Although students take several biostatistics and epidemiology courses in this program, 340.694.81 Power and Sample Size for the Design of Epidemiological Studies is a highly recommended course online course in 3rd term that is helpful in preparing for the comprehensive examinations and in preparing proposals.

The Health Systems Program also offers a Health Economics “specialization” which tracks with school wide standards set out by the interdepartmental PhD Program in Health Economics. For further information on these courses, see the Health Systems Program Coordinators.

Human Nutrition

Requirements

Students are expected to take 6 quarters and at least 96 credits of coursework to satisfy the educational requirements for the Human Nutrition program, pass a written and an oral comprehensive exam, a final oral defense and to successfully complete a thesis research project.

At least two thirds of course credits that are required are associated with the core content areas common to all doctoral students (about 64 credits). The exact number of required core course credits taken by a student will vary depending on specific choices made by the student in conjunction with their adviser. To complete the remainder of their coursework requirements, students will choose elective courses and special studies. Thus, about 25-35 credits will be completed through electives chosen by the student in conjunction with their adviser, depending on their unique career goals and research interests.

The goals of the doctoral program form the basis for the four core content areas of the educational program: Metabolism, Research Methods, Nutrition and Health, and Professional Skills. Students are required to take specific courses in each of these four content areas in order to develop the competencies expected of all doctoral-level nutrition professionals. Within each content area are various sub-areas that more clearly define the content area and provide the basis for identifying minimum competencies for all doctoral candidates. Agreement about these competencies, in turn, led to the development of the core curriculum requirements.

Human Nutrition Course Requirements

All required courses must be taken for a letter grade with the exception of courses only offered for pass/fail.

The below courses are the possible list of requirements, for the most up-to-date information and an accurate list of required course please view our departmental Academic Guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) published August of each academic year.

Code	Title	Credits
Nutrition and Health: Required		
PH.222.641	Principles of Human Nutrition in Public Health	4
PH.222.657	Food and Nutrition Policy	2
PH.222.655	Nutrition and Life Stages	3

PH.222.654	Food, Culture, and Nutrition	4
Nutrition and Health: Suggested Electives		
PH.221.611	Food Security and Nutrition in Humanitarian Emergencies	
PH.222.649	International Nutrition	
PH.222.661	Designing Healthy Diets	
PH.222.652	Nutrition in Disease Treatment and Prevention	
PH.222.630	Nutrition, Infection and Immunity	
PH.700.630	Food Ethics	
Biochemistry and Metabolism: Required		
PH.260.600	Introduction to the Biomedical Sciences (taken the summer before matriculation)	4
PH.222.644	Cellular Biochemistry of Nutrients	3
PH.222.651	Nutrients in Biological Systems	2
Research Methodology: Required		
Biostatistics, choose one of the following series		
Series option 1		
PH.140.621	Statistical Methods in Public Health I	4
PH.140.622	Statistical Methods in Public Health II	4
PH.140.623	Statistical Methods in Public Health III	4
PH.140.624	Statistical Methods in Public Health IV	4
Series option 2		
PH.140.651	Methods in Biostatistics I	4
PH.140.652	Methods in Biostatistics II	4
PH.140.653	Methods in Biostatistics III	4
PH.140.654	Methods in Biostatistics IV	4
Epidemiology, choose one of the following series		
Series option 1		
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.340.722	Epidemiologic Inference in Public Health II	4
Series option 2		
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5
Research Methods		
PH.222.642	Assessment of Nutritional Status	3
PH.222.647	Nutrition Epidemiology	3
PH.222.861	Doctoral Seminar in Proposal Development	1
PH.222.840	Special Studies and Research Human Nutrition (Special studies in HN each quarter to complement 222.861. Students should sign up for credits with their advisor to reflect time spent in development of their research ideas and thesis project)	2-6
Professional Skills: Required		
PH.220.600	International Travel Preparation, Safety, & Wellness	1
PH.222.658	Critical Thinking in Nutrition	1
PH.220.842	Doctoral Independent Goals Analysis - International Health	1
PH.222.860	Graduate Nutrition Seminar	1
Ethics		
PH.550.860	Academic & Research Ethics at BSPH	
PH.550.600	Living Science Ethics - Responsible Conduct of Research	1
or PH.306.665	Research Ethics and integrity: U.S. and International Issues	
Research Methods: Suggested Electives		
PH.140.641	Survival Analysis	3
PH.140.655	Analysis of Longitudinal Data	4
PH.223.664	Design and Conduct of Community Trials	4
PH.224.690	Qualitative Research Theory and Methods	3
PH.224.691	Qualitative Data Analysis	3
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	4
PH.313.601	Economic Evaluation I	3
PH.313.602	Economic Evaluation II	3
PH.313.603	Economic Evaluation III	3
PH.313.604	Economic Evaluation IV	3
PH.340.696	Spatial Analysis I: ArcGIS	3
PH.340.697	Spatial Analysis II: Spatial Data Technologies	2
PH.140.698	Spatial Analysis III: Spatial Statistics	4
PH.140.699	Spatial Analysis IV: Spatial Design and Application	3
PH.340.717	Health Survey Research Methods	4
PH.330.657	Statistics for Psychosocial Research: Measurement	4
PH.140.658	Statistics for Psychosocial Research: Structural Models	4
PH.221.660	Systems Science in Public Health: Basic Modeling and Simulation Methods	3
Other Suggested Electives		
International Health and Disease		
PH.220.605	Doctoral Seminar in International Health I	3
PH.220.606	Doctoral Seminar in International Health II	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
PH.223.663	Infectious Diseases and Child Survival	3
PH.223.680	Global Disease Control Programs and Policies	4
Population, Behavior, and Health		
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.380.611	Fundamentals of Program Evaluation	4
PH.380.604	Life Course Perspectives on Health	4
PH.380.623	Adolescent Health and Development	3
PH.380.642	Child Health and Development	3
PH.380.600	Principles of Population Change	4
Environmental Health, Food Production, Safety, and Food Systems		
PH.180.601	Environmental Health	5
PH.182.640	Food- and Water- Borne Diseases	3
PH.187.610	Public Health Toxicology	4
PH.180.620	Introduction to Food Systems and Public Health	4
PH.180.605	Food Systems Practicum	4
PH.180.606	Case Studies in Food Production and Public Health	4
PH.180.655	Baltimore Food Systems: A Case Study of Urban Food Environments	4
PH.185.600	One Health Tools to Promote and Evaluate Healthy and Sustainable Communities	3
Management Sciences		

PH.312.603	Fundamentals of Budgeting and Financial Management	3
Teaching		
PH.300.750	Teaching, Learning and Leading – in the Classroom, in the Workplace and in the Community	3
Thesis Registration (after completing oral exams)		
PH.222.820	Thesis Research Human Nutrition	1 - 22

Although students take several biostatistics and epidemiology courses in this program, 340.694.81 Power and Sample Size for the Design of Epidemiological Studies is a highly recommended online course in 3rd term that is helpful in preparing for the comprehensive examinations and in preparing proposals.

Social and Behavioral Interventions

Requirements and courses

During the 1st and 2nd term of each academic year each doctoral student should develop a course plan. This can be done through discussions with the adviser and through the individualized Goals Analysis that will be part of the Special Studies requirement for Educational Program Development. This should be reviewed and discussed with the student's adviser. If changes are needed the student is requested to discuss and get approval from their adviser.

If students have particular interests that cannot be met through existing course offerings, requirements for these topic areas can be met through special studies courses after students have requested permission to substitute course requirements using the Course Waiver Form. Such courses, when carefully developed, are an excellent way for doctoral students to gain requisite knowledge and skills, and they give students the opportunity to work closely with faculty and pursue specific intellectual interests. These courses need to first be negotiated with sponsoring faculty and agreed upon by the academic advisers. Once substitutions are approved the Course Waiver Form should be completed and submitted with the student's tracking sheet via CoursePlus. Students are given access to the tracking course at the beginning of each year by the Academic Program Administrator. Students may take courses at any of the Schools within the Johns Hopkins University system. A full listing of University courses can be accessed via: https://sis.jhu.edu/classes/.

SBI CURRICULUM

Unless otherwise specified all required courses must be taken for a letter grade with the exception of courses only offered for pass/fail.

The below courses are the possible list of requirements, for the most up-to-date information and an accurate list of required course please view our departmental Academic Guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html) published August of each academic year.

A. General Requirements This area of requirements is designed to give students broad knowledge of global public health issues and grounding in epidemiology, disease prevention, and statistics.

Code	Title	Credits
PH.220.605	Doctoral Seminar in International Health I	3
PH.220.606	Doctoral Seminar in International Health II	3
PH.220.600	International Travel Preparation, Safety, & Wellness	1
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
Choose one of the three epidemiology series options below		
Series option 1		
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.340.722	Epidemiologic Inference in Public Health II	4
PH.340.769	Professional Epidemiology Methods	4
PH.340.770	Public Health Surveillance	3
Series option 2		
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5
Series option 3		
3 course series in Advanced Epidemiology (This option requires advanced permission from the SBI Program Coordinator)		
Biostatistics, choose one of the following series (a total of 16 credits)		
Series option 1		
PH.140.621	Statistical Methods in Public Health I	4
PH.140.622	Statistical Methods in Public Health II	4
PH.140.623	Statistical Methods in Public Health III	4
PH.140.624	Statistical Methods in Public Health IV	4
Series option 2		
PH.140.651	Methods in Biostatistics I	4
PH.140.652	Methods in Biostatistics II	4
PH.140.653	Methods in Biostatistics III	4
PH.140.654	Methods in Biostatistics IV	4

B. SBI Program Course Requirement

These nine courses provide students with a theoretical and methodological base necessary to be a competent and educated social scientist working on global health issues in the social sciences.

Code	Title	Credits
PH.140.658	Statistics for Psychosocial Research: Structural Models (Can be taken pass/fail)	4
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.224.690	Qualitative Research Theory and Methods	3
PH.224.691	Qualitative Data Analysis	3
PH.224.697	Qualitative Research Practicum I: Partnerships and Protocol Development	2
PH.224.698	Qualitative Research Practicum II: Collecting Qualitative Data	2
PH.224.699	Qualitative Research Practicum III: Analyzing and Writing Qualitative Findings	2
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	4
PH.220.842	Doctoral Independent Goals Analysis - International Health	1
PH.224.866	Social and Behavioral Interventions Doctoral Proposal Development Seminar	2
PH.224.860	Social and Behavioral Interventions Program Seminar I:Applied Social Science & Global Health	1
PH.224.863	Doctoral Seminar in Research Methods in Applied Medical Anthropology I	4
PH.224.864	Doctoral Seminar in Research Methods in Applied Medical Anthropology II	4

PH.330.657	Statistics for Psychosocial Research: Measurement	4

Doctoral students who were Master's students in SBI and have already taken PhD required courses can apply for a waiver for SBI program core requirements. If students have taken more than three years off between degrees, they will still have to earn at least 64 credits during the PhD program. For students who have taken a similar course at other schools, waivers will be evaluated on a case by case basis (upon submission of the relevant syllabus and, in some cases, an exam on the content area).

Although the SBI program seminar in the 2 nd and 3 rd terms (224.861 and 224.862) is not required for PhD students, they are encouraged to register or informally attend sessions as a way to connect to the rest of the SBI cohort or to get information relevant to specific doctoral interests.

C. School-wide Doctoral Requirements

The following three courses are required of all doctoral students in the School. They provide an overview of the appropriate role of research in the public health endeavor, and how to conduct research ethically with integrity.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH	
AND choose one of the below		
PH.306.665	Research Ethics and integrity: U.S. and International Issues	3
PH.550.600	Living Science Ethics - Responsible Conduct of Research	1

For each of the following topic areas students may propose any university course (including special studies) that meets the learning objectives associated with each topic area. After most topic areas is a list of pre-approved courses.

D. Research Design and Methods (7 credits)

The learning objectives for this area are to: (a) understand the fundamentals of designing research studies, (b) expand the student's knowledge and facility with a core research methodology, such as social network analysis, or survey research, and (c) gain a working knowledge of how to appropriately evaluate a social or behavioral intervention.

Although students take several biostatistics and epidemiology courses in this program, 340.694.81 Power and Sample Size for the Design of Epidemiological Studies is a highly recommended online course in 3rd term that is helpful in preparing for the comprehensive examinations and in preparing proposals.

Code	Title	Credits
PH.140.640	Statistical Methods for Sample Surveys	3
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
PH.223.664	Design and Conduct of Community Trials	4
PH.309.616	Introduction to Methods for Health Services Research and Evaluation I	2
PH.309.617	Introduction to Methods for Health Services Research and Evaluation II	2
PH.330.650	Methods in Implementation Science	3
PH.340.666	Foundations of Social Epidemiology	3
PH.340.705	Advanced Seminar in Social Epidemiology	4
PH.340.717	Health Survey Research Methods	4
PH.380.603	Demographic Methods for Public Health	4
PH.380.611	Fundamentals of Program Evaluation	4
PH.380.612	Applications in Program Monitoring and Evaluation	4
PH.380.651	Methods and Measures in Population Studies	4
PH.380.711	Issues in Survey Research Design	3
PH.380.712	Methods in Analysis of Large Population Surveys	3
PH.410.606	Local and Global Best Practices in Health Equity Research Methods	4
PH.410.615	Research Design in the Social and Behavioral Sciences	3
PH.410.686	Advanced Quantitative Methods in The Social and Behavioral Sciences: A Practical Introduction	4
PH.410.711	Doctoral Seminar in Mixed Methods for Public Health Research	3
PH.140.641	Survival Analysis	3
PH.140.655	Analysis of Longitudinal Data	4
PH.140.656	Multilevel Statistical Models in Public Health	4

E. Social and Behavioral Sciences (9-12 credits)

This area covers a broad range of issues and topics and is meant to provide a core foundation in the social and behavioral sciences. The learning objectives for this area are to: (a) understand the major social determinants of health, (b) gain an understanding of multi-level influences on health behaviors, including social, policy, familial, dyadic, and environmental forces that affect health behavior, (c) gain broad knowledge of the major theories of behavior change, (d) understand the theoretical basis and components of major types of behavioral health interventions, such as health education and communication, social marketing, and structural and policy-based interventions, (e) gain a comprehensive understanding of the association between health behavior and health outcomes, and (f) understand how community-based behavioral health initiatives are designed and implemented. This list is not comprehensive. Other courses in social and behavioral sciences offered in the School of Public Health, the School of Arts and Sciences or elsewhere in the university can be substituted with permission of the PhD Program Coordinator.

Code	Title	Credits
PH.221.605	History of International Health and Development	2
PH.221.624	Urban Health in Developing Countries	3
PH.222.654	Food, Culture, and Nutrition	4
PH.224.605	Indigenous Health	2
PH.308.610	The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life	3
PH.313.643	Health Economics	3
PH.313.641	Introduction to Health Economics	3

PH.410.613	Psychosocial Factors in Health and Illness	3

PH.410.650	Introduction to Persuasive Communications: Theories and Practice	4
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication	3
PH.410.679	Decolonization, Global Communication, and Public Health	3
PH.410.863	Doctoral Seminar in Social and Behavioral Research and Practice	1
PH.410.654	Health Communication Programs I: Planning and Strategic Design	4
PH.410.655	Health Communication Programs II: Implementation and Evaluation	4

F. History, Geography, Culture, and Linguistics (6 credits)

The main learning objective associated with this topic area is to prepare students for dissertation fieldwork with regard to knowledge of the history, geography, culture, and language specific to the population they plan to study. Given that there is no required set of courses for this topic area, students and their advisers should include in their course plan which of the two options below the student will pursue:

> **Option 1** includes a combination of direct study courses across the University that is relevant to the student's fieldwork area, including language study. Students who are unable to obtain a field practicum prior to their dissertation fieldwork may benefit from this option. A minimum sum of 6 units is required.
>
> **Option 2** requires enrollment in a special studies course plan (minimum of 6 credits; student enrolls in credit requirement all at one time) with the student's adviser. The special studies should integrate a pre-approved reading list and attendance or participation in at least three cultural, ethnographic, historical, or political activities related to the country or field site for the student's dissertation. Examples of such activities include, but are not limited to: review of a related film or documentary, informational meeting with community or health systems representative, seminar attendance, cultural fest attendance/participation, etc. As part of this requirement, students prepare a short paper or essay summarizing their experience and/or findings in the context of their proposed fieldwork or study proposal.

The overall goal in providing these two options is to enable students to fulfill this requirement within the contexts of their dissertation fieldwork, intellectual needs, and/or course availability. For example, enhancing language skills may be appropriate for some students, but not others. Students should also use this area to become familiar with ethnographic, sociological, historical and economic literature in the area – as well become familiar with regional medical systems and literature on ethnomedical beliefs and practices.

Code	Title	Credits
Option 1: Combination of selected direct study courses for history, geography, culture, or language related to area of student's dissertation country, region, or neighborhood of choice at JHSPH, Homewood Campus, SAIS, etc.		6
PH.224.840	Special Studies and Research Social and Behavioral Interventions (Option 2)	6

G. Public Health Problem Area (6 credits)

The learning objective for this topic area is to acquire detailed knowledge of the public health problem area that the student plans to examine in their dissertation research (e.g., HIV/AIDS, violence, family planning, malaria, mental health, adolescent health, maternal/child health, water and sanitation, nutrition). The student should consider the following aspects of the health issue of interest: (a) epidemiology (b) regional and global variations (c) biologic aspects and medical treatment, (d) social and behavioral interventions addressing the health issue, (e) policy issues relevant to the health issues, and (f) social aspects such as stigma and discrimination associated with the health issue, or its interventions.

Code	Title	Credits
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
PH.222.649	International Nutrition	3
PH.224.694	Mental Health Intervention Programming in Low and Middle-Income Countries	3
PH.340.646	Epidemiology and Public Health Impact of HIV and AIDS	4
PH.380.661	Clinical Aspects of Maternal and Newborn Health	3
PH.380.662	Critiquing the Research Literature in Maternal, Neonatal, and Reproductive Health	4
PH.380.665	Family Planning Policies and Programs	4
PH.380.760	Clinical Aspects of Reproductive Health	3
PH.380.761	Sexually Transmitted Infections in Public Health Practice	4
PH.380.762	HIV Infection in Women, Children, and Adolescents	4
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health	2

General PhD Requirements

Residency & Outside Department Course Requirements

The total number of course credits to be earned depends upon individual program requirements. But, to meet the Residency requirement, students must complete a minimum of 64 credits of didactic courses in four consecutive terms. When general and program-specific requirements total less than 64, the difference may be made up in electives. Thesis Research (820 series) may not be included in the count, but special studies earning credit that is part of a program's requirements only (840 series) are admissible.

The School also requires that 18 credits must be satisfactorily completed in formal courses outside of the IH Department. Among those 18 credits, no fewer than three courses must be satisfactorily completed in one or more departments of the School of Public Health. The remaining outside credits may be earned in any department or division of the University.

Teaching Assistant Requirement

For the most up-to-date policy on teaching assistants please view our Academic Guide (https://www.jhsph.edu/departments/international-health/current-students/academic-guides.html).

Departmental Written Comprehensive Examination

The written comprehensive exam is offered annually soon after the end of the Second or Fourth Terms, depending on the program, and is two days in length. Although most of the material is covered in specific courses, it must be understood that graduate education involves much more than the accumulation of specific course credits. Thus, students are responsible for the material, regardless of the particular curriculum followed. Students in the GDEC and Health Systems programs will take the comprehensive exam at the end of their first year. Students in the SBI and Human Nutrition programs will take the exams in January of their second year. The dates of the exam are announced in the fall.

A minimum overall grade of 75% is required. Those scoring below this level must re-take the entire examination at a specially arranged offering 6 months later. Only one re-examination is permitted. Students failing twice are terminated from the doctoral program. MSPH students who pass the PhD examination must enter the PhD program within 3 years of graduation or retake the exam and pass it again.

Students should plan to take the exam when course work is essentially completed, since questions will cover both required courses and those representing the elected field of specialization and research. Because of the infrequent offering, however, students may have to take the exam before the final completion of coursework. While the exam may be taken whenever the student and adviser feel prepared, the timing does not affect the breadth and depth of coverage of course material. Not taking the exam with the rest of the cohort will delay a student's timeline to completion and will likely lengthen their time to completion for the program.

Students must **NOT** pass along exam questions to future generations of students, **NOT** post questions and/or answers online, **NOT** seek, solicit, accept, or consult content from prior comprehensive exams, and **NOT** share or publicize any content from the comprehensive exam in any form with anyone at any time.

Students who require exam accommodations must get the accommodations approved by Disability Support Services at the Bloomberg School of Public Health (https://publichealth.jhu.edu/about/key-commitments/inclusion-diversity-anti-racism-and-equity-idare/student-disability-services/).

Thesis Advisory Committee (TAC)

In order to undertake research leading to a thesis the student must prepare a research protocol acceptable to a Thesis Advisory Committee (TAC). The objective of the TAC is to provide continuity in the evaluation of the progress and development of the student's thesis work. The TAC is expected to: counsel the student in protocol preparation; determine the protocol's acceptability as a basis for actually carrying out the research; and provide guidance during the conduct of the research and the writing of the thesis.

The TAC should be formed as soon as the student has selected a tentative research topic. This will normally be by the time that coursework has been completed and the Departmental Written Comprehensive Examination has been taken and no later than when the student takes their Preliminary Oral Exam. The student and their adviser decide on the composition of this committee. The Committee will have at least 3 members: the adviser, a second faculty member with advising privileges in the student's department, and at least one faculty member(s) from another program or department. We encourage students to consider adding a fourth and even a fifth member if they provide needed expertise to advise the student appropriately on their thesis topic. Students should have no more than five members total. TAC members from outside of JHU can be approved (for example, a project PI) after consultation with the student's adviser about the composition of the student's TAC. For such requests to be approved a student must have three members of their TAC within JHU, of whom one is their adviser, and their 4th member can be from outside of JHU. At least two of the TAC members must be tenure-track faculty eligible to serve on School examining committees. The proposed members must be approved by the adviser and the relevant PhD Program Coordinator. Students will complete the Thesis Research Documentation Form (PDF) and upload it to their Portfolio once they have selected a TAC and no later than at the time of their Preliminary Oral Exam.

The TAC (3-5 members), the departmental oral examination committee (4 members), the Preliminary Oral Examination Committee (POE) (5 members), and the Committee of Final Readers (CFR) (4 members) are four separate entities. Although it is desirable to provide for overlapping membership, the adviser is the only individual who must be a member of all four committees.

The first meeting of the TAC should occur when the student is developing their thesis proposal. A written progress report should be submitted to the TAC by the student at the time of the meeting and then should be uploaded to the student's Portfolio. This progress report, and all subsequent progress reports, should follow the format described in the following section. Following the meeting, the adviser will discuss this evaluation with the student and will then approve the report in the student's Portfolio as part of the student's academic file.

It is a requirement that the student meet at least every 6 months (either in-person or via phone/skype) with the entire TAC during the thesis phase of the program. Students will submit written progress reports, which will be read and evaluated by the TAC. It is the responsibility of the Department to provide administrative oversight of the TAC to ensure that the student meets and submits reports. Although a once yearly meeting and report is required by the school, the DIH department requires students meet with the TAC more frequently, ideally every 6 months during the conduct of their thesis research, and to prepare a progress report with any questions for the TAC for each meeting. Students who are working outside of the country or at distant sites within the country are not required to return in person for annual TAC meetings, although in-person participation is desirable.

Progress Report Template for TAC Meetings

FIRST TAC REPORT TEMPLATE (During Proposal Development)

A. Describe your likely thesis topic (150 words).

B. What options have you identified for funding your thesis research?

C. What funding challenges remain? Please describe

D. What is the anticipated process for obtaining IRB approval for your thesis project?

E. What is your anticipated timeline for completing oral exams and conducting your thesis research?

F. What are your goals for the next 6 months?

G. Do you have any course requirements or other degree requirements outstanding? If so, please describe

ALL SUBSEQUENT REPORTS (After Oral Exams)

A. Please describe your thesis topic (150 words).

B. Type of analysis list all that apply: e.g. Primary, Secondary, or Both

C. Have you filed the Thesis Proposal Approval form? If not, when do you anticipate doing so?

D. What options have you identified for funding your thesis research?

E. What funding challenges remain? Please describe

F. Have you obtained IRB approval for your thesis project?

G. What is your anticipated timeline for conducting your thesis research and defending your thesis?

H. Have you decided whether to take the papers approach or the traditional thesis approach?

I. Have you discussed with your adviser, thesis project PI and appropriate others regarding authorship of papers for publication?

J. Please review goals you stated in your most recent report. Have you accomplished your goals or made tangible progress toward accomplishing them?

K. What are your goals for the next twelve months?

L. Discuss scientific progress and challenges, and document decision made with the approval of the TAC to address these.

M. If you had any outstanding course or degree requirements as of your most recent report, have you completed them?

Non-Thesis Related Research Experience

All PhD students must complete a research experience in addition to their doctoral thesis work. This is typically conducted with the student's adviser or other faculty member prior to beginning doctoral thesis work. This can take a variety of forms including participating in the development and planning of a new research project, development of data collection instruments for a research project, conducting analysis of existing data, or completing an entire, small research project on a topic other than the thesis topic. It is also possible to fulfill this requirement through an internship or practicum with a foundation, nongovernmental organization, or government or private industry entity, provided it includes a significant research training component. The PhD is a research degree and obtaining a variety of practical training in research is an integral part of the learning process. Once this experience is completed please fill out the Non-Thesis Related Research PDF Form found in the Portfolio library and upload it to the indicated Portfolio touchpoint.

THESIS PROPOSAL APPROVAL

Regardless of the mode and timing of general presentation of the proposal, the TAC members will provide continuing guidance in its development. After the student has passed the University Preliminary Oral Exam and before the student begins field work on the dissertation, the TAC should be satisfied that the proposal is of acceptable quality to be implemented, at which point the student must obtain the TAC members' signatures on the Thesis Proposal Approval Form found in the Portfolio library and should be uploaded to the student's Portfolio touchpoint. After approving the thesis proposal, the TAC is expected to continue offering suggestions for further improvement, especially in light of unexpected difficulties encountered in the field.

Realistically, it is not always possible for the student to carry out in the field the specific study designed and presented at the preliminary oral exam. In such cases when the topic of the study changes entirely or if the proposed research undergoes substantial changes, the student must submit a new thesis proposal to the TAC. The TAC approves the proposal and the student will then submit a new Thesis Proposal Approval Form to their Portfolio. If the student's TAC changes, the student will need to submit a new Thesis Research Documentation Form and a new Thesis Proposal Approval Form.

ORAL EXAMS AND DEFENSE

Departmental Oral Exam

The purpose of the departmental oral examination is to determine whether the student is adequately prepared to conduct research. Because the department requires the student to have a proposal for their research in hand and to provide this proposal to the examining committee in advance of the examination, the student may receive constructive criticism of the proposal as part of feedback associated with the examination.

Specific procedures for the examination are as follows:

- The student, in consultation with the Thesis adviser, identifies at least four IH faculty (two faculty must be at least at the level of Associate Professor or Professor to serve as the chair and subchair for the exam of which the adviser cannot serve either role) of the committee. At least two faculty must have primary appointments in the International Health Department, of whom one can be the student's adviser. The other two faculty must at least have a joint appointment with IH. One member with a primary appointment in IH must be from the student's program area. One faculty member should be identified as an alternate and cannot count as one of the two required faculty with a primary appointment in IH. Two scientist track faculty are able to sit in the departmental exam committee at the same time. If the student's adviser does not have a primary appointment with IH then at least two other faculty on the committee, excluding the alternate, must have a primary appointment with IH.
- Copies of a research proposal are to be circulated to all participating faculty at least 2 weeks in advance of the exam.
- Departmental Orals must be taken **at least 30 days** before the University Preliminary Oral Exam. When planning this, students should first meet with the Elisabeth Simmons, the Academic Program Administrator, to discuss requirements for both exams and timing.
- The most senior faculty member other than the adviser will act as Chair of the examining committee. The Chair is responsible for maintaining an atmosphere of constructive criticism, ensuring that each faculty member has adequate opportunity to question the student, and limiting the total duration of the exam to a maximum of two hours.
- The oral exam will produce one of three results: (1) Unconditional Pass; proceed with the University Preliminary Oral as scheduled; (2) Conditional Pass; before proceeding as scheduled, the student should strengthen their competence in certain identified areas of weakness; or (3) Failure.

Only one re-examination is permitted. Anyone failing the departmental oral examination twice will be terminated from the doctoral program.

Students must formally schedule their Departmental Oral Exam with Elisabeth Simmons at least 2 weeks in advance.

Schoolwide Preliminary Oral Exam

The University Preliminary Oral Examination must be taken no later than the end of the student's second year in the PhD program. Students must have completed their ethics requirement before taking the Preliminary

Oral Exam. Students should keep in prior to taking this exam they should have passed the Departmental Oral Examination.

All members of the examining committee represent the department of their primary appointment except the student's adviser who would represent IH if they have a joint appointment. The committee of five members includes the student's Thesis adviser, one other IH faculty member, and three members from at least two other departments in the University, of whom one must be from JHSPH. The most senior faculty member from outside the student's department will serve as the chair and must hold the rank of full or Associate Professor. One adjunct faculty, one scientist track faculty or one visiting professor may serve on the committee but may not serve as the chair or adviser. Exceptions to this only apply if a student had an adviser assigned to them prior to having their rank changed in which case they can continue to advise the student and can serve on the committee. Two alternates should be identified. One alternate is a DIH faculty while the other is from outside the student's department. Students should be aware that an alternate who may need to serve in place of the committee chair must be of the rank of Associate or full Professor and be from outside the Department of International Health.

The examination's purpose is to determine whether the student is sufficiently knowledgeable of the general field of public health and is capable of undertaking independent research in a specialized area of interest. The question period of about two hours considers the student's course work as well as the feasibility and logical consistency of any research proposal. The examination is not meant to be a proposal defense; rather a research proposal permits the student to be questioned on areas of expertise and public health problems with which the student is familiar.

Three results of the examination are possible: (1) unconditional pass; (2) conditional pass; and (3) failure with the possibility for one reexamination. When the second or third outcomes occur, the examining committee is expected to set time limits for the satisfaction of conditions or the reexamination. In case the examining committee fails to set time limits, they will be established by the IH Curriculum and Credentials Committee. In no case may the time allowed exceed one year. Only one reexamination is permitted. Students failing the University Preliminary Oral Examination twice will be terminated from the doctoral program.

For both the Departmental and University Preliminary oral examinations, the student may need to begin polling faculty for dates/times that will be available a couple months in advance, as many faculty members have fixed teaching and travel commitments. **Paperwork for the University Preliminary Oral Examination must be submitted (37 days) prior to the date of the exam**. Students must meet with Elisabeth Simmons to learn about the necessary forms and other considerations when forming an examination committee.

Thesis REaders and Final Oral Defense

The thesis topic acceptable to the TAC must be a piece of original, independent research focusing on selected aspects of international health in developing or underserved societies.

The Final Oral Defense consists of two parts, a public seminar and a defense of the thesis before a Committee of Readers. The public seminar and closed thesis defense are held on the same day with the seminar being conducted first, followed immediately by the closed defense. Thesis readers should have at least 30 days to read the final thesis prior to the Final Oral defense. The Dissertation Approval Form will be sent to the committee by the student along with a copy of their final thesis at minimum 30 days before the Final Oral Defense indicating the adviser's approval of their thesis as suitable for dissemination to their final thesis defense committee members. After the exam the Committee of Readers must accept the thesis as satisfactory and, in addition, the Committee Chair and the Thesis adviser must write a letter of acceptance to the Associate Dean for Academic Affairs.

If a student defends any time after the last day of 4th term and before the first day of Summer Term, the student must register for three credits of Thesis Research during the Summer Term. The only time PhD students are allowed to register during summer term is when they are defending in the summer. Tuition scholarship is not applied in the summer term.

International students must notify OIS at least two months before defending to determine if there are any issues with their visa. OIS must also be notified that the student is planning on defending, outside of the typical academic year. Any student on a visa must communicate with OIS, and have approval to proceed in the summer, before a student can register and work with Elisabeth Simmons to schedule their exam and submit the required forms.

If a student defends after the last day of Summer Term, the student must register for 1st term as a fulltime student.

The Final Thesis must be submitted to the JHU Library, and to the Department of International Health. The Department of International Health accepts final theses as a PDF document. Final thesis and the letters from the Chair of the examination committee and the adviser must be submitted to the School of Public Health Registrar's office respectively, by the end of the term in which they are registered (if international student) or by add/drop of the following term. Failure to meet this deadline means having to register for the following term.

Any student returning from a leave of absence must be registered for a minimum of two terms before their thesis defense can be scheduled.

Students must contact Elisabeth Simmons at least two months in advance from their desired defense date to learn about defense and convocation deadlines.

Selecting the Committee of Readers

Students must follow instructions on selecting committee members and readers stated in the Appointment of Thesis Readers and Final Oral Exam form found in the Portfolio library. The Associate Dean for Academic Affairs shall, upon recommendation of the student's Department Chair or Associate Chair for Academic Programs, approve a committee of four readers, including the student's thesis adviser, who serves as a departmental reader. The readers should be at the rank stated on Page 15, "Advising and Exam Committee Composition by Faculty Rank". A minimum of three departments of the University, two being from the School of Public Health, must be represented. Two readers must be from the student's Department. All faculty serve on the Committee representing the department of their primary faculty appointment except when the faculty member serves in their capacity as the student's adviser. The most senior faculty member without a primary appointment in the student's Department will serve as Chair of the Committee and MUST hold the rank of Associate or full Professor. A second reader not in the student's department will sever as the Sub-Chair of the Committee and must also hold the rank of Associate or full Professor. With the approval of the Dean for Academic Affairs, the Department may nominate an individual from outside the University to serve as a 5th non-voting member.

PhD Program Policy
PhD Schoolwide Policy

Department of International Health (IH) candidates for the degree Doctor of Philosophy (PhD) must fulfill all School requirements, as specified in the PhD Schoolwide Policy (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_03_Doctor_Of_Philosophy_Degree_071717.pdf). These include, but are not limited to, a minimum of four consecutive academic terms at the School in full-time residency (some programs require 6 terms), continuous registration throughout their tenure as a PhD student, satisfactory completion of a Departmental Written Comprehensive Examination, satisfactory performance on a University Preliminary Oral Examination, readiness to undertake research, and preparation and successful defense of a thesis based upon independent research. Furthermore, all doctoral students must complete a non-thesis related research experience in addition to their doctoral thesis.

Additional IH requirements are specified herein and require that full-time registration be a minimum of 16 credits per term of courses taken for letter grade or pass/fail. Courses taken for audit do not count toward the 16-credit registration minimum.

Students having already earned credit at BSPH within the past three years for any of the listed courses may be able to use them toward satisfaction of doctoral course requirements. Refer to section "Students with a master's degree from BSPH" for more information. Students who have completed similar courses elsewhere may consider requesting a course waiver.

Completion of Requirements

While the University places a seven-year maximum limit upon the period of doctoral study, IH students are expected to complete all requirements within a period of 4 years (16 terms maximum). Formal leaves of absence may extend this time.

Introduction to Online Learning

The Bloomberg School of Public Health offers courses in various formats, including a number of online classes. In order to be eligible to take an online course, students must complete the Introduction to Online Learning, which is offered through the Center for Teaching and Learning at the Bloomberg School. This non-credit mini course is a pre-requisite for all courses offered by this division and must be completed prior to the start of the term in which a student wishes to enroll in an online course. Since the School does not permit conditional and/or concurrent enrollment (that is, students must take the Introduction to Online Learning course prior to enrolling in an online class), the **School requires all incoming students to take this non-credit course during or before the first term they enroll**. For course dates and enrollment information, please visit the CoursePlus website.

Ethics (2 courses) - All doctoral students must take two general ethics courses. The first, PH.550.860 Academic & Research Ethics at BSPH, is an online course for 0 credits that every student is required to take prior to or during the student's first term of matriculation. Failure to complete this course will prevent students from registering for the following term. For the second course, PhD students must take PH.550.600 Living Science Ethics - Responsible Conduct of Research offered first term, OR PH.306.665 Research Ethics and integrity: U.S. and International Issues offered third term. Students will not be allowed to take their University Preliminary oral exam if their two general ethics course requirements are not complete.

Doctoral Seminar in International Health – PhD students in GDEC, Health Systems and SBI are required to take the multi-term course 220.605 and 220.606 Doctoral Seminar in International Health I & II, offered in first and second terms. This course explores the topics relevant to International Health in a seminar format with readings and critical writing. This seminar series is not a requirement for PhD Human Nutrition students but is highly recommended.

International Travel Preparation, Safety and Wellness – All IH students are required to take this course (220.600.81) during their first year and before traveling overseas for any academic reason. IH students are required to take this course regardless of whether their research is conducted within or outside of the United States. Please refer to the Department of International Health Travel Policy.

Doctoral Independent Goals Analysis – Students will enroll for one credit of 220.842 with their adviser in first term every year until students complete their degree. Students will develop a course and academic plan, which will be done through discussion with their adviser and through their Independent Goals Analysis (IGA) that will be part of their requirement in first term of each year in the doctoral program. The IGA is a process of discussion with the adviser resulting in a written document that is then uploaded to the student's Portfolio in CoursePlus and reviewed during the student's semi-annual review. Students will also review their course tracking sheet/course plan with their advisers during this time. All doctoral students will have access to 'My Portfolio' in CoursePlus to upload their IGA and tracking sheet documents due by the end of 1st term each year. This is a guide for students and advisers, but the independent goals analysis should be modified as the student progresses through the program.

Students are required to discuss changes to their course plan with their adviser and update their IGA by uploading these to "My Portfolio" at least once a year, by the end of 1st term.

Standards of Academic Performance

Minimum GPA

All required courses must be taken for letter grade unless courses are only offered pass/fail. Courses may be counted only once when fulfilling requirements. Students must receive satisfactory grades of B or higher in all required courses and continuously maintain a cumulative Grade Point Average (GPA) of at least 3.0 in order to remain a degree candidate in good standing. Any student who receives a C or below in a required course must repeat the course and achieve at least a B or attain a B or higher in a subsequent course in the sequence of course (e.g. In Biostatistics 622 one must get a B, if one received a C in 621).

Academic Progress

Students are required to meet their academic milestones in a timely manner. These milestones and time frames are specified in the table students can reference in their CoursePlus My Portfolio program library. Students are reviewed twice a year in the fall and the spring by the Curriculums and Credentials Doctoral Subcommittee to monitor students' progress through their doctoral program and identify any major barriers to meeting milestones. Specifically, the Subcommittee will review students' academic progress, whether they are able to meet research deadlines, and are regularly communicating with their advisers.

Anyone not meeting academic performance standards will be placed on probationary status pending action by the Department's Curriculum and Credentials Committee. In all cases, the maximum time allowed for the student to come out of probationary status will be no more than two consecutive terms following the term in which the student's GPA fell below the required minimum. The Committee will review scholarship eligibility and establish the minimum conditions to be fulfilled in order to return to the "good standing" status and avoid termination. If conditions are imposed, the Committee will specify the maximum time allowed to satisfy these conditions. Failure to satisfy these conditions may result in termination from the program.

Consistent academic probation status (defined as two or more terms) will result in a reconsideration of tuition and stipend support and possible termination.

If students receive Federal Loans administered through the Financial Aid Office, there are other academic standards that students must abide by in order to comply with Federal Loan requirements. Please check with the Financial Aid office or email them at JHSPH.finaid@jhu.edu to request more information.

Students with a Master's Degree from BSPH

PhD students who received a master's degree from BSPH within 1 year of starting their doctoral degree can waive out of the residency requirement but must still complete 18 credits of formal coursework outside of the department. Students also qualify for a waiver of certain course requirements completed as a master's student. Students are required to request waivers for these courses at the beginning of their PhD program and are required to complete all other program specific requirements.

PhD students who completed a master's degree from BSPH and have more than 1 year between the start of their PhD program and the completion of their master's degree cannot waive out of the residency requirement. Students who fall into this category are required to meet all credit totals for the program and graduation as well as the 18 outside the department credit requirement. Students can however request waivers to count courses taken during their master's program. There are no guarantee waivers will be accepted if there are five years or more between degrees. Students who are granted waivers are not excused from the total credit requirements for their program, graduation and/or the residency requirement.

Thesis Research

After completing oral exams, students engaged in the planning or conduct of their thesis research will register for credit (pass/fail) in 22X.820, "Thesis Research [Program Area]". In order to receive credit for this work a specified deliverable must be submitted to the adviser before the end of each academic quarter of such registration. In the absence of a deliverable the adviser is expected to assign a grade of "F" or "Incomplete." All grades of "Incomplete" automatically convert to "F" if not made up within 120 days from the end of the term in which assigned. Students should not register for thesis research until they have completed their Preliminary Oral Exam. Prior to the completion of that exam, and while preparing for their orals, students should only register for Special Studies (22X.840).

Tracking Sheet

Tracking sheets are used to track all course requirements from each student's program. All students are required to fill out and submit their tracking sheets at least once a year, by the end of 3rd term for all continuing students, to Elisabeth Simmons via their CoursePlus Portfolio. Approved waivers and substitutions must also be submitted with the tracking sheets. Students should use the tracking sheet when meeting with their advisers.

Tuition Scholarship

Doctoral students who matriculated after August 2020 will receive 100% of tuition scholarship up until their 16 term of enrollment. Health insurance, dental insurance, and UHS clinic fee are covered for up to 16 terms of full time enrollment, and satisfactory academic performance. Students who have not completed their degree by the end of the fourth year will be responsible for 100% of their tuition, health insurance, and UHS clinic fee, and must still register full-time. Students who need more time to complete their PhD degree must request an appeal to the Associate Chair of Student Matters in writing with a timeline for completion and an endorsement letter from their adviser. The department would consider additional tuition scholarship support in only on a case by case basis. Leaves of absence are not counted in the four-year plan.

A student's tuition scholarship support is contingent on satisfactory academic progress during their degree. This progress is reviewed twice a year by the Curriculum and Credentials committee.

Withdrawals

Failure to register for a term results in automatic withdrawal. A withdrawn student must be formally readmitted before resuming a program of study. This would mean providing the original application, most current transcript prior to withdrawal, and a cover letter explaining reasons for withdrawal and why the student wants to be readmitted. Upon readmission, a student must register for a minimum of two consecutive terms prior to completing degree requirements.

Timeline to Completion

A suggested timeline of the sequence to completion in 4 years is located in the students CoursePlus My Portfolio program library for each student's reference. Any questions regarding requirements should be discussed with the student's adviser and with the Academic Program Administrator, Elisabeth Simmons.

ACADEMIC ADVISING PHD DEGREE

PhD degree programs in the Department of International Health are a mixture of didactic coursework, independent reading, research/practice experience and the preparation of a culminating document. As the program progresses, there are many decisions to be made regarding which courses and experience will address a student's educational objectives. To assist with navigating this process, each student is assigned an academic faculty adviser who has the responsibility of serving as a guide and mentor. It is the Department's view that graduate degree programs must be owned by the student with the faculty acting as guides in the student's own development as a scholar and practitioner. This section is intended to guide the student and the faculty member in making the adviser-advisee relationship as successful as possible.

The suggestions in this section are derived from the experience of faculty who have worked with students for many years and from students who themselves have been guided by these faculty members. The document is dynamic and needs input from students and advisers as they use it. Please submit comments and concerns to the Academic Coordinator.

THE DEPARTMENT'S ADVISING PHILOSOPHY

The primary purpose of the academic advising process is to assist students in the development and implementation of a meaningful and appropriate plan for their graduate education and future career. This purpose is driven by a set of core values:

1. Advisers are responsible to the students they advise
    - Advising is an integral part of the educational process with both students and advisers benefiting from the relationship.
    - Regular student-adviser communication allows advisers to maximize the student's ability to develop life-long learning skills and for the adviser to act as an advocate for the student.
    - Advisers must recognize the diversity of student backgrounds and the opportunities provided by this diversity for maximizing educational achievement.
    - Advisers are responsible for connecting students with others in the academic community who can, when appropriate, assist in the advising process.
2. Advisers are responsible to the institution.
    - As faculty, advisers are responsible for maintaining the academic standards and reputation of the Department, School, and University. This implies a focus on academic excellence for the students they advise.
    - Advisers must comply with the policies and procedures established by the Department, School and University for the didactic, exploratory, and research portions of a graduate student's educational experience.
3. Advisers are responsible to the community of higher education.
    - Advisers must uphold the values of academic and intellectual freedom that characterize the university environment in the United States.
    - As faculty, advisers are responsible for the training of the next generation of academic leaders in education, research, practice, and service.
4. Advisers are responsible to the public health community.
    - As faculty in a School of Public Health, advisers are committed to improving the health and wellbeing of populations everywhere in the world through education, research, practice and service.

The Adviser-Advisee Relationship

All students in the Department are assigned a faculty adviser who is a full-time member of the advising faculty in their program area. In addition, the **PhD Program Coordinator for their program also serves as a general adviser to students**. The adviser has the responsibility of assisting the student in designing an academic program that meets the student's goals within the requirements of the University, School and Department. Additionally, the adviser serves to direct the student to appropriate resources and research opportunities. The adviser should be the first point of contact in resolving academic problems. Advising students is an integral part of every faculty member's responsibilities. Thus, the student should not feel that they are imposing by asking for advice. Faculty members expect to be available to students, although the students should be respectful of the faculty's time by scheduling and respecting appointments. This is especially true in our department where research and practice responsibilities of the faculty require them to travel a significant portion of their time. **The responsibility for arranging meetings with their adviser lies with the student**. **Students should not expect advisers to seek them out for required appointments**. The student bears the responsibility of consulting the adviser when necessary and arranging periodic appointments, even if there are no specific problems. In general, advisers and advisees should communicate at least once per term, preferably more often, especially at certain critical times during their doctoral research progress.

All course registrations must be approved by the adviser. The student is required to schedule a meeting in order to assure that the adviser has reviewed the student's schedule and to plan any special studies projects or thesis research as needed with the adviser before the registration period deadline. If due to travel or scheduling difficulties, such communication cannot be conducted before the registration period deadline, students should receive approval for course registration from their PhD Program Coordinator.

Student Feedback on Adviser Performance

The Department Chair reviews all faculty performance on an annual basis. This review assesses the career track of each faculty member as a part of the faculty mentoring role played by the Chair. In order to provide the most accurate information on faculty performance, the Chair needs information on all aspects of the faculties' roles including student advising. As a part of this process, we have initiated a formal adviser evaluation process that includes input from students. The provision of honest information is required of all students twice per year and these adviser ratings are handled with complete confidentiality. At the completion of the 2nd and 4th terms each year, all students will complete an Academic Adviser Evaluation Form (https://jhsph.co1.qualtrics.com/jfe/form/SV_8cvVZ1RanXU4PAN/) (will be updated and sent to students twice a year) and submit it online. The survey results are analyzed to provide a body of information on advising style, content, and **collective** perception from **multiple** students advised by each faculty member **over time**, focusing on aggregate results accumulating over successive administrations of the survey. The Department Chair (David Peters), the Associate Chair for Academic Programs (Cyrus Engineer), and the Associate Chair for Student Matters (Julie Denison) are the only faculty who may review individual survey responses, and each is excluded from reviewing responses naming themselves as adviser. The responses are also reviewed by the Academic Program Manager (Cristina Salazar) and Academic Program Administrator (Elisabeth Simmons), who may lead or participate in survey analysis. Survey responses about individual faculty members **will be handled with complete confidentiality**. Any feedback relayed to a faculty member from these surveys will be informed only by cumulative or aggregate survey results, will be communicated to faculty only in a manner that does not identify individual students (with due awareness of the faculty member's overall number of advisees), and will be solely for the purpose of helping faculty prospectively improve their approach to advising as appropriate.

It is **not the aim of this survey-based evaluation** to intervene in specific individual situations that may be problematic. If students wish to discuss concerns about a **specific individual situation**, we encourage them to consult directly with their Degree Program Coordinator(s), the Academic Program Administrator, the Academic Program Manager, or the Associate Chair for Student Matters.

REGISTRATION

PhD students must register for a minimum of 16 credits of courses continuously each term to be a fulltime student in the IH department. **Students do not register for summer or winter intersession**. Summer and winter intersession courses are exempt from tuition scholarship. Students must understand they pay 100% of the tuition for those courses.

Important Information about Registration:

1. Registration below 16 credits is not allowed and violates the terms of a student's tuition scholarship.

> **2. Any student registering below 16 credits during any term could be in violation of their scholarship requirements resulting in a loss of their tuition scholarship.**
>
> **3. Courses taken for Audit do not count toward the 16 credits per term requirement but do count toward the 22 credit maximum.**

Courses taken at other schools within the Johns Hopkins system must be considered carefully. If a student is interested in taking courses outside of the School of Public Health, students **must** meet with the Academic Program Administrator (Elisabeth Simmons) prior to registering to discuss whether the credits count toward their degree and, if so how. There is a separate calculation for courses taken in schools on semesters, and some courses (e.g. language courses) do not count for credit.

Students registering for Special Studies or Thesis research must do so in their specific program area. The following course numbers correspond to the different program areas:

Thesis Research:

Code	Title	Credits
PH.221.820	Thesis Research Health Systems	1 - 22
PH.222.820	Thesis Research Human Nutrition	1 - 22
PH.223.820	Thesis Research Disease Control	1 - 22
PH.224.820	Thesis Res Soc & Beh Interv	1 - 22

Special Studies:

Code	Title	Credits
PH.221.840	Special Studies and Research Health Systems	1 - 22
PH.222.840	Special Studies and Research Human Nutrition	1 - 22
PH.223.840	Special Studies and Research Disease Control	1 - 22
PH.224.840	Special Studies and Research Social and Behavioral Interventions	1 - 22

THESIS RESEARCH

After completing oral exams, students engaged in the planning or conduct of their thesis research will register for credit (pass/fail) in 22X.820, “Thesis Research [Program Area]”. In order to receive credit for this work a specified deliverable must be submitted to the adviser before the end of each academic quarter of such registration. In the absence of a deliverable the adviser is expected to assign a grade of "F" or "Incomplete." All grades of "Incomplete" automatically convert to "F" if not made up within 120 days from the end of the term in which assigned. Students should not register for thesis research until they have completed their Preliminary Oral Exam. Prior to the completion of that exam, and while preparing for their orals, students should only register for Special Studies (22X.840).

SEMI-ANNUAL REVIEWS

All students are required to maintain regular and sustained progress towards completion of their doctoral program. Twice per academic year a review of past progress and future expectations will be carried out as follows

1. Students without a TAC (during proposal development and before oral exams are complete)
   a. PH.220.842 Doctoral Independent Goals Analysis - International Health
   b. The adviser will write a brief report of their advisee’s academic progress twice during the academic year.
2. Students with a TAC Formed (after oral exams)
   a. PH.220.842 Doctoral Independent Goals Analysis - International Health
   b. The report submitted to the TAC at each meeting and then uploaded to the students Portfolio.
   c. The adviser will write a brief report of their advisee’s academic progress twice during the academic year.

The Curriculum and Credentials Committee will review the students’ progress and supporting documentation. Continued enrollment in the doctoral program is contingent upon a satisfactory review by the Committee.

Students not making adequate progress may receive warning letters or requests for specific plans to move ahead with their programs. The IGA, TAC reports and adviser Reports will become part of the official student record maintained by the Academic Program Administrator.

CRITERIA AND PREPARATION FOR DOCTORAL THESIS RESEARCH AND DISSERTATION

The final authority for requirements for the Doctor of Philosophy degree is held by the Graduate Board of Johns Hopkins University. The following description of the doctoral thesis is taken from Electronic Theses & Dissertation from the Sheridan Libraries (https://www.library.jhu.edu/library-services/electronic-theses-dissertations/):

> The dissertation/thesis is the culmination of the graduate degree. It represents an original critical or synthetic treatment of a subject in the student’s field. It documents research formulated independently and presents its findings in a manner consistent with publications in scholarly journals or with scholarly books. The dissertation serves as a reference through the UMI (formerly University Microfilm, Inc.) *Dissertation Abstracts International* and through publication in whole or in part. Manuscripts not conforming to the following standards will not be accepted as partial fulfillment towards the graduate degree.
>
> The Council of Graduate Schools offers the following definition:
>
> The doctoral dissertation should:

1. Reveal the student’s ability to analyze, interpret, and synthesize information
2. Demonstrate the student’s knowledge of the literature relating to the project or at least acknowledge prior scholarship on which the dissertation is built
3. Describe the methods and procedures used
4. Present results in a sequential and logical manner; Display the student’s ability to discuss fully and coherently the meaning of the results. In the sciences, the work must be described in sufficient detail to permit an independent investigator to replicate the results

The dissertation/thesis is the beginning of one's scholarly work, not its culmination.

Dissertation research should provide students with hands-on, directed experience in the primary research methods of the discipline, and should prepare students for the type of research/ scholarship that will be expected of them after they receive the PhD degree.

The question of originality - In its most general sense, "original" describes research that has not been done previously or that creates new knowledge. Although a dissertation should not duplicate another researcher's or scholar's work, the topic, project, or approach taken need not be solely that of the graduate student. An adviser or other faculty member should encourage a student to explore a particular topic or project with the idea that the student themselves will independently develop the "thesis" of the dissertation. The student should be able to demonstrate what portion of the research or scholarship represents their own thinking.

The question of collaboration, in those disciplines where doctoral research efforts are typically part of a larger collaborative project, is crucial that an individual student's contribution be precisely delineated. Whether the collaboration is between faculty or student, or among students, PhD candidates are expected to be able to demonstrate the uniqueness of their own contributions and to define what part of the larger work represents their own ideas and individual efforts. (The Role and Nature of the Doctoral Dissertation, Council of Graduate Schools. CGS, Washington, D.C. 1991). The student assumes the responsibility for conducting the research and the writing of the dissertation in a manner that reflects the academic integrity of the University.

The Policy and Procedures Manual of the Bloomberg School of Public Health is briefer in its description of a doctoral thesis: "The thesis must be (1) based on original research, (2) worthy of publication, and (3) acceptable to the sponsoring department and to a committee of thesis readers."

Requirements for the doctoral thesis research in the Department of International Health include meeting the following educational objectives:

- Identifying and articulating an important scientific or public health problem in a manner conducive to research. In the thesis proposal, this would be expressed by documenting at least one substantive question that is both researchable and important to the field of international health. The research question(s) must be expressed as specific research objectives and/or hypotheses that define the variables and relationships of interest.
- Summarizing and critically appraising relevant existing knowledge on the subject under study. In the thesis, this would be expressed by a focused and critical review of the relevant literature pertinent to the research question(s) being addressed. In many theses, this will also involve the description of the theoretical model or conceptual framework upon which the research question(s) will be based.
- Using scientifically sound and appropriate methods to design and implement a research study to adequately address the question(s) of interest. In the thesis, this would involve the detailed specification of the study methods, including all data collection and data management efforts needed to implement the study design, a description of the analytic approaches to be used, and the application of any inferential models that will be used to describe the results of the data analysis. All research involving human subjects must be approved by the School's Institutional Review Board and all research involving animals must be approved by the University's Committee on Animal Care and Use. It is expected that the doctoral student will develop the application for approval from these committees under the supervision of their thesis adviser who must be named as Principal Investigator of the IRB protocol. If the student is working within a research project of a faculty member other than their adviser, the Principal Investigator (PI) of that project may be the person named as PI on the IRB protocol.
- Interpreting the research findings in the context of previous knowledge in the specific topical area of the thesis. As a part of the thesis, conclusions and recommendations for further research or programmatic initiatives based on the evidence generated by the thesis research must be critically explored, presented and shown to make important contributions to the state of knowledge in the field.

PRIMARY DATA COLLECTION

As the academic programs in the Department of International Health span a spectrum of disciplinary boundaries, the specific requirements for the form of the doctoral thesis work will vary by program. However, all students are expected to meet the above-mentioned minimal educational objectives in addition to any further objectives stated in the program-specific sections of this handbook. The specific activities of the doctoral thesis research must meet the experiential requirements of the primary research methods typically employed by the discipline. For example, most doctoral theses in all four program areas in the department will be based on primary data collection, as this is the primary research method in most behavioral science, epidemiologic, nutrition, and health services research studies. This will often involve extensive time in the field implementing and/or overseeing the actual data collection and management process. Doctoral theses in the health economics specialization of the Health Systems Program may be based on original data or on secondary data analysis or theoretical development. It should be noted that the level and depth of analytic skill, scientific rigor and innovative approaches expected by the faculty for a doctoral thesis based solely on secondary data analysis will be considerable.

TRADITIONAL VS. "PAPERS" OPTION

Students may fulfill their thesis requirement using either the traditional or "papers" option. Both options must comply with the organizational and formatting requirements of the Graduate Board outlined on the Sheridan Library. In each case the product must reflect high standards of scholarly endeavor. It is important to recognize that these options reflect only different formats for presentation and not fundamentally different processes.

The traditional thesis consists of a number of chapters typically including an introduction and specific research objectives, critical review of the literature and discussion of a theoretical or conceptual framework, study methods, results, interpretation, discussion and conclusions.

The "papers" option requires a minimum of three separate papers based on the thesis research in addition to complementary sections that make the thesis a whole. Each paper should stand on its own merits, and in addition, the papers together should embody a recognizable unifying theme. Although no required page length is specified, it is understood that taken together the papers should contain as much substantive information as is usually expected in a traditional thesis. As a result, the length of the papers may exceed the guidelines followed by journals. Appendices can be used to present additional analyses that allow for the review of the thesis by the final examination committees but are not likely to be included in the paper when submitted for publication.

Each of these “papers” is typically a separate chapter in the thesis document. A separate literature review is not always necessary; rather, literature citations should be made in each paper as appropriate and a comprehensive list of references must be included at the end of the document as per University regulations. However, the thesis must incorporate a critical review of available literature relevant to the research topic somewhere in the document. If the “papers” option is selected for the format of the thesis, this critical review can be either in a separate chapter or as a part of the discussion in each of the papers. In addition, when the thesis project consists of a portion of a larger research effort, an additional chapter discussing the overall methods and how the thesis research fit into the whole is often helpful and required by the thesis adviser and committee. Finally, discussion, conclusions and recommendations for further research and/or programmatic initiatives should be included either in each paper, or as a separate chapter.

If following the “papers” option, the department strongly recommends that each paper be formatted for journal submission with additional analyses and information that would be part of the online supplemental materials for the paper being included in the thesis appendices. This makes it more likely that graduates can submit their thesis research for publication as soon after the defense as possible. Publication of thesis research as soon as possible after thesis completion is strongly encouraged. It also fulfills the ethical requirement to share research findings that provide benefit to research participants and/or society that balances the risks assumed by participants.

As with most public health research, most thesis research will be a collaborative effort of the student and other members of an investigative team. However, the thesis itself must be authored by the student in its entirety. Therefore, manuscripts arising from the thesis are typically first authored by the student. Papers included in the thesis must be first authored by the student. However, the adviser and TAC members will read and provide advice to the student on their thesis and/or papers. It should be noted that an overall thesis abstract is required as part of the thesis for both the traditional and papers options.

The student’s Thesis Advisory Committee (TAC) will appraise the adequacy of the research proposal and the appropriateness of the option selected for presenting the results. They will also advise and approve the appropriate “chaptering” of the student’s thesis.

If a student commits an academic ethics violation (including plagiarism) on the thesis, the Department will recommend dismissal from the PhD program, regardless whether it is the student’s first offense.

AUTHORSHIP GUIDELINES

The Department expects and encourages scholarly student authorship. This is part of the educational process and career development that we hope will occur during the degree program. There may be opportunities for students to publish research with faculty separately from the thesis work, as well as publication of thesis results. This is a guide to help students understand what to expect regarding authorship of scientific publications.

GENERAL GUIDELINES FOR AUTHORSHIP

The International Committee of Medical Journal Editors (ICMJE) recommends authorship based on the following criteria: “Substantial contributions to the conception or design of the work; or the acquisition, analysis, or interpretation of data for the work; AND Drafting the work or revising it critically for important intellectual content; AND Final approval of the version to be published; AND Agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.” Please click this link for further details (https://www.icmje.org/recommendations/browse/roles-and-responsibilities/defining-the-role-of-authors-and-contributors.html).

ROLE OF FIRST AUTHOR

The first author is usually responsible for drafting the paper and will usually take primary responsibility for the content of the paper and analysis, along with the senior author (last author). The first author may be the corresponding author, or the senior author (or another co-author) may play this role. The corresponding author provides the email where correspondence regarding the paper from submission to final publication (and fielding of any correspondence from readers following publication) is sent. The first author is also typically responsible for obtaining input from co-authors, submitting the materials to the journal, and making the first draft of responses to reviewers (with subsequent input from co-authors), and re-submissions and proofing the final version prior to publication (along with co-authors). Of course, all authors have to approve the paper prior to submission and approve any subsequent revisions.

DISTINGUISHING BETWEEN AUTHORSHIP AND NON-AUTHORSHIP CONTRIBUTIONS

Some forms of contribution to the production of a manuscript are meaningful, yet do not rise to the level of authorship. Examples include one-off conversations about themes and ideas, reading through a draft to offer helpful comments, and suggesting light edits to correct typographical errors or stylistic infelicities. Typically, the proper way to recognize these sorts of contributions is to list them in a separate acknowledgments section: for instance, “The authors are grateful to [names] for their [valuable discussion of / helpful comments on / critical readings of] earlier versions of this manuscript.”

PUBLICATIONS NOT INCLUDED IN THE DOCTORAL THESIS

When starting to discuss research projects in which a student may participate, students should feel comfortable raising the issue of authorship with faculty, and vice versa. This allows students to be proactive in asking whether the work they may do could merit authorship if the conditions above are met. It is important to have this conversation prior to starting work on a project, although decisions about adding authors and/or order of authorship may change over time. This is because intellectual input of investigators may change as the project progresses. Even for publications that are team-written, the person who will function as lead author should be identified as early as possible in the project timeline to avoid confusion.

The decision on authorship inclusion should be guided by the principal investigator (PI) of the project. However, it is the responsibility of the PI to discuss any anticipated authorship changes with all authors, including students, in a timely manner. Please note, especially in international health work, that there may be local investigators who merit authorship but whose role in the research the student may not be aware of. Please be aware that some journals have restrictions on the number of people who can be listed as authors on a publication. The ICMJE also provides guidance on acknowledgements versus named authorships. See the above link to the guidance. When draft manuscripts are circulated to coauthors for comments, it is reasonable for the first author (including students) to set deadlines for feedback, but these should allow time for busy faculty and collaborators to review thoroughly and carefully.

PUBLICATIONS ARISING FROM THE DOCTORAL THESIS

For students who fulfill their thesis requirement using the “papers” option, as described in the Academic Guide, the thesis includes “a minimum of three separate papers based on the thesis research”, with each paper "stand[ing] on its own merits" and "the papers together…embody[ing] a recognizable unifying theme." Because the papers taken together "should contain as much substantive information as is usually expected in a traditional thesis," they may each be longer than the more compact version that would be submitted under the tight word-count restrictions typical of scholarly journals. These papers are embedded in the thesis and may be published verbatim from the thesis chapters or in a modified format for their respective target journals. In preparing a thesis-derived manuscript for submission to a journal, the student as first author (in consultation with their adviser) may seek to orchestrate additional unique contributions from other researchers, which could not have been included in the thesis itself as written solely by the student. For students who fulfill their thesis requirement using the traditional option, as described in the Academic Guide, the thesis will consist of a set of chapters "typically including an introduction and specific research objectives, critical review of the literature and discussion of a theoretical or conceptual framework, study methods, results, interpretation, discussion and conclusions." Typically, three or more distinct papers suitable for submission to peer-reviewed journals can be developed from the materials presented in the traditional thesis, either in parallel with thesis composition or as soon as possible after the student successfully defends the thesis.

Under either the "papers" option or the traditional option, the papers based on the students' thesis research should be written by the student and published with the student as the first author. This is the expectation. If faculty have a concern about 1st authorship of thesis work embedded in larger research projects, these topics should not be considered for a student thesis.

Faculty members' eligibility for co-authorship on a student's 1st-authored papers based on thesis research should generally be determined by the ICMJE guidelines cited above. Co-authorship is not automatically guaranteed merely by being named a thesis adviser. Rather, it is earned by fully performing the function of thesis adviser by providing sustained, substantial intellectual guidance to the advisee to an extent that would typically qualify one to serve as co-author of the manuscripts based on the advisee's thesis research.

Often, the student's work is embedded in a larger collaborative project and the adviser may be the PI who is responsible for funding, IRB approval, and intellectual conceptualization. Although the adviser does not directly write any part of the thesis, which must be written entirely by the student, the adviser provides comments on the thesis and may suggest ways to reword for improved understanding. It is typically the adviser's intellectual contribution to sustaining the overall project that merits co-authorship on the student's thesis-derived papers. Similar contributions by others – such as helping to conceptualize the project, obtaining funding, helping with study design, data management and analysis, training of data collectors, and lab analysis – may also merit co-authorship as per ICMJE guidelines and in discussion with the adviser and/or PI of the larger project.

Authorship should not be a presumed or quid pro quo expectation of faculty for service on a student's Thesis Advisery Committee or Committee of Final Readers, so far as the faculty member's committee service involves only reading the thesis, providing comments, and assessing the readiness of the thesis for approval. In general, such advice should be seen as an educational contribution to the student rather than authorship. Committee service might lead to authorship, however, where the faculty member makes additional substantive contributions so as to meet the ICMJE authorship criteria.

In sum, determinations of faculty co-authorship on the student's thesis-derived papers require care, judgment, and good-faith compliance with the ICMJE authorship criteria, all supported by explicit discussion as early as possible in the process of composing the papers based on the student's thesis research.

Additional papers arising more broadly from a student thesis project, but not based on material in the thesis itself, may be published by the student or by others after the student has graduated. The adviser/PI of the project should discuss authorship of additional papers with the student/graduate as soon as publication topics are identified but note that authorship may also change for such papers as the project progresses.

FURTHER GUIDANCE

It is important to acknowledge that in most instances these matters are decided in advance and without confusion. However, there can be instances of misunderstanding and miscommunication that make authorship decisions challenging. Under those circumstances, it is recommended that the student have a frank, collegial discussion with the adviser/PI to try and clarify these issues. If that is not satisfactory, the student should approach the relevant program director and seek advice. The section below also contains links to good resources.

In the end the production of a paper should always be a collaborative, exciting and respectful exercise and help everyone involved.

USEFUL RESOURCES

Adviser-Specific

CHANGE OF adviser

For a variety of reasons, a student or a faculty member may wish to have the student change advisers. Faculty wishing to initiate a change should discuss this with the Chair of the Curriculum and Credentials Committee. Faculty will need to submit a report of the student's progress at the time of this request.

Student-initiated changes of adviser are made without penalty and are a common occurrence. Students should write a letter of request to the Chair of the Curriculum and Credentials Committee to change from one faculty member to another. Any request for changes must also be discussed and approved by the students Program Coordinator. Once approved the change request letter and email approval from the student's Program Coordinator should be sent to Elisabeth Simmons via email. Once approved, Elisabeth will update the student's' DIH academic file and inform the Records and Registration Office to update the student's schoolwide file.

Although visiting faculty have full-time appointments, they may not serve as doctoral advisers. Sr. Research associates, research associates, and Instructors, cannot be doctoral advisers, or co-advisers.

RESPONSIBILITIES OF adviser

- To assist in determining the advisee's educational goals and needs at the start of the program
- To serve as an educational and/or professional mentor for the student
- To maintain awareness of and sensitivity to the level of compatibility between the student advisee and themselves in terms of academic, professional, and personal interests

- To facilitate a change of adviser if deemed appropriate to the student
- To monitor the advisee's overall academic program and be sensitive to signs of academic difficulty
- To be sensitive to cultural, medical, legal, housing, visa, language, financial, or other personal problems experienced by the advisee and to be understanding and supportive. The Department has a sizable portion of foreign students coming from diverse pre-professional and professional educational backgrounds. As such, they have diverse needs and experience in managing a US based graduate education program
- To meet regularly with the student (at least once a term or more as needed is recommended) and to identify a mechanism for advising while traveling either through email/skype or by identifying a back-up adviser for periods of extended travel or sabbatical

RESPONSIBILITIES OF ADVISEE

- To arrange to meet with the adviser at least once each term.
- To comply with registration and administrative deadlines.
- To identify and develop professional career goals and interests.
- To understand administrative policies and procedures and be familiar with the requirements for their program as described in the Academic Guide.
- To maintain the academic checklist and review it at meetings with the adviser.

STUDENT EXPECTATIONS OF THEIR adviser

- Adviser's review and advise on course registrations, course changes, pass/fail agreements, waiver requests, and on all petitions to the Curriculum and Credentials Committee.
- At least one meeting per term or more frequently as needed with the adviser.
- Oversight of the student's overall academic program and sensitivity to any academic difficulties.
- Knowledge of and interest in the student's career objectives.
- Review of required and recommended courses for the program area. Assistance in designing a plan for the fulfillment of required courses and assistance with planning the course schedule for the year.
- Advice and feedback on the development of a thesis/research proposal, assistance and feedback on IRB approvals, oversight of the implementation of the thesis research project, feedback on the thesis document and public final oral defense presentation

PHD ADVISER/ADVISEE MEETING GUIDELINES

The guidelines here are the absolute minimum interactions students and advisers should expect. Many of our students and faculty meet much more frequently and often become life-long colleagues as a result of the mentoring experience.

The guidelines below are the absolute minimum interactions students and advisers should expect. Many of our students and faculty meet much more frequently and often become life-long colleagues as a result of the mentoring experience.

YEAR ONE

- Student: Schedule at least one meeting per term
- Student and Adviser: Review academic guide, competencies, departmental requirements, and administrative deadlines
- Student and Adviser: Develop a written plan of courses and experiences to meet the student's educational goals (IGA assignment due in 1st term)
- Student: Discuss possible research topics for thesis and non-thesis related research at every meeting
- Student and Adviser: Discuss course registration for the following term
- Student: Notify adviser of possible letters of recommendation student will need in next few months (must give adviser 2 weeks-notice if recommendation letter is needed)
- Adviser: Identify other people and resources of which students should be aware

YEAR TWO

- Student: Schedule at least one meeting per term
- Student: Complete non-thesis related research experience
- Student: Select a topic and a project, draft thesis proposal
- Student and Adviser: If taking comprehensive exams in January, discuss preparation for exams, student study groups
- Student: Prepare for oral exams through meetings with TAC and mock orals
- Student: Form Departmental and Preliminary Oral exam committees and take exams
- Student: Apply for funding opportunities
- Student: Form a Thesis Advisory Committee
- Student: Obtain approval for thesis proposal from TAC
- Adviser: Monitor student's progress in identifying thesis project; discuss courses left to take
- Adviser: Help student prepare for exams, and help student form a TAC
- Adviser: Write letters of recommendation for student

YEAR THREE

- Student: Schedule meeting with adviser every few weeks (could be via skype or email). Frequency to be discussed with adviser.
- Student: Obtain funding for research
- Student: Obtain IRB approvals for thesis research
- Student: Conduct thesis research, gather data, finish data collection
- Student: Write Thesis Progress Report and deliver to TAC
- Student: Decide if thesis will be a three-paper format or a large thesis
- Student: At least one meeting with full TAC
- Adviser and TAC: Assess student's progress and give feedback
- Adviser: Write an evaluation of student's progress and development, discuss with student, and submit evaluation to the academic program office
- Adviser: write letters of recommendation for student

YEAR FOUR

- Student: Schedule meeting with adviser every few weeks (could be via skype or email). Frequency to be discussed with adviser.
- Student: Data analysis and thesis writing
- Student: Write Thesis Progress Report and deliver to TAC
- Student: At least one meeting with full TAC
- Student: Distribute full thesis draft to TAC
- Student: Schedule exam to meet May graduation
- Student: Give defense seminar and final oral exam, make requested changes to thesis and submit to library, adviser and chair of defense write completion letter to registrar/dean
- Adviser and TAC: Assess student's progress and give feedback

- Adviser: Write an evaluation of student's progress and development, discuss with student, and submit evaluation to the academic program office
- Adviser and TAC: approve final thesis
- Student and Adviser: work on identifying final exam committee

Departmental Travel Policy (p. 336)

Program Concentration Learning Outcomes

For a complete list of learning outcomes by program concentration, please consult the most recent Department of International Health PhD Academic Guide (https://my.jhsph.edu/sites/IH/Student-academic-forms/Forms/AllItems.aspx?RootFolder=%2Fsites%2FIH%2FStudent%2Dacademic%2Dforms%2FAcademic%20Guides&InitialTabId=Ribbon%2ERead&VisibilityContext=WSSTabPersistence) published in August of each year.

Non-Degree Training

Non-Degree Training

Continuing Education Programs

The Department of International Health sponsors two types of continuing education programs for both health professionals and students.

Certificate programs (https://www.jhsph.edu/departments/international-health/continuing-education/certificates/)

Certificate programs offer focused academic training in specific areas of public health. Certificates typically require less time and coursework than a degree, making them appealing both to current Bloomberg degree students desiring specialization in particular topic areas and to individuals seeking to learn more about specific areas of public health.

Click here to see our certificate programs (https://www.jhsph.edu/departments/international-health/continuing-education/certificates/).

Winter and Summer Institute

Institute courses are short (one day to three weeks in length), offered in January, over the Summer, and in November and can be taken for academic credit (resulting in an official transcript from JHSPH) or not for credit (at a reduced cost). Institute courses have the same academic rigor and same world-class faculty as regular term courses, but the courses are compressed to take place in fewer days. Courses vary in length from one day to three weeks, depending on the number of credits and the requirements of the particular course.

Click here to see a list of our institutes (https://www.jhsph.edu/departments/international-health/continuing-education/institutes/).

INSTITUTES SPONSORED BY INTERNATIONAL HEALTH

Center for American Indian Health (http://caih.jhu.edu/training/course-offerings/) (offered winter and summer))

Health Emergencies in Large Populations (HELP) (http://www.hopkinshumanitarianhealth.org/education/help-course/) (offered winter and summer)

Health Systems Summer Institute (https://www.jhsph.edu/departments/international-health/continuing-education/institutes/health-systems-summer-institute/) (only offered in summer)

Tropical Medicine and Public Health (https://www.jhsph.edu/departments/international-health/continuing-education/institutes/summer-institute-in-tropical-medicine-and-public-health/) (offered winter and summer)

Post-Doctoral Training (https://www.jhsph.edu/academics/postdoctoral-training/University%20Policy.pdf)

Department of Mental Health

About

The Department of Mental Health (https://www.jhsph.edu/departments/mental-health/) is the first and the only department-level unit in a school of public health that focuses on Mental Health. The mission of the Department is to advance the understanding of mental and behavioral disorders; to develop, implement, evaluate methods to prevent and control these disorders; to promote mental health in populations around the world; and to educate the next generation of public health professionals that will promote this mission.

The Department brings together leading researchers across multiple disciplines joined by their dedication for understanding, preventing, and addressing mental health and substance use disorders. Faculty have expertise in a range of areas, including: global mental health, mental health and aging, services and policy, prevention science, psychiatric and substance use epidemiology, psychiatric and behavioral genetics, autism and developmental disabilities, violence prevention, and methods.

The department is led by the Interim Department Chair (Dr. Elizabeth Letourneau). Under the chair is a Vice Chair for Diversity, Equity and Inclusion (Dr. Renee Johnson), a Vice Chair of Research (Dr. Spira) and a Vice Chair of Education (Dr. Bass). The Department Chair appoints all committee chairpersons, faculty, and staff. In each case, the committee's function is to establish an agenda of interests in a specific area, initiate a discussion and review issues or requests, formulate a consensus and specific proposals or policies, and bring recommendations for action before the full Department for vote.

The Master of Health Science (MHS) degree program is directed by Dr. Jeanine Parisi; and the PhD program is directed by Dr. Rashelle Musci.

Programs

Summer Institute

The **Summer Institute in Mental Health Research** offers:

- A variety of mental health-related courses, many of which touch upon the Covid-19 pandemic
- Online course offerings
- The option of taking courses for either credit or non-credit
- A certificate of completion for all courses taken
- Tuition remission for JHU faculty and staff

The Institute focuses on methodological and substantive topics in mental health and substance-use research. It is intended for working professionals or students who are interested in developing research expertise in the epidemiology of mental health and substance use disorders, the implementation and evaluation of mental health services and interventions, and/or the methodological issues encountered in mental health research in the population. Our experts are not only training the next generation of public health leaders, they are leading the way in research areas, including the mental health implications of Covid-19. For more details, please visit our course page (https://www.jhsph.edu/departments/mental-health/summer-institute/courses.html).

Research Areas and Centers

The Department emphasizes ongoing research that enriches and stimulates the teaching programs. All students and fellows are encouraged to participate in at least one research group of a major research program such as those listed below.

Psychiatric Epidemiology

(Primary Faculty Contacts: Dr. Heather Volk, hvolk1@jhu.edu; Dr. Peter Zandi, pzandi1@jhu.edu)

Mental and behavioral disorders impose a significant burden on public health, and are among the leading causes of disability worldwide. Faculty use the tools of epidemiology and biostatistics to understand the occurrence and distribution of mental and behavioral disorders across people, space and time, and to investigate the causes and consequences of these disorders in order to develop more effective intervention strategies to treat and prevent them and to promote mental health. Faculty are involved in a range of population-based studies of mental and behavioral disorders that span the life course from in utero to the elderly, typically with studies that are prospective and developmentally oriented.

Substance Use

(Primary Faculty Contacts: Dr. Renee Johnson, rjohnson@jhu.edu; Dr. Brion Maher, brion@jhu.edu)

A major focus of the Department is the epidemiology of substance use and related disorders, encompassing tobacco, alcohol, and illegal drugs. Our faculty's research uses a life course framework and social-ecological perspective to understand the determinants of substance use, including opportunities to use drugs, initiation, use disorders, services, and treatment. A major goal of this research is the identification of potential targets for intervention leading to the development and testing of preventive intervention approaches. Another body of research focuses on the consequences of drug use, including comorbid psychiatric disorders and health consequences such as HIV/AIDS. The Department is the site of several National Institute on Drug Abuse (NIDA) funded studies, as well as a NIDA-funded research training program.

Cognitive Health and Aging

(Primary faculty contacts: Dr. Michelle Carlson, mcarlso2@jhu.edu)

The Department offers advanced training in epidemiologic study of the determinants of cognitive health and cognitive decline in older adults. The dementias of aging are among the most pressing public health concerns in the developed world, where more than 30% of those over age 85 are impaired. In the U.S.A., at least 20% of adults now living are expected to develop severe memory loss and other clinical features of dementia, with African-Americans and Hispanics having higher rates of Alzheimer's disease and related dementias compared to white older adults. With the rapid growth in life expectancy, many countries in the developing world are also seeing dramatic increases in the prevalence of dementing disorders. Department faculty have affiliations with the Johns Hopkins Center on Aging and Health, the Johns Hopkins Center for Innovative Care in Aging, the Johns Hopkins Alzheimer's Disease Resource Center for Minority Aging Research, the Hopkins Economics of Alzheimer's Disease and Services Center, the Alzheimer's Disease Research Center, and direct several NIA-funded projects as well as the Aging and Dementia Training Fellowship, all of which seek to find the role of genes and the environment in the cause of Alzheimer's disease, to identify specific environmental factors that may modify genetic influences, and to test interventions aimed at delaying or preventing the occurrence of cognitive decline and dementia. The training includes course offerings in the Departments of Mental Health, Epidemiology, Biostatistics, Health Policy and Management, and the Department of Psychiatry and Behavioral Sciences of the School of Medicine. Graduate and post-doctoral students have the opportunity to work with several large observational and intervention datasets related to mental health in aging, including the observational, the Epidemiologic Catchment Area (ECA) follow-up, Cache County Study, Cardiovascular Health Study, the Women's Health and Aging II studies, and trial-based studies, including the Advanced Cognitive Training for Independent and Vital Elderly (ACTIVE) Study, Ginkgo Evaluation of Memory Study (GEMS), and Baltimore Experience Corps Trial (BECT). Students are invited to attend monthly Work-in-Progress (WiP) meetings as a forum for informal discussion and development of research papers, dissertation ideas, and grant proposals.

Global Mental Health

(Primary faculty contact: Dr. Judy Bass, jbass1@jhu.edu; Dr. Sarah Murray, Sarah.murray@jhu.edu)

Populations living in contexts of broad adversity, such as conflict, endemic poverty, HIV, and natural disasters, face impediments not just in infrastructure development but also in human development. Establishing a physically and mentally healthy populace is a necessary component for promoting development, securing the right to health, and promoting health equity in contexts and countries with limited resources. As publicized in the 'Global Burden of Disease' reports, common mental illnesses constitute *the* major cause of dysfunction globally and specifically in most resource-poor countries. Addressing these problems requires a multifaceted treatment and prevention approach that also considers fundamental social determinants of poor mental health, including stigma, violence, the relationship between physical and mental well-being, and poverty. Faculty in the Department of Mental Health and throughout the School of Public Health are pioneers in conducting applied research to understand cross-contextual variations in the manifestation of mental disorders and to investigate and innovate in the area of prevention and intervention programming for vulnerable populations living in areas with limited mental health resources. The Department houses an NIMH-funded training program for pre- and postdoctoral training in Global Mental Health.

Psychiatric Genomics

(Primary faculty contact: Dr. Brion Maher, brion@jhu.edu)

Family, twin and adoption studies show that genetic factors play an important role in the etiology of the major mental and behavioral health disturbances and responses to treatment for these disturbances. Faculty in the department are leaders in research to identify these genetic factors and explain how they interact with the physical and social environment to increase (or decrease) the risk for these disturbances. The goal of this research is to establish better predictive models of who is at risk for illness and establish the foundation for developing more rational treatment and preventative strategies. Faculty collaborate with investigators from around the school, including the Department of Epidemiology and the Department of Biostatistics in the School of Public Health; the Department of Psychiatry and Behavioral Sciences and the Institute of Genetic Medicine in the School of Medicine; and the Kennedy Krieger Institute. They are engaged in population and family based studies of a wide range of psychiatric disorders and related phenotypes including: Major Depression, Bipolar Disorder, Alzheimer's Disease, Schizophrenia, Autism, Obsessive-Compulsive Disorder, Substance Abuse and Dependence, Suicide, and Stress-related cortisol response. The latest tools and techniques are utilized from genome-wide linkage, genome-wide association, next-generation sequencing, gene expression and epigenetic studies. There are a number of outstanding didactic and practical training opportunities for students interested in psychiatric and behavioral genetic epidemiology. Students may pursue advanced coursework in genetic epidemiology, behavioral genetics, statistical genetics, and bioinformatics. They may also gain practical research experience by collaborating on different projects lead by the departmental and affiliated faculty around the school.

Prevention Science

(Primary faculty contacts: Dr. Rashelle Musci, rmusci@jhu.edu; Dr. Holly Wilcox, hwilcox1@jhmi.edu, Dr. Tamar Mendelson, tmendel1@jhu.edu)

Several faculty work in the area of prevention science. The Department was the home to the former Center for Prevention and Early Intervention, a collaborative effort between the Bloomberg School of Public Health and community partners in prevention and early intervention such as the Baltimore City Public Schools System, the Family League of Baltimore City, Baltimore Mental Health Systems and the Maryland Department of Education, and prevention and early intervention researchers at Morgan State University, Pennsylvania State University, the University of California at Los Angeles, the University of Alabama, Columbia University, and Stanford University.

The goals of that center included improvement of school-based preventive and early treatment interventions for children and adolescents identification of factors that inhibit or facilitate prevention and treatment practices and dissemination of best practices. The Center for Prevention and Early Intervention builds on the foundation laid by the Johns Hopkins Prevention Intervention Research Center (1985-2001), which provided the basis for two generations of school-based, preventive intervention field trials in Baltimore and their ongoing follow-ups. These general goals are still the focus on many ongoing studies by prevention faculty in our department. In addition, prevention scientists in the department also work in the health care sector, and on prevention of specific outcomes such as child sexual abuse and suicide.

Epidemiologic Catchment Area-East Baltimore (ECA)

(Primary faculty contact: Dr. Adam Spira, aspira@jhu.edu (aspira@jhu.edu))) (aspira@jhu.edu))

The Baltimore Epidemiologic Catchment Area (ECA) Research project started out as one of five sites around the country, in the early 1980s. The Baltimore site was led by Morton Kramer, with collaborators from the Department of Health Policy and Management, and from the Department of Psychiatry. The Baltimore site was the only one of the five to conduct follow-ups, during 1993-1996 and then 2004-2005. The Baltimore ECA follow-up involves investigators from the Departments of Epidemiology, Biostatistics, and Health Policy and Management in the Bloomberg School of Public Health and with investigators from the Departments of Psychiatry and Behavioral Sciences, and Medicine, in the School of Medicine, and from the National Institute on Aging Intramural Research Program. The goals of the follow-up are to provide data on the incidence and natural history of the most frequent mental disorders occurring during adulthood; to search for risk factors for disorders and syndromes; and to study the consequences of psychopathology in terms of physical illness, disability, cognitive and functional decline and dementia, physiological aging, and mortality. Data from the original five sites of the national ECA program, and from the Baltimore ECA follow-up, are available for analysis by members of the Johns Hopkins community, via a Sharepoint Team web site on my.jhsph.edu. The fifth wave of the Baltimore ECA follow-up is supported by grants from the National Institute on Aging.

Wendy Klag Center for Autism and Developmental Disabilities

(Primary faculty contact: Dr. Heather Volk, hvolk1@jhu.edu) (dfallin@jhu.edu;%20Dr.%20Heather%20Volk,%20hvolk1@jhu.edu))

The Wendy Klag Center (WKC) is dedicated to the promotion of research and education regarding the origins, detection, measurement and prevention of conditions that affect behavioral, socioemotional and/or cognitive development, related to developmental disabilities, as well as evaluation of services and policies that support optimal development of affected children and their families. The Center, housed in Mental Health, is a school-wide effort that involves faculty and students across all departments who are pursuing research in autism or developmental disabilities. The Center offers journal clubs, seminars, and other events, as well as student internship placements and competitive student project funding and student travel awards. Current research by WKC faculty and students include national autism surveillance with the CDC (ADDM network), a national autism case-control study focused on genetic and environmental contributions to etiology (the SEED study), a national pregnancy cohort study of autism spectrum disorder (the EARLI study), multiple projects in genetic and epigenetic analyses of these samples, and projects focused on services delivery and policy, as well as methodological research. The Center offers competitive student research funding, internships, and travel awards.

Moore Center for the Prevention of Child Sexual Abuse

(Primary faculty contact: Dr. Elizabeth Letourneau, elizabethletourneau@jhu.edu)

The Moore Center for the Prevention of Child Sexual Abuse was established in October 2012 with philanthropic support from Dr. Stephen and Mrs. Julia Moore. The Center's vision is a world without child sexual abuse. It's mission is to effect prevention change by leading strategic efforts in research, education, communication, advocacy, and policy. With respect to research, Center projects focus on the development, evaluation, and dissemination of effective primary and secondary child sexual abuse perpetration prevention strategies; establishing the prevalence of child sexual abuse perpetration and related risk factors; and evaluating policy impacts. Regarding education, center faculty teach graduate courses on childhood victimization and collaborate locally, nationally, and internationally to bring relevant research to all stakeholders. Regarding communication, the center's full time Communications Director ensures broad promotion of our research findings. Regarding advocacy and policy, we collaborate with state, federal, and international lawmakers to increase resources for prevention and to ensure a strong focus on implementing effective policy and ending harmful policy. As just two examples: In 2020 we were successful in supporting a new line item in the U.S. federal budget that provides funding to the CDC specifically for child sexual abuse prevention research. In 2021, our research was cited in the American Law Institute's Model Penal Code, which recommends (as do we) the end of juvenile sex offender registration, a costly and harmful policy. While the Model Penal Code stopped short of recommending the end of adult registration, it does overtly acknowledge the absence of supporting research (to which we have contributed) and recommends significant curtailment of this policy. We are proud of our influence at the center's 10-year mark and look forward to expanding our work and our influence in the next 10 years.

Statistical Methods for Mental Health

(Primary faculty contacts, Dr. Elizabeth Stuart, estuart@jhu.edu; Dr. Rashelle Musci, rmusci1@jhu.edu)

The methods program area is interested in developing and applying innovative statistical methods for public mental health research. These methods are crucial for generating accurate answers to research questions. The methods, for example, help deal with complications regarding missing data and non—adherence in randomized trials, how to analyze complex data such as DNA or complex longitudinal data, how to measure and model variables that are not directly observable, and how to integrate data from multiple sources or studies. There are strong links between the methods research group and other groups in the Department, such as mental health services & policy, prevention research, and substance use epidemiology. There are three particular research areas within this program area: causal inference (led by Dr. Stuart), measurement (led by Dr. Musci), and mixed methods (led by Dr. Gallo). The causal inference area focuses on the development of statistical methods for estimating causal effects in experiments and non-experimental studies, including for studying the effects of programs and policies. The measurement area includes the development and application of novel latent variable methods and data harmonization tools. The mixed methods area studies how to combine qualitative and quantitative methods. Student involvement in the methods program area consists of research assistance opportunities, related T32 training programs (in Mental Health Services & Systems and Data Analytics for Behavioral Health) as well as advising by faculty members in statistical and related methods. Relevant coursework includes term-long and summer institute courses in the Department of Mental Health, including a two-term sequence on statistics for psychosocial research, a course on causal inference, and the seminar on statistical methods for mental health research, with topics that evolve each year. Courses in the Biostatistics department are also relevant, and some doctoral students interested in this program area also pursue a concurrent MHS in Biostatistics. There are also close links with working groups in the Department of Biostatistics and with Methods cores of other centers, including the ALACRITY Center for Health and Longevity in Mental Illness, the ECHO study in the Department of Epidemiology, and the Wendy Klag Center for Autism and Developmental Disabilities.

Other Collaborations

The Department faculty work in close association with city, state, and federal public mental health agencies, and enjoy working relationships with the Maryland State Department of Health and Mental Hygiene and the Baltimore City Health Department. Department faculty and staff also work with local non-profit agencies working in mental health including Baltimore Mental Health Systems and the Behavioral Health Leadership Institute, the B'MORE Clubhouse, as well as with the Baltimore Substance Abuse Systems, Inc. In addition, the Department faculty has established close working relationships internationally with the WHO Department of Mental Health and Substance Abuse; the World Psychiatric Association; the National Center for Register-based Research in Denmark; and the World Federation for Mental Health.

Department Organization

The department is led by the Interim Department Chair (Dr. Letourneau). Under the chair is Vice Chair for Diversity, Equity and Inclusion (Dr. Johnson), Vice Chair of Research (Dr. Spira) and Vice Chair of Education (Dr. Bass). The Department Chair appoints all committee chairpersons, faculty, and staff. In each case, the committee's function is to establish an agenda of interests in a specific area, initiate a discussion and review issues or requests, formulate a consensus and specific proposals or policies, and bring recommendations for action before the full Department for vote.

Within the department structure, there are several standing and ad-hoc committees that oversee faculty and student research, practice and education.For specific questions on committee mandate and make-up, please contact the Vice Chairs or the Senior Academic Program Coordinator.

Departmental Honors and Awards

Annually, a committee of Department faculty, solicits nominations and selects students as recipients of the following awards:

- The Morton Kramer Award – made annually to a doctoral student who has demonstrated excellence in the application of biostatistical and epidemiologic methods to the solution of problems in research dedicated to advancing our knowledge of the epidemiology of mental disorders, and to the application of such knowledge in programs designed to prevent and control mental disorders and associated disabling conditions.
- The Paul V. Lemkau Award – made annually for outstanding performance in doctoral studies in the field of mental health.
- The Lucy Shum Memorial Award– made annually for a student in the Department of Mental Health who will work in the arena of public health policy for mental health issues. If there are several eligible students a preference will be given to students of Chinese heritage.
- The Rose and Ali Kawi Award – made annually to support outstanding students pursuing a doctoral degree in the Department of Mental Health who furthers the work of Dr. Ali Kawi, a graduate of the Department, and his work in research and education in neuropsychiatric disorders, psychosomatic research and prenatal factors in reading disorders, and learning and mental health.
- The Alberta Szalita Award – made annually to support a graduate student or junior faculty member in the Department of Mental Health. Preference will be given to recipients who are clinically trained.

The departmental Honors and Awards Committee is responsible for choosing the recipients of the awards each year, based on nominations from the faculty, and the awards are granted at a school-wide awards ceremony and also recognized at the department's annual end-of-year party.

Academic Training Programs

The Department of Mental Health houses multiple NIH-funded doctoral and postdoctoral institutional training programs:

Psychiatric Epidemiology Training (PET) Program

This interdisciplinary doctoral and postdoctoral program is affiliated with the Department of Epidemiology and with the Department of Psychiatry and Behavioral Sciences at the School of Medicine. The Program is directed by Dr. Heather Volk (hvolk1@jhu.edu). The goal of the program is to increase the epidemiologic expertise of psychiatrists and other mental health professionals, and to increase the number of epidemiologists with the interest and capacity to study psychiatric disorders. Graduates are expected to undertake careers in research on the etiology, classification, distribution, course, and outcome of mental disorders and maladaptive behaviors. The Program is funded with a training grant from the National Institute of Mental Health.

Pre-doctoral trainees are required to take the four term series in Epidemiologic Methods (340.751-340.754), as well as the four term series in Biostatistics (140.621-624). In addition to the other departmental requirements for the doctoral degree, pre-doctoral trainees must also take four advanced courses in one of the domains of expertise they have selected to pursue: Genetic and Environmental Etiology of Mental Disorders, Mental Health Services and Outcomes, Mental Health and Aging, and Global Mental Health. Pre-doctoral trainees should consult with their adviser and the program director to select courses consistent with their training goals.

Postdoctoral fellows take some courses, depending on background and experience, and engage in original research under the supervision of a faculty member. They are expected to have mastery in the basic principles and methods of epidemiology and biostatistics. Thus, fellows are required to take 340.721 Epidemiologic Inference in Public Health, 330.603 Psychiatric Epidemiology, and some equivalent of 140.621 Statistical Methods in Public Health I and 140.622 Statistical Methods in Public Health II. They may be waived from these requirements by the program director if they can demonstrate equivalent prior coursework.

Drug Dependence Epidemiology Training (DDET) Program

This training program is co-led by Dr. Renee M. Johnson (rjohnson@jhu.edu) and Dr. Brion Maher (brion@jhu.edu). The DDET program is designed to train scientists in the area of substance use and substance use disorders. Research training within the DDET Program focuses on: (1) genetic, biological, social, and environmental factors associated with substance use, (2) medical and social consequences of drug use, including HIV/AIDS and violence, (3) co-morbid mental health problems, and (4) substance use disorder treatment and services. The DDET program is funded by the NIH National Institute on Drug Abuse.

The program supports both pre-doctoral and postdoctoral trainees. Pre-doctoral trainees have a maximum of four years of support on the training grant. After completing required coursework, pre-doctoral trainees are expected to complete original research under the supervision of a faculty member affiliated with the DDET program. Postdoctoral trainees typically have two years of support on the training grant. They are required to engage in original research on a full-time basis, under the supervision of a DDET faculty member. Trainees' research projects must be relevant to the field of substance use.

All trainees are required to attend a weekly seminar series focused on career development and substance use research. The DDET program supports trainees' attendance at relevant academic meetings, including the Annual Meeting of the College on Problems of Drug Dependence (CPDD) each June. Training grant appointments are awarded annually and are renewable given adequate progress in the academic program, successful completion of program and departmental requirements, and approval of the training director.

Pre-doctoral trainees are required to take the required series in epidemiology and biostatistics, as well as The Epidemiology of Substance Use and Related Problems (330.602). In addition, they must take three advanced courses that enhance skills or content expertise in substance use and related problems: one in epidemiology (e.g., HIV/AIDS epidemiology), one in biostatistics, and one in social and behavioral science or health policy. The most appropriate biostatistics course will provide instruction on a method the trainee will use during the thesis research (e.g., survival analysis, longitudinal analysis methods). (Course requirements for trainees from other departments will be decided on a case-by-case basis.)

Postdoctoral trainees are expected to enter the program with mastery in the basic principles and methods of epidemiology and biostatistics. They are required to take The Epidemiology of Substance Use and Related Problems in their first year (330.602), as well as required ethics courses. Postdoctoral trainees are encouraged to take courses in scientific writing and grant writing.

Global Mental Health Training (GMH) Program

The Global Mental Health Training (GMH) Program is a training program to provide public health research training in the field of Global Mental Health. It is housed in the Department of Mental Health (http://www.jhsph.edu/dept/mh/), in collaboration with the Departments of International Health and Epidemiology. The GMH Program is supported by a T32 research training grant award from the National Institute of Mental Health (NIMH). Dr. Judy Bass (jbass1@jhu.edu) is the training program director.

As part of this training program, trainees will undertake a rigorous program of coursework in epidemiology, biostatistics, public mental health and global mental health, field-based research experiences, and integrative activities that will provide trainees with a solid foundation in the core proficiencies of global mental health while giving trainees the opportunity to pursue specialized training in one of three concentration areas that are recognized as high priority: (1) Prevention Research; (2) Intervention Research; or (3) Integration of Mental Health Services Research.

Pre-doctoral trainees are required to take the required series in epidemiology and biostatistics and department of mental health required courses. In addition, they must take three courses that will enhance skills and content expertise in global mental health: 330.620 Qualitative and Quantitative Research Methods for Low Resource Contexts, 224.694 Mental Health Intervention Programming in Low and Middle Income Countries, and 330.680 Promoting Mental Health and Preventing Mental Disorder in Low and Middle Income Countries.

The Mental Health Services and Systems (MHSS) Program

The Mental Health Services and Systems (MHSS) program is an NIMH-funded T32 training program run jointly by the Department of Mental Health and the Department of Health Policy and Management. and also has a close affiliation with the Johns Hopkins School of Medicine. Dr. Elizabeth Stuart (estuart@jhu.edu) is the training program director.

The goal of the MHSS Program is to train scholars who will become leaders in mental health services and systems research. This program focuses on producing researchers who can address critical gaps in knowledge with a focus on: (1) how health care services, delivery settings, and financing systems affect the wellbeing of persons with mental illness; (2) how cutting-edge statistical and econometric methods can be used in intervention design, policies, and programs to improve care; and (3) how implementation science can be used to most effectively disseminate evidence-based advances into routine practice. The program strongly emphasizes the fundamental principles of research translation and dissemination throughout its curriculum.

Pre-doctoral trainees in the MHSS program are expected to take a set of core coursework in epidemiology and biostatistics, 5 core courses related to the core elements of mental health services and systems (330.662: Public Mental Health, 330.664: Introduction to Mental Health Services, 140.664: Causal Inference in Medicine and Public Health, 550.601: Implementation Research and Practice, and 306.665: Research Ethics and Integrity), and to specialize in one of 3 tracks: (1) health services and economics; (2) statistics and methodology; or (3) implementation science applied to mental health. Trainees are also expected to participate in a biweekly training grant seminar every year of the program, and take a year-long practicum course exposing them to real world mental health service systems and settings.

For more details see this webpage: http://www.jhsph.edu/research/centers-and-institutes/center-for-mental-health-and-addiction-policy-research/training-opportunities/

Epidemiology and Biostatistics of Aging

This program offers training in the methodology and conduct of significant clinical- and population-based research in older adults. This training grant, funded by the National Institute on Aging, has the specific mission to prepare epidemiologists and biostatisticians who will be both leaders and essential members of the multidisciplinary research needed to define models of healthy, productive aging and the prevention and interventions that will accomplish this goal. The Associate Director of this program is Dr. Michelle Carlson (mcarlso2@jhu.edu).

The EBA training grant has as its aims:

- Train pre- and post-doctoral fellows by providing a structured program consisting of a) course work, b) seminars and working groups, c) practica, d) directed multidisciplinary collaborative experience through a training program research project, and e) directed research.
- Ensure hands-on participation in multidisciplinary research bringing trainees together with infrastructure, mentors, and resources, thus developing essential skills and experience for launching their research careers.
- Provide in-depth knowledge in established areas of concentration, including a) the epidemiology and course of late-life disability, b) the epidemiology of chronic diseases common to older persons, c) cognition, d) social epidemiology, e) the molecular, epidemiological and statistical genetics of aging, f) measurement and analysis of complex gerontological outcomes (e.g, frailty), and g) analysis of longitudinal and survival data.
- Expand the areas of emphasis to which trainees are exposed by developing new training opportunities in: a) clinical trials; b) causal inference; c) screening and prevention; and d) frailty and the integration of longitudinal physiologic investigation into epidemiology.
- Integrate epidemiology and biostatistics training to form a seamless, synthesized approach whose result is greater than the sum of its parts, to best prepare trainees to tackle aging-related research questions.

These aims are designed to provide the fields of geriatrics and gerontology with epidemiologists and biostatisticians who have an appreciation for and understanding of the public health and scientific issues in human aging, and who have the experience collaborating across disciplines that is essential to high quality research on aging. More information can be found on the training grant website at: http://coah.jhu.edu/academics/aging-training.html

Aging and Dementia Training Program

This interdisciplinary pre- and post-doctoral training program is is an interdisciplinary program, funded by the National Institute on Aging, affiliated with the Department of Neurology and the Department of Psychiatry at the School of Medicine, the Department of Mental Health at the School of Public Health and the Department of Psychology and Brain Sciences at the School of Arts and Sciences. The Department of Mental Health contact is Dr. George Rebok (grebok1@jhu.edu). The goal of this training program is to train young investigators in age-related cognitive and neuropsychiatric disorders.

General Student/Fellow Travel Planning

Students or fellows traveling on a training grant or faculty grant/contract related projects must secure written approval (via email is acceptable) from the Principal Investigator (PI) for any travel that will be funded by these sources prior to making any arrangements or embarking on a trip. The student or fellow is responsible for getting the correct budget number from the PI. The student, fellow or the PI's support staff makes the necessary travel arrangements either with a travel agency or through airlines, Amtrak, etc. directly.

If a student/fellow requires a travel advance, the student should ask the PI to assist with a Travel Request using SAP. By University policy, an advance will not be given sooner than 10 days prior to the actual trip. However, if arrangements are made far enough in advance, the Department can pay on an invoice prior to the actual travel. Some hotels will also invoice in advance and can be paid directly. This cuts down on the amount of travel advance. Invoices can be processed by the support staff person using SAP and will then be approved by the budget analyst for payment. Invoices will also need approval from the PI.

NOTE: A travel advance is considered by the University as an encumbrance against an account; it is not cleared until a Travel Expense Report is filed within SAP. If travel advances are not cleared within 3 months of the advance, the individual will be charged taxes on the amount of the advance and the dollar amount of the advance will be reported to the IRS as income on the W-2 at the end of the calendar year in which the advance was made.
It is essential to have original receipts since the University will not pay from photocopies or statements. Include all transportation receipts, invoices that might have come with tickets, charge card receipts, toll, parking, meal, etc. charges related to travel.

Reimbursements must be submitted within 30 days of the last day of travel or date non-travel expenses were incurred. *Receipts older than 90 days will not be processed*. This policy is now being fully enforced by MH and Accounts Payable due to the IRS Accountable Plan Rules. You can access the full Travel Guide Policies & Procedures (https://policies.jhu.edu/doc/fetch.cfm/DpbSS14O/) .

Travel Funds for Professional Meetings or Conferences

Doctoral students are encouraged to present at and attend professional meetings and conferences related to their area of study. *Students on training grants have access to meeting funds through their training grant* *and should seek approval from the training grant PI.* **The Department sets aside a limited amount of funds for travel and registration fees for doctoral students who are not supported by training grants.** Students and fellows can apply for travel support, after they have also applied for support from the conference or meeting itself, to the Senior Academic Program Coordinator who will obtain the approval of the Department Chair for each request. To be eligible, the student or fellow must have an accepted communication (i.e., poster or oral presentation) at the meeting or conference. **The maximum amount for any one trip is $1,000 and students and fellows can only be supported once per year.**

For access to Department funds, requests should be sent to the Academic Program Administrator via email listing the following information: Student name, name of conference, location of conference, dates of conference, breakdown of estimated expenses, type of presentation (poster, paper, etc.) and whether or not the student has requested scholarship funds from the conference. Once approval has been obtained and the trip is completed, **receipts and proof of payment** must be submitted to be reimbursed. Proof of payment can be in the form of a blinded credit card number (Example: Visa XXXX-XXXX-XXXX-1234) on the receipt, or a bank statement showing the charges and the account holder's name (You may black out any other charges not relevant to the trip). **At least 30 days or more advance notice is requested for approval.**

Travel Abroad

Students at the Johns Hopkins Bloomberg School of Public Health may have an opportunity to supplement their education or conduct research in another country. These opportunities often enrich the academic curriculum, contribute to dissertation research, and allow application of knowledge obtained in the classroom to the world's communities. While the School encourages participation in these kinds of experiences, international tensions can be high. Therefore, students should seek information on conditions abroad before traveling.

The International Travel Resources (https://my.jhsph.edu/Resources/ITR/Pages/default.aspx) portal site is designed to provide tools and information to BSPH students who travel internationally in order to allow them to make informed personal decisions; to protect reasonably themselves from foreseeable harm; to increase their own level of health, safety, and security awareness; and to prepare for emergencies abroad. The site offers a wealth of useful links, travel resources, and insurance information in addition to State Department and Center for Disease Control travel advisories.

Students traveling to a less developed part of the world should be certain to contact their health care provider or the Johns Hopkins International Travel clinic to learn about recommended immunizations and other matters to guard your health. The International Travel Clinic is located on the East Baltimore campus and can be reached by telephone at 410-955-8931. Further information about recommended immunizations and prophylaxis is available at the CDC Website (https://www.cdc.gov/).

International students must contact the Office of International Services (OIS) well in advance of any travel to avoid compliance issues with their visa status. OIS may be contacted at 667-208-7001, or at https://ois.jhu.edu/About_OIS/Contact_Us/index.html (https://ois.jhu.edu/About_OIS/Contact_Us/).

Students who travel abroad as part of a practicum experience or as part of a research team must complete a Graduate Student Study Release and International Travel Checklist and leave the forms with Patty Scott, Academic Program Administrator for the Department of Mental Health.

Mental Health, MHS

The Master of Health Science (MHS) degree is organized around a core set of four terms of graduate courses, and a final research paper that demonstrates mastery of what has been learned in the course work experience. The MHS degree is completed in one academic year. The MHS degree in the Department of Mental Health may be combined with a certificate program offered in another department within the Bloomberg School of Public Health, e.g., Health Education, Health Finance & Management, Health Policy, Health and Human Rights, Health Communication, Health Disparities & Health Inequality, Injury Control, and Maternal and Child Health. These certificate programs are at no extra cost to full-time students and are available to enhance the mental health research educational experience. Courses taken during Winter or Summer sessions will require additional payments.

The Director of the MHS Program is Dr. Jeanine Parisi. The MHS Program Director is the advisor of record for all MHS students. The Director of the MHS Program serves as a resource for MHS students, advising on the choice of courses, career planning, guiding students in selecting a topic for their MHS paper, and connecting them with an appropriate faculty co-advisor in relation to this paper.

Bachelor's/MHS

The Bachelor's/MHS in the Department of Mental Health is designed exclusively for undergraduate students currently enrolled in the Johns Hopkins University. We encourage all JHU undergraduates to apply to this program during the regular admissions cycle.

JHU undergraduates may formally apply for early admission before completing their Bachelor's degree, preferably during the summer between their junior year and senior year, or within the first month of their senior year. As soon as a student is admitted to the MHS degree program, our department will assign a graduate advisor to work with the student while the undergraduate degree is being completed. Admitted students must complete the Bachelor's degree before formally enrolling in the Bloomberg School of Public Health. Program requirements for the Bachelor's/MHS program are the same as requirements for other MHS students in our department. However, up to one half of the PH graduate credits earned interdivisionally toward the Bachelor's degree may also apply to the master's degree. (This is the equivalent of no more than 16 credits, which is one full-time term of graduate level study in the School of Public Health.) Thus, the Bachelor's/MHS degree program will require fewer than 64 credits taken as a matriculated student for those who have taken up to 16 units of coursework offered by JHSPH, only if grades of A or B are earned.

Students in this program will receive co-advising from both schools to optimize their academic experience.

Contact:
Jeanine Parisi, PhD
Email: jparisi1@jhu.edu (jparisi@jhsph.edu)

Requirements

Applications for the Bachelor's/MHS degree should be submitted through SOPHAS Express by July 1st between the junior and senior years to insure completion of review process prior to the first day of the academic year. JHU seniors can also apply during the beginning of their senior year until October 15 once the application reopens in mid-August. Please note that admitted students must complete the Bachelor's degree before formally enrolling in the Bloomberg School of Public Health.

Applicants must submit the following:

- Transcripts from Johns Hopkins University and, if applicable, transcripts from any other college-level institutions you have attended.*
- Three letters of recommendation.
- Resume or curriculum vitae.
- Statement of purpose and objectives.
- No GRE Test scores are required for JHU students.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Course	Title	Credits
First Term		
PH.140.621 or PH.140.611	Statistical Methods in Public Health I or Statistical Reasoning in Public Health I	3-4
PH.330.604	Seminars in Research in Public Mental Health	1
PH.330.617	Psychopathology for Public Health	3
PH.340.721	Epidemiologic Inference in Public Health I	5
PH.330.662	Public Mental Health	2
PH.330.840	Special Studies and Research Mental Health ((for bi-weekly meetings with the MHS director) with student advisor's name listed)	1
PH.550.860	Academic & Research Ethics at BSPH	0
	Credits	**15-16**
Second Term		
PH.140.622 or PH.140.611	Statistical Methods in Public Health II or Statistical Reasoning in Public Health I	3-4
PH.330.603 or PH.330.602	Psychiatric Epidemiology or The Epidemiology of Substance Use and Related Problems	3
PH.330.604	Seminars in Research in Public Mental Health	1
PH.340.722	Epidemiologic Inference in Public Health II	4
PH.330.811	MHS Thesis in Mental Health: from Proposal to Publication I	1
	Credits	**12-13**
Third Term		
PH.330.661 or PH.330.612	Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders [1] or Introduction to Behavioral and Psychiatric Genetics	3
PH.330.604	Seminars in Research in Public Mental Health	1
PH.330.607	PREVENTION of MENTAL DISORDERS: PUBLIC HEALTH InterVENTIONS	3
PH.330.812	MHS Thesis in Mental Health: from Proposal to Publication II	1
	Credits	**8**
Fourth Term		
PH.330.612 or PH.330.661	Introduction to Behavioral and Psychiatric Genetics [1] or Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders	3
PH.330.604	Seminars in Research in Public Mental Health	1
	Credits	**1**
	Total Credits	**36-38**

[1] PH.330.661 Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders is taught in 3rd term. PH.330.612 Introduction to Behavioral and Psychiatric Genetics is taught in 4th term.

A minimum of 64 credits (16 credits per term) is required to complete the degree; a maximum of 22 credits is allowed in any single term. Students in the MHS program must take six credits of electives (i.e. additional courses beyond those required and described above) in the Department of Mental Health which must be taken for a letter grade.

CEPH Courses

According to the requirements of the Council on Education for Public Health (CEPH), all JHSPH degree students must be grounded in foundational public health knowledge. Grounding in foundational public health knowledge is measured by the student's achievement of the learning objectives listed below, or higher-level versions of the same objectives.

https://e-nextcatalog.jhu.edu/public-health/ceph-requirements/index.html (p. 176)

552.601 (.5 credit) Found principles of public health (offered in August, term 1A, term 2A and term 3A)
552.603 (.5 credit) Role of qualitative methods (offered in August, term 1B, term 2B and term 3B)
552.607 (.5 credit) Essentials of Environmental Health (offered term 1A, term 2A, and term 3A)
552.608 (.5 credit) Bio Genetic & Infect basis of health* (offered in August, term 1B, term 2B, and term 3B)
552.610 (.5 credit) Social Determinants of health** (offered in August, term 1B, term 2B and term 3B)
552.611 (.5 credit) Globalization and health (offered in August, term 1B, term 2B and term 3B)
552.612 (.5 credit) Essentials of One Health (offered term 1B and term 4A)

The CEPH courses must be completed by fourth term in order to meet graduation requirements.
* Students taking 330.612 Behavioral and Psychiatric Genetics or 260.600 Introduction to Biomedical Sciences do not need to take this CEPH course.
** Students taking the 330.661 Social, Psychological and Development Processes course do not need to take this CEPH course

Final Research Paper

All MHS students must complete a final research paper in their area of interest. The paper may either be a critical and comprehensive review of the literature pertaining to a specific area of interest or an original analysis of existing data. Alternate formats may also be possible (e.g., policy brief, program evaluation) with faculty approval. This paper should be of sufficient quality to be considered by the Department faculty as worthy of publication in a recognized journal or be used to inform policy or practice. A brief proposal of the final research paper should be submitted to the academic advisor during second term and should be approved by the academic advisor and faculty co-advisor before work on the project is started. Special studies credits with a faculty member may be taken to allocate time and mentoring to working on this research paper. In order to graduate in May, all degree requirements are due in April. The final draft of the paper must be completed and approved by the student's academic advisor and faculty co-advisor by the first week of April. Requirements for the MHS degree will not be fulfilled until the Department receives a copy of the research paper and a letter confirming completion of the degree requirements is filed in the Office of Records & Registrar (BSPH E1002).

Academic Plans

During the first quarter of each academic year, each master's student will complete a plan describing how academic and career goals will be achieved through their learning experience in the department. The plan will contain broad, general goals to be attained during the entire experience at the Department of Mental Health and list of courses to be taken to ensure success is met. A copy of the academic plan template is provided by the MHS Program Director and the Academic Program Administrator. The plan is prepared in collaboration with the advisor, and signed by the student and the advisor. The MHS Program Director will review all MHS academic plans.

