbreak Investigations 3

Term 2: PH.340.627 Epidemiology of Infectious Diseases 4

Term 3: PH.340.609 Concepts and Methods in Infectious Disease Epidemiology 3

Students must complete at least one course in each of the four disciplinary sections below. Additional courses would be recommended.

Section one: General Electives: choose 1

Term 1: PH.340.646 Epidemiology and Public Health Impact of HIV and AIDS 4
PH.340.641 Healthcare Epidemiology 4

Term 2: PH.223.662 Vaccine Development and Application 4

Term 3: PH.182.640 Food- and Water- Borne Diseases 3
PH.223.663 Infectious Diseases and Child Survival 3
PH.223.687 Vaccine Policy Issues 3
PH.260.656 Malariology 4
PH.340.612 Epidemiologic Basis for Tuberculosis Control 2

Term 4: PH.223.682 Clinical and Epidemiologic Aspects of Tropical Diseases 4
PH.223.689 Biologic Basis of Vaccine Development 3
PH.223.705 Good Clinical Practice: A Vaccine Trials Perspective 4
PH.340.651 Emerging Infections 2
PH.380.761 Sexually Transmitted Infections in Public Health Practice 4
PH.380.762 HIV Infection in Women, Children, and Adolescents 4

Section two: Skills in Research: choose 1

Term 1: PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3
Term 2: PH.340.717 Health Survey Research Methods 4

Section three: Biology and Pathogenesis of Disease: choose 1

Term 1: PH.260.623 Fundamental Virology 4
PH.260.636 Evolution of Infectious Disease 3
PH.340.654 Epidemiology and Natural History of Human Viral Infections 6
Term 3: PH.260.627 Pathogenesis of Bacterial Infections 4
PH.260.650 Vector Biology and Vector-Borne Diseases 3

Section four: Immunology: choose one set (recommended to complete in year two)

either:

Term 1: PH.260.611 Principles of Immunology I 4
and 2: PH.260.612 Principles of Immunology II* 4 cr each
**students requesting pass/fail for these two courses only must seek permission from their adviser and the track director*

OR

Term 2: PH.260.631 Immunology, Infection and Disease 3

Department Comprehensive Examination

A two-day written departmental comprehensive examination is administered to all students enrolled in Epidemiology degree programs in late May of the first academic year. All students are required to sit for the exam on the scheduled dates—no alternate exams will be offered.

By the time of the examination, students should have completed 64 credits (one full year of residence), **the required first-year coursework in their Track with a cumulative GPA of at least 2.75,** and in these courses:

Code	Title	Credits
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5
Select one of the following Biostatistics series:		16
PH.140.621 & PH.140.622 & PH.140.623 & PH.140.624	Statistical Methods in Public Health I and Statistical Methods in Public Health II and Statistical Methods in Public Health III and Statistical Methods in Public Health IV	
PH.140.651 & PH.140.652 & PH.140.653 & PH.140.654	Methods in Biostatistics I and Methods in Biostatistics II and Methods in Biostatistics III and Methods in Biostatistics IV	

The first day of the exam (Part A) includes testing on the following topics:

- Knowledge and application of epidemiologic concepts and methods (and related biostatistics)
- History of epidemiology
- Contemporary issues in public health
- Research ethics

The second day of the exam (Part B) is Track-specific, and tests knowledge of concepts and methods presented in the required courses and activities for each Track, as well as the Department core courses as applied to the Track.

Students must pass both Part A and Part B of the comprehensive examination. Master's students must attain at least a 70% on each Part A and Part B to pass. A repeat examination may be allowed but is not guaranteed. If a repeat is granted, it must be completed before starting the second academic year. Failure to pass one or both sections of the comps may result in dismissal from the master's program or from the Department. Further policies are located on the next tab.

Master's Thesis (MHS and Bachelors/MHS)

Master of Health Science (MHS) students must complete a satisfactory thesis in their Track. The thesis must be approved by two members of the Department's faculty, including the thesis adviser. The thesis may be a critical review of the literature pertaining to a specific area of interest, secondary data analysis, program or project proposal, or original research. It is expected that the student will meet with their thesis adviser throughout the duration of the research project. MHS students planning on a May graduation must adhere to all program deadlines. The School's Policy and Procedures Memorandum (PPM) for the MHS degree program is available here (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Forms/AllItems.aspx), "Academic_Programs_08_Master_of_Health_Science_Degree_071417." Students should follow the written guidelines for the preparation of the thesis. The thesis is a requirement for partial fulfillment of the MHS degree.

MASTER'S THESIS EXPECTATIONS

Epidemiology Bachelors/MHS and MHS student theses will be evaluated in the following areas by both the faculty thesis adviser(s) and the second reader. In addition, the thesis adviser(s) will evaluate student quarterly progress detailed in point 5 below.

Each student must register for 4 terms of Thesis Research Epidemiology with their thesis adviser in their second year. The thesis adviser(s), in consultation with the thesis reader, each student will be evaluated on whether their thesis shows:

1. Their understanding of the current state of the knowledge about the public health problem studied for the thesis is demonstrated by the student's descriptions and discussions of:
   a. The descriptive epidemiology of the public health problem. For example, its prevalence and distribution in the population, and its risk factors (e.g., modifiable, non-modifiable, comorbidities, social, environmental risk factors, etc.).
   b. The biology, physiology, and natural history of the public health problem, if relevant.
   c. The contemporary questions about the public health problem, including new directions in research on the public health problem (including technology, diagnosis, and methodologic challenges).
   d. The impact of the public health problem in the real world, with specific discussions about sub-populations or vulnerable populations that are particularly affected by the problem.
2. The student's ability to integrate and synthesize the current body of literature on the public health problem, and is demonstrated by:
   a. Preparation of a comprehensive literature review (systematic review, if appropriate see separate document).
   b. Interpretation of findings from multiple research papers and understanding of the full body of research relevant to the public health problem.
   c. Interpretation of the student's own findings within the context of the current body of literature.
   d. Use or evaluation of proper study design, measurement of exposures and/or outcomes, biases, and confounding, biostatistical methods, and application.
   e. Explanation and interpretation of epidemiologic findings for a non-epidemiologist audience.
   f. Identify next steps and future questions that need to be addressed.
   g. Articulation of how the student's findings could be applied in order to affect or diminish the problem at a population (or sub-population) level.
3. The student's ability to prepare a thesis that is:
   a. Logically structured and organized; and
   b. Includes figures that illustrate important findings, with proper formatting (e.g. legends, labeled axes, appropriate titles, etc.); and
   c. Includes tables that convey important findings, organized and formatted efficiently (e.g. appropriate titles, headings, footnotes, legends, etc.).
4. The student's ability to write a thesis that is grammatically accurate, including:
   a. Correct punctuation and spelling; and
   b. Easily readable by epidemiologists; and
   c. Appropriately and adequately referenced citations; and
   d. The student's own original work (please see Plagiarism modules).
5. The student's thesis adviser will evaluate the student on student professionalism, documented by:
   a. Keeping appointments with the thesis adviser and being on time.
   b. Being prepared and organized at each meeting with the thesis adviser, which includes creating and sending an agenda before the meeting.
   c. Demonstrating appropriately paced progress on the thesis research.
   d. Preparing the thesis document.

The expectation is that the student will improve in all aspects of their research during the course of the thesis work and work will show growth across the year culminating in the final thesis.

Master's Poster Session

All Master's students are required to participate in the Master's Poster Symposium held at the end of their 2nd year. Participation is a requirement for partial fulfillment of the Bachelors/MHS and MHS degrees. Students prepare a 3'x4' portrait-oriented poster of their thesis work (no other work can be presented) and gain the approval of the poster from their adviser(s) before presenting. Although the research conducted for the poster will represent the Master's student's thesis, the adviser(s), and any other research colleagues, should be included as co-authors. In addition, any funding sources that supported the research directly or indirectly should be cited on the poster (in consultation with thesis adviser(s)). Additional guidelines for the creation of a scientific poster will be disseminated to students at the quarterly program meetings. Students are expected to follow these guidelines.

Students should carefully proofread their posters prior to submitting them for printing. Students are welcome to utilize the printing service they wish, but two local recommendations are

https://phdposters.com (Campus Pick-up Available)

FedEx Print & Ship / Carnegie Building Room #170
600 N. Wolfe St.
Baltimore, MD 21287
410-502-7637
usa5032@fedex.com

A poster title and abstract should be submitted to the academic program manager (Justin Switzer) prior to the Master's Poster Symposium for inclusion in the program. Attendees at the Master's Poster Symposium include peers, staff, and faculty.

Students who will not graduate in May are still required to present a poster. This poster must be approved by their adviser(s) and presented to the Master's Program Director at least three weeks prior to the date by which the Department must certify student eligibility for the award of degree to the School's Office of Records and Registration. Students graduating in August or December must contact the Master's Program Director by July 1 (August graduation) or November 1 (December graduation) to indicate their plans to graduate and determine a poster presentation date.

The Policy and Procedures Manual for the Master of Health Science

The Department of Epidemiology reserves the right to augment the PPM (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_08_Master_of_Health_Science_Degree_071417.pdf) for BSPH.
The Admissions and Credentials Committee handles most policy concerns as described above. The Curriculum Committee handles exceptions to requirements.

For concerns and changes to advising, tracks, course requirements, etc. please see the academic policies for the department. (p. 220)

Compressed vs. Regular MHS Timeframes

Ideally formulated for the Bachelors/MHS students, the compressed vs. regular timeframe permits highly focused and motivated students the opportunity to complete the degree requirements for the MHS program in a 14-month period.

Any student interested in completing the compressed program should discuss their research and career goals with the senior academic program manager and the BA/MHS Director.

MHS COMPRESSED TIMELINE

```
Admitted during summer prior to senior year at KSAS:
```

take Biostatistics 140.621 - 624 and Current Topics (4 terms) 340.860 during senior year

Summer prior to enrolling: Meet with Academic Program Manager, Justin Switzer, to connect with faculty for possible research projects. Begin discussing ideas for research.

```
Enrollment – Johns Hopkins Bloomberg School of Public Health:
```

Attend BSPH Orientation in August
First – Second terms: Continue required coursework **and** work on thesis proposal
During January, get approval from the thesis adviser for the proposed hypothesis, identify the dataset, and submit paperwork for IRB approval
Throughout Third and Fourth terms: complete coursework **and** conduct research for the thesis
Participate in the Annual Poster Symposium (if ready)

Take the written departmental comprehensive exam (last Wednesday and Thursday at end of May)

Summer after the first year: Register for 2 credits 340.820 with the adviser
Complete thesis
Prepare and present a poster of the research project (no later than July)
MHS completion and award of the degree at end of August

Regular MHS timeline

```
Enrollment – Johns Hopkins Bloomberg School of Public Health:
```

Attend BSPH Orientation
First – fourth terms: Take course requirements and identify adviser during the third term
During the fourth term, identify the research hypothesis and data set
Take the written departmental comprehensive exam (last Wednesday and Thursday at end of May)

During summer, complete IRB application and begin research

Fifth – eighth terms:
Take any remaining required or recommended coursework
Complete thesis
Prepare and present poster of research project at end of April
MHS completion, award of the degree, and graduation occurs in May of year two

Comprehensive Examination Grading Policy

The Departmental Written Comprehensive Examination is graded by the Department of Epidemiology faculty according to a rubric determined by the Comprehensive Examination Committee. Final results are distributed to students via CoursePlus by mid-July. Students who wish to view their exam should set up an appointment with the Senior Academic Coordinator, Ebony Moore (eamoore@jhu.edu).

Master's students whose results fall below 70% are allowed to submit a written request for a re-grade of specific questions. Re-grade requests must include a justification for a change in points allocated for each question being contested; requests without appropriate justification will not be considered. Re-grade requests must have the adviser's endorsement who must have reviewed and approved the student's request. Re-grade requests are handled by the faculty on the Comprehensive Examination Committee. Adviser-approved requests can be e-mailed to the current year's Comprehensive Examination Committee Chair and must include a copy to the adviser. For approved requests, a new score will be assigned for each question that is re-graded. This score may be equal to, greater than, or less than, the original score awarded and cannot be contested a second time.

Master's students admitted to an Epidemiology PhD program may waive the PhD comprehensive exam if they pass (as a master's student) at the doctoral level (75%) and matriculate within the three years following graduating from a Johns Hopkins Bloomberg School of Public Health Epidemiology Master's Degree.

Comprehensive Examination Retake Policy

Students who do not pass the Comprehensive Exam at the appropriate level for their degree program may be granted an opportunity for a retake in August following the May Exam. Students who do not pass the Comprehensive Exam at the appropriate level are not automatically granted a retake. To request a retake, students must submit an official request within two weeks of notification of the not passing grade. This request should include a detailed timeline and study plan, to make the case for passing a retake. This request and plan must be endorsed by, and developed with, the adviser. Retake requests are reviewed via the Department's Admissions and Credentials Committee. Adviser-approved requests can be e-mailed to the current year's Admissions and Credentials Committee Chair and must include a copy to the adviser and Senior Academic Program Manager (Frances Burman). For approved requests, students are granted one retake only, and it must be in August immediately following the May Exam. A student cannot continue in the degree program without passing the Comprehensive Examination at the appropriate level, prior to the start of the second year.

Recommendations for Special Studies versus Thesis Research

Special Studies and Research in Epidemiology, PH.340.840.xx, is offered during terms 1, 2, 3, and 4. Thesis Research, PH.340.820.XX is offered terms S, 1, 2, 3, and 4.

Special Studies and Research: PH.340.840.XX

All first-year MHS and SCM students should take 1 credit special studies and research each term during terms 1 -3.

The following list of activities may be approved for independent study or special studies and research and is not inclusive:

- Directed readings and discussion leading up to preparing for the research proposal,
- Literature searches and meta-analyses
- Secondary data analysis,
- Self-guided focused study on a particular methodology or a disease of interest

Thesis Research: PH.340.820.XX

Masters students take 340.820 once they begin working on their research thesis. Students should begin registering for thesis research during the fourth term of the first year once their adviser selection is confirmed. MHS students must take a minimum of 2 credits of thesis research for two terms during their program.

Calculating credits for a variable credit course:

- Students must remember that the 1 hour – in class, 2 hours – outside of class ratio still applies: e.g. Students should think about the time the faculty member will be involved in guiding them (see faculty contact hours below) as well as how much time the student uses to conduct outside readings and work.

What constitutes Faculty Contact Hours?

- Individual one-on-one meetings
- Faculty revisions of writing projects (Faculty members spend considerable time editing, proofreading, and otherwise providing feedback to students.)
- Mentoring and networking preparation and discussion.
- Time spent in group settings with a faculty mentor e.g. journal clubs or weekly "lab/group" meetings. Students should make every effort to attend the group meetings for their track and adviser.

How to Register?

- Students must communicate their intent to register with and receive approval from the faculty mentor in writing, prior to registering for credits for the special studies or thesis research and include the content/activities to be conducted and the number of credits.
- Students may take 1-3 credits while taking a full load of courses.
- Students may take up to 8 credits per term while taking a partial load of courses with the approval of the faculty mentor.
- Students must meet with the faculty mentor before or during add/drop to discuss objectives.

Adviser / Advisee Manual [subject to change]

Each student in the Department is assigned an adviser and selects co-adviser(s) as they move through the program; Adviser(s) have the responsibility of serving as a guide and mentor. This manual is intended to guide the student and the faculty member(s) in making the adviser/advisee relationship as successful as possible.

This manual has two goals:

- To provide answers to questions that students frequently ask and,
- To provide guidance on how the student and adviser can interact most effectively

Academic Advisers should:

- Provide oversight of the student's academic progress by:
  - Assisting in the selection of courses
  - Ensuring the student is meeting degree milestones in a timely manner
  - Being available for regular meetings with the student
  - Assessing and developing the student's interests and abilities
  - Monitoring student progress in academic coursework through periodic examination of transcripts
  - Monitoring student progress in fieldwork
  - Writing letters of reference (given appropriate lead-time)
  - Assisting with grant preparation (doctoral students, given appropriate lead-time)
  - Referring students to the appropriate individuals or offices that provide academic support and/or resources
- Provide leadership in matters of academic integrity:
  - Being knowledgeable about ethical issues that pertain to academics, research, and practice
  - Helping students interpret and understand institutional policies and procedures regarding the responsible conduct of research
  - Discouraging students from circumventing institutional policies and procedures, and when confronted with such issues, directing students to appropriate institutional resources or contacts, avoiding actual or appearance of conflicts of interest
  - Respecting the confidentiality of students

- Encourage active participation in the greater community (department, school, university, local, state, national, international)

STUDENTS MAY EXPECT THE FOLLOWING FROM THEIR ADVISER(S):

- Advisers' approval for course registrations, course changes, and pass/fail agreements, and on all reasonable petitions to the Admissions and Credentials Committee
- At least one meeting per term with the advisers
- Oversight of the student's overall academic program and sensitivity to any academic difficulties
- Knowledge of and interest in the student's career objectives
- Review of required and recommended courses for the track
- Assistance in designing a plan for the fulfillment of required courses and assistance with planning the course schedule for the year

Advising students is an integral part of faculty members' responsibilities. Thus, students should not feel or be made to feel that they are imposing by asking for advice. Faculty members expect to be able to meet with students, although the students should be respectful of the faculty's time by scheduling and respecting appointments. The responsibility for arranging meetings lies with the student. Students should not expect advisers to seek them out for needed appointments. The student remains obligated to schedule a meeting in order to assure that the adviser has reviewed the student's schedule and to plan any special studies projects or thesis research as needed with the adviser before the registration period deadline.

RIGHTS AND RESPONSIBILITIES OF THE ADVISER(S)**:

- To assist in determining the advisee's educational goals and needs upon starting the program
- To serve as an educational and/or professional mentor for the student
- To maintain awareness of and sensitivity to the level of compatibility between the student advisee and the advisers in terms of academic, professional, and personal interests
- To facilitate a change of adviser or program, if deemed appropriate for the student
- To monitor the advisee's overall academic program and be sensitive to signs of academic difficulty
- To provide guidance throughout the academic program
- To be sensitive to cultural, medical, legal, housing, visa, language, financial, or other personal problems experienced by the advisee and to be aware, sensitive, understanding, and supportive
- Advisers have the right to expect to be treated with respect and courtesy, to be notified in writing when a meeting must be canceled or rescheduled, to be consulted when students have questions or concerns about the research focus or progress, and to serve as team leader on the research team

RIGHTS AND RESPONSIBILITIES OF THE ADVISEE**:

- To arrange to meet with the adviser at least once each term, and observe registration and administrative deadlines
- To identify and develop professional career goals and interests
- To access and demonstrate knowledge of administrative policies and procedures and be familiar with the content in the Student Handbook
- To maintain the academic checklist and review it at meetings with the advisers
- Advisees have the right to expect to be treated with respect and courtesy, to be notified in writing when a meeting must be canceled or rescheduled, to be notified when advisers have questions or concerns about the research focus or progress, and to be granted the role of a team member on the research team

```
**Students and Faculty each have the right to request changes
 to the adviser/advisee relationship upon consultation with the
 Director of Graduate Education (Laura Camarata) without penalty.
```

Please review the CEPH Competencies located: https://e-nextcatalog.jhu.edu/public-health/ceph-requirements/index.html (p. 176)

Epidemiology, ScM

Master of Science (ScM) Degree Program

Ideal for individuals with strong science and mathematics skills with at least one year of research and work experience, the ScM in Epidemiology is a two-year, intensive research degree program that focuses on applying epidemiological and biostatistical methods to a variety of current public health issues. Successful applicants are those individuals who are motivated to use advanced quantitative methods to analyze public health information and use a translational approach to communicate results. Students select and specialize in one of the research tracks listed below and are expected to complete at least 64 credit units in epidemiology, biostatistics, and elective courses, pass a written comprehensive exam, produce a publishable-quality manuscript based on original research, and present their research during an annual poster symposium. Graduates from the ScM often continue to work in academic research upon graduation and many pursue PhD degrees in a variety of public health arenas after some years of work experience.

https://publichealth.jhu.edu/departments/epidemiology/programs (https://publichealth.jhu.edu/departments/epidemiology/programs/)

Academic Advising

Master's students are each assigned a group academic adviser for terms one through three of the first year of the program. The Group Master Adviser is an academic adviser who meets with a group of advisees regularly to discuss academic issues, progress, development, and goals in the degree program.

The Group Master Adviser is a faculty member in the Department of Epidemiology but may/may not be in the advisee's Track. At the beginning of the 4th term of the first year, the Track Director, with input from the student, will assign the student a thesis adviser. The thesis adviser may be a faculty member with a primary or joint appointment in the Department of Epidemiology. If the thesis adviser has a joint appointment in the Department, a faculty member with a primary appointment in the department must co-advise with the thesis adviser, and serve as the primary adviser of record.

All Master's students are required to meet with their thesis adviser regularly. Students should work with their thesis advisers to develop a timeline for completing their thesis research by the required deadlines. Students are expected to begin thesis research in the summer after their first year.

Academic Year 2022-23

Due Dates for Summer Conferral (August 26, 2022)

JUNE 10, 2022

- All academic requirements for the degree (except for submission of the thesis) have been fulfilled

JUNE 17, 2022

- Appointment of Thesis Readers for has been submitted to the Office of Records and Registration

AUGUST 26, 2022

- Thesis Acceptance Letters have been submitted to the Office of Records and Registration
- The Office of Records and Registration has received approval of submitted electronic copy of dissertation has received from the Sheridan Library

Due Dates for Fall Conferral (December 30, 2022)

OCTOBER 14, 2022

- All academic requirements for the degree (except for submission of the thesis) have been fulfilled

OCTOBER 28, 2022

- Appointment of Thesis Readers for has been submitted to the Office of Records and Registration

DECEMBER 16, 2022

- Thesis Acceptance Letters have been submitted to the Office of Records and Registration
- The Office of Records and Registration has received approval of submitted electronic copy of dissertation has received from the Sheridan Library

Due Dates for Spring Conferral (May 25, 2023)

FEBRUARY 10, 2023

- All academic requirements for the degree (except for submission of the thesis) have been fulfilled

march 17, 2023

- Appointment of Thesis Readers for has been submitted to the Office of Records and Registration

May 5, 2023

- Thesis Acceptance Letters have been submitted to the Office of Records and Registration
- The Office of Records and Registration has received approval of submitted electronic copy of dissertation has received from the Sheridan Library

Degree Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Residency / Registration Requirement

A minimum of 64 credits are required to complete either the MHS or ScM degree. The residency requirement is four consecutive terms of at least 16 credits each. Residency must be completed during the first year of the program. ScM degree programs require two years of full-time registration to complete the required coursework and thesis.

Non-Class Requirements

Track-Specific Activities Masters

Each Track holds journal clubs, research-in-progress meetings, and other activities, that those Track students are expected to attend (list included in this Student Handbook). These activities are opportunities to engage and interact with Track faculty, fellow students, and post-doctoral fellows, and to participate and present in the topic area of the Track. All master's students are expected to participate in their Track. If a student for some reason wishes to switch tracks during the course of their degree, they must schedule a meeting with the Senior Academic Program Manager, Frances Burman (FranBurman @jhu.edu (FranBurman@jhu.edu)) to ascertain whether a switch is feasible to still meet graduation requirements in time and to complete a formal form.

Quarterly Master's Meetings

The Master's Program Co-Directors host quarterly meetings with all of the first and second-year Master's students. These meetings provide a forum to learn about academic policies and deadlines, for students to raise questions and concerns, and for all to hear the answers. All Master's students are expected to attend quarterly group meetings.

Core Coursework (Required for All Epidemiology MHS and ScM Students)

The Masters Level Core Requirements are listed by year and term for all Epidemiology Master of Science students. To broaden perspective and to enhance the student's capabilities for work in public health or disease-related fields, at least 12 credits of coursework are required in courses from at least one department outside the student's primary department. At least 6 of these credits must be taken in the BSPH. Full-time students register for a minimum of 16 credits and a maximum of 22 credits each term.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Cells to Society Courses [CEPH Core Requirements]

A full list of courses and term offerings is located online (https://www.jhsph.edu/course-directory/cells-to-society-courses.html). Epidemiology degree students are required to complete these 8 of the 12 sessions. Each course is 0.5 credits and is offered only online. Many of these courses can be used as introductions to full-term courses offered in multiple modalities throughout the year.

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.610	The Social Determinants of Health	0.5
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5

Required Core Coursework (Subject to change)

Course	Title	Credits
First Year		
First Term		
Summer Before Year 1		
Online Incoming Epi Students 2020 Orientation includes:		
Introduction to Online Learning		
Sexual Harassment and Sexual Violence Prevention Training (Title IX)		
Unconscious Bias Training		
First Term		
PH.140.621 or PH.140.651	Statistical Methods in Public Health I or Methods in Biostatistics I	4
PH.340.751	Epidemiologic Methods 1	5
PH.340.860	Current Topics in Epidemiologic Research	1
Select recommended and elective courses to total 16 credits per term		6
	Credits	**16**
Second Term		
PH.140.622 or PH.140.652	Statistical Methods in Public Health II or Methods in Biostatistics II	4
PH.340.752	Epidemiologic Methods 2	5
PH.340.860	Current Topics in Epidemiologic Research	1
PH.550.865	Public Health Perspectives on Research [1]	2
Select recommended and elective courses to total 16 credits per term		4
	Credits	**16**
Third Term		
PH.140.623	Statistical Methods in Public Health III	4
PH.140.653	Methods in Biostatistics III	4
PH.340.753	Epidemiologic Methods 3	5
PH.340.860	Current Topics in Epidemiologic Research	1
Select recommended and elective courses to total 16 credits per term		2
	Credits	**16**
Fourth Term		
PH.140.624 or PH.140.654	Statistical Methods in Public Health IV or Methods in Biostatistics IV	4
PH.340.723	Epidemiologic Practice Methods for Population Health Research	2
PH.340.820	Thesis Research Epidemiology (varies)	1 - 3
PH.340.860	Current Topics in Epidemiologic Research	1
Select recommended and elective courses to total 16 credits per term		8
Department Comprehensive Examination		
Pass Parts A&B - immediately following Fourth Term		
	Credits	**16-18**
Second Year		
First Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 22
	Credits	**1-22**
Second Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 22
	Credits	**1-22**
Third Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 22
	Credits	**1-22**
Fourth Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 22
	Credits	**1-22**
	Total Credits	**68-154**

[1] May be waived if student holds MPH from a CEPH accredited program in past 10 yrs

Courses that meet the "Outside Track Requirement"

All students must complete one introductory topical epidemiology course outside of the chosen track. Choices below:

Code	Title	Credits
Select one of the following:		3-4
PH.340.616	Epidemiology of Aging (Term 1)	
PH.340.731	Principles of Genetic Epidemiology 1 (Term 1)	
PH.340.682	Pharmacoepidemiology Methods (Term 2)	
PH.330.603	Psychiatric Epidemiology (Term 2)	
PH.340.624	Etiology, Prevention, and Control of Cancer (Term 2)	
PH.340.627	Epidemiology of Infectious Diseases (Term 2)	
PH.340.645	Introduction to Clinical Trials (Term 2)	
PH.340.699	Epidemiology of Sensory Loss in Aging (Term 3)	
PH.340.607	Introduction to Cardiovascular Disease Epidemiology (Term 3)	
PH.340.680	Environmental and Occupational Epidemiology (Term 4)	
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	
PH.340.666	Foundations of Social Epidemiology (Term 4)	
Total Credits		**3-4**

DEPARTMENT-WIDE RECOMMENDED COURSES

Code	Title	Credits
PH.340.860	Current Topics in Epidemiologic Research (Term 1-4, credits variable) [1]	1
PH.340.770	Public Health Surveillance (Term 2) [2]	3
PH.340.769	Professional Epidemiology Methods (Term 3)	4
PH.340.840	Special Studies and Research Epidemiology (Term 1-4, credits variable) [1]	1 - 22

[1] 1 term, can be taken in any term 1 through 4
[2] Recommended for all four terms during year 2

Specific track requirements will be cross-referenced with the catalogue and course system before listing below.

Track Course Requirements (subject to change)

Each track requires additional coursework as below and the course content is covered on the annual Comprehensive Exams.

Cancer Epidemiology

Courses Required for masters students in Cancer Epidemiology
First Year

Term 1: PH.340.731 Principles of Genetic Epidemiology 1

Term 2: PH.340.732 Principles of Genetic Epidemiology 2
PH.340.624 Etiology, Prevention, and Control of Cancer

Second Year

Term 1: ME.510.706 Fundamentals of Cancer: Cause to Cure **or** PH.120.624 Cancer Biology

Term 2: ME.510.706 Fundamentals of Cancer: Cause to Cure **or** PH.180.650 Fundamentals of Clinical Oncology for Public Health Practitioners

Term 3: PH.180.640 Molecular Epidemiology and Biomarkers in Public Health

Recommended Courses for masters students in Cancer Epidemiology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1: PH.340.616 Epidemiology of Aging 3 cr
PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3 cr
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5 cr

Term 2: PH.340.774 Advanced Theory and Methods in Epidemiology 4 cr
PH.140.630 Introduction to Data Management 3 cr
PH.180.650 Fundamentals of Clinical Oncology for Public Health Practitioners 3 cr
PH.330.603 Psychiatric Epidemiology 3 cr
PH.340.645 Introduction to Clinical Trials 3 cr
PH.340.666 Foundations of Social Epidemiology* 3 cr (alt yrs offered 4th term)
PH.340.682 Pharmacoepidemiology Methods 3 cr* alternates every other year online (4) and in-person (2)

Term 3: PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses 4 cr
PH.340.694 Power and Sample Size for the Design of Epidemiological Studies I 1 cr

Term 4: PH.140.632 Introduction to the SAS Statistical Package 3 cr
PH.340.680 Environmental and Occupational Epidemiology 4 cr
PH.120.624 Cancer Biology 3 cr
PH.380.664 Reproductive and Perinatal Epidemiology 4 cr

Cardiovascular and Clinical Epidemiology

Courses Required for masters students in Cardiovascular and Clinical Epidemiology
Required Courses for Students focusing in Cardiovascular Epidemiology
First Year

Students WITHOUT a background in biology or medicine must complete: PH.260.600 Introduction to the Biomedical Sciences (offered over the summer prior to enrollment) **OR** PH.550.630 Public Health Biology
AND PH.340.855 SS/R: Biological Basis of Cardiovascular Disease Epidemiology
AND PH.340.730 Assessment of Clinical Cardiovascular Disease (alternate years 3rd term)

Term 1: PH.340.871 Welch Center Research Seminar (2 terms required)

Term 2: PH.340.871 Welch Center Research Seminar (2 terms required)
PH.340.645 Introduction to Clinical Trials

Term 3: PH.340.871 Welch Center Research Seminar (2 terms required)
PH.340.607 Introduction to Cardiovascular Disease Epidemiology

Term 4: PH.340.871 Welch Center Research Seminar (2 terms required)
PH.340.803 Advanced Topics in Cardiovascular Disease Epidemiology

Second Year

please consider recommended courses appropriate to augment your knowledge in fields of interest

Courses Required for masters students focusing in Clinical Epidemiology
First Year

Students WITHOUT a background in biology or medicine must complete: PH.260.600 Introduction to the Biomedical Sciences (offered over the summer prior to enrollment) **OR** PH.550.630 Public Health Biology

Term 1: PH.340.871 Welch Center Research Seminar (2 terms required)

Term 2: PH.340.871 Welch Center Research Seminar (2 terms required)
PH.340.645 Introduction to Clinical Trials
PH.340.620 Principles of Clinical Epidemiology

Term 3: PH.340.871 Welch Center Research Seminar (2 terms required)

Term 4: PH.340.871 Welch Center Research Seminar (2 terms required)

Second Year

please consider recommended courses appropriate to augment your knowledge in fields of interest

Courses Recommended for masters students in Cardiovascular and Clinical Epidemiology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1: PH.340.687 Epidemiology of Kidney Disease 2

PH.340.731 Principles of Genetic Epidemiology 1 4

PH.340.616 Epidemiology of Aging 3 (alternates online and in-person every other year)

Term 2: PH.340.624 Etiology, Prevention, and Control of Cancer 4

PH.340.627 Epidemiology of Infectious Diseases 4

Term 3: PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4

PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses* 4 *usually taken in Year 2

Term 4: PH.340.644 Epidemiology of Diabetes and Obesity 3

Skills Courses (can be taken Year 1 or later with commensurate progress in Biostats series)

Term 4: PH.340.600 Stata Programming (4th term, 2 credits) 2

Term 4: PH.140.632 Introduction to the SAS Statistical Package 3

Advanced Methods Courses (recommended in Year 2, review course catalogue for prerequisites)

Term 1: PH.140.641 Survival Analysis 3

PH.140.776 Statistical Computing 3

PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3

Term 2: PH.340.717 Health Survey Research Methods 4

Term 3: PH.140.655 Analysis of Longitudinal Data 4

PH.140.664 Causal Inference in Medicine and Public Health I 4

Courses recommended for masters students with a focus in Cardiovascular Epidemiology

Term 1: PH.140.651 Methods in Biostatistics I 4

Term 2: PH.140.652 Methods in Biostatistics II 4

PH.340.620 Principles of Clinical Epidemiology 2

Term 3: PH.140.653 Methods in Biostatistics III 4

Term 4: PH.140.654 Methods in Biostatistics IV 4

Courses recommended for masters students with a focus in Clinical Epidemiology

Term 2: PH.309.712 Assessing Health Status and Patient Outcomes 3

Term 3: PH.340.607 Introduction to Cardiovascular Disease Epidemiology 4

PH.340.730 Assessment of Clinical Cardiovascular Disease 2

Term 4: PH.340.803 Advanced Topics in Cardiovascular Disease Epidemiology 2

PH.340.855 SS/R: Biological Basis of Cardiovascular Disease Epidemiology 2 *

(Incoming students with a U.S. medical degree will be waived automatically. Other students who believe they may qualify for a waiver from the requirement based on their previous course work should consult with the track director)

Clinical Trials and Evidence Synthesis

Courses Required for masters students in Clinical Trials and Evidence Synthesis

First Year

Term 2: PH.340.645 Introduction to Clinical Trials 3

Term 3: PH.340.633 Data Management in Clinical Trials 3

Term 4: PH.340.648 Clinical Trials Management 3

Second Year

Term 3: PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses 4
PH.140.655 Analysis of Longitudinal Data 4

Courses Recommended for masters students in Clinical Trials and Evidence Synthesis

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1: PH.140.651 Methods in Biostatistics I 4
PH.221.722 Quality Assurance Management Methods for Developing Countries 4
PH.340.653 Epidemiologic Inference in Outbreak Investigations 3
PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5
PH.390.631 Principles of Drug Development 2
PH.390.673 Ethical and Regulatory Issues in Clinical Research 3
PH.317.600 Introduction to the Risk Sciences and Public Policy 4

Term 2: PH.140.630 Introduction to Data Management 3
PH.140.652 Methods in Biostatistics II 4
PH.340.717 Health Survey Research Methods 4
PH.410.710 Concepts in Qualitative Research for Social and Behavioral Sciences 3

Term 3: PH.140.634 Non-Inferiority and Equivalence Clinical Trials 2
PH.140.642 Design of Clinical Experiments 3
PH.140.653 Methods in Biostatistics III 4
PH.223.664 Design and Conduct of Community Trials 4
PH.340.694 Power and Sample Size for the Design of Epidemiological Studies I 1
PH.340.775 Measurement Theory and Techniques in Epidemiology 4
PH.140.664 Causal Inference in Medicine and Public Health I 4

Term 4: PH.140.654 Methods in Biostatistics IV 4
PH.140.632 Introduction to the SAS Statistical Package 3
PH.140.656 Multilevel Statistical Models in Public Health 4
PH.221.616 Ethics of Public Health Practice in Developing Countries 2

PH.223.705 Good Clinical Practice: A Vaccine Trials Perspective 4
PH.224.691 Qualitative Data Analysis 3
PH.390.675 Outcomes and Effectiveness Research 3

Summer Inst PH.330.621 Mixed Methods for Research in Public Health 2

Environmental Epidemiology

Course Required for masters students in Environmental Epidemiology
First Year
Term 4: PH.340.680 Environmental and Occupational Epidemiology

Courses recommended for masters students in Environmental Epidemiology
[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1: PH.182.615 Airborne Particles 4
PH.187.610 Public Health Toxicology 4
PH.188.680 Fundamentals of Occupational Health 3
PH.317.600 Introduction to the Risk Sciences and Public Policy 4

Term 2: PH.182.625 Principles of Occupational and Environmental Hygiene 4
PH.317.610 Risk Policy, Management and Communication 3
PH.340.624 Etiology, Prevention, and Control of Cancer 4
PH.340.717 Health Survey Research Methods 4

Term 3: PH.180.601 Environmental Health 5
PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4
PH.317.605 Methods in Quantitative Risk Assessment 4

Term 4: PH.188.681 Onsite Evaluation of Workplace and Occupational Health Programs 5
PH.317.615 Topics in Risk Assessment 2

Epidemiology of Aging

Course Required for masters students in Epidemiology of Aging
First Year
Term 1: PH.340.616 Epidemiology of Aging

Recommended Courses for Masters Students in Epidemiology of Aging
[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

First Year
each term PH.330.802 Seminar on Aging, Cognition and Neurodegenerative Disorders

Term 1: PH.140.641 Survival Analysis 3
PH.380.604 Life Course Perspectives on Health 4

Term 2: PH.340.620 Principles of Clinical Epidemiology 2
PH.340.666 Foundations of Social Epidemiology 3
PH.380.603 Demographic Methods for Public Health 4

Term 3: PH.340.699 Epidemiology of Sensory Loss in Aging 3
PH.260.665 Biological Basis of Aging++ 3

Term 4: PH.330.623 Brain and Behavior in Mental Disorders 3
PH.140.656 Multilevel Statistical Models in Public Health 4
PH.330.618 Mental Health in Later Life++ 3

++offered every other year

Second Year
Term 1: PH.330.657 Statistics for Psychosocial Research: Measurement 4
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5

Term 2: PH.140.658 Statistics for Psychosocial Research: Structural Models 4
PH.309.605 Health Issues for Aging Populations 3

Term 3: PH.140.655 Analysis of Longitudinal Data 4

General Epidemiology and Methodology

Courses Required for masters students in General Epidemiology and Methodology
First Year
Term 1: PH.340.731 Principles of Genetic Epidemiology 1 4
(recommended for year 1 but may be taken in year 2, satisfies the out-of-track requirement as well)

Term 2: PH.340.645 Introduction to Clinical Trials 3
(recommended for year 1 but may be taken in year 2)

Second Year
CHOOSE AT LEAST TWO of these 3 courses in PH research skills:

Term 1: PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3
Term 2: PH.340.717 Health Survey Research Methods 4
Term 3: PH.340.648 Clinical Trials Management 3

Courses Recommended for Masters Students in General Epidemiology and Methodology
[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Master's Students with a Methodology Focus:
Term 1: PH.330.657 Statistics for Psychosocial Research: Measurement 4
PH.340.646 Epidemiology and Public Health Impact of HIV and AIDS 4
PH.340.616 Epidemiology of Aging 3
PH.340.653 Epidemiologic Inference in Outbreak Investigations 3

Term 2: PH.140.658 Statistics for Psychosocial Research: Structural Models 4
PH.183.631 Fundamentals of Human Physiology 4
PH.260.631 Immunology, Infection and Disease 3
PH.330.603 Psychiatric Epidemiology 3
PH.340.620 Principles of Clinical Epidemiology 2
PH.340.624 Etiology, Prevention, and Control of Cancer 4
PH.340.666 Foundations of Social Epidemiology* 3
PH.340.732 Principles of Genetic Epidemiology 2 3
PH.340.641 Healthcare Epidemiology 4

Term 3: PH.140.640 Statistical Methods for Sample Surveys 3
PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4
PH.222.647 Nutrition Epidemiology 3
PH.224.690 Qualitative Research Theory and Methods 3
PH.309.616 Introduction to Methods for Health Services Research and Evaluation I 2

PH.340.607 Introduction to Cardiovascular Disease Epidemiology 4
PH.340.609 Concepts and Methods in Infectious Disease Epidemiology 3
PH.340.733 Principles of Genetic Epidemiology 3 3

Term 4: PH.140.656 Multilevel Statistical Models in Public Health 4
PH.224.691 Qualitative Data Analysis 3
PH.309.617 Introduction to Methods for Health Services Research and Evaluation II 2
PH.340.677 Infectious Disease Dynamics: Theoretical and Computational Approaches 3
PH.340.680 Environmental and Occupational Epidemiology 4
PH.380.664 Reproductive and Perinatal Epidemiology 4
PH.390.675 Outcomes and Effectiveness Research 3

*alternates online and in-person every other year
++ alternate year course

Second Year courses:

Term 1: PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5

Term 2: PH.340.774 Advanced Theory and Methods in Epidemiology 4

Term 3: PH.140.664 Causal Inference in Medicine and Public Health I 4
PH.140.655 Analysis of Longitudinal Data 4
PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses 4

Recommended statistical programming computing courses:

Term 1: PH.140.776 Statistical Computing 3

Term 4: PH.140.632 Introduction to the SAS Statistical Package 3
PH.340.600 Stata Programming 2

Master's Students with a Pharmacoepidemiology and Drug Safety Focus:
Strongly Recommended courses for Masters Students with a Pharmacoepidemiology Focus:

Term 1: PH.317.600 Introduction to the Risk Sciences and Public Policy 4
PH.390.631 Principles of Drug Development 2

Term 2: PH.317.610 Risk Policy, Management and Communication 3

Term 3: PH.140.664 Causal Inference in Medicine and Public Health I 4
PH.340.684 Pharmacoepidemiology: Drug Utilization 3 (alternate year format)
PH.221.610 Pharmaceuticals Management for Under-Served Populations 3

Term 4: PH.410.680 Social Ecological Approaches to Health Regimen Adherence in Chronic Conditions 3

Recommended courses for Masters Students with a Pharmacoepidemiology Focus:

Term 1: PH.317.605 Methods in Quantitative Risk Assessment 4
Term 4: PH.317.615 Topics in Risk Assessment 2

the following courses are offered outside of BSPH and require interdivisional registration and instructor permission

AS.410.651 Clinical Development of Drugs and Biologics 4
AS.410.627 Translational Biotechnology: From Intellectual Property to Licensing 4
ME.330.809 Analytic Methods for Clinical Pharmacology variable
NR.110.508 Clinical Pharmacology 3

Individualized Focus:
Students designing their own educational programs should, in conjunction with their advisor, choose three to four graduate-level courses (taken for a letter grade) in their field from among the offerings of the University in addition to taking the GEM Required courses listed above.

Genetic Epidemiology

Courses Required for Masters Students in Genetic Epidemiology
First Year

Term 1: PH.340.731 Principles of Genetic Epidemiology 1 4

Term 2: PH.340.732 Principles of Genetic Epidemiology 2 3

Term 3: PH.340.733 Principles of Genetic Epidemiology 3 3

Term 4: PH.340.734 Principles of Genetic Epi 4: Emerging and Advanced Methods 2

Second Year

Term 1: PH.120.602 Concepts of Molecular Biology (Pass/Fail, or Grade) 4

Courses recommended for masters students in Genetic Epidemiology
Analytic Methods Courses (ideal for year 2):

Term 1: PH.140.641 Survival Analysis 3
PH.140.651 Methods in Biostatistics I* 4
PH.140.776 Statistical Computing 3

Term 2: PH.140.638 Analysis of Biological Sequences 3
PH.140.652 Methods in Biostatistics II 4
PH.140.778 Advanced Statistical Computing 3
PH.340.774 Advanced Theory and Methods in Epidemiology* 4

Term 3: PH.140.644 Statistical Machine Learning: Methods, Theory, and Applications 4
PH.140.653 Methods in Biostatistics III 4
PH.140.655 Analysis of Longitudinal Data 4

Term 4: PH.140.688 Statistics For Genomics 3

Biology and Molecular Methods Courses:

Term 1: PH.260.611 Principles of Immunology I 4

Term 2: PH.260.612 Principles of Immunology II 4
PH.183.631 Fundamentals of Human Physiology 4 (*For non-physician trained students only)

Term 3: PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4

Term 4: PH.120.608 Gene Editing, therapy and Manipulation 3

Topic-Specific Electives:

Term 3: PH.340.775 Measurement Theory and Techniques in Epidemiology 4

Term 4: PH.330.619 Psychiatric Genomics 3
PH.415.624 Ethical, Legal and Social Implications in Genetics and Genomics Over Time 3 (offered in alternate years)

Infectious Disease Epidemiology

Courses Required for masters students in Infectious Disease Epidemiology First Year

Term 1: PH.340.653 Epidemiologic Inference in Outbreak Investigations 3

Term 2: PH.340.627 Epidemiology of Infectious Diseases 4

Term 3: PH.340.609 Concepts and Methods in Infectious Disease Epidemiology 3

Students must complete at least one course in each of the four disciplinary sections below. Additional courses serve as recommended courses.

Section one: General Electives: choose 1

Term 1: PH.340.646 Epidemiology and Public Health Impact of HIV and AIDS 4
PH.340.641 Healthcare Epidemiology 4

Term 2: PH.223.662 Vaccine Development and Application4

Term 3: PH.182.640 Food- and Water- Borne Diseases 3

PH.223.663 Infectious Diseases and Child Survival 3
PH.223.687 Vaccine Policy Issues 3
PH.260.656 Malariology 4
PH.340.612 Epidemiologic Basis for Tuberculosis Control 2

Term 4: PH.223.682 Clinical and Epidemiologic Aspects of Tropical Diseases 4
PH.223.689 Biologic Basis of Vaccine Development 3
PH.223.705 Good Clinical Practice: A Vaccine Trials Perspective 4
PH.340.651 Emerging Infections 2
PH.380.761 Sexually Transmitted Infections in Public Health Practice 4
PH.380.762 HIV Infection in Women, Children, and Adolescents 4

Section two: Skills in Research: choose 1

Term 1: PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3

Term 2: PH.340.717 Health Survey Research Methods 4

Section three: Biology and Pathogenesis of Disease: choose 1

Term 1: PH.260.623 Fundamental Virology 4
PH.260.636 Evolution of Infectious Disease 3
PH.340.654 Epidemiology and Natural History of Human Viral Infections 6
Term 3: PH.260.627 Pathogenesis of Bacterial Infections 4
PH.260.650 Vector Biology and Vector-Borne Diseases 3

Section four: Immunology: choose one set (recommended to complete in year two)

either:

Term 1: PH.260.611 Principles of Immunology I 4

AND

Term 2: PH.260.612 Principles of Immunology II 4
**students requesting pass/fail for these two courses only must seek permission from their adviser and the track director*

OR

Term 2: PH.260.631 Immunology, Infection and Disease 3

Department Comprehensive Examination

A two-day written departmental comprehensive examination is administered to all students enrolled in Epidemiology degree programs in late May of the first academic year. All students are required to sit for the exam on the scheduled dates—no alternate exams will be offered.

By the time of the examination, students should have completed 64 credits (for four consecutive terms, e.g. one full year of residence), **the required first-year coursework in their Track with a cumulative GPA of at least 2.75,** and in these courses:

Code	Title	Credits
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5
Select one of the following Biostatistics series:		16
PH.140.621 & PH.140.622 & PH.140.623 & PH.140.624	Statistical Methods in Public Health I and Statistical Methods in Public Health II and Statistical Methods in Public Health III and Statistical Methods in Public Health IV	
PH.140.651 & PH.140.652 & PH.140.653 & PH.140.654	Methods in Biostatistics I and Methods in Biostatistics II and Methods in Biostatistics III and Methods in Biostatistics IV	

The first day of the exam (Part A) includes testing on the following topics:

- Knowledge and application of epidemiologic concepts and methods (and related biostatistics)
- History of epidemiology
- Contemporary issues in public health
- Research ethics

The second day of the exam (Part B) is Track-specific, and tests knowledge of concepts and methods presented in the required courses and activities for each Track, as well as the Department core courses as applied to the Track.

Students must pass both Part A and Part B of the comprehensive examination. Master's students must attain at least a 70% on each Part A and Part B to pass. A repeat examination may be allowed but is not guaranteed. If a repeat is granted, it must be completed before starting the second academic year. Failure to pass one or both sections of the comps may result in dismissal from the master's program or from the Department. For additional policies regarding the Comprehensive Exams, please see the next tab.

Master's Thesis (ScM)

Master of Science (ScM) students must complete a thesis based on original research. The readers' committee is comprised of the adviser and one additional University faculty member prior to beginning the thesis project (professor, scientist, lecturer, instructor of any rank). Upon completion, the thesis is submitted to these two readers for their approval. ScM students planning on a May graduation must adhere to all program deadlines. The School's Policy and Procedures Memorandum (PPM) for the ScM degree program is available here (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Forms/AllItems.aspx), "Academic_Programs_10_Master_of_Science_Degree_071417." The thesis is a requirement for partial fulfillment of the ScM degree.

Master's Thesis Expectations

Epidemiology ScM student theses will be evaluated in the following areas by both the faculty thesis adviser(s) and the second reader. In addition, the thesis adviser(s) will evaluate student quarterly progress detailed in point 5 below.

Each student must register for 4 terms of Thesis Research Epidemiology with their thesis adviser in their second year. The thesis adviser(s), in consultation with the thesis reader, each student will be evaluated on whether their thesis shows:

1. Their understanding of the current state of the knowledge about the public health problem studied for the thesis, as demonstrated by the student's descriptions and discussions of:
    a. The descriptive epidemiology of the public health problem. For example, its prevalence and distribution in the population, and its risk factors (e.g., modifiable, non-modifiable, comorbidities, social, environmental risk factors, etc.).
    b. The biology, physiology, and natural history of the public health problem, if relevant.
    c. The contemporary questions about the public health problem, including new directions in research on the public health problem (including technology, diagnosis, and methodologic challenges).
    d. The impact of the public health problem in the real world, with specific discussions about sub-populations or vulnerable populations that are particularly affected by the problem.
2. The student's ability to integrate and synthesize the current body of literature on the public health problem, is demonstrated by:
    a. Preparation of a comprehensive literature review (systematic review, if appropriate see separate document).
    b. Interpretation of findings from multiple research papers and understanding of the full body of research relevant to the public health problem.
    c. Interpretation of the student's own findings within the context of the current body of literature.
    d. Use or evaluation of proper study design, measurement of exposures and/or outcomes, biases, and confounding, biostatistical methods, and application.
    e. Explanation and interpretation of epidemiologic findings for a non-epidemiologist audience.
    f. Identify next steps and future questions that need to be addressed.
    g. Articulation of how the student's findings could be applied in order to affect or diminish the problem at a population (or sub-population) level.
3. The student's ability to prepare a thesis that is:
    a. Logically structured and organized; and
    b. Includes figures that illustrate important findings, with proper formatting (e.g. legends, labeled axes, appropriate titles, etc.); and
    c. Includes tables that convey important findings, organized and formatted efficiently (e.g. appropriate titles, headings, footnotes, legends, etc.).
4. The student's ability to write a thesis that is grammatically accurate, including:
    a. Correct punctuation and spelling; and
    b. Easily readable by epidemiologists; and
    c. Appropriately and adequately referenced citations; and
    d. The student's own original work (please see Plagiarism modules).
5. The student's thesis adviser will evaluate the student on student professionalism, documented by:
    a. Keeping appointments with the thesis adviser and being on time.
    b. Being prepared and organized at each meeting with the thesis adviser, which includes creating and sending an agenda before the meeting.
    c. Demonstrating appropriately paced progress on the thesis research.
    d. Preparing the thesis document.

The expectation is that the student will improve in all aspects of their research during the course of the thesis work and work will show growth across the year culminating in the final thesis.

Master's Poster Session

All Master's students are required to participate in the Master's Poster Symposium held at the end of their 2nd year. Participation is a requirement for partial fulfillment of the ScM degree. Each student should prepare a 3'x4' portrait-oriented poster of their thesis work (no other work can be presented,) and have the approval of the poster from their adviser(s) before presenting. Although the work done for the poster will represent the Master's student's thesis, the adviser(s), and any other research colleagues, should be included as co-authors. In addition, any funding sources that supported the research directly or indirectly should be cited on the poster (in consultation with thesis adviser(s)). Additional guidelines for the creation of a scientific poster will be disseminated to students at the quarterly Master's meetings. Students are expected to follow these guidelines.

Students should carefully proofread their posters prior to submitting them for printing. Students are welcome to utilize the printing service they wish, but two local recommendations are:

https://phdposters.com (Campus Pick-up Available)

FedEx Print & Ship / Carnegie Building Room #170
600 N. Wolfe St.
Baltimore, MD 21287
410-502-7637
usa5032@fedex.com

A poster title and abstract should be submitted to the Academic Program Coordinator (Justin Switzer) prior to the Master's Poster Symposium for inclusion in the program. Attendees at the Master's Poster Symposium include peers, staff, and faculty.

Students who will not graduate in May are still required to present a poster. This poster must be approved by their adviser(s) and presented to the Master's Program Director at least three weeks prior to the date by which the Department must certify student eligibility for the award of degree to the School's Office of Records and Registration. Students graduating in August or December must contact the Master's Program Director by July 1 (August graduation) or November 1 (December graduation) to indicate their plans to graduate and determine a poster presentation date.

The Policy and Procedures Manual for the Master Science

The Department of Epidemiology reserves the right to augment the PPM (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_10_Master_of_Science_Degree_071417.pdf) for BSPH.
The Admissions and Credentials Committee handles most policy concerns as described above. The Curriculum Committee handles exceptions to requirements.

Comprehensive Examination Grading Policy

The Departmental Written Comprehensive Examination is graded by the Department of Epidemiology faculty according to a rubric determined by the Comprehensive Examination Committee. Final results are distributed to students via CoursePlus by mid-July. Students who wish to view their exam should set up an appointment with the Senior Academic Coordinator, Ebony Moore (eamoore@jhu.edu).

Master's students whose results fall below 70% are allowed to submit a written request for a re-grade of specific questions. Re-grade requests must include a justification for a change in points allocated for each question being contested; requests without appropriate justification will not be considered. Re-grade requests must have the adviser's endorsement who must have reviewed and approved the student's request. Re-grade requests are handled by the faculty on the Comprehensive Examination Committee. Adviser-approved requests can be e-mailed to the current year's Comprehensive Examination Committee Chair and must include a copy to the adviser. For approved requests, a new score will be assigned for each question that is re-graded. This score may be equal to, greater than, or less than, the original score awarded and cannot be contested a second time.

Master's students admitted to an Epidemiology PhD program may waive the PhD comprehensive exam if they pass (as a master's student) at the doctoral level (75%) and matriculate within the three years following graduating from a Johns Hopkins Bloomberg School of Public Health Epidemiology Master's Degree.

Comprehensive Examination Retake Policy

Students who do not pass the Comprehensive Exam at the appropriate level for their degree program may be granted an opportunity for a retake in August following the May Exam. Students who do not pass the Comprehensive Exam at the appropriate level are not automatically granted a retake. To request a retake, students must submit an official request within two weeks of notification of the not passing grade. This request should include a detailed timeline and study plan, to make the case for passing a retake. This request and plan must be endorsed by and developed with the adviser. Retake requests are reviewed via the Department's Admissions and Credentials Committee. Adviser-approved requests can be e-mailed to the current year's Admissions and Credentials Committee Chairs and must include a copy to the adviser and Senior Academic Program Manager (Frances Burman). For approved requests, students are granted one retake only, and it must be in August immediately following the May Exam. A student cannot continue in the degree program without passing the Comprehensive Examination at the appropriate level, prior to the start of the second year.

Recommendations for Special Studies versus Thesis Research

Special Studies and Research in Epidemiology, PH.340.840.xx, is offered during terms 1, 2, 3, and 4. Thesis Research, PH.340.820.XX is offered terms S, 1, 2, 3, and 4.

Special Studies and Research: PH.340.840.XX

All first-year ScM students should take 1 credit special studies and research each term during terms 1 -3.

The following list of activities may be approved for independent study or special studies and research and is not inclusive:

- Directed readings and discussion leading up to preparing for the research proposal,
- Literature searches and meta-analyses
- Secondary data analysis,
- Self-guided focused study on a particular methodology or a disease of interest

Thesis Research: PH.340.820.XX

Masters students take 340.820 once they begin working on their research thesis. Students should begin registering for thesis research during fourth term of the first year once their adviser selection is confirmed. ScM students must take a minimum of 2 credits of thesis research for two terms during their program.

Calculating credits for a variable credit course

- Students must remember that the 1 hour – in class, 2 hours – outside of class ratio still applies: e.g. Students should think about the time the faculty member will be involved in guiding them (see faculty contact hours below) as well as how much time the student uses to conduct outside readings and work.

What constitutes Faculty Contact Hours

- Individual one-on-one meetings
- Faculty revisions of writing projects (Faculty members spend a lot of time editing, proofreading, and otherwise providing written feedback to students.)
- Mentoring and networking preparation and discussion.
- Time spent in group settings with faculty mentors e.g. journal clubs or weekly "lab/group" meetings. Students should make every effort to attend the group meetings for their track and adviser.

How to Register

- Students must communicate their intent to register with and receive approval from the faculty mentor in writing, prior to registering for credits for the special studies or thesis research and include the content/activities to be conducted and the number of credits.
- Students may take 1-3 credits while taking a full load of courses.
- Students may take up to 8 credits per term while taking a partial load of courses with the approval of the faculty mentor.
- Students must meet with the faculty mentor before or during add/drop to discuss objectives.

Adviser / Advisee Manual

Each student in the Department is assigned an adviser and selects co-adviser(s) as they move through the program; Adviser(s) have the responsibility of serving as a guide and mentor. This manual is intended to guide the student and the faculty member(s) in making the adviser/advisee relationship as successful as possible.

This manual has two goals:

- To provide answers to questions that students frequently ask and,
- To provide guidance on how the student and adviser can interact most effectively

Academic Advisers should:

- Provide oversight of the student's academic progress by:
  - Assisting in the selection of courses
  - Ensuring the student is meeting degree milestones in a timely manner
  - Being available for regular meetings with the student
  - Assessing and developing the student's interests and abilities
  - Monitoring student progress in academic coursework through periodic examination of transcripts
  - Monitoring student progress in fieldwork
  - Writing letters of reference (given appropriate lead-time)
  - Assisting with grant preparation (doctoral students, given appropriate lead-time)
  - Referring students to the appropriate individuals or offices that provide academic support and/or resources
- Provide leadership in matters of academic integrity:
  - Being knowledgeable about ethical issues that pertain to academics, research, and practice
  - Helping students interpret and understand institutional policies and procedures regarding the responsible conduct of research
  - Discouraging students from circumventing institutional policies and procedures, and when confronted with such issues, directing students to appropriate institutional resources or contacts, avoiding actual or appearance of conflicts of interest
  - Respecting the confidentiality of students
- Encourage active participation in the greater community (department, school, university, local, state, national, international)

STUDENTS MAY EXPECT THE FOLLOWING FROM THEIR ADVISER(S):

- Advisers' approval for course registrations, course changes, and pass/fail agreements, and on all reasonable petitions to the Admissions and Credentials Committee
- At least one meeting per term with the advisers
- Oversight of the student's overall academic program and sensitivity to any academic difficulties
- Knowledge of and interest in the student's career objectives
- Review of required and recommended courses for the track
- Assistance in designing a plan for the fulfillment of required courses and assistance with planning the course schedule for the year

Advising students is an integral part of faculty members' responsibilities. Thus, students should not feel or be made to feel that they are imposing by asking for advice. Faculty members expect to be able to meet with students, although the students should be respectful of the faculty's time by scheduling and respecting appointments. The responsibility for arranging meetings lies with the student. Students should not expect advisers to seek them out for needed appointments. The student remains obligated to schedule a meeting in order to assure that the adviser has reviewed the student's schedule and to plan any special studies projects or thesis research as needed with the adviser before the registration period deadline.

RIGHTS AND RESPONSIBILITIES OF THE ADVISER(S)**:

- To assist in determining the advisee's educational goals and needs upon starting the program
- To serve as an educational and/or professional mentor for the student
- To maintain awareness of and sensitivity to the level of compatibility between the student advisee and the advisers in terms of academic, professional, and personal interests
- To facilitate a change of adviser or program, if deemed appropriate for the student
- To monitor the advisee's overall academic program and be sensitive to signs of academic difficulty
- To provide guidance throughout the academic program
- To be sensitive to cultural, medical, legal, housing, visa, language, financial, or other personal problems experienced by the advisee and to be aware, sensitive, understanding, and supportive
- Advisers have the right to expect to be treated with respect and courtesy, to be notified in writing when a meeting must be canceled or rescheduled, to be consulted when students have questions or concerns about the research focus or progress, and to serve as team leader on the research team

RIGHTS AND RESPONSIBILITIES OF THE ADVISEE**:

- To arrange to meet with the adviser at least once each term, and observe registration and administrative deadlines
- To identify and develop professional career goals and interests
- To access and demonstrate knowledge of administrative policies and procedures and be familiar with the content in the Student Handbook
- To maintain the academic checklist and review it at meetings with the advisers
- Advisees have the right to expect to be treated with respect and courtesy, to be notified in writing when a meeting must be canceled or rescheduled, to be notified when advisers have questions or concerns about the research focus or progress, and to be granted the role of a team member on the research team

```
**Students and Faculty each have the right to request changes
 to the adviser/advisee relationship upon consultation with the
 Director of Graduate Education (Laura Camarata) without penalty.
```

Please review the CEPH Competencies located: https://e-nextcatalog.jhu.edu/public-health/ceph-requirements/index.html (p. 176)

Epidemiology, PhD

Doctor of Philosophy Degree Program

The PhD program in Epidemiology (https://publichealth.jhu.edu/academics/phd-dept-of-epidemiology/) is anchored in public health and quantitative population research and analysis. Students approach research using epidemiologic methods to understand complex human health problems. The PhD comprises two years of coursework followed by two (or more) years of research. Students are required to complete a teaching training curriculum and serve as teaching assistants for methods and topical courses. Additionally, students must successfully complete a written comprehensive exam, a practice oral exam, a preliminary oral exam, multiple oral and poster presentations, and a final dissertation including presentation and defense. The doctoral degree program targets students with specific career goals in public health research, teaching, and/or leadership.

PhD students focus on the creation of new and innovative knowledge through their research. Training is offered through a core methodologic sequence with the addition of more focused courses in specialized areas. Students are expected to tailor their curricula, working with their advisers to create a comprehensive plan of study and research. PhD theses must be based on original research, worthy of publication, and approved by the Department and a committee of thesis (dissertation) readers. PhD students must also be engaged in primary data collection as a component of their dissertation research or embedded in other research during their training here.

The PhD program requires that students:

- Complete at least 64 credits of coursework with a cumulative 3.0 GPA (B or higher average);
- Successfully pass the departmental comprehensive examination at the appropriate level;
- Complete the teaching assistantship (TA) curriculum, including serving as a TA in 3 departmental courses;
- Present a doctoral proposal seminar in the Department;
- Pass the Departmental Oral Examination;
- Pass the Graduate Board Preliminary Oral Examination,
- Fulfill the primary data collection requirement
- Develop and conduct independent research culminating in a doctoral dissertation in an approved format;
- Present their dissertation research in a final seminar (open to the public);
- Successfully defend their dissertation during the Final Oral Examination.

Students work closely with their advisers and Thesis Advisory Committee to develop their research questions and design their projects to address those questions and to conduct the dissertation research.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Doctoral students in the Department of Epidemiology are expected to train to be public health leaders and educators. By following an apprenticeship model, students take courses, learn to teach methods and concepts to a wide audience, conduct a rigorous examination of the existing science, and discover and contribute new knowledge to the field. Thus we require students to complete a residency and participate fully in journal clubs, research-in-progress meetings, programmatic activities, and scientific poster sessions and conferences. Doctoral students serve as teaching assistants, conduct research, and prepare a dissertation of the caliber expected of graduates of the Johns Hopkins University.

Residency

A minimum of 64 credits is required to complete a doctoral degree. The residency requirement (completed by maintaining full-time registration of four consecutive terms of at least 16 credits each) must be completed during the first year of the program. To broaden perspective and to enhance the student's capabilities for work in public health or disease-related fields, at least 18 credits of coursework are required in courses from at least two other departments outside the student's primary department. At least nine of these credits must be taken at BSPH. Students who have completed a master's degree at Johns Hopkins Bloomberg School of Public Health, and are continuing into the doctoral program, must complete 18 new credits outside of Epidemiology, in at least two different departments of the school **and** complete 18 credits within the Department of Epidemiology, to establish the grade point average. Of note: University and Schoolwide requirements do not count toward the 18 credits outside of the department.

Track Specific Activities

Each Track holds journal clubs, research-in-progress meetings, and other activities, which Track students are expected to attend. PhD students should take on leadership roles after their first year of study. These activities are opportunities to engage and interact with Track faculty, fellow students, and post-doctoral fellows, and to participate and present in the topic area of the Track. All doctoral students are expected to participate in their Track. If a student for some reason wishes to switch tracks during the course of their degree, they must schedule a meeting with the Senior Academic Program Manager, Frances Burman (FranBurman@jhu.edu) to ascertain whether a switch is feasible to still meet graduation requirements in time and to complete a formal form.

Quarterly Doctoral Meetings

Doctoral students and the Doctoral Program Directors meet quarterly. The agenda is developed by the Epidemiology Student Organization (ESO) doctoral student representatives in consultation with the program co-directors. These meetings provide a forum to learn about academic policies and deadlines, for students to raise questions and concerns, and for all to hear the answers. All doctoral students are expected to attend these meetings.

Annual Advising and Planning Meetings with Adviser

PhD students must meet at least annually with their primary academic adviser for a formal review of their progress with written feedback and discussion plans for the upcoming year. This is accomplished using the Individualized Development Plan **(**https://my.jhsph.edu/sites/EPI/students/DocumentLibrary/JHSPH_Annual-Discussion-and-Planning-Document_form[1].pdf**)** (IDP) in the My.jhsph.edu portal.

Any template for an IDP may be used but at a minimum, however, the form must include sections for the student to complete on the following topics. There must also be space for advisor comments and feedback:

- Academic and/or thesis research progress of the past year and specific academic and/or research goals for the upcoming year;
- How the advisor can help the student achieve the student's academic or research goals for the coming year;
- Short and long-term professional goals and the types or range of professional sectors of possible interest;
- Specific skills the student wants to develop, or professional areas about which the student wants to learn more;
- How the advisor can help the student achieve, or connect the student to resources for, these professional goals.

Doctoral Teaching Assistant (TA) Curriculum Requirements

PURPOSE OF THE DOCTORAL TA CURRICULUM

Learning how to be an effective teacher and communicator about epidemiologic principles and methods is an integral part of doctoral education in epidemiology. Teaching is an opportunity for students to meet several Departmental doctoral program core competencies, enabling students to:

- Interpret and critique epidemiological studies;
- Interpret epidemiologic data and make valid inferences from study findings;
- Communicate effectively in oral and written formats with students, professionals, and the public on issues related to epidemiology and public health; and
- Provide epidemiologic critique and advice through advising students and professionals on epidemiologic concepts and methods and conducting peer review activities

Practicing these skills also prepare students for Department and Preliminary Oral Examinations and for their future careers, whether in academia or in other venues. The full description of the Teaching Curriculum is outlined in the Policy tab. (p. 263)

School-wide Coursework

Academic & Research Ethics (and Avoiding Plagiarism) Course Requirement

All doctoral students must enroll in PH.550.860 Academic & Research Ethics at BSPH during the first term of doctoral enrollment at the School. The Avoiding Plagiarism at JHU training developed by JHU's Sheridan Libraries course material is contained within the PH.550.860 Academic & Research Ethics at BSPH course. This online course, is administered through CoursePlus. All students are required to complete this online course by the end of their first term enrolled. In the course, students are asked to upload two certificates to a CoursePlus DropBox showing completion of both parts of this course:

- Certificate from JHU for the Avoiding Plagiarism module
- Certificate from SPH for completion of the Responsible Conduct of Research module

Students must also send a copy of the certificates to the Senior Academic Program Manager, Frances Burman (FranBurman@jhu.edu) with their name and "Academic & Research Ethics Requirement" in the subject line of the e-mail.

Responsible Conduct of Research Course Requirement

All doctoral students must fulfill the Responsible Conduct of Research requirement. Please note, while there is a Responsible Conduct of Research module within the PH.550.860 Academic & Research Ethics at BSPH.82, this is a separate requirement and is not fulfilled by that module contained within PH.550.860 Academic & Research Ethics at BSPH.82.

Additionally, doctoral students who are supported by a National Institutes of Health (NIH) training grant, career development award (individual or institutional), research education grant, or dissertation research grant (including D43, D71, F05, F30, F31, F32, F33, F34, F37, F38, K01, K02, K05, K07, K08, K12, K18, K22, K23, K24, K25, K26, K30, K99/R00, KL1, KL2, R36, T15, T32, T34, T35, T36, T37, T90/R90, TL1, TU2, and U2R) must repeat this in-person requirement every four years.

This requirement can be met by completing either of the following two courses:

- PH.550.600 Living Science Ethics - Responsible Conduct of Research (1st term)
  or
- PH.306.665 Research Ethics and integrity: U.S. and International Issues (3rd term)

CEPH Cells to Society Courses

The Council on Education in Public Health designates core knowledge for all public health professionals. The list of courses and term offerings is located online (https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings/). Epidemiology degree students are required to complete 8 of the 12 sessions as listed below. Each course is 0.5 credits and is offered only online. Many of these courses can be used as introductions to full-term courses offered in multiple modalities throughout the year.

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.610	The Social Determinants of Health	0.5
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5

Departmental Core and Required Courses [subject to change]

The Doctoral Level Core Requirements are listed by year and term for all Epidemiology doctoral students. Students complete **CEPH Cells to Society Courses**, **Core Courses**, **Track-Specific Courses**, a **course outside of their track**, and recommended courses appropriate to provide a base for their intended research. Students who group their electives and recommended courses in a cohesive theme may wish to complete one of the many Certificates (https://www.jhsph.edu/academics/certificate-programs/) offered by the Department and School. Doctoral students who have a strong interest in methodology may apply for and complete the Concurrent MHS in Biostatistics (https://www.jhsph.edu/departments/biostatistics/academics-and-student-life/degree-programs/mhs/) while enrolled in the doctoral program.

REQUIRED: Core Courses for all doctoral students in Epidemiology

Core Courses should be completed during the first year of enrollment in preparation for the Written Comprehensive Examinations and as preparation for the Teaching Curriculum.

Course	Title	Credits
First Year		
First Term		
Summer Before Year 1		
Online Incoming Epi Students 2021 Orientation includes:		
Introduction to Online Learning		
Sexual Harassment and Sexual Violence Prevention Training (Title IX)		
Unconscious Bias Training		
First Term		

PH.140.621 or PH.140.651	Statistical Methods in Public Health I or Methods in Biostatistics I	4
PH.340.751	Epidemiologic Methods 1	5
PH.340.860	Current Topics in Epidemiologic Research	1

Fourth Term		
PH.340.820	Thesis Research Epidemiology (with thesis adviser, credits variable)	1 - 5
PH.340.715	Problems in the Design of Epidemiologic Studies: Proposal Development and Critique	5
PH.340.865	Teaching Epidemiologic Methods and Concepts At the Graduate Level (Select this course to coincide with TA positions fulfilling requirement)	1 - 3
Select recommended and elective courses to total 16 credits per term		9
	Credits	**16-22**
	Total Credits	**128-154**

[1] May be waived if student holds MPH from a CEPH accredited program in past 10 yrs

Courses approved for the "OUTSIDE OF TRACK" requirement

All students must complete one introductory topical epidemiology course outside of the chosen track. Courses approved by the Curriculum Committee to meet this requirement are listed below:

Code	Title	Credits
Select one of the following:		3-4
PH.340.616	Epidemiology of Aging (Term 1)	
PH.340.731	Principles of Genetic Epidemiology 1 (Term 1)	
PH.340.682	Pharmacoepidemiology Methods (Term 2)	
PH.330.603	Psychiatric Epidemiology (Term 2)	
PH.340.624	Etiology, Prevention, and Control of Cancer (Term 2)	
PH.340.627	Epidemiology of Infectious Diseases (Term 2)	
PH.340.645	Introduction to Clinical Trials (Term 2)	
PH.340.699	Epidemiology of Sensory Loss in Aging (Term 3)	
PH.340.607	Introduction to Cardiovascular Disease Epidemiology (Term 3)	

Code	Title	Credits
PH.340.680	Environmental and Occupational Epidemiology (Term 4)	
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	
PH.340.666	Foundations of Social Epidemiology (Term 4)	
Total Credits		**3-4**

DEPARTMENT-WIDE RECOMMENDED COURSES

Code	Title	Credits
PH.340.860	Current Topics in Epidemiologic Research (Term 1-4, credits variable) [1, 2]	1
PH.340.770	Public Health Surveillance (Term 2 or Term 3) [2]	3
PH.340.769	Professional Epidemiology Methods (Term 3)	4
PH.340.840	Special Studies and Research Epidemiology (Term 1-4, credits variable) [1]	1 - 22

1 1 term, can be taken in any term 1 through 4
2 Recommended for all four terms during year 2

Specific track requirements will be cross-referenced with the course directory and course system database before listing below.

Track Course Requirements (subject to change)

In addition to the Department-wide Core Requirements, each track requires additional coursework specific to their fields to prepare students to conduct research and serve as leaders. Please see the track-specific requirements and recommended courses listed below. Additionally, the first-year course content is covered in the annual Written Comprehensive Exams. All students may take courses in any of the tracks listed and are encouraged to do so.

Cancer Epidemiology

Courses Required for doctoral Students in Cancer Epidemiology

First Year

Term 1

Code	Title	Credits
PH.340.731	Principles of Genetic Epidemiology 1	4

Term 2

Code	Title	Credits
PH.340.624	Etiology, Prevention, and Control of Cancer	4
PH.340.732	Principles of Genetic Epidemiology 2	3

Second Year

Term 1

Code	Title	Credits
ME.510.706	Fundamentals of Cancer: Cause to Cure ((Fundamentals of Cancer: Cause - to - Cure)) offered alternate years - check catalog listing	2.5
PH.120.624	Cancer Biology (may be completed instead of term 1 of Cause to Cure)	3

Term 2

Code	Title	Credits
ME.510.706	Fundamentals of Cancer: Cause to Cure ((Fundamentals of Cancer: Cause - to - Cure) offered alternate years - check catalog listing)	2.5
PH.180.650	Fundamentals of Clinical Oncology for Public Health Practitioners (may be completed instead of term 2 of Cause to Cure)	3

Term 3

Code	Title	Credits
PH.180.640	Molecular Epidemiology and Biomarkers in Public Health	4

Additional Recommended Courses for doctoral students in Cancer Epidemiology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1

PH.140.651 Methods in Biostatistics I
PH.340.616 Epidemiology of Aging (fulfills an out-of-track requirement)
PH.340.696 Spatial Analysis I: ArcGIS
PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation ideally taken in year 2
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies should be completed in year 2 or later

Term 2

PH.140.652 Methods in Biostatistics II
PH.340.774 Advanced Theory and Methods in Epidemiology
PH.140.630 Introduction to Data Management
PH.180.650 Fundamentals of Clinical Oncology for Public Health Practitioners (becomes recommended only when used in addition to Cancer: Cause to Cure)
PH.330.603 Psychiatric Epidemiology (fulfills an out-of-track requirement)
PH.340.645 Introduction to Clinical Trials (fulfills an out-of-track requirement)
PH.340.666 Foundations of Social Epidemiology (fulfills an out-of-track requirement)
PH.340.682 Pharmacoepidemiology Methods (fulfills an out-of-track requirement)
PH.340.697 Spatial Analysis II: Spatial Data Technologies

Term 3

PH.140.653 Methods in Biostatistics III
PH.140.655 Analysis of Longitudinal Data
PH.140.664 Causal Inference in Medicine and Public Health I
PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses
PH.340.694 Power and Sample Size for the Design of Epidemiological Studies I

Term 4

PH.140.632 Introduction to the SAS Statistical Package
PH.140.654 Methods in Biostatistics IV
PH.140.656 Multilevel Statistical Models in Public Health
PH.340.644 Epidemiology of Diabetes and Obesity
PH.340.600 Stata Programming

PH.340.680 Environmental and Occupational Epidemiology (fulfills an out-of-track requirement)
PH.120.624 Cancer Biology (becomes recommended only when used in addition to Cancer: Cause to Cure)
PH.380.664 Reproductive and Perinatal Epidemiology (fulfills an out-of-track requirement)

Cardiovascular and Clinical Epidemiology

Courses Required for doctoral students in Cardiovascular and Clinical Epidemiology

First Year

Code	Title	Credits
PH.260.600	Introduction to the Biomedical Sciences (offered over the summer prior to enrollment for students without a prior background in biology or medicine)	4
PH.550.630	Public Health Biology (for students WITHOUT a background in biology or medicine)	3
PH.340.855	SS/R: Biological Basis of Cardiovascular Disease Epidemiology (for students WITHOUT a background in biology or medicine)	2

Term 1:

Code	Title	Credits
PH.340.871	Welch Center Research Seminar (2 terms are required, students normally complete all 4 during first year)	1

Term 2:

Code	Title	Credits
PH.340.871	Welch Center Research Seminar	1
PH.340.645	Introduction to Clinical Trials (fulfills an out-of-track requirement)	3

Term 3:

Code	Title	Credits
PH.340.871	Welch Center Research Seminar	1

Term 4:

Code	Title	Credits
PH.340.871	Welch Center Research Seminar	1

Second Year

please consider recommended courses appropriate to augment your knowledge in fields of interest

Additional Required Courses for Doctoral Students focusing in Cardiovascular Epidemiology

Term 3

Code	Title	Credits
PH.340.607	Introduction to Cardiovascular Disease Epidemiology	4
PH.340.730	Assessment of Clinical Cardiovascular Disease (for students WITHOUT a background in biology or medicine)	2

Term 4

Code	Title	Credits
PH.340.803	Advanced Topics in Cardiovascular Disease Epidemiology	2
PH.340.855	SS/R: Biological Basis of Cardiovascular Disease Epidemiology (for students WITHOUT a background in biology or medicine)	2

Additional Required Course for Doctoral Students focusing in Clinical Epidemiology

First Year

Term 2

Code	Title	Credits
PH.340.620	Principles of Clinical Epidemiology	2

Second Year

please consider recommended courses appropriate to augment your knowledge in fields of interest

Recommended Courses for Doctoral Students in Cardiovascular and Clinical Epidemiology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1
PH.340.687 Epidemiology of Kidney Disease   2
PH.340.731 Principles of Genetic Epidemiology 1 (fulfills and out of track requirement) 4
PH.340.616 Epidemiology of Aging (fulfills and out of track requirement) 3

Term 2
PH.340.624 Etiology, Prevention, and Control of Cancer (fulfills and out of track requirement) 4
PH.340.627 Epidemiology of Infectious Diseases(fulfills and out of track requirement) 4

Term 3
PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4
PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses* 4 *usually taken in Year 2

Term 4
PH.340.644 Epidemiology of Diabetes and Obesity (fulfills and out of track requirement) 3

Skills Courses *(can be taken Year 1 or later with commensurate progress in Biostats series)*

Term 4
PH.340.600 Stata Programming 2
PH.140.632 Introduction to the SAS Statistical Package 3

Advanced Methods Courses (recommended in Year 2, review course catalogue for prerequisites)

Term 1
PH.140.641 Survival Analysis 3
PH.140.776 Statistical Computing 3
PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3

Term 2

PH.340.717 Health Survey Research Methods 4

Term 3
PH.140.655 Analysis of Longitudinal Data 4
PH.140.664 Causal Inference in Medicine and Public Health I 4

Additional Recommended Courses for Doctoral Students with a focus in Cardiovascular Epidemiology

Term 1
PH.140.651 Methods in Biostatistics I 4

Term 2
PH.140.652 Methods in Biostatistics II 4
PH.340.620 Principles of Clinical Epidemiology 2

Term 3
PH.140.653 Methods in Biostatistics III 4

Term 4
PH.140.654 Methods in Biostatistics IV 4

Additional Recommended Courses for Doctoral Students with a focus in Clinical Epidemiology

Term 3

PH.340.607 Introduction to Cardiovascular Disease Epidemiology 4
PH.340.730 Assessment of Clinical Cardiovascular Disease 2

Term 4
PH.340.803 Advanced Topics in Cardiovascular Disease Epidemiology 2
PH.340.855 SS/R: Biological Basis of Cardiovascular Disease Epidemiology 2

Clinical Trials and Evidence Synthesis

Courses Required for Doctoral Students in Clinical Trials and Evidence Synthesis

First Year

Term 2

Code	Title	Credits
PH.340.645	Introduction to Clinical Trials	3

Term 3

Code	Title	Credits
PH.340.633	Data Management in Clinical Trials	3

Term 4

Code	Title	Credits
PH.340.648	Clinical Trials Management	3

Second Year

Term 3

Code	Title	Credits
PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses	4
PH.140.655	Analysis of Longitudinal Data	4
Total Credits		**8**

Recommended Courses for Doctoral Students in Clinical Trials and Evidence Synthesis

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1
PH.140.651 Methods in Biostatistics I 4
PH.221.722 Quality Assurance Management Methods for Developing Countries 4
PH.340.653 Epidemiologic Inference in Outbreak Investigations 3
PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5
PH.390.631 Principles of Drug Development 2
PH.390.673 Ethical and Regulatory Issues in Clinical Research 3
PH.317.600 Introduction to the Risk Sciences and Public Policy 4

Term 2
PH.140.630 Introduction to Data Management 3
PH.140.652 Methods in Biostatistics II 4
PH.340.717 Health Survey Research Methods 4
PH.410.710 Concepts in Qualitative Research for Social and Behavioral Sciences 3

Term 3
PH.140.634 Non-Inferiority and Equivalence Clinical Trials 2
PH.140.642 Design of Clinical Experiments 3
PH.140.653 Methods in Biostatistics III 4
PH.223.664 Design and Conduct of Community Trials 4
PH.340.694 Power and Sample Size for the Design of Epidemiological Studies I 1
PH.340.775 Measurement Theory and Techniques in Epidemiology 4
PH.140.664 Causal Inference in Medicine and Public Health I 4

Term 4
PH.140.654 Methods in Biostatistics IV 4
PH.140.632 Introduction to the SAS Statistical Package 3
PH.140.656 Multilevel Statistical Models in Public Health 4
PH.221.616 Ethics of Public Health Practice in Developing Countries 2
PH.223.705 Good Clinical Practice: A Vaccine Trials Perspective 4
PH.224.691 Qualitative Data Analysis 3
PH.390.675 Outcomes and Effectiveness Research 3

Summer Inst
PH.330.621 Mixed Methods for Research in Public Health 2

Environmental Epidemiology

Course Required for Doctoral Students in Environmental Epidemiology

First Year

Term 4

PH.340.680 Environmental and Occupational Epidemiology

Recommended Courses for Doctoral Students in Environmental Epidemiology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Term 1
PH.182.615 Airborne Particles 4
PH.187.610 Public Health Toxicology 4
PH.188.680 Fundamentals of Occupational Health 3

PH.317.600 Introduction to the Risk Sciences and Public Policy 4

Term 2
PH.182.625 Principles of Occupational and Environmental Hygiene 4
PH.317.610 Risk Policy, Management and Communication 3
PH.340.624 Etiology, Prevention, and Control of Cancer 4
PH.340.717 Health Survey Research Methods 4

Term 3
PH.180.601 Environmental Health 5
PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4
PH.317.605 Methods in Quantitative Risk Assessment 4

Term 4
PH.188.681 Onsite Evaluation of Workplace and Occupational Health Programs 5
PH.317.615 Topics in Risk Assessment 2

Epidemiology of Aging

Course Required for Doctoral Students in Epidemiology of Aging

First Year

Term 1

PH.340.616 Epidemiology of Aging

Recommended Courses for Doctoral Students in Epidemiology of Aging

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

First Year

each term PH.330.802 Seminar on Aging, Cognition and Neurodegenerative Disorders 1

Term 1
PH.140.641 Survival Analysis 3
PH.380.604 Life Course Perspectives on Health 4

Term 2
PH.340.620 Principles of Clinical Epidemiology 2
PH.340.666 Foundations of Social Epidemiology 3
PH.380.603 Demographic Methods for Public Health 4

Term 3
PH.340.699 Epidemiology of Sensory Loss in Aging 3
PH.260.665 Biological Basis of Aging++ 3

Term 4
PH.330.623 Brain and Behavior in Mental Disorders 3
PH.140.656 Multilevel Statistical Models in Public Health 4
PH.330.618 Mental Health in Later Life++ 3
++offered every other year

Second Year

Term 1
PH.330.657 Statistics for Psychosocial Research: Measurement 4
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5

Term 2
PH.140.658 Statistics for Psychosocial Research: Structural Models 4
PH.309.605 Health Issues for Aging Populations 3

Term 3
PH.140.655 Analysis of Longitudinal Data 4

General Epidemiology and Methodology

Courses Required for Doctoral Students in General Epidemiology and Methodology

First Year

Term 1

PH.340.731 Principles of Genetic Epidemiology 1 4 (recommended for year 1 but may be taken in year 2, satisfies the out-of-track requirement as well)

Term 2

PH.340.645 Introduction to Clinical Trials 3 (recommended for year 1 but may be taken in year 2)

Second Year

CHOOSE AT LEAST TWO of these 3 courses in Public Health Research Skills:

Term 1: PH.340.660 Practical Skills in Conducting Research in Clinical Epidemiology and Investigation 3
Term 2: PH.340.717 Health Survey Research Methods 4
Term 3: PH.340.648 Clinical Trials Management 3

Recommended Courses for Doctoral Students in General Epidemiology and Methodology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Doctoral Students with a Methodology Focus:

Term 1
PH.330.657 Statistics for Psychosocial Research: Measurement 4
PH.340.646 Epidemiology and Public Health Impact of HIV and AIDS 4
PH.340.616 Epidemiology of Aging 3
PH.340.653 Epidemiologic Inference in Outbreak Investigations 3

Term 2
PH.140.658 Statistics for Psychosocial Research: Structural Models 4
PH.183.631 Fundamentals of Human Physiology 4
PH.260.631 Immunology, Infection and Disease 3
PH.330.603 Psychiatric Epidemiology 3
PH.340.620 Principles of Clinical Epidemiology 2
PH.340.624 Etiology, Prevention, and Control of Cancer 4
PH.340.666 Foundations of Social Epidemiology* 3
PH.340.732 Principles of Genetic Epidemiology 2 3

Term 3
PH.140.640 Statistical Methods for Sample Surveys 3
PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4
PH.222.647 Nutrition Epidemiology 3
PH.224.690 Qualitative Research Theory and Methods 3
PH.309.616 Introduction to Methods for Health Services Research and Evaluation I 2
PH.340.607 Introduction to Cardiovascular Disease Epidemiology 4
PH.340.609 Concepts and Methods in Infectious Disease Epidemiology 3
PH.340.733 Principles of Genetic Epidemiology 3 3

Term 4
PH.140.656 Multilevel Statistical Models in Public Health 4
PH.224.691 Qualitative Data Analysis 3
PH.309.617 Introduction to Methods for Health Services Research and Evaluation II 2
PH.340.641 Healthcare Epidemiology 4

PH.340.677 Infectious Disease Dynamics: Theoretical and Computational Approaches 3
PH.340.680 Environmental and Occupational Epidemiology 4
PH.380.664 Reproductive and Perinatal Epidemiology 4
PH.390.675 Outcomes and Effectiveness Research 3

*alternates online and in-person every other year
++ alternate year course

Second Year courses:
Term 1
PH.340.728 Advanced Methods for Design and Analysis of Cohort Studies 5

Term 2
PH.340.774 Advanced Theory and Methods in Epidemiology 4

Term 3
PH.140.664 Causal Inference in Medicine and Public Health I 4
PH.140.655 Analysis of Longitudinal Data 4
PH.340.606 Methods for Conducting Systematic Reviews and Meta-Analyses 4

Recommended statistical programming computing courses:
Term 1
PH.140.776 Statistical Computing 3

Term 4
PH.140.632 Introduction to the SAS Statistical Package 3
PH.340.600 Stata Programming 2

Doctoral Students with a Pharmacoepidemiology and Drug Safety Focus:

Strongly Recommended courses for Doctoral Students with a Pharmacoepidemiology Focus:
Term 1
PH.317.600 Introduction to the Risk Sciences and Public Policy 4
PH.390.631 Principles of Drug Development 2

Term 2
PH.317.610 Risk Policy, Management and Communication 3

Term 3
PH.140.664 Causal Inference in Medicine and Public Health I 4
PH.340.684 Pharmacoepidemiology: Drug Utilization 3 (alternate year format)
PH.221.610 Pharmaceuticals Management for Under-Served Populations 3

Term 4
PH.410.680 Social Ecological Approaches to Health Regimen Adherence in Chronic Conditions 3

Recommended courses for Doctoral Students with a Pharmacoepidemiology Focus:
Term 1
PH.317.605 Methods in Quantitative Risk Assessment 4

Term 4
PH.317.615 Topics in Risk Assessment 2

the following courses are offered outside of BSPH and require interdivisional registration and instructor permission
AS.410.651 Clinical Development of Drugs and Biologics 4
AS.410.627 Translational Biotechnology: From Intellectual Property to Licensing 4
ME.330.809 Analytic Methods for Clinical Pharmacology variable
NR.110.508 Clinical Pharmacology 3

Individualized Focus:

Students designing their own educational programs should, in conjunction with their advisor, choose three to four graduate-level courses (taken for a letter grade) in their field from among the offerings of the University in addition to taking the GEM Required courses listed above.

Genetic Epidemiology

Courses Required for Doctoral Students in Genetic Epidemiology

First Year
Term 1
PH.340.731 Principles of Genetic Epidemiology 1 4

Term 2
PH.340.732 Principles of Genetic Epidemiology 2 3

Term 3
PH.340.733 Principles of Genetic Epidemiology 3 3

Term 4
PH.340.734 Principles of Genetic Epi 4: Emerging and Advanced Methods 2

Second Year
Term 1
PH.120.602 Concepts of Molecular Biology (Pass/Fail, or Grade) 4

Recommended Courses for Doctoral Students in Genetic Epidemiology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

Analytic Methods Courses (ideal for year 2)
Term 1
PH.140.641 Survival Analysis 3
PH.140.651 Methods in Biostatistics I* 4
PH.140.776 Statistical Computing 3

Term 2
PH.140.638 Analysis of Biological Sequences 3
PH.140.652 Methods in Biostatistics II 4
PH.140.778 Advanced Statistical Computing 3
PH.340.774 Advanced Theory and Methods in Epidemiology* 4

Term 3
PH.140.644 Statistical Machine Learning: Methods, Theory, and Applications 4
PH.140.653 Methods in Biostatistics III 4
PH.140.655 Analysis of Longitudinal Data 4

Term 4
PH.140.688 Statistics For Genomics 3

Biology and Molecular Methods Courses
Term 1
PH.260.611 Principles of Immunology I 4

Term 2
PH.260.612 Principles of Immunology II 4
PH.183.631 Fundamentals of Human Physiology 4 (*For non-physician trained students only)

Term 3

PH.180.640 Molecular Epidemiology and Biomarkers in Public Health 4

Term 4
PH.120.608 Gene Editing, therapy and Manipulation 3

Topic-Specific Electives
Term 3
PH.340.775 Measurement Theory and Techniques in Epidemiology 4

Term 4
PH.330.619 Psychiatric Genomics 3
PH.415.624 Ethical, Legal and Social Implications in Genetics and Genomics Over Time (offered in alternate years)

Infectious Disease Epidemiology

Courses Required for Doctoral Students in Infectious Disease Epidemiology

[Terms and offerings change each year. Always check the course directory for the most up-to-date offerings]

First Year
Term 1

Code	Title	Credits
PH.340.653	Epidemiologic Inference in Outbreak Investigations	3

Term 2

Code	Title	Credits
PH.340.627	Epidemiology of Infectious Diseases	4

Term 3

Code	Title	Credits
PH.340.609	Concepts and Methods in Infectious Disease Epidemiology	3

Students must complete at least one course in each of the four disciplinary sections below:

Section one: General Electives: choose 1
Term 1

Code	Title	Credits
PH.340.646	Epidemiology and Public Health Impact of HIV and AIDS	4

Term 2

Code	Title	Credits
PH.223.662	Vaccine Development and Application	4
PH.340.641	Healthcare Epidemiology	4

Term 3

Code	Title	Credits
PH.182.640	Food- and Water- Borne Diseases	3
PH.223.663	Infectious Diseases and Child Survival	3
PH.223.687	Vaccine Policy Issues	3
PH.260.656	Malariology	4
PH.340.612	Epidemiologic Basis for Tuberculosis Control	2

Term 4:

Code	Title	Credits
PH.223.682	Clinical and Epidemiologic Aspects of Tropical Diseases	4
PH.223.689	Biologic Basis of Vaccine Development	3
PH.223.705	Good Clinical Practice: A Vaccine Trials Perspective	4
PH.340.651	Emerging Infections	2
PH.380.761	Sexually Transmitted Infections in Public Health Practice	4
PH.380.762	HIV Infection in Women, Children, and Adolescents	4

Section two: Skills in Research: choose 1
Term 1

Code	Title	Credits
PH.340.660	Practical Skills in Conducting Research in Clinical Epidemiology and Investigation	3

OR

Term 2

Code	Title	Credits
PH.340.717	Health Survey Research Methods	4

Section three: Biology and Pathogenesis of Disease: choose 1
Term 1

Code	Title	Credits
PH.260.623	Fundamental Virology	4
PH.260.636	Evolution of Infectious Disease	3
PH.340.654	Epidemiology and Natural History of Human Viral Infections	6

Term 3

Code	Title	Credits
PH.260.627	Pathogenesis of Bacterial Infections	4
PH.260.650	Vector Biology and Vector-Borne Diseases	3

Section four: Immunology: choose one set (recommended to complete in year two)
Term 1

Code	Title	Credits
PH.260.611	Principles of Immunology I	4

<u>AND</u>

Term 2

Code	Title	Credits
PH.260.612	Principles of Immunology II (Principles of Immunology II)	3

**students requesting pass/fail for these two courses only must seek permission from their adviser and the track director*

<u>OR</u>

Term 2

Code	Title	Credits
PH.260.631	Immunology, Infection and Disease	3

Department Comprehensive Examination

A two-day written Department comprehensive examination is administered to all students enrolled in Epidemiology degree programs in late May of the first academic year. All students are required to sit for the exam on the scheduled dates—no alternate exams will be offered.

By the time of the examination, students should have completed 64 credits (one full year of residence), **the required first-year coursework in their Track with a cumulative GPA of at least 3.0,** and in these courses:

Code	Title	Credits
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5
Select one of the following Biostatistics series:		16
PH.140.621 & PH.140.622 & PH.140.623 & PH.140.624	Statistical Methods in Public Health I and Statistical Methods in Public Health II and Statistical Methods in Public Health III and Statistical Methods in Public Health IV	
PH.140.651 & PH.140.652 & PH.140.653 & PH.140.654	Methods in Biostatistics I and Methods in Biostatistics II and Methods in Biostatistics III and Methods in Biostatistics IV	

The first day of the exam (Part A) includes testing on the following topics:

- Knowledge and application of epidemiologic concepts and methods (and related biostatistics)
- History of epidemiology
- Contemporary issues in public health
- Research ethics

The second day of the exam (Part B) is Track-specific, and tests knowledge of concepts and methods presented in the required courses and activities for each Track, as well as the Department core courses as applied to the Track.

Students must pass both Part A and Part B of the comprehensive examination. Doctoral students must attain at least a 75% on each Part A and Part B to pass. A repeat examination may be allowed but is not guaranteed. If a repeat is granted, it must be completed before starting the second academic year.

Failure to pass one or both sections of the comps may result in dismissal from the doctoral program or from the Department.

Dissertation Steps

Timing of Activities / Milestones

1. Years one and two: Complete academic preparation for dissertation through coursework, special studies and research with the adviser, and attend seminars, journal clubs, and research-in-progress activities of interest. Students should meet at least once per term with their adviser and possibly weekly while completing special studies and research (PH.340.840).
2. Year two: Students develop their specific aims, add a co-adviser, and produce a working draft of their dissertation research proposal prior to or during the fourth term of the second year. Students, in combination with their advisers, select a third member for the Thesis Advisory Committee and present their proposed research at a public seminar to the department during the fourth term of year two or the first term of year three. Students also begin to fulfill their Teaching Requirements during year two and begin assuming leadership roles within the department or school.
3. Year three: Students hold their departmental and preliminary oral exams and begin research. Many students continue their teaching requirements and begin submitting papers for publication in conjunction with their advisers or other faculty mentors. Students should schedule a minimum of two weeks between the doctoral proposal seminar and the departmental oral exam and must schedule a minimum of four weeks between the departmental oral exam and the preliminary (school-wide) exam. Students may schedule all three activities simultaneously or wait to pass one before scheduling the next. Students may elect to take up to six months to prepare for each exam. Students must successfully pass their Preliminary Oral Exam within three academic years of enrollment in the doctoral degree program.
4. Year four: Students conclude data collection and analysis, complete their dissertation, and hold the defense of their research. This timeframe varies from student to student depending on a wide variety of factors.
5. The University permits as many as seven years or 28 terms to complete the PhD degree requirements; however, the financial support granted PhD students by the Department of Epidemiology will not extend beyond that specified in the acceptance letter.

Thesis Advisory Committee

The role of the Thesis Advisory Committee is to provide continuity in the evaluation of the progress and development of the doctoral student. The Thesis Advisory Committee is assembled by the doctoral student and their adviser(s). For doctoral students, the Thesis Advisory Committee consists of the dissertation (thesis) adviser and at least two additional faculty members who hold either primary or joint appointments in Epidemiology. If the student has a co-adviser, the co-Adviser should serve on the Thesis Advisory Committee. Additional faculty within and outside of the School may also be recruited. Committee membership is permitted to change during the research period. The Thesis Advisory Committee is not the same as the Preliminary or Final Oral Examination Committees. The Thesis Advisory Committee decides when the student is ready to proceed through each of the milestones needed to complete the degree requirements, including the Doctoral Proposal Seminar, the Departmental and School-wide Preliminary Oral Examinations, and the Final Oral Examination ("defense"). Bi-annual formal meetings of the Thesis Advisory Committee are required, but meetings may and should occur more frequently. It is the student's responsibility to schedule meetings.

Tips for doctoral students for successful formal meetings of the Thesis Advisory Committee:

- Prior to each meeting, draft an agenda with advisor input and distribute a one-page description of progress, including any key results

- After each meeting, send a written report of the items discussed and decisions reached to the members for approval
- Maintain a log of the meetings to aid in writing the annual progress report and financial support documentation

Once the Thesis Advisory Committee is formed, submit the signed "Thesis Committee Approval Form" (on the Epi Intranet (https://my.jhsph.edu/sites/EPI/default.aspx)) to Ebony Moore (eamoore@jhu.edu).

Dissertation Research Proposal

The 12-page single-spaced dissertation research proposal is developed during the second year, during terms 1 – 3 of PH.340.863 Doctoral Seminars in Epidemiology, and is the final project for the course PH.340.715 Problems in the Design of Epidemiologic Studies: Proposal Development and Critique. The dissertation proposal must be reviewed and approved by the Thesis Advisory Committee prior to scheduling the Doctoral Proposal Seminar.

Doctoral Research Proposal Seminar

After the Thesis Advisory Committee has approved the student's 12-page dissertation research proposal, the student must orally present the proposal in a Doctoral Proposal Seminar to the Department. Students should present a prepared presentation (typically PowerPoint) of approximately 40-45 minutes in length, followed by approximately 15-20 minutes of questions and discussion. The Proposal Seminar is presented during the Department-wide Epidemiology Seminars (Current Topics in Epidemiologic Research) on Fridays during terms 1-4, from 12:15-1:20 pm, in Sheldon Hall W1214 (or via hybrid technology). Seminars are not permitted during the Summer. The dissertation (thesis) adviser must attend, and the Thesis Advisory Committee members and the Track Director are strongly encouraged to attend. Doctoral Proposal Seminars are advertised to the Department at large, and students and their adviser(s) should personally invite any other colleagues they would like to attend. The best ways to prepare for this seminar include attending Doctoral Research Proposal Seminars presented by peers and by presenting in a track research-in-progress meeting. Students should plan to conduct a 'dress rehearsal,' prior to the actual proposal (in the same room reserved for the defense to familiarize themselves with the surroundings and test all technology) for use during the Doctoral Research Proposal Seminar.

After the Thesis Advisory Committee has approved the student to present their Doctoral Proposal Seminar, the student should work with the adviser and Thesis Advisory Committee to select a seminar date. Once the Advisory Committee and adviser(s) have confirmed readiness, the student can proceed with reserving a date and room. To schedule a date, students should contact Laura Camarata, lcamarata@jhu.edu, to discuss open dates and submit the "Doctoral Proposal Seminar Form" (on the Epi Intranet (https://my.jhsph.edu/sites/EPI/default.aspx)), which includes preferences for seminar dates (1st, 2nd, and 3rd choices). This form requires the signature of the adviser and the Track Director.

Tips to keep in mind:

- Students cannot schedule their doctoral proposal seminars without the approval of their adviser(s) and Advisory Committee
- Doctoral students are required to propose during the academic year (Terms 1-4), in Department-wide Friday Epidemiology Seminars, and this seminar series additionally hosts annual events and outside speakers
  - Work with adviser(s) and Committee to have a timeline, and give as much lead time as possible (but no less than 3 months) to schedule
- Seminars start at 12:15 pm, with an introduction by the student's adviser, that the student should arrange
- Students should test their presentations prior, report early on the day of, and have their presentations saved in more than one place for back-up
- Sheldon Hall is equipped with a dedicated laptop, projector, laser pointer, and microphone/audio system

Departmental Oral Examination

Purpose

After the Thesis Advisory Committee has approved the Dissertation Research Proposal and the student has presented the Doctoral Proposal Seminar, the next step is sitting for the Departmental Oral Examination. The primary purpose of the Departmental Oral Examination is to prepare the student for the Preliminary Oral Examination. As such, the Departmental Oral Examination shares the purpose of the Preliminary Oral Examination:

To determine whether the student has both the ability and knowledge to undertake significant research in the general area of interest, including:

1. the student's capacity for logical thinking;
2. their breadth of knowledge in relevant areas; and
3. their ability to develop and conduct research leading to a completed dissertation (thesis).

Discussion of a specific research proposal, if available, may serve as a vehicle for determining the student's general knowledge and research capacity. However, this examination is not intended to be a defense of a specific research proposal.

Meeting with the Senior Academic Program Manager

In preparation for scheduling the Department Oral Examination, students should meet with the Senior Academic Program Manager, Frances Burman (FranBurman@jhu.edu), to confirm that the student has met all Track, Department, and Schoolwide course requirements and has assembled a valid set of proposed committee members for the Department and Preliminary Oral Examinations.

Department Oral Examination Committee Membership

For PhD students, the Department Oral Examination Committee should consist of: the adviser (primary); two other members, and one alternate member, all of whom have primary appointments in the Department of Epidemiology. Thesis committee members, including co-advisers, are **not** permitted to serve on the Departmental Oral Examination committee with the exception of the student's adviser, who must participate. All Professorial and Scientist Track faculty may serve on the Committee. Students are not required to meet with members of the Committee prior to the examination and should not expect that committee members will discuss what questions they will be asked.

While the above describes the necessary committee, in any case where the student or advising team wants to have an additional faculty member present, the examiners and student must decide in advance whether the extra faculty member may ask questions and if yes, whether the student's responses will count. In any case, the extra person may not vote but may contribute feedback to the student. Students considering this should first check in with the academic office.

DEPARTMENT ORAL EXAMINATION FORM

The “Department Oral Examination Form” (on the Epi Intranet (https://my.jhsph.edu/sites/EPI/default.aspx)), is due to the Senior Academic Program Coordinator, Ebony Moore (eamoore@jhu.edu), at least 14 days prior to the date of the proposed exam. With the approval of the Dissertation (thesis) Adviser, the form should be submitted after presenting the Doctoral Proposal Seminar and incorporating any key input from the Seminar into the Dissertation Research Proposal.

SCHEDULING

The Senior Academic Coordinator, Ebony Moore (eamoore@jhu.edu), will schedule the room and send a memo to examiners prior to the examination date. For hybrid or Zoom-based exams, the adviser will provide the zoom link.

CONDUCT OF THE EXAMINATION

Prior to the exam, students submit to the Department Oral Examination Committee members a single-page summary of the dissertation proposal, including the specific aims, hypotheses, and methods. Committee members may request the longer 12-page Dissertation Research Proposal. The examination should be scheduled for and completed in one and a half hours but may be concluded earlier or later as determined by the Committee. At the start of the exam, students will present a brief talk of no more than 10 minutes that concisely summarizes the aims, hypothesis, methods, limitations, and significance of their proposed dissertation research. This presentation may be a distillation of the Doctoral Proposal Seminar.

Department Oral Examination Outcome

The possible outcomes of the oral examination are Unconditional Pass, Conditional Pass, or Failure (retake). Conditional Pass requires the student and Department Oral Examination Committee to agree on a remedial course of action designed to be completed within two weeks of the examination. Students who fail will be required to re-take the Department Oral Examination within six months. Two failures of the Departmental Oral Examination will result in dismissal from the degree program. For more information about the Departmental Oral Examination, please review the Department of Epidemiology Student Guidelines for the Departmental Oral Examination” (on the Epi Intranet (https://my.jhsph.edu/sites/EPI/default.aspx)).

Preliminary Oral Examination (aka School-wide Exam)

This is also colloquially known as the “Schoolwide Oral Examination.” Students and their adviser(s) are responsible for initiating arrangements for the preliminary doctoral examination. The University Graduate Board oversees these exams.

Purpose

After the student has passed the Departmental Oral Examination, the next step is the Preliminary Oral Examination. The purpose of the Preliminary Oral Examination is to determine whether the student has both the ability and knowledge to undertake significant research in their general area of interest, including:

1. the student’s capacity for logical thinking;
2. their breadth of knowledge in relevant areas; and
3. their ability to develop and conduct research leading to a completed dissertation.

Discussion of a specific research proposal, if available, may serve as a vehicle for determining the student’s general knowledge and research capacity. However, this examination is not intended to be a defense of a specific research proposal. The preliminary oral examination is two hours in duration.

Preliminary Oral Examination Committee Membership

- Must consist of five voting members
  - Two members must be from the epidemiology department; one of these is the adviser
  - A third member from the epidemiology department is optional
    - **Limit** of 3 members from sponsoring department
- Thesis Advisory Committee members may serve on the Committee
- The student’s adviser of record must serve as a member of the Committee.
  - The adviser must be among the members present; an alternate may not serve in place of the adviser.
- The senior faculty member without a primary appointment in Epidemiology will serve as Chair of the Committee and must hold the rank of Associate or Full Professor.
  - All faculty members serving on the Committee must represent the department of their primary faculty appointment.
    - The only instance when the faculty member can serve in their joint appointment capacity is if they are the student’s adviser.
- Most often, the committee is comprised of duly appointed faculty members of a University department and must hold, at the time of selection, a faculty appointment at the rank of Assistant Professor or higher.
  - Occasionally, one adjunct or one scientist faculty member, <u>but not both</u>, may serve on the Committee; neither may serve as the Chair.
- All members of the Committee must be present at the scheduled exam location; teleconference is permitted on a case-by-case basis.
- The committee must be comprised of three Departments of the University, **two** being from the Bloomberg School of Public Health
- The committee must have appropriate alternate members to serve on the committee.
  - The selection of alternates is very important for ensuring the exam can take place at the originally scheduled date/time. If a student has two members on their committee from epidemiology, the student should have one alternate from epidemiology and one from a non-sponsoring department.
  - If a student has three members on their committee from epidemiology, then two alternates should be selected from two different non-sponsoring departments.
- At least two weeks prior to the exam, students submit to the Preliminary Oral Examination Committee members a single-page summary of the dissertation proposal, including the specific aims, hypotheses, and methods. Committee members may request the longer 12-page Dissertation Research Proposal.

Preliminary Oral Examination Form

- Graduate Board Preliminary Oral Examination Request Form (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Documents/Preliminary%20Oral%20Exam%20PhD%20ScD%20Form%204.27.22.pdf)
- Students submit this form once they have successfully passed the Departmental Oral Examination.
- JHSPHExams@jhu.edu must receive the form at least **30 days prior** to the anticipated exam date. There are no exceptions.
- The form requires signatures from the Senior Academic Program Manager, the adviser, and the Department Chair. The student is responsible for obtaining the required signatures in that order.

The form should therefore be submitted to Frances Burman (FranBurman@jhu.edu) at least 3-to 4 days prior to the date of submission to the Registrar's Office.

- The exam is not considered officially scheduled and cannot be held until the student and examiners received notification from the Dean of the approval of the exam to be held.

Scheduling

The student is responsible for scheduling the room (https://my.jhsph.edu/Offices/InformationTechnology/forms/SETForm.aspx) for the exam, requesting Multimedia support (https://my.jhsph.edu/Offices/InformationTechnology/forms/Multimedia%20and%20Production%20Request%20Form.aspx) if needed, and sending a memo to examiners confirming the date, time, and location of the exam prior to the exam date.

Examination Outcome

The outcome of the examination is Unconditional Pass, Conditional Pass, or Failure. Should the student receive a conditional pass, the Committee remains standing until the conditions, specified in writing, have been met. The consequence of a failure is decided by the Committee:

1. no re-examination;
2. re-examination by the same committee;
3. re-examination in written form and conducted by the same committee; or
4. re-examination by a new committee.

Primary Data Collection Requirement

Primary data collection is defined as

1. instrument design;
2. data collection; or
3. data management, quality assurance, and quality control.

Primary data collection is required for all PhD students. This requirement may be met through dissertation research or is satisfied through work on projects distinct from the dissertation. It may be obtained through work with a single epidemiologic study or it can a compilation of several experiences that together fulfill the requirement. Primary data collection may be obtained as part of paid work. Students must document their plan for obtaining experience with primary data collection and submit this plan to their Thesis Advisory Committee with their 12-page dissertation proposal.

The Thesis Advisory Committee may approve primary data collection that occurred prior to matriculation to the doctoral program, but this approval is not guaranteed. Any questions regarding primary data collection will be directed from the Thesis Advisory Committee to a Deputy Chair. Students are expected to demonstrate an understanding of primary data collection processes in the epidemiologic study (or studies) utilized for their dissertation. This includes knowledge of the forms, instruments, and measurement processes relevant to their research; knowledge of quality control/assurance procedures of the study (or studies); and an evaluation of the potential threats to validity in the processes extending from primary measurement to the analytic dataset. If primary data collection is not a direct component of the dissertation research, doctoral students should include their primary data collection experience as an appendix to the dissertation.

Doctoral Dissertation

Doctoral students must complete an original investigation presented in the form of a dissertation. The dissertation should be based on original research involving the generation of new knowledge by the student, worthy of publication, and acceptable to the Department of Epidemiology and to the Final Oral Examination Committee (Thesis Readers). Doctoral students have two options for the format of their dissertation, the traditional format, and the manuscript format. The Department recommends the manuscript format to accelerate the time to submission of manuscripts for publication in peer-reviewed journals.

Manuscript Format

The manuscript format must meet the following criteria:

1. The dissertation includes at least three manuscripts, linked by a common theme;
2. The doctoral student must be the first author on each of the manuscripts;
3. A manuscript will not be accepted as part of the dissertation if it was submitted before the student's dissertation topic was approved by the Thesis Advisory Committee;
4. The manuscripts must be acceptable for publication based on usual substantive area peer review expectations; and
5. The dissertation should be organized as follows:
    a. The body of the dissertation should include a series of papers that are linked by a common theme (i.e., the student's dissertation topic)
    b. The first chapter may be a comprehensive critical literature review suitable for publication. It should introduce the scientific hypothesis for the dissertation
    c. Chapters two and three (or more) are the manuscripts, possibly with a transitional short chapter between each relating one to the other
    d. A final chapter should integrate and discuss the findings reported in the manuscripts. It should include a discussion of the conclusions drawn from research, a synthesis of the findings, and should make recommendations for further studies
    e. The dissertation may include an appendix outlining the details of study methods and any accompanying data tables deemed necessary to fully understand the data

Traditional Format

The traditional format includes:

1. An introductory chapter, outlining the theme, hypotheses, and/or goals of the dissertation coupled with a review of the literature;
2. Research chapters that are coherently structured for the research aims, each providing a reader enough detail to apply similar methods in another study; and
3. A concluding chapter with an overall analysis and integration of the research and conclusions of the dissertation in light of current research in the field

Regardless of the format, it is expected that the student will work with their adviser and any co-advisers to develop drafts of their dissertation chapters and receive constructive substantive and editorial feedback. Together, they will decide when drafts are ready for wider distribution to other members of the Thesis Advisory Committee and, if necessary, to other project collaborators. Follow the School's guidelines (https://www.library.jhu.edu/library-services/electronic-theses-dissertations/) for the preparation of the dissertation. The dissertation is a requirement for partial fulfillment of the PhD degree. Students may consult the School's Policy and Procedures Memoranda (PPM) for the PhD program.

Final Defense:

Appointment of thesis readers/final defense form

- Appointment of Thesis Readers/Final Defense Form (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Documents/Appointment%20of%20Thesis%20Readers%20and%20Final%20Oral%20Examination%20Form%204.27.22.pdf)
- JHSPHExams@jhu.edu must receive the form at least **30 days prior** to the anticipated exam date. There are no exceptions.
- The form requires signatures from the Senior Academic Program Manager, the adviser, and the Department Chair. The student is responsible for obtaining the required signatures in that order. The form should therefore be submitted to Frances Burman (FranBurman@jhu.edu) at least 3-to 4 days prior to the date of submission to the Registrar's Office.
- The exam is not considered officially scheduled and cannot be held until the student and examiners received notification from the Dean of the approval of the exam to be held.

Seminar

As a culminating experience for the doctoral student, the student will present a formal, public seminar. This requirement provides experience for the student in preparing a formal seminar; provides the faculty and Department with an opportunity to share in the student's accomplishments; and gives the student a sense of finality to the doctoral experience. Students typically present a formal public seminar in conjunction with the Final Oral Examination. If possible, students are encouraged to give their Final Defense Seminars during the Department-wide Friday Epidemiology Seminars series (Current Topics; please contact Laura Camarata (lcamarata@jhu.edu) or Frances Burman (FranBurman@jhu.edu) regarding scheduling), but the seminar may be alternately scheduled during normal working hours.

The student is responsible for scheduling the room (https://my.jhsph.edu/Offices/InformationTechnology/forms/SETForm.aspx) for the defense, and requesting Multimedia support (https://my.jhsph.edu/Offices/InformationTechnology/forms/Multimedia%20and%20Production%20Request%20Form.aspx) if needed (unless they will be presenting as part of the Department-wide Friday Epidemiology Seminars series (Current Topics), coordinating with their adviser(s) to be briefly introduced, and inviting any additional outside guests.

Examination

Purpose

The purpose of the Final Oral Examination is to ensure that the Candidate is able to present and defend the dissertation and its underlying assumptions, methodology, results, and conclusions in a manner consistent with the doctoral degree being sought.

The final oral examination is three hours total (one for seminar/presentation and two for exam by committee)

Committee Membership (Dissertation (Thesis) Readers) and Appointment of Thesis readers / final defense examination request form

- Must consist of four voting members:
  - Two members **must** have a primary faculty appointment in Epidemiology
  - The other two members must have appointments in two different departments other than Epidemiology
- The student's adviser of record must serve as a Thesis Reader and a member of the Final Oral Examination Committee
  - Alternates are not permitted to serve in place of the adviser
  - If the adviser is unable to attend the Final Oral Examination, co-advisers may serve in this role
- All faculty members must serve on the Committee representing the department of their primary faculty appointment
  - The only instance when the faculty member can serve in their joint appointment capacity is if they are the student's adviser
- The senior faculty member without a primary appointment in the Epidemiology will serve as Chair of the Committee and **must** hold the rank of Associate or Full Professor
  - Co-advisors may not serve as Chair
- The committee is comprised of duly appointed faculty members of a University department and must hold, at the time of selection, a JHU faculty appointment at the rank of Assistant Professor or higher
- Either one scientist track or one adjunct faculty member may serve on the Exam Committee, <u>but not both</u>
- The Committee of Thesis Readers may be increased to five members, provided that all other committee composition requirements are satisfied.
  - The fifth member may serve on the Final Oral Examination Committee but that individual does not have voting privileges.
- All members of the Committee must be present at the scheduled exam location; teleconference/remote participation may be permitted on a case-by-case basis.
- Must be comprised of three Departments of the University, **two** being from the Bloomberg School of Public Health
  - It is permissible to have three different BSPH departments represented on the committee
- Must have appropriate alternate members to serve on the committee
  - The selection of alternates is very important for ensuring the exam can take place at the originally scheduled date/time
  - Choose alternates that will fulfill the committee composition requirements, regardless of who is able to attend
  - One alternate should be from epidemiology; the other from a non-sponsoring department
- The final oral examination is three hours total (one for seminar/presentation and two for exam by committee)
- The Registration Coordinator will not accept the form unless it is submitted to the Registrar's Office **a minimum of 30 days prior** to the proposed examination date. There are no exceptions.
- This form requires signatures from the Senior Academic Program Manager, Frances Burman, the adviser, and the Department Chair or a Deputy Chair. The student is responsible for obtaining the required signatures in that order. The form should therefore be submitted to Frances Burman (FranBurman@jhu.edu) at least 3-4 days prior to the date of submission to the Registrar's Office.
- The exam is not considered officially scheduled and cannot be held until the student and examiners received notification from the Dean of the approval of the exam to be held.

The student is responsible for scheduling the rooms for the Final Oral Examination. While the Defense Seminar is held in an auditorium or large classroom, the Final Oral Examination usually is held in a smaller classroom or conference room. The Department recommends scheduling the examination in E6130 or W6015. The exam may be held virtually (subject to change by university COVID guidelines). If held virtually, the adviser provides the zoom link for the seminar and the exam.

Distribution of Dissertation to Dissertation (Thesis) Readers

Committee members are encouraged and expected to communicate to the student specific recommendations for changes in the dissertation prior to the Final Oral Examination. The student is, therefore, expected to distribute the dissertation to the Committee at least four weeks before the date of the Final Oral Examination. The Dissertation Approval Form signed by the student's adviser should accompany the dissertation at the time it is distributed to the committee members.

Conduct of the Examination

If one of the officially appointed Committee members fails to appear on the Final Oral Examination date/time, the previously approved alternate will serve as an examiner. A Final Oral Examination may not be held with fewer than four officially approved faculty members present in the room. The adviser must be among the members present; an alternate may not serve in the place of the adviser. Only approved Committee members are permitted to participate as examiners. During the Final Oral Examination, the Committee will evaluate:

1. the originality and publication potential of the research;
2. the candidate's understanding of the details of the methodologic and analytic work; and
3. the final quality of the written dissertation document.

The examination committee chair along with the examiners will determine the details of how the Final Oral Examination is conducted.

Examination Outcome

The possible outcome of the Final Oral Examination based on the student's performance and written dissertation is determined by closed ballot as Acceptable, Conditionally Acceptable, or Unacceptable. If one or more members require substantive changes to the dissertation (Conditionally Acceptable), the specific nature of these changes and the time expected for the student to complete them will be provided to the student in writing. The appropriately revised dissertation must be submitted to each of the members for final approval. If one or more members feel that the candidate's understanding of the written dissertation is inadequate (Unacceptable), or that the dissertation in its present form is not acceptable, then the candidate has failed. Re-examination would be in order unless there is a unanimous recommendation to the contrary. Re-examination is normally conducted by the same committee, but a new committee may be selected by the School's Chair of the Committee on Academic Standards if petitioned by the student.

After the Final Defense

Please consult the Registrar's Office portal site (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx) for dissertation format and submission, procedures to follow upon completion (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Documents/AFTER%20THE%20FINAL%20DEFENSE%20-%20Revised%20March%202019.pdf) of the defense, and additional policy matters.

Graduation

The Registrar's Office (https://www.jhsph.edu/offices-and-services/student-affairs/records-and-registration/) handles all aspects of (https://www.jhsph.edu/student-life/convocation/) graduation (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/Graduation/Pages/default.aspx) and degree verification (https://www.jhsph.edu/offices-and-services/student-affairs/records-and-registration/forms.html). We encourage all graduates to participate in our convocation ceremonies!

The Policy and Procedures Manual for the Doctor of Philosophy

The Department of Epidemiology reserves the right to augment the (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_03_Doctor_Of_Philosophy_Degree_042522.pdf)PPM (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_03_Doctor_Of_Philosophy_Degree_071717.pdf) for JHSPH.
The Admissions and Credentials Committee handles most policy concerns as described above. The Curriculum Committee handles exceptions to requirements.

Policy Components for Metrics

Doctoral Teaching Assistant (TA) Curriculum Requirements

PURPOSE OF THE DOCTORAL TA CURRICULUM

Learning how to be an effective teacher and communicator about epidemiologic principles and methods is an integral part of doctoral education in epidemiology. Teaching is an opportunity for students to meet several Departmental doctoral program core competencies, enabling students to:

- Interpret and critique epidemiological studies;
- Interpret epidemiologic data and make valid inferences from study findings;
- Communicate effectively in oral and written formats with students, professionals and the public on issues related to epidemiology and public health; and
- Provide epidemiologic critique and advice though advising students and professionals on epidemiologic concepts and methods and conducting peer review activities
  - Practicing these skills also prepare students for Department and Preliminary Oral Examinations and for their future careers, whether in academia or in other venues. (See the "Benefits of Teaching" from Former TAs section in this Student Handbook for additional benefits of teaching).

COMPONENTS OF THE DOCTORAL TA CURRICULUM

All doctoral students are required to complete the TA Curriculum after passing the Department Comprehensive Examination and before graduation. Training and feedback is an important part of this curriculum, which includes:

- Formal didactic training;
- In-classroom training through experience as a TA in Department courses; and
- Feedback from instructors
- Students will share their goals for TA training with course instructors prior to the start of each course taught. After TAing

a course, students will document their TA experience for their resume or CV.

Formal Didactic Training Elements:

1. Courses
2. Workshops
3. Teaching practicums
4. Teaching as research fellowship appointments
5. Individual consultation
Teaching Academy also offers a three-day teaching institute for students to advance the development of university-level educators by enhancing classroom teaching skills. This is a free institute and offered at the JHSPH campus early June. https://cer.jhu.edu/teaching-academy/ti (https://cer.jhu.edu/teaching-academy/ti/)
CTL's "Teaching Assistantship Training" covers the learning objectives required to align with completion of Phase I of the Teaching Academy's "Preparing Future Faculty Teaching (PFFT) Certificate Program (https://cer.jhu.edu/teaching-academy/pff/)."
    - The following didactic trainings and activities are flexibly designed to give doctoral students the skills and tools necessary to be a successful TA and to meet teaching and learning goals. Please note, that while all students are welcome to attend the trainings and activities at any time, it may behoove to do after first year, but in advance/at the start of second, as that is when most doctoral students will begin the TA Curriculum.
    Required: Department of Epidemiology Student-led In-Person Training Session
    This student-led in-person 1.5-hour training covers the basics of TAing in the Department, including TA roles, benefits and expectations. This session is held during lunchtime at the beginning of 1st term. Information regarding the date and location is distributed via the Department's student listserv.
    Required: Teaching Assistantship Training (Online Course)
    This online course offered through the JHSPH Center for Teaching and Learning (CTL) *"orients Teaching Assistants to the roles and responsibilities of their position, relevant policies and regulations, technical tools, teaching tips, and other important information*."
    Students can complete when time allows but must be complete in advance of starting In-classroom portion of the TA Curriculum. To sign up, visit: https://sites.google.com/site/ctltteachingtoolkit/teaching-assistants/ta-training (https://sites.google.com/site/ctltteachingtoolkit/teaching-assistants/ta-training/).
    Recommended: Teaching Academy Activities
    https://cer.jhu.edu/teaching-academy (https://cer.jhu.edu/teaching-academy/)
    Offers additional resources around the pedagogy of teaching. To prepare graduate students so they may thrive in higher education as academic professionals once they graduate, this academy offers teacher training and academic career preparation opportunities through:

In-classroom Training

As part of the TA Curriculum, doctoral students will serve as TAs. Students are required to TA 3 courses: 2 epidemiologic methods courses and 1 topical epidemiology course (see list below for courses). No more than 1 of the 3 courses TAed as part of the TA Curriculum may be an online course.

To document the in-classroom training on the academic transcript and to receive academic credit, doctoral students should register for PH.340.865 Teaching Epidemiologic Methods and Concepts At the Graduate Level.01 for up to 3 credit hours during the term that they are TAing. Credit hours depends on the level of TAship, and students will receive instructions prior to the start from the Academic Office as to the allowed number of credits. If the course is being TAed in the Summer term, the credit hour(s) should be registered for in the following 1st term, to avoid additional tuition fees.

Department of Epidemiology epidemiologic methods courses are:

Code	Title	Credits
PH.340.601	Principles of Epidemiology (Summer term)	5
PH.340.653	Epidemiologic Inference in Outbreak Investigations (1st term)	3
PH.340.721	Epidemiologic Inference in Public Health I (.60 - 1st term, blended in-person)	5
PH.340.721	Epidemiologic Inference in Public Health I (.81 - 3rd term, online)	5
PH.340.722	Epidemiologic Inference in Public Health II (.60 - 2nd term, blended in-person)	4
PH.340.722	Epidemiologic Inference in Public Health II (.81 - 4th term, online)	4
PH.340.723	Epidemiologic Practice Methods for Population Health Research (4th term)	2
PH.340.728	Advanced Methods for Design and Analysis of Cohort Studies (1st term)	5
PH.340.751	Epidemiologic Methods 1 (1st term)	5
PH.340.752	Epidemiologic Methods 2 (2nd term)	5
PH.340.753	Epidemiologic Methods 3 (3rd term)	5
PH.340.774	Advanced Theory and Methods in Epidemiology (2nd term)	4
PH.340.769	Professional Epidemiology Methods (3rd term)	4
PH.340.770	Public Health Surveillance (2nd term)	3
AS.280.350	Fundamentals of Epidemiology (Fall Semester)	4
AS.280.350	Fundamentals of Epidemiology (Spring Semester)	4

*Summer Institute courses do not count towards the TA in-classroom training requirement. A student may TA for the Summer Institute prior to the completion of their TA training requirements.

All other Department of Epidemiology courses (PH.340.xxx) eligible to have a TA are considered topical epidemiology courses for the purpose of the TA Curriculum.

To fulfill the 2 methods courses of the TA Curriculum, students are encouraged to TA: PH.340.751 Epidemiologic Methods 1, PH.340.752 Epidemiologic Methods 2, and/or PH.340.753 Epidemiologic Methods 3, although any of the courses listed above may be used to fulfill the requirement.

Students are eligible to TA as part of this curriculum once they have successfully passed the Department Comprehensive Examination. Students may TA PH.340.601 Principles of Epidemiology during the summer term immediately following completing the comps. Students are expected to complete the TA Curriculum during their second and third years of training. Students are responsible for coordinating with course administrators and/or course instructors for each course they wish to TA. The Department recommends students proactively, directly contact faculty once they have identified a course that they would like to TA as part of the Curriculum. Course faculty take many factors into consideration in selecting TAs for a course (sometimes including performance in the course), and some courses may have more TA requests than can be accommodated. Students may not always be able to serve as a TA for their first choice of courses, so should keep several courses in mind and be flexible. TA responsibilities vary by course, and students are expected to work with course faculty to understand their responsibilities prior to the start of the course. Responsibilities may include but are not limited to: preparing for lab/activities and office hours, attending instructors' meetings, attending lectures and lab/activities, holding office hours, and assisting with assessment writing and piloting. TAs are expected to devote 5-19 hours per week for each course; the wide range reflects the variability in responsibilities by course.

Prior to the start of each course TAed as part of the TA Curriculum, students are required to provide to course instructor(s) 3 goals for the TA experience in writing via email. The purpose of these goals is to provide a basis for reflection by TAs on their current skills and knowledge, as well as their future professional teaching/communication goals, in order to improve student achievement. Progress toward achieving goals over the term will be evaluated by course instructor(s) as part of the feedback process.

Feedback from Instructors

As part of the TA Curriculum, students will receive standardized, individualized feedback from course and/or lab instructors (see below Feedback form). If applicable, TAs will also receive student feedback recorded as part of the School's online course evaluation system. Students are responsible for sending the feedback form complete with student's goals from the start of the term to course instructor(s) no later than 2 weeks following the end of the term. Faculty are not obligated to honor requests for feedback that occur more than 2 weeks after the end of the course. TAs are encouraged to document feedback from instructors and from students (if applicable) in their CV or resume.

Compensated TA Positions

Additional TA opportunities may be available for a pre-specified fixed payment after the TA Curriculum has been completed. As with the TA Curriculum, students are responsible for coordinating with course administrators and/or course instructors for each course they wish to TA for pay. Students should proactively, contact faculty directly once they have identified a course that they would like to TA. Course faculty take many factors into consideration in selecting TAs for a course and students should be aware that some courses may have more TA requests than can be accommodated.

Students holding a Departmental TA position should expect that there will be approximately two weeks of light preparatory work in advance of the course start date, and light conclusory work in excess of the course start and end dates. Please note that State of Maryland law sets student hourly work limitations, at 20 hours per week maximum. Exception: 40 hours over Thanksgiving, winter, and spring breaks, and during the summer.

Benefits of Teaching (from Former TAs)

- Improve oral and written communication skills
- Develop an ability to articulate complex epidemiologic concepts to audiences with varying degrees of research experience
- Preparation for oral exams/defense
- Experience with educational technology (e.g., CoursePlus, VoiceThread)
- Experience in nuts and bolts of graduate courses (e.g., design of assessments and feedback)
- Opportunity to provide essential input that can influence the ongoing development of the department's core courses
- Ability to progress to more independent instructor roles (e.g., Gordis Fellows, TA training seminars/modules, Lab instructors)
- Management skills (managing up to faculty instructors and leading teams of TAs)
- Mentorship from, and relationships with, faculty instructors
- Builds a sense of community with TA colleagues
- Allows students to gauge interest in academic/teaching roles post-graduation
- Development of a teaching portfolio that can be used in CV development, job searches, and interviews
- Getting to know diverse groups of students/mentoring new students

DOCUMENTATION OF TEACHING EXPERIENCE FOR A RESUME OR CURRICULUM VITAE

Doctoral students are encouraged to document their TA experience, including teaching responsibilities and feedback, using the below "Guide to Documentation for a Resume or Curriculum Vitae" template.