Academic Progress

The performance and progress of each student is reviewed by the student's advisor and the Academic Program Administrator for their degree. The MHS Program Director along with the Academic Program Administrator review each student's transcripts every quarter. When the academic achievement of any student comes into question (typically this involves a grade of "C" or lower), the advisor may consult with faculty and/or the Chair about the student's progress. Satisfactory academic progress is earning a grade of C or better in the required coursework, earning a minimum of 64 credits, a satisfactory written paper and maintaining a minimum GPA of 2.75. Unsatisfactory or incomplete grades may constitute grounds for removal of a student from a degree program (see Dismissal Policy).

A student's overall academic standing and progress will be judged not only on grades received, but also successful completion of a final research paper.

Mental Health Seminar Series

Attendance at the Mental Health Seminar series is required for all MHS students and first year doctoral students. Credit is obtained for attendance via a one course credit per term 330.604 Seminars in Research in Public Mental Health. All other students and fellows are expected to attend the Seminar Series throughout the course of their program to gain exposure to a wide range of mental health issues and research.

At the beginning of each term a schedule of speakers and presentation topics is shared with all of the students and faculty and is posted on the departmental bulletin board. Once per month, there will be a student-only session during this seminar time that coincides with faculty meetings. Topics for these sessions include grant writing, job search tips, reviews of recent seminars, etc. Students are welcome to suggest topics and formats. This is intended to provide students with an informal forum for peer communication and advice.

The curriculum for the MHS in the Department of Mental Health includes coursework to build knowledge in public mental health, with a foundation in Epidemiology and Biostatistics. The degree can be tailored to meet the students interests and electives can be taken from different departments throughout the school.

Courses are also included that have been approved to meet the Introductory Public Health Knowledge Learning Objectives (p. 176) required by the Council on Education for Public Health for academic programs.

Mental Health, PhD

Overview

PhD Program Description

The PhD program is designed to provide key knowledge and skill-based competencies in the field of public mental health. To gain the knowledge and skills, all PhD students will be expected to complete required coursework, including courses that meet the CEPH competency requirements and research ethics; successfully pass the departmental comprehensive exam; select and meet regularly with a Thesis Advisory Committee (TAC) as part of advancing to doctoral candidacy; present a public seminar on their dissertation proposal; successfully pass the departmental and school wide Preliminary Oral Exams; complete a doctoral thesis followed by a formal school wide Final Oral Defense; participate as a Teaching Assistant (TA); attend Grand Rounds in the Department of Psychiatry; and provide a formal public seminar on their own research. Each of these components is described in more detail below. **The** Introduction to Online Learning **(**https://courseplus.jhsph.edu/core/index.cfm/go/course.home/cid/90/**) course is taken before the start of first term .**

Department Organization

The PhD Program Director, Dr. Rashelle Musci (rmusci1@jhu.edu), works with the Vice Chair for Education, Dr. Judy Bass (jbass1@jhu.edu), to support new doctoral students, together with their advisers, to formulate their academic plans; oversee their completion of ethics training; assist with connections to faculty who may serve as advisers or sources for data or special guidance; provide guidance to students in their roles as teaching assistants; and act as a general resource for all departmental doctoral students. The Vice Chair also leads the Department Committee on Academic Standards and sits on the School Wide Academic Standards Committee. Students can contact Drs. Musci or Bass directly if they have questions or concerns.

Within the department structure, there are several standing and ad-hoc committees that oversee faculty and student research, practice and education.For specific questions on committee mandate and make-up, please contact Dr. Bass or the Academic Program Administrator, Patty Scott patty.scott@jhu.edu.

CEPH Requirements

According to the requirements of the Council on Education for Public Health (p. 176***) (CEPH), all BSPH degree students must be grounded in foundational public health knowledge. Grounding in foundational public***

health knowledge is measured by the student's achievement of the learning objectives listed below, or higher-level versions of the same objectives.

Academic Training Programs

The Department of Mental Health houses multiple NIH-funded doctoral and postdoctoral institutional training programs:

Psychiatric Epidemiology Training (PET) Program

This interdisciplinary doctoral and postdoctoral program is affiliated with the Department of Epidemiology and with the Department of Psychiatry and Behavioral Sciences at the School of Medicine. The Program is co-directed by Dr. Peter Zandi (pzandi1@jhu.edu) and Dr. Heather Volk (hvolk1@jhu.edu). The goal of the program is to increase the epidemiologic expertise of psychiatrists and other mental health professionals, and to increase the number of epidemiologists with the interest and capacity to study psychiatric disorders. Graduates are expected to undertake careers in research on the etiology, classification, distribution, course, and outcome of mental disorders and maladaptive behaviors. The Program is funded with a training grant from the National Institute of Mental Health.

Pre-doctoral trainees are required to take the four term series in Epidemiologic Methods (340.751-340.754), as well as the four term series in Biostatistics (140.621-624). In addition to the other departmental requirements for the doctoral degree, pre-doctoral trainees must also take four advanced courses in one of the domains of expertise they have selected to pursue: Genetic and Environmental Etiology of Mental Disorders, Mental Health Services and Outcomes, Mental Health and Aging, and Global Mental Health. Pre-doctoral trainees should consult with their adviser and the program director to select courses consistent with their training goals.

Postdoctoral fellows take some courses, depending on background and experience, and engage in original research under the supervision of a faculty member. They are expected to have mastery in the basic principles and methods of epidemiology and biostatistics. Thus, fellows are required to take 340.721 Epidemiologic Inference in Public Health, 330.603 Psychiatric Epidemiology, and some equivalent of 140.621 Statistical Methods in Public Health I and 140.622 Statistical Methods in Public Health II. They may be waived from these requirements by the program director if they can demonstrate equivalent prior coursework.

Drug Dependence Epidemiology Training (DDET) Program

This training program is co-led by Dr. Renee M. Johnson (rjohnson@jhu.edu) and Dr. Brion Maher (brion@jhu.edu). The DDET program is designed to train scientists in the area of substance use and substance use disorders. Research training within the DDET Program focuses on: (1) genetic, biological, social, and environmental factors associated with substance use, (2) medical and social consequences of drug use, including HIV/AIDS and violence, (3) co-morbid mental health problems, and (4) substance use disorder treatment and services. The DDET program is funded by the NIH National Institute on Drug Abuse.

The program supports both pre-doctoral and postdoctoral trainees. Pre-doctoral trainees have a maximum of four years of support on the training grant. After completing required coursework, pre-doctoral trainees are expected to complete original research under the supervision of a faculty member affiliated with the DDET program. Postdoctoral trainees typically have two years of support on the training grant. They are required to engage in original research on a full-time basis, under the supervision of a DDET faculty member. Trainees' research projects must be relevant to the field of substance use.

All trainees are required to attend a weekly seminar series focused on career development and substance use research. The DDET program supports trainees' attendance at relevant academic meetings, including the Annual Meeting of the College on Problems of Drug Dependence (CPDD) each June. Training grant appointments are awarded annually and are renewable given adequate progress in the academic program, successful completion of program and departmental requirements, and approval of the training director.

Pre-doctoral trainees are required to take the required series in epidemiology and biostatistics, as well as The Epidemiology of Substance Use and Related Problems (330.602). In addition, they must take three advanced courses that enhance skills or content expertise in substance use and related problems: one in epidemiology (e.g., HIV/AIDS epidemiology), one in biostatistics, and one in social and behavioral science or health policy. The most appropriate biostatistics course will provide instruction on a method the trainee will use during the thesis research (e.g., survival analysis, longitudinal analysis methods). (Course requirements for trainees from other departments will be decided on a case-by-case basis.)

Postdoctoral trainees are expected to enter the program with mastery in the basic principles and methods of epidemiology and biostatistics. They are required to take The Epidemiology of Substance Use and Related Problems in their first year (330.602), as well as required ethics courses. Postdoctoral trainees are encouraged to take courses in scientific writing and grant writing.

Global Mental Health Training (GMH) Program

The Global Mental Health Training (GMH) Program is a training program to provide public health research training in the field of Global Mental Health. It is housed in the Department of Mental Health (http://www.jhsph.edu/dept/mh/), in collaboration with the Departments of International Health and Epidemiology. The GMH Program is supported by a T32 research training grant award from the National Institute of Mental Health (NIMH). Dr. Judy Bass (jbass1@jhu.edu) is the training program director.

As part of this training program, trainees will undertake a rigorous program of coursework in epidemiology, biostatistics, public mental health and global mental health, field-based research experiences, and integrative activities that will provide trainees with a solid foundation in the core proficiencies of global mental health while giving trainees the opportunity to pursue specialized training in one of three concentration areas that are recognized as high priority: (1) Prevention Research; (2) Intervention Research; or (3) Integration of Mental Health Services Research.

Pre-doctoral trainees are required to take the required series in epidemiology and biostatistics and department of mental health required courses. In addition, they must take three courses that will enhance skills and content expertise in global mental health: 330.620 Qualitative and Quantitative Methods for Mental Health and Psychosocial Research in Low Resource Settings, 224.694 Mental Health Intervention Programming in Low and Middle Income Countries, and 330.680 Promoting Mental Health and Preventing Mental Disorder in Low and Middle Income Countries.

The Mental Health Services and Systems (MHSS) Program

The Mental Health Services and Systems (MHSS) program is an NIMH-funded T32 training program run jointly by the Department of Mental Health and the Department of Health Policy and Management. and also has a close affiliation with the Johns Hopkins School of Medicine. Drs. Elizabeth Stuart (estuart@jhu.edu) and Colleen Barry (cbarry@jhu.edu) are the training program co-directors.

The goal of the MHSS Program is to train scholars who will become leaders in mental health services and systems research. This program focuses on producing researchers who can address critical gaps in knowledge with a focus on: (1) how health care services, delivery settings, and financing systems affect the wellbeing of persons with mental illness; (2) how cutting-edge statistical and econometric methods can be used in intervention design, policies, and programs to improve care; and (3) how implementation science can be used to most effectively disseminate evidence-based advances into routine practice. The program strongly emphasizes the fundamental principles of research translation and dissemination throughout its curriculum.

Pre-doctoral trainees in the MHSS program are expected to take a set of core coursework in epidemiology and biostatistics, 5 core courses related to the core elements of mental health services and systems (330.662: Public Mental Health, 330.664: Introduction to Mental Health Services, 140.664: Causal Inference in Medicine and Public Health, 550.601: Implementation Research and Practice, and 306.665: Research Ethics and Integrity), and to specialize in one of 3 tracks: (1) health services and economics; (2) statistics and methodology; or (3) implementation science applied to mental health. Trainees are also expected to participate in a biweekly training grant seminar every year of the program, and take a year-long practicum course exposing them to real world mental health service systems and settings.

For more details see this webpage: http://www.jhsph.edu/research/centers-and-institutes/center-for-mental-health-and-addiction-policy-research/training-opportunities/

Epidemiology and Biostatistics of Aging

This program offers training in the methodology and conduct of significant clinical- and population-based research in older adults. This training grant, funded by the National Institute on Aging, has the specific mission to prepare epidemiologists and biostatisticians who will be both leaders and essential members of the multidisciplinary research needed to define models of healthy, productive aging and the prevention and interventions that will accomplish this goal. The Associate Director of this program is Dr. Michelle Carlson (mcarlso2@jhu.edu).

The EBA training grant has as its aims:

- Train pre- and post-doctoral fellows by providing a structured program consisting of a) course work, b) seminars and working groups, c) practica, d) directed multidisciplinary collaborative experience through a training program research project, and e) directed research.
- Ensure hands-on participation in multidisciplinary research bringing trainees together with infrastructure, mentors, and resources, thus developing essential skills and experience for launching their research careers.
- Provide in-depth knowledge in established areas of concentration, including a) the epidemiology and course of late-life disability, b) the epidemiology of chronic diseases common to older persons, c) cognition, d) social epidemiology, e) the molecular, epidemiological and statistical genetics of aging, f) measurement and analysis of complex gerontological outcomes (e.g, frailty), and g) analysis of longitudinal and survival data.
- Expand the areas of emphasis to which trainees are exposed by developing new training opportunities in: a) clinical trials; b) causal inference; c) screening and prevention; and d) frailty and the integration of longitudinal physiologic investigation into epidemiology.
- Integrate epidemiology and biostatistics training to form a seamless, synthesized approach whose result is greater than the sum of its parts, to best prepare trainees to tackle aging-related research questions.

These aims are designed to provide the fields of geriatrics and gerontology with epidemiologists and biostatisticians who have an appreciation for and understanding of the public health and scientific issues in human aging, and who have the experience collaborating across disciplines that is essential to high quality research on aging. More information can be found at: https://coah.jhu.edu/graduate-programs-and-postdoctoral-training/epidemiology-and-biostatistics-of-aging/.

Aging and Dementia Training Program

This interdisciplinary pre- and post-doctoral training program is is an interdisciplinary program, funded by the National Institute on Aging, affiliated with the Department of Neurology and the Department of Psychiatry at the School of Medicine, the Department of Mental Health at the School of Public Health and the Department of Psychology and Brain Sciences at the School of Arts and Sciences. The Department of Mental Health contact is Dr. George Rebok (grebok1@jhu.edu). The goal of this training program is to train young investigators in age-related cognitive and neuropsychiatric disorders.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Residence Requirements

All doctoral students must complete and register for four full-time terms of a regular academic year, in succession, starting with Term 1 registration in August-September of the academic year and continuing through Term 4 ending in May of that same academic year. Full-time registration entails a minimum of 16 credits of registration each term and a maximum of 22 credits per term.

Full-time residence means more than registration. It means active participation in department seminars and lectures, research work group meetings, and other socializing experiences within our academic community. As such, doctoral trainees are expected to be in attendance on campus for the full academic year except on official University holidays and vacation leave.

Course Requirements

Not all courses are required to be taken in the first year alone; students typically take 2 years to complete all course requirements. Please note that PhD students are required to take either PH.550.600 Living Science Ethics - Responsible Conduct of Research or PH.306.665 Research Ethics and integrity: U.S. and International Issues as part of their ethics requirement (see research ethics section below).

Students must obtain an A or B in all required courses. If a grade of C or below is received, the student will be required to repeat the course. An exception is given if a student receives a C (but not a D) in either of the first two terms of the required biostatistics series, but then receives a B or better in both of the final two terms of the series; then a student will not be required to re-take the earlier biostatistics course. However, the student cannot have a cumulative GPA lower than 3.0 to remain in good academic standing. Any other exceptions to this grade requirement must be reviewed and approved by the departmental CAS and academic adviser.

The following are the course requirements for the PhD program in the Department of Mental Health.

Biostatistics

Code	Title	Credits
PH.140.621	Statistical Methods in Public Health I (first term) [1]	4
PH.140.622	Statistical Methods in Public Health II (second term) [1]	4
PH.140.623	Statistical Methods in Public Health III (third term) [1]	4
PH.140.624	Statistical Methods in Public Health IV (fourth term) [1]	4
Total Credits		**16**

[1] Must be completed to be eligible to sit for the departmental written comprehensive exams.

Epidemiology

Code	Title	Credits
PH.340.751	Epidemiologic Methods 1 (first term) [1]	5
PH.340.752	Epidemiologic Methods 2 (second term) [1]	5
PH.340.753	Epidemiologic Methods 3 (third term) [1]	5

[1] Must be completed to be eligible to sit for the departmental written comprehensive exams.

Department of Mental Health Courses

Code	Title	Credits
Courses usually taken first year:		
PH.330.604	Seminars in Research in Public Mental Health (all terms required for first year students)	1
PH.330.617	Psychopathology for Public Health (first term) [1]	3
PH.330.662	Public Mental Health (first term) [1]	2
PH.330.603	Psychiatric Epidemiology (second term) [1]	3
PH.330.661	Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders (third term) [1]	3
PH.330.607	PREVENTION of MENTAL DISORDERS: PUBLIC HEALTH InterVENTIONS (third term) [1]	3
PH.330.612	Introduction to Behavioral and Psychiatric Genetics (fourth term) [1]	3
PH.330.623	Brain and Behavior in Mental Disorders (fourth term) [1]	3
Courses to be taken either first or second year:		
PH.330.664	Introduction to Mental Health Services (first term) [1]	3
PH.330.602	The Epidemiology of Substance Use and Related Problems (first term online and second term in person) [1]	3
Courses usually taken second year:		
PH.330.657	Statistics for Psychosocial Research: Measurement (first term) [1]	4
PH.330.660	Grant Writing for the Social and Behavioral Sciences (fourth term)	3
PH.330.611	Writing Publishable Manuscripts for the Social and Behavioral Sciences (second year and beyond only - second term)	2
PH.330.605	Doctoral Seminar in Public Mental Health (2nd year PhD students only)	1

[1] Must be completed to be eligible to sit for the departmental written comprehensive exams.

[2] For Department of Mental Health doctoral students, a research paper is required entailing one additional course credit. PH.330.840 Special Studies and Research Mental Health listing Dr. Eaton as the mentor.

Course Requirements Outside the Department of Mental Health

The School requires that at least 18 credit units must be satisfactorily completed in formal courses outside the student's primary department. Among these 18 credit units, no fewer than three courses (totaling at least 9 credits) must be satisfactorily completed in two or more departments of the Bloomberg School of Public Health. The remaining outside credit units may be earned in any department or division of the University. This requirement is usually satisfied with the biostatistics and epidemiology courses required by the department.

Candidates who have completed a master's program at the Bloomberg School of Public Health may apply 12 credits from that program toward this School requirement. Contact the Academic Office for further information.

School-wide Courses

Introduction to Online Learning (http://distance.jhsph.edu/core/index.cfm/go/course.home/cid/90/) taken before the first year.

Ethics Training

PH.550.860 Academic & Research Ethics at BSPH (0 credit - pass/fail) **required of all students in first term of registration.**

Responsible Conduct of Research (RCR) connotes a broad range of career development topics that goes beyond the more narrowly focused "research ethics" and includes issues such as conflict of interest, authorship responsibilities, research misconduct, animal use and care, and human subjects research. RCR training requirements for JHPSH students are based on two circumstances: their degree program and their source of funding, which may overlap.

1. All PhD students are required to take one of two courses in Responsible Conduct of Research, detailed below one time, in any year, during their doctoral studies.
2. All students, regardless of degree program, who receive funding from one of the federal grant mechanisms outlined in the NIH notice below, must take one of the two courses listed below to satisfy the 8 in-person hours of training in specific topic areas specified by NIH (e.g., conflict of interest, authorship, research misconduct, human and animal subject ethics, etc.).

The two courses that satisfy either requirement are:

- PH.550.600 Living Science Ethics - Responsible Conduct of Research [1 credit, Evans]. Once per week, 1st term.
- PH.306.665 Research Ethics and integrity: U.S. and International Issues [3 credits, Kass]. Twice per week, 3rd term.

Registration in either course is recorded on the student's transcript and serves as documentation of completion of the requirement.

- If a non-PhD or postdoctoral student is unsure whether or not their source of funding requires in person RCR training, they or the PI should contact the project officer for the award.
- Students who have conflicts that make it impossible for them to take either course can attend a similar course offered by Sharon Krag at Homewood during several intensive sessions (sequential full days or half days) that meet either on weekends in October or April, a week in June, or intersessions in January. Permission is required. Elizabeth Peterson (epeterso@jhsph.edu) can provide details on dates and times.
- Students who may have taken the REWards course (Research Ethics Workshops About Responsibilities and Duties of Scientists) in the SOM can request that this serve as a replacement, as long as they can provide documentation of at least 8 in person contact hours.
- Postdoctoral students are permitted to enroll in either course but BSPH does not require them to take RCR training. However, terms of their funding might require RCR training and it is their obligation to fulfill the requirement.
- The required Academic Ethics module is independent of the RCR training requirement. It is a standalone module which must be completed by all students at the Bloomberg School of Public Health. This module covers topics associated with maintaining academic integrity, including: plagiarism, proper citations, and cheating.

Special Studies Credits

Several educational opportunities come under the description of special studies that should be formally registered (PH.330.840 Special Studies and Research Mental Health). Some are described further below such as TA requirements and grand rounds. Other examples will arise, such as special study arrangements with specific faculty or helping with a specific project whose goals are aimed at the student's education and training. Research group meetings may qualify for this under certain circumstances. Please discuss this with your adviser and with the Vice Chair for Education, Dr. Bass. To determine the number of special studies credit hours consider each credit is associated with 3-4 hours of work per week.

Comprehensive Examination

The Comprehensive Examination provides the faculty with an assessment of the doctoral student's level of competence, integration of knowledge across the core curriculum, and fulfills the School's requirements as outlined below:

> "This examination should constitute a comprehensive inquiry into the student's grasp of the subject matter underlying their discipline. It should explore the student's understanding of scientific principles and methods as well as their substantive knowledge of the major field and related areas."

A student will become eligible for the Comprehensive Examination upon completion of all the courses required for the exam and approval of his/her adviser. This will normally take place after 6 consecutive terms of full-time study. Students must pass the Comprehensive Examination prior to scheduling the Departmental Oral Examination and the School's Preliminary Oral Examination.

Exams will be offered by the Department **one time each year in January** at a date announced via memo to all students from the Academic Program Administrator. All students starting their 2nd year will be assumed to be sitting for the January exam. Any student who will not be taking the exam at that time must make the decision in conjunction with their adviser and notify the Senior Academic Program Coordinator before the 2nd year begins.

Format of Exam

The Department's Comprehensive Examination will be a multi-day exam consisting of a total of 4 substantive knowledge essays (each one 1500-2000 words in length). In writing the essays, candidates are expected to demonstrate their knowledge of a particular area in the field of public mental health.

The four substantive knowledge essay questions will be derived from a list of 20 questions provided to the students in the summer after the first year of study (usually early July). The questions will be designed to cut across the required course curriculum, forcing students to integrate across material and topics. The Comprehensive Exam coordinator will solicit questions from all department faculty, and will select from contributed questions plus the existing bank of questions to generate the 20 questions to be provided to each new cohort of students.

Essays are expected to draw on the existing literature as well as the student's own critiques of and insights into current research. All assertions of fact must be documented with references to published research. Formal references will be required for major works that provide fundamental support for the conclusions presented. Unresolved issues in each area should also be discussed with references made to existing and ongoing research.

Preparation for Examination

Students are expected to prepare for the examination over the course of two terms by drafting outlines and gathering relevant materials in order to comprehensively answer each of the 20 questions. Students may work with other students who will take the exam at the same time to prepare and review one another's outlines and drafts essays. During the exam, we expect see essays that represent each student's own work and students may not share drafts with one another once the exam period has begun. Students will sign an honor code document when they receive the essay questions noting that they will not share the questions with anyone not taking the exam with them at the same time and date.

READERS

The Comprehensive Exam Coordinator shall be responsible for assignment of reviewers for the different essays and will supervise the grading process. Where possible, assignment of reviewers will take into account the research questions selected by the candidate and faculty specialty areas. Readers are free to seek consultation for specific questions outside their own areas. Readers will not include the candidate's adviser.

Grading and Evaluation

Each essay will be read by at least two independent faculty reviewers, who will assign a pass or fail grade (note: high and low pass will not be options, only pass/fail). Students must score a "pass" on 3 of 4 essays in order to pass the entire exam. If there is disagreement among the faculty, the Comprehensive Exam Coordinator will bring the reviews to the Department Chair for a final decision.

The decision of the reviewers will be communicated to the Department Chair who will send a letter to each student and their adviser advising them of their Comprehensive Exam results. Written notification of the decision to pass will be communicated to the Office of Records and Registration by the Senior Academic Program Coordinator.

Non-Passing Determination

If a student receives a 'fail' on 2 or more of the essays, the student will be required to retake the number of essays they failed (e.g., if they failed 2 essays, they will retake 2 essays). The re-take essays will be selected from among the 21 essay topics that were not selected for the original exam; the student **will not** be asked to re-write the specific essay that they failed. The decision on when to hold the re-take will be made on an individual basis after discussions with the student's adviser, to ensure the student is adequately prepared for their re-take. The re-take must be taken within 6 months of the initial exam.

Debriefing

Debriefing sessions for each student who failed to pass the Comprehensive Exam will be scheduled as soon as possible after the decision of pass/fail has been made for all candidates. This meeting will include the student's adviser and the coordinator of the comprehensive exams. The debriefing will be an opportunity to identify the difficulties and receive guidance to help with preparation for a retake, if one is allowed. In the event of a second failure, the Department Chair will meet with the student and adviser to discuss whether the student should be allowed to continue their studies.

Requirements for Advancement to Doctoral Candidacy

Students advance to doctoral candidacy following successful passing of the Departmental and School-Wide Preliminary Oral Examinations. Prior to the Oral Exams, students must pass the Department's Written Comprehensive Examination and take and pass the proposal writing course offered by the Department of Mental Health (PH.330.660 Grant Writing for the Social and Behavioral Sciences). This course will be offered in the fourth term and is typically taken in the second year of doctoral study to assist with the development of the student's dissertation proposal.

Dissertation Proposal

To facilitate consistency and provide an opportunity for building skills in grantsmanship, students will be required to write their dissertation proposal using the NIH NRSA F31 Research Component format. This format includes a 1-page Specific Aims page and 6 pages of proposal text, single space with 0.5-inch margins and a minimum of 11-point font. As is standard for NIH research proposals, the proposal should include the following sections:

- Significance of the proposed research,
- Innovation of the research and/or methods, and
- the Research Approach which includes the methods for the dissertation research.

References are not included in the 6-page limit. Example proposals are available from the Vice Chair for Education.

Thesis Advisory Committee

All students will put together a Thesis Advisory Committee (TAC), which consists of the thesis adviser and two to four other faculty, as their proposal is being developed. The TAC can be formed during the 3rd or 4th term of 2nd year and should be formed no later than the 1st term of the 3rd year. The composition of this Committee is decided on by the student and their adviser with the objective of including faculty who will assist the student in the development of feasible and relevant research aims, support the student throughout their dissertation process, and provide continuity in the evaluation of each student's progress as they work to complete their thesis. Students may meet with their TAC members individually or as a group to get ongoing feedback, though it is recommended that group meetings be regularly held in order to facilitate group-level feedback which is often different from what is obtained during one-on-one meetings. Students often find it is also more efficient to meet with committee members as a group for feedback. **The Thesis Advisory Committee also provides final approval and sign off of the student's dissertation proposal prior to scheduling Departmental and School-Wide Oral Exams.** A Dissertation Proposal Approval form is available from the Academic Program Administrator, Patty Scott.

Public Presentation of Dissertation Proposal

To assist with the development and synthesis of the dissertation proposal and provide an opportunity for students to present their research ideas and methods for feedback from an audience that includes colleagues and peers not in their area of study, students are required to present a 30-45 minute oral public presentation of their dissertation proposal followed by a Q&A session. Students may choose to schedule this presentation in connection with a TAC meeting, which could follow after the presentation to help the student finalize their proposal. *The faculty adviser and the Vice Chair for Education will assist with the scheduling of the Proposal Presentations, which may be scheduled as part of the Wednesday lunchtime seminar*. **The public presentation must be completed prior to scheduling the Department and School-Wide Preliminary Oral Exams.**

Departmental Preliminary Oral Examination

The purpose of this examination, as stated in the Policy and Procedure Memorandum (PPM-Academic 01), is to "determine whether the student has both the ability and knowledge to undertake significant research in their general area of interest." Specifically, the examiners will be concerned with the student's capacity for logical thinking; breadth of knowledge in relevant areas; and ability to develop and conduct research leading to a completed thesis. Discussion of a specific research proposal will serve as a vehicle for determining the student's general knowledge and research capacity. However, this examination is not intended to be a defense of a specific research proposal.

Each doctoral student will briefly (~10 minutes) present their proposed dissertation research at the Departmental Oral Examination, which is intended to determine the student's readiness to proceed to the School Preliminary Oral. The student and adviser will propose to the Department Chair which faculty will sit for this exam. There must be at least three teaching faculty, including the adviser, on the committee. The faculty member of highest seniority, other than the adviser, will chair the committee. Please let the Senior Academic Program Coordinator (Patty Scott) know in advance of any AV needs.

Conduct of Examination and Report of Results

A folder containing an up-to-date transcript will be made available to the faculty of the oral examination on the day of the exam by the Senior Academic Program Coordinator. Immediately following the examination, the departmental oral exam committee will evaluate the student's readiness to move on to the school-wide oral exam. If the exam committee determines the student is ready, they will inform the student and the student may proceed with the school-wide exam as scheduled. If the exam committee determines the student is not yet prepared, a list of items to review and materials to prepare will be provided to the student by the committee (through the adviser) and advice will be given as to postponing the school-wide exam until the student is more fully prepared.

The results of the examination will be reported by the student's adviser to the Academic Program Administrator (Patty Scott). Any further conditions will be dictated to the Academic Program Administrator for preparation of the appropriate memorandum.

School-Wide Preliminary Oral Examination

The School-Wide Preliminary Oral Examination takes place after the student has successfully completed the Departmental Preliminary Oral Examination. The student selects a faculty committee of at least five (5) members, representing at least three departments, with no more than three from the student's own department. One of the faculty members must be the student's thesis adviser. All of the committee members must be at the level of assistant professor or higher. The chair of the examining committee is appointed by the Graduate Board Office and must be a full or associate professor from outside the student's department. **The School--Wide Preliminary Orals must be scheduled at least one month in advance.** The appropriate forms must be submitted to the Senior Academic Program Coordinator for review and be signed by the Chair of the Department. Upon approval by the Chair of the Department, the form will be directed to the Office of Records and Registration. Forms are available online through the BSPH portal: https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx

The School-Wide Preliminary Oral Exam should be taken no later than the end of the student's third year in residence and before significant engagement in research. If a student has not taken their School-Wide Preliminary Oral Exam by the end of their third year, they are no longer considered in 'good standing' and must request an extension in their timeline. (Note: the summer before the beginning of the fourth year is still considered the third year and the student may complete this exam during that time).

Suggested Time Line

We recognize that not all students' academic and research plans will necessarily fit into one timeline. Students and their adviser should develop a proposal and dissertation timeline that best suits their needs. Below is a suggested timeline for completion of the milestones needed to move to doctoral candidacy and completion of the doctoral degree. Note: Students may register for elective coursework at anytime during their 4 years of the program.

- 1st Year
    - Terms 1 through 4: Required coursework
- 2nd Year
    - Terms 1 and 2: Required coursework and studying for comprehensive exam
    - January: Comprehensive exam
    - Terms 3 and 4: Draft aims, put together TAC (have first TAC meeting if possible)
    - Term 4: Grant writing class
    - Summer: Continue drafting aims and full proposal
- 3rd Year[1]
    - Terms 1 through 3: Public proposal presentation, TAC sign off on proposal
    - Terms 2 through 4: Schedule and complete Department and School-wide Preliminary
- 4th Year
    - Terms 1 through 4: Ongoing dissertation work
    - Terms 3 through 4: Final dissertation defense

[1] To remain in academic good standing, the school-wide Preliminary Oral Exam must be completed by the end of the 3rd year.

Doctoral Thesis

All doctoral students must complete an original investigation presented in the form of a thesis. The thesis must be based on original research, worthy of publication, and acceptable to the Department of Mental Health and to a committee of thesis readers. As part of the thesis process, each student must develop a thesis proposal that will be reviewed and found acceptable by the student's adviser while the student is enrolled as a doctoral student.

Monitoring of Progress

After passing the School-Wide Preliminary Oral Examination, each student's thesis progress will be monitored by their TAC on at least a bi-annual basis.

Doctoral advisers must officially approve the final draft of a student's thesis prior to dissemination to the other members of the Thesis Oral Examination Committee. **Students must fill out and submit the paperwork for the Final Oral Examination at least 30 days prior to the final defense date.** A signed Dissertation Approval form must accompany each hard copy of the thesis distributed. A copy of this form is available on the Office of Records and Registration website. An adviser may provide the approval in the form of an email message if traveling makes a signature impractical. Students should provide a complete and final copy of their dissertation to the committee members at least four weeks prior to the Final Oral Examination. All forms related to the final thesis defense can be found on the JHU portal at: https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx. (https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx.html)

After the student completes the Thesis Defense and the final version of dissertation is approved by the committee and the student's adviser, each doctoral student is required to submit one copy for binding to the Office of Records and Registration for the departmental library. The copy should be on acid-free paper. One additional copy is to be provided to the Eisenhower Library. Information on formatting requirements is posted on the Registrar's Office website (see above).

Institutional Review Board Approval (IRB: Committee on Human Subjects)

IRB Approval should be sought as soon the student has a final proposal for their dissertation research project. In order to graduate, certification that the student is on an IRB approved protocol (either on a new application or as an amendment to an existing protocol) that is the basis for the dissertation must be on file with the Office of Graduate Education and Research, which is provided to that office by the IRB. More details can be viewed at the IRB website: www.jhsph.edu/irb (https://www.jhsph.edu/irb/). Students should discuss any questions about the use of human subjects in their research activities with their adviser.

Thesis Format

The dissertation can take one of two forms: the traditional dissertation monograph model; or the three manuscript dissertation model.

The Traditional Dissertation Monograph Model

In this model the dissertation typically consists of an abstract, 5-7 chapters, references, and any appendices. The outline of chapters below is merely a guide, reflecting the academic discipline or orientation of the student's research. All dissertations must include a Table of Contents at the beginning.

Abstract: The abstract is a short overall summary of the work. It lays out the purpose(s) and aims of the study, the methods, and the key results and implications. The abstract generally is 2-3 double spaced pages.

Chapter 1: Introduction: Statement of the Problem and Specific Aims. This chapter, which tends to be relatively short (5-6 double spaced pages), provides an introduction to the dissertation. It describes briefly why this work was undertaken, what background conditions or data suggested it was an important problem, and what, then, this project was intended to accomplish.

Chapter 2: Literature Review. The literature review summarizes existing literature that informed the dissertation research. It generally is organized topically. The literature review tends to be a fairly detailed review, particularly for those topics most directly related to the content and methods of the dissertation.

Chapter 3: Methods. The content of the methods chapter varies tremendously with the methodological approach taken by the student for the dissertation research. With traditional empirical studies, it will generally include the specific aims, research questions, and/or hypothesis; a description of the source of study data, a description of the study instrument, and its development, if relevant; a description of secondary data obtained, if relevant; analytic methods, including data cleaning, creation of a data set, creation of variables and/or qualitative codes, types of analyses done, and human subjects issues.

Chapters 4-6: Results. The results chapter(s) report the main findings of the dissertation. They are often organized by research question, specific aim, or hypothesis, but need not necessarily follow this format.

Chapter 7: Discussion of Results and Policy Implications. The discussion chapter both summarizes key findings and discusses findings in light of existing literature and in light of their policy implications. Also included generally are a description of the study's limitations and implications for future research.

References: A listing of all citations used for the dissertation must be provided. The Department allows any standard format for references.

Appendices: Appendices can be used for many purposes. They can include study instruments, if relevant; they can include additional tables not included in the main body of the dissertation; also included must be a copy of the student's CV. The traditional dissertation should be able to "stand alone" without appendices, however, so results should never be put in appendices that are key to the study's main findings.

All components of the traditional dissertation will be judged by the committee to be one of the following: Acceptable, Acceptable with Revisions, or Unacceptable. Students, with guidance from their adviser, will rework their dissertation until all components are judged acceptable.

The Three Manuscript Thesis Model

In this model, the thesis typically consists of a minimum of three papers in publishable form, linked to the student's thesis topic, with accompanying introductory and conclusion chapters. One of these papers may be the literature review, providing a comprehensive critical review, suitable for publication. The format of the manuscript dissertation generally consists of an abstract, 5-6 chapters, references, and any appendices. The outline of chapters below is merely a guide. The pages numbers are rough estimates, and the form of the chapters will vary, reflecting the academic discipline or orientation of the student's research. All dissertations must include a Table of Contents at the beginning.

Abstract: The abstract is a short overall summary of the work as a whole, providing a rationale for the inclusion of the different manuscripts being brought together. It lays out the overall dissertation purpose(s) and aims of each manuscript, a brief description of the methodological approach, and the key results and implications. The abstract generally is 2-3 double spaced pages.

Chapter 1: Introduction: Statement of the Problem and Specific Aims. This chapter provides an introduction to the topics covered in the manuscripts and the conceptual model or guiding theory that links the different manuscripts together. It describes briefly why the work was undertaken, what background conditions or data suggested it was an important problem, and what, in terms of public health significance, this project was intended to accomplish.

Chapter 2: Literature Review. A general literature review summarizes existing literature that informed the overall project. It generally is organized topically. This can be relatively brief (4-7 pages) as a review for the individual papers or it can be one of the manuscripts, providing a comprehensive critical review of the literature.

Chapter 3-5: Individual Dissertation Manuscripts. In these chapters, the student presents the complete manuscripts, each containing their own abstract, background, methods, results and discussions, as well as references and accompanying tables/figures.

Chapter 6: Discussion of Results and Policy Implications. A chapter which integrates and discusses the findings reported in the manuscripts. It should include a discussion of the conclusions of the research, and it should make recommendations for further studies.

References: A listing of any citations not already included in the individual manuscripts (i.e. from Chapters 1, 2, 6) must be provided. The Department allows any standard format for references.

Appendices: An appendix outlining in detail the study methods and any accompanying data tables necessary to fully understand the data. They can also include study instruments. A copy of the student's CV must also be included in the Appendices.

A manuscript oriented thesis must also meet the following criteria:

- The doctoral student must be the first author on the three manuscripts used to satisfy this requirement.
- No manuscript will be accepted as part of the dissertation if it was submitted for publication before the student passes the School-Wide Preliminary Oral Exam.

As is true for the traditional doctoral dissertation, all components of the manuscript-oriented dissertation will be judged as one of the following: Acceptable, Acceptable with Revisions, or Unacceptable. Students, with guidance from their adviser, will rework their dissertation until all components are judged acceptable.

Each doctoral student is required to submit one copy for binding to the Office of Records and Registration for the departmental library. The copy should be on acid-free paper.

Final Oral Defense of Thesis

Oral defense of the thesis by the candidate before the committee of faculty is the final step for the doctoral degree. All doctoral students are required to present their completed thesis to a Thesis Oral Examination Committee, and gain approval. To establish this Thesis Oral Examination Committee, the student and their adviser identify four faculty members to serve as thesis readers. The composition of this committee includes the student's adviser and faculty from at least two other departments of the University, two of which must be from the Bloomberg School of Public Health; at least one committee member must have neither a primary nor a joint appointment in the student's department. The committee may be increased to five members provided the conditions stated above are satisfied for four readers. The faculty included in the committee should be at least the rank of assistant professor, with at least one faculty at the level of associate or full professor from outside the Department of Mental Health to serve as committee chair. One faculty at the scientist level or one adjunct faculty is allowed. ***The committee may contain faculty members who are part of the Thesis Advisory Committee, but should also contain at least one non-TAC member*.**

Forms to establish this committee are available through the Office of Records and Registration. The Appointment of Thesis Reader and Final Oral Exam form (combined form) must be submitted **at least one month** before the scheduled defense date. This form must be submitted to the Senior Academic Program Coordinator for review and to be signed by the Chair of the Department. Upon approval by the Chair of the Department, the form should be directed to the Office of Records and Registration. The form is available online through the BSPH portal under the Office of Records and Registration/Doctoral Students page.

A Doctoral student is not considered complete at the time they pass their final oral defense. Students are considered complete when:

1. copies of their acceptance letters from the Examining Committee Chair and Thesis Adviser are on file in the Office of Records and Registration;
2. one copy of the dissertation is delivered to the Office of Records and Registration (departmental copy);
3. one copy of their dissertation is delivered to The Milton S. Eisenhower Library (Homewood Campus).

Students should consult the "After the Final Thesis Defense To Do List" which can be found on the Office of Records and Registration page for doctoral students on the BSPH portal.

Students who would like their dissertation copyright protected may do so through the Commercial Binding Office of the Milton S. Eisenhower Library (A Level, Commercial Binding Office, 516-8397, Homewood).

Students must be continuously registered up to and including their term of completion.

Policy Regarding Publishing Thesis Papers Before the Final Defense

Doctoral Students are encouraged to submit papers for publication in a range of areas prior to the final defense. Students who submit papers before the defense that become part of the dissertation must document in the appendix of the thesis what stage of publishing the papers are in (e.g., submitted, in press, or published), as well as document the contributions of the co-authors to the papers.

Teaching Assistantships

Teaching Assistant (TA) positions provide students with an opportunity to develop their teaching and interpersonal skills, to work professionally with faculty and fellow students, and to contribute service to the Department. All full-time doctoral students are required to serve as a TA for 3 courses offered by the Department of Mental Health course during their time in the program. Students usually begin their teaching assistantships in their 2nd year and frequently TA one class per year.

Prior to TAing, all students are required to take the Online Module: Essential Elements for Teaching Assistantships https://courseplus.jhu.edu/core/index.cfm/go/enr.enr.start/cID/1886/

Because this is an educational requirement, students will register for PH.330.840 Special Studies and Research Mental Health the term they are TAing with the faculty they are assisting (number of credits corresponding to number of credits for that course). Prior to the start of the course, the teaching faculty and TAs should meet to review the checklist of expectations and responsibilities for both the primary faculty and TAs, which will serve as guidelines for the TA commitments (See Appendix). During this meeting, the TA and faculty will discuss expectations of both the TA and faculty members. The checklist can be used as a template for the discussion, with particular expectations circled or initialed to show they have been discussed. We recommend that a **similar meeting occur at the course midpoint** to evaluate the TA relationship and performance from both perspectives. This is separate from the normal, much more frequent, interactions related to the actual course management or other work products. Students who choose to serve as a TA beyond the three required terms may receive compensation for their time. This should be discussed with the primary instructor, Senior Academic Program Coordinator, and the Department Administrator.

Length of TA Commitment

The TA commitment is for 8-12 weeks for an 8-week (quarter-based) course, to include 2 weeks before the course begins and 2 weeks after. TA responsibilities should take an ***average* of 8-10 hours per week,** including time in class and office hours. Emphasis on "average", as this timing may be >10 hours during heavy weeks for the course and less in light weeks of the quarter. TAs are expected to attend all class sessions unless specifically arranged otherwise with the primary instructor.

During each summer, the Senior Academic Program Coordinator will send an email to the students entering their 2nd, 3rd, and 4th years to solicit preferences for which class they want to TA. All students should discuss with their adviser which courses would best fit their interests and schedule before sending in their requests.

Psychiatry Grand Rounds

To gain a deeper understanding of mental disorders from a clinical perspective, doctoral students are required to attend Grand Rounds in the Department of Psychiatry and Behavioral Sciences for at least two terms. This is usually during the second or later year of study. Credit is obtained for attendance by registering for one credit of special studies (PH.330.840 Special Studies and Research Mental Health) with the adviser of record, and providing a final document per term with approximately one-paragraph summaries of each grand rounds to be reviewed and discussed with the adviser (typically via an hour in-person session near the end of the term). The student should also email the Senior Academic Program Coordinator with this information so it can be documented in the file. The schedule for Grand Rounds can be found at: http://www.hopkinsmedicine.org/Psychiatry/for_faculty/

calendars.html (https://www.hopkinsmedicine.org/Psychiatry/for_faculty/calendars.html)

Public Didactic Lecture or Seminar

As part of building students' competency to public present their research, each doctoral student is required to present a formal, public seminar of their research during their academic program. Conference presentations will **not** meet this requirement. The purpose of this requirement is to give students an opportunity to plan for and present a 30-45 minute presentation of their own research for feedback from peers, faculty, and, when appropriate, community members.

Expectations for Good Standing

"Good standing" is defined as maintaining an overall 3.0 GPA or higher, standing for the comprehensive examination at or before the end of the second year of study, and standing for the preliminary oral examination at or before the end of the third year of study. If a student does not meet these criteria, approval by the Department Chair will be needed to continue to receive any departmental scholarship funds.

Monitoring of Academic Progress

At the end of the first quarter each year, the Vice Chair for Education reviews each student's Academic Plan to assess doctoral progress, and each quarter a review of all students' academic grades is done by the Vice Chair for Education and the Senior Academic Coordinator. This review should help anticipate potential problems that might move a student out of 'good standing'. The faculty adviser, Director of Doctoral Programs, and the Senior Academic Coordinator will work with any student at risk of falling out of 'good standing' to proactively prevent this situation. If a student is not in good standing, this could trigger dismissal from the PhD program (see below).

Dismissal Policy

Any of the following criteria are considered grounds for dismissal from the PhD program in the Department of Mental Health:

1. Failure of any or all sections of the Department's comprehensive examination on two occasions
2. Overall GPA below 3.0 for two consecutive terms
3. Earning a C or less in a course required by the Department after 2 attempts at taking the course
4. Failure of school-wide orals on two occasions
5. Failure to complete a successful dissertation defense within 7 years of matriculation

Postdoctoral Fellowships

Postdoctoral fellows (PDFs) are considered non-degree seeking students, but must maintain registration for each term: 16 credits for PH.330.830 Postdoctoral Research Mental Health, with a minimum of 12 credits per term if additional courses of interest are taken. PDFs are not permitted to earn more than 16 credits of didactic course work for academic credit during their tenure as postdoctoral fellows. However, this 16 credit limit may be extended for some special PDF training programs if prior approval is obtained from the School's Committee on Academic Standards. There is no limit on the number of courses a fellow may audit. The PDF's adviser approves the registration request. Upon successful completion of the program, the Department will notify the Office of Records and Registration, which will issue a PDF Certificate. The School's postdoctoral handbook has additional critical information for PDFs: https://www.jhsph.edu/academics/postdoctoral-training/Postdoc-guidebook.pdf

The NIH requires that Postdoctoral fellows supported by an NIH training grant receive training in the responsible conduct of research. Courses that fulfill this requirement are PH.550.600 Living Science Ethics - Responsible Conduct of Research and PH.306.665 Research Ethics and integrity: U.S. and International Issues. These courses must be taken for pass/fail. Postdoctoral Research fellowships are generally for two years. The postdoctoral programs differ from program to program. Most postdoctoral fellowships are tailored to the needs and abilities of the individual fellow.

PhD Schoolwide Program Policy

Department of Mental Health candidates for the degree Doctor of Philosophy (PhD) must fulfill all School requirements, as specified in the PhD Schoolwide Policy (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_03_Doctor_Of_Philosophy_Degree_042522.pdf) last revised April 25, 2022. These include, but are not limited to, a minimum of four consecutive academic terms at the School in full-time residency (some programs require 6 terms), continuous registration throughout their tenure as a PhD student, satisfactory completion of a Departmental Written Comprehensive Examination, satisfactory performance on a University Preliminary Oral Examination, readiness to undertake research, and preparation and successful defense of a thesis based upon independent research.

PhD Students are required to be registered full-time for a minimum of 16 credits per term and courses must be taken for letter grade or pass/fail. *Courses taken for audit do not count toward the 16-credit registration minimum.*

Students having already earned credit at BSPH from a master's program or as a Special Student Limited within the past three years for any of the required courses may be able to use them toward satisfaction of doctoral course requirements.

Completion of Requirements

The University places a seven-year maximum limit upon the period of doctoral study. The Department of Mental Health students are expected to complete all requirements in an average of 4 - 5 years. Tuition funding is provided for up to four years. Formal leaves of absence may extend this time.

General Policies

Admission Standards

The admissions committee for the Department reviews all applications for admissions to degree programs and fellowships. Each application is reviewed and scored by multiple faculty members. Many factors are taken into consideration before the faculty member assigns a score including the student's past experiences and commitment to research or professional practice and educational excellence in this field. Included in the consideration are standardized test scores (i.e. GRE) and the Test of English as a Foreign Language (TOEFL) for foreign students. The Statement of Purpose of each applicant is carefully considered also as part of the admission process as are the recommendations and their indication of the program fit to the student's training and goals. There must be a fit between an applicant's career commitment and the interests of a faculty adviser for admission for research-oriented doctoral students and postdoctoral fellows in the Department. These rating sheets are confidential and do not become part of a student's file.

Advisers

Each student/fellow is assigned a faculty adviser prior to the time of enrollment in a course of study. Every attempt is made to assign advisers appropriate to the student's/fellow's area of interest. All Master of Health Science (MHS) students are assigned the Director of the MHS (Dr. Parisi) program as their primary adviser, and encouraged to designate a secondary adviser who will serve as a mentor for their thesis project. All Doctoral students are assigned an adviser at acceptance and are encouraged to be in contact with them prior to the start of the academic year.

Advisers play an important role in the student's/fellow's life. They are the initial point of contact regarding academic program, registration for courses, and subsequent changes in status or program. Registration, add/drop, pass/fail agreements and many other School forms require the adviser's signature. The adviser is available to help students choose courses, to help with resolution of academic problems, and to provide general guidance. It is the student's/fellow's responsibility to seek the advice and guidance of the adviser. Faculty members establish their own office schedules and this may vary from faculty member to faculty member. Students and fellows should speak with individual advisers to make arrangements for regular meetings.

As students/fellows progress in their academic careers, they may request a change to a different adviser. These requests should be sent in writing with approvals from both the old and new adviser and submitted to the Senior Academic Program Coordinator to be approved by the Vice Chair for Education. Requests to discuss adviser-related issues can be made to either the Senior Academic Program Coordinator or the Vice Chair for Education.

Course Waivers

It sometimes is possible to waive a required course based on previous course work and/or experience. Required courses outside the Department of Mental Health may have different waiving requirements than courses within the Department. If a student wishes to receive a waiver for a required course, they should first meet with their adviser and confirm that the requirements have been met. Together with the adviser, a student should draft a detailed request in writing for submission to the Vice Chair for Education. The request should have signatures of the lead faculty teaching the course, the training program director (if appropriate), and the student's adviser prior to submission to the Vice Chair. A final decision on the waiver request will be made in consultation with the Department Chair; the student and adviser will be notified of the decision and if the waiver is granted, a note will go in the students academic file.

Academic Standards

To maintain satisfactory academic performance and good academic standing the school-level policy indicates that students must meet minimum academic standards to remain in their program. A student's failure to meet any of the criteria below is grounds for being placed on academic warning and/or being dismissed from the program. To remain in satisfactory academic standing a student must:

Minimum cumulative grade-point average (GPA). Qualitatively, on a scale of 0 - 4.0, students must maintain a minimum cumulative GPA: 2.75 for Master's students and 3.0 for Doctoral students. Students with a GPA falling below that limit will be placed on academic warning and will have one term of registration in which to raise their GPA above the threshold for their degree. Students not meeting the minimum GPA after one term may be granted additional term(s) on academic warning if academic progress has been shown in the cumulative GPA; that approval beyond one term must be reported to the School's Committee on Academic Standards. Students on academic warning must meet with their academic adviser and program director (or senior academic program coordinator) each term to review their academic plan and receive approval for their course schedule prior to registering for courses. Students with a cumulative GPA below the minimum may not register for more than 18 credits per term. Any repeated courses count towards this 18 credit limit.

Minimum grades in core (i.e. required) courses. Students must earn a minimum grade on a set of required program-specific core courses: "Pass" for courses offered only on a pass/fail basis: "C" or higher for Master's students, and "B" or higher for Doctoral students, for courses offered for letter grading. A student who earns a grade below that threshold in a course that meets a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the Vice Chair for Education. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards.

Maximum timeframe for completion of degree. Students must successfully complete all program-specific requirements (such as a thesis or dissertation, as detailed in other program PPMs) within 4 years for Master's programs, and 7 years for PhD program according to the requirements specified in the program-specific descriptions and PPMs. Extensions are possible as described in the program-specific PPMs and must be formally approved by the Committee on Academic Standards.

Academic Ethics

Students in the Bloomberg School of Public Health are expected to abide by the highest levels of academic and research integrity. Information on the Academics Policy of the Johns Hopkins Bloomberg School of Public Health can be found at:

http://www.jhsph.edu/offices-and-services/office-of-academic-affairs/academic-integrity/academic-ethics.html

The Department of Mental Health adheres to the School's Academic Ethics. The faculty and students of the Bloomberg School of Public Health have the joint responsibility for maintaining academic integrity and guaranteeing the high standard of conduct of this Institution. An ethical code is based upon the support of both faculty and students who must accept the responsibility to live honorably and to take action when necessary to safeguard the academic integrity of this University.

Students enrolled in the Bloomberg School of Public Health assume an obligation to conduct themselves in a manner appropriate to The Johns Hopkins University's mission as an institution of higher education. A student is obligated to refrain from acts which they know or under the circumstances has reason to know, impair the academic integrity of the university. Violations of academic integrity include, but are not limited to: cheating; plagiarism; knowingly furnishing false information to any agent of the University for inclusion in the academic records; falsification, forgery, alteration, destruction, or misuse of official university documents or seal; violation of the rights and welfare of human subjects in research; violation of the welfare of animal subjects in research; falsification of research results; and misconduct as a member of either School or University committees or recognized groups or organizations.

For a Mental Health student, abiding by the Academic Ethics code includes:

- Completing work on one's own when an individual assignment or examination is given in a course.
- Providing proper attribution to others' work by providing citations with quotations and giving proper references for all course assignments, data analysis projects, research proposals, dissertations and theses.

All members of the academic community are responsible for the academic integrity of the university. Students and faculty alike must work together to minimize the possibility of violations of academic integrity.

The faculty is responsible for the conduct of examinations, for announcing the ground rules for all work in a course at the beginning of the term in which the course is offered, and for the security of examination papers and teaching laboratories. Proctoring is at the discretion of the instructor.

A student with knowledge of any violation of academic integrity governed by the Bloomberg School of Public Health Constitution has an obligation to report such violations, including the identity of the alleged violator(s) to the appropriate faculty member, the Dean or to the Academic Ethics Board.

All members of the Johns Hopkins community are responsible for immediately informing the Academic Ethics Board of the Bloomberg School of Public Health of any suspected violations of its Constitution. The Ethics Board, composed of six students and four faculty members, is responsible for implementing its Constitution according to the procedures set forth therein. This includes formal hearings of suspected violations. Students and faculty should become familiar with the Constitution, copies of which can be obtained in the office of the associate dean responsible for student affairs.

To be approved for graduation, the student must have all outstanding charges of misconduct and violations of academic ethics resolved.

All students are required to take course 550.860.82 Academic and Research Ethics at BSPH (0 credit – pass/fail) in first term of registration.

Academic Progress

The performance and progress of each student is reviewed by the student's adviser and the Coordinator for their degree. For MHS students, this is the MHS Program Director (Dr. Jeanine Parisi). For doctoral students and postdoctoral fellows, this is the Vice Chair of Education (Dr. Judy Bass). These directors, together with the Senior Academic Program Coordinator, review each student's transcripts every quarter. When the academic achievement of any student comes into question, the appropriate director will bring this to the adviser's attention (typically this involves a grade of "C" or lower). The adviser may consult with faculty and/or the Chair about the student's progress. Satisfactory academic progress is described under academic standards above. Unsatisfactory or incomplete grades may constitute grounds for removal of a student from a degree program (see Dismissal Policy).

A student's overall academic standing and progress will be judged not only on grades received, but also successful completion of other degree-specific milestones.

Leave of Absence

We recognize that it is sometimes necessary for students to take a leave of absence from their studies. An academic leave of absence refers to, and is limited to, students in a degree program requiring continuous enrollment who, while in good academic standing, are forced to withdraw temporarily from graduate work due to parental/family leave or reasons beyond their control, such as illness, military service, financial exigency, or pressing personal reasons justifying an interruption of the degree program. Students may be also given a leave of absence for other reasons (e.g., involuntary, medical leave).

As per school policy, leaves of absence are typically limited to one year except for military service. Students requiring additional terms of leave beyond the one year must reapply. Students who have had federal financial aid may be subject to additional restrictions and should check with the Financial Aid Office before extending a leave of absence beyond two terms. No more than two years of leave may be granted. The academic clock is stopped for periods in which the student is approved for leave of absence. The period is regarded as an approved break in study. No academic activities may be conducted during leave and this leave may not be used to avoid payment of tuition.

The failure of a student in a full-time program requiring continuous registration to register without obtaining an approved leave of absence status will be considered a withdrawal. The student considered to be withdrawn must be formally readmitted before resuming a program of study. Upon readmission, a student must be registered for a minimum of two consecutive terms prior to completion of their degree program.

Students planning to request a leave of absence must file a petition, which is signed by the departmental chairman, the student's adviser, appropriate staff members in the area of Student Services, and the Office of Records and Registration. Prior to resuming the degree program, students on leave of absence must notify the department chairperson and the associate director of the Office of Records and Registration. Upon return from leave of absence status, students must register for a minimum of two successive terms before completion of their degree programs.

Academic Plans

The department recognizes that students and fellows come from different disciplines and are at varying developmental stages with respect to their careers. Explicit plans developed by students and fellows and approved by advisers foster investigation of the various training opportunities available within a flexible and developing career path, and help to monitor achievement of goals.

During the first quarter of each academic year, each master's student, doctoral student and postdoctoral fellow will complete a plan describing how academic and career goals will be achieved through their learning experience in the department. The plan will contain broad, general goals to be attained during the entire experience at the Department of Mental Health; concrete objectives including specific products, so that it can be readily determined if the objectives are met; and methods and strategies for reaching the objectives. The plans will include a schedule for the year with projected dates for completion of objectives. If course waivers are to be requested, they should be included in the academic plans. A copy of the academic plan template is available from the advisers and the Senior Academic Program Coordinator.

The plan is prepared in collaboration with the adviser, and signed by the student or fellow and the adviser. The MHS Program Director will review all the MHS academic plans and the Vice Chair for Education will review all the doctoral student and postdoctoral fellow plans. Feedback on the plans will be provided to the advisers who will then relay any adjustments or further information back to the students. The Senior Academic Program Coordinator will keep a file of all plans.

After the student has passed the School Preliminary Oral Examination (usually in their 3rd year), work begins on the dissertation. At this time the Academic Plan is supplemented with written documentation of meetings of the thesis advisory committee, which must take place at least annually.

Mental Health Seminar Series

Attendance at the Mental Health Seminar Series is required for all MHS students and first year doctoral students. Credit is obtained for attendance via a one-course credit per term 330.604.01 Seminars in Research in Public Mental Health. All other students and fellows are expected to attend the Seminar Series throughout the course of their program to gain exposure to a wide range of mental health issues and research.

At the beginning of each term a schedule of speakers and presentation topics is shared with all of the students and faculty and is posted on the departmental bulletin board. Once per month, there will be a student-only session during this seminar time that coincides with faculty meetings. Topics for these sessions include grant writing, job search tips, reviews of recent seminars, etc. Students are welcome to suggest topics and formats. This is intended to provide students with an informal forum for peer communication and advice.

Course Evaluation Summaries

All courses offered for academic credit in the Johns Hopkins Bloomberg School of Public Health, whether onsite or offsite, are evaluated by students. The mechanics of course evaluations are handled by the Office of the Associate Dean for Graduate Education and Research. This information is intended as a general guide only. To select the best courses to meet your needs, you should seek additional information from other students, the academic program coordinator, your academic adviser and teaching faculty.

Course Materials

Course materials will usually be posted in CoursePlus. In some courses, materials will be reproduced and put together in a book. The student will be charged for course fees which is the amount it cost to photocopy.

Council on Education for Public Health (CEPH) Public Health Learning Objectives

In 2016, CEPH (the main accreditation agency for Schools of Public Health) generated a new set of guidelines for curriculum standards for all students obtaining Masters and Doctoral degrees from Schools of Public Health. For MHS and PhD degrees, the curriculum standards include 12 specific learning objectives that need to be met through courses taken during the degree program. These learning objectives include gaining at least an introductory competency in the following 12 topic areas: 1) foundational principles of public health; 2) role of quantitative methods in public health; 3) role of qualitative methods in public health; 4) causes and trends in morbidity and mortality; 5) primary, secondary and tertiary prevention; 6) evidence for advancing public health knowledge; 7) essentials of environmental health; 8) biologic, genetic and infectious bases of disease; 9) psychological and behavioral factors in health; 10) social determinants of health; 11) globalization and health; and 12) essentials of one health.

To support MHS and PhD program in meeting this curriculum standard, Johns Hopkins School of Public Health has developed a series of 0.5 credit online courses for each of the 12 topic areas (course numbers 552.601.81-552.612.81). All students matriculating in the 2019-2020 academic year will need to meet this curriculum standard either through completion of the 0.5 credit courses or through completion of a regularly-offered course that has been approved by the Committee on Academic Standards as covering the required content. A copy of the approved courses is available from Dr. Parisi and Dr. Bass and is updated throughout the year as new courses are added. The academic plan completed by all MHS and PhD students at the beginning of each academic year has a section where each student can indicate how they are meeting each required competency. Decisions on which course to take should be made in conversation with the student's adviser; questions about which courses meet which competencies can be addressed to the Vice Chair for Education (Dr. Bass).

Introduction to Online Learning

The Bloomberg School of Public Health offers courses in various formats, including a number of online classes. In order to be eligible to take an online course, students must complete the Introduction to Online Learning, which is offered through the Center for Teaching and Learning at the Bloomberg School. This non-credit mini course is a pre-requisite for all courses offered by this division and must be completed prior to the start of the term in which a student wishes to enroll in an online course. Since the School does not permit conditional and/or concurrent enrollment (that is, you must take the Introduction to Online Learning course prior to enrolling in an online class), the **School requires all incoming students to take this non-credit course during or before the first term they enroll**. For course dates and enrollment information, please visit the CoursePlus website (https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/).

Travel Funds for Professional Meetings

Doctoral students are encouraged to present at and attend professional meetings and conferences related to their area of study. *Students on training grants have access to meeting funds through their training grant and should seek approval from the training grant PI.* **The Department sets aside a limited amount of funds for travel and registration fees for doctoral students who are not supported by training grants.** Students and fellows can apply for travel support, after they have also applied for support from the conference or meeting itself, to the Senior Academic Program Coordinator who will obtain the approval of the Department Chair for each request. To be eligible, the student or fellow must have an accepted communication (i.e., poster or oral presentation) at the meeting or conference. **The maximum amount for any one trip is $1,000 and students and fellows can only be supported once per year.**

For access to Department funds, requests should be sent to the Senior Academic Program Coordinator via email listing the following information: Student name, name of conference, location of conference, dates of conference, breakdown of estimated expenses, type of presentation (poster, paper, etc.) and whether or not the student has requested scholarship funds from the conference. Once approval has been obtained and the trip is completed, **receipts and proof of payment** must be submitted to be reimbursed. Proof of payment can be in the form of a blinded credit card number (Example: Visa XXXX-XXXX-XXXX-1234) on the receipt, or a bank statement showing the charges and the account holder's name (You may black out any other charges not relevant to the trip). **At least 30 days or more advance notice is requested for approval.**

Travel Abroad

Students at the Johns Hopkins Bloomberg School of Public Health may have an opportunity to supplement their education or conduct research in another country. These opportunities often enrich the academic curriculum, contribute to dissertation research, and allow application of knowledge obtained in the classroom to the world's communities. While the School encourages participation in these kinds of experiences, international tensions can be high. Therefore, students should seek information on conditions abroad before traveling.

The International Travel Resources portal site (https://my.jhsph.edu/Resources/ITR/Pages/default.aspx) is designed to provide tools and information to BSPH students who travel internationally in order to allow them to make informed personal decisions; to protect reasonably themselves from foreseeable harm; to increase their own level of health, safety, and security awareness; and to prepare for emergencies abroad. The site offers a wealth of useful links, travel resources, and insurance information in addition to State Department and Center for Disease Control travel advisories.

Students traveling to a less developed part of the world should be certain to contact their health care provider or the Johns Hopkins International Travel clinic to learn about recommended immunizations and other matters to guard your health. The International Travel Clinic is located on the East Baltimore campus and can be reached by telephone at 410-955-8931. Further information about recommended immunizations and prophylaxis is available at the CDC Website (https://www.cdc.gov/).

International students must contact the Office of International Services (OIS) well in advance of any travel to avoid compliance issues with their visa status. OIS may be contacted at 410-955-3371, or at https://ois.jhu.edu/About_OIS/Contact_Us/index.htm (https://ois.jhu.edu/About_OIS/Contact_Us/)l.

Students who travel abroad as part of a practicum experience or as part of a research team must complete a Graduate Student Study Release and International Travel Checklist and leave the forms with Patty Scott, Academic Program Administrator for the Department of Mental Health.

General Resources

Office Supply/Stationery Orders

Doctoral students who are on a training grant will need to email their training grant director to get approval prior to requesting office supplies which will be paid for by the training grant. The student should forward the email with the training program director's approval to the Budget Assistant Candice Davis (cdavi108@jhu.edu) so the item(s) can be ordered. Students not on training grants should email the Senior Academic Program Coordinator for requests for paper and/or toner. Do not wait until the last minute to make stationery requests because not all items are kept on hand by the department and will likely need to be ordered.

MHS students who need paper or toner for the MHS student office should see Candice Davis (cdavi108@jhu.edu) in HH850.

Telephones

Telephones are not provided in student offices. If you run into a situation where you need a landline for a local call, please see Patty Scott and she can assist you with locating a phone for use.

Office Keys

All doctoral students and postdoctoral fellows are equipped with one office key, and one 8^{th} floor common key that opens the copier room, kitchen, and 8^{th} floor conference rooms. Students must return keys to HH850 upon their departure.

Learning Outcomes

PhD Program Description

The PhD program is designed to provide key knowledge and skill-based competencies in the field of public mental health. To gain the knowledge and skills, all PhD students will be expected to:

- complete required coursework, including courses that meet the CEPH competency requirements and research ethics;
- successfully pass the departmental comprehensive exam;
- select and meet regularly with a Thesis Advisory Committee (TAC) as part of advancing to doctoral candidacy;
- present a public seminar on their dissertation proposal;
- successfully pass the departmental and school wide Preliminary Oral Exams;
- complete a doctoral thesis followed by a formal school wide Final Oral Defense;
- participate as a Teaching Assistant (TA);
- attend Grand Rounds in the Department of Psychiatry; and
- provide a formal public seminar on their own research.

Each of these components is described in more detail below.

Non-Degree Training

Non-Degree Training

Post Doctoral Fellows

The Department welcomes individuals who have completed doctoral degrees to postdoctoral fellow (PDF) affiliations. PDFs identify a mentor and enjoy advising from faculty and use of the School's facilities.

Prospective PDFs should submit a PDF application (https://www.jhsph.edu/academics/postdoctoral-training/process-appointmentoffellows.pdf). The Application requires proof of sponsorship by either the School or an outside agency for the entire period of the program. Post-doctoral fellows may not use personal funds to support themselves during their program. PDFs will not be able to register, be paid, and/or buy health insurance until verification of their official receipt of the doctoral degree is filed and their PDF application is formally approved.

After being admitted to the Program, each fellow should design, in collaboration with their faculty mentor, an Individualized Development Plan for their research time with the Department. PDFs should discuss the anticipated duration of their fellowship with their mentor when they begin the fellowship. PDFs are evaluated annually and must maintain an appropriate level of professionalism and scientific research for the duration of their program.

PDFs must adhere to the student code of conduct (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Forms/AllItems.aspx) ("Student_Conduct_Code") for all students of the Johns Hopkins Bloomberg School of Public Health.

PDFs are considered non-degree seeking students and should register for 16 credits during each course term. The Postdoctoral Research Credits course number is PH.330.830 (https://www.jhsph.edu/courses/course/29822/2020/330.830.01/postdoctoral-research-mental-health/) POSTDOCTORAL RESEARCH MENTAL HEALTH. Tuition for PDFs is set at $200 per term by the School and a postdoctoral scholarship covering tuition is generally granted. PDFs have the option of taking up to 16 credits of courses during their fellowship period. PDFs who wish to take academic courses should discuss this with their research mentor as part of their Individualized Development Plan; these courses cannot be transferred into a degree program at a later date. Please visit the School's PDF website (https://www.jhsph.edu/academics/postdoctoral-training/) and PDF guidebook (https://www.jhsph.edu/academics/postdoctoral-training/Postdoc-guidebook-revised.pdf) for additional critical information.

The NIH requires that Postdoctoral fellows supported by an NIH training grant receive training in the responsible conduct of research. Courses that fulfill this requirement are PH.550.600 LIVING SCIENCE ETHICS - RESPONSIBLE CONDUCT OF RESEARCH and PH.306.665 RESEARCH ETHICS AND INTEGRITY: U.S. AND INTERNATIONAL ISSUES. These courses must be taken for pass/fail. Postdoctoral Research fellowships are generally for two years. The postdoctoral programs differ from program to program. Most postdoctoral fellowships are tailored to the needs and abilities of the individual fellow.

Upon satisfactory completion of their program, PDFs are issued a Certificate of Completion from the School of Public Health.

Further questions may be directed to the Academic Program Administrator, Patty Scott, at: patty.scott@jhu.edu.

Certificate Programs

Certificate Programs offer focused academic training in specific areas of public health. They provide a focused way of integrating elective courses into a research area of interest. The School offers over 30 certificates outlined here: https://www.jhsph.edu/academics/certificate-programs/.

Hopkins students who are enrolled in a degree program need to send an email to the Academic Program Administrator, Patty Scott to notify the department of their intent to pursue the certificate. Upon enrolling in the last course to complete the certificate, the student would then email the Academic Program Administrator the certificate completion form listing all of the required coursework taken to complete the certificate. Students must take the courses for academic credit and earn a grade of B for better. Non-Hopkins students must submit an application through the SOPHAS express system.

Tuition, application fee, and book costs are subject to change from one academic year to another academic year. The student should review the section of the website that addresses completion (http://www.jhsph.edu/academics/certificate-programs/completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program and processed by the School of Public Health Registrar.

Department of Mental Health sponsored certificates are:

- Public Mental Health Research Certificate (p. 624) (not open to Department of Mental Health Students)
- Mental Health Policy, Economics and Services (p. 612)

Certificate Program in Public Mental Health Research

Our certificate program provides graduate training in understanding the causes and consequences of mental disorders in populations. The courses describe the clinical and behavioral features and prevalence of mental and behavioral disorders. They also identify factors that influence the occurrence, persistence or severity of these disorders. The goals of the program are to increase the epidemiologic expertise of psychiatrists and other mental health professionals, as well as the number of epidemiologists, biostatisticians and health policy makers interested in psychiatric disorders.

Mental Health Policy, Economics and Services

The certificate introduces current issues in mental health policy including economic evaluation of mental and substance disorders and their treatments; access to mental health care treatments and utilization patterns; and mental health care financing, insurance, and delivery system issues in the US. The certificate program also strives to orient mental health policy, economics, and services training within the broader context of ongoing national health care debates. It is open to Johns Hopkins University graduate students interested in policy, advocacy, and research careers within the field of mental health and junior and mid-level public health professionals interested in expanding their knowledge base and expertise in mental health services and economics and related policy issues.

Summer Institute in Mental Health Research

The Institute focuses on methodological and substantive topics in mental health and substance-use research. It is intended for working professionals or students who are interested in developing research expertise in the epidemiology of mental health and substance use disorders, the implementation and evaluation of mental health services and interventions, and/or the methodological issues encountered in mental health research in the population. Our experts are not only training the next generation of public health leaders, they are leading the way in research areas, including the mental health implications of Covid-19.

After completing the program, participants will understand the latest findings on the occurrences of mental health and substance use disorders in the population and their implications for public mental health; know the steps involved in the scientific, empirical evaluation of services and interventions targeted for mental health outcomes; and acquire the skills and knowledge needed in using the state of the art methodological tools for collecting and analyzing mental health data. Where academic credit leading to a degree is desired, students are required to pay the standard school tuition for 2022 of $1,270 per credit.

This rate does not apply to students taking courses for non-credit. The non-credit tuition rate for 2022 is $675. No scholarship and/or grant support is available.

Department of Molecular Microbiology & Immunology

About

The Department of Molecular Microbiology and Immunology (https://www.jhsph.edu/departments/w-harry-feinstone-department-of-molecular-microbiology-and-immunology/) integrates many disciplines concerned with the study of the transmission, immunobiology and pathogenesis of bacterial, parasitic, viral, immunological and infectious diseases of public health importance. Research is at the population, organismal, cellular and molecular levels.

Programs

Molecular Microbiology & Immunology, MHS

Introduction

The goal of the MHS training program in MMI is to provide a solid foundation in the biomedical sciences for a select group of students interested in addressing outstanding issues underlying infectious and immunologic diseases of public health importance. It aims to equip students with a diversity of disciplinary concepts and methodological tools to solve specific disease-related problems. This holistic approach requires a common core of knowledge of the population, clinical, cellular and molecular aspects of disease.

This MMI MHS Guidebook, which supplements the School's resources page, which can be found at https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs (https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs/) is intended to summarize most of the School and Departmental requirements for your degree program. In addition, other practical information is included for your convenience and consideration.

The MHS in MMI

The Department provides the Master of Health Science (MHS) program for students who wish to gain a greater depth of knowledge in molecular microbiology, immunology, and infectious diseases or in tropical public health, but who do not wish to commit to longer-term research training programs. MHS training is provided through coursework, special studies with faculty members, and participation in other Departmental activities. An elective opportunity to gain experience with basic molecular biological laboratory techniques is also available.

MHS to ScM Program Transfer

MHS students who excel in the program and wish to add a research component to their training may apply for transfer to the MMI ScM program. The integrated MMI Master's program is intended to facilitate transfer between ScM and MHS degree programs; the program requirements have a high degree of overlap for the first two academic terms. However, the programs diverge significantly in the third term and a decision on degree program, therefore, must be made before that time. At the time of application for transfer from the MHS to the ScM program, students are strongly encouraged to have identified into which laborator(ies) they wish to rotate and to have confirmed that those laborator(ies) would be amenable to taking on an ScM student.

Masters students who wish to transfer programs should inform the Student Coordinator in writing by December 1st. Applications for transfer to the ScM program are evaluated by the departmental Admissions Committee on the same basis as incoming ScM applications and a completed School application form must be available for review. In general, the Departmental copy of the student's original MHS application (held by the Student Coordinator) can be used. However, the student should confirm that the information contained on the application is still current, and may wish to modify the thesis to reflect the new goals of his/her proposed training program. Additional references may also be added. Note that because this application is submitted directly to MMI and not the School, no application fee is required.

Applicants for the MHS to ScM transfer will be informed of the Admission Committee's decision before the beginning of third term. Because there is no guarantee that an application will be successful, students should continue to follow the MHS academic program including thesis preparation (below) until they have received a final decision.

Program Requirements

There are several requirements for the completion of degree programs – some set by the school and others set by the department. The degree requirements for all programs, established by the School are contained in Policy and Procedure Memoranda available at https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/Pages/default.aspx

The Departmental requirements are explained in this Student Handbook. Of particular note is the requirement to register each term for one credit of Special Studies specifically designed to assist MHS students in navigating the program requirements and timeline for completion of thesis steps.

Residency: Minimum duration is one academic year (9 months) in full-time residence (enrollment for 12 or more credits per term). Most students complete their degrees in 9 months, however, the period may be extended for up to 24 months.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Academic Program

Academic adviser

New students will be assigned to small advising groups – each group composed of 8-10 students. Each small group will be directed by a faculty member from MMI who will serve as the academic adviser for all students in the group. The academic adviser will assist the student in the selection of appropriate courses for the year and help the student with problems they may encounter.

In addition, full MHS cohort meetings will take place weekly via the Special Studies course through the academic year. Attendance at these meetings is required. These meetings will be used to disseminate information, build skills required for thesis preparation, detail requirements for the degree, establish benchmarks for Thesis preparation, review progress, promote career development, and address general questions.

MHS Thesis Mentors

Students will be presented with a list of potential thesis topics and thesis mentors early in the 1st term. MHS students will be responsible for identifying thesis topics of interest and reaching out to faculty to identify a thesis mentor who will serve as both supervisor of thesis preparation and primary reader of the thesis. Students may consult with their academic adviser to discuss potential thesis topics and identify potential thesis mentors. Thesis topics and mentors are formalized on a form turned in to the Student Coordinator during the 2nd term. Secondary readers for the thesis will be assigned by the MHS Committee in the 3rd term.

Coursework

Masters students must register for a minimum of 16 credits each term. (The maximum a student can register for is 22 credits per term.) These credits include didactic courses, special studies, seminars, etc. A minimum of 64 credits are required by the School for a Master's degree. Course requirements and suggestions are summarized in the accompanying table.

In core courses, Master's students must receive a 'C' or higher. A student who earns a grade below that threshold in a course listed as a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the Graduate Program Committee (GPC) Chair. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards. To remain in good academic standing, Master's students must maintain a minimum grade point average of 2.75. If a student's GPA falls below the requirement, the student will be placed on academic probation. School policy states that a Master's student cannot graduate with a GPA lower than 2.75.

COURSE DISTRIBUTION REQUIREMENT

The School requires MHS students to complete at least 5 credits of formal coursework outside of their home department. All 5 credits must be taken for a letter grade (Audit or Pass/Fail is not acceptable). Many university-wide courses can be used to fulfill specific requirements. Consult the catalogs of the various university divisions available for viewing on line.

1. Bloomberg School of Public Health catalog -- see interdepartmental program.
2. School of Medicine catalog.
3. School of Arts and Sciences (Homewood Campus) catalog.

MHS CURRICULUM

Outlined below is an example of a curriculum based on the choices of past MHS students. The specifics of your personalized curriculum is likely to vary from the list below depending on your interests and needs. Students should consult with your Academic Adviser and/or The Director of Graduate Studies as they build their curriculum.

The 1 credit courses "Departmental Research Forum" and "Seminar" Series are requirements that students need to register for each term.

In addition to required courses, for each term there is a list of selected elective courses that previous MHS students have rated favorably. Students will note that several of these suggested courses are outside MMI and can be used to fulfill the **Course Distribution Requirement**.

PH.260.844	Causation	
	Credits	**3**
First Year		
Third Term		
PH.260.705	Fundamentals of Quantitative Reasoning in the Biomedical and Health Sciences	
	Credits	**0**
	Total Credits	**35**

1 MHS students are required to take only two of the following MMI core courses:
- PH.260.623 Fundamental Virology
- PH.260.627 Pathogenesis of Bacterial Infections
- PH.260.650 Vector Biology and Vector-Borne Diseases
- PH.260.635 Biology of Parasitism

2 Only one literature course is required. Selection made in consultation with academic adviser. Options include:
- PH.260.653 Molecular Biology Literature
- PH.260.654 Current Literature in Microbial Immunity
- PH.260.655 Pandemics of the 20Th Century
- PH.260.657 Vector Biology and Disease Ecology Literature

3 Special studies credit hours are to be used for thesis preparation. During each term, this will entail attending noon meetings on thesis preparation and meeting with your academic adviser to discuss how to approach thesis preparation, writing and presentation.

4 As a School-wide requirement, all students must take Academic and Research Ethics in the first term of their enrollment (PH.550.860 Academic & Research Ethics at BSPH).

5 Students with little or no Molecular Biology or Biochemistry background are strongly encouraged to take one or both of these courses, offered by the Department of Biochemistry and Molecular Biology.

MHS & Biotechnology

A subset of MHS students are interested in a career in the biotechnology arena. To accommodate this interest MMI is offering MHS students an elective set of four courses focused on how innovative technologies are moved to a commercial sphere to receive wider distribution. The goal of this program is to teach students how to apply the science they will learn in traditional courses to a translational setting. Students who successfully complete this course of study will be able to indicate to potential employers that in addition to having a strong background in the science of immunology and infectious diseases, they also have a foundational understanding of how innovative science is translated into commercial products. No certificates will be issued for this program, but provided that all four of the below courses are completed, at the student's request, the Department Chair will provide a letter describing the skill sets developed through this path of study.

Descriptions of the four courses can be found in the course catalogues for the School of Public Health and the Carey Business School. The courses cover basic microeconomic theory, practical exposure to the molecular tools used by biotechnology companies and, in a set of two courses offered by the Johns Hopkins Carey Business School, direct experience with addressing the issues involved in moving technology from the laboratory to the marketplace. Please note that these four courses will be taken as elective courses to compliment the core MMI MHS requirements. The Applied Microeconomics is required as a pre-requisite for the Discovery to Market courses.

The courses include:

Code	Title	Credits
PH.260.613	Techniques in Molecular Biology	3
PH.318.603	Applied Microeconomics for Policymaking	3
BU.150.710	Discovery to Market I	2
BU.150.715	Discovery to Market II	2

MHS & Medical School

A subset of MHS students are interested in pursuing medical careers. Students who plan to apply to medical school should strongly consider enrolling in the premedical seminars course (120.607), which is a one-credit course offered all four terms that helps students prepare to apply to medical school. The course covers specific topics to address the complex premedical journey, including planning the months/years leading up to the application, reviewing the application process, addressing the medical schools' expectations, medical school selection, writing the personal statement, requesting letters of evaluation, interviewing, and more. Each term focuses on different aspects of preparing for medical school and medical careers, so interested students should plan on registering for this pre-med seminar course every term.

Cells-to-Society Requirements for All Degree Programs

The Council on Education for Public Health (CEPH) requires didactic coursework covering and assessing 12 CEPH-defined Introductory Public Health Knowledge Learning Objectives. It is important to emphasize that this is a School-level requirement of all degree programs.

The School's Committee on Academic Standards approved 12 online, 0.5 credit, mini-courses, graded S/U (satisfactory/unsatisfactory) that will cover each of the 12 Learning Objectives (see table below). Each of the mini-courses consists of 3-5, 30-40 minute presentations with an accompanying assessment. **Note:** Certain learning objective can be fulfilled by taking a course that covers this material instead of the mini-course (noted in the table below).

Each of the C2S mini-courses will be offered multiple times starting in the summer term and extending through terms 1, 2 and 3. NOTE: In the 4th term, only C2S LO #12 will be offered.

The 2022-2023 schedule is here: https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings (https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings/)

Please note that for the presentation of these mini-courses each term has been split into a A section covering the first 4 weeks of the term and a B section that covers the second 4 weeks of the term.

These 12 mini-courses must be completed by the end of your MHS program.

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.602	The Role of Quantitative Methods in Public Health (or take any of the following courses: 140.611-12 (term 1 and 2) or 140.615-16 (term 3 and 4) or 260.705 (term 3 or term 4))	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (or take 260.700 (term 1 or term 3))	0.5
PH.552.604	Causes and Trends in Morbidity and Mortality (or take 260.600 (summer, credit in term 1) or 260.844 (term 2 or term 4))	0.5
PH.552.605	The Science of Primary Secondary and Tertiary Prevention in Population Health	0.5
PH.552.606	The Critical Importance of Evidence in Advancing Public Health Knowledge (or take 260.700 (term 1 or term 3))	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease (or take 260.600.81 in summer (credit in term 1))	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.610	The Social Determinants of Health (or take 260.844 (term 2 or term 4))	0.5
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5
Total Credits		**6**

Additional Course Requirements for MHS Students

The School requires MHS students to complete at least 5 credits in formal courses outside of their home department. All 5 credits must be taken for a letter grade (Audit or Pass/Fail is not acceptable).

Required for all MMI graduate students:

Code	Title	Credits
PH.260.822	Seminars in Research in Molecular Microbiology and Immunology (all terms 2nd year)	1
PH.260.821	Research Forum in Molecular Microbiology and Immunology (all terms 2nd year)	1
PH.552.6XX	Cells-to-Society	

Additional Course Information

Many university-wide courses can be used to fulfill specific requirements. Consult the catalogs of the various university divisions available for viewing online:

1. Bloomberg School of Public Health catalog -- see interdepartmental programs.
2. School of Medicine catalog.
3. School of Arts and Sciences (Homewood Campus) catalog.

Winter and Summer Institute Courses

Tuition for these courses is charged separately by the School of Public Health Registrar, and is not covered by tuition paid during the academic year. An exception to this rule is a course offered specifically for MHS students interested in gaining some experience with laboratory techniques in molecular biology, PH.260.613 Techniques in Molecular Biology. This course will be offered during the last week of the winter institute, but the final examination for the course will occur at the beginning of the third term, allowing the course to be registered as a third term course without additional tuition.

Departmental Seminars

A weekly Departmental Seminar is held at 12:00 pm on Thursdays during the academic year and **all students are required to attend.**

Research Forum is held at 12:00 pm on Mondays and **all students are required to attend.**

MHS Thesis

The student will select the topic for the thesis in consultation with his/her academic adviser or another faculty member. The thesis will typically involve a critical review of the scientific literature on a substantive public health issue. MHS students will meet weekly in Special Studies, which will outline the expectations for the thesis including focus, scope, structure, and criteria for evaluation.

Important Graduation Requirement

Your MHS Thesis needs to be submitted to the Student Coordinator, via email/PDF for binding, for our department library. (You do not need to submit your MHS thesis to the JHU library.) Guidelines for formatting the thesis can be found here: https://www.library.jhu.edu/library-services/electronic-theses-dissertations/formatting-guidelines/

Readers and Deadlines for MHS Thesis Completion

Students are responsible for finding a primary thesis reader who will act as a mentor through the thesis-writing process. Students may consult their academic adviser for advice on choosing a primary reader appropriate for their thesis topic. The primary reader must have an appointment in MMI. A secondary reader will be assigned by the department. The primary and secondary readers cannot be from the same laboratory group.

The MHS student and primary reader are required to have regular meetings to review progress and to ensure that the benchmarks and deadlines listed in the following table are meet. The responsibilities of the primary reader includes guidance on the crafting of the hypothesis to be tested, guidance on the focus and scope of the thesis, as well as editorial and technical critiques to aid in this learning experience. When the primary reader is satisfied with the quality of the thesis draft, the student will submit the final draft of the MHS Thesis to the secondary reader whose responsibility is to evaluate the thesis manuscript for scientific validity, approach, and intelligibility.

An outline of the evaluation criteria that will be used by the faculty can be viewed in the MMI MHS Thesis Scoring Form found at the end of this handbook.

It is the student's responsibility to meet the benchmarks and deadlines listed below. Students who fail to meet the April & May deadlines will be removed from the May graduation list.

Important Dates for MHS Thesis 2022-2023

Date	Description
November 2, 2022	Select topic, identify primary reader, Submit 'MHS Thesis Proposal' form to the student coordinator
November 11, 2022	Provide a provisional outline to primary reader
December 2, 2022	Advanced outline with provisional bibliography
January 23, 2023	Submit first draft of MHS thesis to the primary reader
February 3, 2023	Select secondary thesis reader
February 24, 2023	Submit second draft of the MHS thesis to the primary reader
March 10, 2023	Submit revised draft of the MHS thesis to the secondary reader for comments
March 27, 2023	Third draft of MHS thesis to primary reader
April 7, 2023	Final version of MHS thesis to secondary reader for review and scoring
April 21, 2023	Deadline for primary and secondary readers to submit review results to the student coordinator.
April 28, 2023 (or earlier)	Submit approved MHS Thesis to the student coordinator (via PDF)
May 10 and 12, 2023	Oral presentation of MHS thesis research

For those individuals who require assistance, writing/editing assistance is offered at:

- JHMI: Editing Referral Service: http://www.hopkinsmedicine.org/fac_development/researchers/publishing.html#ERS
- JHU: Writing Center: http://krieger.jhu.edu/writingcenter/about/
- https://www.jhsph.edu/offices-and-services/student-affairs/resources/writing-resources.html

MHS Thesis Presentation

As part of the requirements of the MHS degree, each student must present their Thesis orally in the special MHS Forum held in the fourth term, schedule details pending. All MHS students are required to attend the MHS Forum for the entire time.

Vacation/Holiday Policy

Graduate student holiday and vacation schedules traditionally have been flexible to accommodate the varied demands of individual research projects. Guidelines which reflect the Department's expectations are outlined below. These guidelines are not intended to eliminate flexibility in the scheduling of holidays and vacation, and do not replace any conditions that might be imposed by fellowships/funding agencies. These guidelines also do not restrict legitimate academic or research activities conducted off campus, such as attendance at scientific meetings and field work. Students are generally entitled to the following holidays and vacation time:

- University holidays
- Spring break
- The period between last day of 2nd term and the first day of winter intersession

Leave of Absence (p. 641)

Application for LOA must be made on a form available from the Student Coordinator. Please discuss any potential LOA with your mentor and the Student Coordinator.

Graduate Student Organization

All MMI graduate students are members of the MMI Graduate Student Organization (GSO). The GSO generally meets at the annual departmental retreat to elect officers, and can meet at other times as often as the students desire. Apart from the annual retreat meeting, GSO meetings and activities are organized by the students. Officers elected by the GSO who bear specific official responsibilities are a President, a faculty liaison who attends faculty meetings, a representative to the School's Student Assembly, and Student Admissions Coordinators. Additional officers (Social Chair, Treasurer, etc.) can be chosen by the GSO if it wishes. In the past, activities sponsored by the GSO have included charity events, fundraisers, picnics, student birthday celebrations, etc.

Academic Performance

Academic Performance and Academic Probation

MHS students are required to maintain a 2.75 grade point average or better. Students who do not satisfy this and other academic requirements will be placed on Academic Probation by the Graduate Program Committee. Formal notification of Academic Probation generally will be accompanied by conditions that the student must fulfill in order to be returned to good academic standing. Students who fail to meet those conditions may be dismissed from the program. Students cannot graduate with a GPA lower than 2.75.

Criteria for Dismissal from the MHS Program

Students may be dismissed from the MMI MHS program for reasons that include (but are not limited to) failure to satisfy conditions specified for removal from academic probation, failure to maintain an adequate GPA, violations of academic or professional ethics, and failure to adhere to School and Departmental time limitations.

Academic Ethics and Responsible Conduct of Research

MMI requires students to adhere rigorously to the School's standards for Academic Ethics and Responsible Conduct of Research in all activities. Violations of these standards are ground for dismissal from the program. Policies are detailed in Policy and Procedures Memoranda (PPMs) "Students 01 Academic Ethics" and (for research, including student research) "Faculty 07 Scientific Misconduct". A lecture introducing students to these topics will be presented during the first term. Time and location will be announced by the Student Coordinator.

Attendance is required. Each student is also required to complete the online module on Academic and Research Ethics in their first term of enrollment (PH.550.860 Academic & Research Ethics at BSPH)

Student Conduct Code

The fundamental purpose of the JHU's regulation of student conduct is to promote and to protect the health, safety, welfare, property, and rights of all members of the University community as well as to promote the orderly operation of the University and to safeguard its property and facilities. As members of the University community, students accept certain responsibilities that support the educational mission and create an environment in which all students are afforded the same opportunity to succeed academically and professionally. The JHU Student Conduct Code is outlined at: https://studentaffairs.jhu.edu/policies-guidelines/student-code (https://studentaffairs.jhu.edu/policies-guidelines/student-code/)

Learning Outcomes

Key educational objectives for MHS students include:

1. Develop knowledge through coursework in the areas of immunology and microbiology;
2. Develop skills for the critical evaluation of scientific literature;
3. Develop literature-based analytical and research skills; and
4. Develop the ability to communicate scientific information orally and in writing.

Molecular Microbiology & Immunology, ScM

Introduction

The goal of the ScM training program in MMI is to provide a solid foundation in the biomedical sciences for a select group of students interested in addressing outstanding issues underlying infectious and immunologic diseases of public health importance. It aims to equip students with a diversity of disciplinary concepts and methodological tools to solve specific disease-related problems. This holistic approach requires a common core of knowledge of the population, clinical, cellular, and molecular aspects of disease.

This MMI ScM Guidebook, which supplements the School's resources page, which can be found at https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs (https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs/) is intended to summarize most of the School and Departmental requirements for your degree program. In addition, other practical information is included for your convenience and consideration.

The ScM in MMI

The Department offers the Master of Science (ScM) program for students who wish to obtain, in addition to course work, rigorous training in laboratory research. The ScM program includes most elements of the MHS program combined with an additional laboratory component. Successful completion of a Departmental Comprehensive Exam is required of all ScM students.

Educational Objectives: Key educational objectives for ScM students include: 1) develop knowledge through coursework in the areas of immunology and microbiology; 2) develop skills for the critical evaluation of scientific literature; 3) develop literature-based analytical and research skills; and 4) develop the ability to communicate scientific information orally and in writing. Additional educational objectives for ScM students include development of laboratory and analytical skills required to effectively conduct laboratory research.

Academic adviser

Each new student is assigned an MMI faculty member as their academic adviser. The academic adviser will assist the student in the selection of appropriate courses for the first year, act as the student's source of information concerning school and departmental policies and procedures, and help the student with problems they may encounter. A student who wishes to change their assigned academic adviser should contact the Student Coordinator, who will consult the Graduate Program Committee (GPC.)

ScM Thesis Mentors

Selection of a thesis adviser takes place after completion of the required laboratory rotation (see below). After consultation with the prospective thesis adviser, the student should submit a completed Thesis Adviser Selection Form (available on the MMI web portal or from the Student Coordinator), signed by the prospective adviser, to the departmental Student Coordinator for approval by the Department Chair. Requests for extra time to identify a thesis adviser must be submitted to the GPC. When appointed, a thesis adviser becomes the student's Primary Adviser.

Approval of thesis adviser selection will take into account the interests of the student and the faculty and the availability of resources in the faculty member's laboratory (e.g, funds, space, faculty time). Every effort will be made to accommodate a student's request to work with a specific faculty member for their thesis research. The Department, however, cannot guarantee that a student will be able to work in the laboratory that they select as a first choice. In the event that a student's first choice cannot be met, an alternative will be arranged in consultation with the student.

With the specific approval of the GPC, ScM students may conduct thesis research in laboratories outside of MMI (for example, in departments other than MMI or in the School of Medicine). Requests to conduct thesis research outside the department will be noted on a Thesis Adviser Form that includes acknowledgement from the proposed extra-departmental thesis adviser that MMI will provide no financial support for the student, a detailed research topic and timetable, and an agreement by a faculty member with a primary appointment in MMI (see Core Faculty list, page 2) to act as co-adviser. (Field work conducted off-campus under the direction of an MMI faculty member does not need to be approved by the GPC.)

Coursework

Masters students must register for a minimum of **16 credits** each term. (The maximum allowed per term by the School is 22 credits.) These credits include didactic courses, special studies, thesis research, seminars, etc. (A minimum of 64 credits are required by the School for a Master's degree.) Course requirements and suggestions for electives are summarized in the next section.

In core courses, Master's students must receive a 'C' or higher. A student who earns a grade below that threshold in a course listed as a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the GPC Chair. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards. To remain in good academic standing, masters students must maintain a minimum grade point average of 2.75. If a student's GPA falls below the requirement, the student will be placed on academic probation. School policy states that a Master's student cannot graduate with a GPA lower than 2.75.

Academic Performance

Academic Performance and Academic Probation

Master's students are required to maintain a 2.75 grade point average or better. Students who do not satisfy this and other academic requirements will be placed on Academic Probation by the Graduate Program Committee. Formal notification of Academic Probation generally will be accompanied by conditions that the student must fulfill in order to be returned to good academic standing. Students who fail to meet those conditions may be dismissed from the program. Students cannot graduate with a GPA lower than 2.75

Criteria for Dismissal from the ScM Program

Students may be dismissed from the MMI ScM program for reasons that include (but are not limited to) failure to satisfy conditions specified for removal from academic probation, failure to maintain an adequate GPA, failure of the Departmental Comprehensive Examination, failure to make satisfactory progress in thesis research, violations of academic or professional ethics, and failure to adhere to School and Departmental time limitations.

Academic Ethics and Responsible Conduct of Research

MMI requires students to adhere rigorously to the School's standards for Academic Ethics and Responsible Conduct of Research in all activities. Violations of these standards are ground for dismissal from the program. Policies are detailed in Policy and Procedures Memoranda (PPMs) "Students 01 Academic Ethics" and (for research, including student research) "Faculty 07 Scientific Misconduct". A lecture introducing students to these topics will be presented during the first term. Time and location will be announced by the Student Coordinator. Attendance is required. Each student is also required to complete the online module on Academic and Research Ethics in their first term of enrollment (PH.550.860 Academic & Research Ethics at BSPH)

Student Conduct Code

The fundamental purpose of the JHU's regulation of student conduct is to promote and to protect the health, safety, welfare, property, and rights of all members of the University community as well as to promote the orderly operation of the University and to safeguard its property and facilities. As members of the University community, students accept certain responsibilities that support the educational mission and create an environment in which all students are afforded the same opportunity to succeed academically and professionally. The JHU Student Conduct Code is outlined at: https://studentaffairs.jhu.edu/policies-guidelines/student-code (https://studentaffairs.jhu.edu/policies-guidelines/student-code/).

Program Requirements

Degree Requirements

There are several requirements for the completion of degree programs: those set by the school, those set by the department, and those set by the thesis advisor (for ScM students). The degree requirements for all programs, established by the School are contained in Policy and Procedure Memoranda available at https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/Pages/default.aspx

Students will need to log in with their BSPH e-mail user name and password to have access to these pages.

The Departmental requirements for Molecular Microbiology and Immunology (MMI) are explained in this Student Guidebook. A student's thesis advisor generally will set requirements regarding the preparation for, and completion of, the thesis or dissertation project. A brief summary with an approximate timetable of the requirements of the school and of the department is included at the end of this section.

Residency: Minimum duration of two academic years in full-time residence (including the Summer Term between the first and second years.) Completion, including the requirement of an Advisor-approved written thesis, is required within four calendar years of matriculation. Most students complete their degrees in two years.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

ScM Curriculum

Listed below are courses required of all ScM students, as well as a selection of elective courses that ScM students have found useful.

Course	Title	Credits
First Term		
Summer		
Introduction to Online Learning: https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90 (https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/)/ (noncredit)		0

[1] The required Immunology course for ScM students is Immunology, Infection, and Disease (PH.260.631 Immunology, Infection and Disease) offered in the 2nd term. While PH.260.611 Principles of Immunology I & PH.260.612 Principles of Immunology II are not recommended for ScM students, those who wish to substitute this two-term series for IID are required to gain permission from the course director Dr. Scott. Topics in Immunology I & II are only available to doctoral students.

[2] ScM students are only required to take two of the following four core courses in the area of microbial pathogenesis:

- PH.260.623 Fundamental Virology
- PH.260.627 Pathogenesis of Bacterial Infections
- PH.260.650 Vector Biology and Vector-Borne Diseases
- PH.260.635 Biology of Parasitism

[3] Only one literature course is required. Selection made in consultation with the academic advisor.

[4] Students with little or no Molecular Biology or Biochemistry background are strongly encouraged to take one or both of these courses, offered by the Department of Biochemistry and Molecular Biology.

[5] As a School-wide requirement, all students must take Academic and Research Ethics in the first term of their enrollment (PH.550.860 Academic & Research Ethics at BSPH).

Cells-to-Society Requirements for All Degree Programs

The Council on Education for Public Health (CEPH) requires didactic coursework covering and assessing 12 CEPH-defined Introductory Public Health Knowledge Learning Objectives. It is important to emphasize that this is a School-level requirement of all degree programs.

The School's Committee on Academic Standards approved 12 online, 0.5 credit, mini-courses, graded S/U (satisfactory/unsatisfactory) that will cover each of the 12 Learning Objectives (see table below). Each of the mini-courses consists of 3-5, 30-40 minute presentations with an accompanying assessment. **Note:** Certain learning objective can be fulfilled by taking an MMI course that covers this material instead of the mini-course. See notes in the table, below.

Each of the C2S mini-courses will be offered multiple times starting in the summer term and extending through terms 1, 2 and 3. NOTE: In the 4th term, only C2S LO #12 will be offered. The 2022-2023 schedule is here: https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings (https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings/)

Please note that for the presentation of these mini-courses each term has been split into a A section covering the first 4 weeks of the term and a B section that covers the second 4 weeks of the term.

These 12 mini-courses must be completed by the end of the first academic year.

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.602	The Role of Quantitative Methods in Public Health (or take any of the following courses: 140.611-12 (term 1 and 2) or 140.615-16 (term 3 and 4) or 260.705 (term 3 or term 4))	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (or take 260.700 (term 1 or term 3))	0.5
PH.552.604	Causes and Trends in Morbidity and Mortality (or take 260.600 (summer, credit in term 1) or 260.844 (term 2 or term 4))	0.5
PH.552.605	The Science of Primary Secondary and Tertiary Prevention in Population Health	0.5
PH.552.606	The Critical Importance of Evidence in Advancing Public Health Knowledge (or take 260.700 (term 1 or term 3))	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease (or take 260.600 in summer (credit in term 1))	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.610	The Social Determinants of Health (or take 260.844 (term 2 or term 4))	0.5
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5
Total Credits		**6**

Additional Course Requirements for ScM Students

The School requires ScM students to complete 12 credits in formal courses outside of their own department, at least 6 of which are within the Bloomberg School of Public Health. These courses must be taken during the first year. All 12 credits must be taken for a grade (Pass/Fail is not acceptable).

Required for all MMI graduate students:

Code	Title	Credits
PH.260.822	Seminars in Research in Molecular Microbiology and Immunology (all terms 2nd year)	1
PH.260.821	Research Forum in Molecular Microbiology and Immunology (all terms 2nd year)	1
PH.552.6XX	Cells-to-Society	

Additional Course Information

Many university-wide courses can be used to fulfill specific requirements. Consult the catalogues of the various university divisions available for viewing online:

1. Bloomberg School of Public Health catalogue -- see interdepartmental programs.
2. School of Medicine catalogue.
3. School of Arts and Sciences (Homewood Campus) catalogue.

Winter and Summer Institute Courses

Tuition for these courses is charged separately by the School of Public Health Registrar, and is not covered by tuition paid during the academic year.

Certificate Programs

There are several certificate programs offered by the School in specific areas of public health that have fewer course requirements than do formal degree programs. Certificate programs are focused academic training programs designed to appeal to students seeking targeted education in a specific area of public health. Educational objectives, admission requirements, courses of study, and other information is provided for each certificate program and can be found at https://publichealth.jhu.edu/academics/academic-programs/certificate-programs (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/).

Departmental Seminars

Departmental Seminar is held at 12:00 pm on Thursdays during the academic year and **all students are required to attend.**

Research Forum is held at 12:00 pm on Mondays and **all students are required to attend.**

Laboratory Rotations

ScM students must conduct at least one laboratory rotation before formal selection of a Thesis Adviser. The required rotation should be performed in the first rotation period and students should register for PH.260.851 Laboratory Rotations in the second term. If desired, a second rotation may be performed; register again for PH.260.851 Laboratory Rotations in the third term. See the table below for rotation period dates. Rotation periods in a series of laboratories broaden a student's knowledge of laboratory techniques and skills, expose them to a variety of research areas, help them to select a laboratory for thesis research, provide the student an opportunity for interaction with several faculty members, and develop their ability to carry out a research project. Faculty from outside MMI are eligible to supervise ScM students, but the research project must be within the scope MMI's core research areas (immunology, bacteriology/microbiome, parasitology, virology, mycology, and/or vector biology). If a student chooses to join a lab outside of MMI, a co-advisor with a primary appointment in MMI is required (see Core Faculty list, page 2). During a laboratory rotation, a student is given a specific research problem of limited scope as their rotation exercise. This provides close interaction with the faculty member who supervises the rotation. It is not expected that a student necessarily complete the assigned project. At the end of the laboratory rotation term, the student will give a short oral presentation of their research project at the Research Forum in Molecular Microbiology and Immunology (see below). The rotation supervisor will submit a written evaluation of the student's performance to the Student Coordinator and will assign a grade of Pass or Fail. The form is available here: https://my.jhsph.edu/sites/MMI/academic-forms/default.aspx. Failing grades will be given for not having spent sufficient time in the laboratory or for an unsatisfactory performance in the laboratory.

The selection of laboratory or laboratories for rotation(s) is the responsibility of the student. Students (with the assistance of their academic adviser) should identify potential laboratories for their rotations and consult with the faculty members in charge of these laboratories to arrange a rotation for a particular period. To assist students in identifying the research interests of the faculty, each faculty member has prepared a short summary of their ongoing projects which can be found on their official school web pages: https://publichealth.jhu.edu/departments/w-harry-feinstone-department-of-molecular-microbiology-and-immunology/people/faculty (https://publichealth.jhu.edu/departments/w-harry-feinstone-department-of-molecular-microbiology-and-immunology/people/faculty/)

2022-2023 MMI Laboratory Rotation Schedule

Rotation Period	Dates	Register in Term
First	11/8/22 - 1/20/23	2
Second	1/23/23 – 3/17/23	3

ScM students must present reports after each laboratory rotation during weekly Departmental Research Forum. Rotation reports are 20 minutes. Presentation dates are assigned by the Course Director; rotation reports generally will be scheduled 1 to 3 weeks after the completion of the rotation.

In preparing a rotation report, students should keep in mind that it is most important to provide sufficient background and a sufficiently good explanation of the experimental rationale to make the rotation project and its objectives understandable by a diverse audience. As noted above, it is not required that students successfully complete their assigned rotation project, and many rotation reports cannot include firm conclusions. This is not a shortcoming if the presentation is clear, intelligible, and presents good analyses of any difficulties encountered. **Once a laboratory is chosen, ScM students should register for thesis research credits in subsequent terms.**

ScM Comprehensive Examination

The ScM Comprehensive Examination constitutes a comprehensive inquiry into the student's grasp of the subject matter underlying disciplines underlying MMI's main areas of research. The exam tests the student's understanding of scientific principles and methods, as well as his substantive knowledge of major subjects and related areas. At approximately mid-year, first year ScM students are furnished with a list of about fifty questions from which the comprehensive exam will be drawn. The questions cover the five main areas of research in MMI – virology, bacterology, parasitology, vector biology and immunology. Students are encouraged to consider essay format responses to these questions that demonstrates a firm grasp of the principles and relevant details addressed by the question. The exam will be administered at the end of the fourth term (**Thursday, May 25, 2023**) and will consist of two questions each from the five different MMI subject areas (Virology, Bacteriology, Vector Biology, Parasitology, and Immunology). Students are required to select one of the immunology questions and two other questions from two of the remaining topic areas. The exam is closed book and 3 hours in length. Student responses to the three exam questions are graded independently. Students who fail only one exam question must retake both questions from the original exam in that topic area and pass both questions, submitting written answers within two weeks for reassessment. Failing marks on two or more of the questions from the original exam results in retaking the exam with a new series of questions within a month. Failure of the exam twice may result in dismissal from the ScM program.

ScM Thesis

The ScM thesis is the culminating product of a student's ScM studies and provides a permanent record of a student's intellectual contribution to the field. Unlike published papers that might result from the same work, the thesis both requires and provides opportunity for the student to creatively place their work in the broadest possible context, explore implications, and speculate on where the future of the field lies. Preparation of a thesis requires the greatest care both in thought and execution.

Most students find that writing a thesis requires much more time and effort than expected. For that reason, students are encouraged to write as they go, rather than wait for the final few weeks of their graduate careers. Students are also encouraged to work closely with their advisors on thesis organization, scope, and content. To facilitate these recommendations, the Department requires that a student follow the timetable below:

In addition to the primary reader (typically the thesis advisor) a secondary reader from a different laboratory must be chosen. Preparation Requirements for ScM theses, including additional instructions for the selection of thesis readers, details on the format of the final version of the thesis, procedures for thesis submission and approval, and deadlines, are available from the School of Public Health Registrar's office and online at:

- https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/MastersCandidateInformation/Pages/default.aspx
- https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_10_Master_of_Science_Degree_071417.pdf
- https://www.library.jhu.edu/library-services/electronic-theses-dissertations/

Thesis Presentation

As part of the requirements of the ScM degree, each student must defend their completed thesis orally, late in the fourth term. The ScM thesis presentations for second year students will be held during the week of May 15-19, 2023.

ScM Thesis Submission Deadlines

Date	Description
2/10/2023 (or earlier)	Students should meet with the student coordinator to go over transcripts and make sure all other degree requirements have been met.
3/10/2023	1st draft of thesis is due to thesis advisor.
3/17/2023 (or earlier)	Deadline for submitting the Thesis Readers and Final Examination form to the registrar
3/31/2023	Final draft of thesis is due to the secondary reader.
5/05/2023 (or earlier)	Final deadline for submitting final copies of ScM thesis and all readers' letters. **Note: the thesis and letters should be submitted several days ahead of the final deadline to ensure their receipt and allow for processing.**

Vacation/Holiday Policy

Graduate student holiday and vacation schedules traditionally have been flexible to accommodate the varied demands of individual research projects. Guidelines which reflect the Department's expectations are outlined below. These guidelines are not intended to eliminate flexibility in the scheduling of holidays and vacation, and do not replace any conditions that might be imposed by fellowships/funding agencies. These guidelines also do not restrict legitimate academic or research activities conducted off campus, such as attendance at scientific meetings and field work. Students are generally entitled to the following holidays and vacation time:

- University holidays
- Spring break
- The period between last day of 2nd term and the first day of winter intersession
- A fortnight vacation in the second and subsequent years as scheduled by arrangement with the adviser.

Graduate students are expected to be present during winter intersession and summer term or as required by their experimental protocols.

Leave of Absence

A leave of absence (LOA) is for students who are forced to take a temporary break from their programs of study due to reasons beyond their control, such as illness, military service, financial exigency, or pressing personal reasons justifying an interruption of their graduate studies. A leave of absence is an officially recognized inactive student status that is entered on a student's academic record. LOA cannot be used by a student working on a thesis who has completed all other degree requirements. LOA is limited to one academic year except for military service.

Application for LOA must be made on a form available from the Student Coordinator. Please discuss any potential LOA with your mentor and the Student Coordinator.

Please review the BSPH Schoolwide Policy (p. 641).

Employment as a Full-Time ScM Student

Full-time ScM students can be employed by faculty, including by their PI, to conduct part-time work **<u>not directly related to their thesis</u>**. Hours worked per week from all sources at JHU **<u>must not exceed 20 hours</u>**.

Learning Outcomes

Key educational objectives for ScM students include:

1. Develop knowledge through coursework in the areas of immunology and microbiology;
2. Develop skills for the critical evaluation of scientific literature;
3. Develop literature-based analytical and research skills; and

4. Develop the ability to communicate scientific information orally and in writing.

Additional educational objectives for ScM students include development of laboratory and analytical skills required to effectively conduct laboratory research.

Molecular Microbiology & Immunology, PhD

Introduction

The goal of the MMI doctoral program is to train independent scientists to take leading roles in advancing our understanding of the cellular and molecular mechanisms that drive infectious and immune diseases. The specific goals listed below are designed to foster ingenuity, creativity and critical thinking in students that will enable them to recognize and solve key problems in infectious and immunological diseases of public health importance.

A majority of the content of the MMI PhD Student Guidebook can also be found at School's resources page – see https://www.jhsph.edu/offices-and-services/student-affairs/resources/. In addition, MMI PhD Student Guidebook contains other practical information that is included for your convenience and consideration.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

There are several levels of requirements for the completion of your degree program: those set by the school, by the department, by the Thesis Advisory Committee (TAC), and by the thesis adviser. The degree requirements established by the School are contained in Policy and Procedure Memoranda available at the Bloomberg School of Public Health (https://my.jhsph.edu/).

School procedures, information and forms can be found on the Bloomberg School of Public Health website (https://my.jhsph.edu/).

The requirements for MMI are explained in this Student Guidebook. A student's thesis adviser with participation of the Thesis Advisory Committee (TAC) generally will set requirements regarding the preparation for, and completion of, the thesis or dissertation project.

Advisers

Each student is assigned an MMI faculty member who will serve as their initial Academic Adviser during the first year of training. The Academic Adviser assists the student in navigating the first year by advising on the selection of appropriate courses, providing information concerning school and departmental policies, etc. The Academic Adviser is a temporary appointment and is typically replaced by the Thesis Adviser at some point during the first academic year. A student who wishes to change their Academic Adviser should contact the Student Coordinator, who will consult the GPC.

Selection of a Thesis Adviser takes place after completion of laboratory rotations (see below), generally prior to June 1. After discussion with the prospective thesis adviser, the student should submit to the Student Coordinator a completed Thesis Adviser Selection form (available on the Departmental portal, https://my.jhsph.edu/sites/MMI/academic-forms/default.aspx signed by the prospective adviser, for approval by the department Chair.

Note that MMI graduate students must perform thesis research in the laboratory of a faculty member who holds a primary appointment in MMI or in the laboratory of a JHU faculty member who holds a joint appointment in MMI and is designated as a trainer on a MMI training grant. **Requests for thesis advisers other than these will not be approved**.

Every effort will be made to accommodate a student's request to work with a specific faculty member for their thesis research. However, the department cannot guarantee that a student will be able to work in the laboratory that is selected as a first choice. In the event that a student's first choice cannot be met, an alternative will be arranged in consultation with the student.

Thesis Advisory Committees (TAC) and Individual Development Plans (IDP)

The Thesis Advisory Committee (TAC) meetings provide a structured opportunity for students to discuss scientific goals, research progress, and issues relevant to their project as well as to adopt an Individual Development Plan (IDP) that will support and monitor your professional and career development. The TAC, which is composed a with a customized group of faculty members with expertise in the areas relevant to your research project, meets at least annually through the fourth year of the program and semi-annually thereafter.

Each student is required to form a TAC during their second academic year. The initial TAC meeting should be scheduled by the end of the 4th term of year two and the meeting should take place no later than the end of the first term of year three. Students in their second year and beyond who do not complete the annual TAC meeting including the submission of the TAC/IDP Report will not be allowed to register in the first term of the following academic year. It is the responsibility of the student and their faculty adviser to schedule the annual meetings. The Student Coordinator should be informed of the anticipated date of the TAC meeting when it is scheduled. Note that a long lead time (months) may be needed to find a date when all TAC members are available for the meeting and so it is wise to begin the scheduling process early.

TACs consist of the student's Thesis Adviser and at least two faculty members with a primary appointment in MMI at the rank of assistant professor or higher. The highest-ranking MMI faculty member, other than the adviser, will serve as the committee chair. TACs can include additional members and participants from other departments/divisions of JHU and from other institutions are welcome. Inclusion and diversity are encouraged on TACs. Committee members should be jointly selected by the student and the thesis adviser.

TAC meetings are conducted in four parts in the following order:

Introduction by the adviser. With the student absent, the adviser should briefly introduce the student (thesis topic, year in the program, background, unusual career circumstances, or other relevant matters) and assess the student's performance relative to the adviser's expectations. Factors that may be impeding the student's progress should be raised and discussed. At the discretion of the TAC, these may be discussed with the student during the meeting.

Review of the student's progress in the program and professional development, guided by the points listed in Part B of the TAC/IDP and the experiences gained in the programs offered by the JHU Professional Development and Career Office (see page 28). Part B should be completed by the student before the meeting and furnished to the committee members at the meeting. As appropriate, the committee will discuss the student's responses to the points on the form and offer recommendations, advice, and insights into how the student might best approach their professional goals. Starting in the 3rd year special attention will be focused on the completion of the first author paper requirement. At the end of this discussion, the TAC Chair will summarize this discussion and note action items on the form. It is recognized that career goals evolve, and it is the intent that TAC/IDP reports will reflect, facilitate, and potentially guide that evolution, not constrain it. At the end of this discussion, the TAC/IDP form is signed by the committee and the student and returned to the Student Coordinator.

Discussion of the scientific aspects of the student's project, beginning with a concise presentation by the student that summarizes the current status of the research project, research accomplishments during the previous year, and an outline of research plans for the coming year. The scientific discussion is intended to provide fresh perspectives on the project, overall guidance, potential technical solutions to difficulties that have arisen, and access to expertise in varied fields. This part of the TAC meeting will be summarized at the end of the discussion by the TAC Chair in Part A of the Thesis Advisory Committee and Individual Development Plan (TAC/IDP) Report form, available on the MMI portal. https://my.jhsph.edu/sites/MMI/academic-forms/default.aspx

Discussion with the student in the absence of the adviser. At the conclusion of the discussion of the IDP, the adviser will leave the meeting to give the student an opportunity to evaluate the status of his project, the relationship with the adviser or the lab generally, and to identify measures that would enhance their educational and professional experience. Substantive issues that are revealed should be summarized in a confidential e-mail from the TAC Chair to the GPC c/o the Student Coordinator. The TAC chair should also inform the adviser of matters that arose, unless the student specifies that the discussion remain confidential.

Annual Evaluation of Progress, Performance, and Mentoring

The principal element in the training and guidance of graduate students is the interaction with their Thesis Adviser. Such mentoring commonly occurs on an ongoing basis involving frequent informal discussions, lab meetings, etc. However, a formal mechanism of evaluation of performance and of satisfaction of both the adviser and student is valuable in many cases. Annual progress, performance, and mentoring meetings between each student and their mentor guided by the Annual Evaluation of Progress, Performance, and Mentoring (AEPPM) form ensures that such formal performance and satisfaction discussions occur in MMI. Once per year, a month prior to the TAC meeting, each student is required to complete this document (available on the MMI departmental portal), and to discuss it with their Thesis Adviser. Following that discussion, the form, signed by student and Thesis Adviser should be returned to the Student Coordinator. <u>The signed form must be turned in prior to the TAC meeting.</u> Completed forms are reviewed by the GPC with the object of identifying developing problems. This mechanism is intended to foster frank discussions between student and adviser and will be of value only if the student's answers and the adviser's responses during the following discussions are honest. Note: A GPC committee member will be added to the TAC starting in year 5 if graduation is not scheduled.

Laboratory Rotations

Rotation periods broaden a student's knowledge of laboratory techniques and skills, provide exposure to a variety of research areas, help in selecting a laboratory for thesis research, provide an opportunity for interaction with several faculty members, and develop the ability to carry out a research project. During a laboratory rotation, a student will be given a specific research problem of limited scope as their rotation exercise. At the end of the laboratory rotation term, the student will give a short oral presentation on the project at the Research Forum in Molecular Microbiology and Immunology (see below). Students are encouraged to discuss expectations (time and effort spent, etc.) with the rotation supervisor early in the rotation.

Doctoral students are required to rotate through at least three (3) laboratories of faculty members who hold primary appointments in MMI or who are designated as members of the MMI training faculty.

MMI ScM students who matriculate to the PhD program are required to complete a total of 3 rotations over the course of both programs. These rotations must be in different departmental laboratories.

Each laboratory rotation lasts about 8 weeks. The rotation starting and ending dates are listed in the table below. Because laboratory rotations do not correspond to standard academic terms, **students should register for PH.260.851 Laboratory Rotations during the second, third, and fourth terms.**

2022-2023 MMI Laboratory Rotation Schedule

Rotation Period	Dates	Register in Term
First	11/8/22 - 1/20/23	2
Second	1/23/23 – 3/17/23	3
Third	3/27/23 – 5/19/23	4

The selection of laboratories for rotations is the responsibility of the student. Students (with the assistance of their academic adviser) should identify potential laboratories for their rotations and consult with the faculty members in charge of these laboratories to arrange a rotation for a particular academic term.

Students may conduct rotations in addition to the three required to explore other laboratories or to learn particular laboratory techniques or skills. These extra rotations may be conducted in departmental laboratories or in labs outside the MMI training faculty. Because PhD students must conduct thesis research in a laboratory within MMI or in the laboratory of a designated MMI trainer, rotations outside such labs should <u>**not**</u> be considered a means for identifying potential thesis research laboratories.

It is expected that substantial time will be spent in the laboratory during each rotation. It is critical that the student and rotation supervisor discuss this issue and reach an agreement on their mutual expectations. In the case of questions on this point, seek the advice of the MMI Ombuds, the GPC chair or any MMI faculty member.

At the conclusion of each rotation, the student and the rotation supervisor will complete a rotation report that will be turned in to the student coordinator. A copy of the form can be found on the MMI portal. https://my.jhsph.edu/sites/MMI/academic-forms/default.aspx

NOTE: Animal protocols; radiation licenses; pathogen, and recombinant DNA registrations. Any rotating student who participates in animal experiments must be added to the appropriate animal protocol before beginning work. While it is the responsibility of the Principle Investigator

(PI) of the protocol, working with the PI prior to the start of the rotation to make sure that you are included on the protocol(s) will prevent costly delays. Students also must complete online animal research training and must enroll in the Animal Exposure Surveillance Program prior to beginning work. Students must also be added to radiation licenses, pathogen registration and recombinant DNA registration, and human IRBs by the PI as required. In general, training in procedures is required for work with these agents or human samples.

Once the POE has been passed (see pages 23-24), the student needs to complete a **Thesis Research Documentation Form** that will be sent from the Dean's Office, which must be filled out **within 6 months of passing the POE.** It is the student's responsibility to ensure that the necessary research approvals are obtained (either IRB for human subjects research or ACUC for animal research) on the appropriate approved protocol(s). Retroactive research approval for research involving human subjects and/or animals **cannot**, under any circumstance, be granted. Failure to obtain research approval will prevent a student from publishing their thesis/dissertation.

MMI guidelines request that 1st year PhD students choose a research adviser by no later than June 1st, to ensure that any payroll change deadlines are met.

Research Forum and Laboratory Rotation Presentations

Ph.D. students are required to give oral presentation of their research. During the first year, the student will present the results of their rotation projects. These oral presentations will be delivered during weekly Departmental Research Forum. Rotation presentations are 20 minutes long and thesis research presentations are 30 minutes long. Suggested organization of presentations:

1. Introduction - Present the background and rationale of the work and outline the working hypothesis.
2. Experimental Design - Describe the overall experimental approach.
3. Results/Discussion - Results should be presented in an organized, meaningful and comprehensible manner.
4. Summary/Conclusion - Provide a short summary of the results and give an indication of future research directions.

An evaluation form (available from the departmental web portal and the TA) will be completed by two students and two faculty and returned to the student to provide constructive comments to improve future presentations.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Required Courses

All MMI required courses must be passed with a grade of A or B. Students not meeting that standard must repeat the relevant course(s) and pass with an A or B. A student who earns a grade below that threshold in a course that meets a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the GPC Chair. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards.

First year students must register for **16-22 credits each term**. Students in their 2nd year and beyond should register for a maximum of 16 credits. First year students should register for PH.260.851 Laboratory Rotations in terms 2, 3 and 4. (See Laboratory Rotations (p. 419), above).

The required core curriculum necessitates that each student takes:

- Principles of Immunology I & II and the companion courses Topics in Immunology I & II.
- Course work in 3 out of the 4 areas that focus on microbial biology and pathogenesis – Fundamentals of Virology, Pathogenesis of Bacterial Infections, Biology of Parasitology and Vector Biology & Vector Borne Disease.
- Two molecular and cell biology courses taught at the School of Medicine – Molecular Biology & Genomics; Cell Structure & Dynamics
- Two courses from the R3 menu of offerings (indicated by a * below) (scroll down for a full list).
- Cells-to-Society Learning Objectives (see below)

In addition, students are required to register for Research Forum in MMI (Monday noon research presentations) and Seminars in Research in MMI (Thursday departmental noon seminar) each term.

Outlined below is an example of a representative curriculum taken in the first and second years of the program. Depending on interests and background, the details of a student's specific curriculum can vary from the prototype outlined below. Consult your academic adviser prior to registering for courses..

NOTE: Students in the R^{3}IM Track – go to R^{3}IM Required Courses below.

Requirements for General PhD Program

First-Year Course Requirements

Course	Title	Credits

PH.260.821	Research Forum in Molecular Microbiology and Immunology	1
PH.260.822	Seminars in Research in Molecular Microbiology and Immunology	1
	Credits	**6-10**
	Total Credits	**63-75**

Electives

PhD students are strongly advised to take at least one departmental advanced course during each of the third and fourth terms of their first year. The specific courses taken should be chosen after discussion between the student and their adviser. Generally, these courses will include at least one in the area in which the student expects to conduct their thesis research.

Cells-to-Society Requirements for All Degree Programs

The Council on Education for Public Health (CEPH) requires didactic coursework covering and assessing 12 CEPH-defined Introductory Public Health Knowledge Learning Objectives. It is important to emphasize that this is a School-level requirement of all degree programs.

The School's Committee on Academic Standards approved 12 online, 0.5 credit, mini-courses, graded S/U (satisfactory/unsatisfactory) that will cover each of the 12 Learning Objectives (see table below). Each of the mini-courses consists of 3-5, 30-40 minute presentations with an accompanying assessment. **Note:** Certain learning objective can be fulfilled by taking a course that covers this material instead of the mini-course (see right-hand column in table below).

Each of the C2S mini-courses will be offered several times each year, starting in the summer term. The 2022-2023 schedule is here: https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings (https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings/)

Please note that for the presentation of these mini-courses each term has been split into a A section covering the first 4 weeks of the term and a B section that covers the second 4 weeks of the term.

These 12 mini-courses must be completed by the end of the first academic year.

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.602	The Role of Quantitative Methods in Public Health (or take any of the following courses: 140.611-12 (term 1 and 2) or 140.615-16 (term 3 and 4) or 260.705 (term 3 or term 4))	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (or take 260.700 (term 1 or term 3))	0.5
PH.552.604	Causes and Trends in Morbidity and Mortality (or take 260.600 (summer, credit in term 1) or 260.844 (term 2 or term 4))	0.5
PH.552.605	The Science of Primary Secondary and Tertiary Prevention in Population Health	0.5
PH.552.606	The Critical Importance of Evidence in Advancing Public Health Knowledge (or take 260.700 (term 1 or term 3))	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease (or take 260.600.81 in summer (credit in term 1))	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.610	The Social Determinants of Health	0.5
PH.552.611	Globalization and Population Health (or take 260.844 (term 2 or term 4))	0.5
PH.552.612	Essentials of One Health	0.5
Total Credits		**6**

Second-Year Course Requirements

Course	Title	Credits
First Term		
PH.550.600	Living Science Ethics - Responsible Conduct of Research	1
PH.260.820	Thesis Research Molecular Microbiology and Immunology (Variable credits)	1 - 22
PH.260.821	Research Forum in Molecular Microbiology and Immunology	1
PH.260.822	Seminars in Research in Molecular Microbiology and Immunology	1
	Credits	**4-25**
Second Term		
PH.260.625	Scientific Grant Writing	2

PH.260.820	Thesis Research Molecular Microbiology and Immunology (Variable credits)	1 - 22
PH.260.821	Research Forum in Molecular Microbiology and Immunology	1
PH.260.822	Seminars in Research in Molecular Microbiology and Immunology	1
	Credits	**5-26**
Third Term		
PH.260.820	Thesis Research Molecular Microbiology and Immunology (Variable credits)	1 - 22
PH.260.821	Research Forum in Molecular Microbiology and Immunology	1
PH.260.822	Seminars in Research in Molecular Microbiology and Immunology	1
Select one of the following: [1]		4-8
PH.140.615	Statistics for Laboratory Scientists I (Recommended)	
PH.140.611 & PH.140.612	Statistical Reasoning in Public Health I and Statistical Reasoning in Public Health II	
PH.140.621 & PH.140.622	Statistical Methods in Public Health I and Statistical Methods in Public Health II	
	Credits	**7-32**
Fourth Term		
PH.260.820	Thesis Research Molecular Microbiology and Immunology (Variable credits)	1 - 22
PH.260.821	Research Forum in Molecular Microbiology and Immunology	1
PH.260.822	Seminars in Research in Molecular Microbiology and Immunology	1
	Credits	**3-24**
	Total Credits	**19-107**

1 All doctoral degree candidates are required to take one course in biostatistics. The recommended biostatistics course is PH.140.615 Statistics for Laboratory Scientists I. Other courses that fulfill the requirement include: PH.140.611 Statistical Reasoning in Public Health I/PH.140.612 Statistical Reasoning in Public Health II and PH.140.621 Statistical Methods in Public Health I/PH.140.622 Statistical Methods in Public Health II.

Second year and beyond, PhD students should continue to register for a minimum of 16 credits per term, including courses (if any),

- 1 credit for PH.260.821 Research Forum in Molecular Microbiology and Immunology,
- 1 credit for PH.260.822 Seminars in Research in Molecular Microbiology and Immunology, and
- PH.260.820 Thesis Research Molecular Microbiology and Immunology.

PhD students must also register for summer term:

Code	Title	Credits
PH.260.829	Summer Thesis Research	12
Total Credits		**12**

Additional Course Requirements

PhD students must complete the online course Academic and Research Ethics (550.860.82) in the first term they are enrolled. Additionally, PhD students must take Living Science Ethics – Responsible Conduct of Research (550.600, 1st term) or Research Ethics and Integrity (306.665, 3rd term.) These courses are usually taken during the second year and must be taken prior to taking the Preliminary Oral Exam (POE.)

**All doctoral degree candidates are required to take coursework in biostatistics. The recommended biostatistics course is 140.615 Statistics for Laboratory Scientists I. Other courses that fulfill the requirement include: PH 140.638 Analysis of Biological Sequences (3 credits), Ph 140.688 Statistics for Genomics (3 credits)140.611/612 Statistical Reasoning in Public Health 1 & 2 and 140.621/622 Statistical Methods in Public Health 1 & 2.

R3 Course Offerings – Online (.81) and blended (.60) R3 courses by Term.

Code	Title	Credits
First Term		
PH.260.700	How Do We Know? - Theory and Practice of Science	3
PH.260.704	Critical Dissection of the Scientific Literature: Taking the Scalpel to Journal Articles	3
PH.260.707	Evidence-Based Teaching in the Biomedical and Health Sciences: Foundations	3

PH.260.812	The Performance of Leadership: Foundations	2
PH.260.844	Causation	3
PH.260.848	Community-Based Practice Through Civic Engagement	2

Distribution Requirement
The School requires Ph.D. students to complete a minimum of 18 credits in formal courses outside their own department with no fewer than nine (9) of these credits taken in the Bloomberg School of Public Health. All 18 credits must be taken for a grade (Pass/Fail is not acceptable). Credits earned for Molecular Biology and Genomics and Cell Structure and Dynamics count toward the required credits outside of MMI, as do credits earned for biostatistics. Credits for Academic and Research Ethics, Responsible Conduct of Research and Cells to Society are counted as separate School requirements and are not included in the 18-credit requirement.

Academic Performance and Academic Probation
Doctoral students are required to maintain a 3.0 grade point average and, as noted above, complete required courses with a grade of B or better. Students who do not comply with these and other academic requirements may be placed on Academic Probation by the Graduate Program Committee. Formal notification of Academic Probation generally will be accompanied by conditions that the student must fulfill in order to be returned to good academic standing. Students who fail to meet those conditions may be dismissed from the program.

Winter and Summer Institute Courses
Tuition for these courses is charged separately by the School of Public Health Registrar and is not covered by tuition paid during the academic year. Students wishing to take any of these courses may do so at their own expense.

Certificate Programs
There are several certificate programs offered by the School in specific areas of public health that have fewer course requirements than do formal degree programs. Certificate programs are focused academic training programs designed to appeal to students seeking targeted education in a specific area of public health. Educational objectives, admission requirements, courses of study, and other information are provided for each certificate program and can be found at https://publichealth.jhu.edu/academics/academic-programs/certificate-programs (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/)

Teaching Assistant
Teaching Assistant positions provide students with an opportunity to develop their teaching and interpersonal skills, to work professionally with faculty and fellow students, and to contribute service to the Department.

Policy: All PhD students are required to serve as TA for one course, preferably during the second year of the program. Only MMI courses may be used to fulfill this requirement.

TA Training: Students are required to complete the TA training during their first year in the program. The TA training course is offered twice per year-July-December and January-June. The academic program administrator will verify the student has completed the training prior to starting a TA position.

Compensation: A student will become eligible for TA compensation after they have satisfied the TA requirement. Completion of the requirement will be noted on the IDP/TAC form and eligibility for compensation will be noted on the departmental TA request form.

Additional Opportunities:
Gordis Teaching Fellowship
Teaching Academy- Preparing Future Faculty Program

R^{3}IM Track - Required Courses

All MMI required courses must be passed with a grade of A or B. Students not meeting that standard must repeat the relevant course(s) and pass with an A or B. A student who earns a grade below that threshold in a course that meets a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course or by completing another course that has been approved by the GPC Chair. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards.

First year students must register for 16-22 credits each term. Students in their 2^{nd} year and beyond should register for a maximum of 16 credits.

First year students should register for 260.851 Laboratory Rotation in terms 2, 3 and 4. (See Laboratory Rotations table).

PH.120.627	Stem Cells and the Biology of Aging and Disease	
PH.140.688	Statistics For Genomics	
PH.260.848	Community-Based Practice Through Civic Engagement	
PH.187.625	Animals in Research: Law, Policy, and Humane Sciences	
PH.260.812	The Performance of Leadership: Foundations	
PH.223.687	Vaccine Policy Issues	
	Credits	**9-13**
	Total Credits	**57-69**

1) First year students must take **at least three out of either four microbiology** courses: PH.260.623 Fundamental Virology; PH.260635 Biology of Parasitism; PH.260.627 Pathogenesis of Bacterial Infections; PH.260.650. Vector Biology and Vector Borne Diseases. If of interest, students have the option to take any of the microbiology courses that could not be taken in AY 1 as an AY 2 elective.

2) MMI PhD students are required to take two molecular and cell biology courses taught at the School of Medicine – Molecular Biology & Genomics (ME 260.709); Cell Structure & Dynamics (ME 110.728)

3) 260.701 Anatomy of Scientific Error must be taken during AY 1, either during term 2 or 4, however is recommended during term 2.

4) 260.710 Communications Practice for Health Science Professionals must be taken during AY 1 or AY2, either in term 2 or term 4.

5) 260.844 Causation must be taken in either term 2 or 4 of AY 1, or in term 2 of AY 2, however is recommended in Term 4 or AY1.

6) 260.715 Unleash your Writing Superpower must be taken in either term 2 of AY 1 or AY 2.

7) All BSPH doctoral degree candidates are required to take coursework in statistics. To fulfill the statistics requirement for the R^{3}IM track, PH.260.705 Fundamentals of Quantitative Reasoning in the Biomedical and Health Sciences, **and either** PH.140.615/616 Statistics for Laboratory Scientists I and II **or** PH.140.611/612 Statistical Reasoning in Public Health I and II must be taken in AY 1 or AY 2, respectively.

8) R^{3}IM track students are required to take either Evidence-Based Teaching (260.707) or Evidence-Based Mentoring (260.708) in either AY 1 or AY2.

Cells-to-Society Requirements for All Degree Programs

The Council on Education for Public Health (CEPH) requires didactic coursework covering and assessing 12 CEPH-defined Introductory Public Health Knowledge Learning Objectives. It is important to emphasize that this is a School-level requirement of all degree programs.

The School's Committee on Academic Standards approved 12 online, 0.5 credit, mini-courses, graded S/U (satisfactory/unsatisfactory) that will cover each of the 12 Learning Objectives (see table below). Each of the mini-courses consists of 3-5, 30-40 minute presentations with an accompanying assessment. **Note:** Certain learning objective can be fulfilled by taking an MMI course that covers this material instead of the mini-course. See notes in the table, below.

Each of the C2S mini-courses will be offered 2-4 times during the academic year. The current schedule can be found at: https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings (https://publichealth.jhu.edu/academics/course-directory/schedule-of-cells-to-society-course-offerings/)

Please note that for the presentation of these mini-courses each term has been split into a A section covering the first 4 weeks of the term and a B section that covers the second 4 weeks of the term.

> **These 12 mini-courses must be completed by the end of the first academic year.**

Code	Title	Credits
PH.552.601	Foundational Principles of Public Health (or take 260.700.81 in term 1 or 260.700.60 in term 3)	0.5
PH.552.602	The Role of Quantitative Methods in Public Health (or take any of the following courses: 140.611-12 (term 1 and 2) or 140.615-16 (term 3 and 4) or 260.705 (term 3 or term 4))	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (or take 260.700 (term 1 or term 3))	0.5

	Credits	**3-24**
	Total Credits	**14-77**

Second year and beyond, PhD students should continue to register for a minimum of 16 credits per term, including courses (if any), 1 credit for Research Forum (260.821), 1 credit for Seminars in Research (260.822), and Thesis Research (260.820). PhD students must also register for summer term: 12 credits Summer Thesis Research (260.829).

R3 certificate requirement for support on the Molecular and Cellular Basis of Infectious Diseases (MCBID) T32 training grant

```
 The MCBID T32 training grant typically has slots open each
 year to support MMI PhD students.  PhD students who are
 working in the laboratory of a training grant preceptor
 can apply for up to two years of training grant support.
 To receive support, students must commit to completing
 the R3 certificate program as described in the link
 below: https://e-catalogue.jhu.edu/public-health/certificates/
rigorreproducibilityandresponsibilityinscientificpractice/
#newitemtextThe R3 certificate will be considered a PhD degree
 requirement for students who are supported by the MCBID T32.
```

Written & Oral Exams

DEPARTMENTAL COMPREHENSIVE EXAMINATION (PHD COMPS)

The School requires a departmentally-administered written comprehensive examination for students in doctoral degree programs. In MMI, the comprehensive examination is intended to test the student's grasp of basic factual material necessary for PhD-level research in molecular microbiology and immunology and their ability to integrate the information obtained in the several disciplines of departmental interest. The examination also assesses each student's ability to identify important scientific problems and to formulate hypotheses and plausible experimental approaches to testing those hypotheses.

The MMI comprehensive exam is given at the end of the first year and has a written and an oral component. The written component of the exam takes the form of a critical review of the literature on a currently active topic relevant to first-year coursework. The review should be limited in scope, but a thorough, scholarly exploration of the topic area. Included should be a discussion of the public health and scientific significance of the topic, a critical analysis of the current state of knowledge in the field including important unanswered questions, a discussion of potential experimental approaches to address those questions, and their implications for future research. The student's written review will be evaluated by a Comprehensive Exam Committee (CEC) of three MMI faculty, with the student's Academic Adviser serving as CEC Chair, and will be defended in an oral examination administered by the same CEC.

This is an examination. Thus, the written review must be the student's own work. However, students must select the review topic in consultation with the Academic Adviser and will receive their CEC's comments on their outline/description (see below). Additionally, students are encouraged to discuss their original ideas, concepts, experimental approaches, etc. with advisers, faculty and colleagues at whatever length. Members of the CEC will not evaluate the written review before submission. The GPC suggests that students hold at least three substantive meetings with their adviser(s): prior to topic selection, before finalization of the outline/description, and during preparation of the review/exam document.

Summary of the Comprehensive Examination Process

- Select a topic relevant to first-year coursework in consultation and with the approval of your academic adviser.
- Submit an email stating the topic, cc'd to the academic adviser, to the Student Coordinator.
- The GPC will appoint a CEC of three MMI faculty members. The student's Academic Adviser serves as the Chair of the CEC.
- Submit an outline or brief description of your topic (about 1 page) to your CEC and to the Student Coordinator. The CEC will comment on the proposed content and organization of the review. If necessary, your adviser will assist in revision of the outline.
- Provide copies of the finished review (4000-5000 words, double spaced, 11 pt font) to each CEC member and to the Student Coordinator. The CEC will grade the review.
- Arrange an oral exam - you are responsible for setting the date and time, subject to CEC member availability.
- Present a 15-minute overview of the written exam document and answer general knowledge questions asked by the CEC. CEC members will grade the oral exam.

MMI Ph.D. Comprehensive Examination Timetable

Steps	Dates	Who is Responsible?
Letter stating topic due to Student Coordinator	4/3/2023	Student
Review Committee appointed	4/10/2023	GPC
Outline/description due	4/17/2023	Student
Committee response to student	5/1/2023	Adviser/Committee
Final review due	6/12/2023	Student
Grades/request for revision due from committee members	6/19/2023	Committee members
Oral examinations completed	7/21/2023	Student/Committee

Written Component

The written review will be graded Pass/Conditional Pass/Fail in its entirety on criteria that include:

- Significance to the field
- Quality of the literature review, including inclusion of primary literature, depth and synthesis of the review, and inclusion of recent literature
- Quality of critical analysis of the state of the field
- Clarity and precision of writing
- Quality of assessment of future research directions

CEC members will grade the review, meet to discuss the critiques and determine the outcome, and the Chair, on behalf of the CEC, will inform the student of a Pass, Conditional Pass, or Fail. A Conditional Pass constitutes minor revisions that the CEC has decided would help the student improve the quality of the written document, but that does not preclude progression to the oral component.

A Fail that requires a substantial revision to the document before the student can proceed to the oral component. The CEC will document the areas that need revision and, in consultation with the student, set a timeline for providing the revised document to the CEC for assessment. The revised document will be due at least two weeks prior to the rescheduled oral examination date. If the revised document does not receive a unanimous grade of Pass from the CEC, this will constitute a second failure of the written portion of the Comprehensive Examination and will trigger a meeting of the GPC to consider the student's dismissal from the PhD program.

Oral Component

The oral exam will consist of a brief (10-15 minute) oral summary of the review topic, followed by questions from the committee. Students are strongly encouraged to use PowerPoint, Keynote, or similar software in presenting their summary. During the exam, questions will address topics both related to and outside the immediate subject area of the proposal to assess the student's breadth of understanding of material presented in required coursework, departmental seminars, and research forum. The oral exam will be one to two hours long. The student is responsible for reserving a room for the exam (the Student Coordinator can assist if needed.)

Scoring of Oral Component

After the oral exam, the committee will meet in private to determine an outcome. Possible outcomes are Pass, Conditional Pass, or Fail. The committee will impose specific conditions upon students who receive a Conditional Pass and will specify a timetable and mechanism for satisfying the condition. The outcome of the oral component will be reported to the Student Coordinator by the adviser by e-mail.

A student who passed the written component in their first try, but fails the oral defense must repeat the oral defense within a time frame specified by the committee. The student should meet with each committee member to discuss the areas that need improvement before scheduling a second oral exam.

The following framework should be used in evaluating the oral defense:

- 20% of emphasis: Summary.
- 30% of emphasis: Discussion of questions posed by committee specific to the review, including
  - Explanation of why this topic was selected from subject matter
  - Demonstration of knowledge of concepts and terms used
  - Demonstration of understanding of experimental evidence discussed
- 50% of emphasis: Discussion of questions extending beyond immediate subject areas to other fields in microbiology and immunology. (Remember, this is a Comprehensive Exam.)

Outcome of the comprehensive exam. Each student has two attempts to pass their comprehensive exam. A failure on either the written or the oral component, constitutes failure of the comprehensive exam. A total of two determinations of 'fail', on either the written, the oral, or a combination of the components, constitutes failure of the exam and may result in dismissal from the PhD program. For example, a student who passes the written component after two tries but then fails the oral defense may be dismissed from the PhD program.

Preliminary Oral Examination

Note: PH.550.600 Living Science Ethics - Responsible Conduct of Research **and the 552.6XX Cells-to-Society series must be completed before taking the POE.**

The purpose of the preliminary oral examination (POE), an exam required by the University for all PhD candidates, is to determine whether the student has the depth and breadth of scientific and technical knowledge to undertake dissertation research. Examiners will be concerned with the student's reasoning ability; depth and breadth of knowledge; and ability to develop and conduct research leading to a completed thesis or dissertation. The POE is conducted by a committee of examiners usually selected by the student's adviser according to eligibility rules set by the university (link below). Note that the student's adviser, or co-adviser of record, is NOT a member of the POE committee. Diversity and inclusion are encouraged on the POE and any student who would like to include a faculty member from outside of the University, including faculty members from groups underrepresented in the biomedical sciences, on the POE voting committee, may do so by having their adviser seek appointment of the outside faculty member to a Senior Associate position at the BSPH. Appointment as a Senior Associate must be requested in a letter by the Department Chair in a nomination letter to the Dean, for vote by the School's Advisery Board. A copy of the external faculty member's CV (in BSPH CV format) must be included.

The POE must be scheduled by February 1 and completed by March 31 in the student's second year. If a committee/date is not set by February 1, the GPC will assume the responsibility for committee assignment and scheduling of the student's POE. The GPC's decisions will be made with input from the adviser if offered, but to simplify scheduling, the GPC will not feel obligated to honor requests for certain examiners or dates. The student is responsible for arranging for a room for the exam.

The PPM describing the preliminary oral exam process: https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_03_Doctor_Of_Philosophy_Degree_071717.pdf

The preliminary oral examination form can be found here: https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx

Please note that the POE form must be submitted to the School of Public Health Registrar's Office at least one month prior to the exam.

At least two weeks prior to the scheduled date of the exam, the student should make their Grant Writing Course proposal available to the committee members. This is for background purposes and the proposal will not be evaluated as part of the exam by committee members, nor will the examination be confined to topics related to the proposal.

Conduct of the Exam

```
The student's adviser does not participate in the student's POE.
  However, in the student's absence, the adviser will provide
 a brief overview of the student's research progress to the
 committee prior to the start of the POE.
The student may prepare a short talk (5 min) based on their
 proposal and/or their anticipated research project to serve as
 an introduction to the examination.  If a presentation is made,
 students are strongly encouraged to make use of PowerPoint,
 Keynote, or similar presentation software.
Exams last 1 to 2 hours. After the exam, a form indicating the
 outcome (Pass, Conditional Pass, or Fail) will be filled out
 by the examiners and returned to the School of Public Health
 Registrar.  It is suggested that the POE Committee Chair inform
 the student's PI of issues that arose in the course of the exam.
 In particular, if the outcome of the exam is a Conditional Pass
 or Failure, the advisor will require this information to assist
 the student in correcting deficiencies.
```

Requirement for a Conditional Pass includes demonstration of a limited deficiency in a specific area. Examples of acceptable requirements that can be used to fulfill a Conditional Pass include:

1. Reading assigned literature in the area of deficiency and taking an oral examination on the subject material; and
2. Reading assigned literature in area of deficiency and writing a review paper to be read by one or more POE committee members.

Requirement for a Fail includes demonstration of a significant deficiency in two or more areas. Receipt of a Fail requires retaking the POE. A student who receives a Fail on a POE will be granted one additional try to pass the POE. Two Fails on the POE will result in termination from the PhD program.

After the completion of the preliminary oral exam, PhD students will be required to complete a "Thesis Documentation Form." Melissa Cooke in the Dean's Office collects these forms. Final orals paperwork will not be processed unless this form is on file with the Dean's Office.

MMI F31 Proposal Requirement

Success in obtaining independent funding for research is an essential element of most scientific careers. Therefore, as part of their training, each MMI PhD student is required to submit a grant proposal for funding by outside agencies. It is anticipated that most proposals will be for NIH F31 grants, but similar applications to NSF or other governmental or non-governmental organizations will also fulfill the requirement.

The grant application must be submitted by the end of the summer term (late August) in the student's second year, for example, on the F31 NIH submission deadlines of April 8th or August 8th.

Proposals will generally be written on the student's thesis project (or anticipated thesis project) and should be prepared in close cooperation of the student's PI. Additionally, each student must obtain written critiques of a draft of the proposal from two different MMI faculty members apart from the PI prior to submission. Since students will have formed Thesis Advisory Committees (TACs) by that time, it is suggested that members of the TAC be identified as reviews. Proposal drafts should be submitted to these reviewers at least ONE MONTH before the application is due at the School's Office or Research Administration (ORA) or to the sponsoring organization. Note that for many applications (for example, NIH applications), the ORA deadline is several days before the sponsor's due date.

Students must notify the Student Coordinator of grant application submissions by completing a form available from the MMI portal. TACs will record submissions on the TAC report form. https://my.jhsph.edu/sites/MMI/academic-forms/default.aspx

Publication Requirement

Publication is an essential component of training for a research career and a strong publication record as a graduate student is of great benefit to the trainee, the laboratory, and the program. Therefore, each PhD student in MMI is required to have published or submitted for publication in a peer-reviewed journal one or more first-author manuscripts prior to the date of the Final Oral Examination. Publication plans should be discussed as part of the IDP portion of each TAC meeting, and the TAC must indicate on the TAC Report Form whether the student is making satisfactory progress toward publication. If not, the TAC must provide a written recommendation for steps to be followed to expedite publication. Students must notify the Student Coordinator of first author publications by completing the First Author Form available from the MMI departmental portal. https://my.jhsph.edu/sites/MMI/academic-forms/default.aspx. Submission of the First Author Form is required before the student's paperwork can be submitted to schedule their final defense.

Final Oral Exam

The PhD thesis/dissertation is the culminating product of a student's PhD studies and provides a permanent record of a student's intellectual contribution to the field. Unlike published papers that might result from the same work, the thesis both requires and provides opportunity for the student to creatively place their work in the broadest possible context, explore implications, and speculate on where the future of the field lies. Preparation of a thesis requires the greatest care both in thought and execution.

Most students find that writing a dissertation requires much more time and effort than expected. For that reason, students are encouraged to write as they go, rather than wait for the final few weeks of their graduate careers. Students are also encouraged to work closely with their advisers on thesis organization, scope, and content. To facilitate these recommendations, the Department requires a student to submit a draft of each of the components of the thesis to their adviser at least eight weeks prior to the Final Oral Examination (thesis defense) date, and to submit a final draft of the complete thesis to the readers at least four weeks prior to that date. Readers will provide comments on the thesis at or before the Final Oral Examination and may require that changes be made prior to approval.

The Committee of Thesis Readers conducts the Final Oral Examination and ultimately must approve the thesis. Diversity and inclusion are encouraged for the Final Oral Exam and any student who would like to include a faculty member from outside of the University, including faculty members from groups underrepresented in the biomedical sciences, on the Final Oral Exam voting committee, may do so by having their adviser seek appointment of the outside faculty member to a Senior Associate position at the BSPH. Appointment as a Senior Associate must be requested in a letter by the Department Chair in a nomination letter to the Dean, for vote by the School's Advisory Board. A copy of the external faculty member's CV (in BSPH CV format) must be included.

School-wide policies and deadlines governing the selection of readers, conduct of the oral examination, and approval of the written thesis are available from the School of Public Health Registrar's office and online: https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Programs_03_Doctor_Of_Philosophy_Degree_071717.pdf.

Note:The Appointment of Thesis Readers and Final Orals Form must be submitted to the School of Public Health Registrar's Office for processing at least one month prior to the scheduled exam.

Comprehensive information for doctoral students including timelines, guidelines, exam and graduation information for doctoral students, including Thesis Reader Appointment forms can be found here: https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Pages/default.aspx

Details of the required format of a PhD thesis are available at: https://www.library.jhu.edu/library-services/electronic-theses-dissertations/

For dissertations that contain published work, suitably modified versions of the published manuscripts may be used as chapters, with careful attribution of the work of co-authors. In general, because the depth of the introductions and discussions of published papers are not sufficient for thesis use, and additional introductory and summary chapters will be required in the thesis.

Essay/thesis writing/editing assistance is offered at both campuses:

- JHMI: Editing Referral Service: http://www.hopkinsmedicine.org/fac_development/researchers/publishing.html#ERS
- JHU: Writing Center: http://krieger.jhu.edu/writingcenter/about/

Other resources: https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs (https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs/)

Official PhD thesis submission to the University is now done electronically. Please review the checklist for specific requirements regarding thesis submission: https://my.jhsph.edu/Offices/StudentAffairs/RecordsRegistration/DoctoralCandidateInfo/Documents/AFTER%20 THE%20FINAL%20DEFENSE%20-%20Revised%20March%202019.pdf

The department requires one printed copy of the PhD thesis, which will be kept in the Department Library. Students should provide the Student Coordinator with a PDF, and they will have a copy printed for the department.

Final Seminar Presentation

At the conclusion of their dissertation research, students are required to present their work at a formal seminar that is advertised throughout the University and open to the public. This seminar is scheduled in conjunction with the Final Oral Examination.

Time Limits

PhD students must successfully complete all program-specific requirements (such as a dissertation, as detailed in the specific program PPMs) within 7 years. Extensions are possible and must be formally approved by the Committee on Academic Standards.

Program Policies

Vacation/Holiday Policy

Graduate student holiday and vacation schedules traditionally have been flexible to accommodate the varied demands of individual research projects. Guidelines which reflect the Department's expectations are outlined below. These guidelines are not intended to eliminate flexibility in the scheduling of holidays and vacation, and do not replace any conditions that might be imposed by fellowships/funding agencies. These guidelines also do not restrict legitimate academic or research activities conducted off campus, such as attendance at scientific meetings and field work. Students are generally entitled to the following holidays and vacation time:

- University holidays
- Spring break
- The period between last day of 2nd term and the first day of winter intersession
- A fortnight vacation in the second and subsequent years as scheduled by arrangement with the adviser.

Graduate students are expected to be present during winter intersession and summer term or as required by their experimental protocols.

Leave of absence

A leave of absence (LOA) is for students who are forced to take a temporary break from their programs of study due to reasons beyond their control, such as illness, military service, financial exigency, or pressing personal reasons justifying an interruption of their graduate studies. A leave of absence is an officially recognized inactive student status that is entered on a student's academic record. LOA cannot be used by a student working on a thesis who has completed all other degree requirements. LOA is limited to one academic year except for military service. Application for LOA must be made on a form available from Student Coordinator. Please discuss any potential LOA with your mentor and the Student Coordinator. Please review the BSPH Schoolwide Policy (p. 641).

Parental leave

Graduate students may request parental leave following the adoption or birth of a child. Parental leave applies to either or both parents and includes sixty calendar days of stipend/salary support and health insurance coverage. Parental leave must be requested on a Departmental Paid Leave of Absence form, available from the MMI administration. More detailed information is available here (https://policies.jhu.edu/?event=render&mid=764&pid=32391&fid=policy_32391.pdf&_=0.0023679474985).

Sick Leave

All students receiving a fellowship/stipend from BSPH for full-time study while enrolled in a Master's or PhD program at the School are entitled to 15 days (three weeks) paid sick leave per year. Days may be used for a student's own sickness or to care for a family member. Unused days may not be carried over into the following 12-month period and are not payable upon departure. When a student takes sick leave, they should notify their faculty adviser and keep them as up to date as feasible. At its discretion, the department or adviser may require the student to submit verification of the need for sick leave from their healthcare provider to the University Health Service Center for review. Any documents containing a student's medical information must be kept separate from their academic file. Extended absences (more than two weeks) must be reported by the student and the adviser to the Department Administrator as quickly as possible. If the illness requires an extended absence, the student may apply for a leave of absence.

Policy for MMI PhD Students Changing Thesis Laboratories

MMI PhD students occasionally want to, or have to, change thesis laboratories. In all cases, PhD students must choose to do their thesis research in the laboratory of a faculty member with a primary appointment in MMI, or in the laboratory of a faculty member with a joint appointment in MMI who is also designated as a trainer on an MMI training grant. Students can request a list of current training faculty who are eligible to accept PhD students from the academic coordinator or the Graduate Program Committee (GPC) chair at any time. To remain in good standing, students should adhere to the following process:

PhD students considering changing thesis laboratories must first schedule a confidential meeting with the departmental ombud to discuss the proposed change. Based on the discussion, the ombud may direct the student to additional resources such as the BSPH Office of Student Life or the university ombuds office.

The student may then consult with faculty members to identify a new thesis laboratory and thesis project. At some point during this process, the student must notify their current adviser of the proposed change with copy of this correspondence also sent to the graduate student coordinator, the department administrator and the chair of the GPC. The student must work with their current adviser in a professional manner to transfer any relevant notes, data, reagents or supplies.

The student and proposed new thesis adviser must then submit the Thesis Adviser Form to the graduate student coordinator for approval by the departmental administrator. In addition to serving as a commitment to advise the student, this form also details the available financial support. Once this form has been approved, the student will be free to pursue thesis research in the new laboratory.

Learning Outcomes

MMI PhD students will:

- Attain an in-depth understanding of the molecular and cellular basis for infectious and immunological diseases through structured course work, informal instruction, mentoring, and firsthand knowledge gained during dissertation research.
- Develop the ability to critically analyze scientific data.
- Learn how to create sound hypotheses and to test hypotheses employing the scientific method.

- Attain a broad understanding of the theory, utility, and limitations of classic and modern scientific approaches and techniques.
- Develop the ability to adapt current methods or to develop a new methodology to address specific scientific problems.
- Acquire the communication skills necessary to effectively report research findings to other scientists as well as to the non-scientific community.
- Gain an appreciation for the tenets of professional and scientific ethics.

The Department's Graduate Program Committee (GPC) and faculty constantly monitor the components of the MMI graduate program for its effectiveness. Adjustments are made when necessary to maintain an optimal balance of didactic, literature-based, and technical training.

Professional Development

In addition to the commitment to enhancing their scientific knowledge base, critical thinking and research skills, MMI is equally dedicated to students development as a science professionals. Experience teaches that students who start the process of formulating and refining a career plan early in their academic career have a better chance of achieving their goals. In this spirit, MMI requires that starting in their first year each student participate in the structured career and professional development OPTIONS program offered by the Johns Hopkins Professional Development and Career Office (PDCO). This multi-year program is designed to help students identify career objectives and systematically devise and implement a strategic plan to achieve their goals. This plan includes a series of programs - **Career Exploration**, **Career Development**, and **Career Readiness** – that provide opportunities to explore career options, train in and develop valuable professional skill sets, and even gain hands on experience as an intern in their field of interest. In addition, PDCO holds **Career Clinics** to aid students in preparing winning resumes, CVs, and web pages to prepare them to enter the marketplace. See the PDCO web site for details of the program. https://pdco.med.jhmi.edu/. The progress and direction developed through the PDCO program will be monitored at each Thesis Advisory Committee meeting and documented in each student's customized Individual Development Plan (IDP).

In addition to the program offered by the PDCO, MMI has academic offerings designed to assist students with professional development such as the required course Scientific Grant Writing (260.625) and the elective Business of Academic Biomedical Research (260.815).

Johns Hopkins Teaching Academy

The Teaching Academy serves as an exceptional graduate and post-doctoral fellow professional development program. The Teaching Academy offers PhD students and post-doctoral fellows, college-level teacher training and academic career preparation opportunities through courses, workshops, teaching practicums, teaching as research fellowship appointments and individual consultation. The Teaching Academy is located in the Center for Educational Resources (CER) in the Garrett Room of the Milton S. Eisenhower Library on the Homewood campus. How to find us: https://cer.jhu.edu/teaching-academy (https://cer.jhu.edu/teaching-academy/).

NOTE: Teaching or outside work: Federal law stipulates a maximum of 19 hours for paid work outside of laboratory thesis work. All paid fellowships, part-time working opportunities and teaching need to be discussed with the student's primary adviser.

Career Resources

The Career Services Office at the Bloomberg School helps students, alumni, faculty, staff and employers navigate the world of public health jobs. Career Services Office provides valuable resources to assist students in the process. Specifically, the Bloomberg School's Career Services Office provides career coaching, resume preparation, a database of jobs and internships, and networking opportunities.

Non-Degree Training

Postdoctoral Training

Postdoctoral fellows (PDFs) are trained in most laboratories in MMI. Postdoctoral training provides the opportunity for doctoral degree holders trained in more traditional environments to broaden their exposure to problems of public health importance and offers the opportunity for rigorous advanced training in those areas of public health biology that are the special expertise of MMI faculty.

Postdoctoral training consists primarily of close interaction with the trainee's preceptor in the performance of a research project. At the end of the first three months in residence and for each subsequent year, PDFs are to complete an individual development plan with their preceptor and mentor team in an effort to provide a formal opportunity to define goals and expectations as well as recommend actions that will assist the PDF successfully realize their preferred career path.

Didactic courses in the School and other divisions of the University also are available to PDFs, who are considered by the School to be non-degree students. PDFs attend the MMI Seminar Series and are invited to attend and present posters or talks at the annual MMI Retreat. In addition, MMI conducts a summer continuation of Research Forum devoted exclusively to research seminars delivered by PDFs.

PDFs are also encouraged to participate in special career development courses and workshops administered through the Johns Hopkins Medical Institutes Professional Development Office (https://pdco.med.jhmi.edu/) – e.g., *Grantcraft, Your Research Career, Research Leadership*. Undergraduate teaching opportunities are available through the mentored Instructional Associate Program at the Notre Dame of Maryland University.

Individuals interested in pursuing postdoctoral training in MMI should contact individual investigators directly.

Department of Population, Family and Reproductive Health

About

Our mission is to optimize the health and well-being of individuals, families, and populations across the life course through public health science, teaching and practice locally, nationally, and globally. Learn about the Life Course Framework. (https://publichealth.jhu.edu/departments/population-family-and-reproductive-health/research-and-practice/life-course-framework/)

The Department of Population, Family and Reproductive Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/) is grounded in a life course framework with domestic and international areas of interest including: adolescent health; child health; maternal, fetal and perinatal health; population and health; sexual and reproductive health; women's health. Skills emphasized in departmental training include: population sciences, behavioral science, program evaluation, evidence based advocacy and the translation of research for programs and policy.

Centers and Initiatives

PFRH is home to eight research centers and initiatives that provide unrivaled hands-on experience with industry leaders domestically and globally.

- Bill and Melinda Gates Institute for Population and Reproductive Health (https://www.gatesinstitute.org/)
- Center for Adolescent Health (https://www.jhsph.edu/research/centers-and-institutes/center-for-adolescent-health/)
- Center on the Early Origins of Disease (https://www.jhsph.edu/departments/population-family-and-reproductive-health/center-on-early-life-origins-of-disease/)
- Center of Excellence in Maternal and Child Health (http://jhu-mchcenterofexcellence.org/)
- Child and Adolescent Health Measurement Initiative (CAHMI) (https://www.jhsph.edu/departments/population-family-and-reproductive-health/child-adolescent-health-measurement-initiative/)
- Early Childhood Services Research Program (https://publichealth.jhu.edu/departments/population-family-and-reproductive-health/research-and-practice/life-course-framework/child-health/early-childhood-services-research-program/)
- Hopkins Population Center (https://popcenter.jhu.edu/)
- Women, Infants and Children Program (WIC) (https://publichealth.jhu.edu/departments/population-family-and-reproductive-health/research-and-practice/child-health/women-infants-children/)

Degree Programs

- Population, Family and Reproductive Health, MHS (p. 431)
- Population, Family and Reproductive Health, MHS Online (p. 438)
- Population, Family and Reproductive Health, MSPH (p. 444)
- Population, Family and Reproductive Health, PhD (p. 457)

Faculty

Meet the faculty of PFRH. (https://publichealth.jhu.edu/departments/population-family-and-reproductive-health/people/faculty/)

Summer Institute

Summer Institute in Data to Policy (https://publichealth.jhu.edu/academics/summer-institute-in-data-to-policy/) offered by Department of Population, Family and Reproductive Health. The Data to Policy in Population, Family and Reproductive Health Summer Institute is designed to equip students with skills needed to understand population-based data and shape policies related to families, reproductive health, and the health of populations.

Departmental Seminars

Departmental Seminars PFRH holds a noon seminar series every Wednesday 1st through 4th term. PFRH students are required to attend. The schedule of seminars will be sent in advance via email to all PFRH students and listed in the JHSPH Weekly Calendar. All graduating master's students are required to make a presentation of their thesis results in a formal academic setting, which may include the departmental noon seminar or a professional meeting. For upcoming seminars and recording of past seminars, please visit our news and events page (https://publichealth.jhu.edu/departments/population-family-and-reproductive-health/news-and-events/).

PFRH Teaching Assistant Policy

The Department of Population, Family and Reproductive Health supports full-time graduate students serving in the role of teaching assistants (TA). The department values the educational and learning experience that students gain through participating as a TA in addition to providing monetary compensation to them. The department classifies TA positions into 2 levels: 1.0 FTE TA and 0.5 FTE TA. The expectation for time commitment as well as monetary compensation differs for the two levels. Part-time students are not eligible for TA positions due to FLSA rules.

Information about current TA positions will be sent to students throughout the year. Typically, students should have already taken the course in order to be a TA. Students wishing to serve as a TA in a course should meet with the course instructor prior to agreeing to serve as a TA and discuss the nature of the course as well as the faculty member's expectations. Both should discuss the responsibilities of the TA as well as the tasks the department deems beyond the scope of the TA to be sure there are no misunderstandings about roles. The expected number of hours/week as well as preparation needs should also be addressed. Once a student and faculty member have agreed, they both must sign the TA agreement form; students submit it to the department's payroll office.

The number of hours that a TA actually works may vary substantially from course to course, but it is generally expected that a TA will begin work approximately two weeks prior to the start of the course and continue to work at least 10 days beyond the last class session or until grades are submitted. 1.0 FTE TA is expected to attend each class session. 0.5 FTE TAs may or may not be required to attend class sessions.

Population, Family and Reproductive Health, MHS

The academic Master's of Health Science (MHS) program allows students to select from the five areas of interest listed below. This full-time, one-year, 64 credit program is designed for those with a desire to enhance their research skills in public health and includes both methods and content courses. Students choose one of four methodological approaches: demography; behavioral and social sciences; epidemiology; or health services research and evaluation. The one-year curriculum is intended for students with two or more years of public health or related experience to inform their area of research inquiry prior to entry into the program.

The Department's current areas of interest in the MHS program include:

- Adolescent Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/adolescent-health/)
- Child Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/child-health/)
- Maternal, Fetal, and Perinatal Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/maternal-fetal-perinatal-health/)
- Population and Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/population-and-health/)

- Women's, Sexual and Reproductive Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/women-sexual-and-reproductive-health/)

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

MHS Departmental Competencies

Code	Title	Credits
Competency 1: Applying statistical methods to address the health of populations (Choose 4 in sequence)		
PH.140.621	Statistical Methods in Public Health I	4
OR		
PH.140.651	Methods in Biostatistics I	4
AND		
PH.140.622	Statistical Methods in Public Health II	4
OR		
PH.140.652	Methods in Biostatistics II	4
AND		
PH.140.623	Statistical Methods in Public Health III	4
OR

PH.340.751	Epidemiologic Methods 1	5

Code	Title	Credits
Competency 3: Applying ethical concepts and tools to population health research and practice.		
PH.550.860	Academic & Research Ethics at BSPH	0
AND		
PH.306.665	Research Ethics and integrity: U.S. and International Issues	3
OR		
PH.550.600	Living Science Ethics - Responsible Conduct of Research	1
If student takes 550.600, must also takes one of the following:		
PH.306.663	Legal and Ethical Issues in Health Services Management	3
OR		
PH.221.616	Ethics of Public Health Practice in Developing Countries	2

CEPH Learning Objectives

Code	Title	Credits
CEPH Learning Objective 1 (Choose 1):		
PH.380.624	Maternal and Child Health Legislation and Programs	4
OR		
PH.552.601	Foundational Principles of Public Health	0.5
CEPH Learning Objective 2 (Choose 1):		
PH.380.624	Maternal and Child Health Legislation and Programs	4
OR		
PH.552.601	Foundational Principles of Public Health	0.5
CEPH Learning Objective 3 (Must take both)		
PH.380.603	Demographic Methods for Public Health	4
AND		
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5
CEPH Learning Objective 4:		
PH.380.600	Principles of Population Change	4
CEPH Learning Objective 5 (Choose 1):		
PH.340.721	Epidemiologic Inference in Public Health I	5
OR		
PH.340.751	Epidemiologic Methods 1	5
CEPH Learning Objective 6 (Choose 1):		
PH.380.664	Reproductive and Perinatal Epidemiology	4
OR		
PH.552.606	The Critical Importance of Evidence in Advancing Public Health Knowledge	0.5
CEPH Learning Objective 7 (Choose 1):		
PH.380.616	Child Health Epidemiology	3
OR		
PH.552.607	Essentials of Environmental Health	0.5
CEPH Learning Objective 8:		
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
CEPH Learning Objective 9:		
PH.380.604	Life Course Perspectives on Health	4
CEPH Learning Objective 10:		
PH.380.604	Life Course Perspectives on Health	4
CEPH Learning Objective 11:		
PH.552.611	Globalization and Population Health	0.5
CEPH Learning Objective 12:		
PH.552.612	Essentials of One Health	0.5

Students must select 2 research methods courses within a methodological area of their choice: behavioral/social science; epidemiology (2 different options); or health services research and evaluation. The methods areas and course requirements are listed in alphabetical order below.

Behavioral/Social Science Specialty Core Requirements

Code	Title	Credits
PH.380.611	Fundamentals of Program Evaluation	4
Data Collection and Analysis (Choose 1):		
PH.340.717	Health Survey Research Methods	4
PH.380.711	Issues in Survey Research Design	3
PH.224.690	Qualitative Research Theory and Methods	3
PH.330.657	Statistics for Psychosocial Research: Measurement	4
PH.140.658	Statistics for Psychosocial Research: Structural Models	4
PH.224.690	Qualitative Research Theory and Methods	3
PH.224.691	Qualitative Data Analysis	3

*Multi-term course. Students must take both 224.690 and 224.691 in order to receive a grade for the course. 220.689 is a prerequisite for the course.

Epidemiology Specialty Core Requirements

Code	Title	Credits
Choose either Option 1 or Option 2		
Option 1 Professional Track:		
PH.340.722	Epidemiologic Inference in Public Health II	4
Data Collection (Choose 1):		
PH.340.717	Health Survey Research Methods	4
OR		
PH.380.711	Issues in Survey Research Design	3
OR		
PH.340.770	Public Health Surveillance	3
Option 2 (must take both):		
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5

Health Services Research and Evaluation Specialty Core Requirements

Code	Title	Credits
Choose 1:		
PH.380.611	Fundamentals of Program Evaluation	4
OR		
PH.309.616	Introduction to Methods for Health Services Research and Evaluation I	2
AND		
PH.309.617	Introduction to Methods for Health Services Research and Evaluation II	2
Choose 1:		
PH.380.612	Applications in Program Monitoring and Evaluation	4
OR		
PH.223.632	Methods for Planning and Implementing Evaluations of Large-Scale Health Programs in Low and Middle income Countries	4
OR		
PH.340.717	Health Survey Research Methods	4
OR		
PH.380.711	Issues in Survey Research Design	3
Students who take 309.616 must also take 309.617.		

Students must take both 224.690 and 224.691 in order to receive a grade for course. Course 220.689 is a prerequisite for the courses.

Adolescent Health Area of Interest

Code	Title	Credits
Competency 1:		
PH.380.604	Life Course Perspectives on Health	4
Competency 2 (Choose 1):		
PH.380.600	Principles of Population Change	4
OR		
PH.380.603	Demographic Methods for Public Health	4
Competency 3 (Choose 1):		
PH.380.623	Adolescent Health and Development	3
OR		
PH.380.747	International Adolescent Health	3
Competency 4 (Choose 1):		
PH.380.624	Maternal and Child Health Legislation and Programs	4
OR		
PH.380.665	Family Planning Policies and Programs	4
Competency 5:		
PH.380.725	The Social Context of Adolescent Health and Development	3

Child Health Area of Interest

Code	Title	Credits
Competency 1:		
PH.380.604	Life Course Perspectives on Health	4
Competency 2 (Choose 1):		
PH.380.600	Principles of Population Change	4
OR		
PH.380.603	Demographic Methods for Public Health	4
Competency 3 (Choose 1):		
PH.380.616	Child Health Epidemiology	3
OR		
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children	3
OR		
PH.380.623	Adolescent Health and Development	3
Competency 4 (Choose 1):		
PH.380.624	Maternal and Child Health Legislation and Programs	4
OR		
PH.380.661	Clinical Aspects of Maternal and Newborn Health	3
Competency 5 (Choose 1):		
PH.380.624	Maternal and Child Health Legislation and Programs	4
OR		
PH.380.744	Nutrition and Growth in Maternal and Child Health	3

Maternal and Child Health Area of Interest

Code	Title	Credits
Competency 1:		
PH.380.604	Life Course Perspectives on Health	4

Competency 2 (Choose 1):		
PH.380.600	Principles of Population Change	4
OR		
PH.380.603	Demographic Methods for Public Health	4
Competency 3 (Choose 1):		
PH.380.664	Reproductive and Perinatal Epidemiology	4
OR		
PH.380.616	Child Health Epidemiology	3
OR		
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children	3
Competency 5 (Choose 1):		
PH.380.642	Child Health and Development	3
OR		
PH.380.744	Nutrition and Growth in Maternal and Child Health	3
OR		
PH.380.623	Adolescent Health and Development	3
OR		
PH.380.747	International Adolescent Health	3
OR		
PH.380.725	The Social Context of Adolescent Health and Development	3

Maternal, Fetal and Perinatal Health Area of Interest

Code	Title	Credits
Competency 1		
PH.380.604	Life Course Perspectives on Health	4
Competency 2 (Choose 1):		
PH.380.600	Principles of Population Change	4
OR		
PH.380.603	Demographic Methods for Public Health	4
Competency 3 (Choose 1):		
PH.380.664	Reproductive and Perinatal Epidemiology	4
OR		
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children	3
Competency 4 (Choose 1):		
PH.380.624	Maternal and Child Health Legislation and Programs	4
OR		
PH.380.665	Family Planning Policies and Programs	4
OR		
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries	4
Competency 5 (Choose 1):		
PH.380.655	Social and Economic Aspects of Human Fertility	3
OR		
PH.380.750	Migration and Health: Concepts, Rates, and Relationships	3
OR		
PH.380.756	Poverty, Economic Development, and Health	4

Women's Sexual and Reproductive Health Area of Interest

Code	Title	Credits
Competency 1:		
PH.380.604	Life Course Perspectives on Health	4
Competency 2 (Choose 1):		
PH.380.600	Principles of Population Change	4
OR		
PH.380.603	Demographic Methods for Public Health	4
Competency 3 (Choose 1):		
PH.380.664	Reproductive and Perinatal Epidemiology	4
OR		
PH.380.666	Women’s Health	3
Competency 4 (Choose 1):		
PH.380.665	Family Planning Policies and Programs	4
OR		
PH.380.771	Understanding and Changing International Reproductive Health Policy	3
OR		
PH.380.667	Women’s Health Policy	3
OR		
PH.380.768	Selected Topics in Women’s Health and Women’s Health Policy	4
OR		
PH.380.760	Clinical Aspects of Reproductive Health	3
Competency 5 (Choose 1):		
PH.380.655	Social and Economic Aspects of Human Fertility	3
OR		
PH.380.668	International Perspectives on Women, Gender, and Health	3

MHS Essay and Presentation Guidelines

The Master’s Essay is a requirement for graduation from the MHS program in the Department of Population, Family, and Reproductive Health. The goal of the essay is for students to apply the skills and knowledge they have acquired during their academic program to a public health problem or concern of interest to them; a priority for the essay is that it has a research focus even if it does not involve data analysis. In addition to the written essay, students must give a 10-minute public presentation of their essay.

Students should begin thinking about essay topics and format at the end of the first term.

During Terms 3 and 4 of their studies, students will register for PFRH Master’s Essay (380.850), designating their first reader as the instructor. Guidelines for credit hours are as follows:

- Term 3: 3-6 credits
- Term 4: 3-5 credits
- Students need to take a minimum of 3 credits of special studies each term for the essay
- If taking more than 3 credits student must meet weekly with 1st reader

The following sections provide detailed guidelines about the essay and presentation.

Essay Readers

Students must have at least one reader for their essay. The following guidelines must be applied:

- The students' reader must be PRFH faculty; faculty with a joint appointment in PFRH can be a reader.
- If a student wishes to select a reader who is not PFRH faculty, then a second reader from PFRH must also be selected.

Responsibilities of Students and Readers

Primary Reader

The essay reader has the overall responsibility of working with the student on the essay from the outline to final draft, and on preparation for the presentation. They must be identified as the instructor for the special studies course for the PFRH Master's Essay Essay (380.850) in the 3rd and 4th terms. Students must submit outline and essay drafts to the primary reader on key dates starting in November through April; these dates are indicated to assure timely completion of the essay.

Second Reader

A second reader may also provide comments on the essay at any stage. A second reader will seldom be needed but may be asked if a student is using data from a study conducted by the reader or at the agency of the reader. If a second reader is external to the department, students are strongly advised to discuss the roles and responsibilities of this reader with their primary reader. Second readers do not give approval for the essay, unless the first reader is external to PFRH.

The essay must meet the standards required by faculty of the School. However, student who are using data affiliated with the second reader or the second reader's agency should provide drafts of the essay to this reader and discuss when feedback will be given to the student from the reader.

Choosing a Topic and Format for the Essay

In addition to selecting a topic and readers, students select one of five formats for the essay:

- Research Report
- Analysis of a Public Health Problem or Legislation Position Paper
- Structured Literature Review
- Evaluation of a Program/Project
- Research Proposal

Given the research/academic focus of MHS degree, the essay should include data to support the topic even if it is not a research report. Students may a public health concern or problem which may or may not be in their area of interest.

The student and their adviser must verify the knowledge and skills required for the selected essay format (see Essay Topic Form); for example, students conducting a systematic literature review for their essay must have taken a related course or work with a primary reader with methodological expertise in systematic reviews.

Steps to Complete the Essay

Step 1: Identify topic, format, and readers

Students should identify a reader whose research interests and expertise are in the topic area or methodology for the essay. Advisers are as a useful resource for discussing potential topics of interest and providing referrals to other faculty members in the department whose expertise may better match the proposed topic of the essay. Other resources for identifying potential readers are the Master's Director, academic coordinators and PFRH website.

Step 2: Discuss roles and responsibilities with readers

Once readers have been identified, all students should have a conversation with their readers so that each knows their responsibility for the essay. This discussion is especially important for readers outside PFRH and especially for third readers. A timeline should also be provided to the readers so that each is aware of when feedback should be provided. In general, readers should be given at least a minimum of one week to provide feedback to students. While not required, the student and readers also should discuss plans to publish the essay and the order of authors for the publication. Separate guidelines regarding authorship will be provided to the students.

Step 3: Determine Whether Essay Involves 'Human Subjects Research'

What is 'human subjects research'?

"Human subjects research' is broadly defined to include any activity involving humans that seeks to test a hypothesis or answer a scientific question. This activity can include secondary data analysis and research involving direct contact with participants. All students who plan to undertake human subjects' research must have IRB approval before working with human subjects' data or samples and before contacting human subjects if undertaking primary data collection. The BSPH IRB Office (publichealth.jhu.edu/offices-and-services/institutional-review-board-irb (https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/)) is charged with assuring that human subjects research studies conducted in the School comply with internal school policies and external regulations designed to protect human subjects.

After students have identified the data source(s) for research for their essay, they should complete the online IRB Worksheet (http://jhsph.us2.qualtrics.com/SE/?SID=SV_1GrF6WBUcNFZCV6) to determine additional steps (if any) needed for securing IRB approval for the essay, or documenting existing approval.

For additional questions about the IRB process, please visit: http://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/policies-and-guidance (http://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/policies-and-guidance/)

Step 4: Submit the Essay Topic Form

After students have selected an essay topic and format, the Essay Topic Form (https://courseplus.jhu.edu/core/index.cfm/go/ol:library.viewAll/coid/7100/) must be completed and signed by the student, academic adviser, and primary reader (if different from the adviser). This form will ensure that a student has the needed skills and knowledge to complete the essay. For example, if a student decides to conduct or propose an evaluation of a project or program for the essay, they must have either taken the 'Fundamentals of Program Evaluation' course or equivalent or had prior experience conducting an evaluation (formats listed under

“MSPH Essay and Presentation Guidelines” section). Students also must indicate whether IRB approval is needed for the essay.

Step 5: Register for 380.850 PFRH Master's Essay

Students should register for 3 to 6 credits with their reader using course number 380.850 in the 7th term and 3 to 5 credits in the 8th term. The number of credits is dependent on the amount of time students think they will spend on data collection, analysis, and writing during each term. Each credit is equivalent to approximately 3 hours of work per week.

Step 6: Submit Outline of Essay to Essay Reader

Students must submit an outline of the essay to the primary reader by the required deadline. The outline should contain all major headings and sub-headings of the specific essay format, with bulleted text on the content of each section. Primary readers must be given at least 1 week for feedback. .

Step 7: Submit First Draft of Essay to Essay Reader

Students must submit a complete draft of their essay to the reader by the 2nd week of the term in which the essay is to be completed. The reader should ensure that the draft contains all necessary elements of the essay in the standardized format and provide feedback to the student within 2 weeks of receiving the draft essay.

Step 8: Submit Second Draft of Essay to Readers

Second drafts must be submitted to both the primary (and second readers if needed) for final edits and recommendations by the required deadline. Readers should provide feedback to the student within 2 weeks of receiving the second draft. Students should submit a second draft that is of reasonable quality so that faculty can complete their review and provide comments in a timely manner. Students must incorporate comments from each reader in their final draft

Step 9: Submit Final Draft of Paper to Primary and Secondary Readers for Approval

Students must submit the final draft of their essay to their reader for approval and submission to the PFRH Academic Office. The readers must also submit the Reader Approval Form for the essay directly to the Office. If the reader is not from PFRH, then the second reader from PFRH must also sign the form. **If the essay is not approved by the reader by the deadline, students may not be able to participate in the oral presentation and may be in jeopardy of not graduating on time.** The reader may nominate the student’s essay for a distinction award if the quality of the essay is deemed to be excellent. The essay must be completed by the required deadline to be nominated.

Step 10: Oral Presentation of Essay

Each student is required to present their essay in a 10-minute PowerPoint presentation at a public seminar before the end of the 4th term. The student’s adviser is expected to review draft presentations prior to a practice session. A practice session will be scheduled approximately one week prior to the public seminar with input from doctoral students in the department. No video clips are allowed in the presentation.

Before students can present their essay, they must meet these conditions:

- Any existing incompletes in coursework must be rectified, with confirmation by the student’s adviser and academic coordinator,
- The essay has received final approval from first and second readers,
- All slides have been approved by the primary reader.

Failure to meet any of these conditions before the time of presentation will result in postponement of graduation.

Master’s Essay Deadlines

In preparation for completion of the MHS essay and presentation, students should contact their adviser and/or their primary reader no later than the 2nd term to discuss the essay topic and format of interest to them. MHS Essays are due early in the 4th Term. Students should begin work on their paper no later than the start of 3rd term, preferably before the term begins, and complete it early in the 4th term . Students should begin to consider essay topics and format early in the 2nd term. Essays will be presented at a public seminar in May, prior to graduation.

General Guidelines for All Essay Formats

The essay should be between 15-20 pages in length, excluding the title page, acknowledgements, tables, references/bibliography, and appendices.

All essays should have a title page including: the title, student’s name, readers (identifying the adviser), and date. Please see the template included in the *Appendices* section at the end of the handbook. Students may include an acknowledgments page (does not count toward the total).

Typing guidelines:

- Standard letter size paper 8 ½ by 11
- Double spaced/single sided (can single space block quotations)
- Type size no smaller than 11 pt.
- 1-inch margins all around
- Page numbering: title page, acknowledgments, etc., usually not numbered. Others numbered consecutively to the end of the paper
- Consistent format for all tables, figures, headings, and end notes and/or bibliography materials

Use APA or AMA format for references; see http://www.apastyle.org/ and http://www.amamanualofstyle.com/.

Essay Formats

The following are specific guidelines for each essay format. If a student prefers a format different from those specified below, they will need approval by their adviser and the Director of the Master’s Program.

Research Report

This format could be based on secondary data analysis (more typical) or primary data collection and analysis. IRB approval is needed for this format. The sections in this format essay are as follows:

- Structured abstract (1 page maximum)
  - Should include the following headings: Background, Objective (s) of study, Methods, Results, Conclusions
- Introduction (1 to 3 pages)
  - Importance of public health concern/problem
  - The magnitude of problem and population affected
  - Knowledge gaps and how the current study fills the gaps
- Methods (2 to 4 pages) *See Methods Section below*
  - Study design
  - Sample/participants

- Data Sources
- Measures/Topics [for quantitative analyses, include variable tables that specifies variables and how they are operationalized (e.g., categorical, ordinal, interval); for qualitative analyses, include table with domains and sample questions]
- Data analysis

- Results
- Discussion with Limitations and Implications for public health practice
- References
- Tables/figures

Analysis of a Public Health Problem or Legislation Position Paper:

Both formats examine a public health problem and recommend either a specific intervention strategy or policy/policies for addressing the problem. The analysis of a public health problem format offers solutions and recommendations related to intervention strategies, while a legislation position paper offers solutions and recommendations related to a policy or a set of policies. Both formats also identify concerns of key stakeholders. The sections in this essay format are as follows:

- Executive summary (2-3 pages) [Should include an Introduction and overview of public health problem and a brief discussion about how the problem could be addressed.]
- Statement of the problem (1 page)
- Magnitude of problem (1-2 pages)
- Causes/determinants of the problem (3-5 pages)
- Alternative policy strategies; and may also include an evaluation of a current policy and its impact along with the discussion of alternative policy strategies (4-6 pages)
- Specific recommendations (2-4 pages)

Structured Literature Review

This format analyzes an important public health problem by examining the empirical literature published on the problem. The sections in this essay format are as follows:

- Structured abstract (1 page maximum)
  - Should include the following headings: Background, Objective (s) of review, Methods, Results, Conclusions
- Introduction (1 to 3 pages)
  - Why is the topic an important public health problem?
  - What is the magnitude of problem and population affected?
  - What are the knowledge gaps and how does the current literature review contribute to field or fill the gaps?
- Methods (1 to 3 pages) *See Methods Section below*
  - Databases used
  - Search criteria
  - Analytic tables describing literature cited
- Results (3 to 6 pages)
- Discussion (3 to 5 pages)
- References
- Tables/figures

Evaluation of a Program/Project

This format involves evaluating/monitoring an existing public health program/project and could include a process, outcome, or impact evaluation. It may also be a proposed evaluation with additional details on the planned design and hypotheses to substitute for results. The sections in this essay format are as follows:

- Introduction (1 to 2 pages)
- Description of program/project (1 to 3 pages)
  - Need (what is the public health problem the program/project is trying to address?)
  - Target audiences (what are the groups/individuals who are targeted for the program/project?)
  - Activities of program/project
- Objectives of program/project (1 page)
- Logic Model of program/project (1 page)
- Evaluation Methodology (3 to 6 pages) *See Methods Section below*
  - Type of evaluation
  - Indicators
  - Data collection methods
  - Sampling strategy and sample size
  - Data analysis
- Anticipated use of results (2 to 5 pages)
- Timetable if proposed project (1 page)

Research Proposal

This essay format simulates a grant proposal for a research project. The sections in this essay format are as follows:

- Introduction (1 page)
- Statement of research question (1/2 page)
- Specific aims (1 page) o Background and significance (2-3 pages) o
- Methods (6-8 pages): Study design; Sampling/participants/sample size; Data Sources and variables; Methods of Analysis
- Strengths and Limitations (1 page)
- Budget and budget justification (1-2 pages)

Methods Section for Research Report, Structured Literature Review and Evaluation Formats

The information included in the Methods section should provide enough detail to the reader so that the quality of the study design, sampling methods, data sources, and measures can be clearly evaluated, even if the methods have been reported elsewhere. If the maximum essay length of 20 pages does not permit this level of detail, then students are encouraged to include an appendix describing additional details about the study methods. This appendix should be a supplement and not duplicate material already found in the body of the essay. Referring the reader to previous publications about the methods is not adequate.

Evaluation Criteria for MHS Essay Readers

- The student demonstrates the ability to successfully complete a cohesive and acceptable essay in the timeframe provided applying public health knowledge and skills.
- The student demonstrates the ability to make appropriate inference(s) and draw logical conclusion(s) to inform the field of public health.
- The essay is suitable for publication as a peer-reviewed journal or an organization/government report or is deemed of publishable quality.

Honors

Student essays that demonstrate excellence, as indicated by both the primary and secondary readers, can be nominated for an honorary 'distinction' award if the essay submission deadline is met. Nominations will be accepted from the primary reader. Student essays that receive a distinction award will be selected by the masters committee.

All PFRH MHS students must attain proficiency in the following three (3) competencies:

1. Applying statistical methods to address the health of populations.
2. Applying epidemiological methods to address the health of populations.
3. Applying ethical concepts and tools to population health research and practice.

Degree Program Competencies

All **PFRH MHS students** must attain proficiency in three MHS-specific research competencies:

1. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.
2. Evaluating and applying rigorous strategies for measurement and data collection across a range of study designs.
3. Translating and communicating research findings to researchers, policy makers, and the public.

Area of Interest Competencies

All **PFRH MHS students** must attain proficiency in five competencies:

1. Applying a life course framework to understand population health problems related to their area of interest, including multiple determinants framework for the health of populations across the life course.
2. Identifying and assessing the causes and consequences of population change using demographic methods.
3. Assessing the principal health concerns for the populations relevant to the area of interest , the associated population-based risk factors, and the relative impact of each risk factor.
4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in the relevant populations.
5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

CEPH Learning Objectives

All **PFRH MHS students** must attain proficiency in twelve CEPH Learning Objectives:

1. Explain public health history, philosophy and values
2. Identify the core functions of public health and the 10 Essential Services
3. Explain the role of quantitative and qualitative methods and sciences in describing and assessing a population's health
4. List major causes and trends of morbidity and mortality in the US or other community relevant to the school or program
5. Discuss the science of primary, secondary and tertiary prevention in population health, including health promotion, screening, etc.
6. Explain the critical importance of evidence in advancing public health knowledge
7. Explain effects of environmental factors on a population's health
8. Explain biological and genetic factors that affect a population's health
9. Explain behavioral and psychological factors that affect a population's health
10. Explain the social, political and economic determinants of health and how they contribute to population health and health inequities
11. Explain how globalization affects global burdens of disease
12. Explain an ecological perspective on the connections among human health, animal health and ecosystem health (e.g., One Health)

Population, Family and Reproductive Health, MHS Online

MHS Online

The MHS Online program in Population, Family and Reproductive Health is designed for part-time working professionals who desire skills to enable them to conduct research and evaluation in Maternal and Child Health (MCH). The program provides students with fundamental understanding of statistical methods and their application; epidemiology; research methods in a selected methodological area (epidemiologic methods, behavior sciences, or health services research and evaluation); leadership; expertise in MCH; and the application of life course perspectives on health.

The program is intended for students with one to two years of public health experience prior to entry. The specialized skills and knowledge gained during the program are essential for the workforce to promote the health of MCH populations.

The department is home to a Center of Excellence in MCH Education, Science, and Practice. Faculty are recognized experts in MCH in the areas of maternal, perinatal, child and adolescent health. Faculty are also experts in population studies and women's, sexual and reproductive health

PFRH has several centers and large initiatives linked to MCH that offer research and evaluation opportunities for students:

- Center for Adolescent Health (https://www.jhsph.edu/research/centers-and-institutes/center-for-adolescent-health/)
- Center for Early Life Origins of Disease (https://www.jhsph.edu/departments/population-family-and-reproductive-health/center-on-early-life-origins-of-disease/)
- Child and Adolescent Health Measurement Initiative (https://www.jhsph.edu/departments/population-family-and-reproductive-health/child-adolescent-health-measurement-initiative/)
- Early Childhood Services Research Program (https://www.jhsph.edu/departments/population-family-and-reproductive-health/early-childhood-services-research-program/)

- Women's, Infants, and Children's Program (https://www.jhsph.edu/departments/population-family-and-reproductive-health/women-infants-children/)

Our online coursework in MCH is highly rated, including MCH Legislation and Policies; Demographic Methods for Public Health; and Life Course Perspectives on Health along with other courses in specific areas of MCH such as Growth and Nutrition in MCH and Infant Mortality.

Students complete the program in 1-3 years, with 64 credits (4 full-terms equivalents of coursework) including: an MHS essay and presentation; five courses in MCH; and schoolwide and departmental requirements.

A certificate in MCH is available at the completion of the program.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Maternal and Child Health Requirements

Code	Title	Credits
Competency 1. Applying a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course		
PH.380.604	Life Course Perspectives on Health	4
Competency 2. Identifying and assessing the causes and consequences of population change using demographic methods		
PH.380.603	Demographic Methods for Public Health	4
Competency 3. Assessing the principal health concerns for populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor		
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children	3
OR		
PH.380.623	Adolescent Health and Development	3
Competency 4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in populations relevant to the area of interest		
PH.380.624	Maternal and Child Health Legislation and Programs	4
Competency 5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of relevant populations		
PH.380.642	Child Health and Development	3
OR		
PH.380.744	Nutrition and Growth in Maternal and Child Health	3
OR		
PH.380.623	Adolescent Health and Development	3
OR		
PH.380.747	International Adolescent Health	3
Electives:		
PH.380.740	Nutrition Programs, Policy and Politics in the United States: the Impact on Maternal, Child and Family Health	3
PH.380.762	HIV Infection in Women, Children, and Adolescents	4
PH.380.633	Promoting Equity for Adolescents and Emerging Adults: Problem-Solving Seminar	3

CEPH Learning Objectives

Code	Title	Credits
Competency 1. Explain public health history, philosophy and values		
PH.380.624	Maternal and Child Health Legislation and Programs	4
OR		
PH.552.601	Foundational Principles of Public Health	0.5
Competency 2. Identify the core functions of public Health and the 10 Essential Services		
PH.380.624	Maternal and Child Health Legislation and Programs	4
OR		
PH.552.601	Foundational Principles of Public Health	0.5
Competency 3. Explain the role of quantitative and qualitative methods and sciences in describing and assessing populations's health		
PH.380.603	Demographic Methods for Public Health	4
Competency 4. List major causes and trends of morbidity in the US or other community relevant to the school or program		
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children	3
OR		
PH.552.604	Causes and Trends in Morbidity and Mortality	0.5
Competency 5. Discuss the science of primary, secondary and tertiary prevention in population health, including health promotion, screening, etc.		
PH.340.721	Epidemiologic Inference in Public Health I	5
Competency 6. Explain the critical importance evidence in advancing public health knowledge		
PH.552.606	The Critical Importance of Evidence in Advancing Public Health Knowledge	0.5
Competency 7. Explain effects of environmental factors on a population's health		
PH.552.607	Essentials of Environmental Health	0.5
Competency 8. Explain biological and genetic factors that affect a population's health		
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
Competency 9. Explain behavioral and psychological factors that effect a population's health		
PH.380.604	Life Course Perspectives on Health	4
Competency 10. Explain the social, political and economic determinants of health and how they contribute to population health and health inequities		
PH.380.604	Life Course Perspectives on Health	4
Competency 11. Explain how globalization affects global burdens of disease		
PH.552.611	Globalization and Population Health	0.5
Competency 12. Explain an ecological perspective on the connections among human health, animal health and ecosystem health (e.g. One Health)		
PH.552.612	Essentials of One Health	0.5

Students may select from one of the three methods areas: Behavioral/Social Sciences; Epidemiology; or Health Services Research and Evaluation. The methods areas are along with the list of courses to meet the above competencies are listed below. Elective courses are also listed.
Behavioral/Social Science Specialty Core Requirements

Code	Title	Credits
Study Design (Choose 2 of 3)		
PH.410.635	Applications of innovative Methods in Local and Global Health Equity Research	4
PH.309.616	Introduction to Methods for Health Services Research and Evaluation I	2
PH.550.604	Qualitative Reasoning in Public Health	2
OR CHOOSE ONE		
PH.224.690	Qualitative Research Theory and Methods	3
PH.380.611	Fundamentals of Program Evaluation	4
Data Collection and Analysis (Choose 1)		
PH.340.727	Introduction to Health Survey Research Methods (AND must take 309.616)	2
PH.330.657	Statistics for Psychosocial Research: Measurement	4
PH.224.690	Qualitative Research Theory and Methods	3
Elective:		
PH.410.605	Fundamental Tools for Promoting Health Equity	3

Epidemiology Specialty Core Requirements

Code	Title	Credits
OPTION 1(340.601 Principles of Epidemiology) Professional Track:		
Study Design(Choose 1)		
PH.340.722	Epidemiologic Inference in Public Health II	4
Data Collection and Analysis (Choose 1)		
PH.340.770	Public Health Surveillance	3
PH.607.724	Applying Household Surveys to Primary Health Care Programs	3
PH.340.727	Introduction to Health Survey Research Methods ((AND must take 340.701))	2
OPTION 2		
Study Design and Data Analysis (take both)		
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5
Electives		
PH.340.645	Introduction to Clinical Trials	3
PH.340.861	Clinical Trials: Procedures, Design, and Interpretation of Results	3

Health Services Research Course Requirements

Code	Title	Credits
Study Design(Choose 1)		
PH.380.611	Fundamentals of Program Evaluation	4
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
PH.309.616	Introduction to Methods for Health Services Research and Evaluation I (AND must take 410.635)	2
Data Collection and Analysis (Choose 1)		
PH.330.657	Statistics for Psychosocial Research: Measurement	4
PH.340.727	Introduction to Health Survey Research Methods (AND must take 550.640)	2
PH.224.690	Qualitative Research Theory and Methods (AND must take 224.691)	3
Elective		
PH.312.693	Introduction to Comparative Effectiveness and Outcomes Research	3
PH.410.605	Fundamental Tools for Promoting Health Equity	3
PH.330.650	Methods in Implementation Science	3

School-wide Requirements

Students must choose the following courses for meeting school-wide competencies:

Code	Title	Credits
Competency #1: Applying statistical methods to address the health of populations		
PH.140.611	Statistical Reasoning in Public Health I	3
AND		
PH.140.612	Statistical Reasoning in Public Health II	3
Competency #2: Applying epidemiological methods to address the health of populations.		
PH.340.721	Epidemiologic Inference in Public Health I	5
Competency #3: Applying ethical concepts and tools to population health research and practice (Must take both courses)		
PH.550.860	Academic & Research Ethics at BSPH	
AND		
PH.221.616	Ethics of Public Health Practice in Developing Countries	2
Recommended Additional Biostatistics Courses		
PH.140.613	Data Analysis Workshop I	2
PH.140.614	Data Analysis Workshop II	2
PH.330.657	Statistics for Psychosocial Research: Measurement	4
PH.140.664	Causal Inference in Medicine and Public Health I	4

MHS Essay and Presentation Guidelines

The Master's Essay is a requirement for graduation from the MHS program in the Department of Population, Family, and Reproductive Health. The goal of the essay is for students to apply the skills and knowledge they have acquired during their academic program to a public health problem or concern of interest to them; a priority for the essay is that it has a research focus even if it does not involve data analysis. In addition to the written essay, students must give a 10-minute public presentation of their essay.

Students should begin thinking about essay topics and format at the end of the first term.

During the last two terms of studies, students will register for PFRH Master's Essay (380.850), designating their first reader as the instructor. Guidelines for credit hours are as follows:

- Term 3: 3-6 credits
- Term 4: 3-5 credits
- Students need to take a minimum of 3 credits of special studies each term for the essay

- If taking more than 3 credits student must meet weekly with 1st reader

The following sections provide detailed guidelines about the essay and presentation.

Essay Readers

Students must have at least one reader for their essay. The following guidelines must be applied:

- The students' reader must be PRFH faculty; faculty with a joint appointment in PFRH also can be a reader.
- Approval is required if a student wishes to select a reader who is not PFRH faculty; a rationale must be given for the choice of the reader and a second reader from PFRH must be selected.

Responsibilities of Students and Readers

Primary Reader

The essay reader has the overall responsibility of working with the student on the essay from the outline to final draft, and on preparation for the presentation. The faculty must be identified as the instructor for the special studies course for the PFRH Master's Essay (380.850). Students must submit outline and essay drafts to the primary reader on key components prior to the last two terms enrolled; these dates are indicated to assure timely completion of the essay.

Second Reader

A second reader may also provide comments on the essay at any stage. A second reader will seldom be needed but may be asked if a student is using data from a study conducted by the reader or at the agency of the reader. If a second reader is external to the department, students are strongly advised to discuss the roles and responsibilities of this reader with their primary reader. Second readers do not need to give approval for the essay, unless the first reader is external to PFRH.

The essay must meet the standards required by faculty of the School. However, student who are using data affiliated with the second reader or the second reader's agency should provide drafts of the essay to this reader and discuss when feedback will be given to the student from the reader.

Choosing a Topic and Format for the Essay

In addition to selecting a topic and readers, students select one of five formats for the essay:

- Research Report
- Analysis of a Public Health Problem or Legislation Position Paper
- Structured Literature Review
- Evaluation of a Program/Project
- Research Proposal

Given the research/academic focus of MHS degree, the essay should include data to support the topic even if it is not a research report. Students may a public health concern or problem which may or may not be in their area of interest.

The student and their adviser must verify the knowledge and skills required for the selected essay format (see Essay Topic Form); for example, students conducting a systematic literature review for their essay must have taken a related course or work with a primary reader with methodological expertise in systematic reviews

Steps to Complete the Essay

Step 1: Identify topic, format, and readers

Students should identify a primary reader whose research interests and expertise are in the topic area or methodology for the essay. Academic advisers must serve as a reader, but do not need to be the primary reader. Advisers serve as a useful resource for discussing potential topics of interest and providing referrals to other faculty members in the department whose expertise may better match the proposed topic of the essay. Other resources for identifying potential primary readers are the Masters Committee Director and Associate Director, academic coordinators, the PFRH website, and school faculty directory.

Step 2: Discuss roles and responsibilities with readers

Once readers have been identified, all students should have a conversation with their readers so that each knows their responsibility for the essay. This discussion is especially important for readers outside PFRH and especially for third readers. A timeline should also be provided to the readers so that each is aware of when feedback should be provided. In general, readers should be given at least a minimum of one week to provide feedback to students. While not required, the student and readers also should discuss plans to publish the essay and the order of authors for the publication. Separate guidelines regarding authorship will be provided to the students.

Step 3: Determine Whether Essay Involves 'Human Subjects Research'

What is 'human subjects research'?

"Human subjects research' is broadly defined to include any activity involving humans that seeks to test a hypothesis or answer a scientific question. This activity can include secondary data analysis and research involving direct contact with participants. All students who plan to undertake human subjects' research must have IRB approval before working with human subjects' data or samples and before contacting human subjects if undertaking primary data collection. The JHBSPH IRB Office (http://www.jhsph.edu/irb (http://www.jhsph.edu/irb/)) is charged with assuring that human subjects research studies conducted in the School comply with internal school policies and external regulations designed to protect human subjects.

After students have identified the data source(s) for research for their essay, they should complete the online IRB Worksheet (http://jhsph.us2.qualtrics.com/SE/?SID=SV_1GrF6WBUcNFZCV6) to determine additional steps (if any) needed for securing IRB approval for the essay, or documenting existing approval.

For additional questions about the IRB process, please visit: https://www.jhsph.edu/offices-and-services/institutional-review-board/faqs-by-topic/

Step 4: Submit the Essay Topic Form

After students have selected an essay topic and format, the Essay Topic Form (https://courseplus.jhu.edu/core/index.cfm/go/ol:library.viewAll/coid/7100/) must be completed and signed by the student, academic adviser, and primary reader (if different from the adviser). This form will ensure that a student has the needed skills and knowledge to complete the essay. For example, if a student decides to conduct or propose an evaluation of a project or program for the essay, they must have either taken the ‘Fundamentals of Program Evaluation’ course or equivalent or had prior experience conducting an evaluation (formats listed under “MSPH Essay and Presentation Guidelines” section). Students also must indicate whether IRB approval is needed for the essay.

Step 5: Register for 380.850 PFRH Master's Essay

Students should register for 3 to 6 credits of special studies with their **primary reader** using course number 380.850 in the last two terms of the degree program. The number of credits is dependent on the amount of time students think they will spend on data collection, analysis, and writing during each term. Each credit is equivalent to approximately 3 hours of work per week.

Step 6: Submit Outline of Essay to Primary Reader

Students must submit an outline of the essay to the primary reader by the required deadline. The outline should contain all major headings and sub-headings of the specific essay format, with bulleted text on the content of each section. Primary readers must be given at least 1 week for feedback. .

Step 7: Submit First Draft of Essay to Primary Reader

Students must submit a complete draft of their essay to the primary reader by the required deadline. The primary reader should ensure that the draft contains all necessary elements of the essay in the standardized format. Primary readers should provide feedback to the student within 2 weeks of receiving the draft essay.

Note: Students partnering with an organization that is expecting a report may need to write two separate documents in order to meet the expectations of the department’s essay.

Step 8: Submit Second Draft of Essay to Primary and Secondary Readers

Second drafts must be submitted to both the primary and second readers for final edits and recommendations by the required deadline. Both readers should provide feedback to the student within 2 weeks of receiving the second draft. Students should submit a second draft that is of reasonable quality so that faculty can complete their review and provide comments in a timely manner. Students must incorporate comments from each reader in their final draft.

Step 9: Submit Final Draft of Paper to Primary and Secondary Readers for Approval

Students must submit the final draft of their essay to both primary and secondary readers for approval and submission to the Academic Office. Both readers must also submit the Reader Approval Form (https://courseplus.jhu.edu/core/index.cfm/go/ol:library.viewAll/coid/7100/) for the essay directly to the Academic Office. ***If the essay is not approved by both readers by the deadline, students may not be able to participate in the oral presentation and may be in jeopardy of not graduating.***

The primary reader may nominate the student’s essay for a distinction award if the quality of the essay is deemed to be excellent. In order to be nominated, the essay must be completed by the required deadline.

Step 10: Oral Presentation of Essay

Each student is required to present their essay in a 10-minute PowerPoint presentation at a public seminar before the end of the last term enrolled. The student’s adviser is expected to review draft presentations prior to a practice session. A practice session will be scheduled approximately one week prior to the public seminar with input from doctoral students in the department. No video clips are allowed in the presentation.

Before students can present their essay, they must meet these conditions:

- Any existing incompletes in coursework must be rectified, with confirmation by the student’s adviser and academic coordinator,
- The essay has received final approval from first and second readers,
- All slides have been approved by the primary reader.

Failure to meet any of these conditions before the time of presentation will result in postponement of graduation.

Master’s Essay Deadlines

In preparation for completion of the MHS essay and presentation, students should contact their adviser and/or their primary reader prior to their last two terms enrolled to discuss the essay topic and format of interest. MHS Essays are due early in the last term enrolled. Students should begin work on their paper at the start of the last two terms enrolled, preferably before the term begins, and complete it early in the last term enrolled . Students should begin to consider essay topics and format early term prior to the last two terms enrolled. Essays will be presented at a public seminar in last term enrolled.

General Guidelines for All Essay Formats

The essay should be between 15-20 pages in length, excluding the title page, acknowledgements, tables, references/bibliography, and appendices.

All essays should have a title page including: the title, student’s name, readers (identifying the adviser), and date. Please see the template included in the *Appendices* section at the end of the handbook. You may include an acknowledgments page (does not count toward the total).

Typing guidelines:

- Standard letter size paper 8 ½ by 11
- Double spaced/single sided (can single space block quotations)
- Type size no smaller than 11 pt.
- 1-inch margins all around
- Page numbering: title page, acknowledgments, etc., usually not numbered. Others numbered consecutively to the end of the paper
- Consistent format for all tables, figures, headings, and endnotes and/or bibliography materials

Use APA or AMA format for references; see http://www.apastyle.org/ and http://www.amamanualofstyle.com/.

Essay Formats

The following are specific guidelines for each essay format. If a student prefers a format different from those specified below, they will need approval by their adviser and the Director of the Master’s Program.

Research Report

This format could be based on secondary data analysis (more typical) or primary data collection and analysis. IRB approval is needed for this format. The sections in this format essay are as follows:

- Structured abstract (1 page maximum)
  - Should include the following headings: Background, Objective (s) of study, Methods, Results, Conclusions
- Introduction (1 to 3 pages)
  - Importance of public health concern/problem
  - The magnitude of problem and population affected
  - Knowledge gaps and how the current study fills the gaps
- Methods (2 to 4 pages) *See Methods Section below*
  - Study design
  - Sample/participants
  - Data Sources
  - Measures/Topics [for quantitative analyses, include variable tables that specifies variables and how they are operationalized (e.g., categorical, ordinal, interval); for qualitative analyses, include table with domains and sample questions]
  - Data analysis
- Results
- Discussion with Limitations and Implications for public health practice
- References
- Tables/figures

Analysis of a Public Health Problem or Legislation Position Paper:

Both formats examine a public health problem and recommend either a specific intervention strategy or policy/policies for addressing the problem. The analysis of a public health problem format offers solutions and recommendations related to intervention strategies, while a legislation position paper offers solutions and recommendations related to a policy or a set of policies. Both formats also identify concerns of key stakeholders. The sections in this essay format are as follows:

- Executive summary (2-3 pages) [Should include an Introduction and overview of public health problem and a brief discussion about how the problem could be addressed.]
- Statement of the problem (1 page)
- Magnitude of problem (1-2 pages)
- Causes/determinants of the problem (3-5 pages)
- Alternative policy strategies; and may also include an evaluation of a current policy and its impact along with the discussion of alternative policy strategies (4-6 pages)
- Specific recommendations (2-4 pages)

Structured Literature Review

This format analyzes an important public health problem by examining the empirical literature published on the problem. The sections in this essay format are as follows:

- Structured abstract (1 page maximum)
  - Should include the following headings: Background, Objective (s) of review, Methods, Results, Conclusions
- Introduction (1 to 3 pages)
  - Why is the topic an important public health problem?
  - What is the magnitude of problem and population affected?
  - What are the knowledge gaps and how does the current literature review contribute to field or fill the gaps?
- Methods (1 to 3 pages) *See Methods Section below*
  - Databases used
  - Search criteria
  - Analytic tables describing literature cited
- Results (3 to 6 pages)
- Discussion (3 to 5 pages)
- References
- Tables/figures

Evaluation of a Program/Project

This format involves evaluating/monitoring an existing public health program/project and could include a process, outcome, or impact evaluation. It may also be a proposed evaluation with additional details on the planned design and hypotheses to substitute for results. The sections in this essay format are as follows:

- Introduction (1 to 2 pages)
- Description of program/project (1 to 3 pages)
  - Need (what is the public health problem the program/project is trying to address?)
  - Target audiences (what are the groups/individuals who are targeted for the program/project?)
  - Activities of program/project
- Objectives of program/project (1 page)
- Logic Model of program/project (1 page)
- Evaluation Methodology (3 to 6 pages) *See Methods Section below*
  - Type of evaluation
  - Indicators
  - Data collection methods
  - Sampling strategy and sample size
  - Data analysis
- Anticipated use of results (2 to 5 pages)
- Timetable if proposed project (1 page)

Methods Section for Research Report, Structured Literature Review and Evaluation Formats

The information included in the Methods section should provide enough detail to the reader so that the quality of the study design, sampling methods, data sources, and measures can be clearly evaluated, even if the methods have been reported elsewhere. If the maximum essay length of 20 pages does not permit this level of detail, then students are encouraged to include an appendix describing additional details about the study methods. This appendix should be a supplement and not duplicate material already found in the body of the essay. Referring the reader to previous publications about the methods is not adequate.

Evaluation Criteria for MHS Essay Readers

- The student demonstrates the ability to successfully complete a cohesive and acceptable essay in the timeframe provided applying public health knowledge and skills.
- The student demonstrates the ability to make appropriate inference(s) and draw logical conclusion(s) to inform the field of public health.
- The essay is suitable for publication as a peer-reviewed journal or an organization/government report or is deemed of publishable quality.

Honors

Student essays that demonstrate excellence, as indicated by both the primary and secondary readers, can be nominated for an honorary 'distinction' award if the essay submission deadline is met. Nominations will be accepted from the primary reader. Student essays that receive a distinction award will be selected by the masters committee.

All PFRH MHS students must attain proficiency in the following three (3) competencies:

1. Applying statistical methods to address the health of populations.
2. Applying epidemiological methods to address the health of populations.
3. Applying ethical concepts and tools to population health research and practice.

CEPH Learning Objectives

All **PFRH MHS students** must attain proficiency in the following twelve CEPH Learning Objectives:

1. Explain public health history, philosophy and values
2. Identify the core functions of public health and the 10 Essential Services
3. Explain the role of quantitative and qualitative methods and sciences in describing and assessing a population's health
4. List major causes and trends of morbidity and mortality in the US or other community relevant to the school or program
5. Discuss the science of primary, secondary and tertiary prevention in population health, including health promotion, screening, etc.
6. Explain the critical importance of evidence in advancing public health knowledge
7. Explain effects of environmental factors on a population's health
8. Explain biological and genetic factors that affect a population's health
9. Explain behavioral and psychological factors that affect a population's health
10. Explain the social, political and economic determinants of health and how they contribute to population health and health inequities
11. Explain how globalization affects global burdens of disease
12. Explain an ecological perspective on the connections among human health, animal health and ecosystem health (e.g., One Health)

Area of Interest Competencies

All **PFRH MHS students** must attain proficiency in five competencies in maternal and child health:

1. Applying a life course framework to understand population health problems related to their area of interest, including multiple determinants framework for the health of populations across the life course.
2. Identifying and assessing the causes and consequences of population change using demographic methods.
3. Assessing the principal health concerns for the populations relevant to the area of interest , the associated population-based risk factors, and the relative impact of each risk factor.
4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in populations relevant to the area of interest.
5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Population, Family and Reproductive Health, MSPH

MSPH Program Overview

The professional MSPH program in Population, Family and Reproductive Health is intended for individuals with a baccalaureate degree who are interested in issues related to the Department's areas of interest. Details regarding the areas of interest can be found in the student handbook. The department's current areas of interest include:

- Adolescent Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/adolescent-health/)
- Child Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/child-health/)
- Maternal, Fetal, and Perinatal Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/maternal-fetal-perinatal-health/)
- Population and Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/population-and-health/)
- Women's, Sexual and Reproductive Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/women-sexual-and-reproductive-health/)

The two-year curriculum allows students to integrate coursework in life course, population, program management, quantitative methods and core areas with practical knowledge and skills. Additional courses may include program design and evaluation, advocacy, policy, and qualitative methods among others. The two-year curriculum is intended for students with less than 2 years of public health work experience.

MSPH students participate in a 680 hour supervised field placement in domestic and/or international settings during terms one and two of the second year. The field placement can start anytime after the end of term 4 of the first year. The field placement provides the opportunity to integrate formal classroom teaching with practical experience in the student's chosen field. There is no part-time option available for the two-year MSPH program.

Components of the MSPH program include a set of core departmental courses that provide a common theoretical foundation for the work of the entire department. These courses cover biological/developmental, demographic and social science foundations. MSPH students in Population, Family and Reproductive Health also complete a core set of courses determined by the area of study they have selected. All professional MSPH students within the department complete an MSPH Essay and Presentation. The Essay and Presentation are culminating experiences for which students apply newly honed skills and put their academic and experiences in perspective within the broader context of public health.

Graduates of the MSPH program in PFRH go on to careers in organizations such as government ministries, nongovernmental health organizations, state and local health agencies, managed health care organizations, research institutions, health care delivery organizations, advocacy groups and academic institutions.

BA/MSPH

The Johns Hopkins University Krieger School of Arts and Sciences, in conjunction with the Johns Hopkins Bloomberg School of Public Health, offers a major in Public Health Studies for undergraduates interested in careers in public health. The program focuses on the prevention of illness, disease, and health care inequalities, drawing on fundamental knowledge from biology and the social and behavioral sciences.

To build on the existing partnerships of BSPH with KSAS for dual bachelors/master's degree programs, the Department of Population, Family, and Reproductive Health proposes offering early graduate school admission to JHU juniors/seniors. All majors are welcome. Admission will serve as entry to the two-year professional MSPH degree program in the Department.

The MSPH degree provides students with a broad foundation in public health as well as coursework concentrated in the six areas of interest listed above; the program also includes real-world experience in the form of a field placement. The two-year MSPH degree program includes a full year of coursework, a minimum of 680 hours of a full-time field placement, and completion of an original essay and a public presentation of the essay content. The essay can take many forms, including that of a research report, literature review, policy analysis, or grant proposal. Students must begin their field placement during the summer term following the first year of coursework. Up to 16 credits of public health coursework completed inter-divisionally at JHSPH toward their bachelor's degree may also apply toward their 128 credits required for an MSPH degree.

Applications for the MSPH dual degree programs are accepted any time until July 1st between a student's junior and senior years. Students must be accepted prior to the start of their senior year classes. Applications are submitted through SOPHAS EXPRESS. GRE test scores are optional. Students need to achieve a GPA of 3.3 or higher at the time of their application. Admission is contingent on students maintaining the same or higher GPA during their senior year.

Once students complete the bachelor's degree and meet all conditions to enter the MSPH degree program, admitted students will be automatically enrolled in JHSPH starting the fall after completing the bachelor's degree. Students admitted into the dual degree program will receive co-advising from both Schools during their senior year as part of this unique experience.

MSPH Course Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

MSPH students are required to meet schoolwide requirements, CEPH (Council on Education for Public Health) Learning Objectives (12), CEPH requirements (22), departmental requirements, and area of interest competencies (5). During the first year of the MSPH degree program, students will be required to successfully complete all five courses in their area of interest before starting field placement.

Schoolwide Requirements

Students must take PH.550.860, and either PH.306.663 or PH.306.665

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (Terms 1,2,3,4)	0
AND		
PH.306.663	Legal and Ethical Issues in Health Services Management	3
OR		
PH.306.665	Research Ethics and integrity: U.S. and International Issues	3

CEPH Learning Objectives

Many 0.5 and 1.0 credit 552 courses are listed for only one term but may be available in another term, but are not yet listed in the course catalogue as such.

1. Explain public health history, philosophy, and values.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.552.601	Foundational Principles of Public Health (Term 1)	0.5

2. Identify the core functions of Public Health and the 10 Essential Services.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.552.601	Foundational Principles of Public Health (Term 1)	0.5

3. Explain the role of quantitative and qualitative methods and sciences in describing and assessing a population's health.

Code	Title	Credits
Must take 380.603 or 552.602; and 552.603 or 224.690		
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4
Or		
PH.552.602	The Role of Quantitative Methods in Public Health (Term 2)	0.5
AND		
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	.5
OR		
PH.224.690	Qualitative Research Theory and Methods	3

4. List major causes and trends of morbidity and mortality in the US or other community relevant to the school or program.

Code	Title	Credits
Select one of the following:		
PH.380.600	Principles of Population Change (Term 2)	4
OR		
PH.552.604	Causes and Trends in Morbidity and Mortality	0.5

5. Discuss the science of primary, secondary, and tertiary prevention in population health, including health promotion, screening, etc.

Code	Title	Credits
Select one of the following:		
PH.340.721	Epidemiologic Inference in Public Health I (Terms 1,3)	5
OR		
PH.340.751	Epidemiologic Methods 1	5
OR		
PH.552.605	The Science of Primary Secondary and Tertiary Prevention in Population Health	0.5

6. Explain the critical importance of evidence in advancing public health knowledge.

Code	Title	Credits
Select one of the following:		
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	4
OR		
PH.552.606	The Critical Importance of Evidence in Advancing Public Health Knowledge	0.5

7. Explain effects of environmental factors on a population's health.

Code	Title	Credits
Select one of the following:		
PH.380.616	Child Health Epidemiology (Term 4)	3
OR		
PH.552.607	Essentials of Environmental Health	0.5

8. Explain biological and genetic factors that affect a population's health.

Code	Title	Credits
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease (Term 2)	4

9. Explain behavioral and psychological factors that affect a population's health.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4
OR		
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5

10. Explain the social, political, and economic determinants of health and how they contribute to population health and health inequities.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4
OR		
PH.552.610	The Social Determinants of Health	0.5

11. Explain how globalization affects global burdens of disease.

Code	Title	Credits
Select one of the following:		
PH.380.600	Principles of Population Change (Term 2)	4
OR		
PH.552.611	Globalization and Population Health	0.5

12. Explain an ecological perspective on the connections among human health, animal health, and ecosystem health (e.g., One Health).

Code	Title	Credits
PH.552.612	Essentials of One Health	0.5

CEPH Requirements

C1. Apply epidemiological methods to the breadth of settings and situations in public health practice.

Code	Title	Credits
PH.340.721	Epidemiologic Inference in Public Health I	5

C2a. Select quantitative data collection methods appropriate for a given public health context.

Code	Title	Credits
Select one of the following:		
PH.340.721	Epidemiologic Inference in Public Health I	5
OR		
PH.380.611	Fundamentals of Program Evaluation	4

C2b. Select qualitative data collection methods appropriate for a given public health context.

Code	Title	Credits
Select one of the following:		
PH.224.690	Qualitative Research Theory and Methods (Terms 1,3)	3
PH.550.604	Qualitative Reasoning in Public Health (Terms 1,2)	2
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (Term 1)	0.5
PH.380.611	Fundamentals of Program Evaluation	4

C3a. Analyze quantitative data using biostatistics, informatics, computer-based programming and software, as appropriate.

Code	Title	Credits
Must take either both courses in the 140.611 series, or all three courses in the 140.621 series		
PH.140.611	Statistical Reasoning in Public Health I	3
AND		
PH.140.612	Statistical Reasoning in Public Health II	3
OR		
PH.140.621	Statistical Methods in Public Health I	4
AND		
PH.140.622	Statistical Methods in Public Health II	4
AND		
PH.140.623	Statistical Methods in Public Health III	4

C3b. Analyze qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate

Code	Title	Credits
Select one of the following:		
PH.224.690	Qualitative Research Theory and Methods	3
PH.550.604	Qualitative Reasoning in Public Health	2
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	.5

C4. Interpret results of data analysis for public health research, policy, or practice.

Code	Title	Credits
Must take either both courses in the 140.611 series, or all three courses in the 140.621 series:		
PH.140.611	Statistical Reasoning in Public Health I	3
AND		
PH.140.612	Statistical Reasoning in Public Health II	3
OR		
PH.140.621	Statistical Methods in Public Health I	4
AND		
PH.140.622	Statistical Methods in Public Health II	4
AND		
PH.140.623	Statistical Methods in Public Health III	4

C5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings.

Code	Title	Credits
PH.380.624	Maternal and Child Health Legislation and Programs	4

C6. Discuss the means by which structural bias, social inequalities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health	4

C7. Assess population needs, assets and capacities that affect communities' health.

Code	Title	Credits
Select one of the following:		
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth	3
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	4
PH.222.642	Assessment of Nutritional Status	3
PH.410.620	Program Planning for Health Behavior Change	3

C8. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs.

Code	Title	Credits
Select one of the following:		
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth	3
PH.380.665	Family Planning Policies and Programs	4
PH.380.771	Understanding and Changing International Reproductive Health Policy	3

C9. Design a population-based policy, program, project, or intervention.

Code	Title	Credits
Select one of the following:		
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth	3
PH.380.665	Family Planning Policies and Programs	4

C10. Explain basic principles and tools of budget and resource management.

Code	Title	Credits
PH.552.622	Creating, Implementing and Monitoring Budgets for Projects and Programs	1
OR		
PH.312.603	Fundamentals of Budgeting and Financial Management	3

C11. Select methods to evaluate public health programs

Code	Title	Credits
PH.380.611	Fundamentals of Program Evaluation	4

C12. Discuss multiple dimensions of the policy-making process, including the role of ethics and evidence.

Code	Title	Credits
Select one of the following:		
PH.380.771	Understanding and Changing International Reproductive Health Policy	3
PH.380.624	Maternal and Child Health Legislation and Programs	4

C13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs	4
PH.380.665	Family Planning Policies and Programs	4
PH.300.615	The Tools of Public Health Practice	1

C14. Evaluate policies for their impact on public health and health equity.

Code	Title	Credits
Select one of the following:		
PH.380.740	Nutrition Programs, Policy and Politics in the United States: the Impact on Maternal, Child and Family Health	3
PH.380.771	Understanding and Changing International Reproductive Health Policy	3

C15. Evaluate policies for their impact on public health and health equity.

Code	Title	Credits
Select one of the following:		
PH.380.771	Understanding and Changing International Reproductive Health Policy	3
PH.380.667	Women's Health Policy	3

C16. Apply principles of leadership, governance, and management, which include creating a vision, empowering others, fostering collaboration, and guiding decision making.

Code	Title	Credits
Select one of the following:		
PH.380.880	Lessons in Leadership: Applications for Population, Family and Reproductive Health I (must take all 4 courses in the series that include 380.880, 380.881, 380.882, and 380.883)	1
OR		
PH.410.622	Strategic Leadership Principles and Tools for Health System Transformation in Developing Countries Students required to attend a one week in-person seminar in January	4

C17. Apply negotiation and mediation skills to address organizational and community challenges.

Code	Title	Credits
Must take both courses:		
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals	0.5
AND		
PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals	0.5

C18. Select communication strategies for different audiences and sectors.

Code	Title	Credits
Select one of the following:		
PH.410.650	Introduction to Persuasive Communications: Theories and Practice	4
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication	3
PH.410.654	Health Communication Programs I: Planning and Strategic Design If select, 410.654 must also take 410.655	4
PH.410.655	Health Communication Programs II: Implementation and Evaluation If select, 410.654 must also take 410.655	4
PH.301.645	Health Advocacy	3
PH.223.802	Global Disease Epidemiology and Control Program Seminar 2	1
PH.221.802	Health Systems Graduate Seminar 2	1
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	4
PH.222.641	Principles of Human Nutrition in Public Health	4
PH.222.654	Food, Culture, and Nutrition	4

C19. Communicate audience-appropriate public health content, both in writing and through oral presentation.

Code	Title	Credits
Select one of the following:		
PH.301.645	Health Advocacy	3
OR		
PH.260.720	Communications Primer for the Public Health Sciences	1

C20. Describe the importance of cultural competence in communicating public health content.

Code	Title	Credits
Select one of the following:		
PH.301.645	Health Advocacy	3
OR		
PH.260.720	Communications Primer for the Public Health Sciences	1

C21. Perform effectively in interprofessional teams

Code	Title	Credits
PH.552.625	Building Collaborations Across Sectors to Improve Population Health	0.5
AND Must Participate in an Interprofessional Education Event		

C22. Apply systems thinking tools to a public health issue.

Code	Title	Credits
PH.221.654	Systems Thinking in Public Health: Applications of Key Methods and Approaches	3
OR		
PH.552.626	Systems Thinking: Concepts and Methods	0.5

Departmental Requirements

Students must successfully complete master's seminar course in year one, field placement in year two, and master's essay in year two.

Code	Title	Credits
PH.380.816	SS/R: Population, Family and Reproductive Health Master's Seminar This course is taken for 4 consecutive terms (1-4) during year one of MSPH degree program.	1

Code	Title	Credits
PH.380.810	Field Placement in Population, Family and Reproductive Health This course is taken in term 1 of year two	16
AND		
PH.380.810	Field Placement in Population, Family and Reproductive Health This course is taken in term 2 of year two	16

Code	Title	Credits
PH.380.850	PFRH Master's Essay This course is taken in term 3 of year two	3 - 6
AND		
PH.380.850	PFRH Master's Essay This course is taken in term 4 of year two	3 - 6

Areas of Interest Requirements

Students must take a minimum of five required courses from one of the department's areas of interest. The areas of interest include the following:

- Adolescent Health (p. 449)
- Child Health (p. 449)
- Maternal, Fetal and Perinatal Health (p. 450)
- Population and Health (p. 451)
- Women's, Sexual and Reproductive Health (p. 451)

Within a given area of interest, ***a unique course*** must be selected for each of the following competencies:

1. Applying a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course;
2. Identifying and assessing the causes and consequences of population change using demographic methods;
3. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor;
4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in populations relevant to the area of interest;
5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of relevant populations.

Courses taken to meet the 12 CEPH objectives can also be used to meet the area of interest competencies and CEPH competencies.

If a student chooses to complete a second area of interest, courses may be double counted across their primary and secondary areas of interest; students must, however, complete the course requirements for at least one area of interest. The department encourages students to select electives from other areas of interest to enhance their breadth and depth of understanding in their chosen and other areas of interest. Areas of interest and their eligible courses are listed in the following tables.

Adolescent Health

Competency

1. Applying a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change using demographic methods;

Code	Title	Credits
Select one of the following:		
PH.380.600	Principles of Population Change (Term 2)	4
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

3. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

Code	Title	Credits
Select one of the following:		
PH.380.623	Adolescent Health and Development (Term 3)	3
PH.380.747	International Adolescent Health (Term 4)	3

4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2) [1]	4
PH.380.665	Family Planning Policies and Programs (Term 3)	4

[1] This course cannot be used to fulfill both the CEPH Requirements and Area of Interest Requirement.