WAIVERS

A written request for a waiver to any aspect of the TA Curriculum due to exceptional circumstances, including the in-classroom training (i.e., being a TA), should be submitted to the Academic Core office (JHSPH.epiasc@jhu.edu) and will be reviewed by the Department of Epidemiology Curriculum Committee and decided upon by the Admissions and Credentials Committee. Matriculating doctoral students are eligible to apply (with the support of their adviser) for a waiver to the requirement of passing the Department Comprehensive Examination before beginning in the TA curriculum if the student has completed a JHSPH master's degree program in the 2 years immediately prior to matriculation; **and** has completed the following courses as part of that JHSPH master's degree program. Students must meet with the faculty mentor before or during add/drop to discuss their learning objectives.

Comprehensive Examination Grading Policy

The completed Comprehensive Examination is graded by the Department of Epidemiology faculty according to a rubric determined by the Comprehensive Examination Committee. Final results are distributed to students via CoursePlus by mid-July. Students who wish to view their exam should set up an appointment with the Senior Academic Coordinator, Ebony Moore (eamoore@jhu.edu).
Doctoral students whose results fall below 75% are allowed to formally request in writing a re-grade of specific questions. Re-grade requests must include a justification for a change in points allocated for each question being contested; requests without appropriate justification will not be considered. Re-grade requests must have the adviser's endorsement, and they need to have reviewed and approved the student's request. Re-grade requests are handled by the faculty on the Comprehensive Examination Committee. Adviser-approved requests can be e-mailed to the current year's Comprehensive Examination Committee

Chair and must include a copy to the adviser. For approved requests, a new score will be assigned for each question that is re-graded. This score may be equal to, greater than, or less than, the original score awarded and cannot be contested a second time.

Comprehensive Examination Retake Policy

Students who do not pass the Comprehensive Exam at the appropriate level for their degree program may be granted an opportunity for a retake in August immediately following the May Exam. Students who do not pass the Comprehensive Exam at the appropriate level are not automatically granted a retake. To request a retake, students must submit an official request within two weeks of notification of the not passing grade. This request should include a detailed timeline and study plan, to make the case for passing a retake. This request and plan must be endorsed by and developed with the adviser. Retake requests are reviewed via the Department's Admissions and Credentials Committee. Adviser-approved requests can be e-mailed to the current year's Admissions and Credentials Committee Chairs and must include a cc to the adviser and Senior Academic Program Manager (Frances Burman). For approved requests, students are granted one retake only, and it must be in August following the May Exam. A student cannot continue in the degree program without passing the Comprehensive Examination at the appropriate level, prior to the start of the second year.

Recommendations for Special Studies versus Thesis Research

Special Studies and Research in Epidemiology, PH.340.840.xx, is offered during terms 1, 2, 3, and 4. Thesis Research, PH.340.820.XX is offered terms S, 1, 2, 3, and 4.

SPECIAL STUDIES AND RESEARCH: PH.340.840.XX

All first-year PhD students should take 1 credit special studies and research each term during terms 1 -3.

The following list of activities may be approved for independent study or special studies and research and is not inclusive:

- Directed readings and discussion leading up to preparing for the research proposal,
- Literature searches and meta-analyses
- Secondary data analysis,
- Self-guided focused study on a particular methodology or a disease of interest

THESIS RESEARCH: PH.340.820.XX

Doctoral students take 340.820 once they successfully pass their School-wide Preliminary Oral Exam and begin working on their research thesis.

CALCULATING CREDITS FOR A VARIABLE CREDIT COURSE

- Students must remember that the 1 hour – in class, 2 hours – outside of class ratio still applies: e.g. Students should think about the time the faculty member will be involved in guiding them (see faculty contact hours below) as well as how much time the student uses to conduct outside readings and work.

What constitutes Faculty Contact Hours

- Individual one-on-one meetings
- Faculty revisions of writing projects (Faculty members spend considerable time editing, proofreading, and otherwise providing written feedback to students.)
- Mentoring and networking preparation and discussion.
- Time spent in group settings with faculty mentors e.g. journal clubs or weekly "lab/group" meetings. Students should make every effort to attend the group meetings for their track and adviser.

HOW TO REGISTER

- Students must communicate their intent to register with and receive approval from the faculty mentor in writing, prior to registering for credits for the special studies or thesis research and include the content/activities to be conducted and the number of credits.
- Students may take 1-3 credits while taking a full load of courses.
- Students may take up to 8 credits per term while taking a partial load of courses with the approval of the faculty mentor.

Adviser / Advisee Manual

Each student in the Department is assigned an adviser and selects co-adviser(s) as they move through the program; Adviser(s) have the responsibility of serving as a guide and mentor. This manual is intended to guide the student and the faculty member(s) in making the adviser/advisee relationship as successful as possible.

This manual has two goals:

- To provide answers to questions that students frequently ask and,
- To provide guidance on how the student and adviser can interact most effectively

Academic Advisers should:

- Provide oversight of the student's academic progress by:
  - Assisting in the selection of courses
  - Ensuring the student is meeting degree milestones in a timely manner
  - Being available for regular meetings with the student
  - Assessing and developing the student's interests and abilities
  - Monitoring student progress in academic coursework through periodic examination of transcripts
  - Monitoring student progress in fieldwork
  - Writing letters of reference (given appropriate lead-time)
  - Assisting with grant preparation (doctoral students, given appropriate lead-time))
  - Referring students to the appropriate individuals or offices that provide academic support and/or resources
- Provide leadership in matters of academic integrity:
  - Being knowledgeable about ethical issues that pertain to academics, research, and practice
  - Helping students interpret and understand institutional policies and procedures regarding the responsible conduct of research
  - Discouraging students from circumventing institutional policies and procedures, and when confronted with such issues, directing students to appropriate institutional resources or contacts, avoiding actual or appearance of conflicts of interest
  - Respecting the confidentiality of students
- Encourage active participation in the greater community (department, school, university, local, state, national, international)

STUDENTS MAY EXPECT THE FOLLOWING FROM THEIR ADVISER(S):

- Advisers' approval for course registrations, course changes, and pass/fail agreements, and on all reasonable petitions to the Admissions and Credentials Committee
- At least one meeting per term with the advisers
- Oversight of the student's overall academic program and sensitivity to any academic difficulties
- Knowledge of and interest in the student's career objectives
- Review of required and recommended courses for the track
- Assistance in designing a plan for the fulfillment of required courses and assistance with planning the course schedule for the year

Advising students is an integral part of faculty members' responsibilities. Thus, students should not feel that they are imposing by asking for advice. Faculty members expect to be available to students, although the students should be respectful of the faculty's time by scheduling and respecting appointments. The responsibility for arranging meetings lies with the student. Students should not expect advisers to seek them out for needed appointments. The student remains obligated to schedule a meeting in order to assure that the adviser has reviewed the student's schedule and to plan any special studies projects or thesis research as needed with the adviser before the registration period deadline.

RIGHTS AND RESPONSIBILITIES OF THE ADVISER(S)**:

- To assist in determining the advisee's educational goals and needs upon starting the program
- To serve as an educational and/or professional mentor for the student
- To maintain awareness of and sensitivity to the level of compatibility between the student advisee and the advisers in terms of academic, professional, and personal interests
- To facilitate a change of adviser or program, if deemed appropriate for the student
- To monitor the advisee's overall academic program and be sensitive to signs of academic difficulty
- To provide guidance throughout the academic program
- To be sensitive to cultural, medical, legal, housing, visa, language, financial, or other personal problems experienced by the advisee and to be aware, sensitive, understanding, and supportive
- Advisers have the right to expect to be treated with respect and courtesy, to be notified in writing when a meeting must be canceled or rescheduled, to be consulted when students have questions or concerns about the research focus or progress, and to serve as team leader on the research team

RIGHTS AND RESPONSIBILITIES OF THE ADVISEE**:

- To arrange to meet with the adviser at least once each term, and observe registration and administrative deadlines
- To identify and develop professional career goals and interests
- To understand administrative policies and procedures and be familiar with the Student Handbook
- To maintain the academic checklist and review it at meetings with the advisers
- Advisees have the right to expect to be treated with respect and courtesy, to be notified in writing when a meeting must be canceled or rescheduled, to be notified when advisers have questions or concerns about the research focus or progress, and to be granted the role of a team member on the research team

```
**Students and Faculty each have the right to request changes
 to the adviser/advisee relationship upon consultation with the
 Director of Graduate Education (Laura Camarata) without penalty.
```

Please review the CEPH Competencies located: https://e-nextcatalog.jhu.edu/public-health/ceph-requirements/index.html (p. 176)

Non-Degree Training

Postdoctoral Fellows

The Department welcomes individuals who have completed doctoral degrees to postdoctoral fellow (PDF) affiliations. Post-doctoral Fellows identify a mentor and enjoy advising from faculty and use of the School's facilities.

Prospective PDFs submit a PDF application (https://www.jhsph.edu/academics/postdoctoral-training/process-appointmentoffellows.pdf). The Application requires proof of sponsorship by either the School or an outside agency for the entire period of the program. Post-doctoral fellows may not use personal funds to support themselves during their program. PDFs will not be able to register, be paid, and/or buy health insurance until verification of their official receipt of the doctoral degree is filed and their PDF application is formally approved.

After being admitted to the Program, each fellow should design, in collaboration with their faculty mentor, an **Individualized Development Plan** for their research time with the Department. PDFs should discuss the anticipated duration of their fellowship with their mentor when they begin the fellowship. PDFs wishing to extend their position beyond the agreed-upon time in the acceptance letter will need to send a letter of request and a report of accomplishments or work completed over the past year to their mentor. After meeting with their mentor, PDFs should send these materials to the Senior Academic Coordinator for the Department, Ebony Moore (eamoore@jhu.edu) and copy their mentor. PDFs are evaluated annually and must maintain an appropriate level of professionalism and scientific research for the duration of their program. Upon satisfactory completion of their program, PDFs are issued a Certificate of Completion. PDFs must submit a request form and provide an updated curriculum vitae, a forwarding address, and the start and end dates, approved by their mentor, to the Academic Support Core (JHSPH.epiasc@jhu.edu).

Directors

The Co-Directors for the PDF program, Casey Rebholz (https://www.jhsph.edu/faculty/directory/profile/3208/casey-m-rebholz/) and Joe Coresh (https://www.jhsph.edu/faculty/directory/profile/155/josef-coresh/) meet regularly with the PDFs for engagement and professional growth. Epidemiology Department PDFs are encouraged to participate in the Epidemiology Postdoctoral Association (EpiPDA) and in the Johns Hopkins Postdoctoral Association (JHPDA (https://jhpda.jhmi.edu/)). To join the EpiPDA listserv, please email Jonathan Eichberger at je@jhu.edu. The staff of the Professional Development (https://pdco.med.jhmi.edu/) and Career Office provides seminars, workshops, and career development assistance to all PDFs at the JHH campus.

Staff
Senior Academic Coordinator, Ebony Moore, eamoore@jhu.edu, handles questions, concerns, application procedures, and certification of completion for PDFs.

Required Courses and Training
PDFs must adhere to the student code of conduct (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Forms/AllItems.aspx) ("Student_Conduct_Code") for all students of the Johns Hopkins Bloomberg School of Public Health.

PDFs are considered non-degree seeking students and must register for 16 credits during each course term. The Postdoctoral Research Credits course number is PH.340.830 Postdoctoral Research Epidemiology.

PDFs conducting research must complete the School-wide Academic and Research Ethics and Responsible Conduct of Research courses during their first term of enrollment:

PH.550.860 Academic & Research Ethics at BSPH
The Avoiding Plagiarism at JHU training, developed by JHU's Sheridan Libraries, is contained within the PH.550.860 Academic & Research Ethics at JHSPH course. This online course is administered through CoursePlus. All students are required to complete this online course by the end of their first term enrolled. In the course, students are asked to upload two certificates to a CoursePlus DropBox showing completion of both parts of this course

- Certificate from JHU for the Avoiding Plagiarism module
- Certificate from SPH for completion of the Responsible Conduct of Research module

Responsible Conduct of Research Course Requirement
Additionally, those who are supported by a National Institutes of Health (NIH) training grant, career development award (individual or institutional), research education grant or dissertation research grant (including D43, D71, F05, F30, F31, F32, F33, F34, F37, F38, K01, K02, K05, K07, K08, K12, K18, K22, K23, K24, K25, K26, K30, K99/R00, KL1, KL2, R36, T15, T32, T34, T35, T36, T37, T90/R90, TL1, TU2, and U2R) must repeat this in-person requirement every four years. This requirement can be met by completing either of the following two courses:

PH.550.600 Living Science Ethics - Responsible Conduct of Research (1st term) 1 credit
or
PH.306.665 Research Ethics and integrity: U.S. and International Issues (3rd term) 3 credits

Cost of the Program
Tuition
The fee for tuition and research for PDFs is set at $200 per term by the School and a postdoctoral scholarship covering tuition is generally granted. PDFs have the option of taking up to 16 credits of didactic courses during their fellowship period. PDFs who wish to take academic classes should discuss this with their research mentor as part of their Individualized Development Plan; these courses cannot be transferred into a degree program at a later date. Please visit the School's PDF website (https://www.jhsph.edu/academics/postdoctoral-training/) and PDF guidebook (https://www.jhsph.edu/academics/postdoctoral-training/Postdoc-guidebook-revised.pdf) for additional critical information.

Living in Baltimore (https://www.jhsph.edu/student-life/life-in-baltimore/)
Generally, PDFs complete their training onsite in Baltimore, MD. The Office of Financial Aid lists the Cost of Living and Health Insurance (https://www.jhsph.edu/offices-and-services/student-affairs/financial-aid/cost-of-attendance/).

Information for International PDFs
The Office of International Services (https://ois.jhu.edu/Contact_Us/Medical%20Institutions/) is most helpful for answering questions related to the program.

Certificate Programs

Certificate Programs offer focused academic training in specific areas of public health. They provide a focused way of integrating elective courses into a research area of interest. The School offers over 30 certificates outlined here: https://www.jhsph.edu/academics/certificate-programs/.

The Certificates offered by the Department of Epidemiology are:

- Clinical Trials (p. 580)
- Epidemiology for Public Health Professionals (p. 586)
- Health and Human Rights (p. 597)
- Healthcare Epidemiology and Infection Prevention and Control (p. 602)
- Pharmacoepidemiology and Drug Safety Certificate (p. 613)
- Risk Sciences and Public Policy (p. 628) (Epidemiology is one of three sponsoring departments; the primary Department Sponsor is Health Policy and Management)

Generally, students interested in a particular certificate will need to forward a brief statement and a CV to the contact person listed. The statement should indicate research/professional interest and background preparation for the certificate and explain how the additional certificate will be beneficial to the student's career. Many of the Certificates also require a planning chart of the courses including term/year to meet the Certificate's requirements.

Applying for a certificate as an enrolled degree candidate in Epidemiology at BSPH: https://www.jhsph.edu/academics/certificate-programs/how-to-apply/jhsph-degree-students.html. Many of the Certificates require formal acceptance prior to beginning the coursework. Students can count just 6 credits of the coursework taken toward a Certificate before acceptance into the Certificate program. Students who enroll in the last course of a certificate should complete and submit the Notification of Completion form during add/drop of that final term. Once the Certificate requirements have been satisfied, please comply with all completion instructions; ***certificates cannot be processed retroactively*** https://www.jhsph.edu/academics/certificate-programs/completion.html. Please see the individual certificate page or the Certificate FAQs (p. 575) for more information.

Graduate Summer Institute of Epidemiology and Biostatistics

The Graduate Summer Institute (https://publichealth.jhu.edu/academics/graduate-summer-institute-of-epidemiology-and-biostatistics/) offers short, intensive courses in epidemiology and biostatistics intended to develop an understanding of the principles, methodologic strategies and practical aspects of epidemiological research. The Department has offered the Summer Institute Program since 1983 and has trained thousands of students from the U.S. and around the world. Institute participants include students, clinicians, public health practitioners, physicians in training, and those considering a career in public health. Tuition for the GSIEB is assessed separately from the regular academic year and current degree-seeking students in epidemiology are responsible for 100% of institute tuition.

Department of Health, Behavior and Society

About

The Department of Health, Behavior and Society (HBS) advances public health research, pedagogy, and practice through our focus on health equity, social justice, and the myriad factors that drive people's health and well-being. We develop, evaluate, and implement solutions to pressing pubic health challenges in Baltimore, throughout the U.S., and in some two dozen countries around the world. We believe that human behaviors are key determinants of health and well-being and that behavioral determinants reside at the nexus of social context, political and policy structures, systems, and constructed environments.

Our research, practice, and pedagogy reflect this multilevel orientation, centering on factors occurring within and across each level. These include:

- **The individual level**: people’s own attitudes, beliefs, and emotions.
- **The interpersonal level**: people’s social networks at home, the workplace, and elsewhere.
- **The policy level**: policies that promote or hinder access to healthy living, including access to healthcare, insurance, and housing.
- **The structural level**: structures of racism, inequity, and injustice.

Some of HBS’s areas of expertise include addiction, social justice, anti-racism, health equity, LGBTQ studies, chronic diseases, health communication, social factors, sex work, opioid use, tobacco control, nutrition, HIV/AIDS, and COVID-19 prevention and control. We are particularly known for our mixed methods (including qualitative) approaches.

We house several centers and institutes, including one of BSPH’s largest centers, the Center for Communication Programs. Since our founding in 2005, our Department has grown to include 120 students and 58 full-time faculty members. We are proud to have a dedicated core of highly skilled staff members who support all aspects of the work in the Department of Health, Behavior and Society.

Programs

Summer Institute

Our HBS Summer Institute offers short, intensive courses that provide students with an understanding of behavioral and societal impacts on public health—and specific strategies to address the challenges they present.

Overview - Explore how social context and behavior shape population health through our HBS Summer Institute courses. Institute courses offer the same rigor and quality of our full-term HBS courses, condensed into days instead of weeks. Our HBS faculty experts lead each of our courses, ranging in focus from risk communication to qualitative studies and more. HBS Summer Institute courses:

- Offer the same rigor and quality of full-term courses, **condensed into days** instead of weeks.
- Are taught by our **HBS faculty experts**.
- May be taken on a **for-credit** or **non-credit basis** (with reduced tuition available for courses taken not for credit).
- Are eligible for **tuition remission** under the terms of the Hopkins Tuition Remission Plan (https://hr.jhu.edu/benefits-worklife/tuition-assistance/tuition-remission/).
- Courses taken for credit may be applied towards the completion of many full-time and part-time **degree programs** at HBS and BSPH.

Winter Institute

Our HBS Winter Institute offers compressed, intensive courses exploring behavioral and societal impacts on public health — and specific strategies to address the challenges they present.

Overview - Expand your knowledge of behavioral and societal impacts on public health through our winter institute courses. HBS Winter Institute courses:

- Offer the same rigor and quality of full-term courses, **condensed into days** instead of weeks.
- Are taught by our **HBS faculty experts**.
- May be taken on a **for-credit** or **non-credit basis** (with reduced tuition available for courses taken not for credit).
- Are eligible for **tuition remission** under the terms of the Hopkins Tuition Remission Plan (https://hr.jhu.edu/benefits-worklife/tuition-assistance/tuition-remission/).
- Courses taken for credits may be applied towards the completion of many full-time and part-time **degree programs** at HBS and BSPH.

HBS Policies and Student Resources

HBS Policy on Advising

All students are assigned a faculty adviser at the time of admission to their program. Adviser assignments are based, in part, on compatibility of the student and faculty research or practice interests. Advisers play an important role in the student's academic life. The adviser is expected to keep abreast of school and departmental degree requirements so that they can counsel students on courses and the proper progression towards the degree. Students should consult with their advisers prior to registering for courses each term. In addition, any special requests or petitions that a student submits to any of the administrative offices of the School will require the endorsement of the student's adviser as well as that of the department chair.

As students move through their degree programs, they may elect to choose a different adviser, depending on their chosen area of concentration and the dissertation topic selected, or for other reasons. In that event, the student should contact the preferred faculty member to determine if that person is able to assume responsibility as the student's adviser. If so, the student should notify the department in writing of an adviser change, obtaining the signatures of the prior adviser and the new adviser, and submit the signed notification to their respective program director for approval. Once approved, notify the Academic Program Administrator so that the change may be processed.

Each student is required to meet with their adviser at least once per academic term to discuss academic progress, to plan for fulfillment of degree requirements, and to review and modify course selection plans for the next term. These meetings are formally scheduled before each major registration period. **HBS students are responsible for scheduling these meetings with their advisers. See Milestones tables in each degree program description.** The Academic Program Administrator works closely with the faculty advisers and also provides guidance to students with the School and departmental academic policies and procedures.

- Students are expected to engage in pre-planning for these meetings.
- Both advisers and students should be aware of and understand curriculum policies and procedures.
- Students and advisers should identify future professional career goals and interests.
- The adviser and student should review the student's tentative curriculum and course schedule, and alternatives should be identified.
- Any major issues or questions about academic programs and non-academic problems should be identified and discussed.

HBS Program Directors for each respective program and the Academic Program Administrator are also available as resources within the department for students who have questions or concerns related to their own academic advisers. These individuals may be able to assist with mediation, coaching, facilitating co-mentoring, or switching advisers as needed. The Vice Chair for Pedagogy and Academic Affairs is also available to serve in this role.

HBS Teaching Assistant Policy

Any student, regardless of program, who wishes to serve as a Teaching Assistant (TA) in any Health, Behavior and Society course must first complete the self-paced, online "Teaching Assistantship Training (https://sites.google.com/site/ctlteachingtoolkit/teaching-assistants/ta-training/)" course. The Center for Teaching and Learning (CTL) will provide students with a certificate of completion, which they must then submit with their TA Payment Form.

Introduction to Online Learning: Students are now required to take the free, non-credit mini course "Introduction to Online Learning (IOL) (https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/)" before beginning their first term.

Funding

The Department is committed to seeking opportunities that will allow it to provide financial support to its students. Most eligible accepted applicants will automatically be considered for School scholarship support. Departmental scholarship decisions are made during the admissions process and communicate to students in their letters of acceptance.

Federally funded institutional training grants may be available for eligible students. During the admissions process, admissions committees and program directors review and screen applications for appropriate candidates to be appointed. Appointees must be U.S. Citizens or permanent residents according to federal law.

The individual NRSA (National Research Service Award, NIH) may provide tuition and stipend support for up to 3 years for doctoral candidates planning to undertake research in certain areas. Students may apply for individual training support for NIH. The department provides a set of resources and a required internal review process to support student applications for NRSAs and similar grant proposals. Students interested in submitting a NRSA proposal should notify the Doctoral Program Director, with cc to the Academic Program Administrator and Administrative Program Coordinator as early as possible to initiate this process. The internal review process requires submission of grant text one month prior to the official submission deadlines.

Once a student begins working on their dissertation proposal, the Department strongly encourages students to seek dissertation writing support. Government agencies and private organizations provide funding for students once they are working on an approved thesis topic. The award amount varies by agency and organization. Application deadlines vary, but notices are sent to eligible students.

Students interested in applying for dissertation support should watch for postings and take special note of application procedures and deadlines. The Department has policies and procedures in place for student submission of grant applications.

Social Factors in Health, MHS

General Program Information

The Master's of Health Science (MHS) in Social Factors in Health is an advanced research degree for students with undergraduate exposure to social and behavioral sciences and/or public health, who are interested in further training in the theory and methods in this area. The degree is intended to prepare students either for further doctoral training in public health, or to work in a public health research, policy, or practice position. The focus of the MHS in Social Factors program in the Department of Health, Behavior, and Society is on integrating and applying a broad range of knowledge and analytical skills in social aspects of public health, with an emphasis on contemporary health problems.

Graduates of the program will be prepared to embark on doctoral training in public health or pursue careers in research, policy, and practice positions in local, state, national, and international agencies, organizations, and institutions.

The curriculum provides broad foundational training in public health, as well as specific training to build substantive knowledge and analytic skills as social scientists in public health, with the ability to understand problems and to design and implement solutions. The program focuses on understanding and influencing the societal structures and behaviors that create risk for disease and illness, as well as social factors that are protective and health enhancing. Rigorous training in applied research methods is also a key element of the curriculum.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

The program consists of one and one-half to two years of full-time study, combining classroom-based coursework, seminars, and independent study. Students must also complete a mentored research experience, which includes the development of a research plan. Students must also write a master's research thesis presenting original research (in most cases based on the mentored research experience). The research experience, planned with the guidance of the student's academic adviser, may begin after successful completion of 64 credits, typically at the end of the first year, and must include the equivalent of 600 hours of activity in a paid or unpaid position.

After the completion of 64 credits, students in good academic standing are eligible for a Master's Tuition Scholarship (MTS) from the School. The MTS provides 75 percent tuition support during year two of the program.

Academic Progress

The Department expects students to maintain satisfactory academic progress for the duration of the degree program. In the Department, satisfactory academic progress is defined as follows:

- Maintaining a minimum cumulative grade point average of 2.75. Students falling below this minimum will have one term (or 12 additional units of coursework if part-time) to raise the GPA above 2.75.
- Earning a grade of "C" or higher in program specific core courses. Students earning lower grades must repeat the course.
- Adhering to the time frame for completion of degree, defined as two years for all program requirements (coursework, placement and written assignment). Extensions are possible but must be formally approved by the Department and Committee on Academic Standards.

Maintaining a minimum cumulative grade point average of 2.75. Failure to maintain satisfactory academic progress as defined by any of the criteria above may be grounds for dismissal from the program.

Course/Credit Load

The Department strongly encourages students to register for fewer than 19 credits (including special studies and thesis research) in any one academic term. While a credit registration of more than 18 credits is possible through the registration system, departmental faculty think that the additional course burden prohibits students from dedicating the appropriate time needed for the educational activities being undertaken. Any decision to register for more than 18 credits should be carefully considered and discussed with the student's adviser prior to registering. The Department encourages students to register for a minimum of 16 credits each term. The School requires a minimum of 12 credits to maintain full-time status and a maximum of 22 credits.

Course of Study

Students will complete a minimum of 96 total units of credit hours, in six to eight full-time terms, graduating at the end of the second year. Students must attend the MHS in Social Factors Seminar for all of the terms in which they are registered, including a minimum of two terms in their second year program. It is also expected that MHS students will attend HBS seminar series events.

Students planning to take online courses must first take the free, non-credit mini-course “Introduction to Online Learning (IOL).” Students are now required to take IOL before beginning their first term.

All students are required to complete the Academic and Research Ethics course (550.860) during their first term.

In the first year, the four full-time terms of study will consist of academic coursework in classroom and seminar settings. A total of 64 academic units must be completed prior to beginning the research practicum, typically within the first four terms of study. HBS students typically register for 16 credits or more each term in the first year to complete the required total of 64 credits and to be eligible for the Master's Tuition Scholarship in the second year (though enrollment may vary slightly from term to term, the 64 credit hour requirement cannot be changed). Audited courses may not be applied toward the full-time enrollment requirement or toward the required 64 credits. All required courses must be taken for a letter grade, unless the course is only offered for Pass/Fail. It is anticipated that students will complete a significant portion of their research practicum activities during the summer between first and second year.

In the second year, HBS students register for 16 credits each term for a course of study that will include remaining courses and thesis research hours with their adviser (or another JHU faculty member) as they work to complete their mentored research experience and compose their research thesis. Students may be eligible to complete all requirements for graduation by the end of second term or the beginning of the third term of their second year, depending on the timing of their research experience and final approval of their thesis.

The final requirement of the program is that the student must perform a public presentation of their placement and associated research. Typically, this presentation will take place in the second and third quarters of the second year.

Students who have not completed both the mentored research experience and the final thesis by the May graduation deadline will be required to register for two credits in the summer term.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Methodologic and Research Training

Epidemiology

Students must take a minimum of five credit hours in epidemiology, starting with Epidemiological Inference in Public Health. This course should be taken in Term 1 of Year 1.

Code	Title	Credits
PH.340.721	Epidemiologic Inference in Public Health I (Term 1)	5
Total Credits		5

Biostatistics
MHS students must take all 4 of the following courses:

Code	Title	Credits
PH.140.621	Statistical Methods in Public Health I (Term 1) [1]	4
PH.140.622	Statistical Methods in Public Health II (Term 2) [1]	4
PH.140.623	Statistical Methods in Public Health III (Term 3) [1]	4
PH.140.624	Statistical Methods in Public Health IV (Term 4) [1]	4
Total Credits		16

[1] The more advanced Biostatistics series PH.140.651 Methods in Biostatistics I – PH.140.654 Methods in Biostatistics IV may be substituted.

Social Science Research Methods
Students must take:

Code	Title	Credits
PH.410.615	Research Design in the Social and Behavioral Sciences (Term 2)	3
PH.410.631	Introduction to Community-Based Participatory Research: Principles and Methods (Term 2)	3
MHS in Social Factors Seminar – (1 unit per term, 6 terms minimum)		6
PH.410.881	MHS Seminar in Social Factors in Health I (1st term of first year)	
PH.410.882	MHS Seminar in Social Factors in Health II (2nd term of first year)	
PH.410.883	MHS in Social Factors in Health Seminar III (3rd term of first year)	
PH.410.884	MHS Seminar in Social Factors in Health IV (4th term of first year)	
Total Credits		12

Students must take the above courses. In addition, students must take at least 1 course in each of 2 areas: quantitative methods and qualitative methods. Students should carefully choose methods training considering both their previous training and future research goals. One course in each of the two areas is considered the minimum; students are encouraged to build their methodological expertise in all areas relevant to their proposed research activities and scientific areas of interest. It is valuable for students to seek both breadth and depth in methods training. Therefore, we strongly recommend that students also elect an area of methodological focus and take multiple courses in this area.

Quantitative Methods Courses

Code	Title	Credits
Select at least two of the following:		6-10
PH.410.686	Advanced Quantitative Methods in The Social and Behavioral Sciences: A Practical Introduction (Term 4)	
PH.330.657	Statistics for Psychosocial Research: Measurement (Term 1)	
PH.140.658	Statistics for Psychosocial Research: Structural Models (Term 2)	
PH.309.616	Introduction to Methods for Health Services Research and Evaluation I (Terms 3 & 4)	
PH.410.733	Communication Network Analysis in Public Health Programs (Term 1)	
PH.140.698	Spatial Analysis III: Spatial Statistics	4
PH.140.699	Spatial Analysis IV: Spatial Design and Application	3
PH.340.696	Spatial Analysis I: ArcGIS	3
PH.340.697	Spatial Analysis II: Spatial Data Technologies	2
Total Credits		18-22

Qualitative Methods Courses

Code	Title	Credits
PH.550.604	Qualitative Reasoning in Public Health	2
PH.410.710	Concepts in Qualitative Research for Social and Behavioral Sciences	3
PH.410.712	Theory and Practice in Qualitative Data Analysis and Interpretation for The Social and Behavioral Sciences	3
PH.410.690	Ethnographic Fieldwork	3

‡Students who intend to take 410.712 should also take 410.710 (Concepts in Qualitative Research) or be able to demonstrate exposure to qualitative research methods through prior coursework or work experience. 550.604 (Qualitative Reasoning) does not meet the prerequisites for this course. Qualitative Reasoning is designed to foster an appreciation of a qualitative approach but does not teach skills necessary for qualitative data collection.

Strongly recommended:

Code	Title	Credits
PH.410.638 & PH.410.639	Scientific Writing in Health Sciences: Developing A Manuscript for Publication I and Scientific Writing in Health Sciences: Developing A Manuscript for Publication II (Terms 3 & 4)	6

Public Health Core Competencies
All students matriculating into a graduate program in an accredited school of public health (such as BSPH), are required to take courses that expose them to content that covers 12 'introductory learning objectives' before graduation. For MHS students in HBS, some of these exposures will come through regular program courses, and others will come through ½ credit "Cells to Society" (C2S) online modules developed by the school. The C2S modules will be offered at least twice a year and will be taken in the first 4 weeks of the term in which they are held. Some courses fulfill more than one learning objective. HBS MHS students will fulfill some CEPH requirements through coursework in other domains. Other CEPH requirements will be fulfilled by taking the following courses:

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5

PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
Total Credits		**3**

Required of all PhD/ScD students, ScM students, and MHS students enrolled in academic/advanced study programs. Students may obtain waivers if they have:

1. completed an MPH, professional MHS, or MSPH degree at a domestic institution within the last ten years,
2. enrolled in an MSPH program or in the DrPH program, or
3. taken and passed with a B or better graduate-level courses in the five CEPH core areas that are biostatistics, epidemiology, social and behavioral sciences, environmental health sciences, and health systems administration.

Requests for waivers should be addressed to Maryann Smith (mksmith@jhsph.edu (p. 18)).

Lecture times: Not applicable (online); LiveTalk sessions: Wednesdays at 12:00 noon or 5:30 PM online.

Social Science Theory as Applied to Public Health

Fundamentals of Social Theory in Public Health

Students must take:

Code	Title	Credits
PH.410.612	Sociological Perspectives on Health (Term 1)	3
PH.410.600	Fundamentals of Health, Behavior and Society (Term 1)	4
PH.410.611	Under Pressure: Health, Wealth & Poverty (Term 3)	3
PH.550.605	History of Public Health (Term 3)	3
Total Credits		**13**

Policy Courses

In addition, students must take at least 1 of the following policy courses:

Code	Title	Credits
Select one of the following:		3-4
PH.300.600	Introduction to Health Policy (Terms 1 & 2)	
PH.300.650	Crisis and Response in Public Health Policy and Practice (Term 3)	
PH.318.636	Urban Policy (Term 1)	
PH.318.623	Social Policy for Vulnerable Populations in the U.S. (Term 2)	
Total Credits		**3-4**

Social Science Applications in Public Health

Students must take at least 12 credit hours from the following list. Alternate courses may be substituted with permission from the program director.

Code	Title	Credits
Select at least 12 credit hours from the following:		12
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels (Term 2)	
PH.300.652	Politics of Health Policy (Term 4)	
PH.306.650	Public Health and the Law (Term 3)	
PH.313.601	Economic Evaluation I	
PH.330.661	Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders	
PH.380.600	Principles of Population Change (Term 2)	
PH.380.604	Life Course Perspectives on Health (Terms 1 & 2)	
PH.380.611	Fundamentals of Program Evaluation (Term 3)	
PH.410.650	Introduction to Persuasive Communications: Theories and Practice	
PH.410.635	Applications of innovative Methods in Local and Global Health Equity Research	
PH.410.613	Psychosocial Factors in Health and Illness (Term 3)	
PH.410.630	Implementation and Sustainability of Community-Based Health Programs (Term 4)	
PH.410.721 & PH.410.722	Translating Research into Public Health Programs and Policy and Translating Research into Public Health Programs II (Terms 3 & 4)	
PH.410.645	Applying the Social Ecological Model in Tobacco Control and Climate Change	
PH.340.666	Foundations of Social Epidemiology (Term 4, Offered every other year)	
PH.410.620	Program Planning for Health Behavior Change (Terms 1 & 4)	
PH.306.660	Legal and Public Health Issues in the Regulation of intimacy (Term 4)	
PH.410.668	Policy Interventions for Health Behavior Change (Term 2)	
PH.318.636	Urban Policy (Term 1)	
PH.308.610	The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life (Terms 2 & 4)	
PH.410.679	Decolonization, Global Communication, and Public Health (Term 2)	
Total Credits		**12**

Public Health Priority Populations, Issues, and Solutions

MHS in Social Factors students must take at least 12 credit hours from the following list. Alternate courses may be substituted with permission from the program director.

Code	Title	Credits
Select at least 12 credit hours from the following:		12
PH.410.604	Harm Reduction: A Framework for Evidence-Based Policy and Practice (Term 2)	
PH.410.610	Housing Insecurity and Health (Term 3)	
PH.410.640	Global Tobacco Control (Term 2)	
PH.410.660	Latino Health: Measures and Predictors (Term 4)	
PH.410.663	Media Advocacy and Public Health: Theory and Practice (Term 4)	
PH.410.677	Theory and Practice in Campaigning and Organizing for Public Health I (Term 3)	
PH.410.680	Social Ecological Approaches to Health Regimen Adherence in Chronic Conditions (Term 4)	
PH.410.681	Gay, Bisexual and Other Men Who Have Sex With Men (MSM) and HIV: Theoretical Perspectives on the Us Epidemic (Term 4)	

PH.410.683	Global Perspectives on LGBT Health (Term 3)	
PH.410.752	Children, Media, and Health (Term 3)	
PH.188.682	A Built Environment for A Healthy and Sustainable Future	
PH.221.643	Armed Conflict and Health (Term 3)	
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs (Terms 2 & 4)	
PH.222.654	Food, Culture, and Nutrition (Term 4)	
PH.222.657	Food and Nutrition Policy (Term 1)	
PH.300.615	The Tools of Public Health Practice (Term 2)	
PH.301.615	Seminar in Health Disparities	
PH.301.627	Understanding and Preventing Violence (Term 2)	
PH.301.645	Health Advocacy (Term 4)	
PH.305.684	Health Impact Assessment (Term 3)	
PH.306.625	Ethical Issues in Health Policy: Public Health and Health Care (Term 2)	
PH.306.663	Legal and Ethical Issues in Health Services Management	
PH.306.665	Research Ethics and integrity: U.S. and International Issues (Term 3)	
PH.308.615	The Opioid Crisis: Problem Solving Seminar (Term 1)	
PH.309.605	Health Issues for Aging Populations (Term 2)	
PH.317.600	Introduction to the Risk Sciences and Public Policy (Terms 1 & 3)	
PH.330.607	PREVENTION of MENTAL DISORDERS: PUBLIC HEALTH InterVENTIONS	
PH.330.623	Brain and Behavior in Mental Disorders	
PH.330.639	The Intersection of Mental and Physical Health	
PH.330.664	Introduction to Mental Health Services (Term 1)	
PH.330.667	Mental Health and the Law (Term 3)	
PH.330.680	Promoting Mental Health and Preventing Mental Disorders in Low- and Middle-income Countries (Term 4)	
PH.340.629	The Epidemiology of LGBTQ Health	
PH.330.674	Suicide As A Public Health Problem (Terms 3 & 4)	
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	
PH.340.692	Prisons, Public Health, and Human Rights	
PH.380.635	Urban Health in Contemporary America (Term 4)	
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth (Term 3)	
PH.380.665	Family Planning Policies and Programs (Term 3)	
PH.380.666	Women's Health (Term 3)	
PH.380.667	Women's Health Policy (Term 4)	
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond (Term 2)	
PH.380.721	Schools and Health (Term 4)	
PH.380.725	The Social Context of Adolescent Health and Development (Term 4)	
PH.380.744	Nutrition and Growth in Maternal and Child Health (Term 1)	
PH.380.750	Migration and Health: Concepts, Rates, and Relationships (Term 3)	
PH.380.762	HIV Infection in Women, Children, and Adolescents (Term 4)	
PH.380.767	Couples and Reproductive Health (Variable credits, Term 1)	
PH.380.768	Selected Topics in Women's Health and Women's Health Policy (Term 1)	
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies (Term 3)	
PH.550.609	Life and Death in Charm City: Histories of Public Health in Baltimore, 1750 to the Present (Term 1)	
Total Credits		**12**

MHS Degree Policy and Procedure Manual (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_08_Master_of_Health_Science_Degree_071417.pdf)

Milestones for the MHS in Social Factors in Health Program

Key Dates	Task/Event
First Year	
Term 1

Term of completion	
	Completion of Final Paper
	Successful Presentation of Work in Seminar

Timetable for Completion of Degree Requirements

Please direct questions regarding the timetable for completion of degree requirements to Office of Records & Registration (JHSPH.Registra@jhu.edu).

MHS Program Policies

MHS Program Prerequisites

1. In order to take required online courses, students must complete Introduction to Online Learning, which is offered through the Center for Teaching and Learning at the Bloomberg School. This non-credit course is a pre-requisite that **must be completed in the summer prior to matriculation**.
2. All students must take the required course *PH.550.860* Academic & Research Ethics at BSPH. This is an online offering that **must be completed in the summer prior to matriculation**. Failure to complete this course will prevent students from registering for 2nd term.

Master's Tuition Scholarship

The MTS provides eligible second year MHS students with a 75% tuition scholarship for up to four consecutive terms. Students are eligible if they have successfully completed all Year 1 required coursework, are in good academic standing, and have accumulated a minimum of 64 credits. ***Once the scholarship has been awarded, the student must maintain full# time registration for the entire period of the award.*** Upon completion of the final written assignment, the MTS will be concluded. Students will not be permitted to enroll in courses using the MTS once they have been certified as complete in the MHS program.

Satisfactory Academic Progress

The Department expects students to maintain satisfactory academic progress for the duration of the degree program. For the MSPH program, satisfactory academic progress is defined as follows:

- Maintaining a minimum cumulative grade point average of 2.75. Students falling below this minimum will have one term (or 12 additional units of coursework if part-time) to raise the GPA above 2.75.
- Earning a grade of "C" or higher in program specific core courses. (Students earning lower grades must repeat the course.)
- Adhering to timeframe for completion of degree, defined as four years for all program requirements (coursework, placement and written assignment). Extensions are possible but must be formally approved by the Department and Committee on Academic Standards.

Failure to maintain satisfactory academic progress as defined by any of the criteria above may be grounds for dismissal from the program.

HBS Policy on Course Waivers

Waiving or substituting a course that the faculty have determined essential to the program is a serious consideration. Students should discuss this thoroughly with their adviser well in advance of the start of the term in which the required course is offered. Course waivers are rare and are appropriate only when the student has completed the course or one very similar to it in prior graduate level training. Course substitutions may be appropriate if the student can provide a rationale for why an alternate course is preferred to the required one. (NB: The alternate course must cover much of the same content as the required course.) If the student and the adviser agree that a waiver or substitution is warranted, a memo from the student (co- signed by the adviser) to the program directors, requesting the waiver should be submitted to the HBS Academic Office no later than the first day of the term of the course in question.

All requests for course substitutions must be submitted in writing using the required form to the program directors and student's adviser prior to course enrollment and should include the following information: Proposed competency area for substitution; Proposed course name, number, number of credits, and description; Rationale for substitution, including demonstrated match between course objectives and relevant training competency. Substitutions for coursework in Methodologic and Research Training will only be considered with evidence of prior equivalent coursework. No substitutions can be made for coursework in Section 1d (Public Health Core Competencies).

Program Competencies

1. Articulate the influences of social context and behavior on health with the aim of developing, evaluating and implementing solutions to pressing public health challenges in Baltimore, the United States and around the globe
2. Describe relationships and potential pathways between social factors, behaviors, and health and related contributions to health disparities
3. Critically evaluate literature related to individual and social influences on health behaviors and health
4. Apply interdisciplinary, ecological, and other multi-level theoretical models of health and health behavior to identify relevant social and structural factors and effective social and behavioral intervention strategies to address public health challenges in diverse populations and settings
5. Design and critically assess interventions and community-based programs to prevent disease and injury, alleviate illness and disability, improve quality of life, and reduce health disparities
6. Translate research on effective social and structural interventions with implications for public health related practice and policy
7. Apply a variety of study designs, methods and analytic techniques to appropriately address key questions about social and structural influences on health
8. Apply appropriate ethical standards in the conduct of public health research and practice

Health Education and Health Communication, MSPH

General Program Information

The Master of Science in Public Health (MSPH) program in Health Education and Health Communication is designed for individuals seeking formal academic training in health education, health promotion, and health communication. The program equips students with the fundamental skills and knowledge necessary for a career in these areas in settings ranging from voluntary, community-based agencies to health departments and government agencies to for-profit companies. The degree is appropriate for individuals interested in either or both domestic or international work. Four major elements comprise the MSPH program in Health Education and Health Communication and are described below:

program requirements, academic course requirements, a field placement, and a final written assignment.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Student Status

The program is open to both full-time and part-time students. However, during the field placement, all students must be registered as full-time students. Students must maintain their student status up until they complete all requirements for graduation.

Timing

Full-time students complete course requirements in their first year of study; part-time students must complete them within three years of matriculating into the program. All students are required to participate in a full-time field placement of at least six months duration, only after their required and elective coursework is complete.

Course/Credit Load

The Department strongly encourages students to register for fewer than 19 credits (including special studies) in any one academic term. While a credit registration of more than 18 credits is possible through the registration system, departmental faculty think that the additional course burden prohibits students from dedicating the appropriate time needed for the educational activities being undertaken. Any decision to register for more than 18 credits should be carefully considered and discussed with the student’s adviser prior to registering. The Department encourages students to register for a minimum of 16 credits each term. The School requires a minimum of 12 credits to maintain full-time status and a maximum of 22 credits.

Certification for Graduation

MSPH students in good academic standing who complete all program components are certified for graduation by the Department’s Academic Program Administrator.

Students must communicate their graduation plans well in advance to their adviser, program director, and the School and meet all deadlines for degree requirements. Students are certified for graduation only after they have successfully completed all course work, the field placement, and the final writing assignment. Students who do not fulfill program requirements within the stated time frame run the risk of delaying their graduation. Specific deadlines and graduation conferral dates will be provided to the student.

The University now has three conferral dates for graduation (December, May, and August) but only one graduation ceremony per year (May). December and August graduates may participate in the May graduation ceremony of the appropriate academic year. Most MSPH students are certified for May graduation.

Students who have not completed both the field placement experience and the final writing assignment by the May graduation deadline will be required to register for two credits in the summer term. Students will receive an Incomplete (I) grade for field placement (PH.410.810 Field Placement Health Behavior and Society) and, as dictated by School policy, the Incomplete grade will convert to a Fail (F) grade if the activity is not completed within 120 days of the end of 4th term.

Academic Course Requirements

Students must complete a *minimum* of 64 credits, which includes both required and elective courses (see table below), before becoming eligible for field placement. Program course requirements are designed to give students general competence in core areas of public health and more in#depth competence in the theories and practice of public health education, promotion and communication. For a number of required areas, students may select among options to fulfill the requirement. For instance, students can pursue the Biostatistics requirement through one of two options. The first option (Track A) emphasizes interpretation and concepts rather than data analysis. This sequence develops an understanding of statistical methods rather than developing a student’s own data analysis skills. The second option (Track B) is aimed at students who intend to analyze data themselves or contribute meaningfully to a group of practitioners or researchers doing so. Students may not switch between tracks after they have begun one. Both courses in the track must be completed to fulfill the Biostatistics requirement. *All students taking online courses are required to complete Introduction to Online Learning (offered all four terms) before they take their first online course.* Students are encouraged to consult with their academic advisers when making course selections.

The required curriculum emphasizes:

- assessment of educational and communication needs;
- development and implementation of health behavior change strategies and health communication programs targeting the individual, group, and community; and
- evaluation of program effects.

Required Courses: Core Public Health Requirements

Code	Title	Credits
Ethics		
PH.550.860	Academic & Research Ethics at BSPH (all terms)	0
Epidemiology		
PH.340.721	Epidemiologic Inference in Public Health I (Terms 1 (recommended),3,SI)	5
Biostatistics		
Select one of the following:		6-8
PH.140.611 & PH.140.612	Statistical Reasoning in Public Health I and Statistical Reasoning in Public Health II [1]	
PH.140.621 & PH.140.622	Statistical Methods in Public Health I and Statistical Methods in Public Health II [2]	
Total Credits		**11-13**

1. Terms 1 (recommended), 2, 3 for PH.140.611 Statistical Reasoning in Public Health I; Terms 2 (recommended), 3, 4 for PH.140.612 Statistical Reasoning in Public Health II
2. Term 1 recommended for PH.140.621 Statistical Methods in Public Health I; Term 2 recommended for PH.140.622 Statistical Methods in Public Health II

Required Courses: Health Education, Promotion and Communication

Code	Title	Credits
Theory		
PH.410.600	Fundamentals of Health, Behavior and Society (Term 1 recommended)	4

Planning and Implementation		
Select one of the following:		6-8
PH.410.620 & PH.410.630	Program Planning for Health Behavior Change and Implementation and Sustainability of Community-Based Health Programs [1]	
PH.410.654 & PH.410.655	Health Communication Programs I: Planning and Strategic Design and Health Communication Programs II: Implementation and Evaluation [2]	
Program Evaluation		
Select one of the following:		3-4
PH.410.615	Research Design in the Social and Behavioral Sciences (Term 2 recommended)	
PH.380.611	Fundamentals of Program Evaluation (Term 3 recommended)	
Communication		
PH.410.650	Introduction to Persuasive Communications: Theories and Practice (Term 2 recommended, WI)	4
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication (Term 3 recommended)	3
Policy		
PH.410.668	Policy Interventions for Health Behavior Change	3
Professional Development		
PH.410.865	MSPH Seminar in Health Education and Health Promotion (Term 1 reecommended)	1
PH.410.866	Careers in Health Education and Health Promotion (Term 2 recommended)	1
PH.410.867	MSPH Field Placement Preparation (Term 3 recommended)	1
Total Credits		**26-29**

1 Terms 1 (recommended), WI, 4 for PH.410.620 Program Planning for Health Behavior Change; Terms 2 (recommended), 4 for PH.410.630 Implementation and Sustainability of Community-Based Health Programs
2 Term 3 recommended for PH.410.654 Health Communication Programs I: Planning and Strategic Design; Term 4 recommended for PH.410.655 Health Communication Programs II: Implementation and Evaluation

Remember to check for prerequisites. Note all online courses require completion of Introduction to Online Learning.

Required Courses: CEPH Introductory Learning Objectives and Professional Development Competencies

The Council for Education in Public Health (CEPH) is responsible for the accreditation of all schools of public health. According to CEPH requirements, all degree students must be grounded in foundational public health knowledge, as outlined in 12 ‘introductory learning objectives.’ In addition, students in professional master’s degree programs like the MSPH must also demonstrate their ability to perform 22 professional development competencies. For MSPH students in HBS, many of these competencies are integrated into core departmental and program requirements. Competencies not already covered are included in 0.5 credit “Cells to Society” (C2S) online modules (552.601 - 552.626) or variable credit "Leadership Skills" courses (552.622, 552.651, 552.655) developed by the school. The C2S modules are offered every academic term; the Leadership Skills courses are offered as noted. All CEPH requirements must be completed prior to graduation. MPSH students are *strongly encouraged* to complete them prior to the start of the field placement. More details about CEPH requirements can be found here (p. 176).

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population’s Health	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population’s Health	0.5
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5
PH.552.622	Creating, Implementing and Monitoring Budgets for Projects and Programs	1
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals	0.5
PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals	0.5
PH.552.625	Building Collaborations Across Sectors to Improve Population Health	0.5
PH.552.626	Systems Thinking: Concepts and Methods	0.5
PH.300.651	Introduction to the U.S. Healthcare System	4
PH.312.655	Organizational Behavior and Management	2
Total Credits		**12.5**

Elective Courses

Students have ample opportunity to choose elective courses to tailor their program of study to their own unique needs and interests. Students may use electives to broaden their understanding of major public health issues by taking courses in any of the departments of the School. Electives may also be used to pursue specialized training such as that offered by the Certificate in Injury Control, Certificate in Health Finance and Management, etc. Again, students are encouraged to consult with their advisers and program director about elective course selections.

Field Placement

Overview

The field placement is designed to provide students with an opportunity, under supervision, to apply the knowledge and skills from the classroom to professional health education, promotion, and communication practice. The primary purpose of the field placement, an integral component of the MSPH program, is skill-building: helping students learn how to apply theories and principles and develop skills essential for functioning as an effective health educator. Another goal for the placement is to allow for the seamless transition from student to public health professional.

The field placement is an activity in which the student, the placement agency, and the faculty share responsibility. All three parties must be involved in developing work objectives to guide the student's field placement experience. An appropriate field placement is one that consists of a full-time work experience as a health education, promotion, or communication trainee in a health-related agency or organization in which the student participates in some aspect of program/project planning, implementation, and/or evaluation. The placement must be full time, last at least six months (consecutive) and provide the student with appropriate supervision and guidance from agency personnel. Both the student and the agency preceptor will be asked to participate in a mid-course discussion and a final evaluation.

Part-time students who are employed full-time by an agency may propose a field placement with their current employer. In such instances, the student must propose a scope of work that involves new responsibilities or activities that are not part of their current work, and the students must extend the time frame to accommodate the fact that they are not engaged in new work for 100% effort.

Additional field placement information and requirements will be provided to students by the program director.

Second Year Seminar

Students are required to participate in a monthly seminar series during year two of the program. The purpose of the seminar series is to allow students to learn about each other's placements and to discuss issues relevant to current health education and communication practice. The seminar also reviews the purpose and procedures for the final written assignment. Additional seminar information and requirements will be provided to the students by the program director. The seminars will be held virtually using Zoom technology; students will need a laptop or desktop computer with audio capabilities. If time zone or work priorities interfere with the student's ability to participate in the seminar, it is the student's responsibility to watch on their own time the recorded seminar. Monthly seminars are held during the academic year on Friday afternoons; the specific schedule will be shared by the program director.

Final Written Assignment

The concluding requirement of the program is the completion of a program proposal prepared by the student. The goal of this written assignment is threefold:

- to provide students with an opportunity to synthesize information obtained in the academic year with that experienced during the field placement,
- to demonstrate the ability to write at the graduate level, and
- to gain proposal writing skills.

The proposal must display academic rigor, must comply with program requirements (provided by the program director and reviewed in seminar), and must be grounded in the needs and activities of the field placement agency.

The proposal must be reviewed and approved by the academic adviser and one faculty member from outside the Department, known as the Second Reader. Failure to submit the completed, approved proposal to the MSPH program director by the specified due date may delay graduation. Students must maintain their registration status until the approved proposal is submitted to the program director. Additional proposal information and requirements will be provided to students by the program director.

Graduates

Recent graduates from the MSPH program in Health Education and Health Communication are employed by such agencies as Academy for Educational Development, Centers for Disease Control and Prevention, National Institutes of Health, Health Resources and Services Administration, Washington DC Department of Health, Ogilvy Public Relations Worldwide, and the Center for Communication Programs at The Johns Hopkins University.

Graduates from this program are eligible to sit for national certification exams. One is conducted by the National Commission for Health Education Credentialing. Upon successful completion of this exam, individuals earn the designation of Certified Health Education Specialist (CHES) or MCHES (Masters Certified Health Education Specialist). Another is conducted by the National Board of Public Health Examiners. Upon successful completion of this exam, individuals earn the designation of Certified in Public Health (CPH). Additional information and requirements about CHES, MCHES and CPH will be provided to students by the program director.

Milestones for the MSPH in Health Education and Health Communication Program

Key Dates	Task/Event

	Graduation

Timetable for Completion of Degree Requirements

Please direct questions regarding the timetable for completion of degree requirements to Office of Records & Registration (JHSPH.Registra@jhu.edu).

MSPH Program Policies

MSPH Program Prerequisites

1. In order to take required online courses, students must complete Introduction to Online Learning, which is offered through the Center for Teaching and Learning at the Bloomberg School. This non-credit course is a pre-requisite that **must be completed in the summer prior to matriculation**.
2. All students must take the required course PH.550.860 Academic & Research Ethics at JHSPH. This is an online offering that **must be completed in the summer prior to matriculation**. Failure to complete this course will prevent students from registering for 2nd term.

Master's Tuition Scholarship

The MTS provides eligible second year MSPH students with a 75% tuition scholarship for up to four consecutive terms. Students are eligible if they have successfully completed all Year 1 required coursework, are in good academic standing, and have accumulated a minimum of 64 credits. ***Once the scholarship has been awarded, the student must maintain full# time registration for the entire period of the award.*** Upon completion of the final written assignment, the MTS will be concluded. Students will not be permitted to enroll in courses using the MTS once they have been certified as complete in the MSPH program.

Satisfactory Academic Progress

The Department expects students to maintain satisfactory academic progress for the duration of the degree program. For the MSPH program, satisfactory academic progress is defined as follows:

- Maintaining a minimum cumulative grade point average of 2.75. Students falling below this minimum will have one term (or 12 additional units of coursework if part-time) to raise the GPA above 2.75.
- Earning a grade of "C" or higher in program specific core courses. (Students earning lower grades must repeat the course.)
- Adhering to timeframe for completion of degree, defined as four years for all program requirements (coursework, placement and written assignment). Extensions are possible but must be formally approved by the Department and Committee on Academic Standards.

Failure to maintain satisfactory academic progress as defined by any of the criteria above may be grounds for dismissal from the program.

HBS Course Waivers and Substitutions

Waiving or substituting a course that the faculty have determined essential to the program is a serious consideration. Students should discuss this thoroughly with their adviser well in advance of the start of the term in which the required course is offered. Course waivers are rare and are appropriate only when the student has completed the course or one very similar to it in prior *graduate* level training. Course substitutions may be appropriate if the student can provide a rationale for why an alternate course is preferred to the required one. (NB: The alternate course must cover much of the same content as the required course in order to ensure that we stay true to the program as presented to and approved by CEPH.) If the student and the adviser agree that a waiver or substitution is warranted, a memo from the student (co-signed by the adviser) to the program directors, requesting the waiver should be submitted to the HBS Academic Program Administrator no later than the first day of the term of the course in question.

Learning Outcomes

Genetic Counseling, ScM

General Degree Information

The JHU/NIH Genetic Counseling Training Program is a joint effort between the Department of Health, Behavior, and Society and the National Institutes of Health through the National Human Genome Research Institute (NHGRI) and the National Cancer Institute (NCI). This collaboration draws on resources from the two research institutions to address needs in the genetic counseling profession. This program was initiated in 1996. Its goals are to shape genetic counseling services through student and faculty research and develop outstanding genetic counselors who are innovators and leaders in:

- psychotherapeutic genetic counseling,
- genetic counseling research and scholarship,
- applications of genomics and precision health
- transdisciplinary learning and practice, incorporating perspectives from public health, policy, ethics, and advocacy

Prospective students who would like additional information after perusing this site, please visit the program's NIH site (https://www.genome.gov/careers-training/Professional-Development-Programs/Genetic-Counseling-Training/).

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Course Requirements

The program requires two and one-half years of full-time study. The curriculum consists of at least 146 credit hours of didactic course work and rotations in the areas of human genetics, genetic counseling, public policy, research methodology, ethics, and health education. One credit of Supervised Clinical Rotation must be completed during the summer between the first and second years of study. The coursework is taken on the NIH campus in Bethesda, Maryland, and at Johns Hopkins Bloomberg School of Public Health in Baltimore. Clinical rotations extend in location from northern Baltimore to Washington, D.C and northern Virginia, and include both in-person and telegenetics experiences.

Per School regulations, at least 12 credits of formal course work must be completed outside the Department of Health, Behavior, and Society, of which at least eight (8) must be earned in another department of the School of Public Health.

Important General Notes

All students are required to enroll for a minimum of 12 credits per term in order to be considered full-time. If a student opts out of a course that is *considered an elective in this curriculum, other electives must be selected with the student's adviser to maintain the 12 credit minimum.*

There are four course requirements for which we are able to offer some choices. All options are reflected in the curriculum further below, but students are only required to choose one course from each set of requirements as outlined below:

Qualitative research methods requirement

Students *must* take one of the following:

For those NOT planning to pursue a qualitative thesis:

1. PH.550.604 Qualitative Reasoning in Public Health - 2 credits, 1st or 2nd term (online) (highly recommended)

OR

2. PH.552.603 The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health-0.5 credits, 1st, 2nd, or 3rd term (online) (less recommended, discuss with your advisor)

For those considering a qualitative thesis:

1. PH.550.604 Qualitative Reasoning in Public Health-2 credits in 1st or 2nd term (online)

OR

2. PH.410.710 Concepts in Qualitative Research for Social and Behavioral Sciences- 3 credits, 2nd term (on-site)

Taking one of these courses also allows students to take the following additional elective:

PH.410.712 Theory and Practice in Qualitative Data Analysis and Interpretation for The Social and Behavioral Sciences - 3 credits, 3rd term (on-site)

Social Determinants of Health Requirement

Students *must* take one of the following:

1. PH.410.651 Health Literacy: Challenges and Strategies for Effective Communication - 3 credits, 2nd term (online)

OR

2. PH.552.610 The Social Determinants of Health -0.5 credits, 1st, 2nd or 3rd term (online)

medical genetics requirement

Students *must* take one of the following:

1. PH.415.613 Introduction to Medical Genetics I and PH.415.614 Introduction to Medical Genetics II-2 credits each (online), 3rd and 4th terms

OR

2. Clinical Genetics for Genetic Counselors I - 2 credits (asynchronous online) and Clinical Genetics for Genetic Counselors II - 2 credits (asynchronous online) (new courses, under review), 3rd and 4th terms

Responsible conduct of research requirement

Students *must* take one of the following:

1. 306.665 Research Ethics and Integrity: U.S. and International Issues -3 credits (on-site)

OR

2. 550.600 Living Science Ethics Responsible Conduct of Research -1 credit, 1st term online or 4th term online or on-site

Satisfactory Academic Progress

All ScM students in the Department of Health, Behavior, and Society are expected to maintain satisfactory academic standards for the duration of the degree program. In the department, satisfactory academic progress is defined as follows:

A minimum grade point average (GPA) of 2.75. Any ScM student who does not obtain the minimum 2.75 GPA will not be eligible to present his/her written research proposal. If this minimum grade point average is not maintained, the program directors will meet to determine the appropriate course of action.

ScM students are required to pass all of their clinical rotations and are required to pass a minimum of four semesters of clinical supervision. In the event a student fails to pass a rotation, criteria for repeating and successfully passing the rotation will be determined and communicated by the program director.

Clinical Rotations

In addition to didactic course work, the program requires a minimum of six hundred contact hours of supervised clinical rotations in a variety of settings. Clinical rotations begin with a standardized patient rotation in the second quarter of the program, transition to an on-site rotation in third quarter and are required throughout the remainder of study. During the first and second years, rotations are scheduled during one full or two half-days each week. During the third year, they are scheduled for a minimum of two full days each week for one term or one full day each week for two terms. These rotations provide a critical opportunity for students to learn directly about genetic conditions and their impact on individuals and their families, as well as about roles of the professional counselor. Most of the preceptors for clinical rotations are board-certified genetic counselors. Those who are not (bioethicists, medical social workers, health educators, physicians) enhance the clinical training by exposing students to a variety of disciplines. This type of broad experience is endorsed by the Accreditation Council for Genetic Counseling that accredits the program.

Thesis

Students are expected to conduct original research worthy of publication as part of their Master's thesis. To this end, students are required to take courses that will provide them with the training and experience to develop, carry out, and publish their research. Students are expected to develop an acceptable thesis proposal by the middle of the second year of study and to conduct their study during the second and third years of the program. Students are expected to prepare a publishable manuscript of their study results and present the findings at a research seminar in January of their third year on the NIH campus in Bethesda.

By December of the student's second year, the student must submit a written thesis research proposal. The written proposal is to be submitted two weeks prior to a scheduled meeting of the Executive Committee faculty. The proposal includes the following sections: an abstract, specific aims, hypotheses (if applicable), background, research plan, plan for analysis, significance of the proposed work, and a timeline. Written feedback is returned to the student for response during an oral presentation with the Executive Committee. The student receives a written evaluation with the stipulations and recommendations detailed.

Comprehensive Examinations

Prior to conducting the thesis project, the student completes a comprehensive written exam that consists of questions intended to further the student's thinking on topics related to the conduct of genetic counseling research.

Institutional Review Board

An application for SRC (Scientific Review Committee) and NHGRI IRB (Institutional Review Board) review at the NIH or the Johns Hopkins IRB must be submitted after successful completion of the comprehensive exam and prior to beginning thesis research.

Students should discuss any questions about the use of human subjects in their research activities with their adviser.

Program Accreditation

The Accreditation Council for Genetic Counseling re-accredited the program in 2016 for eight years. Graduates of the program are eligible to sit for the genetic counseling board examinations after completion of the degree program and a clinical logbook demonstrating significant involvement in the evaluation and counseling of at least 50 patients seen in approved rotation sites.

2022-23 Curriculum for Sc.M. Program in Genetic Counseling

(All Courses are required unless indicated otherwise. Total credits listed per term include all electives. Actual totals vary.)

Course	Title	Credits
First Year		
First Term		
Introduction to Online Learning (non-credit)		
PH.550.860	Academic & Research Ethics at BSPH (Students must take this non-credit course upon matriculation) [4]	
PH.140.621	Statistical Methods in Public Health I	4
PH.340.721	Epidemiologic Inference in Public Health I	5
ED.861.502	Counseling Theory and Practice (elective for Psych majors/minors; required for others) [1]	2.5
PH.415.610	Practical Genetic Counseling	2
PH.415.620	Introduction to Genetic Counseling I	2
PH.415.611	Introduction to Human Genetics I	2
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
	Credits	**20.5**
Second Term		
PH.140.622	Statistical Methods in Public Health II	4
PH.410.615	Research Design in the Social and Behavioral Sciences	3
ED.861.502	Counseling Theory and Practice (elective for Psych majors/minors; required for others) [1]	2.5
PH.415.621	Introduction to Genetic Counseling II	2
PH.415.612	Introduction to Human Genetics II	2
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
Genetic Counseling Prenatal Standardized Patient Clinical Rotation (under review)		2
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication (elective) [6]	3
	Credits	**21.5**
Third Term		
PH.140.623	Statistical Methods in Public Health III (elective)	4
PH.415.613	Introduction to Medical Genetics I (or Clinical Genetics for Genetic Counselors I) [2]	2
PH.415.630	Therapeutic Genetic Counseling I	2
PH.415.640	Health Judgment and Decision Making	2
PH.410.603	Introduction to Genetic Counseling Research	1
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
PH.415.851	Supervised Clinical Rotations: Genetic Counseling	4
	Credits	**18**
Fourth Term		
PH.415.650	Facilitating Family Adaptation to Loss and Disability I	2
PH.415.624	Ethical, Legal and Social Implications in Genetics and Genomics Over Time [3]	3
PH.415.675	Cancer Genetics: Managing the Risks Through Testing and Counseling	2
PH.415.614	Introduction to Medical Genetics II (or Clinical Genetics for Genetic Counselors II)	2
PH.415.880	Genetic Counseling Program Thesis Proposal Development I	2
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
PH.415.851	Supervised Clinical Rotations: Genetic Counseling (Total credits for 4th term: 18)	4
Summer		
PH.415.851	Supervised Clinical Rotations: Genetic Counseling (Total credits for 4th term AND Summer: 19)	4
	Credits	**22**
Second Year		
First Term		
PH.415.631	Therapeutic Genetic Counseling II	2
PH.415.710	Medical Genetics and Genomic Medicine: from Diagnosis to Treatment I [5]	2
PH.415.881	Genetic Counseling Program Thesis Proposal Development II	2
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1

PH.415.851	Supervised Clinical Rotations: Genetic Counseling	4
PH.550.600	Living Science Ethics - Responsible Conduct of Research (also offered 4th term; take this or Research Ethics and Integrity)	1
PH.552.601	Foundational Principles of Public Health (also offered 2nd and 3rd term) [7]	0.5
PH.552.607	Essentials of Environmental Health (also offered 2nd and 3rd term) [7]	0.5
PH.552.612	Essentials of One Health (also offered 4th term) [7]	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (take at least one qualitative course; also offered 2nd and 3rd term) [7]	0.5
PH.550.604	Qualitative Reasoning in Public Health (take at least one qualitative course; also offered in 2nd term)	2
	Credits	**18**
Second Term		
PH.410.710	Concepts in Qualitative Research for Social and Behavioral Sciences (take at least one qualitative course)	3
PH.550.604	Qualitative Reasoning in Public Health (take at least one qualitative course; also offered 1st term)	2
PH.415.651	Facilitating Family Adaptation to Loss and Disability II	2
PH.415.711	Medical Genetics and Genomic Medicine: from Diagnosis to Treatment II [5]	2
PH.415.882	Genetic Counseling Program Thesis Proposal Development III	2
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
PH.415.851	Supervised Clinical Rotations: Genetic Counseling (2 credits required plus 2 credits elective non-clinical rotation)	4
PH.552.610	The Social Determinants of Health (take this or Health Literacy; also offered 1st and 3rd term) [7]	0.5
PH.552.611	Globalization and Population Health (also offered 1st and 3rd term) [7]	0.5
	Credits	**19**
Third Term		
PH.306.665	Research Ethics and integrity: U.S. and International Issues (take this or Living Science Ethics Responsible Conduct of Research)	3
PH.415.866	Current Topics in Molecular Genetics I (elective) [2]	1
PH.415.840	SS/R: Genetic Counseling	2
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
PH.410.624	Genetic Counseling Cancer Standardized Patient Clinical Rotation	4
PH.410.712	Theory and Practice in Qualitative Data Analysis and Interpretation for The Social and Behavioral Sciences (elective)	3
	Credits	**16**
Fourth Term		
PH.415.867	Current Topics in Molecular Genetics II (elective)	1
PH.415.624	Ethical, Legal and Social Implications in Genetics and Genomics Over Time [3]	3
PH.550.600	Living Science Ethics - Responsible Conduct of Research (also offered 1st term; take this or Research Ethics and Integrity)	1
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
PH.415.851	Supervised Clinical Rotations: Genetic Counseling	4
PH.415.840	SS/R: Genetic Counseling	2
	Credits	**14**
Third Year		
First Term		
PH.415.701	Genetic Counseling Lab I	2
PH.415.710	Medical Genetics and Genomic Medicine: from Diagnosis to Treatment I [5]	2
PH.415.820	Thesis Research: Genetic Counseling	4
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
PH.415.851	Supervised Clinical Rotations: Genetic Counseling (can take 4 credits across 2 terms or 8 credits in one term)	4
	Credits	**15**
Second Term		
PH.415.702	Genetic Counseling Lab II	2
PH.415.711	Medical Genetics and Genomic Medicine: from Diagnosis to Treatment II [5]	2
PH.415.820	Thesis Research: Genetic Counseling	4
PH.415.861	Genetic Counseling Seminar: Topics in the Field [2]	2
PH.415.870	Genetic Counseling Clinical Supervision	1
PH.415.851	Supervised Clinical Rotations: Genetic Counseling (can take 4 credits across 2 terms or 8 credits in one term)	4
	Credits	**15**
	Total Credits	**179**

1 Fall semester course offered through the Johns Hopkins School of Education

2 NIH FAES courses also listed at Johns Hopkins

3 Two courses alternate every other year. For the 2022-23 AY, PH 415.624 ETHICAL, LEGAL AND SOCIAL IMPLICATIONS IN GENETICS AND GENOMICS OVER TIME will be taught. It alternates with PH 415.619 NEW GENETIC TECHNOLOGIES AND PUBLIC POLICY.

[4] This non-credit, online mini-course **must** be completed before you can take online courses. You must enroll yourself. The course includes one mandatory LiveTalk session. See https://courseplus.jhsph.edu/core/index.cfm/go/course.home/cid/90/ to enroll.
[5] Precision Health and Precision Oncology (under development) alternate every other year with 415.710/711 Medical Genomics and Genomic Medicine I/II.
[6] For students taking the Counseling Theory course, it will be difficult to take Health Literacy during this term in the first year. Students may alternatively choose to take in the second year.
[7] Enroll in 1-4 of the required half-credit PH classes listed in Year 2, which are offered in terms 1, 2, 3, and (in some cases) 4.

Timetable for Completion of Degree Requirements

Please direct questions regarding the timetable for completion of degree requirements to Office of Records and Registration (JHSPH.Registra@jhu.edu (jhsph.registra@jhu.edu)).

Key Dates	Task/Event
First Year	
Terms 1 and 2	
Before 3rd term registration	**Academic Adviser Meeting**
	Course Selections
	Satisfactory academic progress
Terms 3 and 4	
Before the end of the term	**Academic Adviser Meeting**
	Course Selections
	Satisfactory academic progress
	Discuss potential thesis (Deadline: mid-July, specific aims and progress report due to Executive Committee)
	Discuss thesis advisor choice (choose a second advisor to serve as thesis advisor or use academic advisor in both capacities)
	Discuss summer internship/rotation plans
Second Year	
Term 1	
Before 2nd term registration	**Academic Adviser Meeting**
	Course Selections
	Satisfactory academic progress
	Discuss thesis proposal process
At least twice during the term	**Thesis Adviser Meetings**
	Decide on other thesis committee members
Term 2	
At least twice during the term	**Thesis Adviser Meetings**
	Discuss proposal draft progress (Deadline: **mid-November** (or earlier) Proposal due to the Executive Committee 2-3 weeks before the meeting)
	Thesis Advisor meeting/phone call to discuss strategy for Executive Committee Meeting (Deadline: The day before the Executive Committee meeting)
	Thesis Advisor attends the meeting Executive Committee (Deadline: **late November to early-Dec**)
	Thesis Advisor meeting/phone call to plan for the response to the Executive Committee (Deadline: After the Executive Committee meeting)
Term 3	
At least once during the term	**Thesis Adviser Meetings**
	Discuss proposal revisions (Deadline: by **January 30** submit to IRB)
	Monitor progress toward thesis timeline
Term 4	
Before the end of the term	**Academic Adviser Meeting**
	Course Selections
	Satisfactory academic progress
	Discuss summer internship/rotation/research plans
At least once during the term	**Thesis Adviser Meetings**
	Monitor progress toward thesis timeline (**April 15** deadline to submit revised proposal if needed)
Third Year	
Term 1	
Before 2nd term registration	**Academic Adviser Meeting**
	Course Selections
	Satisfactory academic progress
	Discuss potential career directions
At least once during the term	**Thesis Adviser Meetings**
	Monitor progress toward thesis timeline (Data collection should be completed by the end of the summer at the latest for December conferral)
	Discuss data analysis issues
	Review thesis draft
	Discuss potential thesis readers
	Review student's poster for NHGRI research retreat
Term 2	
At least twice during the term	**Thesis Adviser Meetings**
	Final thesis reader choice (Deadline for December conferral: **October 28** readers' names submitted)
	Review written thesis document (**mid-November** deadline to give final thesis to readers for December conferral)

	December 16 deadline for readers' letters to registrar, if December conferral (February 3 for spring conferral)
	Assist in preparation for final thesis seminar

Degree Program Competencies

All **ScM in Genetic Counseling** students must attain proficiency in these competencies, in addition to the competencies required by the Accreditation Council for Genetic Counseling:

1. Articulate the influences of social context and behavior on health when developing, evaluating and implementing solutions to pressing public health challenges in Baltimore, the United States, and around the globe.
2. Appreciate the interface between genetic counseling and public health and policy
3. Define and describe social, ethical, and legal issues as they pertain to the delivery of genetic services
4. Apply the principles of human genetics to asses disease risk for genetic counseling clients
5. Provide genetic counseling to clients for a variety of different indications
6. Explain methods, indications, and limitations of genetic testing
7. Plan, organize and conduct public and professional education programs in human genetics, patient care, and genetic counseling issues
8. Develop self-awareness and critical assessment of personal strengths/weaknesses that enhance/interfere with providing effective psychotherapy
9. Demonstrate the ability to conduct research into different aspects of genetic counseling

Health, Behavior and Society, PhD

Overview of PhD Program

The PhD program is designed for students seeking training for careers in social and behavioral sciences, health education, and health communication, most often in academic or research settings. The curriculum emphasizes the application of social and behavioral science perspectives to contemporary health problems. The training in this program focuses on the theoretical perspectives and methods of the social and behavioral sciences that enable scholars to understand and influence the social contexts and behaviors relevant to health.

The PhD degree represents outstanding scholarly achievement and the accomplishment of independent research. The University's Doctor of Philosophy Board oversees the granting of all PhD degrees.

The following two areas are examples of significant work in the PhD program:

Social and Psychological Influences on Health

This area focuses on social and psychological factors and processes in the etiology and prevalence of disease, in health care seeking behavior, adaptation and coping, and disease prevention. Students are exposed to current research on contextual factors and their relation to health knowledge, attitudes and beliefs; social and psychological factors in disease etiology; risk reduction; and cultural influences in public health, including cross-cultural studies.

This sociological and psychological conceptualizations of health and illness, theories of stress and coping, and the special problems in the design and measurement of social and psychological variables are emphasized in the training of the PhD student. The interactive and independent roles of psychosocial factors for disease, with a focus on the social context in which illness is defined and treated, are emphasized. Major social structural divisions such as gender, socioeconomic status, and ethnicity are influential in health outcomes. The basic structure and function of health care systems of societies are also considered in their social-political context.

Health Education and Health Communication

Research and practice in this area focus on how principles from educational, behavioral, social, psychological, and communication theory influence health practices and behaviors conducive to optimal health in individuals, groups, and communities. Students are exposed to current research on health education and communication, with a particular focus on ecological models of health, evaluating multi-faceted intervention programs, and patient-provider communication.

Health education and communication programs are laboratories for the study of effective intervention strategies. Students in this area focus on needs assessment, planning, implementation, and evaluation of comprehensive health promotion programs with an eye toward improving both theory and practice. Specific intervention strategies of interest may include individual behavior change strategies based on learning theory and theories of psychosocial dynamics; use of mass media communication; interpersonal communication; mobilization of social and community support; and advocacy. Program implementation issues such as administrative and staff development and support are also considered. Interventions studied include those directed at patients, health care professionals, administrators, legislators, the general public, or combinations of the above.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Our doctoral curriculum is designed to help students master a set of program competencies through corresponding required and recommended courses. Courses listed as required must be taken by all doctoral students. Students should meet with their advisers prior to registering for courses each term to discuss the selection and sequence of HBS recommended courses, as well as courses offered by other departments and divisions appropriate for their individual areas of interest.

Students are expected to take methods courses relevant to the field of their dissertation research. Students who wish to take advanced biostatistics courses (PH.140.651 Methods in Biostatistics I-PH.140.654 Methods in Biostatistics IV) in place of the basic requirements are encouraged to do so, provided they have the necessary background. To register for the advanced series, a working knowledge of calculus and linear algebra is required.

At the end of the first year of coursework, first-year doctoral students take the qualifying exam. This exam tests whether the student has mastered the basic knowledge of the field (as exemplified by the competencies) and whether the student is ready to specialize in a specific area of study.

Students take the Departmental and School-wide Preliminary Oral Examinations in sequence by the end of their third year in the PhD program. In these exams, the goal is for faculty members to examine the student's readiness to conduct independent research. Upon passing, students pursue a research topic under the guidance of an academic adviser and faculty committee. The student's written dissertation is presented in a formal public seminar and then defended at a closed oral examination. Most students complete the PhD within four to five years, and the School requires that students complete within seven years.

Course Requirements - School

The School requires that at least 18 credit units must be satisfactorily completed in formal courses **outside** the student's primary department. Among these 18 credit units, no fewer than three courses (totaling at least 9 credits) must be satisfactorily completed in two or more departments of the Bloomberg School of Public Health. The remaining outside credit units may be earned in any department or division of the University. This requirement is usually satisfied with the biostatistics and epidemiology courses required by the department and taken in Year 1 of the PhD program.

Students who have completed a master's program at the Bloomberg School of Public Health may apply 12 credits from that program toward this School requirement of taking at least 18 credit units outside the department. Contact the HBS Academic Office for further information.

Council on Education in Public Health (CEPH) Requirements

As of 2019-2020, all students matriculating into a graduate program in an accredited school of public health (such as BSPH) are required to take courses that expose them to content that covers 12 'introductory learning objectives' before graduation. For PhD students in HBS, some of these exposures will come through regular program courses, and others will come through ½ credit "Cells to Society" (C2S) online modules developed by the school. The C2S modules will be offered at least twice a year, and will be taken in the first 4 weeks of the term in which they are held. Some courses fulfill more than one learning objective. *These courses need to be successfully completed prior to graduation, and it may be advisable to take some of them in years 2 and 3.* HBS PhD students will fulfill the CEPH requirements by taking the following courses:

1. Explain public health history, philosophy and values: 552.601.81 Foundational Principles of Public Health
2. Identify the core functions of public health and the 10 essential services of public health: 552.601.81 Foundational Principles of Public Health
3. 3a. Explain the role of quantitative methods and sciences in describing and assessing a population's health: 140.621 Statistical Methods in Public Health 3b. Explain the role of qualitative methods and sciences in describing and assessing a population's health: 410.710 Concepts in Qualitative Methods (or another qualitative course of at least 3 credits)
4. Discuss the science of primary, secondary and tertiary prevention in population health, including health promotion, screening, etc.: 340.721 Epidemiological Inferences in Public Health
5. List major causes and trends of morbidity and mortality in the US or other community relevant to the school or program: 340.721 Epidemiological Inferences in Public Health
6. Explain the critical importance of evidence in advancing public health knowledge: 340.721 Epidemiological Inferences in Public Health
7. Explain effects of environmental factors on a population's health: 552.607.81 Essentials of Environmental Health
8. Explain biological and genetic factors that affect a population's health. *Choose 1 of the following*: 552.608.81 Biologic, Genetic, and Infectious Bases of Human Disease, 380.604.01 Life Course Perspectives on Health, 550.631.81 Biological Basis of Public Health
9. Explain behavioral and psychological factors that affect a population's health: 410.650 Persuasive Communication
10. Explain the social, political and economic determinants of health and how they contribute to population health and health inequities: 410.860 Graduate Seminar in Social and Behavioral Sciences
11. Explain how globalization affects global burdens of disease: 552.611.81 Globalization and Health: A Framework for Analysis
12. Explain an ecological perspective on the connections among human health, animal health and ecosystem health (e.g. One Health): 552.612.81 Essentials of One Health

Curriculum - Social and Behavioral Sciences

Note: Minimum of 16 credits (including special studies and thesis research) required each term throughout the first 4 years of the PhD program. After Year 4, most students will elect to go part-time, and register for 3 credits per term.

Students must take the free, non-credit mini-course "Introduction to Online Learning (IOL)." Students are now required to take IOL before beginning their first term. See https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/

Course	Title	Credits
First Year		
First Term		
PH.550.860	Academic & Research Ethics at BSPH (online-should be automatically enrolled in this course)	
PH.140.621	Statistical Methods in Public Health I	4
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.410.860	Graduate Seminar in Social and Behavioral Sciences	2
PH.410.863	Doctoral Seminar in Social and Behavioral Research and Practice	1
PH.410.600	Fundamentals of Health, Behavior and Society [1]	4
PH.410.612	Sociological Perspectives on Health	3
	Credits	**19**
Second Term		
PH.140.622	Statistical Methods in Public Health II	4
PH.410.860	Graduate Seminar in Social and Behavioral Sciences	2
PH.410.615	Research Design in the Social and Behavioral Sciences [2]	3
PH.410.650	Introduction to Persuasive Communications: Theories and Practice	4
	Credits	**13**

Third Term		
PH.140.623	Statistical Methods in Public Health III	4
PH.410.860	Graduate Seminar in Social and Behavioral Sciences	2
	Credits	**6**
Fourth Term		
PH.140.624	Statistical Methods in Public Health IV	4
PH.410.860	Graduate Seminar in Social and Behavioral Sciences	2
	Credits	**6**
Second Year		
First Term		
PH.410.870	HBS Research and Proposal Writing Process for Doctoral Students I	2
PH.306.665	Research Ethics and integrity: U.S. and International Issues	3
	Credits	**5**
Second Term		
PH.410.871	HBS Research and Proposal Writing Process for Doctoral Students II	2
	Credits	**2**
	Total Credits	**51**

[1] Highly recommended for those students with little social and behavioral sciences background. Students should discuss this with their advisors to ensure that they have covered the course content and have met the learning objectives of this course in prior coursework. The course should be taken in 1st term by students who plan to take the course.
Students are required to discuss course selections with their advisors prior to registration. Students not taking PH.410.600 FUNDAMENTALS OF HEALTH, BEHAVIOR AND SOCIETY in 1st term are required to select at least one 1st term HBS course in addition to PH.410.860 GRADUATE SEMINAR IN SOCIAL AND BEHAVIORAL SCIENCES and PH.410.863 DOCTORAL SEMINAR IN SOCIAL AND BEHAVIORAL RESEARCH AND PRACTICE (often this will be Sociological Perspectives/410.612).

[2] Highly recommended for those students with little social and behavioral sciences research background. Students should discuss this with their advisors to ensure that they have covered the course content and have met the learning objectives of this course in prior coursework.

Recommended HBS Courses

Students should discuss the selection and sequence of recommended and other courses relevant to their research interests with their advisers. Students will select some recommended courses in their first year; other courses may be taken in their second and later years of the program. Note methodological training requirements (p. 287) in next section.

The Department offers a flexible PhD curriculum. Students are strongly encouraged to balance breadth and depth, theory, and methodology in pursuing training in the Department. The Department has a broad focus, incorporating health education/health communication as well as social and psychological influences on health.

Students are strongly recommended to take at least 24 credits of taught (non-special studies) HBS classes before they sit for their departmental oral exams. For students with a prior masters in HBS or a BSPH MPH with an SBS concentration, 10 of these credits can be transferred.

HBS courses recommended for doctoral students and offered by term (list does not include required courses noted above):

Code	Title	Credits
Term 1		
PH.410.600	Fundamentals of Health, Behavior and Society	4
PH.410.620	Program Planning for Health Behavior Change	3
PH.410.653	Contemporary Issues in Health Communication	1
PH.410.656	Entertainment Education for Behavior Change and Development	4
PH.410.733	Communication Network Analysis in Public Health Programs	4
PH.410.861	Graduate Seminar in Community-Based Research	1
PH.410.690	Ethnographic Fieldwork	3
Term 2		
PH.550.601	Implementation Research and Practice (extradepartmental)	3
PH.410.631	Introduction to Community-Based Participatory Research: Principles and Methods	3
PH.340.629	The Epidemiology of LGBTQ Health	3
PH.410.640	Global Tobacco Control	3
PH.410.668	Policy Interventions for Health Behavior Change	3
PH.410.679	Decolonization, Global Communication, and Public Health	3
PH.410.710	Concepts in Qualitative Research for Social and Behavioral Sciences	3
PH.410.861	Graduate Seminar in Community-Based Research	1
Term 3		
PH.410.654	Health Communication Programs I: Planning and Strategic Design	4
PH.410.613	Psychosocial Factors in Health and Illness	3
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication	3
PH.410.638	Scientific Writing in Health Sciences: Developing A Manuscript for Publication I	3
PH.410.672	Organizing for Public Health with the Six Steps to Effective Advocacy: Turning Public Will into Public Policy	3
PH.410.721	Translating Research into Public Health Programs and Policy	3
PH.410.752	Children, Media, and Health	3
PH.410.755	Health Communication Programs	4
PH.410.861	Graduate Seminar in Community-Based Research	1
PH.410.712	Theory and Practice in Qualitative Data Analysis and Interpretation for The Social and Behavioral Sciences	3
Term 4		
PH.410.610	Housing Insecurity and Health	3
PH.410.611	Under Pressure: Health, Wealth & Poverty	3
PH.410.620	Program Planning for Health Behavior Change	3
PH.410.625	Injury and Violence Prevention: Behavior Change Strategies	2

PH.410.711	Doctoral Seminar in Mixed Methods for Public Health Research	3
PH.410.630	Implementation and Sustainability of Community-Based Health Programs	3
PH.410.640	Global Tobacco Control	3
PH.410.655	Health Communication Programs II: Implementation and Evaluation	4
PH.410.657	Communication Strategies For Sexual Risk Reduction	3
PH.410.660	Latino Health: Measures and Predictors	3
PH.410.663	Media Advocacy and Public Health: Theory and Practice	3
PH.410.672	Organizing for Public Health with the Six Steps to Effective Advocacy: Turning Public Will into Public Policy	3
PH.410.675	Critical Analysis of Popular Diets and Dietary Supplements	3
PH.410.680	Social Ecological Approaches to Health Regimen Adherence in Chronic Conditions	3
PH.410.617	Foundations of University Teaching and Learning	3
PH.410.639	Scientific Writing in Health Sciences: Developing A Manuscript for Publication II	3
PH.410.722	Translating Research into Public Health Programs II	2
PH.410.861	Graduate Seminar in Community-Based Research	1
PH.410.686	Advanced Quantitative Methods in The Social and Behavioral Sciences: A Practical Introduction	4

School of Public Health course listings for courses in HBS and other departments: https://www.jhsph.edu/courses/

Students also have the opportunity to take courses in other divisions of the University. Contact Records and Registration regarding interdivisional course registration procedures. https://www.jhsph.edu/offices-and-services/student-affairs/records-and-registration/interdivisional-registration.html

Additional Requirements in Methodological Training

In addition to the specific required courses listed above, students are required to complete, **prior to their preliminary oral examination**, at least one course in each of four areas of methodological training in the social and behavioral sciences: quantitative methods (QN), qualitative methods (QL), evaluation methodologies (EV), and methods applications specific to the social and behavioral sciences (SBS). These courses should be taken for letter grade and not on a Pass/Fail basis. From the menu of courses listed below, students should carefully choose methods training by considering both their previous training and future research goals. Departmental faculty should be consulted as needed.

One course in each of the four areas is considered the minimum; students are encouraged to build their methodological expertise in all areas relevant to their proposed thesis activities and scientific areas of interest. It is valuable for students to seek both breadth and depth in methods training. Therefore, we strongly recommend that students also elect an area of methodological focus and take multiple courses (3 or more) in this area. We additionally recommend that all students take at least two courses in Qualitative area.

Students who would like to propose taking a methods course not currently listed in lieu of the listed courses may, with their adviser's consent, request such a substitution in writing to the doctoral program director.

Code	Title	Credits
Qualitative (QL) **		
PH.410.690	Ethnographic Fieldwork [1]	3
PH.410.710	Concepts in Qualitative Research for Social and Behavioral Sciences [1]	3

PH.380.603	Demographic Methods for Public Health	4
PH.380.711	Issues in Survey Research Design	3

** Note: Qualitative Reasoning in Public Health (550.604) cannot count towards fulfilling the qualitative requirements for HBS PhD students

1 HBS faculty instructor

Course/Credit Load

The Department strongly encourages doctoral students to register for fewer than 19 credits (including special studies and thesis research) in any one academic term. While a credit registration of more than 18 credits is possible through the registration system, departmental faculty think that the additional course burden prohibits doctoral students from dedicating the appropriate time needed for the educational activities being undertaken. Any decision to register for more than 18 credits should be carefully considered and discussed with the student's adviser prior to registering. Doctoral students should register for a minimum of 16 credits each term; the maximum number of credits per term is 22.

Satisfactory Academic Progress

Doctoral students in the Department of Health, Behavior, and Society are expected to maintain satisfactory academic standards for the duration of the degree program. In the Department, satisfactory academic progress is defined as follows:

1. A minimum grade point average (GPA) of 3.00. Any doctoral student who does not obtain the minimum 3.00 GPA by the end of the third term during the first year will not be permitted to sit for the written qualifying exams. In this situation, an appropriate course of action will be determined by the Department Chair. If students fall below a 3.0 GPA, they have 2 terms to re-gain at least a 3.0 GPA.
2. All courses required for the program must be taken for a letter grade. All HBS departmental courses must be taken for a letter grade except with prior consent of the adviser. The pass/fail option may only be used for elective courses and only with the consent of the student's adviser.
3. No grades below a "B" in core courses. Any required course (or course taken to fulfill a methodological requirement) for which a grade of C or below is received) must either be retaken, or an alternative mechanism for material mastery must be agreed upon between the PhD program director, the adviser and the student. This should be successfully completed before taking the schoolwide oral exam.
4. All grades will be calculated into the student's GPA.
5. All doctoral students will have their transcript evaluated at the end of their first year. This evaluation will be completed in conjunction with the qualifying exam review process.

Independent Developmental Plans (IDP)

It is now university policy that each Ph.D. student and Post Doctoral Fellow should develop an individual development plan (IDP) in conjunction with their adviser. This is in line with the 2014 NIH notice that strongly encourages the development of an institutional policy on Individual Development Plans for all graduate students and postdoctoral scholars who are supported by NIH funds. Beginning in 2017-2018, all matriculating PhD students must complete an IDP, review it with their adviser and submit a signed IDP form for departmental records on an annual basis.

The IDP is a mechanism for self-reflection as well as a communication and planning tool for the student and their faculty mentor/s. The IDP can be useful to make sure that the student's and the adviser's expectations are clearly outlined and in agreement so that there are no big surprises, particularly at the end of the student's training.

The goal of the IDP and the annual review process is to support the student in their success in the program and in attaining readiness for their intended future career. To this end, the IDP creates a structure for the student to:

1. assess current skills, interests, and strengths;
2. make a plan for developing skills to meet academic and professional goals; and
3. communicate and collaborate with supervisors, advisers, and mentors about evolving goals and related skills.

The onus to engage in the IDP process is on the student, with the support and input of the adviser. Although the IDP is kept on file in the department, it is primarily a document for use by the student. Through the IDP process, it is possible that the student may decide to identify various additional mentors to whom they can go for expertise and advice.

Once an IDP is written, it is expected that it will be revisited and revised by the student and their adviser (and when appropriate, the dissertation committee) on an annual basis, and that this review will be integrated into an annual review process for each student. It is expected that the department will keep a record of this document, and of the process by which it was developed and revised.

There are three aspects of the HBS IDP that will be completed on an annual basis, and **submitted to the Academic Program Administrator by January 15th of each year**. The IDP summary and the signature form will both be kept in the student's departmental file.

1. **Self assessment and goal setting**, primarily accomplished by the student through the completion of one of 2 'self assessment tools'.
   a. The university has developed a template that is available at Provost Annual Discussion and Planning Document (https://provost.jhu.edu/wp-content/uploads/2019/08/Annual-Discussion-and-Planning-Document_pdf-form-1.pdf)
   b. Or, the AAAS IDP tool, which is required for NIH training grants is accessible at the following website: https://myidp.sciencecareers.org (https://myidp.sciencecareers.org/).
2. **Adviser's Response to the plan.** It is required that the adviser be involved in a review and possible refinement of the student's IDP process. In most instances, an adviser's feedback will be provided in the context of an in-person meeting. There may be circumstances where it makes sense to involve other faculty members (such as co-advisers, training program leaders, or members of the thesis committee). There may also be times (such as if remote field work is being undertaken) where review of a plan needs to occur via skype or phone call. In all cases students and advisers should discuss the plan submitted/amended
   a. The student should set up a meeting with their adviser specifically to review the IDP. The IDP should be forwarded to the adviser in advance of this meeting so that the adviser has time to review before the meeting. The student and the adviser should discuss the IDP, and possibly revise (e.g. add goals or members of the mentorship team).
   b. Both student and adviser should sign the signature form. The student must scan this form and send electronic copies of the IDP and the form to **Academic Program Administrator, cc'ing their adviser and the PhD program director.**
3. **Annual Departmental and program feedback to the student**. Written feedback will be provided from the department/program, that evaluates student progress in the program to date and the student's graduation trajectory, and progress towards stated career goals. Departmental feedback should be integrated into the IDP process. **After Year 1, students will receive written departmental feedback before the beginning of the first term of each year**. The goals outlined in the IDP will be reviewed in preparation of this feedback. Other elements of the IDP will not factor into departmental feedback.

Ideas for Items/Topics to Consider in Creation/Review of the IDP

Year 1

1. Career goal for PhD program (long term goals)
2. Coursework plans/goals for Year 1 (other than required courses)
3. Coursework plans/goals before embarking on dissertation
4. Skills assessment (areas of strength and needs for additional training)
5. Goals for establishment of professional identity and network
6. Goals for research opportunities in coming year/entire PhD program
7. Goals for teaching opportunities
8. Goals for practice opportunities
9. Funding targets/opportunities
10. Preparation for qualifying exams

Year 2/3 (before departmental and schoolwide preliminary exams)

1. Achievements/goals met over the past year
2. Challenges faced over the past year
3. Career goal for PhD program (long term goals)
4. Remaining coursework plans/goals (other than required courses)
5. Skills assessment (areas of strength and needs for additional training)
6. Goals for establishment of professional identity and network
7. Goals for research opportunities in coming year/entire PhD program
8. Goals for teaching opportunities
9. Goals for practice opportunities
10. Goals related to identification of dissertation topic/focus
11. Progress on identification of broader mentorship team/committee
12. Progress on preparation of dissertation proposal
13. Funding targets/opportunities

Years 3+ (after preliminary exams)

1. Achievements/goals met over the past year
2. Challenges faced over the past year
3. Career goal for PhD program (long term goals)
4. Dissertation goals for the coming year
5. Planned timeline for program completion and remaining activities and milestones
6. Non-dissertation (research/teaching/practice) goals for remainder of program
7. Skills assessment (areas of strength and needs for additional training)
8. Goals for establishment of professional identity and network
9. Identification of possible career opportunities
10. Funding targets/opportunities

Departmental Qualifying Examination

As stated in the School's Policy and Procedure Memorandum for doctoral degree programs, the examination should constitute a comprehensive inquiry into the student's grasp of the subject matter underlying their discipline. It should explore the student's understanding of scientific principles and methods as well as their substantive knowledge of the major field and related areas.

Doctoral students become eligible for the departmental qualifying examination upon successful completion of the first-year required courses while maintaining the minimum GPA required.

The exam is offered in June and is under the purview of the HBS Exam Committee. Specific details on the nature of the exam and policies related to grading will be distributed well in advance of the exam.

Research Hours

The School requires all doctoral students to engage in research in addition to the research conducted as part of their dissertation, so that they will gain exposure to and experience in different research skills, and approaches. While HBS encourages students to work within the Department, students are free to pursue opportunities of interest throughout the School, University, or off-campus. Research hours can be fulfilled by engaging in either paid or unpaid research tasks.

The research hours can involve participation in any of the following aspects of research, including but not limited to:

- elements of research design (literature review and development of the conceptual framework of a study);
- community development and liaison activities;
- community needs assessment and its related social, epidemiological, behavioral, or political diagnosis;
- development and piloting of health interventions or materials;
- data collection;
- data analysis and interpretation;
- policy analysis;
- literature reviews;
- manuscript preparation;
- grant preparation and any other form of research approved by the adviser.

Students must discuss their plan for fulfilling the research hours requirement with their academic adviser and have the plan approved by their academic adviser prior to engaging in the research tasks. Students are expected to engage in at least two different research tasks, which may be related to a single study or two separate studies. These tasks should reflect different elements of the research design as outlined above. The student must identify a primary mentor to work with for each of the tasks, and this mentor must agree to serve in this capacity by signing the research hours form in advance. Up to 50% of the required hours can be accomplished through off-campus work, as long as the work has been approved by the student's academic adviser. A student's academic adviser can serve as a primary mentor for one but not both of the research tasks. A minimum of 300 hours for total work on research tasks is required, with at least 100 hours on each task.

The research hours should be completed between matriculation and the Departmental preliminary oral exam. Completion of this requirement will be monitored by the Department through submission of the Research Hours Form to the HBS Academic Office. Please contact the Academic Office for the form.

Departmental Preliminary Oral Examination

Students must successfully pass the Departmental preliminary oral examination before taking or scheduling the School-wide preliminary oral exam. The format of the exam is similar to the School-wide preliminary oral exam and is intended to determine if the student is academically prepared to pass the School-wide preliminary oral exam and to carry out independent dissertation research. Students must have successfully completed the departmental qualifying exam before taking the departmental or schoolwide oral exam.

The examination requires the student to prepare a dissertation protocol that will be examined by the committee members before the exam takes place. This protocol should be between 7,000 and 9,000 words (rough guide) and no more than 10,000 words. The proposal should provide the committee with the student's rationale for the proposed study and the research questions to be examined and the approach and methods the student proposes to use.

The departmental preliminary orals committee consists of four faculty members and an alternate. The student's adviser is included in the four committee members. All committee members should have primary appointments in the Department of Health, Behavior, and Society. (An exception is made when the student's adviser has a primary appointment in another department and a joint appointment in HBS.) The senior faculty member from the department who is not the student's adviser will serve as chair of the committee. The exam is closed, with only the committee members and the student in attendance.

The student will coordinate the date of the exam with the exam committee members and <u>will distribute a copy of the research proposal to all committee members at least three weeks before the exam is scheduled to be held</u>. The student is required to complete the Departmental Oral Form, available from the HBS Academic Office. The information required on this form includes the names of the committee members, the title of the research protocol and the date, time, and location of the exam. Committee members will receive formal written notification of the exam date and time by memo.

Immediately following the examination, the committee evaluates the success or failure of the student. One of the following results must be reported to the HBS Academic Program Administrator by the Committee Chair. The two main criteria to determine the outcome of this exam are:

1. The student is academically prepared to pass the School-wide oral examination.
2. The student is academically prepared to carry out their dissertation research.
   Note: The exam is an evaluation of the student's general academic preparation and is not limited to an assessment of the student's proposal or the details of the proposed study.

Based on the above criteria, students can then receive:

1. Unconditional Pass: If the members each vote "unconditional pass" on the first ballot, this result is reported with no further discussion. If one or more members vote "conditional pass" or "fail," then the committee should discuss the specific concerns of those members as discussed below.
2. Conditional Pass: The committee may decide that further evidence of qualifications is necessary and impose a specific condition that the candidate must fulfill within a given period of time. Those who feel the need for a condition or failure must convince the others, or vice versa. The committee should make a concerted effort to reach a consensus. In the case of a conditional pass, the committee will remain appointed until the condition is removed. Terms of the condition and its removal must be reported in writing to the HBS Academic Office. Students will *not* be permitted to sit for the School-wide preliminary oral until the conditions have been removed. It is recommended that conditions are met within six months unless otherwise recommended by the examination committee.
3. Failure: If a majority of the committee decides that the candidate has failed the exam, the committee must recommend a future course of action. A student will be permitted to retake the exam only once. The committee may recommend one of the following:
   a. Reexamination by the same Committee
   b. Reexamination by a new committee.

HBS Guidelines for the Dissertation Proposal

Research Plan: The student must provide a narrative project description which contains a detailed discussion of the following specific points.

1. An introduction which describes the public health problem and brief overview of the sample, aims/research questions, and public health significance.
2. A literature review which describes the supporting literature and a synthesis of the themes, gaps, and weaknesses in the literature related to the social and behavioral aspects of the proposed project.
3. A conceptual framework and theoretical foundations discussion.
4. The methodology section will discuss sampling, recruitment, data collection procedures, measures, analysis, and steps that will be taken to protect human subjects as appropriate.
5. The strengths and limitations of the proposed project.
6. Timeline for completion of the proposed study.
7. Other pertinent
   information deemed appropriate by the student and their adviser such facilities and resources, timeline, etc.

School-wide Preliminary Oral Examination

The School-wide preliminary oral examination takes place after the student has successfully completed the departmental qualifying examination and the departmental preliminary oral examination and completed PH.550.600 LIVING SCIENCE ETHICS - RESPONSIBLE CONDUCT OF RESEARCH **(it is only offered in 1st term)**. You will not be approved to complete the school-wide exam if you have not taken this course. The purpose of this examination, as stated in the School's Policy and Procedure Memorandum (PPM), is to determine whether the student has both the ability and knowledge to undertake significant research in their general area of interest. Specifically, the examiners will be concerned with the student's:

- capacity of logical thinking;
- breadth of knowledge in relevant areas;
- ability to develop and conduct research leading to a completed dissertation.

Discussion of a specific research proposal, if available, may serve as a vehicle for determining the student's general knowledge and research capacity. However, this examination is not intended to be a defense of a specific research proposal.

It is a School requirement that the School-wide preliminary oral exam be taken by the end of the student's third year in residence and before significant engagement in their own research. <u>Note: The school has placed a time limit of three years between matriculation into a degree program and successful completion of the preliminary oral exam.</u> Students are encouraged to keep this time limit in mind when planning their academic schedule.

All requests for extensions beyond the stated time periods to take and pass the School-wide Preliminary Oral Examination or to complete the doctoral degree requirements must be approved by the Committee on Academic Standards. School policy regarding extension requests:

https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/AcademicInformation/Pages/default.aspx Contact the Academic Administrator for the most up-to-date information on extension policies.

The School-wide preliminary oral examination must be scheduled at least one month in advance by submission of a preliminary oral examination form to the Academic Program Administrator. Instructions on scheduling the examination and information on committee composition are available are available on the Records and Registration web site: https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx

After successful completion of School-wide preliminary oral exam, students register for 16 credits of PH.410.820 THESIS RESEARCH IN HEALTH BEHAVIOR AND SOCIETY **each term (or a combination of Thesis Research and other courses totaling at least 16 credits) until completion of all degree requirements.**

Dissertation Advisory Committee

The progress of each doctoral student is followed regularly, at least once a year, by a committee consisting of the dissertation adviser and two to four other faculty members. Other committee members can come from either inside and/or outside the student's department. The student and their adviser, with the consent of the Department chair, decide on the composition of this committee. The objective of the Dissertation Advisory Committee is to provide continuity in the evaluation of the student's progress during the dissertation phase of the student's training. Students should form their advisory committees and obtain IRB approval soon after passing their preliminary oral exams and well before the Office of Graduate Education and Research deadline.

Each month, the Office of Graduate Education and Research will generate a report of the students who passed their Preliminary Oral Exam within the past three months. (Students receiving a conditional pass must meet the conditions before this contact is initiated.) An e-mail and "Dissertation Research Documentation Form" will be sent to the student and copied to the student's Dissertation A (as identified on the Preliminary Oral Exam Committee) and the Academic Program Administrator. The form is to be completed and returned within three months of contact (or six months past preliminary oral exam date) to the Office of Graduate Education and Research for tracking and inclusion in the student's academic file. A copy is kept in the HBS Academic Office. This documentation will then be attached to the combined Appointment of Dissertation Readers' and Final Oral Exam Committee Composition form in order to obtain final signatory approval from the Sr. Associate Dean for Academic Affairs.

As noted in the "Milestones" table of this handbook, students should schedule meetings with their advisers at least once per term to review their dissertation progress. Students should also plan to meet at least once per year with their Dissertation Advisory Committee and provide this committee with a written progress report and a copy of the "HBS Doctoral Dissertation Progress Evaluation Form" (available from the HBS Academic Program Administrator) to be completed by the student's adviser, attached to the progress report, and submitted to the HBS Academic Administrator for the student's file. The first progress report and evaluation form should be completed by one year from the date the "Dissertation Research Documentation Form" was submitted.

Completion of this requirement each year will be monitored by the student's adviser and the Academic Program Administrator.

Dissertation Guidelines

All doctoral students must complete an original investigation presented in the form of a dissertation. The dissertation must be based on original research, worthy of publication, and acceptable to the Department of Health, Behavior, and Society and to a committee of dissertation readers. During the student's application process, various research ideas may have been discussed with faculty members. However, each student's dissertation proposal must be developed, reviewed, and found acceptable to departmental faculty <u>while the candidate has been enrolled as a doctoral student</u>.

The traditional doctoral dissertation consists of a statement of the problem and specific aims; a literature review; data and research methods; analyses and results; and a discussion of findings and their implications. The form these take will reflect the specific academic discipline or orientation guiding the student's research. Doctoral students also have the option of a manuscript-oriented dissertation as an alternative to the traditional dissertation. See the "Dissertation Policy for HBS Doctoral Students" at the end of this section for more information on manuscript formats.

Students should discuss the advantages and disadvantages of each option with their adviser before deciding on a dissertation strategy.

Completion of a satisfactory investigation in the principal subject and its presentation in the form of a dissertation, approved by a committee of the faculty, is the next step toward the doctoral degree. The material contained in the dissertation should be worthy of publication in a scientific journal in the field involved. To establish this committee, the student and adviser recommend four faculty members to serve as dissertation readers. These faculty members, one of whom is the dissertation adviser, should hold an appointment as Assistant Professor or higher and represent at least three departments of the University and at least two departments of the School of Public Health. One member must hold the rank of Associate Professor or Full Professor and not hold a joint appointment in the student's department. This individual will serve as the Chair of the Final Oral Examination Committee. One adjunct or one scientist faculty member may serve on the Committee, but not both. All faculty members must serve as Dissertation Readers representing the department of their primary faculty appointment.

The committee of readers may be increased to five members provided the conditions stated above are satisfied for four readers. If a fifth member was approved to serve as a Dissertation Reader, that individual does not have voting privileges on the Final Examination Committee.

Oral Defense of Dissertation

The oral defense of the dissertation by the candidate before a committee of the faculty is the final step for the doctoral degree candidate. Instruction and forms for the appointment of dissertation readers and scheduling the final oral exam can be accessed at https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx.

Records and Registration requires that the "Appointment of Dissertation Readers & Final Oral Examination Committee" form be submitted at least one month in advance of the proposed date.

The completed form must be submitted to the HBS Academic Program Administrator for review. The Academic Program Administrator will obtain the Department Chair's signature and forward the form to Records and Registration. **Committee members should be given at least 30 days to properly read the dissertation before the defense, and the "Dissertation/Dissertation Approval Form," signed by the adviser, should be included**

with the dissertation copies. The adviser should consult with committee members at least two weeks prior to the exam date to ensure that the student is ready to proceed with the exam.

Students must be continuously registered up to and including their term of completion. A doctoral student is not considered complete at the time they pass their final defense. Note that students must be registered in the term of their final oral exam. Doctoral students who schedule their exams after the end of 4th term must register for summer term. They then have until the end of the add/drop period of the following term to complete all requirements. Students are considered complete:

1. when copies of their acceptance letters from the Examining Committee Chair and Dissertation Adviser are on file in the Office of Records & Registration;
2. the dissertation is submitted electronically to The Milton S. Eisenhower Library; and
3. a pdf copy of the dissertation and a dissertation form submitted to the academic administrator once approved by the library.

Students should be sure to check both graduation and registration deadlines with the Academic Program Administrator well in advance.

Public Seminar

As a culminating experience, all doctoral students are required by the School to present a formal, public seminar. A room that holds no less than 25 people should be reserved for the public seminar. A three-hour period should be allowed for the final oral examination, consisting of the public seminar and session with the examination committee. It will begin with an approximately 45 minute public seminar followed by 15 minutes of Q&A with the audience. This will be immediately followed by the closed portion of the examination, which is closed to all except the doctoral candidate and the examination committee. Records and Registration posts the seminar announcement to the School's events calendar.

Dissertation Policy for HBS Doctoral Students

Students in HBS have the choice of completing a "traditional" doctoral dissertation or a manuscript-oriented dissertation. Ideally, this decision should be made by the time the student undergoes the departmental preliminary oral examination. There are advantages and disadvantages to each option which should be carefully discussed with the student's adviser.

Each of these options is described briefly below.

The traditional doctoral dissertation generally consists of an abstract, five chapters, references, and any appendices. The outline of chapters below is merely a guide. The pages numbers are rough estimates, and the form of the chapters will vary, reflecting the academic discipline or orientation of the student's research.

> **Abstract:** The abstract is a short overall summary of the work. It lays out the purpose(s) and aims of the study, the methods, and the key results and implications. The abstract generally is 2-3 double spaced pages.
>
> **Chapter 1: Introduction: Statement of the Problem and Specific Aims.** This chapter, which tends to be relatively short (5-6 double spaced pages), provides an introduction to the dissertation. It describes briefly why this work was undertaken, what background conditions or data suggested it was an important problem, and what, then, this project was intended to accomplish.
>
> **Chapter 2: Literature Review.** The literature review summarizes existing literature that informed the dissertation research. It generally is organized topically. The literature review tends to be a fairly detailed review, particularly for those topics most directly related to the content and methods of the dissertation. The literature review tends to be 30-60 pages in length.
>
> **Chapter 3: Methods.** The content of the methods chapter varies tremendously with the methodological approach taken by the student for the dissertation research. With traditional empirical studies, it will generally include the specific aims, research questions, and/or hypothesis; a description of the source of study data, a description of the study instrument and its development, if relevant; a description of secondary data obtained, if relevant; analytic methods, including data cleaning, creation of a data set, creation of variables and/or qualitative codes, types of analyses done, and human subjects issues. The methods chapter ranges from 20-40 pages.
>
> **Chapter 4: Results.** The results chapter reports the main findings of the dissertation. It often is organized by research question or specific aim or hypothesis, but need not necessarily follow this format. The results chapter ranges from 25-50 pages.
>
> **Chapter 5: Discussion of Results and Policy Implications.** The discussion chapter both summarizes key findings and discusses findings in light of existing literature and in light of their policy implications. Also included generally are a description of the study's limitations and implications for future research. The Discussion chapter is generally 25-50 pages.
>
> **References:** A listing of all citations used for the dissertation must be provided. The Department allows any standard format for references.
>
> **Appendices:** Appendices can be used for many purposes. They can include study instruments, if relevant; they can include additional tables not included in the main body of the dissertation; also to be included must be a copy of the student's CV. The traditional dissertation should be able to "stand alone" without appendices, however, so results should never be put in appendices that are key to the study's main findings.

All components of the traditional dissertation will be judged by the committee to be one of the following: Acceptable, Acceptable with Revisions, or Unacceptable. Students, with guidance from their adviser, will rework their dissertation until all components are judged acceptable.

The manuscript dissertation consists of the following:

- A total of three (or more) papers, linked to the student's dissertation topic. One of these papers may be the literature review, provided it is a comprehensive critical review, suitable for publication.
  If one of the three papers is not a literature review, the dissertation must still contain a chapter that critically surveys the literature.
- A chapter which integrates and discusses the findings reported in the manuscripts. It should include a discussion of the conclusions of the research, and it should make recommendations for further studies.
- An appendix outlining in detail the study methods and any accompanying data tables necessary to fully understand the data.

A manuscript-oriented dissertation must also meet the following criteria:

- The doctoral student must be the first author on the three manuscripts used to satisfy this requirement.
- No manuscript will be accepted as part of the dissertation if it was submitted for publication before the student passes the School-wide preliminary oral exam.

As is true for the traditional doctoral dissertation, all components of the manuscript-oriented dissertation, will be judged to be one of the following: Acceptable, Acceptable with Revisions, or Unacceptable. Students, with guidance from their adviser, will rework their dissertation until all components are judged acceptable.

Role of Faculty Adviser in Relation to the Dissertation:

The adviser's role is to facilitate successful completion of the doctoral dissertation. The type of assistance provided should be tailored to the individual student's needs. Both the traditional dissertation and the manuscript-oriented dissertation must reflect work that is the student's independent and original work. The adviser, then, can and should provide ongoing and critical feedback, but the research must be that of the student.

Maintaining this balance may be particularly challenging for manuscript-oriented theses. Even if the adviser (or another committee member) will be a co-author on a manuscript, the manuscripts must be viewed first and foremost as fulfilling the student's needs in the dissertation process, with publication as a secondary goal. Advisers or other committee members who are co-authors may not undertake the first draft of any portions of the manuscripts nor substantial re-writes. Whether an adviser will be a co-author on any manuscript should be decided early in the dissertation process.

Link to Thesis guidelines and deadlines (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx)

Career Development Resources for PhD Students

The BSPH Career Services Office provides a variety of assistance including individual career coaching, a university wide job and employer database (http://jhu.joinhandshake.com/), career development workshops and events (https://www.jhsph.edu/offices-and-services/career-services/events/), a list of career resources (https://www.jhsph.edu/offices-and-services/career-services/for-students/career-resources/), and an annual career fair (https://www.jhsph.edu/offices-and-services/career-services/events/career-fair/). More information is available here: https://www.jhsph.edu/offices-and-services/career-services/for-students/

The Professional Development and Career Office (PDCO) provides professional development training and career services to support PhD students and Postdoctoral Scholars in designing their life. The PDCO supports academic careers by providing grant writing workshops, teaching opportunities at local undergraduate institutions and through an annual academic job search series. It also supports career exploration outside the academy by hosting alumni career panels, organizing an alumni mentorship program, running leadership workshops and by offering paid internships in science policy, consulting, business development, etc. PDCO staff can also meet with PhD students or post-doctoral fellows one on one to meet their specific career goals. The PDCO services are outlined here: https://pdco.med.jhmi.edu. They also send monthly emails that list events for PhDs happening across the university (sent through the doctoral student listserv).

Milestones for the PhD Program

Key Dates	Task/Event
First Year	
Term 1	
Before 1st term registration	Introductory Advisor Meeting
	Course selections – Discussion of required and highly recommended courses, courses in area of interest, and special studies.
	Identify professional and educational goals. Review deadlines. Review the Individual Development Plan Procedures
Term 2	
Before 2nd term registration	Advisor Meeting
	Course selections
	Satisfactory academic progress
	Discuss research plans. Identify faculty resources.
	Discuss the individual Development Plan (IDP)
Term 3	
Before 3rd term registration	Advisor Meeting
	Course selections
	Satisfactory academic progress
	Submit IDP to Academic Coordinator
Term 4	
Before 4th term registration	Advisor Meeting
	Course selections
	Satisfactory academic progress
By end of first year	Residency requirement met
	Student has discussed research hours requirement with advisor
	Departmental qualifying exam in June
Second Year	
Term 1	
Before 1st term registration	Advisor Meeting
	Course selections
	Satisfactory academic progress
	Discuss possible composition of oral exam committees.
	Review IDP and procedures
Term 2	
Before 2nd term registration	Advisor Meeting
	Course selections
	Satisfactory academic progress
Term 3	
Before 3rd term registration	Before 3rd term registration
	Course selections

	Satisfactory academic progress
	If student plans to take oral exam in 2nd year, committee members should be identified by 3rd term.
	Submit CV and IDP to academic coordinator
Term 4	
Before 4th term registration	Advisor Meeting
	Course selections
	Satisfactory academic progress
Third Year	
Terms 1-4	
Before registration each term	Advisor Meeting
	After successful completion of school preliminary oral exam, student registers for PH.410.820 Thesis Research each term until completion of all degree requirements (see timetable at end of student handbook).
Prior to prelim exams	Research Hours form has been completed by student, signed by advisor, and submitted to Academic Office.
By 3 years from matriculation date	Successful completion of departmental and school preliminary oral examinations
Within 3 months of successful completion of school prelim oral exam	Student has identified a dissertation advisory committee and submitted the School's Thesis Research Documentation form to HBS Academic Office
	Review IDP
	Submit CV to Academic Coordinator
Fourth Year	
Terms 1-4	
At least once per term	Advisor Meetings to review thesis progress
Annually, post prelim oral exam	Dissertation Advisory Committee meets to evaluate progress and submits evaluation to HBS Academic Office
	Ensure that students who have an interest in an academic career have had some teaching experience as TA or the opportunity to apply for a Dean's Teaching Fellowship.
	Review IDP
	Submit CV to Academic Coordinator

Timetable for Completion of Degree Requirements

Please direct questions regarding the timetable for completion of degree requirements to the Office of Records & Registration (JHSPH.Registra@jhu.edu).

Advising

All students are assigned a faculty adviser at the time of admission to the program. Adviser assignments are based, in part, on compatibility of the student and faculty research or practice interests. Advisers play an important role in the student's academic life. The adviser is expected to keep abreast of school and depart- mental degree requirements so that they can counsel students on courses and the proper progression towards the degree. Students should consult with their advisers prior to registering for courses each term. In addition, any special requests or petitions that a student submits to any of the administrative offices of the School will require the endorsement of the student's adviser as well as that of the department chair.

As students move through their degree programs, they may elect to choose a different adviser, depending on their chosen area of concentration and the dissertation topic selected, or for other reasons. In that event, the student should contact the preferred faculty member to determine if that person is able to assume responsibility as the student's adviser. If so, the student should notify the department in writing of an adviser change, obtaining the signatures of the prior adviser and the new adviser, and submit the signed notification to their respective program director for approval. Once approved, notify the Academic Program Administrator so that they change may be processed.

Each student is required to meet with their adviser at least once per academic term to discuss academic progress, to plan for fulfillment of degree requirements, and to review and modify course selection plans for the next term. These meetings are formally scheduled before each major registration period. HBS students are responsible for scheduling these meetings with their advisers. The Academic Program Administrator works closely with the faculty advisers and also provides guidance to students with the School and departmental academic policies and procedures.

- Students are expected to engage in pre-planning for these meetings.
- Both advisers and students should be aware of and understand curriculum policies and procedures.
- Students and advisers should identify future professional career goals and interests.
- The adviser and student should review the student's tentative curriculum and course schedule, and alternatives should be identified.
- Any major issues or questions about academic programs and non-academic problems should be identified and discussed.
- The academic program administrator, the student, and the adviser should be aware of the administrative policies and procedures affecting payment of tuition and fees, academic eligibility for scholarships, loans, and college work-study support. The academic program administrator, working with the student and adviser, can help clarify and identify funding opportunities as well as provide guidance regarding academic policies and procedures.
- See below for more details about roles and responsibilities of doctoral students and advisers.

The Doctoral Program Director and the Academic Program Administrator are also available as resources within the department for students who have questions or concerns related to their academic advisers. The Program Director may be able to assist with mediation, coaching, facilitating co-mentoring, or switching advisers as needed. If these individuals are not available, the Vice Chair for Pedagogy and Academic Affairs is available to serve in this role.

Satisfactory Academic Progress

Doctoral students in the Department of Health, Behavior and Society are expected to maintain satisfactory academic standards for the duration of the degree program. Satisfactory academic progress is defined as follows:

1. A minimum grade point average (GPA) of 3.00. Any doctoral student who does not obtain the minimum 3.00 GPA by the end of the third term during the first year will not be permitted to sit for the written qualifying exams. In this situation, an appropriate course of action will be determined by the Department chair. If students fall below a 3.0 GPA, they have 2 terms to re-gain at least a 3.0 GPA.

2. All courses required for the program must be taken for a letter grade. All HBS departmental courses must be taken for a letter grade except with prior consent of the adviser. The pass/fail option may only be used for elective courses and only with the consent of the student's adviser.

3. No grades below a "B" in required courses. Any required course (or course taken to fulfill a methodological requirement) for which a grade of C or below is received) must either be retaken, or an alternative mechanism for material mastery must be agreed upon between the PhD program director, the adviser and the student. This should be successfully completed before taking the school-wide oral exam.

4. All grades taken for a grade will be calculated into the student's GPA.

5. All doctoral students will have their transcript evaluated at the end of their first year. This evaluation will be completed in conjunction with the qualifying exam review process.

HBS IRB Approval

When developing a research study using human data or biospecimens, students must consider whether the activity will qualify as human subjects research requiring IRB review and oversight. The BSPH IRB office is charged with making sure that research studies involving human subjects comply with federal, state, and local law, as well as institutional policy. All student-initiated projects involving human data/biospecimens must have a preliminary review by the IRB Office to determine whether they require IRB oversight, unless the BSPH PI is adding you as a student investigator to an existing, BSPH IRB-approved study.

All student studies involving data about humans or biospecimens should be submitted to the IRB either through the PHIRST system or via a preliminary Determination Form (using the New Data Collection/Secondary Data Analysis https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/student-research/irb-office-preliminary-determinations-for-mph-and-other-degree-students. (https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/student-research/irb-office-preliminary-determinations-for-mph-and-other-degree-students/))

A faculty member must serve as the Principal Investigator for all student research projects. The IRB website includes extensive FAQs about general IRB topics, using the electronic application system (PHIRST), completing the CITI human subjects research training, and student research. If there are further questions, contact the IRB Office (JHSPH.irboffice@jhu.edu) and make an appointment to review any questions with the IRB Navigator (IRBNav@jhu.edu) or an IRB Analyst. More information about student projects is available on our Student Research page: http://www.jhsph.edu/offices-and-services/institutional-review-board/student-projects/ (https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/student-research/) which includes a Student Primer and Frequently Asked Questions.

Students should review this primer carefully and discuss the issues as they relate to the proposed project with their advisers as a first step in understanding the process and evaluating whether the proposed study will involve human subjects research.

HBS Extension Request for Completion of Degree Requirements

The School's PPM governing the PhD program requires students to defend their thesis within seven years of matriculation. Failure to meet this deadline necessitates the submission of an extension request by the student to both the Department and the School before they are permitted to continue in the program.

A request for an extension of time to complete the degree must be submitted at least two months prior to the conclusion of the 7th year in the program and may not exceed four terms.

The request is first submitted to your HBS adviser for review, and if approved, is forwarded to the Student Matters Subcommittee of the School's Committee on Academic Standards (CAS). All requests must include the following information or will not be considered:

- A letter of request, initiated and signed by the student, stating the rationale for the request
- A supporting letter signed by the adviser
- Timetable and plan developed by the student in collaboration with the student's adviser and members of the thesis advisory committee that provide specific milestones from completion; agreement to this plan should be indicated in writing by member(s) of the thesis advisory committee
- A (student) copy of the current transcript
- If the HBS adviser approves the request, a supporting letter from the Department will be included in the request that is forwarded to the school for final approval.

Policy on Mentoring Commitments for PhD Students and Faculty Advisers

Johns Hopkins University has a commitment to quality mentoring of PhD students, in support of the mission of excellence in PhD education at Johns Hopkins. As such, the university requires every PhD-granting school to undertake ALL of the following:

1. Distribute "JHU Mentorship Commitments of Faculty Advisers and PhD Students" to all PhD students and all PhD-advising faculty at least annually;
2. Identify when and by whom (role) the "JHU Mentorship Commitments of Faculty Advisers and PhD Students" will be distributed annually to students and to faculty advisers;
3. Ensure that the "JHU Mentorship Commitments of Faculty Advisers and PhD Students" are included in student handbooks
4. Ensure that the "JHU Mentorship Commitments of Faculty Advisers and PhD Students" are included in both new student orientation and new faculty orientation materials and/or sessions;
5. Identify a point person within each PhD program or department, as well as at the school level, to whom students can go if they have questions or concerns related to their own PhD adviser. This should include:

a. A description of how it is communicated to students that they may go to this named person with questions or concerns about advising;
b. A description of the functions the person may perform to assist with the advising situation (e.g., mediation, coaching, training, co-mentoring, switching advisers).
c. A description of the back-up procedure should the primary person be involved in the situation themselves or be temporarily unavailable.

In addition, it is the responsibility of the school's dean's office to ensure, either within the school as a whole or within each PhD program (or through a combination thereof), that at least two strategies (e.g., from list below, or others) will be used to enhance and support a good mentoring environment. Examples of mentoring supports are listed below. Additional supports, and additional innovative ideas to support good mentoring, are encouraged.

1. Dean's or chair's communication about the importance of good PhD advising and mentoring with supporting description of where to go with any concerns;

2. Workshops, lunches, or discussions about PhD mentoring (could include external guests with experience with mentoring, case discussions among faculty, best practice discussions, discussions of hard cases, etc.);

3. Mentoring awards:

- Smaller vs. larger number given annually within a school
- With or without financial award
- High visibility and celebration around awardees

4. Training on how to be a great mentor:

- Length, format, target audience, topics, etc. to be determined by program and/or school

5. Robust thesis committee structure

- Required 1-2x annually
- Goal: Broader intellectual input to student's work; also can diffuse singular power of mentor
- May choose to allow time in each meeting when i) the adviser leaves the room; and ii) the student leaves the room.
- Letter generated after meeting with consensus of where things stand and goals for upcoming year. Distributed to student and all committee members

6. Mechanism to provide feedback on adviser's and student's adherence to commitments:

- Option: More formal survey/evaluation of each commitment
  - Returned to adviser/student?
  - Collected by program head or department chair?
  - Collected centrally by an institutional research office within school?
- Option: Ask student to identify three mentoring commitments the adviser is meeting the best and three commitments to work on for coming year. Faculty adviser does same for student.
- Option: Adviser asks student: "What is the one thing I should work on in the coming year?" Student asks adviser the same.

7. Mentoring mavens

- Each school identifies a few highly-effective faculty mentors to be master mentors, able to chat with or coach others, able to counsel students, able to serve on panels providing tips for good mentoring; also serves as important recognition

8. Any other strategy suggested by the program or school that is also designed to support a culture of excellence in mentoring

JHU Mentorship Commitments of Faculty Advisers and PhD Students

This document outlines mentoring expectations of faculty advisers and of PhD students at Johns Hopkins University. These expectations should be discussed together.

Faculty advisers should commit to the following responsibilities:

Training:

- The PhD adviser has the responsibility to mentor the PhD student. This responsibility includes committing to the training of their PhD student, building on the PhD student's individual professional background and in support of their individual professional aspirations.
- The PhD adviser has the responsibility to participate in ongoing and regular meetings with their advisees to discuss academic and research progress. The adviser and student should agree on expected frequency of and preparation for meetings and use meetings to brainstorm ideas, troubleshoot challenges, and outline next steps. The adviser should identify a co-adviser/mentor should the primary adviser be unavailable for an extended period (sabbatical, leave, etc.).
- The PhD adviser has the responsibility to participate in a formal annual meeting with the student to discuss academic progress and next steps in the academic program. This responsibility includes helping to ensure that the document summarizing this annual discussion is completed and submitted in accordance with program requirements.
- The PhD adviser has the responsibility to encourage their advisees to reach out, as relevant, to additional co-advisers or informal mentors.
- The PhD adviser has the responsibility clarify the student's funding package and to clarify any work and/or teaching expectations associate with the package.
- The PhD adviser has the responsibility to contribute to a training environment that fosters independent, scholarly research, and professional growth.

Research

- The PhD adviser has the responsibility to provide guidance in scholarly research. This responsibility includes helping to identify a workable research project and helping to set reasonable goals and timelines for research completion. The adviser should encourage the student to expand their skill sets and share ideas with others at Johns Hopkins and externally.
- The PhD adviser has the responsibility to monitor research progress. The adviser should encourage effective use of time. The adviser should meet regularly with the PhD student to hear updates on progress, results, and challenges in activities and research.

Professional development:

- The PhD adviser has the responsibility to discuss career development with the PhD student, including in any number of sectors of interest to the student. PhD advisers should assist in identifying resources to further the student's professional goals.
- The PhD adviser has the responsibility to participate in a formal annual meeting with the PhD student to discuss professional development goals. The adviser should help to ensure that the document summarizing this discussion is completed and submitted in accordance with program requirements.
- The PhD adviser has the responsibility to nominate the student for relevant professional opportunities and try to connect their advisees to relevant professional contacts and networks.
- The PhD adviser has the responsibility to allow time outside of research for student engagement in professional development activities including, for example, skill building workshops, professional conferences, additional research collaborations, or other informational sessions.

Respectful engagement and well-being:

- The PhD adviser has the responsibility to treat their advisees, other students, and colleagues with respect at all times.
- The PhD adviser has the responsibility to commit to being available to meet with the PhD student. The adviser and the student should agree on expected frequency of and preparation for meetings, and expected time frame for responding to emails and for providing feedback on work products. The PhD adviser should give their full attention during meetings and should reach out to PhD students who are not making contact.
- The PhD adviser has the responsibility to provide support during both successful and discouraging periods of training.
- The PhD adviser has the responsibility to communicate in a respectful and constructive manner, including if the adviser has concerns that the PhD student is not meeting the expectations outlined in this document. This responsibility includes using concrete and specific language when providing suggestions or critiquing work.
- The PhD adviser has the responsibility to take an interest in the student's well-being, to listen to any concerns, and to connect the student, as appropriate, with additional resources.