5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
PH.380.725	The Social Context of Adolescent Health and Development (Term 4)	3

Electives

Code	Title	Credits
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond (Term 2)	3
PH.380.721	Schools and Health (Term 2)	3
PH.380.762	HIV Infection in Women, Children, and Adolescents (Term 4)	4
PH.380.761	Sexually Transmitted Infections in Public Health Practice (Term 4)	4
PH.380.625	Evidence and Opportunities to Mitigate Childhood Adversity and Promote Well-Being (Term 3)	3
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth (Term 3)	3
PH.380.771	Understanding and Changing International Reproductive Health Policy (Term 4)	3
PH.380.749	Adolescent Sexual and Reproductive Health (Term 4)	3

Child Health

Competency

1. Applying a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change using demographic methods;

Code	Title	Credits
Select one of the following:		
PH.380.600	Principles of Population Change (Term 2)	4

PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

3. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

Code	Title	Credits
PH.380.616	Child Health Epidemiology (Terms 3,4)	3

4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2) [1]	4
PH.380.661	Clinical Aspects of Maternal and Newborn Health (Terms 2,3)	3

1 This course cannot be used to fulfill both the CEPH Requirements and Area of Interest Requirement.

5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.642	Child Health and Development (Term 2)	3
PH.380.744	Nutrition and Growth in Maternal and Child Health (Term 1)	3

Electives

Code	Title	Credits
PH.223.663	Infectious Diseases and Child Survival (Term 3)	3
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth (Term 3)	3
PH.330.640	Childhood Victimization: A Public Health Perspective (Term 4)	3
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (Term 4)	3
PH.380.762	HIV Infection in Women, Children, and Adolescents (Term 4)	4
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.625	Evidence and Opportunities to Mitigate Childhood Adversity and Promote Well-Being (Term 3)	3
PH.380.740	Nutrition Programs, Policy and Politics in the United States: the Impact on Maternal, Child and Family Health (Term 2)	3
PH.380.721	Schools and Health (Term 2)	3
PH.380.742	Family - Health, Public Health and Policy (Term 3)	3
PH.380.623	Adolescent Health and Development (Term 2)	3
PH.410.752	Children, Media, and Health (Term 3)	3

Maternal, Fetal and Perinatal Health
Competency

1. Applying a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course;

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change using demographic methods;

Code	Title	Credits
Select one of the following:		
PH.380.600	Principles of Population Change (Term 2)	4
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

3. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

Code	Title	Credits
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	4

4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in the relevant.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2) [1]	4
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.661	Clinical Aspects of Maternal and Newborn Health (Term 3)	3

1 This course cannot be used to fulfill both the CEPH Requirements and Area of Interest Requirement.

5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.655	Social and Economic Aspects of Human Fertility (Term 1)	3
PH.380.744	Nutrition and Growth in Maternal and Child Health (Terms 1,2)	3

Electives

Code	Title	Credits
PH.380.662	Critiquing the Research Literature in Maternal, Neonatal, and Reproductive Health (Term 2)	4
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (Term 4)	3
PH.380.740	Nutrition Programs, Policy and Politics in the United States: the Impact on Maternal, Child and Family Health (Term 2,3)	3

PH.120.620	Fundamentals of Reproductive Biology (Term 1)	3
PH.120.620	Fundamentals of Reproductive Biology (Term 2)	3

Population and Health

Competency

1. Applying a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course;

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change using demographic methods;

Code	Title	Credits
Select one of the following:		
PH.380.600	Principles of Population Change (Term 2)	4
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

3. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

Code	Title	Credits
Select one of the following:		
PH.380.655	Social and Economic Aspects of Human Fertility (Term 2) Course cannot be used to meet two area of interest competencies	3
PH.380.750	Migration and Health: Concepts, Rates, and Relationships (Term 3) Course cannot be used to meet two area of interest competencies	3

4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in the relevant;

Code	Title	Credits
Select one of the following:		
PH.380.665	Family Planning Policies and Programs (Term 3)	4
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2) [1]	4
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4

[1] This course cannot be used to fulfill both the CEPH Requirements and Area of Interest Requirement.

5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.655	Social and Economic Aspects of Human Fertility (Term 2) Course cannot be used to meet two area of interest competencies	3
PH.380.750	Migration and Health: Concepts, Rates, and Relationships (Term 3) Course cannot be used to meet two area of interest competencies	3

Electives

Code	Title	Credits
PH.380.635	Urban Health in Contemporary America (Term 4)	4
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	4
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (Term 4)	3
PH.380.767	Couples and Reproductive Health (variable credit, Term 1)	3
PH.380.670	Religion, Spirituality and Public Health (Term 3)	3

Women's, Sexual and Reproductive Health

Competency

1. Applying a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change using demographic methods;

Code	Title	Credits
Select one of the following:		
PH.380.600	Principles of Population Change (Term 2)	4
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

3. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

Code	Title	Credits
Select one of the following:		
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	4
PH.380.666	Women's Health (Term 3)	3

4. Evaluating strategies to promote population health, including health services and systems delivery strategies used to address health concerns in the relevant.

Code	Title	Credits
Select one of the following:		
PH.380.665	Family Planning Policies and Programs (Term 3)	4
PH.380.771	Understanding and Changing International Reproductive Health Policy (Term 4)	3
PH.380.667	Women's Health Policy (Term 4)	3
PH.380.768	Selected Topics in Women's Health and Women's Health Policy (Term 1)	4
PH.380.760	Clinical Aspects of Reproductive Health (Term 3)	3

5. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.655	Social and Economic Aspects of Human Fertility (Term 2)	3

PH.380.668	International Perspectives on Women, Gender, and Health (Term 4)	3

Electives

Code	Title	Credits
PH.380.662	Critiquing the Research Literature in Maternal, Neonatal, and Reproductive Health (Term 2)	4
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond (Term 2)	3
PH.380.749	Adolescent Sexual and Reproductive Health (Term 4)	3
PH.380.762	HIV Infection in Women, Children, and Adolescents (Term 4)	4
PH.380.623	Adolescent Health and Development (Term 3)	3
PH.410.683	Global Perspectives on LGBT Health (Term 3)	3
PH.340.629	The Epidemiology of LGBTQ Health	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies (Term 4)	3
PH.380.628	Public Health Perspectives On Abortion (Term 4)	3
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.410.657	Communication Strategies For Sexual Risk Reduction (Term 4)	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.767	Couples and Reproductive Health (variable credit, Term 1)	3
PH.120.620	Fundamentals of Reproductive Biology (Term 2)	3
PH.380.761	Sexually Transmitted Infections in Public Health Practice (Term 4)	4

Field Placement Guidelines

The field placement is an integral part of the MSPH Program in the Department of Population, Family and Reproductive Health. It provides an opportunity for the student to enhance their educational experience by integrating basic understanding of concepts, methods, and skills developed during the first year of the MSPH academic program with the experience of full-time work in an appropriate practice setting. It also provides the opportunity to successfully complete a specified activity and/or product as stated in the field placement objectives.

MSPH students are required to complete a two-term field placement for a minimum of 4 months full-time, or no less than 680 full time work hours. Students must be in good academic standing and have completed the following course work: PFRH Area of Interest courses (5 courses), Quantitative Methods: Biostatistics (2-4 courses), Quantitative Methods: Epidemiology (1 course), Public Health and Health Care Systems Interpersonal Practice (2-3 courses), and Negotiation/Mediation (1 course) -as listed in the CEPH requirements to proceed to the field placement portion of the program.

During terms 5 and 6 of the program, students will register for PFRH Field Placement (380.810) for 16 credits each term. Students are expected to be on campus in the 7th and 8th terms of their academic program when they take courses and complete their culminating Master's Essay and Presentation. Students who wish to extend their field placement must petition the Masters Committee for approval.

Structure of the Field Placement

The field placement may begin right after the end of term 4 of the first year and is usually completed on or before the end of term 2 of the second year. The duration of the placement should be a minimum of four (4) months or 680 full time work hours. This time includes any holidays which are normally observed by the field placement sponsor. To comply with the School's academic calendar, a four-month field placement should begin no later than August 1st.

The student is expected to function as a productive staff member throughout the field placement. While it is considered to be equitable for the student to be properly compensated for their contribution in the form of a salary, stipend, or other such financial support, not all field placements are paid positions.

If the field placement is outside the U.S., a Graduate Student Study Release (http://www.jhsph.edu/student_affairs/TravelAbroad.html) form must be completed and submitted to the Academic Coordinator. Students should also consult the section on International Travel in Part I the student handbook for further requirements about international travel.

Arranging the Placement

The process of arranging the field placement will vary; however, arrangements will be considered formalized when:

- A Work Agreement has been completed and signed by the student, academic adviser and preceptor.
- All arrangements associated with compensation have been agreed on by all principals involved, and contracts pursuant thereto have been completed and filed with the proper financial offices and office.

Selection of the Field Placement Site

Students can seek a field placement in many different types of health and/or welfare organizations. These may include national and state program offices, nonprofit voluntary organizations, or public as well as private agencies with a public health or population focus. The field placement can be domestic, international, or both. Field placement opportunities can be found by searching the PFRH MSPH 1st Year Cohort site on CoursePlus, which includes several possible and available field placement opportunities as well as on the my.jhsph website.

Field placements on the my.jhsph website are organized by domestic and international locations, and by specific location. If a student has a clear sense of where s/he would like to do the field placement, s/he can click on the location and see the various field placements associated with the location. If students are less clear about location for their field placement(s), another starting point is the Popular Field Placements list of previous field placements that have received positive feedback from students.

Another way of finding a field placement is to speak with faculty who share common interests. Some former students have found field placements by working on research projects with a faculty member from the School of Public Health or School of Medicine. Getting advice and assistance from an academic adviser is another useful way of finding opportunities for field placements.

Regardless of how you find your field placement, the following minimum criteria should be followed:

- The preceptor has the time and inclination to supervise the student to facilitate a meaningful learning and work experience;
- The activities and final product are clearly defined;
- Adequate support, supplies, and space are provided for the student; and
- A Work Agreement is signed by preceptor and submitted to the MSPH CoursePlus site.

Student Responsibilities

Students are expected to take an active role in identifying potential field placement opportunities. This approach is important, as it also prepares students for acquiring skills needed to obtain a job after graduation. Students should ensure that their resumes or curriculum vitae is updated and may also be required to write a cover letter to the organization describing the skills they can offer to the organization. Students are expected to show a high level of professionalism when communicating with potential preceptors and discussing the potential scope of work for the field placement. During the course of securing and working on the field placement, students need to be in regular contact with their faculty adviser. The Field Placement Coordinator and the MSPH Academic Program Coordinator also need to be informed about plans a student has for securing a field placement. Students must complete a Work Agreement with their preceptor and approval from their Academic Adviser before the beginning of the Field Placement. To receive credit for the field placement, students must submit a Work Agreement to the MSPH CoursePlus website, and an evaluation form must be completed by the student as well as the preceptor. Students are responsible for assuring that all forms are completed.

If a student plans to either analyze or collect data as part of the field placement, please consult the IRB Website (https://www.jhsph.edu/offices-and-services/institutional-review-board/) and discuss related matters with their advisers.

Field Placement Preceptor

The preceptor supervises the student's progress in completing all goals, objectives, and associated activities throughout the field placement. In addition, the preceptor needs to be available to meet with the student on a regular basis and, when necessary, advise the MSPH Program Director, Dr. Kristin Mmari (kmmari1@jhu.edu), of any problems that may arise. The preceptor is required to submit a performance form at the completion of the field placement.

Faculty Adviser

The faculty adviser may be the primary contact to help identify potential field placement sites. Other faculty and the MSPH Academic Program Coordinator are also available to consult on additional recommendations. The faculty adviser approves the decision about the most appropriate field placement experiences for their advisee. The adviser confers as needed with both the student and the preceptor during the field placement.

PFRH Field Placement Coordinator

The PFRH Field Placement Coordinator is available to discuss the type of field placement of interest to students and to help locate appropriate field placement opportunities. Meeting with the field placement coordinator is particularly important if the faculty adviser does not have contacts in the student's area of interest. In addition, the field placement coordinator can assist students in completing the necessary paperwork and advise them of outside funding sources and deadlines.

Forms for Field Placement

The forms that are required for the field placement include:

- Work Agreement (this is the agreement between the student and the preceptor). The work agreement describes the learning objective of the field placement experience and the deliverables. This is completed prior to the start of the field placement
- Student Evaluation of Preceptor. This is completed by the student at the conclusion of the field placement.
- Preceptor Evaluation of Student. This is completed by the preceptor at the conclusion of the field placement.
- Student evaluation of field placement. This is a written report completed by the student at the conclusion of the field placement.

The Work Agreement

The Work Agreement is the form needed to confirm a field placement; it must be submitted before the field placement begins. It contains important information, including the student's contact information, the contact information of the preceptor, and a list of tasks (referred to as 'work objectives') that the student is expected to perform as part of the field placement. It is important that students carefully define the work objectives, keeping in mind feasibility and realistic expectations.

"Well specified" work objectives describe realistic objectives that are feasible within the time frame of a typical field placement. They also do not over-commit students to a certain task, unlike those found under above the 'vague or poorly specified' work objectives. Avoid using terms and phrases such as 'complete all' or 'conduct all' – as these phrases may create unrealistic expectations, which if not met, may result in poor evaluations. The percentage of time for a given objective also should be realistic; for example, the tasks listed as vague or poorly specified can be very time-consuming; time spent on the task should be clearly in line with the ability to complete them.

To ensure the work agreement is realistic and feasible, students are expected to discuss their work agreements with their advisers and/or the academic coordinator as well as the Field Placement Coordinator.

Confirming the Field Placement

- If you are considering more than one opportunity, inform the contact person at each site about when you will let them know of your decision; **there may be others waiting for the same opportunity.**
- **After you have informed an organization that you have decided not to work with them**, **send a letter thanking them for their time**. If your first choice falls through for some reason, you may have another option.
- **For the placement you select, send a letter** to the individuals with whom you will be working thanking them for their time, conveying your enthusiasm for their field placement offer, and indicating that you will speak with your adviser and be in touch with them about the next steps in setting up the field placement.
- **After speaking with your adviser, send a letter to your preceptor reviewing the steps in finalizing the field placement. The next step is theirs**. It is helpful to include a sample Work Agreement form so the preceptor knows the general guidelines and parameters. The objective is to assure that both students and preceptors have the same understanding of the scope of work. This up-front negotiation with written confirmation avoids later problems. This approach also demonstrates that you are well organized, focused, and follow through on tasks.
- The letter can include a **draft of your objectives for the field placement**. Sharing the objectives will avoid misunderstanding of your proposed contribution, and how you expect to benefit from the experience.
- The letter should include a writing sample, if applicable and if you have not yet provided one, and a d**etailed description of the MSPH**

Field placement, including Preceptor Evaluation Guidelines for the MSPH field placement. As noted above, students are required to submit a signed Work Agreement Form before beginning the field placement (sometimes called a “contract”).
When the work objectives have been completed and agreed on, prepare and sign 2 copies of the Work Agreement for the preceptor to also sign. The preceptor should retain one copy and the other copy must be uploaded to CoursePlus or sent to the Academic Program Manager, via email, for your file.

- **If you sign a contract with an organization**, it represents the official documentation that you have agreed on the scope of work with the organization, and, therefore, must abide with the terms of the contract. If you are not sure about signing such a document, it is critical that you speak to either your academic adviser, the Director of the MSPH program, the MSPH Academic Program Coordinator, or the Field Placement Coordinator for further assistance.

During the Field Placement

- **Maintain regular contact with your faculty adviser. The faculty adviser is a valuable resource for information and guidance throughout your degree program**;
- If you are having difficulties with your field placement it is important to express your concerns to your faculty adviser or field placement coordinator, Dr. Susan Gross (sgross@jhu.edu), to assure that your field placement is a successful and positive experience;
- If you are offered an extension for your field placement that would extend past winter break you must petition the MSPH Committee for an extension (see the Petition to Extend Field Placement Policy).

After the Field Placement

Upon completion of the field placement, each student must prepare a brief, but concise, evaluation of the field placement. This brief narrative (no more than 2 pages) should describe: 1) key strengths of the field placement; 2) weaknesses or challenges encountered; and 3) whether the field placement should be recommended to future MSPH students. Students can submit this report through CoursePlus site.

The student will complete an evaluation report of the preceptor.

The Field Placement preceptor must also complete an evaluation form of the student.

Petition to Extend Field Placement

Under special circumstances, an extension may be granted by the Masters Committee to a student for an existing field placement as a special studies course (380.810). Students must write a formal petition for an extension to the Masters Committee before the end of 2nd term (term 6) of the second year. The petition must include:

- A description about how the extension will enable the student to attain their academic objectives beyond coursework already completed or additional coursework in the 7th and 8th terms of study; students often use the last two terms as an opportunity to take courses to further enhance skills they found lacking during their field placement
- The specific objectives of the extension and the additional skills that will be gained;
- Confirmation of adviser support; and
- A statement indicating the intention to return to campus for MSPH Presentation and to complete MSPH Essay in adherence with MSPH program guidelines

Students can email the petition to the Academic Program Coordinator with the student’s academic adviser copied on the email. No petition will be approved if it is submitted after the end of the 2nd term.

MSPH Essay and Presentation Guidelines

The Master’s Essay is a requirement for graduation from the MSPH program in the Department of Population, Family, and Reproductive Health. The goal of the essay is for students to apply the skills and knowledge they have acquired during their academic program to a public health problem or concern of interest to them. In addition to the written essay, students must give a 10-minute public presentation about the content of their essay.

Students should begin thinking about essay topics and format at the end of the first academic year and should have identified a topic before completing their field placement. During Terms 7 and 8 of the program, students register for PFRH Master’s Essay (380.850), designating their First Reader as the instructor. Guidelines for credit hours are as follows:

- Term 7: 3-6 units
- Term 8: 3-5 units
- Students need to take a minimum of 3 units of special studies
- If taking more than 3 units student must meet weekly with their 1st reader

The following sections provide detailed guidelines about the essay and presentation. The MSPH CoursePlus website has further details about the process.

Essay Readers

Students must have at least one reader for their essay. The following guidelines must be applied: The students’ reader must be PRFH faculty; faculty with a joint appointment in PFRH also can be a reader. Approval is required if a student wishes to select a reader who is not PFRH faculty; a rationale must be given for the choice of the reader and a second reader from PFRH must be selected.

Responsibilities of Students and Readers

Primary Reader

The essay reader is responsible for working with the student on the essay from the outline to final draft, and on preparation for the presentation. The reader must be identified as the instructor for the PFRH Master’s Essay (380.850) in terms 7 and 8. Students must submit outline and essay drafts to their reader on key dates starting in November through April; these dates are indicated to assure timely completion of the essay.

Second Reader

A second reader may also provide comments on the essay at any stage. A second reader will seldom be needed but may be asked if a student is using data from a study conducted by the reader or at the agency of the reader. If a second reader is external to the department, students are strongly advised to discuss the roles and responsibilities of this reader with their primary reader. Second readers do not need to give approval for the essay, unless the first reader is external to PFRH. The essay must meet the standards required by faculty of the School. However, student who are using data affiliated with the second reader or the second reader’s agency should provide drafts of the essay to this reader and discuss when feedback will be given to the student from the reader.

Choosing a Topic and Format for the Essay

In addition to selecting a topic, students may select one of five formats for the essay:

- Research Report
- Analysis of a Public Health Problem or Legislation Position Paper
- Structured Literature Review
- Evaluation of a Program/Project
- Research Proposal

Many students link the essay topic to their Field Placement experience, although it is not a requirement that they do so. For example, students' work on a literature review or a research project as part of their Field Placement may serve as a basis for developing the essay. The essay must represent work completed, for example on a research project, in addition to that completed during the Field Placement. Regardless of whether the topic is based on their Field Placement, students must focus on a public health concern or problem, which may or may not be in their area of interest. Details on the expectations of the essay are given during the 3rd MSPH quarterly luncheon.

The student and their adviser must verify the knowledge and skills required for the selected essay format (see Essay Topic Form (https://courseplus.jhu.edu/core/index.cfm/go/ol:library.downloadItem/coid/6709/libItemID/376959/)); for example, students conducting a systematic literature review for their essay must have taken a related course or work with a primary reader with methodological expertise in systematic reviews.

Steps to Complete the Essay

Step 1: Identify topic, format, and readers

Students should identify a primary reader whose research interests and expertise are in the topic area or methodology for the essay. Academic advisers must serve as a reader, but do not need to be the primary reader. Advisers can serve as a useful resource for discussing potential topics of interest and providing referrals to other faculty members in the department whose expertise better matches the proposed topic of the essay. Other resources for identifying potential primary readers are the Masters Program Director and Associate Director, academic coordinators, Department website, and school faculty directory.

Step 2: Discuss roles and responsibilities with readers

Once readers have been identified, all students should have a conversation with their readers so that each knows their responsibility for the essay. This discussion is especially important for readers who are outside PFRH and especially for third readers. A timeline should also be provided to the readers so that each is aware of when feedback should be provided. In general, readers should be given at least a minimum of one week to provide feedback to students. Additionally, while not required, the student and readers should discuss plans to publish the essay and the order of authors for the publication. Separate guidelines regarding authorship will be provided to the students.

Step 3: Determine Whether Essay Involves 'Human Subjects Research'

What is 'human subjects research'?

"Human subjects research' is broadly defined to include any activity involving humans that seeks to test a hypothesis or answer a scientific question. This activity can include secondary data analysis and research involving direct contact with subjects. All students who plan to undertake human subjects' research must have IRB approval before working with human subjects' data or samples and before contacting human subjects. The JHBSPH IRB Office (http://www.jhsph.edu/irb (http://www.jhsph.edu/irb/)) is charged with assuring that human subjects research studies conducted in the School comply with internal school policies and external regulations designed to protect human subjects.

For the purposes of the essay, after students have identified the data source(s) for their research, they should complete the online IRB Worksheet (http://jhsph.us2.qualtrics.com/SE/?SID=SV_1GrF6WBUcNFZCV6) to determine the additional steps (if any) needed for securing IRB approval for the essay, or documenting existing approval.

For additional questions about the IRB process, please visit: https://www.jhsph.edu/offices-and-services/institutional-review-board/faqs-by-topic/

Step 4: Submit the Essay Topic Form

After students have selected an essay topic and format, the Essay Topic Form (https://courseplus.jhu.edu/core/index.cfm/go/ol:library.viewAll/coid/7100/) must be completed and signed by the student, academic adviser, and primary reader (if different from the adviser). This form will ensure that a student has the needed skills and knowledge to complete the essay. For example, if a student decides to conduct an evaluation of a project or a program for the essay, they must have either taken the 'Fundamentals of Program Evaluation' course or had prior experience conducting an evaluation (formats listed under "MSPH Essay and Presentation Guidelines" section). Students also must indicate whether IRB approval is needed for the essay.

Step 5: Register for 380.850 PFRH Master's Essay

Students should register for 3 to 6 units of special studies with their **primary reader** using course number 380.850 in the 7th term and 3 to 6 units in the 8th term.

Step 6: Submit Outline of Essay to Primary Reader

Students must submit an outline of the essay to their primary reader by the required deadline listed above. The outline should contain all major headings and sub-headings of the particular essay format, with bulleted text on the content of each section. Primary readers must be given at least 1 week to provide feedback to the student on the outline. **Failure to meet the outline deadline often results in delay in meeting later deadlines.**

Step 7: Submit First Draft of Essay to Primary Reader

Students must submit a complete draft of their essay to the primary reader by the required deadline. The primary reader should ensure that the draft contains all necessary elements of the essay in the standardized format. Primary readers should provide feedback to the student within 2 weeks of receiving the draft essay. **Failure to meet this deadline often results in delay in completing the essay on time.**

Note: Students partnering with an organization that is expecting a report may need to write two separate documents in order to meet the expectations of the department's essay.

Step 8: Submit Second Draft of Essay to Primary and Secondary Readers

Second drafts must be reviewed by both the primary and second readers for final edits and recommendations. Both readers should provide feedback to the student within 2 weeks of receiving the second draft. Students should submit a second draft in a timely manner and of reasonable quality in order for faculty to complete their review and provide comments to them in a timely manner. Students must incorporate comments from each reader in their final draft.

Step 9: Submit Final Draft of Paper to Primary and Secondary Readers for Approval

Students must submit the final draft of their essay to both primary and secondary readers for approval and submission to the Academic Office. Both readers must also submit the Reader Approval Form (https://courseplus.jhu.edu/core/index.cfm/go/ol:library.viewAll/coid/7100/) for the essay directly to the Academic Office. ***If the essay is not approved by both readers by the deadline, students may not participate in the oral presentation and may be in jeopardy of not graduating. They also will not be eligible for a distinction award.***

Step 10: Oral Presentation of Essay

Each student is required to present their essay in a 10-minute PowerPoint presentation at a public seminar before the end of the 8th term. The student's first reader is expected to review draft presentations prior to a practice session. A practice session should be scheduled approximately one week prior to the public seminar with input from first reader. No video clips are allowed in the presentation. Before students can present their Masters' Essay, they must meet these conditions:

- Any existing incompletes in coursework must be rectified, with confirmation by the student's adviser and academic coordinator
- The essay has received final approval from reader(s)
- PowerPoint presentation has been approved by the reader

Failure to meet any of these conditions before the time of presentation will result in postponement of graduation.

Master's Essay Deadlines

In preparation for completion of the Master's essay and presentation, students should contact their adviser and/or their primary reader no later than the 6th term to discuss the essay topic and format. Master's Essays are due early in the 8th Term. Students should begin work on their paper no later than the start of 7th term, preferably before the term begins, and complete it early in the 8th term. Students should begin to consider essay topics and format during their field placement. Essays will be presented at a seminar in late April/ early May, prior to graduation.

CEPH (Council on Education for Public Health) Competencies

C1. Apply epidemiological methods to the breadth of settings and situations in public health practice

C2a. Select quantitative data collection methods appropriate for a given public health context

C2b. Select qualitative data collection methods appropriate for a given public health context

C3a. Analyze quantitative data using biostatistics, informatics, computer-based programming and software, as appropriate

C3b. Analyze qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate

C4. Interpret results of data analysis for public health research, policy, or practice

C5. Compare the organization, structure, and function of health care, public health, and regulatory systems across national and international settings

C6. Discuss the means by which structural bias, social inequities, and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels

C7. Assess population needs, assets and capacities that affect communities' health

C8. Apply awareness of cultural values and practices to the design or implementation of public health policies or programs

C9. Design a population-based policy, program, project, or intervention

C10. Explain basic principles and tools of budget and resource management

C11. Select methods to evaluate public health programs

C12. Discuss multiple dimensions of the policy-making process, including the role of ethics and evidence

C13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes

C14. Advocate for political, social or economic policies and programs that will improve health in diverse populations

C15. Evaluate policies for their impact on public health and health equity

C16. Apply principles of leadership, governance, and management, which include creating a vision, empowering others, fostering collaboration, and guiding decision making

C17. Apply negotiation and mediation skills to address organizational and community challenges

C18. Select communication strategies for different audiences and sectors

C19. Communicate audience-appropriate public health content, both in writing and through oral presentation

C20. Describe the importance of cultural competence in communicating public health content

C21. Perform effectively in interprofessional teams

C22.Apply systems thinking tools to a public health issue

CEPH (Council on Education for Public Health) Learning Objectives

1. Explain public health history, philosophy and values
2. Identify the core functions of public health and the 10 Essential Services
3. Explain the role of quantitative and qualitative methods and sciences in describing and assessing a population's health
4. List major causes and trends of morbidity and mortality in the US or other community relevant to the school or program
5. Discuss the science of primary, secondary and tertiary prevention in population health, including health promotion, screening, etc.

6. Explain the critical importance of evidence in advancing public health knowledge
7. Explain effects of environmental factors on a population's health
8. Explain biological and genetic factors that affect a population's health
9. Explain behavioral and psychological factors that affect a population's health
10. Explain the social, political and economic determinants of health and how they contribute to population health and health inequities
11. Explain how globalization affects global burdens of disease
12. Explain an ecological perspective on the connections among human health, animal health and ecosystem health (e.g., One Health)

Areas of Interest Competencies

All **PFRH master's students** must attain proficiency in five competencies in their selected PFRH area of interest:

1. Apply a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course;
2. Identify and assess the causes and consequences of population change using demographic methods;
3. Assess the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor;
4. Evaluate strategies to promote population health, including health services and systems delivery strategies used to address health concerns in populations relevant to the area of interest;
5. Apply frameworks specific to the area of interest (beyond life course) for improving the health of relevant populations

Population, Family and Reproductive Health, PhD

PhD Program Overview

This PFRH handbook describes the program of study for PhD students. It is based on the competencies for the program shown below and the 12 foundational learning objectives required for all programs in schools of public health by the Council on Education in Public Health (CEPH). All PFRH PhD students should have a fundamental understanding of statistical methods and their application, epidemiology, research ethics, advanced research methods in a selected methodological area, expertise in an area of interest, as listed below, and the application of life course perspectives on health, demography, and population dynamics to this area of interest. They are also required to take four terms of the first-year doctoral seminar, two terms of the second-year doctoral seminar, and the PFRH Proposal Writing Seminar (until completion of the Preliminary Oral Examination).

The department's current areas of interest include:

- Adolescent Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/adolescent-health/)
- Child Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/child-health/)
- Maternal, Fetal, and Perinatal Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/maternal-fetal-perinatal-health/)
- Population and Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/population-and-health/)
- Women's, Sexual and Reproductive Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/areas-of-interest/women-sexual-and-reproductive-health/)

Program Requirements

During the program, students are required to:

- Successfully complete courses that address the 12 foundational learning objectives required for all programs in schools of public health by CEPH
- Successfully complete all examinations including the comprehensive exam in year two, department preliminary oral examination, schoolwide preliminary oral examination, and final defense examination
- Complete and update an individual development plan for their doctoral studies as they progress through the program and annual reviews of progress (after year two)
- Complete one full year of residency (a minimum of 16 units per term for four consecutive terms)
- Successfully complete a Research Apprenticeship
- Achieve a grade point average (GPA) of 3.0 or higher in all course work
- Achieve a grade B or better in all required PFRH Core courses (life course perspectives on health, demography, and population dynamics as applied to their area of interest)

Students are required to take a minimum of 16 units each term in order to be considered full-time students. Tuition support is contingent on full-time status.

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

School-wide PhD Requirements

Students must choose:

Code	Title	Credits
PH.340.721	Epidemiologic Inference in Public Health I	5
or PH.340.751	Epidemiologic Methods 1	
Select one of the following:		16
PH.140.621 & PH.140.622 & PH.140.623 & PH.140.624	Statistical Methods in Public Health I and Statistical Methods in Public Health II and Statistical Methods in Public Health III and Statistical Methods in Public Health IV	
PH.140.651 & PH.140.652 & PH.140.653 & PH.140.654	Methods in Biostatistics I and Methods in Biostatistics II and Methods in Biostatistics III and Methods in Biostatistics IV	
Select a minimum of 3 units of Research Ethics		3
PH.550.860	Academic & Research Ethics at BSPH	0

Students must complete all courses meeting the Council on Education for Public Health (CEPH) objectives prior to completing the School-wide Preliminary exam.

Total Credits		**24**

COMPETENCY

1. Applying statistical methods to address the health of populations. **(Choose 4 in sequence)**

Code	Title	Credits
Select four of the following:		
PH.140.621	Statistical Methods in Public Health I (Term 1)	4
or PH.140.651	Methods in Biostatistics I	
PH.140.622	Statistical Methods in Public Health II (Term 2)	4
or PH.140.652	Methods in Biostatistics II	
PH.140.623	Statistical Methods in Public Health III (Term 3)	4
or PH.140.653	Methods in Biostatistics III	
PH.140.624	Statistical Methods in Public Health IV (Term 4)	4
or PH.140.654	Methods in Biostatistics IV	

2. Applying epidemiological methods to address the health of populations.

Code	Title	Credits
Select one of the following:		
PH.340.721	Epidemiologic Inference in Public Health I (Terms 1,3)	5
PH.340.751	Epidemiologic Methods 1 (Term 1)	5

3. Applying ethical concepts and tools to population health research and practice.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (Terms 1,2,3,4)	
Select one of the following:		
PH.306.665	Research Ethics and integrity: U.S. and International Issues (Term 3)	3
PH.550.600	Living Science Ethics - Responsible Conduct of Research (Term 1) [1]	1

[1] If students choose PH.550.600 Living Science Ethics - Responsible Conduct of Research, they must also take one of the following courses: PH.306.663 Legal and Ethical Issues in Health Services Management or PH.221.616 Ethics of Public Health Practice in Developing Countries

CEPH Requirements

1. Explain public health history, philosophy, and values.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.552.601	Foundational Principles of Public Health (Terms 1,3)	0.5

2. Identify the core functions of public health and the 10 Essential Services.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.552.601	Foundational Principles of Public Health (Terms 1,3)	0.5

3. Explain the role of quantitative and qualitative methods and sciences in describing and assessing a population's health. **(Must take both)**

Code	Title	Credits
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (Term 1)	0.5

4. List major causes and trends of morbidity and mortality in the US or other community relevant to the school or program.

Code	Title	Credits
PH.380.600	Principles of Population Change (Term 2)	4

5. Discuss the science of primary, secondary, and tertiary prevention in population health, including health promotion, screening, etc.

Code	Title	Credits
Select one of the following:		
PH.340.721	Epidemiologic Inference in Public Health I (Terms 1,3)	5
PH.340.751	Epidemiologic Methods 1 (Term 1)	5

6. Explain the critical importance of evidence in advancing public health knowledge.

Code	Title	Credits
Select one of the following:		
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	4
PH.552.606	The Critical Importance of Evidence in Advancing Public Health Knowledge (Terms 2,4)	0.5

7. Explain effects of environmental factors on a population's health.

Code	Title	Credits
Select one of the following:		
PH.380.616	Child Health Epidemiology (Term 4)	3
PH.552.607	Essentials of Environmental Health (Terms 1,3)	0.5

8. Explain biological and genetic factors that affect a population's health.

Code	Title	Credits
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease (Terms 2,4)	0.5

9. Explain behavioral and psychological factors that affect a population's health.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

10. Explain the social, political, and economic determinants of health and how they contribute to population health and health inequities.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

11. Explain how globalization affects global burdens of disease.

Code	Title	Credits
PH.380.600	Principles of Population Change (Term 2)	4

12. Explain an ecological perspective on the connections among human health, animal health, and ecosystem health (eg, One Health).

Code	Title	Credits
PH.552.612	Essentials of One Health (Term 1)	0.5

PFRH Course Requirements

PhD students are required to take four research methods courses in a specific methodological area in addition Epidemiologic Inference **or** Epidemiologic Methods I. These requirements must be completed before taking the PFRH comprehensive examination. The methods areas and course requirements are listed in alphabetical order below. PhD students must also complete doctoral seminars throughout their program.

SOCIAL SCIENCE SPECIALTY CORE REQUIREMENTS

Competency

1. Evaluating and applying rigorous strategies for measurement and data collection across a range of study designs.

Code	Title	Credits
Select one of the following:		
PH.340.717	Health Survey Research Methods (Term 2)	4
PH.380.711	Issues in Survey Research Design (Term 3)	3
PH.224.690	Qualitative Research Theory and Methods (Term 3)	3
PH.410.690	Ethnographic Fieldwork (Term 3)	3

2. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
Select one of the following:		
PH.380.611	Fundamentals of Program Evaluation (Terms 1,3)	4
PH.309.616 & PH.309.617	Introduction to Methods for Health Services Research and Evaluation I and Introduction to Methods for Health Services Research and Evaluation II (Term 3 for 616, Term 4 for 617) [1]	4

[1] PH.309.616 Introduction to Methods for Health Services Research and Evaluation I is a multi-term course. Must take both courses in order to receive a grade for the course.

3. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
Select one of the following:		
PH.410.615	Research Design in the Social and Behavioral Sciences (Term 2)	3
PH.410.710	Concepts in Qualitative Research for Social and Behavioral Sciences (Term 2)	3
PH.410.631	Introduction to Community-Based Participatory Research: Principles and Methods (Term 3)	3

4. Analyzing data using methodological tools appropriate to the study question and available data.

Code	Title	Credits
PH.330.657	Statistics for Psychosocial Research: Measurement (Term 1)	4
PH.140.658	Statistics for Psychosocial Research: Structural Models (Term 2)	4
PH.224.691	Qualitative Data Analysis (Term 4) [1]	3

[1] PH.224.690 Qualitative Research Theory and Methods is a prerequisite for the course PH.224.691 Qualitative Data Analysis.

DEMOGRAPHY SPECIALTY CORE REQUIREMENTS

Competency

1. Evaluating and applying rigorous strategies for measurement and data collection across a range of study designs.

Code	Title	Credits
Select one of the following:		
PH.340.717	Health Survey Research Methods (Term 2)	4
PH.380.711	Issues in Survey Research Design (Term 3)	3

2. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
PH.410.615	Research Design in the Social and Behavioral Sciences (Term 2)	3

3. Analyzing data using methodological tools appropriate to the study question and available data. **(Must take both)**

Code	Title	Credits
PH.380.650	Demographic Methods for Measuring Health and Longevity (Term 3)	4
PH.380.651	Methods and Measures in Population Studies (Term 4)	4

EPIDEMIOLOGY SPECIALTY CORE REQUIREMENTS

Option 1 Professional Track

(PH.340.721 Epidemiologic Inference in Public Health I)

Competency

1. Evaluating and applying rigorous strategies for measurement and data collection across a range of study designs.

Code	Title	Credits
Select one of the following:		
PH.340.717	Health Survey Research Methods (Term 2)	4
PH.380.711	Issues in Survey Research Design (Term 3)	3

2. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
PH.340.722	Epidemiologic Inference in Public Health II (Terms 2,4)	4

3. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
Select one of the following:		
PH.340.645	Introduction to Clinical Trials (Term 2)	3
PH.223.664	Design and Conduct of Community Trials (Term 3)	4
PH.340.728	Advanced Methods for Design and Analysis of Cohort Studies (Term 1)	5

4. Analyzing data using methodological tools appropriate to the study question and available data. **(Must take both)**

Code	Title	Credits
PH.340.770	Public Health Surveillance (Term 2)	3
PH.140.630	Introduction to Data Management (Terms 2,4)	3

Option 2

(PH.340.751 Epidemiologic Methods 1)

Competency

1. Evaluating and applying rigorous strategies for measurement and data collection across a range of study designs.

Code	Title	Credits
Select one of the following:		
PH.340.717	Health Survey Research Methods (Term 2)	4
PH.380.711	Issues in Survey Research Design (Term 3)	3

2. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
Select one of the following:		
PH.340.645	Introduction to Clinical Trials (Term 2)	3
PH.223.664	Design and Conduct of Community Trials (Term 3)	4
PH.340.728	Advanced Methods for Design and Analysis of Cohort Studies (Term 1)	5

3. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations. **Both courses fulfill competency 3 & 4.**

Code	Title	Credits
PH.340.752	Epidemiologic Methods 2 (Term 2)	5
PH.340.753	Epidemiologic Methods 3 (Term 3)	5

4. Analyzing data using methodological tools appropriate to the study question and available data. **Both courses fulfill competency 3 & 4.**

Code	Title	Credits
PH.340.752	Epidemiologic Methods 2 (Term 2)	5
PH.340.753	Epidemiologic Methods 3 (Term 3)	5

HEALTH ECONOMICS SPECIALTY CORE REQUIREMENTS

Competency

1. Evaluating and applying rigorous strategies for measurement and data collection across a range of study designs.

Code	Title	Credits
Select one of the following:		
PH.313.603	Economic Evaluation III (Term 3) [1]	3
PH.380.711	Issues in Survey Research Design (Term 3)	3

[1] PH.313.601 Economic Evaluation I and PH.313.602 Economic Evaluation II are pre-requisites for PH.313.603 Economic Evaluation III

2. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
Select two of the following:		
PH.313.601	Economic Evaluation I (Term 1) [1]	3
PH.313.653	Advanced Health Economics I (Term 1)	2
PH.313.654	Advanced Health Economics II (Term 2)	2
PH.313.655	Advanced Health Economics III (Term 3)	2
PH.313.656	Advanced Health Economics IV (Term 4)	2
AS.180.600	General Equilibrium Theory (Term 1)	4
AS.180.601	Microeconomic Theory I (Term 2)	4

[1] PH.313.601 Economic Evaluation I and PH.313.602 Economic Evaluation II are pre-requisites for PH.313.603 Economic Evaluation III

3. Analyzing data using methodological tools appropriate to the study question and available data.

Code	Title	Credits
Select one of the following:		
PH.221.644	Econometric Methods for Evaluation of Health Programs (Term 4)	4
PH.309.617 & PH.309.616	Introduction to Methods for Health Services Research and Evaluation II and Introduction to Methods for Health Services Research and Evaluation I (Terms 3,4) [1]	4
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs (Term 4)	4
PH.300.713	Research and Evaluation Methods for Health Policy (Term 3)	3
PH.313.602	Economic Evaluation II (Term 2) [2]	3

[1] Students who elect to take PH.309.616 Introduction to Methods for Health Services Research and Evaluation I must also take PH.309.617 Introduction to Methods for Health Services Research and Evaluation II

[2] PH.313.601 Economic Evaluation I and PH.313.602 ECONOMIC EVALUATION II are pre-requisites for PH.313.603 ECONOMIC EVALUATION III

HEALTH SERVICES RESEARCH AND EVALUATION SPECIALTY CORE REQUIREMENTS

Competency

1. Evaluating and applying rigorous strategies for measurement and data collection across a range of study designs.

Code	Title	Credits
Select one of the following:		
PH.340.717	Health Survey Research Methods (Term 2)	4
PH.380.711	Issues in Survey Research Design (Term 3)	3

PH.224.690	Qualitative Research Theory and Methods (Term 3)	3
PH.410.690	Ethnographic Fieldwork (Term 3)	3

2. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
Select one of the following:		
PH.380.611	Fundamentals of Program Evaluation (Terms 1,3)	4
PH.309.616 & PH.309.617	Introduction to Methods for Health Services Research and Evaluation I and Introduction to Methods for Health Services Research and Evaluation II (Terms 3,4)	4

3. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.

Code	Title	Credits
Select one of the following:		
PH.223.664	Design and Conduct of Community Trials (Term 3)	4
PH.300.713	Research and Evaluation Methods for Health Policy (Term 3)	3
PH.300.715	Advanced Research and Evaluation Methods in Health Policy (Term 4) [1]	4
PH.221.638	Health Systems Research and Evaluation in Developing Countries (Term 4)	4
PH.410.631	Introduction to Community-Based Participatory Research: Principles and Methods (Term 2)	3
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development (Term 4)	4
PH.313.790	Introduction to Economic Evaluation (Term 4)	3
PH.312.693	Introduction to Comparative Effectiveness and Outcomes Research (Term 3)	3
PH.390.675	Outcomes and Effectiveness Research (Term 4)	3
PH.410.710	Concepts in Qualitative Research for Social and Behavioral Sciences (Term 2)	3
PH.380.612	Applications in Program Monitoring and Evaluation (Term 4)	4

4. Analyzing data using methodological tools appropriate to the study question and available data.

Code	Title	Credits
PH.223.632	Methods for Planning and Implementing Evaluations of Large-Scale Health Programs in Low and Middle income Countries (Term 4)	4
PH.224.691	Qualitative Data Analysis (Term 4) [1]	3
PH.221.644	Econometric Methods for Evaluation of Health Programs (Term 4)	4

[1] PH.224.690 Qualitative Research Theory and Methods is a prerequisite for PH.224.691 Qualitative Data Analysis

PFRH DOCTORAL SEMINARS

Code	Title	Credits
First Year Doctoral Students		
PH.380.817	PFRH First Year Doctoral Seminar Part 1 (Terms 1,2)	1
PH.380.822	PFRH First Year Doctoral Seminar Part 2 (Terms 3,4)	1
Second Year Doctoral Students		
PH.380.823	Research Seminar in Population, Family and Reproductive Health I (Term 1)	2
PH.380.824	Research Seminar in Population, Family and Reproductive Health II (Term 2)	2
PH.380.821	PFRH Proposal Writing Seminar (Term 4) [1]	2
Third Year Doctoral Students		
PH.380.821	PFRH Proposal Writing Seminar (Terms 1,2,3,4)	2

[1] Second year doctoral students also register for 1 credit PH.380.840 Special Studies in PFRH in 3rd Term for PFRH Proposal Writing Seminar

PFRH Areas of Interest Requirements for PhD

Students must take a minimum of seven required courses from one of the department's areas of interest. The courses fulfilling these requirements must be taken ***in addition to*** any departmental **or** schoolwide course requirements. The current areas of interest for students include the following:

- Adolescent Health
- Child Health
- Maternal, Fetal and Perinatal Health
- Population and Health
- Women's, Sexual and Reproductive Health

Doctoral students must take 7 courses to meet the requirements for the areas of interest component of their degree program. Within a given area of interest, a unique course needs to be selected for each of the following competencies:

1. Applying selected frameworks to understand population health problems, including a multiple determinants framework for the health of populations across the life course;
2. Identifying and assessing the causes and consequences of population change.
3. Applying demographic methods to the health of populations to the area of interest.
4. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.
5. Evaluating strategies to promote population health, including the policies and programs that address health concerns and behavior in the relevant populations.
6. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.
7. Critiquing health services and systems delivery strategies used to address health concerns in the relevant populations

Courses meeting the health services and systems delivery strategies competency are eligible for all areas of interest, but the department recommends that this course be closely related to the students' chosen area of interest. A unique course must be taken to fulfill each competency. If a student chooses to complete a second area of interest, courses may be double counted across their primary and secondary area of interests; students must, however, complete the course requirements for at least one area of interest. The department encourages students to select electives from other area of interests to enhance the breadth and depth of understanding in their chosen and other area of interests. Area of interests and their eligible courses are listed in the following tables by alphabetical order.

ADOLESCENT HEALTH

Competency

1. Applying selected frameworks to understand population health problems, including a multiple determinants framework for the health of populations across the life course.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change.

Code	Title	Credits
PH.380.600	Principles of Population Change (Term 2)	4

3. Applying demographic methods to the health of populations.

Code	Title	Credits
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

4. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact on each risk factor.

Code	Title	Credits
Select one of the following:		
PH.380.623	Adolescent Health and Development (Term 3)	3
PH.380.747	International Adolescent Health (Term 4)	3

5. Evaluating strategies to promote population health, including the policies and programs that address health concerns and behavior in the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.380.665	Family Planning Policies and Programs (Term 3)	4

6. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
PH.380.725	The Social Context of Adolescent Health and Development (Term 4)	3

7. Critiquing health services and systems delivery strategies used to address health concerns in the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.661	Clinical Aspects of Maternal and Newborn Health (Term 3)	3
PH.380.760	Clinical Aspects of Reproductive Health (Term 3)	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.665	Family Planning Policies and Programs (Term 3)	4
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.380.721	Schools and Health (Term 4)	3

Electives

Code	Title	Credits
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond (Term 2)	3
PH.380.721	Schools and Health (Term 4)	3
PH.380.762	HIV Infection in Women, Children, and Adolescents (Term 4)	4
PH.380.761	Sexually Transmitted Infections in Public Health Practice (Term 4)	4
PH.380.625	Evidence and Opportunities to Mitigate Childhood Adversity and Promote Well-Being (Term 3)	3
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth (Term 3)	3
PH.380.771	Understanding and Changing International Reproductive Health Policy (Term 4)	3
PH.380.749	Adolescent Sexual and Reproductive Health (Term 4)	3

CHILD HEALTH

Competency

1. Applying selected frameworks to understand population health problems, including a multiple determinants framework for the health of populations across the life course.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change.

Code	Title	Credits
PH.380.600	Principles of Population Change (Term 2)	4

3. Applying demographic methods to the health of populations.

Code	Title	Credits
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

4. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

Code	Title	Credits
PH.380.616	Child Health Epidemiology (Term 4)	3

5. Evaluating strategies to promote population health, including the policies and programs that address health concerns and behavior in the relevant populations.

Code	Title	Credits
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4

6. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.642	Child Health and Development (Term 2)	3
PH.380.744	Nutrition and Growth in Maternal and Child Health (Term 1)	3

7. Critiquing health services and systems delivery strategies used to address health concerns in the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.661	Clinical Aspects of Maternal and Newborn Health (Term 3)	3
PH.380.760	Clinical Aspects of Reproductive Health (Term 3)	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.665	Family Planning Policies and Programs (Term 3)	4
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.380.721	Schools and Health (Term 4)	3

Electives

Code	Title	Credits
PH.223.663	Infectious Diseases and Child Survival (Term 3)	3
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth (Term 3)	3
PH.330.640	Childhood Victimization: A Public Health Perspective (Term 4)	3
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (Term 4)	3
PH.380.762	HIV Infection in Women, Children, and Adolescents (Term 4)	4
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.625	Evidence and Opportunities to Mitigate Childhood Adversity and Promote Well-Being (Term 3)	3
PH.380.740	Nutrition Programs, Policy and Politics in the United States: the Impact on Maternal, Child and Family Health (Term 2)	3
PH.380.742	Family - Health, Public Health and Policy (Term 2)	3
PH.380.623	Adolescent Health and Development (Term 3)	3
PH.410.752	Children, Media, and Health (Term 3)	3

MATERNAL, FETAL AND PERINATAL HEALTH

Competency

1. Applying selected frameworks to understand population health problems, including a multiple determinants framework for the health of populations across the life course.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change.

Code	Title	Credits
PH.380.600	Principles of Population Change (Term 2)	4

3. Applying demographic methods to the health of populations.

Code	Title	Credits
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

4. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

Code	Title	Credits
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	4

5. Evaluating strategies to promote population health, including the policies and programs that address health concerns and behavior in the relevant populations.

Code	Title	Credits
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4

6. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.744	Nutrition and Growth in Maternal and Child Health (Term 1)	3
PH.380.655	Social and Economic Aspects of Human Fertility (Term 2)	3

7. Critiquing health services and systems delivery strategies used to address health concerns in the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.661	Clinical Aspects of Maternal and Newborn Health (Term 3)	3
PH.380.760	Clinical Aspects of Reproductive Health (Term 3)	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.665	Family Planning Policies and Programs (Term 3)	4
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.380.721	Schools and Health (Term 4)	3

Electives

Code	Title	Credits
PH.380.662	Critiquing the Research Literature in Maternal, Neonatal, and Reproductive Health (Term 2)	4
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (Term 4)	3
PH.380.740	Nutrition Programs, Policy and Politics in the United States: the Impact on Maternal, Child and Family Health (Term 2)	3

PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (Term 4)	3
PH.120.620	Fundamentals of Reproductive Biology (Terms 1,2)	3

POPULATION AND HEALTH

Students selecting the Population and Health Area of interest must select the Demography Specialty Core to fulfill the Research Methods Course Requirements.

Competency

1. Applying selected frameworks to understand population health problems, including a multiple determinants framework for the health of populations across the life course.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change.

Code	Title	Credits
PH.380.600	Principles of Population Change (Term 2)	4

3. Applying demographic methods to the health of populations.

Code	Title	Credits
PH.380.603	Demographic Methods for Public Health (Terms 2,3)	4

4. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

Code	Title	Credits
Select one of the following:		
PH.380.655	Social and Economic Aspects of Human Fertility (Term 2)	3
PH.380.750	Migration and Health: Concepts, Rates, and Relationships (Term 3)	3

5. Evaluating strategies to promote population health, including the policies and programs that address health concerns and behavior in the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.665	Family Planning Policies and Programs (Term 3)	4
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4

6. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.

Code	Title	Credits
PH.380.655	Social and Economic Aspects of Human Fertility (Term 2)	3
PH.380.750	Migration and Health: Concepts, Rates, and Relationships (Term 3)	3
PH.380.756	Poverty, Economic Development, and Health (Term 2)	4

7. Critiquing health services and systems delivery strategies used to address health concerns in the relevant populations.

Code	Title	Credits
Select one of the following:		
PH.380.661	Clinical Aspects of Maternal and Newborn Health (Term 3)	3
PH.380.760	Clinical Aspects of Reproductive Health (Term 3)	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (Term 2)	4
PH.380.665	Family Planning Policies and Programs (Term 3)	4
PH.380.624	Maternal and Child Health Legislation and Programs (Term 2)	4
PH.380.721	Schools and Health (Term 4)	3

Electives

Code	Title	Credits
PH.380.635	Urban Health in Contemporary America (Term 4)	4
PH.380.664	Reproductive and Perinatal Epidemiology (Term 4)	4
PH.380.662	Critiquing the Research Literature in Maternal, Neonatal, and Reproductive Health (Term 2)	4
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (Term 4)	3
PH.380.767	Couples and Reproductive Health (Term 1, variable credit)	3

[1] Students selecting the Population and Health Area of interest must select the Demography Specialty Core to fulfill the Research Methods Course Requirements.

WOMEN'S, SEXUAL AND REPRODUCTIVE HEALTH

Competency

1. Applying selected frameworks to understand population health problems, including a multiple determinants framework for the health of populations across the life course.

Code	Title	Credits
PH.380.604	Life Course Perspectives on Health (Terms 1,2)	4

2. Identifying and assessing the causes and consequences of population change.

Code	Title	Credits
PH.380.600	Principles of Population Change (Term 2)	4

3. Applying demographic methods to the health of populations.

Code	Title	Credits

Monitoring Progress of PFRH PhD Students

As of the 2018-2019 academic year, the University Doctoral Board requires that each doctoral student, and Postdoctoral Fellow, should receive an annual review during every year in their program. This review is expected to have 3 components:

1. Student self-assessment and Individual Development Plan (IDP)
2. Monitoring of progress in the program
3. Written feedback to the student/Fellow

For PFRH doctoral students, the IDP self-assessment and Annual Review process embody these three components. With AY2019-2020, first and second-year doctoral students will be asked to complete the IDP, which is described in detail below and will be reviewed as part of meetings of students with their advisers. PFRH encourages doctoral students to meet regularly and frequently with their advisers.

Annual Review

BSPH, and thus PFRH, requires that all doctoral students have a yearly meeting with their academic adviser and other faculty members from PFRH or other BSPH departments. A formal annual review meeting and report is required after the second year of study and takes place annually by mid-November. Faculty who attend the review may change over the course of a student's program. The purpose of the meeting is twofold, serving as an opportunity:

1. for students and faculty to discuss the student's progress and identify resources and potential problems as they progress through the program and
2. ensure that PFRH records on student progress are correct and up-to-date.

Individual Development Plan

The IDP is intended to help PhD students assess their goals, strengths, weaknesses, values, and plans for their future career. They are expected to complete this plan at the beginning of doctoral studies and update it annually. As noted earlier, this IDP is not meant to track progress towards specific degree requirements. This tracking is accomplished by the PFRH department's Annual Review and credentialing process. Rather, the IDP is designed to assist students in considering future career goals and how to best ensure current activities prepare them appropriately for these goals.

If students would like to complete more self-assessment focused IDPs here are a few:

- American Association for the Advancement of Science (AAAS): https://myidp.sciencecareers.org/
- University of Michigan: https://hr.umich.edu/sites/default/files/faculty-idp.pdf
- Stanford University: https://biosciences.stanford.edu/current-students/idp/forms/

An Individual Development Plan helps with self-assessment, planning, and communication:

- An IDP can help students communicate professional development and career planning needs and intentions to others including their adviser, which can lead to helpful advice and resources.
- They can use the IDP to make sure their expectations and those of their adviser are clearly outlined and in agreement so that there are no big surprises, particularly at the end of training.
- The current job market is challenging and research has shown that individuals who perform structured career planning achieve greater career success and satisfaction.
- Some students, especially those early in their studies, may not yet have a firm understanding of where they hope to take their career. The IDP can also help think about strengths and weaknesses as they evolve towards career planning.
- The IDP is meant as a living document, to be modified as students move through the program and solidify their goals and plan.
- The IDP helps to reflect on successes and challenges from the previous year and anticipate any successes and challenges in the coming year(s).
- The questions listed below help as a starting place for thinking; students do not need to respond to all, if some are less relevant, and aspects not included can also be considered.

We hope that you find this opportunity for reflection helpful and welcome feedback on the process.

PFRH Comprehensive Examination

The first and second term doctoral seminars in the second year of the doctoral program of study contribute to preparation for the comprehensive exams. During the first term, all second-year doctoral students participate in an integrated seminar in which they review and critique literature based on readings that span the areas of interest in the department and integrate the core demography courses and life course perspectives in health.

In the second term, students work with faculty members in their area of interest to critically review and evaluate literature specific to the area. The readings address the specific area of interest competencies and methods competencies related to measurement and study design. When appropriate (as determined by seminar leaders), some areas of interest may choose to meet together to critically review and discuss a subset of readings. A practice take-home exam also is reviewed with all second year students at the end of the second tern. All second term, second year doctoral seminars meet on the same pre-determined date and time to provide the opportunity for cross area of interest collaboration. Readings from the first and second term second year doctoral seminars are used as the basis for some oral exam questions.

A two-part exam includes:

1. **Area of interest Specific Written Examination**
   A written take-home exam will be given that tests the students' ability to critically analyze research in their area of interest and to synthesize and integrate both concepts and required methods learned in course work (including doctoral seminars).
2. **Area of interest Oral Examination**
   The oral exam focuses on content and synthesis of core area of interest and public health knowledge, basic research methods, and follow-up questions on the written examination, providing students an opportunity to clarify written responses.

Departmental Preliminary Oral Examination

This exam is intended to review the student's proposed research plan and determine that the student is academically prepared to undertake the schoolwide preliminary oral exam and to carry out thesis research. The examination provides the student with experience in discussing a research proposal in a formal setting that resembles the School's preliminary oral. It also is a mechanism to review the rigor of the proposed research, independent of the oral performance, and to provide the student with constructive commentary on the strengths and weaknesses of the proposed research, as well as strengths and weaknesses in PFRH content and research design and methods in general. Students are expected to begin with a 10-minute PowerPoint presentation summarizing their proposal.

In order to sit for the departmental oral examination a student must have completed all required coursework, and passed the written and oral components of the Department Comprehensive Examination. Students are also expected to complete a thesis proposal in preparation for the exam. This proposal is completed while working closely with their adviser, co-adviser, if there is one, and department faculty, as appropriate, to determine if the thesis proposal is of adequate rigor before proceeding to the oral exam. The faculty adviser (and co-adviser) is expected to have thoroughly reviewed the proposal and have approved its quality prior to scheduling the examination. Other examiners or department faculty are not responsible for approving the proposal prior to the examination, but consultation during the work from faculty other than the adviser is recommended, as appropriate.

In addition to working with their adviser(s), students are expected to take advantage of the proposal writing seminar. It provides an opportunity to receive feedback from fellow students and the seminar instructor about their proposed research and proposal. Examples of proposals are available for student review in the proposal writing course website and provide models of the expected rigor. Sample proposals are also available for faculty review (see Education Office). Students are expected to discuss feedback received during the proposal writing seminar with their adviser (and co-adviser).

The Departmental Oral Examination is typically scheduled at least one month before the Schoolwide Preliminary Oral Examination. It may wise to begin contacting faculty about service on the schoolwide oral exam committee before the departmental oral so that paperwork for the schoolwide exam can be submitted shortly after the departmental oral exam is successfully concluded with an unconditional pass. On the other hand, time between the two exams may be advised for students whose proposal may need additional refinement or for students who may need additional preparation in answering questions in an oral exam.

Schoolwide Preliminary Doctoral Oral Exam

Purpose

The purpose of this examination is to determine whether the student has both the ability and knowledge to undertake significant research in their general area of interest. Specifically, the examiners will be concerned with the student's: (1) capacity for logical thinking; (2) breadth of knowledge in relevant areas; and (3) ability to develop and conduct research leading to a completed thesis. Discussion of a specific research proposal, if available, may serve as a vehicle for determining the student's general knowledge and research capacity. However, this examination is not intended to be a defense of a specific research proposal.

Policy

This exam is a University examination under the jurisdiction of the Graduate Board and is required of all PhD students. The full-time residency requirement must be successfully fulfilled before the Preliminary Oral Examination is requested.

The Examining Committee must:

1. Include five voting members. Two members MUST be from the sponsoring department; one of these is the adviser. A third member from the sponsoring department is optional. (LIMIT of 3 members from sponsoring department; co-advisers are 2 of the 3 members.)
a. The student's adviser of record must serve as a member of the Committee. If a student is in a department where the adviser serves on the committee, the adviser must be among the members present; an alternate may not serve for the adviser. The senior faculty member without a primary appointment in the student's Department will serve as Chair of the Committee and MUST hold the rank of Associate or Full Professor.
b. All faculty members must serve on the Committee representing the department of their primary faculty appointment. The only instance when the faculty member can serve in their joint appointment capacity is if they are the student's adviser.
c. Most often, the committee is comprised of duly appointed faculty members of a University department and must hold, at the time of selection, an appointment of Assistant Professor or higher. Occasionally, one adjunct or one scientist faculty member, but not both, may serve on the Committee. Neither may serve as the Chair.
d. Access to the most current faculty ranks can be found on the school's website at the following address: publichealth.jhu.edu/faculty/directory/list (https://publichealth.jhu.edu/faculty/directory/list/) Contact Erin McEvoy, emcevoy2@jhu.edu, with any issues with this directory.
e. All members of the Committee must be present at the scheduled exam location; teleconference participation is NOT permitted.

2. Be comprised of three Departments of the University, TWO being from the Bloomberg School of Public Health.
3. Must have appropriate alternate members to serve on the committee. The selection of alternates is very important for ensuring the exam can take place at the originally scheduled date/time. If you have two members on your committee from your sponsoring department, you should have one alternate from your sponsoring department and one from a non-sponsoring department. If you have three members on your committee from your sponsoring department, then your two alternates should be from a non-sponsoring department, at least one of which should be of the rank of Associate Professor or higher and from a department other than the chair if one of the committee members is not from the Bloomberg School of Public Health.
The examination should be taken at the earliest feasible time, not later than the end of the student's third year in residence, and before significant engagement in dissertation research. If the student fails the Preliminary Oral Examination and is permitted a re-examination, they must be re-examined within one year.

Final Doctoral Oral Exam

Policy
The oral defense of the thesis shall be conducted by the Committee of Thesis Readers after the adviser agrees that the candidate is ready for the formal defense. The adviser must certify in writing that the thesis is in a form that is ready for defense before the student may distribute the final written document to the thesis readers. During the defense the committee shall evaluate: (a) the originality and publication potential of the research; (b) the candidate's understanding of the details of the methodological and analytic work; and (c) the final quality of the written thesis document.

Conduct of Examination
If one of the officially appointed members of the committee fails to appear on the date fixed for the defense, the previously approved alternate must be prepared to discharge the responsibility of the absent individual. A final oral examination may not be held with fewer than four officially approved faculty members present in the room. The adviser must be among the members present; an alternate may not serve for the adviser. The examination will be open to the public. It is the prerogative of the Examining Committee to decide on the details of conducting the examination. At the conclusion of the formal presentation by the student, the student, public, and unofficial members of the Faculty Examining Committee will be excused. At the conclusion of the examination with only the committee present, the committee will then vote with a closed ballot on the candidate's performance and written thesis, selecting one of the following outcomes:

Acceptable: This choice requires a unanimous vote of the committee indicating an acceptable thesis with only minor corrections. Minor corrections are considered those that can be comfortably completed within two weeks following the exam.

Conditionally Acceptable: If one or more members require substantive changes to the thesis, these changes must be discussed by the committee. Immediately following this discussion, each member who still requires changes will write down the specific nature of the changes and the time expected for the student to complete them. The appropriately revised thesis must be submitted to each member for final approval; the committee shall remain appointed until the chair writes a letter to the associate dean responsible for student academic affairs indicating that all conditions have been met.

Unacceptable: If one or more members feel that the candidate's understanding of the written thesis is inadequate, or that the thesis in its present form is not acceptable for a doctoral dissertation, then the candidate has FAILED. Re-examination would be in order unless there is a unanimous recommendation to the contrary. The re-examination will normally be by the same committee, but a new committee may be selected by the Chair of the Committee on Academic Standards if petitioned by the student.

Public Seminar
As a culminating experience, the doctoral student will present a formal, public seminar. This requirement provides experience for the student in preparing a formal seminar; provides the faculty and department with an opportunity to share in the student's accomplishment; and gives a sense of finality to the doctoral experience on behalf of the student. The presentation is expected to not exceed 25 minutes. Students who choose to give a longer presentation should consult their defense committee about the acceptability of longer presentation.

PhD Schoolwide Program Policy

The Department of Population, Family and Reproductive Health candidates for the degree Doctor of Philosophy (PhD) must fulfill all School requirements, as specified in the PhD Schoolwide Policy (https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Academic_Progr%20ams_03_Doctor_Of_Philosophy_Degree_071717.pdf) last revised July 17, 2017. These include, but are not limited to, a minimum of four consecutive academic terms at the School in full-time residency (some programs require 6 terms), continuous registration throughout their tenure as a PhD student, satisfactory completion of a Departmental Written Comprehensive Examination, satisfactory performance on a University Preliminary Oral Examination, readiness to undertake research, and preparation and successful defense of a thesis based upon independent research.

PhD Students are required to be registered full-time for a minimum of 16 credits per term and courses must be taken for letter grade or pass/fail. *Courses taken for audit do not count toward the 16-credit registration minimum.*

Students having already earned credit at BSPH from a master's program or as a Special Student Limited within the past three years for any of the required courses may be able to use them toward satisfaction of doctoral course requirements.

Completion of Requirements

The University places a seven-year maximum limit upon the period of doctoral study. PFRH students are expected to complete all requirements in an average of 4 - 5 years and must achieve a cumulative GPA of 3.O in order to maintain Satisfactory Academic Progress (SAP). Tuition funding is provided for up to four years. Formal leaves of absence may extend this time.

Unsatisfactory Academic Progress/Cause for Dismissal

A failing grade (F) in two or more courses will be cause for dismissal from the PFRH graduate program. The department will permit a student to remediate one course failure (F). Any student who fails a course will be monitored closely regarding academic progress.

Other causes for dismissal from the program include, but are not limited to, the following:

- Ethics violation
- Failure to pass a re-take examination (Comprehensive, Departmental Oral, Schoolwide Preliminary Oral, and Final Defense Examinations)

Failure to maintain required GPA and to successfully complete all required courses

Departmental Pass/Fail Policy

PFRH requires that doctoral students take all required courses, including required PFRH area of interest and methods courses, for a letter grade. Only elective courses may be taken as Pass/Fail option.

BSPH Courses Taken Prior to Enrollment in Current Degree Program

Students who previously took a course at the School of Public Health who wish to use the course to fulfill a current requirement must have received a "B" or better and taken the course within the last three years of matriculating into their current degree program. Students who took these courses as an undergraduate may use the courses to fulfill course requirements, but may not receive credit for the course to meet the minimum credit requirement for their current degree program.

Course Waiver Policy

Students requesting course waivers must present evidence of prior coursework in the same subject, including, but not limited to, a syllabus and transcript. No waivers will be granted for courses in which the student received less than a B, or did not receive a letter grade. If a waiver is granted, another course in the same subject must be taken as a substitute.

Required PFRH Courses
Students wishing to waive **380.604, Life Course Perspectives on Health**, must petition the instructors and show that they have taken a similar course, demonstrate knowledge of the foundations of a multilevel life course perspective on health, and demonstrate (e.g. through a past course paper) that they understand how to develop a conceptual framework.
Students wishing to waive **Principles of Population Change (380.600) or Demographic Methods for Public Health (380.603)** may do so with the consent of the instructor and with the understanding that they are required to take a higher level course in the same subject area (e.g., Social and Economic Aspects of Human Fertility (380.655) instead of Principles of Population Change or Methods & Measures in Population Studies (380.651)instead of Demographic Methods for Public Health).
Doctoral students may petition the Doctoral Committee, with consent from their academic adviser, to **substitute a course requirement with another course not listed in the requirements.** Students should contact the Education Office with their request; the Education Office will forward the request to the degree program director or course instructor, as appropriate. Evidence of having taken a similar course in a previous graduate program or a rationale for substituting a course must be provided with the petition. The request will then be reviewed by the degree (Master's or Doctoral) program committee.

Required Courses in Other Departments
Students wishing to waive **Epidemiologic Inference (340.721) or Epidemiologic Methods (340.751)** may do so by contacting the Academic Coordinator in the Department of Epidemiology, franBurman@jhu.edu, at the beginning of the 1st term. Students may waive Epidemiologic Inference or Epidemiologic Methods only if they have completed a graduate level course in epidemiology with a grade of B or higher. Students will need to take the waiver exam and receive a score of 85% or better on the exam. Students who do not pass the exam must register for the course. Students who receive a waiver for Epidemiologic Inference must take a higher level course in epidemiologic methods.

The only Biostatistics course that can be waived is **Statistical Methods in Public Health (140.621)**. Students may petition the Department of Biostatistics for a waiver if they can document and demonstrate that they have previously acquired the course competencies. The documentation to grant a waiver requires the title of previous courses(s), name of instructor(s), textbook(s) used, course syllabi, and grade(s) received. After review of this documentation, one or more written waiver examinations may be required. Students wishing to request a waiver should contact the Academic Coordinator in the Department of Biostatistics, margo1@jhu.edu, before the start of the 1st term. Doctoral students are required to take the remainder of the Statistical Methods in Public Health sequence (140.622-624) or Methods in Biostatistics (140.651-654).

Doctoral students may petition the Doctoral Committee, with consent of their academic adviser, **to waive a specific course in the PFRH list of Methods Requirements**, but it must be replaced with a similar or higher-level course. Students should contact the Education Office with their request; the Education Office will forward the request to the Doctoral Committee Chair. Evidence of having taken a similar course in a previous graduate program or a rationale for substituting a course must be provided with the petition. The request will then be reviewed by the Doctoral committee.

Student's Responsibilities Regarding Deadlines

If a student needs to postpone taking an examination or submitting a paper for a PFRH course, the student must make the request in writing in advance to the course instructor explaining the reason for the request. The ruling made by the individual faculty member is final about such requests, and there is no appeal process. Original copies of work should be turned in for assignments. **The use of e-mail for turning in work is at the discretion of the instructor. It is the *student's responsibility* to ensure that the appropriate faculty member actually receives her/is work.**

Special Studies

Special studies provide students with the opportunity for intensive exploration of substantive and methodological issues in their area of interest, under the supervision of a faculty member. Students are encouraged to undertake such opportunities in advance of planning their master's essay or doctoral research. It is expected that doctoral students will begin more specialized studies after they have completed most course and degree requirements, and are developing and implementing a research topic for the thesis. A special-studies form must be completed by students and faculty with whom they are working for special studies that are not taken for development of a doctoral research proposal.. The form includes the objectives for the special studies and the activities and deliverables undertaken to meet the objectives along with a timeline and frequency of meetings.

Institutional Review Board Research Project Approval Procedures

The Institutional Review board (IRB) of the Bloomberg School of Public Health requires review of all faculty and student research involving the use of human subjects.

Before beginning contact with either human or animal subjects for research, students, as all researchers, must obtain the appropriate approval for their projects from either an institutional review board (e.g., the Institutional Review board, IRB) or the Institutional Animal Care and Use Committee (IACUC). In both cases, the faculty mentor must be involved in this process in that the protocol for the research project is submitted under the faculty's name with the student listed as a student investigator. NO contact can be made with humans, human tissue, human samples or human records without prior approval of the protocol by the IRB. NO animals can be purchased for the experimentation without an IACUC protocol approval.

It is important for students to make sure that they are either listed on their mentor's approved protocol or have obtained approval for their research protocol, in collaboration with their mentor before starting their research.

Information about the IRB committee can be obtained at the Office for Research Subjects in Suite W1100 in Bloomberg School of Public Health building. Students who are conducting original and independent research - under the direction of JHMI faculty advisers - that involves human subjects must have their proposed project approved by this committee.

When students are using data and other information that was developed by a previously approved JHMI or IRB research project, a copy of the previous IRB approval must be forwarded to the IRB in addition to a plan of how the data are to be used in secondary data analysis. If the student will be conducting secondary analysis of data from an existing approved study (refer to IRB list), the student and adviser will complete the IRB short form for approval of a secondary data analysis of the approved data set. The IRB still needs to review and approve how the student plans to use the data and report the findings from the analysis of the data.

For field placement activities outside of JHU, the student's adviser will review the proposed set of activities to be conducted during the field placement experience (usually within the first month of work). If it is difficult to distinguish whether the activities are "practice" or "research", the student should consult the IRB website about the activities. If necessary after review of the website, a memo describing the proposed activities should be submitted to the IRB by the student and adviser for an expedited review. The IRB review process should be completed within two weeks and a decision made as to whether the proposed activity is "professional practice" or "research project".

The IRB will advise the student and adviser of their decision and if the scope of the project requires a full IRB application. In the circumstance that the IRB determines that an MSPH or MHS student is planning to conduct an activity that meets the criteria for a research project, the IRB will request completion of a full application for submission to the Institutional Review board. The letter from the IRB and any subsequent communication will be kept in the student's departmental record.

Authorization must also be obtained from the agency/department sponsoring a field placement for the use and dissemination of the data and information in question. If the student plans to publish their work and/or the work is conducted as "research", a full IRB application must be submitted. Guidelines for preparing an application to the Committee on Human Research are available in Room W1100 and on the IRB website, https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb (https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/).

Notes: Is it human subjects? Institutional Review Board Research Project Approval Procedures

1. "About" means the data provide information about individual living people, not simply collected from individual living people. Key informant data about agencies or other entities (e.g., asking a hospital administrator about wait times in the ER, asking a drug manufacturer about dispensing patterns) or from experts or opinion leaders about their areas of expertise does not constitute data about individual living people.

2. "Publicly available" means the information is available to anyone, without prior clearance or qualification. Examples of publicly available data include census data, state court records, openly available national household surveys, or data available on the web. If you need a Data Use Agreement, it is not publicly available.

3. Identifiers provide the possibility of linkage to specific individuals. Examples include names, social security numbers, addresses, hospital IDs, or any HIPAA-defined identifiers. Identifiable can also mean that you can reasonably link to a specific individual based on an ensemble of variables. If you retain records that link an individual to a study ID, even if those records are kept in a separate location, then those individuals remain identifiable as long as you keep those records.

4. Can I still submit something I think is NHSR to the IRB for review? Yes! There is some element of risk in making this determination yourself, should you ever be challenged on the decision not to submit by a journal editor or other source. You are welcome to submit any research protocol to the IRB and you will receive a statement with a determination following review. We urge you to do so to protect yourself if the topic is particularly socially or politically sensitive. If you elect to use the flow chart with

attached clarifications, then we recommend printing it out, with notations regarding how you made you ultimate decision, and retain it in your files.

PFRH Teaching Assistant Policy

The Department of Population, Family and Reproductive Health supports full-time graduate students serving in the role of teaching assistants (TA). The department values the educational and learning experience that students gain through participating as a TA in addition to providing monetary compensation to them. The department classifies TA positions into 2 levels: 1.0 FTE TA and 0.5 FTE TA. The expectation for time commitment as well as monetary compensation differs for the two levels. Part-time students are not eligible for TA positions due to FLSA rules.

Information about current TA positions will be sent to students throughout the year. Typically, students should have already taken the course in order to be a TA. Students wishing to serve as a TA in a course should meet with the course instructor prior to agreeing to serve as a TA and discuss the nature of the course as well as the faculty member's expectations. Both should discuss the responsibilities of the TA as well as the tasks the department deems beyond the scope of the TA to be sure there are no misunderstandings about roles. The expected number of hours/week as well as preparation needs should also be addressed. Once a student and faculty member have agreed, they both must sign the TA agreement form; students submits it to the department's payroll office.

The number of hours that a TA actually works may vary substantially from course to course, but it is generally expected that a TA will begin work approximately two weeks prior to the start of the course and continue to work at least 10 days beyond the last class session or until grades are submitted. 1.0 FTE TA is expected to attend each class session. 0.5 FTE TAs may or may not be required to attend class sessions.

Research Apprenticeship

PFRH requires that PhD students undertake one or more research apprenticeship activities with one or more faculty members during their program of study at BSPH. The goal of this requirement is to ensure that PhD students have a structured opportunity to master a specific set of competencies which: a) ensure their competence as public health professionals after graduation and b) represent skills best learned outside a conventional classroom setting in the context of an ongoing research program or project.

PhD students may begin activities aimed at fulfilling these competencies as early in their program of study as they wish. Typically, PhD students begin to plan for this requirement during the second half of their first year and begin the activities after their first year of studies.

PhD students may proceed to their departmental oral exam without completing the research apprenticeship, although PFRH encourages them to complete the requirement and competencies before the departmental oral. PhD students who have not completed the research apprenticeship at the time of their departmental oral exam will be expected at that time to: a) have demonstrated substantial progress toward their completion; and b) have a concrete plan for completion soon thereafter.

Progress towards completing this requirement should be a major component of the discussion at the PhD students' annual reviews (see next section). PhD students master each of the following six competencies by means of one or several research apprenticeships. The competencies are:

1. Critical Review of the Literature: PhD students must demonstrate the ability to synthesize and critically review a body of literature that is more comprehensive than expected for a standard, course term paper.

2. Framing a Research Question: PhD students must demonstrate the ability to identify a "researchable" question.

3. Instrument Development: PhD students must demonstrate the ability to design an instrument for collecting data. This ability may include identification and evaluation of existing instruments, the ability to adapt existing instruments for new modalities (e.g. self-administered questionnaire converted to use in a telephone interview), or creating a new instrument.

4. Data Collection: PhD students must document experience with primary data collection including activities related to data coding and data entry.

5. Data Analysis: PhD students must document experience with analyzing either primary data they collected as part of a supervised research project or data from a secondary source.

6. Manuscript Preparation: PhD students must have substantially participated in the preparation of a published or publishable manuscript prepared in the form of an original peer-reviewed journal article; this requirement does not include papers from thesis research.

PhD students may demonstrate several or even all competencies by means of one research apprenticeship if the activities involved in the apprenticeship are comprehensive. Alternatively, PhD students may undertake several research activities over their program of study, each of which results in mastery of one or more competencies.

When a PhD student masters one or more competencies, s/he must indicate on the apprenticeship form the faculty member who was preceptor for the apprenticeship and the student's adviser, including the signature of each. The original form should be submitted to the Academic Program Administrator who will place it in the student's file and note completion of each competency on the student's tracking sheet. Students who master the competencies one-by-one will typically turn in one form per apprenticeship. It is possible to use previous work to meet one or more of the above competencies, but at least one must be completed during doctoral studies. Supporting documents must be provided to validate the competency when completed in previous work.

PhD students may petition the PFRH Doctoral Committee to certify that they have mastered a competency before they began the program. In such cases, students should attach to their petition documentation of their mastery (e.g. a senior authored journal article or letter testifying to the student's work as project manager of a data collection effort) and a letter from their adviser expressing support for the request. PhD student may arrange their research apprenticeships with any faculty of JHU or, with the approval of their adviser, with a qualified researcher outside JHU.

Annual Reviews Doctoral Students

BSPH requires that all doctoral students have a yearly meeting with their academic adviser and other faculty members from PFRH or other BSPH departments. This process must begin after the second year of study and occurs annually by mid-November. Faculty who attend the review may change over the course of a student's program. The purpose of the meeting is twofold, serving as an opportunity: 1) for students and faculty to discuss the student's progress and identify resources and potential problems as they progress through the program and 2) ensure that PFRH records on student progress are correct and up-to-date.

Until students complete their schoolwide preliminary exam, the annual meeting is generally held with the academic adviser and one other PFRH faculty member, usually someone the student and adviser select together. Faculty members from other BSPH departments are welcome to attend these early meetings if the student and adviser think it would be helpful. After a student has passed the Schoolwide Preliminary Exam, it is expected that the meeting will include the thesis adviser and faculty with whom the student is working, including faculty from outside PFRH, if desired. The meeting may include members of the Schoolwide Preliminary Oral Exam Committee who have agreed to help guide the student's thesis research on an ongoing basis. Other people (e.g. the Academic Program Administrator) may attend if the student and adviser think it would be helpful. A least one other faculty besides the students' advisers (including co-advisers) must participate in the annual review of doctoral students.

Both students and faculty are responsible for insuring that the annual meetings take place, but students are expected to initiate the meeting.

Students are required to provide a brief written progress report (no more than 1 or 2 pages) at least one day in advance of the meeting. If the report is not submitted a day before the meeting and the report is incomplete, then the meeting will need to be rescheduled. This report should list progress toward graduation since the last meeting and include fulfillment of course requirements and other milestones during the student's course of study. A transcript should also be included as part of the review. Students should bring copies of the report for each faculty member attending the meeting as well as a copy of their transcript.

Students who are working outside the country are encouraged, but not required, to return for advisory meetings. These students must submit a written progress report by an appointed time, determined by their adviser, for the year(s) not in residence. The progress and planning report should be longer and more detailed than those submitted by students who attend in person meetings. The adviser should share this report with other faculty (as in the case of in person meetings) and then proceed in the same way as above by scheduling a meeting for the adviser and other faculty to review progress with the student.

Thesis Advisory Committee

The progress of each PhD student is followed regularly after completing the PFRH comprehensive examination at least once a year by a committee consisting of the adviser and two to four other faculty, from inside and/or outside the student's Department. The objective of the Thesis Advisory Committee is to provide continuity in the evaluation of the progress and development of the student's research. Committee membership can change during the research phase.

Procedure

1. The student and her/his adviser, with the consent of the Department Chair, decide on the composition of this committee.
2. The first meeting of the Thesis Advisory Committee is when the student is developing their thesis proposal but should be formed shortly after the student completes the departmental comprehensive examination and well before the departmental preliminary oral examination (when the thesis proposal is presented).
3. Students who are working outside of the country or at distant sites within the country are not required to return for an in-person Thesis Advisory Committee meeting but can hold it virtually.
4. All students will submit yearly written progress reports to their Thesis Advisory Committees, which will read and evaluate them. A written evaluation based on this document will be sent to the student and placed in the student's departmental file. It is the responsibility of the Department to provide the administrative oversight of these committees, to ensure that the committee meets and submits reports. A departmental template for the yearly progress report will be shared.
5. A brief written progress report should be submitted by the student at the time each committee meeting. A written evaluation of the student's progress and development will be prepared by the committee after the meeting and discussed with the student; a copy of the evaluation will be placed in the student's departmental file. A departmental template for the TAC meeting report will be shared.

PhD Program Competencies

DEPARTMENT COMPETENCIES

All **PFRH doctoral students** must attain proficiency in the following three (3) competencies:

1. Applying statistical methods to address the health of populations.
2. Applying epidemiological methods to address the health of populations.
3. Applying ethical concepts and tools to population health research and practice.

DEGREE PROGRAM COMPETENCIES

All **PFRH doctoral students** must attain proficiency in eight PhD-specific competencies:

1. Evaluating and applying study designs for addressing research and evaluation questions about the health of populations.
2. Evaluating and applying rigorous strategies for measurement and data collection across a range of study designs.
3. Analyzing data using methodological tools appropriate to the study question and available data.
4. Interpreting data based on the strength of evidence, recognizing study limitations, and drawing appropriate inferences.
5. Analyzing primary quantitative or qualitative data and participating in the preparation of a peer-reviewed manuscript using the data.
6. Designing an instrument for data collection and implementing the instrument with primary data.
7. Preparing and defending a research proposal addressing a clearly identified research question, including the appropriate research methods and conceptual framework for answering the question.
8. Conducting and presenting original, independent, and publishable research about a clearly identified research question.

AREA OF INTEREST COMPETENCIES

All **PFRH doctoral students** must meet proficiency in seven competencies in their selected area of interest:

1. Applying a life course framework to understand population health problems related to their area of interest, including a multiple determinants framework for the health of populations across the life course.
2. Identifying and assessing the causes and consequences of population change.
3. Applying demographic methods to the health of populations.
4. Assessing the principal health concerns for the populations relevant to the area of interest, the associated population-based risk factors, and the relative impact of each risk factor.

5. Evaluating strategies to promote population health, including the policies and programs that address health concerns and behavior in populations relevant to the area of interest.
6. Applying frameworks specific to the area of interest (beyond life course) for improving the health of the relevant populations.
7. Critiquing health services and systems delivery strategies used to address health concerns in relevant populations.

PFRH Doctoral Seminars

Formal seminars are required for all PFRH doctoral students from the first year until students successfully complete their preliminary oral exam. They are described below. The seminar in the first and second term of the first year is planned based on students' interests.

First-year Doctoral Seminars in Population, Family, and Reproductive Health; First and Second Term Course Objectives:

These seminars are designed to facilitate students' transitions into the PFRH doctoral program, introduce skills to help students succeed in the program, and develop students' ability to formulate scientific questions.

At the end of the seminar, students will be able to:

- Describe the requirements, timeline, and benchmarks of the PFRH doctoral program
- Locate opportunities and resources for doctoral students within PFRH, JHBSPH, and JHU
- Read scientific articles effectively and efficiently
- Describe the nature of scientific questions and how they are identified
- Explain the role of the scientific community in the research process
- Articulate their area of specialization orally and in writing

First-year Doctoral Seminars in Population, Family, and Reproductive Health; Third and Fourth Term Course Objectives:

At the end of these courses, students will be able to:

- Develop a research concept based on their individual interests;
- Link scientific questions with appropriate research designs;
- Discuss strategies for obtaining and managing research funding;
- Evaluate different approaches used to communicate research findings; and
- Create a plan for their research career both as a student and later as a professional.

Second-year Doctoral Seminars in Population, Family, and Reproductive Health; First and Second Term Course Objectives:

At the end of these courses, students will be able to:

- Apply diverse conceptual frameworks to public health issues pertinent to PFRH;
- Critically evaluate empirical articles addressing public health issues related to PFRH;
- Compare and contrast the approaches of various academic disciplines to public health issues of relevance to PFRH; and
- Recognize and critically evaluate common study designs and methods used in research relevant to PFRH.
- Compose and discuss written responses to analytic and conceptual questions about two studies presented as a practice comprehensive exam (second term only)

The first term focuses on integrating life course and demographic methods and approaches across the population area of interests in the department. The second term builds on the first term experience and is specific to the student's chosen area of interest. It also includes a practice written exam for the comprehensive exam.

PFRH Proposal Writing Seminar Course Objectives:

Upon successfully completing this course, students will be able to:

- Develop a research question, study aims, and hypotheses to be used in a dissertation proposal;
- Conduct a literature review which identifies current research and gaps as they relate to the study and research questions and aims;
- Identify an appropriate study design including study population and methodology, both quantitative and qualitative;
- Identify data sets or settings for data collection;
- Examine frameworks and find appropriate frameworks for the study;
- Review analytic methods; develop a feasible timeline for the study; consider ethical issues and IRB approval; and
- Identify potential funding sources.

Doctor of Public Health (DrPH)

Program Overview

The Doctor of Public Health (DrPH) degree is a professional doctoral degree for early to mid-career public health professionals with an MPH or health-related master's degree seeking to secure leadership roles in domestic or international public health agencies and organizations. DrPH graduates are able to synthesize and translate research findings to practice, communicate with and convene diverse partners to effect change across a range of public health settings, and advance programs, policies and services through evidence-based public health practice and research. DrPH alumni hold mid to senior-level positions in city and state public health organizations, non-profits, government agencies, healthcare delivery services, consulting companies, and international Ministries of Health as well as positions within academia.

The DrPH program is built around foundational competencies that focus on leadership and communication, data and analytical skills, management and ethics, policy and program design, as well as education and workforce development. In addition, students develop specialized expertise through a customized program of study or by focusing on one of the following concentrations (and tracks):

- Environmental Health (Environmental Health or Health Security Track)
- Health Equity and Social Justice
- Global Health: Policy & Evaluation
- Health Policy and Management (4 Tracks: Healthcare Management & Leadership, Health Policy, Quality & Patient Safety, or Public Health Informatics Track)
- Implementation Science
- Women's and Reproductive Health

The DrPH program is a flexible, part-time program delivered online and through intensive onsite courses in institutes (for about a week in June and January). Part-time students are required to register for a minimum of 1 credit per term in each of the four regular terms or go on leave of absence, regardless if they register during the institutes or summer term. In addition to coursework, the program requires a practicum, typically performed in the student's place of employment, and a dissertation. Students are anticipated to remain in relevant public health employment throughout their studies. While most students complete the DrPH in 5-7 years, part-time students have up to 9 years to complete the program and full-time students have up to 7 years.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Admissions

In addition to the standard School application materials, DrPH applicants should also possess:

1. An MPH or public health-related Master's degree; and

2. A minimum of 3 years of professional, full-time public health experience in the applicant's area of interest by the application deadline (Dec 1st).

DrPH Program Core Course Requirements

The following core courses from the Johns Hopkins Bloomberg School of Public Health's MPH program are requirements for the DrPH program in order to ensure a strong academic foundation in biostatistics and epidemiology for students. If students have not taken these courses or equivalent ones during their MPH (or other relevant graduate program) at BSPH within the last 5 years for a B or better, they may be required to take these courses or to pass the corresponding non-credit waiver exams. Please note: this coursework is ***in addition to*** the minimum 64 credits required for the DrPH degree.The credits indicated below are term credits.

Code	Title	Credits
PH.140.611	Statistical Reasoning in Public Health I	3
PH.140.612	Statistical Reasoning in Public Health II	3
PH.340.618	Epidemiology: the Basics	3

When students matriculate into the DrPH program, their prior coursework will be reviewed and considered for fulfillment of the core course requirements. Students may be asked to submit course descriptions and syllabi for prior coursework in order to evaluate comparability of topics and learning objectives. Matriculating students will be informed which core course requirements they need to address through coursework or waiver exams. The coursework and/or waiver exams may be completed during the DrPH Program; they do not need to be completed prior to matriculation.

Program Registration Requirements & Standards of Academic Performance

Students will be required to successfully complete a minimum of 64 term credits, including 57 didactic credits, a practicum experience, and a doctoral dissertation. There are 29 term credits of required schoolwide foundational and data analysis courses which are designed to develop knowledge, skills and competencies in the CEPH DrPH foundational competencies. These courses are required for all DrPH students. An additional 28 term credits are associated with the student's concentration and track where relevant (Environmental Health, Health Equity and Social Justice, Health Policy and Management, or Implementation Science) or the Customized Concentration.

Students will take a minimum of 7 proposal and dissertation credits usually comprising 2 credits of Special Studies while drafting their proposal in preparation for the preliminary oral exams and a minimum of 5 credits of Thesis Research with their dissertation adviser while drafting their thesis in preparation for their final oral defense.

Students must remain continuously registered, unless they take a Leave of Absence. Students enrolled part-time in the DrPH Program must register for a minimum of one credit per term in each of the traditional four academic terms (1-4), regardless of whether they register for courses during summer term, or winter or summer institutes. This requirement varies for on-site international students.

Students are required to take any core courses and required/elective courses counting toward the required 57 didactic credits of the program for a grade unless the course is only offered Pass/Fail. Elective courses taken beyond the required 57 didactic credits may be taken Pass/Fail or audited.

Students must receive satisfactory grades of C or better in each course required for the DrPH program and maintain a cumulative Grade Point Average (GPA) of at least 3.0 to remain a DrPH candidate in good standing.

DrPH Program Course Requirements

The DrPH program is built around a set of common set of program objectives and CEPH DrPH Foundational Competencies that all students matriculating into the program are required to attain. The DrPH foundational course requirements furnish students with a breadth of skills, knowledge and competencies relevant to public health leadership including data analysis, health policy, management, equity and ethics, with emphasis on leadership and communication. A sequence of problem-solving courses rooted in case studies provides students with opportunities to integrate skills and apply them to real-world problems, while working in diverse, multidisciplinary teams. Additional credits associated with the student's concentration, track, or customized course of study allow more in-depth exploration of specific topical areas and skills.

DrPH Foundational and Data Analysis Course Requirements

Students will pursue the above objectives and competencies through the required foundational courses and by completing a data analysis track of their choosing. All foundational and data analysis courses must be taken for letter grade and students must receive a grade of C or better to successfully complete the requirement. Students are strongly encouraged to take the problem-solving sequence in their first year of the program with their cohort and may choose to take some of their concentration-specific requirements during their first year if they wish.

Foundational Courses Required for the DrPH Program

With the problem-solving seminars below, students must take one of the two offered courses each term; no substitutions are allowed.

Code	Title	Credits
Preparatory		
Introduction to Online Learning		0
Academic & Research Ethics at JHSPH		0
Sexual Harassment Prevention Training		0
Opioid Epidemic Awareness & Education Program		0
Summer Institute On-site		
PH.312.700	Leading Organizations (or)	3

PH.221.607	Essential Skills for Women's Leadership in Global Health (or)	
PH.221.636	High Performing Organizations in Lmic Settings	
First Term Online		
PH.224.630	The Obesity Epidemic Problem Solving Seminar: What We Can Learn from Native American Communities (or)	3
PH.308.615	The Opioid Crisis: Problem Solving Seminar (or)	
PH.180.641	Climate Change and Public Health Problem Solving Seminar: Global Challenges and Solutions for Mitigation, Adaptation, and Sustainability	
1st Year School-wide DrPH Monthly Seminar (no registration required)		0
Second Term Online		
PH.180.621	Protecting the Environment and Safeguarding Worker Health: A Problem-Based Approach (or)	3
PH.380.633	Promoting Equity for Adolescents and Emerging Adults: Problem-Solving Seminar (or)	
PH.221.690	Strengthening Primary Health Care Across the World: Problem Solving Seminar	
1st Year School-wide DrPH Monthly seminar (no registration required)		0
Fall, Summer & Winter Institutes On-site (Barcelona/Baltimore)		
PH.308.701	Effective Presentations and News Media Interviews: Practical Skills for Public Health Practitioners	3
or PH.308.604	Effective Writing for Public Health Change	
Third Term Online		
PH.221.630	Tackling the Intersectoral Challenge of Antimicrobial Resistance: Problem Solving Seminar	3
or PH.330.675	Suicide Prevention: Problem Solving Seminar	
PH.300.750	Teaching, Learning and Leading – in the Classroom, in the Workplace and in the Community	3
1st Year School-wide DrPH Monthly Seminar (no registration required)		0
Fourth Term Online		
PH.340.610	The One Health Approach to Epidemiology and Global Public Health: Problem Solving Seminar (or)	3
PH.301.650	Crafting Effective Solutions to Gun Violence: Problem Solving Seminar (or)	
PH.223.630	The Practice of Public Health Through Vaccine Case Studies: Problem Solving Seminar	
1st Year School-wide DrPH Monthly Seminar		0
Variable		
Data Analysis Courses:Select a minimum of six credits; track options and course selections below		6
2nd Year, Terms 1-4 non-credit; register SU term, start of 3rd year		
PH.220.701	School-wide 2nd Year DRPH Seminar	2
Total Credits		**29**

Data Analysis Track Options

DrPH students are required to take a minimum of 6 credits of data analysis courses and may choose from among the three following tracks:

A. Quantitative Track
(Minimum 6 credits)

Code	Title	Credits
PH.140.613	Data Analysis Workshop I (summer and winter institute)	2
PH.140.614	Data Analysis Workshop II (summer and winter institute)	2
PH.140.620	Advanced Data Analysis Workshop (summer and possibly winter instutute)	2
Total Credits		**6**

B. Qualitative Track
(Minimum 6 credits)

Code	Title	Credits
PH.224.690	Qualitative Research Theory and Methods (Online, 1st term)	3
PH.224.691	Qualitative Data Analysis (Online, 2nd term)	3
Total Credits		**6**

C. Mixed Methods Track
(Minimum 6-11 credits)

Students wishing to employ both quantitative and qualitative approaches in their dissertations will need to develop expertise in both quantitative and qualitative methods as well as facility with selecting when to use which method. As a result, students employing this method will need to cover the below course material through a combination of prior coursework, work experience, and/or current coursework.

Code	Title	Credits
Required Courses		
Select from the following options:		6-11
Mixed Methods Course		
PH.330.621	Mixed Methods for Research in Public Health (summer institute)	
Quantitative Courses		
PH.140.613	Data Analysis Workshop I (summer and winter institute)	
PH.140.614	Data Analysis Workshop II (summer and winter institute)	
Qualitative Courses		
PH.410.671	Introduction to Qualitative Research Methods (summer institute)	
PH.410.673	Introduction to Qualitative Data Analysis for Public Health (summer institute)	
Total Credits		**6-11**

DrPH Concentration/Track Competencies & Course Requirements

Students apply to and matriculate into one of six different concentrations (some with tracks) or the Customized Track. Within the Health Policy and Management Concentration, students choose one of four tracks (Healthcare Management & Leadership, Health Policy, Quality & Patient Safety, or Public Health Informatics); in the Environmental Health Concentration, students choose one of two tracks (Environmental Health or Health Security) . Once admitted into a specific concentration (and track where applicable), students will remain in the chosen concentration (and track) throughout the DrPH program. Students who matriculate into the Customized Track must identify a clearly defined field of study.

Students are required to complete 28 didactic term credits associated with their concentration/track or customized program of study. The competencies and required classes for the four concentrations and their associated tracks as well as the approach adopted for customized students are described below.

CUSTOM TRACK

Students pursuing a customized program of study will take the following three courses (10 credits) that emphasize cross-cutting competencies in the areas of 1) program development; 2) program evaluation; and 3) systems thinking:

Code	Title	Credits
PH.410.620	Program Planning for Health Behavior Change	3
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
or PH.380.611	Fundamentals of Program Evaluation	
PH.221.654	Systems Thinking in Public Health: Applications of Key Methods and Approaches	3

Building on these competencies, custom students will work with their advisers and concentration co-directors to select a minimum of 18 didactic credits of customized coursework related to their custom area of interest and to identify two customized competencies corresponding to the learning objectives of two of these courses. This additional coursework can be taken from any of the courses offered at Johns Hopkins University with receipt of the appropriate approval.

Environmental Health Concentration-Environmental Health Track

Competencies for the Environmental Health Track are as follows:

1. Analyze the state of the science and current research and policy issues related to environmental and occupational health.
2. Explain how environmental and occupational health sciences can be used to improve public health practice at local, state, national and international levels.
3. Evaluate environmental and occupational health programs and policies by applying toxicology, biostatistics, epidemiology, risk assessment, risk communication, and risk management principles to program planning, implementation and goals.
4. Design, advocate and provide leadership for effective environmental and occupational health interventions using law, regulation and policy at local, state, national and international levels.
5. Assess and communicate environmental and occupational health risks based on scientific, ethical, environmental justice and community-based principles.

To achieve these competencies students are required to take the following courses:

Code	Title	Credits
PH.180.628	Introduction To Environmental and Occupational Health Law	4
PH.183.631	Fundamentals of Human Physiology	4
PH.188.680	Fundamentals of Occupational Health	3
or PH.182.623	Occupational Health Management	
PH.317.600	Introduction to the Risk Sciences and Public Policy	4
PH.317.610	Risk Policy, Management and Communication [1]	3
PH.187.610	Public Health Toxicology	4
PH.550.630	Public Health Biology	3
From the following: 340.666, or 340.680, or 340.636 and 340.701		3
PH.340.680	Environmental and Occupational Epidemiology (Prerequisite: An introductory level course (or higher) in epidemiology)	
or PH.340.66	Foundations of Social Epidemiology	
PH.340.701 & PH.340.636	Epidemiologic Applications of Gis and Epidemiology in Evidence-Based Policy	
Total Credits		**28**

1 Prerequisite: PH.317.600 Introduction to the Risk Sciences and Public Policy

Environmental Health Concentration-Health Security Track

High profile public health emergencies, such as the COVID-19 pandemic, the global spread of Zika virus and the Ebola Epidemic in West Africa have brought wide-spread attention to the field of health security. Each of these events has had severe consequences—from public health outcomes that have extended beyond the illness and deaths directly caused by these viruses, to generational impacts on societies and economies. With risk factors for the emergence of domestic and international health security threats (e.g., globalization, environmental change, urbanization, mass displacement, terrorism, and biotechnology) increasing, there is good reason to expect that the occurrence of health security threats (e.g., emerging infectious diseases, laboratory accidents, deliberate epidemics) will continue to occur and may increase with time. In this track, students will gain skills and training to prevent, detect, and respond to these health security threats.

Competencies for the Health Security Track are as follows:

1. Identify major health security threats; characterize the human, social, economic and political risks they pose to societies; and demonstrate the importance of public health to national security
2. Apply risk assessment principles to program planning, implementation and goals, particularly in the context of emergency response and health security problems
3. Examine the origin and evolution of major US and international organizations and initiatives to prevent, detect, and respond to health security threats; and assess those areas of health security where preparedness is strongest and where additional progress is needed
4. Evaluate the effectiveness of strategies to enhance health security and prevent or mitigate health security threats
5. Synthesize and communicate important health security information in a way that enables political leaders and policy-makers to take appropriate action

To achieve these competencies students are required to take the following courses and at least 6 credits of elective courses listed below (for a total of at least 28 credits):

Code	Title	Credits
Required Courses 19 credits		
PH.317.600	Introduction to the Risk Sciences and Public Policy	4
PH.317.610	Risk Policy, Management and Communication	3
PH.180.623	Infectious Disease Threats to Global Health Security	3

PH.180.634	Public Health Emergencies: Risk Communication and Decision Science	3
PH.180.624	Biotechnology and Health Security	3
PH.185.600	One Health Tools to Promote and Evaluate Healthy and Sustainable Communities	3
Elective Courses		
Select at least nine credits of the following:		9
PH.187.610	Public Health Toxicology	
PH.221.613	Introduction to Humanitarian Emergencies	
PH.317.605	Methods in Quantitative Risk Assessment	
PH.221.639	Health Care in Humanitarian Emergencies	
PH.317.615	Topics in Risk Assessment	
PH.120.603	Molecular Biology of Pandemic Influenza	
PH.300.650	Crisis and Response in Public Health Policy and Practice	
PH.180.670	Introduction to Public Health Emergency Preparedness	
PH.180.627	Lessons Learned in 1918 Pandemic Flu	
PH.180.630	Chemical and Biological Weapons Threats: Science, Public Health, Policy	
PH.260.606	Major Global Infectious Diseases: Prospects for Control	
PH.301.692	The Role of Community-Based Organizations (Cbos) and Non-Governmental Organizations (Ngos) in Improving Global Public Health	
PH.221.615	Health Emergencies in Large Populations (H.E.L.P.)	
PH.340.668	Topics in Infectious Disease Epidemiology	
PH.340.765	Professional Epidemiologic Methods: Epidemiologic intelligence and Population Health Assessments	
PH.340.658	Critical Reading of Epidemiologic Literature	
PH.340.636	Epidemiology in Evidence-Based Policy	
PH.223.684	Vector-Borne Diseases in the Tropics	
PH.340.666	Foundations of Social Epidemiology	
Total Credits		**28**

global health policy & evaluation concentration

Competencies for the Global Health Policy and Evaluation (GHPE) Concentration are as follows:

1. Assess global public health burdens and threats, and formulate strategies to solve complex health issues.
2. Describe health systems frameworks, strategies, actors and tools to analyze and evaluate health systems performance and their reforms in global settings with a primary focus in LMICs.
3. Apply key policy frameworks and models in policy development and analyze the role and contribution of actors, culture, equity and context in shaping effective policy with a primary focus in LMICs.
4. Create effective evaluation plans for small and large programs, with a primary focus in LMICs with time, budgetary, human resource capacity, and ethical, data availability and quality considerations.
5. Examine theories and evaluate economic development factors/ investments that affect health, apply analytic tools, and propose evidence informed strategies to improve health outcomes and reduce inequalities in global settings with a primary focus in LMICs.

Students are expected to complete a minimum of 28 credits of concentration-specific courses*. These courses broadly address pedagogy under the following categories:

1. Concentration Core Requirements (4 courses)
2. Evaluation Requirements (2 courses)
3. Economic Development and Health Requirement (1 course)
4. Electives to reach 28 credits

In addition to the requirements described above, students must take additional coursework *(proposed electives)* to make up a total of 28 credits of concentration-specific courses. The proposed elective courses could be taken from any of the course options listed below or from other courses at the School. Courses electives outside the options listed below will require the advisor's approval prior to registration.

Note: Courses taken to fulfill Foundational requirements may not be applied to fulfill Concentration requirements.

Course Requirements and Electives for Global Health Policy and Evaluation Concentration

Code	Title	Credits
Concentration Core Requirements-4 courses		
PH.221.646	Health Systems in Low and Middle income Countries	3
PH.221.650	Health Policy Analysis in Low and Middle income Countries	3
PH.180.623	Infectious Disease Threats to Global Health Security	3
or PH.221.620	Applying Summary Measures of Population Health to Improve Health Systems	
PH.221.656	Conceptual and Evidential Foundations of Health Equity and Social Justice (or)	4
PH.410.605	Fundamental Tools for Promoting Health Equity (or)	
PH.340.667	Health Equity Research Methods to Address Social Determinants of Health	
Evaluation Requirements-2 courses		
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
PH.221.626	Introduction to Household Surveys for Evaluation of Primary Health Care Programs in Low- and Middle- Resource Settings (or)	3
PH.221.631	Evaluation Methods for Injury Interventions (or)	
PH.221.705	Monitoring and Evaluation of Health Systems Strengthening in Low and Middle income Countries (or)	
PH.223.632	Methods for Planning and Implementing Evaluations of Large-Scale Health Programs in Low and Middle income Countries	
Economic Development and Health Requirement-1 course		
PH.221.663	Globalization and Health: Framework for Analysis	3
Electives		
Select courses from the following to reach 28 concentration credits:		5
PH.221.617	Behavioral Economics in Health Decisions	
PH.221.639	Health Care in Humanitarian Emergencies	

PH.221.640	Design and Implementation of Incident Management Systems in Low- and Middle-income Countries	
PH.221.652	Financing Health Systems for Universal Health Coverage	
PH.221.654	Systems Thinking in Public Health: Applications of Key Methods and Approaches	
PH.223.680	Global Disease Control Programs and Policies	
PH.380.603	Demographic Methods for Public Health	
PH.410.635	Applications of innovative Methods in Local and Global Health Equity Research	
PH.550.601	Implementation Research and Practice	
Total Credits		**28**

Health Equity & Social Justice Concentration

Competencies for the Health Equity and Social Justice (HESJ) Concentration are as follows:

1. Employ bioethics and human rights concepts relating to equity and social justice in analysis of public health programs and policies.
2. Advocate with and on behalf of disadvantaged and vulnerable individuals and communities to improve their health and wellbeing and build their capacity.
3. Conduct assessments of health equity in communities and systems to identify the behavioral, cultural, social, environmental and organizational determinants that promote or compromise health in disadvantaged groups.
4. Identify evidence-informed strategies, and measurable goals and objectives, to promote health equity and social justice.
5. Implement effective, efficient and culturally sensitive strategies to improve health equity and social justice.

Students are expected to complete a minimum of 28 credits of concentration-specific courses. These courses broadly address pedagogy under the following categories:

1. Concepts, philosophical bases, and methodological issues in HESJ;
2. Design and implementation of interventions (programs, policies and practice) for addressing HESJ issues; and
3. Research and evaluation methods applicable for HESJ.

Students are expected to complete two required courses that address the conceptual and philosophical basis of Health Equity and Social Justice namely

1. PH.221.656 Conceptual and Evidential Foundations of Health Equity and Social Justice (4 credits); and
2. PH.410.605 Fundamental Tools for Promoting Health Equity (3 credits) for a total of 7 credits.

Students also must complete at least **7 credits** from those courses categorized as **“Design and Implementation of Interventions”** and at least **7 credits** from those courses categorized as **“Research and Evaluation Methods”;** see Table 2. This makes a total of 21 credits.

In addition to the 21 credits described above, students must take a **minimum of 7 credits of electives** to make up a total of 28 credits of concentration-specific courses. The elective courses may be selected from any of the course options listed below or from other courses at the School. Elective courses not listed in the options below, will require the approval of the student’s adviser prior to registration.

Note: Courses taken to fulfill Foundational requirements may not be applied to fulfill Concentration requirements.

Course Requirements and Electives for Health Equity and Social Justice Concentration

Code	Title	Credits
Required Courses		
PH.221.656	Conceptual and Evidential Foundations of Health Equity and Social Justice (Alonge, Rubenstein & Barnhill)	4
PH.410.605	Fundamental Tools for Promoting Health Equity (Thorpe & Gaskin)	3
Design and Implementation of Interventions for Addressing Health Equity and Social Justice		
Select a minimum of seven credits from the following:		7
PH.330.647	Childhood Victimization: An Overview of Public Health Efforts	
PH.330.610	Knowledge for Managing County and Local Mental Health, Substance Use, and Developmental Disability Authorities	
PH.221.665	Early Childhood Intervention in Tribal Communities	
PH.221.625	Evaluation of District-Level Primary Health Care Implementation in Low-and Middle-income Settings	
PH.330.658	Mental Health and Psychosocial Support in International Humanitarian Settings	
PH.330.681	Mental Health and Psychosocial Needs of Refugees After Resettlement in High income Countries	
PH.188.694	Health of Vulnerable Worker Populations	
PH.380.768	Selected Topics in Women’s Health and Women’s Health Policy	
PH.410.620	Program Planning for Health Behavior Change	
PH.180.600	Public Health Implications of Health as a Human Right	
PH.410.668	Policy Interventions for Health Behavior Change	
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies	
PH.410.672	Organizing for Public Health with the Six Steps to Effective Advocacy: Turning Public Will into Public Policy	
PH.380.623	Adolescent Health and Development	
PH.380.750	Migration and Health: Concepts, Rates, and Relationships	
PH.221.688	Social and Behavioral Foundations of Primary Health Care	
PH.221.635	Global Advances in Community-Oriented Primary Health Care	
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children	
PH.380.761	Sexually Transmitted Infections in Public Health Practice	
PH.221.624	Urban Health in Developing Countries	
PH.380.725	The Social Context of Adolescent Health and Development	

PH.330.680	Promoting Mental Health and Preventing Mental Disorders in Low- and Middle-income Countries	
PH.330.607	PREVENTION of MENTAL DISORDERS: PUBLIC HEALTH InterVENTIONS	
Research and Evaluation Methods for Health Equity and Social Justice		
Select a minimum of seven credits from the following:		7
PH.309.712	Assessing Health Status and Patient Outcomes	
PH.340.706	Methods and Applications of Cohort Studies	
PH.410.635	Applications of innovative Methods in Local and Global Health Equity Research	
PH.309.631	Population Health Informatics	
PH.313.790	Introduction to Economic Evaluation	
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	
PH.380.603	Demographic Methods for Public Health	
PH.380.611	Fundamentals of Program Evaluation	
PH.380.604	Life Course Perspectives on Health	
PH.380.711	Issues in Survey Research Design	
PH.380.651	Methods and Measures in Population Studies	
PH.340.666	Foundations of Social Epidemiology	
PH.330.672	Evaluation of Mental Health Service Systems	
PH.221.620	Applying Summary Measures of Population Health to Improve Health Systems	
PH.221.722	Quality Assurance Management Methods for Developing Countries	
PH.330.621	Mixed Methods for Research in Public Health	
PH.330.657	Statistics for Psychosocial Research: Measurement	
PH.140.664	Causal Inference in Medicine and Public Health I	
PH.340.613	Design and Conduct of Clinical Trials	
PH.223.632	Methods for Planning and Implementing Evaluations of Large-Scale Health Programs in Low and Middle income Countries	
PH.410.671	Introduction to Qualitative Research Methods	
PH.410.673	Introduction to Qualitative Data Analysis for Public Health	
PH.410.615	Research Design in the Social and Behavioral Sciences	
PH.309.616	Introduction to Methods for Health Services Research and Evaluation I	
Conceptual and Philosophical Bases for Health Equity and Social Justice		
Select electives from the following or from other courses listed above to reach the required 28 credits:		7
PH.410.619	Social Justice: Policy, Practice, and Research	
PH.410.606	Local and Global Best Practices in Health Equity Research Methods	
PH.550.844	Current Issues in Public Health: COVID-19 Pandemic Response	
PH.700.622	Bioethics, Human Rights, and Global Health	
PH.380.604	Life Course Perspectives on Health	
PH.318.623	Social Policy for Vulnerable Populations in the U.S.	
PH.308.610	The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life	
PH.410.864	Critical Issues in Health Disparities	
Total Credits		**28**

Health Policy & Management Concentration

Students in the Health Policy & Management Concentration may choose one of three tracks:

- Healthcare Management & Leadership
- Health Policy
- Public Health Informatics
- Quality & Patient Safety

Students must complete at least 26 credits of courses within one track per the requirements listed below for each track. While ongoing participation in the seminar is expected throughout the duration of the program, students also register for a total of **two credits** of PH.311.861 Graduate Seminar in Health Care Management and Leadership in term(s) of their choosing to fulfill the 28 concentration credits. Students may in some cases substitute alternative courses for track electives with approval from their academic adviser and track director.

Healthcare Management & Leadership Track

The focus of the Healthcare Management and Leadership Track is on measuring, monitoring and improving the clinical and financial performance of health services organizations, as well as training leaders for organizational change. The track curriculum is based on the Malcolm Baldrige Healthcare Criteria for Performance Excellence framework and targets those who have master's level training related to healthcare management and/or public health.

The competencies for the track in Healthcare Management and Leadership are met through required and elective coursework, a practicum, and the process of writing a dissertation. Upon successful completion, students will have mastered the following track competencies; specifically, students by the end of the program will have the ability to:

1. Enable senior leaders to develop an effective organizational leadership and governance system to deploy shared visions, missions and core values to address societal and community health needs.
2. Utilize strategic assessment and planning skills to identify internal and external issues that may impact health services delivery; apply facilitation skills to ensure the participation of key internal and external organizational stakeholders for both strategy development and deployment.
3. Apply evidence-based tools and frameworks to enhance organizational performance in the human, clinical, financial, information and supply chain domains so as to drive value and improved outcomes.
4. Develop and sustain a culture of excellence that builds upon providing visionary leadership, valuing people, ethics and transparency, societal responsibility and community health, organizational learning and agility, patient/client focused excellence, delivering value and results, management by fact, managing for innovation with a focus on success.
5. Manage data, information and knowledge systematically to improve quality of decision making to enhance quality of care and service delivery.
6. Apply organizational and systems thinking theories to create high performing teams that promote care integration, create value, promote efficiencies and organizational and personal learning.

Required Courses for the Healthcare Management & Leadership Track

Code	Title	Credits
Required Courses		
PH.312.603	Fundamentals of Budgeting and Financial Management	3
PH.312.620	Performance Measurement in Health Care	2
PH.312.621	Strategic Planning (Prerequisites not required for DrPH students.)	3
PH.313.641	Introduction to Health Economics	3
PH.313.790	Introduction to Economic Evaluation	3
Health Informatics		
PH.309.631	Population Health Informatics	3
or PH.312.633	Health Management Information Systems	
Quality and Patient Safety		
Select one of the following:		3
PH.309.712	Assessing Health Status and Patient Outcomes	
PH.309.730	Patient Safety and Medical Errors	
PH.311.615	Quality of Medical Care	
Elective(s)		
Select from the following to complete 26 track credits:		6
PH.312.693	Introduction to Comparative Effectiveness and Outcomes Research	
PH.140.607	Multilevel Models	
PH.309.616 & PH.309.617	Introduction to Methods for Health Services Research and Evaluation I and Introduction to Methods for Health Services Research and Evaluation II	
PH.312.604	Quantitative Tools for Managers	
PH.312.617	Fundamentals of Financial Accounting	
PH.312.630	Healthcare Financial Management	
PH.313.793	Extended Exercises in Cost Effectiveness	
PH.340.727	Introduction to Health Survey Research Methods	
PH.380.611	Fundamentals of Program Evaluation	
PH.410.635	Applications of innovative Methods in Local and Global Health Equity Research	
PH.410.671	Introduction to Qualitative Research Methods	
PH.410.673	Introduction to Qualitative Data Analysis for Public Health	
Total Credits		**26**

Note, for students able to take in-person courses on site in Baltimore during the traditional academic year, additional elective options may be available.

Public Health Informatics Track

The Public Health Informatics track offers training in methods and concepts of informatics for application to public health and population health management. The track curriculum is designed for public health professionals or population health managers who wish to develop an area of expertise or specialization in the emerging field of public health informatics.

The competencies for the track in Public Health Informatics are met through required and elective coursework, a practicum, and the process of writing a dissertation. Upon successful completion, students will have mastered the following track competencies; specifically, students by the end of the program will have the ability to:

1. Analyze the state of the science and current research and policy issues related to the foundation of public health informatics; and, explain how informatics can be leveraged to improve the practice of public health and enhance the overall role of public health organizations.
2. Characterize and critically evaluate the integration of different domains of public health informatics such as bio-surveillance, decision support, predictive modeling, and population risk stratification using clinical informatics systems such as laboratory information systems or electronic health records (EHRs).
3. Evaluate a given public or population health information system based on different criteria such as standardized protocols, common classification systems, governance structures, and embedded decision support systems.
4. Critically analyze and evaluate various informatics solutions for public or population health management interventions based on different criteria such as system architecture, interoperability, standards, human factors, security, privacy, and ethical issues.
5. Articulate the proper informatics management tools for an organization to implement solutions that assure confidentiality, security, integrity and legal compliance while maximizing the availability of information for public and population health use.

Required Courses for the Public Health Informatics Track

Code	Title	Credits
Required Courses		
PH.315.707	Introduction to Biomedical and Public Health Informatics	3
ME.600.905	Applied Clinical Informatics	3
PH.309.631	Population Health Informatics	3
PH.315.703	Leading Change Through Health Informatics	3
PH.315.700	Health Information Systems: Design to Deployment	3
PH.315.709	Health Sciences Informatics, Knowledge Engineering and Decision Support	3
PH.309.635	Population Health: Analytic Methods and Visualization Techniques	3
Elective(s)		
Select from the following to complete 26 track credits:		5
PH.312.633	Health Management Information Systems	
PH.315.708	HIT Standards and Systems Interoperability	
ME.600.907	Database Querying in Health	
ME.600.716	Informatics and the Clinical Research Lifecycle: Tools, Techniques and Processes	
ME.600.721	Introduction to Precision Medicine Data Analysis	
PH.380.603	Demographic Methods for Public Health	
AS.430.604	Spatial Analytics	
Total Credits		**26**

Note, for students able to take in-person courses on site in Baltimore during the traditional academic year, additional elective options may be available. Students in the Public Health informatics Track may take 27 credits of track coursework and 1 credit of 311.Graduate Seminar in Health Care Management & Leadership to fulfill the 28 concentration credits, with the approval of the concentration and track co-directors.

Quality and Patient Safety Track

The Quality and Patient Safety track addresses issues related to quality of healthcare, patient safety, patient centered outcomes, and performance measurement and improvement. The curriculum is designed for public health, clinical and management professionals who wish to develop the expertise to identify challenges in these areas, implement evidence-based interventions and improve care delivery. The curriculum includes a variety of specialized courses in quality, patent safety, patient centered outcomes, performance measurement, human factors and the evaluation of programs and interventions for improving the safety and quality of health care services. The track targets those who have master's level training related to public health, healthcare management and/or clinical sciences.

The competencies for the track in Quality and Patient Safety are met through required and elective coursework, a practicum, and the process of writing a dissertation. Upon successful completion, students will have mastered the following track competencies; specifically, students by the end of the program will have the ability to:

1. Apply quality improvement and evaluation frameworks.
2. Recognize implementation barriers and facilitators to quality and patient safety in the real world.
3. Assess utility of specific quality improvement and patient safety methods.
4. Leverage opportunities for adapting quality and patient safety methods to different types of organizations.
5. Address pitfalls of quality improvement and patient safety activity and research.

Required Courses for the Quality and Patient Safety Track

Code	Title	Credits
Required Courses		
PH.309.600	Evaluating Quality Improvement and Patient Safety Programs	3
PH.309.712	Assessing Health Status and Patient Outcomes	3
PH.309.730	Patient Safety and Medical Errors	3
PH.311.615	Quality of Medical Care	3
PH.312.620	Performance Measurement in Health Care	2
PH.312.621	Strategic Planning	3
PH.312.693	Introduction to Comparative Effectiveness and Outcomes Research	3
Health Informatics		
PH.309.631	Population Health Informatics	3
or PH.312.633	Health Management Information Systems	
Elective(s)		
Select from the following to complete 26 track credits:		3
PH.140.607	Multilevel Models	
PH.309.620	Managed Care and Health insurance	
PH.221.722	Quality Assurance Management Methods for Developing Countries	
PH.309.616 & PH.309.617	Introduction to Methods for Health Services Research and Evaluation I and Introduction to Methods for Health Services Research and Evaluation II	
PH.309.731	Patient Safety in Developing Countries	
PH.312.604	Quantitative Tools for Managers	
PH.312.603	Fundamentals of Budgeting and Financial Management	
PH.340.717	Health Survey Research Methods	
PH.340.727	Introduction to Health Survey Research Methods	
PH.380.611	Fundamentals of Program Evaluation	
PH.410.635	Applications of innovative Methods in Local and Global Health Equity Research	
PH.410.671	Introduction to Qualitative Research Methods	
PH.410.673	Introduction to Qualitative Data Analysis for Public Health	
PH.221.636	High Performing Organizations in Lmic Settings	
PH.312.670	Negotiation in Health Care Settings	
Total Credits		**26**

Note, for students able to take in-person courses on site in Baltimore during the traditional academic year, additional elective options may be available.

Implementation Science Concentration

The competencies associated with the Implementation Science concentration include:

1. Participate in and lead collaborative multidisciplinary teams that promote a blending of disciplines to inform and evaluate implementation strategies
2. Integrate diverse perspectives including those from communities and experts into a cogent intervention design and/or implementation strategy for health programs and policies
3. Characterize optimal implementation processes to support iterative cycles of implementation and adaptation based on learning.
4. Integrate didactic and practice-based experience to support methodologically sound evaluation of implementation processes and outcomes to inform implementation
5. Analyze frameworks to improve synthesis and integration of diverse data from multiples sources to inform policy and practice.
6. Present and interpret demographic, statistical, programmatic, and scientific information to inform decision making by policy makers and other professional and lay audiences.

Students are required to take a minimum of 28 credits focused on the Implementation Science concentration. This requirement will be achieved through a set of required and elective course.

Note: Courses taken to fulfill DrPH Foundational Requirements may not be applied to fulfill concentration requirements.

Course Requirements and Electives for Implementation Science Concentration

Code	Title	Credits
Required Courses		
PH.550.601	Implementation Research and Practice (2nd term)	3
PH.340.726	Implementation Research Methods to Address Real World Epidemiological Questions	3
PH.330.650	Methods in Implementation Science (3rd term)	3
Epidemiology or Health, Behavior and Society Special Studies: Implementation Science Concentration Seminar Series (register for only 1 term; Monthly)		1
Methodology and Analysis Courses		
Select nine or more credits from the following:		9

PH.221.722	Quality Assurance Management Methods for Developing Countries (1st term)
PH.312.693	Introduction to Comparative Effectiveness and Outcomes Research (1st term)
PH.221.654	Systems Thinking in Public Health: Applications of Key Methods and Approaches (3rd term)
PH.309.616	Introduction to Methods for Health Services Research and Evaluation I (3rd term)
PH.309.617	Introduction to Methods for Health Services Research and Evaluation II (4th term)
PH.221.622	Using Qualitative Methods for Program Planning and Evaluation (SI)
PH.221.659	Introduction to Health Systems Modeling (SI)
PH.330.621	Mixed Methods for Research in Public Health (SI)
PH.340.613	Design and Conduct of Clinical Trials (SI)
PH.340.674	Causal Inference: Emulating A Target Trial to Assess Comparative Effectiveness (SI)
PH.340.686	Introduction to Systematic Reviews and Meta-Analysis (SI)
PH.340.725	Methods for Clinical and Translational Research (SI)
PH.340.767	Professional Epidemiologic Methods: Topics and Methods for Health Situation Analysis (SI)
PH.410.664	Knowledge Management for Effective Global Health Programs (SI)
Total Credits	**19**

The above courses total a minimum of 19 credits. **In addition**, students are required to take **9 or more credits** from the **following electives or content-specific courses** to complete the required 28 concentration credits:

Code	Title	Credits
PH.390.678	Introduction to Quality Improvement & Knowledge Translation Research	3
PH.221.646	Health Systems in Low and Middle income Countries	3
PH.700.621	Ethics in Clinical Practice: Fundamentals, Problems and Approaches	3
PH.410.755	Health Communication Programs	4
PH.340.861	Clinical Trials: Procedures, Design, and Interpretation of Results	3
PH.340.765	Professional Epidemiologic Methods: Epidemiologic intelligence and Population Health Assessments	2
PH.140.664	Causal Inference in Medicine and Public Health I	4
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs	4
PH.410.755	Health Communication Programs	4
PH.221.625	Evaluation of District-Level Primary Health Care Implementation in Low-and Middle-income Settings	3
PH.221.705	Monitoring and Evaluation of Health Systems Strengthening in Low and Middle income Countries	3
PH.221.711	Managing District Health Systems in Low and Middle Income Countries	3
PH.312.620	Performance Measurement in Health Care	2
PH.340.636	Epidemiology in Evidence-Based Policy	2
PH.301.692	The Role of Community-Based Organizations (Cbos) and Non-Governmental Organizations (Ngos) in Improving Global Public Health	3
PH.340.663	Epidemiology Workshop: Interpreting and Using Epidemiologic Evidence	2
PH.410.620	Program Planning for Health Behavior Change	3
PH.309.600	Evaluating Quality Improvement and Patient Safety Programs	3

Women's & Reproductive health concentration

The competencies associated with the Women's and Reproductive Health (WRH) concentration include:

1. Assess the principal health concerns for women or mothers and newborns, the associated population-based risk factors, and the relative impact of each risk factor.
2. Apply a life course framework to understanding the determinants of a woman's or reproductive health concern, implications for a woman's health later in life, and the population strategies to address it.
3. Evaluate strategies to promote population-level women's, reproductive, maternal and child health, including healthcare services and systems delivery strategies used to address health concerns in the population.
4. Evaluate research approaches to understand woman's or reproductive health concerns and the implications of the research.
5. Apply frameworks related to women's and reproductive health for improving their health, including gender equity frameworks.
6. Identify and assess the causes and consequences of population change related to women's and reproductive health using demographic methods.

Students are expected to complete a minimum of 28 credits of concentration-specific courses. These courses cover the following six domains:

1. Health Concerns for Women, Mothers, and Newborns (2 courses)
2. Life Course Framework on Women's, Maternal, and Newborn Health (1 course)
3. Promote Population-level Women's, Reproductive, Maternal , and Child Health (1 course)
4. Evaluate Research Approaches (1 course)
5. Apply Frameworks Other Than Life Course (1 course)
6. Population Change and Methods (1 course)

In addition to the requirements described above, students must take additional coursework (*proposed electives*) to make up a total of 28 credits of concentration-specific courses. The proposed elective courses could be taken from any of the course options listed below or from other courses at the School. Courses electives outside the options listed below will require the advisor's approval prior to registration.

Note: Courses taken to fulfill DrPH Foundational Requirements may not be applied to fulfill concentration requirements.

Course Requirements and Electives for Women's and Reproductive Health Concentration

Code	Title	Credits
Health Concerns for Women, Mothers, and Newborns-2 courses		
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (or)	3
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies (or)	3

PH.120.620	Fundamentals of Reproductive Biology	
PH.340.727	Introduction to Health Survey Research Methods	
Total Credits		**28**

Comprehensive Written Exam

All students will complete a Comprehensive Written Examination, which is intended to assess students' ability to apply the DrPH foundational competencies, analytic skills, and concentration/track competencies they have acquired through foundational and concentration/track coursework to case studies and/or real-world problems. The comprehensive exam also tests students' abilities to integrate and synthesize across foundational and concentration competency domains.

Students are eligible to take the exam after completing required course work, including both required foundational courses and concentration/track courses with a C or better; students must have a cumulative GPA of 3.0 or better. Students may complete certain concentration/track electives after the exam.

Special Studies Registration Requirements

After completing coursework, part-time students register for a minimum of one credit per term of special studies with their dissertation adviser (in the primary department of their adviser) while preparing their proposals for the Preliminary Oral Examinations.

Full-time and on-site international students should consult with the DrPH Program Office and/or the Office of International Scholars regarding special studies registration requirements.

Practicum

The purpose of the DrPH practicum is to further develop students' leadership and applied skills in relation to students' areas of specialization through a practice-based project developed by the student. The practicum should form an integral part of student learning, complementing the student's course work, special studies and dissertation interests. Typically, the practicum is performed in the student's place of work, but the practicum project must be distinct from the student's daily work activities.

All DrPH students are required to complete a practicum to comply with the Council on Education for Public Health (CEPH) accreditation requirements, regardless of their years of work experience; the program does not grant waivers from the practicum requirement. Students are not required to register for credits to complete the practicum.

Practicum Requirements

It is required that the DrPH student practicum:

1. **Applies and further develops public health skills and competencies:** the objectives of the student's practicum should be clearly identified as part of an integrated, individualized proposal that is approved in advance. Students will identify a minimum of 5 CEPH Foundational and concentration/track competencies in which they wish to achieve high-level skills. The practicum must address a minimum of 1 competency from the CEPH Leadership, Management & Governance domain. The practicum will present an opportunity for the application of these skills and students should ensure that they have taken appropriate coursework to be adequately prepared to conduct the practicum.
2. **Is framed and carried out in a public health context:** the practicum will include population-level activities carried out at, or in collaboration with, an organization or agency to the benefit of the of the organization. Appropriate organizations may include governmental, nongovernmental, non-profit, industrial and for-profit settings. The practicum should not be an academic exercise in which students merely crunch numbers or administer surveys but rather students should be engaged in the larger public health context of their activities, in a "real-world" setting.
3. **Is supervised and supported:** the practicum preceptor will be qualified to evaluate the student's professional competence and will

supervise the student throughout the project within the organization. The preceptor will typically be from an outside organization (i.e. community-based organization, health department, private corporation, etc.), but can be a JHSPH faculty member if appropriate. The preceptor will provide background information, guidance, and feedback with regards to student progress on well-defined learning objectives. The student's adviser will be kept informed of the student's practicum activities and progress, and may provide additional assistance.

4. **Is significant:** the practicum should be more than an opportunity for additional work experience given each student's prior work background. Practicum projects should make a significant contribution to the organization with which the student is collaborating, as well as constitute a significant investment of student time and effort. It is estimated that the typical DrPH student may spend a minimum of 100 hours on practicum projects. Experiences may take the form of one significant large project or several smaller projects. Students may work independently but may also be part of a student team or a team composed of other members of the organization with which they are collaborating. If students are members of a broader team, then their role on the team should be clearly defined.
5. **Is evaluated:** students will be evaluated on their achievement of defined competencies and deliverables by both the preceptor and faculty adviser. As part of the practicum experience, students also will reflect on and evaluate their overall practicum experiences, including their personal and professional reactions to the practicum experience. Clearly identified outputs from the practicum experience (not necessarily written products, but oral presentations or a new management or information system) should be identified in advance.

PRACTICUM Preceptor

Each student should have a preceptor and all preceptors must be approved by the student's Concentration Co-directors prior to the start of the practicum. Current BSPH faculty may act as preceptors where this is appropriate (e.g., if the faculty member is engaged in collaborative work with an outside agency). Other individuals working in relevant practice positions may already have an adjunct position at the school, and thus are "preapproved" as preceptors. When the preceptor does not have a faculty position at the School, their résumé or CV should be submitted to the Concentration Co-Directors, along with the practicum proposal, for approval and submitted to the DrPH Program Office.

The role of the preceptor is to support the student within the organization, and in particular to assist with access to data and other resources needed to complete the practicum; to ensure the practicum aligns with the organization's goals and strategies, and will benefit the organization; to evaluate the student's competencies before and after the practicum; to guide the student throughout the practicum process; to troubleshoot challenges that arise if necessary; and to debrief with the student at the end of the practicum.

PRACTICUM Faculty Adviser

In addition to the practicum preceptor, each student also should consult with a faculty adviser on their practicum project. The student's academic adviser often serves as the faculty adviser to the practicum. This is particularly recommended when the student's practicum addresses a facet of the student's anticipated dissertation research. If a student would like to undertake a practicum outside their adviser's area of expertise, then the student can elect to engage a faculty adviser whose expertise aligns with the practicum area of interest. The role of the faculty adviser is to support the student (not the practicum organization), and in particular to help ensure that the scope of the practicum is appropriate; to evaluate the student's competencies before and after the practicum; to guide the student to resources relevant to the practicum; to troubleshoot challenges that arise if necessary; and to debrief with the student at the end of the practicum.

DrPH Thesis Proposal

Prior to the Comprehensive Written Examination, students should develop a clear understanding of the three thesis options described briefly below. The decision on which format to follow should be made by the time the student begins to draft the proposal. There are strengths particular to each format that should be carefully discussed with the student's adviser.

1. The **traditional doctoral thesis** consists of a statement of the problem and specific aims; a literature review; data and research methods; analyses and results; and a discussion of findings and their implications. The form these take will reflect the specific academic discipline or orientation guiding the student's research.
2. The **manuscript-oriented thesis** is an alternative to the traditional thesis. The manuscript thesis consists of a total of three (or more) papers, linked to the student's research topic.
3. The **workplace challenge** requires the selection of one organization or a combination of several organizations to complete a series of three out of four practice-based analytical projects (organizational assessment, plan for a new program or service, program evaluation or economic evaluation). (*Note:* this option is not available for students pursuing a DrPH in the Environmental Health Concentration).

Once a thesis format has been selected, the student should draft their thesis proposal in preparation for the Preliminary Oral Exams.

DrPH Preliminary Oral Examinations

Required for all DrPH students, the Schoolwide Preliminary Oral Examination is a Bloomberg School of Public Health requirement overseen by the Committee on Academic Standards. The Schoolwide Preliminary Oral Examination is preceded by the Concentration Oral Examination.

Concentration Oral Examination

The purpose of the Concentration Oral Examination is to prepare students and determine their readiness to take the Schoolwide Preliminary Oral Examination. To take the Concentration Oral Exam, students must have successfully passed the Comprehensive Written Exam and drafted a proposal for their thesis project.

Schoolwide Preliminary Oral Examination

The purpose of this examination is to determine whether the student has the ability and knowledge to undertake significant public health problem-solving and analytic research in their general area of interest. Specifically, the examination shall evaluate the student's:

1. Capacity for logical thinking;
2. Breadth and depth of knowledge in public health and evaluative methodologies; and
3. Ability to undertake a research project aimed at addressing a significant public health problem leading to a completed thesis.

Discussion of a specific proposal serves as a vehicle for determining the student's general knowledge and analytical capabilities; however, this examination is not intended to be a defense of a specific proposal. The student will be expected to defend the public health significance of the problem that s/he wishes to examine as well as the methodologies to be used in evaluating solutions to the problem. The examination is conducted by a Committee of four faculty and one practitioner, including the student's adviser.

Eligibility

Students must have completed all core course requirements and didactic credit requirements for the DrPH program with a C or better and a cumulative GPA of 3.0 or higher, and submitted both the practicum proposal and practicum completion forms to be eligible to take the Schoolwide Preliminary Oral Examination.

Timeline and Registration

The examination should be given at the earliest feasible time after completion of the Comprehensive Written Examination and Concentration Oral Examination, and before significant engagement in the student's dissertation work. For part-time students, the School-wide Oral Examination must be completed before the end of their fifth year in the program, while for full-time students this exam must be completed before the end of their third year in the program.

Part-time students will register for one credit per term of special studies credit with their dissertation adviser while preparing for their Preliminary Oral Examinations. After the examination, they will register for one credit per term of thesis research with their dissertation advisers until they complete their Final Oral Exam.

DrPH Thesis

Overview

The focus of the DrPH degree is to facilitate the creation and application of knowledge in the practice of public health. As a culminating and integrative learning experience, all students must complete an original investigation presented in the form of a thesis. The student's thesis should integrate the foundational competencies and the student's concentration-specific competencies. The thesis must be based on original research, worthy of publication, and acceptable to a committee of faculty readers.

The content of the thesis should reflect the focus of the degree program and the student's concentration. The thesis content is to be developed by the student in consultation with their adviser and the Dissertation Advisory Committee. The DrPH thesis shall also meet the following criteria:

1. Address a practical problem confronting a leader in public health practice;
2. Represent original thought and work;
3. Use a rigorous and scientifically defensible analytic component; and
4. Be based on a conceptual model (or models) that relates the work to existing knowledge and to practice.

During the student's application process, various research ideas may have been discussed with faculty members. However, each student's thesis proposal must be developed, reviewed and found acceptable to program faculty while the student is enrolled as a doctoral student at BSPH.

Registration

Following the satisfactory completion of the Schoolwide Preliminary Oral Examination, students must register for thesis research credits with their dissertation adviser. Part-time students are required to register for a minimum of 1 thesis research credit per term. All DrPH students must be registered in the term in which they present their Thesis Seminar and take their Final Oral Exam.

Thesis Format and Content

The decision on which format to follow should be made by the time the student takes the Concentration Oral Examination. There are advantages and disadvantages to each option that should be carefully discussed with the student's adviser. If a decision is made during the writing stage to change the format of the thesis, all members of the thesis advisory committee and/or the thesis readers committee should be informed.

Each of these options is described in greater detail in the following sections.

Option 1: The Traditional Doctoral Thesis

The **traditional doctoral thesis** generally consists of an abstract, five or more chapters, references, and any appendices. The outline of chapters below is merely a guide. The page numbers are rough estimates, and the form of the chapters will vary, reflecting the academic discipline or orientation of the student's research.

All components of the traditional thesis will be judged by the Committee to be either: Acceptable, Acceptable with Revisions, or Unacceptable. Each student, with guidance from their adviser, will rework the thesis draft until all components are judged acceptable.

Option 2: Manuscript-Oriented Thesis

The manuscript-oriented thesis consists of a total of **three (or more) papers, linked to the student's thesis topic.** These papers should be prepared as if for submission to a journal and therefore while the papers may cross-reference each other, each paper should be self-contained and publishable in its own right. Papers prepared in this fashion are typically slightly longer than regular journal articles as they contain slightly more methodological detail and background material than usual.

A manuscript-oriented thesis must meet the following criteria:

1. The doctoral student must be the first author on the three manuscripts used to satisfy this requirement;
2. No manuscript will be accepted as part of the thesis if it was submitted for publication before the student passed the Schoolwide Preliminary Oral Exam; and
3. At least two members of the thesis committee must not be co-authors of any of the manuscripts to avoid conflict of interest if published prior to the Final Oral Exam.

As is true for the traditional doctoral thesis, all components of the manuscript-oriented thesis will be judged to be either: Acceptable, Acceptable with Revisions, or Unacceptable. Each student, with guidance from her/his adviser, will rework the thesis draft until all components are judged acceptable.

Option 3: The 'Workplace Challenge'

In the context of their working environment, students may elect to pursue three out of four following analyses as the basis for their thesis research: 1) organizational assessment; 2) plan for a new program or service; 3) program evaluation; 4) economic evaluation. These analytical pieces may relate to one organization or program that they are closely associated with or could relate to multiple different organizations and programs. In either case, the thesis will need to provide sufficient background information regarding the organization and/or program for the committee of readers to be able to understand the context for the work.

In addition to comprising three of the four analyses described above, a final section of the thesis should discuss implications of the analysis. This section summarizes the lessons learned through the 'workplace challenge' experience, identifies opportunities for improvement from the perspectives of relevant stakeholders, and draws implications for other similar programs or organizations. Students should address the role that leadership played or could have played regarding the projects and/or outcomes observed. For example, what was done and could have been done to enhance, assure, foster or mitigate the outcomes observed?

Thesis Seminar & Final Oral Examination

The Final Oral Examination of the dissertation shall be conducted by the Final Oral Examination Committee after the Thesis Advisory Committee agrees that the candidate is ready for the final defense. The Final Oral Examination Committee is typically composed of the of the same members as the student's Preliminary Oral Exam Committee (four faculty, including the student's adviser, and one practitioner). During the student's defense, the Final Oral Examination Committee shall evaluate the following:

1. Value of the work in terms of its potential practical application;
2. Methodological rigor and original thought demonstrated in the work;
3. Candidate's understanding of the details of the methodological and analytical work; and
4. Final quality of the written thesis document.

As a culminating experience, the doctoral student will present a formal, public thesis seminar online. This requirement provides experience for the student in preparing a formal seminar; provides the faculty and other students with an opportunity to share in the student's accomplishments; and gives a sense of finality to the doctoral experience for the student. The public thesis seminar and Final Oral Examination are typically held on the same day with the seminar being conducted first, followed immediately by the Final Oral Examination and defense. Thesis readers should have at least one month to read and suggest revisions to the thesis prior to the Final Oral Examination. For part-time DrPH students, the Final Oral Examination must be completed within nine years of matriculation, while full-time DrPH students must complete it within seven years of matriculation.

Online Submission of Electronic Theses & Dissertations to The Sheridan Libraries

Submission of electronic dissertation: Submit a PDF copy of the final dissertation to the Johns Hopkins ETD Submission Tool http://etd.library.jhu.edu (https://etd.library.jhu.edu). Instructions for formatting and submitting the dissertation may be found at http://guides.library.jhu.edu/etd (https://guides.library.jhu.edu/etd/). The dissertation needs approval from The Sheridan Libraries before submission to the program.

Dissertation Format Guidelines: Follow the guidelines found on the University's ETD LibGuide (https://www.library.jhu.edu/library-services/electronic-theses-dissertations/) when incorporating the examining committee's recommendations and finalizing the dissertation. To ensure that the dissertation meets all the guidelines, an electronic version can be sent to The Sheridan Libraries for review, dissertations@jhu.edu.

Publication Embargo: Students may choose an embargo period of 0, 1, 2, 3, or 4 years during the ETD submissions. This means that The Sheridan Libraries will withhold publication of the dissertation for the period of time chosen. If students wish to publish their dissertation research, the full embargo period of four years is highly recommended, as many journals will not publish research that is already available in electronic format. At a certain point, The Sheridan Libraries does make some dissertation details public (student name, degree, dissertation title, abstract etc.) during the embargo period, but the actual dissertation is hidden from view.

ProQuest/UMI Publication: Optional for all degree programs – On the "Document Information" page, there will be a check-box at the bottom in which the student may request that their thesis/dissertation be published through ProQuest/UMI. Publication through ProQuest/UMI is now optional. There is no additional form to fill out and no fees associated with publication.

DrPH Program Requirements: The program does require submission of an electronic copy of the final dissertation document.

Learning Outcomes

DrPH Program Objectives

The DrPH Program Objectives provide students with a multi-faceted framework enabling students to become ethical public health leaders equipped to confront the world's most pressing public health challenges.

The DrPH Program Objectives are:

1. Identify, synthesize and apply evidence based public health research and theory from a broad range of disciplines and health related data sources for problem solving and to advance programs, policies, and systems promoting population health. *(Data analysis)*
2. Identify and analyze ethical issues including balancing the claims of personal liberty with the responsibility to protect and improve the health of the population; and act on the ethical concepts of social justice and human rights in public health research and practice. *(Ethics)*
3. Influence decision making regarding policies and practices that advance public health using scientific knowledge, analysis, communication and consensus building. *(Policy)*
4. Assess and use communication strategies across diverse audiences to inform and influence individual, organization, community and policy actions to promote the health of the public. *(Communication)*
5. Enable organizations and communities to create, communicate and apply shared visions, missions and values; inspire trust and motivate others; build capacity; improve performance, and enhance the quality of the working environment; and use evidence-based strategies to enhance public health. *(Leadership)*
6. Provide fiscally responsible, strategic, and operational guidance within both public and private health organizations, for achieving individual and community health and wellness. *(Management)*
7. Design and evaluate system-level and programmatic initiatives in multidisciplinary teams so as promote public health outcomes and health equity *(Program design and evaluation)*
8. Assess adult learning needs, and design and deliver training or educational experiences that respond to these needs using the best pedagogical practices available. *(Education)*

CEPH DrPH Foundational Competencies

In addition to the 12 CEPH Foundational Learning Objectives (p. 176), all DrPH students are expected to achieve the following 20 CEPH DrPH Foundational Competencies as they work toward attaining the program's objectives.

The 20 CEPH DrPH Foundational Competencies are:

Data & Analysis

1. Explain qualitative, quantitative, mixed methods and policy analysis research and evaluation methods to address health issues at multiple (individual, group, organization, community and population) levels
2. Design a qualitative, quantitative, mixed methods, policy analysis or evaluation project to address a public health issue
3. Explain the use and limitations of surveillance systems and national surveys in assessing, monitoring and evaluating policies and programs and to address a population's health

Leadership, Management & Governance

4. Propose strategies for health improvement and elimination of health inequities by organizing stakeholders, including researchers, practitioners, community leaders and other partners

5. Communicate public health science to diverse stakeholders, including individuals at all levels of health literacy, for purposes of influencing behavior and policies

6. Integrate knowledge, approaches, methods, values and potential contributions from multiple professions and systems in addressing public health problems

7. Create a strategic plan

8. Facilitate shared decision making through negotiation and consensus-building methods

9. Create organizational change strategies

10. Propose strategies to promote inclusion and equity within public health programs, policies and systems

11. Assess one's own strengths and weaknesses in leadership capacities including cultural proficiency

12. Propose human, fiscal and other resources to achieve a strategic goal

13. Cultivate new resources and revenue streams to achieve a strategic goal

Policy & Programs

14. Design a system-level intervention to address a public health issue

15. Integrate knowledge of cultural values and practices in the design of public health policies and programs

16. Integrate scientific information, legal and regulatory approaches, ethical frameworks and varied stakeholder interests in policy development and analysis

17. Propose interprofessional team approaches to improving public health

Education & Workforce Development

18. Assess an audience's knowledge and learning needs

19. Deliver training or educational experiences that promote learning in academic, organizational or community settings

20. Use best practice modalities in pedagogical practices

Graduate Training Programs in Clinical Investigation

About

The Graduate Training Programs in Clinical Investigation (https://www.jhsph.edu/academics/graduate-training-programs-in-clinical-investigation/) (GTPCI) are the first of their kind. A joint venture between the Johns Hopkins Bloomberg School of Public Health (BSPH) and the Johns Hopkins School of Medicine (SOM), GTPCI trains clinicians to be more effective clinical scientists. Participants gain the skills necessary to design and conduct clinical investigations of emerging medical treatments and technologies, and to apply new diagnostic techniques and approaches to the study of human pathophysiology. We train mostly faculty, postdoctoral fellows and other allied health professionals working with human subjects in clinical investigation. Our graduates pursue careers in academia, and as independent clinical investigators at pharmaceutical firms and federal regulatory agencies.

BACKGROUND

In 1989, a Task Force on Clinical Research in the Department of Medicine reported results of a survey in which one-third of our clinical post-doctoral fellows indicated their desire to pursue "full-time clinical research" as a career objective. In the same survey, a large majority of post-doctoral fellows felt they were inadequately trained in clinical trial design (70%), data management (70%), the ethics of human experimentation (69%), and biostatistics (83%). At that time, almost half of the responding post-doctoral fellows expressed an interest in a structured training program in clinical investigation. Discussions on ways to meet this need ensued at the department and SOM levels, and eventually enlarged to include the BSPH. At the same time, concerns about the adverse trends for clinical investigation and about the inadequate supply of qualified clinical investigators were being expressed at the national level. Johns Hopkins' response to these local and national needs was the creation of GTPCI in 1992 and admitted its first students in 1993.

CONCEPT

The program is targeted toward internal physician post-doctoral fellows in clinical departments of the SOM. It involves one year of full-time academic classroom work, followed by at least two years of mentored training in clinical research. In 1996, the University approved expansion of the program to include a PhD degree in Clinical Investigation. Normally, an interested fellow applies for admission during their 1st year of clinical post-doctoral training, or for longer training programs, after completion of more than 80% of required subspecialty training. The 1st year is devoted entirely to a full-time academic curriculum (see below). Thereafter, the student returns to the sponsoring department or division to undertake mentored clinical research and to complete any other requirements for clinical certification. In 1997, a MHS degree option was added for those who seek access to the didactic curriculum without the requirement for a thesis project.

CURRICULUM FOR THE DIDACTIC YEAR

The didactic year begins in the summer with a short course on clinical research methods and a seminar series to explore career objectives and inculcate a broad understanding of clinical investigation. During the four terms of the academic year, students take required courses in: Biostatistics, Epidemiology, and Clinical Investigation. For the Biostatistics and Epidemiology cores, a standard series of courses is drawn from the existing BSPH Graduate Curriculum. Courses in the Clinical Investigation core are specifically designed for students in the GTPCI program and largely taught by SOM faculty. An effort is made to involve as many appropriate role models of successful clinical investigators as possible. This core includes courses on biomedical writing, grant writing and thesis preparation, ethical and regulatory issues, drug development, analytical methodology, outcomes effectiveness research and a seminar series in clinical investigation. A course listing can be found in the Requirements tab and course descriptions (p. 3071) are found here.

All degree students enter into an intensive grant writing/thesis development course during the 3rd and 4th terms of their didactic year, out of which comes a thesis research proposal. All degree students are required to successfully complete a written comprehensive examination at the end of the didactic year. Thereafter, research progress is monitored by a thesis committee according to the rules of the University.

FUNDING

For admission to the PhD degree program, the nominating department or division must guarantee three years of stipend support as well as identify a source for the tuition costs for the didactic year. For many students, existing NIH training grants (T32 or F32) are used to pay stipend and tuition. A limited number of institutional tuition grants are provided by the program. From July 1999, an NIH Curriculum Development Award (CTSA) provides for administrative, development and enrichment costs of the program. Participation in the degree programs can also be funded by an NIH KL2 grant which select applicants competitively each year to be NIH Clinical Research Scholars. They are junior faculty, who receive stipends/salary, full tuition and some research support for at least 2 years. Applications are received each December for awards beginning the following July. Individual K23 (or other K awards) can also be used to fund participation in the program.

EXPERIENCE TO DATE

As of June 2022, 452 students have entered the program: 211 in thesis-degree tracks and 241 in the MHS track. Sixteen new students will matriculate for the 2022-23 academic year. As of June 2022, 376 students have completed their degree requirements and 27 are currently in residence.

Programs

GTPCI POLICIES AND IMPORTANT PROGRAM INFORMATION:

Academic Committee and Sub-Committees:

An Academic Committee (https://www.jhsph.edu/academics/graduate-training-programs-in-clinical-investigation/advisory-council/) appointed from faculties of the SOM and the BSPH establishes policy for the program and oversees students' progress. Appointments are for rotating terms of three years, with the possibility of reappointment. Functional sub-committees have been created for Curriculum, Admission, Research Review, and Visiting Scholars; these committees also contain faculty not on the Academic Committee.

Admissions Committee:

Dale Needham, MD, PhD Chair - Professor of Pulmonary & Critical Care

Gregory Lucas, MD, PhD - Professor of Infectious Disease

Richard F. Ambinder, MD - Professor of Oncology

Khalil Ghanem, MD, PhD - Director, GTPCI Program and Professor of Infectious Disease

Edgar (Pete) Miller, MD, PhD - Professor of Medicine & Epidemiology

Sapna Kudchadkar, MD, PhD - Associate Professor of Pediatrics and Anesthesiology/Critical Care Medicine

Research Review Committee:

Richard Rothman, MD, PhD - Professor of Emergency Medicine

Allan Gelber, MD, PhD, MPH - Professor of Rheumatology

Craig Hendrix, MD - Professor of Clinical Pharmacology

Curriculum & Academic Standards Committee:

Khalil Ghanem, MD, PhD - Director, GTPCI Program and Professor of Infectious Disease

Charles W. Flexner, MD - Associate Director, GTPCI Program and Professor of Clinical Pharmacology

O. Joseph Bienvenu, MD, PhD - Professor of Psychiatry

Frank Lin, MD, PhD - Professor of Otolaryngology

Marie Diener-West, PhD - Chair of MPH Program and Professor of Biostatistics

Visiting Scholars Committee:

N. Franklin Adkinson, Jr., MD - Professor of Allergy & Clinical Immunology

Research Forum Delegate

David Levine, MD - Professor of General Internal Medicine

Program Delegate to Committee on Academic Standards

Khalil Ghanem, MD, PhD - Director, GTPCI Program and Professor of Infectious Disease

CHARGES TO THE STANDING COMMITTEES OF THE GTPCI

The **Admissions Committee** shall: (a) review and recommend to the Academic Committee written criteria for admission to the PhD or MHS program; (b) review and approve admission applications for all degree programs, referring to the Academic Committee difficult or unusual cases; (c) establish criteria for evaluation of requests for early admission; and (d) conduct inquiries or interviews as necessary to reach admission decisions. The Committee is composed of a Chair and 3-4 members of the Academic Committee.

The **Research Review Committee** shall: (a) recommend to the Academic Committee an appropriate advisory system to monitor academic and research performance of GTPCI students; (b) instruct students, advisers, and research preceptors and mentors on the Program's expectations for their roles; (c) monitor thesis research progress by each student; and (d) periodically review written reports of academic advisors, and alert the Program Director/Associate Director and the Academic Committee when problems are identified.

The **Curriculum and Academic Standards Committee** shall: (a) continually review and refine as necessary the curriculum requirements for the PhD and MHS programs; (b) to obtain and review student evaluations of the curriculum components; (c) to review annually academic performance. This Committee is chaired by the Associate Program Director and has 3-4 members.

The **Visiting Scholars Committee** shall: (a) receive and evaluate suggestions for enrichment opportunities for GTPCI programs - these may include lectureships, visiting professorships, short topical programs, internal forums, or other creative ventures which could promote the cause of clinical investigation within JHMI or enrich the training experience of students; (b) organize and implement several such enrichment programs each academic year; (c) recommend to the Academic Committee programs which may build bridges and promote cooperation between JHMI elements concerned with training and nurturing clinical investigation in its broadest definition; this would include the GCRCs, Clinical Trials programs, Welch Center programs, Health Services research groups and others.

TUITION, FEES, AND BILLING GUIDELINES

ALL FELLOWS OR FACULTY ACCEPTED INTO THE GTPCI PROGRAM MUST IDENTIFY ADEQUATE FUNDING TO SUPPORT THEIR STUDIES PRIOR TO MATRICULATION. Students must provide complete support information to the GTPCI Office for tuition, course materials fees, matriculation fees, books and supplies.

The Business Office is responsible for posting all payments to the student accounts. Students will receive on-line statements on the 16th of each month from Student Accounts and Business Services. These statements will reflect all funding that has been applied by the Business Office and any outstanding financial responsibilities. The student is ultimately responsible to ensure all bills are paid.

Continuing PhD students, after the 1st year of full-time coursework, **must maintain continuous registration** for part-time classes or thesis research until completion of the degree. If tuition support is available from grant or other sources, the student is expected to arrange for that payment source to be utilized. If no additional funding exists, scholarship support for continuing students will be provided for up to three credits per term. All additional coursework to be supported by scholarship MUST be submitted to the GTPCI office in July for the upcoming academic year and must be approved prior to registration.

Students are personally responsible for late fees.

Faculty are expected to use tuition remission benefits, via the university tuition remission form (https://hr.jhu.edu/wp-content/uploads/2019/03/trffacandstaff.pdf).

COURSEWORK AND GRADING

The BSPH does not accept transfer credits; however GTPCI will waive required courses if taken within the past five years at BSPH, or if the student can verify via exam or transcript that competencies for that course have been mastered. However, such waivers do not reduce the required number of academic credits for a degree; therefore all courses waived must be substituted with an elective course.

GTPCI will also give academic credit for up to 16 hours of required coursework, completed with an A or B, within the past three years at the BSPH if those credits did not apply to another degree earned. Credit is not given for previously taken elective courses, or coursework not taken for a grade.

Grading Policies:

All core (required) courses (including the five required advanced courses taken in the 2nd and/or 3rd year for PhD students) MUST be taken for a letter grade. Electives may be taken for Pass/Fail, unless the elective is taken in place of a required course, it must be taken for grade.

PhD students must maintain a cumulative GPA of 3.00 to remain in good standing, and must earn a B or better in all required courses. Any grade of C in a required course must be retaken for a B or better or GTPCI can recommend a suitable replacement course for a grade of B or better.

MHS students must maintain a cumulative GPA of 2.75 to remain in good standing. Any grade of D or F in a required course will automatically require that the course be re-taken within one year to improve the grade to at least a B or better.

Courses taken for audit do not count toward the PhD and MHS registration requirements.

SPECIAL STUDIES

Special Studies (390.840) is an ad hoc course to provide educational experiences not available in the formal curriculum. However, it **cannot** generally be substituted for a required course requirement in GTPCI. In rare circumstances, a written course plan with a defined workproduct may be approved by your Academic Adviser and Dr. Ghanem, which can involve directed reading or writing, original research, or clinical or administrative experience. It must be supervised and documented by GTPCI faculty or another approved mentor; documentation can include a clinical protocol, draft manuscript, or other written report of activities. One credit of Special Studies is considered the equivalent of three hours of personal work per week, either in or out of a classroom.

LEAVE OF ABSENCE

Students in need of a Leave of Absence (https://www.jhsph.edu/offices-and-services/student-affairs/resources/student-policies/_documents/Academic_Leave_of_Absence.pdf) must submit a request to the GTPCI Academic Committee, and if approved, the student must complete a LOA form which can be obtained from the Registrar's Office.

How will the didactic (1st) year be affected by missing a term(s)?

Many required GTPCI courses are part of a series of courses or multi-term; therefore enrollment in subsequent terms is contingent upon completion of the preceding course/term. For example, if a student is on LOA in 2nd term and misses the second courses in the Epi and Biostat series, the student can not continue the course series in the 3rd and 4th terms, but must restart the series with the 2nd term in the following year. Other courses that may have Epi and Biostat as prerequisites may also be affected, so the impact on curriculum choices is major when there is a LOA in the didactic year of the GTPCI program.

How will the PhD residency requirement be affected by missing a term(s)?

PhD students are required to complete a minimum of four consecutive full-time terms of 16 credits to fulfill the degree; generally students meet this requirement at the end of the didactic year. If LOA is taken during this time, the student must register full-time (16 credits) upon returning from LOA, even if the term is during the 2nd year when GTPCI PhD students are normally only required to register part-time. Full-time registration must continue until four consecutive terms of 16 credits are completed.

How will the completion of the MHS degree be affected by missing a term(s)?

The inability to take required courses during the didactic year due to a LOA will not allow MHS students to complete the 70 credits of required coursework in one year. Therefore completion of the MHS degree must be extended to a 2nd year.

PARENTAL LEAVE

Students who take Parental Leave (https://hr.jhu.edu/benefits-worklife/time-off/leave-for-new-parents/) must complete a LOA form which can be obtained from the Registrar's Office. Those who take Parental Leave during the didactic year can anticipate the delays in program completion that are detailed in the LOA policy.

Will my KL2, T32, or F32 stipend be affected by taking parental leave?

```
According to the National Institutes of Health regulations,
 trainees (KL2, T32, or F32 NRSA awardees) may continue to receive
 stipends up to 15 calendar days of sick leave per year.  Sick
 leave may be used for the medical conditions related to pregnancy
 and childbirth pursuant to the Pregnancy Discrimination Act (42
 USC 2000 e(k)).  Trainees may also receive stipends up to 30
 calendar days of parental leave per year for the adoption or
 the birth of a child when those in comparable training positions
 at the grantee institution have access to paid leave for this
 purpose and the use of parental leave is approved by the program
 director.
```

INTERNATIONAL STUDENTS

The GTPCI program may sponsor a student visa for one year of full-time study to complete the MHS program. Ordinarily, visa sponsorship for PhD applicants will be the responsibility of the sponsoring home clinical department, but in unusual and appropriate situations the GTPCI may sponsor or co-sponsor a visa or visa extension for a PhD student. This would be determined on a case by case basis. Please consult the Office of International Services (https://ois.jhu.edu/) (OIS) for proof of funding and other requirements.

Regardless of visa status or sponsorship, all international students are obligated to notify the GTPCI Office immediately of any changes in academic appointment, employment, funding, or payroll. Students must also notify the GTPCI Office of any plans to travel or work outside of the U.S.

It is the sole responsibility of the student to ensure that all visa requirements are being met and valid status maintained. International students are expected to consult the OIS regarding ANY changes in the situation under which they were issued their visa status. They must also notify the OIS of any plans to travel well in advance. The U.S. Department of State should be consulted prior to any travel outside of the U.S. to determine adequate visa processing times or travel advisories.

Generally, ECFMG certification is required of all applicants for thesis-requiring degrees, since clinical credentials are usually needed to undertake clinical investigation; some exceptions may be justified, and will be considered on a case by case basis. If an international student is admitted without having obtained ECFMG certification, they may be required to obtain it during their GTPCI studies. It is the responsibility of the international student to determine if ECFMG is required through a formal request to the program directors.

Foreign applicants are not entitled to U.S. Federal Aid. Therefore they must be sponsored financially by their home organization or government.

Graduate Training Programs in Clinical Investigation, MHS

The MHS degree is a one-year training program for physicians or other health care professionals with an advanced degree who desire rigorous training in patient-oriented research. The MHS degree may also be appropriate for junior Johns Hopkins Medical Institutions (JHMI) faculty or post-doctoral clinical fellows who cannot accommodate the three-year PhD commitment because of departmental constraints or other issues. It is also appropriate for professionals who do not have an academic appointment within JHMI, and for medical students who desire intensive training in clinical investigation.

All students are assigned an academic adviser from among the Academic Committee (https://www.jhsph.edu/academics/graduate-training-programs-in-clinical-investigation/advisory-council/), who will provide academic and career advice and monitor the student's academic performance. Assignments are made during the 1st term of the didactic year, determined on the basis of perceived mutual interests, availability, and sometimes professional background. Each student and assigned adviser are expected to have a face-to-face introductory meeting by the end of 2nd term in the didactic year. The adviser's role is complete once the student has passed the comprehensive examination at the end of the didactic year, and hence satisfied the degree requirements.

Thesis research is not required.

Requirements for the MHS Degree:

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

The MHS degree is a non-research requiring degree which is awarded to students who specifically apply for this non-research track and fulfill the following requirements:

- 70 credit hours of course work
- MHS capstone experience
- comprehensive examination

MHS students must commit to a one year, full-time pursuit of completing the coursework as rapidly as possible so the benefits begin to accrue in clinical research activities. In some ***extenuating circumstances*** exceptions may be considered at the discretion of the GTPCI Admissions Committee and Academic Committee prior to admission.

All MHS students are assigned an academic adviser in the 1st term whose role is to provide general academic and career advice and monitor the student's academic performance.

MHS Capstone Experience

The project completed in the "Principles of Grant Writing" course serves as the MHS Capstone project. MHS students will consider the principles of successful clinical research strategies and the requirements of funding agencies. Each student will identify a defined research project, together with a suitable team of mentors and collaborators. With mutual review and criticism, each student will develop a written research proposal in the format of a grant application which will integrate the scientific principles of the GTPCI curriculum. MHS students must satisfactorily complete this class prior to graduation.

GTPCI thesis-degree students may not transfer into the MHS degree, nor receive an MHS degree even though they may have satisfied the nominal requirements.

MHS students who have successfully completed a minimum of 16 credits consecutively, 1st through 4th terms, may formally request a transfer into the PhD degree with the approval of their academic adviser. Requests should be made to the Academic Committee, who will either grant the transfer or determine that the application must be reviewed and approved by the GTPCI Curriculum and Academic Standards Committee.

When the coursework requirements are completed satisfactorily and the comprehensive exam has been passed, the program will recommend approval of the MHS degree.

Comprehensive Examination

Taken after successfully completing the core coursework. It is a 4-hour, in-person, open-notes exam that is distributed at the end of 4th term. One re-take of the exam is allowable; if the exam is not passed on the second attempt, the student will be removed from the program.

Required Coursework

Completion of Introduction to Online Learning (https://courseplus.jhsph.edu/core/index.cfm/go/course.home/cid/90/) is required prior to beginning 1st term.

According to the requirements of the Council on Education for Public Health (CEPH) (p. 176), all BSPH degree students must be grounded in foundational public health knowledge. The courses below meet these requirements: 552.601, 552.603, 552.607, 552.608, 552.609, 552.610, 552.611, 552.612.

Code	Title	Credits
PH.390.750	Introduction to Clinical Research (Optional in Summer prior to matriculation)	2
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5
PH.552.607	Essentials of Environmental Health	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health	0.5
PH.552.610	The Social Determinants of Health	0.5
PH.552.611	Globalization and Population Health	0.5
PH.552.612	Essentials of One Health	0.5
PH.550.600	Living Science Ethics - Responsible Conduct of Research	1
PH.550.860	Academic & Research Ethics at BSPH	
PH.390.673	Ethical and Regulatory Issues in Clinical Research (or 306.665)	3
PH.390.631	Principles of Drug Development	2

PH.390.801	Professional Goals and Objectives	1
PH.390.710	Biomedical Writing I	2
PH.390.711	Biomedical Writing II	2
PH.390.721	Principles of Grant Writing I	2
PH.390.722	Principles of Grant Writing II	4
PH.390.703	Presentation Skills	1
PH.140.621	Statistical Methods in Public Health I (or 140.651)	4
PH.140.622	Statistical Methods in Public Health II (or 140.652)	4
PH.140.623	Statistical Methods in Public Health III (or 140.653)	4
PH.140.624	Statistical Methods in Public Health IV (or 140.654)	4
PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses	4
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5
In place of 340.754, choose electives: 5 or more total credits, taken for grade		
70 total credits are required: choose electives to reach 70		

Upon successful completion of the Master of Health Science, students will have mastered the following competencies:

- Maintain an understanding and perspective on the importance of excellent and rigorous clinical research in public health and the practice of medicine
- Take a scholarly, comprehensive, and objective approach to the selection and formulation of a clinical research question
- Identify, interpret, and critique relevant clinical literature
- Effectively communicate scientific information to professionals and the lay public
- Demonstrate proficiency in the clinical skills needed to conduct clinical research and manage study subjects
- Provide advice on clinical research methods to professionals within and outside of the academic medical environment
- Identify analytical laboratory techniques and methodologies appropriate to answer a specific research question for a proposed study
- Prepare a scientific proposal
- Develop and write a study protocol using systematic protocol documentation
- Effectively manage a clinical study team
- Develop and implement an ongoing system for data intake and management
- Recruit study participants in an ethical manner
- Monitor study progress
- Analyze data
- Interpret statistical analysis
- Adhere to regulatory requirements

Graduate Training Programs in Clinical Investigation, PhD

The PhD degree is our flagship program for sub-specialty physicians, leading to both clinical board eligibility in a medical discipline and the PhD.

Candidates take one year of full-time didactic instruction after an initial training year in a medical or surgical subspecialty. This provides the scientific grounding for subsequent original research. GTPCI faculty and a preceptor from the fellow's SOM home division or department jointly mentor thesis research. Fellows already enrolled in a clinical fellowship program at Johns Hopkins usually apply during their first year of clinical training.

PhD candidates must complete 90 credit hours of instruction, including one full year of full-time coursework, with additional specialized coursework during the following two years, during which thesis research is conducted. A comprehensive exam is given at the end of the didactic year.

Candidates must satisfy all University requirements for the PhD, including preliminary oral examinations and thesis preparation and defense.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Requirements for the PhD Degree:

- satisfactory completion of 90 credit hours of course work (including thesis research credits)
- 5 additional advanced elective courses to be taken AFTER the 1st year in the 2nd or 3rd years; to include PH.140.642 Design of Clinical Experiments – these courses must be at least 3 credits each and taken for grade. They should be advanced methodically and analytically, and are to build on the knowledge/curriculum learned in the 1st year. Elective courses taken prior to enrolling in GTPCI or in the 1st year do not qualify as one of the 5 advanced electives
- must earn a B or better in all required courses
- continuous registration for the PH.390.855 Research Forum and registration for thesis research each term during the following years
- comprehensive examination at the end of the didactic year
- satisfaction of all university requirements for the PhD, including preliminary oral examination, thesis preparation, and final defense

PhD Residency Requirement

The BSPH requires all PhD students to register full-time for a minimum of 16 credits for 4 consecutive terms. This does not necessarily have to be the first 4 terms of enrollment, but the full-time residency requirement must be fulfilled sometime during the PhD program PRIOR to taking the preliminary oral examination.

Annual Review Requirement – Individual Development Plan (IDP)

The University Doctoral Board requires that each PhD student receive an annual review during every year in their program. This review is expected to have 3 components:

1. Student self-assessment and Individual Development Plan (IDP form)

2. Monitoring of progress in the program

3. Written feedback to the student

Comprehensive Examination

Taken after successfully completing the core coursework. It is a 4-hour, in-person, open-notes exam that is distributed at the end of 4th term. One re-take of the exam is allowable; if the exam is not passed on the second attempt, the student will be removed from the program.

Preliminary Oral Examination

All PhD students must complete the PH.550.600 Living Science Ethics - Responsible Conduct of Research course prior to taking the preliminary oral exam.

The preliminary oral examination should ordinarily take place no later than December following the completion of the didactic year and comprehensive written examination. It is a 2-hour exam that serves to determine whether the student has both the ability and the knowledge to undertake significant research in their general area of interest. Specifically, the exam committee will be concerned with the student's:

1. Capacity for logical thinking

2. Breadth of knowledge in relevant areas

3. Ability to develop and conduct research leading to a completed thesis

Students will provide a 10-15 min. presentation of their research topic, and discussion of this research topic may serve as a vehicle for determining the student's general knowledge, methodological approaches, and research capacity. This examination is not intended to be a defense of a specific research proposal.

When the student's thesis committee agree that a written draft of the dissertation work is acceptable, the student may proceed to schedule the "oral defense" of their thesis. If the thesis committee agree by unanimous vote that the student "passes" their oral thesis defense, they will then recommend to the Graduate Board of the University, the awarding of the PhD degree.

Documentation of Thesis Progress

In addition to the BSPH annual review requirement, GTPCI requires documentation of each thesis degree student's interaction with their thesis committee, as it pertains to their thesis progress. The policy is as follows:

1. Students must convene with their thesis committee within 6 months after completion of the preliminary oral exam and then every 12 months thereafter. A minimum of 3 members must be present for the meeting. Thesis committee members may participate by teleconferencing if necessary to achieve a quorum.
2. It is the student's responsibility to organize the required meeting of the thesis committee.
3. It is the student's responsibility to present the report form at the meeting, obtain committee member signatures, and return the form to the GTPCI Program office.
4. The Program will notify each student and Academic Adviser via e-mail one month prior to the due date.

Documentation Form

1. The form will be distributed for completion to students during the December and May monthly GTPCI Research Forum.
2. Students who are absent from the Research Forum will be notified via e-mail to complete the form and return it to the GTPCI Program Office.

PhD Continuing Course Requirements:

After all required coursework is completed, PhD students must continuously be registered for a minimum of 3 credits per term until graduation.

PhD students are required to register for and attend the monthly PH.390.855 Research Forum every year after the 1st didactic year, until all degree requirements are met or they leave the institution. Students are expected to attend at least six of the eight sessions; if this requirement is not met, completion of a remedial assignment will be required. The Research Forum requirement ceases after passing the final oral thesis defense. The purpose is to provide students with an opportunity to present interim research results and obtain constructive criticisms from their peers and faculty.

The format of the meetings is a brief presentation by the investigator (10-15 minutes) of problems presented by work in progress. Another PhD student will be assigned as a discussant for each presentation, and will comment for 5 minutes after the presentation. This will be followed by questions, answers, and comments (10-15 minutes). The format is NOT intended to be a platform for formal presentation of research results. Instead, its intent is to facilitate critical discussion, and even disagreement that will be helpful to the presenter and other students in attendance as well.

Final Oral Examination (Thesis Defense)

The structure of the defense includes two parts: an initial public presentation of the thesis work, followed by a closed critical examination by the student's thesis committee.

The public seminar should include a 30 minute presentation by the student, followed by a question period of 15 minutes. Public announcement and invitations should be initiated by the student. Afterward, the thesis committee and student will meet privately to continue a critical evaluation of the thesis as needed. Thereafter, the thesis committee will convene in private for voting and discussion, after which they will announce their decision to the student.

Students should schedule a two-hour time block with their thesis committee, and reserve suitable space for both parts of the defense.

The Appointment of Thesis Reader and Final Exam form is DUE ONE MONTH PRIOR TO EXAM DATE.

Exam Committee Members - who can serve for GTPCI

ADKINSON, Franklin - GTPCI or DOM Clinical Immunology

ALEXANDER, Caleb - GTPCI or BSPH Epidemiology

AMBINDER, Richard - GTPCI or SOM Oncology

BANDEEN-ROCHE, Karen - GTPCI or BSPH Biostatistics

BEMBEA, Melania - GTPCI or SOM Anesthesiology/Critical Care Medicine

BIENVENU, Joe - GTPCI or SOM Psychiatry

CELENTANO, David - GTPCI or BSPH Epidemiology

DIENER-WEST, Marie - GTPCI or BSPH Biostatistics

FLEXNER, Charles - GTPCI or DOM Clinical Pharmacology

GELBER, Allan - GTPCI or SOM Rheumatology

GHANEM, Khalil - GTPCI or SOM Infectious Disease

HAUT, Elliott - GTPCI or SOM Surgery

HENDRIX, Craig - GTPCI or DOM Clinical Pharmacology

HOOVER-FONG, J. - GTPCI or SOM Pediatric Genetics

JOHNSTON, Fabian - GTPCI or SOM Surgery and Oncology

KING, Elizabeth - GTPCI or SOM Transplant Surgery

KUDCHADKAR, Sapna - GTPCI or SOM Pediatrics and Anesthesiology/Critical Care Medicine

LEVINE, David - GTPCI or SOM General Internal Medicine

LIN, Frank - GTPCI or SOM Otolaryngology

LUCAS, Greg - GTPCI or SOM Infectious Disease

MILLER, Pete - GTPCI or SOM Medicine and Epidemiology

NEEDHAM, Dale - GTPCI or SOM Pulmonary

ROTHMAN, Richard - GTPCI or SOM Emergency Medicine

SEGEV, Dorry - GTPCI or SOM Surgery

Required Coursework

Completion of Introduction to Online Learning (https://courseplus.jhsph.edu/core/index.cfm/go/course.home/cid/90/) is required prior to beginning 1st term.

According to the requirements of the Council on Education for Public Health (CEPH) (p. 176), all BSPH degree students must be grounded in foundational public health knowledge. The courses below meet these requirements: 552.601, 552.603, 552.607, 552.608, 552.609, 552.610, 552.611, 552.612.

Code	Title	Credits
PH.390.750	Introduction to Clinical Research (Optional in Summer prior to matriculation)	2
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	0.5

PH.140.623	Statistical Methods in Public Health III (or 140.653)	4
PH.140.624	Statistical Methods in Public Health IV (or 140.654)	4
PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses	4
PH.340.751	Epidemiologic Methods 1	5
PH.340.752	Epidemiologic Methods 2	5
PH.340.753	Epidemiologic Methods 3	5
In place of 340.754, choose electives: 5 or more total credits, taken for grade		
16 credits per/term required for 1st-4th terms: choose electives in terms with less than 16		
In 2nd year - must take 5 advanced electives; 3 credits each; taken for grade (including 140.642)		
PH.140.642	Design of Clinical Experiments (1 of 5 advanced electives in 2nd year)	3
PH.390.855	Research Forum (taken each year beginning 2nd year until graduation)	1

In addition to the Schoolwide policies (p. 633), these are the following GTPCI PhD program policies:

Academic Adviser

1. An academic adviser will be appointed during the 1st term from among the Academic Committee (https://www.jhsph.edu/academics/graduate-training-programs-in-clinical-investigation/advisory-council/). Assignments are determined on the basis of perceived mutual interests, availability, and sometimes professional background. Students and their assigned advisers work together with mutual consent. The academic adviser assigned will not be the same person as the research mentor.

2. Each student and assigned adviser are expected to have a face-to-face introductory meeting by the end of 2nd term in the didactic year. This provides an opportunity for at least one detailed discussion regarding career objectives, mentoring arrangements, and thesis development.

3. The academic adviser's responsibility is to: advise student on course work selection and monitor academic performance, provide general mentoring and support for academic issues, and to serve on the student's thesis committee. Students are required to have an introductory meeting no later than the end of 2nd term in the didactic year. Then students are required to contact their academic adviser in June and December in each succeeding research year until a degree is awarded. Each academic adviser will provide brief, written documentation of these contacts to the Program Office.

4. The academic adviser does not function as the student's advocate which is the role of the research mentor. *(Note: BSPH graduate degree documents frequently use the term "adviser" by which is meant the student's GTPCI academic adviser. Both the academic adviser and research mentor must be present during the preliminary oral exam and participate on the thesis committee/final oral examination).*

Thesis Research Mentors

The principal research mentor is a faculty member in the student's home division or department. Unlike the academic adviser, the research mentor knows the scientific and medical disciplines involved in the research and therefore can supervise and critically evaluate the student's research progress. The same individual commonly serves as a mentor for the student's professional and career development. In some thesis projects, especially when new methodology is involved, other research mentors may also need to be involved in assisting and directing the student's thesis research. *The GTPCI Program continually emphasizes the importance of establishing a successful mentoring relationship with the research mentor, and with other key faculty who are important for research training or professional development.*

Thesis Committee

A thesis committee must be established within 3 months of completing the 1st didactic year, and each PhD student will use this committee for research oversight through completion of the thesis. PhD students are required to have 5 member committees, who will also serve for the preliminary oral exam AND the final oral examination.

The Academic adviser, Research Mentor, a second GTPCI representative, a BSPH representative, and another representative outside GTPCI (this can be a SOM person) will serve on the thesis committee. **The sponsoring department is GTPCI** (these are BSPH forms & guidelines, not SOM). Any faculty listed on the Academic Committee (https://www.jhsph.edu/academics/graduate-training-programs-in-clinical-investigation/advisory-council/) or GTPCI Standing Committees can represent GTPCI (the home department). Anyone on the GTPCI committees who has a PRIMARY appointment in BSPH may also represent "outside department BSPH". You may check BSPH faculty appointment status (https://www.jhsph.edu/faculty/directory/list/). Questions regarding thesis committee composition should be directed to the GTPCI Program Coordinator.

BSPH thesis committee forms are available on the BSPH Portal (https://my.jhsph.edu/_login/PS.JHSPH.Login.aspx?ReturnUrl=%2f_layouts%2f15%2fAuthenticate.aspx%3fSource%3d%252FPages%252FDefault%252Easpx&Source=%2FPages%2FDefault%2Easpx). You will need your BSPH e-mail address and password to log in for access to the forms.

Acceptable Doctoral Thesis

During the 2nd term PH.390.801 Professional Goals and Objectives students will initiate the structured process of considering and choosing among a variety of research topics for career development and thesis requirements.

A PhD student is expected to undertake a dissertation project which will represent a novel and substantial contribution to the chosen field of endeavor. The project must be of the student's own design, and the student must be largely responsible for its completion. It must also include primary data collection which is defined as assimilation of new information directly from first-hand sources such as surveys, prospective observations, and/or experimentation. It is compiling data from new or original research that (a) have not been previously published and (b) can be subjected to statistical analyses to address a predefined objective or research question. It can also include hypothesis-driven new laboratory assessments of existing samples from a defined population. Ideally, the thesis project will focus on a single, important research issue.

In unusual circumstances, the thesis project may consist of a series of smaller related studies designed to address a particular clinical or methodological problem.

A doctoral dissertation must adhere to the published University guidelines. As a general guide, the completed doctoral dissertation should consist of two or more units which would be publishable in peer-reviewed journals. For example, the Introduction chapter could be publishable as a rigorous and comprehensive review of the research problem, and individual chapters describing research results should be published as original papers in scientific journals. For dissertations which are more methods-oriented, chapters describing new research methodologies or data collection instruments might also be considered as publishable units. Acceptance of the thesis in partial fulfillment of the requirements for the PhD does not require that manuscripts be submitted or accepted for publication. However, in the opinion of the thesis committee, at least two parts of the thesis must be suitable for publication if submitted to peer-reviewed journals, and prior acceptance or publication will be taken as substantial evidence in favor of this requirement.

The criteria to be applied in evaluating a thesis are: the originality and publication potential of the research, the student's understanding of the details of the methodological and analytic work, the magnitude of the student's contribution to their chosen field of research, and the final quality of the written thesis document.

All thesis submissions MUST adhere to the formatting guidelines outlined by the BSPH. University policy stipulates that "previously published material must be incorporated into a larger argument that unites the whole work. A common thread linking the various parts must be identified and made explicit as the papers are joined into a coherent unit. Introductory, transitional, and concluding sections, as well as a bibliography must be included. Proper credit must be given to co-authors and to the publisher. Written evidence that permission has been granted by the publisher must accompany the dissertation. Discrete, unlinked papers are not acceptable."

IRB Approval for Thesis Projects

Candidates for thesis-requiring degrees must document IRB approval or exemption for their thesis project(s). If the project is exempt, a brief application process to JHMI IRBs will generate a document stating the project is exempt. Either this document, or an approval letter(s) from the IRB must be submitted to the GTPCI office no later than the submission of the thesis for review by the thesis committee. Failure to get prospective IRB approval or exemption will result in the thesis being administratively disapproved.

PhD Mentoring **(**https://provost.jhu.edu/education/graduate-and-professional-education/phd-mentoring-policies-and-resources/**)**

ScM Degree (only available to those who are unable to complete the PhD)

The ScM is a thesis-requiring degree which can be awarded to PhD students who cannot fulfill the full set of requirements for a PhD because of curtailed time available, unanticipated research difficulties, or late shifts in thesis projects. Requirements include:

- 70 credit hours of course work including a year of full-time coursework
- comprehensive examination
- continuous registration for the Research Forum following the didactic year
- evidence of original research productivity as evidenced by submission of an acceptable Master's thesis

The written thesis must be based on original research, worthy of publication, and acceptable to the program's Advisory Council and a Committee of Thesis Readers. The document may consist of one or more original manuscripts derived from the student's research and submitted to peer-review journals, or a traditional thesis document with sections on background and introduction, literature review, methods, results, discussion and a copy of all study-related instruments. GTPCI students are not ordinarily accepted for this track initially, but may transfer into it by mutual agreement after matriculation. Students matriculating into the ScM degree program may not transfer into the MHS degree program.

Students who transfer to, or remain in the ScM track, must establish a thesis committee within 3 months of completing the 1st didactic year. Each ScM student will use this committee for research oversight through completion of the thesis. ScM students are required to have 2 members on their thesis committees.

PhD students who are advised or elect for valid reasons to transfer to the ScM program must receive approval from their thesis committee. <u>From the term the ScM transfer is effective, the program provides students with tuition for up to 4 additional non-summer terms to complete the ScM requirements, after which students will be responsible for their own tuition costs.</u> However, the maximum duration of student enrollment may not exceed 4 years from original matriculation into the PhD/ScM program.

<u>However, an automatic transfer to the ScM candidacy will occur if a PhD student does not form a thesis committee and complete the preliminary oral examination by the end of their 3rd academic year.</u> Students matriculating into a thesis-requiring degree program will not be allowed to transfer into the MHS degree program.

Upon successful completion of the Doctor of Philosophy, students will have mastered the following competencies:

- Maintain an understanding and perspective on the importance of excellent and rigorous clinical research in public health and the practice of medicine
- Take a scholarly, comprehensive, and objective approach to the selection and formulation of a clinical research question
- Identify, interpret, and critique relevant clinical literature
- Effectively communicate scientific information to professionals and the lay public
- Demonstrate proficiency in the clinical skills needed to conduct clinical research and manage study subjects
- Provide advice on clinical research methods to professionals within and outside of the academic medical environment
- Identify analytical laboratory techniques and methodologies appropriate to answer a specific research question for a proposed study
- Prepare a scientific proposal
- Develop and write a study protocol using systematic protocol documentation
- Effectively manage a clinical study team

- Develop and implement an ongoing system for data intake and management
- Recruit study participants in an ethical manner
- Monitor study progress
- Analyze data
- Interpret statistical analysis
- Adhere to regulatory requirements

Master of Arts in Public Health Biology, MA

Program Overview

The MAPHB degree is a fully online, part-time degree program focused on biological tenets and research methods that are relevant to current issues in public health. It is an interdepartmental program involving Biochemistry and Molecular Biology, Environmental Health and Engineering, and Molecular Microbiology and Immunology, with required coursework provided through each. The program is designed to provide a solid, conceptual basis for an understanding of the rationale, tools and approaches that are essential for addressing problems in public health.

Summary of Graduation Requirements

- A minimum of 48.5 credit hours to fulfill the degree
- Students are required to complete a thesis research course
- Students must take one course from BMB, EHE, and MMI as detailed in the MAPHB Curriculum section
- All students must maintain minimum academic standards and have satisfactory grades as detailed in the Academic Standards section

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Choose at least one of the following:		
PH.120.600		5
PH.120.601	Biochemistry II: Major Metabolic Pathways	5
PH.120.602	Concepts of Molecular Biology	4
PH.120.613	Nucleic Acid Chemistry	3
PH.120.625	Introduction to Cancer Biology	3

Code	Title	Credits
Required Course, Molecular Microbiology and Immunology		
Choose at least one of the following:		
PH.260.656	Malariology	4
PH.550.603	Fundamentals of Immunology	3
PH.260.600	Introduction to the Biomedical Sciences	4
PH.260.701	Anatomy of Scientific Error	3

Academic Standards

Students must meet minimum academic standards to remain in the MPH Program. A student's failure to meet any of the criteria below is grounds for being placed on academic warning and/or being dismissed from the program.

In core courses, Master's students must receive a 'C' or higher. A student who earns a grade below that threshold in a course listed as a core requirement must, at the next opportunity, make a second attempt to complete the core course by repeating the same course. A grade below the threshold on the second attempt may be grounds for dismissal and must be reported to the School's Committee on Academic Standards. To remain in good academic standing, masters students must maintain a minimum grade point average of 2.75. If a student's GPA falls below the requirement, the student will be placed on academic probation. School policy states that a Master's student cannot graduate with a GPA lower than 2.75.

While students could opt to take a term(s) off, students are required to complete the degree within 4 years of their original start date. Failure to complete the degree within 4 years of the original start day could result in a non-conferral of the degree.

The goal of the MA in Public Health Biology program is to prepare students from diverse backgrounds to apply biological principles to public health issues, conceptualize research questions, interpret results and apply these skills in the context of human health. The specific educational objectives are as follows:

Objectives

Upon successful completion of the MA in Public Health Biology program, students will be able to:

1. Describe the molecular, cellular, immunological, and physiological bases of selected human diseases and conditions;
2. Describe biological principles that underlie the development of disease and its prevention, control and management;
3. Critically evaluate data described in scientific papers and integrate data from multiple papers into coherent theories about the regulation of complex biological processes and diseases;
4. Apply statistical principles to the analysis of biological data and apply findings to the understanding and treatment of human disease;
5. Compose, explain and defend a 20-30 page scholarly thesis that demonstrates a deep understanding of how biological principles and methods are used to understand, treat and/or prevent a particular condition of importance in the public health arena;
6. Communicate effectively with the general public, professionals and other stakeholders on issues related to immunology, biochemistry, molecular biology, environmental health sciences and public health.

Master of Bioethics (MBE)

About

From the ethics of food production to stem cell research, the Johns Hopkins Berman Institute of Bioethics (https://bioethics.jhu.edu/about/what-we-do/) is guiding the conversation about some of the most complex moral and policy issues affecting the health and well-being of people worldwide.

Programs

Master of Bioethics (https://bioethics.jhu.edu/education-training/master-of-bioethics/) (MBE)

Offered in collaboration with the School of Public Health, the MBE is an innovative, interdisciplinary and cross-divisional graduate program that prepares students from diverse backgrounds to investigate and address the bioethics challenges of professional and civic life. The program combines approaches from science and technology, the humanities and arts, and public health and medicine.

Bioethics Certificate Program (p. 578)

Offers focused academic training in specific areas of bioethics and public health. Designed to appeal to:

- Current Johns Hopkins graduate degree students desiring specialization in particular topic areas
- Individuals seeking to learn more about specific areas of public health.

The Berman Institute's Bioethics Certificate Program is geared toward current JHU graduate students, non-degree-seeking students as well as a broader audience.

Summer Institute (https://bioethics.jhu.edu/education-training/training/summer-institute-in-bioethics/)

Explore the fascinating interdisciplinary world of bioethics in an interactive, intensive week-long summer institute. Leading bioethics faculty cover both theory and practical application for fields including public health, the life sciences, medicine, nursing, and law. Prior coursework or experience in bioethics is not required. For more information about the Summer Institute in Bioethics,

Please view our course site (https://bioethics.jhu.edu/education-training/training/summer-institute-in-bioethics/) or contact or Penny White (https://bioethics.jhu.edu/people/profile/penny-white/), Academic Program Administrator at (410) 614-5580.

Curriculum

The program requires successful completion of a minimum of 64 term credits, including a practicum and a thesis seminar. Upon matriculation, each student charts a program of study to meet individual goals.

Full-time students typically complete the degree over four 8-week academic terms plus a few credits during the summer. Part-time students must complete program requirements within four years.

In addition to formal coursework, practicum, and thesis, all students will participate in a variety of supplemental seminars in bioethics, such as the Berman Institute Noontime Seminar Series (https://bioethics.jhu.edu/news-events/events/seminar-series/), Robert H. Levi Symposium, Shallenberger Lecture in Ethics, and the Sheila Hutzler-Rives Memorial Lecture in Palliative Care. These events allow students to interact with a broad network of national and international leaders in bioethics.

Courses

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

PH.700.601 Foundations of Bioethics with Anne Barnhill (https://bioethics.jhu.edu/people/profile/anne-barnhill/) PhD (https://bioethics.jhu.edu/people/profile/anne-barnhill/) and BI Core Faculty
Offers an introduction to central approaches and issues in bioethics. Includes a discussion of the history of the field and the issues that led to its birth and growth internationally. Introduces philosophical, empirical and non-empirical approaches to bioethics and core ethical issues in clinical care, public health, science and research. Provides a foundation for future study in bioethics.

PH.700.602 Hot Topics in Bioethics with Travis Rieder, PhD (https://bioethics.jhu.edu/people/profile/travis-rieder/) and BI Core Faculty
Offers a continuation of the exploration of ethical theory and its use in bioethics begun in "Introduction to Ethical Theory". Utilizes the conceptual and methodological tools from "Ethical Theory" in analyzing topics and cases currently being discussed in bioethics. Although topics change from year to year, common themes include: discussion of legal changes concerning end of life; the ethics of new reproductive technologies; ethical challenges concerning genome-editing

technologies; and global ethical challenges such as climate change and resource allocation.

PH.700.603 Introduction to Ethical Theory with Travis Rieder, PhD
Explores the relationship between philosophical ethical theory and the practical world of bioethics. In particular, examines the classical accounts of moral obligation and virtue in the context of a variety of contemporary bioethical problems. Further presents the distinction between individual bioethics and collective bioethics, with the goal of determining how the theoretical grounding for these fields differ. The motivating questions are both methodological and substantive: First, how does theory contribute to bioethical investigations? And second, does reflection on ethical theory tell us what to do concerning particular, bioethical problems?

PH.700.604 Methods in Bioethics with Jeremy Sugarman, MD, MPH, MA (https://bioethics.jhu.edu/people/profile/jeremy-sugarman/)
Describes the range of methods used in bioethics research and practice, including philosophy, law, history, religion, and quantitative/qualitative research techniques. Emphasizes the strengths and weaknesses of each method in addressing bioethical questions or problems. Illustrates each method with contemporary examples from bioethics and public health. Exposes students to experts in various methods. Presents one cross-cutting example of an issue addressed by all methods. Discusses the challenges of interdisciplinary and multi-disciplinary research.

Expected Courses

To gain a comprehensive view of bioethics, students are expected to take a range of courses during their time at Johns Hopkins. Some of the courses relevant to MBE course of study include:

- Bioethics, Human Rights, and Global Health
- Bioethics and the Law
- Ethics, Policy, and Emerging Biomedical Technologies
- Food Ethics
- Germs, Genes, Patients, & Populations
- Justice Theory and Health
- Understanding Addiction - Philosophy, Science, Ethics
- Vulnerability in Childhood: From Ethics to Advocacy

Focused on the Future

As a graduate of the MBE program, students will be equipped to drive the responsible pursuit of new knowledge and will be prepared to help develop new tools to consider society's thorniest issues through a cross-disciplinary lens.

Advances in health care and scientific research benefit people around the world. From the first ventilator to the first vaccine, scientific and technological discoveries have prolonged life and alleviated human suffering while advancing health-related knowledge. However, such advancements often present challenging ethical questions for individuals and society related to appropriate use, access, safety, rights and obligations.

The MBE program prepares students to make meaningful contributions at the intersection of health sciences and societal impact.

Master of Public Health Program (MPH)

Program Overview

Objectives

The overarching goal of the MPH Program is to provide students with a population perspective on health. The Johns Hopkins MPH Program is designed to:

- prepare students to tackle current and emerging global public health problems
- provide students with critical multidisciplinary training to help solve global health problems
- equip students with foundational public health knowledge and competencies

Students are required to complete a core MPH curriculum that comprises approximately 45-50 of the 80 credits required for graduation. Students have flexibility to customize the remaining elective credits of their curriculum to their areas of interest to achieve an appropriate balance between depth and breadth.

MPH Program Matriculation Dates and Locations

June Cohort (Part-time)

Orientation: Online or Onsite in Baltimore, MD. End of May/Early June.

Johns Hopkins Bloomberg School of Public Health
600 N. Wolfe Street
Baltimore, MD 21205

July Cohort (Full-time)

Orientation: Onsite in Baltimore, MD. Beginning of July.

Johns Hopkins Bloomberg School of Public Health
600 N. Wolfe Street
Baltimore, MD 21205

November Cohort (Part-time)

Orientation: Onsite in Barcelona, Spain. Early November.

Universitat Pompeu Fabra
Ciutadella Campus
Merçè Rodoreda Building
Ramon Trias Fargas, 25-27
08005 Barcelona

January Cohort (Part-time)

Orientation: Online early January.

Johns Hopkins Bloomberg School of Public Health
600 N. Wolfe Street
Baltimore, MD 21205

March Cohort (Part-time)

Orientation: Onsite in Kyoto, Japan. Mid March.

iHope International
Kyoto daiichiseimei-Izumiya Bldg., 5F

Akinonocho 513, Nakagyo-ku
Kyoto 604-0847 Japan

Planning Your Curriculum

MPH students have flexibility in choosing courses and putting together their academic schedule of courses. Students can mix and match online courses, intensive learning Institute courses, on-site courses at our East Baltimore campus, as well as Johns Hopkins courses at other sites.

Catalogue and Academic Calendar

The definitive course directory is https://www.jhsph.edu/courses (https://www.jhsph.edu/courses/) and the current year courses in this catalogue should be used for planning. New students should familiarize themselves with the academic calendar (p. 175) for the term dates and registration periods.

Course Load and Time Commitment

Each credit represents, on average, about a three to four-hour time commitment during each week of the eight-week term. A median course load per 8-week term for a part-time student is about 5-6 credits. Therefore, part-time students can expect an average of 15-18 hours' worth of course-related work per week. Full-time students must be registered for 12 or more credits each term to maintain full-time status. Assuming that each credit of a course equals about three to four hours' worth of work per week, full-time students can expect to dedicate approximately 36 hours of work per week to their MPH courses. No student may exceed twenty-two credits in a single term.

Sequencing Your Curriculum

Required core area courses should be completed early in the program, and the epidemiology core course must be completed during the first year of study. If elective courses have prerequisites, these will be listed in the course description. Some course content, such as biostatistics, is delivered in a specific sequence of courses. Certificates may have specific sequences that participants should follow. The capstone is to be completed at or near the end of the program.

Choosing Electives

Many of MPH program credits will be in elective courses, and even some of the core courses can be chosen from among a variety of options. Here are some places to look for guidance in choosing electives:

- Your faculty adviser
- The course listings for the Summer, Fall and Winter Institutes (p. 498)
- Searches in the course directory, using key words for search terms that pertain to your areas of interest
- The Informal Focus Areas/Formal Concentrations
- The certificate programs offered by BSPH (please see below)

BSPH Certificate Programs

The School offers certificate programs in specific areas of study. MPH students may pursue a certificate program; however, a student in a concentration area should check with the concentration directors to ensure that there is no substantial overlap between the concentration and certificate requirements. For more information, see http://www.jhsph.edu/academics/certificate- programs/ (http://www.jhsph.edu/academics/certificate-%20programs/) and contact the faculty sponsors of the certificate programs listed on the website.

Formal Concentrations Areas

Concentrations and certificate programs differ in that concentrations are intended specifically for MPH students and incorporate faculty advising and the capstone experience within the concentration.

- Aging in Public Health
- Child and Adolescent Health
- Epidemiological and Biostatistical Methods for Public Health and Clinical Research
- Food, Nutrition and Health
- Food Systems
- Global Environmental Sustainability and Health
- Health Leadership and Management
- Health Systems and Policy
- Humanitarian Health
- Infectious Diseases
- Social and Behavioral Sciences in Public Health
- Women's and Reproductive Health

Detailed information about each concentration can be found on the MPH website (https://www.jhsph.edu/academics/degree-programs/master-of-public-health/curriculum/concentrations.html (https://publichealth.jhu.edu/academics/academic-programs/masters-degrees/master-of-public-health-mph/program-options/full-time-format/concentrations/)) and in the student manual for full-time students. Part-time/online students are able to take concentration courses as electives and possibly may participate in the concentration.

On-Campus Work in the Intensive Institutes

Summer Institutes in Baltimore

The Summer Institutes offer short intensive courses in the following areas:

- Health Behavior and Society
- Health Policy & Management
- Environmental Health
- Epidemiology and Biostatistics
- Injury Prevention
- Mental Health
- Tropical Medicine
- American Indian Health
- Health Emergencies in Large Populations

The course schedules for the various Summer Institutes are typically published online in February.

Global Tobacco Control Institute in Baltimore

Two weeks of intensive courses held in Baltimore in October, considered to be part of 1st Term. Offerings are for students pursuing the Global Tobacco Control Certificate.

Fall Institute in Barcelona, Spain

Fall Institute is comprised of several short courses offered in November and is part of 2nd Term. While the Institute is hosted by the Health Policy & Management Department, the courses offered are from multiple departments and the offerings vary from year to year. Courses are held at Universitat Pompeu Fabra in Barcelona and taught in English. The schedule is typically available in late June.

Winter Institute in Baltimore
A variety of one- and two-week course are offered in January. Typically, the offerings include courses in Data Analysis, Tropical Medicine, Native American Health, Health Emergencies, Quality Improvement, and Health Communication, among others. The schedule is typically available in September.

Winter Institute in Washington, DC
All-day courses from one to four days long, pertaining to Health Policy, are offered in January. Courses are held at a Johns Hopkins satellite campus in the DuPont Circle area of Washington. The schedule is typically available in September.

SOURCE

https://www.jhsph.edu/source/

SOURCE is the community engagement and service-learning center for the Johns Hopkins University (JHU) Schools of Public Health, Nursing, and Medicine. Its mission is to engage the Johns Hopkins University health professional schools and Baltimore communities in mutually beneficial partnerships that promote health and social justice. There are multiple ways to engage in a practicum experience through SOURCE supported activities. However, not all SOURCE projects meet the practicum requirements. Subscribe to the SOURCE Weekly Service Scoop to learn more about the latest community involvement opportunities in Baltimore City (https://source.jhu.edu/programs-and-events/service-scoop/).

Getting Advice, Mentoring, and Your Questions Answered

Each MPH student is assigned a faculty adviser. The role of the adviser is to discuss your academic program and progress including your choice of courses considering your educational and professional goals. Your adviser is your first point of contact with the faculty, but students are encouraged to reach out and form relationships with other faculty members as interests evolve. A Faculty Directory is available online (https://publichealth.jhu.edu/faculty/directory/list/?combine=&work_type%5Bprimary%5D=primary).

Once you are assigned an adviser, you should be proactive in contacting them at least once a term. Since faculty advisers are also busy with research studies, lecturing, and frequent travel, the best way to initiate contact is to send your adviser an email to see if you can schedule a time to meet or talk by phone at a mutually convenient time.

Students should use the MPH program office as a source for advice on the day-to-day details of the program, questions regarding program requirements, school policies or administrative procedures.

For specific questions about academic rules and regulations, especially concerning the grading systems, pass/fail options, and add/drop policies, please consult BSPH Academic Policies (p. 633).

MPH Executive Board

The Johns Hopkins MPH Program is governed by the MPH Executive Board composed of faculty from all departments of the Johns Hopkins Bloomberg School of Public Health.

Marie Diener-West
MPH Program Chair
Professor, Biostatistics

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Summary of Graduation Requirements

- A minimum of 80 credits are required for graduation. Students must complete the MPH core curriculum as detailed in the next section entitled "MPH Core Curriculum (p. 501)."
- At least 60 of the 80 credits must be completed in formal coursework that is not special studies, i.e. independent studies.
- At leave five additional general competencies from Concentration Competencies must be completed.
- All courses that are part of the core curriculum must be taken for a letter grade, if the course is offered for a letter grade.
- All students are required to complete an individualized MPH Goals Analysis.
- All students must complete the MPH Practicum requirement, including course PH.300.615 The Tools of Public Health Practice or PH.300.603 The Tools of Public Health Practice and Decision Making.
- All students must complete PH.260.720 Communications Primer for the Public Health Sciences and an MPH capstone (PH.XXX.800).
- Students are required to complete PH.550.860 Academic & Research Ethics at BSPH during their first term of registration in the program.
- All students must maintain minimum academic standards (p. 500) and have satisfactory grades as detailed in the *Academic Standards* section.

Note: A repeated course may only count once toward the 80-credit requirement. Courses taken for audit do not count towards the 80-credit requirement for graduation.

Special Note on Courses Taken at BSPH While Not Formally Matriculated as an MPH Degree Seeking Student: A limited number of course credits taken at Johns Hopkins prior to matriculation into the MPH Program (e.g., up to 16 as a special student and 40 credits from another degree program) can be applied toward the 80 total credits, provided the courses were completed not more than 5 years prior to the date of matriculation into the MPH Program.

Academic Standards

Students must meet minimum academic standards to remain in the MPH Program. A student's failure to meet any of the criteria below is grounds for being placed on academic warning and/or being dismissed from the program.

1. To maintain good academic standing in the MPH program, students must maintain a minimum cumulative grade point average (GPA) of **2.75**. Students with a GPA falling below 2.75 will be placed on academic warning and will have one term, or 12 additional credits of coursework, to raise the GPA to 2.75 or above. Students not meeting the 2.75 minimum after one term may be granted additional term(s) on academic warning if academic progress has been shown in the cumulative GPA. Students on academic warning must meet with their faculty adviser and the MPH Academic Coordinator prior to registering for courses. Students with a cumulative GPA of less than 2.75 may not register for more than 18 credits per term. Any repeated courses count towards this 18-credit limit. [Note: Students with less than a 2.75 cumulative GPA are not eligible to enroll in the Biostatistics 620 course series or the Epidemiology 750 course series].
2. A student who earns a "D", "U", or "F" grade in a course that meets a core requirement must, at the next opportunity, make a second attempt to complete the core requirement either by repeating the same course or by completing another course that meets the same core requirement (if available).
3. Students must complete the Public Health Policy/Problem Solving core requirement and the Epidemiology core requirement within the first twelve months of matriculation into the MPH program.
4. Students must complete the Goals Analysis plan within the set timeframe during the first two terms of the program.
5. Students must progress toward degree completion in four years or less, as per their Goals Analysis plan. If additional time is required to complete the degree, it is a student's responsibility to contact in writing (email communication is sufficient) their faculty adviser and their MPH Academic Coordinator to request an extension beyond the four-year limit. An extension request should be submitted to their faculty adviser and their MPH Academic Coordinator at least one term prior to the end of the 4-year limit.

6. Students may not accrue more than 9 credits of “incomplete” coursework at any given time. Students exceeding this limit must immediately contact their faculty adviser and their MPH Academic Coordinator in writing (email communication is sufficient) to discuss their academic situation. Students may not be permitted to register for subsequent terms until the incompletes have been resolved.
7. Students who are inactive (not enrolled in courses) for two terms or more without notifying their MPH Academic Coordinator of their academic plans will be withdrawn from the program. Students who do notify in writing (email communication is sufficient) their MPH Academic Coordinator and faculty adviser of their circumstances may suspend enrollment, assuming that they otherwise have met academic standards.

Academic and Research Ethics at BSPH

Maintaining the highest level of academic and research integrity is an important responsibility of our faculty and students. To help achieve this goal, all students are required to complete the PH.550.860 Academic & Research Ethics at BSPH course. The course examines academic and research ethics at BSPH through a series of online interactive modules:

- Focuses on information about the academic ethics code and responsible conduct of research at the School.
- Explores issues of academic integrity such as proper ethical conduct and referencing, and discusses violations such as plagiarism and cheating, relative to case studies that illustrate situations faced by students and faculty in the academic setting.
- Addresses topics that include responsible conduct of research, authorship, data management, data ownership, guidelines for professional conduct, research fraud or scientific misconduct, federal and institutional guidelines related to research using human and animal subjects and ethical issues involving vulnerable subjects in research.

Students are automatically registered into the *Academic and Research Ethics* course (PH.550.860) when they matriculate into the MPH program. All BSPH students are required to complete this non-credit course by the end of the Institute associated with their Orientation program and matriculation (ie: Summer Institute, Fall Institute or Winter Institute).

The ***BSPH Policy and Procedure Memorandum for Students for Academic Ethics*** can be found at https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Students_01_Academic_Ethics_102606.pdf

MPH Core Curriculum

The core curriculum and associated components of the MPH Program includes grounding in foundational public health knowledge in the profession and science of public health and factors related to human health. All MPH graduates will demonstrate public health competencies that are informed by the critical disciplines in public health (including: biostatistics, epidemiology, social and behavioral determinants of health, management sciences, public health problem-solving, computer applications, demography, environmental health, biological sciences, and public health policy) as well as cross-cutting and emerging public health areas.

The core curriculum also provides an opportunity to apply the skills and competencies acquired during the program to practical public health problems through the MPH practicum experience and the MPH capstone course and project.

The following are required of MPH students, but are not formal courses:

- Goals Analysis Plan requirement (please see section “Goals Analysis”)
- MPH Practicum requirement (please see section “Practicum Experience in Population-based Health”)
- MPH Capstone requirement (please see section "MPH Capstone Project")
- Completion of Interprofessional Education Event

In addition to the above courses, students must also complete additional courses to satisfy the MPH foundational knowledge learning objectives and public health foundational competencies. The tables on the following pages list courses that satisfy the foundational knowledge and competency areas and when they are offered.

Course schedules are subject to change; please check the course directory for the most up-to-date course listing information: https://www.jhsph.edu/courses (https://www.jhsph.edu/courses/)

Listing of MPH Core Curriculum Course Options

Code	Title	Credits
Assessing Population Needs		
Select one of the following:		3-8
PH.221.688	Social and Behavioral Foundations of Primary Health Care	
PH.222.642	Assessment of Nutritional Status	
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	
PH.318.623	Social Policy for Vulnerable Populations in the U.S.	
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth	
PH.410.613	Psychosocial Factors in Health and Illness	
PH.410.614	A New View: Improving Public Health Through innovative Social and Behavioral Tools and Approaches	
PH.410.616	Social and Behavioral Aspects of Public Health	
PH.410.620	Program Planning for Health Behavior Change	
PH.410.654 & PH.410.655	Health Communication Programs I: Planning and Strategic Design and Health Communication Programs II: Implementation and Evaluation	
PH.410.683	Global Perspectives on LGBT Health	
Biologic and Genetic Factors		
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease (Required)	0.5
Biology and Public Health		
Appropriate for all students. Provides a broad introduction to public health biology:		
Select one of the following:		2-6
PH.183.631	Fundamentals of Human Physiology	
PH.260.636	Evolution of Infectious Disease	
PH.550.630	Public Health Biology	
PH.550.631	Biological Basis of Public Health	
PH.550.844	Current Issues in Public Health: COVID-19 Pandemic Response	

For students possessing considerable breadth of biological competence, subject to concurrence of the advisor.		
PH.120.603	Molecular Biology of Pandemic Influenza	
PH.120.620	Fundamentals of Reproductive Biology	
PH.120.627	Stem Cells and the Biology of Aging and Disease	
PH.182.640	Food- and Water- Borne Diseases	
PH.187.610	Public Health Toxicology	
PH.222.641	Principles of Human Nutrition in Public Health	
PH.223.689	Biologic Basis of Vaccine Development	
PH.260.606	Major Global Infectious Diseases: Prospects for Control	
PH.260.631	Immunology, Infection and Disease	
PH.260.635	Biology of Parasitism	
PH.260.650	Vector Biology and Vector-Borne Diseases	
PH.260.656	Malariology	
PH.340.612	Epidemiologic Basis for Tuberculosis Control	
PH.340.646	Epidemiology and Public Health Impact of HIV and AIDS	
PH.340.654	Epidemiology and Natural History of Human Viral Infections	
PH.340.744	Advanced Topics on Control and Prevention of HIV/AIDS	
PH.380.761	Sexually Transmitted Infections in Public Health Practice	
Capstone Project		
PH.260.710	Communication Practice for Health Science Professionals	3
PH.260.720	Communications Primer for the Public Health Sciences (Required)	1
PH.xxx.800	MPH Capstone (Required: course number is affiliated with Capstone Advisor's department)	2
PH.300.860	Special Studies/Research: The Media and the Message: What Public Health Needs to Know about the News	3
Communication Strategies		
Select one of the following:		3-8
PH.222.654	Food, Culture, and Nutrition	
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	
PH.301.645	Health Advocacy	
PH.308.604	Effective Writing for Public Health Change	
PH.308.701	Effective Presentations and News Media Interviews: Practical Skills for Public Health Practitioners	
PH.380.620	A Coalition-based SMART Approach to Public Health Advocacy	3
PH.317.610	Risk Policy, Management and Communication	
PH.410.650	Introduction to Persuasive Communications: Theories and Practice	
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication	
PH.410.654 & PH.410.655	Health Communication Programs I: Planning and Strategic Design and Health Communication Programs II: Implementation and Evaluation	
Environmental Health		
PH.180.601	Environmental Health (Required)	5
Foundational Public Health Knowledge		
PH.552.601	Foundational Principles of Public Health	0.5

PH.552.626	Systems Thinking: Concepts and Methods	

Modifications of Core Course Requirements

In some exceptional circumstances, students may be granted a modification of some core requirements if they can demonstrate and document that they have previously acquired the associated core competencies. Even if a modification is granted of a core course, 80 credits are still required for graduation. Modifications or exceptions can only be granted in the following core areas:

- ***Biostatistics:*** Requires taking an examination. Please contact Dr. Marie Diener-West, mdiener@jhu.edu.
- ***Epidemiology:*** Requires taking an examination. Please contact Ms. Allyn Arnold, aarnold2@jhu.edu.
- ***Biology and Public Health:*** Core course exceptions can be requested by contacting Dr. Gary Ketner, gketner1@jhu.edu. Be prepared to submit the title of the course, name of instructor, textbook used, a summary of course syllabi, and grade received.

All other core requirements must be completed with the approved course options only.

Additional General Competencies

Students must select 5 additional general competencies that they plan to develop – separate from the Foundational Public Health competencies. These five additional competencies may expand or enhance the foundational competencies but cannot be the same as them. *Students select their 5 additional competencies from among the > 60 competencies listed in courses required by any of the 12 MPH Concentration Areas.*

- This decision should be made in consultation with your academic adviser.
- Please note that a single course may satisfy multiple competencies.

The Competency Table must be completed and submitted as part of your curriculum plan. You will submit the curriculum plan online. All courses that you select to meet your 5 additional competencies must be completed for degree completion and graduation eligibility.

As you progress through the MPH program, if your course selections change, you must upload a new curriculum plan and competency table to show how these requirements will continue to be met.

Please check https://publichealth.jhu.edu/academics/academic-programs/masters-degrees/master-of-public-health-mph/program-options/full-time-format/concentrations (https://publichealth.jhu.edu/academics/academic-programs/masters-degrees/master-of-public-health-mph/program-options/full-time-format/concentrations/) ***for updated, detailed information on Concentration Competencies and related courses.***

MPH Customized Program of Study and Optional MPH Concentrations

Typically, 40-45 credits of an MPH student's curriculum are based on courses from the required core curriculum. The remainder of the total of 80 credits required for graduation can be accomplished either through a customized program or through one of twelve multidisciplinary concentration areas.

MPH Customized Program

The MPH customized program is for students who desire an understanding of a broad spectrum of public health problems. It is designed for students who want versatility in designing their MPH course electives and may have academic objectives that do not fit precisely into the concentration areas. Students who customize their program of study complete the core MPH requirements and then choose elective courses for the remaining credits (approximately 35-40) in consultation with their faculty academic advisers.

MPH Concentration Areas

There are 12 multidisciplinary concentration areas. The concentration areas are designed for students wishing to have a guided curriculum in an area and the opportunity to interact with other students and faculty who share similar academic interests. Students who elect a concentration must complete several required course credits (approximately 20 credits) as specified by the concentration area over and above the MPH core course requirements.

The pie charts below illustrate the approximate distribution of academic credits associated with a customized plan or an optional concentration. The exact number of credits varies depending on the courses chosen to satisfy core requirements and the specific requirements of the concentration.

The specific number of additional credits required by each concentration is variable. However, as a rough guide, of the 80 credits needed for graduation, approximately half are core MPH requirements that all students must complete, approximately one quarter are course credits required by the concentration area and approximately one quarter of the credits are course electives.

Choosing to Customize or Electing a Concentration

The decision to customize one's program or elect a concentration area depends on the individual student. Specific questions concerning each concentration should be directed to the concentration faculty directors.

Answers to some frequently asked questions are:

- Students may elect only one MPH area concentration area.
- Students may qualify for a concentration and a certificate unless noted otherwise by the concentration directors.
- Students may switch into a new concentration only if they have met the 1st term requirements for that concentration and they must notify the MPH Academic Coordinator (Janet Carn at jcarn1@jhu.edu for full-time; Katie Cruit at kcruit@jhu.edu or Jacob Shaw at jshaw46@jh.edu for part-time) and the Concentration Directors.
- Students are always free to change from a concentration to a customized course of study at any time during the academic year. When changing from a concentration to a customized course of study, students must notify the MPH Academic Coordinator (Janet Carn at jcarn1@jhu.edu for full-time; Katie Cruit at kcruit@jhu.edu or Jacob Shaw at jshaw46@jh.edu for part-time) and the Concentration Directors.
- Students with an interest in international health will have ample opportunity to apply their knowledge to global health and developing country issues either as a customized student or as a student electing any of these concentration areas.
- Students completing a concentration will have a notation placed on their academic transcript.

Academic Advising

Advising assignments are made after a student makes the decision to customize their program or elect a concentration. Students who elect to customize their program of study will be assigned an appropriate faculty academic adviser by the MPH Program Faculty after carefully considering the students' interests and goals. Similarly, upon election of a concentration, a student will be assigned a faculty academic adviser from the concentration area.

Capstone Project

All students complete an MPH capstone project under the direction of a faculty capstone adviser. The MPH capstone experience in a concentration area may be more structured and focused on topics related to the concentration.

Goals Analysis

The purpose of the MPH Individualized Goals Analysis requirement is to:

- Describe the goals and competencies which you aim to achieve during your program.
- Plan your MPH education early in your program with the support and guidance of your academic network adviser.
- Serve as a springboard for discussion of career opportunities as the program progresses.
- The Goals Analysis should be updated as you make changes in focus and direction throughout the MPH program.

The required Goals Analysis will be completed as part of the ***Introduction to MPH Studies*** course and consists of two parts:

- **Part 1 – Self-Assessment**: Complete a self-assessment by:

1. Rating your current skill levels for the Schoolwide and MPH core competencies. Identify the core competencies that you wish to focus on and those that are particularly relevant to your professional future.
2. In your reflection, briefly explain what knowledge, skills, and experiences you bring to the program. Identify your goals for the MPH by explaining what you hope to gain in terms of knowledge, skills, professional and personal contacts, and any additional experiences. This information should be reviewed with your academic network adviser.

- **Part 2 – Curriculum Planning**: Students should work with their academic network adviser to complete their curriculum plan and submit the online Core Curriculum Confirmation Form to the MPH Program office.

1. Develop a term-by-term tentative course plan for your entire MPH program, including the five general competencies and corresponding courses that you will be completing. Your course plan should include the required courses, electives, and special studies you intend to take and when you plan to complete these courses.
2. Once your term-by-term plan has been created, complete the *Core Curriculum Confirmation Form*, indicating your core course selections and your 5 general competency selections. In the reflection section of the form, list any potential plans for a practicum experience and the specific skills you hope to develop through the practicum. Also, briefly describe one or more capstone topics of interest and possible capstone faculty mentors.
3. Once you have submitted the *Core Curriculum Confirmation Form*, then add your Biostatistics sequence selection and your general competency selection to your Degree Audit. This is required for degree completion and graduation. If during your MPH program, your biostatistics sequence or general competency selections change (including joining or leaving a concentration), you must update your

Degree Audit to reflect these changes. All courses that are linked to your 5 general competencies must be completed for degree and graduation eligibility.

The Goals Analysis is intended to be a living document, one which you and your adviser review and update as you make changes in focus and direction throughout the MPH program.

Practicum Experience in Population-based Health

About the Practicum

The intent of the MPH practicum requirement is to engage students in activities aligned with their career goals, as well as activities that demonstrate application of public health concepts and critical thinking relevant to the student's area of specialization. Students will seek out activities that further develop their skill set and add new tools to their professional toolkit. Upon completion of the program, the student will be able to provide evidence of application of these skills to potential employers.

Organizations or agencies that can serve as practicum sites may include local and state public health agencies, community-based organizations, international non-governmental agencies and organizations, data coordinating centers for clinical trials, and BSPH Centers. The Practicum Experience must have some engagement in the larger public health practice implications of the work. This could be completed in a variety of ways, as appropriate to the individual projects. Some examples include, but are not limited to, collaboration with others (e.g., end users, data collectors, etc.) to provide/prepare for data analysis and interpretation, partnerships with other public health organizations (e.g., state health department, community organizations) related to study design or implementation; and obtaining input on the work from stakeholders (population impacted by project, other professionals/researchers completing similar work).

Activities completed *prior* to matriculation to the MPH program do not count towards the MPH practicum requirement.

General Criteria for MPH Practicum

The following criteria reflect the minimum practicum requirements. Approval from the MPH Practicum Team is required prior to the student initiating each practicum experience. A practicum experience:

1. **Applies public health skills and competencies.** Students identify the public health skills and competencies relevant to their area of interest that are most beneficial to their career advancement. Students apply these skills and competencies in concert with knowledge gained from their coursework.
2. **Is framed and carried out within a public health practice context with an established organization or agency.** The practicum is a population-level focused project conducted in a practice context. Students may engage in activities at an individual level, but the primary purpose of the experience is to gain population-level practical experience at an established organization or agency. Students can not solely complete screenings, administer surveys, perform calculations, etc., but must be engaged in the larger public health practice context of the activities, as well as become familiar with the organization's overall purpose and decision-making process. A literature review or data analysis project alone will not meet the practicum requirement. The student must obtain input from the partnering organization and/or from the stakeholders (e.g., population impacted by project, other professionals/researchers completing similar work). There must be a clear link to how the practicum project makes an impact on the targeted population. Students should also develop a deeper understanding of the organization's mission, hierarchy and practices, as well as the challenges faced (funding, politics, efficiency, etc.) in achieving desired goals.
3. **Is supervised by a qualified preceptor.** The practicum preceptor must be qualified to evaluate the student's professional competence and supervise the student throughout the project. The preceptor is directly engaged in the population-level focused practicum activities. Preceptors can be from an organization outside of Johns Hopkins (e.g. community-based organization, health department, private corporation, etc.), or a BSPH faculty member if the faculty member is directly engaged with or is the lead on a project that meets the practicum criteria. The preceptor works with the student to develop project learning objectives and deliverables, and guides and monitors the student's progress and achievement. The student's faculty academic adviser will be kept informed of the student's practicum activities and progress and may provide additional assistance if warranted.
4. **Is a significant experience (minimum of 100 hours).** The practicum requirement is administered and tracked by the School's MPH Practicum Team. Students must have their proposed practicum project(s) approved prior to initiating their experience. The practicum requirement can be met in a variety of ways including a single experience or a combination of experiences. Students may work independently or in a team. Activities must be completed during the MPH year to be able to count towards the MPH practicum requirement.
5. **An evaluated experience.** Preceptors will evaluate on the achievement of defined learning objectives and deliverables by the preceptors. Additionally, students will reflect on and evaluate their overall practicum experiences, particularly as they relate to their career goals. A minimum grade of "C" must be earned in courses with a practicum component that are taken towards fulfilling the requirement. Students who register for practicum special studies credits are required to earn a "pass" for the experience to count towards the practicum requirement.

Competency-based Learning Objectives for MPH Practicum

Students will need to identify distinct learning objectives for the practicum that address learning and application in at least five competencies competencies from this list (https://www.jhsph.edu/

offices-and-services/practice-and-training/practicum/_documents/MPH%20Practicum%20Competencies.pdf).

Steps to Completing the MPH Practicum

A detailed outline of all steps that students must follow to complete the MPH Practicum, including registration instructions, can be found on the MPH Practicum website (https://www.jhsph.edu/offices-and-services/practice-and-training/practicum/for-students/practicum-process.html) as well as in the MPH program manual. All Students must receive approval from the MPH Practicum Team prior to initiating each practicum experience.

Ways to Complete the Practicum Requirement

To meet the practicum requirement, the total practicum hours must be at least 100 hours; one may combine multiple experiences of less than 100 hours, to meet the total.

Completion of the PH.300.615 **or** PH.300.603 TOOLS OF PUBLIC HEALTH PRACTICE **course (required for all MPH students) with a grade of C or higher will earn students 10 practicum hours.**

BSPH APPROVED COURSES WITH A PRACTICUM COMPONENT

Some courses have a real-world practice component, connecting students to outside organizations/agencies. In some cases, the course is centered on a fully developed practice experience that fulfills the practicum requirement for all students who complete the course (i.e. Baltimore Community Practicum, PHASE Internship, and the Health Policy Institute). Other courses may have limited availability or may not fully meet the 100-hour minimum requirement.

For courses that do not fulfill the entire 100-hour practicum requirement, students must combine experiences to complete the practicum requirement in full. Students are expected to complete courses in their entirety with a final letter grade of "C" or better to count towards the practicum requirement.

Please use the following link to view the most current listing of approved practicum courses: http://www.jhsph.edu/offices-and-services/practice-and-training/practicum/for-students/practicum-courses.html

CUSTOMIZED PRACTICUM EXPERIENCES

Students may complete customized practicum experiences coordinated by a BSPH faculty member or in partnership with an outside BSPH preceptor.

<u>Projects with a BSPH faculty member</u>: Projects are developed and coordinated by the BSPH faculty member who may or may not serve as the Preceptor (e.g. in conjunction with a course, research study, grant, etc.). Some potential practicum projects with faculty may be established projects and are listed on the Practicum Opportunity Site. Students can also arrange other experiences with a faculty member.

<u>Projects with an outside non-BSPH preceptor:</u> Projects can be developed in other settings through their own connections, networks, prior work experience, etc. According to the CEPH accreditation document, "Applied practice experiences may involve governmental, non-governmental, non-profit, industrial and for-profit settings or appropriate university-affiliated settings. To be appropriate for applied practice experience activities, university-affiliated settings must be primarily focused on community engagement, typically with external partners. University health promotion or wellness centers may also be appropriate."[1]

Examples of customized projects include but are not limited to:

- programmatic cost effectiveness analysis;
- policy analysis and recommendations development with a local health department;
- budget impact analysis of the financial consequences of adoption of a new vaccine,
- qualitative and quantitative data analysis of poor health outcomes for a specific population;
- health curriculum planning and development of health education materials.

Finding Practicum Opportunities

Students may utilize the resources below to identify practicum experiences.

Practicum Opportunity Site – Office of Public Health Practice and Training

<u>https://my.jhsph.edu/Resources/SearchTools/pos/Pages/home.aspx</u>

The Practicum Opportunity Site (POS) lists various potential practicum opportunities (including projects with outside organizations, with BSPH faculty, and practicum courses) that have been identified and vetted by the School's Practicum Team.

SOURCE

http://www.jhsph.edu/source/

SOURCE is the community engagement and service-learning center for the Johns Hopkins University (JHU) Schools of Public Health, Nursing, and Medicine. Its mission is to engage the JHU health professional schools and Baltimore communities in mutually beneficial partnerships that promote health and social justice. There are multiple ways to engage in a practicum experience through SOURCE supported activities, including the SOURCE Service Scholars program, Baltimore Action Projects, Connection Community Consultants, and working directly with a SOURCE partner organization on a project. ***<u>NOTE:</u> Not all SOURCE projects meet the practicum requirements***. Subscribe to the SOURCE Weekly Service Scoop to learn more about the latest community involvement opportunities in Baltimore City (http://source.jhu.edu/programs-and-events/service-scoop/).

Office of Public Health Practice and Training

https://www.jhsph.edu/offices-and-services/practice-and-training/

The Office of Public Health Practice and Training (Practice Office) is a schoolwide office dedicated to promoting excellence in public health practice at the Johns Hopkins Bloomberg School of Public Health. It works in partnership with students, staff, faculty, academic departments, centers, programs, community partners and alumni. The Practice Office also coordinates the MPH practicum. Any questions pertaining to the MPH practicum should be directed to the MPH Practicum Coordinator in the Practice Office. The MPH Practicum Coordinator can provide feedback/guidance on project ideas and also holds regular office hours throughout the year, during which students can drop by for advice.

Certificate Programs

https://www.jhsph.edu/academics/certificate-programs/

There are a few certificate programs that include their own practicum requirement in the curriculum (e.g. *Community-based Public Health*, and *Quality, Patient Safety, and Outcomes Research*). The certificate practicum may fulfill the MPH practicum requirement, upon approval from the practicum team. Please note: Some certificates may have separate practicum paperwork that will need to be completed in addition what you must submit for the MPH practicum.

Key Contact for Practicum
Paulani Mui, MPH Practicum Coordinator
Ph: (410) 502-8952 | Email: practice@jhu.edu

MPH Capstone Project

Overview

The MPH Capstone project is a requirement for graduation for students in the Master's of Public Health Program and is to be completed at the end of or within the final two terms of the program. The MPH Capstone is an opportunity for students to work on public health projects that are of interest to them. The goal is for students to synthesize, integrate and apply the skills and competencies they have acquired throughout the entire MPH program. Completion of the MPH capstone project requires completion of the course, PH.260.720 Communications Primer for the Public Health Sciences, and both a written and oral component to your project.

The project is done under the direction of a faculty member, the MPH capstone adviser. The capstone adviser will often be the student's adviser but does not have to be. Students can identify another faculty member to supervise the capstone, if more appropriate. **The capstone adviser must have a primary or joint appointment in the School of Public Health.** Department affiliation for any faculty member in the School can be determined by going to the Faculty Directory (https://publichealth.jhu.edu/faculty/directory/list/?combine=&work_type%5Bprimary%5D=primary) . If you are uncertain as to your capstone adviser's departmental affiliation, check with your adviser or the MPH Program office.

After identifying a capstone adviser and capstone topic, students are expected to communicate regularly with their capstone adviser about their progress. The iterative process between a student and capstone adviser is an important component in the development and completion of the written project. Please see the capstone completion timeline for specific deadlines.