Policies:

- The PhD adviser has the responsibility to become familiar with and respect University, school, and program policies for PhD students. The adviser will acknowledge all PhD student benefits and entitlements, including, as relevant, paid and unpaid leave.
- The PhD adviser has the responsibility to discuss with the student relevant policies, commitments, and expectations related to funding, work, research assistantships, teaching assistantships, sick leave, or vacation.

Responsible conduct:

- The PhD adviser has the responsibility to become familiar with university and professional codes of responsible conduct for PhD students. This responsibility includes reporting any possible violations as required to relevant parties, including to the relevant Dean's office and to the Office of Institutional Equity.
- The PhD adviser has the responsibility to discuss and help clarify authorship or intellectual property issues and appropriately recognize the student's contributions to any collaborative work.
- The PhD adviser has the responsibility to model professional behavior in both interpersonal interactions and in scholarly integrity.
- The PhD adviser has the responsibility to complete Title IX Training regarding sexual misconduct and sexual harassment as required by the University. http://oie.jhu.edu/training/

Continuous quality improvement as an adviser:

- The PhD adviser has the responsibility to participate in mentor training and best practices discussions. This responsibility includes striving to be a better mentor and to learn tips and practices that improve their work and skills as an adviser.
- The PhD adviser has the responsibility to ask advisees for constructive feedback on mentoring. This responsibility includes doing their best to respond professionally to these suggestions and consider whether or how best to incorporate them into their mentoring interactions.

PhD students should commit to the following responsibilities:

Training:

- The PhD student has the primary responsibility for the successful completion of their degree.
- The PhD student has the responsibility to familiarize themselves with academic milestones and to strive to meet all milestones within the expected timeframe.
- The PhD student has the responsibility to meet regularly with the PhD adviser. This responsibility includes providing the adviser with updates on the progress, outcomes, and challenges in coursework, research, and academic or professional activities. The adviser and the student should agree on expected frequency of and preparation for meetings, and will use meetings to brainstorm ideas, troubleshoot challenges, and outline expectations for work and timelines.
- The PhD student has the responsibility to participate in a formal annual meeting with the adviser to discuss academic progress and next steps in the academic program. The student should ensure that the document summarizing this discussion is completed and submitted in accordance with program requirements.
- The PhD student has the responsibility to seek additional mentors to expand their training experience, as appropriate.
- The PhD student has the responsibility to understand their funding package and to clarify any work and/or teaching expectations in line with this funding.

Research:

- The PhD student has the responsibility to work with the adviser to develop a thesis/dissertation project. This responsibility includes establishing a timeline for each phase of work and striving to meet established deadlines.
- The PhD student has the responsibility to seek guidance from their adviser, while also aspiring increasingly for independence.
- The PhD student has the responsibility to engage in activities beyond their primary research responsibilities. The student should attend and participate in any research-related meetings and seminars relevant to their training area.

Professional development:

- The PhD student has the primary responsibility to identify their professional goals and to develop their career plan following completion of the PhD degree. This responsibility includes familiarizing themselves with professional development opportunities within Johns Hopkins and externally. Students should identify specific activities to pursue that will advance their professional development and networking.

- The PhD student has the responsibility to prepare a Professional Development Plan annually that outlines their research and career objectives. This responsibility includes discussing this plan annually with the adviser. The student should ensure that the document summarizing this discussion is completed and submitted in accordance with program requirements.

Respectful engagement and well-being:

- The PhD student has the responsibility to treat the adviser, other mentors, and colleagues with respect at all times.
- The PhD student has the responsibility to make themselves available, within reason, to meet with the adviser upon request.
- The PhD student has the responsibility to communicate in a respectful and constructive manner if they have concerns that the adviser is not meeting the expectations outlined in this document.
- The PhD student has the responsibility to be open to constructive criticism by the adviser, other mentors, and colleagues.
- The PhD student has the responsibility, as possible, for their well-being, should consider discussing any concerns with the adviser or other mentor(s), and should connect with available resources when needed.

Policies:

- The PhD student has the responsibility to familiarize themselves and comply with University, school, and program-specific policies and requirements for PhD students.
- The PhD student has the responsibility to discuss with the adviser relevant policies, commitments, and expectations related to funding, work, research assistantships, teaching assistantships, sick leave, or vacation. As needed, the student will provide any documentation relevant to stated policies on leave and other requirements to the student's program, school, or the University.

Responsible conduct:

- The PhD student has the responsibility to conduct themselves in a responsible and ethical manner at all times.
- The PhD student has the responsibility to familiarize themselves with University codes of responsible conduct for PhD students.
- The PhD student has the responsibility to engage in responsible research conduct. This responsibility includes completing the responsible conduct of research training requirements of their specific school and program, and any specific discipline training requirements (e.g., animal and human subject work). The student will maintain accurate and contemporaneous records of research activities in accordance with the norms of best practices in their own discipline. The student should discuss authorship and intellectual property issues with the adviser.
- The PhD student has the responsibility to complete Title IX Training regarding sexual misconduct and sexual harassment as required by the University. http://oie.jhu.edu/training/

Our curriculum is designed to help students master the following competencies:

- Analyze and theorize the influences of social context and behavior on health with the aim of developing, evaluating, and implementing solutions to pressing public health challenges in Baltimore, the United States and around the world
- Apply, develop and critically evaluate interdisciplinary, ecological, and other multi-level theoretical models of health and health behavior to societal, structural, community and organizational influences on health behaviors, disease, and injury
- Design, conduct and disseminate rigorous and innovative social and behavioral sciences research of relevance to public health
- Develop, implement and evaluate behavioral and structural interventions to prevent disease and injury, alleviate illness and disability, improve the quality of life and reduce health disparities
- Critically evaluate, synthesize, and question the theoretical/conceptual orientation and perspectives on health, risk, illness and health interventions
- Lead and collaborate as an expert social and behavioral scientist on a team of public health investigators

Non-Degree Training

Post Doctoral Fellows

The Department welcomes individuals who have completed doctoral degrees to postdoctoral fellow (PDF) affiliations. PDFs identify a mentor and enjoy advising from faculty and use of the School's facilities. Postdoctoral Research fellowships are generally for two years. The postdoctoral programs differ from program to program. Most postdoctoral fellowships are tailored to the needs and abilities of the individual fellow.

Prospective PDFs should submit a PDF application. The Application requires proof of sponsorship by either the School or an outside agency for the entire period of the program. Post-doctoral fellows may not use personal funds to support themselves during their program. PDFs will not be able to register, be paid, and/or buy health insurance until verification of their official receipt of the doctoral degree is filed and their PDF application is formally approved.

After being admitted to the Program, each fellow should design, in collaboration with their faculty mentor, an Individualized Development Plan (IDP) for their research time with the Department. PDFs should discuss the anticipated duration of their fellowship with their mentor when they begin the fellowship. PDFs are evaluated annually and must maintain an appropriate level of professionalism and scientific research for the duration of their program.

PDFs must adhere to the student code of conduct (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Forms/AllItems.aspx) for all students of the Johns Hopkins Bloomberg School of Public Health.

PDFs are considered non-degree seeking students and should register for 16 credits during each course term. The Postdoctoral Research Credits course number is 410.830 Postdoctoral Research in Health Behavior and Society. Tuition for PDFs is set at $200 per term by the School and a postdoctoral scholarship covering tuition is generally granted. PDFs who wish to take academic courses should discuss this with their research mentor as part of their IDP (Individualized Development Plan); these courses cannot be transferred into a degree program at a later date. Please visit the School's PDF website (https://www.jhsph.edu/academics/postdoctoral-training/) and PDF guidebook (https://www.jhsph.edu/academics/postdoctoral-training/Postdoc-guidebook-revised.pdf) for additional critical information.

The NIH requires that Postdoctoral fellows supported by an NIH training grant receive training in the responsible conduct of research. Courses that fulfill this requirement are PH.550.600 Living Science Ethics - Responsible Conduct of Research and PH.306.665 Research Ethics and integrity: U.S. and International Issues PH.306.665 Research Ethics and integrity: U.S. and International Issues PH.306.665 Research Ethics and integrity: U.S. and International Issues These courses must be taken for pass/fail.

Upon satisfactory completion of their program, PDFs are issued a Certificate of Completion from the Bloomberg School of Public Health.

Further questions may be directed to HBS Academic Program Administrator (HBS_Admissions@jhu.edu).

Certificate Programs

The Department of Health, Behavior and Society offers a number of certificate programs that provide academic training to students seeking targeted education in a specific area of public health. The certificate admissions process and requirements for successful completion are available at https://www.jhsph.edu/departments/health-behavior-and-society/certificates/

Our certificates require a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (http://www.jhsph.edu/academics/certificate-programs/completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the School of Public Health Registrar.

Hopkins students enrolled in a degree program **must notify** the Academic Program Administrator their intent to pursue the certificate. Non-Hopkins students must submit an application through the SOPHAS express system. **Certificate completions cannot be processed retroactively; the Notification of Certificate Program Completion Form must be submitted before the end of the add/drop period of the term in which a student is taking their last certificate course.**

Further questions may be directed to HBS Academic Program Administrator (HBS_Certificates@jhu.edu).

Department of Health Policy and Management

About

Since its founding in 1921, the Department of Health Policy and Management (https://www.jhsph.edu/departments/health-policy-and-management/) (HPM) has been dedicated to advancing the public health field through the development, implementation and evaluation of health and social policies. HPM strives to bring order to the policy-making process by working with decision makers to develop rational, evidence-based arguments in support of new and improved policies. The faculty's policy-making expertise provides a sound basis for systemic changes to promote health, monitor, and evaluate the results of those changes and train tomorrow's leading policymakers and administrators.

The Department trains public health professionals and researchers in diverse disciplines and fields relevant to the translation of public health sciences into practice and policy. The goal is to train researchers and public health leaders to become agents of change to advance the public's health through effective, efficient and equitable policies, programs and services.

The Department is committed to advancing research, education and practice in the following areas:

- **Bioethics and Health Policy**: the ethical issues relevant to public health policy, practice and research.
- **Health Economics and Policy**: the concepts and methods of economic analysis to study how clinical and public health resources are and should be allocated.
- **Health and Public Policy**: the development, analysis, implementation, and evaluation of health and social policies that promote population health and quality of life.
- **Health Services Research and Policy**: the organization, financing, and delivery of both curative and preventive services, and their impact on access, quality, outcomes and cost, particularly for the most vulnerable.
- **Leadership and Management**: the leadership and management needs of health and public health organizations in today's rapidly changing environment.

Programs

Department Governance

The Department strives to ensure that policy and decision-making processes are participatory, and that decision criteria are transparent to all stakeholders. The Department engages faculty, staff and students in its governance. Standing committees consist of elected or appointed members and there are formal and informal opportunities to meet with the department leadership to discuss issues and policies. Central to the functioning of the Department is the Executive Management Team and several standing faculty and staff committees.

The **Executive Management Team (EMT)** is charged with making day-to-day decisions for the Department and facilitating strategic change. The committee consists of the Chair of the Department, the Associate Chair for Academic Programs, the Associate Chair for Finance and Administration, the Associate Chair for Research and Practice, the Associate Chair for Inclusion, Diversity, Anti-Racism & Equity (IDARE), the Department Administrator, and the Director of the Department's Office of Academic Affairs.

The **Committee on Inclusion, Diversity, Anti-Racism, and Equity (IDARE)** promotes scholarship and training to cultivate an environment where all people, especially those who are historically marginalized, disenfranchised, or excluded, can thrive. The committee, which is comprised of students, staff, and faculty, works closely with the School's IDARE office and HPM leadership to build a diverse inclusive community in HPM and support actions grounded in anti-racism and equity.

The **Academic Policy and Admissions Committee (APAC)** monitors the department's policies related to admissions, curriculum, and methods for assessing the quality of education in the Department. The scope of APAC's responsibilities includes oversight of academic policies, review of new programs, monitoring consistency among program curricula, setting standards for admissions, and other issues of concern related to the academic health of the department. Members of APAC include program directors and student representatives.

The **Faculty Development Committee (FDC)** monitors department faculty progress, appointments and promotions and makes recommendations to the Department Chair in accordance with the School's policies. The committee is composed of all full professors and senior scientists in the department.

The **Social Committee** is charged with improving interactions among faculty, staff, and students. It organizes department-wide events such as the annual holiday party. Members of the committee include faculty, staff and students.

The **Student Endowment Awards Committee** is charged with reviewing and selecting recipients for Departmentally-based student endowments. Faculty members are appointed by the chair to serve on this committee.

Faculty

The faculty of the Department are trained in many disciplines, and lead a wide range of research and practice. Areas of focus include:

- Analyzing and evaluating the effects of policy changes on the health of individuals and populations.
- Assessing the organization, financing, and delivery of health care and public health services and their impact on access, quality of care, patient outcomes, and cost.
- Developing and testing community-based models of health and preventive services to improve access, quality of care, patient outcomes, and cost.
- Improving methods for measuring the health of populations and individuals, risks to health, and the characteristics of health services provided to individuals and populations, including access to care, quality, and cost.
- Analyzing the ethics of public health policy, practice, and research.

The department also has a distinguished part-time faculty including leaders in management, practice, policy, and public health. The part-time faculty hold appointments as adjunct professors, senior associates, and associates. They teach courses, serve as preceptors and are available to mentor students.

A full list of faculty associated with the Department can be found here (https://www.jhsph.edu/faculty/directory/list/?department=6).

Research Centers & Institutes

HPM faculty come from many disciplinary and professional backgrounds, but share a common focus on research and practice that addresses major health and social policy issues and their impact on population health. The Department's research efforts are largely organized around centers and institutes in areas of public health importance.

- Center for Gun Violence Solutions (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-center-for-gun-policy-and-research/)
- Center for Health Disparities Solutions (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-center-for-health-disparities-solutions/)
- Center for Health Services & Outcomes Research (https://www.jhsph.edu/research/centers-and-institutes/health-services-outcomes-research/)
- Center for Hospital Finance and Management
- Center for Injury Research & Policy (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-center-for-injury-research-and-policy/)
- Center for Law & the Public's Health (https://www.jhsph.edu/research/centers-and-institutes/center-for-law-and-the-publics-health/)
- Center for Mental Health & Addiction Policy Research (https://www.jhsph.edu/research/centers-and-institutes/center-for-mental-health-and-addiction-policy-research/)
- Center for Population Health IT (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-center-for-population-health-information-technology/)
- Evidence-Based Practice Center (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-evidence-based-practice-center/)
- Institute for Health and Social Policy (https://www.jhsph.edu/research/centers-and-institutes/institute-for-health-and-social-policy/)
- Major Extremity Trauma Research Consortium (METRC) (https://www.metrc.org/)
- Primary Care Policy Center (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-primary-care-policy-center/)
- Risk Sciences & Public Policy Institute (https://www.jhsph.edu/research/centers-and-institutes/risk-sciences-and-public-policy-institute/)
- Lipitz Center for Integrated Health Care (https://www.jhsph.edu/research/centers-and-institutes/roger-c-lipitz-center-for-integrated-health-care/)
- Johns Hopkins University Public Policy Center (https://www.jhsph.edu/departments/health-policy-and-management/research-and-centers/johns-hopkins-public-policy-center/),
- Lerner Center for Public Health Advocacy (https://www.jhsph.edu/research/centers-and-institutes/center-for-public-health-advocacy/)
- Berman Institute of Bioethics (https://bioethics.jhu.edu/)

Affiliated Centers

- Johns Hopkins Drug Access and Affordability Initiative (https://www.jhsph.edu/research/affiliated-programs/johns-hopkins-drug-access-and-affordability-initiative/)
- Hopkins Business of Health Initiative
- Hopkins' Economics of Alzheimer's Disease and Services Center (https://www.jhsph.edu/departments/health-policy-and-management/research-centers-and-institutes/hopkins-economics-of-alzheimers-disease-and-services-center/)

The research conducted by these centers and institutes is timely and rigorous, responsive to the needs to clinicians, health care administrators, officials and policy-makers at the local, state, and national levels. The

Department's research is broad, beyond the U.S. and North America, to promote and protect health across the world including the European Union, South America, the Middle East, Asia, and parts of Africa.

Departmental Academic Policies

Advising

All students are assigned a faculty adviser at the time of admission to the program. Advisers play an important role in the student's academic life. The adviser is expected to keep abreast of school and departmental degree requirements so that they can counsel advisees on courses and the proper progression towards the degree. Registration, add/drop, pass/fail agreements and many other School forms require the signature of the student's adviser. In addition, any special requests or petitions that a student submits to any of the administrative offices of the School will require the endorsement of the student's adviser as well as that of the Department chair.

In an effort to eliminate unclear expectations for both faculty and students, the following guidelines have been developed.

Expectations, Rights, and Responsibilities

Students can expect their adviser to work with them in defining educational goals, course work and independent studies that will assist in achieving their goals. In addition, the adviser periodically will review academic progress with the student, including assessing the student's strengths and weaknesses. Advisers provide advice while students must make the final choices consistent with the guidelines and policies of the Department, School, and University.

Students are responsible for scheduling regular meetings with their advisers, in-person or by phone, to discuss goals, progress, problems, and next steps. If an adviser does not know the answer to specific questions or issues, the adviser will refer the student to knowledgeable sources. Advisers are expected to make a regular time available for student-adviser meetings or have a clearly stated process by which students can schedule time to meet individually. Students have the right to change advisers and individual faculty members have the right to accept or not to accept any specific student as an advisee. The first step in the process for changing advisers is to consult the program director.

All tenure-track faculty are expected to have an advising load consistent with their rank and are expected to commit their best efforts to provides students with the academic advice and career direction needed to be successful. Non-tenured professional faculty and scientists frequently advise master's and doctoral students. Their advising and teaching roles and loads vary, depending on their primary academic commitments.

Advisers are expected to provide what guidance they can in helping a student meet the financial demands of tuition and living expenses. This may include assistance in completing applications for scholarships, dissertation grants, and training grants. The Department's Office of Academic Affairs and the School's Office of Financial Aid share responsibilities for advising students on financial aid and work opportunities.

Minimum Expectations for Student-Adviser Meetings

The following are minimum expectations for scheduled meetings between a faculty adviser and advisee. In general, meetings should be scheduled so students can prepare for the meeting, should be at least a half-hour or more in duration, and should be conducted in an appropriate location, desirably without interruptions.

Degree	Year in Program	Minimum Meeting Frequency
Master of Health Administration	Year 1	One in-person meeting in each academic term
	Year 2	Zoom or in-person meeting in each academic term
Master of Science in Public Health in Health Policy	Year 1	One in-person meeting in each academic term
	Year 2	Check-in each academic term (either in-person or by Zoom or electronic correspondence)
Master of Health Science in Health Economics and Outcomes Research	Year 1	One in-person meeting in each academic term
PhD in Health Policy and Management	Year 1	One in-person or Zoom meeting in each academic term
	Years 2-3	One in-person or Zoom meeting every 3-4 weeks
	During Thesis Research	One in-person or Zoom meeting in each academic term; written comments on thesis drafts within 4 weeks of receipt.

E-mail Signature Lines

If a student in the Department chooses to indicate an affiliation with the University in an e-mail signature line, the line *must contain information on the student's candidacy status*.

Teaching Assistantships

Students can TA in the department but need instructor AND departmental approval prior to starting work. For more information, students must talk to the instructor and if both agree, will complete the necessary paperwork. For the most updated policy and open positions, please see the Department's portal page (separate login required).

All TA's who serve in HPM courses, regardless of their department or program, are required to take the Center for Teaching and Learning (CTL) TA training course designed to guide students in their roles and responsibilities as TA's prior to beginning any work. The training can be done online (https://sites.google.com/site/ctltteachingtoolkit/teaching-assistants/ta-training/).

CTL's TA Training has been approved by the Johns Hopkins University Center for Teaching Excellence & Innovation (CTEI) to fulfill the Teaching Academy – *Preparing Future Faculty (PFF)* program – Phase I requirement. Students interested in obtaining a Teaching Academy certification can finish CTL's TA training and continue their path with the Teaching

Academy. For more information on the Teaching Academy Program please follow this link (https://ctei.jhu.edu/).

Student Conflict Mediator

Are you stressed about a challenging relationship with a faculty mentor, supervisor or a staff member? Are you unsure about how to proceed with your concern? Do you feel unfairly treated?

The Health Policy and Management Conflict Mediator can help with all of these types of concerns. The HPM Conflict Mediator provides a confidential, impartial, informal and independent place to discuss Departmental student concerns, access information, clarify policies and procedures, discuss response options and get problem-solving assistance. Those using the Conflict Mediator's services can remain anonymous, if they choose, and in control over what, if any, actions are taken (unless information disclosed is legally required to be reported). The Conflict Mediator will not take sides in a dispute and does not serve as an office of record or keep any personally-identifiable records. The Conflict Mediator does not take part in any formal process but can talk with you about your formal and informal options.

The HPM Student Conflict Mediator is Professor Jon Vernick (https://publichealth.jhu.edu/faculty/724/jon-vernick/).

HPM Student Coordinating Committee (SCC)

The Department of Health Policy and Management has an active and organized student group, the Student Coordinating Committee (SCC). The SCC works to facilitate communication and interaction between the Department (faculty and administrators) and the students. The SCC works each year to plan and develop different opportunities aimed at achieving this goal. Participation by all HPM students is welcomed and encouraged.

Required Course Waivers/Substitution Policy

In rare cases, students may request a waiver or substitution of a required program course. Any request must be submitted in writing according to the guidelines outlined below at least one week prior to the start of the academic term and be approved in writing by the student's Program Director.

Examples of when a substitution might be appropriate:

- A student has successfully completed a **graduate level** course with a grade of "A" or "B" that covered the same content areas as the required course. (The completed graduate-level course syllabus must be submitted with the request.)
- A course or series of courses fulfills a general area of the required curriculum, such as biostatistics or epidemiology, but the student wishes to take a different course or series that is equally or more advanced than the normal requirement and that better aligns with their overall academic and career goals.

Course substitutions must abide by the following principles:

- A strong rationale must be made for how the substitution will benefit the student's overall academic and career goals.
- The resulting curriculum meets the requirements of a learning competencies of the student's program.

Procedure for making a substitution request:

- The request for substitution must be submitted to student's Program Director in writing at least one week before the substituted course is to be offered.
- A brief rationale for the substitution must be provided in writing.
- A completed course-by-course curriculum plan for the degree must accompany the request.
- Approval or denial will be provided by the Program Director within one week of being received. Decisions on course substitutions may not be appealed, as such, students should be prepared to complete the required curriculum if the request is denied.

Funding and HPM Student Endowment Opportunities

Master's Tuition Scholarship

The Master's Tuition Scholarship (MTS) provides eligible MSPH and MHA students with a tuition scholarship worth 75% of one year's tuition. The scholarship can be applied in one of two ways; (1) All 75% applied in Year 2; or (2) 25% applied in Year 1 and 50% applied in year 2. Students in these programs must declare which option they prefer in the summer before matriculating. Once a preference has been selected, students may not change their scholarship allocation. Upon completion of the 2nd year field placement or residency, the scholarship will be concluded. Students are not permitted to enroll in courses using the scholarship once they have completed the program.

PhD Funding

All PhD students admitted to the Department are offered a standard funding package which covers the following: 4 years of tuition; 4 years of a NIH pre-doc level stipend; health, dental and vision insurance, along with the University's clinic fee for the duration of their enrollment in the program up to 7 years.

Student Endowment Awards

The Department has a number of Student Endowment Awards that provide competitive opportunities for students to obtain additional funding. These awards are limited to enrolled students only. Recipients are selected based on the applicant's match to the spirit of the funder's wishes.

Satisfactory Academic Progress

Students must meet minimum standards (https://e-catalogue.jhu.edu/public-health/policies/academic/grading-system/) to remain enrolled in the degree programs in the Department of Health Policy and Management. A student's failure to meet the criteria is grounds for being placed on academic warning and/or being dismissed from the program.

Students enrolled in the 2 year Master of Health Administration (MHA) and Master of Science in Public Health (MSPH) programs who do not achieve the minimum GPA by the end of the 4th term in the first year (or upon completion of all required course work) may be prevented from initiating their 2nd year placement or residency. Program Directors, in consultation with the HPM Student Matters Committee, will determine the appropriate course of action.

Guidelines for Student Employment

Master's Students

Full-time master's students who work for the Bloomberg School are eligible to work a maximum of 19.99 hours per week during each academic term. During periods of academic non-enrollment (i.e., summer, spring break, etc.) student employees may work up to 40 hours per week.

This work hour limit does not apply to the Year 2 placement or residency for the MHA and MSPH programs. For FICA TAX purposes, "summer" begins on **June 1st** and ends on the last day of August prior to the first day of Term 1. During this time, students may work up to 40 hours per week. International students should always consult with their OIS officer prior to accepting any employment offer.

PhD Students

HPM PhD students may be permitted to work more than 19.99 hours per week during each academic term when the work opportunity is well-aligned with their degree program and will not interfere with their role as full-time students. Those funded on NIH training grants are not permitted to work more than 10 hours per week during each academic term.

Eligible HPM PhD students wishing to work more than 19.99 hours per week must obtain written approval from their academic/thesis advisor and program director documenting how the additional work beyond 19.99 hours aligns with their program and progress in the program. Approval or disapproval by the advisor and program director will be based on the student's stage and performance in their program, any policies or requirements specific to the student's source of funding, and the nature of the additional work.

International students under limited circumstances may be able to work more than 19.99 hours but the work must be related to the student's program and approved in advance by OIS before increasing the student's work hours.

During periods of academic non-enrollment, (i.e. summer, spring, winter break), student employees may work up to 40 hours per week.

Program Pre-requisites

All students matriculating into the Department of Health Policy and Management are required to complete the following training modules prior to the start of their first term of enrollment. These training sessions are incorporated into the Department's summer orientation period, which runs from early June through the end of August, prior to the start of the formal academic year. Some HPM programs may have additional pre-requisites that are noted on their requirements page.

1. Opioid Epidemic Awareness Education
2. Title IX: Sexual Assault Prevention Course
3. History of Baltimore module
4. Indigenous Peoples History Module
5. Introduction to Online Learning
6. PH.550.860 (https://e-catalogue.jhu.edu/search/?P=PH.550.860) Academic & Research Ethics

Withdrawals

Failure to register for a term results in an automatic withdrawal. A withdrawn student must be formally readmitted before resuming a program of study. Students requesting to be readmitted must submit the most current transcript prior to the withdrawal and a cover letter explaining the reasons for the withdrawal and why the students wants to be readmitted to the program director who will recommend to the HPM Student Matters committee approval or rejection of the request.

Registration

All MSPH, MHS, and MHA students are expected to maintain a continuous registration through graduation. Those enrolled in *full-time* programs must register for a minimum of 12 credits each in terms 1-4. International students should work with the Office of International Services to make sure they understand the requirements of their visa. Please reach out to your program director with any questions about how to meet the requirements within the context of your specific degree program

Registration requirements for HPM PhD students can be found in the HPM PhD requirements (p. 314) section.

Academic Leave of Absence (LOA)

Academic leave of absence refers and is limited to students in a degree program requiring continuous enrollment and have completed a minimum of one academic term of program coursework, and who, while in good academic standing, are forced to withdraw temporarily from graduate work due to reasons beyond their control, such as illness, military service, financial exigency, or pressing personal reasons justifying an interruption of the degree program. Please read the school-wide academic leave of absence (https://e-catalogue.jhu.edu/public-health/policies/academic/academic-leave-absence/) policy for further information.

An active file fee of $50 per term is assessed for each term within the leave of absence period. The Department will cover this fee for all *full time* HPM degree seeking students for up to 8 terms (which is the limited per the School's Leave of Absence Policy). For further information, contact the HPM Office of Academic Affairs.

Bloomberg School Policies

Graduate Student Sick Leave

All students receiving a fellowship/stipend from BSPH for full-time study while enrolled in a Master's or PhD program at the School are entitled to 15 days (three weeks) paid sick leave per year. Days may be used for a student's own sickness or to care for a family member. Unused days may not be carried over into the following 12-month period and are not payable upon departure.

When a student takes sick leave, they should notify their faculty adviser and keep them as up to date as feasible. At its discretion, the department or adviser may require the student to submit verification of the need for sick leave from their healthcare provider to the University Health Service Center for review. Any documents containing a student's medical information must be kept separate from their academic file. Extended absences (more than two weeks) must be reported by the student and the adviser to the Department Administrator as quickly as possible. If the illness requires an extended absence, the student may apply for a leave of absence.

Academic Ethics Code

The faculty and students of the Bloomberg School of Public Health have the joint responsibility for maintaining the academic integrity and guaranteeing the high standard of conduct of this institution. Please read the Code of Academic Ethics (https://e-catalogue.jhu.edu/public-health/policies/academic/academic-ethics-code/) for more information.

Compliance Line

The mission of Johns Hopkins University is to educate its students and cultivate their capacity for life-long learning, to foster independent and original research, and to bring the benefits of discovery to the world. In service to this mission, the university strives to promote an environment of integrity, ethics and safety. All members of the Johns Hopkins community are expected to uphold these standards, which is why The Johns Hopkins Compliance Line (https://e-catalogue.jhu.edu/

public-health/policies/academic/compliance-line/) was established. This independently administered hotline allows for anonymous (if desired) reporting of serious concerns or violations of any kind.

Student Grievance Procedure

On occasion, disputes arise between students and other members of the Hopkins Bloomberg School of Public Health community. The School encourages individuals involved in such disputes to resolve the matter directly between them. For those disputes that cannot be resolved informally, the following policy (https://e-catalogue.jhu.edu/public-health/policies/academic/student-grievance-policy/) has been created to provide students or student groups with a formal process to seek resolution of a grievance. A grievance covered by these procedures is a complaint by a student or group of students alleging that they have been adversely affected in their capacity as students.

Parental Accommodations

Contact the HPM Academic Office to discuss the accommodations policy and how it impacts the student, at least three months before the birth or adoption of a child, as we may need to create a plan that instructors, supervisors, student and advisers approve of. Please read the University parental accommodations policy (https://policies.jhu.edu/?event=render&mid=764&pid=32391&fid=policy_32391.pdf&_=0.931885768396) for graduate students and post-docs.

Additional Bloomberg School Policies impacting on students can be found here **(**https://e-catalogue.jhu.edu/public-health/policies/**)**

Bloomberg School Offices and Services

The following are selected offices and services provided by the Bloomberg School or the Johns Hopkins University which the Department of Health Policy and Management recommends its students utilize. A full list of BSPH offices and services can be found here (https://www.jhsph.edu/offices-and-services/).

- Career Services (https://www.jhsph.edu/offices-and-services/career-services/)
- Student Disability Services (https://www.jhsph.edu/offices-and-services/student-affairs/disability-support-services/)
- SOURCE (https://source.jhu.edu/) (Service learning and community engagement)
- Institutional Review Board (IRB) (https://www.jhsph.edu/offices-and-services/institutional-review-board/)
- Student Life (https://www.jhsph.edu/offices-and-services/office-of-student-life/)
- Records and Registration (https://www.jhsph.edu/offices-and-services/student-affairs/records-and-registration/)
- Inclusion, Diversity, Anti-Racism, and Equity (IDARE) Office (https://publichealth.jhu.edu/offices-and-services/office-of-inclusion-diversity-anti-racism-and-equity-idare/)

University Resources and Services

Health Administration, (MHA)

Program Overview

The Master of Health Administration (https://www.jhsph.edu/departments/health-policy-and-management/degree-programs/master-of-health-administration/) is a professional degree, preparing future healthcare executives for management and leadership positions dedicated to improving health and health service delivery across all sectors. The Hopkins program focuses on the U.S. healthcare system and is well-suited for early careerists interested in managerial and leadership positions within hospitals and health systems, the health insurance industry, and consulting firms.

The accelerated two-year residential cohort program is designed specifically for the early careerist. The curriculum includes one year of full-time academic coursework followed by a full-time, 11-month compensated administrative residency with faculty preceptors designed to provide direct experience through hands-on learning. The curriculum is founded on principles of innovation and strategic problem-solving, and develops the analytical, technical, and management skills required to improve the quality, cost-effectiveness, and integration of health and health care organizations and systems.

The full-time residential program has a required residency component during the 2nd year of the program. The program has partnerships with local and national organizations providing the full-time paid residency positions, many exclusive to Bloomberg students. However, because many of the residency sites have rules prohibiting placement of non-U.S. citizens and non-permanent residents, the program cannot guarantee placement of international students and thus the ability to successfully complete the degree program requirements for graduation. Therefore, non-U.S. citizens and non-U.S. permanent residents should carefully consider these possibilities before applying to or accepting an offer of admission from the full-time residential program.

Program Accreditation

The program's curriculum, accredited by the Commission on Accreditation of Healthcare Management Education (CAHME), provides for the development of conceptual, quantitative, and applied skills essential to lead contemporary health care organizations.

Program Administration

Program Director: Mark J. Bittle, DrPH, MBA, FACHE (https://www.jhsph.edu/faculty/directory/profile/1047/mark-j-bittle/)
Associate Director: Conan Dickson, PhD, FACHE (https://www.jhsph.edu/faculty/directory/profile/1868/conan-dickson/)
Assistant Director: Karen Charron, MPH, BSN (https://www.jhsph.edu/faculty/directory/profile/810/karen-r-charron/)
Sr. Academic Coordinator: Keasha Wormley, MA

Bachelor's/MHA

The Johns Hopkins University, in conjunction with the Bloomberg School, offers a combined Bachelor's degree and Master of Health Administration (MHA) degree. The combined degree programs have been tailored to prepare students for a range of careers, including public health, healthcare management, and medicine.

JHU undergraduate students have the unique opportunity to seek early admission to the MHA degree. The combined Bachelor's/MHA program emphasizes innovation and strategic problem-solving by applying analytical, technical, and management skills required to improve the quality, cost-effectiveness, and integration of healthcare organizations and systems. Students in this program will receive co-advising from both schools to optimize their academic experience.

Successful applicants will demonstrate relevant experience in the U.S. health care system (paid or volunteer), strong analytical skills, and/or demonstrate a passion for, and a desire to lead, health and health care delivery transformation in the U.S. Applicants must provide evidence of strong quantitative skills as reflected by undergraduate course work in college algebra, calculus, and/or statistics with a minimum 3.0 GPA.

While not required, it is also strongly recommended that applicants take EN.660.203 Financial Accounting. Those who earn a "B" in this course and pass a waiver exam do not need to take the required MHA course PH.312.617 Fundamentals of Financial Accounting.

Applicants who are admitted and have not completed an undergraduate microeconomics course are required to complete a course before matriculating.

Requirements
Bachelor's/MHA degree applications should be submitted through SOPHAS Express by the July 1st between junior and senior years. Bachelor's/MHA students must be accepted before the start of their senior year. Please note that admitted students must complete the Bachelor's degree before formally matriculating in the Bloomberg School of Public Health.

Bachelor's/MHA applicants must submit the following:

- Transcripts from Johns Hopkins University and, if applicable, transcripts from any other college-level institutions students have attended.*
- Three letters of recommendation.
- Resume or curriculum vitae.
- Statement of purpose and objectives. The Statement of Purpose should provide a compelling rationale for admittance and focus on the applicant's relevant health care experience (volunteer or paid), leadership potential, and early career goals.

*Students may upload unofficial transcripts in the document section to expedite the application review process; however, admitted students must submit an official transcript before they can matriculate into the program.

For more information on the Bachelor's/MHA program, contact Assistant Director, Karen Charron, or visit our website (https://www.jhsph.edu/departments/health-policy-and-management/degree-programs/master-of-health-administration/ba-mha/).

MHA Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Core Curriculum

The MHA program requires a minimum 79 credits of didactic coursework. All required courses must be taken for a letter grade except for courses only offered as pass/fail.

Course	Title	Credits
First Year		
Summer Term		
XXX.XXX	Opioid Epidemic Awareness & Education	
XXX.XXX	Title IX: Sexual Assault Prevention Course

[1] Course meets one or more CEPH learning objectives (p. 176).

CEPH Required Courses

The following online CEPH required courses may be taken in either Year 1 or 2. ***All eight courses, (an additional 4 credits beyond the MHA requirements) are required before graduation***. Some courses, indicated below, may be held prior to First Term. Those courses will count toward First Term registration.

Code	Title	Credits
Summer Courses		
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.610	The Social Determinants of Health	.5
Term 1A		
PH.552.607	Essentials of Environmental Health	0.5
Term 1B		
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5
Total Credits		**4**

Administrative Residency

In the second year of the program, students continue to register full-time while their 11-month full-time, paid administrative residency in a healthcare management setting. While the actual organizations may vary, the sectors include community hospitals, university-affiliate hospitals, investor-owned hospitals, physicians' medical practices, consulting firms, long-term care facilities and managed care organizations.

The MHA program has a residency placement process partnering students with local and national organizations providing administrative residency positions, many exclusive to JHU students. Residency "showcases" are scheduled throughout the fall of the first year for students to meet the preceptors and discuss the organization and residency prior to the interview and selection process. Residencies are only available to U.S. citizens and U.S. permanent residents.

The residency provides students with healthcare management experience in which the student applies the knowledge and skills learned in the program's coursework. The residency experience is supervised by an on-site faculty preceptor and an MHA program adviser. During the residency year, students are required to submit reports that consist of an educational goals paper, three progress reports, a residency critique, summary of accomplishments and a final capstone paper. In addition, students will have the opportunity to present their capstones to their classmates and program faculty during the 4th term.

In year two, students must register for a total of 60 credits of PH.312.810, MHA Residency, in addition to other courses. A minimum of 16 credits per term is required to be considered full-time. Student evaluation is based on the completed and timely submission of all assignments as well as continued satisfactory performance in the residency site as determined by the on-site preceptor and the program directors.

All students in the MHA program who have a minimum of three years of post-graduate clinical experience and plan to return to their clinical responsibilities after graduation may, with approval of the MHA Program Office, complete a case study or project at their workplace in lieu of a separate residency.

Capstone Guidelines

The MHA Capstone provides an opportunity for students to integrate the knowledge that they have gained through their course work and residency. The program offers three options for the Capstone: a case study of a major project from their administration residency, submission of an acceptable paper for the Stull competition, or participation in the UAB case competition. All students will register for 1 credit of PH.312.862 MHA Capstone in Term 4 and present their Capstone topics and findings in May.

Option #1: A Case Study from the Administrative Residency

Students who choose the case study option will report on a major initiative in which they were involved during their administrative residency. They are expected to provide a thorough analysis of the situation or problem that the organization faced, a description of the alternative approaches that the organization considered (if it did so), a description of the initiative that was adopted, presentation of data regarding the results of the initiative, and a thorough analysis of whether or not the initiative succeeded (including lessons learned). The case study should incorporate theories, concepts, knowledge, and practice relevant to the healthcare management field of study. (This option differs from a classroom-based case study in which issues are presented and questions provided to assist the student in resolving a problem.)

Deliverables

Students should submit their proposal for the case study to their CoursePlus portfolio by the first week of Term 2. The proposal (approximately 500 words) should describe the problem(s) facing the organization, the context of the problem within the healthcare system, the initiative undertaken by the organization, and the measures of success used by the organization. Students are encouraged to consult with their academic advisers throughout the year to ensure that the case study will meet expectations.

Students should submit their case to the CoursePlus Portfolio by the beginning of Term 3. Case studies should be written in MLA or APA Style format (12pt sans serif type face, e.g. Arial or Garamond, one-inch margins and double-spaced), and should be between 5,000 and 10,000 words (not including abstract, bibliography, tables and appendices). Students are expected to include references from sources outside the organization (such as peer-reviewed and scholarly journals as well as other periodicals, books, newspaper articles, and government documents).

Students should submit PowerPoint slides for the Capstone Symposium to the CoursePlus Portfolio by the last Friday in April.

Examples of excellent case studies from previous students are posted on the MHA Residency CoursePlus site.

Evaluation of Case Studies

Faculty will evaluate the case study using a quality rubric posted on the CoursePlus Portfolio focused on these four areas:

1. Central idea
2. Literature review and analytical support
3. Organization
4. Mechanics

Option #2: Submission of Paper for Stull Essay Competition

Students may choose to submit a paper for American College of Healthcare Executive's (ACHE's) Richard Stull Student Essay Competition in the Fall. The specifications for the paper are described on ACHE's website. Proposals should be submitted to the CoursePlus Portfolio no later than **October 1**. Final manuscripts should be submitted to the CoursePlus Portfolio no later than **November 1**. The program office will select the best paper for submission to ACHE in early December.

Option #3: Participation in the UAB Case Competition

Three students will be selected to represent the program at the annual Health Administration Case Competition held at the University of Alabama at Birmingham (UAB) in February. Participation in this event fulfills the capstone requirement. Team members are identified in early October.

Capstone Symposium

All students are expected to present the results of their Capstone in May, regardless of which option they choose. Each student will have no more than 15 minutes to present the topic and findings of their Capstone to classmates and faculty. The content should be no more than 10 minutes with approximately two (2) minutes of Q&A.

MHA Program Policies

Please view the HPM Departmental Policies for details on program satisfactory academic progress, course waivers and the Masters Tuition Scholarship (MTS).

The following program prerequisites apply to students enrolled in the HPM MHA program only.

1. Incoming students who have not completed an undergraduate microeconomics course are required to complete a course in this area before matriculating. The MHA program office will provide online course options to help you fulfill this prerequisite. Please contact the program office for more information.
2. Incoming students may want to consider completing a business accounting course, similar to the Hopkins course EN.660.203 Financial Accounting, prior to matriculation. Those who earn a "B" or better and pass a waiver exam will not need to take the required course PH.312.617 Fundamentals of Financial Accounting.

MHA Learning Outcomes

Program Competencies

It is the program's goal that by the time students have successfully completed the course work and administrative residency, they will have mastered the competencies outlined in the following domains.

Health and Healthcare Environment

- **Legal and Regulatory Environment**: Explain federal, state and local laws and regulations affecting the delivery of health care and related services.
- **Financing Environments**: Analyze the healthcare financing and economic environments, including regulation and processes applicable to public and private payers.
- **Health Policy Environment**: Analyze the effects of health policy on providers, payers and populations and its implications for organizational response and change.
- **Provider Environment**: Describe the array of key provider organizations and health professions and their implications for the quality and cost of care of individuals and populations.
- **Public Health**: Establish goals and objectives for improving health outcomes that incorporate an understanding of the social determinants of health and the socioeconomic environment in which the organization functions.

Management

- **Financial Capability**: Apply financial and accounting information and analytical tools to evaluate short and long term options and goals and monitor financial performance.
- **Budget Management**: Apply key accounting principles to prepare, monitor and manage budgets.
- **Market Analysis**: Apply economic models to analyze health care sector events, developments and trends, and plan accordingly.
- **Operatives Management and Performance Measurement**: Apply quantitative and qualitative tools and models to analyze, evaluate and improve an organization's service orientation, patient safety and quality processes and outcomes.
- **Knowledge Management**: Create management structures that apply, analyze, evaluate and convey information (gathered from both human and technological sources) to facilitate organizational decision making.
- **Population Health Management**: Apply epidemiological, biostatistical and evidence-based methods to improve health system performance at the population-level. Use vital statistics and core health indicators to guide decision-making and analyze health trends of the population to guide the provision of health services.
- **Workforce Systems**: Organize and manage the workforce utilizing key performance indicators and employee engagement metrics.
- **Workforce Management**: Direct the operation of a business segment through the development of the workforce's knowledge, skills, abilities and competencies.
- **Health Services Management**: Explain the various organizational structures of health care delivery, funding mechanisms and the way that health care services are delivered.

- **Strategic Thinking and Management**: Provide overall direction to the enterprise, including specifying the organization's objectives, developing policies and plans designed to achieve these objectives, and then allocating resources to implement the plans.
- **Systems Thinking**: Describe the analyze an organization form a systems perspective (i.e., as a complex set of cause and effect relationships).
- **Governance**: Explain how to create and maintain a system of governance that ensures appropriate oversight of the organization.

Leadership

- **Innovation and Creativity**: Facilitate diversity of thought in pursuit of developing new ideas, creating an entrepreneurial spirit and identifying break-through opportunities to significantly enhance organization performance.
- **Leading Change**: Promote ongoing organizational learning, champion organizational change when necessary and manage the resources necessary to accomplish the change.
- **Influence**: Promote the ideas and help shape the opinions and actions of others by: Understanding their needs, interests and concerns through questioning thoughtfully and listening empathetically; Communicating clearly both in writing and orally; and Delivering persuasive and organized presentations.
- **Team Leadership**: Develop team-oriented structures and systems to promote team performance, balance giving direction and support for team processes and promote consensus to achieve goals.
- **Organizational Leadership**: Articulate and communicate the mission, objectives and priorities of the organization to internal and external stakeholders and entities.
- **Cultural Engagement**: Create an organizational climate built on mutual trust and transparency, establish and communicate a compelling vision and hold oneself and others accountable for achieving organizational goals.

Relationship Management

- **Interpersonal Understanding**: Exercise the use of empathy, listening and diagnostic behavior in order to understand others' interests, concerns, needs and non-verbal behavior.
- **Relationship Management**: Develop and maintain collaborative relationships and shared decision-making with key leaders, colleagues and stakeholders to achieve organization and personal goals.
- **Collaboration**: Facilitate a work environment focused on a shared purpose or goal, encouraging colleagues to work effectively with others, demonstrating enthusiasm for a collaborative solution and communicating a shared sense of ownership and autonomy.

Standards of Professional Behavior

- **Professionalism**: Demonstrate high ethical conduct, integrity, transparency and accountability for one's actions and respect for others.
- **Initiative**: Take action without being asked and offer solutions/ options when presenting problems.
- **Advocacy**: Advocate for the rights and responsibilities of patients and their families.
- **Professional Development**: Demonstrate commitment to self-development including continuing education, networking, reflection and personal improvement.
- **Self-Awareness**: Be aware of one's own assumptions, values, strengths and limitations.
- **Mentoring**: Develop others by mentoring, advising, coaching and serving as a role model.

CEPH-Defined Foundational Public Health Learning Objectives

The curriculum for the MHA program includes coursework that has been approved to meet the foundational public health knowledge learning objectives (p. 176) in the *Profession & Science of Public Health* and *Factors Related to Human Health* domains as required by the Council on Education for Public Health (CEPH).

Health Policy, MSPH

Program Overview

The Master of Science in Public Health (https://www.jhsph.edu/departments/health-policy-and-management/degree-programs/master-of-science-in-public-health-in-health-policy/) (MSPH) in Health Policy is a professional degree program designed for individuals seeking specialized academic training in health policy in order to establish or expand their careers in health policy. The interdisciplinary faculty associated with the program are recognized for excellence in policy analysis, health services research, public health practice, and teaching. The faculty are actively involved in formulating and implementing health policy at the federal, state, and municipal levels.

The program requires one academic year of full-time, residential academic coursework, followed by a 9-month field placement in a professional public health setting. Through their coursework, students acquire a solid foundation in public health policy along with substantive knowledge of the U.S. public health and healthcare delivery system, as well as key health and public policy issues. The required curriculum and field placement experience provide students with a rich understanding of U.S. health/public health policy; knowledge of the process by which public policy decisions are made; training in basic quantitative and analytic methods; and the skills needed to critically assess and apply research findings to the development, implementation and analysis of health/public health policy.

In addition to the core requirements, the program offers professional development and flexibility for students to pursue their individual interests in the health/public health policy arena. Elective courses may be selected from those offered within HPM or any other department in the Bloomberg School.

Program Administration

Program Director: Beth Resnick (https://www.jhsph.edu/faculty/directory/profile/1104/beth-a-resnick/), DrPH, MPH
Assistant Director: David Earle, MLA
Sr. Academic Coordinator: Mary Wisniewski

Bachelor's/MSPH

The Johns Hopkins University, in conjunction with the Bloomberg School, offers a combined Bachelor's degree and Master of Science in Public Health in Health Policy (MSPH) degree. The combined degree programs have been tailored to prepare students for a career in health policy.
JHU undergraduate students have the unique opportunity to seek early admission to the MSPH degree. The combined Bachelor's/MSPH program emphasizes a solid foundation in public health policy along with substantive knowledge of the U.S. public health and healthcare delivery

system. Students in this program will receive co-advising from both schools to optimize their academic experience.

Successful applicants to the Bachelor's/MSPH are recommended to take at least one math or statistics course and at least one writing-intensive course during undergraduate study.

Requirements

Bachelor's/MSPH degree applications should be submitted through SOPHAS Express by July 1st between the junior and senior years. Bachelor's/MSPH students must be accepted before the start of their senior year. Please note that admitted Bachelor's/MSPH students must complete their Bachelor's degree before formally matriculating in the Bloomberg School of Public Health.

Bachelor's/MSPH applicants must submit the following:

- Transcripts from Johns Hopkins University and, if applicable, transcripts from any other college-level institutions students have attended.*
- Three letters of recommendation.
- Resume or curriculum vitae.
- Statement of purpose and objectives.

*You may upload unofficial transcripts in the document section to expedite the application review process; however, admitted students must submit an official transcript before they can matriculate into the program.

For more information on the Bachelor's/MSPH program, contact Assistant Director David Earle, or visit our website (https://www.jhsph.edu/departments/health-policy-and-management/degree-programs/master-of-science-in-public-health-in-health-policy/ba-msph.html).

MSPH Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Year 1 Course Requirements

The MSPH in Health Policy program requires a minimum of 64 credits of didactic coursework to be completed in the first year of the program. Coursework includes program core requirements and electives. Students must complete a self-assessment and a tentative course plan prior to matriculating.

The program recommends completing all required online course modules in Year 1, but it is permissible to take some in Year 2 if necessary. All courses listed below, or an approved full-term substitute, must be taken prior to graduation. Half-term online modules (worth .5 credits) are offered multiple times throughout the year, including during the summer. Information on the half-term online courses available in the summer will be posted to the MSPH program orientation site. Online courses taken in the summer will be included in first term registration.

Core MSPH Courses

Code	Title	Credits
Summer Prerequisites		
XXX.XXX	Opioid Epidemic Awareness Education

Total Credits		**49**

1 MSPH Seminar in Health Policy must be taken every term.

Electives

In addition to the core course curriculum, MSPH in Health Policy students must take elective courses in order to meet the first year 64 credit requirement. Elective options should be discussed with the academic adviser prior to registration. Students may take the opportunity to specialize in a specific area of policy. Specialty areas include:

Advocacy	Bioethics
Child & Adolescent Health	Environmental Health Policy
Food & Nutrition Policy	Health & Aging Populations
Health Disparities & Health Inequality	Health Economics

Health Finance & Management	Health Informatics
Injury & Violence Prevention	LGBT Health
Mental Health Policy & Services	Quality Improvement & Outcomes Research
Social Policy	Women's & Reproductive Health

Year 2 Course Requirements

Each term of the second year, students must register for the course PH.308.810 Field Placement Health Policy-MSPH for 16 credits. **It is the student's responsibility to maintain their field placement registration for each term.**

Students are welcome to take additional elective courses during the 2nd year if their schedule allows.

Field Placement

The second-year field placement experience allows students to apply their academic training in a professional health policy/public health setting, demonstrate essential health policy analyst competencies and transition seamlessly to a full-time health policy career.

Students are eligible to initiate their placement after meeting all of the following requirements:

- Completion of the required 64 program didactic credits
- Satisfactory academic progress with a minimum overall GPA of 2.75 by the end of the 4th term of their first academic year
- Earned a minimum grade of "C" in all required core courses

The minimum length of a field placement is nine cumulative months. Many students begin their field placement employment in the summer after the first year of coursework, although students are not required to begin their field placement until the first day of the first term in their second year. The nine-month field placement requirement can be completed at one or multiple sites domestically or internationally.

Field Placement Goals

The field placement experience provides students with the opportunity to apply their academic training in real world settings under the guidance of at least one senior-level health policy/public health professional and the program faculty. Through the field placement experience, students will gain perspective on how public health policies affect the public's health and hone their professional health policy skills. During their employment, students are expected to accomplish the following objectives:

- Develop practical, applied public health policy skills including but not limited to: problem analysis, oral and written communications to various audiences, and quantitative analysis to advance evidence-based policy decisions.
- Contribute to their field placement organization by participating in and completing all assigned work. Where appropriate, share work with field placement colleagues, and suggest additional projects in support of the organization's mission.
- Discern their own role in the organization as to how their work fits both into the mission of the organization and within the "larger health policy system."
- Explore the internal structure, function and history of the organization and its impact on the organization's mission and operations.
- Observe the preceptor's leadership and managerial approach and implications of these leadership approaches on the student's field placement experience as well as their overall career advancement and development.

Selection and Approval of Field Placement Sites

Students may choose to pursue field placements in a wide variety of settings, including governmental agencies, the legislative arena, consulting, advocacy, non-profit, research and professional organizations in both domestic and/or international settings.

Students are responsible for securing their own field placement positions, with assistance and final approval from MSPH staff and faculty. The program will disseminate field placement opportunities to students and they are encouraged to utilize existing MSPH partnerships with health policy/public health related employers via alumni contacts, recruiters, and established networking contacts. Additionally, students are encouraged to identify appropriate placements on their own. Placements can be domestic or international and can be completed in a single or multiple experiences. Students must submit an official field placement offer letter to the MSPH for final approval.

Field Placement Requirements

HPM faculty and staff oversee the evaluation of the field placement as a culminating experience. During the field placement, students are experienced to chronicle their professional practice developments in health policy/public health, as well as synthesize and integrate knowledge and competencies acquired in their coursework through the completion of four (4) pass-fail assignments. Details and due dates for these assignments will be provided to the students at the beginning of their 2nd year.

Evaluation Of Student's Completion Of The Requirement: Preceptor

Each preceptor is asked for feedback on the student's performance through the completion of a brief evaluation form near the end of the students' placement.

MSPH Program Policies

Please view the HPM Departmental Policies (p. 301) for details on program satisfactory academic progress, course waivers and the Masters Tuition Scholarship (MTS).

MSPH Learning Outcomes

Program Learning Outcomes

The learning outcomes specific to the MSPH in Health Policy are met through coursework and a 9-month field placement. Upon successful completion of the program, students will have mastered the following:

- Evaluate critically the sources of vulnerability and related policy approaches to improve health and social outcomes in a specific vulnerable population.
- Appraise the range of policy options that can be used to improve health outcomes among populations.
- Describe the array of collaboration, evidence, and leadership needed to translate a policy idea into a viable policy option.
- Apply skills and knowledge about policy formulation to advance health and social policy initiatives.
- Acknowledge the legal and ethical underpinnings of health policy formulation.

CEPH-Defined Foundational Competencies for Professional Programs

The curriculum for the MSPH in Health Policy program includes coursework that has been approved to meet the introductory Public Health Knowledge Learning Objectives (p. 176) identified by CEPH and the 22 CEPH-defined foundational competencies (p. 176) for public health professional programs.

Health Economics and Outcomes Research, MHS

Program Overview

The Master of Health Science in Health Economics and Outcomes Research (https://www.jhsph.edu/departments/health-policy-and-management/degree-programs/master-of-health-science-in-health-economics/) (MHS in HEOR) is an academic/research program focused on economic evaluation and outcomes research methods for healthcare. This rigorous program develops data analytic and economic modeling skills, as employed in the health policy context. Health economics and outcomes research is an applied field of study drawing upon two disciplines: economic evaluation and outcomes research. Methods in this field are used to promote the efficient and equitable allocation of healthcare resources in public health.

The discipline of economic evaluation is grounded on seminal theories of health economics that relate the value of healthcare to individuals and society. Statistical and decision sciences further enable researchers to build upon these theories and model the valuef healthcare technologies to individuals and society. Some examples of this research include the evaluation of the value of new pharmaceuticals to existing therapies, the value of vaccines to society, or the value of a public health campaign to provide safety.

The discipline of outcomes research is grounded on seminal theories of health services that relate the role of healthcare to improving the lives of individuals and society. These theories enable researchers to identify important clinical, patient, and provider outcomes; design measurement techniques to capture different outcomes; and incorporate outcomes measurement into health systems. Specific examples of this research include assessing the impact of new pharmaceuticals on patient outcomes, how to measure a new approach for healthcare delivery, or how to validate a new patient reported outcomes instrument for a pediatric population.

Students enrolled in the program have the opportunity to take courses from multiple departments across the Bloomberg School taught by faculty with expertise in a variety of disciplines-many of which are true leaders in the respective fields. Through their coursework, experience at seminars, and capstone projects, students are provided a multidisciplinary experience. Graduates of the program work in public health research, healthcare consulting, pharmaceutical and insurance industries. Many go on to pursue doctoral study in health services research, health economics or other areas of economics or public health and some have entered the program with a medical degree or plan to pursue medical school, and these graduates have used the tools taught in the program to supplement their clinical research.

The MHS program can be completed both full-time (9 months on site in Baltimore or online) or part-time (2 years online). The curriculum requires a minimum of 64 course credits and a mentored research experience (the Capstone project.)

Program Administration

Program Director: Jeromie Ballreich (https://www.jhsph.edu/faculty/directory/profile/3522/jeromie-m-ballreich/), PhD, MHS
Assistant Director: David Earle, MLA
Sr. Academic Coordinator: Mary Wisniewski

Bachelor's/MHS Program

The Johns Hopkins University, in conjunction with the Bloomberg School, offers a combined Bachelor's degree and Master of Health Science (MHS) in Health Economics and Outcomes Research degree. The combined degree programs have been tailored to prepare students for a career in economic evaluation and outcomes research methods for healthcare.

JHU undergraduate students have the unique opportunity to seek early admission to the MHS in Health Economics and Outcomes Research degree. The combined Bachelor's/MHS program is focused on economic evaluation and outcomes research methods for healthcare. Students in this program will receive co-advising from both schools to optimize their academic experience.

Successful applicants to the program will have taken an undergraduate course in economics or microeconomics.

Requirements

Bachelor's/MHS degree applications should be submitted through SOPHAS Express by July 1st between the junior and senior years. Bachelor's/MHS students must be accepted before the start of their senior year. Please note that admitted Bachelor's/MHS students must complete their Bachelor's degree before formally matriculating in the Bloomberg School of Public Health.

Bachelor's MHS applicants must submit the following:

- Transcripts from Johns Hopkins University and, if applicable, transcripts from any other college-level institutions the student has attended.*
- Three letters of recommendation.
- Resume or curriculum vitae.
- Statement of purpose and objectives.
- *Students may upload unofficial transcripts in the document section to expedite the application review process; however, admitted students must submit an official transcript before they can matriculate into the program.

For further information on the Bachelor's/MHS in Health Economics and Outcomes Research program, contact Assistant Director, David Earle, or visit our website (https://www.jhsph.edu/departments/health-policy-and-management/degree-programs/master-of-health-science-in-health-economics/ba-mhs/).

MHS Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Program Core Curriculum

The MHS in HEOR requires the completion of at least 64 credits. In addition to the program requirements, electives are chosen in consultation with the program or academic adviser. All requirements, including elective courses, must be completed for letter grade if the course is offered for letter grade. Any exceptions must be approved by the Program Director prior to the start of the term

[1] Course meets one or more CEPH learning objectives (p. 176).

Electives

In order to meet the graduation requirement, students are required to take elective coursework. With so many elective options available, all students should meet with their program advisor prior to registering to determine the right options to meet their program goals.

Capstone Project

Students will complete a mentored capstone (scholarly article) as the culminating requirement for the program. To facilitate this, each student will enroll for the MHS Capstone in the 4th term. The capstone is an economic analysis on a topic with health policy implications. The capstone project is completed under the guidance of a BSPH faculty member. All students are required to submit a written product and give an oral presentation of their capstone work in 4th Term.

MHS Program Policies

Please view the HPM Departmental Policies (p. 301) for details on program satisfactory academic progress and course waivers.

MHS Learning Outcomes

Learning Outcomes

The learning outcomes for the MHS in HEOR are met through required and elective coursework, and a mentored research capstone. Upon successful completion of the program, students will have mastered the following; specifically, students will have the ability to:

- Use statistics and econometric methods (including statistical inferences, regression methods, and applied econometric methods) to solve public health problems
- Measure and calculate health outcomes; differentiate between methods of economic evaluation and practice use of economic evaluation
- Apply economic theory and mathematical microeconomic modeling within the field of health economics
- Evaluate and apply methods in health economics and economic evaluation in public health research
- Assess the analytical methods in health economics and economic techniques in the fields of health services research and health policy
- Cite and reference methods and techniques used within the field of health economics
- Execute a post-graduate career plan

CEPH-Defined Introductory Public Health Learning Objectives

The curriculum for the MHS program includes coursework that has been approved to meet the foundational public health knowledge learning objectives (p. 176) in the *Profession & Science of Public Health* and *Factors Related to Human Health* domains as required by the Council on Education for Public Health (CEPH).

Health Policy and Management, PhD

PhD Program Overview

The Department of Health Policy and Management offers a full-time PhD program (https://www.jhsph.edu/departments/health-policy-and-management/degree-programs/phd-in-health-policy-and-management/) with students choosing one of four areas of concentration in which to focus their study. The program trains its students to conduct original investigator-initiated research through a combination of coursework and research mentoring. The curriculum includes core courses that are common across the four HPM PhD concentrations, including courses in health policy, epidemiology, economics, and biostatistics, along with courses specific to each individual concentration. Student enrolled in the PhD program meet the Introductory Public Health knowledge learning objectives through the required curriculum.

- The Bioethics and Health Policy (https://publichealth.jhu.edu/academics/phd-in-health-policy-and-management/bioethics-and-health-policy/) concentration addresses the ethical issues relevant to public health policy, practice and research.
- The Health Economics and Policy (https://publichealth.jhu.edu/academics/phd-in-health-policy-and-management/health-economics-and-policy/) concentration addresses the concepts and methods of economic analysis to study how clinical and public health resources are and should be allocated.
- The Health Services Research and Policy (https://publichealth.jhu.edu/academics/phd-in-health-policy-and-management/health-services-research-and-policy/) concentration addresses the organization, financing and delivery of both curative and preventive services, and their impact on access, quality, outcomes and cost, particularly for the most vulnerable.
- The Health and Public Policy (https://publichealth.jhu.edu/academics/phd-in-health-policy-and-management/health-and-public-policy/) concentration addresses the development, implementation, analysis, and evaluation of public policies to prevent disease and injury, reduce inequalities, and promote the health and quality of life of populations.

Concentration in Bioethics and Health Policy

Concentration Director: Brendan Saloner, PhD (https://www.jhsph.edu/faculty/directory/profile/2929/brendan-saloner/)
The PhD concentration in Bioethics and Health Policy differs from most other bioethics doctoral programs in two important ways: first, it focuses on bioethics as it relates to moral questions in public health and health policy (rather than, for example, in clinical decision-making or bedside dilemmas); and, second, it provides rigorous training in quantitative and qualitative empirical research methods and expects the analysis of data to be part of the dissertation. Students and faculty in the concentration study and conduct independent empirical and normative research on ethical issues in public health practice, research, and policy such as: ethics and emergency preparedness, domestic and international research ethics, genetic screening policy, ethics and obesity prevention, ethics and infectious diseases, HIV screening, social justice and resource allocation.

Original doctoral research conducted by students in the bioethics program involves analyzing primary or secondary empirical data about specific areas of public health, health policy, of health research, and examining the ethical implications of the issue or study results. By the end of their PhD training, students are prepared to provide not only normative recommendations regarding ethics and public health policy but also are equipped to function as independent researchers, conducting empirical research related to bioethics, public health, and health policy.

Students in the Bioethics program complete the departmental core requirements, including courses in health policy, epidemiology, economics, and biostatistics. In addition, students in Bioethics also complete coursework in moral philosophy, applied bioethics and public health law. These requirements are satisfied, in part, through the Department of Philosophy of the Johns Hopkins University and Kennedy Institute of Ethics at Georgetown University. Generally, course work is completed in the first two years of the program. Students are required by the concentration to have a normative ethics chapter in their thesis in addition to the other chapters traditionally required. Students completing the manuscript option for the PhD will have one of their manuscripts focus on the normative aspects of their selected issue or results.

Concentration in Health Economics and Policy

Concentration Director: Matthew Eisenberg, PhD, MPhil (https://www.jhsph.edu/faculty/directory/profile/3217/matthew-d-eisenberg/)
Health economics is a field of study that applies the theoretical concepts an empirical methods of economic analysis to various issues throughout the health sector, such as understanding underlying patient, provider, and insurer behaviors and evaluating healthcare interventions and policies. The PhD concentration in Health Economics and Policy prepares doctoral students for conducting innovative research on the economics of health and healthcare.

The curriculum stresses a solid grounding in applied modern microeconomic theory, economic evaluation, quantitative methods, and econometrics applications, including PhD-level courses from the Department of Economics in the Krieger School of Arts and Sciences (KSAS). Incoming students must have prior training in linear algebra, multivariable calculus, and real analysis in preparation for the economics courses at KSAS. The curriculum offers a broad exposure to the health economics literature and public health disciplines and stresses the policy implications of these fields of research. Student research generally focuses on econometric analyses of hypotheses generated by economic theory or quantitative evaluation of the effectiveness of various interventions.