Requirements

1. ***PH.260.720 Communications Primer for the Public Health Sciences***
   Students must complete the course, PH.260.720 Communications Primer for the Public Health Sciences as part of the MPH Capstone requirement. Students can complete this course at any time during their MPH program, but it ***must be completed no later than the term prior to their capstone presentation***. For example, if you plan to present your capstone project in December (Term 2), you must complete PH.260.720 Communications Primer for the Public Health Sciences no later than Term 1, prior to your capstone presentation.
   Please note: As part of this course, you will be required to present in a LiveTalk session. It will be your responsibility to choose the date and time of your presentation and participate as scheduled.
   This course also requires that your computer have a camera and microphone.
2. ***MPH Capstone – Course Number and Registration***
   Students are required to register for the 2-credit MPH Capstone in the term that the project will be completed – this includes both the written and oral components. For most students this will be 4th term. More information can be found in the "Registering for MPH Capstone" section.
3. ***MPH Capstone - Paper***
   To satisfy the written component, a student must write a paper. The paper must include:
   - An executive summary or structured abstract (limited to 300 words) and references
   - A summary of how the capstone project addresses the areas that you wanted to strengthen, as identified in your MPH Goals Analysis
   - While there are no formal guidelines on the length of the paper, it is expected that the paper will be approximately 20 pages (ranging between 15-25 double-spaced pages) not including references, tables and figures.
     Students who have been approved to pursue an optional MPH concentration should follow any additional specific concentration area requirements for the MPH capstone for that concentration.
4. ***MPH Capstone - Oral Presentation***
   Students are required to give a 15-minute oral presentation (10-minute presentation/5-minute discussion) summarizing their capstone project. Students participating in MPH concentrations sometimes present in an alternate venue that is designated by the concentration directors. Students may, with approval of their faculty capstone advisers, be permitted to present at an alternate venue such as a scientific meeting or academic conference.

Possible Forms That the Capstone Project May Take

The capstone project can take many forms including one of the designs below, an expansion of a course, or an internship or practicum opportunity. The overarching principle used to determine if a capstone project is suitable is whether it provides students the opportunity to apply the skills and competencies acquired in the MPH program to a problem likely to be encountered in public health practice. The topic and format of the capstone project is flexible and is developed through discussions between the student and capstone adviser. Some examples of formats or designs for the capstone project include:

Literature Review
The capstone project would be an analysis of an important public health problem through a survey of current literature on the topic. The project would include sections that clearly describe and assess the problem and its magnitude, evaluate its causes and determinants, and discuss prevention and intervention strategies.

Program Plan
The capstone project would involve the development of a plan to implement a public health program. It would address critical issues such as management, fiscal, ethical and logistical issues.

Program Evaluation
The capstone project would involve the evaluation/monitoring of an existing public health program, such as process evaluation, monitoring of outputs and outcomes, impact assessment, and/or cost analysis.

Policy Analysis
The capstone project would involve analysis of the public health implications of a current or proposed policy. The project could include perspectives on economics and financing, need and demand, politics/ethics/law, or quality/effectiveness.

Research Proposal
The capstone project would simulate a grant proposal or research plan. The project would include a clear statement of the research question, the specific aims of the proposal, review of literature, study design, methods of analysis, implications and significance of the work. The research

question would be one that is encountered in professional work such as the evaluation of a public health intervention.

Research Report

The capstone project could involve the collection, analysis, and/or interpretation of data to address a public health problem. The project could include sections on the research question, study design, data collection procedures, data analysis, interpretation, and significance of findings.

Secondary data analysis

Typically, the capstone research report is in the form of a secondary data analysis, using an existing data set. Please note that the appropriate IRB approval may need to be obtained for any project that uses data gathered from human subjects. Even in cases where the data is de-identified, a determination should be sought from the IRB office (see IRB section for further information).

Primary data analysis

Work for the MPH capstone can also involve the collection of data. Data collection for a capstone is usually in the context of an ongoing study. It is typically not feasible to initiate a new study involving primary data collection and requires special approval in the rare cases where feasible.

Using a course project as an MPH capstone project

Some courses in the School of Public Health require projects that could serve as a basis for an MPH capstone project. Students may use their work from any project-oriented course as a starting basis for their capstone but must build and expand on it for the final capstone project. Building on a project from a course may be helpful to some students because it provides additional structure and support. If a project from a course is used as a starting point for the capstone, the previous work must be placed in the list of references and the adviser will need a copy of the student's original paper. There are numerous courses in the School that are project oriented which could serve as a starting point for the capstone.

Capstone Project Timeline

Timeline for online presentations, August session

Event	Date
Complete PH.260.720: Communications Primer for the Public Health Sciences	No later than 4th Term
Submit online Capstone Information Form	By early May
Submit final outline to capstone advisor	By late May
Register for capstone course for Summer Term	See academic calendar
Submit first draft of project to capstone advisor	By 3rd week of June
Submit final draft of project to capstone advisor	By 3rd week of July
Upload only the **capstone advisor approved final paper and slides** to drop box. Unapproved papers will not be accepted.	By one week before presentation date
Give oral presentation	August (see website for current year's date)

Timeline for online presentations, December sessions

Event	Date
Complete PH.260.720: Communications Primer for the Public Health Sciences	No later than 1st Term
Submit online Capstone Information Form	By early August
Submit final outline to capstone advisor	By 3rd week of September
Register for capstone course for Summer Term	See academic calendar
Submit first draft of project to capstone advisor	By 3rd week of October
Submit final draft of project to capstone advisor	By mid-November
Upload only the **capstone advisor approved final paper and slides** to drop box. Unapproved papers will not be accepted.	By one week before presentation date
Give oral presentation	December (see website for current year's date)

Timeline for online presentations, May sessions

Event	Date
Complete PH.260.720: Communications Primer for the Public Health Sciences	No later than 3rd Term
Submit online Capstone Information Form	By early December
Submit final outline to capstone advisor	By early February
Register for capstone course for Summer Term	See academic calendar
Submit first draft of project to capstone advisor	By mid-March
Submit final draft of project to capstone advisor	By mid-April
Upload only the **capstone advisor approved final paper and slides** to drop box. Unapproved papers will not be accepted.	By one week before presentation date
Give oral presentation	May (see website for current year's date)

Timeline for in-person presentation at May Capstone Symposium

Event	Date
Complete PH.260.720: Communications Primer for the Public Health Sciences	No later than 3rd Term
Submit online Capstone Information Form	By early December
Submit final outline to capstone advisor	By early February
Register for capstone course for Summer Term	By mid-March

Submit first draft of project to capstone advisor	By late March
Submit final draft of project to capstone advisor	By 3rd week of April
Upload only the **capstone advisor approved final paper and slides** to drop box. Unapproved papers will not be accepted.	By one week before presentation date
Give oral presentation	May (see website for current year's date)

Timeline for presentation at alternate venue
Students presenting at an alternate venue must adhere to the schedules above, as per the time of year in which the project is completed. Deadlines for completion of the oral presentation are August online, December online, or the May symposium date, depending on the period in which the student is graduating.

Capstone Honors and Awards

The MPH Capstone Awards Committee bestows special honors to the best overall capstone projects. Nominations are accepted from capstone advisers. The winners will be selected by the awards committee based on the written project. Each capstone award winner receives a plaque for excellence. The student with the single overall best capstone project will also receive a $500 award.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Summary of Graduation Requirements

- A minimum of 80 credits are required for graduation. Students must complete the MPH core curriculum as detailed in the next section entitled "MPH Core Curriculum (p. 501)."
- At least 60 of the 80 credits must be completed in formal coursework that is not special studies, i.e. independent studies.
- At leave five additional general competencies from the Focus Area/ Concentration Competencies must be completed.
- All courses that are part of the core curriculum must be taken for a letter grade, if the course is offered for a letter grade.
- All students are required to complete an individualized MPH Goals Analysis within the CoursePlus Portfolio.
- All students must complete the MPH Practicum requirement, including course PH.300.615 The Tools of Public Health Practice or PH.300.603 The Tools of Public Health Practice and Decision Making.
- All students must complete PH.260.720 Communications Primer for the Public Health Sciences and an MPH capstone (PH.XXX.800).
- Students are required to complete PH.550.860 Academic & Research Ethics at BSPH during their first term of registration in the program.
- All students must maintain minimum academic standards (p. 500) and have satisfactory grades as detailed in the *Academic Standards* section.

Note: A repeated course may only count once toward the 80-credit requirement. Classes taken for audit do not count towards the 80-credit requirement for graduation.

Special Note on Courses Taken at BSPH While Not Formally Matriculated as an MPH Degree Seeking Student: A limited number of course credits taken at Johns Hopkins prior to matriculation into the MPH Program (e.g., up to 16 as a special student and 40 credits from another degree program) can be applied toward the 80 total credits, provided the courses were completed not more than 5 years prior to the date of matriculation into the MPH Program.

Academic Standards

Students must meet minimum academic standards to remain in the MPH Program. A student's failure to meet any of the criteria below is grounds for being placed on academic warning and/or being dismissed from the program.

1. To maintain good academic standing in the MPH program, students must maintain a minimum cumulative grade point average (GPA) of **2.75**. Students with a GPA falling below 2.75 will be placed on academic warning and will have one term, or 12 additional credits of coursework, to raise the GPA to 2.75 or above. Students not meeting the 2.75 minimum after one term may be granted additional term(s) on academic warning if academic progress has been shown in the cumulative GPA. Students on academic warning must meet with their faculty advisor and the MPH Academic Coordinator prior to registering for courses. Students with a cumulative GPA of less than 2.75 may not register for more than 18 credits per term. Any repeated courses count towards this 18-credit limit. [Note: Students with less than a 2.75 cumulative GPA are not eligible to enroll in the Biostatistics 620 course series or the Epidemiology 750 course series].
2. A student who earns a "D", "U", or "F" grade in a course that meets a core requirement must, at the next opportunity, make a second attempt to complete the core requirement either by repeating the same course or by completing another course that meets the same core requirement (if available).
3. Students must complete the Public Health Policy/Problem Solving core requirement and the Epidemiology core requirement within the first twelve months of matriculation into the MPH program.
4. Students must complete the Goals Analysis plan within the set timeframe during the first two terms of the program.
5. Students must progress toward degree completion in four years or less, as per their Goals Analysis plan. If additional time is required to complete the degree, it is a student's responsibility to contact in writing (email communication is sufficient) their faculty advisor and their MPH Academic Coordinator to request an extension beyond the four-year limit. An extension request should be submitted to their faculty advisor and their MPH Academic Coordinator at least one term prior to the end of the 4-year limit.
6. Students may not accrue more than 9 credits of "incomplete" coursework at any given time. Students exceeding this limit must immediately contact their faculty advisor and their MPH Academic Coordinator in writing (email communication is sufficient) to discuss their academic situation. Students may not be permitted to register for subsequent terms until the incompletes have been resolved.
7. Students who are inactive (not enrolled in courses) for two terms or more without notifying their MPH Academic Coordinator of their academic plans will be withdrawn from the program. Students who do notify in writing (email communication is sufficient) their MPH Academic Coordinator and faculty advisor of their circumstances may suspend enrollment, assuming that they otherwise have met academic standards.

Academic and Research Ethics at BSPH

Maintaining the highest level of academic and research integrity is an important responsibility of our faculty and students. To help achieve this goal, all students are required to complete the PH.550.860 Academic & Research Ethics at BSPH course. The course examines academic and research ethics at BSPH through a series of online interactive modules:

- Focuses on information about the academic ethics code and responsible conduct of research at the School.
- Explores issues of academic integrity such as proper ethical conduct and referencing, and discusses violations such as plagiarism and cheating, relative to case studies that illustrate situations faced by students and faculty in the academic setting.
- Addresses topics that include responsible conduct of research, authorship, data management, data ownership, guidelines for professional conduct, research fraud or scientific misconduct, federal and institutional guidelines related to research using human and animal subjects and ethical issues involving vulnerable subjects in research.

Students are automatically registered into the *Academic and Research Ethics* course (PH.550.860) when they matriculate into the MPH program. All BSPH students are required to complete this non-credit course by the end of the Institute associated with their Orientation program and matriculation (ie: Summer Institute, Fall Institute or Winter Institute).

The ***BSPH Policy and Procedure Memorandum for Students for Academic Ethics*** can be found at https://my.jhsph.edu/Resources/PoliciesProcedures/ppm/PolicyProcedureMemoranda/Students_01_Academic_Ethics_102606.pdf

thE WELCH SCHOLARSHIP

All new online/part-time MPH students will be awarded the Welch Scholarship. This award is in honor of the Bloomberg School's 100th anniversary and our founding dean William Henry Welch. The Welch Scholarship is designated for tuition costs and is disbursed incrementally for each credit (up to 80 credits). This funding can be used for online, in-person or institute courses.
Please note that the Welch Scholarship is not part of Federal Financial Aid and does not have the same eligibility guidelines. To be eligible for the Welch Scholarship, students must register for no more than 12 credits per term or institute. While the maximum part-time credit load is 11 credits, we can make an exception and award the Welch Scholarship for 12 credits. This is particularly beneficial for international students who may be taking courses in the United States and their visa requires them to take a minimum of 12 credits.

If a part-time/online MPH program student takes more than 12 credits in any Term or Institute, they will not receive the Welch Scholarship and will pay the full-time tuition rate for that term.

MPH Core Curriculum

The core curriculum and associated components of the MPH Program includes grounding in foundational public health knowledge in the profession and science of public health and factors related to human health. All MPH graduates will demonstrate public health competencies that are informed by the critical disciplines in public health (including: biostatistics, epidemiology, social and behavioral determinants of health, management sciences, public health problem-solving, computer applications, demography, environmental health, biological sciences, and public health policy) as well as cross-cutting and emerging public health areas.

The core curriculum also provides an opportunity to apply the skills and competencies acquired during the program to practical public health problems through the MPH practicum experience and the MPH capstone course and project.

The following are required of MPH students, but are not formal courses:

- History of Public Health module (Pre-Orientation activity)
- Goals Analysis Plan requirement (please see section "Goals Analysis and Portfolio")
- MPH Practicum requirement (please section "Practicum Experience in Population-based Health")
- Completion of Interprofessional Education Event as part of course PH.552.625 Building Collaborations Across Sectors to Improve Population Health

In addition to the above courses, students must also complete additional courses to satisfy the MPH foundational knowledge learning objectives and public health foundational competencies. The tables on the following pages list courses that satisfy the foundational knowledge and competency areas and when they are offered.

Course schedules are subject to change; please check the course database for the most up-to-date course listing information: https://www.jhsph.edu/courses (https://www.jhsph.edu/courses/)

Listing of MPH Core Curriculum Course Options

Code	Title	Credits
Assessing Population Needs		
Select one of the following:		3-8
PH.221.688	Social and Behavioral Foundations of Primary Health Care	
PH.222.642	Assessment of Nutritional Status	
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels	
PH.318.623	Social Policy for Vulnerable Populations in the U.S.	
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth	
PH.410.613	Psychosocial Factors in Health and Illness	
PH.410.614	A New View: Improving Public Health Through innovative Social and Behavioral Tools and Approaches	
PH.410.616	Social and Behavioral Aspects of Public Health	
PH.410.620	Program Planning for Health Behavior Change	
PH.410.654 & PH.410.655	Health Communication Programs I: Planning and Strategic Design and Health Communication Programs II: Implementation and Evaluation	
PH.410.683	Global Perspectives on LGBT Health	
Biologic and Genetic Factors		
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease (Required)	0.5
Biology and Public Health		
Appropriate for all students. Provides a broad introduction to public health biology:		

Select one of the following:		2-6
PH.183.631	Fundamentals of Human Physiology	
PH.260.636	Evolution of Infectious Disease	
PH.550.630	Public Health Biology	
PH.550.631	Biological Basis of Public Health	
PH.550.844	Current Issues in Public Health: COVID-19 Pandemic Response	
For students possessing considerable breadth of biological competence, subject to concurrence of the advisor:		
PH.120.603	Molecular Biology of Pandemic Influenza	
PH.120.620	Fundamentals of Reproductive Biology	
PH.120.627	Stem Cells and the Biology of Aging and Disease	
PH.182.640	Food- and Water- Borne Diseases	
PH.187.610	Public Health Toxicology	
PH.222.641	Principles of Human Nutrition in Public Health	
PH.223.689	Biologic Basis of Vaccine Development	
PH.260.606	Major Global Infectious Diseases: Prospects for Control	
PH.260.631	Immunology, Infection and Disease	
PH.260.635	Biology of Parasitism	
PH.260.650	Vector Biology and Vector-Borne Diseases	
PH.260.656	Malariology	
PH.340.612	Epidemiologic Basis for Tuberculosis Control	
PH.340.646	Epidemiology and Public Health Impact of HIV and AIDS	
PH.340.654	Epidemiology and Natural History of Human Viral Infections	
PH.340.744	Advanced Topics on Control and Prevention of HIV/AIDS	
PH.380.761	Sexually Transmitted Infections in Public Health Practice	
Capstone Project		
PH.260.710	Communication Practice for Health Science Professionals	3
PH.260.720	Communications Primer for the Public Health Sciences (Required)	1
PH.xxx.800	MPH Capstone (Required: course number is affiliated with Capstone Advisor's department)	2
PH.300.860	Special Studies/Research: The Media and the Message: What Public Health Needs to Know about the News	3
Communication Strategies		
Select one of the following:		3-8
PH.222.654	Food, Culture, and Nutrition	
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development	
PH.301.645	Health Advocacy	
PH.308.604	Effective Writing for Public Health Change	
PH.308.701	Effective Presentations and News Media Interviews: Practical Skills for Public Health Practitioners	
PH.317.610	Risk Policy, Management and Communication	
PH.380.620	A Coalition-based SMART Approach to Public Health Advocacy	
PH.410.650	Introduction to Persuasive Communications: Theories and Practice	
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication	
PH.410.654 & PH.410.655	Health Communication Programs I: Planning and Strategic Design and Health Communication Programs II: Implementation and Evaluation	
Environmental Health		
PH.180.601	Environmental Health (Required)	5
Foundational Public Health Knowledge		
PH.552.601	Foundational Principles of Public Health	0.5
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health (Required)	0.5
PH.552.610	The Social Determinants of Health (Required)	0.5
PH.552.611	Globalization and Population Health (Required)	0.5
Health Equity		
Select one of the following:		3-4
PH.188.694	Health of Vulnerable Worker Populations	
PH.305.684	Health Impact Assessment	
PH.318.623	Social Policy for Vulnerable Populations in the U.S.	
PH.330.661	Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders	
PH.380.604	Life Course Perspectives on Health	
PH.410.600	Fundamentals of Health, Behavior and Society	
Interprofessional Practice		
PH.552.625 & PH.550.602	Building Collaborations Across Sectors to Improve Population Health and Interprofessional Education Activity (Required)	0.5
Leadership, Goverance, and Management		
Select one of the following:		2-4
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	
PH.221.608	Managing Non-Governmental Organizations in the Health Sector	
PH.312.600	Managing Health Services Organizations	
PH.312.601	Fundamentals of Management for Health Care Organizations	
PH.312.655	Organizational Behavior and Management	
PH.312.700	Leading Organizations	
PH.312.703	Learning Organizations & Knowledge Management	
PH.410.622	Strategic Leadership Principles and Tools for Health System Transformation in Developing Countries	
PH.380.880 & PH.380.881 & PH.380.882 & PH.380.883	Lessons in Leadership: Applications for Population, Family and Reproductive Health I and Lessons in Leadership: Applications for Population, Family and Reproductive Health II and Lessons in Leadership: Applications for Population, Family and Reproductive Health III and Lessons in Leadership: Applications for Population, Family and Reproductive Health IV	
Negotiation and Mediation		
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals (Required)	0.5

PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals (Required)	0.5
Population Dynamics		
PH.380.755	Population Dynamics and Public Health (Required)	2
Public Health Policy/Problem Solving		
Must be completed during the 1st year of the MPH Program		
Select one of the following:		
PH.300.610	Public Health Policy	
PH.550.608	Problem Solving in Public Health (Required)	
Public Health Practice		
Select one of the following:		
PH.300.603	The Tools of Public Health Practice and Decision Making	
PH.300.615	The Tools of Public Health Practice	
Qualitative Methods		
Select one of the following:		0.5-3
PH.224.690	Qualitative Research Theory and Methods	
PH.550.604	Qualitative Reasoning in Public Health	
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health	
Quantitative Methods		
Must complete requirements for **both** Biostatistics and Epidemiology		
Biostatistics		
No switching permitted between Biostatistics sequences.		
Select one complete sequence from the following:		6-16
PH.140.611 & PH.140.612	Statistical Reasoning in Public Health I and Statistical Reasoning in Public Health II [1,2]	
PH.140.621 & PH.140.622 & PH.140.623	Statistical Methods in Public Health I and Statistical Methods in Public Health II and Statistical Methods in Public Health III [3]	
PH.140.651 & PH.140.652 & PH.140.653 & PH.140.654	Methods in Biostatistics I and Methods in Biostatistics II and Methods in Biostatistics III and Methods in Biostatistics IV [4]	
Epidemiology		
Must be completed during the 1st year of the MPH program		
Select one of the following:		
PH.340.601	Principles of Epidemiology	
or PH.340.721	Epidemiologic Inference in Public Health I	
PH.340.721	Epidemiologic Inference in Public Health I	
Resource Management and Budgeting		
Select one of the following:		1-3
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries	
PH.312.603	Fundamentals of Budgeting and Financial Management	
PH.318.625	Management of Nonprofit Organizations	
PH.552.621	Basic Resources Management for Public Health	
PH.552.622	Creating, Implementing and Monitoring Budgets for Projects and Programs	
Systems Thinking		
Select one of the following:		
PH.221.654	Systems Thinking in Public Health: Applications of Key Methods and Approaches	
PH.552.626	Systems Thinking: Concepts and Methods	

MODIFICATIONS OF CORE COURSE REQUIREMENTS

In some exceptional circumstances, students may be granted a modification of some core requirements if they can demonstrate and document that they have previously acquired the associated core competencies. Even if a modification is granted of a core course, 80 credits are still required for graduation. Modifications or exceptions can only be granted in the following core areas:

- ***Biostatistics:*** Requires taking an examination. Please contact Dr. Marie Diener-West, mdiener@jhu.edu.
- ***Epidemiology:*** Requires taking an examination. Please contact Ms. Allyn Arnold, aarnold2@jhu.edu.
- ***Biology and Public Health:*** Core course exceptions can be requested by contacting Dr. Gary Ketner, gketner1@jhu.edu. Be prepared to submit the title of the course, name of instructor, textbook used, a summary of course syllabi, and grade received.

All other core requirements must be completed with the approved course options only.

Additional General Competencies

Students must select 5 additional general competencies that they plan to develop – separate from the Foundational Public Health competencies. These five additional competencies may expand or enhance the foundational competencies but cannot be the same as them. Students select their 5 additional competencies from among the > 60 competencies listed in courses required by any of the 12 MPH Focus Areas.

- This decision should be made in consultation with your academic advisor.
- Please note that a single course may satisfy multiple competencies.

The Competency Table must be completed and submitted as part of your curriculum plan. You will submit the curriculum plan online . All courses that you select to meet your 5 additional competencies must be completed for degree completion and graduation eligibility.

As you progress through the MPH program, if your course selections change, you must upload a new curriculum plan and competency table to show how these requirements will continue to be met.

Please check https://publichealth.jhu.edu/academics/academic-programs/masters-degrees/master-of-public-health-mph/program-options/full-time-format/concentrations ***(***https://publichealth.jhu.edu/academics/academic-programs/masters-degrees/master-of-public-health-mph/program-options/full-time-format/concentrations/***)*** ***(***mphprog@jhu.edu***)for updated, detailed information on Focus Area Competencies and related courses.***

Goals Analysis

The purpose of the MPH Individualized Goals Analysis requirement is to:

- Describe the goals and competencies which you aim to achieve during your program.
- Plan your MPH education early in your program with the support and guidance of your academic network adviser.

- Serve as a springboard for discussion of career opportunities as the program progresses.
- The Goals Analysis should be updated as you make changes in focus and direction throughout the MPH program.

The required Goals Analysis will be completed as part of the ***Introduction to MPH Studies*** course and consists of two parts:

- **Part 1 – Self-Assessment**: Complete a self-assessment by:

1. Rating your current skill levels for the Schoolwide and MPH core competencies. Identify the core competencies that you wish to focus on and those that are particularly relevant to your professional future.
2. In your reflection, briefly explain what knowledge, skills, and experiences you bring to the program. Identify your goals for the MPH by explaining what you hope to gain in terms of knowledge, skills, professional and personal contacts, and any additional experiences. This information should be reviewed with your academic network adviser.

- **Part 2 – Curriculum Planning**: Students should work with their academic network adviser to complete their curriculum plan and submit the online Core Curriculum Confirmation Form to the MPH Program office.

1. Develop a term-by-term tentative course plan for your entire MPH program, including the five general competencies and corresponding courses that you will be completing. Your course plan should include the required courses, electives, and special studies you intend to take and when you plan to complete these courses.
2. Once your term-by-term plan has been created, complete the *Core Curriculum Confirmation Form*, indicating your core course selections and your 5 general competency selections. In the reflection section of the form, list any potential plans for a practicum experience and the specific skills you hope to develop through the practicum. Also, briefly describe one or more capstone topics of interest and possible capstone faculty mentors.
3. Once you have submitted the *Core Curriculum Confirmation Form*, then add your Biostatistics sequence selection and your general competency selection to your Degree Audit. This is required for degree completion and graduation. If during your MPH program, your biostatistics sequence or general competency selections change (including joining or leaving a concentration), you must update your Degree Audit to reflect these changes. All courses that are linked to your 5 general competencies must be completed for degree and graduation eligibility.

The Goals Analysis is intended to be a living document, one which you and your advisor review and update as you make changes in focus and direction throughout the MPH program.

Practicum Experience in Population-based Health

About the Practicum

The intent of the MPH practicum requirement is to engage students in activities aligned with their career goals, as well as activities that demonstrate application of public health concepts and critical thinking relevant to the student's area of specialization. Students will seek out activities that further develop their skill set and add new tools to their professional toolkit. Upon completion of the program, the student will be able to provide evidence of application of these skills to potential employers.

Organizations or agencies that can serve as practicum sites may include local and state public health agencies, community-based organizations, international non-governmental agencies and organizations, data coordinating centers for clinical trials, and BSPH Centers. The Practicum Experience must have some engagement in the larger public health practice implications of the work. This could be completed in a variety of ways, as appropriate to the individual projects. Some examples include, but are not limited to, collaboration with others (e.g., end users, data collectors, etc.) to provide/prepare for data analysis and interpretation, partnerships with other public health organizations (e.g., state health department, community organizations) related to study design or implementation; and obtaining input on the work from stakeholders (population impacted by project, other professionals/researchers completing similar work).

Activities completed *prior* to matriculation to the MPH program do not count towards the MPH practicum requirement.

General Criteria for MPH Practicum

The following criteria reflect the minimum practicum requirements. Approval from the MPH Practicum Team is required prior to the student initiating each practicum experience. A practicum experience:

1. **Applies public health skills and competencies.** Students identify the public health skills and competencies relevant to their area of interest that are most beneficial to their career advancement. Students apply these skills and competencies in concert with knowledge gained from their coursework.
2. **Is framed and carried out within a public health practice context with an established organization or agency.** The practicum is a population-level focused project conducted in a practice context. Students may engage in activities at an individual level, but the primary purpose of the experience is to gain population-level practical experience at an established organization or agency. Students can not solely complete screenings, administer surveys, perform calculations, etc., but must be engaged in the larger public health practice context of the activities, as well as become familiar with the organization's overall purpose and decision-making process. A literature review or data analysis project alone will not meet the practicum requirement. The student must obtain input from the partnering organization and/or from the stakeholders (e.g., population impacted by project, other professionals/researchers completing similar work). There must be a clear link to how the practicum project makes an impact on the targeted population. Students should also develop a deeper understanding of the organization's mission, hierarchy and practices, as well as the challenges faced (funding, politics, efficiency, etc.) in achieving desired goals.

3. **Is supervised by a qualified preceptor.** The practicum preceptor must be qualified to evaluate the student's professional competence and supervise the student throughout the project. The preceptor is directly engaged in the population-level focused practicum activities. Preceptors can be from an organization outside of Johns Hopkins (e.g. community-based organization, health department, private corporation, etc.), or a BSPH faculty member if the faculty member is directly engaged with or is the lead on a project that meets the practicum criteria. The preceptor works with the student to develop project learning objectives and deliverables, and guides and monitors the student's progress and achievement. The student's faculty academic advisor will be kept informed of the student's practicum activities and progress and may provide additional assistance if warranted.
4. **Is a significant experience (minimum of 100 hours).** The practicum requirement is administered and tracked by the School's MPH Practicum Team. Students must have their proposed practicum project(s) approved prior to initiating their experience. The practicum requirement can be met in a variety of ways including a single experience or a combination of experiences. Students may work independently or in a team. Activities must be completed during the MPH year to be able to count towards the MPH practicum requirement.
5. **An evaluated experience.** Preceptors will evaluate on the achievement of defined learning objectives and deliverables by the preceptors. Additionally, students will reflect on and evaluate their overall practicum experiences, particularly as they relate to their career goals. A minimum grade of "C" must be earned in courses with a practicum component that are taken towards fulfilling the requirement. Students who register for practicum special studies credits are required to earn a "pass" for the experience to count towards the practicum requirement.

Competency-based Learning Objectives for MPH Practicum

Students will need to identify distinct learning objectives for the practicum that address learning and application in at least five competencies competencies from this list (https://www.jhsph.edu/offices-and-services/practice-and-training/practicum/_documents/MPH%20Practicum%20Competencies.pdf).

Steps to Completing the MPH Practicum

A detailed outline of all steps that students must follow to complete the MPH Practicum, including registration instructions, can be found on the MPH Practicum website (https://www.jhsph.edu/offices-and-services/practice-and-training/practicum/for-students/practicum-process.html) as well as in the MPH program manual. All Students must receive approval from the MPH Practicum Team prior to initiating each practicum experience.

Ways to Complete the Practicum Requirement

To meet the practicum requirement, the total practicum hours must be at least 100 hours; one may combine multiple experiences of less than 100 hours, to meet the total.
Completion of the PH.300.615 **or** PH.300.603 TOOLS OF PUBLIC HEALTH PRACTICE **course (required for all MPH students) with a grade of C or higher will earn students 10 practicum hours.**

BSPH APPROVED COURSES WITH A PRACTICUM COMPONENT

Some courses have a real-world practice component, connecting students to outside organizations/agencies. In some cases, the course is centered on a fully developed practice experience that fulfills the practicum requirement for all students who complete the course (i.e. Baltimore Community Practicum, PHASE Internship, and the Health Policy Institute). Other courses may have limited availability or may not fully meet the 100-hour minimum requirement.

For courses that do not fulfill the entire 100-hour practicum requirement, students must combine experiences to complete the practicum requirement in full. Students are expected to complete courses in their entirety with a final letter grade of "C" or better to count towards the practicum requirement.

Please use the following link to view the most current listing of approved practicum courses: http://www.jhsph.edu/offices-and-services/practice-and-training/practicum/for-students/practicum-courses.html

CUSTOMIZED PRACTICUM EXPERIENCES

Students may complete customized practicum experiences coordinated by a BSPH faculty member or in partnership with an outside BSPH preceptor.

Projects with a BSPH faculty member: Projects are developed and coordinated by the BSPH faculty member who may or may not serve as the Preceptor (e.g. in conjunction with a course, research study, grant, etc.). Some potential practicum projects with faculty may be established projects and are listed on the Practicum Opportunity Site. Students can also arrange other experiences with a faculty member.

Projects with an outside non-BSPH preceptor: Projects can be developed in other settings through their own connections, networks, prior work experience, etc. According to the CEPH accreditation document, "Applied practice experiences may involve governmental, non-governmental, non-profit, industrial and for-profit settings or appropriate university-affiliated settings. To be appropriate for applied practice experience activities, university-affiliated settings must be primarily focused on community engagement, typically with external partners. University health promotion or wellness centers may also be appropriate."[1]

Examples of customized projects include but are not limited to:

- programmatic cost effectiveness analysis;
- policy analysis and recommendations development with a local health department;
- budget impact analysis of the financial consequences of adoption of a new vaccine,
- qualitative and quantitative data analysis of poor health outcomes for a specific population;
- health curriculum planning and development of health education materials.

Finding Practicum Opportunities

Students may utilize the resources below to identify practicum experiences.

Practicum Opportunity Site – Office of Public Health Practice and Training

https://my.jhsph.edu/Resources/SearchTools/pos/Pages/home.aspx

The Practicum Opportunity Site (POS) lists various potential practicum opportunities (including projects with outside organizations, with BSPH faculty, and practicum courses) that have been identified and vetted by the School's Practicum Team.

SOURCE
http://www.jhsph.edu/source/
SOURCE is the community engagement and service-learning center for the Johns Hopkins University (JHU) Schools of Public Health, Nursing, and Medicine. Its mission is to engage the JHU health professional schools and Baltimore communities in mutually beneficial partnerships that promote health and social justice. There are multiple ways to engage in a practicum experience through SOURCE supported activities, including the SOURCE Service Scholars program, Baltimore Action Projects, Connection Community Consultants, and working directly with a SOURCE partner organization on a project. ***NOTE:* Not all SOURCE projects meet the practicum requirements**. Subscribe to the SOURCE Weekly Service Scoop to learn more about the latest community involvement opportunities in Baltimore City (http://source.jhu.edu/programs-and-events/service-scoop/).

Office of Public Health Practice and Training
https://www.jhsph.edu/offices-and-services/practice-and-training/
The Office of Public Health Practice and Training (Practice Office) is a schoolwide office dedicated to promoting excellence in public health practice at the Johns Hopkins Bloomberg School of Public Health. It works in partnership with students, staff, faculty, academic departments, centers, programs, community partners and alumni. The Practice Office also coordinates the MPH practicum. Any questions pertaining to the MPH practicum should be directed to the MPH Practicum Coordinator in the Practice Office. The MPH Practicum Coordinator can provide feedback/guidance on project ideas and also holds regular office hours throughout the year, during which students can drop by for advice.

Certificate Programs
https://www.jhsph.edu/academics/certificate-programs/
There are a few certificate programs that include their own practicum requirement in the curriculum (e.g. *Community-based Public Health*, and *Quality, Patient Safety, and Outcomes Research*). The certificate practicum may fulfill the MPH practicum requirement, upon approval from the practicum team. Please note: Some certificates may have separate practicum paperwork that will need to be completed in addition what you must submit for the MPH practicum.

Key Contact for Practicum
Paulani Mui, MPH Practicum Coordinator
Ph: (410) 502-8952 | Email: practice@jhu.edu

MPH Capstone Project

Overview

The MPH Capstone project is a requirement for graduation for students in the Master's of Public Health Program and is to be completed at the end of or within the final two terms of the program. The MPH Capstone is an opportunity for students to work on public health projects that are of interest to them. The goal is for students to synthesize, integrate and apply the skills and competencies they have acquired throughout the entire MPH program. Completion of the MPH capstone project requires completion of the course, PH.260.720 Communications Primer for the Public Health Sciences, and both a written and oral component to your project.

The project is done under the direction of a faculty member, the MPH capstone advisor. The capstone advisor will often be the student's advisor but does not have to be. Students can identify another faculty member to supervise the capstone, if more appropriate. **The capstone advisor must have a primary or joint appointment in the School of Public Health.** Department affiliation for any faculty member in the School can be determined by going to the Faculty Directory (https://publichealth.jhu.edu/faculty/directory/list/?combine=&work_type%5Bprimary%5D=primary) . If you are uncertain as to your capstone advisor's departmental affiliation, check with your advisor or the MPH Program office.

After identifying a capstone advisor and capstone topic, students are expected to communicate regularly with their capstone advisor about their progress. The iterative process between a student and capstone advisor is an important component in the development and completion of the written project. Please see the capstone completion timeline for specific deadlines.

Requirements

1. ***PH.260.720 Communications Primer for the Public Health Sciences***
   Students must complete the course, PH.260.720 Communications Primer for the Public Health Sciences as part of the MPH Capstone requirement. Students can complete this course at any time during their MPH program, but it ***must be completed no later than the term prior to their capstone presentation***. For example, if you plan to present your capstone project in December (Term 2), you must complete PH.260.720 Communications Primer for the Public Health Sciences no later than Term 1, prior to your capstone presentation. ***Please note:*** As part of this course, you will be required to present in a LiveTalk session. It will be your responsibility to choose the date and time of your presentation and participate as scheduled.
   This course also requires that your computer have a camera and microphone.
2. ***MPH Capstone – Course Number and Registration***
   Students are required to register for the 2-credit MPH Capstone in the term that the project will be completed – this includes both the written and oral components. For most students this will be 4th term. More information can be found in the "Registering for MPH Capstone" section.
3. ***MPH Capstone - Paper***
   To satisfy the written component, a student must write a paper. The paper must include:
   - An executive summary or structured abstract (limited to 300 words) and references
   - A summary of how the capstone project addresses the areas that you wanted to strengthen, as identified in your MPH Goals Analysis
   - While there are no formal guidelines on the length of the paper, it is expected that the paper will be approximately 20 pages (ranging between 15-25 double-spaced pages) not including references, tables and figures.
     Students who have been approved to pursue an optional MPH concentration should follow any additional specific concentration area requirements for the MPH capstone for that concentration.
4. ***MPH Capstone - Oral Presentation***
   Students are required to give a 15-minute oral presentation (10-minute presentation/5-minute discussion) summarizing their capstone project. Part-time students have the option of presenting online in August, December or May or at the in-person Symposium in May. Students participating in MPH concentrations sometimes present in an alternate venue that is designated by the concentration directors. Students may, with approval of their faculty capstone

advisors, be permitted to present at an alternate venue such as a scientific meeting or academic conference.

Possible Forms That the Capstone Project May Take

The capstone project can take many forms including one of the designs below, an expansion of a course, or an internship or practicum opportunity. The overarching principle used to determine if a capstone project is suitable is whether it provides students the opportunity to apply the skills and competencies acquired in the MPH program to a problem likely to be encountered in public health practice. The topic and format of the capstone project is flexible and is developed through discussions between the student and capstone advisor. Some examples of formats or designs for the capstone project include:

Literature Review
The capstone project would be an analysis of an important public health problem through a survey of current literature on the topic. The project would include sections that clearly describe and assess the problem and its magnitude, evaluate its causes and determinants, and discuss prevention and intervention strategies.

Program Plan
The capstone project would involve the development of a plan to implement a public health program. It would address critical issues such as management, fiscal, ethical and logistical issues.

Program Evaluation
The capstone project would involve the evaluation/monitoring of an existing public health program, such as process evaluation, monitoring of outputs and outcomes, impact assessment, and/or cost analysis.

Policy Analysis
The capstone project would involve analysis of the public health implications of a current or proposed policy. The project could include perspectives on economics and financing, need and demand, politics/ethics/law, or quality/effectiveness.

Research Proposal
The capstone project would simulate a grant proposal or research plan. The project would include a clear statement of the research question, the specific aims of the proposal, review of literature, study design, methods of analysis, implications and significance of the work. The research question would be one that is encountered in professional work such as the evaluation of a public health intervention.

Research Report
The capstone project could involve the collection, analysis, and/or interpretation of data to address a public health problem. The project could include sections on the research question, study design, data collection procedures, data analysis, interpretation, and significance of findings.

Secondary data analysis
Typically, the capstone research report is in the form of a secondary data analysis, using an existing data set. Please note that the appropriate IRB approval may need to be obtained for any project that uses data gathered from human subjects. Even in cases where the data is de-identified, a determination should be sought from the IRB office (see IRB section for further information).

Primary data analysis
Work for the MPH capstone can also involve the collection of data. Data collection for a capstone is usually in the context of an ongoing study. It is typically not feasible to initiate a new study involving primary data collection and requires special approval in the rare cases where feasible.

Using a course project as an MPH capstone project
Some courses in the School of Public Health require projects that could serve as a basis for an MPH capstone project. Students may use their work from any project-oriented course as a starting basis for their capstone but must build and expand on it for the final capstone project. Building on a project from a course may be helpful to some students because it provides additional structure and support. If a project from a course is used as a starting point for the capstone, the previous work must be placed in the list of references and the advisor will need a copy of the student's original paper. There are numerous courses in the School that are project oriented which could serve as a starting point for the capstone.

Capstone Project Timeline

Timeline for online presentations, August session

Event	Date
Complete PH.260.720: Communications Primer for the Public Health Sciences	No later than 4th Term
Submit online Capstone Information Form	By early May
Submit final outline to capstone advisor	By late May
Register for capstone course for Summer Term	See academic calendar
Submit first draft of project to capstone advisor	By 3rd week of June
Submit final draft of project to capstone advisor	By 3rd week of July
Upload only the **capstone advisor approved final paper and slides** to drop box. Unapproved papers will not be accepted.	By one week before presentation date
Give oral presentation	August (see website for current year's date)

Timeline for online presentations, December sessions

Event	Date
Complete PH.260.720: Communications Primer for the Public Health Sciences	No later than 1st Term
Submit online Capstone Information Form	By late August
Submit final outline to capstone advisor	By 3rd week of September
Register for capstone course for Summer Term	See academic calendar
Submit first draft of project to capstone advisor	By 3rd week of October
Submit final draft of project to capstone advisor	By mid-November
Upload only the **capstone advisor approved final paper and slides** to drop box. Unapproved papers will not be accepted.	By one week before presentation date

Give oral presentation	December (see website for current year's date)

Timeline for online presentations, May sessions

Event	Date
Complete PH.260.720: Communications Primer for the Public Health Sciences	No later than 3rd Term
Submit online Capstone Information Form	By early December
Submit final outline to capstone advisor	By early February
Register for capstone course for Summer Term	See academic calendar
Submit first draft of project to capstone advisor	By mid-March
Submit final draft of project to capstone advisor	By mid-April
Upload only the **capstone advisor approved final paper and slides** to drop box. Unapproved papers will not be accepted.	By one week before presentation date
Give oral presentation	May (see website for current year's date)

Timeline for in-person presentation at May Capstone Symposium

Event	Date
Complete PH.260.720: Communications Primer for the Public Health Sciences	No later than 3rd Term
Submit online Capstone Information Form	By early December
Submit final outline to capstone advisor	By early February
Register for capstone course for Summer Term	By mid-March
Submit first draft of project to capstone advisor	By late March
Submit final draft of project to capstone advisor	By 3rd week of April
Upload only the **capstone advisor approved final paper and slides** to drop box. Unapproved papers will not be accepted.	By one week before presentation date
Give oral presentation	May (see website for current year's date)

Timeline for presentation at alternate venue
Students presenting at an alternate venue must adhere to the schedules above, as per the time of year in which the project is completed. Deadlines for completion of the oral presentation are August online, December online, or the May symposium date, depending on the period in which the student is graduating.

Capstone Honors and Awards

The MPH Capstone Awards Committee bestows special honors to the best overall capstone projects. Nominations are accepted from capstone advisors. The winners will be selected by the awards committee based on the written project. Each capstone award winner receives a plaque for excellence. The student with the single overall best capstone project will also receive a $500 award.

Learning Outcomes

Foundational Public Health Knowledge

All MPH students will attain grounding in foundational public health knowledge as measured by the following learning objectives:

Profession & Science of Public Health

- Explain public health history, philosophy and values
- Identify the core functions of public health and the 10 Essential Services
- Explain the role of quantitative methods and sciences in describing and assessing a population's health
- Explain the role of qualitative methods and sciences in describing and assessing a population's health
- List major causes and trends of morbidity and mortality in the US or other community relevant to the school or program
- Discuss the science of primary, secondary and tertiary prevention in population health, including health promotion, screening, etc.
- Explain the critical importance of evidence in advancing public health knowledge

Factors Related to Human Health

- Explain effects of environmental factors on a population's health
- Explain biological factors that affect a population's health
- Explain genetic factors that affect a population's health
- Explain behavioral and psychological factors that affect a population's health
- Explain the social, political and economic determinants of health and how they contribute to population health and health inequities
- Explain how globalization affects global burdens of disease
- Explain an ecological perspective on the connections among human health, animal health and ecosystem health (e.g., One Health)

Foundational Public Health Competencies

All MPH students will demonstrate achievement of the following competencies:

Evidence-based Approaches to Public Health

- Apply epidemiological methods to the breadth of settings and situations in public health practice
- Select quantitative data collection methods appropriate for a given public health context
- Select qualitative data collection methods appropriate for a given public health context
- Analyze quantitative data using biostatistics, informatics, computer-based programming and software, as appropriate
- Analyze qualitative data using computer-based programming and software, as appropriate
- Interpret results of data analysis for public health research, policy or practice

Public Health & Health Care Systems

- Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings

- Discuss how structural bias, social inequities and racism undermine health and create challenges to achieving health equity at organizational, community and societal levels

Planning & Management to Promote Health

- Assess population needs, assets and capacities that affect communities' health
- Apply awareness of cultural values and practices to the design or implementation of public health policies or programs
- Design a population-based policy, program, project or intervention
- Explain basic principles and tools of budget and resource management
- Select methods to evaluate public health programs Policy in Public Health
- Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence
- Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes
- Advocate for political, social or economic policies and programs that will improve health in diverse populations
- Evaluate policies for their impact on public health and health equity

Leadership

- Apply principles of leadership, governance and management, which include creating a vision, empowering others, fostering collaboration and guiding decision making
- Apply negotiation and mediation skills to address organizational or community challenges

Communication

- Select communication strategies for different audiences and sectors
- Communicate audience-appropriate public health content, both in writing and through oral presentation
- Describe the importance of cultural competence in communicating public health content

Interprofessional Practice

- Perform effectively on interprofessional teams

Systems Thinking

- Apply systems thinking tools to a public health issue

DNP/MPH

About

The Bloomberg School and the School of Nursing of Johns Hopkins University offer the Doctor of Nursing- Executive Track and Master of Public Health (DNP/MPH (https://nursing.jhu.edu/academics/programs/doctoral/dnp/dnp-mph/dnp-mph.html)) dual degree program. This program prepares nurse leaders to take on executive level roles in healthcare and tackle critical public health challenges locally and globally. Students pursue an integrated curriculum with core coursework in nursing and public health, as well as flexibility to choose electives based on individual interests. The program is offered in a part-time, online format and is 3 years in length.

How to Apply

The School of Nursing serves as the student's "home" school and provides all administrative functions including admissions, financial aid, and course registration. Applications for the DNP/MPH must be obtained from and submitted to the School of Nursing and will be reviewed by the admissions committees of both schools. For best consideration, please submit the application by November 1st, the admission priority deadline date at the School of Nursing. Please visit their website for application instructions (https://nursing.jhu.edu/admissions/apply/).

DVM/MPH

About

Veterinary students desiring a Master of Public Health (MPH) may enroll in the MPH program after graduation or after at least two years of veterinary school. Students in the DVM/MPH program will earn a DVM from their veterinary school and an MPH from Johns Hopkins.

In particular, BSPH has partnered with the Ross University School of Veterinary Medicine (RUSVM) to offer combined degrees where JHSPH MPH graduates enter RUSVM to study veterinary medicine and that RUSVM DVM graduates enter the BSPH MPH program. For information on the RUSVM program, visit

https://veterinary.rossu.edu/admissions/dvm-admissions/articulation-agreements/johns-hopkins.html

Veterinary students typically enroll in the MPH program between the 3rd and 4th year of medical school. Coursework must be completed in the 11-month, full-time format (https://www.jhsph.edu/academics/degree-programs/master-of-public-health/program-overview/full-time.html). Learn more about the MPH curriculum.

How to Apply

Requirements (p. 500) are the same as the full-time MPH program. Veterinary students must apply to the program and request a leave of absence from veterinary school. The years of veterinary training will fulfill the two years of health experience required for admission to the School's MPH program. Veterinary students apply to the MPH program (http://www.jhsph.edu/admissions/how-to-apply/) through SOPHAS.

JD/MPH

About

The Juris Doctor and Master's of Public Health (JD/MPH) dual degree program prepares students in the overlapping fields of law, public health, policy and ethics.

Graduates earn a JD degree from their accredited U.S. law school and an MPH degree from the Bloomberg School. Both degrees are awarded upon completion of the program.

Students can enter the program after completing a minimum of two full-time semesters (one year) in law school.

Coursework must be completed in the 11-month, full-time format (https://www.jhsph.edu/academics/degree-programs/master-of-public-health/program-overview/full-time.html). Learn more about the MPH curriculum.

How to Apply

The JD/MPH program applicants must apply to the MPH program (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/how-to-apply/) through SOPHAS and request a leave of absence for one year from law school. Applicants not yet enrolled in law school must apply separately to the Bloomberg School (p. 54) and an accredited U.S. law school.

LLM/MPH

About

The Bloomberg School and the Georgetown University Law Center's O'Neill Institute for National and Global Health Law (https://www.law.georgetown.edu/academics/academic-programs/graduate-programs/degree-programs/global-health/joint-mph-llm.cfm) offer the Master's of Laws and the Master's of Public Health (LLM/MPH) dual degree program.

Students are trained in public health practice and the role of law in solving critical global health challenges. Graduates earn the LLM degree in Global Health Law from Georgetown University and the MPH degree from the Bloomberg School. Both degrees are awarded upon completion of the program.

The dual degree program begins at the Bloomberg School. However, the MPH Practicum requirement is fulfilled during Year 2 by completing the O'Neill Institute Practicum. The MPH program office must approve the practicum proposal.

- Year 1: MPH coursework in the 11-month, full-time format (https://www.jhsph.edu/academics/degree-programs/master-of-public-health/program-overview/full-time.html) in Baltimore, Maryland
- Year 2: LLM coursework, Georgetown University Law Center in Washington, D.C.

How to Apply

Applicants must apply to the Bloomberg School (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/how-to-apply/) using the SOPHAS application and to Georgetown University Law Center separately and simultaneously. The dual degree program requires acceptances from both schools.

Candidates who are not admitted to the dual degree program may still be eligible for admission to either the MPH Program or the LLM in Global Health Law Program, if they satisfy the individual program's admissions requirements.

MBA/MPH with China Europe International Business School

About

The Bloomberg School and the China Europe International Business School (CEIBS) offer the Master's of Business Administration and Master of Public Health (https://www.ceibs.edu/mba/ceibs-johns-hopkins/) (MBA/MPH) dual degree program.

Students pursue complementary studies in public health and international business. They observe first-hand the opportunities and challenges in China's giant health care market, which is vital for future leaders in global health.

Graduates earn the MBA degree from CEIBS and the MPH degree from the Bloomberg School.

Students earn both degrees in 23 months, six months less than if each degree were sought separately. Training includes population-based health, strategic planning, health economics and more.

- Year 1: MBA coursework, CEIBS, Shanghai Campus in China
- Year 2: MPH coursework in the 11-month, full-time format (https://www.jhsph.edu/academics/degree-programs/master-of-public-health/program-overview/full-time.html) in Baltimore, Maryland, U.S.

How to Apply

Requirements and deadlines are the same as the full-time MPH program, however, applicants must apply to CEIBS (http://www.ceibs.edu/mba/application/) and the Bloomberg School (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/how-to-apply/) separately. The application to the MPH program is processed through SOPHAS and applicants should take care to indicate the appropriate year they will begin the MPH program. The admissions committees of both schools review applications independently.

Applicants are required to take either the GRE (preferred) or the GMAT. IELTS and TOEFL scores are waived for students who meet the CEIBS English language requirement.

Meeting CEIBS's pre-MBA working experience requirement, together with the completion of one year MBA at CEIBS satisfies the health experience requirement of the MPH.

MD/MPH

About

The MD/MPH dual degree program provides medical students with a population-based perspective on health and tools to address public health challenges. Two years of training from Johns Hopkins School of Medicine (p. 909) or any accredited U.S. medical school fulfills the two years of health-related work experience required for admission to the Bloomberg School MPH program.

Medical students typically enroll in the MPH program between the 3rd and 4th year of medical school. Coursework must be completed in the 11-month, full-time format (p. 497). Learn more about the MPH curriculum (http://www.jhsph.edu/academics/degree-programs/master-of-public-health/curriculum/).

How to Apply

Requirements (p. 500) are the same as the full-time MPH program. Two years of U.S. medical training will fulfill the two years of health experience required for admission to the MPH program. International medical students must have previous health related experience. Medical students must apply to the MPH program (http://www.jhsph.edu/admissions/how-to-apply/) through SOPHAS and request a leave of absence for one year from medical school.

MD/PhD

About

In partnership with the Johns Hopkins School of Medicine (http://www.hopkinsmedicine.org/som/), the Bloomberg School offers students the opportunity to earn a Doctor of Medicine (MD) alongside a Doctor of Philosophy (PhD) (p. 986) – a rigorous combination that prepares graduates for prestigious careers in academic medicine.

The long-lasting relationship between the School of Medicine and the Bloomberg School – both situated along the same city block here in Baltimore – fosters the ideal environment for this combined six or eight year program.

Students complete two years of medical school before devoting themselves full-time to their PhD studies. After completion of the PhD degree requirements, students then complete their MD degree.

Interested "physician-scientists" should visit the MD/PhD Program's website (https://publichealth.jhu.edu/academics/doctor-of-medicine-and-doctor-of-philosophy-mdphd/)for full details on admission requirements and application procedures.

MPH/MBA

About

The Bloomberg School of Public Health and the Carey Business School of Johns Hopkins University offer the Master's of Public Health and Master's of Business Administration (MPH/MBA) dual degree program.

The MPH/MBA provides experienced professionals with the knowledge and skills to be successful leaders in health-related organizations.

Students pursue an integrated curriculum with both public health and business courses. They are trained in population-based health, strategic planning, health economics and more. The program requires 80 MPH credits and 63 MBA credits, for a minimum of 143 total credits to graduate.

Students complete the dual degree program in nine terms (two years). Tuition per term is based on the full-time rate at the Bloomberg School.

How to Apply

Requirements (p. 500) and deadlines are the same as the full-time MPH program. *Please note: all MPH/MBA applicants must submit a GRE or GMAT score (including applicants who hold an advanced degree).*

Applicants submit only one application for the MPH/MBA through the Bloomberg School (https://publichealth.jhu.edu/offices-and-services/office-of-admissions-services/how-to-apply/). Applications are processed through SOPHAS, and the admissions committees of both schools review applications independently.

Online Programs for Applied Learning (OPAL)

OPAL MAS and Certificate Programs

The Master of Applied Science (MAS) is a fully online, part-time degree designed for working professionals, delivered through the Online Programs for Applied Learning (OPAL). Programs focus on emergent industry sectors in public health and health care that have a need for highly skilled professionals. By building on the strengths of the School, they provide unmatched opportunities for advanced training and focus on both local and global health issues. Students are prepared to create innovative solutions through multidisciplinary approaches that apply the latest scientific knowledge. All MAS programs will culminate in a final Integrative Activity. The goal of this activity is for students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates mastery of program competencies, as applied to real-world public health and health care questions. Students can complete their degree program in as little as two years, but are allowed up to four years.

The OPAL post-baccalaureate certificates are designed to combine the academic excellence of Johns Hopkins with the flexibility of a fully online, part-time program. Students can complete a certificate is as little as one year, but have up to three years if needed.

Online Student Experience

What to Expect

Faculty record course lectures in the School's state-of-the-art recording suite. Each lecture goes through a comprehensive production process involving audio editing, technical writing, medical illustration, and quality assurance. Students are able to download videos, along with audio-only (MP3) and slide-only (PDF) versions, and text transcripts for offline review. This gives a lot of flexibility for students to choose the format that works best for their learning style.

Students, faculty, and teaching assistants interact with one another using a variety of asynchronous tools, including discussion forums, collaborative peer assessments, online document editing, and email. Real-time communication occurs during online office hours and/or LiveTalk sessions via Zoom web conferencing.

Preparing Students for Online Learning

Introduction to Online Learning is a free, mandatory prerequisite for all online courses offered. It's open to prospective students and designed to give a thorough view into what the online experience on CoursePlus will be like. It also prepares students and faculty for success on the first day of class since everyone is already acclimated to the technology. Introduction to Online Learning will allow students to:

- Ensure all tools and applications are properly installed
- Troubleshoot any component that may not work properly
- Experience the online tools for peer-to-peer and instructor communication
- Become familiar with the coursework structure and learning management system

The course takes between 1-4 hours to complete, depending on the student's skills working online. With the notable exception of one LiveTalk, students can do the class work on their own schedule. For details on the course, including assignments and requirements for completion, please see the Syllabus page.

Ready to test-drive online courses at BSPH? Register for this course. Students can take this free course at any point before or during the application process!

Programs

Master of Applied Science (MAS) degree programs

- Master of Applied Science in Community-Based Primary Health Care Programs in Global Health (p. 521)
- Master of Applied Science in Global Health Planning and Management (p. 524)
- Master of Applied Science in Humanitarian Health (p. 527)
- Master of Applied Science in Patient Safety and Healthcare Quality (p. 530)
- Master of Applied Science in Population Health Management (p. 532)

- Master of Applied Science in Spatial Analysis for Public Health (p. 534)

Please note: The MAS programs in Community-Based Primary Health Care Programs in Global Health, Global Health Planning and Management and Humanitarian Health are not open to new matriculants in AY22-23. Current students should follow the program requirements in place at the time of their admission. See program sections for additional information or reach out to the OPAL Program Office at OPAL-Office@jhu.edu.

POST-BACCALAUREATE CERTIFICATES

- Certificate in Global Health Practice (p. 594)
- Certificate in Global Tobacco Control (p. 595)
- Certificate in Population Health Management (p. 615)
- Certificate in Spatial Analysis for Public Health (p. 629)

Faculty

The Bloomberg School of Public Health is comprised of over 650 full-time faculty including professors, scientists, lecturers, instructors and researchers. These renowned experts in the field are shaping public health through teaching, research, and application. Faculty contribute to the OPAL programs via course development, teaching, and advising students. Below are a few of the experts students will learn from.

Matthew Austin, PhD
Assistant Professor
Email: jmaustin@jhmi.edu

David Baker, DrPH, MBA
Assistant Professor - Adjunct
Email: dbaker26@jhmi.edu

Mark Bittle, DrPH
Senior Scientist, and Program Director, MAS and Certificate programs in Population Health Management
Email: mbittle1@jhu.edu

William Brieger, DrPH
Professor and Program Director, MAS and Certificate programs in Global Health
Email: wbriege1@jhu.edu

Gilbert Burnham, MD
Professor
Email: gburnha1@jhu.edu

Aruna Chandran, MD
Associate Scientist
Email: achandr3@jhu.edu

Cheryl Connors
Associate
Email: ccicio1@jhmi.edu

Frank Curriero, PhD
Professor and Program Director, MAS and Certificate programs in Spatial Analysis for Public Health
Email: fcurriero@jhu.edu

Shannon Doocy, PhD
Associate Professor
Email: doocy1@jhu.edu

Ryan Kennedy, PhD
Associate Professor and Program Director, Certificate program in Global Tobacco Control
Email: rdkennedy@jhu.edu

Paula Kent, DrPH, MSN, MBA
Associate
Email: pkent2@jhmi.edu

Julia Kim, MD, MPH
Assistant Professor
Email: jkim315@jhmi.edu

John McGready, PhD
Senior Scientist
Email: jmcgrea1@jhu.edu

Peter Pronovost, MD
Professor
Email: ppronovo@jhmi.edu

W. Courtland Robinson, PhD
Associate Professor and Program Co-Director, MAS and Certificate programs in Humanitarian Health
Email: wrobins2@jhu.edu

Michael Rosen, PhD
Assistant Professor
Email: mrosen44@jhmi.edu

Tim Shields, MA
Associate Scientist and Program Co-Director, MAS and Certificate programs in Spatial Analysis for Public Health
Email: tshields@jhu.edu

Paul Spiegel, PhD
Professor of the Practice, and Program Co-Director, MAS and Certificate programs in Humanitarian Health
Email: pbspiegel@jhu.edu

Elizabeth F. Topper, PhD, MEd, MPH
Senior Lecturer and Director, Online Programs for Applied Learning (OPAL)
Email: etopper@jhu.edu

Albert Wu, MD
Professor and Program Director, MAS in Patient Safety and Healthcare Quality
Email: awu@jhu.edu

Master of Applied Science in Community-Based Primary Health Care Programs in Global Health, MAS

Program Overview

Please note: The Master of Applied Science (MAS) program in Community-based Primary Health Care Programs in Global Health is not open to new matriculants in AY22-23. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science (MAS) is a fully online, part-time degree designed for working professionals, delivered through the Online

Programs for Applied Learning (OPAL). Programs focus on emergent industry sectors in public health and health care that have a need for highly skilled professionals. By building on the strengths of the School, they provide unmatched opportunities for advanced training and focus on both local and global health issues. Students are prepared to create innovative solutions through multidisciplinary approaches that apply the latest scientific knowledge. All MAS programs will culminate in a final Integrative Activity. The goal of this activity is for students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates mastery of program competencies, as applied to real-world public health and health care questions. Students can complete their degree program in as little as two years, but are allowed up to four years.

The MAS program in Community-based Primary Health Care builds on the community health strengths of the Bloomberg School and the Department of International Health, which provides unmatched opportunities for advanced training, focuses on both local and global issues, and prepares students to address public health problems through multidisciplinary approaches that apply the latest scientific knowledge. The program will provide students with the skills to plan, implement, and evaluate community-based public health programs and services in countries throughout the world. Our focus on Primary Health Care is in keeping with the Alma Ata Declaration that is built on active community participation. We hope that as a result of this course students will be able to involve the communities where they work in being active partners in the provision of their own health care.

LinkedIn Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage students to join this professional networking community.

Additional Public Health Learning Resources

The Mid-Atlantic Regional Public Health Training Center provides links to many of its online learning resources, as well as external resources, databases and public health organizations. These can be used to supplement learning on a particular topic, or provide background material. Many of these resources are available for free via their website (https://www.jhsph.edu/research/centers-and-institutes/mid-atlantic-public-health-training-center/training_events/online_training.html).

The Welch Medical Library at Johns Hopkins has many resources related to research, writing and documentation on their YouTube channel (https://www.youtube.com/c/WelchMedicalLibrary/).

The School has a number of research and practice related seminar series (https://publichealth.jhu.edu/academics/lecture-series/) that occur throughout the year and contribute to the intellectual community of the School, for students, staff, and faculty. The Bloomberg School has a website (https://publichealth.jhu.edu/practice/resources-for-practitioners/) that provides some additional resources for practitioners as well.

Practitioners can also access dozens of courses from Bloomberg School faculty on Coursera (https://www.coursera.org/jhu/). Practice-focused offerings include courses on topics such as gun violence, food systems, health equity, biostatistics, and epidemiology, among others.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Please note: The Master of Applied Science (MAS) program in Community-based Primary Health Care Programs in Global Health is not open to new matriculants in AY22-23. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

Master of Applied Science in Community-based Primary Health Care Programs in Global Health is an interdisciplinary online degree. Faculty at the Bloomberg School of Public Health contribute to the program via course development, teaching, and advising students. The topics and concepts allow graduates to build a diverse skill set focusing on the design, analysis, implementation and evaluation of large-scale community-based primary health care programs.

Students will complete 50.5 credits to graduate. The program is designed to be completed in 8 academic terms - two academic years (Sept-May). In addition to the coursework, students must complete an Integrative Activity, where newly acquired knowledge and skills are used to create an applicable activity (e.g., identifying a problem in community-based primary health care and designing a solution, plan for implementation and evaluation method) – with a final paper that describes the methodology used and the final assessment. Students can complete their degree program in as little as two years, but are allowed up to four years.

If the 2-credit Professional Development Workshop courses are not included in the required curriculum, students are still welcome to take them, in addition to the required degree courses outlined below. Current offerings include Effective Online Searching and Writing for Results. OPAL scholarship funds will apply towards these credits. Students should refer to the online course directory (www.jhsph.edu/courses (http://www.jhsph.edu/courses/)) for additional details.

Satisfactory Academic Progress (SAP)

The Bloomberg School of Public health requires students to maintain satisfactory academic progress for the duration of the degree program. For the MAS program, satisfactory academic progress is defined as follows:

Maintaining a minimum cumulative grade point average of 2.75 and grades of C or better in all required courses. Grades of P are sufficient in courses that are graded as Pass/Fail. Students falling below this minimum should consult with the OPAL Program Office and their Academic Adviser in order to develop a course plan to allow them to raise the GPA above 2.75 as soon as possible, in order to return to good academic standing.

Failure to maintain satisfactory academic progress as defined by any of the criteria above may be grounds for dismissal from the program, and financial aid status will be affected. Full details of the School's Satisfactory Academic Policy can be found here (https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs/financial-aid/federal-aid-policies/).

Program Plan of Study

Students should follow the plan outlined below if they wish to complete the MAS program in two years. This plan will also allow students to maintain minimum credits needed for financial aid eligibility each term, and to follow any prerequisite sequencing. Courses can be taken at a slower pace if needed, so long as course prerequisites are met.

Course	Title	Credits
First Year		
First Term		
PH.550.860	Academic & Research Ethics at BSPH	
PH.600.601	Seminars in Public Health	2
PH.606.601	Fundamentals in Global Health Practice	4
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health May be taken during any term offered	0.5
	Credits	**6.5**
Second Term		
PH.604.621	Design and Planning of Primary Health Care Projects	4
PH.600.602	Seminars in Public Health: Advanced Topics	2
or PH.604.641 Disaster Preparedness (2 credits)		
or PH.602.721 Organizing PH: Systems Approach (2 credits)		
	Credits	**6**
Third Term		
PH.600.701	Introduction to Epidemiology	4
PH.604.604	Global Epidemiology Policies and Programs	3
	Credits	**7**
Fourth Term		
PH.600.709	Statistical Concepts in Public Health 1	3
PH.604.771	Social & Cultural Basis for Community and Primary Health Programs	3
	Credits	**6**
Second Year		
First Term		
PH.607.701	Health and Safety Preparation for Global Health Assignments	1
PH.607.704	Essential Medicines, Commodities and Supplies Needed for Community Level Primary Health Care Interventions	2
PH.607.711	Applying Evaluation to More Effectively Reach Communities Through Primary Health Care	3
	Credits	**6**
Second Term		
PH.607.721	Urban Primary Health Care in Low and Middle-income Countries	3
PH.607.724	Applying Household Surveys to Primary Health Care Programs	3
	Credits	**6**
Third Term		
PH.607.735	Planning Training and Learning Programs for Community Health Workers	4
PH.600.612	Professional Development: Writing for Results	2
	Credits	**6**
Fourth Term		
PH.607.751	Building Community Capacity for Primary Health Care in Low and Middle-Income Countries	3
PH.607.880	Integrative Activity in Community-Based Primary Health Care	4
	Credits	**7**
	Total Credits	**50.5**

Integrative Activity

Online Programs for Applied Learning (OPAL) Integrative Activity: Human Subjects Research and Other Activities

This culminating experience will provide Master of Applied Science students with the opportunity to synthesize lessons learned via the application of concepts and techniques. Please note that individual degree programs may have specific guidelines related to their particular Integrative Activity course including, but not limited to the format, presentation, and composition of final course deliverable.

As you begin planning the research for your Integrative Activity within the MAS program, please review the information below and proceed accordingly. Regardless of whether IRB review is required, all OPAL students should apply ethical principles in their interactions with humans and/or their data. Please follow the BSPH Ethical Code for Student Activities that Involve Human Interactions.

1. As long as the project is limited to the context of the course, or courses if components of the Integrative Activity is spread among more than one course, there is no need for IRB approval, even if the project involves human subjects research. These types of student projects are considered learning exercises when there is no plan to disseminate beyond the class, School, or affiliated agency.
2. If you do wish to publish your project while you are a student, you will need to test to see if you are conducting Human Subjects Research (HSR) which would necessitate IRB approval. You can test your project for HSR by using the IRB worksheet or consulting the IRB guidance flowchart. You will need to go to IRB for official/final determination **before** beginning your research in order to be approved for publication. All student-initiated research projects which you intend to publish must have a preliminary review by the IRB Office to determine whether they are human subjects research requiring IRB oversight, unless (1) the student is working with a Principal Investigator (PI) from another institution, or (2) the PI is adding you

as a student investigator to an existing, IRB-approved study. If you are using human subjects data, you must obtain a determination from the BSPH IRB. If you are collecting primary new data, complete the IRB Office Determination Request Form for Primary Data Collection or if you are using existing data, complete the IRB Office Determination Request Form for Secondary Data Analysis in collaboration with your adviser and submit it to the BSPH IRB Office e-mail address jhsph.irboffice@jhu.edu. Be sure to include your adviser in your e-mail submission.

3. If you do not intend to publish the project while you are a student, IRB approval will not be required. However, if you would be interested in publishing it after graduating from JHU, you should note that the *project must meet the ethical standards of your institution and that many institutions will not allow you to present/publish human subjects research without having prior IRB approval*. For this reason, we strongly recommend that you consult your organization now if you think that you may wish to publish in the future.

PROGRAM COMPETENCIES

Please note: The Master of Applied Science (MAS) program in Community-based Primary Health Care Programs in Global Health is not open to new applicants in AY22-23. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science in Community-based Primary Health Care Programs in Global Health is an interdisciplinary program. Faculty at the Bloomberg School of Public Health contribute to the program via course development, teaching, and advising students. The topics and concepts allow graduates to build a diverse skill set focusing on the design, analysis, implementation and evaluation of large-scale community-based primary health care programs.

By the end of the program, students should be able to:

A. **Core Global Health Practice Competencies**

1. Apply capacity building processes to global health programming in low and middle-income countries.
2. Identify and collaborate with a wide range of stakeholders whose active participation is required for successful global health programming at community, sub-national, national and regional levels.
3. Apply ethical reasoning to the policy and programming decisions needed for designing and implementing global health programs in low and middle-income countries.
4. Exhibit a health equity and social justice lens in the design and conduct of global health programs.
5. Apply appropriate management processes in the design, implementation and evaluation of global health programs.
6. Demonstrate social, cultural and political awareness of the context in which global health programming takes place.
7. Conduct strategic analysis of factors that influence the success of global health programming.

B. **Community-Based Primary Health Care Competencies**

1. Use community-based approaches to address priority health problems through full participation of community members and groups
2. Design and manage implementation of household surveys that yield relevant health and social data needed to plan community-based PHC programs
3. Analyze local contexts and project implementation designs in order to develop evaluation plans that can be practically applied to community-based PHC programs in middle and low-resource settings
4. Design a community-based primary health care program from the analysis through implementation to evaluation stages
5. Prepare a training plan for front-line and community health workers involved in community-based PHC
6. Conduct a detailed analysis of the demographic, epidemiological and social aspects of a major health need in a low- or middle-income country.

Master of Applied Science in Global Health Planning and Management, MAS

Program Overview

Please note: The Master of Applied Science (MAS) program in Global Health Planning and Management is not open to new matriculants in AY22-23. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science (MAS) is a fully online, part-time degree designed for working professionals, delivered through the Online Programs for Applied Learning (OPAL). Programs focus on emergent industry sectors in public health and health care that have a need for highly skilled professionals. By building on the strengths of the School, they provide unmatched opportunities for advanced training and focus on both local and global health issues. Students are prepared to create innovative solutions through multidisciplinary approaches that apply the latest scientific knowledge. All MAS programs will culminate in a final Integrative Activity. The goal of this activity is for students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates mastery of program competencies, as applied to real-world public health and health care questions. Students can complete their degree program in as little as two years, but are allowed up to four years.

The MAS program in Global Health Planning and Management builds on the Health Systems Strengthening expertise of the Bloomberg School and the Department of International Health, which provides unmatched opportunities for advanced training, focuses on both local and global issues, and prepares students to address public health problems through multidisciplinary approaches that apply the latest scientific knowledge.

The program will provide students with the skills to plan, implement, and evaluate public health programs and services in countries throughout the world. We take a systems approach to understanding how to meet the health needs of communities and local governments/districts. We hope that as a result of this course students will build skills to plan and manage health programs in non-governmental and governmental agencies serving people in under-served areas and low and middle income countries.

LinkedIn Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage students to join this professional networking community.

Integrative Activity

Online Programs for Applied Learning (OPAL) Integrative Activity: Human Subjects Research and Other Activities

This culminating experience will provide Master of Applied Science students with the opportunity to synthesize lessons learned via the application of concepts and techniques. Please note that individual degree programs may have specific guidelines related to their particular Integrative Activity course including, but not limited to the format, presentation, and composition of final course deliverable.

As you begin planning the research for your Integrative Activity within the MAS program, please review the information below and proceed accordingly. Regardless of whether IRB review is required, all OPAL students should apply ethical principles in their interactions with humans and/or their data. Please follow the BSPH Ethical Code for Student Activities that Involve Human Interactions.

1. As long as the project is limited to the context of the course, or courses if components of the Integrative Activity is spread among more than one course, there is no need for IRB approval, even if the project involves human subjects research. These types of student projects are considered learning exercises when there is no plan to disseminate beyond the class, School, or affiliated agency.
2. If you do wish to publish your project while you are a student, you will need to test to see if you are conducting Human Subjects Research (HSR) which would necessitate IRB approval. You can test your project for HSR by using the IRB worksheet or consulting the IRB guidance flowchart. You will need to go to IRB for official/final determination **before** beginning your research in order to be approved for publication. All student-initiated research projects which you intend to publish must have a preliminary review by the IRB Office to determine whether they are human subjects research requiring IRB oversight, unless: (1) the student is working with a Principal Investigator (PI) from another institution, or (2) the PI is adding you as a student investigator to an existing, IRB-approved study. If you are using human subjects data, you must obtain a determination from the BSPH IRB. If you are collecting primary new data, complete the IRB Office Determination Request Form for Primary Data Collection, or if you are using existing data, complete the IRB Office Determination Request Form for Secondary Data Analysis in collaboration with your adviser and submit it to the BSPH IRB Office e-mail address jhsph.irboffice@jhu.edu. Be sure to include your adviser in your e-mail submission.
3. If you do not intend to publish the project while you are a student, IRB approval will not be required. However, if you would be interested in publishing it after graduating from JHU, you should note that the project *must meet the ethical standards of your institution and that many institutions will not allow you to present/publish human subjects research without having prior IRB approval.* For this reason, we strongly recommend that you consult your organization now if you think that you may wish to publish in the future.

PROGRAM COMPETENCIES

Please note: The Master of Applied Science (MAS) program in Global Health Planning and Management is not open to new matriculants in AY22-23. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science (MAS) in Global Health Planning and Management curriculum is delivered entirely online and designed for working students. Courses equip students with the necessary skills to develop sustainable solutions to advance health initiatives throughout the world. Online students are trained in epidemiology and statistics, form practical skills derived from workshops in professional development, and learn to understand critical issues facing the global health field.

By the end of the program, students should be able to:

A. **Core Global Health Practice Competencies**

1. Apply capacity building processes to global health programming in low and middle-income countries.
2. Identify and collaborate with a wide range of stakeholders whose active participation is required for successful global health programming at community, sub-national, national and regional levels.
3. Apply ethical reasoning to the policy and programming decisions needed for designing and implementing global health programs in low and middle-income countries.
4. Exhibit a health equity and social justice lens in the design and conduct of global health programs.
5. Apply appropriate management processes in the design, implementation and evaluation of global health programs.
6. Demonstrate social, cultural and political awareness of the context in which global health programming takes place.
7. Conduct strategic analysis of factors that influence the success of global health programming.

B. **Global Health Planning and Management Competencies**

1. Apply frameworks, tools, strategies and models to improve the planning and management of global health programs and organizations in low- and middle-income countries.
2. Identify and apply principles and practices of total quality management methods for health systems in developing countries.
3. Utilize systems thinking to determine how societies organize themselves to achieve collective health goals and contribute to policy outcomes in global settings.
4. Demonstrate skills for managing non-governmental organizations in the health sector in LMICs.
5. Utilize appropriate evaluation designs and approaches for public health programs in LMICs and advocate the uptake of program results by policymakers.
6. Conduct a detailed analysis of the demographic, epidemiological and social aspects of a major health need in a low- or middle-income country.

Master of Applied Science in Humanitarian Health, MAS

Program Overview

Please note: The Master of Applied Science (MAS) program in Humanitarian Health is not open to new matriculants in AY22-23. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science (MAS) is a fully online, part-time degree designed for working professionals, delivered through the Online Programs for Applied Learning (OPAL). Programs focus on emergent industry sectors in public health and health care that have a need for highly skilled professionals. By building on the strengths of the School, they provide unmatched opportunities for advanced training and focus on both local and global health issues. Students are prepared to create innovative solutions through multidisciplinary approaches that apply the latest scientific knowledge. All MAS programs will culminate in a final Integrative Activity. The goal of this activity is for students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates mastery of program competencies, as applied to real-world public health and health care questions. Students can complete their degree program in as little as two years, but are allowed up to four years.

Graduates gain necessary tools to adopt and adapt to the rapidly changing roles of the humanitarian professional and to support humanitarian organizations in service delivery, applied research and public health advocacy. The Humanitarian Health Master's program focuses on both local and global issues, and prepares students to address public health problems through multidisciplinary approaches that apply the latest scientific knowledge.

LinkedIn Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage you to join this professional networking community.

For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science (MAS) in Humanitarian Health curriculum is delivered entirely online and designed for working students. The part-time, 49.5-credit degree program consists of intensive graduate-level coursework culminating in the Integrative Activity, which requires students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates their mastery of the program competencies. Students may complete the degree over a minimum of eight 8-week terms, in two years to a maximum of four years.

Courses reflect the breadth of global public health; online students are trained in epidemiology and biostatistics, form practical skills derived from workshops in professional development, and understand critical issues in the humanitarian and disaster fields.

If the 2-credit Professional Development Workshop courses are not included in the required curriculum, students are still welcome to take them, in addition to the required degree courses outlined below. Current offerings include Effective Online Searching and Writing for Results. OPAL scholarship funds will apply towards these credits. Students should refer to the online course directory (www.jhsph.edu/courses (http://www.jhsph.edu/courses/)) for additional details.

Satisfactory Academic Progress (SAP)

The Bloomberg School of Public Health requires students to maintain satisfactory academic progress for the duration of the degree program.

For the MAS program, satisfactory academic progress is defined as follows:

Maintaining a minimum cumulative grade point average of 2.75 and grades of C or better in all required courses. Grades of P are sufficient in courses that are graded as Pass/Fail. Students falling below this minimum should consult with the OPAL Program Office and their Academic Adviser in order to develop a course plan to allow them to raise the GPA above 2.75 as soon as possible, in order to return to good academic standing.

Failure to maintain satisfactory academic progress as defined by any of the criteria above may be grounds for dismissal from the program, and financial aid status will be affected. Full details of the School's Satisfactory Academic Policy can be found here (https://publichealth.jhu.edu/offices-and-services/office-of-student-affairs/financial-aid/federal-aid-policies/).

Program Plan of Study

Students should follow the plan outlined below if they wish to complete the MAS program in two years. This plan will also allow students to maintain minimum credits needed for financial aid eligibility each term, and to follow any prerequisite sequencing. Courses can be taken at a slower pace if needed, so long as course prerequisites are met.

Course	Title	Credits
First Year		
First Term		
PH.550.860	Academic & Research Ethics at BSPH	
PH.600.601	Seminars in Public Health	2
PH.604.601	Public Health Humanitarian Emergencies	4
PH.552.612	Essentials of One Health May be taken during any term offered	0.5
	Credits	**6.5**
Second Term		
PH.604.621	Design and Planning of Primary Health Care Projects	4
PH.604.641	Disaster Preparedness	2
	Credits	**6**
Third Term		
PH.604.651	Introduction of Water, Sanitation and Hygiene in Emergencies	2
PH.600.701	Introduction to Epidemiology	4
	Credits	**6**
Fourth Term		
PH.600.709	Statistical Concepts in Public Health 1	3
PH.604.771	Social & Cultural Basis for Community and Primary Health Programs	3
	Credits	**6**
Second Year		
First Term		
PH.604.701	Assessment Approaches in Humanitarian Settings	3
PH.604.715	Health Needs and Service Provision in Humanitarian Emergencies	3
	Credits	**6**

Second Term		
PH.604.721	Securing Food Assistance and Nutrition in Humanitarian Emergencies	2
PH.604.731	Management and Leadership in Humanitarian Health	2
PH.600.602 or PH.602.721	Seminars in Public Health: Advanced Topics or Organizing for Public Health: A Systems Approach	2
	Credits	**6**
Third Term		
PH.604.741	Human Rights in Humanitarian Emergencies	2
PH.604.751	Mental Health and Psychosocial Support in Low-Resource Humanitarian Emergencies	2
PH.600.612	Professional Development: Writing for Results	2
	Credits	**6**
Fourth Term		
PH.608.771	Non-Governmental Organizations and the Administration of Global Health Programs	3
PH.604.880	Humanitarian Health integrative Activity	4
	Credits	**7**
	Total Credits	**49.5**

Integrative Activity

Online Programs for Applied Learning (OPAL) Integrative Activity: Human Subjects Research and Other Activities

This culminating experience will provide Master of Applied Science students with the opportunity to synthesize lessons learned via the application of concepts and techniques. Please note that individual degree programs may have specific guidelines related to their particular Integrative Activity course including, but not limited to, the format, presentation, and composition of final course deliverable.

As you begin planning the research for your Integrative Activity within the MAS program, please review the information below and proceed accordingly. Regardless of whether IRB review is required, all OPAL students should apply ethical principles in their interactions with humans and/or their data. Please follow the BSPH Ethical Code for Student Activities that Involve Human Interactions.

1. As long as the project is limited to the context of the course, or courses if components of the Integrative Activity is spread among more than one course, there is no need for IRB approval, even if the project involves human subjects research. These types of student projects are considered learning exercises when there is no plan to disseminate beyond the class, School, or affiliated agency.
2. If you do wish to publish your project while you are a student, you will need to test to see if you are conducting Human Subjects Research (HSR) which would necessitate IRB approval. You can test your project for HSR by using the IRB worksheet or consulting the IRB guidance flowchart. You will need to go to IRB for official/final determination **before** beginning your research in order to be approved for publication. All student-initiated research projects which you intend to publish must have a preliminary review by the IRB Office to determine whether they are human subjects research requiring IRB oversight, unless: (1) the student is working with a Principal Investigator (PI) from another institution, or (2) the PI is adding you as a student investigator to an existing, IRB-approved study. If you are using human subjects data, you must obtain a determination from the BSPH IRB. If you are collecting primary new data, complete the IRB Office Determination Request Form for Primary Data Collection or if you are using existing data, complete the IRB Office Determination Request Form for Secondary Data Analysis in collaboration with your adviser and submit it to the BSPH IRB Office e-mail address jhsph.irboffice@jhu.edu. Be sure to include your adviser in your e-mail submission.
3. If you do not intend to publish the project while you are a student, IRB approval will not be required. However, if you would be interested in publishing it after graduating from JHU, you should note that *the project must meet the ethical standards of your institution and that many institutions will not allow you to present/publish human subjects research without having prior IRB approval*. For this reason, we strongly recommend that you consult your organization now if you think that you may wish to publish in the future.

PROGRAM COMPETENCIES

Please note: The Master of Applied Science (MAS) program in Humanitarian Health is not open to new applicants in AY22-23. Students previously admitted to the program should consult the prior catalogue/guidebook under which they were admitted or review the OPAL Student Resources site in CoursePlus. For additional information, please follow up directly with OPAL Office to verify program requirements; OPAL-Office@jhu.edu.

The Master of Applied Science (MAS) in Humanitarian Health curriculum is delivered entirely online and designed for working students. Courses reflect the breadth of global public health; online students are trained in epidemiology and biostatistics, form practical skills derived from workshops in professional development, and understand critical issues in the humanitarian and disaster fields.

By the end of the program, students should be able to:

1. Demonstrate knowledge of humanitarian architecture, including key organizations, international and UN systems, and sectors, including health; water, sanitation, and hygiene (WASH); shelter; nutrition; food security; and protection.
2. Demonstrate knowledge of core humanitarian and human rights principles, treaty instruments, and codes of ethical conduct in humanitarian and disaster settings.
3. Apply skills in assessment, monitoring and evaluation, and research relevant to humanitarian contexts—including qualitative, quantitative and mixed methods.
4. Apply skills in humanitarian health project design, planning and implementation, including awareness of appropriate interventions and how to contextualize them in operational settings.
5. Critically assess and synthesize information relevant to humanitarian health interventions, prioritize decisions and actions, and communicate decisions and actions effectively.
6. Demonstrate key management and leadership skills needed to function in humanitarian and disaster contexts, including developing and maintaining collaborative relationships, operating safely and effectively, adapting and coping, and maintaining professionalism and critical judgment.
7. Apply leadership and management skills, as well as program evaluation methods, to inform decision-making in humanitarian and disaster settings.

Master of Applied Science in Patient Safety and Healthcare Quality, MAS

Program Overview

The Master of Applied Science (MAS) is a fully online, part-time degree designed for working professionals, delivered through the Online Programs for Applied Learning (OPAL). Programs focus on emergent industry sectors in public health and health care that have a need for highly skilled professionals. By building on the strengths of the School, they provide unmatched opportunities for advanced training and focus on both local and global health issues. Students are prepared to create innovative solutions through multidisciplinary approaches that apply the latest scientific knowledge. All MAS programs will culminate in a final Integrative Activity. The goal of this activity is for students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates mastery of program competencies, as applied to real-world public health and health care questions. Students can complete their degree program in as little as two years, but are allowed up to four years.

The Patient Safety and Healthcare Quality master's program is an interdisciplinary degree offered by the Johns Hopkins University. It is a first of its kind collaboration between the Bloomberg School of Public Health, Johns Hopkins School of Medicine, Johns Hopkins School of Nursing and the Armstrong Institute for Patient Safety and Quality. It combines coursework from JHU's top-ranked schools with the Armstrong Institute's pioneering advances in patient safety. The program is designed to educate students in the transformative mechanisms and evidence-based protocols that reduce preventable patient harm and improve clinical outcomes.

LinkedIn Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage students to join this professional networking community.

B (https://www.linkedin.com/groups/8675147/)SPH OPAL Patient Safety and Healthcare Quality (https://www.linkedin.com/groups/8675147/)

Additional Public Health Learning Resources

The Mid-Atlantic Regional Public Health Training Center provides links to many of its online learning resources, as well as external resources, databases and public health organizations. These can be used to supplement learning on a particular topic, or provide background material. Many of these resources are available for free via their website (https://www.jhsph.edu/research/centers-and-institutes/mid-atlantic-public-health-training-center/training_events/online_training.html).

The Welch Medical Library at Johns Hopkins has many resources related to research, writing and documentation on their YouTube channel (https://www.youtube.com/c/WelchMedicalLibrary/).

The School has a number of research and practice related seminar series (https://publichealth.jhu.edu/academics/lecture-series/) that occur throughout the year and contribute to the intellectual community of the School, for students, staff, and faculty. The Bloomberg School has a website (https://publichealth.jhu.edu/practice/resources-for-practitioners/) that provides some additional resources for practitioners as well.

Practitioners can also access dozens of courses from Bloomberg School faculty on Coursera (https://www.coursera.org/jhu/). Practice-focused offerings include courses on topics such as gun violence, food systems, health equity, biostatistics, and epidemiology, among others.

If you are using human subjects data, you must obtain a

determination from the BSPH IRB. If you are collecting primary new data, complete the IRB Office Determination Request Form for Primary Data Collection or if you are using existing data, complete the IRB Office Determination Request Form for Secondary Data Analysis in collaboration with your adviser and submit it to the BSPH IRB Office e-mail address jhsph.irboffice@jhu.edu. Be sure to include your adviser in your e-mail submission.
3. If you do not intend to publish the project while you are a student, IRB approval will not be required. However, if you would be interested in publishing it after graduating from JHU, you should note that *the project must meet the ethical standards of your institution and that many institutions will not allow you to present/publish human subjects research without having prior IRB approval*. For this reason, we strongly recommend that you consult your organization now if you think you may wish to publish in the future.

PROGRAM COMPETENCIES

The Master of Applied Science in Patient Safety and Healthcare Quality is an interdisciplinary degree offered fully online. It spans several divisions across Johns Hopkins University. Faculty at the Bloomberg School of Public Health, the Johns Hopkins School of Medicine and the Johns Hopkins School of Nursing contribute to the program via course development, teaching, and advising students. The topics and concepts educate students in the transformative mechanisms and evidence-based protocols that reduce preventable patient harm and improve clinical outcomes.

By the end of the program, students should be able to:

1. Describe several frameworks and theories for assessing and improving the quality of care
2. Describe current key policy and programmatic areas in quality of care
3. Describe how to assess quality of care for a medical condition
4. Describe key elements of published quality assessment and improvement studies
5. Articulate how to develop a workable quality improvement and evaluation plan
6. Recognize the extent of problems in patient safety in medical care
7. Describe the role of various systems and factors in creating safety and causing errors and adverse events
8. Discuss problems and issues in measuring and reporting safety
9. Demonstrate knowledge of the basics of conducting an incident investigation and disclosing an adverse event
10. Design solutions to improve patient safety
11. Articulate the ethical, legal, and regulatory implications related to patient safety

Master of Applied Science in Population Health Management, MAS

Program Overview

The Master of Applied Science (MAS) is a fully online, part-time degree designed for working professionals, delivered through the Online Programs for Applied Learning (OPAL). Programs focus on emergent industry sectors in public health and health care that have a need for highly skilled professionals. By building on the strengths of the School, they provide unmatched opportunities for advanced training and focus on both local and global health issues. Students are prepared to create innovative solutions through multidisciplinary approaches that apply the latest scientific knowledge. All MAS programs will culminate in a final Integrative Activity. The goal of this activity is for students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates mastery of program competencies, as applied to real-world public health and health care questions.

Population health management has emerged as an important strategy for health care providers and payers. The MAS program in Population Health Management prepares students to examine and respond to both challenges and opportunities to improve health within and across populations. The program is structured to guide health care professionals seeking to transform systems into sustainable models of value-driven accountable care.

The interdisciplinary curriculum also examines the importance of the determinants of health, including medical care, public health, genetics, personal behaviors and lifestyle, and a broad range of social, environmental, and economic factors.

LinkedIn Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage you to join this professional networking community.

Be sure to include your adviser in your e-mail submission.
3. If you do not intend to publish the project while you are a student, IRB approval will not be required. However, if you would be interested in publishing it after graduating from JHU, you should note that the project *must meet the ethical standards of your institution and that many institutions will not allow you to present/publish human subjects research without having prior IRB approval.* For this reason, we strongly recommend that you consult your organization now if you think that you may wish to publish in the future.

PROGRAM COMPETENCIES

The Master of Applied Science in Population Health Management is an interdisciplinary program. The Master of Applied Science (MAS) in Population Health Management provides students the opportunity to learn from experts and develop advanced skills in population health leadership and management, informatics, assessment, and social and behavioral techniques to engage communities and improve health.

By the end of the program, students should be able to:

1. Apply the essentials of public health practice to identifying determinants of population health that impact health outcomes in a community and design low cost interventions;
2. Apply leadership in the formation and management of health systems organizations that consist of, and rely upon, diverse stakeholders in the organization and delivery of community-based systems of care;
3. Communicate effectively to constituencies both within and outside of the health system;
4. Articulate and apply frameworks for collecting, analyzing and using data to inform decisions, facilitate care coordination and improve health outcomes of targeted populations within and outside the health system;
5. Support state and local public health agency efforts in assessing health needs, quality of services and strategies for health services research.
6. Evaluate payment systems and risk mitigation strategies and develop new structures to function under evolving value-based payment models emphasizing low cost, high quality care;
7. Describe new methods for assessing the health needs of a population, working with stakeholders to establish meaningful targets and applying scientific frameworks for measuring and reporting progress;
8. Apply social and behavioral constructs to develop and enhance community engagement and involvement to improve health;
9. Engage in a population health practicum designed to allow the student to work on a project to integrate clinical care and public health practice around an identified community need.

Master of Applied Science in Spatial Analysis for Public Health, MAS

Program Overview

The Master of Applied Science (MAS) is a fully online, part-time degree designed for working professionals, delivered through the Online Programs for Applied Learning (OPAL). Programs focus on emergent industry sectors in public health and health care that have a need for highly skilled professionals. By building on the strengths of the School, they provide unmatched opportunities for advanced training and focus on both local and global health issues. Students are prepared to create innovative solutions through multidisciplinary approaches that apply the latest scientific knowledge. All MAS programs will culminate in a final Integrative Activity. The goal of this activity is for students to synthesize knowledge and skills obtained through coursework in a final project that demonstrates mastery of program competencies, as applied to real-world public health and health care questions. Students can complete their degree program in as little as two years, but are allowed up to four years.

The MAS program in Spatial Analysis for Public Health is an interdisciplinary program. Faculty at the Bloomberg School of Public Health contribute to the program via course development, teaching, and advising students. The topics and concepts allow graduates to effectively design and conduct public health-related spatial analysis by applying knowledge and tools learned in the program.

Students are equipped with the skills to understand, map, analyze and interpret spatial data as they relate to public health. The program will provide learners with skill-oriented training in spatial analysis taught through a comprehensive spatial science paradigm to include courses in spatial data, geographic information systems and spatial statistics. The program also offers training in epidemiology and biostatistics, courses that reflect the breadth and depth of public health and practical skills derived from workshops in professional development.

LinkedIn Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage students to join this professional networking community.

B (https://www.linkedin.com/groups/8676099/)SPH OPAL Spatial Analysis for Public Health (https://www.linkedin.com/groups/8676099/)

Additional Public Health Learning Resources

The Mid-Atlantic Regional Public Health Training Center provides links to many of its online learning resources, as well as external resources, databases and public health organizations. These can be used to supplement learning on a particular topic, or provide background material. Many of these resources are available for free via their website (https://www.jhsph.edu/research/centers-and-institutes/mid-atlantic-public-health-training-center/training_events/online_training.html).

The Welch Medical Library at Johns Hopkins has many resources related to research, writing and documentation on their YouTube channel (https://www.youtube.com/c/WelchMedicalLibrary/).

The School has a number of research and practice related seminar series (https://publichealth.jhu.edu/academics/lecture-series/) that occur throughout the year and contribute to the intellectual community of the School, for students, staff, and faculty. The Bloomberg School has a website (https://publichealth.jhu.edu/practice/resources-for-practitioners/) that provides some additional resources for practitioners as well.

Practitioners can also access dozens of courses from Bloomberg School faculty on Coursera (https://www.coursera.org/jhu/). Practice-focused offerings include courses on topics such as gun violence, food systems, health equity, biostatistics, and epidemiology, among others.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

The Master of Applied Science in Spatial Analysis for Public Health is an interdisciplinary program. Faculty at the Bloomberg School of Public Health contribute to the program via course development, teaching, and advising students. The topics and concepts allow graduates to effectively design and conduct public health-related spatial analysis by applying knowledge and tools learned in the program.

Students will complete 50.5 credits to graduate. The program is designed to be completed in 8 academic terms - two academic years (Sept-May). In addition to the coursework, students must complete an Integrative Activity, where newly acquired knowledge and skills are used to create an applicable activity (e.g., design a study, plot the map and analyze the data) – with a final paper that describes the methodology used and the final assessment. Students can complete their degree program in as little as two years, but are allowed up to four years.

Satisfactory Academic Progress (SAP)

The Bloomberg School of Public Health requires students to maintain satisfactory academic progress for the duration of the degree program. For the MAS program, satisfactory academic progress is defined as follows:

Maintaining a minimum cumulative grade point average of 2.75 and grades of C or better in all required courses. Grades of P are sufficient in courses that are graded as Pass/Fail. Students falling below this minimum should consult with the OPAL Program Office and their Academic Adviser in order to develop a course plan to allow them to raise the GPA above 2.75 as soon as possible, in order to return to good academic standing.

Failure to maintain satisfactory academic progress as defined by any of the criteria above may be grounds for dismissal from the program, and financial aid status will be affected. Full details of the School's Satisfactory Academic Policy can be found here (https://

publichealth.jhu.edu/offices-and-services/office-of-student-affairs/financial-aid/federal-aid-policies/).

Program Plan of Study

Students should follow the plan outlined below if they wish to complete the MAS program in two years. This plan will also allow students to maintain minimum credits needed for financial aid eligibility each term, and to follow any prerequisite sequencing. Courses can be taken at a slower pace if needed, so long as course prerequisites are met.

Course	Title	Credits
First Year		
First Term		
PH.550.860	Academic & Research Ethics at BSPH	
PH.600.601	Seminars in Public Health	2
PH.601.731	Spatial Analysis for Public Health	4
PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health May be taken during any term offered	0.5
	Credits	**6.5**
Second Term		
PH.601.732	Spatial Data Technologies for Mapping	4
PH.600.602	Seminars in Public Health: Advanced Topics	2
	Credits	**6**
Third Term		
PH.600.701	Introduction to Epidemiology	4
PH.600.612	Professional Development: Writing for Results	2
	Credits	**6**
Fourth Term		
PH.600.711	Public Health Statistics I	4
PH.601.931	Spatial Analysis Lab 1	2
	Credits	**6**
Second Year		
First Term		
PH.600.712	Public Health Statistics II	4
PH.600.611	Professional Development Workshops: Effective online Searching	2
	Credits	**6**
Second Term		
PH.600.702	Intermediate Epidemiology	4
PH.601.932	Spatial Analysis Lab 2	2
	Credits	**6**
Third Term		
PH.601.733	Applied Spatial Statistics	4
PH.601.805	Spatial Analysis Journal Club	2
	Credits	**6**
Fourth Term		
PH.601.734	Spatial Applications	4
PH.601.880	Spatial Analysis integrative Activity	4
	Credits	**8**
	Total Credits	**50.5**

Integrative Activity

Online Programs for Applied Learning (OPAL) Integrative Activity: Human Subjects Research and Other Activities

This culminating experience will provide Master of Applied Science students with the opportunity to synthesize lessons learned via the application of concepts and techniques. Please note that individual degree programs may have specific guidelines related to their particular Integrative Activity course including, but not limited to the format, presentation, and composition of final course deliverable.

As you begin planning the research for your Integrative Activity within the MAS program, please review the information below and proceed accordingly. Regardless of whether IRB review is required, all OPAL students should apply ethical principles in their interactions with humans and/or their data. Please follow the BSPH Ethical Code for Student Activities that Involve Human Interactions.

1. As long as the project is limited to the context of the course, or courses if components of the Integrative Activity is spread among more than one course, there is no need for IRB approval, even if the project involves human subjects research. These types of student projects are considered learning exercises when there is no plan to disseminate beyond the class, School, or affiliated agency.
2. If you do wish to publish your project while you are a student, you will need to test to see if you are conducting Human Subjects Research (HSR) which would necessitate IRB approval. You can test your project for HSR by using the IRB worksheet or consulting the IRB guidance flowchart. You will need to go to IRB for official/final determination **before** beginning your research in order to be approved for publication. All student-initiated research projects which you intend to publish must have a preliminary review by the IRB Office to determine whether they are human subjects research requiring IRB oversight, unless: (1) the student is working with a Principal Investigator (PI) from another institution, or (2) the PI is adding you as a student investigator to an existing, IRB-approved study. If you are using human subjects data, you must obtain a determination from the BSPH IRB. If you are collecting primary new data, complete the IRB Office Determination Request Form for Primary Data Collection, or if you are using existing data, complete the IRB Office Determination Request Form for Secondary Data Analysis in collaboration with your adviser and submit it to the BSPH IRB Office e-mail address jhsph.irboffice@jhu.edu. Be sure to include your adviser in your e-mail submission.
3. If you do not intend to publish the project while you are a student, IRB approval will not be required. However, if you would be interested in publishing it after graduating from JHU, you should note that the project *must meet the ethical standards of your institution and that many institutions will not allow you to present/publish human subjects research without having prior IRB approval.* For this reason, we strongly recommend that you consult your organization now if you think that you may wish to publish in the future.

PROGRAM COMPETENCIES

The Master of Applied Science in Spatial Analysis for Public Health is an interdisciplinary program. The goal of the MAS in Spatial Analysis for Public Health program is to prepare students from diverse individual and professional backgrounds for positions that utilize spatial data to address public health problems.

By the end of the program, students should be able to:

1. Interpret and critique epidemiologic studies addressing public health problems
2. Apply measures of morbidity and mortality to the evaluation and comparison of the health of populations
3. Synthesize how geography affects public health
4. Obtain and transfer information from spatial data technologies into a database appropriate for mapping
5. Utilize a geographic information system to map and spatially integrate public health related databases
6. Analyze and interpret maps using tools from the field of spatial statistics to describe and interpret distributions of health outcomes in a population
7. Design and implement a spatial analysis protocol for addressing a public health problem

Residency Programs

About

The Bloomberg School offers two residency programs for physicians: a General Preventive Medicine Residency Program and an Occupational and Environmental Medicine Residency Program. Each two-year program is fully accredited by the Accreditation Council for Graduate Medical Education (ACGME). Although the programs are distinct entities, they share a similar structure; the first year is primarily an academic year in which coursework toward the MPH degree is completed. The second year is a practicum year during which residents fulfill rotation requirements in various settings including: public health departments, clinics, local and federal government agencies and sites, corporate sites, and a union site. Completion of either program leads to eligibility for certification by the American Board of Preventive Medicine in either General Preventive Medicine and Public Health or Occupational and Environmental Medicine. These programs appeal to physicians who are interested in a medical career that combines medicine and public health. Completion of either program opens up a world of possibilities and opportunities; many of our alumni are leaders who go on to make an impact in their professions across the country and globe.

Residency Programs

Graduate Medical Education Committee (GMEC) Policies

Johns Hopkins University Bloomberg School of Public Health

POLICIES AND PROCEDURES FOR GRADUATE MEDICAL EDUCATION - AY 22-23

Policy on Eligibility and Selection of Residents

1. To be eligible for appointment to a Johns Hopkins Bloomberg School of Public Health residency program, all applicants must have completed a **minimum** of one clinical year of training in an Accreditation Council for Graduate Medical Education (ACGME) approved clinical residency program.
2. Therefore, residents **must** have met one of the following criteria:
   a. Graduate of medical school in the United States and Canada accredited by either the Liaison Committee on Medical Education (LCME) or the American Osteopathic Association (AOA), **or**
   b. Graduate of medical school outside the United States and Canada who either has a currently valid certificate from the Education Commission for Foreign Medical Graduates or have a full and unrestricted license to practice medicine in a US licensing jurisdiction, **or**
   c. Graduate of medical school outside the United States who has completed a Fifth Pathway program provided by an LCME-accredited medical school.
3. General Preventive Medicine Residency offers the two joint recruitment opportunities. With the exception of these two positions, the Johns Hopkins University Bloomberg School of Public Health does not offer a first postgraduate year of training and does not otherwise participate in the National Residency Matching Program (NRMP).
   a. One transitional internship year position jointly with Mary Imogene Bassett Hospital in Cooperstown, NY, for which fourth-year medical students or other appropriately qualified applicants apply through the NRMP.
   b. One combined family medicine-preventive medicine program with MedStar Franklin Square Medical Center in Baltimore, MD, for which fourth-year medical students or other appropriately qualified applicant apply through the NRMP.
4. Each School of Public Health residency program will select from among its eligible applicants on the basis of their preparedness and ability to benefit from the program to which they are appointed. The criteria for selection include:
   a. aptitude
   b. academic credentials
   c. personal characteristics
   d. ability to communicate
   e. interest in and commitment to chosen field
   f. prior work, research, and other experiences
   g. potential for significant contribution to chosen field
5. Applicants who have not earned an MPH or an equivalent degree that is deemed acceptable by the prospective residency program must also be accepted to the School MPH program. Failure to gain acceptant to the MPH program disqualifies applicants from further consideration.
6. Each Hopkins program must have a formal procedure to review applicants that includes a review of a formal application, transcripts, essays, and letters of recommendations followed by, as appropriate, a personal or telephone interview, and review by an admissions committee. These procedures are established and implemented by the residencies, with oversight by the GMEC.
7. Each residency program will present its list of successful residency candidates to the Graduate Medical Education Committee.

Policy on Evaluation of Resident

1. Each resident will have a confidential folder held in the residency program office and/or an electronic folder housed in a secure BSPH server, that will contain all resident's formal evaluations. This folder will be made available to the resident if requested.
2. Each resident will meet formally with the program director or deputy program director a minimum of two times each year. Written documentation of that evaluation will be retained in the resident's confidential folder.
3. Each residency program has a chief resident, whose duties include being available to residents to informally advise and mentor. The

chief resident will discuss any potential concerns with the program director.

4. The program director at any time can discuss a resident's progress with 1) other residency faculty, 2) the residency advisory/program evaluation committee, or 3) the chair of the Graduate Medical Education Committee.
5. The program director will serve as the resident's faculty adviser and will mentor the resident through the residency program. The director will be available to meet with the resident, at a minimum, at the beginning of each of the five terms.
6. At the beginning of each year of training, the residency program will guide the resident through an exercise to identify their professional goals, decide on academic coursework and appropriate rotations, and write a paper summarizing and elaborating on their goals. This document will include an assessment of a resident's knowledge, skills, and competencies. It will serve as the educational plan for that year.
7. The program director will receive a copy of each resident's academic transcript each term and will review the transcript to assure satisfactory performance. A resident may not be on academic probation for more than one term to remain a resident in good standing.
8. The residency will provide guidance to the resident in developing appropriate practicum rotations.
9. Each practicum rotation preceptor will complete a formal written evaluation of a resident's performance at the completion of the rotation. This evaluation will become part of the resident's permanent file.

Policy on Resident Evaluation of Program (Including MPH Degree)

1. The resident will be required to formally evaluate all aspects of the MPH program, including its faculty.
2. The resident will be required to formally evaluate all practicum rotations that they have completed.
3. Each year, the resident will be required to evaluate all aspects of the residency including its faculty.

Policy on Promotion and Credentialing

1. The names of all residents who successfully complete the first year residency requirements will be submitted to the Graduate Medical Education Committee. After review, the Graduate Medical Education Committee will recommend promotion. All residents will be notified of their status.
2. At the end of the second year, the names of residents who have successfully completed the two-year program will be presented to the Graduate Medical Education Committee for credentialing. After review, the dean of the School will be presented with the names of residents who have successfully completed the requirements of each residency.
3. The residents who have been approved for completion of the residency will receive a certificate stating that they have met the requirements of their residency program. The certificate will be signed by the program director and by the dean of the School.
4. Successful completion of the requirements of the residency fulfils the American Board of Preventive Medicine residency requirements.

Policy on Financial Remuneration and Benefits

The Johns Hopkins Bloomberg School of Public Health provides tuition support, stipend support, medical malpractice insurance, and health, dental, life, and disability insurance consistent with ACGME requirements.

Policy on Professional Liability Insurance

Johns Hopkins Bloomberg School of Public Health residents are provided with liability coverage for the duration of training, and such coverage will provide legal defense and protection against awards from claims reported or filed after the completion of graduate medical education if the alleged acts or omissions of the residents are within the scope of the education program.

The Johns Hopkins University and Johns Hopkins Hospital will provide coverage for liability exposure for all residents for educational activities that they perform within The Johns Hopkins Medical Institutions or external rotations that are within the scope of their training program. The coverage includes legal defense and payment of loss to the extent of maximum judgment within insurance policy limits and also requires participation in the Hospital's Risk Management Program.

Coverage is provided through MCIC Vermont, Inc. It is a claims made policy and provides the insured with "tail coverage" for claims that concern events occurring while the resident was at Hopkins but which are reported after the resident has left residency training. Professional liability coverage is in the amount of $1,000,000 per occurrence; and $3,000,000 annual aggregate.

Insofar as extracurricular employment is not an extension of graduate medical education at Hopkins, medical professional liability insurance coverage is not provided to any trainee for such activities.

Policy on Vacation

The vacation policy is 3 weeks per year for all residents and must be used within the academic year (July 1 – June 30). Unused vacation time for residents does not carry-over beyond the end of the academic year and will not be paid out as a supplement if it is not taken.

Each residency program shall set its own vacation schedule. This vacation schedule shall be set so that a resident is able to complete all of the residency requirements for each of the years. Vacation shall be scheduled to avoid interference with coursework. Each resident must satisfy all attendance requirements of the precepting agency while on rotations.

Policy on Sick Leave

All residents at BSPH are entitled to 15 days (three weeks) paid sick leave per year. Days may be used for a resident's own sickness or to care for a family member. Unused days may not be carried over into the following 12-month period and are not payable upon departure.

When a resident takes sick leave, they should notify their Program Director and keep them as up to date as feasible. At their discretion, the Program Director may require the resident to submit verification of the need for sick leave from their healthcare provider to the University Health Service Center for review. Any documents containing a resident's medical information must be kept separate from their academic file. Extended absences (more than two weeks) must be reported by the resident and the Program Director to the Program Manager as quickly as possible. If the illness requires an extended absence, the resident may apply for a leave of absence.

New Child Accommodations Policy

(Replaces Former Policy on Parental, Maternity, and Adoption Leave)

For the purposes of this Policy only, "postdoctoral trainees" shall apply to General Preventive Medicine and Occupational and Environmental

Residency trainees at the Johns Hopkins Bloomberg School of Public Health.

Full-time graduate students and postdoctoral trainees may request from their school a “new child accommodation” for 8 weeks. A new child accommodation is designed to make it possible to maintain the parent’s existing status, and to facilitate their return to full participation in coursework, research, teaching, and clinical training in a seamless manner.

Individuals who have teaching or research duties should work collaboratively to support the program’s responsibility in identifying a substitute for any duties or recurring responsibilities for the duration of the accommodation period. Those requesting an accommodation will not be expected to assume sole responsibility for finding their own temporary replacement, but must work with their program and supervisor(s) to delineate the responsibilities to be addressed.

The Policy applies equally to birth and non-birth parents of any gender. Accommodations begin on the day the student or trainee indicates they are no longer fully engaged in their professional and academic activities due to a new child and, to the extent possible, should be requested in advance of the beginning of the accommodation. Retroactive requests (more than one week after the new child accommodation has begun) will not automatically be granted but handled on a case-by-case basis. An accommodation is to be taken continuously and not intermittently and is not to continue beyond the end date of any appointment.

Full-time postdoctoral trainees: Individuals approved for a new child accommodation are guaranteed to retain the rights and privileges as employed postdoctoral trainees. Financial support will remain unchanged during the accommodation period, contingent on the policies of the funding entity supporting the trainee. This accommodation assures that the parent will not lose any financial support during the accommodation period; it does not provide financial support or additional benefits if none was already in place. No appointment period is extended by this accommodation, unless there is an explicit extension of the appointment agreed upon by the appropriate school official.

Postdoctoral trainees in accredited training programs (e.g. Bloomberg School of Public Health residencies) may be required by certifying boards to make up time spent utilizing a new child accommodation in order to sit for the board exam. If additional months of training are necessary to complete program requirements as set by the applicable certifying board, an extended appointment period with salary and benefits will be granted.

Full-time graduate students: Residents who are MPH students approved for a new child accommodation are guaranteed to retain the same rights and privileges as all other students, including remaining registered and matriculated in a degree program. If the student is receiving tuition, stipend support, and benefits from a training grant, fellowship, or scholarship, these will remain unchanged during the accommodation period contingent on the policies of the entity providing funding. Fully-funded students will not lose any financial support during the approved accommodation period, but the accommodation will not provide financial support or additional benefits if none were already in place. Further, students receiving less than full-funding support or who receive wages for other types of employment or federal work-study are not guaranteed such support during the accommodation period. Students should consult the Office of Student Financial Services for questions regarding financial support during accommodation periods.

During this time and to the extent the student can remain enrolled, the student is expected to work with their adviser, program administrator, and department to reschedule course assignments, examinations, and other academic requirements. To the extent that the demands of caring for a new child allow, students are expected to keep up with courses in which they are registered and participate in seminars. Faculty are expected to work with the student to make arrangements for submitting work for completion of requirements, including assigning ‘incomplete’ grades consistent with school policies. Students will be granted a one-term extension of university and departmental requirements and academic milestones. Students in a primarily coursework-only program (e.g., master’s students) or programs with specific course requirements that may only be offered during specific periods of time may have to revise their degree completion timeline based on when courses are offered as part of the normal academic schedule.

For full details, procedures to request new child accommodations, and resources/contacts, please visit the website (https://www.jhu.edu/assets/uploads/2017/06/newchildaccommgradandpostdoc.pdf).

Policy on Medical Leave of Absence

A trainee may request a leave of absence for medical reasons. Leave of absence for medical reasons will be granted for a maximum of 12 consecutive weeks with the approval of the program director and the chair of the Graduate Medical Education Committee (GMEC). Any request for medical leave in excess of 12 weeks will be reviewed by the program director and the GMEC chair and a decision made based upon the circumstances.

Only the treating physician can place a resident on medical leave of greater than two consecutive weeks. Such leave also requires the approval of the program director. A letter stating the nature of the illness and the reason for the period of disability by the attending physician may be required.

Any medical leave that is shorter than two consecutive weeks will be negotiated between the resident and the preceptor. The program director will be made aware of such periods of short-term disability.

It is the responsibility of the program director to keep accurate records of training status so as to have adequate information for board eligibility. The program director will determine whether or not the trainee will be required to spend additional time in training to compensate for the leave period and be eligible for certification for a full training year.

Special Provisions for Pregnancy: For uncomplicated pregnancies and deliveries, it is anticipated that a resident will take an eight week leave as stated in the New Child Accommodations policy. Complicated pregnancies and deliveries will be handled through medical leave.

Effects of Leave of Absence on Training: Reinstatement in the training program is dependent upon the availability of training positions. Where feasible, program directors are encouraged to reinstate trainees in good standing in the next available training position.

Any leave of absence that does not allow a resident to remain a full-time student and to complete all course work and rotations by program and School deadlines may necessitate the extension of training.

It is the responsibility of the program director to keep accurate records of training status so as to have adequate information for board eligibility. The School of Public Health Registrar may need to be informed so that certificates may be accurately prepared. The program director will determine whether or not the trainee will be required to spend additional time in training to compensate for the leave period and be eligible for certification for a full training year.