Concentration in Health and Public Policy

Concentration Director: Cass Crifasi, PhD, MPH (https://www.jhsph.edu/faculty/directory/profile/3089/cassandra-crifasi/)
Finding solutions to public health problems through the development, analysis, implementation, and evaluation of health policies is the focus of the PhD concentration in Health and Public Policy. Faculty and students consider a broad array of public health policies that affect health and safety. These include policies pertaining to food, alcohol, tobacco, firearms, inequality, housing, injury, transportation, and the environment. Students examine challenging public health problems and learn how political, social, economic, ethical, and legal factors affect health, and how health policy can address these problems. Students acquire skills that enable them to conduct rigorous research to inform policy solutions, effectively translate their scholarly work to policy and practice, and emerge as leaders in public health policy.

Faculty employ an interdisciplinary approach to their teaching, research, and practice which is reflected by their backgrounds in medicine, epidemiology, political science, sociology, law, environmental health, and the risk sciences. Through coursework, research, and practice, students across the concentration gain an understanding of the relationship between health and policy.

Within this concentration, students may focus their elective and dissertation studies in one of the following areas: environmental and occupational health policy, injury prevention and control, social policy and health, and the practice of prevention; other specialty areas may be developed in consultation with each student's adviser and concentration director.

Concentration in Health Services Research & Policy

Concentration Director: Jennifer L. Wolff, PhD, MHS (https://publichealth.jhu.edu/faculty/68/jennifer-l-wolff/)

The PhD concentration in Health Services Research and Policy provides a firm grounding in public health principles, research and evaluation methods, policy analysis and numerous content areas related to health and health services delivery and population health. The program at the Bloomberg School is one of the oldest and most respected of its type in the nation.

In this concentration, students acquire the conceptual and methodological tools needed to conduct research, program evaluation, and policy analysis and synthesis to advance the state of knowledge. The curriculum emphasizes the following areas: public and private sector health insurance and financing, organization and delivery of health care, methods for measuring and improving quality and safety of medical care, methods to measure personal and population health status, methods for assessing the impact of government health care policy on individuals and populations, and patient-centered outcomes research and comparative effectiveness research methods for assessing the impact of technology and treatments on patient outcomes. Emphasis is placed on special need populations, such as older adults, minorities, persons with mental illness and substance abuse, high burden diseases, and disabilities.

The concentration stresses the development of skills in research and analysis methods, as well as content knowledge. In addition to careers in academia, this concentration prepares students for leadership careers as health services researchers and health care policy analysts working in public or private agencies or organizations. Issues of relevance to the U.S. are emphasized. All students in the concentration will be exposed to a broad array of methods and content. In addition, it is expected that all students will select at least one methods sub-area (e.g., econometrics, advanced statistical methods, informatics, or qualitative analysis). It is also expected that all students will develop expertise in one or more content areas.

There are many research opportunities within the Department and elsewhere within the University and Health System. The Baltimore-Washington area is the home to the largest concentration of public and private health services research and health care policy analysis organizations in the world. Formal and informal relationships with these agencies, including research practicums, thesis collaborations, and internships are encouraged and facilitated.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

[1] Course meets one or more CEPH learning objectives (p. 176).

Note, all HPM PhD students are required to complete **one** of the following courses in Economics, based on their individual interests

Code	Title	Credits
PH.313.643	Health Economics	3
PH.313.644	Intermediate Health Economics	3
The entire sequence noted below		
PH.313.653	Advanced Health Economics I	2
PH.313.654	Advanced Health Economics II	2
PH.313.655	Advanced Health Economics III	2
PH.313.656	Advanced Health Economics IV	2

Once students have completed all of the required and elective coursework, they must maintain a full-time registration (12+ credits per term) for the duration of their program. Students who have not yet passed the school-wide oral exam should register for 12 credits of PH.300.840 Special Studies and Research in HPM with their adviser to work on their thesis proposal. Once a student has passed the school-wide oral exam, they should register for PH.301.820 Thesis Research in Health Policy and Management.

Graduate Seminar in Bioethics

Students in their first two years will participate in PH.306.861 Graduate Doctoral Seminar in Bioethics a joint graduate student and postdoctoral fellows bioethics seminar at the Berman Institute of Bioethics.

Bioethics Course Requirement

All students in the bioethics concentration are required to take a total of 15 course credits in the field of bioethics. This must include at least one class in moral/political philosophy and at least two classes that are considered advanced bioethics classes. The 15 credits, as a whole, can be satisfied through a combination of JHSPH (including Masters in Bioethics) term-length bioethics courses (2-3 credits each) and/or semester-length courses either at the JHU Homewood campus or through the Kennedy Institute of Ethics at Georgetown (5 credits each). Generally, these requirements are completed during the second year of the program. Students are encouraged to enroll in at least one semester length courses as part of their course combination, but the specific course plan is to be determined by each student in consultation with the concentration director and advisor.

Special Thesis Requirements

Students in the bioethics concentration are welcome to write either a traditional thesis or a manuscript thesis. Additional guidelines for the thesis for students enrolled in the Bioethics and Health Policy concentration can be obtained from the Bioethics concentration director.

Concentration in Health Economics and Policy Curriculum

1 Course meets one or more CEPH learning objectives (p. 176).
2 Core Mathematics for Economics meets for 2 weeks in Summer Term and once weekly in Term 1.
3 KSAS courses follow a semester schedule, and overlap multiple SPH terms. Please see JHU policy on multi-term courses (p. 646) for more information.

Note, all HPM PhD students are required to complete one of the following courses in Economics. The Advanced Health Economics sequence is required for students in the Health Economics concentration.

Code	Title	Credits
PH.313.643	Health Economics	3
PH.313.644	Intermediate Health Economics	3
PH.313.653	Advanced Health Economics I	2
PH.313.654	Advanced Health Economics II	2
PH.313.655	Advanced Health Economics III	2
PH.313.656	Advanced Health Economics IV	2

Electives

Students should choose electives in consultation with the Concentration Director and their academic adviser to ensure adequate preparation for departmental exams. Names and availability of Homewood classes subject to change. Electives must include at least one PhD-level KSAS economics course.

All students are encouraged to choose from the following courses for their elective options, including at least one of the KSAS Applied Economics courses:

Code	Title	Credits
Health Economics Courses		
PH.221.617	Behavioral Economics in Health Decisions	2
PH.221.652	Financing Health Systems for Universal Health Coverage	3
Applied Economics Courses		
AS.180.371	Industrial Organization	3
AS.180.611	Economics of Uncertainty	
AS.180.622	Game Theory	
AS.180.632	Topics in Applied Microeconometrics	
AS.180.651	Labor Economics I	
AS.180.694	Applied Microeconomics Workshop	
Outcomes and Evaluation Courses		
PH.311.615	Quality of Medical Care	3

PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses	4
PH.340.722	Epidemiologic Inference in Public Health II	4
PH.340.620	Principles of Clinical Epidemiology	2
Biostatistics Courses		
PH.140.641	Survival Analysis	3
PH.140.655	Analysis of Longitudinal Data	4
PH.140.656	Multilevel Statistical Models in Public Health	4
PH.140.664	Causal Inference in Medicine and Public Health I	4
PH.140.655	Analysis of Longitudinal Data	4

Once students have completed all of the required and elective coursework, they must maintain a full-time registration (12+ credits per term) for the duration of their program. Students who have not yet passed the school-wide oral exam should register for 12 credits of PH.300.840 Special Studies and Research in HPM with their adviser to work on their thesis proposal; once a student has passed the school-wide oral exam, they should register for PH.301.820 Thesis Research in Health Policy and Management.

Health Economics and Policy Comprehensive Exam

Students take a comprehensive exam in health economics and policy at the conclusion of their second year. The exam has a written component and an oral component. For the written component, students are provided with a brief summary of a specific topic and given two days to write a seven-page, single-spaced research proposal on that topic which draws on the broad theoretical and empirical literature in health economics. For the oral component, students have an hour-long meeting with members of the economics faculty one to two weeks after the written exam to answer questions related to their specific written proposal and their general health economics knowledge. Students receive a copy of the prior year's written exam in advance in order to become familiar with the exam format.

The exam must be completed during the summer between second and third year at a time that is mutually convenient for students sitting for the exam and the faculty exam committee. In order to pass the exam, students must exhibit mastery of theory and methods in both the written and oral portions of the exam. If a student does not pass the comprehensive exam, a single retake is allowed; both the written and oral exams must be completed by the end of the second term in the third year.

Students who do not pass the health economics and policy comprehensive exam on the first attempt must meet with members of the exam committee to determine areas of weakness and create a plan approved by their adviser and the Health Economics and Policy Concentration Director. Students who fail the exam a second time will not be eligible to remain in the Health Economics and Policy Concentration. In exceptional circumstances, a student who has failed the exam a second time may request a transfer to a different HPM PhD Concentration. The student must formally apply and be admitted by the new concentration.

Health Economics and Policy Oral Exam Committee composition

Dissertations in health economics and policy require specialized expertise in econometrics and economic theory. To ensure that students will have access to appropriate advising, the list of proposed committee members for the department and school-wide oral exams must be approved by the Health Economics Concentration Director. Students wishing to change primary advisers after the department or school-wide preliminary oral exam must obtain permission from the Health Economics Concentration Director and the Department chair.

Concentration in Health and Public Policy Curriculum

Note, the timing and choice of some courses will be determined based on availability and individual needs.

[1] Course meets one or more CEPH learning objectives (p. 176).

Note, all HPP PhD students must complete **one** of the following courses:

Code	Title	Credits
PH.180.629	Environmental and Occupational Health Law and Policy	4
PH.305.610	Issues in Injury and Violence Prevention	2
PH.305.684	Health Impact Assessment	3
PH.317.600	Introduction to the Risk Sciences and Public Policy	4

Note, all HPM PhD students are required to complete one of the following courses in Economics, based on their individual interests

Code	Title	Credits
PH.313.643	Health Economics	3
PH.313.644	Intermediate Health Economics	3
The entire sequence noted below		
PH.313.653	Advanced Health Economics I	2
PH.313.654	Advanced Health Economics II	2
PH.313.655	Advanced Health Economics III	2
PH.313.656	Advanced Health Economics IV	2

All HPP students should choose electives in consultation with their academic adviser; students are encouraged to choose from the following courses for their elective options:

Code	Title	Credits
PH.300.650	Crisis and Response in Public Health Policy and Practice	3
PH.300.750	Teaching, Learning and Leading – in the Classroom, in the Workplace and in the Community	3
PH.305.684	Health Impact Assessment	3
PH.317.600	Introduction to the Risk Sciences and Public Policy	4
PH.318.623	Social Policy for Vulnerable Populations in the U.S.	3
PH.410.668	Policy Interventions for Health Behavior Change	3
PH.550.601	Implementation Research and Practice	3

Once students have completed all of the required and elective coursework, they must maintain a full-time registration (12+ credits) for the duration of the program. Students who have not yet passed the school-wide oral exam should register for 12 credits of PH.300.840 Special Studies and Research in HPM with their adviser to work on their thesis proposal. Once a student has passed the school-wide oral exam, they should register for PH.301.820 Thesis Research in Health Policy and Management. Students are also encouraged to engage in a field-based practicum as part of their doctoral education.

Distributional Methods Course Requirements

During the second year, students complete at least two of the methods courses below (equaling at least 6 credits) in one of the following domains. The intent of this distributional methods requirement is to allow the student to develop a special area of methods expertise. Alternative methods courses require approval from the concentration director and the student's adviser. Note that, unless they are listed below, prerequisites for methods courses do not count towards the distributional methods requirement.

Code	Title	Credits
Social and Behavioral Methods		
PH.140.658	Statistics for Psychosocial Research: Structural Models	4
PH.330.657	Statistics for Psychosocial Research: Measurement	4
Design and Conduct of Population-Based Surveys

PH.221.660	Systems Science in Public Health: Basic Modeling and Simulation Methods	3
PH.309.716	Advanced Methods in Health Services Research: Analysis	3
PH.309.720	Applied Econometrics for Health Policy Research	3

Graduate Seminar in Health and Public Policy

Students are expected to participate in the graduate seminar during their first three years of the program and are strongly encouraged to participate as much as their schedule allows in subsequent years of the program.

Specialty Areas

Students in Health and Public Policy may choose specialized areas identified to help students focus their electives in such a way as to best provide the background needed for their dissertation work. Those interested in taking additional graduate level coursework in policy or research methods for the social sciences as part of their electives requirement, should consider courses offered at the Krieger School of Arts and Sciences (KSAS) and at the School of Advanced International Studies (SAIS).

Environmental and Occupational Health Policy

Factors in the human environment that affect health require a multidisciplinary approach for evaluation. Courses from the Departments of Epidemiology, Environmental Health and Engineering, and Health Policy and Management are integrated to provide a foundation for the application of science to occupational and environmental policy. Evaluation, development and refinement of policies at local, state, federal and international levels are emphasized.

Code	Title	Credits
Strongly Recommended		
PH.180.601	Environmental Health	5
PH.180.628	Introduction To Environmental and Occupational Health Law	4
PH.187.610	Public Health Toxicology	4
PH.317.600	Introduction to the Risk Sciences and Public Policy	4
PH.317.605	Methods in Quantitative Risk Assessment	4
PH.317.610	Risk Policy, Management and Communication	3
PH.317.615	Topics in Risk Assessment	2
PH.340.680	Environmental and Occupational Epidemiology	4
Additional Options		
PH.180.631	Environmental and Occupational Health Policy Seminar	3
PH.182.623	Occupational Health Management	3
PH.182.625	Principles of Occupational and Environmental Hygiene	4
PH.182.640	Food- and Water- Borne Diseases	3
PH.188.694	Health of Vulnerable Worker Populations	3
PH.305.615	Occupation Injury Prevention and Safety Policy and Practice	2

Injury Prevention and Control

In conjunction with the Center for Injury Research and Policy, students focus on injuries of all types, including road traffic injuries, falls, burns, drowning and violence. The epidemiology of these injuries is assessed, and strategies to prevent injuries are formulated, implemented, and evaluated. Students who focus their electives in this area may also decide to complete the Certificate in Injury and Violence Prevention.

Code	Title	Credits
Strongly Recommended		
PH.221.612	Confronting the Burden of Injuries: A Global Perspective	3
PH.301.627	Understanding and Preventing Violence	3
PH.301.650	Crafting Effective Solutions to Gun Violence: Problem Solving Seminar	3
PH.305.610	Issues in Injury and Violence Prevention	2
PH.305.615	Occupation Injury Prevention and Safety Policy and Practice	2
PH.305.630	Transportation Policy, Equity and Health	2
PH.305.861	Graduate Seminar in Injury Research and Policy	1
PH.330.640	Childhood Victimization: A Public Health Perspective	3
PH.330.674	Suicide As A Public Health Problem	3
PH.410.625	Injury and Violence Prevention: Behavior Change Strategies	2

Social Policy and Health

Social policy and health examines how social policies influence public health and/or the relationship between healthcare policy and other social policies.

Code	Title	Credits
Strongly Recommended		
PH.305.630	Transportation Policy, Equity and Health	2
PH.308.650	Public Health Perspectives on U.S. Drug Policy	3
PH.318.623	Social Policy for Vulnerable Populations in the U.S.	3
PH.318.636	Urban Policy	3
PH.410.611	Under Pressure: Health, Wealth & Poverty	3

Additional Elective Options		
PH.221.650	Health Policy Analysis in Low and Middle income Countries	3
PH.300.650	Crisis and Response in Public Health Policy and Practice	3
PH.301.615	Seminar in Health Disparities	3

Once students have completed all of the required and elective coursework, they must maintain a full-time registration (12+ credits each term) for the duration of their program. Students who have not yet passed the school-wide oral exam should register for 12 credits of PH.300.840 Special Studies and Research in HPM with their adviser to work on their thesis proposal. Once a student has passed the school-wide oral exam, they should register for PH.301.820 Thesis Research in Health Policy and Management.

HPM PhD Requirements

PhD Program Milestones and Timeline

The following is an estimated timeline for PhD students based on the average length of the program. This timeline may change based on individual circumstances.

Year 1 Milestones

- Complete 1st year required coursework
- Complete TA training module
- Complete PhD qualifying exam

Year 2 Milestones

- Complete 2nd year required and elective coursework
- Meet with adviser regarding individual development plan (IDP) and research proposal
- Satisfy department's research hours requirement
- Satisfy department's TA requirement

Year 3 Milestones

- Defend research proposal at Departmental and School-wide Oral Exams
- Identify Thesis Advisory Committee

Year 4 Milestones

- Meet with Thesis Advisory Committee
- Complete thesis research
- Defend and graduate

Department PhD Core Curriculum

All PhD students must complete the Departmental core courses. These courses are incorporated into the concentration requirements noted earlier. Students are also expected to take methods courses relevant to the field of their thesis research (e.g., courses in ethics, history, political science, economics, epidemiology, and/or advanced courses in biostatistics).

Code	Title	Credits
PH.300.721	Foundations in Health Policy I	2
PH.300.722	Foundations in Health Policy II	2
PH.300.723	Foundations in Health Policy III	2
PH.300.724	Foundations in Health Policy IV	1
PH.300.741	PhD Seminar in Health Policy: Using Secondary Data to Conduct Health Policy Research	1
PH.300.715	Advanced Research and Evaluation Methods in Health Policy	4
PH.300.870	The Research and Proposal Writing Process I	2

PH.300.871	The Research and Proposal Writing Process II	2
PH.306.665	Research Ethics and integrity: U.S. and International Issues	3
And one of the following courses/course sequences in economics		
PH.313.643	Health Economics	3
PH.313.644	Intermediate Health Economics	3
The entire sequence noted below		
PH.313.653	Advanced Health Economics I	2
PH.313.654	Advanced Health Economics II	2
PH.313.655	Advanced Health Economics III	2
PH.313.656	Advanced Health Economics IV	2

Residency & Course Distribution Requirements

The total number of course credits to be earned depends upon individual concentration requirements. But, to meet the Residency requirement, students must complete a minimum of 64 credits of didactic courses in four consecutive terms. When general and program-specific requirements total less than 64, the difference may be made up in electives. Thesis Research (820 series) may not be included in the count, but special studies earning credit that is part of a concentration's requirements only (840 series) are admissible.

The School's Policy and Procedure Memorandum (PPM) overseeing all PhD programs require that *at least 18 credits* of formal coursework must be completed *outside* the student's primary department. Among these 18 credit units, no fewer than three courses must be completed in two or more departments of the Bloomberg School of Public Health. The remaining outside credit units may be earned in any department or division of the University.

PhD students who have completed a master's program at the Bloomberg School of Public Health may apply 12 credits from that program toward this School requirement. Students must request this application of credits in a formal letter. Contact the HPM Office of Academic Affairs for further information.

Full-time PhD registration

The Department is firmly committed to full-time PhD doctoral education. The Department's policy requires a full-time registration for the duration of the student's program. Students should register for a minimum of 16 credits per term during the first year of the program. This will fulfill the School's residency requirement of four consecutive terms of 16-credits each.

The Department strongly discourages PhD students from registering for more than 18 credits in any one academic term unless required by their concentration. Any decision to register for more than 18 credits should be carefully considered and discussed with the student's adviser prior to registering.

Once a student has completed all of their required or formal coursework, they must maintain a full-time 12 credit per term registration. Students who have not yet successfully passed the School-wide Preliminary Oral Exam should register for special studies credits with their adviser while working on their thesis proposal. Once the School-wide Preliminary Oral Exam has been successfully passed, students should register for thesis research credits.

Qualifying Exam

PhD students are eligible for the departmental qualifying exam upon successful completion of the first year-required courses while maintaining the minimum GPA requirement. All students matriculating in September are expected to sit for the exam at the end of the first year. The exam is offered every June. The Academic Policy and Admissions Committee (APAC) and the PhD Exam Committee will consider exceptions on a case-by-case basis. The HPM PhD Qualifying Exam Guidelines can be found on the HPM doctoral portal page (portal login required).

Research Hours

PhD students are required to engage in at least two research projects to understand different research approaches. While students are encouraged to work within the department, students are free to pursue opportunities of interest throughout the School, University or off-campus.

The research hours can involve participation in any of the following aspects of research, including, but not limited to: elements of research design (literature review and development of the conceptual framework of a study); community development and liaison activities; community needs assessment and its related social, epidemiological, behavioral, or political diagnosis; development and piloting of health interventions or materials; quantitative or qualitative data collection; data analysis and interpretation; policy analysis; literature reviews; manuscript preparation; grant preparation; and any other form of research approved by the adviser.

Students are expected to engage in at least two different research tasks, which may be related to a single study or two separate studies. Up to 50% of the required hours can be accomplished through off -campus work, as long as the adviser has approved the work. A minimum of 300 hours total split over both projects should be used as a guideline.

The research hours must be met prior to scheduling the Departmental Preliminary Oral Exam. The Department, through submission of the Research Hours Form to the HPM Office of Academic Affairs, will monitor completion of this requirement. The form is available on the HPM doctoral portal page (portal login required.)

TA Educational Experience

All PhD students are required to serve as a full-time teaching assistant (TA) for *six* Health Policy and Management courses while enrolled in the PhD program. The department strongly values this educational experience and believes that these skills are critical components to a PhD education.

The following restrictions apply to the experience:

- Only courses offered by the Department of Health Policy and Management can be used to meet the requirement.
- Courses must be for two or more credits offered during the traditional 8-week term or as part of the summer MPH curriculum.

Courses offered in an Institute (summer, fall or winter) may not be used to fulfill the requirement.

PhD students may occasionally have primary instructor responsibilities in Johns Hopkins graduate or undergraduate courses while enrolled in the PhD program. In these situations, a student may request a one-for-one substitution to the TA requirement. Students requesting the substitution should submit a written request, including a copy of the course syllabus and letter of support from their adviser to the HPM Office of Academic Affairs.

Online paperwork to confirm completion of this requirement must be submitted and approved by the course instructor prior to the start of the term in which the course is offered. The link to the online form will be forward to an identified student by the HPM Office of Academic Affairs.

Once the six course requirement has been met, PhD students serving as a TA in HPM course(s) will receive payment for their efforts.

Individual Development Plan (IDP)

The Individual Development Plan (IDP) is a mechanism for self-reflection as well as a communication and planning tool for the student and their faculty adviser and mentor(s). The goal of the IDP is to support the student's successful performance in the program and in attaining readiness for their intended future career. To this end, the IDP creates a structure for the student to:

1. assess current skills, interests, and strengths;
2. make a plan for developing skills to meet academic and professional goals; and
3. communicate and collaborate with supervisors, advisers, potential employers, and mentors about evolving goals and related skills.

Rising HPM 2nd year PhD students will receive instructions on preparing the IDP after successful completion of the 1st year qualifying exam. Students are required to complete the self assessment and the IDP and meet and discuss with their adviser prior to submission of their first progress report due in the fall of the 2nd year. Third and 4th year students will revisit their IDP and discuss with their adviser each year at the submission of their yearly progress report.

Student Progress Report

The Department is committed to assisting students make steady and timely progress through the PhD program. To facilitate this process, all PhD students are required to submit regular progress reports to the HPM Office of Academic Affairs.
Students who have passed the written qualifying exam, but have not yet passed their School-wide Preliminary Oral Exam, must submit a progress report on December 1 and June 1 each year until they have passed their School-wide Preliminary Oral Exam. The report must be reviewed, discussed and approved by the student's adviser prior to submission.

Once a student has passed their School-wide Preliminary Oral Exam, a yearly progress report is submitted to the HPM Office of Academic Affairs until the program is complete. The progress report is due each year on June 1st. The report must be reviewed and discussed with the student's adviser prior to submission.

Preliminary Oral Exams

Departmental

The Departmental Preliminary Oral Exam takes place before the School-wide Preliminary Oral Exam. The Departmental Exam may not take place until after the successful completion of the departmental qualifying exam. The format of the exam is similar to the School-wide Preliminary Oral Exam and is intended to determine if the student is academically prepared to pass the School-wide Preliminary Oral Exam and carry out independent research.

The exam requires the student to prepare a thesis proposal that will be examined by the faculty exam committee. The HPM Departmental Preliminary Oral Exam committee consists of a minimum of three faculty members; one must be the student's adviser. A fourth alternative committee member should be identified and may choose to participate in the exam. Guidelines for the Departmental Preliminary Oral Exam can be found on the Department's portal page (portal login required).

School-wide

The School-wide Preliminary Oral Exam takes place after the student has successfully completed the departmental qualifying exam and the Departmental Preliminary Oral Exam. The purpose of this examination is to determine whether the student has both the ability and knowledge to undertake significant research in their general area of interest.

The examiners will be concerned with the student's capacity of logical thinking, breadth of knowledge in relevant areas, and ability to develop and conduct research leading to a completed thesis. While the specific proposal serves as a vehicle for determining the student's general knowledge and research capacity, this examination is not intended to be a defense of a specific proposal. The student will be expected to defend the public health significance of the proposal as well as the methodologies use to evaluate the problem.

The exam should be taken at the earliest feasible time, before significant engagement in thesis research and must not take place until after the Departmental Oral Exam has been successfully passed. If the student fails the Preliminary Oral Exam and is permitted re-examination, they must be re-examined within one year.

Extension Request to Sit for Oral Exams

The School's PPM governing the PhD program requires students to sit for the School-wide Preliminary Oral Exam prior to the start of their 4th year in the program. Failure to meet this deadline necessitates the submission of an extension request by the student to both the Department and the School before they are permitted to continue in the program.

An initial request for an extension of time to sit for the oral exams must be submitted at least two months prior to the start of the 4th year in the program and may not exceed two terms.

The request is first submitted to the HPM APAC Student Matters Subcommittee for review, and if approved, is forwarded to the Student Matters Subcommittee of the School's Committee on Academic Standards (CAS). All requests must include the following information or will not be considered:

- A letter of request, initiated and signed by the student, stating the rationale for the request
- A supporting letter signed by the advisor
- Timetable and plan developed by the student in collaboration with the student's advisor and members of the thesis advisory committee that provide specific milestones from completion; agreement to this plan should be indicated in writing by member(s) of the thesis advisory committee
- A (student) copy of the current transcript
- If the HPM APAC Student Matters Subcommittee approves the request, a supporting letter from the Department will be included in the request that is forwarded to the school for final approval.

If the extension is granted, the student and advisor, in cooperation with the HPM Office of Academic Affairs, must provide evidence of progress at intervals determined by the applicable school subcommittee, not to exceed 90 days, toward satisfying the milestones specified in the plan for completion. Failure to meet the specified milestones according to the prescribed timetable for completion may result in further action. Requests for a second extension beyond that of the initial extension are taken very seriously by the Department and CAS and require extension documentation.

Thesis Advisory Committee

Within three months of passing the School-wide Preliminary Oral Exam, every doctoral student must identify a thesis advisory committee. This committee, consisting of the student's adviser and at least two other faculty members from either inside or outside the Department, will meet with the student at minimum once a year until the student has graduated to evaluate the student's work and progress.

Each student is required to submit a written summary report to the advisory committee prior to the committee's meeting. This approved summary report will be submitted to the Department each June with the annual progress report. A sample of the summary report can be found on the Department's portal page (portal login required).

Thesis Guidelines

All PhD students must complete an original investigation presented in the form of a thesis. The thesis must be based on original research, worthy of publication, and acceptable to the Department and to a committee of faculty readers. During the student's application process, various research ideas may have been discussed with faculty members. However, each student's thesis proposal must be developed, reviewed and found acceptable to Departmental faculty while enrolled as a doctoral student at the BSPH.

PhD students in HPM have two options for the format of the thesis:

- The traditional doctoral thesis consists of a statement of the problem and specific aims; a literature review; data and research methods; analyses and results; and a discussion of findings and their implications. The form these will take reflect the specific academic discipline or orientation guiding the student's research.
- The manuscript-oriented thesis is an alternative to the traditional thesis. The manuscript thesis consists of a total of three (or more) papers, linked to the student's research topic.

The decision on which format to follow should be made at the time of the Departmental Preliminary Oral Exam. If, during the writing process, the student wishes to change formats, the student must seek approval for this change from their faculty adviser and thesis committee

The Department has developed the following guidelines to help a student determine which of these options is best for their particular research. Students should discuss the advantages and disadvantages of each option with their adviser before determining a strategy.

Traditional Thesis Guidelines

The traditional doctoral thesis generally consists of an abstract, five chapters, references, and any appendices. The outline of chapters below is merely a guide. The page numbers are rough estimates, and the form of the chapters will vary, reflecting the academic discipline or orientation of the student's research.

- **Abstract**: The abstract is a short overall summary of the work. It lays out the purpose(s) and aims of the study, the methods, and the key results and implications. The abstract generally is 2-3 double spaced pages.
- **Chapter I: Introduction: Statement of the problem and specific aims**. This chapter, which tends to be relatively short (5-6 double spaced pages), provides an introduction to the thesis. It describes briefly why this work was undertaken, what background conditions or data suggested it was an important problem, and what, then, this project was intended to accomplish.
- **Chapter 2: Literature Review**. The literature review summarizes existing literature that informed the thesis research. It generally is organized topically. The literature review tends to be a fairly detailed review, particularly for those topics most directly related to the content and methods of the thesis. The literature review tends to be 30-60 page in length.
- **Chapter 3: Methods**. The content of the methods chapter varies tremendously with the methodological approach taken by the student for the thesis research. With traditional empirical studies, it will generally include the specific aims, research questions, and/or hypothesis; a description of the source of study data, a description of the study instrument and its development, if relevant; a description of secondary data obtained, if relevant; analytic methods, including data cleaning, creation of a data set, creation of variables and/or qualitative codes, types of analyses done; and human subjects issues. The methods chapter ranges from 20-40 pages.
- **Chapter 4: Results**. The results chapter reports the main findings of the thesis. It often is organized by research question or specific aim or hypothesis, but need not necessity follow this format. The results chapter ranges from 25-50 pages.
- **Chapter 5: Discussion of results and policy implications**. The discussion chapter both summarizes key findings and discusses findings in light of existing literature and in light of their policy implications. Also included generally are a description of the study's limitations and implications for future research. The discussion chapter is generally 25-50 pages.
- **References**. A listing of all citations used for the thesis must be provided. The Department allows any standard format for references.
- **Appendices**. Appendices can be used for many purposes. They can include study instruments, if relevant; they can include additional tables not included in the main body of the thesis; also to be included must be a copy of the student's CV. The traditional thesis should be able to 'stand alone' without appendices, however, so results should never be put in appendices that are key to the study's main findings.

Manuscript-Oriented Thesis Guidelines

The manuscript thesis consists of the following:

- A total of three (or more) papers, linked to the student's thesis topic. One of these papers may be a literature review, providing a comprehensive critical review, if it is suitable for publication.
- A chapter that integrates and discusses the findings reported in the manuscripts. It should include a discussion of the conclusions of the research, and should make recommendations for further studies.
- An appendix outlining in detail the study methods and any accompanying data tables necessary to understand the data.

A manuscript-oriented thesis must also meet the following criteria:

- The PhD student must be the first author on the three manuscripts used to satisfy this requirement;
- No manuscript will be accepted as part of the thesis if it was submitted for publication before the student passes the School-wide Preliminary Oral Exam; and,
- Co-authors should be determined based on the criteria (http://www.icmje.org/recommendations/browse/roles-and-responsibilities/defining-the-role-of-authors-and-contributors.html) for authorship developed by the International Committee of Medical Journal Editors (ICMJE)

Role of Faculty Adviser

The adviser's role is to facilitate successful completion of the doctoral thesis. Students should refer to the HPM policy for advising for general guidelines about the frequency of meetings between advisers and students during the thesis research and writing period. The thesis must reflect the student's independent and original work. The adviser can and should provide ongoing and critical feedback, but the research must be that of the student.

Even if the adviser (or another committee member) serves as a co-author on a manuscript, the manuscripts must be viewed first and foremost as fulfilling the student's needs in the thesis process, with publication as a secondary goal. Advisers or other committee members who are co-authors may not undertake the first draft of any portions of the manuscripts nor substantial re-writes. Whether an adviser will be co-author on any manuscript should be decided early in the thesis writing process.

Thesis Approval

PhD advisers must provide official approval of the final draft of a student's thesis prior to dissemination to the other members of the Final Oral Examination Committee. A signed Thesis Approval Form (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx) (portal login required) must accompany each copy of the thesis distributed. Students should provide the final copy of the thesis to the readers at least four weeks prior to the Final Oral Examination.

Thesis Readers and Final Examination Committee

Paperwork (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx) (portal login required) to establish the formal final examination committee is submitted by the Department to the Office of Records and Registration at least one month in advance of the final defense.

Final Public Seminar and Closed Oral Defense of Thesis

A formal, public seminar and closed oral defense of the thesis before a committee of the faculty is one of the final steps for a PhD candidate. The public seminar and oral thesis defense are typically held on the same day with the seminar being conducted first, followed immediately by the closed defense before the approved final exam committee.

The public seminar generally lasts approximately 45 minutes to 1 hour, and the closed defense generally lasts approximately 60-90 minutes. Members of the Final Oral Examination Committee are required to attend both the seminar and the closed defense. The Office of Records and Registration will post the final defense date and location in the Public Health calendar. Students are strongly encouraged to attend the public seminars of their fellow students whenever feasible.

The Final Oral Examination Committee judges all components of the thesis to be either: Acceptable, Acceptable with Revisions, or Unacceptable. This is the case for both a traditional thesis and a manuscript-oriented thesis. Students, with guidance from their adviser, will rework their thesis until all components are judged Acceptable.

Taking the Final Oral Examination and receiving an unconditional pass does not release the student from further responsibilities to complete the degree requirements. All students must stay continually registered until the degree requirements have been completed, including receipt of the thesis acceptance letters and electronic submission of the thesis to the Sheridan Library. Once everything has been submitted, the student will be reported to the Committee on Academic Standards and be considered complete.

Online Submission of Thesis to Sheridan Library

- ETD Electronic Submission (https://etd.library.jhu.edu/)
- Formatting Instructions (https://www.library.jhu.edu/library-services/electronic-theses-dissertations/)
- Sheridan Library contact: dissertations@jhu.edu
- Publication Embargo: Students are allowed to choose an embargo period of 0, 1, 2, 3, or 4 years during the ETD submission. This means that the Sheridan Library will withhold publication of the thesis for the period of time chosen. The Sheridan Library does make some details of the thesis public (student name, degree, thesis title, abstract) during the embargo period, but the actual thesis is hidden from view.
- The Department of Health Policy and Management does not require submission of an electronic or paper copy of the final thesis document to the department. However, students must forward the thesis acceptance confirmation from the Sheridan Library to the HPM Office of Academic Affairs to certify completion of all program requirements.

Extension Request for Completion of Degree Requirements

The School's PPM governing the PhD program requires students to defend their thesis within seven years of matriculation. Failure to meet this deadline necessitates the submission of an extension request by the student to both the Department and the School before they are permitted to continue in the program.

A request for an extension of time to complete the degree must be submitted at least two months prior to the conclusion of the 7th year in the program and may not exceed four terms.

The request is first submitted to the HPM APAC Student Matters Subcommittee for review, and if approved, is forwarded to the Student Matters Subcommittee of the School's Committee on Academic Standards (CAS). All requests must include the following information or will not be considered:

- A letter of request, initiated and signed by the student, stating the rationale for the request
- A supporting letter signed by the advisor
- Timetable and plan developed by the student in collaboration with the student's advisor and members of the thesis advisory committee that provide specific milestones from completion; agreement to this plan should be indicated in writing by member(s) of the thesis advisory committee
- A (student) copy of the current transcript
- If the HPM APAC Student Matters Subcommittee approves the request, a supporting letter from the Department will be included in the request that is forwarded to the school for final approval.

If the extension is granted, the student and advisor, in cooperation with the HPM Office of Academic Affairs, must provide evidence of progress at intervals determined by the applicable school subcommittee, not to exceed 90 days, toward satisfying the milestones specified in the plan for completion. Failure to meet the specified milestones according to the prescribed timetable for completion may result in further action. Requests for a second extension beyond that of the initial extension are taken very seriously by the Department and CAS and require extension documentation.

HPM PhD Program Policies

HPM PhD Student Work Space

The Department provides shared student office space for full-time PhD students. Each full-time PhD student in the Department will have access to a workstation and a locked drawer file cabinet in one of the identified shared office spaces. The workstation is not dedicated to an individual student; those using the office will select a station that is available when they use the space (similar to a parking lot). Any materials that the student wishes to leave in the office must be locked in their assigned file cabinet.

The HPM Office of Academic Affairs will evaluate student workspace yearly. Incoming students will be assigned keys at orientation. Upon graduation, students must return the key to the Sr. Academic Coordinator in order to be certified for graduation. Students are responsible for both the room and file cabinet keys. Lost keys should be reported to the Sr. Academic Coordinator immediately; replacement keys are subject to a $10 replacement fee.

Note: Students working as Research Assistants on a funded grant which requires analyses of restricted/confidential data may be eligible for other office space arrangements. Faculty responsible for projects in this category must submit formal requests to the HPM Administrator stating the need for individual space.

HPM Grant Proposal Submission Process

Most sources of outside the Department or School funding for PhD education requires the submission of a formal grant proposal. HPM works closely with students in submitting these proposals and managing the award if and when it is awarded.

If a student is considering submitting a grant proposal, they must contact the Department's Grants and Contracts Analyst who will work with them on the application process. All application/proposals that are submitted to external funding agencies must be reviewed and approved by the Office of Research Administration (ORA). The department requires that all application materials be submitted a *minimum of 8 business days before the grant due date.* Students should seek guidance from the Grants and Contracts Analyst for specific due dates.

Once a grant has been submitted, the student must be available by e-mail or phone at least 72 hours after submission in case any questions arise.

IRB Approval

The Institutional Review Board (IRB) supports students in applying ethical principles in their research interactions with humans and/or their data, regardless of whether IRB review is required.

All HPM PhD research must undergo IRB review and students must receive approval or an approved exemption within three months of passing the School-wide Preliminary Oral Exam. Students should consult the IRB website (https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/student-research/) and specifically review the Student Primer and FAQ that are posted on that page.

PhD students are required to submit the "Thesis Research Documentation Form" *within three months* of passing the School-wide Preliminary Oral Exam. This for requires the signature of the HPM Senior Academic Coordinator in addition to the student and advisor prior to submission. Forms should be submitted to the HPM Office of Academic Affairs who will forward the completed form to the appropriate school office. Forms submitted directly to the school office without a departmental signature will not be accepted.

PhD Program Learning Outcomes

HPM PhD Departmental Competencies

Upon successful completion of the PhD program in Health Policy and Management, students in each of the four concentrations will have mastered the following core competencies; specifically, students by the end of the program will have the ability to:

- Analyze the nature, scope and determinants of major health policy problems by applying conceptual frameworks from key academic disciplines, formulating testable hypotheses, and identifying appropriate interventions based on an understanding of the existing evidence base.
- Critique the policymaking process, including the underlying roles of legislation, regulation, litigation, and advocacy; the differences between federal, state, and local policies; and the influence of academic research in the policy formulation and evaluation processes.
- Assess the organization and financing of public health and/or medical services and critique their impact on access and use, quality of care, costs, and outcomes.
- Apply appropriate rigorous empirical methods to the evaluation of health policy, including a well-rounded foundation of the methods and tools of public health.
- Communicate scientific findings effectively through written and oral methods to technical and lay audiences, demonstrating an ability to interpret study limitations and prior research.
- Conduct research in accordance with the highest ethical standards, scientific integrity, and interpersonal collegiality.

Concentration in Bioethics and Health Policy Competencies

Upon successful completion of the PhD concentration in Bioethics and Health Policy, students will have mastered the following core competencies; specifically, students by the end of the program will have the ability to:

- Recognize moral problems in public health practice, research, and health policy, and identify which ethical principles or foundational ethical theories are at stake and potentially in tension.
- Analyze moral problems in public health practice, research, and health policy, identify and communicate morally compelling lines of argument that may include: building on existing ethical frameworks, further specification of an existing framework or ethical principle; further specification of an ethical norm or formulating a novel ethical norm.
- Use relevant literature from moral and political philosophy and public health ethics in analyzing moral problems in public health practice, research, and health policy.
- Identify when, why, and how empirical scholarship can make a contribution to bioethics and how data can be relevant to normative analysis.
- Construct public policy arguments informed by the analysis of empirical and normative scholarship in bioethics.

Concentration in Health Economics and Policy Competencies

Upon successful completion of the PhD concentration in Health Economics and Policy, students will have mastered the following core competencies; specifically, students by the end of the program will have the ability to:

- Apply key concepts in microeconomic theory, including how the behavior of individual households and firms affects the market supply and demand of goods and services and how market failures arise under certain circumstances.
- Analyze key theoretical concepts in health economics, including the underlying determinants of health, patient demand for healthcare services, and the organization and financing of healthcare services, with an emphasis on critiquing the effects of alternative forms of financing and organizing healthcare services on cost, quality, access, and overall public health.
- Apply key concepts in applied econometrics, including both sophisticated empirical models for healthcare utilization, expenditures, and health outcomes.
- Conduct original research in the field of health economics, ranging from conception of innovative ideas through study design, selection and application of appropriate analytic methods and data; interpretation of results; and both written and oral dissemination of findings.

Concentration in Health and Public Policy Competencies

Upon successful completion of the PhD concentration in Health and Public Policy, students will have mastered the following core competencies; specifically, students by the end of the program will have the ability to:

- Demonstrate how to identify, describe, and analyze a public health problem, and recommend an appropriate policy solution to address it (e.g., legislative, regulatory, judicial, organizational).
- Describe the steps of the policymaking process, including problem setting, formulation, implementation, analysis, and evaluation.
- Critically compare and apply theories of the policy process to the study of public health problems.
- Identify the major institutions, sectors, and stakeholders involved in the policymaking processes at the global, federal, state, and local levels.
- Effectively translate and communicate public health policy research, in both oral and written forms, to policymakers, key stakeholders, and the public.

Concentration in Health Services Research & Policy Competencies

Upon successful completion of the PhD concentration in Health Services Research and Policy, students will have mastered the following core competencies; specifically, students by the end of the program will have the ability to:

- Understand key concepts and developments in the field of health services research, including issues relating to care quality and safety, access, cost, and the role and effects of alternative forms organizing and financing services.
- Integrate and critique theoretical and empirical literature in the formulation of an original and significant health services research and policy research question with clear and testable hypothesis.
- Evaluate the strengths and weakness of experimental, quasi-experimental and observational study designs and be able to select the most appropriate design for a specified research question.
- Identify, evaluate and determine the most suitable data source for a specified research question (data sources may include existing data sources or the development of a primary data collection protocol utilizing quantitative or qualitative methods).
- Select and implement appropriate analytic techniques from advanced epidemiological, statistical, economic, and qualitative or survey methods to examine a specified research question.

CEPH-Defined Introductory Public Health Learning Objectives

The PhD program includes coursework that has been approved to meet the Introductory Public Health Learning Objectives (p. 176) required by the Council on Education for Public Health (CEPH) for academic programs.

Health Policy and Management, DrPH (Tsinghua)

Tsinghua DrPH Program Overview

The JHU-Tsinghua Doctor of Public Health (https://www.jhsph.edu/departments/health-policy-and-management/degree-programs/drph-in-health-policy-and-management/jhu-tsinghua-drph-program/) program is a cohort-based program administered collaboratively between the Department of Health Policy and Management at Johns Hopkins University and the Institute for Hospital Management at Tsinghua University, with support from the Capital Healthcare Group. Students undertake the Healthcare Management and Leadership track within the Health Policy and Management concentration of the School-wide DrPH program. Courses for the cohort program are offered in Beijing, China and Baltimore, Maryland, with limited online coursework. At this time, no further cohorts are being enrolled.

The mission of the DrPH program within the Bloomberg School of Public Health is to prepare graduates to advance the public's health through the integration and application of a broad range of knowledge and skills in leadership, practice, policy analysis, management, and professional communication, coupled with preparation in a specific public health field.

Healthcare Management and Leadership Overview

The focus of the Healthcare Management and Leadership Track is on measuring, monitoring and improving the clinical and financial performance of health services organizations, as well as training leaders for organizational change. The track curriculum is based on the Malcolm Balridge Healthcare Criteria for Performance Excellence framework.

Concurrent MHS in Health Finance and Management Option

DrPH students currently enrolled in the JHU-Tsinghua program have the opportunity to pursue a Master of Health Science (MHS) with a focus in Health Finance and Management concurrently with their doctoral program. The administrative requirements and certifications by the faculty as set forth in the existing Policy and Procedure Memoranda apply to the doctoral degree requirements of the concurrent Doctoral/Master of Health Science program in Health Finance and Management.

Students must be accepted into the JHU-Tsinghua DrPH program within the Department of Health Policy and Management. With the program's approval, the student may submit an application to the concurrent Master of Health Science program in Health Finance and Management.

Core course requirements consist of successful (graded) completion of the core courses: these classes should be taken over the course of the student's first two or three years in the DrPH program. Sixty-four total credits of coursework are required.

Additionally, students must successfully pass the written comprehensive examination. Upon satisfactory completion of these requirements, the student is eligible for award of the Master of Health Science in Health Science in Health Finance and Management degree.

Should a student not complete the DrPH degree, the MHS degree may be awarded. Students must complete all of the core course requirements, and a final graded paper. The degree will be awarded upon the recommendation of the Department.

Program Administration

Program Director: Leiyu Shi (https://www.jhsph.edu/faculty/directory/profile/640/leiyu-shi/), DrPH, MBA, MPA
Director, HPM Office of Academic Affairs: Judith L. Holzer, MBA
Senior Academic Program Coordinator: Mary Sewell

Tsinghua DrPH Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Cohort Course Requirements

Students will follow the cohort plan developed by the program administration each year. Students are expected to complete course requirements with their cohort.

Year 1

Code	Title	Credits
Taken Prior to Matriculation		
PH.550.860	Academic & Research Ethics at BSPH	
XXX.XXX	Introduction to Online Learning	
XXX.XXX	Title IX & Sexual Harassment Prevention Training for Students	
Taken After Matriculation		
PH.180.601	Environmental Health	5
PH.309.620	Managed Care and Health insurance	3
PH.309.712	Assessing Health Status and Patient Outcomes	3
PH.311.865	Tsinghua DRPH Seminar	1
PH.312.600	Managing Health Services Organizations	4
PH.312.603	Fundamentals of Budgeting and Financial Management	3
PH.312.610	Foundations of Organizational Leadership	3
PH.312.621	Strategic Planning	3
PH.312.635	Human Resources in Health Organizations	2
PH.550.630	Public Health Biology	3
Total Credits		**30**

Year 2

Code	Title	Credits
PH.340.601	Principles of Epidemiology	5
PH.312.670	Negotiation in Health Care Settings	3
PH.312.620	Performance Measurement in Health Care	2
PH.312.623	Financial Management in Health Care I	3
PH.311.865	Tsinghua DRPH Seminar	1
PH.140.611	Statistical Reasoning in Public Health I	3
PH.140.612	Statistical Reasoning in Public Health II	3
PH.140.613	Data Analysis Workshop I	2
PH.140.614	Data Analysis Workshop II	2
PH.300.651	Introduction to the U.S. Healthcare System	4
PH.309.616	Introduction to Methods for Health Services Research and Evaluation I	2
PH.309.617	Introduction to Methods for Health Services Research and Evaluation II	2
PH.312.617	Fundamentals of Financial Accounting	3
PH.312.633	Health Management Information Systems	3
PH.313.641	Introduction to Health Economics	3
PH.306.663	Legal and Ethical Issues in Health Services Management	3
Total Credits		**44**

Year 3

Code	Title	Credits
PH.140.620	Advanced Data Analysis Workshop	2
PH.300.600	Introduction to Health Policy	4
PH.309.730	Patient Safety and Medical Errors	3
PH.309.750	Applied Research Methods for Health Policy and Management	3
PH.311.615	Quality of Medical Care	3
PH.311.867	Tsinghua Graduate Seminar	1
PH.311.720	Tsinghua DRPH Capstone	2
PH.312.607	Quantitative Tools for Managers in Asia	3
PH.312.624	Financial Management in Health Care II	3
PH.312.660	Marketing in Health Care Organizations	3
PH.313.790	Introduction to Economic Evaluation	3
PH.313.793	Extended Exercises in Cost Effectiveness	2
PH.340.620	Principles of Clinical Epidemiology	2
PH.410.620	Program Planning for Health Behavior Change	3
Total Credits		**37**

Year 4

Code	Title	Credits
PH.300.840	Special Studies and Research in HPM	4
PH.311.840	HPM DrPH Qualifying Exams	3
Total Credits		**7**

Year 5 And Beyond

Code	Title	Credits
PH.311.820	Thesis Research HPM-DRPH	4
DrPH students must maintain a 1-credit per term registration until graduation.		
Total Credits		**4**

Registration Requirement

By design, the JHU-Tsinghua DrPH program in HPM is part-time. All students must be continuously registered for **at least one credit per term** for the duration of the program. Students who are not able to participate in coursework or dissertation research work during a registration term must request an official leave from the program.

Students may request leave for up to 8 terms (2 years) over the entire duration of their program.

Qualifying Exam

JHU-Tsinghua DrPH students became eligible for the Department Qualifying Exam at the conclusion of Year 3. The exam consists of a case study identified by the exam committee for the exam period.

The exam is offered in July. Students receiving a grade of "conditional pass" or "fail" will be eligible for a retake at the discretion of the exam committee.

DrPH Practicum Requirement

JHU-Tsinghua DrPH students are required to complete a practicum. The purpose of the DrPH practicum is to further the development of high-level competencies and, in particular, applied competencies and critical thinking relevant to the student's area of specialization. The practicum should form an integral part of the student learning, complementing course work, special studies and student dissertations in a way that responds to student learning objectives.

Minimum Practicum requirements

- **Applies and further develops public health skills and competencies** - the objectives of the student practicum should be clearly identified as part of an integrated, individualized, academic plan that is approved in advance of the practicum. Students will identify competency domains in which they wish to achieve high-level skills and the DrPH student practicum presents an important opportunity for the application of these skills.
- **Is framed and carried out in a public health context** - the practicum will include population-level activities carried out at, or in collaboration with, an organization or agency. Students should not merely crunch numbers or administer surveys, but should be engaged in the larger public health context of their activities.
- **Is supervised and supported** - The practicum preceptor will be qualified to evaluate the student's professional competence and will supervise the student throughout the project. The preceptor will typically be from an outside organization (i.e., community-based organization, health department, private corporation, etc.), but can be a JHSPH faculty member if appropriate. The preceptor will provide background information, directions, feedback, and guidance with regards to the student progress on well-defined learning objectives. The faculty adviser will be kept informed of the student's practicum activities and progress and may provide additional assistance if warranted.
- **Is significant** - The practicum should be more than an opportunity for additional work experience given the significant work experience already held by DrPH students. Practicum projects should make a significant contribution to the organization with which the student is collaborating, as well as constituting a significant investment of student time and effort. There is no minimum number of hours required, but it is estimated that the typical DrPH student may spend a minimum of 100 hours on practicum projects. Student practica may take the form of one significant large project or several smaller practica experiences. DrPH student practica do not need to be individual projects, students may work independently but may also be part of a student team, or a team composed of other members of the organization with which they are collaborating. If students are members of a broader team, then their role on the team should be clearly defined.
- **Is evaluated** - Students will be evaluated on achievement of defined learning objectives and deliverables by the preceptor. Faculty advisers will be informed and have an opportunity to provide feedback on the student's progress if they choose to do so. As part of the practicum experience students will reflect on and evaluate their overall practicum experiences, particularly as they related to their career goals. Clearly identified outputs from the practicum experience (not necessarily written products, but oral presentations or a new management or information system) should be identified in advance.

The DrPH practicum is designed to be flexible, and to respond to individual students' prioritized learning needs. The practicum should be an important part of the program for all DrPH students.

Mentoring/Approval of Preceptor

All preceptors must be approved by JHSPH prior to the start of the practicum. Current JHSPH faculty may act as preceptors where this is appropriate, for example where the faculty member is engaged in collaborative work with an outside agency. Many other individuals working in relevant practice positions will already have an adjunct position at the school, and thus are "pre-approved" as preceptors. Where the preceptor does not have any faculty position at the School, their CV will be submitted to the Program Director along with the practicum proposal for approval.

Documentation and Evaluation

- When a student wishes to proceed with a practicum opportunity, they will complete a short practicum proposal form that outlines the nature of the project, how it fits with their learning objectives, the location of the practicum, the preceptor, a time frame for the work and outputs. After discussion with the student's adviser, the form will be submitted to the department to be included in their student file.
- At the end of the practicum, the student and the preceptor will complete the practicum summary form. The summary will reflect on the experience and lessons learned and will provide constructive feedback to the student. Final outputs from the project should be attached to the form and these should all be submitted to the Department.

Questions related to the DrPH practicum should be directed to Dr. Leiyu Shi or Judith Holzer.

Student Progress Reports

The Department of Health Policy and Management is committed to assist students with steady progress through the completion of the DrPH program. To facilitate this process, all students are required to submit regular progress reports to the HPM Office of Academic Affairs.

Beginning in Year 4, after successful completion of the written qualifying exams, students must submit a progress report on December 1st and June 1st each year until they have passed their School-wide Preliminary Oral Exam. The report must be reviewed, discussed and approved by the student's adviser prior to submission. Approximately six weeks prior to the due date, a reminder e-mail will be sent by the HPM Office of Academic Affairs.

Once a student has passed their School-wide Preliminary Oral Exam, a yearly progress report is to be submitted to the HPM Office of Academic Affairs until the program is complete. The progress report, along with the approved summary report of the Dissertation Advisory Committee Meeting (see below), will be due each year on June 1. The report must be reviewed and discussed with the student's adviser prior to submission. Approximately six weeks prior to the deadline, a reminder e-mail will be sent by the HPM Office of Academic Affairs.

Departmental Preliminary Oral Exam

The Departmental Preliminary Oral Exam takes place before the student takes the School-wide Preliminary Oral Exam. The Departmental Exam may not take place until after the successful completion of the Departmental Qualifying Exam. The format of the exam is similar to the School-wide Preliminary Oral Exam and is intended to determine if the student is academically prepared to pass the School-wide Preliminary Oral Exam and to carry out independent dissertation research.

The exam requires the student to prepare a dissertation proposal that will be examined by the committee members. This proposal is approximately 30 pages in length and provides the committee with the student's basic hypothesis to be research or program to be evaluated or work-place challenge to be addressed.

The HPM Departmental Preliminary Oral Exam committee consists of a minimum of three faculty members; one must be the student's adviser. A fourth alternate committee member should be identified and may choose to participate in the exam.

School-wide Preliminary Oral Exam

The School-wide Preliminary Oral Exam takes place after the student has successfully completed the Departmental Qualifying Exam and the Departmental Preliminary Oral Exam. The purpose of this examination is to determine whether the student has both the ability and knowledge to undertake significant research in their general area of interest.

The examiners will be concerned with the student's capacity for logical thinking, breadth and depth of knowledge in public health and evaluate methodologies, and ability to undertake a project aimed at addressing a significant public health problem leading to a completed dissertation. While the specific proposal serves as a vehicle for determining the student's general knowledge and research capacity, this examination is not intended to be a defense of a specific proposal. The student will be expected to defend the public health significance of the proposal as well as the methodologies used to evaluate the problem.

The examination should be taken at the earliest feasible time, before significant engagement in dissertation research. If the student fails the Preliminary Oral Examination and is permitted a re-examination, they must be re-examined within one year. The School-wide Preliminary Oral must be scheduled at least one month in advance but not until the departmental oral has been successfully passed.

Thesis Advisory Committee

Within three months of passing the School-wide Preliminary Oral Exam, every DrPH student must identify a thesis advisory committee. This committee, consisting of the student's adviser and at least two other faculty members from either inside or outside the Department, will meet with the student at minimum once a year until the student has graduated to evaluate the student's work and progress.

Each student is required to submit a written summary report to the Thesis Advisory Committee prior to the committee's meeting. This approved summary report will be submitted to the Department each June with the annual progress report (see above).

Thesis Guidelines

All students must complete an original investigation presented in the form of a thesis. The thesis must be based on original research, worthy of publication, and acceptable to the Department of Health Policy and Management and to a committee of faculty readers. During the student's application process, various research ideas may have been discussed with faculty members. However, each student's thesis proposal must be developed, reviewed and found acceptable to departmental faculty **while enrolled as a doctoral student at the BSPH**.

DrPH students in HPM have options for the format of the thesis. These options are described below:

- The traditional doctoral thesis consists of a statement of the problem and specific aims; a literature review; data and research methods; analyses and results; and a discussion of findings and their implications. The form these take will reflect the specific academic discipline or orientation guiding the student's research.
- The manuscript-oriented thesis is an alternative to the traditional dissertation. The manuscript thesis consists of a total of three (or more) papers, linked to the student's research topic.
- The workplace challenge requires the selection of one organization or a combination of several organizations to complete a series of five practice-based projects.

The decision on which format to follow should be made by the time the student takes the departmental preliminary oral examination. There are advantages and disadvantages to each option that should be carefully discussed with the student's adviser. If a decision is made during the thesis writing stage to change the format of the thesis, all members of the thesis advisory committee and/or the thesis readers committee should be informed.

Each of these options is described briefly below:

Option 1: The Traditional Doctoral Thesis

The traditional doctoral thesis generally consists of an abstract, five chapters, references, and any appendices. The outline of chapters below is merely a guide. The pages numbers are rough estimates, and the form of the chapters will vary, reflecting the academic discipline or orientation of the student's research.

Abstract: The abstract is a short overall summary of the work. It lays out the purpose(s) and aims of the study, the methods, and the key results and implications. The abstract generally is 2-3 double spaced pages.

Chapter 1: Introduction: Statement of the problem and specific aims; This chapter, which tends to be relatively short (5-6 double spaced pages), provides an introduction to the thesis. It describes briefly why this work was undertaken, what background conditions or data suggested it was an important problem, and what, then, this project was intended to accomplish.

Chapter 2: Literature Review. The literature review summarizes existing literature that informed the thesis research. It generally is organized topically. The literature review tends to be a fairly detailed review, particularly for those topics most directly related to the content and methods of the thesis. The literature review tends to be 30-60 pages in length.

Chapter 3: Methods. The content of the methods chapter varies tremendously with the methodological approach taken by the student for the thesis research. With traditional empirical studies, it will generally include the specific aims, research questions, and/or hypothesis; a description of the source of study data, a description of the study instrument and its development, if relevant; a description of secondary data obtained, if relevant; analytic methods, including data cleaning, creation of a data set, creation of variables and/or qualitative codes, types of analyses done; and human subjects issues. The methods chapter ranges from 20-40 pages.

Chapter 4: Results: The results chapter reports the main findings of the thesis. It often is organized by research question or specific aim or hypothesis, but need not necessarily follow this format. The results chapter ranges from 25-50 pages.

Chapter 5: Discussion of results and policy implications. The discussion chapter both summarizes key findings and discusses findings in light of existing literature and in light of their policy implications. Also included generally are a description of the study's limitations and implications for future research. The discussion chapter is generally 25-50 pages.

References: A listing of all citations used for the thesis must be provided. The Department allows any standard format for references.

Appendices: Appendices can be used for many purposes. They can include study instruments, if relevant; they can include additional tables not included in the main body of the thesis; also to be included must be a copy of the student's CV. The traditional thesis should be able to "stand alone" without appendices, however, so results should never be put in appendices that are key to the study's main findings.

<u>Option 2: The Manuscript Thesis</u>

The manuscript thesis consists of the following:

a total of three (or more) papers, linked to the student's thesis topic. One of these papers may be a literature review, providing a comprehensive critical review only if it would advance the field and would be suitable for publication.

the thesis as a whole must somewhere address the implications for policy and practice. This may be significantly addressed through one or more of the manuscripts or could instead be addressed in a chapter that integrates and discusses the findings reported in the manuscripts.

an appendix outlining in detail the study methods and any accompanying data tables necessary to fully understand the data.

A manuscript-oriented thesis must also meet the following criteria:

(1) The doctoral student must be the first author on the three manuscripts used to satisfy this requirement;

(2) No manuscript will be accepted as part of the thesis if it was submitted for publication before the student passes the school-wide preliminary oral exam;

(3) At least two members of the thesis committee must not be co-authors of any of the manuscripts to avoid conflict of interest if published prior to the final defense.

<u>Option 3: The "Work Place Challenge" Thesis</u>

Students are required to select either ONE organization or a combination of SEVERAL organizations and complete a series of five practice-based projects outlined below:

Organizational Assessment of an entire organization, large department, or program. This assessment should use a systematic framework (e.g., Baldrige framework, balanced scorecard approach, European Excellence framework, Abu Dhabi Award for Excellence in Government Performance), and is expected to examine the mission or purpose of the organization, its stakeholders, its internal processes, and its performance. The assessment should include a list of areas for further improvement. Please use the perspective of an "outside" consultant for completing this project.

Plan for a New Program or Service to address a workplace need. The plan must include a focused needs assessment, review of relevant literature, program design, implementation plan, evaluation plan and proposed budget with detailed justification.

Program Evaluation. The program evaluation should include a program description, rationale for how the program should have an impact (the "program logic"), review of relevant literature, evaluation design (e.g., before/after with comparison group), measurement of process and outcome indicators, data analysis, discussion of possible threats to the reliability and validity of evaluation results, and implications for program management. Qualitative, quantitative, or mixed methodologies may be used. In addition to the evaluation results, please discuss the potential generalizability of research findings for other organizations, as well as possible policy implications.

Economic Evaluation. This section should include a description of the program, project, or service under analysis, a review of the relevant literature, and a cost-benefit analysis, cost effectiveness analysis, equity analysis, return on investment analysis, or other type of cost-consequence analysis. The analysis should include both the societal perspective and the perspective of the organization being analyzed. Implications for program management and policy, as well as the potential generalizability of analysis results, should also be addressed.

Discussion of Implications. This section summarizes the lessons learned through the 'workplace challenge' experience, identifies opportunities for improvement from the perspectives of relevant stakeholders, and draws implications for other similar programs or organizations. Please address the role that leadership played or could have played with regard to the projects and/or outcomes observed. For example, what was done and could have been done to enhance, assure, foster or mitigate the outcomes observed.

Role of the Faculty Adviser

The adviser's role is to facilitate successful completion of the doctoral thesis. The type of assistance provided should be tailored to the individual student's needs. The thesis must reflect work that is the student's independent and original work. The adviser should provide ongoing and critical feedback, but the research must be that of the student.

Maintaining this balance may be particularly challenging for manuscript-oriented and "workplace challenge" theses. Even if the adviser (or another committee member) will be a co-author on a manuscript, the manuscripts must be viewed first and foremost as fulfilling the student's needs in the thesis process, with publication as a secondary goal. Advisers or other committee members who are co-authors may not undertake the first draft of any portions of the manuscripts nor substantial re-writes. Whether an adviser will be a co-author on any manuscript should be decided early in the thesis process.

Thesis Approval

Doctoral advisers must provide official approval of the final draft of a student's thesis prior to dissemination to the other members of the Thesis Readers/Final Oral Examination committee. A signed Thesis Approval Form must accompany each copy of the thesis distributed.

Final Public Seminar of Thesis

A formal, public seminar *and* closed oral defense of the thesis before a committee of the faculty is one of the final steps for a DrPH candidate. The public seminar and oral thesis defense are typically held on the same day with the seminar being conducted first, followed immediately by the closed defense before the approved final exam committee.

It is expected that the public seminar will last approximately 45 minutes and the closed defense, approximately 90 minutes. Members of the final examination committee are required to attend both the seminar and the closed defense.

The Final Oral Examination Committee judges all components of the thesis to be either: Acceptable, Acceptable with Revisions, or Unacceptable. This is the case for both the traditional thesis and a manuscript-oriented thesis. Students, with guidance from their adviser, will rework their thesis until all components are judged Acceptable.

Taking the Final Oral Exam and receiving an unconditional pass does not release the student from further responsibilities to complete the degree requirements. All students must stay continually registered until the degree requirements have been completed, including the thesis acceptance letters and electronic submission of the thesis to the Welch Medical Library. Once everything is submitted, the student will be reported to the Committee on Academic Standards and be considered complete.

Tsinghua DrPH Program Policies

Program Prerequisites

Students entering the DrPH in Healthcare Management and Leadership are expected to have taken the following prerequisite courses during their previous Master's program. Students who have not met the prerequisite will need to complete these courses while enrolled in the DrPH program. These courses are incorporated into the 3-year didactic course plan presented for the students enrolled in the JHU-Tsinghua cohort program.

Students who have completed the prerequisite courses may request a waiver provided they meet the waiver requirement described below. Students who waive courses may not be eligible for the concurrent MHS degree. The maximum number of credits that may be waived is 45.

School-wide DrPH Prerequisite Courses

Code	Title	Credits
PH.180.601	Environmental Health	5
PH.140.611	Statistical Reasoning in Public Health I	3
PH.140.612	Statistical Reasoning in Public Health II	3
PH.300.600	Introduction to Health Policy	4
PH.340.601	Principles of Epidemiology	5
PH.410.620	Program Planning for Health Behavior Change	3
PH.550.630	Public Health Biology	3

Healthcare Management and Leadership Prerequisite Courses

Code	Title	Credits
PH.300.651	Introduction to the U.S. Healthcare System	4
PH.312.600	Managing Health Services Organizations	4

HPM DrPH Advising Policy

All DrPH students will work with the Program Director, who will serve as the initial advisor during the coursework portion of the program. After the successful completion of the written qualifying exam and once the student has identified their proposed dissertation area, a dissertation advisor will be identified to mentor the student on the content-specific work.

The following guidelines have been developed to make clear the advising expectations for both faculty and students.

Expectations, Rights, and Responsibilities

Students can expect their advisor to work with them in defining educational goals, course work and independent studies that will assist in achieving their goals. In addition, the advisor periodically will review academic progress with the student, including assessing the student's strengths and weaknesses. Advisors provide advice while students must make the final choices consistent with the guidelines and policies of the Department, School, and Johns Hopkins University.

Students are responsible for scheduling regular meetings with their advisors, in-person or by telephone, to discuss goals, progress, problems, and next steps. If an advisor does not know the answer to the specific questions or issues, the advisor will refer the student to knowledgeable sources. Advisors are expected to make a regular time available for student/advisor meetings or have a clearly stated process by which students can schedule time to meet individually. Students have the right to change advisors and individual faculty members have the right to accept or not accept any specific student as an advisee. The first step in the process for changing advisors is to consult the program director.

Minimum Expectations for Student-Advisor Meetings

The following are minimum expectations for scheduled meetings between a faculty advisor and advisee. In general, meetings should be scheduled so students can prepare for the meeting, should be at least a half-hour in duration or more if needed, and should be conducted in an appropriate location, desirably without interruptions.

Degree	Time in Program	Minimum Meeting Frequency
Doctor of Public Health (DrPH) Part-time	Year 1-3 (coursework)	Meeting at least once a year until departmental qualifying exams
	Year 3 to preliminary oral	One meeting every academic term
	During dissertation research	One meeting each academic term; written comments on dissertation drafts within 4 weeks of receipt

Standards of Academic Performance

Students must meet minimum academic standards to remain in the DrPH program in the Department. A student's failure to meet any of the criteria below is grounds for being placed on academic warning and/or being dismissed from the program.

To remain in good academic standing in the Tsinghua DrPH program, students must:

- Maintain a minimum cumulative grade point average (GPA) of 3.0. Students with a GPA falling below a 3.0 will be placed on academic warning and will have one term of registration in which to raise their cumulative GPA above the 3.0 threshold. Students not meeting the minimum GPA after one term may be granted additional term(s) on academic warning if academic progress has been shown in the cumulative GPA; approval beyond one term must be reported to the School's Committee on Academic Standards. Students on academic warning must meet with their academic advisor and program director each term to review their academic plan and receive approval for their course schedule prior to registering for courses.
- Must earn a minimum grade on all required program-specific core courses of "B" or higher in courses offered for letter grading and a "Pass" for courses only on a pass/fail basis.
- Not accrue more than 6 credits of "incomplete" coursework at any given time. Students exceeding this limit must immediately e-mail the program director in writing to discuss their academic situation and registration for subsequent terms until the in-completes have been resolved.

Any student enrolled in the DrPH program that does not obtain the minimum 3.0 GPA by the end of the coursework phase of the program will not be permitted to proceed to the written qualifying exam. In this situation, the program director, in consultation with the HPM APAC's Student Matters Subcommittee, will determine the appropriate course of action.

Tsinghua DrPH Learning Outcomes

The learning outcomes for the JHU-Tsinghua DrPH program in Healthcare Management and Leadership are met through required and elective coursework, including doctoral seminars, a practicum, independent research, and the process of writing a dissertation. Upon successful completion of the program, students will have mastered the following learning outcomes:

- Identify, synthesize and apply evidence-based public health research and theory from a broad range of disciplines and health-related data sources for problem solving and to advance programs, policies, and systems promoting population health.
- Identify and analyze ethical issues including balancing the claims of personal liberty with the responsibility to protect and improve the health of the population; and act on the ethical concepts of social justice and human rights in public health research and practice.
- Influence decision-making regarding policies and practices that advance public health using scientific knowledge, analysis, communication and consensus building.
- Assess and use communication strategies across diverse audiences to inform and influence individual, organization, community and policy actions in order to promote the health of the public.
- Enable organizations and communities to create, communicate and apply shared visions, missions and values; inspire trust and motivate others; build capacity; improve performance; enhance the quality of the working environment; and use evidence-based strategies to enhance essential public health services.
- Provide fiscally responsible, strategic, and operational guidance within both public and private health organizations, for achieving individual and community health and wellness.
- Apply organizational theory and interpret its relation to professional practice as it contributes to the development, implementation, and monitoring of organizational performance standards while promoting team learning and organizational learning.
- Identify and apply concepts and methods for measurement, monitoring and improvement of the clinical and financial performance of health services organizations, as well as train leaders for organizational change initiatives.
- Utilize strategic assessment and planning skills to identify internal and external issues that may impact delivery of essential public health services and apply facilitation skills to ensure the participation of key internal and external organizational stakeholders.

Non-Degree Training

Non-Degree Training

HPM Academic Institutes

The Department encourages all students to take advantage of the many educational opportunities offered throughout the Johns Hopkins University. Many opportunities are available for formal and informal coursework in non-traditional formats.

The Department offers graduate courses in Institutes throughout the academic year, specifically in the January intersession (Winter Institute), in the June session (Summer Institute) and during 2nd term, in Barcelona Spain (Fall Institute).

Institutes are opportunities for students to take courses in compressed formats, from 1 to 4 days, over a 1 to 3 week period. Courses taken for academic credit may be applied to degree programs at the School of Public Health and to the appropriate certificate programs. Other Departments, Programs and Centers within the Bloomberg School offer additional Institutes. For the most up to date information, consult the School of Public Health Institutes web page (https://publichealth.jhu.edu/academics/academic-programs/accelerated-learning-institutes/).

HPM Certificates

The Department of Health Policy and Management offers 12 graduate certificate programs; an asterisk (*) indicates programs that can be completed online. For detailed information on each program, please visit our certificate page (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/).

Certificate Programs for Hopkins Students Only

- Gerontology
- Health Disparities and Health Inequality
- Public Health Advocacy
- Public Health Preparedness

Certificate Programs for Hopkins and Non-Degree Students

- Health Finance and Management*
- Injury and Violence Prevention
- Leadership for Public Health and Healthcare*

- Public Health Economics
- Public Health Informatics*
- Quality, Patient Safety, and Outcomes Research*
- Risk Sciences and Public Policy

Certificate Programs Open to Non-Degree Students Only

- International Healthcare Management and Leadership*

Executive Education

The Department of Health Policy and Management sponsors an inter-professional continuing education program for health care executives: Leading Transformation for Value-Based Health Care (https://www.jhsph.edu/academics/continuing-and-executive-education/professional-trainings/leading-transformation-for-value-based-health-care/) (LTVH).

LTVH is a fully on-line, multidisciplinary, inter-professional program offered from January to June each year. The interactive curriculum provides health care leaders with the requisite knowledge and skills to transform their organizations for success under value-based health care. The program starts with an intense 3 days of on-line learning in January, followed by weekly Wednesday evening seminars through early June, spanning finance, leadership, negotiation, quality, population health, ethics and IT.

Department of International Health

About

The Department of International Health (https://www.jhsph.edu/departments/international-health/) is a global leader and partner in building capacity and identifying, developing, testing, and implementing practices and policies that help the world's most vulnerable and disadvantaged people improve their health and well-being.

Programs

- Global Health Economics, MHS (p. 340)
- International Health, MSPH (p. 343)
- International Health, MSPH, Human Nutrition-Dietitian (p. 362)
- International Health, MA/MSPH (p. 362)
- International Health, PhD (p. 363)
- Non-Degree Training (p. 384)

General Information

Name	Position	Email	Phone	Fax
Antonio J. Trujillo	MHS Global Health Economics Director	Atrujil1@jhu.edu		
Elliot Rosen	Financial Manager	Erosen@jhu.ec		

Departmental Policy

Academic Faculty and Staff

Several administrative staff and faculty members within the Department help oversee and facilitate the academic programs. They are available to help you navigate the program and the department. The following information is intended to help you understand the roles of each person.

Cyrus Engineer (Associate Chair for Academic Programs): Dr. Engineer is responsible for the management and oversight of all academic programs. In this role, she chairs the Curriculum & Credentials Committee, which sets and implements policies and procedures for department academic programs and monitors student advising.

Julie Denison (Associate Chair for Student Matters): This position is responsible for the management and oversight of all students. In this role, leads the Admissions committee and coordinates with all academic coordinators and programs by leading new efforts to improve master's and doctoral student experiences. The Associate Chair for Student Matters will be announced in September.

Cristina Salazar (Academic Program Manager): Cristina oversees the operations of the academic programs in the department and works as the liaison between students, faculty, and administrative offices of both the department and the School.

Elisabeth Simmons (Academic Program Administrator): Elisabeth is the Academic Program Administrator for all master's and doctoral programs and assists students and Program Coordinators with academic issues related to tracking of student academic progress, departmental exams, and graduation requirements.

Degree Program Coordinators – within the IH Department, the PhD and MSPH degrees are broken down into four concentrations, also known as program areas. Each program area has a faculty member as the overall coordinator of the degree program. The degree program coordinators are responsible for the management and oversight of the individual degree programs and are the first point of contact for any questions, issues, or concerns. They act as a secondary/general adviser for students within their program areas and can be sought out to answer questions in the adviser's absence or as an additional source of information. Students are encouraged to approach program coordinators for questions about the program area and degree information (including curriculum requirements, course selection, etc.). The MHS degree program has a program director serving in the role of a degree program coordinator.

Financial Managers – Each program area has its own financial manager and grant specialists who are responsible for the oversight of each area's budget and payroll activities. Students who plan to work within the department should see one of these individuals to fill out the appropriate paperwork prior to their start date. If students are at all uncertain who they should see about an issue, students must contact Cristina Salazar or Elisabeth Simmons for clarification.

Academic Committees

Curriculum and Credentials Committee

- Cyrus Engineer: Chair
- Cristina Salazar: Staff
- Elisabeth Simmons: Staff

Honors and awards Committee

- Laura Caulfield: Chair
- Elisabeth Simmons: Staff

Course Waivers and/or Substitutions

Waivers of requirements may be granted for credits earned in equivalent graduate level courses taken in this or another school. The course waiver request must be based on coursework already taken which is similar in content, and documentation (i.e., a transcript and course syllabus) must be provided. In addition, a waiver request form must be submitted prior to the beginning of the quarter in which the course is offered. No requests will be granted after a course has been taken. **Requests for waivers for any course offered in the first quarter must be submitted no later than the end of the first day of class. No requests for first term waivers will be considered after this time.**

WAIVER PROCESS: The course waiver form can be found in the Portfolio Library and should be completed for each course requirement a student is requesting be waived. Requests should include the required supporting documentation noted on the form and a short explanation, which includes the name of the course, and why they are requesting the waiver. The completed form and supporting documentation should be **merged into one PDF** and emailed to the Academic Program Administrator, **Elisabeth Simmons** (esimmo15@jhu.edu), for review. The Academic Program Administrator will review the request and obtain the appropriate approval from the student's faculty Program Coordinator and or the IH Associate Chair for Academic Programs. The student will then receive the course waiver form with a final decision to keep for their record and a copy of the form will be kept in the students' academic file.

Course waivers are only approved by the Program Coordinators for each program and/or the Associate Chair for Academic Programs. **advisers do not approve waivers or course substitutions. Students should not consider a course waived until they have completed the course waiver form and received a decision form from the Academic Program Administrator.**

SUBSTITUTION PROCESS: A similar process should also be followed to request course substitutions. Students are reminded that waivers are not the same as substitutions. Waiving out of a course requirement allows a student to take any course(s) they choose in place of the course they are receiving permission to waive out of. A substitution allows students to substitute a specific program requirement by another course that is approved by the Program Coordinator in advance. Please note that approval of a waiver or substitution request does not reduce the total number of credits a student is required to earn in their degree program to meet graduation requirements.

Leave of Absence

A Leave of Absence is an officially recognized inactive student status. Please read the school-wide academic leave of absence (p. 641) policy. This is an option available to students who must take a temporary break from their program of study due to reasons beyond their control. There are specific criteria for determining if you are eligible for a LOA and it may have an impact on international student visa status, financial aid, and student employment. International students who are on LOA will have their I-20/DS2019 cancelled and will have to request a new visa in order to come to the US again. If you are considering requesting a LOA, the first thing you should do is speak with **Cristina Salazar** (csalazar@jhu.edu) to determine your eligibility and consider other potential impacts.

Students requesting a LOA cannot be employed in a position where their work is related to their MSPH requirement. Any requests for a LOA must be made in writing to the Department through the Academic Program Manager (Cristina Salazar) by both the student submitting a letter of request and fully complete LOA form, along with a supporting letter from their adviser. Once a written request for a LOA is received, the student's request must be approved by the Curriculum and Credentials (C&C) Committee. The C&C committee will review the request and may ask for more information. If the C&C approves the LOA request the Academic Program Manager will then submit the Leave of Absence Form to the Registrar's Office for final processing. Once the Registrar's office has processed the LOA request, the student will receive an email indicating they are on LOA and will be charged $50 per term for each term they are on leave. When a student is ready to return they should contact Cristina Salazar. If a student takes a leave of absence, the student must be registered for a minimum of ***two*** consecutive terms prior to completing degree requirements.

In some instances you may be forced to take a Involuntary Leave of Absence and Condition of Enrollment, please read the school-wide policy Involuntary Leave of Absence and Condition of Enrollment (p. 645) for more information.

Parental Accommodations

Contact Cristina Salazar to discuss the accommodations policy and how it impacts the student, at least three months before the birth or adoption of a child, as we may need to create a plan that instructors, supervisors, student and advisers approve of. Please read the University parental accommodations policy (https://policies.jhu.edu/?event=render&mid=764&pid=32391&fid=policy_32391.pdf&_=0.931885768396) for graduate students and post-docs.

Tracking Sheets

Tracking sheets are used to track all course requirements from each student's program. All students are required to fill out and submit their tracking sheets at least once a year, by the end of 3rd term for all continuing students, to **Elisabeth Simmons** (esimmo15@jhu.edu) via their CoursePlus Portfolio. Approved waivers and substitutions must also be submitted with the tracking sheets. Students should use the tracking sheet when meeting with their advisers.

Transfers

MSPH to MPH: It is important to note that transfers between these programs are very rare due to the capacity of each program and because the MPH program timeline starts one term before the MSPH program. If after beginning the MSPH program a student desires admission to the MPH program instead, the student must contact Cristina Salazar. Students will need to obtain adviser approval in writing and also receive approval from the Associate Chair for Academic Programs. If approved the student will submit this approved letter, to the Director of the MPH Program. Once the letter is signed for approval by the Director of the MPH Program, it is then submitted to the Office of Records and Registration to make the transfer official.

MSPH to MSPH (from one program to another, or one department to another): It is important to note that these types of transfers are very rare, due to the capacity of the programs and the sequencing of courses by each program area. If after beginning the MSPH program a student wishes to change programs, the student must request the change in writing along with a new personal statement and have it endorsed by the MSPH Program Coordinator(s) of the current and future program area. The request then needs to be endorsed by the Associate Chair for Academic Programs.

Students considering transfers to the MPH or a different MSPH program, must first talk to Cristina Salazar before submitting written requests.

MSPH to PhD: Students in the MSPH program who are interested in going on to a PhD program in the Department of International Health are required to formally apply to the Department for admission to the PhD program. They must first complete the MSPH degree and then apply to the PhD program to enter in September following the completion of the MSPH practicum and completion of their MSPH capstone.

IH Student Group

The Department of International Health has an active and organized student group. This group was formed to facilitate stronger communication and interaction between the Department (faculty and administrators) and the students and works each year to plan and develop different opportunities aimed at achieving this goal. Participation by all IH students is welcomed and encouraged. For more information on the activities and functions of this group and to learn more about getting involved, please contact **Elisabeth Simmons** (esimmo15@jhu.edu) and **Cristina Salazar** (csalazar@jhu.edu).

Travel Policy for Students Traveling Abroad

Below is the required process for all International Health students traveling for school related purposes, and students from other departments working under the supervision of International Health faculty:

1. Fill out the Student Emergency Information Form **(**https://goo.gl/forms/hkTcpXNIOVH89NFE3/**) (IH students complete this during orientation)**

2. Complete the online course International Travel Preparation, Safety and Wellness (220.600.81) during your first year and/or prior to travel

3. Fill out the IH Department Travel Registration Form **(**https://goo.gl/forms/jRimLu7ElmySzQaj1/**) prior to every trip abroad**

As you prepare to take an overseas assignment you should take into account a few administrative, health, and safety issues and requirements before you leave the country. Keep in mind that when working overseas, even in the short-term, you need to be prepared before leaving the US in order to have a productive experience and avoid unnecessary health and safety risks. The Department of International Health has developed the step by step process listed above for you to complete prior to leaving the country to assist you in preparing for your assignment and in acquiring the appropriate approvals before traveling.

It is the responsibility of each student to complete and submit the completed registration forms no later than <u>FIVE WEEKS</u> prior to your departure for all overseas assignments.

The US State Department now issues travel advisories using a system of levels 1 through 4. Students traveling to countries with Travel advisory levels 3 or 4, or Bangladesh, Cameroon, Colombia, Egypt, Ethiopia, Jordan, Kenya, or Mexico, must follow the procedure described in section A. Administrative (10). Students traveling to other countries may also be required to follow procedure A. Administrative (10) if the IH Leadership deems it necessary upon initial review of their IH Travel Registration Form. Copies of the registration form may be obtained from the Departmental Academic Program Administrator. Students must register their travel each time they travel and every time they return for follow up trips. Students traveling to travel warning countries must obtain approval prior to every trip.

Below are instructions for you when traveling overseas:

A. ADMINISTRATIVE

(1) STUDENT EMERGENCY INFORMATION FORM: Students must submit the online Student Emergency Information Form during orientation. A copy of the form will be kept securely in each student's academic file and will be updated by the student on a yearly basis.

(2) TRAVEL COURSE REQUIREMENT – All students must take the online course 220.600.81 International Travel Course through CoursePlus during their first year. It is a mandatory 1-credit pass/fail course offered 2nd, 3rd and 4th terms. Students must complete all lectures and assignments, take the quiz, and participate in a LiveTalk session during the year. The course provides information on University and departmental travel approvals and procedures, safety, health information and guides students in answering questions they have about traveling abroad. Students in other departments who are engaging in work with IH Faculty or in IH projects must take this course. Students who do not take this course will not be allowed to travel.

(3) REQUIRED FORMS AND DEPARTMENTAL APPROVALS – All students must submit the IH Department Travel Registration Form prior to traveling. If a student is traveling to a country with a U.S. State Department Travel Warning they must also complete the Traveling to Countries with Travel Warning portion of the form and submit everything at least five weeks prior to departure, to get approval from the IH Leadership Committee (see section 10 below). MSPH students are required to have their practicum approval form submitted and approved along with the IH travel policy process completed before traveling. Proper registration of student travel facilitates a faster response during an emergency. **<u>Students who travel without prior approval and without completing the IH travel forms outlined by this policy may be subject to disciplinary action deemed appropriate by the IH Leadership.</u>**

(4) STUDENTS FROM OTHER JHU DEPARTMENTS – Students from other JHSPH departments who will be traveling with the IH Department for school related travel must follow the DIH travel policy and process outlined in pages one to four, including steps 1-4 on page one, and must notify and obtain permission from their primary department prior to traveling.

(5) REPEAT TRAVEL TO THE SAME COUNTRY – If a student is traveling to the same city and country they traveled to previously and all the information in the initial form is the same, the student has to submit a short version of the IH Department Travel Registration Form, in which only the dates of travel are updated. If this repeat trip is to a country with a U.S. State Department Travel Warning, they have to go through IH Leadership approval again. Repeat travel must also be registered in the University Travel Registry.

(6) SHORT TRIP TO ANOTHER COUNTRY WITHIN INITIAL TRAVEL ASSIGNMENT – Students who will be engaged in short trips to another country from their initial country of travel for personal reasons, must submit a short version of the IH Department Travel Registration Form. Short trips are defined as trips that last up to 14 days.

(7) TRAVEL DOCUMENTATION – You should assure that your travel documents are current and appropriate. Visas, if necessary, should be obtained well in advance of your travel. You can find out if a visa is required for the country you will be visiting by calling the embassy of that country (most are in Washington), or by checking the embassy web sites. If you have a problem with getting a visa you will often fare better if you then go yourself to the embassy to have the visa processed. This is especially true if you hold a non-US passport. Remember also that you may need a visa for transit through some countries. Also, a tourist visa is often all you will need, but a business visa may give you extra time in country and help you avoid additional fees if multiple visits are required. Your adviser can help you obtain a letter to submit with your visa application if that is required. You should also be sure that your passport will be valid for the full time that you will be away. Most countries require that your passport be valid for 6 months from the date of departure. Finally, be sure that you have return airline tickets well in advance of your trip. Do not travel with a one-way ticket, as you may be restricted from entering the country upon arrival, and you may have difficulty securing airline tickets while away. Students on a visa should consult with OIS regarding letters and or information they might need to re-enter the country.

(8) UNIVERSITY APPROVALS – Be sure that you have the requisite approvals from the University to initiate any overseas research. These include approval from your thesis committee for dissertation research (must be signed before collecting data) or approval from your adviser and Program Coordinator for the MSPH Practicum, and approval from the IRB for collecting data for research projects. Remember that for student research, the Principal Investigator for purposes of JHSPH IRB approval will be either (typically) your adviser or (in some cases) another JHSPH faculty member selected in consultation with your adviser, and they must approve the research and sign the forms. It can take several months to get all of the IRB approvals finalized, so plan ahead accordingly. Post-hoc submission of these forms is not acceptable, and you run the risk of your research being deemed invalid, so you should take these precautions seriously. Conducting research on human subjects without IRB approval is a serious breach of ethical conduct. All students should discuss the IRB process with their advisers and review the BSPH website for more information (https://www.jhsph.edu/offices-and-services/institutional-review-board/).

(9) HOST COUNTRY APPROVALS – Be sure that you have the necessary approvals from the host country to travel and conduct research. Many host country governments have agencies that must approve all foreign research projects. To check on this you should consult with your adviser, as well as with your host country collaborators. These approvals often take considerable time, so be sure to plan ahead. You should also be sure that the host-country collaborating agency has granted you approval. It is good to get this in writing. Be sure that they know the scope of your work in-country, your travel dates, where you will stay while there, and who they can contact if a problem develops. Take care to set your travel

dates to accommodate your collaborators. If you are not sensitive to their schedules you run the risk of getting a low level of support while you are on travel status. You should identify who your local preceptor/supervisor will be.

(10) TERRORISM AND CIVIL CONFLICT – GETTING TRAVEL APPROVED BY IH – Check before you leave the country with the US State Department's country alerts and warnings website (https://travel.state.gov/content/passports/en/alertswarnings.html) to see about safety in the country you are traveling to.

If you are traveling for a school related activity (including a practicum requirement with an organization or a faculty member, or for your doctoral thesis research), to a country that has a Travel advisory level of 3, 4, or Bangladesh, Cameroon, Colombia, Egypt, Ethiopia, Jordan, Kenya, or Mexico, from the US. State Department, you must submit the following forms prior to every trip:

1. A completed International Health Department Travel Registration Form

2. An evacuation plan or a safety plan from the organization or faculty member you will be working with.

3. A Practicum Proposal form approved by your adviser (MSPH students only)

4. Due to the COVID-19 pandemic, we are requiring you to obtain local office approval from your supervisor (via letter or email) outlining:

- A brief description of your job duties/responsibilities
- The dates of your travel

5. A photocopy of your passport (needed only once)

Once approval is granted from IH Leadership, you must send:

6. A copy of your itinerary to Elisabeth Simmons

Email Elisabeth Simmons (esimmo15@jhu.edu) at least **FIVE WEEKS** in advance informing her of your trip to a travel warning location and include the necessary documentation listed above. The IH Leadership Committee will review your trip. Final approval will come from the International Health Leadership Committee. Students cannot travel without approval.

Once in country you must register with the US Consulate and/or your home embassy if you are a 3rd country national. If you have any problems you should contact the Consulate and follow your evacuation plan if necessary. This includes for problems with health, safety, or civil conflict. You should also contact your adviser, family and the department if you have any problems. Use common sense in your dealings and avoid association with persons who may place you at risk or cause you to be a target for police interrogation or terrorism.

(11) CONTACT INFORMATION – It is important that you leave your contact information with your family and your adviser. Also, be sure to leave your family's contact information with your adviser, and vice versa. If you are out of town while away be sure to let your adviser and family know. It is quite common for students to leave town for trips and people at home are unable to reach them, generating significant worry and concern among your family and colleagues. You should also leave behind the name and contact information of your colleagues you are working with and let them know how to contact you when you are in-country in the event of an emergency

B. HEALTH

(1) INSURANCE – You should check to be sure that your health insurance will cover you when you are overseas. Contact your provider to obtain information on coverage overseas. Please note the conditions under which your insurance plan will or will not reimburse you for overseas costs. Sometimes you may need to notify your insurance provider within a certain time frame of seeking care in order to be reimbursed. Usually, if you need prescription medication for more than three months, your medical insurance will require a written letter from the department stating the nature of the trip and the length of time. Cristina Salazar or Elisabeth Simmons can write this letter if you were to need it. You should also consider getting supplementary travel insurance. This type of insurance will assist you in seeking quality medical care should a serious problem arise.

C. IN CASE OF AN EMERGENCY

(1) JHU Healix International – Healix International provides medical or security assistance to all faculty, staff and students during university-related travel. This includes include 24-hour support via Johns Hopkins Global Travel Assistance helplines. JHU approves all emergency services by Healix, which is why it is crucial you register your travel through the University Travel Registry in case Healix services are needed in an emergency or for an evacuation. For general medical issues Healix will assist in providing care, but students should understand that it is not a regular medical insurance and that there may be fees.

- For travel within the Americas, call 443-455-0711.
- For travel within Europe, the Middle East, Africa, and Asia, call 44-20-8763-4952.

Students must register on the Healix Travel Oracle website (https://traveloracle.healix.com/johnshopkins/) to gain access to Johns Hopkins–specific travel assistance information. Use **policy number JH18492** to register. From there, you may also download the Travel Oracle app.

Students should carry the Healix contact information with them at all times while traveling in case of an emergency or for medical or travel assistance. If you have questions about the Johns Hopkins Global Travel Assistance Program, send an email johnshopkins@healix.com to Healix. You can also find information about these program services on the Johns Hopkins Travel Portal under Traveler Tools.

2. EMERGENCY CONTACT TRAVEL CARD – Every student will receive a wallet size card to be given to their emergency contact (person identified in the Student Emergency Information Form) while the student is traveling along with a letter describing the intention of the card and how to use it. The card outlines in three simple steps on who to contact if the student is in an emergency while traveling abroad and can only reach their emergency contact. All IH students should provide the card to their emergency contact prior to traveling and inform them of the process if an emergency such as a natural disaster were to occur while traveling. The card should only be used for this purpose.

NOTE TO STUDENTS

Please take these common-sense precautions seriously. With a little care and planning you can have a safe and enjoyable experience overseas. Realize that each country is unique and has special issues that should be attended to. Your adviser, and others who have traveled regularly to the country you are visiting, can help you plan for your trip accordingly. Note also that this list of recommendations is cursory and will not cover all events that may occur. Plan ahead, be careful, follow the advice of colleagues, and do not be shy about advocating for your health and safety. It can also be helpful to contact students who have worked in that country or with the organization you will be working with as they may have additional advice and useful tips for you. They can also help you budget by giving you cost of living information.

Internet Resources for Traveling Abroad

- US State Department Travel Information (https://travel.state.gov/content/travel.html)
- US State Department Current Travel advisories (https://travel.state.gov/content/travel/en/traveladvisories/traveladvisories.html/)
- CDC's "Traveler's Health" site. Useful information on health issues, and warnings by country (https://wwwnc.cdc.gov/travel/page/contact-us/)
- JHU Institutional Review Board. Includes forms for applying for approval (https://phirst.jhsph.edu/sph/sd/PublicCustomLayouts/SSO/Selection/?redirect=https%3A%2F%2Fphirst.jhsph.edu%2Fsph%2Fsd%2FRooms%2FDisplayPages%2FLayoutInitial%3FContainer%3Dcom.webridge.entity.Entity%255BOID%255B0A7646F3B149874E902185897C144551%255D%255D)
- Healix Travel website (https://traveloracle.healix.com/register/a9f1f118-b5b0-482c-8a59-993e5855e444/). Useful information on medical, security, travel, and other alerts worldwide and specific vaccination requirements for different countries.
- Full list of travel clinics in Maryland (http://www.travelhealthresource.com/)
- US State Department Study Abroad Website (https://travel.state.gov/content/travel/en/international-travel/before-you-go/travelers-with-special-considerations/students.html?refcode=osac). Useful travel and destination info for students before and during their trips. The site is mobile-responsive

Guidelines for Student Employment

For information about student employment please go to the International Health Department latest academic guides (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) for more information.

Teaching Assistantships

Students can TA in the department but need instructor AND departmental approval prior to starting work. For more information, students must talk to the instructor and **Elisabeth Simmons** (esimmo15@jhu.edu) to fill out the necessary forms. For the most updated policy please go to the International Health Department latest academic guides (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html).

All TA's are required to take the TA training course designed to guide students in their roles and responsibilities as TA's prior to beginning any work. The training can be done online (https://courseplus.jhu.edu/core/index.cfm/go/enr.enr.start/cID/1886/). Our CTL's TA Training has been approved by Homewood's CIRTL to fulfill Teaching Academy – Preparing Future Faculty (PFF) program – Phase I requirement. Students interested in obtaining a Teaching Academy certification can finish our TA training and continue their path with Teaching Academy, if interested. For more information on the Teaching Academy Program please follow this link (https://ctei.jhu.edu/teaching-academy/).

Withdrawals

Failure to register for a term results in automatic withdrawal. A withdrawn student must be formally readmitted before resuming a program of study. This would mean providing the original application, most current transcript prior to withdrawal, and a cover letter explaining reasons for withdrawal and why the student wants to be readmitted. Upon readmission, a student must register for a minimum of two consecutive terms prior to completing degree requirements.

Registration

All MSPH, MHS, and PhD students must register for a minimum of 16 credits of courses each term until they graduate to be a full-time student in the IH department. Students do not register for summer or winter intersession.

Introduction to Online Learning

The School of Public Health offers courses in various formats, including a number of online classes. You may at some point want or need to register for a course online. In order to be eligible to take an online course, students must complete the Introduction to Online Learning, which is offered through the Distance Education Division of the Johns Hopkins Bloomberg School of Public Health. This noncredit mini course is a pre-requisite for all courses offered by this division and must be completed prior to the start of the term in which a student wishes to enroll in an online course. Since the School does not permit conditional and/or concurrent enrollment (that is, you must take the online course prior to enrolling in a distance education class), **we require all incoming students to take this non-credit course during the first term they enroll**. For course dates and enrollment information, please visit the CoursePlus website (https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/).

Standards of Academic Performance

Letter grades must be earned in all courses used to satisfy requirements. Please note that courses may be counted **only once** to fulfill requirements. Students must receive satisfactory grades of C or higher in all required courses and continuously maintain a cumulative Grade Point Average (GPA) of at least 2.75 in the MSPH and MHS programs, and a cumulative GPA of at least 3.0 in the PhD program in order to remain a degree candidate in good standing. Any student who receives a D or F in a required course must repeat the course and achieve at least a C. Anyone not meeting these standards will be placed on probationary status. The Committee will establish the minimum conditions to be fulfilled in order to return to the "good standing" status and avoid termination. Typical cases with no conditions require that students improve their academic standing within 2 academic terms. In cases where conditions are imposed, the Committee will specify the maximum time allowed for satisfaction of the conditions. Failure to satisfy these conditions may result in termination from the program.

If students receive Federal Loans administered through the Financial Aid Office (http://www.jhsph.edu/offices-and-services/student-affairs/financial-aid/) there are other academic standards that students must abide by in order to comply with Federal Loan requirements. Please check with the Financial Aid office or email them at JHSPH.finaid@jhu.edu to request more information.

Global Health Economics, MHS

Overview

Director: Dr. Antonio J. Trujillo

The Master of Health Science (MHS) in Global Health Economics is a 9-month academic program that teaches students how to use economic tools to help solve pressing global health problems.

With increasing globalization, there is a growing need for health economists who can translate research into policy and directly inform governments and organizations on the best course of action. Through this degree program, students will learn how health economic principles are used to address global issues such as migration, displaced persons, climate change and pandemics. They'll also learn how health economics can be used to promote healthy lifestyles, positive health outcomes, and equitable access to care.

Using applied health cases from around the world, students will learn how to conduct economic evaluations of health programs and how to evaluate the impact of social problems on the health of a community or population. They will also gain a solid understanding of how to influence behavior through the use of economic incentives.

The major components of the MHS in Global Health Economics include:

- Nine months of academic coursework building strengths in economics, econometrics, economic evaluation, and epidemiology
- Written comprehensive exam
- Scholarly paper
- Specialty elective courses in international health

Completion of a scholarly paper that integrates material from multiple courses applying econometric, evaluation or other research techniques to a topic of interest. Within the School this degree is classified as an academic MHS as it provides an opportunity for advanced study and research in a specific public health discipline and will prepare students for a career in global health economics or further graduate study.

An academic adviser is assigned from the list of Advising Faculty in the student's program area. The Program Coordinator provides general guidance and supervision over all students in each program area.

Requirements for Admission

Students must have a strong quantitative background with undergraduate coursework in microeconomics and calculus highly recommended. Some prior international or health systems experience is highly desirable.

Advising Faculty

While students will have a designated adviser, they are encouraged to meet and discuss their interests with a variety of faculty members.

Cristina Garcia

Antonio J. Trujillo

Bryan Patenaude

Krishna Rao

Alan Sorkin

Andres Vecino

General Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

A minimum of 67 credits in formal coursework must be earned over four academic quarters. Required and elective courses are described in the curriculum section. **Students must be continuously registered until all requirements for the degree program have been satisfied**. Failure to register for a quarter will result in automatic withdrawal. A withdrawn student must be formally readmitted before resuming a program of study. Upon readmission, a student must be registered for a minimum of two consecutive terms prior to completing degree requirements.

Ethics Requirement

Ethics – All master's students are required to take the course PH.550.860 Academic & Research Ethics at BSPH. This is an online course for 0 credits that every student is required to take in their first term of matriculation. Failure to complete this course will prevent students from matriculating for 3rd term.

Students who are being funded by an NIH training grant must also take one of the following two courses: PH.550.600 Living Science Ethics - Responsible Conduct of Research offered first term, OR PH.306.665 Research Ethics and integrity: U.S. and International Issues, offered third term.

Core and International Health Requirements

Students in the MHS in Global Health Economics must required courses examples of the required courses are listed below. Schedule permitting, students can take additional electives provided they do not conflict with the required and elective courses. **A list of elective courses is provided. Additional electives not included in the list need to be approved by the Program Director.**

All core and elective courses must be taken for letter grade. Course substitutions are not allowed for any of the required or the elective courses. Students cannot take more than 22 credits per term.

For the most up-to-date information on course requirements please view our departmental academic guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) published August of each academic year.

Code	Title	Credits
Example of Core and International Health Requirements		
First Term		
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.220.601	Foundations of International Health (On campus only)	4
PH.140.621	Statistical Methods in Public Health I	4
PH.221.620	Applying Summary Measures of Population Health to Improve Health Systems	3
PH.221.840	Special Studies and Research Health Systems ((IGA) Sign up under adviser)	1
PH.221.801	Health Systems Program Seminar I	1
PH.318.603	Applied Microeconomics for Policymaking	3
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5
PH.550.860	Academic & Research Ethics at BSPH	
Second Term		
PH.140.622	Statistical Methods in Public Health II	4
PH.221.646	Health Systems in Low and Middle income Countries	3
PH.221.802	Health Systems Graduate Seminar 2	1
PH.313.643	Health Economics	3

PH.313.602	Economic Evaluation II	3
Third Term		
PH.313.603	Economic Evaluation III	3
PH.221.651	Econometrics I	4
PH.221.803	Health Systems Graduate Seminar 3	1
PH.221.662	Globalization and Health: Economic Development	3
PH.313.644	Intermediate Health Economics	3
PH.221.652	Financing Health Systems for Universal Health Coverage	3
PH.221.840	Special Studies and Research Health Systems (Sign up under adviser for Scholarly paper)	2
Fourth Term		
PH.221.840	Special Studies and Research Health Systems (Sign up under adviser for Scholarly paper)	2
PH.221.804	Health Systems Graduate Seminar 4	1
PH.221.663	Globalization and Health: Framework for Analysis	3
PH.221.647	Advanced Topics in Economic Evaluation & Modeling for Global Health	3

NOTE: Students must choose from the elective selection given to them for each term. They cannot substitute with a course not listed.

Code	Title	Credits
Elective Courses		
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
PH.221.639	Health Care in Humanitarian Emergencies	3
PH.221.650	Health Policy Analysis in Low and Middle income Countries	3
PH.140.640	Statistical Methods for Sample Surveys	3
PH.223.687	Vaccine Policy Issues	3
PH.313.861	Public Health Economics Seminar	1
PH.140.632	Introduction to the SAS Statistical Package	3
PH.221.617	Behavioral Economics in Health Decisions	2
PH.223.680	Global Disease Control Programs and Policies	4
PH.340.600	Stata Programming	2
PH.380.712	Methods in Analysis of Large Population Surveys	3
PH.140.624	Statistical Methods in Public Health IV	4

Comprehensive Exam

Satisfactory performance is required on a written comprehensive examination. Students will take the exam in the 4th term date to be announced in February. The exam will cover the materials taught in the core courses, and the required courses from International Health.

A minimum overall passing grade of 75 is required. Exams will be graded by the co-instructors of the Capstone course. Those scoring below this level may re-take the entire examination on a later term decided by the co-Director of International Health (student must maintain registration if taking the comprehensive exam a second time). Only one re-examination is permitted. Students failing twice are terminated from the MHS program.

Scholarly Paper

Students are expected to write a scholarly paper during their four-term degree. Students must work with their adviser on their paper starting 1st term. Students must register for Special Studies with the Global Health Economics Program Director for 2 credits, during third and fourth terms to work solely on their scholarly paper. The paper must be completed during the Special Studies course in fourth term and due date for the paper TBA. The scholarly essay will be graded by two faculty members: the Director of the MHS program in Global Health Economics, and the student's adviser. If a student identifies a topic that does not align with their adviser's research area, the student must identify a new adviser and needs to seek approval of this change from the Program Director.

Time of Completion of Requirements

Students are expected to complete all requirements for the degree in one year (four terms). Delays for reason will be considered, but in no case, may the time in the program exceed four years from the time of matriculation, regardless of the residence status of the student (other than leave of absence).

BA/MHS

Johns Hopkins undergraduate students currently majoring in Public Health Studies or Economics interested in the BA/MHS program contact **Elisabeth Simmons** (esimmo15@jhu.edu) and for more information visit this page (https://www.jhsph.edu/departments/international-health/global-health-masters-degrees/master-of-health-science-in-global-health-economics/bachelor-of-arts-and-master-of-health-science-health-economics-BA-MHS.html).

PREREQUISITE COURSES

Undergraduate students applying must have completed the following coursework and have received a B or higher on each of the following:

- AS 280.380 Global Health Principles and Practice
- AS 280.345 Public Health Biostatistics or EN 553.311 Probability and Statistics for the Biological Sciences and Engineering
- AS 280.350 Fundamentals of Epidemiology
- AS 180.101 Elements of Microeconomics
- AS 180.301 Intermediate Microeconomics or its advanced equivalent 180.434

BENEFITS OF PROGRAM

- Johns Hopkins University undergraduates (only) to take BSPH courses during their undergraduate program, can select up to 16 credits of BSPH courses accumulated as undergraduates to transfer into their Master's program.
- Apply by July 1, before senior year, without submitting GRE's as long as their cumulative and SPH undergraduate grade point average remains above 3.3.
- Students who complete the BA/BS at JHU, become MHS candidates and follow the MHS program.
- Receive International Health advisor during your senior year
- This 9-month MHS program allows students to apply to PhD programs faster

BA/MHS ADMISSION REQUIREMENTS

- Online SOPHAS Express application
- Unofficial JHU transcripts when applying. Official transcript required before starting the MHS degree.
- GRE score required if cumulative GPA less than 3.3 at the time of application
- Three letters of recommendation
- Resume or curriculum vitae

- Statement of purpose
- Completion of all prerequisite courses (B or higher)

INDIVIDUALIZED GOALS ANALYSIS (IGA)

The IGA is a process of discussion with your advisor resulting in a written document.

Part 1: Briefly explain what knowledge, skills, and experiences you bring to the program.

Part 2: Identify your goals for your education by explaining what you hope to gain in terms of knowledge, skills, personal and professional contacts, and other experiences while a student in the program. Describe one or more topics for your scholarly paper and indicate how these will be used to build your competencies and achieve your goals.

Part 3: Identify what courses and electives you intend to take and when you plan to complete your courses. Course descriptions in the catalogue indicate when courses are generally offered. Your tracking sheet should include a tentative list of electives you plan to complete and the total credit hours. Carefully review your paper and tracking sheet with your advisor to ensure the proposed curriculum is not only feasible, but that it meets program requirements. Explain how your curriculum plan is aligned with the goals you identified in Part 2. A spreadsheet is often the best way to do this part.

MHS in Global Health Economics Program Learning Outcomes

For a complete list of learning outcomes, please consult the most recent Department of International Health MSPH/MHS Academic Guide (https://my.jhsph.edu/sites/IH/Student-academic-forms/Forms/AllItems.aspx?RootFolder=%2Fsites%2FIH%2FStudent%2Dacademic%2Dforms%2FAcademic%20Guides&InitialTabId=Ribbon%2ERead&VisibilityContext=WSSTabPersistence) published in August of each year.

Standards of Academic Performance

Letter grades must be earned in all courses used to satisfy requirements. Please note that courses may be counted only once to fulfill requirements. Students must receive satisfactory grades of C or higher in all required courses and continuously maintain a cumulative Grade Point Average (GPA) of at least 2.75 in order to remain a degree candidate in good standing. Any student who receives a D or F in a required course must repeat the course and achieve at least a C. Anyone not meeting these standards will be placed on probationary status. The Committee will establish the minimum conditions to be fulfilled in order to return to the "good standing" status and avoid termination. Typical cases with no conditions require that students improve their academic standing within 2 academic terms. In cases where conditions are imposed, the Committee will specify the maximum time allowed for satisfaction of the conditions. Failure to satisfy these conditions may result in termination from the program.

If students receive Federal Loans administered through the Financial Aid Office (http://www.jhsph.edu/offices-and-services/student-affairs/financial-aid/) there are other academic standards that students must abide by in order to comply with Federal Loan requirements. Please check with the Financial Aid office or email them at JHSPH.finaid@jhu.edu to request more information.

Registration

MHS students must register for a minimum of 16 credits of courses each term to be a full-time student in the IH department. Students do **not** register for summer term or winter intersession classes. **Registration below 16 credits is not allowed and violates the terms of a student's full-time requirements and good academic standing. Any student registering below 16 credits during any term could be in violation of their requirements. Audit courses do not count toward the 16-credit per term requirement**.

International Health, MSPH

MASTER OF SCIENCE IN PUBLIC HEALTH DEPARTMENT OF INTERNATIONAL HEALTH

Overview

Each student is admitted into one of the four program areas approved for study leading to the Master of Science in Public Health degree in International Health: Social and Behavioral Interventions, Global Disease Epidemiology and Control, Health Systems, or Human Nutrition.

An academic adviser is assigned from the list of Advising Faculty in the student's program area. The Program Coordinator provides general guidance and supervision over all students in each program area.

Concentrations

GLOBAL DISEASE EPIDEMIOLOGY AND CONTROL

Director: Andrea Ruff, MD

Program Coordinators: Elizabeth Hazel, PhD and Yvonne Tam, MHS

REQUIREMENTS FOR ADMISSION

Students in the program ideally have a bachelor's degree in health or biological sciences or statistics. An applicant with another undergraduate degree must have satisfactorily completed courses in mathematics; biology; and chemistry, physics, or another natural science.

EDUCATIONAL OBJECTIVES

Overall Program Goal

This program provides training for public health practitioners who will use epidemiologic, immunologic and/or laboratory and statistical methods to design, implement and/or evaluate disease control interventions for diseases of public health importance to under-served populations. Graduates will have a fundamental understanding of the pathogenesis, epidemiology, and control measures applicable to diseases of public health importance in disadvantaged populations. Interventions to be studied will be primarily biomedical (e.g. therapeutic or prophylactic drugs, vaccines or environmental modifications), although there may be a behavioral component to effective implementation of such interventions.

Special strengths of the program are infectious disease epidemiology (including emerging infections), vaccinology, and micronutrients. Students have the opportunity to learn from leading experts in vaccine science and policy and may take courses to complete a certificate in this area. Students can acquire a broad understanding of the methods, skills, and tools needed to design, conduct, and analyze community and clinical trials and/or laboratory-based investigations. Students will be able to provide technical assistance to public health researchers and public health managers in the design, implementation and evaluation of programs to address public health problems facing underserved populations in the US and abroad.

HEALTH SYSTEMS

Director: Sara Bennett, PhD

Program Coordinators: Ligia Paina, PhD and Nukhba Zia, PhD

Requirements for Admission

Students must have a degree in biological or health sciences, social sciences or management. Some prior international or health systems experience is highly desirable.

Educational Goals

Graduates of the Health Systems MSPH program will be prepared to take on leadership and management roles in health policy and planning, health financing and management, and monitoring and evaluation of health programs. Graduates will contribute to strengthening health systems through the implementation of equitable and cost-effective interventions for improving access, quality, and efficiency of health services for underserved populations. A health-related practicum experience is an important component of this degree program.

Core Health System Competencies

1. Demonstrate knowledge of public health problems pertinent to disadvantaged populations and approaches to their assessment, management, and control;
2. Demonstrate a thorough understanding of concepts and application of management principles to the operation of health systems in resource-poor settings;
3. Analyze and synthesize data relevant to the management and control of health problems of public health importance in resource-poor settings;
4. Produce written and oral reports for public health professionals and policy makers.

HUMAN NUTRITION

Director: Parul Christian, DrPH

Program Coordinator: Amanda Palmer, PhD

Requirements for Admission

The program seeks to attract and train future experts in public health nutrition across a range of
professional interests and background. Entry into the Master of Science in Public Health (MSPH)
program in Human Nutrition requires, at a minimum, a bachelor's degree or its equivalent, preferably in

nutrition, biology, health or social sciences, public health, health, economics, or health policy.

Educational Objectives

The MSPH program in Human Nutrition is designed to train professionals to focus on understanding
and solving public health problems in food and nutrition across a diverse societal landscape. The
MSPH degree in Human Nutrition prepares students to assume professional, technical, and
management positions within public health nutrition programs or government, international or nongovernmental
agencies, universities, hospitals and private industry. The program also offers a broad
public health nutrition component that complements dietetics skills acquired in the combined MSPH-Dietitianietitian
program (see below). The MSPH program also prepares students with a foundation of knowledge and
skills for carrying out subsequent doctoral studies and research in the field of human nutrition, or
training in medicine.

Overall Program Goal

There are four overarching academic competencies that students are expected to master during the
course of their masters' degree program. Students should:

- Demonstrate knowledge of public health nutrition problems and characterize these problems in
  terms of measurable indicators
- Identify nutrition problems of public health importance; analyze and synthesize relevant data; and
  develop and implement prevention, control, and evaluation plans
- Participate in a field, laboratory or clinical experience related to nutrition research or programs
  from conception of ideas through design, management, monitoring, data collection, and analysis
- Communicate through written reports, oral presentations and other media nutrition information of
  high technical quality and program or policy relevance.

Advising Faculty

- Laura Caulfield
- Jessica Fanzo (co-adviser)
- Joel Gittelsohn
- Ethan Gough
- Jean Humphrey
- Vanessa Garcia-Larsen
- Rebecca Heidkamp
- Kristen Hurley
- Yunhee Kang
- Yeeli Mui
- Amanda Palmer
- Kerry Schulze
- Andrew Thorne-Lyman
- Keith P. West Jr.

Program Requirements

Students will be expected to enroll each term, satisfy the educational requirements, and successfully complete a practicum experience and write a capstone. Students must also pass a written comprehensive exam. A minimum of 16 total credits of coursework per term is required. Of these, approximately 64 credits are associated with directed coursework usually completed in the first year, a minimum of 28 credits are associated with a practicum experience, and minimum of 4 credits with a capstone usually completed during the second year.

Students are required to take specific courses in each of four core content areas in order to develop specific competencies: Nutrition and Health, Biochemistry and Metabolism, Research Methods, and Professional Skills. Approximately 53 course credits are associated with these core content areas common to all MSPH students. MSPH-Dietitianietitian students are required to take an additional 12 credits of required coursework. Within these required courses, all students must complete coursework in environmental health and management sciences. To complete the remainder of their coursework requirements, students will choose elective coursework and special studies in conjunction with their adviser, depending on their unique career goals.

Nutrition Practicum

MSPH candidates complete a practicum for a minimum of 2 terms. The student, faculty adviser, and other faculty within the department or school arrange this experience, as necessary. The practicum complements and reinforces the didactic portion of the MSPH program. It provides students with an opportunity to apply the knowledge gained during the first year, to develop field, laboratory, or clinical skills related to nutrition research or programs according to individually designed learning objectives, and to work as part of a team in an applied research or practice project. Students are placed in a variety of professional settings, which may include: government, non-government organizations (NGO's), university projects, and multi-lateral, private, and/or for-profit sector. Practicum locations exist in the US and in most regions of the world. Students are often placed in organizations such as WHO, the World Bank, UNICEF, Helen Keller International, USDA, Feeding America, and the Center for Livable Future. Funding or scholarship opportunities for the practicum experience include funding from the Center for Global Health at JHU, Sight and Life, and the Borlaug Foundation. In addition to providing students with a real-life opportunity to apply their knowledge, the practicum experience helps facilitate subsequent career opportunities.

SOCIAL AND BEHAVIORAL INTERVENTIONS

Director: Caitlin Kennedy, PhD

Program Coordinator: Elli Leontsini, MD, MPH

Program Co-Coordinator: Nora West, PhD, MPH

Requirements for Admission

Applicants into the program must have a bachelor's degree in the health or social sciences. Some prior international or health experience is highly desirable.

Educational Objectives

The program offers multidisciplinary training for researchers and public health practitioners who wish to use the social sciences in the design, implementation, and evaluation of public health programs, particularly community-based interventions. The program provides students with exposure to applied theory and methods from the fields of social psychology and medical anthropology and sociology. The combined use of qualitative and quantitative methods is a defining characteristic of the program.

Students may choose to specialize in the development, implementation, and evaluation of public health programs related to a given area of interest such as HIV/AIDS, maternal and child health, malaria prevention, or a host of other topical areas relevant to the enhancement of health in lower income settings. Upon completion of the program, students will be able to provide technical assistance in assessing and responding to the socio-cultural context surrounding public health interventions, and in the development, implementation, and evaluation of social and behavioral change programs to improve the health of underserved communities.

The program addresses the following educational objectives:

The Evidence Base for International Health: Identify, define and address major global health problems of underserved populations in lower income contexts, using appropriate indicators and current best practice.

- *International Health:* Examine conditions faced by disadvantaged populations in lower income contexts, principles of health equity and social justice and apply a range of tools to achieve better health outcomes.
- *Public Health Biology:* Explain biologic mechanisms and/or clinical manifestations of disease(s) impacting public health.
- *Environmental Health:* Discuss environmental influences on public health and appropriate risk assessment and public health response options.

Epidemiology and Biostatistics: Develop a solid foundation in epidemiologic and statistical research and evaluation skills applicable to public health assessment and action.

- Identify and utilize epidemiologic and biostatistics tools relevant to assessing the scope of a public health problem or the impact of public health action on a given condition.

Social and Behavioral Interventions: Develop the theoretical and methodological tools to gain an understanding of the socio-cultural context surrounding public health in lower income contexts and to assist in the development, implementation and evaluation of locally appropriate social and behavioral change programs.

- *Theory and Practice:* Apply relevant theories and concepts drawn from anthropology, sociology and psychology to design effective theory-driven social and behavioral interventions to improve the health and well-being of underserved communities.
- *Qualitative Methods:* Develop an understanding of theoretical paradigms and perspectives informing ethnography and qualitative research and use appropriate and rigorous qualitative research methods to understand the socio-cultural context of health and inform public health action.
- *Formative Research and Human Centered Design:* Conduct multi-method formative research to develop locally appropriate social and behavioral interventions to improve health, including development of appropriate communication interventions in support of those strategies.

Management and Leadership: Apply management and leadership techniques to develop, implement and evaluate health programs including organizational and financial best practices.

Evaluation: Propose, conduct, or assess process and outcome evaluations of social and behavioral interventions in global health

Professional Communication and Interprofessional Performance: Produce written reports of programmatic findings and/or research and communicate them via oral presentations, posters, briefs, or other official documents, intended for public health professionals and/or policy makers in audience- appropriate formats; perform effectively on interprofessional teams with local community organizations and stakeholders over the course of a project of mutual interest.

BA/MSPH

FOR PUBLIC HEALTH MAJORS AT JHU KRIEGER SCHOOL OF ARTS AND SCIENCES

The Department of International Health offers early graduate school admission to JHU seniors majoring in Public Health Studies. This transition program serves as a mode of entry into the following International Health MSPH degree programs:

- MSPH in Global Disease Epidemiology and Control (https://www.jhsph.edu/departments/international-health/global-health-masters-degrees/master-of-science-in-public-health/global-disease-epidemiology-control/)
- MSPH in Health Systems (https://www.jhsph.edu/departments/international-health/global-health-masters-degrees/master-of-science-in-public-health/health-systems/)

The Department of International Health also offers early graduate school admission to any undergraduate at JHU Krieger School of Arts and Sciences, for those who apply to:

- MSPH in Social and Behavioral Interventions (https://www.jhsph.edu/departments/international-health/global-health-masters-degrees/master-of-science-in-public-health/social-and-behavioral-interventions/)

Students in this Program will receive co-advising from both Schools as part of this unique experience. Admitted students must complete the BA degree before formally enrolling in the degree program.

Once students complete the BA degree, admitted students will be automatically enrolled into the MSPH degree at JHSPH starting that fall. The MSPH degree consists of a full year of coursework, a comprehensive written exam, and in the second year, a minimum of 4 months and maximum of 9 months of a full time practicum (32 credits), where students apply all their skills in a field setting, and finally fulfilling the MSPH Essay requirement. Students find practicum opportunities overseas or domestically.

Applications for the BA/MSPH degree must be submitted by July 1 between the junior and senior years to ensure completion of the review process prior to the first day of the academic year. Students must be accepted before the start of their senior year.

Standardized test scores are not required for application to the BA/MSPH program for students with a cumulative GPA of 3.3 or higher. However, a transcript is required for all prerequisite courses listed below and for all coursework through the 2nd semester of the student's junior year.

Undergraduate students applying must have completed the following coursework and have received a B or higher on each of the following:

- AS 280.380 Global Health Principles and Practice
- AS 280.345 Public Health Biostatistics or EN 553.311 Probability and Statistics for the Biological Sciences and Engineering
- AS 280.350 Fundamentals of Epidemiology

HOW TO APPLY

Applications for the BA/MSPH degree should be submitted by July 1 between the junior and senior year. Admitted students must complete their BA degree before formally enrolling in the Bloomberg School.

To apply, please use the the SOPHAS Express Application. (https://sophasexpress.liaisoncas.com/applicant-ux/#/login)

If you have questions please email **Elisabeth Simmons** (esimmo15@jhu.edu).

MSPH Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Program Concentration Specific Requirements

Global Disease Epidemiology and Control

GDEC MSPH Course Requirements

All required courses must be taken for a letter grade except for courses only offered for pass/fail.

Students may choose Epidemiology Option 3 with guidance and approval from their academic adviser AND the GDEC MSPH Academic Program Coordinators. Please review the guidance from the Epi Dept provided during GDEC orientation to decide which Epi course option best fits.

The below courses are examples of required courses, for the most up-to-date information and an accurate required course list please view our departmental academic guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) published August of each academic year.

PH.340.770	Public Health Surveillance	3
Epidemiology - Series Option 3		
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
Biostatistics		
PH.140.621	Statistical Methods in Public Health I	4
PH.140.622	Statistical Methods in Public Health II	4
PH.140.623	Statistical Methods in Public Health III	4
PH.140.624	Statistical Methods in Public Health IV	4
International Health		
PH.220.601	Foundations of International Health	4
PH.223.680	Global Disease Control Programs and Policies	4

Infectious Disease (choose one)		
PH.223.663	Infectious Diseases and Child Survival	3
PH.223.682	Clinical and Epidemiologic Aspects of Tropical Diseases	4
Applied Epidemiology/Randomized Trials (choose one)		
PH.223.664	Design and Conduct of Community Trials	4
PH.340.769	Professional Epidemiology Methods	4
PH.223.705	Good Clinical Practice: A Vaccine Trials Perspective	4
Vaccines		
PH.223.662	Vaccine Development and Application	4
PH.223.687	Vaccine Policy Issues	3
Environmental Health		
PH.180.602	Environment and Health in Low and Middle income Countries	2
Management Sciences		
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	3
Qualitative Methods (choose one of the following)		
PH.550.604	Qualitative Reasoning in Public Health	2
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5
Design and Implementations (choose one of the following)		
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.221.688	Social and Behavioral Foundations of Primary Health Care	4
PH.221.661	Project Development for Primary Health Care in Developing Countries	4
PH.410.620	Program Planning for Health Behavior Change	3
Leadership and Interprofessional Practice		
PH.552.625	Building Collaborations Across Sectors to Improve Population Health	0.5
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals	0.5
PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals	0.5
YEAR 2 Requirements		
PH.223.810	Global Disease Epidemiology and Control Practicum (Students must complete a minimum of 28 credits of practicum)	14
PH.223.810	Global Disease Epidemiology and Control Practicum (Students must complete a minimum of 28 credits of practicum)	14
PH.223.850	Msph Capstone Global Disease Epidemiology and Control	4
Recommended Courses based on student feedback and topic areas		
International Health and Diseases		
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
Infectious Disease		
PH.340.612	Epidemiologic Basis for Tuberculosis Control	2
PH.340.646	Epidemiology and Public Health Impact of HIV and AIDS	4
PH.340.627	Epidemiology of Infectious Diseases	4
PH.340.609	Concepts and Methods in Infectious Disease Epidemiology	3
PH.340.677	Infectious Disease Dynamics: Theoretical and Computational Approaches	3
Chronic Disease		
PH.223.667	Chronic Diseases in Low and Middle income Countries: Prevalence and Epidemiology	4
Nutrition		
PH.222.641	Principles of Human Nutrition in Public Health	4
PH.222.647	Nutrition Epidemiology	3
PH.222.649	International Nutrition	3
Population/Program Evaluation		
PH.221.641	Measurement Methods in Humanitarian Emergencies	2
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
PH.380.600	Principles of Population Change	4
PH.380.603	Demographic Methods for Public Health	4
PH.223.866	Special Topics in Program Evaluation in International Health	1
PH.380.611	Fundamentals of Program Evaluation	4
PH.223.632	Methods for Planning and Implementing Evaluations of Large-Scale Health Programs in Low and Middle income Countries	4
Research Ethics		
PH.306.665	Research Ethics and integrity: U.S. and International Issues	3
PH.306.655	Ethical Issues in Public Health	3
Vaccines		
PH.223.867	Special Topics in Vaccine Science	1
PH.223.689	Biologic Basis of Vaccine Development	3
Data Management/Survey Design		
PH.340.696	Spatial Analysis I: ArcGIS	3
PH.140.630	Introduction to Data Management	3
PH.340.697	Spatial Analysis II: Spatial Data Technologies	2
PH.340.717	Health Survey Research Methods	4
PH.223.600	Application of Spatial Analysis Tools to Inform Decision-Making in Lmics	4
PH.380.711	Issues in Survey Research Design	3
PH.140.632	Introduction to the SAS Statistical Package	3
Epidemiology Methods		
PH.340.653	Epidemiologic Inference in Outbreak Investigations	3
PH.340.753	Epidemiologic Methods 3	5
PH.340.682	Pharmacoepidemiology Methods	3
Qualitative Methods		
PH.224.690	Qualitative Research Theory and Methods	3
PH.224.691	Qualitative Data Analysis	3
Environmental Health		
PH.180.611	The Global Environment, Climate Change, and Public Health	4
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health	2
PH.182.640	Food- and Water- Borne Diseases	3
Management Sciences		

PH.221.722	Quality Assurance Management Methods for Developing Countries	4
PH.312.603	Fundamentals of Budgeting and Financial Management	3
PH.317.600	Introduction to the Risk Sciences and Public Policy	4
PH.305.607	Public Health Practice	4
PH.221.610	Pharmaceuticals Management for Under-Served Populations	3
Social and Behavioral Sciences		
PH.410.650	Introduction to Persuasive Communications: Theories and Practice	4
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication	3
PH.410.630	Implementation and Sustainability of Community-Based Health Programs	3
Crisis & Response		
PH.300.650	Crisis and Response in Public Health Policy and Practice	3
Injury		
PH.221.631	Evaluation Methods for Injury Interventions	3

Plan of Study Example

Course	Title	Credits
First Year		
First Term		
PH.550.860	Academic & Research Ethics at BSPH	
PH.223.840	Special Studies and Research Disease Control (with adviser)	1
PH.223.801	Global Disease Epidemiology and Control Program Seminar 1	1
PH.340.721	Epidemiologic Inference in Public Health I	5
OR		
PH.340.751	Epidemiologic Methods 1	
PH.140.621	Statistical Methods in Public Health I	4
PH.220.601	Foundations of International Health	4
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	3
	Credits	**18**
Second Term		
PH.223.802	Global Disease Epidemiology and Control Program Seminar 2	1
PH.340.722 or PH.340.770	Epidemiologic Inference in Public Health II (or PH.340.752) or Public Health Surveillance	4
PH.140.622	Statistical Methods in Public Health II	4
PH.223.662	Vaccine Development and Application	4
	Credits	**13**
Third Term		
PH.223.803	Global Disease Epidemiology and Control Program Seminar 3	1
PH.140.623	Statistical Methods in Public Health III	4
PH.223.687	Vaccine Policy Issues	3
PH.180.602	Environment and Health in Low and Middle income Countries	2
	Credits	**10**
Fourth Term		
PH.140.624	Statistical Methods in Public Health IV	4
PH.223.680	Global Disease Control Programs and Policies	4
	Credits	**8**
	Total Credits	**49**

Add in selections from the following to the Plan of Study Example:

- General: International Travel Preparation, Safety and Wellness
- Infectious Disease
- Applied Epidemiology/Randomized Trials
- Social and Behavioral Sciences
- Leadership and Interprofessional Practice

Health Systems

Health Systems Course Requirements

All required courses must be taken for a letter grade with the exception of courses only offered for pass/fail.

The below courses are examples of required courses, for the most up-to-date information and an accurate required course list please view our departmental academic guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) published August of each academic year.

Code	Title	Credits
Year 1		
General Degree Requirements		
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.140.621	Statistical Methods in Public Health I	4
PH.140.622	Statistical Methods in Public Health II	4
PH.140.623	Statistical Methods in Public Health III	4
PH.550.604	Qualitative Reasoning in Public Health	2
PH.220.601	Foundations of International Health	4
PH.550.860	Academic & Research Ethics at BSPH	
PH.220.600	International Travel Preparation, Safety, & Wellness	1
Health Systems Program Requirements		
PH.221.840	Special Studies and Research Health Systems (Individual Goals Analysis)	1
PH.221.801	Health Systems Program Seminar I	1
PH.221.802	Health Systems Graduate Seminar 2	1
PH.221.803	Health Systems Graduate Seminar 3	1
PH.221.804	Health Systems Graduate Seminar 4	1
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	3
PH.221.646	Health Systems in Low and Middle income Countries	3
PH.221.638	Health Systems Research and Evaluation in Developing Countries	4
or		
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4

PH.221.650	Health Policy Analysis in Low and Middle income Countries	3
PH.221.620	Applying Summary Measures of Population Health to Improve Health Systems	3
PH.221.661	Project Development for Primary Health Care in Developing Countries	4
Year 2		
PH.221.810	Health Systems Practicum (Students must complete a minimum of 28 credits of practicum)	14
PH.221.810	Health Systems Practicum (Students must complete a minimum of 28 credits of practicum)	14
PH.221.850	Msph Capstone Health Systems	2 - 16

Health Systems Program Electives Twelve (12) additional credits should be selected from the following list of elective courses. Courses below are organized under specific headings relevant to our program to facilitate selection, thus some courses may appear under more than one heading. These courses must be taken for a letter grade, with the exception of courses only offered pass/fail.