Remuneration: Remuneration for all leaves will be decided by each program.

Policy on Non-Medical Leave of Absence

A leave of absence for non-medical reasons must be negotiated with the program director and would require an interruption in appointment, without pay. Except in unusual circumstances, a leave of absence may not extend beyond the trainee's period of appointment. During the leave of absence, benefits may be purchased through the School of Public Health Business Office and are the responsibility of the trainee.

Effects of Leave of Absence on Training: Reinstatement in the training program is dependent upon the availability of training positions. Where feasible, program directors are encouraged to reinstate trainees in good standing in the next available training position.

Any leave of absence that does not allow a resident to remain a full-time student and to complete all course work and rotations by program and School deadlines may necessitate the extension of training.

It is the responsibility of the program director to keep accurate records of training status so as to have adequate information for board eligibility. The program director will determine whether or not the trainee will be required to spend additional time in training to compensate for the leave period and be eligible for certification for a full training year.

Remuneration: Remuneration for all leaves will be decided by each program.

Policy on Non-Renewal of Appointment

In instances where a resident's agreement is not going to be renewed, the residency program will provide the resident with a written notice of intent not to renew the resident's agreement no later than four months prior to the end of the resident's current agreement. If the primary reason(s) for the non-renewal occurs within the four months prior to the end of the agreement, the residency program will provide the resident with as much written notice of the intent not to renew as the circumstances reasonably will allow, prior to the end of the agreement.

The Resident/Clinical Fellow may appeal an adverse decision to the Dean of the School of Public Health by notifying them in writing within 7 days of the decision. The Dean may designate another senior official at the school, who has not previously been involved in the case, to hear the appeal.

The review will be limited to review of whether the procedures set forth in this policy were followed and their decision will be final.

Policy on Confidentiality and Conflict of Interest

Responsibility of Residents: During the day-to-day activities of practicum rotations in the residency, residents are entrusted with access to information of several types that is of a sensitive nature. This includes, but is not limited to:

- medical records
- information on legal proceedings
- information on regulatory actions
- proprietary product or trade information

With this trust comes the responsibility to use the information, whether read in paper files, verbally communicated, or in computer databases, in a professional manner and only for the purposes for which the information was intended at the rotation at which it was generated. Always discuss the level of confidentiality of any information or work assignment with the rotation preceptor or residency faculty before sharing it beyond the group where it was originally generated. It is the resident's responsibility to safeguard work assignments and information by keeping the materials, for example, in locked file cabinets or keeping computer files on diskette or otherwise limiting access. Please be aware that breaches of confidentiality may motivate some sites to pursue disciplinary or legal actions.

In addition to concerns about confidential information, residents may also find themselves in situations that involve a conflict of interest. For example, residents may be aware of regulatory or legal proceedings that involve a rotation site, or have knowledge that could affect a regulatory or legal proceeding. Residents who find themselves in such a position should discuss the conflict of interest with their program director, who can provide guidance for addressing the situation.

Responsibility of Rotation Preceptors, Faculty, and Staff: Preceptors, faculty, and staff at residency rotations have an important role in the education of residents. During the course of the residency, residents often learn about or work directly with information at one site that may be of interest to personnel at a second site. Rotation preceptors, faculty, and staff should respect the obligation of the resident to hold certain such information as confidential and should not ask residents to provide information about a second site that was considered to be confidential at that site. In this situation, residents should inform the rotation preceptor, faculty, or staff that the information being requested is confidential and that it cannot be shared.

Policy on Working Conditions

The School will assure that the resident is provided with an environment conducive to an intensive learning experience. The School will provide appropriate faculty and staff to guide all aspects of coursework. The School will have ancillary support staff to allow residents to fulfill all their learning objectives. The School will provide adequate library and computer facilities. The residencies will provide residents with appropriate support services to include resource rooms, phones, and copiers.

The residency will assure that residents have appropriate time with preceptors and ancillary staff. The residency will assure that the residents are provided with workspace and appropriate computers, phones, and copiers. The residency will ensure that appropriate resources are available to promote rotation learning objectives.

Policy on Resident Duty Hours

The Johns Hopkins School of Public Health Preventive Medicine Residency Programs affirm the ACGME Principles regarding duty hours. Both programs are committed to promoting patient safety and resident well-being and to providing a supportive educational environment.

Rotations in both programs generally keep weekday business hours. It is expected that there will be preparation activities (reading and writing) beyond this. Some rotations may require night or weekend coverage. Each residency program that has rotations requiring night or weekend call will set its own policy with regard to the maximum hours per week allowable and the maximum hours consecutively worked allowable. These policies will set the maximum allowable hours based on the number of hours that are required to maintain a high quality of patient care and that will enhance the residency training experience while assuring compliance with ACGME requirements on duty hours.

In setting these policies, each program will adhere to the following ACGME guidelines:

DUTY HOURS

1. Duty hours are defined as all clinical and academic activities related to the residency program, i.e. patient care (both inpatient and outpatient), administrative duties related to patient care, the provision for transfer of patient care, time spent in-house during call activities, and scheduled academic activities such as conferences. Duty hours do not include reading and preparation time spent away from the duty site. Time spent by residents in internal and external moonlighting (as defined by ACGME) must be counted toward the 80-hour maximum limit.
2. Duty hours must be limited to 80 hours per week, averaged over a four-week period, inclusive of all in-house call activities.
3. Residents must be provided with 1 day in 7 free from all educational and clinical responsibilities, averaged over a 4-week period, inclusive of call. One day is defined as one continuous 24-hour period free from all clinical, educational, and administrative activities.
4. Adequate time for rest and personal activities must be provided. This should consist of a 10-hour time period provided between all daily duty periods and after in-house call.

DUTY HOUR EXCEPTIONS

A Review Committee may grant exceptions for up to 10% or a maximum of 88 hours to individual programs based on a sound educational rationale.

1. In preparing a request for an exception the program director must follow the duty hour exception policy from the ACGME Manual on Policies and Procedures.
2. Prior to submitting the request to the Review Committee, the program director must obtain approval of the institution's GMEC and DIO.

ON-CALL ACTIVITIES

The objective of on-call activities is to provide residents with continuity of patient care experiences throughout a 24-hour period. In-house call is defined as those duty hours beyond the normal workday when residents are required to be immediately available in the assigned institution.

1. In-house call must occur no more frequently than every third night, averaged over a four-week period.
2. Continuous on-site duty, including in-house call, must not exceed 24 consecutive hours. Residents may remain on duty for up to 6 additional hours to participate in didactic activities, transfer care of patients, conduct outpatient clinics, and maintain continuity of medical and surgical care as defined in Specialty and Subspecialty Program Requirements.
3. No new patients, as defined in Specialty and Subspecialty Program Requirements, may be accepted after 24 hours of continuous duty.
4. At-home call (pager call) is defined as call taken from outside the assigned institution.
    a. The frequency of at-home call is not subject to the every third night limitation. However, at-home call must not be so frequent as to preclude rest and reasonable personal time for each resident. Residents taking at-home call must be provided with 1 day in 7 completely free from all educational and clinical responsibilities, averaged over a 4-week period.
    b. When residents are called into the hospital from home, the hours residents spend in-house are counted toward the 80-hour limit.
    c. The program director and the faculty must monitor the demands of at-home call in their programs and make scheduling adjustments as necessary to mitigate excessive service demands and/or fatigue. Faculty and residents must be educated to recognize the signs of fatigue and sleep deprivation.

Policy on Extracurricular Activities

The Johns Hopkins Bloomberg School of Public Health ("School") considers graduate medical education to be a full-time educational experience. Consequently, residents should not be diverted from their primary educational responsibilities, and in no instances are residents required to engage in extracurricular patient care activities ("moonlighting"). The Accreditation Council for Graduate Medical Education ("ACGME") has established rules governing the performance of moonlighting activities by residents enrolled in ACGME approved programs, as has the School.

It is understood that occasions may arise in which residents choose to moonlight. These activities must in no way prevent residents from carrying out the full scope of their training responsibilities. Time spent by residents in internal and external moonlighting (as defined by ACGME) must be counted toward the 80-hour maximum limit. Program director will monitor and approve moonlighting hours. If a resident's moonlighting interferes with their Hopkins educational activities the permission for such moonlighting may be withdrawn.

Residents who wish to moonlight must obtain prospective written permission to do so from the program director. The program director will send notification to the DIO about all such approvals. This request must include the proposed moonlighting activity, location, approximate number of hours per week, averaged number of hours per week in training program in last month, location's intent to bill payors and will be made part of the resident's file, and the resident will be monitored for the effect of these activities upon the resident's performance. Adverse effects of moonlighting may lead to withdrawal of permission.

No resident may moonlight in the specialty that is the subject of their training program. No resident may moonlight without having first obtained an unrestricted medical license and, where applicable, controlled dangerous substance registrations in the applicable jurisdiction(s). No resident may moonlight without having first been appropriately credentialed by the applicable facility. Residents who intend to engage in and bill for moonlighting activities (directly or through the proposed employer/contractor) must comply with policies on professional fee billings that apply in the school of medicine, if applicable.

It should be noted that some School of Public Health residents may also be covered by the School of Medicine's extracurricular employment policy. Such residents should be familiar with its policy in this regard.

Residents and clinical fellows performing approved moonlighting activities at any of the Johns Hopkins Medical Institutions will be covered under Johns Hopkins Professional Liability Insurance. However, residents and clinical fellows performing approved moonlighting activities at any hospital/facility other than a Johns Hopkins Medical Institution will not be covered under Johns Hopkins Professional Liability Insurance. A resident or clinical fellow who intends to engage in moonlighting activities at hospitals/facilities other than the Johns Hopkins Medical Institutions must ensure that they will be covered by professional liability insurance at the location at which the moonlighting activities take place. ***Note:* Even though moonlighting hours at a participating institution count toward compliance with the ACGME work hours guidelines, the resident/clinical fellow is not covered by Johns Hopkins Professional Liability Insurance for moonlighting activities at a participating**

institution unless that institution is one of the Johns Hopkins Medical Institutions, as define above.

Policy on Annual Report of Program Director and Residency Advisory/ Program Evaluation Committee

The program director and the chair of the Residency Advisory/Program Evaluation Committee (RAC/PEC) will provide to the Graduate Medical Education Committee (GMEC) an annual written report of the residency. The report will include a summary of resident progress, any changes in the program, and a summary of the most recent institutional review of the program. If there are any deficiencies noted in any aspect of the residency quality, or recommendations for the GMEC based on the annual report, a written plan for correction should be submitted to the GMEC.

Policy on Continued Support for Residents

In the event that the Johns Hopkins Bloomberg School of Public Health ceases to exist, or that a residency program is discontinued or reduced in size, the Graduate Medical Education Committee (GMEC), the Designated Institutional Official (DIO) and the residents enrolled in the program at the time of the event will be notified immediately. Residents will be supported until the completion of their residency, or will be assisted in enrolling in an ACGME-accredited program in which they can continue their education.

Policy on Disaster Planning for the Residency Training Programs

In the event of a widespread emergency affecting operations of some or all of the Johns Hopkins Institutions, the Institutions have adopted emergency plans to guide the institutional response to the specific situation, and the extent to which a particular situation constitutes an emergency will be determined with reference to those Institutional policies and plans. This policy is intended to augment existing plans that are applicable to the institutions affected, focusing specifically on Resident trainees in graduate medical education programs sponsored by The Johns Hopkins Bloomberg School of Public Health. The Institution is guided by the following principles:

1. The University is committed to ensuring a safe, organized, and effective environment for training of its residents;
2. The University recognizes the importance of physicians at all levels of training in the provision of emergency care in the case of a disaster of any kind;
3. Decisions regarding initial and continuing deployment of residents in the provision of service during an emergency will be made taking into consideration of the importance of providing emergency service; the continuing educational needs of the trainees; and the health and safety of the trainees and their families.
4. By the end of the first week following the occurrence of the emergency situation, if the emergency is ongoing:
    a. An assessment will be made of:
        i. the continued need for provision of service by trainees; and
        ii. the likelihood that training can continue on site.
    b. The assessment will be made by:
        i. DIO and the Senior Associate Dean for Academic Affairs
        ii. Program Directors
        iii. In consultation with the University's Vice Provost and Chief Risk Officer
5. By the end of the second week following the occurrence of the emergency situation, if the emergency is ongoing:
    a. The DIO will request an assessment by individual program directors and department chairs regarding their ability to continue to provide training;
    b. The DIO will request suggestions for alternative training sites from program directors who feel they will be unable to continue to offer training at Johns Hopkins;
    c. The DIO will contact the ACGME to provide a status report, and
    d. Those involved in decision making in this period are: DIO, the Senior Associate Dean for Academic Affairs, and Program Directors
    e. Trainees who wish to take advantage of the Leave of Absence Policy or to be released from their Contract will be accommodated.
6. During the third and fourth weeks following the occurrence of the emergency situation, if the emergency is ongoing:
    a. Program directors at alternative training sites will be contacted to determine feasibility of transfers as appropriate;
    b. Transfers will be coordinated with ACGME;
    c. Johns Hopkins program directors will have the lead responsibility for contacting other program directors and notifying the DIO the Senior Associate Dean for Academic Affairs of the transfers;
    d. The DIO will be responsible for coordinating the transfers with ACGME.
7. When the emergency situation is ended:
    a. Plans will be made with the participating institutions to which residents have been transferred for them to resume training at Johns Hopkins;
    b. Appropriate credit for training will be coordinated with ACGME and the applicable Residency Review Committees; and
    c. Decisions as to other matters related to the impact of the emergency on training will be made.

Policy on Physician Impairment

1. **Purpose**
   Impairment of performance by resident physicians can put patients at risk. Impairment shall be managed as a medical/behavioral illness. Implicit in this concept is the existence of criteria permitting diagnosis, opportunity for treatment, and with successful progress toward recovery, the possibility of returning to training in an appropriate capacity. Impairment may result from depression or other behavioral problems, from physical impairment, from medical illness, and from substance abuse and consequent chemical dependency. The goals of this policy are to:
    a. prevent or minimize the occurrence of impairment, including substance abuse, among residents in graduate medical education programs sponsored by The Johns Hopkins Bloomberg School of Public Health,
    b. protect patients from risks associated with care given by impaired resident physicians, and
    c. compassionately confront problems of impairment to effect diagnosis, relief from service responsibilities if necessary, treatment as indicated, and appropriate rehabilitation.
2. **Identification of Impairment**
   Listed below are signs and symptoms of impairment. Isolated instances of any of these may not impair ability to perform adequately, but if they are noted on a continued basis or if multiple signs are observed, reporting may be indicated. The signs and symptoms may include:
    a. Physical signs such as fatigue, deterioration in personal hygiene and appearance, multiple physical complaints, accidents, and eating disorders.
    b. Family stability disturbances.

c. Social changes such as withdrawal from outside activities, isolation from peers, inappropriate behavior, undependability and unpredictability, aggressive behavior and argumentativeness.
d. Professional behavior problems such as unexplained absences, tardiness, decreasing quality or interest in work, inappropriate orders, behavioral changes, altered interaction with other staff and inadequate professional performance.
e. Behavioral signs such as mood changes, depression, slowness, lapses of attention, chronic exhaustion, risk taking behavior, excessive cheerfulness, and flat affect.
f. Drug use indicators such as excessive agitation or edginess, dilated or pinpoint pupils, self-medication with psychotropic drugs, stereotypical behavior, alcohol on breath at work, uncontrolled drinking at social events, blackouts, and binge drinking.

3. **Scope**
   This policy applies to all residents participating in graduate medical education programs sponsored by The Johns Hopkins Bloomberg School of Public Health.
4. **Responsibility**
   It is the responsibility of the program directors and faculty to communicate this policy to their residents and to enforce its provisions. Faculty and residents who suspect that a resident is suffering impairment shall follow this policy and its procedures.
5. **Procedure**
   a. **Education:** To minimize the incidence of impairment, a program has been developed to educate residents about physician impairment, including problems of substance abuse, its incidence and nature and risks to the physician and patients. Education includes knowledge concerning signs and symptoms of impairment. All residents shall be informed at orientation about physician impairment, this policy, and the resources available.
   The University's Policy on Alcohol and Drug Abuse and Drug-Free Environment (https://studentaffairs.jhu.edu/policies-guidelines/university-student-policies/) may be found online.
   All residents shall receive information regarding the counseling and referral resources available at the hospital at which the training program is based. At the Johns Hopkins Medical Institutions, this consists principally of the Faculty and Staff Assistance Program (FASAP) and the Professional Assistance Committee (PAC). At the Johns Hopkins Bayview Medical Center, services are provided through the Community Psychiatry Program.
   b. **Counseling and Management:**
      i. The following services are available to residents and their families:
         1. Assessment and identification of personal, family, or work- related problems
         2. Brief counseling and crisis intervention
         3. Follow-up appointments when indicated
         4. Referral to resources within Johns Hopkins and/or the community
      ii. The following services are available to administrators, managers, and supervisors:
         1. Managerial consultation and coaching
         2. Risk assessments
         3. Educational workshops and programs
         4. Organizational group interventions
   c. **Reporting:** All faculty and residents have a duty to report to an appropriate supervisor, in confidence, concerns about possible impairment both in themselves and in others.
   If a resident is observed and/or suspected to be impaired while engaged in the performance of their duties, the following actions shall occur:
      i. The observer shall report their concern to a responsible supervisor, ultimately the residency program director. The individual making the report does not need to have proof of the impairment, but must state the facts leading to suspicions.
      ii. The person to whom the report is made shall report the concern to the program director. The program director or their designee will investigate the matter, in a confidential process.
      iii. If it is determined that a resident may have an impairment problem, the program director is responsible to refer the resident to a counseling and treatment, such as that offered through the FASAP.
      iv. Failure of the resident to accept referral to counseling or to abide by the treatment program may be considered grounds for disciplinary action and may result in suspension or termination from the program.
      In any event, use of illegal drugs, the un-prescribed use of pharmaceuticals and impairment while on duty are all violations of standards of conduct for which the resident may be disciplined, up to and including, termination from the program.
   d. **Self-Reporting:** The University is eager to assist residents with impairment problems and encourages any resident with impairment problems to contact their program directors or their hospitals' counseling resources for assistance. Residents shall not be subject to punitive actions for voluntarily acknowledging an impairment problem. (Note, however, that this will not excuse violations of other policies for which the resident is subject to disciplinary action.)
   e. **Continuation of Training:** In order for a resident to resume training after a referral, there shall be satisfactory evidence of the successful completion of or participation in an appropriate treatment program. Further, the resident shall agree to a provisional period during which time they may be monitored and/or tested periodically.
   f. **Confidentiality:** The identification, counseling and treatment of an impaired resident are deemed confidential, except as necessary to carry out the policies of the GMEC or University and as required by law.

Policy on Probation, Suspension, and Dismissal of Clinical Residents/Fellows

Introduction

The purpose of this policy is to describe the procedures that should be employed when a resident/clinical fellow fails to meet performance or academic standards for the training program in which they are engaged or is found to have acted in a manner that violates a policy or policies of the Johns Hopkins Bloomberg School of Public Health. It is the policy of the School of Public Health to employ procedural fairness in all matters which may lead to probation, suspension, or termination of Residents/Clinical Fellows. In the interests of all concerned parties the following procedure is to be followed whenever a Resident's/Clinical Fellow's performance or conduct requires that action be taken under this policy.

Definitions

Resident/Clinical Fellow: This policy applies to all trainees appointed as resident or clinical fellow, whether in an ACGME-accredited program, or not.

Additional time: Additional time in the GME training program at a given PGY level or beyond the expiration of the Resident's/Clinical Fellow's appointment may be required to meet the educational objectives and certification requirements of the department or the specialty. The Resident/Clinical Fellow shall be notified in writing of any requirements for additional time. If the Resident/Clinical Fellow contests the decision to require additional time to satisfactorily complete the program or to achieve the goals required for advancement, a Trainee Evaluation Committee shall be convened to review the decision. Salary and benefits for additional time extending beyond the original period of appointment shall be determined based on institutional policies or at the discretion of the DIO.

Administrative Leave: Administrative leave is not intended to replace any leave that a Resident/Clinical Fellow may otherwise be entitled to, including vacation, sick leave, maternity/paternity, or family leave. Non-medical leave of absence, investigatory leave, and suspension are examples of types of leave that fall under the administrative leave category.

Leave of Absence: If a Resident/Clinical Fellow wishes to take a leave of absence for non-medical reasons, this must be negotiated with the Training Program Director and requires an interruption in appointment, without pay. Except in unusual circumstances, a leave of absence may not extend beyond the Resident's/Clinical Fellow's period of appointment. During the leave of absence, benefits may be purchased through the School of Public Health Student Affairs Office and are the responsibility of the Resident/Clinical Fellow. Reinstatement in the training program following non-medical leave of absence is dependent upon the availability of training positions. Where appropriate and feasible, Training Program Directors are encouraged to reinstate Residents/Clinical Fellows in good standing in the next available training position. However, position, salary, and benefits cannot be guaranteed for voluntary interruption in appointment.

Investigatory Leave: A Resident/Clinical Fellow may be placed on investigatory leave in order to review or investigate allegations of deficiencies or concerns. Such leave shall be confirmed in writing, stating the reason(s) for and the expected duration of the leave, and specifying the activities the Resident/Clinical Fellow may engage in during the duration of the leave. The alleged deficiency should be of a nature that warrants removing the Resident/Clinical Fellow from the training program for the period of investigation. The investigation shall be concluded as quickly as possible so that the Resident/Clinical Fellow can either be returned to the program or action can be initiated for remediation, resignation, or termination. Salary and benefits will be continued during investigatory leave. However, waivers of required activities of the program shall not be granted; all program requirements must be fulfilled. Investigatory leave does not constitute an adverse action and does not need to be reported as such.

Suspension: A Resident/Clinical Fellow may be suspended from part or all of their usual and regular assignments in the training program, including clinical and/or didactic duties, when the removal of the Resident/Clinical Fellow from the clinical service or research site is required because of the Resident's/Clinical Fellow's failure to comply with the policies of the program or of the Institution. The Suspension shall be confirmed in writing, stating the reason(s) for the Suspension and its expected duration. Suspension generally should not exceed 60 calendar days and may be coupled with or followed by other academic actions. The Resident's/Clinical Fellow's salary and benefits may continue during the period of Suspension, depending on the circumstances and at the discretion of the Associate Dean for Graduate Medical Education.

Letter of Counseling: A letter of counseling may be issued by the Training Program Director to a Resident/Clinical Fellow to address a deficiency or concern that needs to be remedied or improved. Letters of counseling should describe the nature of the problem and suggestions for remedial actions or changes required on the part of the Trainee. Failure to achieve improvement, or a repetition of the conduct, may lead to a Notice of Concern or other actions. A letter of counseling does not constitute a disciplinary action and may be removed from the Resident's/Clinical Fellow's file after one year with no further incidents or upon the completion of the program if there are no further incidents. In most cases, this will be the first written notification that there is a deficiency in performance or conduct.

Notice of Concern: A Notice of Concern may be issued by the Training Program Director to a Resident/Clinical Fellow to address a deficiency or behavior that needs to be immediately remedied or improved. The Notice of Concern shall be in writing and should describe the nature of the deficiency or behavior and any necessary remedial actions required on the part of the Resident/Clinical Fellow. The Training Program Director shall review the notice of concern with the Resident/Clinical Fellow. Failure to achieve immediate and/or sustained improvement, or a repetition of the conduct, may lead to additional notices or other actions, including probation, suspension, or dismissal. In most cases, the Notice of Concern is used when there has been inadequate improvement after the Letter of Counseling. However, it may be used as the initial notification when there is a problem of greater significance than should be addressed with a Letter of Counseling.

Probation: Probation shall be used for Residents/Clinical Fellows who are in jeopardy of not successfully completing the requirements of the training program or who are not performing or behaving satisfactorily. Conditions of probation shall be communicated to the Resident/Clinical Fellow in writing and should include: a description of the reasons for the probation, an individualized remediation plan, and the expected time frame for the required remedial activity. Failure to correct the deficiency within the specified period of time may lead to an extension of the probationary period or other academic actions. The probationary period should not be less than 30 days and its duration should be appropriate for the issue(s) of concern.

In most cases Probation will be preceded by a Letter of Counseling and/or a Notice of Concern, unless the circumstances warrant more immediate action.

Procedure

When evaluations of a Resident/Clinical Fellow suggest that s/he is not meeting the expectations of the training program, or whenever the Training Program Director is notified that a Resident's/Clinical Fellow's behavior is suspected to have violated a policy of the Johns Hopkins Institutions, the Training Program Director or their representative shall:

- meet with the Resident/Clinical Fellow to discuss the area(s) of concern
- provide counseling, and
- identify appropriate measures for improvement or remediation.

In advance of formal academic or disciplinary action, including Notice of Concern, Probation, Suspension, or Termination, the Training Program Director or preceptor should have written documentation of the date and nature of all previous warnings and other communications given to the Resident/Clinical Fellow whose performance or conduct fails to meet expected standards. A Training Program Director or preceptor should give verbal warnings to an individual Resident/Clinical Fellow in the presence of at least one other individual and the content of the warning and the concern that prompted it must be documented. Training Program Directors and preceptors are expected to provide appropriate counseling and/or attempts at remediation to Residents/Clinical Fellows whose performance is less than satisfactory.

If an offense is so serious that it poses immediate and serious danger to patients, faculty, or staff or to the institutions, immediate suspension prior to procedural review is appropriate.

Trainee Evaluation Committee: An ad hoc Trainee Evaluation Committee shall be appointed by the Training Program Director or Designated Institutional Official to review a Notice of Concern or decision for Probation, Suspension, or Termination. The Trainee Evaluation Committee shall include no fewer than three faculty members of the Graduate Medical Education Committee or recommended by the Graduate Medical Education Committee. The Program Director will offer to appoint a faculty member who will advise the trainee and provide support and guidance to the trainee throughout the process. This individual, if appointed, will not be a voting member of the Trainee Evaluation Committee. The trainee may identify this individual, subject to approval by the Program Director. The Training Program Director shall provide the Trainee Evaluation Committee with documentation of the concerns that led to the academic or disciplinary action, including documentation of previous meetings with the trainee and of prior efforts to counsel the trainee.

The Training Program Director shall inform the Resident/Clinical Fellow of the composition of the Evaluation Committee. The trainee will be offered an opportunity to meet with the Trainee Evaluation Committee, and the Resident/Clinical Fellow should be informed that they may provide the Trainee Evaluation Committee with a written statement responding to the Notice of Concern or, if Probation, Suspension, or Termination has been recommended, providing a statement explaining why s/he feels the Probation, Suspension, or Termination is not warranted.

Within 10 working days of the Training Program Director or Department Chair's delivery of a Notice of Concern or decision for Probation, Suspension, or Termination the Trainee Evaluation Committee shall be provided with all documentation, including the statement from the Resident/Clinical Fellow, if provided, and may request to meet with the Resident/Clinical Fellow. In cases of Probation, Suspension, or Termination the Trainee Evaluation Committee shall reach a decision to uphold the original action or to request an alternate action within 30 days. An oral notification shall be delivered to the Resident/Clinical Fellow within 3 days and in writing within 10 working days of the decision.

In cases of a Notice of Concern or Probation, the Trainee Evaluation Committee shall assist the Training Program Director in determining an appropriate course of remediation and shall review the Resident's/Clinical Fellow's progress periodically to determine whether the trainee has satisfactorily addressed or remediated the concerns that led to academic or disciplinary action.

The Training Program Director or preceptor shall inform the DIO before a Resident/Clinical Fellow is to receive a Notice of Concern or to be placed on Probation, Suspended, or Terminated. A written statement describing the problem, warnings issued, deliberations of the Trainee Evaluation Committee, and the proposed resolution (remediation, Probation, Suspension, Termination, or return to good standing) shall be provided to the DIO. Before taking final action the Training Program Director shall first confer with the DIO, before informing the Resident/Clinical Fellow of the decision.

The training director should consult with counsel on whether the action (probation, suspension, or termination) should be reported to State or Federal Authorities, as applicable.

The Training Program Director or preceptor must provide a specific statement to the Resident/Clinical Fellow as to the action to be taken, i.e., Probation, Suspension, or Termination; effect on salary, benefits, and training certification; and if applicable, whether or not the action taken is reportable to the Board of Physicians.

In cases of Termination, salary, and benefits shall terminate as of the effective date, and training certification shall be granted for the period of months of acceptable service. Health insurance coverage may be maintained under COBRA options so as to provide continuous health care insurance coverage, in which case the Resident/Clinical Fellow is responsible for all premiums.

A Suspension may be imposed with or without pay, and shall result in suspension of training credit during interruption of service. In instances of suspension with pay, benefits coverage shall be continued during the period of Suspension. The Resident/Clinical Fellow suspended without pay shall be responsible for the full premiums of the benefits during the suspension period.

Written decisions shall be hand-delivered to the Resident/Clinical Fellow at a meeting informing them of the decision or sent by overnight delivery service.

The Resident/Clinical Fellow may appeal an adverse decision to the Dean of the School of Public Health by notifying them in writing within 7 days of the decision. The Dean may refer the matter to a senior official of the school with no prior involvement in the case for review. The review will be limited to review of whether the procedures set forth in this policy were followed and their decision will be final.

Policy on Resident Transfer

Residents who are selected for admission into the first year of one of the Preventive Medicine residency program (PM-1) in the Johns Hopkins Bloomberg School of Public Health will be considered to be a transfer resident if they have not completed a full ACGME accredited residency program of three or more years.

The Johns Hopkins Bloomberg School of Public Health Preventive Medicine Residency Program that accepts the transfer resident will obtain a summative evaluation from that resident's prior ACGME training program. If the resident has completed a full residency, the Hopkins Medical Staff Office will contact the prior program director for verification of training as part of the credentialing process.

Policy on Interaction with Vendors/Corporations and Residency Programs

The Johns Hopkins Bloomberg School of Public Health Graduate Medical Education Committee is committed to creating a training environment that fosters a culture in which faculty, staff, and residents exercise independent judgment in all their activities and provide evidence-based, cost-effective care.

Insofar as they support these goals, appropriate interactions with industry that move ideas into development, production, and practice for the welfare of patients, communities, and the betterment of public health are desirable.

To this end, the GMEC will follow the Johns Hopkins Bloomberg School of Public Health Policy on Interaction with Industry and Outside Interests found in the BSPH Office of Academic Affairs Policies & Procedures Manual (https://www.jhsph.edu/offices-and-services/office-of-academic-affairs/).

Policy on Supervision at Rotation Sites

1. Purpose
   The purpose of this policy is to establish standards for independent health care practitioners engaged in the supervision and teaching of GPM and OEM residents and to establish guidelines for resident responsibilities for GPM and OEM residents.
2. Scope
   This policy applies to all independent health care practitioners engaged in the supervision and teaching of residents enrolled in the GPM or OEM post-graduate medical education program at the Johns Hopkins Bloomberg School of Public Health (BSPH). This policy, unless otherwise stated, is applicable to resident supervision at all training sites.
3. Responsibility
   It is the responsibility of the program director and the site preceptors who supervise and teach residents at BSPH and other training sites as well as residents to comply with this policy.
4. Definitions
   Site preceptor - refers to the individual designated as the supervisor of the resident at the training site. This individual may be a physician (to be designated for this policy the **attending physician**), other faculty of the School of Public Health or a senior staff member at the agency serving as the training site.
   Direct supervision - refers to supervision provided by the site preceptor who is physically present and available to the resident being supervised.
   Program Director - The one physician designated with authority and accountability for the operation of the residency/fellowship program.
   Resident - refers to an unlicensed or licensed resident enrolled in a BSPH post-graduate education program, including subspecialty programs, and which are accredited by the Accreditation Council for Graduate Medical Education (ACGME) or an equivalent accreditation process approved by the Johns Hopkins Bloomberg School of Public Health.
5. General Guidelines
   a. The program director, with the assistance of site preceptors, assures that residents are appropriately supervised. Residents are permitted to take on progressively greater responsibility throughout the course of a residency, consistent with individual growth in experience, judgment, knowledge, and technical skill. Site preceptors supervise residents so that the residents assume progressively increasing responsibility according to their level of education, ability, and experience.
   b. Resident supervision will be monitored and ultimately enforced by the governing board of the Johns Hopkins Bloomberg School of Public Health through the quality process, peer review, credentialing, and privileging, or the resident disciplinary process.
6. General Program Responsibilities
   a. The program director, with the assistance of site preceptors, will assess the resident's competence as the basis for determining the minimum level of supervision required for different activities. This assessment includes the evaluation of the resident's technical, patient management (if applicable), and communication skills and capacity to perform as required. The program director communicates the assessment of the resident's competence to the resident at least semi-annually and when significant progress or deficiencies are noted.
   b. The program director will provide each site preceptor with the list of Preventive Medicine competencies (see Attachment A) for use in planning and evaluating the resident's activities at the site.
   c. Site preceptors will be available for supervision to the resident on duty 24 hours per day, 7 days per week. Site preceptors can provide adequate supervision off site as long as their physical presence within a reasonable time can be assured in case of need. The program director assures that a schedule with the name and contact number of the responsible site preceptor(s) is available at all times to program residents.
   d. All patients seen by a resident on an outpatient basis must be seen by, discussed with, or reviewed by the responsible site preceptor.
   e. Attachment B outlines the procedures for monitoring and evaluation of residents.
7. General Site Preceptor Responsibilities
   a. A site preceptor is responsible for and actively involved in clinical, administrative, or research activities at the training site.
   b. A site preceptor at a clinical site is an attending physician who directs the care of each patient and provides the appropriate level of supervision for a resident based on the nature of the patient's condition, the likelihood of major changes in the management plan, the complexity of care, and level of education, ability, experience, and judgment of the resident being supervised.
   c. The attending physician, in consultation with the program director, accords a resident progressive responsibility for the care of the patient based on the resident's clinical experience, judgment, knowledge, technical skill, and capacity to function.
   d. The attending physician advises the program director if they believe a change in the level of the resident's responsibility and supervision should be considered. The overriding consideration must be the safe and effective care of the patient that is the personal responsibility of the attending physician.
   e. The attending physician fosters an environment that encourages questions and requests for support or supervision from the resident, and encourages the resident to call or inform the attending physician of significant or serious patient conditions or significant changes in patient condition.
8. Resident Responsibilities and Requirements
   a. The resident must be aware of their level of training, their specific clinical experience, judgment, knowledge, and technical skill, and any associated limitations. The resident must not independently perform procedures or treatments, or management plans that they are unauthorized to perform or lacks the skill and training to perform.
   b. The resident is responsible for self-monitoring of progress toward achievement of the GPM competencies listed in Attachment A.
   c. The resident is responsible for communicating to the attending physician any significant issues regarding patient care.
      (see Attachment A and Attachment B)

Policy on Transitions of Care
Clinical care in the Johns Hopkins Occupational and Environmental Medicine Residency and General Preventive Medicine Residency is entirely outpatient with direct precepting in the clinical rotation sites. Thus, residents work directly with preceptors in each clinic and in population management. Many clinical encounters are for acute medical issues that do not require prolonged follow-up. Patients are referred back to their primary care providers for ongoing medical care.

At the end of each rotation, residents discuss any outstanding issues that may exist with their faculty preceptor (who is the medical provider ultimately responsible for patient occupational or environmental health care). For ongoing projects, such as at the International Association of Fire Fighters, residents also leave a written sign-out report for the incoming resident who then discusses the report and remaining action items with the preceptors. By directly involving preceptors, this transition process facilitates continuity of care and patient safety while allowing preceptors to assess resident competency in communicating hand-over details. Finally, rotation schedules are sent to preceptors at the start of each year and updated as needed.

Protocol for Faculty Involvement in Clinical Care
The Johns Hopkins School of Public Health Occupational Medicine Residency Program and General Preventive Medicine Residency is committed to promoting patient safety while providing residents with progressive responsibility. A Policy on Supervision currently exists for all preventive medicine rotations, regardless of clinical content. The ACGME Common Program Requirements (VI.A.2) indicate that residency programs must set guidelines for circumstances and events in which residents must communicate with appropriate supervising faculty members. Therefore, this protocol is specifically for clinical activities. Clinical care in the program is entirely outpatient with direct precepting in the clinical rotation sites. Residents work directly with preceptors in each clinic. Residents see patients with a range of complexity, however, all patients are discussed at least briefly with the preceptor. Patients with more complex medical problems will require more detailed discussion and faculty involvement.

Preceptors, including physicians, nurses and nurse practitioners, will have greater involvement for a range of patient needs including, but not limited to, the following:

- Situations in which contact with public health agencies and/or employers is required. For these patients, preceptors will need to direct residents to appropriate contacts and how to approach employers while protecting patient confidentiality to the extent possible under the law.
- Acutely ill patients who present to the occupational health clinic and need to be transferred to the Emergency Department (e.g., chest pain, shortness of breath, deep laceration). Nursing staff, even if not directly precepting, will be involved in the care and transfer of these patients as well.
- Acute work-related injuries, such as needle sticks, that require urgent care and follow-up.

Any deviation from this policy should be reported to the OEMR or GPMR Director promptly. The Director may convey the information to the Designated Institutional Official and the Graduate Medical Education Committee for discussion to facilitate process improvement.

Under the ACGME Common Program Requirements (VI.A.2.e) each resident must know the limits of their scope of authority, and the circumstances under which they are permitted to act with conditional independence. Progression is discussed semi-annually.

Use of M.D. Designation for ECFMG-Certified Medical Graduates
Following the Johns Hopkins School of Medicine procedure, the Johns Hopkins School of Public Health will permit ECFMG-certified medical graduates to use the M.D. designation on an ID badge upon request.

Discrimination and Harassment
The Johns Hopkins University policies on discrimination and harassment apply to the residency programs. The policy may be found on the Johns Hopkins University Office of Institutional Equity (https://oie.jhu.edu/) website.

Sexual Misconduct Policy
The Johns Hopkins University Sexual Misconduct Policy and Procedures apply to the residency program. The policy may be found on the Johns Hopkins University Office of Institutional Equity (https://oie.jhu.edu/) website.

Accommodations for Disabilities
The Johns Hopkins University Americans with Disabilities Act Compliance and Disability Accommodations processes apply to the residency programs. This information may be found on the Johns Hopkins University Office of Institutional Equity (https://oie.jhu.edu/) website.

Resident Grievance Procedure
Purpose
On occasion, disputes arise between residents and other members of the Johns Hopkins University ("University") or Bloomberg School of Public Health ("School") community. Individuals involved in such disputes should first endeavor to resolve the matter informally. After reasonable efforts have been made to do so, residents who believe they have been adversely and unfairly affected in their capacity as residents may use this process to seek formal resolution of a serious situation that cannot be resolved informally and is not otherwise covered under another University or School policies or procedures.

Definitions
The "grievant" is the resident bringing forth the grievance. The "respondent" is the individual against whom the grievance is made.

Grievable Matters
A "grievable" matter is a complaint that a current resident enrolled in a School residency program has been directly and adversely affected in their education, training, or professional activities due to an arbitrary or capricious act, or failure to act, or a violation of a University or School policy or procedure by anyone acting officially or on behalf of the University or School, other than the matters exempted below.

The following matters are not grievable and are excluded from consideration under this policy:

1. Complaints alleging discrimination or harassment on the basis of sex, gender, marital status, pregnancy, race, color, ethnicity, national origin, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or other legally protected characteristic; sexual misconduct, domestic violence, dating violence, or stalking; or that are otherwise within the purview of the University's Office of Institutional Equity ("OIE"). Such complaints must be referred to OIE.

2. Complaints pertaining to general levels of salary, fringe benefits, or other broad areas of financial management and staffing.

3. Complaints, the resolution or remedy of which, would conflict with a policy of the University or School; a policy of The Johns Hopkins Health System (or its affiliate or subsidiary hospitals); federal, state, or local laws or regulations; or any contract to which the University is a party.
4. A complaint pertaining to subject matter within the purview of another University or School policy or procedures, or any standing committee of the University or School, unless the complaint arises from an alleged failure to act or to follow the policies or procedures of the University or School. For example, disputes involving grades, promotions, disciplinary action, and matters covered by the Johns Hopkins Personnel Policy Manual are not grievable.
5. Disputes that are personal in nature and do not involve the Grievant's educational, training, professional, or institutional responsibilities or activities.

Procedures

1. Prior to filing a formal grievance, the grievant should attempt to resolve the situation informally, which may include meeting with the individual against whom the grievance is made, a department chair, an appropriate dean, or others. The Director of the residency program or other responsible official is also available to the grievant for counseling on how best to resolve the situation informally and for handling a grievance made against the resident-in-training.
2. If the matter cannot be resolved to the mutual satisfaction of the parties, a formal grievance may be filed with the Designated Institutional Official ("DIO") within sixty (60) days thereafter or sixty (60) days from the event leading to the grievance, whichever is later. A delay in filing the grievance may constitute grounds for its dismissal.If the grievance is initiated against the DIO, the grievant may instead submit the grievance to the Dean of the School.
3. The grievance must be in writing and include the following:
    a. statement of the grievance;
    b. description of the alleged facts on which the grievance is based;
    c. summary of steps taken to attempt to informally resolve the grievance, if any;
    d. name(s) of the person(s) against whom the grievance is filed;
    e. other facts considered to be pertinent;
    f. the remedy sought; and
    g. any relevant documentation.
4. Upon receipt of a properly submitted grievance, the DIO shall appoint two (2) faculty members without conflicts to first determine whether the grievance presents a grievable issue. The decision regarding grievability will be final and may not be appealed.
5. If the matter is determined not to be grievable, the grievance will be dismissed and the grievant will be notified of the decision in writing, stating the reasons for such decision.If the matter is determined to be grievable, the DIO will then appoint one (1) resident without a conflict to also serve on a Committee with the two faculty and the following procedures shall be followed.
6. The DIO shall inform the grievant of the composition of the committee. The grievant may, within five (5) days, request that the DIO replace one or more members of the Committee upon a reasonable showing of bias or conflict of interest.
7. The Committee shall provide written notification to the grievant and respondent and assemble the relevant documentation and facts. The Committee may request additional information from and/or interviews with the grievant, the respondent, witnesses, and relevant University personnel.
8. The Committee will formulate its findings and recommendations based on a majority vote and will forward its recommendation in writing to the DIO.
9. The DIO will inform the parties to the grievance in writing of the DIO's decision and the reasons for the decision.The DIO's decision will be final.

Administration

A good faith effort will be made to complete the process within 90 days, but this time frame may be extended as reasonably necessary. Legal counsel for any party may not participate in meetings or deliberations pursuant to these procedures. The Office of the General Counsel will not act as the prosecutor or defender of any party, but will act as an impartial legal adviser to the University.

General Preventive Medicine Residency Program

Welcome and Introduction

Welcome to the Johns Hopkins Bloomberg School of Public Health General Preventive Medicine Residency Program. This information is designed to give you an overview of the program and to guide you through the academic and practicum years.

Please use this as a frequent reference for the questions that will come up as you complete your training. The first sections provide an overview of the program, policies, benefits, administrative structure, and governance, and the competency and knowledge areas of preventive medicine. Sections that follow guide the academic and practicum years. The roles and responsibilities of the resident and the program are delineated.

This is not intended as a stand-alone resource. You will find valuable and pertinent information regarding the MPH (p. 497) and the Johns Hopkins Bloomberg School of Public Health (p. 54) in this online catalogue. Many preventive medicine resources are now online and useful websites are also included.

The General Preventive Medicine Residency (GPMR) Clinical Director, Academic Director, Chief Resident, administrative staff, and I are here to provide direction throughout your program. In addition, be sure to talk to faculty and rotation preceptors whose interests, research, and practice activities can help to guide you. These contacts can prove invaluable to your career. Plan to meet frequently with me, and be specific about your interests as well as your uncertainties.

Finally, make the most of your associations with fellow residents and students in the school. You may well find that these relationships are your richest continuing source of support, encouragement, and professional stimulation.

Again, welcome, and my very best wishes for a wonderful training experience and a successful career in the exciting field of preventive medicine!

Clarence Lam, MD, MPH
Director, General Preventive Medicine Residency

Mission Statement

The mission of the Johns Hopkins Bloomberg School of Public Health General Preventive Medicine Residency Program is to prepare physicians in the theoretical, practical, and clinical knowledge and skills essential to leadership roles in the design, management, and evaluation of population-based approaches to health. Fundamental to this mission is the program's commitment to instilling in residents the ability to synthesize clinical and population-based approaches to disease prevention and health promotion, to impact health issues on a broad continuum from local to international in perspective, and to discover and apply knowledge toward the protection of the public's health.

Residency Accreditation

The Johns Hopkins Bloomberg School of Public Health General Preventive Medicine Residency Program is fully accredited by the Residency Review Committee (RRC) of the Accreditation Council for Graduate Medical Education (https://acgme.org/) (ACGME) for Preventive Medicine for both the academic and practicum years of training. The GPMR Program recently underwent an ACGME site visit in 2017 and remains fully accredited.

Program Overview

The mission of the Johns Hopkins Bloomberg School of Public Health General Preventive Medicine Residency Program is to prepare physicians in the theoretical, practical, and clinical knowledge and skills essential to leadership roles in the design, management, and evaluation of population-based approaches to health.

Five key strategies are basic to this mission:

1. to instill in residents the ability to synthesize clinical and population-based approaches to disease prevention and health promotion,
2. to view health issues on a broad continuum from local to international in perspective,
3. to discover and apply knowledge toward the protection of the public's health,
4. to provide residents with the management and epidemiologic skills needed to address the overall health needs of underserved populations, and
5. to provide residents with the clinical skills needed to treat specific diseases that disproportionately affect underserved populations.

The goal of the residency program is to train physicians in the knowledge and skills that will allow them to advance the health of populations and individuals by promoting health-enhancing behaviors and preventing disease and disability. The residency program accepts physicians who have completed their requisite appropriate clinical training, into the academic phase of general preventive medicine training. Residents may join the program having previously earned a Master of Public Health (MPH) or seeking an MPH.

Although the residency does not have an internship year, it does have an arrangement with The Mary Imogene Bassett Hospital (https://www.bassett.org/medical-education/residency-programs/transitional-year/) in Cooperstown, New York, where one resident a year may complete a transitional PGY-1 year before entering the Hopkins GPMR Program. The residency program also trains one combined family medicine-preventive medicine resident per year in conjunction with MedStar Franklin Square Medical Center (https://www.medstarhealth.org/education/affiliated-hospitals-2/medstar-franklin-square-medical-center/combined-family-medicine-preventive-medicine-residency/) in Baltimore, Maryland, for which fourth-year medical students or other appropriately qualified applicants may apply through the National Resident Matching Program.

The GPMR Program is committed to maximizing the educational process for each resident so that each may become a competent preventive medicine physician and meet their professional goals. In addition to the residency director, who supervises and guides all aspects of the residency program and is readily accessible to each resident, the residency program also has a Chief Resident, Academic Director, and Clinical Director who all assist residents with various aspects of the training program.

The PM-1[1] (Preventive Medicine Year 1) year is an opportunity to gain the theoretical knowledge and skills necessary to become a preventive medicine physician, and the PM-2[2] year allows residents to apply the knowledge and skills that they have acquired. The PM-2 year continues to provide didactic education with an emphasis on "real-world" issues. These educational experiences encourage residents to become lifelong learners. Furthermore, they encourage residents to be constantly intellectually inquisitive and to use practical situations to uncover new knowledge. The residency program makes available a variety major textbooks in the field of preventive medicine that are available for reference in the residency on-campus office. In addition, the skills that residents gain in the academic year are used on a regular basis during the practicum rotations.

All residents are expected to attend the annual meeting of the American College of Preventive Medicine (https://www.acpm.org/) (ACPM). Any exceptions must be approved by the Program Director. Residents are encouraged to be involved in national preventive medicine resident activities and Hopkins residents often hold national leadership positions. The residency program provides all residents funds to offset the costs of these prevention-related conferences. The residency program also reimburses the annual membership dues for the ACPM (https://www.acpm.org/) for all residents.

Upon completion of the residency, all residents are expected to sit for the American Board of Preventive Medicine Certifying Examination.

[1] PM-1 may also be referred to as PGY-2 in GPMR documentation
[2] PM-2 may also be referred to as PGY-3 in GPMR documentation

Clinical Overview (PM-1 and PM-2 years)

In accordance with ACGME Preventive Medicine Guidelines, all residents will complete two months (320 hours) of clinical activities during each year of the program. Residents will be training in clinical environments focused on preventive medicine and where patient responsibilities are paramount.

PM-1 (First Year)

The first year (PM-1 year) of the General Preventive Medicine Residency Program is an intensive academic experience. Residents who have not already obtained a Master of Public Health (MPH) prior to coming to GPMR will complete the required coursework during the PM-1 year. Coursework for the MPH is completed in an 11-month program that is divided into 5 terms. The MPH-seeking PM-1 residents spend the majority of their year engaged in the MPH courses, pursuing didactic and independent study that leads to the MPH degree.

Although nearly all of the requirements of the MPH degree are to be completed during the PM- 1 year, **residents will not receive the degree until May of their last year of training**. The MPH degree requires the completion of a practicum experience, and this requirement will be fulfilled through the completion of a PM-2 practicum rotation. While the MPH Capstone can be completed either at the end of either academic year, but it is **encouraged that the Capstone be completed during the PM-1 year**.

Residents select from among 400 courses offered in the School of Public Health. The MPH requirements account for approximately 60% of preventive medicine residents' responsibilities. **Residents will spend approximately 20% of their time completing clinical preventive medicine activities and 20% of their time participating in residency-sponsored seminars and supplemental educational activities (e.g. modules).** Residents may also receive special studies credit for research conducted with a faculty mentor during their academic year. With the depth and breadth provided by the large faculty and the large number of course offerings, residents are able to customize their academic training to be closely aligned with their professional interests. Each resident receives advice on choice of courses from the residency program director, the GPMR Chief Resident, their assigned MPH adviser, and other faculty and students, as needed.

Residents who have previously obtained an MPH degree prior to entering GPMR are required to complete two years of preventive medicine residency training. In the first year, the program will review each MPH-holding GPMR resident's MPH transcript to devise an individualized academic plan. This will ensure that the combination of their prior and Hopkins coursework meets the standards of those residents who are undergoing their MPH academic requirements at the Johns Hopkins Bloomberg School of Public Health. The MPH-holding GPMR residents will also be required to complete the clinical program, and to attend all residency-sponsored seminars and supplemental educational activities. The remainder of the MPH-holding resident's time will be spent working with pre-established practicum rotation sites on a specific project that is mutually agreed upon by the rotation site, the resident, and the GPMR Program.

Residency training and all educational endeavors at the school are based on competencies. Students define their career and educational objectives with the guidance of their advisers and other resources. This process enables students to appropriately select options for fulfilling core requirements, electives that develop the desired competencies, and a focus for a self-directed integrating experience project. Such a resident-centered programmatic orientation and philosophy necessitates a multi-dimensional view of curriculum organization. This multi-dimensional organization facilitates thinking of the program in ways that assure requisite knowledge and skills are addressed across the breadth of the core curriculum within a context that promotes the rapid integration of these skills into professional practice behaviors.

On entry into the program, each resident meets with the program director and then prepares an educational plan that outlines their educational goals for the year, with an emphasis on coursework and residency activities that will maximize their background and allow them to gain competence in the field of preventive medicine. In addition to the in-service exam, this plan serves as the incoming assessment. Each resident will receive a grade report at the end of each term and at the end of the year. They will meet semi-annually with the program director during each year of study to review performance and progress.

The MPH curriculum is organized around the core functions of public health practice as defined by the Institute of Medicine and enhanced by Johns Hopkins: assessment, policy and program development, assurance, and communication. These functions are embodied within the school's problem-solving paradigm. This integrative paradigm serves as an organizing principle for the structure and sequencing of the core (discipline-based) curriculum in the form of a professional practice paradigm that progresses through each of these core functions.

Within each broad discipline area as defined by the Council on Education for Public Health (CEPH), a set of competencies defines the level of mastery expected of all MPH graduates, irrespective of the student's intended focus of study. The MPH Executive Committee also uses these competencies to determine the suitability of courses and combinations of courses to fulfill core area requirements, and the entire matrix is used to identify gaps in the overall program.

The MPH Program also has competencies that transcend disciplinary boundaries and demonstrate synthesis, analysis, and integration of multiple cognitive, attitudinal, and behavioral domains. These competencies include activities that are inherently integrative in nature, requiring students simultaneously to draw upon and selectively and critically utilize the array of knowledge and skills in their possession. These competencies are most closely associated with the behavioral outcomes MPH graduates are expected to manifest in their professional practice activities. In addition, all residents, regardless of whether they are pursuing the MPH degree during their PM-1 year, will be required to take courses that uniquely meet the needs of preventive medicine residents (see (p. 556) Course Requirements). The MPH final project, the Capstone Project, is tailored to the residents' needs and is a project that is the culmination of a practicum or research experience and may be written using the Problem Solving Paradigm.

Other residency activities (e.g. modules) complement the educational experience during the academic year. An extensive summer seminar series introduces residents to role models for careers in public health. Each week throughout the summer, public health and preventive medicine professionals, including School faculty and our own residency graduates, present information on how their own careers have developed and share ongoing activities at the health agencies and organizations where they are employed. In this way, residents learn about potential career paths early in their academic year.

Throughout the first year, residents participate in modules to acquaint them with the breadth and depth of the field of preventive medicine. They gain experiences with modules such as those focused on Problem Solving in Public Health, Public Health Preparedness, Quality Improvement, and Conflict Management and Negotiation. Environmental Health site visits to a water filtration plant, a wastewater treatment plant, and a waste management facility are also part of the PM-1 curriculum. Residents also receive professional development training in skills such as leadership, management, advocacy (including media advocacy), project management, and oral and written presentation skills. The advocacy series culminates with a trip to Capitol Hill where the residents can practice presenting to legislative aides and receive feedback on their presentations.

Another important component of the PM-1 curricula is the opportunity to teach graduate students in the “Problem Solving in Public Health” course. All first year (PM-1) residents serve as teaching assistants for this course. Residents work with professors in the School of Public Health to prepare for this course and receive student feedback on their teaching abilities.

All residents in the PM-1 year are required to complete a direct patient care clinical component that is equivalent to 2 months (320 hours) of clinical interaction. The program has developed these clinical experiences to advance the mission of the preventive medicine residency program and meet ACGME requirements. All clinical experiences are approved by the program director and clinical director. Residents must have a **minimum of two months of direct patient care experience (clinical rotations) during each year of the program**, and all patient care experiences must be supervised (see Supervision section for additional details). Given the structure of the program, this requirement is spread across the year by completing 80 half-days in a clinic (of note, a half-day should equal approximately 4 hours). Residents will track their clinical hours in New Innovations with the goal of obtaining 320 hours each year. Please note that the program does not permit residents to obtain all 320 hours over a one-month period.

The residents spend a large portion of their time together in the first year as they take required courses and participate in didactic resident activities. These activities help to build group cohesiveness and provide a distinct identity for the residents within the MPH class. Residents are encouraged to participate in research projects and often work with faculty on such endeavors. Residents have the chance to be involved in school-wide and residency committees and can participate in many different community-based projects.

PM-1 residents are expected to attend monthly didactic Administrative Rounds if there is no pre-existing conflict with a regularly scheduled course (or with overnight call, for the Franklin Square combined residents). This also applies to PM-1 residents who already have their MPH and are on practicum rotations. Finally, all first year residents are expected to attend the annual Preventive Medicine/Public Health Grand Rounds.

PM-2 (Second Year)

The PM-2 year, the practicum year, is individualized to meet the educational and experiential needs of each resident. Residents plan their rotations to be consistent with their professional goals and to maximize their prior education and experiences. It is expected that residents’ practicum experiences will build on the theoretical models that they studied in their academic year. Residents must complete the practicum year to meet the eligibility requirements for certification by the American Board of Preventive Medicine.

During the practicum year, residents are required to complete at least four practical preventive medicine rotations, including one from each of the following categories:

1. Biostatistics and Epidemiology
2. Management and Administration
3. Occupational/Environmental Health **or** Clinical Preventive Medicine

The content of each rotation is designed to focus on the competencies established for that category of rotation. These competencies were adopted and adapted from competencies developed by national preventive medicine forums to focus on the knowledge and skills needed to function effectively as a preventive medicine specialist in local, state, federal, international, clinical, corporate, and academic settings. Similar to the PM-1 year, all residents in the PM-2 year are required to complete a direct patient care clinical component that is equivalent to 2 months (320 hours) of work.

Practicum year residents also register for 16 credits per term for Special Studies course PH.550.890 SS/R: General Preventive Medicine Residency-Residency Year, which is fulfilled through monthly administrative rounds. (Note: Residents in their third and fourth year of the combined program should follow the instructions provided by the Residency Program Manager regarding their credit requirement in those years.) These monthly rounds (one day a month) provide an ongoing opportunity for residents to receive the didactic portion of their education during their practicum year. The monthly rounds may include journal club, guest lecturers who speak on current topics in public health, professional skill building didactics, and opportunities for residents to present their practicum projects to the group. Other pertinent information, such as information on board preparation and job search techniques may be presented at appropriate times of the academic year. Residents are expected to attend the annual Preventive Medicine/Public Health Grand Rounds if their rotations are within the Baltimore-Washington area.

Resident Benefits

Residents receive a stipend in each year of the program as well as a tuition (https://www.jhsph.edu/admissions/tuition-and-fees/) scholarship for the Master of Public Health program. Residents also receive a comprehensive benefits package which includes health insurance, dental insurance, life insurance, long-term disability, and professional liability insurance. Residents are also provided allowances for conference travel and professional membership, as well as an annual vacation and sick time allotment. These benefits are reviewed annually.

Advisory Committees

Formally established advisory committees play a role in the governance of the General Preventive Medicine Residency. Residency representatives from both years of training, as well as the GPMR Program Director, Clinical Director, Academic Director, and Chief Resident, serve as members of each committee.

Program Evaluation Committee (PEC)

Committee Charge

The goal of the Program Evaluation Committee is to serve as a formal, systematic assessment of the educational components of the residency program, including the examination and monitoring of areas, measures, and progress undertaken to improve the program curriculum.

Committee Membership

- Committee must be composed of at least two members of the program faculty and at least one resident as designated by the program director. (The program director may serve as one of the two faculty members of the Committee.)
- The Program Coordinator will assist in the administrative functions of the committee, which include managing the logistics and scheduling for the Program Evaluation Committee meetings, and recording and retaining of meeting minutes.

Committee Meetings

The Committee will meet at least once per year. Additional meetings may be scheduled at the discretion of the chair.

Committee Accountability

Responsibilities of the Program Evaluation Committee must include:

- Acting as an advisory to the program director, through program oversight.
- Annual review of the program's self-determined goals and progress toward meeting them.
- Guiding ongoing program improvement, including development of new goals, based upon outcomes.
- Review of the current operating environment to identify strengths, challenges, opportunities, and threats as related to the program's missions and aims.
- The Committee is responsible for assessing the following areas for the purpose of program improvement (not to identify individual residents for personal improvement or remediation):
  - Resident performance, including examining cohort-wide data aggregated from transcripts, milestones, resident feedback/ evaluation (including at least one opportunity to evaluate the program confidentially and in writing at least annually), and other materials as deemed necessary.
  - Resident well-being, recruitment and retention, workforce diversity
  - Faculty development, including annual data aggregated from preceptor evaluations, faculty evaluations, and other materials as deemed necessary.
  - Graduate performance, including performance of program graduates on the board certification examination.
  - Program quality, through materials and assessments as deemed necessary.

Documentation of the Annual Program Evaluation:

- The Committee must prepare a written plan of action known as the Annual Program Evaluation (APE) that will identify areas of improvement and ensure that recommendations are measured and monitored annually.
- A consensus for initiatives and recommendations to be documented in the APE should be determined by the end of each Committee meeting. The Program Director and Program Coordinator will be responsible for developing a written plan based on the proceedings of the meeting.
- The APE should be reviewed and approved by the teaching faculty to ensure widespread agreement and support.
- The Program Director will carry out the recommendations as outlined in the APE.
- APE does not need to be submitted to the ACGME but document should be distributed to and discussed with members of the teaching faculty and residents, submitted to the DIO, and retained by the program.

Clinical Competency Committee (CCC) Committee Charge

The goal of the CCC is to review and document residents' progression through the ACGME milestones.

Committee Accountability

The Committee will prepare and assure the reporting of milestones evaluations of each resident semi-annually to the ACGME.

The responsibilities of the CCC include, but are not necessarily limited to, the following:

1. The Committee will meet, review, and advise the Program Director on each resident's progress through the program, including promotion, remediation, and dismissal.
2. The Committee will make a determination of each resident's progress through all preventive medicine milestones.
3. The Committee will prepare and assure the reporting of milestones evaluations of each resident semi-annually to the ACGME.
4. Milestones evaluations for each resident will be entered directly into the ACGME Accreditation Data System (ADS) during both of the following reporting windows: November 1-December 31, and May 1-June 30 (exact dates determined by ACGME).

Committee Channels of Communication

The Clinical Competency Committee will make its recommendation to the GPMR Program Director. The Program Director will ensure milestones evaluations for each resident are entered in to the ACGME Accreditation Data System.

Committee Membership

The Clinical Competency Committee will be composed of at least three members of the program faculty as designated by the Program Director.

Committee Chair

The Program Director will serve as Chair of the Committee.

Committee Meetings

The Clinical Competency Committee will meet at least twice annually each academic year to discharge its responsibilities. Fall meeting to be scheduled in November/December and the Spring meeting to be scheduled in May/June, to coincide with ACGME data reporting requirements. Additional meetings may be scheduled at the discretion of the chair.

Committee Staff

The Program Coordinator will handle the administrative functions of the committee, which include collecting data on each resident, managing the logistics and scheduling for the Clinical Competency Committee (CCC) meeting, and recording the decisions of milestone levels for each resident as determined by the Committee.

Graduate Medical Education Committee (GMEC)

Committee Charge

The Graduate Medical Education Committee shall be responsible for meeting the sponsoring institution responsibilities for preventive medicine education activities in the School, including establishment and implementation of Graduate Medical Education Policies (p. 537) and procedures set forth by the Accreditation Council for Graduate Medical Education (ACGME).

The committee shall advise the School on and monitor the following:

1. Establishment and maintenance of appropriate liaison with residency directors and with the administrators of other institutions participating in programs sponsored by the School of Public Health.
2. Regular review of all ACGME program accreditation letters and action plans for the correction of concerns and areas of noncompliance.

3. Regular review of the Sponsoring Institution's Letter of Report from the ACGME Institutional Review Committee (IRC) and development and monitoring of action plans for the correction of concerns and areas of noncompliance.
4. Review and approval prior to submission to the ACGME of:
    a. all application for ACGME accreditation of new programs and subspecialties;
    b. changes in resident complement;
    c. major changes in program structure or length of training;
    d. additions and deletions of participating institutions used in a program;
    e. appointments of new program directors;
    f. progress reports requested by any Review Committee;
    g. responses to all proposed adverse actions;
    h. requests for increases or any change in resident duty hours;
    i. requests for "inactive status" or to reactivate a program;
    j. voluntary withdrawals of ACGME-accredited programs;
    k. requests for an appeal of an adverse action;
    l. appeal presentations to a Board of Appeal or the ACGME.
5. Establishment and the implementation of policies and procedures for the selection, evaluation, promotion, and dismissal of residents.
6. Establishment and implementation of institutional policies and procedures for discipline and the adjudication of complaints and grievances relevant to the graduate medical programs.
7. Assurance of appropriate and equitable funding for resident positions, including stipends, benefits, and support services.
8. Regular review of ethical, socioeconomic, medical/legal, and cost-containment issues that affect graduate medical education.
9. Assurance of the incorporation of School-wide policies and procedures into the residency programs.
10. Review all resident applicants after acceptance to the programs.
11. Review and monitor the progress of all residents through the academic and practicum years.
12. Establish and implement formal written policies and procedures governing resident duty hours in compliance with the Institutional and Program Requirements.
13. Assure that each program provides a curriculum and evaluation system so that residents demonstrate achievement of general and program-specific competencies.
14. Serve as an appeal or arbitration group if problems arise in the programs.
15. Regular review of all residency training programs in relation to their compliance with institutional policies and the program requirements of the Accreditation Council for Graduate Medical Education Residency Review Committee for Preventive Medicine.
16. Conduct internal reviews of all ACGME-accredited programs to assess their compliance with the Institutional Requirements and the Program Requirements of the ACGME Residency Review Committees

Professional Organizations Related to Preventive Medicine

American Board of Preventive Medicine (https://www.theabpm.org/)

The purpose of the American Board of Preventive Medicine (ABPM) is to grant and issue to qualified physicians who are licensed to practice medicine, certificates of special knowledge in preventive medicine and in one of the specialty areas of aerospace medicine, occupational medicine, or public health and general preventive medicine. It is also its purpose to encourage the study, enhance the standards of practice, and advance the cause of preventive medicine.

All Johns Hopkins preventive medicine residents are expected to sit for the American Board of Preventive Medicine (ABPM) Certifying Examination upon completion of the residency. Information about the board exam, the board study guide materials, and board applications are available at the ABPM website.

American College of Preventive Medicine (https://www.acpm.org/)

The American College of Preventive Medicine (ACPM) is the national professional society for physicians committed to disease prevention and health promotion. ACPM's 2,700 members are engaged in preventive medicine practice, teaching, and research. Many serve on ACPM committees and task forces and represent preventive medicine in national forums, contributing to the organization's role as a major national resource of expertise in disease prevention and health promotion. ACPM was founded in 1954.

Specialists in preventive medicine are uniquely trained in both clinical medicine and public health. They have the skills needed to understand and reduce the risks of disease, disability, and death in individuals and in population groups. Students can find preventive medicine trained physicians working in primary care settings and managed care organizations, in public health and government agencies, in workplaces and in academia.

The ACPM has developed core competencies and performance indicators for preventive medicine residents. The organization also offers a review course for the preventive medicine board exam. In addition, ACPM offers a Lifestyle Medicine Core Competency Online Program.

Resident Physician Section (RPS) of the ACPM: Residents are eligible for Resident Membership of the ACPM throughout their residency training, and for one transitional year after. Resident members may vote and hold office in the Resident Physician Section (RPS). RPS is the national voice of preventive medicine residents on issues that affect training, policy, and education. The College provides RPS members with educational resources and puts them in touch with many of the best clinicians and educators in preventive medicine.

RPS members receive the RPS Newsletter and membership includes an active subscription to the *American Journal of Preventive Medicine*. Members are eligible for discounted rates on annual meeting fees and scholarships to attend the meetings of both parent associations, the American College of Preventive Medicine and the Association for Prevention Teaching and Research. Members are also included in the discussions that occur on the RPS email listserv, which includes over 300 preventive medicine residents.

The residency program pays for membership in RPS for both years of the residency training. After completing registration, residents should submit reimbursement requests for RPS registration with receipts to program staff within 30 days of incurring the expense. Residents in the second year are asked to renew their membership and again submit a receipt for reimbursement.

Many GPMR residents are interested in holding a national position with RPS. Elections are in or around February/March of each year; 1-year terms start in April.

American Public Health Association (https://www.apha.org/)

The American Public Health Association (APHA) is the oldest and largest organization of public health professionals in the world, representing more than 50,000 members from over 50 occupations of public health. APHA has been influencing policies and setting priorities in public health for over 125 years. It brings together researchers, health service providers, administrators, teachers, and other health workers in a unique, multidisciplinary environment of professional exchange, study, and action.

APHA is concerned with a broad set of issues affecting personal and environmental health, including federal and state funding for health programs, pollution control, programs, and policies related to chronic and infectious diseases, a smoke-free society, and professional education in public health. APHA actively serves the public, its members, and the public health profession through its scientific and practice programs, publications, annual meeting, awards program, educational services, and advocacy efforts.

The achievements of APHA are the achievements of the thousands of federal, state, community, and academic health professionals who seek to assure the conditions in which people can be healthy. Whether APHA is proposing solutions based on research, helping to set public health practice standards, or working closely with national and international health agencies to improve health worldwide, its mission is to continue to strive to improve public health for everyone.

Association of American Medical Colleges (https://www.aamc.org/)

The Association of American Medical Colleges is a nonprofit association of medical schools, teaching hospitals, and academic societies. The AAMC seeks to improve the nation's health by enhancing the effectiveness of academic medicine. It assists academic medicine's institutions, organizations, and individuals in three main mission areas: medical education, medical research, and patient care.

The AAMC represents and supports its constituents through a broad array of programs and studies, and the administrative leadership of medical schools and teaching hospitals are served by a variety of professional development groups housed within the AAMC. The AAMC provides services to those entering the medical field, including the American Medical College Application Service (AMCAS), the Electronic Residency Application Service (ERAS), MEDLOANS, and the National Resident Matching Program (NRMP). Its full-time staff of 350 is based in Washington, D.C., and is divided into several offices and divisions, from member services to governmental relations to biomedical and health sciences research.

The AAMC has recently launched an online resource bank for educational materials called the MedEdPORTAL (https://www.mededportal.org/).

Association for Prevention Teaching and Research (https://www.aptrweb.org/)

The Association for Prevention Teaching and Research (APTR) is the national association supporting health promotion and disease prevention educators and researchers. Since 1942, APTR has been in the forefront of advancing, promoting, and supporting health promotion and disease prevention in the education of physicians and other health professionals. APTR members include members of the Association of Preventive Medicine Residents. Individual members include physicians, nurses, public health professionals, and health services researchers. Institutional members include academic departments and programs, health agencies, and schools of public health.

APTR provides essential linkages to bring together individuals and institutions devoted to health promotion and disease prevention education and research. APTR develops vital curriculum, professional development, and communication tools for educators, researchers, residents, and students.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

Requirements and Expectations for All Residents

The General Preventive Medicine Residency (GPMR) Program is a broad, two-year training program of academic and applied learning in a school of public health, accredited by the Accreditation Council for Graduate Medical Education. The primary purpose of the residency is to prepare physicians in the theoretical, practical, and clinical knowledge and skills essential to leadership roles in the design, management, and evaluation of population-based approaches to health – i.e., to prepare physicians to recognize that their primary patient is a population and that their goal is to improve the health of that population in the aggregate. In accordance with the Accreditation Council for Graduate Medical Education Preventive Medicine Program Requirements (https://www.acgme.org/Specialties/Overview/pfcatid/20/), the program consists of Master of Public Health coursework, practicum and clinical rotations, and preventive residency-specific modules.

In pursuit of that purpose, it is fundamental that the residency and the residents work together to help each other meet their respective needs. Residents must speak directly with the Program Director, Clinical Director, Academic Director, and/or Chief Resident regarding their individual needs and must clearly verbalize their expectations. Similarly, residents should bring problems or issues to the attention of the Program Director, Clinical Director, Academic Director, Chief Resident, or Program Manager for assistance. Additionally, residents may submit feedback anonymously to the program through an online comment box: www.tiny.cc/GPMRcommentbox (http://www.tiny.cc/GPMRcommentbox/). This link brings students to a Qualtrics form that allows anyone to submit information to the program. All submissions are completely anonymous – no location information, IP addresses, etc. are collected except for a timestamp and the content a student submits.

REQUIREMENTS AND EXPECTATIONS FOR PM-1 RESIDENTS

To meet the objectives of the residency, residents will fulfill the following roles and responsibilities in securing training in the teaching, research, and practice of preventive medicine. The common knowledge base that all residents should master is most effectively acquired through shared experiences. Among such experiences are summer orientation, the MPH coursework, the clinical program, and participation in first year training modules, residency administrative rounds, Grand Rounds, and other program activities – all of which are designed to enable residents to gain the skills, knowledge, and experience in competencies required for preventive medicine training.

Roles and Responsibilities of Residents

Although it is important that all guidelines be met, the program attempts to accommodate and remains flexible to allow for residents' interests.

1. All residents must know and follow the policies and procedures, including but not limited to the Professional Conduct Code –

Residency Expectations and Requirements and GPMR Attendance Policy.

2. All residents must meet with the principal faculty on a regular basis. These meetings include a formal, written semi-annual evaluation with Program Director, Chief Resident, and Clinical Director as well as periodic meetings with the Academic Director. Evaluation will consist of a discussion of the didactic work, applied work, clinical work, courses, research projects, papers, and related activities in which the resident has been involved. Residents' academic transcripts also will be reviewed as a part of the process. Evaluation of resident's activities includes identification of areas of strength, areas needing additional emphasis, and professional goals. At the conclusion of each meeting there will be a summary of the resident's performance in New Innovation. This information is required for performance evaluation and credentialing of residents. A sample schedule of when these meetings occur is shown below:
   PM-1 Residents:
   August and October: Meet with Academic Director
   December: Semi-annual review with Program Director and Clinical Director
   February and April: Meet with Academic Director

   June: Semi-annual review with Program Director and Clinical Director
3. **For those residents who are pursuing an MPH:**
   a. Complete MPH coursework. Discuss plan for completing Capstone project during PM-1 year or prior to April of PM-2 year.
   b. Remain in satisfactory academic standing in the MPH program in accordance with the standards set by that program or be subject to dismissal from the General Preventive Medicine Residency Program. Any resident dismissed from the MPH program will be dismissed from the residency.
   c. Maintain full-time registration (minimum of 16 credits for GPMR) in all five terms of the academic year.
   d. Maintain a 2.75 GPA for the MPH program.
   e. Complete all core MPH and all GPMR requirements prior to beginning the Practicum Year.
   f. Residents will receive their MPH during the PM-2 year after completing their practicum rotation that fulfills the MPH practicum requirement.
4. **For those residents who have completed an MPH prior to coming to GPMR:**
   a. Participate fully in scheduled PM-1 didactic and educational modules, as well as other educational activities.
   b. Complete all MPH courses identified by the GPMR program as necessary for preventive medicine training.
   c. Maintain a 3.0 GPA in all residency-required courses that are taken for a letter grade.
   d. Maintain full-time student status. Register for up to 16 credits of Special Studies (PH.550.890 SS/R: General Preventive Medicine Residency-Residency Year) per term.
   e. Plan to schedule primarily part-time rotations (3-4 days a week) in consultation with the GPMR Chief Resident and Program Director during the PM-1 year, in order to allow sufficient time to participate in PM-1 activities and to take any required courses. All rotation schedules are subject to final approval of the Program Director.
   f. With prior approval of the Program Director, may schedule one unfunded or partially-funded rotation during the PM-1 year, for a period of up to three months. Other rotations shall be fully funded at the PM-2 rotation fee rates.
   g. Complete a project at each practicum site.
   h. Complete and submit all assigned rotation reports. A resident is required to submit:
      i. A *Rotation Plan* form, which is due **one week** after beginning the rotation.
      ii. A form evaluating the rotation overall (*Resident Evaluation of Rotation/Preceptor*), which is due **one week** after completing the rotation.
      iii. During the last week of a rotation, the resident must meet with the preceptor as part of an "exit interview" and to help facilitate and ensure the timely completion of the *Preceptor's Evaluation of the Resident*. Residents must receive at least a satisfactory evaluation from each rotation preceptor.
5. All residents must complete the clinical component, equivalent to 2 months (320 hours) of work, each year. All clinical experiences must be approved by the Program Director. Residents are required to complete similar rotation evaluation forms for each clinical rotation including;
   a. A Rotation Plan form, which is due **one week** after beginning the rotation.
   b. A form evaluating the rotation overall (Resident Evaluation of Rotation/ Preceptor), which is due **one week** after completing the rotation.
   c. During the last week of a clinical rotation, the resident must meet with the preceptor as part of an "exit interview" and to help facilitate and ensure the timely completion of the Preceptor's Evaluation of the Resident.

Course Requirements

The following is a list of the curriculum requirements for residents during the PM-1 year. *Note that MPH-required courses must be taken for a letter grade; courses taken to fulfill residency requirements may be taken Pass/Fail unless they are also fulfilling MPH requirements*.

All residents must take the following courses (or courses deemed to be equivalent in prior studies) as required by the GPMR Program:

Code	Title	Credits
PH.188.686	Clinical Environmental and Occupational Toxicology	3
PH.188.840	Special Studies and Research Environmental Health & Engineering (INTRO TO PROBLEM SOLVING)	2 - 4
PH.300.651	Introduction to the U.S. Healthcare System	4
PH.305.623	Fundamentals of Clinical Preventive Medicine	3
PH.550.860	Academic & Research Ethics at BSPH	
PH.552.622	Creating, Implementing and Monitoring Budgets for Projects and Programs	1
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals	0.5
PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals	0.5
Advanced Epidemiology Course [1]		3-4

[1] An advanced epidemiology course that builds on the knowledge and skills of Epi 1 (may be methods course, applied course, content area

course, etc.) Students should please check with the Program Director if they choose this course.

COURSE suggestions

The following is a list of courses suggested (but not required) for residents during the PM-1 year.

Code	Title	Credits
PH.140.621	Statistical Methods in Public Health I	4
PH.140.622	Statistical Methods in Public Health II	4
PH.140.623	Statistical Methods in Public Health III	4
PH.187.610	Public Health Toxicology	4

Residents pursuing an MPH at JHSPH must:

1. Register for one credit of Special Studies (PH.550.880 SS/R: General Preventive Medicine Residency-MPH) during each of the five terms of the MPH year. Regular attendance at all seminars, completion of knowledge assessment quizzes of training modules, and other required residency activities is a condition for receiving a Pass in this course.
2. Complete the MPH Capstone project, which must be in a residency-determined area and format, unless a waiver is given by the Program Director.

All residents who have previously completed an MPH must:

1. Complete any additional coursework required by the GPMR program as necessary for educational enrichment based on an individual academic plan developed upon review of each resident's MPH transcript, per the required course list above.
2. Enroll as full-time student. Register for up to 16 credits of Special Studies (PH.550.890 SS/R: General Preventive Medicine Residency-Residency Year)during each of the five terms of the MPH year. Regular attendance at all seminars, completion of knowledge assessment quizzes of training modules, and other required residency activities is a condition for receiving a Pass in this course.
3. Students should discuss any additional coursework they wish to complete with the GPMR Chief Resident and Program Director.

Educational Plan

Early in the year, first year residents must prepare and submit to the Program Director a written educational plan for the first year of the General Preventive Medicine Residency. Residents who are pursuing an MPH will likely incorporate the MPH Goals Analysis into their educational plan. The deadline for this plan will be announced, but will be well before the MPH deadline. This plan will follow the MPH Goals Analysis guidelines, with the addition of residency-specific information regarding their goals, additional skills, knowledge, competencies students hope to gain from the residency training, and their plans for obtaining these. The plan will include activities outside of the residency itself, such as attendance at professional conferences, research projects, etc. For residents who have already completed an MPH prior to coming to GPMR, a students plan should also include the rotations and other activities they are thinking of completing, and how these will help them in their educational goals. A template for this Plan will be provided.

Advising and Customized Program

As the GPMR Program Director, Dr. Clarence Lam will have responsibility for overseeing overall advising and mentoring of all residents. Dr. Lam will serve as the summer adviser for all PM-1 residents. At the end of the summer term, the MPH office will assign residents in the MPH program to academic advisers based on background and area of interest. In addition, residents in the MPH program must select a Capstone adviser; this adviser may be their MPH academic adviser, the GPMR Program Director, or another faculty member. PM-1 residents who already have an MPH will select an academic adviser in consultation with Dr. Lam based on the resident's area(s) of interest. All PM-1 residents will be expected to meet with Dr. Lam on a semi-annual basis to review their academic performance and professional development within the program.

For PM-2 residents, Dr. Lam will serve as the formal primary faculty adviser for all residents.

In both PM-1 and PM-2 years, all residents will create an individualized academic plan that will meet their professional training needs. PM-1 residents submit both a Goals Analysis to the MPH office and an individualized program-oriented educational plan to the Residency Program Office. PM-2 residents submit this plan to Residency Program Office. This individualized academic plan will be reviewed annually by the Chief Resident and Program Director.

PM-1 residents should elect a *customized* program of study for their MPH degree, although residents may informally follow the sequence of courses for any of the MPH (p. 497) concentrations offered. Residents that wish to apply for and complete an MPH concentration should first receive approval from the Program Director and Chief Resident.

Extracurricular Activities

Crucial to resident learning and success is resident involvement in the opportunities that become available through the MPH and residency programs. Although it is extremely difficult to measure its impact, involvement in classes, in projects, in residency activities, and in the community is the main mechanism for personal growth. We will bring to residents' attention numerous public health-related activities during the year, and residents will hear about many opportunities from other sources.

We expect and strongly encourage residents to:

1. Be involved in as many of these opportunities as their time and energy permit. We encourage residents to engage in at least one preventive medicine research project or preventive medicine practice activity (i.e. community project) either as a part of the residency program or independent of it. Residents also are strongly encouraged to publish any research results and to present them at a residency seminar and national scientific meetings.
2. Serve as visiting instructors in courses when requested.
3. Participate in Special Studies projects that can be organized with faculty and preceptors at the local, state, national, or international health levels in order to gain experience in the solution of practical problems in preventive medicine.
4. Participate actively in departmental and school-wide activities including seminars, required courses, and teaching opportunities.
5. Seek advice and assistance from a faculty member designated as faculty adviser in the planning of both academic and field research experience.
6. Attend preventive medicine/public health national meetings, such as the annual meetings of the American College of Preventive Medicine and the American Public Health Association.

SAMPLE Calendar of Major PM-1 Year Residency Events

Month	Event
July-August	Orientation
	Meet the Professor series
	Public Health Preparedness module
	Journal Club
	Clinical component orientation
September-December	Professional development and skill-building seminars
	Introduction to Problem Solving in Public Health course
	Fundamentals of Clinical Preventive Medicine course (Term 1)
	Creating, Implementing and Monitoring Budgets for Projects and Programs
	Intro to U.S. Healthcare course (also offered in Term 4)
	Public Health Toxicology course (optional course offered in Terms 1 and 2)
	Health Equity sessions
	Clinical program
January Intersession	Advocacy module
	Clinical program
January-May	Clinical Environmental and Occupational Toxicology
	Foundations of Leadership seminar
	Quality Improvement module
	Practicum Rotation selection process, including Meet the Preceptors sessions
	Project Management (biennial)
	Leadership and Management module
	Health Equity sessions
	Colman Grand Rounds
	Clinical program
	TA the Term 3 Online Problem Solving Course
May-June	MPH Capstone Project due
	ACPM Preventive Medicine Conference
	Preparations for second year
	TA the MPH Summer Intersession Problem Solving in Public Health course
	Environmental Health Seminar series with site visits
	Clinical program

PM-1 residents are required to be present and participate in all residency activities through June 30 of that year, except when vacation for the PM-1 course is scheduled.

MPH Capstone

Overview

The MPH capstone project is a graduation requirement for students in the MPH program. The goal is for students to synthesize, integrate, and apply the skills and competencies they have acquired. Completion of the MPH capstone project requires both written and oral components. Additional detailed information is available in the MPH Program guides; some key excerpts are shown below:

- There are no formal guidelines on the length of the paper; range is generally between 15 and 25 double spaced pages.
- The paper must include an executive summary (limited to 300 words) and references.
- The final written project, along with a letter from the faculty capstone supervisor approving the student's project, will be due in the MPH Program Office by a specified date.
- Students should indicate on their MPH Capstone Information form that they will be presenting the oral component with the overall MPH program, scheduled for a Saturday early in May by the MPH program, but should be assigned to the General Preventive Medicine Residency group, which will be moderated by GPMR leadership and faculty.
- During 3rd and 4th terms, students must sign up for at least 1 credit of special studies each term with their capstone supervisor. The capstone supervisor may be their residency adviser, but it can be another faculty member in their area of interest. If a student is working with Dr. Lam as their capstone adviser, they should register for PH.300.800 MPH Capstone Health Policy and Management (MPH Capstone – HPM).
- Although it is encouraged that all residents complete their Capstone during PM-1, residents may seek to complete their Capstone during PM-2.

GPMR Capstone Focus

Preventive medicine residents have a unique opportunity within the School of Public Health to complete multiple "capstones" during residency practicum rotations, with more intensive exposure to chosen areas of interest. The MPH capstone project should contribute to each resident's foundation for engaging in a productive PM-2 year.

The MPH capstone experience in the residency program is designed each year with the goals of meeting all MPH Program educational experiences but also allowing the residents to demonstrate competence in areas that have been a focus of residency seminars during the year. Each year these competencies will vary based on the internal and external environments of public health. The Problem Solving Paradigm may be utilized. All residents will fulfill their MPH oral presentation requirement by presenting at a Capstone Symposium in May. The program faculty and staff will provide specific guidelines as the year progresses.

Rotation Selection Process

Mid-way through their PM-1 year of training, residents begin to plan for the practicum year by reviewing the rotation guidelines, the available established rotations, and other materials such as reports and evaluations submitted by current and former practicum year residents. Rotation Descriptions and Planning Documents can be found in New Innovations.

Calendar for Rotation Selection Process

The selection of rotations follows approximately the schedule below.

Month	Event
Jan-Feb	Rotation information distributed, selection process reviewed, and residents attend Meet the Preceptors sessions to familiarize themselves with established rotation site preceptors and learn more about those rotations
March	Rotation preferences are submitted to program manager
April	Rotation schedule is drafted and refined
April-June	Residents contact preceptors to confirm rotations; program manager finalizes rotation agreements

PM-1 Vacation Guidelines

Residents have 15 vacation days per year. Vacation during the PM-1 year will be determined by the academic calendar and the GPMR-required didactic modules. **The GPMR program schedules modules and learning opportunities for the PM-1 residents during many of the MPH breaks, including spring break, winter intersession, and summer intersession**.

Residents will be provided an annual calendar, which includes holidays, vacation time, and other important residency activities. Please consult the annual calendar carefully and discuss with the Chief Resident before making travel plans. Residents who have completed an MPH prior to coming to GPMR should consult with the GPMR Chief Resident before scheduling vacation; rotation dates will surround the PM-1 vacation schedule as to minimize time away from rotations they will complete during the first year.

All residents will have days off according to Johns Hopkins University holidays:

- Independence Day,
- Labor Day,
- Thanksgiving,
- Winter holidays,
- Martin Luther King, Jr Day
- Memorial Day, and
- Juneteenth.

PM-1 SICK TIME GUIDELINES

All residents at JHSPH are entitled to 15 days (three weeks) paid sick leave per year. Days may be used for a resident's own sickness or to care for a family member. Unused days may not be carried over into the following 12-month period and are not payable upon departure.

When a resident takes sick leave, they should notify their Program Director and keep them as up to date as feasible. The Program Director may require the resident to submit verification of the need for sick leave from their healthcare provider to the University Health Service Center for review. Any documents containing a resident's medical information must be kept separate from their academic file. Extended absences (more than two weeks) must be reported by the resident and the Program Director to the Program Manager as quickly as possible. If the illness requires an extended absence, the resident may apply for a leave of absence.

PM-2 (Second Year) Information

Requirements and Expectations for PM-2 Residents (Practicum Year)

To meet the objectives of the residency, residents will fulfill the following roles and responsibilities in securing training in the teaching, research, and practice of preventive medicine. The residency believes there is a common knowledge base that all residents should acquire and that this knowledge base will be most effectively acquired through shared experiences. Among such experiences are the earning of the MPH degree, attending Grand Rounds, completing clinical preventive medicine training, and meeting the requirements for rotations and administrative rounds during the second year.

Roles and Responsibilities of Residents

Although it is important that **all** guidelines be met, the residency will do all it can to accommodate residents' interests. However, PM-2 residents must:

1. Know and follow the policies and procedures set out in the General Preventive Medicine Residency Handbook, including but not limited to the Professional Conduct Code – Residency Expectations and Requirements and GPMR Attendance Policy on page 13.
2. Attend all residency activities unless formally excused by the Chief Resident. These activities include monthly Administrative Rounds and Grand Rounds.
   Note: Monthly Administrative Rounds are a requirement of the program. If a student is on an away rotation, they may be excused up to 3 Administrative Rounds.
   Note: Students may submit request to the Program Director to be excused for up to 6 Administrative Rounds; prior approval of the Program Director is required. Students are expected to plan for completing any missed clinical sessions prior to participating in away rotation(s). **Students are not allowed to take a vacation day to miss Administrative Rounds if that is not their scheduled vacation time.**
3. Complete the practicum experience required for the MPH degree.
4. Register for 16 credits of Special Studies (PH.550.890 SS/R: General Preventive Medicine Residency-Residency Year) per term during their Practicum Year.
   (Note: residents in their third and fourth year of the combined program should follow the instructions provided by the Residency Program Manager regarding their credit requirement.)
5. Complete and submit all assigned rotation reports per the Practicum Rotations (p. 559)/Resident Requirements (p. 559) guidelines.
6. Engage in at least one preventive medicine research project or preventive medicine project (e.g. a community project) either as part of the residency program or independent of it.
7. All residents must meet with the principal faculty on a regular basis. These meetings include a formal, written semi-annual evaluation with program director and clinical director as well as periodic meetings with the academic co-directors. Evaluation will consist of a discussion of the didactic work, applied work, clinical work, courses, research projects, papers, and related activities in which the resident has been involved. Residents' academic transcripts also will be reviewed as a part of the process. Evaluation of resident's activities includes identification of areas of strength, areas needing additional emphasis, and professional goals. At the conclusion of each meeting there will be a summary of the resident's performance in New Innovation. This information is required for performance evaluation and credentialing of residents. For residents on rotations outside of the Baltimore/Washington area, evaluations will be conducted by telephone, as appropriate.

PM-2 Residents' meeting expectations :

September: Meet with Academic Director
December: Semi-annual review with Program Director and Clinical Director
March: Meet with Academic Director
May: Semi-annual review with Program Director and Clinical Director

8. Participate in the preventive medicine clinical component – equivalent to 2 months (320 hours) annually. All clinical experiences are subject to approval by the Program Director.

PM-2 Educational Plan

Residents are required to prepare an educational plan for their practicum year, using the following instructions to develop the plan. A template for this plan will also be shared with the residents at the start of the academic year.

1. Referring to the competency descriptions in this packet, students will write a narrative (several pages) that details their educational objectives for the practicum year. Include the knowledge, skills, and competencies they hope to acquire in each of their planned rotations and how they believe each rotation will help them meet their professional goals.
2. Students should include in their narrative the knowledge, skills, and competencies they expect to gain in the residency-sponsored modules, monthly rounds, including didactic sessions, Grand Rounds, and their own readings.
3. Students should include a paragraph on what they expect to be doing in one year, five years, and ten years from now.

Practicum Rotations

The major activity of residents in the practicum year of training is participation in practicum rotations. The following section outlines the guidelines for Practicum Preventive Medicine Rotations. More detailed information can be found in New Innovations.

Resident Requirements

1. Each resident must complete twelve months of rotations consisting of a minimum of four different rotations. Rotations must be two to three months in duration. One month rotations are not permitted; four month rotations must be approved in advance by the program director.
2. Each resident must complete at least one rotation of 2-3 months in
   a. Biostatistics/Epidemiology
   b. Management and Administration/Medical Management, and
   c. Either Occupational/Environmental Health **or** Clinical Preventive Medicine.
3. If a student is on an away rotation (outside of the Baltimore-Washington area), they may be excused for up to 3 Administrative Rounds. Note: students may submit request to the Program Director to be excused for up to 6 Administrative Rounds for participation in an away rotation, though prior approval is required. Students are expected to submit a plan for completing any missed clinical sessions prior to participating in away rotation(s).
4. Each resident must select at least two rotations from the list of established rotations.
5. All residents must attend the monthly Administrative Rounds and Grand Rounds during all months that they are doing rotations in the Baltimore-Washington area. They must be present for the entire day of activities. Residents may not take a vacation day on the day of Administrative Rounds unless that is their regularly scheduled vacation.
6. Based on accreditation requirements, each resident must do at least one rotation in a public health agency. Public health agencies are defined as any local health department, any state health department, any federal health agency (such as NIH, NIAID, ODPHP, AHRQ, FDA), and international health agencies such as PAHO.
7. In order to receive credit for each rotation, a resident is required to submit:
   a. A *Rotation Plan* form, which is due **one week** after beginning the rotation.
   b. A form evaluating the rotation overall (*Resident Evaluation of Rotation/ Preceptor*), which is due **one week** after completing the rotation. These forms are available in electronic format and should be completed and submitted through the New Innovations system. ***Failure to submit these documents as required in a timely fashion may lead to a grade of Incomplete in the Special Studies course*** PH.550.890 SS/R: General Preventive Medicine Residency-Residency Year ***and/or denial of the residency certificate of completion. Disciplinary action will be taken if rotation reports are ≥2 months late.*** The purpose of these reports is to enable the residency to support residents more effectively in the field and to identify and resolve problems in a timely manner. These forms are mandatory as a part of accreditation of the residency.
8. During the last week of a practicum rotation, the resident must meet with the preceptor as part of an "exit interview" and to help facilitate and ensure the timely completion of the *Preceptor's Evaluation of the Resident*.
9. Residents must receive at least a satisfactory evaluation from each rotation preceptor. All rotation schedules are subject to final approval by the director of the residency program.
10. Residents must complete the clinical component, equivalent to 2 months (320 hours) of work. All clinical experiences must be approved by the program director. Residents are required to complete similar rotation evaluation forms for each clinical rotation including:
   a. A *Rotation Plan form*, which is due **one week** after beginning the rotation.
   b. A form evaluating the rotation overall (*Resident Evaluation of Rotation/ Preceptor*), which is due **one week** after completing the rotation.
   c. During the last week of a clinical rotation, the resident must meet with the preceptor as part of an "exit interview" and to help facilitate and ensure the timely completion of the *Preceptor's Evaluation of the Resident*.

New Innovation Evaluation Forms and Due Dates

Evaluation Form	Due Date
Rotation Plan	**One week** after beginning rotation (each rotation)
Resident Evaluation of Rotation/ Preceptor	**One week after** completing rotation (each rotation); This form is confidential between the resident and program.
Preceptor Evaluation of Resident	**One week before** completing rotation (each rotation); Residents encouraged to review with preceptor.
Principal Faculty Assessment of Resident Performance	During Semi-annual and Quarterly meetings; Residents encouraged to review with principal faculty.

Residency Rotation Support

It is the residency program's responsibility to ensure that all practicum year residents receive an equitable stipend. The residency is able to do this because rotation sites support the program through rotation fees. The fee is used to support the cost of the residency program.

PM-2 Vacation Guidelines

JHSPH GPM residents are entitled to **15** business days of vacation during the practicum year plus any standard holidays or office closures that fall during a rotation period. (Residents in the combined family medicine/preventive medicine program receive vacation according to MedStar Franklin Square guidelines per the agreement.) Students should be sensitive to the impact of their vacation absence on their rotation project(s). **Students may not take all 15 days during one rotation.** We suggest that students take no more than 2-3 vacation days in a two-month rotation and no more than 5 days in a three-month rotation, while vacation time taken during a longer rotation may be adjusted accordingly. ***Vacation time must be approved in advance by:***

1. ***the program director*** *(vacation requests must be submitted via New Innovations)* ***and***
2. **by the preceptor.**

Vacation days during a rotation must be reported on a student's end of rotation evaluation report (within New Innovations).

Time taken off to attend required residency activities (including Administrative Rounds and Grand Rounds) should not be counted as vacation days, but students should be sure to inform their preceptor at the start of each rotation that they are required to attend these activities. Days taken off for job interviews or other personal reasons are counted as vacation days. Days taken off to attend conferences are not considered vacation days; however, a student's total conference plus vacation days in one rotation should not exceed the total suggested number of vacation days for rotation's length.

As with any professional work situation, students likely will be responsible for completion of specific projects or other deliverables as part of their rotations and they should plan their time toward that end, regardless of vacation time off. Evening and weekend work, while not routinely required on most rotations, is nevertheless a possibility.

PM-2 sick time GUIDELINES

All residents at JHSPH are entitled to 15 days (three weeks) paid sick leave per year. Days may be used for a resident's own sickness or to care for a family member. Unused days may not be carried over into the following 12-month period and are not payable upon departure.

When a resident takes sick leave, they should notify their Program Director and Preceptor and keep them as up to date as feasible. The Program Director may require the resident to submit verification of the need for sick leave from their healthcare provider to the University Health Service Center for review. Any documents containing a resident's medical information must be kept separate from their academic file. Extended absences (more than two weeks) must be reported by the resident and the Program Director to the Program Manager as quickly as possible. If the illness requires an extended absence, the resident may apply for a leave of absence.

Practicum Year Reading List

Rotation	Texts to be Utilized
All Rotations	Wallace R, Kohatsu N. Maxcy-Rosenau-Last Public Health and Preventive Medicine, 15th Ed. McGraw-Hill, 2007.
Biostatistics/Epidemiology	Heyman, D.L. Control of Communicable Diseases Manual, 18th Ed. American Public Health Association, Washington, DC.
Clinical Preventive Medicine	The Guide to Clinical Preventive Medicine 2012: https://www.ncbi.nlm.nih.gov/books/NBK115115 (https://www.ncbi.nlm.nih.gov/books/NBK115115/)/
Management & Administration/ Medical Management	Scutchfield, F.D., Keck, C.W. Principles of Public Health Practice, Delmar, Albany, 1997.

Practicum Year Didactics

Description and Responsibilities

Didactics for practicum year residents are designed to enhance training and provide academic and practical knowledge for critical content areas and/or where gaps are identified in the existing curriculum. Didactic material will be covered at monthly administrative rounds. Each didactic topic will be introduced and discussed with a guest speaker. The residents are responsible for engaging with the speaker and participating in discussions or Q&A.

Practicum year residents must sign up for 16 credits per term for the following special studies course for this didactic component: PH.550.890 SS/R: General Preventive Medicine Residency-Residency Year.

This Preventive Medicine Core Course is designed to expose residents to essential areas in General Preventive Medicine and Public Health. Residents will have been exposed to the content areas of this course during previous training or work experiences. As such, we assume a basic level of familiarity with the course content. The course will be structured around 12 topics. Each topic will consist of introductory comments, didactic materials, and discussion. All residents are required to complete the indicated readings and be active participants in discussion.

Course structure for PH.550.890 SS/R: General Preventive Medicine Residency-Residency Year

Didactic Topics

1. Healthcare Delivery/Health Systems
2. Public Health Nutrition
3. Injury Epidemiology and Prevention

4. Socio-economic Aspects of Public Health
5. Health Promotion
6. Infectious Diseases
7. International Health
8. Occupational Medicine
9. Outbreak and Surveillance System
10. Public Health Practice
11. Global Health
12. Career/Professional Development

Course Objectives by Topics

1. **Health Care Delivery/Health Systems:** To become familiar with basic concepts and organizational design and function of the US healthcare system including Medicaid, Medicare, managed care, and quality assurance.
2. **Public Health Nutrition:** To understand mechanics of micro and macro-nutrition, diagnosis and treatment of over and under-nutrition, anthropometrics, and population-based nutritional interventions.
3. **Injury Control:** To develop a public health approach to injury assessment, management and intervention, and prevention. To learn basic biomechanics of childhood injuries. To learn how to obtain injury information from various sources.
4. **Socio-economic Aspects of Public Health:** To learn major theories of health behavior, the relationship among SES, race, and population–level health determinants, and the implications of these factors for population-based health promotion and primary prevention.
5. **Health Promotion:** To become familiar with principles of providing cost-effective services within clinical encounters. Preventive recommendations for specific disease states will not be addressed but will instead focus on a conceptual framework for the provision of services in private and public practice settings.
6. **Infectious Diseases:** To understand the importance, characteristics, epidemiology, prevention, and treatment of vaccine preventable, sexually transmitted, and other important infectious diseases. To become familiar with the current U.S. Recommended Childhood Immunization Schedule. To gain understanding of vaccine policy.
7. **International Health:** To understand health-related problems and approaches to evaluating, intervening, and promoting health, and preventing diseases in developing countries.
8. **Occupational Medicine:** To understand the historical, legislative framework involving occupational medicine, develop competence in the administration and leadership of an occupational health and safety program, and evaluate and develop therapeutic and preventive interventions for occupational problems.
9. **Outbreak and Surveillance System:** To learn how to investigate an outbreak. To learn how to evaluate and develop good surveillance systems.
10. **Public Health Practice:** To explore the concepts, definitions, and settings of public health practice. To consider the legal and ethical contexts within which public health practice operates. To survey tools available to the public health practice doctor and the challenges they face.
11. **Global Health:** To learn the scope of work for the most important organizations involved in international health. To state the top causes of adult and child morbidity and mortality and the determinants affecting child and adult morbidity and mortality in developing countries. To review the fundamentals involved in disaster relief. To understand the global burden of HIV/AIDS.
12. **Career/Professional Development:** To develop and evaluate residents' curriculum vitae. To provide a venue for residents to self-evaluate their knowledge, skills, and competencies in order to allow them to hone their deficiencies over the remainder of their residency training. To review strategies on networking, interviewing, finding the right first job, negotiating terms, and developing a plan of continuous professional development.

PREVENTIVE MEDICINE IN-SERVICE EXAMINATION

The Preventive Medicine In-Service Examination, provided by the American College of Preventive Medicine (ACPM), is designed for residents in all specialty areas of Preventive Medicine. The material covered in the exam relates to the core (morning) portion of the American Board of Preventive Medicine (ABPM) examination. The exam enables residents and their directors to determine if there are specific areas where more study and experience are needed. It also enables residents to compare themselves with others at the same level nationally. Though it is not intended to be an examination preparation tool, it can be a gauge of how well residents are being trained and prepared for the content of the board examination.

All residents are required to take the annual Preventive Medicine In-Service Examination in each year of training. The exam is given during the summer of each year. The exam is two hours long and all of the questions are "one best response," which is the type of question the American Board of Preventive Medicine now is using in the certifying examination. The Chief Resident and program staff will schedule the exams for both resident cohorts.

Reflecting the content on the core part of the certifying examination, the categories covered are: Epidemiology, Biostatistics, Infectious Disease, Chronic Disease, Occupational Medicine, and Health Services Administration. The number of questions per category is evenly distributed. There are a very few questions on the topic of Health Promotion.

General Textbooks and Resources

- Maxcy, Rosenau, Last - *Public Health and Preventive Medicine*
- Levy and Wegman - *Occupational Health: Recognizing and Preventing Work-Related Diseases*
- McCally - *Life Support: The Environment and Human Health*
- Heymann - *Control of Communicable Diseases Manual*
- Scutchfield, Keck - *Principles of Public Health Practice*
- Novick, Mays - *Public Health Administration: Principles for Population-based Management*
- USPSTF - *Guide to Clinical Preventive Services 2014*
- WWW, scientific and lay literature, and other resources as indicated in specific modules

Program Policies

Residents must abide by the Graduate Medical Education Policies (p. 537) and the School (p. 633) and University (p. 42) Policies.

Additional program-specific policies are outlined in this section.

Professional Conduct Code

The purpose of these guidelines is to foster an atmosphere of professionalism and respect between the GPMR residents, program and staff, and guests (e.g. speakers, lecturers, visitors). Residents' first duty is to the Residency Program (accredited by the Accreditation Council for Graduate Medical Education).

Residency Expectations and Requirements

1. Meet all expectations of the GPMR program, as described in this handbook and elsewhere.
2. Attend all residency activities unless formally excused by the Chief Resident or Program Director. These include, but are not limited to:
    - All residency module activities, journal clubs, seminars, and site visits
    - Monthly administrative rounds
    - In-Service Examination in August
    - Service as teaching assistant for the School of Public Health “Problem Solving in Public Health” courses, including attending the lectures of those intersession courses
    - Additional activities as required by the Program Director or Chief Resident.
3. Attend and participate in all assigned clinical activities and must meet minimum ACGME requirements of 80 shifts per year (4 hours per shift). The Clinical Director must be notified in advance of schedule conflicts or absences. Failure to do so will result in disciplinary action.
4. Notify the Chief Resident well in advance if unable to attend any GPMR activity. Failure to do so in a timely fashion may result in disciplinary action. Absences may only occur within the framework described in the GPMR Activity Attendance section (p. 562), as below.
5. Arrive on time and remain in attendance until the activity is formally closed. Late arrivals and early departures will be treated as unexcused absences.
6. Attend sessions actively - physically, cognitively, psychologically. Unless otherwise specified, we expect residents to refrain from the use of laptop computers, cell phones, tablets, and other digital or distracting devices during residency activities, as distraction detracts from the educational experience and is disrespectful to our invited speakers.
7. If a resident’s performance or conduct is determined to require action, the Residency Program Director will follow the procedures as listed in the Graduate Medical Education Policies (p. 537).
8. Maintain regular communication. Residents are explicitly expected to:
    - Check their JHU email account every day Monday through Friday (except when on vacation). **Read all emails from the Program Director, Chief Resident, and GPMR staff and respond within an appropriate time period (within 48 hours during the work week)**
    - Regularly check the Residency Program calendar for schedules and updates
    - Return all phone calls and text messages from the Program Director, Chief Resident, and staff within 48 hours.
9. Complete readings and submit assignments by specified deadlines.
10. Promptly update GPMR staff with any changes in contact information.
11. Meet individually with the Chief Resident each MPH term or more frequently and meet individually with the Program Director semi-annually to review progress on career development objectives and academic performance.

GPMR Attendance Policy

GPMR training is an educational experience that serves to develop the skills and experiences necessary for a graduating physician to begin a career in preventive medicine and population health and to excel in their own chosen area of the specialty.

As a specialty training program, there are certain core competencies that must be met as part of ACGME accreditation standards. The program expects residents to have a strong motivation to learn about preventive medicine and hopes to create an environment that encourages residents to look forward to activities and events that enhance the breadth and understanding of a resident’s educational experience.

Since repeated absences serve to diminish a resident’s learning opportunities and might even be detrimental to the educational experiences of other residents, this attendance policy has been adopted by the program in order to ensure a positive experience for all residents:

1. GPMR activities include, but are not limited to, those described above.
2. For all residency-required activities and events, attendance will be recorded by the Chief Resident.
3. It is the resident’s responsibility to be up to date on all scheduled GPMR activities and activity updates.
4. Arrive on time or early. Late arrivals demonstrate disorganization and disrespect for one’s peers, and will be treated as unexcused absences and recorded.
5. Remain in attendance until the activity is formally adjourned by the Chief Resident. Early unexcused departures will be treated as unexcused absences.
6. Students should notify the GPMR Chief Resident well in advance if they are unable to attend any GPMR activity. Failure to do so in a timely fashion may result in disciplinary action.
7. Given the wide range of activities and conferences held in the School of Public Health, GPMR understands that residents may desire to attend other activities of professional interest. Residents may be allotted one (1) absence per academic term, in consultation with the Chief Resident and/or Program Director. Permission from the Chief Resident and/or Program Director must be sought well in advance of the desired absence and will only be granted at their discretion. Such professional interest absences can only be used for GPMR lectures. In general, absences will not be allowed for seminar series (such as Problem Solving in Public Health, Public Health Preparedness, etc.), site visits, Administrative Rounds, Grand Rounds, Winter Intersession, or Summer Institute (May-June) activities. Moonlighting is not considered an acceptable reason to miss scheduled residency activities. All moonlighting must be scheduled around residency activities. The moonlighting privilege may be revoked in the event of repeated absences.
8. Excused residents have the same responsibility as their present peers for all activities missed, announcements made, and materials distributed. It is the resident’s responsibility to inquire about and complete any missed assignments. Failure to do so may result in disciplinary action.
9. In the event of unforeseen circumstances that fall outside the control of the resident (e.g., illness), the resident must notify the Chief Resident as soon as possible. Permission for such absences may only be granted at the discretion of the Chief Resident and Program Director after consultation with the resident. In the event that such circumstances occur with frequency, the resident will work with the Chief Resident to develop a remediation plan to account for material that was missed.

10. For repeated absences, sanctions may be imposed according to the following attendance policy:

Number of Absences Per Term	Sanction[1]
First absence	None if prior approval given by Chief Resident
Second absence	Warning and discussion with the Chief Resident
Third absence	Letter in permanent record **and**
	Meeting with the Program Director
Fourth absence	Develop a remediation plan with the consent of the Chief Resident and the approval of the Program Director
Fifth absence	"F" grade for GPMR course **and/or**
	Other sanctions to be determined by the Program Director

[1] Where multiple sanctions are listed, determination is made by the Program Director in consultation with the GPMR Chief Resident.

GPMR Clinical Requirement and Attendance Policy

As part of the ACGME requirements, residents will be training in environments where patient responsibilities are paramount. Similar to other clinical settings, it is not permissible for a student to be absent from their clinical responsibilities without proper notice. (e.g. a student would not find it acceptable if a colleague were absent from patient care duties without notice or coverage while they were in clinic or on the wards.) It is important that students take these responsibilities seriously, and failure to do so is not appropriate behavior.

The procedure and consequences of missed clinical shift are articulated below.

Absences that require at least 2 weeks of notice: this should be reserved for a significant activity that will result in a students absence. This does not include routine activities, meetings with faculty/preceptors, but does include exceptional activities such as presenting at a conference, etc. Students should notify both the Chief Resident and Clinical Director of their potential absence with as much advance notice as possible or as soon as they are aware of the conflict. This request must be approved by the Clinical Director. Students are also responsible for notifying the preceptor for the clinic site and arranging a make-up session.

Less than 2 weeks of notice: This is reserved for illness, family emergencies, and similar circumstances. Students should notify both the Chief Resident and Clinical Director, and this must be approved by the Clinical Director. Students are also responsible for notifying the preceptor for the clinic site and arranging a make-up session.

1st unexcused absence: a formal letter documenting the unexcused absence will be filed in the resident's electronic file. This documentation will be taken into account when drafting letters of recommendation/reference, etc. The resident will be required to meet with the Clinical Director to discuss the absence.

2nd unexcused absence: another formal letter documenting the absence will be included in the resident's file. The resident will be required to meet with both the Clinical Director and Program Director to discuss the absence.

3rd unexcused absence: another formal letter documenting the absence; a meeting with both the Clinical Director and Program Director. The chair of the Graduate Medical Education Committee (Vice Dean for Public Health Practice and Community Engagement) will be formally notified in writing, and the resident may be requested to meet with the Vice Dean.

Additional unexcused absences: disciplinary actions will be determined by the Program Director in consultation with the Clinical Director and chair of the Graduate Medical Education Committee.

Grading Evaluation Policy

Grading is based on presence of residents at administrative rounds, both physically and cognitively, and active participation in discussions and Q&A

SUPERVISION POLICY

Preventive Medicine Competencies

Generic

1. Communicate to target groups including health professionals, the public, and the media, in a clear and effective manner, both orally and in writing, the levels of risk from real or potential hazards, and the rationale for selected interventions
2. Demonstrate the ability to prioritize new or ongoing projects or programs according to their potential impact, as defined by objective, measurable criteria
3. Use information technology for specific applications relevant to Preventive Medicine and Public Health
4. Interpret relevant laws and regulations relating to protection and promotion of the public's health
5. Identify ethical, social, and cultural issues relating to policies, risks, research, and interventions in Public Health and Preventive Medicine contexts
6. Identify the processes by which decisions are made within an organization or agency and their points of influence
7. Identify and coordinate the integrated use of available resources to improve the community's health

Epidemiology and Biostatistics

1. Characterize the health of a community
2. Design and conduct an epidemiologic study
3. Design and operate a surveillance system
4. Select and describe limitations of appropriate statistical analyses as applied to a particular data set
5. Translate epidemiologic findings into a recommendation for a specific intervention to control a public health problem
6. Design and/or conduct an outbreak and/or cluster investigation

Management and Administration

1. Assess data and formulate policy for a given health issue
2. Develop and implement a plan to address a specific health issue or problem
3. Conduct an evaluation or quality assessment based on process and outcome performance measures
4. Manage the operation of a program or project, including human and fiscal resources

Clinical Preventive Medicine

1. Develop, implement, and refine screening programs for groups to identify risks for disease or injury, and opportunities to promote wellness
2. Design and implement clinical preventive services for individuals
3. Implement community-based interventions to modify or eliminate identified risks for disease or injury and to promote wellness
4. Diagnose and manage diseases/injuries/conditions in which prevention plays a key role

Occupational and Environmental Health

1. Assess individual risk for occupational/environmental disorders using an occupational and environmental history
2. Identify occupational and environmental hazards, illnesses, and injuries in defined populations, and assess and respond to identified risks

MONITORING AND EVALUATING RESIDENTS

Definitions:

- **PM-1** = resident in the 13th through the 24th month of preventive medicine training
- **PM-2** = resident in the 25th through 36th month of preventive medicine training

Clinical Skills:

Each resident entering the program as a PM-1 will have completed at least one year of ACGME- accredited clinical residency training. The program director will ascertain from the resident's previous clinical program (or other source as appropriate) that the resident has achieved the six core clinical competencies.

Outpatient Care:

All patients seen by a resident on an outpatient basis must be seen by, discussed with, or reviewed by the responsible site preceptor.

Communication:

Communication with the site preceptor is mandatory in the case of emergent and/or critical incidents or other significant changes in clinical status.

Monitoring/Evaluation:

The goals and objectives as well as the process of evaluation for the training program are discussed at orientation. The goals and objectives are available to all residents and faculty on the residency website. Rotation specific evaluations mirror the goals and objectives for a given rotation. At the end of each rotation, a formal written evaluation is completed for each resident by the site preceptor. A copy of this evaluation is provided to the resident.

Assessment of resident performance will be based on multiple evaluation strategies and may include:

- Direct observation of clinical and interpersonal skills
- Case-based discussion
- Completion of teaching modules
- Review of medical records
- Preparation and delivery of teaching sessions
- Participation in conferences
- Review of patient and/or procedure logs
- Feedback from patients and families
- Feedback from allied health professionals
- Assigned projects such as a clinical research project

Non-compliance with responsibilities or performance problems are generally discovered and addressed in one of the following ways:

1. The site preceptor may address isolated problems with specific individuals. The problem and corrective actions are documented by the site preceptor, who notes the problem, and are transmitted to the program director.
2. Each resident has a faculty mentor who meets with their advisee a minimum of twice a year to review evaluations and provide career counseling. The mentor may be invoked to provide counseling to his/her mentee.
3. The program director reviews all resident evaluations. The Clinical Competency Committee consisting of leadership and key faculty members and as required by ACGME guidelines, meet semi-annually to discuss the progress of each resident. Any identified problems will be discussed and remediation plans will be implemented.
4. Semi-annual, annual, and summary evaluations are completed on each resident in accordance with ACGME-RRC and JHSPH requirements.