Code	Title	Credits
Part 1: General Electives		
Health Systems Planning and Management		
PH.221.722	Quality Assurance Management Methods for Developing Countries	4
PH.312.617	Fundamentals of Financial Accounting	3
PH.410.620	Program Planning for Health Behavior Change	3
PH.312.603	Fundamentals of Budgeting and Financial Management	3
PH.312.604	Quantitative Tools for Managers	3
PH.221.654	Systems Thinking in Public Health: Applications of Key Methods and Approaches	3
PH.312.610	Foundations of Organizational Leadership	3
PH.221.605	History of International Health and Development	2
PH.221.608	Managing Non-Governmental Organizations in the Health Sector	3
PH.221.610	Pharmaceuticals Management for Under-Served Populations	3
PH.312.621	Strategic Planning	3
PH.312.633	Health Management Information Systems	3
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	4
International Health Topics		
PH.221.613	Introduction to Humanitarian Emergencies	3
PH.180.620	Introduction to Food Systems and Public Health	4
PH.221.612	Confronting the Burden of Injuries: A Global Perspective	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
PH.221.635	Global Advances in Community-Oriented Primary Health Care	3
PH.221.637	Health Information Systems	3
PH.221.639	Health Care in Humanitarian Emergencies	3
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health	2
PH.221.634	Stress Management for Relief Workers	2
PH.221.643	Armed Conflict and Health	2
PH.221.688	Social and Behavioral Foundations of Primary Health Care	4
PH.380.750	Migration and Health: Concepts, Rates, and Relationships	3
PH.221.642	Mental Health Aspects of Disaster: Public Health Preparedness and Response	2
PH.221.616	Ethics of Public Health Practice in Developing Countries	2
PH.221.624	Urban Health in Developing Countries	3
PH.221.611	Food Security and Nutrition in Humanitarian Emergencies	2
PH.221.653	Hospital-Based Injury/Trauma Surveillance in Low- and Middle-income Countries	3
Health Policy		
PH.300.600	Introduction to Health Policy	4
PH.221.614	International Political Science for Ph Practitioners	2
PH.300.712	Formulating Policy: Strategies and Systems of Policymaking in the 21st Century	3
PH.223.687	Vaccine Policy Issues	3
PH.300.652	Politics of Health Policy	4
PH.301.645	Health Advocacy	3
PH.308.610	The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life	3
Part 2: Research and Evaluation Methods Electives		
Research Methods		
PH.330.657	Statistics for Psychosocial Research: Measurement	4
PH.221.641	Measurement Methods in Humanitarian Emergencies	2
PH.221.701	Applications to Gender Analysis Within Health Research and Interventions	2
PH.309.716	Advanced Methods in Health Services Research: Analysis	3
PH.340.717	Health Survey Research Methods	4
PH.410.710	Concepts in Qualitative Research for Social and Behavioral Sciences	3
PH.550.601	Implementation Research and Practice	3
PH.223.664	Design and Conduct of Community Trials	4
PH.224.690	Qualitative Research Theory and Methods	3
PH.300.713	Research and Evaluation Methods for Health Policy	3
PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses	4
PH.224.694	Mental Health Intervention Programming in Low and Middle-Income Countries	3
PH.380.711	Issues in Survey Research Design	3
PH.224.691	Qualitative Data Analysis	3
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	4
PH.380.712	Methods in Analysis of Large Population Surveys	3
Monitoring and Evaluation		

PH.221.641	Measurement Methods in Humanitarian Emergencies	2
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
PH.221.631	Evaluation Methods for Injury Interventions	3
PH.223.632	Methods for Planning and Implementing Evaluations of Large-Scale Health Programs in Low and Middle income Countries	4
PH.380.611	Fundamentals of Program Evaluation	4
PH.300.713	Research and Evaluation Methods for Health Policy	3
PH.380.612	Applications in Program Monitoring and Evaluation	4
Health Economics		
PH.318.603	Applied Microeconomics for Policymaking	3
PH.313.601	Economic Evaluation I	3
PH.313.602	Economic Evaluation II	3
PH.313.603	Economic Evaluation III	3
PH.313.604	Economic Evaluation IV	3
PH.313.643	Health Economics	3
PH.313.644	Intermediate Health Economics	3
PH.221.652	Financing Health Systems for Universal Health Coverage	3
PH.221.662	Globalization and Health: Economic Development	3
PH.221.663	Globalization and Health: Framework for Analysis	3
PH.309.670	Comparative Health insurance	3
PH.221.617	Behavioral Economics in Health Decisions	2
PH.221.651	Econometrics I	4

Human Nutrition

Human Nutrition Course Requirements

All required courses must be taken for a letter grade with the exception of courses only offered for pass/fail.

The below courses are examples of required courses, for the most up-to-date information and an accurate required course list please view our departmental academic guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) published August of each academic year.

IMPORTANT NOTE: Courses taken to meet one group of requirements may NOT be used to meet another group of requirements

Code	Title	Credits
General/Professional Skills		
PH.220.600	International Travel Preparation, Safety, & Wellness	1
PH.222.840	Special Studies and Research Human Nutrition	1
PH.222.860	Graduate Nutrition Seminar	1
PH.550.860	Academic & Research Ethics at BSPH	
Nutrition and Health		
PH.222.641	Principles of Human Nutrition in Public Health	4
PH.222.657	Food and Nutrition Policy	2
PH.222.642	Assessment of Nutritional Status	3
PH.222.644	Cellular Biochemistry of Nutrients	3
PH.222.654	Food, Culture, and Nutrition	4
PH.222.655	Nutrition and Life Stages	3
PH.222.658	Critical Thinking in Nutrition	1
Research Methods, Biostatistics: Chose one of the following series for a total of 16 credits		

PH.140.621	Statistical Methods in Public Health I	4
PH.140.622	Statistical Methods in Public Health II	4
PH.140.623	Statistical Methods in Public Health III	4
PH.140.624	Statistical Methods in Public Health IV	4
OR		
PH.140.651	Methods in Biostatistics I	4
PH.140.652	Methods in Biostatistics II	4
PH.140.653	Methods in Biostatistics III	4
PH.140.654	Methods in Biostatistics IV	4
Research Methods, Epidemiology:		
PH.340.721	Epidemiologic Inference in Public Health I	5
Environmental Health: Choose one of the following (any courses not chosen may be used to satisfy the elective requirement)		
PH.180.602	Environment and Health in Low and Middle income Countries	2
PH.180.611	The Global Environment, Climate Change, and Public Health	4
PH.180.601	Environmental Health	5
PH.180.609	Principles of Environmental Health	4
PH.182.640	Food- and Water- Borne Diseases	3
PH.187.610	Public Health Toxicology	4
Budgeting, choose one of the following		
PH.552.621	Basic Resources Management for Public Health	1
PH.552.622	Creating, Implementing and Monitoring Budgets for Projects and Programs	1
Management Sciences, choose one of the following *The courses not chosen can be used to satisfy the elective requirement*		
PH.312.600	Managing Health Services Organizations (This course also fulfills the budget requirement)	4
PH.312.601	Fundamentals of Management for Health Care Organizations	3
PH.312.655	Organizational Behavior and Management	2
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	3
PH.410.622	Strategic Leadership Principles and Tools for Health System Transformation in Developing Countries	4
Leadership and Interprofessional Practice		
PH.552.625	Building Collaborations Across Sectors to Improve Population Health	0.5
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals	0.5
PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals	0.5
Year 2		
PH.222.810	Human Nutrition Practicum (Students must complete a minimum of 28 credits of practicum)	14
PH.222.810	Human Nutrition Practicum (Students must complete a minimum of 28 credits of practicum)	14
PH.222.850	Msph Capstone Human Nutrition	4
Recommended Electives: 18-23 Credits		
Food Systems and Production		
PH.180.620	Introduction to Food Systems and Public Health	4
PH.180.655	Baltimore Food Systems: A Case Study of Urban Food Environments	4
PH.180.606	Case Studies in Food Production and Public Health	4
Nutrition		
PH.222.647	Nutrition Epidemiology	3
PH.221.611	Food Security and Nutrition in Humanitarian Emergencies	2
PH.222.649	International Nutrition	3
PH.340.644	Epidemiology of Diabetes and Obesity	2
PH.700.603	Introduction to Ethical Theory	3
PH.222.840	Special Studies and Research Human Nutrition (Developing Skills in Clinical Nutrition)	1
Research Methods		
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.340.722	Epidemiologic Inference in Public Health II	4
PH.223.664	Design and Conduct of Community Trials	4
PH.224.690	Qualitative Research Theory and Methods	3
PH.410.690	Ethnographic Fieldwork	3
PH.221.660	Systems Science in Public Health: Basic Modeling and Simulation Methods	3
PH.222.653	Food Technology and Health	3
PH.222.661	Designing Healthy Diets	2
PH.222.652	Nutrition in Disease Treatment and Prevention	3
PH.224.691	Qualitative Data Analysis	3

	Credits	**9**
	Total Credits	**58.5**

Social and Behavioral Interventions Program Requirements

A minimum total of 96 credits of coursework is required. Of these, 64 credits are associated with academic coursework, generally completed within the first year of the program. During the second year 28 credits are associated with a practicum experience and a minimum of 4 credits with a final capstone. Courses taken to fulfill program requirements must be taken for a letter grade unless, only offered Pass/Fail.

The below courses are examples of required courses, for the most up-to-date information and an accurate required course list please view our departmental academic guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) published August of each academic year.

IMPORTANT NOTE: A course taken to meet a requirement may NOT be used to meet another requirement

Code	Title	Credits
Required Courses		
Schoolwide		
PH.550.860	Academic & Research Ethics at BSPH	
International Health		
PH.220.601	Foundations of International Health (Students must take the on-campus version)	4
PH.220.600	International Travel Preparation, Safety, & Wellness	1
Epidemiology and Biostatistics		
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.140.621	Statistical Methods in Public Health I	4
PH.140.622	Statistical Methods in Public Health II	4
PH.140.623	Statistical Methods in Public Health III	4
Management and Leadership		
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	3
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals	0.5
PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals	0.5
Social and Behavioral Interventions		
PH.224.840	Special Studies and Research Social and Behavioral Interventions (IGA)	1
PH.224.860	Social and Behavioral Interventions Program Seminar I:Applied Social Science & Global Health	1
PH.224.861	Social and Behavioral Interventions Program Seminar II: Participatory Approaches and the Role of Community	1
PH.224.862	Social and Behavioral Interventions Program Seminar III: Intervention Case Studies	1
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.224.690	Qualitative Research Theory and Methods	3
PH.224.691	Qualitative Data Analysis	3
PH.224.697	Qualitative Research Practicum I: Partnerships and Protocol Development	2
PH.224.698	Qualitative Research Practicum II: Collecting Qualitative Data	2
PH.224.699	Qualitative Research Practicum III: Analyzing and Writing Qualitative Findings	2
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	4
Year 2 Required Courses		
PH.224.810	Social and Behavioral Interventions Practicum (Students must complete a minimum of 28 credits of practicum)	14
PH.224.810	Social and Behavioral Interventions Practicum (Students must complete a minimum of 28 credits of practicum)	14
PH.224.850	Msph Capstone Social and Behavioral Interventions	4
Public Health Policy (choose one of the following)		
PH.222.657	Food and Nutrition Policy	2
PH.410.668	Policy Interventions for Health Behavior Change	3
PH.223.687	Vaccine Policy Issues	3
PH.380.771	Understanding and Changing International Reproductive Health Policy	3
Social & Behavioral Sciences Electives: Choose two to three courses (6 credits minimum) from the following options		
PH.222.657	Food and Nutrition Policy	2
PH.410.612	Sociological Perspectives on Health	3
PH.410.690	Ethnographic Fieldwork	3
PH.410.656	Entertainment Education for Behavior Change and Development	4
PH.410.733	Communication Network Analysis in Public Health Programs	4
PH.180.620	Introduction to Food Systems and Public Health	4
PH.221.701	Applications to Gender Analysis Within Health Research and Interventions	2
PH.301.627	Understanding and Preventing Violence	3
PH.330.620	Qualitative and Quantitative Methods for Mental Health and Psychosocial Research in Low Resource Settings	3
PH.340.717	Health Survey Research Methods	4
PH.380.642	Child Health and Development	3
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond	3
PH.410.615	Research Design in the Social and Behavioral Sciences	3

PH.410.631	Introduction to Community-Based Participatory Research: Principles and Methods	3
PH.410.650	Introduction to Persuasive Communications: Theories and Practice	4
PH.410.668	Policy Interventions for Health Behavior Change	3
PH.340.629	The Epidemiology of LGBTQ Health	3
PH.700.622	Bioethics, Human Rights, and Global Health	3
PH.180.655	Baltimore Food Systems: A Case Study of Urban Food Environments	4
PH.221.605	History of International Health and Development	2
PH.221.635	Global Advances in Community-Oriented Primary Health Care	3
PH.221.642	Mental Health Aspects of Disaster: Public Health Preparedness and Response	2
PH.221.650	Health Policy Analysis in Low and Middle income Countries	3
PH.221.688	Social and Behavioral Foundations of Primary Health Care	4
PH.224.694	Mental Health Intervention Programming in Low and Middle-Income Countries	3
PH.330.661	Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders	3
PH.340.683	Human Rights in Public Health Practice	2
PH.380.623	Adolescent Health and Development	3
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies	3
PH.380.665	Family Planning Policies and Programs	4
PH.410.613	Psychosocial Factors in Health and Illness	3
PH.410.654	Health Communication Programs I: Planning and Strategic Design	4
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication	3
PH.221.621	Gender and Health: Foundational Theories and Applications	2
PH.410.752	Children, Media, and Health	3
PH.180.636	Human Rights and Health Seminar	3
PH.221.616	Ethics of Public Health Practice in Developing Countries	2
PH.222.654	Food, Culture, and Nutrition	4
PH.224.605	Indigenous Health	2
PH.300.652	Politics of Health Policy	4
PH.301.645	Health Advocacy	3
PH.308.610	The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life	3
PH.380.668	International Perspectives on Women, Gender, and Health	3
PH.380.747	International Adolescent Health	3
PH.380.771	Understanding and Changing International Reproductive Health Policy	3
PH.410.630	Implementation and Sustainability of Community-Based Health Programs	3
PH.410.655	Health Communication Programs II: Implementation and Evaluation	4
PH.410.663	Media Advocacy and Public Health: Theory and Practice	3
PH.410.721	Translating Research into Public Health Programs and Policy	3
Evaluation-related Research Electives, choose one of the following		
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
PH.340.717	Health Survey Research Methods	4
PH.340.722	Epidemiologic Inference in Public Health II	4
PH.221.631	Evaluation Methods for Injury Interventions	3
PH.221.638	Health Systems Research and Evaluation in Developing Countries	4
PH.222.647	Nutrition Epidemiology	3
PH.223.664	Design and Conduct of Community Trials	4
PH.300.713	Research and Evaluation Methods for Health Policy	3
PH.380.611	Fundamentals of Program Evaluation	4
PH.380.711	Issues in Survey Research Design	3
PH.140.624	Statistical Methods in Public Health IV	4
Public Health Biology (choose one of the following)		
PH.380.661	Clinical Aspects of Maternal and Newborn Health	3
PH.120.620	Fundamentals of Reproductive Biology	3
PH.222.641	Principles of Human Nutrition in Public Health	4
PH.260.636	Evolution of Infectious Disease	3
PH.340.646	Epidemiology and Public Health Impact of HIV and AIDS	4
PH.550.630	Public Health Biology	3
PH.223.662	Vaccine Development and Application	4
PH.260.631	Immunology, Infection and Disease	3
PH.182.640	Food- and Water- Borne Diseases	3
PH.223.663	Infectious Diseases and Child Survival	3
PH.260.656	Malariology	4
PH.380.760	Clinical Aspects of Reproductive Health	3
PH.223.682	Clinical and Epidemiologic Aspects of Tropical Diseases	4
PH.223.689	Biologic Basis of Vaccine Development	3
PH.330.623	Brain and Behavior in Mental Disorders	3
PH.380.762	HIV Infection in Women, Children, and Adolescents	4
Environmental Health (choose one of the following)		
PH.180.609	Principles of Environmental Health	4
PH.180.611	The Global Environment, Climate Change, and Public Health	4
PH.182.640	Food- and Water- Borne Diseases	3
PH.180.606	Case Studies in Food Production and Public Health	4
PH.185.600	One Health Tools to Promote and Evaluate Healthy and Sustainable Communities (This course also fulfills the Management and Leadership requirement)	3
Other International Health Electives to consider (none required)		
PH.221.612	Confronting the Burden of Injuries: A Global Perspective	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
PH.221.639	Health Care in Humanitarian Emergencies	3

PH.221.646	Health Systems in Low and Middle income Countries	3
PH.221.605	History of International Health and Development	2
PH.410.622	Strategic Leadership Principles and Tools for Health System Transformation in Developing Countries	4
PH.221.608	Managing Non-Governmental Organizations in the Health Sector	3
PH.221.635	Global Advances in Community-Oriented Primary Health Care	3
PH.221.650	Health Policy Analysis in Low and Middle income Countries	3
PH.223.687	Vaccine Policy Issues	3
PH.380.750	Migration and Health: Concepts, Rates, and Relationships	3
PH.221.616	Ethics of Public Health Practice in Developing Countries	2
PH.221.624	Urban Health in Developing Countries	3
PH.221.661	Project Development for Primary Health Care in Developing Countries	4
PH.222.649	International Nutrition	3
PH.223.680	Global Disease Control Programs and Policies	4
PH.340.639	Assessing Epidemiologic Impact of Human Rights Violations	2
PH.380.668	International Perspectives on Women, Gender, and Health	3
PH.380.747	International Adolescent Health	3

Plan of Study Example

Course	Title	Credits
First Year		
First Term		
PH.224.840	Special Studies and Research Social and Behavioral Interventions (IGA)	1
PH.224.860	Social and Behavioral Interventions Program Seminar I:Applied Social Science & Global Health	1
PH.550.860	Academic & Research Ethics at BSPH	
PH.220.601	Foundations of International Health	4
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.140.621	Statistical Methods in Public Health I	4
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	3
	Credits	**18**
Second Term		
PH.224.861	Social and Behavioral Interventions Program Seminar II: Participatory Approaches and the Role of Community	1
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.224.697	Qualitative Research Practicum I: Partnerships and Protocol Development	2
PH.140.622	Statistical Methods in Public Health II	4
PH.410.668	Policy Interventions for Health Behavior Change	3
PH.340.717	Health Survey Research Methods	4
PH.552.626	Systems Thinking: Concepts and Methods	0.5
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals	0.5
PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals	0.5
	Credits	**19.5**
Third Term		
PH.224.862	Social and Behavioral Interventions Program Seminar III: Intervention Case Studies	1
PH.224.690	Qualitative Research Theory and Methods	3
PH.224.698	Qualitative Research Practicum II: Collecting Qualitative Data	2
PH.140.623	Statistical Methods in Public Health III	4
PH.182.640	Food- and Water- Borne Diseases	3
PH.380.611	Fundamentals of Program Evaluation	4
	Credits	**17**
Fourth Term		
PH.220.600	International Travel Preparation, Safety, & Wellness	1
PH.224.691	Qualitative Data Analysis	3
PH.224.699	Qualitative Research Practicum III: Analyzing and Writing Qualitative Findings	2
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	4
PH.222.654	Food, Culture, and Nutrition	4
PH.223.682	Clinical and Epidemiologic Aspects of Tropical Diseases	4
	Credits	**18**
	Total Credits	**72.5**

MSPH Departmental Requirements

Residency Requirement

The total number of course credits to be earned depends upon individual program requirements. But, to meet the Residency requirement, students must complete a minimum of 64 credits of didactic courses in four consecutive terms. When general and program-specific requirements total less than 64, the difference may be made up in electives. Only those special studies earning credit that are part of a program's requirements (840 series) are admissible. The Residency requirement is usually fulfilled in a master's student's first year

General Requirements

Individual Goals Analysis (IGA): During the first term of enrollment, students will register for one credit of Special Studies (Individual Goals Analysis) with their adviser in order to define specific educational objectives and to work out a program of study consonant with those objectives.

Ethics Requirement - All master's students are required to take course 550.860.82 Academic and Research Ethics at JHSPH in their first term of matriculation. Failure to complete this course will prevent students from matriculating for the next term and continuing their program.

Students who are being funded by an NIH training grant must also take one of the following two courses: 550.600 Responsible Conduct of Research offered first term, OR 306.665 Research Ethics and Integrity: US and International Issues, offered third term.

All students must complete the Online Human Subjects Training Module prior to the end of the 4th term. However, for students wishing to work on research projects part time for faculty during the academic year, it would be advisable to take this module in 1st term as the training is required for such research work. For information on the Training module go to http://www.jhsph.edu/offices-andservices/institutional-review-board/training/.

International Travel Preparation, Safety, and Wellness: All IH students are required to take this course (220.600.81) during their first year and before traveling overseas for any academic reason, and regardless of whether their research is conducted within or outside of the United States. This course is offered three times a year, students must only take it once.

Registration

MSPH students must register for a minimum of 16 credits of courses each term until they graduate to be a full-time student in the IH department. Students do not register for summer or winter intersession. Summer and winter intersession courses may be available to students with the understanding that students pay 100% of its tuition.

Courses taken for audit do not count towards this 16-credit minimum. Failure to register for a term results in automatic withdrawal. A withdrawn student must be formally readmitted before resuming a program of study. Upon readmission, a student must be registered for a minimum of two consecutive terms prior to completing degree requirements.

Students must be registered in the term they complete their capstone. If a student does not complete all requirements by the last day of fourth term of their second year and wishes to graduate in August, they are required to register for 2 credits during the summer term. Students are responsible for their full tuition and fees during the summer. If students are unable to complete in August, the student must register full time in first term and in each term until they complete.

Important Information about Registration:

1. **Registration below 16 credits is not allowed and violates the terms of a student's tuition scholarship.**
2. **Any student registering below 16 credits during any term could be in violation of their scholarship requirements resulting in a loss of their tuition scholarship.**
3. **Courses taken for Audit do not count toward the 16 credits per term requirement but do count toward the 22 credit maximum.**

During their 2nd year students register in their Program Area's MSPH Practicum course and for their Capstone requirements. When a student takes Special Studies, they must register for Special studies in their specific Program area. The following course numbers correspond to the different program areas:

Practicum

221.810 Health Systems Practicum

222.810 Human Nutrition Practicum

222.815 Human Nutrition Registered Dietitian Practicum

223.810 GDEC Practicum

224.810 SBI Practicum

Capstone

221.850 MSPH Capstone Health Systems

222.850 MSPH Capstone Human Nutrition (including Dietitian)

223.850 MSPH Capstone GDEC

224.850 MSPH Capstone SBI

Special Studies

221.840 Special Studies in Health Systems

222.840 Special Studies in Human Nutrition

223.840 Special Studies in GDEC

224.840 Special Studies in SBI

These are pass/fail credits and a passing grade is only provided if program requirements are met within the corresponding term.

Students each term can register for 14-16 credits of Practicum or a combination of Practicum, Capstone and didactic courses. If they audit a course, they must have 16 additional credits for letter grade or pass/fail. Within a term, a maximum of 22 credits is allowed, combining Practicum, Capstone, and other didactic courses (audited courses are also counted within the 22 credit maximum). A sample schedule for year 2 is below.

SAMPLE SCHEDULE

- Complete at least 2 terms of practicum in the second year by completing at least 28 credits of practicum (22X.810). A student can register and earn more than 28 credits, but not less.
- Students should register for 22X.850 during the term in which they will complete their Capstone requirement. A student must register for a minimum of 4 credits.

Courses taken at other schools within the Johns Hopkins University must be considered carefully. If a student is interested in taking courses outside of the Bloomberg School of Public Health students must meet with the Academic Program Administrator (Elisabeth Simmons) prior to registering to discuss if the credits count toward their degree and or toward registration requirements.

Time of Completion Requirements

Students are expected to complete all requirements for the degree within two years of matriculation. Delays may be considered in special circumstances but in no case may the time in the program exceed four years, regardless of the residence status of the student (other than a leave of absence). Responsibility for tracking and adhering to the graduation timelines belongs to the student. If requirements are not met by the dates posted (see graduation schedule), registration for subsequent terms is required.

Introduction to Online Learning

The School of Public Health offers courses in various formats, including a number of online courses. In order to be eligible to take an online course, students must complete the Introduction to Online Learning, which is offered through the Center for Teaching and Learning at the Johns Hopkins Bloomberg School of Public Health. **This non-credit mini course is a prerequisite for all courses offered by this division and must**

be completed prior to the start of the term in which a student wishes to enroll in an online course. Since the School does not permit conditional and/or concurrent enrollment (that is, a student must take the online course prior to enrolling in a distance education course), we require all incoming students to take this non-credit course during the first term they enroll. For course dates and enrollment information, please visit the CoursePlus website (https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/).

Capstone

The culminating experience of the MSPH program is the production of an MSPH capstone that provides a meaningful contribution to knowledge of the health of underserved populations. The capstone is not a thesis in that it need not contain original research findings for review by an academic committee. However, it should provide tangible evidence of expertise on a specific applied topic of international health relevance. The capstone must be reviewed and approved by two faculty readers. Detailed, step by step, guidelines for the MSPH capstone content, format and submission for each program area can be found in the Final Capstone Guide.

Capstone Deadlines

Students must select one of four graduation timelines. Each task must be completed by the due dates indicated or students will be required to register for the next academic term until all requirements are met. The deadline for a cohort will be similar to the deadlines for the previous cohort. Students should familiarize themselves with the capstone deadlines for the previous cohort, to view these deadlines please see the academic guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html). The timeline for the second year will be distributed at the end of the first year.

MSPH Students must also abide by the complete list of additional tasks and deadlines which may be set by each program area and will be given to students by their respective Program Coordinators by the date of the Comprehensive Exam, end of May or early June of the student's 1st year.

Practicum

In addition to completing the requisite coursework, students must gain practical experience in the application of the principles and methods learned. Often the experience is acquired through field placement (practicum) in a work setting that may be the route to permanent employment, though such long-term implications are by no means essential. Alternatively, the student may undertake within the School environment the investigation and analysis of a significant issue related to health of underserved populations. Students begin their full-time practicum sometime between June and September of their second year. Practicum requirements are a minimum of two terms full time (4 months) and up to 8 months. Detailed information on the requirements for the practicum, including IRB requirements, can be found in the Practicum Guide.

Departmental Written Comprehensive Examination

Satisfactory performance is required on a written comprehensive examination. The date for the Departmental Comprehensive Exam TBA. The student should take the exam after completing required coursework, because questions will cover all required fields of study. Although most of the material for the exam is covered in specific courses, graduate education involves much more than the accumulation of specific course credits. Thus, students are responsible for the material on the exam regardless of the particular curriculum they have taken.

A minimum overall passing grade of 70/100 is required. Those scoring below this level may re-take the entire examination in January of the following year. A January examination sitting is offered only for students who fail the May examination. Only one re-examination is permitted. Students failing twice are terminated from the MSPH program.

Students must **NOT** pass along exam questions to future generations of students, **NOT** post questions and/or answers online, **NOT** seek, solicit, accept, or consult content from prior comprehensive exams, and **NOT** share or publicize any content from the comprehensive exam in any form with anyone at any time. Failure to adhere to these rules could result in termination from the program

Master's Degrees Specific Policy

Academic Advising Master's Degrees

Master's degree programs in the Department of International Health are a mixture of didactic coursework, independent reading, research/practice experience and the preparation of a culminating document. As the program progresses, there are many decisions to be made regarding which courses and experiences will address a student's educational objectives. To assist with navigating this process, each student is assigned an academic faculty adviser who has the responsibility of serving as a guide and mentor. While these programs seem to be tightly scripted by the Department and School, it is the Department's view that graduate degree programs must be owned by the student with the faculty acting as guides in the student's own development as a scholar and practitioner. This section is intended to guide the student and the faculty member in making the adviser-advisee relationship as successful as possible.

The suggestions are derived from the experience of faculty who have worked with students for many years and from students who themselves have been guided by these faculty members. The information is dynamic and needs input from students and advisers as they use it. Please submit comments and concerns to the Academic Program Administrator.

THE DEPARTMENT'S ADVISING PHILOSOPHY

Advising Philosophy, Department of International Health

The primary purpose of the academic advising process is to assist students in the development and implementation of a meaningful and appropriate plan for their graduate education and future career, based on the student's individual goals. This purpose is driven by a set of core values:

1. Advisers are responsible to the students they advise.
    - Advising is an integral part of the educational process with both students and advisers benefiting from the relationship
    - Regular student-adviser communication allows advisers to maximize the student's ability to develop life-long learning skills and for the adviser to act as an advocate for the student.
    - Advisers must recognize the diversity of student backgrounds and the opportunities provided by this diversity for maximizing educational achievement.
    - Advisers are responsible for connecting students with others in the academic community who can, when appropriate, assist in the advising process.
2. Advisers are responsible to the institution.
    - As faculty, advisers are responsible for maintaining the academic standards and reputation of the Department, School, and

University. This implies a focus on academic excellence for the students they advise.
  - Advisers must comply with the policies and procedures established by the Department, School and University for the didactic, exploratory, and research portions of a graduate student's educational experience.
3. Advisers are responsible to the community of higher education.
  - Advisers must uphold the values of academic and intellectual freedom that characterize the university environment in the United States.
  - As faculty, advisers are responsible for the training of the next generation of academic leaders in education, research, practice, and service.
4. Advisers are responsible to the public health community
  - As faculty in a School of Public Health, advisers are committed to improving the health and well-being of populations everywhere in the world through education, research, practice and service.

The Adviser-Advisee Relationship

All students in the Department are assigned a faculty adviser who is a full-time member of the advising faculty in their program area. In addition, **the MSPH Academic Coordinator for their program also serves as a back-up adviser to students**. The adviser has the responsibility of assisting the student in designing an academic program that meets the student's goals within the requirements of the University, School and Department. Additionally, the adviser serves to direct the student to appropriate resources and research opportunities. The adviser should be the first point of contact in resolving academic problems. Advising students is an integral part of every faculty member's responsibilities. Thus, the student should not feel that they are imposing by asking for advice. Faculty members expect to be available to students, although the students should be respectful of the faculty's time by scheduling and respecting appointments. This is especially true in our department where research and practice responsibilities of the faculty require them to travel a significant portion of their time. **The responsibility for arranging meetings with their adviser lies with the student. Students should not expect advisers to seek them out for required appointments**. The student bears the responsibility of consulting the adviser when necessary and arranging periodic appointments, even if there are no specific problems. In general, advisers and advisees should communicate at least once per term, preferably more often. All course registrations must be approved by the adviser. The student is required to schedule a meeting in order to assure that the adviser has reviewed the student's schedule and to plan any special studies projects or thesis research as needed with the adviser before the registration period deadline. If due to travel or scheduling difficulties, such communication cannot be conducted before the registration period deadline, students should receive approval for course registration from their MSPH Program Coordinator.

Student Feedback on Adviser Performance

The Department Chair reviews all faculty performance on an annual basis. This review assesses the career track of each faculty member as a part of the faculty mentoring role played by the Chair. In order to provide the most accurate information on faculty performance, the Chair needs information on all aspects of the faculties' roles including student advising. As a part of this process, we have initiated a formal adviser evaluation process that includes input from students. The provision of honest information is required of all students twice per year and these adviser ratings are handled with complete confidentiality. At the completion of the 2nd and 4th terms each year, all students will complete an Academic Adviser Evaluation Form (https://jhsph.co1.qualtrics.com/jfe/form/SV_8cvVZ1RanXU4PAN/) (will be updated and sent to students twice a year) and submit it online. The survey results are analyzed to provide a body of information on advising style, content, and collective perception from multiple students advised by each faculty member over time, focusing on aggregate results accumulating over successive administrations of the survey. The Department Chair (David Peters), the Associate Chair for Academic Programs (Cyrus Engineer), and the Associate Chair for Student Matters (Julie Denison) are the only faculty who may review individual survey responses, and each is excluded from reviewing responses naming themselves as adviser. The responses are also reviewed by the Academic Program Manager (Cristina Salazar) and Academic Program Administrator (Elisabeth Simmons), who may lead or participate in survey analysis. Survey responses about individual faculty members **will be handled with complete confidentiality**. Any feedback relayed to a faculty member from these surveys will be informed only by cumulative or aggregate survey results, will be communicated to faculty only in a manner that does not identify individual students (with due awareness of the faculty member's overall number of advisees), and will be solely for the purpose of helping faculty prospectively improve their approach to advising as appropriate.

It is **not the aim of this survey-based evaluation** to intervene in specific individual situations that may be problematic. If a student wishes to discuss concerns about a **specific individual situation**, we encourage that student to consult directly with their Degree Program Coordinator(s), the Academic Program Administrator, the Academic Program Manager, or the Associate Chair for Student Matters.

Advising Information

CHANGE OF Adviser

For a variety of reasons, a student may wish to change advisers. Faculty wishing to initiate a change should discuss this with the Chair of the Curriculum and Credentials Committee. Faculty will need to submit a report of the student's progress at the time of this request. Student-initiated changes of adviser are made without penalty and are a common occurrence. Students should write a letter of request to the Chair of the Curriculum and Credentials Committee to change from one faculty member to another. Both faculty members must agree. Any request for changes must also be discussed and approved by the student's Program Coordinator. Once approved the change should be sent to Elisabeth Simmons, who will update the students' DIH academic file and inform the Records and Registration Office to update the student's schoolwide file.

RESPONSIBILITIES OF adviser

- To assist in determining the advisee's educational goals and needs at the start of the program.
- To serve as an educational and/or professional mentor for the student.
- To maintain awareness of and sensitivity to the level of compatibility between the student advisee and themselves in terms of academic, professional, and personal interests.
- To facilitate a change of adviser if deemed appropriate to the student.
- To monitor the advisee's overall academic program and be sensitive to signs of academic difficulty.
- To be sensitive to cultural, health, legal, housing, visa, language, financial, or other personal problems experienced by the advisee and to be understanding, and supportive. The Department has a sizable portion of foreign students coming from diverse pre-professional and professional educational backgrounds. As such, they have diverse

needs and experience in managing a US based graduate education program.
- To meet regularly with the student and to identify a mechanism for advising while traveling either through email or by identifying a back-up adviser for periods of extended travel.

RESPONSIBILITIES OF ADVISEE

- To arrange to meet with the adviser at least once each term.
- To comply with registration and administrative deadlines.
- To identify and develop professional career goals and interests.
- To understand administrative policies and procedures and be familiar with the requirements for their program as described in the Academic Guide.
- To maintain the academic checklist and review it at meetings with the adviser.
- To complete an Adviser Evaluation Form twice during the academic year, once at the end of 2nd term and again at the end of 4th term.

STUDENT EXPECTATIONS OF AdviserS

- Adviser's approval and or recommendation on course registrations, course changes, pass/fail agreements, waiver requests, practicum approvals and on all petitions to the Curriculum and Credentials Committee.
- At least one meeting per term with the adviser.
- Oversight of the student's overall academic program and sensitivity to any academic difficulties.
- Knowledge of and interest in the student's career objectives including writing recommendation letters.
- Review of required and recommended courses for the program area. Assistance in designing a plan for the fulfillment of required courses and assistance with planning the course schedule for the year.

MSPH Adviser/Advisee Meeting Guidelines

The guidelines below are the absolute minimum interactions students and advisers should expect. Many of our students and faculty meet much more frequently and often become life-long colleagues as a result of the mentoring experience.

YEAR ONE

First Term

- Minimum of two meetings with advisee
- Review with advisee competencies, departmental requirements, develop a written plan of courses and experiences to meet the student's educational goals
- Review and approve Individual Goals Analysis (IGA) assignment
- Review administrative deadlines
- Identify other people and resources of which students should be aware
- Monitor progress after midterms and review transcript at end of term

Second Term

- One Meeting
- Monitor advisee's progress, evaluate, discuss first term grades
- Begin discussion of possible internship opportunities
- Follow up on plan set out in first term
- Provide advice on courses advisee might take in third term
- Monitor progress after midterms and review transcript at end of term

Third Term

- One Meeting
- Monitor advisee's progress; evaluate; discuss second term grades
- Continue discussion on internship opportunities
- Discuss preparation for comprehensive examination, student study groups
- Provide advice on courses advisee might take in fourth term
- Write letters of recommendation for practicum and scholarship applications
- Monitor progress after midterms and review transcript at end of term

Fourth Term

- One or two meetings
- Monitor student's progress; evaluate; discuss third term grades
- Encourage participation in study groups for comprehensive examination
- Finalize plans for practicum; review and approve practicum proposal/sign approval form
- Review and approve travel plans and forms
- Students should begin working with the Career Services Office to explore options for post-graduation employment or further education
- Monitor progress after midterms, review transcript at end of term, and discuss year-end grades

YEAR TWO

First term Practicum

- Communicate via email or Skype or in-person once a month
- Discuss MSPH capstone topic, readers, and graduation timeline
- Discuss post-graduation employment or further education
- Advisers who have December graduate advisees must follow corresponding deadlines from Graduation Deadline Table found in students CoursePlus library
- Adviser to review and approve advisee's Portfolio Touchpoints
  - Identify Topics and Capstone readers
  - Declare intent to graduate Capstone outline for students completing in January

Second term Practicum & Capstone

- Communicate via email or in-person once a month
- Continue discussions regarding post-graduation employment or further education
- Adviser to review and approve student's Portfolio Touchpoints
  - Capstone outline
  - First draft
  - Final draft
- Other drafts and revisions should be conducted via email
- Follow up with advisee and second reader for timely feedback on drafts
- Make sure your advisee has completed or is in a practicum by this term
- For December graduates and January completers, submit grade for their capstone special studies
- Discuss post-graduation employment or further education

Third term Practicum & Capstone

- Communicate via email or in-person once a month
- Make sure advisee has completed all course requirements or are registered to complete all course requirements
- Adviser to review and approve student's Portfolio Touchpoints
  - Capstone outline
  - First draft
  - Final draft
- Other drafts and revisions should be conducted via email
- Follow up with advisee and second reader for timely feedback on drafts
- For those finishing in third term, submit grade for their capstone special studies
- Discuss post-graduation employment or further education

Fourth term Practicum & Capstone

- Communicate via email or in-person once a month
- Make sure advisee has completed all course requirements or are registered to complete all course requirements
- Adviser to review and approve student's Portfolio Touchpoints
  - Capstone outline
  - First draft
  - Final draft
- Other drafts and revisions should be conducted via email
- Follow up with advisee and second reader for timely feedback on drafts
- For those finishing in third term, submit grade for their capstone special studies
- Discuss post-graduation employment or further education

Standards of Academic Performance

Letter grades must be earned in all courses used to satisfy requirements. Please note that courses may be counted only once to fulfill requirements. Students must receive satisfactory grades of C or higher in all required courses and continuously maintain a cumulative Grade Point Average (GPA) of at least 2.75 in order to remain a degree candidate in good standing. Any student who receives a D or F in a required course must repeat the course and achieve at least a C. Anyone not meeting these standards will be placed on probationary status. The Committee will establish the minimum conditions to be fulfilled in order to return to the "good standing" status and avoid termination. Typical cases with no conditions require that students improve their academic standing within two academic terms. In cases where conditions are imposed, the Committee will specify the maximum time allowed for satisfaction of the conditions. Failure to satisfy these conditions may result in termination from the program.

If students receive Federal Loans administered through the Financial Aid Office (http://www.jhsph.edu/offices-and-services/student-affairs/financial-aid/) there are other academic standards that students must abide by in order to comply with Federal Loan requirements. Please check with the Financial Aid office or email them at JHSPH.finaid@jhu.edu to request more information. Any student below a 2.75 GPA at the end of their 1st year will automatically be disqualified from receiving the schoolwide Master's MSTP scholarship in their 2nd year.

Masters Tuition Scholarship

All MSPH students will receive a 75% tuition scholarship in their second year of their MSPH degree. This scholarship is contingent on completing the Residency Requirement (page 28) continue to be registered full time in the second year of the MSPH degree and being in good academic standing. The 75% tuition scholarship can only be applied during terms 1-4 of the student's second year. It does not apply for summer term or winter intersession.

Individualized Goals Analysis (IGA)

The IGA is a process of discussion between a student and their adviser to help them plan their course and program goals. Students are required to enroll for one credit of Special Studies (22X.840) with their adviser during 1st term.

Students will work on a written document that is uploaded to their Portfolio outlining the process below.

Part 1: Students briefly explain what knowledge, skills, and experiences they bring to the program.

Part 2: Students Identify their goals for their education by explaining what they hope to gain in terms of knowledge, skills, personal and professional contacts, and other experiences while a student in the MSPH program. Students will review the list of MSPH core competencies with their adviser. Students are encouraged to identify additional competencies particularly relevant to their professional future and/or academic stream. Students will describe one or more practicum assignments and potential capstone topics and indicate how these will be used to build their competencies and achieve their goals.

Part 3: Develop an MSPH Curriculum Planning and Tracking Sheet by developing a tentative course plan for a student's entire MSPH program. Identify what courses and special studies they intend to take and when they plan to complete their courses. Course descriptions in the catalogue indicate when courses are generally offered. A student's tracking sheet should include a tentative list of electives they plan to complete and the total credit hours. Students should carefully review their paper and tracking sheet with their adviser to ensure the proposed curriculum is not only feasible, but that it meets program requirements. Students will then explain how their curriculum plan is aligned with the goals they identified in Part 2. A spreadsheet is often the best way to do this part.

Part 4: Students upload their MSPH Curriculum Planning to their Portfolio by the end of 1st term and address the touchpoint to complete the requirement and for feedback from their Program Coordinators.

Tracking Sheet

Tracking sheets are used to track all course requirements from each student's program. All students are required to fill out and submit their tracking sheets once a year to Elisabeth Simmons via their Portfolio. Approved waivers and substitutions must also be submitted with the tracking sheets. Students should use the tracking sheet when meeting with their advisers. Students will have access to their tracking sheets in their Portfolio libraries and will submit their completed sheet in March, by the end of 3rd term, to the required touchpoint.

Portfolio

All MSPH students have access to 'My Portfolio' in CoursePlus. The Portfolio provides students an easy way to receive feedback on progress from Advisers and Program Coordinators and allows them to provide “evidence” of assignments and completed tasks for their MPSH degree all in one convenient location.

The Portfolio is used for students to turn in assignments such as the Individual Goals Analysis and the second year Capstone process and deadlines. Students will be responsible for uploading and adhering to all deadlines as part of their MSPH program. At the beginning of each year students will be given instruction on how to use the Portfolio and will be expected to visit their Portfolio regularly for assignments and due dates.

Travel Policy (p. 336)

Practicum Guidelines

The latest practicum information can be found in the practicum section **(**https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html**) in the Academic Guide.**

MSPH Practicum Opportunity Examples

1. JHSPH Center for Global Health: Field Placements and Field Research Awards (http://www.hopkinsglobalhealth.org/funding-opportunities/student-and-trainee-grants/ghefp/) - Deadline: February Length of internship: Depends on the posting from faculty Location of internship: Depends on the posting from faculty Benefits: Grants of up to $3,500

> Contact: Anna Kalbarczyk, MPH Program Manager 410-502-9873 akalbarc@jhu.edu

2. Fulbright US Student Program (https://studentaffairs.jhu.edu/fellowships/fulbright/) - Deadline: September (JHSPH Deadline) Benefits: Round trip transportation to host country. Funding for room, board and incidental costs based on country cost of living. Health benefits. Country specific benefits also exist. Contact: follow the link (https://studentaffairs.jhu.edu/fellowships/fulbright/) or contact nfp@jhu.edu

3. Program in Applied Vaccine Experience (PAVE) (https://www.jhsph.edu/departments/international-health/current-students/Program-in-Applied-Vaccine-Experiences-PAVE/): Deadline: January Length of Internship: 3-4 months Location of Internship: Geneva, Switzerland; Washington, DC; Atlanta, GA; New York, NY; depending on agency placement Benefits: Grants of up to $3,500 per month Contact: Jessica Atwell, PhD, MPH Program Manager jatwell@jhu.edu

Internships are currently offered with the following organizations: WHO, Gavi, UNICEF, PAHO and CDC

4. New York Epi Scholarship Program: Deadline: February Length of internship: 10-12 week summer internship Location of internship: NYC Department of Health and Mental Hygiene, Los Angeles County Department of Public Health, or at Public Health – Seattle & King County Benefits: An allowance to defray expenses for a full-time 10-12 week summer internship. Mentoring by some of the nation’s leading epidemiologists and researchers. Enhanced academic opportunities and practical experience in statistical analysis.

Contact: http://www.nyc.gov/html/doh/html/career/epi-scholar-apply.shtml

5. STAR Program (https://www.ghstar.org/): Deadline: Dependent on Open Posting Due Dates (see website) Length of internship: work full or part time for up to six calendar months Location of internship: USAID offices in Washington, DC (the Agency’s headquarters), in the Agency’s missions throughout the world, or with Agency implementing partners (other government agencies, multilateral and non-governmental organizations).

6. Boren Fellowship: Deadline: January Length of internship: a preference of 6 months or longer, absolute minimum of 3 months Location of internship: All over the globe- see website for complete listing Benefits: Language learning fellowship to combined with a practicum Contact: see website (https://www.borenawards.org/)

7. Critical Language Scholarship Program: Deadline: Early November Benefits: Language learning scholarship to combine with a practicum

8. Helen Keller International (http://www.hki.org/internships-and-volunteering/#VIsTJGTF8ms): Deadline: December - Length of internship: minimum of 6 months - Location of internship: Africa,

9. Congressional Hunger Center (http://www.hungercenter.org/fellowships/emerson/): Emerson Hunger Fellowship: Deadline: January Length of internship: 1 year Location of internship: Washington DC Benefits: $16,000 annual living expenses, health insurance, travel insurance, housing during field placement, $4,000 housing subsidy in DC, $3,500 end of service award, relocation subsidies Contact: Apply online

10. U.S. Borlaug Fellows in Global Food Security Program (https://www.fas.usda.gov/programs/borlaug-fellowship-program/): Deadline: Deadline for fall applications is early November Length of internship: Varies Location of internship: Varies Contact: see website

11. World Food Program (http://www.wfp.org/careers/internships/): Deadline: December Length of internship: Varies Location of internship: Rome, Italy Contact: see website (http://www.wfp.org/careers/internships/)

12. World Bank - Deadline: January 31 st – summer internship & October 31st – winter internship Length of internship: At least 4 weeks Location of internship: Most positions are in Washington DC, but some positions are offered in country offices Benefits: The Bank pays an hourly salary to all Interns and, where applicable, provides an allowance towards travel expenses. Interns are responsible for their own living accommodations. Contact: apply online; Annie Provo (previous HN MSPH student)

13. WHO internships (https://www.who.int/careers/internship-programme/) -

Deadline: January 31 st – summer internship & September 30th – winter internship Length of internship: A minimum of 6 weeks to a maximum of 12 weeks on a full-time basis. Exceptionally, internships may be extended up to 24 weeks to respond to special academic requirements. Location of internship: Geneva, Switzerland (apply online)

For internships at regional offices email directly:

- WHO Regional Office for Africa: afrgohrinterns@who.int
- WHO Regional Office for the Americas: interns@paho.org
- WHO Regional Office for Europe: interns@euro.who.int
- WHO Regional Office for the Eastern Mediterranean: emrgohrs@who.int
- WHO Regional Office for South-East Asia: seinterns@who.int
- WHO Regional Office for the Western Pacific: interns@wpro.who.int

WHO Headquarters also accepts interns in the following out-posted offices:

- WHO Global Service Centre: gsoffice@who.int
- WHO Kobe Office: wkc@wkc.who.int

Benefits: WHO internships are not paid, and no travel expenses are available.

Contact: apply online or with email addresses above

See list of previous/current student practicums and essays/capstones for ideas and contact

*No practicum is currently permitted in the state of Kentucky

Capstone Guidelines

The latest capstone information can be found in the capstone section in the Academic Guide **(**https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html**).**

Program Concentration Learning Outcomes

For a complete list of learning outcomes by program concentration, please consult the most recent Department of International Health MSPH/MHS Academic Guide (https://my.jhsph.edu/sites/IH/Student-academic-forms/Forms/AllItems.aspx?RootFolder=%2Fsites%2FIH%2FStudent%2Dacademic%2Dforms%2FAcademic%20Guides&InitialTabId=Ribbon%2ERead&VisibilityContext=WSSTabPersistence) published in August of each year.

International Health, MSPH, Human Nutrition - Dietitian

International Health, MSPH, Human Nutrition-Dietitian

Program Coordinator: Laura Caulfield, PhD

Requirements for Admission

The Dietitian program seeks to attract and train future experts in public health nutrition across a range of professional interests and background. Entry into the Master of Science in Public Health (MSPH) program in Human Nutrition requires, at a minimum, a bachelor's degree and eight prerequisite courses. For more information please go to the MSPH, Human Nutrition - Dietitian homepage (https://www.jhsph.edu/departments/international-health/global-health-masters-degrees/master-of-science-in-public-health/registered-dietician-program/).

Advising Faculty

- Laura Caulfield

Visit our Departmental website for International Health, MSPH, Human Nutrition-Dietitian requirements, application, fees, and additional information. (https://www.jhsph.edu/departments/international-health/global-health-masters-degrees/master-of-science-in-public-health/registered-dietician-program/)

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Visit our Departmental website for MSPH, Human Nutrition-Dietitian requirements, application, fees, and additional information. (https://www.jhsph.edu/departments/international-health/global-health-masters-degrees/master-of-science-in-public-health/registered-dietician-program/)

Educational Objectives

The MSPH program in Human Nutrition is designed to train professionals to focus on understanding and solving public health problems in food and nutrition across a diverse societal landscape. The MSPH degree in Human Nutrition prepares students to assume professional, technical, and management positions within public health nutrition programs or government, international or non-governmental agencies, universities, hospitals and private industry. The program also offers a broad public health nutrition component that complements dietetics skills acquired in the combined MSPH-Dietitian program (see below). The MSPH program also prepares students with a foundation of knowledge and skills for carrying out subsequent doctoral studies and research in the field of human nutrition, or training in medicine.

Overall Program Goal

There are four overarching academic competencies that students are expected to master during the course of their Masters' degree program. Students should:

- Demonstrate knowledge of public health nutrition problems and characterize these problems in terms of measurable indicators
- Identify nutrition problems of public health importance; analyze and synthesize relevant data; and develop and implement prevention, control, and evaluation plans
- Participate in a field, laboratory or clinical experience related to nutrition research or programs from conception of ideas through design, management, monitoring, data collection, and analysis
- Communicate through written reports, oral presentations and other media nutrition information of high technical quality and program or policy relevance

International Health, MA/MSPH

International Health, MA/MSPH

Students in the dual degree program may complete both Masters in 3 years (6 terms at BSPH and 3 semesters at SAIS) depending on what SAIS track a student chooses. Dual degree candidacy does not remove the MSPH practicum or the master's Capstone requirements. Students can choose to do the MSPH or MA first. For more information about the dual degree please ask **Cristina Salazar** (csalazar@jhu.edu), the

Academic Program Manager. For more information please visit this site (https://publichealth.jhu.edu/academics/ma-msph/).

International Health, PhD

Doctor of Philosophy (PhD)

The PhD prepares students to become independent investigators in academic and non-academic research institutions, and emphasizes contributions to theory and basic science.

Students interested in a doctoral research degree must apply to one of the Department's four concentrations.

Program Concentrations

Global Disease Epidemiology and Control

Program Director: Andrea Ruff, MD

Program Coordinator: Melissa Marx, PhD

Requirements for Admission

Applicants to the program must have a degree in medicine, veterinary medicine, or dentistry; or a master's level degree or equivalent graduate training in epidemiology, statistics, international health, tropical medicine, microbiology, parasitology, immunology, or virology. Prior work experience is preferable.

Educational Objectives

Overall Program Goal

This program provides training for public health researchers who will use epidemiologic, immunologic and/or laboratory and statistical methods to design, implement, and/or evaluate disease control interventions for diseases of public health importance to under-served populations. Graduates will have a fundamental understanding of the pathogenesis, epidemiology, and control measures applicable to diseases of public health importance in disadvantaged populations throughout the world. Interventions to be studied will be primarily biomedical (e.g. therapeutic or prophylactic drugs, vaccines or environmental modifications), although there may be a behavioral component to effective implementation of such interventions.

Special strengths of the program are infectious disease epidemiology and vaccinology. Students can acquire a broad understanding of the methods needed to design studies and gain hands-on experience in the design, conduct and analysis of community and clinical trials and/or laboratory based investigations, including the immunologic and biologic basis of responses to immunizations and other prophylactic or therapeutic interventions.

General Knowledge

Learning Objectives

- Describe the evolution of key approaches that have been applied in an attempt to address the major public health problems of underserved populations and to place these approaches in the context of general development, culture and health policies.
- Define the most important indicators of health status of underserved populations, identify databases and other sources of information for these indicators, and describe how changes in these indicators reflect changes in the health status of populations.
- Describe the epidemiology, biology, pathophysiology, modes of transmission, and strategies for prevention and control of the major infectious diseases of public health importance to resource-poor environments. Be able to argue for the appropriateness of specific strategies for prevention and control in selected circumstances.

Research Skills

Learning Objectives

- Review and critique the relevant literature on a topic of interest.
- Place a research question in the context of current knowledge.
- Frame a research question in terms of study goals and specific aims.
- Design a research study to address specific aims. Be able to differentiate between study designs and to argue in favor of using a specified design as most appropriate to address that research question
- Develop and write a research proposal
- Develop and justify a budget for a research proposal.
- Discuss the ethical issues involved in research in resource poor environments and argue for a particular approach to addressing these ethical issues.
- Prepare an application to an IRB for ethical approval.
- Implement and manage a research study, monitor the progress of the study and the quality of data collected.
- Produce an appropriate statistical analysis of the data collected during the research project, and provide a reasoned interpretation of these results.
- Place the research findings in the context of current knowledge, identify limitations of the research, and be able to specify further areas for research.
- Analyze the policy implications and public health significance of the research findings.

Communications

Learning Objectives

- Make oral and poster presentations of research findings for professional audiences.
- Write manuscripts of publishable quality for the peer reviewed literature that describe and explain research findings.
- Teach other students basic introductory materials in the student's general area of expertise.

Health Systems

Program Director: Sara Bennett, PhD

Program Coordinator: Abdul Bachani, PhD

Requirements for Admission

Applicants must have a prior Master's degree in biological, health sciences, or alternatively in management or social sciences. Prior international or health systems experience is a significant advantage.

Educational Objectives

The overall goal of the Doctor of Philosophy (PhD) degree in the Health Systems Program is to produce the next generation of leaders in health systems research and practice, particularly in low- and middle income country settings. Graduates of the PhD program in Health Systems should have the competencies to play leadership roles in: (a) health policy; (b) health planning, financing, and management; (c) monitoring and evaluation; (d) institution building and community development; (e) public health teaching; and (f) research on health systems; in low and middle-income countries or with disadvantaged populations in any part of the world.

Overall Program Goal

There are four overarching academic competencies applicable to each area of study, that students are expected to master during the course of their doctoral program. Students should be able to:

- Apply public health sciences to address health problems in vulnerable populations
- Provide leadership in health systems management and analysis
- Conduct independent research on health systems in low- and middle-income countries and vulnerable populations
- Communicate effectively with researchers, policy makers, and key stakeholders in health systems

Human Nutrition

Program Director: Parul Christian, DrPH

Program Coordinator: Laura Caulfield, PhD

Requirements for Admission

The program seeks to attract and train future experts and leaders in public health nutrition across a range of professional interests and backgrounds. Entry into the doctorate in philosophy (PhD) program in Human Nutrition requires, at a minimum, a bachelor's degree or its equivalent, preferably in nutritional, biological, food health or social sciences, public health practice, food security, economics or health policy with a minimum of one year of post-baccalaureate experience which can take the form of a master's degree, a dietetic internship, medical training or other relevant work experience.

Educational Objectives

The doctoral program in Human Nutrition is designed to train professionals to identify, understand and solve, through scientific methods, problems of public health importance in human nutrition. Graduates are expected to assume leadership roles in academia, government, industry and other private sector enterprises. They will be expected to advance knowledge in human nutrition through research and advocate the application of such knowledge through public health policies and programs.

Overall Program Goal

There are five overarching academic competencies, applicable to each area of study, that students are expected to master during the course of their doctoral program. Students should:

- Understand the biochemical, molecular, epidemiological, social and behavioral fundamentals of human nutrition
- Comprehend the complex interrelationships between food-and-nutrition and health-and-disease in diverse populations
- Master quantitative and qualitative analytic skills required to understand, critically evaluate and conduct nutrition research
- Be able to integrate ethical principles and standards in the conduct of human research
- Develop the professional skills necessary to communicate effectively

Students in the doctoral program in Human Nutrition are expected to gain knowledge and master skills in the following broad content areas of the curriculum, each with sub-areas of specialization:

Nutrition and Health

Sub-areas: Nutrition over the life span, social, cultural and behavioral influences, food and nutrition policy.

This content area of the curriculum has core competencies that can be addressed in a flexible manner, and in consultation with a student's academic adviser.

Learning Objectives – Know and understand:

- Nutritional processes in each stage of life
- Age-, disease- and physiologic state-specific nutrient requirements
- Social, political and cultural contexts influencing nutritional status of individuals and populations
- Pathological processes and how they influence nutritional well-being and vice versa
- Development and application of evidence-based food and nutrition policies

Biochemistry and Metabolism

Sub-areas: Nutrient metabolism

Minimum requirements in the area of metabolism would provide candidates with the biochemical and metabolic fundamentals of nutritional science.

Learning Objectives – Know and understand:

- Biochemical and metabolic pathways of macronutrients and micronutrients
- Relationship between cell structure and metabolism and nutrient functions
- Genetic basis of nutritional interactions and requirements

Research Methodology

Sub-Areas: Biostatistics, Epidemiology, Nutritional Assessment, Nutritional Epidemiology, Research Proposal Development, Qualitative Research Methods

Minimum required competencies in research methodology provide candidates with the quantitative and qualitative knowledge and skills for understanding and conducting research in human nutrition.

Learning Objectives – Know and understand concepts and terms

- Compose research questions
- Link nutrition research questions to appropriate study design, methods, analysis, interpretation, and writing
- Be familiar with underlying principles, methods of collection, analysis and interpretation of quantitative and qualitative data
- Demonstrate ability to analyze a nutrition-related (e.g., dietary or nutritional status) data set
- Understand the use of nutrition reference data
- Demonstrate competence in one primary statistical software and data management package
- Understand the principles and use of nutrition-related laboratory techniques, equipment and field assessment methods

Professional Skills

Sub-areas: Grant writing, scholarly publishing, teaching and public speaking, ethics, information technology

The goal of the professional skills core curriculum is to provide the student with exposure to or experiences in important skills necessary to work effectively as a professional at the doctoral level., Development of these competencies occur through the academic process of the degree rather than through didactic coursework per se.

To support students in transitioning from coursework to thesis research, Dr. Caulfield leads the Doctoral Seminar in Proposal Development. Through the sequence, HN doctoral students (or those in other programs with research interests in nutrition) are engaged in career planning, identifying opportunities at Johns Hopkins, speaking and communicating their research ideas, persuasive written communication to various audiences, seeking research funding, and grant writing and budgeting. By the end of the sequence (2nd quarter of year 2), students are expected to have a solid draft of their research proposal and are planning for completion of the proposal and their oral exams. To support this process, and to reflect the academic work involved, students also sign up for varying credits of special studies with their adviser.

We encourage students to write and publish peer-reviewed scientific papers in addition to their thesis throughout their doctoral program. Dr. Gittelsohn offers a 2-quarter special studies course designed to assist students in writing their first research article for publication, or students may sign up for special studies with their adviser.

Social and Behavioral Interventions

Program Director: Caitlin Kennedy, PhD

Program Coordinator: Svea Closser, PhD

Requirements for Admission

Entrants into the program must have: professional experience and a master's degree in the health or social sciences.

Educational Objectives

The program exposes students to applied social science and health education/communication theory and methods for health-related research, program implementation, and evaluation. Coursework emphasizes theoretical and methodological approaches within applied medical anthropology and social determinants of health, qualitative and quantitative methods, competency within a specific cultural/geographic area, and principles and methods for community-based intervention research.

PH.380.603	Demographic Methods for Public Health	4
PH.380.758	Demographic Estimation for Developing Countries	4

Although students take several biostatistics and epidemiology courses in this program, 340.694.81 Power and Sample Size for the Design of Epidemiological Studies is a highly recommended course online in 3rd term that is helpful in preparing for the comprehensive examinations and in preparing proposals.

Students are encouraged to take advantage of offerings in other schools of the University. The Institute of the History of Medicine in the School of Medicine is a unique resource; the courses most relevant to GDEC students are: History of International Health and Development, and History of Health and Development in Africa (http://www.hopkinshistoryofmedicine.org/content/course-descriptions)

Health Systems

Health Systems Course Requirements

All required courses must be taken for a letter grade with the exception of courses only offered pass/fail. Any application to waive courses must be made in writing (with an approval from the adviser) to the coordinator at least 1 term prior to the start of the course. Even if waivers are granted, students are responsible for course content on comprehensive exams.

The below courses are the possible list of requirements, for the most up-to-date information and an accurate list of required course please view our departmental Academic Guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) published August of each academic year.

Code	Title	Credits
Required Courses		
PH.220.605	Doctoral Seminar in International Health I	3
PH.220.606	Doctoral Seminar in International Health II	3
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	3
PH.220.600	International Travel Preparation, Safety, & Wellness	1
PH.221.646	Health Systems in Low and Middle income Countries	3
PH.221.620	Applying Summary Measures of Population Health to Improve Health Systems	3
PH.221.638	Health Systems Research and Evaluation in Developing Countries	4
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
PH.220.842	Doctoral Independent Goals Analysis - International Health	1
Biostatistics choose one of the series options		
Series option 1		
PH.140.621	Statistical Methods in Public Health I	4
PH.140.622	Statistical Methods in Public Health II	4
PH.140.623	Statistical Methods in Public Health III	4
PH.140.624	Statistical Methods in Public Health IV	4
Series option 2		
PH.140.651	Methods in Biostatistics I	4
PH.140.652	Methods in Biostatistics II	4
PH.140.653	Methods in Biostatistics III	4
PH.140.654	Methods in Biostatistics IV	4
Epidemiology		
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
Seminars		
PH.221.801	Health Systems Program Seminar I	1
PH.221.802	Health Systems Graduate Seminar 2	1
PH.221.861	Doctoral Seminar in Health Systems (Terms 3-4 of 1st year, and terms 1-2 of second year)	1
Ethics		
PH.550.860	Academic & Research Ethics at BSPH	
PH.550.600	Living Science Ethics - Responsible Conduct of Research	1
or PH.306.665	Research Ethics and integrity: U.S. and International Issues	
General Elective Courses		
Fifteen (15) additional credits are required for the PhD program from the following list of courses, if not already selected to satisfy another requirement. The courses must cover at least 2 of the 3 blocks below. These courses must be taken for a letter grade with the exception of courses only offered pass/fail.		
Health Systems Management		
PH.221.608	Managing Non-Governmental Organizations in the Health Sector	3
PH.221.610	Pharmaceuticals Management for Under-Served Populations	3
PH.221.722	Quality Assurance Management Methods for Developing Countries	4
PH.312.604	Quantitative Tools for Managers	3
PH.312.610	Foundations of Organizational Leadership	3
PH.312.617	Fundamentals of Financial Accounting	3
PH.312.621	Strategic Planning	3
PH.312.603	Fundamentals of Budgeting and Financial Management	3
PH.312.633	Health Management Information Systems	3
International Health Topics		
PH.180.620	Introduction to Food Systems and Public Health	4
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health	2
PH.221.612	Confronting the Burden of Injuries: A Global Perspective	3
PH.221.613	Introduction to Humanitarian Emergencies	3
PH.221.616	Ethics of Public Health Practice in Developing Countries	2
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
PH.221.635	Global Advances in Community-Oriented Primary Health Care	3
PH.221.639	Health Care in Humanitarian Emergencies	3
PH.221.661	Project Development for Primary Health Care in Developing Countries	4
PH.221.624	Urban Health in Developing Countries	3
PH.221.637	Health Information Systems	3
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.410.610	Housing Insecurity and Health	3
Health Policy		
PH.221.614	International Political Science for Ph Practitioners	2
PH.221.650	Health Policy Analysis in Low and Middle income Countries	3
PH.223.687	Vaccine Policy Issues	3
PH.300.652	Politics of Health Policy	4
PH.300.712	Formulating Policy: Strategies and Systems of Policymaking in the 21st Century	3
PH.300.713	Research and Evaluation Methods for Health Policy	3

PH.308.610	The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life	3
PH.300.600	Introduction to Health Policy	4
Research/Analytical Methods Electives		
Fifteen (15) additional credits are required from following list of courses. The selected courses must cover at least 2 of the following 5 blocks. These courses may be taken for a letter grade or Pass/Fail.		
Quantitative Methods		
PH.140.646	Essentials of Probability and Statistical Inference I: Probability	4
PH.140.647	Essentials of Probability and Statistical Inference II: Statistical Inference	4
PH.330.657	Statistics for Psychosocial Research: Measurement	4
PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses	4
PH.340.715	Problems in the Design of Epidemiologic Studies: Proposal Development and Critique	5
PH.340.728	Advanced Methods for Design and Analysis of Cohort Studies	5
PH.340.753	Epidemiologic Methods 3	5
Health Systems Research & Evaluation		
PH.223.664	Design and Conduct of Community Trials	4
PH.309.712	Assessing Health Status and Patient Outcomes	3
PH.309.716	Advanced Methods in Health Services Research: Analysis	3
PH.340.717	Health Survey Research Methods	4
PH.380.711	Issues in Survey Research Design	3
PH.380.712	Methods in Analysis of Large Population Surveys	3
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
Qualitative Methods		
PH.224.690	Qualitative Research Theory and Methods	3
PH.224.691	Qualitative Data Analysis	3