In order to be promoted to the PM-2 year, the resident must have demonstrated satisfactory performance in academic coursework and all practicum evaluations must reflect satisfactory performance.

Occupational and Environmental Medicine Residency

Welcome and Introduction

Welcome to the Johns Hopkins Bloomberg School of Public Health Occupational and Environmental Medicine Residency Program. This online resource is designed to give you an overview of the program. It includes information on policies, required competencies, evaluations, and professional resources. Please refer to this information for questions that will come up as you complete your training.

This is not intended as a stand-alone resource. You will find valuable and pertinent information regarding the MPH (p. 497)and the Johns Hopkins Bloomberg School of Public Health (p. 54) in this online catalogue. Additional occupational medicine residency resources and information can be found in New Innovations (a residency management software system) and are available online for our residents to access at any time.

The Program Director, Deputy Program Director and the administrative staff are here to provide direction through your residency. In addition, be sure to talk to faculty and rotation preceptors whose interests, research, and practice activities can help to guide you. These contacts will prove invaluable to your career.

Finally, make the most of your associations with fellow residents and students in the school. You may well find that these relationships are your richest continuing source of support, encouragement, and professional stimulation.

Again, welcome, and our very best wishes for a wonderful training experience and a successful career in the exciting field of occupational and environmental medicine!

Aisha Rivera Margarin, MD, MS
Program Director, Occupational and Environmental Medicine Residency
Johns Hopkins Bloomberg School of Public Health

Brian S. Schwartz, MD, MS
Professor of Environmental Health and Engineering, Epidemiology, and Medicine
Deputy Program Director, Occupational and Environmental Medicine Residency
Johns Hopkins Bloomberg School of Public Health

Program Overview

The Johns Hopkins Occupational and Environmental Medicine Residency (OEMR) is a two-year training program leading to eligibility for the certifying examination of the American Board of Preventive Medicine (https://www.theabpm.org/). All residents are expected to become board certified by the American Board of Preventive Medicine after completing residency training. The OEMR is accredited by the Accreditation Council for Graduate Medical Education (https://acgme.org/) (ACGME) and is one of the key programs that make up the Occupational Safety and Health Education and Research Center (https://www.jhsph.edu/research/centers-and-institutes/johns-hopkins-education-and-research-center-for-occupational-safety-and-health/) (ERC) at Johns Hopkins Bloomberg School of Public Health.

The first year of the program includes graduate coursework, participation in departmental activities and conferences, research and clinical activities.

The second year of the program includes practicum rotations, completion of MPH practicum requirement, participation in departmental activities, clinical activities, research and may include additional coursework.

Mission

The Mission of the Johns Hopkins Occupational Medicine Residency Program is to train physicians who will be leaders in occupational and environmental medicine. Our graduates manage and improve the health of populations through:

1. the development and implementation of programs to mitigate occupational or environmental exposure;
2. the direction of clinical care and health management of individuals and populations exposed to chemical, physical, biological, ergonomic, and/or psychological hazards in a variety of occupational and environmental settings and;
3. application of new technologies, new research findings, and new management techniques to improve the health of working populations and minimize disability.

To achieve this level of training, we will provide trainees with superior academic training and practical, experience-based rotations in a wide variety of workplaces, and unparalleled opportunities to engage in research. We will offer residents a unique opportunity to master the tools of evidence-based medicine, and to apply their skills to real-world problems including disability management, employee health and wellness, environmental exposures, and other emerging occupational and environmental medicine issues. We expect that our graduates will become board-certified practitioners with the capability to perform at high levels in any organization, practice, or academic institution. Whatever their career path, our graduates will have the desire and the ability to examine occupational and environmental health problems in fresh ways, and to generate and impart new knowledge for the improvement of public health.

Learning Outcomes

The educational objectives of the residency are to provide residents with:

1. The knowledge and skills necessary to define occupational and environmental medicine/public health problems; design and implement appropriate interventions; and evaluate the outcomes.
2. Appropriate learning environments in which to apply their skills and knowledge.

Faculty

Residency faculty includes: full-time faculty in the Schools of Public Health and Medicine, as well as affiliated faculty throughout the university and at rotation sites. This allows us to capitalize on the great breadth and depth of occupational and environmental medicine expertise in the Baltimore-Washington DC area. The faculty is engaged in a wide range of clinical, research, and management activities.

Aisha Rivera Margarin, MD, MS, is the Program Director of the residency and a Faculty Associate in the Department of Environmental Health and Engineering. She is board-certified in occupational and environmental medicine and general preventive medicine.

Brian S. Schwartz (https://www.jhsph.edu/faculty/directory/profile/624/brian-schwartz/), MD, MS, is the Deputy Program Director of the residency. He is a Professor of Environmental Health and Engineering, Epidemiology, and Medicine, with a joint appointment in the School of Medicine. He is board-certified in internal medicine and occupational and environmental medicine.

Information on other faculty, along with links to individual websites, can be found at the residency website (https://www.jhsph.edu/academics/residency-programs/occupational-and-environmental-medicine-training-program/Meet%20the%20Team/).

Faculty Advisers

Dr. Rivera and Dr. Schwartz will serve as MPH advisers to all residents, who, with their assistance, will be expected to create an individualized curriculum that will meet their professional training needs. A different faculty adviser may be selected depending on resident interest on a case-by-case basis. Residents will elect a customized program of study for their MPH degree that includes the required courses outlined by the MPH and in this online catalogue. Additional options include MPH (p. 497) concentrations, however due to clinical requirements for the residency these are not always feasible.

Miscellaneous Administrative Information

Residency Facilities

Students' Office and Computer Facilities

Located in room W7606, the students' office has a phone, microwave, and a variety of reference materials. This room contains computers with Microsoft Office software and CD-ROM, in addition to wireless network access for laptops. Around the corner from this room, on the same floor, there is a shared departmental space with a refrigerator and coffeemaker. In addition, all residents have access to the computer facilities of the Bloomberg School of Public Health.

Residency Programs Office

The administrative office for the Occupational and Environmental Medicine Residency and the General Preventive Medicine Residency is located in room WB602. This office suite houses the residency programs administrative staff and the chief resident for the General Preventive Medicine Residency, and serves as office, computer, and seminar space for the General Preventive Medicine residents. Residency files for both programs are kept in this office.

Chief Resident

Each year a chief resident is selected by the Program Director and Deputy Program Director based on resident performance, experience, ability to work with others, ideas to improve the program and desire for the leadership opportunity. If multiple residents express an interest in the position, interviews may be arranged by the Program Director and Deputy Program Director. The chief will receive an additional $1,500 in annual stipend for their responsibilities.

Chief Resident Roles and Responsibilities

- Works closely with the OEMR Program Director and Deputy Program Director in all the responsibilities outlined below
- Serves as an advocate and role model for other residents by following program policies, participating in program activities, recommending improvements, and providing advice to other residents
- Serves as a member of the Graduate Medical Education Committee (GMEC) and the Residency Advisory Committee/Program Evaluation Committee (RAC/PEC) and provides feedback on residency policies, programs, and procedures
- Handles delegated administrative duties including but not limited to:
    - Scheduling Monday teaching seminars
    - Coordinating with faculty and residents to schedule administrative rounds
    - Assisting program faculty in organizing and facilitating educational activities, projects, and rotations
- Assists in the OEMR's orientation program for new residents in early July of each year
- Participates in interviews with OEMR applicants in November and December of each year and assists in other recruitment activities as needed (including accompanying applicants in tour and lunch)
- Organizes an annual resident feedback meeting and provides an aggregate summary of recommendations from that meeting to program faculty.

Randy Bass Award

The Randy E. Bass in the amount of $1,500.00 was endowed in 1996 through Dr. Bass' estate. Randy received his MPH from the Johns Hopkins Bloomberg School of Public Health in 1988 and completed the Occupational Medicine Residency in June 1989. Dr. Bass served as a team member in developing final environmental cadmium standards and received the Secretary's Exceptional Achievement Award from the U.S. Department of Labor. He was active in the Occupational Medicine Residency teaching and training programs, and in the teaching of undergraduates. This award benefits a student who demonstrates the same dedication to the field that Randy did during his all too brief career.

Resources for Professional Development

Professional Organizations

The American College of Occupational and Environmental Medicine (http://www.acoem.org/) **(ACOEM)**

ACOEM is one of the major professional organizations for occupational health professionals (mainly physicians). ACOEM offers members a variety of services and publications, including the *Journal of Occupational Medicine, ACOEM Report*, an employment referral service, the Occupational Physicians Scholarship Fund, and many others. ACOEM has a Residents and Recent Graduates section that represents residents' interests to the larger organization. ACOEM sponsors the American Occupational Health Conference (AOHC) in the spring of each year that provides an important networking opportunity. Membership for residents is discounted and includes all of the services and publications.

The ACOEM website has many useful areas including Career Planning (http://acoem.org/Careers/What-Is-OEM/); free Audio Podcasts on OEM Practice Settings and Career Opportunities; and the Knowledge Centers.

There is also a State component, the Maryland College of Occupational/ Environmental Medicine (MCOEM) that sponsors scientific meetings, and residents can become members at the same time they join ACOEM. Attendance at the twice-yearly Saturday morning conferences offered by MCOEM has been a residency requirement in the past, however these are not always held from year to year.

The American Public Health Association (https://www.apha.org/) **(APHA)**

The APHA has an Occupational Health and Safety (OHS) Section that has mainly consisted of academics, researchers, and public health professionals in medicine, nursing, and industrial hygiene, in the past. The APHA sponsors an annual conference (>12,000 annual attendance) and offers many services. The *American Journal of Public Health* comes with membership and publishes good articles relevant to occupational safety and health.

Association of Occupational and Environmental Clinics (http://www.aoec.org/) **(AOEC)**

The AOEC is a network of individuals and clinics across the country, primarily university-based, that practice occupational and environmental medicine. The AOEC has an extensive clinical lending library, including slide sets that can be used to make presentations. It also maintains a database of clinical cases from across the country, and collaborates with Federal agencies and its members to make grant opportunities available on a wide range of topics. COEH is a clinic member.

International Society for Environmental Epidemiology (https://www.iseepi.org/) **(ISEE)**

The ISEE sponsors an annual scientific conference of outstanding quality and the journal *Epidemiology*. Join if you are interested in epidemiology or an academic career.

American College of Preventive Medicine (ACPM)

The ACPM is the preventive medicine physician professional organization.

Journals in Occupational Health

- *Journal of Occupational and Environmental Medicine* – The journal of the ACOEM, this is a standard that is widely read.
- *Occupational and Environmental Medicine* – British journal
- *American Journal of Industrial Medicine*
- *Environmental Research*

- *Environmental Health Perspectives* – A standard for environmental journals, high impact factor, includes the Grand Rounds in Environmental Medicine series
- *American Journal of Epidemiology* – Broad topics, high quality articles including some occupational and environmental epidemiologic research
- *Archives of Environmental & Occupational Health*
- *Scandinavian Journal of Work, Environment, and Health*
- *American Journal of Public Health*- broad

Occupational health research is also irregularly published in the *New England Journal of Medicine, Journal of the American Medical Association, Science, Annals of Internal Medicine, Annals of Epidemiology, Lancet, and British Medical Journal*.

Online Data Sources

National Library of Medicine (NLM) Environmental Health and Toxicology Specialized Information Services - Lots of useful data and databases.

> **TOXLINE** - NLM's on-line bibliographic search system for toxicology and pharmacology
>
> **MEDLINE/PUBMED** - Also from NLM

Welch Library **(**https://welch.jhmi.edu/**) Databases** - Essential source for online articles and other relevant resources. Will be addressed in OEMR seminar conference

National Institution for Occupational Safety and Health **(**https://www.cdc.gov/niosh/**) (NIOSH)**

O **(**https://www.osha.gov/**)**ccupational Safety and Health Administration **(**https://www.osha.gov/**) (OSHA)** - You need to know about new OSHA publications when they become available. When new standards are published in the Federal Register, they contain much information that is deleted when published in final form in the CFR (often ends up as preamble)

The Agency for Toxic Substances and Disease Registry **(**https://www.atsdr.cdc.gov/**)** (ATSDR), part of the Public Health Service in Atlanta, has several publications of great use such as the *Case Studies in Environmental Medicine*

Note: We will have an additional conference on resources.

Program Requirements

Course location and modality is found on the BSPH website (https://publichealth.jhu.edu/academics/course-directory/coursesection-numbers-explained/).

ACGME Milestones

The ACGME Milestones for Occupational Medicine (https://www.acgme.org/Portals/0/PDFs/Milestones/PreventiveMedicineMilestones-PublicHealthandGeneralPreventiveMedicine.pdf) are used to evaluate the progress of each resident from baseline level (level at the beginning of training) through completion of training, with the goal that each resident will attain a level of competency for independent practice in each area. The program also recognizes that some residents may attain a level of advanced expertise in selected areas based upon completing electives and experiences that demonstrate this level of advanced competency. Milestone ratings are based upon evaluation tools, including but not limited to: resident portfolio content related to achievement of ACGME competencies, resident research products, work products from rotations, preceptor feedback documented on rotation and continuity clinic evaluations, and academic transcripts. The milestone ratings are completed by the Clinical Competency Committee which meets twice annually, and are uploaded to the ACGME ADS website twice annually in accordance with ACGME requirements. Milestone ratings are shared with the residents during semi-annual reviews.

Requirements and Expectations for OEM Residents

To meet the objectives of the residency, residents will fulfill the following roles and responsibilities:

Although it is important that **all** guidelines be met, the residency will do all it can to be flexible to allow for residents' interests. However, all residents must:

1. Know and follow the policies and procedures set out in this OEMR online catalog.
2. Read, understand, and respond appropriately to residency communications from the Director, Deputy Director, Chief Resident, and staff.
3. Complete 80 days of clinic in the first year of training per ACGME requirements, and maintain and submit documentation of completion of these clinic days using the "Continuity Clinic Log" form available on the OEMR New Innovations site to the Program Director and Deputy Director at least every 6 months and upon request. During the second year of training, clinical requirements are met through block rotations.
4. Attend all residency activities and fulfill all related requirements unless formally excused by the Deputy Director and/or Director. These activities include, but are not limited to:
    a. Summer orientation
    b. In-Service Examination
    c. Seminars
    d. Special sessions during Winter Intersession and following completion of courses in the 4th Term
    *It is your responsibility to notify the Deputy Director and/or Director at least 2 weeks in advance if you are unable to attend any of the above activities.
5. Meet all MPH and residency requirements, including course requirements of each. Note that *MPH required courses must be taken for a letter grade*.
6. Remain in satisfactory academic standing in the MPH program in accordance with the standards set by that program or be subject to dismissal. Any resident dismissed from the MPH program will be dismissed from the residency.
7. Maintain full-time registration (16 or more credits).
8. Maintain a 3.0 GPA in all residency-required courses in the MPH curriculum.
9. Complete and submit all monthly and final rotation reports. *(Failure to submit these documents as required in a timely fashion may lead to a grade of Incomplete in* PH.550.870 SS/R: OCCUPATIONAL MEDICINE RESIDENCY-PRACTICUM YEAR *and/or denial of the residency certificate of completion.)*
10. Receive at least a satisfactory overall evaluation from each rotation preceptor.
11. Meet with the director of the residency program twice a year, in November-December and April-June, for a formal written evaluation. Each evaluation will consist of a discussion of rotations, conferences, courses, research projects, papers, and related activities in which

the resident has been involved. In addition, transcripts and preceptor evaluations will be reviewed as a part of the process. There will be a summary of the resident's performance. This information is required for performance evaluation and credentialing of residents.

12. Complete their research project.
13. Participate in objective structured clinical evaluations, worksite evaluations, and other learning activities as they arise.
14. In addition, involvement in unique opportunities that become available through the MPH and residency program are crucial to resident learning and success. We encourage residents to be involved in these opportunities as their time and energy permit. Examples include guest lecturing and participating in public health practice projects. We also encourage attendance at national meetings, such as the annual meetings of the American College of Occupational and Environmental Medicine and the American Public Health Association.
15. Complete all USMLE Step examinations by the end of the first year in the program.

MPH Highlights

Residents matriculate in the MPH (p. 497) program of the Johns Hopkins Bloomberg School of Public Health (BSPH). For the MPH degree, courses required of OEM residents fall into two groups:

1. those required by the school for the MPH degree and
2. those required by the residency to achieve ACGME preventive and OEM competencies (https://acgme.org/Specialties/Overview/pfcatid/20/).

The latter also include courses that fulfill American Board of Preventive Medicine (https://www.theabpm.org/) (ABPM) eligibility requirements.

Residents must meet all departmental and graduate school requirements. MPH (p. 497) requirements can be found online.

Example Schedule with Required Courses

Courses listed for each term are required by either the residency or the MPH program, there is a document entitled "OEM courses" in New Innovations that may provide greater clarity on which courses are required by the residency. Residents should review the MPH requirements closely as these may change from year to year. Residents must register for 16 credits in all terms. You do not have to register for resident seminar for credit if you would like to take additional courses. However, you should make sure your courses do not interfere with resident seminar or your clinic. Any concerns should be communicated to Program Director and Deputy Program Director.

MPH Requirements
(80 credit hours are needed for degree, including core, residency requirements and electives), only 20 credits total may be taken in "special studies" courses.

Course	Title	Credits
First Year		
Summer Term		
PH.300.615	The Tools of Public Health Practice	1
PH.380.755	Population Dynamics and Public Health	2
PH.300.610	Public Health Policy	4
PH.306.601	Introduction to Bioethics in Public Health Practice and Research	1
PH.550.867	Introduction to MPH Studies	
PH.550.860	Academic & Research Ethics at BSPH	
PH.340.601	Principles of Epidemiology	5
PH.180.601	Environmental Health	5
PH.188.840	Special Studies and Research Environmental Health & Engineering	1
	Credits	**19**
First Term		
PH.188.680	Fundamentals of Occupational Health (online)	3
PH.140.611	Statistical Reasoning in Public Health I (**Do online but sit in on class as desired**)	3
PH.410.620	Program Planning for Health Behavior Change	3
PH.552.609	Psychological and Behavioral Factors That Affect A Population's Health (online)	0.5
PH.552.625	Building Collaborations Across Sectors to Improve Population Health (online)	0.5
PH.552.608	Biologic, Genetic and Infectious Bases of Human Disease (online)	0.5
PH.552.601	Foundational Principles of Public Health (online)	0.5
PH.188.840	Special Studies and Research Environmental Health & Engineering [1]	1
Electives or additional Special Studies credits (p. 569)		1
	Credits	**13**
Second Term		
PH.187.610	Public Health Toxicology (online)	4
PH.182.621	Introduction to Ergonomics [2]	4
PH.140.612	Statistical Reasoning in Public Health II (online)	3
PH.182.625	Principles of Occupational and Environmental Hygiene	4
PH.380.604	Life Course Perspectives on Health (online)	4
PH.188.840	Special Studies and Research Environmental Health & Engineering (Resident Seminar) [1]	1
*INTERPROFESSIONAL EDUCATIONAL EVENT (required, but not formal course)		
	Credits	**20**
Third Term		
PH.312.600	Managing Health Services Organizations (online)	4
PH.552.621 or PH.552.622	Basic Resources Management for Public Health or Creating, Implementing and Monitoring Budgets for Projects and Programs	1
PH.188.686	Clinical Environmental and Occupational Toxicology	3
PH.317.600	Introduction to the Risk Sciences and Public Policy (online)	4
PH.552.624	Applications of Negotiation and Mediation for Public Health Professionals	0.5
PH.552.623	Principles of Negotiation and Mediation for Public Health Professionals (online)	0.5

PH.552.603	The Role of Qualitative Methods and Science in Describing and Assessing a Population's Health (online)	0.5
PH.552.610	The Social Determinants of Health (online)	0.5
PH.552.626	Systems Thinking: Concepts and Methods	0.5
PH.552.611	Globalization and Population Health (online)	0.5
PH.260.720	Communications Primer for the Public Health Sciences (online assigned to 1st, 2nd, or 3rd term according to last name)	1
PH.188.840	Special Studies and Research Environmental Health & Engineering [1]	1
	Credits	**17**
Fourth Term		
PH.186.800	MPH Capstone: Environmental Health & Engineering	2
PH.317.610	Risk Policy, Management and Communication (online)	3
PH.188.681	Onsite Evaluation of Workplace and Occupational Health Programs (worksite evaluation course)	5
PH.340.722	Epidemiologic Inference in Public Health II (online)	4
PH.340.680	Environmental and Occupational Epidemiology (if it is offered online)	4
PH.188.840	Special Studies and Research Environmental Health & Engineering (Resident Seminar) [1]	2
PH.305.615	Occupation Injury Prevention and Safety Policy and Practice	2
	Credits	**22**
	Total Credits	**91**

Second Year

Code	Title	Credits
PH.550.870	SS/R: Occupational Medicine Residency-Practicum Year (16 credits per term)	16
PH.340.680	Environmental and Occupational Epidemiology (4th term)	4

Recommended Electives

Code	Title	Credits
PH.180.629	Environmental and Occupational Health Law and Policy	4
PH.180.611	The Global Environment, Climate Change, and Public Health	4
PH.180.670	Introduction to Public Health Emergency Preparedness	3
PH.182.623	Occupational Health Management	3
PH.140.613 & PH.140.614	Data Analysis Workshop I and Data Analysis Workshop II	4
PH.305.623	Fundamentals of Clinical Preventive Medicine	3
PH.182.637	Noise and Other Physical Agents in the Environment	4
PH.182.617	Exposure Sciences for Health Risk Assessment	4

[1] If needed, residents can also get credit for resident seminar by signing up for 1-2 credits of EHE 188.840 to meet the 16 credit hour minimum requirement in any given term. However, some residents may choose not to sign up for resident seminar because either 1) they take additional electives instead or 2) they have a minimum of 16 credit hours with their other courses.

[2] Ergonomics course can be scheduled in first year if schedule allows, however many residents have taken it in second year.

Individualized Learning Plans and MPH Goals Analysis

Each new first year resident prepares an individualized written educational plan for the residency program and a similar, but separate MPH learning plan. Templates for the individualized learning plan can be found in New Innovations, residents are expected to complete the plan for first year prior to the first meeting with the program director. Residents are expected to start on the plan for second year prior to the first semiannual evaluation meeting with the program director. Residents should approach developing their plans seriously and use information from their MPH learning plan with the addition of residency-specific information regarding goals, additional skills, knowledge, and competencies the resident intends to gain from the residency training, and plans for obtaining these. Each plan will outline courses to be taken by the resident to meet their individual educational goals. The residency plan will also include research goals for the resident, and identify specific competencies that the resident will develop during residency training. Dr. Rivera will guide the resident in this process and must approve this document. There are examples of the templates the residents will complete for the MPH in New Innovations as well, however these will be sent to the resident by the MPH program. The resident should download the PDF of the completed MPH goals analysis documents and upload them into their learning portfolio in New Innovations.

Before beginning their second year, residents are required to submit a **residency and professional goals analysis** for the practicum rotations that serves as an individualized learning plan, using a template that will be provided. The plan will include a statement of the resident's professional and career goals (similar to the plan they complete at the beginning of the MPH year), the rotations planned and the competencies to be achieved.

MPH Capstone

The MPH capstone project is a graduation requirement for students in the MPH program. The goal is for students to synthesize, integrate, and apply the skills and competencies they have acquired. While OEMR residents have an opportunity to complete a customized capstone project done in the Occupational Health worksite evaluation course in the 4th term, they should be mindful of any changes that may occur with this course that could affect their opportunity to do a worksite evaluation as a capstone project. Ultimately, residents are responsible for coming up with their capstone project and should think of feasible, alternate projects if unable to complete a worksite evaluation. Residents are responsible for meeting Capstone deadlines and Capstone projects must be approved to make sure they meet the School's requirement.

The link to the School's academic calendar (https://www.jhsph.edu/academics/calendar/2020-2021.html) can be found online.

MPH Practicum

The MPH requires each student complete a practicum experience totaling 100 hours. The practicum should be a programmatic project, ideally focused on quality improvement, where you can apply your public health skills and competencies while supervised by your preceptor. Effective with residents entering into the July 2019 cohort, residents will complete their MPH practicum requirement during the second year of their residency while on a practicum rotation. Each resident will need to submit the practicum learning plan (https://jhsph.co1.qualtrics.com/jfe/form/SV_bpVoc2NnI9DjNFs/) for review and approval *prior* to the start of the rotation activity that you intend to apply towards the practicum. Approval generally takes 1-2 weeks from time of submission, and is required before you begin.

Once approved, residents should register for three credits of PH.186.895 MPH Practicum: EHE for the term they will complete the practicum in. Additional information about the MPH practicum can be found online (https://www.jhsph.edu/offices-and-services/practice-and-training/practicum/).

In particular, residents will note that:

1. Their practicum plans will need to be approved in advance by Paulani Mui, MPH Practicum Coordinator.
2. An MPH practicum generally is not clinic-based.
3. Residents should proactively communicate with the rotation preceptor of the rotation they would like to use toward the practicum requirement to make sure there is an appropriate project and they can complete the MPH forms in a timely manner.

Course Registration

Residents must register for 16 credits in all five terms in both the first and second year of the residency. Residents doing second year rotations should register for rotation credit listed as special studies (PH.550.870 SS/R: Occupational Medicine Residency-Practicum Year).

Seminar Series

Residents attend a variety of weekly seminars while the MPH terms are in session. Seminars start at noon and include:

- Education and Research Center seminars (1st Monday @ noon);
- Departmental Journal Club (2nd and 4th Monday @ noon);
- ESEE Seminar (3rd Monday @ noon);
- Resident seminar (every Monday from 1:30-3:30pm, *summer schedule varies*).

Topics and speakers for resident seminars are coordinated by the chief resident and program directors.

The schedule for resident seminars is posted on New Innovations. These seminars are being held virtually via Zoom but are subject to change. Attendance at Journal club, Departmental noon conferences, ERC, and Resident seminars is required of all residents. Attendance may be waived for residents on out of town rotations with permission of either Dr. Rivera or Dr. Schwartz. In addition, attendance at the annual Mid Atlantic Regional Conference for Occupational and Environmental Medicine (MARCOEM) conference is a residency requirement when it is held at Hopkins. Residents are expected to attend ERC events including the annual Anna Baetjer Lecture hosted by the Department of Environmental Health and Engineering. The Department also hosts a grand rounds and residents are strongly encouraged to attend during their first year and when it does not interfere with their courses or clinical rotations; second year residents are not expected to attend grand rounds while on rotations as they are typically held on campus on Fridays.

Journal Club

Residents are required to attend Journal Club, which meets during the Fall and Spring semesters on Mondays starting at noon. Residents and other graduate students are responsible for presentations at Journal Club. Additional guidelines on how to select an article and give a presentation at Journal Club are available on New Innovations.

Research Requirement

Residents are required to do a research project that results in a manuscript of publishable quality and/or conference presentation. Posters presented at national meetings such as the AOHC fulfill this requirement. Examples of resident research publications are available upon request.

Residents will meet with the Program Director and/or Deputy Director early in the program to define their research projects and advisers. Drs. Rivera and Schwartz will help residents identify an appropriate research preceptor. Residents will work individually with their research preceptor on a mutually chosen topic. The preceptor is responsible for the scientific conduct of the research and for the evaluation of the resident's performance. The resident can devote special studies courses to research activities and manuscript preparation. Residents should carefully define their goals for the research (e.g., acquisition of data analysis skills, review article approaches, learning to prepare manuscripts or grant applications) and choose a research project with a faculty member that will meet these goals. *If a resident needs more structure, they have the option and are encouraged to take courses through the MPH that will give them additional data analysis and research training as well as provide a structured research project as part of the coursework*. Residents are strongly encouraged to publish their research results and present them at national scientific meetings.

If data analysis is the goal, previously collected data should be analyzed. The short length of the residency program precludes projects that involve collection of original data by the resident. Similarly, obtaining IRB approval is also time-consuming and should be avoided. Acceptable research projects involve those for which IRB approval has already been obtained or the project will be approved as exempt by the IRB. A timetable for resident research projects is shown below:

Example Research Project Schedule

Time	Description
August	Resident meets with Program Director and potential research project advisers, identifies research project adviser, defines research project.
October	Research project adviser, project outline, and timetable presented to Program Director for approval.
February-June	Residents present updates on progress of their research project.
Second Year	Residents present seminars on results of research projects at Hopkins and national meetings. The final manuscript may be submitted after receiving comments/edits from adviser, Program Director, and seminar.

Practicum Rotations

Through participation in practicum rotations, residents must acquire and demonstrate the broad clinical and public health skills necessary for occupational and environmental medicine practice. Residency rotations include: required/core, direct patient care, and elective rotations. The preceptor will be available to residents at all times. Precepting during non-clinical, population-based activities will also be direct but contact frequency will be dictated by work requirements. Any deviation from this policy should be reported to the OEMR Deputy Director or Director ASAP.

During first year, residents are assigned to clinics. Each resident is expected to complete an individual learning plan in each of the 2 residency years. The learning plan for second year is done during the second half of first year and is a tool to help residents think about their career goals, the program requirements and available rotations and indicate where they would like to rotate in 2nd year. Residents should verify with the residency staff that there is an agreement between the rotation site and Johns Hopkins. The program director or deputy program director will confirm rotation sites for each resident going into second year prior to the end of the first year. Rotations will not be changed during second year unless there are extenuating circumstances. Prior to starting any rotation, residents should review the specific ACGME-required competencies, goals, and objectives for that rotation. Residents should submit accurate contact information for the rotation preceptor (if there are any changes) to the Residency Program Director and Deputy Program Director. Residents are responsible for rotation evaluations for each rotation. All evaluation forms are distributed through New Innovations (you will receive a notification email of pending evaluations; follow the instructions provided to you during orientation to access New Innovations.) Preceptors will receive the Preceptor Evaluation of Resident through New Innovations prior to the end of the rotation. Residents are responsible for completing evaluations of each rotation and all **rotation evaluations are due a week after the rotation ends**. Each resident is required to continue to attend OEMR seminars and conferences. Residents are responsible for making sure vacation requests are cleared and communicated with their individual rotation sites (e.g., send a friendly email to your preceptor to let them know you're planning on taking vacation and want to make sure it's not a problem for the site) and requesting vacation time through New Innovations.

Any resident who needs an accommodation due to a disability should follow the School's policies for requesting accommodations. Residents should also notify Dr. Rivera ahead of a rotation to make sure the accommodation request is communicated to the rotation site, please keep in mind individual rotation sites may have separate processes for requesting accommodations.

Core Rotations

1. A rotation at Johns Hopkins Division of Occupational Medicine and the University of Maryland Occupational Medicine Program, which also includes industrial hygiene and safety activities - 2 months
2. A union-based rotation (International Association of Fire Fighters) - 2 months
3. A regulatory rotation (OSHA) - 2 months
4. Direct patient care - 4 months in total per year

Elective Rotations

Elective rotations are designed to provide competencies unique to individual resident goals. Elective rotations allow the individual resident to tailor practicum rotations to fit their career objectives. These electives may be clinical, research, or administrative in nature. Established electives have goals/objectives and competency forms already completed, if these are not already completed you will need to develop goals and objectives and a competency form with your rotation preceptor. The elective must be approved by the Program Director or designee. A list of elective options can be found on New Innovations.

How to Confirm A Rotation

1. Get verbal agreement from selected rotation supervisor
2. Get verbal approval from Program Director
3. Ask rotation preceptor to send credentials and contact information to Program Director
4. Create or review (if one already exists) the list of Goals and Objectives, and Competencies and submit to the Program Director
5. Residency manager will coordinate with the rotation site to establish an agreement is one does not already exist

Sample OEMR Rotation Schedule

Rotation Period	Requirement
Year 1	
July-August	Coursework only
September-December	Continuity Clinic (one day per week)
January	FT Clinics with continued Continuity Clinic
February-May	Continuity Clinic (one day per week) with PT academic or OM clinics
End of May-June	FT Clinics with continued Continuity Clinic
Year 2	
July-August	IAFF
September-October	OSHA
November-December	Elective
January-February	JHH/UM
March-April	Elective (e.g., Erickson Living)
May-June	Elective (e.g., OM Clinics: Mercy/ PFC/CorpOHS

Direct Patient Care Clinical Requirement

In accordance with ACGME requirements, all OEM residents will complete 80 days of clinic in an OEM specialty clinic during each year. This is accomplished through weekly continuity clinic to attain patient and programmatic competencies with full-time clinical experiences in January and June at a range of clinics where residents can be assigned including OEM clinics at Johns Hopkins, the University of Maryland, the Center for Occupational and Environmental Neurology, Mercy Health, DC Police and Fire Clinic, CorpsOHS and Occupational Health Consultants. During the second year, residents do 4 months of clinical rotations to fulfill this requirement, the required core JHH/UM rotation is a 2 month rotation but only counts toward one month of clinical rotation time because residents are not in clinic every day. Residents should sign up for at least 3 additional months of clinical rotations in the second year but are encouraged to choose more clinical time.

Continuity Clinic

This clinical experience will be coordinated with the MPH course schedule, and take place in half to full day increments. During weeks when no classes are in session, residents are strongly encouraged to spend full weeks in clinic in order to meet this requirement. The Program Director and Deputy Program Director will supervise the selection and scheduling of clinical time in clinics that meet this ACGME requirement, including but not limited to: the JHH OIC, the UM OEM Clinic, the COEN, Corp OHS, and Occupational Health Consultants. A tracking form shall be used to document clinical experience, and will be reviewed with residents during orientation and periodically reviewed by the Program Director, Deputy Program Director, and Program Manager in order to ensure compliance with this requirement.

Third (Research) Year and Other Training Options

The residency program has limited funding available for an optional third year of training. This position, which is not considered part of the ACGME-approved residency, is designed for those physicians interested primarily in research. The third year option would allow the trainee to pursue an investigation in depth, utilizing the extensive research resources available within the School and the University. Interested physicians should discuss their interest with Dr. Schwartz.

Applicants with prior experience or education in occupational medicine can request special or flexible programs that may involve partial course loads, research, and other special schedules. These requests are also handled individually and interested applicants should express their interest early in the application process. Residents may also earn a PhD or DrPH in occupational health. These degree programs have several requirements and would be expected to add at least 3 years of additional training, and are not a part of the ACGME-approved residency program.

Evaluations

Evaluation of Residency Program

Numerous evaluations are utilized to assess the program and the resident's progress in it. Resident input is an essential part of the evaluation process. Residents have several opportunities to provide written evaluations of the adequacy, quality, and appropriateness of each component of the educational program. Some of these evaluations are provided to the Chair of the Residency Advisory Committee/Program Evaluation Committee on an annual basis.

1. Students evaluate individual courses in the school and evaluations are made available to faculty members. Each resident completes an evaluation of every rotation.
2. Residents complete a comprehensive anonymous evaluation of all aspects of the program at the end of each year through Survey Monkey.
3. The ACGME's anonymous resident survey of the residency program is done annually.
4. The Program Evaluation Committee (PEC), an external group composed of prominent occupational health professionals, meets to evaluate the residency once per year. The program has Residency Advisory Committee that can meet if needed and requested.
5. The Graduate Medical Education Committee (GMEC) meets four times per year and provides input to the program. Residents are welcomed at the meetings.
6. Residents meet every year and provide compiled anonymous feedback to the program.

Evaluation of Residents

Self-evaluations

At the beginning of each year, residents perform a self-evaluation, based on competencies identified by the ACGME. These competencies form the basis of the educational program. Discussions with the Program Director, the self-assessment and the resident's previous experience and training, are used by each resident as they prepare an individual written educational plan. This plan identifies training needs and experiences for the resident, and serves as the basis for course selection over the two years. An update of this document in the second year guides additional rotation selection. Both documents are discussed with and approved by the Program Director and/or Deputy Program Director.

Coursework

Academic grades are evaluated each term. Performance in courses and other activities are monitored and any academic deficiencies are quickly identified and addressed. Resident participation in and presentations at the OEMR conference series are also used by the Program Director and Deputy Program Director to provide additional feedback to residents.

The Clinical Competency Committee and the rotation preceptors discuss resident progress throughout the year. Overall progress of trainees is also used to modify the training program.

In-Service Examination

All residents are required to take the annual Preventive Medicine In-Service Examination in each year of training. The exam is given during the summer of each year. The Preventive Medicine In-Service Examination, provided by the American College of Preventive Medicine (ACPM), is designed for residents in all specialty areas of Preventive Medicine. The material covered in the exam relates to the core (morning) portion of the American Board of Preventive Medicine (ABPM) examination and includes questions on Epidemiology, Biostatistics, Infectious Disease, Chronic Disease, Occupational Medicine, and Health Services Administration. Exam results include individual scores by category, the overall percent correct, and a national comparison with other programs (coded). Results are used to guide programmatic content in the OEMR as well as identify areas of additional concentration for individual residents.

Rotation Evaluations

A fundamental requirement of the residency training program is that the resident be given and demonstrate increasing responsibility for the management of all aspects of occupational and environmental medicine. An evaluation of performance, based on a set of competencies/educational objectives designed for each rotation, is obtained at the completion of each rotation. Preceptors in each rotation are asked to evaluate each resident on their ability to assume responsibility throughout the rotation. Preceptors are encouraged to review these evaluations with the resident in an exit interview at the end of the rotation.

Resident Learning Portfolio and Semi-Annual Evaluation of Residents

All residents meet with the Program Director twice per year for a semi-annual performance evaluation that becomes a permanent part of the resident's file. During the semi-annual performance report meeting with the resident, the resident reviews all written evaluations by preceptors. Residents are responsible for keeping all residency work products such as PowerPoint slide handouts and manuscripts on a flash drive or computer and uploading them to New Innovations prior to semiannual performance evaluation meetings. These materials are reviewed by the Program Director as part of the resident's evaluation to demonstrate progression throughout the residency and become a part of the resident's file. Transcripts, attendance and participation in seminars, special activities and projects, and research efforts are also reviewed and evaluated. The semi-annual performance report is completed by the Residency Program Director and/or Deputy Director, then read and signed by the resident.

Program Policies

Residents must abide by the Johns Hopkins Bloomberg School of Public Health Graduate Medical Education Policies (p. 537) and the School (p. 633)and University (p. 42)Policies. Additional program-specific policies are outlined in this section.

Graduate Medical Education Committee

The Graduate Medical Education Committee (GMEC) of the Johns Hopkins Bloomberg School of Public Health is responsible for monitoring and advising on all aspects of residency education. Voting membership on the committee includes:

1. residents from each of the two residency programs nominated by their peers;
2. the directors of the General Preventive Medicine and Occupational Medicine residency programs;
3. other members of the faculty from each department participating in either of the residency programs; and
4. the accountable institutional official or their designee (the Associate Dean for Professional Education and Programs).

The committee meets a minimum of four times per year and minutes of each meeting are kept.

The GMEC:

- establishes residency policies for graduate medical education **(see Exhibit A)**;
- maintains open and regular communication with the General Preventive Medicine and Occupational Medicine Program Directors and administrators;
- reviews the residency training programs for their compliance with institutional and ACGME policies;
- establishes policies for resident selection, evaluation, promotion, and dismissal;
- establishes policies for grievances;
- reviews resident funding, benefits, and support services;
- reviews resident working conditions; and
- reviews ethical, social, socioeconomic, medical/legal, and cost containment issues that affect graduate medical education.

Each resident receives a Resident Contract (see Exhibit B) which contains the terms and conditions of the trainee's appointment.

Resident Grievances

Residents have a number of options to raise concerns about the residency. In addition to discussing concerns with the Program Director, Deputy Program Director, or Chief Resident and the information listed in the Policies and Procedures for Graduate Medical Education provided to residents, residents can contact the OEMR Residency Advisory Committee/Program Evaluation Committee Chair, currently Dr. Marianne Cloeren to discuss concerns, her contact information is provided in the contacts section of the manual. Residents could also meet Dr. Cloeren in person at luncheons following PEC meetings as well as in her lectures during resident seminar. In addition a member of the PEC is invited to attend resident seminar.

Vacation Policy

Residents are permitted three (3) weeks of vacation time in each training year. During the first year of training, vacation may not be taken when MPH classes are in session or when mandatory training or the in-service examination is scheduled (eg: EPIC training between summer session and first term). Residents must ensure that they meet the 80-day clinic requirement during the first year of training.

During the second year of training, residents should avoid planning vacation during one-month rotation periods and should contact preceptors in advance for approval when planning vacations. A maximum of one week of vacation may be taken from each 2-month required rotation.

Residents in both years are encouraged to discuss vacation plans with the Program Director and/or Deputy Program Director prior to confirming plans.

PROCEDURE FOR FIRST-YEAR RESIDENTS

1. Resident will submit a vacation request through New Innovations at least 2 weeks in advance and alert the Program Director of the request.
2. Program Director will review the request. An approval or denied email will be sent via email to the resident.
3. Vacation Requests reports are available to the Program Director.

PROCEDURE FOR SECOND-YEAR RESIDENTS

1. Resident will submit a vacation request through New Innovations at least 2 weeks in advance and alert the Program Director of the request.
2. Resident will request time off from preceptor.
3. Vacation is granted when approved by Program Director and preceptor.
4. Vacation Requests reports are available to the Program Director.

Sick Leave Policy

All residents at BSPH are entitled to 15 days (three weeks) paid sick leave per year. Days may be used for a resident's own sickness or to care for a family member. Unused days may not be carried over into the following 12-month period and are not payable upon departure.

When a resident takes sick leave, they should notify their Program Director and keep them as up to date as feasible. The Program Director may require the resident to submit verification of the need for sick leave from their healthcare provider to the University Health Service Center for review. Any documents containing a resident's medical information must be kept separate from their academic file. Extended absences (more than two weeks) must be reported by the resident and the Program Director to the Program Manager as quickly as possible. If the illness requires an extended absence, the resident may apply for a leave of absence.

Some Additional Points

1. Rotations generally accommodate sick days in a flexible way, and do not count sick days as vacation days. However, if the number of sick days becomes significant, rotations may count these days towards the vacation allotment.
2. There are no "personal days" allotted to residents. Such days will generally be counted as vacation days unless prior agreements have been reached with the Program Director and the rotation preceptor.
3. There is no special policy for days taken off between the Christmas and New Year holidays. These days are counted as vacation days

during both years of training for both the rotations' and the residents' totals.

Holidays

Residents schedule will reflect the Johns Hopkins University holidays below. Because residents rotate in many locations, residents should discuss any holiday that falls while they are on a rotation with their rotation preceptor ahead of time to ensure the preceptor is aware and is not expecting them in clinic. Additionally, if a rotation site is open, residents should make sure that taking the holiday will not interfere with their ability to meet the clinical requirement.

- New Year's Day
- Martin Luther King
- Memorial Day
- Juneteenth
- Independence Day
- Labor Day
- Thanksgiving Day
- Day after Thanksgiving
- Winter holidays include Christmas Eve, Christmas Day, New Year's Eve, New Year's Day

Conferences

Residents are strongly encouraged to attend a scientific meeting each year. Options to consider include: ACOEM/AOHC fall or spring meeting, the American Public Health Association conference, American College of Preventive Medicine annual meeting, or other occupational/environmental medicine-related content. While the residency encourages residents to attend the American Occupational Health Conference (AOHC), residents may choose to use their conference allowance on a conference that is not AOHC with the pre-approval of the Program Director.

- All conference travel must be pre-approved by the Program Director.
- Conference allowance is to be used toward reasonable expenses of attending occupational medicine-related conferences. The amount of the travel allowance is stated on the Resident Benefits Summary (Exhibit C), which is updated annually. Note: the amount may change each year.
  - If residents do not use all of the conference allowance funds on the conference they select to attend, remaining funds can be applied towards another conference or course travel expense.
- Residents may take up to five working days during each year of the residency to attend a scientific meeting.
- When the Mid Atlantic Regional Conference in Occupational and Environmental Medicine (MARCOEM) is held at the Johns Hopkins Bloomberg School of Public Health, residents are expected to attend. The residency program will support the registration fee; this registration fee is not included in your annual allowance noted on the Benefit Summary Sheet. This does not apply when MARCOEM is held outside of BSPH, the conference is treated like any other conference and the resident should refer to the annual allowance noted on the Benefit Summary.

Reimbursements

- Residents must complete and submit reimbursement requests by carefully following the Johns Hopkins University policy, which can be found on the New Innovations home page on the document titled "Travel and Non-travel Reimbursement Policies and Procedures for BSPH Residency Programs." Please carefully read the policy, particularly in regards to transportation/airline and hotel expenses, **prior** to making purchase.
  - Expenses other than airfare and/or hotel (i.e., registration fees, board review materials or course) must be in accordance with residency policy. Any exceptions must be pre-approved by the Program Director. All requests must be submitted within 30 days of incurring the expense.
  - JHU Policy for airfare and hotel expense reimbursement:
    - Travelers may only request reimbursement for airfare and/or hotel expenses in advance of travel if they book thru Concur using their personal credit card and the University funding source is unrestricted funds.
    - Airfare and/or hotel expenses purchased outside of Concur (1) must be submitted AND approved within 60 days of transaction date AND (2) travel must have been completed. If these guidelines are not followed, reimbursement may be denied or reimbursement may become taxable income.

Attire

CLINICS AND ROTATIONS

Professional attire is expected, for example, business casual. For clinical rotations you should also take your white coat, ID badge, pen, stethoscope, and a small notepad for taking notes of things you may want to remember later. If you have doubts about what to bring with you to your rotation, ask your preceptor.

Rehman et al. Am J Med 2005 provides rationale for professional attire and is discussed in NY Times article: When Young Doctors Strut Too Much of Their Stuff (http://www.nytimes.com/2006/11/21/health/21essa.html)

CLASSES

Comfortable but professional clothing.

SITE VISITS

Attire should be functional and professional. You may be the medical professional consultant, and that role needs to be reflected in what you wear. You also may need your clothing to serve as barrier protection. The following dress guidelines are recommended:

Shirt: Non-revealing professional shirt or blouse. Sleeves may be helpful as some level of protective barrier. Some professionals wear long-sleeved button-down shirts with University logo.

Pants: Trousers or jeans, which cover the entire leg and do not drag on the floor. Khakis or jeans are good options.

Shoes: Closed-toe shoes and/or sturdy boots are always appropriate. Depending on the situation, a steel-toed boot may be required.

Social Media Use

The JHU Bloomberg School of Public Health Social Media Policy (p. 652) may be found on the BSPH website.

The JHU School of Medicine has Social Media Guidelines (https://www.hopkinsmedicine.org/webcenter/social-media-guidelines/) that can be found online. You will need Network Connect open to get in.

Health Insurance Portability and Accountability Act (HIPAA)

Available in the HIPAA (https://intranet.insidehopkinsmedicine.org/privacy_office/) intranet site. You will likely need Network Connect open to get in.

Privacy Regulations means the regulations promulgated by the Secretary of the Department of Health and Human Services to implement portions of HIPAA that concerns the confidentiality of health information, as amended from time to time; these regulations currently include 45 CFR §§ 160 and 164, subparts A and E.

The Johns Hopkins HIPAA Office has posted on its website (https://intranet.insidehopkinsmedicine.org/jhhs_human_resources/hr-bulletin/social-media-policy/) guidance on two topics of significant interest: “Use of Social Networking” and “Portable Electronic Devices.”

This information provides short, practical, and basic advice, and is not meant to be definitive statements on these topics.

Monitoring and Evaluating Residents

Definitions:

- **PM-1** = resident in the 13th through the 24th month of preventive medicine training
- **PM-2** = resident in the 25th through 36th month of preventive medicine training

Clinical Skills:

Each resident entering the program as a PM-1 will have completed at least one year of ACGME-accredited clinical residency training. The program director will ascertain from the resident’s previous clinical program (or other source as appropriate) that the resident has achieved the six core clinical competencies.

Outpatient Care:

All patients seen by a resident on an outpatient basis must be seen by, discussed with, or reviewed by the responsible site preceptor.

Communication:

Communication with the site preceptor is mandatory in the case of emergent and/or critical incidents or other significant changes in clinical status.

Monitoring/Evaluation:

The goals and objectives as well as the process of evaluation for the training program are discussed at orientation. The goals and objectives are available to all residents and faculty on the residency website. Rotation specific evaluations mirror the goals and objectives for a given rotation. At the end of each rotation, a formal written evaluation is completed for each resident by the site preceptor via New Innovations. A copy of this evaluation is provided to the resident.

Assessment of resident performance will be based on multiple evaluation strategies and may include:

- Direct observation of clinical and interpersonal skills
- Case-based discussion
- Completion of teaching modules
- Review of medical records
- Preparation and delivery of teaching sessions
- Participation in conferences
- Review of patient and/or procedure logs
- Feedback from patients and families
- Feedback from allied health professionals
- Assigned projects such as a clinical research project

Non-compliance with responsibilities or performance problems are generally discovered and addressed in one of the following ways:

1. The site preceptor may address isolated problems with specific individuals. The problem and corrective actions are documented by the site preceptor who notes the problem and are transmitted to the program director.
2. Each resident meets with the Program Director a minimum of twice a year to review evaluations and provide career counseling.
3. The program director reviews all resident evaluations. The Clinical Competency Committee consisting of leadership and key faculty members and as required by ACGME guidelines, meet semi-annually to discuss the progress of each resident. Any identified problems will be discussed and remediation plans are implemented.
4. Semi-annual, annual, and summary evaluations are completed on each resident in accordance with ACGME-RRC and BSPH requirements.

In order to be promoted to the PM-2 year, the resident must have demonstrated satisfactory performance in academic coursework and all practicum evaluations must reflect satisfactory performance.

Certificates

Certificate Programs for Which Only Hopkins Students Are Eligible

Certificate Programs for Which Both Hopkins and Non-Degree Students are Eligible

- Health Communication (p. 598)
- Health Education (p. 600)
- Health Finance and Management (p. 601)*
- Healthcare Epidemiology and Infection Prevention and Control (p. 602)
- Humane Sciences and Toxicology Policy (p. 604)
- Injury and Violence Preventio (p. 606)n
- Leadership for Public Health and Healthcare (p. 608)*
- Lesbian, Gay, Bisexual, Transgender, and Queer (LGBTQ) Public Health (p. 609)
- Maternal and Child Health (p. 611)
- Mental Health Policy, Economics and Services (p. 612)
- Pharmacoepidemiology and Drug Safety (p. 613)
- Population and Health (p. 614)
- Product Stewardship and Sustainability (p. 617)*
- Public Health Economics (p. 619)
- Public Health Informatics (p. 620)*
- Public Health Training Certificate for American Indian Health Professionals (p. 623)
- Public Mental Health Research (p. 624)
- Public Health Preparedness (p. 622) *(in AY22-23 only, non-degree students may be able to apply for admission)*
- Quality, Patient Safety, and Outcomes Research (p. 625)*
- Risk Sciences and Public Policy (p. 628)
- Tropical Medicine (p. 631)

Certificate Programs for Which Only Non-Degree Students Are Eligible

- Global Health Practice (p. 594)*
- Global Tobacco Control (p. 595)*
- International Healthcare Management and Leadership (p. 607)*
- Population Health Management (p. 615)*
- Public Health Practice (p. 621)
- Quantitative Methods in Public Health (p. 626)
- Spatial Analysis for Public Health (p. 629)*
- Training Certificate in Public Health (p. 631)*

***Certificate programs with an asterisk may be completed entirely online**

Frequently Asked Questions About Certificate Programs

Who is eligible to apply to a certificate program?

Eligibility requirements vary. Students should review the information for their certificate of interest carefully.

Applicants not currently enrolled in a Johns Hopkins degree program must have earned at least a bachelor's degree from an accredited college or university and have a strong academic record.

Is visa sponsorship provided for international students applying to certificate programs?

Certificate programs completed outside the Summer Institutes do NOT qualify for visa sponsorship. Most international students are advised to consider certificate programs that can be completed online from their country of residence. Legal Permanent Residents and non-immigrants who are otherwise physically present in the US and in a status that allows for study may be eligible to pursue a certificate program in person at the Bloomberg School.

When are courses taught?

The Bloomberg academic year (p. 175) consists of five eight-week terms: two in the fall, two in the spring and one in the summer. Most on-campus Bloomberg courses are taught during the work week (Monday-Friday) between 8:30 and 5:00. The term, venue and time for each course may be found in the BSPH course directory (http://www.jhsph.edu/courses/).

Can certificates be earned part-time?

Non-degree students may earn certificates part-time. Degree students earn the certificate concurrently with their degree or training program.

How long does it take to complete a certificate program?

Certificate program length varies by the number of required term credits, when courses are offered, and each student's schedule.

Students do not need to enroll in certificate courses during consecutive terms, but must complete the program within three years.

Can certificate courses be taken pass/fail?

All required or core certificate courses must be taken for a letter grade unless the course is only offered pass/fail. The certificate program determines whether elective courses may be taken pass/fail. Certificate courses cannot be audited.

How do I register for courses if I am a non-degree student?

The certificate program will inform each applicant of its admission decision. Accepted students will also receive an email with instructions for registering. Students wishing to take an online course must first complete the non-credit/free Introduction to Online Learning (https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/).

What is a Notification of Completion?

Please read this page that addresses certificate program completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) for complete information about notifying the School that the certificate program has been completed.

Can courses taken before being accepted into the certificate program be counted towards the certificate?

For students not currently enrolled in a Bloomberg School of Public Health degree program, up to six term credits for courses taken before being admitted to the certificate program may be applied toward the certificate. Bloomberg School degree students should follow the parameters set by their certificate program as far as how many credits may be taken before applying.

Can certificate courses be counted towards a BSPH degree?

Typically, up to 16 term credits taken as a non-degree student may later be applied to a Bloomberg School degree program. The courses must be applicable to the degree and completed no more than five years before matriculating to the degree program. The process is not automatic and the final decision rests with the degree program; if a student is planning to apply to a BSPH degree program upon completion of a certificate program, it's a good idea to contact the degree program first, to verify how many completed academic credits the program will accept.

Upon completion of a certificate program, will I be considered a BSPH alum and have access to alumni privileges?

Only those students who successfully complete a degree program at BSPH are considered alumni. Individuals who complete a certificate program will receive a certificate diploma suitable for framing and display, and a BSPH transcript indicating that they have completed the certificate program.

What is the Tuition for a Certificate Program at BSPH?

Please visit the page on the BSPH website (https://www.jhsph.edu/academics/certificate-programs/tuition/) that addresses certificate program tuition.

How to Apply to a Certificate Program

Different certificate programs are open to different audiences. There are different application processes for students who are currently enrolled in degree programs at Johns Hopkins University (including students enrolled at the Bloomberg School of Public Health) and those who are applying as non-students. Each certificate program has its own eligibility requirements and terms in which it is possible to begin the program. Prospective students should visit the webpage of the program that interests them on the Bloomberg School of Public Health certificate website (https://www.jhsph.edu/academics/certificate-programs/) for complete information about who the program is open to (ie, JHU graduate students, non-degree students, or both), what admissions requirements are necessary, and which start terms are available. If a student is not currently enrolled in a degree program at JHU, they should carefully review the "how to apply (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_admissions.html)" page on the Bloomberg School of Public Health website as well.

Certificate Tuition

Please visit the page on the Bloomberg School website that addresses certificate program tuition.

Completion of a Certificate Program

Individuals currently enrolled in a certificate program should carefully review the completion instructions (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) on the Bloomberg School of Public Health's website. Certificate completions cannot be processed retroactively.

Adolescent Health, Certificate

Adolescent Health Certificate Program

NOTE: This certificate program may be completed entirely online!

OVERVIEW

The certificate program builds on the certificate student's existing clinical knowledge and the clinical, research, and/or program/policy-related skills they are developing through their degree or training program. It focuses on adolescent pregnancy, substance abuse, and violence prevention and on mental health promotion–all of which are strengths of the Bloomberg School of Public Health. Certificate topics include:

- Primary causes of adolescent mortality and morbidity both domestically and globally
- Adolescent growth and development including biological, neurological and cognitive, psychological, emotional, and other developmental processes, as well as cultural contexts in which young people live that impact health and health behavior
- Proximate and distal social environments in which young people mature and the mechanisms by which such environments influence health outcomes
- Ethical issues inherent in working with adolescents who are legal minors
- Policies and legislation that are evidence-based as well as culturally and developmentally appropriate and health promoting (e.g., graduated drivers' licenses)

EDUCATIONAL OBJECTIVES

Students earning the certificate will be able to apply knowledge of adolescent growth and development, positive youth development, and cultural and ethical considerations of youth to design, implement, and evaluate adolescent health-related research, programs, and policies. Upon completing the certificate program, students will be able to::

1. Describe how developmental (biological, cognitive, psychological), environmental (physical and social), and cultural factors do and can be used to influence the health and health-related behaviors of adolescents.
2. Participate in designing research, programs, and/or policies using family-, school-, and/or community-based methodologies that are effective for addressing adolescent health issues and that adhere to ethical standards for adolescents who are legal minors.
3. Use integrated knowledge about 1) the factors influencing adolescent health and 2) effective research, program, and/or policy methodologies to design, conduct, and/or evaluate research and/or to develop, implement, monitor, and/or evaluate programs/policies that are appropriate to address adolescent health issues, prevent unhealthy behaviors, and/or promote healthy ones.

Sponsoring Department

Population, Family and Reproductive Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/)

ADMISSIONS

Contact information and complete admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/adolescent-health-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (p. 577) (https://www.jhsph.edu/academics/certificate-programs/completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (course is offered in all academic terms)	
Required Courses:Students must complete 380.623 AND EITHER 380.725 OR 380.747		
PH.380.623	Adolescent Health and Development (typically offered online in 3rd term)	3
PH.380.725	The Social Context of Adolescent Health and Development (typically offered onsite in 4th term)	3
PH.380.747	International Adolescent Health (typically offered online in 4th term)	3
Elective Courses: Students must complete at least four elective courses (12 credits minimum). Students should complete 3 elective courses from Groups A and B, and one elective course from Group C		
Elective Courses Group A: Sexual and Reproductive Health		
PH.340.629	The Epidemiology of LGBTQ Health (typically offered onsite in 2nd term)	3
PH.380.633	Promoting Equity for Adolescents and Emerging Adults: Problem-Solving Seminar (typically offered online in 2nd term)	3
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond (typically offered onsite in 2nd term)	3
PH.380.749	Adolescent Sexual and Reproductive Health (typically offered onsite in 4th term)	3
PH.380.761	Sexually Transmitted Infections in Public Health Practice (typically offered online in 4th term)	4
PH.380.762	HIV Infection in Women, Children, and Adolescents (typically offered online in 4th term)	4
PH.410.681	Gay, Bisexual and Other Men Who Have Sex With Men (MSM) and HIV: Theoretical Perspectives on the Us Epidemic (typically offered onsite in 4th term)	3
Elective Courses Group B: Other Topics in Adolescent Health		
PH.221.621	Gender and Health: Foundational Theories and Applications (typically offered onsite in 1st term)	2
PH.301.627	Understanding and Preventing Violence (typically offered onsite in 2nd term)	3
PH.305.610	Issues in Injury and Violence Prevention (typically offered onsite in 1st term)	2
PH.330.602	The Epidemiology of Substance Use and Related Problems (typically offered online in 1st and 2nd terms and onsite in 2nd term)	3
PH.330.640	Childhood Victimization: A Public Health Perspective (typically offered onsite in 4th term)	3
PH.330.607	PREVENTION of MENTAL DISORDERS: PUBLIC HEALTH InterVENTIONS (typically offered onsite and online in 3rd term)	3
PH.330.674	Suicide As A Public Health Problem (typically offered onsite in 3rd term)	3
PH.330.661	Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders (typically offered onsite in 3rd term)	3
PH.380.624	Maternal and Child Health Legislation and Programs (typically offered onsite and online in 2nd term)	4
PH.380.625	Evidence and Opportunities to Mitigate Childhood Adversity and Promote Well-Being (typically offered onsite in 3rd term)	3
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth (typically offered onsite in 3rd term)	3
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies (typically offered onsite in 3rd term and online in 4th term)	3
PH.380.721	Schools and Health (typically offered onsite in 2nd term)	3
PH.410.625	Injury and Violence Prevention: Behavior Change Strategies (typically offered onsite in 4th term)	2
PH.380.880	Lessons in Leadership: Applications for Population, Family and Reproductive Health I (typically offered onsite and online in 4th term)	1
PH.410.752	Children, Media, and Health (typically offered onsite in 3rd term)	3
Elective Courses Group C: Program Evaluation		
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs (typically offered onsite in 2nd term)	4
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels (typically offered onsite in 2nd term)	4
PH.380.611	Fundamentals of Program Evaluation (typically offered onsite in 3rd term and online in 1st term)	4
PH.410.620	Program Planning for Health Behavior Change (typically offered onsite in 1st term and Winter Institute)	3
PH.410.631	Introduction to Community-Based Participatory Research: Principles and Methods (typically offered onsite in 2nd term)	3

Bioethics, Certificate

Certificate Program in Bioethics

EDUCATIONAL OBJECTIVES

1. Describe the essential theories and methods that underpin the ethics of public health, clinical care, science and research;
2. Recognize ethical issues and questions that arise in public health, clinical care, science and research;
3. Articulate and critique policy and scholarly arguments to engage with long-standing and emerging debates in bioethics;
4. Distinguish various ethics advisory functions in practice settings; and
5. Apply ethical theories and methods to real-world ethical dilemmas.

ADMISSIONS

Contact information and complete admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/bioethics-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. Students will complete three required courses totaling 9 credits, and then choose three courses from the Berman Institute course list totaling 9 credits to fulfill the 18-credit requirement to complete the certificate program.

All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. All courses must be completed within a three year period.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) (p. 577)before completing certificate program requirements. The student's transcripts will not indicate that the certificate was earned until the Notification of Completion form has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses (9 credits required)		
PH.700.601	Foundations of Bioethics (typically offered onsite in 1st term)	3
PH.700.602	Hot Topics in Bioethics (typically offered onsite in 2nd term)	3
PH.700.603	Introduction to Ethical Theory (typically offered onsite in 1st term)	3
Elective Courses (minimum of 9 credits)		
PH.700.604	Methods in Bioethics (typically offered onsite in 3rd term)	3
PH.700.621	Ethics in Clinical Practice: Fundamentals, Problems and Approaches (typically offered online in 2nd term)	3
PH.700.622	Bioethics, Human Rights, and Global Health (typically offered onsite in 2nd term)	3
PH.700.623	Ethics and Decision-Making in Clinical Practice (typically offered onsite in 2nd term)	3
PH.700.625	Bioethics and the Law (typically offered onsite in 4th term)	3
PH.700.630	Food Ethics (typically offered onsite in 3rd term)	3
PH.700.632	Ethics, Policy, and Emerging Biomedical Technologies (typically offered onsite in 4th term)	3
PH.700.641	Germs, Genes, Patients, and Populations (typically offered onsite in 3rd term)	3
PH.700.642	Vulnerability in Childhood -- from Ethics to Advocacy (typically offered onsite in 4th term)	3
PH.700.840	Bioethics Program Independent Study (typically offered onsite in 1st, 2nd, 3rd, 4th, and Summer terms and Summer Institute)	2

Climate and Health, Certificate

OVERVIEW

Climate change represents one of the most pressing issues of our time, affecting every nation and person. This certificate program covers climate change, its effects on public health, and ways to mitigate the impacts. Courses explore the effects of energy production and climate change on food, water, air and human health, through the lens of social justice.

EDUCATIONAL OBJECTIVES

Students completing the certificate program will be able to:

1. Explain the connection between climate and public health, ranging from temperature-related mortality and increasing rates of disease, to mass migration, food & water shortages, and resulting conflict
2. Describe policies and practices in the US and around the world addressing the impact of climate change on health
3. Summarize the role of various sectors (government, private and non-profit) in addressing climate change's impact on public health
4. Distinguish between climate-related risks in developed countries and those in low- and middle-income countries
5. Evaluate research related to climate change and health
6. Discuss and predict how climate change will affect economics and social structures, including inequities in the risks and benefits associated with climate change
7. Develop and discuss strategies that effectively mitigate and prevent adverse health effects caused by climate change.

ADMISSIONS

Contact information and complete admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/climate-and-health-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; however, the certificate must be completed within three years.

The student should review the section of the Bloomberg School of Public Health website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://www.jhsph.edu/courses/) to confirm when and where the courses are offered. Students should also check prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
The following 2 courses are required		
PH.180.651	Energy, Environment, and Public Health (typically offered onsite in 3rd term)	2
PH.317.600	Introduction to the Risk Sciences and Public Policy (typically offered onsite in 1st term, online in 3rd term)	4
Required: Take one of the following 2 courses:		
PH.180.602	Environment and Health in Low and Middle income Countries (typically offered onsite and online in 3rd term)	2
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health (typically offered onsite in 3rd term)	2
Students must complete one of the following introductory environmental health courses		
PH.180.601	Environmental Health (typically offered online in 3rd term, and onsite in Summer and Summer Institute)	5
PH.180.609	Principles of Environmental Health (typically offered onsite in 1st term)	4
Students must complete one of the following climate and health courses:		
PH.180.607	Climate Change and Public Health (typically offered onsite and online in 3rd term)	3
PH.180.611	The Global Environment, Climate Change, and Public Health (typically offered onsite in 1st term)	4
PH.180.641	Climate Change and Public Health Problem Solving Seminar: Global Challenges and Solutions for Mitigation, Adaptation, and Sustainability (This course targets DrPH students and is typically offered online in 1st term)	3
Students must complete two of the following courses		
PH.180.620	Introduction to Food Systems and Public Health (typically offered online in 1st term)	4
PH.180.625	Community-Driven Epidemiology and Environmental Justice (typically offered onsite in 3rd term)	3
PH.180.626	Environmental Justice and Public Health Practice (typically offered online in 2nd term)	3
PH.180.628	Introduction To Environmental and Occupational Health Law (typically offered online in 4th term)	4
PH.180.670	Introduction to Public Health Emergency Preparedness (typically offered onsite in 4th term)	3
PH.182.640	Food- and Water- Borne Diseases (typically offered onsite in 3rd term)	3
PH.185.600	One Health Tools to Promote and Evaluate Healthy and Sustainable Communities (typically offered online in 4th term)	3
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels (typically offered onsite in 2nd term)	4
PH.305.630	Transportation Policy, Equity and Health (typically offered online in 4th term)	2
PH.317.864	Advanced Topics in Climate Change Policy (typically offered onsite in Fall Institute in Barcelona, Spain)	2
PH.330.609	Climate Change and Mental Health: Research, Practice, and Policy Perspectives (typically offered online in 4th term)	3
PH.330.665	Climate Change and Mental Health (typically offered online in Summer Institute)	1
PH.410.645	Applying the Social Ecological Model in Tobacco Control and Climate Change (typically offered onsite in 3rd term)	3
EN.575.711	Climate Change and Global Environmental Sustainability	3
EN.575.723	Sustainable Development and Next-Generation Buildings	3
EN.575.735	Energy Policy and Planning Modeling	3

Clinical Trials, Certificate

Certificate Program in Clinical Trials

NOTE: This certificate program may be completed entirely online!

OVERVIEW

Clinical Trials are a key tool in the evaluation of new strategies for prevention and treatment of disease. This certificate program focuses primarily on the design and analysis of randomized clinical trials for evaluation of licensed and non-licensed medical products and other health interventions, the regulatory framework for the conduct and evaluation of data from clinical trials, and ethical principles for the conduct of clinical trials.

EDUCATIONAL OBJECTIVES

After completing the certificate, students will be able to:

1. Summarize the history of clinical trials and describe the role they play in evaluation of health interventions;
2. Explain the key differences, advantages and disadvantages of experimental versus observational study designs;
3. Develop a protocol, consent statement, monitoring plan and data collection plan for a clinical trial;
4. Review and critique manuscripts presenting the results of clinical trials using CONSORT guidelines; and
5. Explain the key ethical principles regarding the design, conduct and analysis of clinical trials

SPONSORING DEPARTMENT

Epidemiology (https://www.jhsph.edu/departments/epidemiology/)

ADMISSIONS

Contact information and complete admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/clinical-trials-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires at least 18 credit units that consist of core courses in clinical trials, epidemiology, and research ethics, as well as elective courses focusing on specific issues in the design, conduct and analysis of clinical trials. The required courses in clinical trials include introductory courses in epidemiology, clinical trials design and interpretation and clinical trials methodology. Students are also required to take at least two additional courses relating to clinical trials, one course in research ethics and one course in biostatistics.

Each student will be required to develop a protocol and plan for obtaining consent, e.g., prototype consent statement, for a randomized clinical trial. The protocol will be 8 to 12 pages long and accompanied by consent statement(s) or other materials appropriate for obtaining consent for a proposed clinical trial. Most students should be able to complete these requirements as a part of one or more class project(s), e.g., 340.648 or 340.861. Alternatively, the student may sign up for 1 to 2 credits of independent study for this project with a faculty member in the Department of Epidemiology, Clinical Trials and Evidence Synthesis Track. The credits for an independent study to work on the protocol and consent statement(s) can be counted towards the 18 credits required for the certificate program.

Students are strongly encouraged to participate in the seminars, research in progress meetings, journal club and other activities sponsored by the Clinical Trials and Evidence Synthesis Track and the Center for Clinical Trials and Evidence Synthesis.

All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the program must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Required Clinical Trials Coursework: Students must complete the following 3 required courses: (340.601 or 340.721 or 340.751), 340.645, and 340.694. Students must also complete 340.861 (Sequence A below) OR 340.633 and 340.648 (Sequence B below).		
Students must complete one of the following 3 courses:		
PH.340.601	Principles of Epidemiology (typically offered onsite in the Summer Institute)	5
PH.340.721	Epidemiologic Inference in Public Health I (typically offered onsite in 1st term, and online in 1st, 3rd, and Summer terms and Summer Institute)	5
PH.340.751	Epidemiologic Methods 1 (typically offered onsite in 1st term)	5
Students must complete the following 2 courses		
PH.340.645	Introduction to Clinical Trials (typically offered online in 2nd term)	3
PH.340.694	Power and Sample Size for the Design of Epidemiological Studies I (typically offered online in 3rd term and during the Summer and Winter Institutes)	1
Students must complete all courses in either Sequence A or Sequence B		
Sequence A		
PH.340.861	Clinical Trials: Procedures, Design, and Interpretation of Results (typically offered online in 3rd term)	3
Sequence B		
PH.340.633	Data Management in Clinical Trials (typically offered onsite in 3rd term)	3
PH.340.648	Clinical Trials Management (typically offered onsite in 4th term)	3
Students must complete one of the following Biostatistics courses		
PH.140.611	Statistical Reasoning in Public Health I (typically offered online in 1st term and onsite during the Summer Institute)	3
PH.140.621	Statistical Methods in Public Health I (typically offered onsite in 1st term)	4
PH.140.651	Methods in Biostatistics I (typically offered onsite in 1st term)	4
Students must complete one of the following Ethics courses		
PH.306.665	Research Ethics and integrity: U.S. and International Issues (typically offered onsite in 3rd term)	3
PH.390.673	Ethical and Regulatory Issues in Clinical Research (typically offered onsite in 1st term and online in 2nd term)	3
PH.550.600	Living Science Ethics - Responsible Conduct of Research (typically offered onsite in 1st and 4th term)	1
PH.700.621	Ethics in Clinical Practice: Fundamentals, Problems and Approaches (typically offered online in 2nd term)	3
Students must complete at least two of the following elective courses		
PH.140.633	Biostatistics in Medical Product Regulation (typically offered online in 1st term)	2

PH.140.642	Design of Clinical Experiments (typically offered onsite in 3rd term)	3
PH.223.662	Vaccine Development and Application (typically offered onsite in 2nd term)	4
PH.223.664	Design and Conduct of Community Trials (typically offered onsite in 3rd term)	4
PH.223.690	The Design and Analysis of Cluster Randomized Trials (typically offered onsite in 4th term)	2
PH.223.705	Good Clinical Practice: A Vaccine Trials Perspective (typically offered online in 4th term)	4
PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses (typically offered onsite in 3rd term)	4
PH.340.619	Topics in Pharmacoepidemiology (typically offered online during the Summer Institute)	2
PH.340.633	Data Management in Clinical Trials	3
PH.340.648	Clinical Trials Management (typically offered onsite in 4th term)	3
PH.340.660	Practical Skills in Conducting Research in Clinical Epidemiology and Investigation (typically offered onsite in 1st term)	3
PH.340.671	Topics in Management of Clinical Trials (typically offered online during the Summer Institute)	2
PH.340.676	Bayesian Adaptive Trials (typically offered onsite during the Summer Institute)	2
PH.340.682	Pharmacoepidemiology Methods (typically offered online in 2nd term)	3
PH.340.684	Pharmacoepidemiology: Drug Utilization (typically offered onsite in 3rd term)	3
PH.340.686	Introduction to Systematic Reviews and Meta-Analysis (typically offered onsite during the Summer Institute)	2
PH.340.840	Special Studies and Research Epidemiology (Note: Students interested in pursuing this option should contact a faculty member before registering; course is typically offered onsite in 1st, 2nd, 3rd and 4th terms)	1 - 22
PH.340.861	Clinical Trials: Procedures, Design, and Interpretation of Results	3
PH.390.631	Principles of Drug Development (typically offered onsite in 1st term)	2
PH.390.750	Introduction to Clinical Research (typically offered onsite in Summer term)	2
One of the following courses, but not both, may be counted towards the certificate program		
AS.410.649	Introduction to Regulatory Affairs	4
AS.410.676	Food And Drug Law	4

Community-Based Public Health, Certificate

Community- Based Public Health Overview

The certificate program in Community-Based Public Health prepares future community public health practitioners and researchers to collaborate. Participants are trained in the skills and knowledge necessary for community-based public health program development, management and evaluation, community-based participatory research (CPBR) and other research in community settings.

EDUCATIONAL OBJECTIVES

To develop students' skills and competencies for careers in both community-based public health practice and research, particularly for applications in underserved urban settings. By marrying training in these two areas, this certificate will prepare future community public health practitioners and researchers to collaborate. The certificate will train recipients in the skills and knowledge necessary for community-based public health program development, management and evaluation, community-based participatory research (CPBR) and other research in community settings.

It will also train students in the following key competencies for community-based public health practice and research, including:

CULTURAL COMPETENCY SKILLS AND ATTITUDES

1. Identify the role of cultural, social, and behavioral factors in determining the delivery of community-based public health
2. Utilize appropriate methods for interacting sensitively, effectively, and professionally with persons from diverse cultural, socioeconomic, educational, racial, ethnic, and professional backgrounds, and persons of all ages and lifestyle preferences
3. Develop and adapt approaches to problems that take into account cultural differences

LINKING SOCIAL AND ENVIRONMENTAL CAUSES OF DISEASE AND COMMUNITY HEALTH

1. Define, assess, and understand the health status of populations, determinants of health and illness, factors contributing to health promotion and disease prevention, and factors influencing the use of health services impacting communities
2. Understand the historical development, structure, and interaction of national and local public health and health care systems
3. Identify and apply research methods appropriate for community-based applications

COMMUNITY DIMENSIONS OF PRACTICE SKILLS AND ATTITUDES

1. Promote the utilization of leadership, team building, negotiation, and conflict resolution skills to build community partnerships and maintain key stakeholders
2. Utilize best practices for engaging in effective community partnerships
3. Identify community assets and available resources

SPONSORING DEPARTMENT

Hea (http://www.jhsph.edu/dept/hbs/)lth, Behavior and Society

ADMISSION

Please review the certificate program page (https://publichealth.jhu.edu/academics/community-based-public-health-certificate-program/) on the

Bloomberg School of Public Health's website for contact information and full information about admission process and requirements.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. Any request to substitute a course that the faculty sponsors consider essential to meet the certificate program competencies must be given serious consideration. The student must propose the course to be substituted and present a rationale for the request. In no case will more than one substitution be permitted. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years. The student should review the section of the website that addresses completion (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/) before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. The term may change from what is listed in the table below and some courses are only offered every other year. Students should also check for prerequisites and whether instructor consent is required.

Note: Students who started the certificate program prior to AY21-22 may count 410.620 Program Planning for Health Behavior Change towards their total credits, since it was included in the curriculum before that year.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Required (Core) Courses		
PH.410.630	Implementation and Sustainability of Community-Based Health Programs (typically offered onsite in 4th term)	3
PH.410.631	Introduction to Community-Based Participatory Research: Principles and Methods (typically offered onsite in 2nd term)	3
Any students not enrolled in the School of Nursing are required to take the following practicum course. Students must apply to be accepted into the Baltimore Community Practicum during 1st term; instructor permission is required. Experience prior to enrollment in the student's current degree program is not applicable to the certificate program		
PH.550.864	Baltimore Community Practicum (Please note: This is a multi-term course: students must enroll in both 2nd and 3rd terms onsite)	1 - 4
Elective Courses: Each student must select at least one course from each of the following three groups of courses, for a total minimum of 10 credits		
Group 1: Competency Skills and Attitudes		
NR.110.560	Program Development and Evaluation in Health Care	2
PH.224.690	Qualitative Research Theory and Methods (typically offered onsite in 3rd term and online in terms 1 & 3)	3
PH.224.691	Qualitative Data Analysis (typically offered online in 2nd term)	3
PH.410.650	Introduction to Persuasive Communications: Theories and Practice (typically offered onsite in 2nd term and Winter Institute)	4
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication (typically offered online in 2nd term)	3
PH.410.690	Ethnographic Fieldwork (typically offered onsite in 1st term)	3
Group 2: Linking Social and Environmental Causes of Disease and Community Health		
PH.221.624	Urban Health in Developing Countries (typically offered online in 4th term)	3
PH.301.615	Seminar in Health Disparities (course is typically offered onsite in term 2)	3
PH.305.607	Public Health Practice (typically offered onsite in 2nd term)	4
PH.380.612	Applications in Program Monitoring and Evaluation (typically offered onsite in 4th term)	4
PH.410.611	Under Pressure: Health, Wealth & Poverty (typically offered onsite in 4th term)	3
PH.410.620	Program Planning for Health Behavior Change (typically offered onsite in 1st term and Winter Institute)	3
Group 3: Community Dimensions of Practice Skills and Attitudes		
PH.180.655	Baltimore Food Systems: A Case Study of Urban Food Environments (typically offered onsite in 3rd term)	4
PH.221.635	Global Advances in Community-Oriented Primary Health Care (typically offered onsite and online in 3rd term)	3
PH.301.645	Health Advocacy (typically offered onsite in 4th term)	3
PH.340.698	Methods For Assessing Power, Privilege, and Public Health in the United States	4
PH.410.861	Graduate Seminar in Community-Based Research (Graduate Seminar in Community-Based Research is typically offered onsite in 2nd and 4th terms)	1
PH.550.601	Implementation Research and Practice (typically offered onsite and online in 2nd term)	3

Demographic Methods, Certificate

Certificate Program in Demographic Methods

OVERVIEW

The certificate is designed to serve two audiences—master's or doctoral degree students at The Johns Hopkins University and interested professionals desiring to gain skills in applying demographic analytic methods to identify or forecast public health problems and evaluate the effectiveness of policies or interventions aimed at mitigating them. Demographic analytic methods are used to calculate denominators of health measures. They, along with epidemiology methods, are used to develop profiles of those at risk for health/disease conditions, evaluate health care interventions, forecast health resource needs, and inform health care policies and planning based on accurate projections of at-risk groups.

EDUCATIONAL OBJECTIVES

Students completing the certificate will gain competency in:

1. Knowledge of the comparative strengths and weaknesses of different methods of demographic analysis
2. Appropriate application of demographic methods to the analysis of a range of population and health issues
3. Critical evaluation of the public health implications of results from applications of different demographic and population analysis methods

ADMISSIONS

Contact information and complete certificate program admissions information is available on the Bloomberg School of Public Health certificate program (https://publichealth.jhu.edu/academics/demographic-methods-certificate-program/)webpage.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; however, the certificate must be completed within three years.

The student should review the (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the JHSPH course directory (http://www.jhsph.edu/courses/) to confirm when courses are offered, as the term and time may change from what is listed in the table below and some courses are only offered every other year. Students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Students must complete the following two required courses		
PH.380.603	Demographic Methods for Public Health (typically offered onsite in 2nd term and online in 3rd term)	4
PH.380.605	Advanced Demographic Methods in Public Health (typically offered onsite in 3rd term)	4
Students must complete at least ten credits of elective courses from the list below		
PH.140.640	Statistical Methods for Sample Surveys (typically offered onsite in 3rd term)	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (typically offered onsite in 2nd term)	4
PH.221.641	Measurement Methods in Humanitarian Emergencies (typically offered onsite in 2nd term)	2
PH.380.600	Principles of Population Change (typically offered onsite in 2nd term)	4
PH.380.662	Critiquing the Research Literature in Maternal, Neonatal, and Reproductive Health (typically offered onsite in 2nd term)	4
PH.380.711	Issues in Survey Research Design (typically offered onsite in 3rd term)	3
PH.380.712	Methods in Analysis of Large Population Surveys (typically offered onsite in 4th term)	3
PH.380.750	Migration and Health: Concepts, Rates, and Relationships (typically offered onsite in 3rd term)	3

Environmental and Occupational Health, Certificate

Environmental and Occupational Health Certificate Program

NOTE: This certificate program may be complete entirely online!

OVERVIEW

The certificate program educates and trains students to identify major environmental health issues facing public health professionals today. Courses explore the sources of environmental agents, their distribution in community and work environments, transfer routes to humans and possible health effects; the basic biological mechanisms underlying the association between prior exposure and subsequent development of adverse health effects; and control strategies and interventions.

EDUCATIONAL OBJECTIVES

1. Define the major environmental agents that cause adverse effects on human health, and their sources
2. Identify the carriers or vectors that promote the transfer of these agents from the environment to the human
3. Describe various risk management approaches both in the workplace and in the environment
4. Develop and discuss strategies that effectively mitigate and prevent adverse health effects caused by environmental and/or occupational agents and conditions
5. Illustrate how concepts such as exposure assessment, the hierarchy of controls, biological monitoring, medical screening and surveillance are used to prevent occupational injuries and illnesses
6. Identify and describe important current and emerging environmental and/or occupational problems that pose a risk to public health.

Environmental Health and Engineering

ADMISSIONS

Complete information about applying to the certificate program can be found on the Bloomberg School of Public Health certificate program webpage (https://publichealth.jhu.edu/academics/environmental-and-occupational-health-certificate-program/).

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible, however the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted and verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the JHSPH course directory (http://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for pre-requisites and if instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required courses- Students must complete 3 of the following 6 course selections; students may complete either 180.601 or 180.609, but not both		
PH.180.601	Environmental Health (typically offered online in 3rd term, and onsite in Summer and Summer Institutes)	5
PH.180.609	Principles of Environmental Health (typically offered onsite in 1st term)	4
PH.182.625	Principles of Occupational and Environmental Hygiene (typically offered onsite in 2nd term and online in 2nd and 4th terms)	4
PH.187.610	Public Health Toxicology (typically offered online in 2nd term)	4
PH.187.650	Alternative Methods in Animal Testing (typically offered online in 4th term)	3
PH.188.680	Fundamentals of Occupational Health (typically offered online in 1st term)	3
Elective Courses- Students must complete 2-3 courses from the list below to meet the 18 credit minimum required for the certificate program		
Sustainability/Climate Change		
PH.180.607	Climate Change and Public Health (typically offered onsite in 4th term)	3
PH.180.611	The Global Environment, Climate Change, and Public Health (typically offered onsite in 1st term)	4
PH.180.619	Drinking Water and Water Policy: Avoiding Another Flint (typically offered onsite in Summer Institute)	1
PH.180.647	The Health Effects of Indoor and Outdoor Air Pollution (typically offered online in 4th term)	3
PH.180.651	Energy, Environment, and Public Health (typically offered onsite in 3rd term and online in 4th term)	2
PH.180.653	Climate Change: Avoiding Conflict and Improving Public Health (typically offered online in 4th term)	3
PH.185.600	One Health Tools to Promote and Evaluate Healthy and Sustainable Communities (typically offered online in 4th term)	3
PH.185.601	One Health Seminar (typically offered onsite in 4th term)	1
PH.188.682	A Built Environment for A Healthy and Sustainable Future (typically offered online in 4th term)	3
PH.188.688	Global Sustainability & Health Seminar (typically offered onsite in 4th term)	1
Food Systems/Water		
PH.180.606	Case Studies in Food Production and Public Health (typically offered online in 4th term)	4
PH.180.614	Urban Agriculture and Public Health (typically offered onsite in Summer Institute)	2
PH.180.620	Introduction to Food Systems and Public Health (typically offered online in 2nd term)	4
PH.180.644	Food System Resilience to Disasters: COVID-19, Climate Change, and Beyond (typically offered online in 4th term)	2
PH.180.655	Baltimore Food Systems: A Case Study of Urban Food Environments (typically offered onsite in 3rd term)	4
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health (typically offered onsite in 3rd term)	2
PH.182.640	Food- and Water- Borne Diseases (typically offered onsite in 3rd term)	3
Occupational Hygiene/Safety/Occupational Health		
PH.180.621	Protecting the Environment and Safeguarding Worker Health: A Problem-Based Approach (typically offered online in 2nd term)	3
PH.182.613	Exposure Assessment Techniques for Health Risk Management (typically offered onsite and online in 3rd term)	3
PH.182.614	Industrial Hygiene Laboratory (typically offered onsite in 2nd term and onsite in Summer Institute every other year)	5
PH.182.615	Airborne Particles (typically offered online in 3rd term)	4
PH.182.621	Introduction to Ergonomics (typically offered onsite in 2nd term)	4
PH.182.622	Ventilation and Hazard Control (typically offered online in term 1)	4
PH.182.623	Occupational Health Management (typically offered online in 3rd term)	3
PH.182.625	Principles of Occupational and Environmental Hygiene (typically offered on site in 2nd term and online in 4th term)	4

PH.182.637	Noise and Other Physical Agents in the Environment (typically offered onsite in 2nd term and online in 3rd term)	4
PH.185.600	One Health Tools to Promote and Evaluate Healthy and Sustainable Communities (typically offered online in 4th term)	3
PH.188.680	Fundamentals of Occupational Health (typically offered online in 1st term)	3
PH.188.681	Onsite Evaluation of Workplace and Occupational Health Programs (typically offered onsite in 4th term and onsite in Summer Institute every other year)	5
PH.188.694	Health of Vulnerable Worker Populations (typically offered online in 1st term)	3
Health Security/Infectious Diseases		
PH.180.623	Infectious Disease Threats to Global Health Security (typically offered online in 3rd term)	3
PH.180.624	Biotechnology and Health Security (typically offered online in 1st term and onsite in 3rd term)	3
PH.180.627	Lessons Learned in 1918 Pandemic Flu (typically offered onsite in 4th term)	1
PH.180.630	Chemical and Biological Weapons Threats: Science, Public Health, Policy (typically offered onsite in 4th term)	3
PH.180.633	The Sociocultural Dimensions of Disasters (typically offered onsite in 4th term)	3
PH.180.634	Public Health Emergencies: Risk Communication and Decision Science (typically offered online in 1st term and onsite in 4th term)	3
PH.180.670	Introduction to Public Health Emergency Preparedness (typically offered onsite in 4th term)	3
Environmental Law/Environmental Justice		
PH.180.600	Public Health Implications of Health as a Human Right (typically offered onsite in Winter Institute)	2
PH.180.602	Environment and Health in Low and Middle income Countries (typically offered onsite in 3rd term)	2
PH.180.625	Community-Driven Epidemiology and Environmental Justice (typically offered onsite in 3rd term)	3
PH.180.626	Environmental Justice and Public Health Practice (typically offered online in 2nd term)	3
PH.180.628	Introduction To Environmental and Occupational Health Law (typically offered online in 4th term)	4
PH.340.680	Environmental and Occupational Epidemiology (typically offered onsite in 4th term)	4
Toxicology/Physiology/Molecular Mechanisms		
PH.180.632	Introduction to Molecular Toxicology (typically offered online in 4th term)	3
PH.180.637	Refinement of Animal Experimentation: Essential to Reduce Animal Suffering and Enhance Scientific Rigor (typically offered onsite in 3rd term)	2
PH.180.638	Animals in Research: Ethics (typically offered in 4th term)	1
PH.180.640	Molecular Epidemiology and Biomarkers in Public Health (typically offered onsite in 3rd term and online in 4th term)	4
PH.180.650	Fundamentals of Clinical Oncology for Public Health Practitioners (typically offered onsite in 2nd term)	3
PH.183.631	Fundamentals of Human Physiology (typically offered onsite in 2nd term and online in 4th term)	4
PH.183.638	Mechanisms of Cardiopulmonary Control (typically offered onsite in 3rd term)	2
PH.183.642	The Cardiopulmonary System Under Stress (typically offered onsite in 4th term)	2
PH.187.625	Animals in Research: Law, Policy, and Humane Sciences (typically offered online in 4th term)	3
PH.187.633	Introduction to Environmental Genomics and Epigenomics (typically offered onsite in 4th term)	3
PH.187.634	Analysis for Environmental Genomics and Epigenomics (typically offered onsite in 4th term)	1
PH.187.640	Toxicology 21: Scientific Foundations (typically offered onsite in 2nd term)	1
PH.187.645	Toxicology 21: Scientific Applications (typically offered online in 3rd term)	3
PH.187.650	Alternative Methods in Animal Testing (typically offered onsite in 4th term)	3
PH.187.655	Evidence-Based Toxicology (typically offered online in 4th term)	3
PH.187.661	Environmental Health in Neurological and Mental Disorders (typically offered online in 4th term)	3
PH.188.686	Clinical Environmental and Occupational Toxicology (typically offered onsite in 3rd term)	3

Epidemiology for Public Health Professionals, Certificate

Epidemiology for Public Health Professionals

OVERVIEW

The timely detection, investigation, control, and prevention of outbreaks and major long-term public health problems require a well-trained and competent epidemiology workforce as a key component of a national public health infrastructure. The Epidemiology Workforce in State and Local Health Departments - United States, 2010 Weekly March 30, 2012/61(12);205-208

Epidemiology is an integral component of public health practice. The discipline aims to provide the basis to prevent disease and to promote the health of populations through the study of the occurrence and distribution of health-related states or events, including the study of determinants influencing such states. Professional epidemiologic methods, defined as the application of epidemiologic methods to public health practice, entail the combination of analytical methods and applied epidemiology oriented to problem solving in public health. The principal areas of professional epidemiology include epidemiologic assessment of public health data, health situation and trend analyses, public health surveillance and health program impact assessment. These areas are closely linked to the essential public health function and services. This certificate program is intended to provide the concepts, methods and tools needed for the assessment of health situations and trends of population groups.

EDUCATIONAL OBJECTIVES

Upon completion of the core courses in this certificate program, individuals will have gained specialized knowledge and skills on the application of epidemiologic concepts and methods to public health problems, as follows:

1. Understand the place of epidemiology in public health, specifically how epidemiology is used to identify causes of disease, identify populations at high risk for disease, develop preventative methods and evaluate public health strategies.
2. Calculate and interpret basic epidemiologic measures of disease frequency, identify sources of data for measuring health outcomes, and identify key aspects of measurement problems,
3. Identify distinguishing features of fundamental study designs, including randomized trials, cohort and case-control studies, birth cohort and ecologic studies, and pre-post and quasi-experimental studies. Students will be able to describe strengths and limitations of the different study designs, and key sources of confounding and bias in epidemiological studies and
4. Interpret and make inferences from results of epidemiologic studies.

With regard to the usual functions of public health agencies, students will be able to:

1. Identify the Problem Solving Framework for measuring the severity of priority health problems,
2. Recognize the role of routine and public health information systems in epidemiologic assessments,
3. Identify tools and measurements used to monitor the quality of performance of public health information systems,
4. Identify the main indicators for measuring the burden of diseases at global, national and local levels
5. Design health situation analyses: epidemiological profiles and community health status assessments,
6. Interpret measures of health burden, association and effectiveness,
7. Describe the framework of the public health surveillance cycle and sources of information,
8. Design, implement and evaluate disease surveillance systems,
9. Communicate epidemiological information and synthesis to policy makers, professionals, and lay audiences.

ADMISSIONS

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/epidemiology-for-public-health-professionals-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework.

Students must successfully complete the core courses, demonstrated by full attendance and participation in all course activities and assignments. The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) (p. 577)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

The certificate program requires a minimum of 21 term credits comprised of required courses and core elective courses. The certificate curriculum consists of four required courses in epidemiologic methods, and at least two of three core elective courses. Certificate students may take additional elective courses focusing on application of epidemiologic methods to substantive areas, such as infectious diseases and biostatistics methods. Students should check the JHSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Students must select either 340.601, 340.721 or 340.751		
PH.340.601	Principles of Epidemiology (typically offered onsite in Summer Institute and Summer Term)	5
PH.340.721	Epidemiologic Inference in Public Health I (typically offered online in 1st, 3rd, Summer and Summer Institute terms and onsite in 1st term)	5
PH.340.751	Epidemiologic Methods 1 (typically offered onsite in 1st term)	5
Students must select either 340.602, 340.722, or 340.752		
PH.340.602	Intermediate Epidemiology (typically offered in Summer Institute and Winter Institute)	3
PH.340.722	Epidemiologic Inference in Public Health II (typically offered onsite and online in 2nd term)	4
PH.340.752	Epidemiologic Methods 2 (typically offered onsite in 2nd term)	5
Students must select either (340.767 and 340.768) or 340.769		
PH.340.767	Professional Epidemiologic Methods: Topics and Methods for Health Situation Analysis (typically offered online in Summer Institute)	2
PH.340.768	Professional Epidemiologic Methods: Decision Making in Health Situation Analysis (typically offered onsite in Summer Institute)	2
PH.340.769	Professional Epidemiology Methods (typically offered onsite in 3rd term)	4
Students must complete either (340.765 and 340.766) or 340.770		
PH.340.765	Professional Epidemiologic Methods: Epidemiologic intelligence and Population Health Assessments (typically offered online in Summer Institute and Winter Institutes)	2
PH.340.766	Professional Epidemiologic Methods: Surveillance (typically offered onsite in Summer Institute)	2
PH.340.770	Public Health Surveillance (typically offered onsite in 2nd term and online in 3rd term and Summer Institute)	3
Required Elective Courses: Students must complete at least two of the following elective courses to complete the certificate program with at least 21 academic credits. Elective substitutions are possible, but require approval in advance from Dr. Carlos Castillo-Salgado. Only one elective course may be substituted		
Students may select either 340.606 or 340.686		

PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses (typically offered onsite in 3rd term)	4
PH.340.686	Introduction to Systematic Reviews and Meta-Analysis (typically offered onsite in Summer Institute)	2
Students may select either 340.653 or 340.693		
PH.340.653	Epidemiologic Inference in Outbreak Investigations (typically offered onsite in 1st term)	3
PH.340.693	Investigation of Outbreaks (typically offered onsite in Summer Institute and Winter Institute)	2
Students may select either 320.717 or 340.727		
PH.340.717	Health Survey Research Methods (typically offered onsite in 2nd term)	4
PH.340.727	Introduction to Health Survey Research Methods (typically offered online in 3rd term and onsite in Summer Institute)	2

Evaluation: International Health Programs, Certificate

Evaluation: International Health Programs OVERVIEW

The certificate program is intended for current master's and doctoral students at JHU planning to work in the field of monitoring and evaluation (M&E) in low- and middle-income countries.

EDUCATIONAL OBJECTIVES

Upon completion of the certificate program, individuals will be able to:

1. Evaluate health programs from conception, planning and design through data collection, interpretation, and analysis in low-and-middle-income settings;
2. Create impact models for health programs that reflect program assumptions and the available evidence on intervention effectiveness;
3. Critically evaluate the advantages and disadvantages of various evaluation designs for a given health program;
4. Identify threats to internal and external validity in program evaluation, and develop a plan to mitigate or document these threats;
5. Design, implement and manage data collection activities to measure program inputs, processes, outputs, outcomes, and impacts in low and middle-income settings;
6. Critically assess the quality of existing data on program inputs, processes, outputs, outcomes and impacts, and determine whether these data can be used in the evaluation of a health program in low- and middle-income settings; and
7. Analyze, interpret and use program evaluation data to improve program implementation.

ADMISSIONS

Certificate contact information and complete admissions information is available on the Bloomberg School's certificate program page (https://publichealth.jhu.edu/academics/evaluation-international-health-programs-certificate-program/).

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 20 term credits. All required and elective courses must be taken for a letter grade, if a letter grade is an option. Students must earn a minimum letter grade of C in each certificate course, and maintain a GPA of 2.75 or higher for the certificate courses. All courses must be completed within a three year period.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) before completing certificate program requirements. The student's transcripts will not indicate that the certificate was earned until the Notification of Completion form has been submitted, verified by the certificate program, and processed by the School of Public Health Registrar.

COURSE OF STUDY

Students should check the JHSPH course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Required Courses- Students are required to complete 4 core courses (14 credits required)		
PH.221.645	Large-scale Effectiveness Evaluations of Health Programs (typically offered onsite in 2nd term)	4
PH.223.632	Methods for Planning and Implementing Evaluations of Large-Scale Health Programs in Low and Middle income Countries (typically offered onsite in 4th term)	4
PH.223.866	Special Topics in Program Evaluation in International Health (typically offered onsite in 3rd term)	1
Students must complete either 340.601 or 340.721 o4 340.751		
PH.340.601	Principles of Epidemiology (typically offered onsite in 3rd term, Summer and Summer Institute)	5
PH.340.721	Epidemiologic Inference in Public Health I (typically offered onsite in 1st term, and online in 1st, 3rd, Summer and Summer Institute)	5
PH.340.751	Epidemiologic Methods 1 (typically offered onsite in 1st term)	5
Elective Courses: students must complete 6 or more credits from among the following courses:		
Note: Up to 3 credits of elective coursework may be substituted for a special topics course only with prior approval from the certificate program's sponsoring faculty.		
General Evaluation Courses		
PH.300.713	Research and Evaluation Methods for Health Policy (typically offered onsite in 3rd term)	3
PH.300.715	Advanced Research and Evaluation Methods in Health Policy (typically offered onsite in 3rd term)	4
PH.318.615	Program Evaluation for Public Policy I (typically offered onsite in 1st term)	3

PH.318.616	Program Evaluation in Public Policy II (typically offered onsite in 2nd term)	3
PH.380.611	Fundamentals of Program Evaluation (typically offered onsite in 3rd term and online in 1st term)	4
Economic Evaluation Courses		
PH.221.644	Econometric Methods for Evaluation of Health Programs (typically offered onsite in 3rd term)	4
PH.313.601	Economic Evaluation I (typically offered onsite and online in 1st term)	3
PH.313.602	Economic Evaluation II (typically offered onsite and online in 2nd term)	3
Methods and Analysis Courses		
PH.140.640	Statistical Methods for Sample Surveys (typically offered onsite in 3rd term)	3
PH.223.664	Design and Conduct of Community Trials (typically offered onsite in 3rd term)	4
PH.340.717	Health Survey Research Methods (typically offered onsite in 2nd term)	4
PH.380.711	Issues in Survey Research Design (typically offered onsite in 3rd term)	3
PH.380.712	Methods in Analysis of Large Population Surveys (typically offered onsite in 4th term)	3
Statistical Methods Courses		
PH.140.664	Causal Inference in Medicine and Public Health I (typically offered onsite in 3rd term and online in 4th term)	4
PH.140.665	Causal Inference in Medicine and Public Health II (typically offered onsite in 4th term)	3

Food Systems, the Environment & Public Health, Certificate

Food Systems, the Environment and Public Health

Please Note: Certificate program may be completed entirely online!

OVERVIEW

Food provides many benefits, from nourishment and well-being to livelihoods. Our food systems are also at the nexus of many of the today's most significant challenges, including climate change, resource scarcity, over- and under-nutrition, and environmental exposures to workers and communities. Inequities are widespread. The certificate program in Food Systems, the Environment, and Public Health is designed for Johns Hopkins University degree students and professionals seeking to deepen their understanding of the critical role of food systems in public health and global environmental change. Students will apply research, communication, policy analysis and advocacy skills to address the public health and equity implications of food systems. The certificate curriculum can be customized to meet the needs of full-time, part-time, and online students.

EDUCATIONAL OBJECTIVES

Students completing the certificate program will be able to:

1. Define and describe the concepts of food systems, food security, food system sustainability, and resilience.

2. Describe how food systems and food production practices affect the public's health, with attention to equity and the historical trends that shaped today's food system.

3. Use a systems perspective to analyze and apply critical thinking to inter-relationships within food systems, specifically among diet, food production, the environment and public health.

4. Analyze strengths and weaknesses of political, social, and economic policies and other interventions to improve food systems.

5. Apply selected skills (such as research methodologies, communication, advocacy and behavior change) to promote healthy and sustainable food systems.

Admissions

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/food-systems-the-environment-and-public-health-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

Please note: Certificate program may be completed entirely online

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check prerequisites and whether instructor consent is required.

Code	Title	Credits
All students must complete the following courses:		
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
PH.180.620	Introduction to Food Systems and Public Health (typically offered online in 1st term)	4

Core Elective Courses: Students must complete a minimum of two courses from Group A and one from Group B, totaling a minimum of ten credits.		
Group A (Food Systems): Select a minimum of two courses from the following:		
PH.180.605	Food Systems Practicum (typically offered onsite in 2nd term)	4
PH.180.606	Case Studies in Food Production and Public Health (typically offered online in 4th term)	4
PH.180.635	Seafood and Public Health: Global Trade, Nutrition and the Environment (typically offered online in 3rd term)	2
PH.180.644	Food System Resilience to Disasters: COVID-19, Climate Change, and Beyond (typically offered online in 4th term)	2
PH.180.655	Baltimore Food Systems: A Case Study of Urban Food Environments (typically offered onsite in 3rd term)	4
PH.410.608	Applying Systems Thinking to Obesity Prevention (typically offered onsite in Summer Institute)	2
Group B (Food and the Environment): Select a minimum of one course from the following:		
PH.180.607	Climate Change and Public Health (typically offered hybrid in 3rd term)	3
PH.180.611	The Global Environment, Climate Change, and Public Health (typically offered onsite in 1st term)	4
PH.182.640	Food- and Water- Borne Diseases (typically offered onsite in 3rd term)	3
PH.185.600	One Health Tools to Promote and Evaluate Healthy and Sustainable Communities (typically offered online in 4th term)	3
PH.188.682	A Built Environment for A Healthy and Sustainable Future (typically offered online in 4th term)	3
PH.221.611	Food Security and Nutrition in Humanitarian Emergencies (typically offered onsite in 4th term)	2
PH.222.653	Food Technology and Health (typically offered onsite in 4th term)	3
PH.222.654	Food, Culture, and Nutrition (typically offered onsite in 4th term)	4
PH.222.657	Food and Nutrition Policy (typically offered onsite in 1st term)	2
PH.222.662	Obesity in Public Health (typically offered onsite in 2nd term)	3
PH.222.665	Planning for Food Systems and Public Health (typically offered onsite and synchronous online in 3rd term)	3
PH.224.630	The Obesity Epidemic Problem Solving Seminar: What We Can Learn from Native American Communities (typically offered online in 1st term)	3
PH.308.660	Food Industry, Politics and Public Health (typically offered online in 4th term)	3
PH.380.740	Nutrition Programs, Policy and Politics in the United States: the Impact on Maternal, Child and Family Health (typically offered online in 2nd term)	3
PH.700.630	Food Ethics (typically offered onsite in 3rd term)	3
Additional Recommended Courses: Students may select up to one course below to complete a total of 18 certificate credits		
PH.180.625	Community-Driven Epidemiology and Environmental Justice (typically offered onsite and hybrid in 3rd term)	3
PH.185.601	One Health Seminar (typically offered onsite and synchronous online in 4th term)	1
PH.188.688	Global Sustainability & Health Seminar (typically offered onsite in 2nd and 4th terms. Students may take 2 terms of this course for 2 credits)	1
PH.221.654	Systems Thinking in Public Health: Applications of Key Methods and Approaches (typically offered online in 2nd term)	3
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels (typically offered onsite in 2nd term)	4
PH.260.848	Community-Based Practice Through Civic Engagement (typically offered online in 4th term)	2
PH.224.690	Qualitative Research Theory and Methods (typically offered online in 1st and 3rd terms, and onsite in 3rd term)	3
PH.305.684	Health Impact Assessment (typically offered online in 3rd term)	3
PH.317.600	Introduction to the Risk Sciences and Public Policy (typically offered onsite in 1st term and online in 3rd term)	4
PH.317.610	Risk Policy, Management and Communication (typically offered onsite in 2nd term and online in 4th term)	3
PH.410.612	Sociological Perspectives on Health (typically offered hybrid in 1st term)	3
PH.410.620	Program Planning for Health Behavior Change (typically offered onsite in 1st term and Winter Institute and online in 4th term)	3
PH.410.650	Introduction to Persuasive Communications: Theories and Practice (typically offered onsite in 2nd term and Winter Institute)	4
PH.410.663	Media Advocacy and Public Health: Theory and Practice (typically offered onsite in 4th term)	3
PH.410.672	Organizing for Public Health with the Six Steps to Effective Advocacy: Turning Public Will into Public Policy (typically offered onsite in 2nd and 3rd terms and Summer Institute and online in 3rd term)	3
Recommended Courses for Non-Degree Students: Students who are not enrolled in a degree program at BSPH are strongly encouraged to complete one or more of the following courses.These credits cannot count towards Group A or B requirements but can count towards the fulfillment of the 18-credit requirement to complete the certificate program		
PH.552.601	Foundational Principles of Public Health (typically offered online in 1st, 2nd and 3rd terms)	0.5
PH.552.607	Essentials of Environmental Health (typically offered online in 1st, 2nd, and 3rd terms)	0.5
PH.552.610	The Social Determinants of Health (typically offered onsite in 1st, 2nd and 3rd terms)	0.5
PH.552.612	Essentials of One Health (typically offered online in 1st and 4th terms)	0.5

Gender and Health, Certificate

Gender and Health Certificate Program

OVERVIEW

The Certificate Program in Gender and Health will provide concrete training in gender and health with particular focus on gender theories, gender analysis, gender-based violence research methods, gender and sexuality, gender and women's health, gender and men's health, and intersectionality. Gender as applied to public health is a burgeoning field, and many NGOs and multi-lateral organizations have specific gender specialist positions; this Certificate Program is designed to give students the knowledge and skills to work in this area.

EDUCATIONAL OBJECTIVES

Upon completion of the certificate program, students will be able to:

1. Explain the role of gender in shaping health inequities and recognize how gender health inequities affect health research and interventions.
2. Apply gender analysis and gender concepts to leading related health topics related to women's, men's and people with other gender identities' health, including sexual/reproductive health and gender-based violence.
3. Incorporate gender analysis into health research and interventions.

SPONSORING DEPARTMENTS

International Health (https://www.jhsph.edu/departments/international-health/)

Population, Family and Reproductive Health

Health, Behavior and Society

ADMISSIONS

Contact information and complete certificate program admission information is available on the certificate program page (https://publichealth.jhu.edu/academics/gender-and-health-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) before completing certificate program requirements. The student's transcripts will not indicate that the certificate was earned until the Notification of Completion form has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the JHSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses: All students should complete 221.621, 221.701 and 380.720; in addition, they should complete either 380.666 or 380.668, AND they should complete either 340.629 or 410.683		
PH.221.621	Gender and Health: Foundational Theories and Applications (typically offered onsite in 1st term)	2
PH.221.701	Applications to Gender Analysis Within Health Research and Interventions (typically offered onsite in 2nd term)	2
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond (typically offered onsite in 2nd term)	3
Students should complete either 380.666 or 380.668		
PH.380.666	Women's Health (typically offered onsite in 3rd term)	3
PH.380.668	International Perspectives on Women, Gender, and Health (typically offered onsite in 4th term)	3
Students should complete either 340.629 or 410.683		
PH.340.629	The Epidemiology of LGBTQ Health (typically offered onsite in 2nd term)	3
PH.410.683	Global Perspectives on LGBT Health (typically offered as a hybrid onsite/online course in 3rd term)	3
Elective Courses- Students should complete 5 credits of electives, for a total of 18 credits of certificate program coursework		
PH.306.660	Legal and Public Health Issues in the Regulation of intimacy (typically offered onsite in 4th term)	3
PH.340.629	The Epidemiology of LGBTQ Health (can only count once; typically offered onsite in 2nd term)	3
PH.340.698	Methods For Assessing Power, Privilege, and Public Health in the United States (typically offered onsite in 4th term, every other year)	4
PH.380.604	Life Course Perspectives on Health (typically offered online in 2nd term and onsite in 1st term)	4
PH.380.628	Public Health Perspectives On Abortion (typically offered onsite in 4th term)	3
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies (typically offered onsite in 3rd term)	3
PH.380.665	Family Planning Policies and Programs (typically offered onsite in 3rd term)	4
PH.380.666	Women's Health (can only count once; typically offered onsite in 3rd term)	3
PH.380.668	International Perspectives on Women, Gender, and Health (can only count once; typically offered onsite in 4th term)	3
PH.380.760	Clinical Aspects of Reproductive Health (typically offered onsite in 3rd term)	3

PH.380.768	Selected Topics in Women's Health and Women's Health Policy (typically offered online in 1st term)	4
PH.410.681	Gay, Bisexual and Other Men Who Have Sex With Men (MSM) and HIV: Theoretical Perspectives on the Us Epidemic (typically offered onsite in 3rd term)	3
PH.410.683	Global Perspectives on LGBT Health (can only count once; typically offered as a hybrid onsite/online course in 3rd term)	3

Gerontology, Certificate

OVERVIEW

The Johns Hopkins certificate in Gerontology is awarded to qualified students who have acquired a body of knowledge that is essential for success in this exciting field. The University is known for its several centers of excellence in gerontologic studies. It offers a rich array of aging-related courses, conferences, research projects, and mentors across its medical institutions: the Bloomberg School of Public Health, the School of Nursing, and the School of Medicine. The Johns Hopkins School of Medicine's Division of Geriatric Medicine and Gerontology is considered one of the best in the country, and the continuum of long-term and chronic care, located at the University's Bayview Campus, has been referred to as the most complete in the United States.

EDUCATIONAL OBJECTIVES

1. Increase understanding of the health issues confronting aging populations and commonly used terms, conceptual frameworks, and domains of gerontology study.
2. Provide health professionals with skills for evaluating the health of an aging population.
3. Foster knowledge of constructive interdisciplinary research and practice for improving the quality of health care and long-term services and supports for aging populations.

ADMISSIONS

Complete certificate contact information and admissions information can be found on the Bloomberg School certificate program page (https://publichealth.jhu.edu/academics/gerontology-certificate-program/).

SPONSORING DEPARTMENTS

Health Policy and Management (http://www.jhsph.edu/dept/hpm/)
Epidemiology (http://www.jhsph.edu/dept/epi/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

Students must complete all certificate coursework for a letter grade, earn a minimum of a C in each certificate course, and maintain a minimum grade point average of 2.75 for all certificate courses. Students must successfully complete at least 18 credit hours among the required and elective courses. The certificate program length is flexible; it varies from student to student, however, the certificate program must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should use the Bloomberg School of Public Health c (https://www.jhsph.edu/courses/)ourse directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for prerequisites and whether instructor consent is required. Prior to registering for any online courses, students must complete Introduction to Online Learning (https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/).

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Required Courses: Students must complete 309.605 and 340.616. They must also complete EITHER 120.627 OR 260.665		
PH.120.627	Stem Cells and the Biology of Aging and Disease (typically offered onsite and online in 3rd term)	3
PH.260.665	Biological Basis of Aging (typically offered onsite in 3rd term, every other year)	3
PH.309.605	Health Issues for Aging Populations (typically offered onsite in 2nd term)	3
PH.340.616	Epidemiology of Aging (typically alternates between being offered onsite and online in 1st term every other year and online in the Summer Institutes)	3
Elective Courses: Students must complete at least 9 credits of elective coursework		
PH.120.627	Stem Cells and the Biology of Aging and Disease (Course may only be completed as an elective if not already completed as one of the required courses. Course is typically offered onsite and online in 3rd term)	3
PH.260.665	Biological Basis of Aging (Course may only be completed as an elective if not already completed as a required course. Course is typically offered onsite in 3rd term every other year)	3
PH.330.618	Mental Health in Later Life (typically offered onsite in 4th term every other year)	3
PH.330.623	Brain and Behavior in Mental Disorders (typically offered onsite in 4th term)	3
PH.330.802	Seminar on Aging, Cognition and Neurodegenerative Disorders (typically offered onsite in 1st, 2nd and 3rd terms, every other year)	2
PH.340.699	Epidemiology of Sensory Loss in Aging (typically offered onsite in 3rd term)	3
PH.380.604	Life Course Perspectives on Health (typically offered virtually in 1st term and online in 2nd term)	4
PH.380.603	Demographic Methods for Public Health (typically offered onsite in 2nd term and online in 3rd term)	4

Students interested in aging may learn about other aging-related training opportunities at Johns Hopkins University's Center on Aging and Health (https://coah.jhu.edu/).

Global Health, Certificate

Global Health Certificate Program

NOTE: Certificate program may be completed entirely online!

OVERVIEW

Global health is the study of the health of populations in a global context, considering its political, social, and economic impact. The certificate program is primarily intended for junior and mid-level professionals practicing or planning to practice in developing countries and interested in expanding their global health skills and knowledge.

The certificate program can be completed entirely with online courses or with a combination of online and on-campus courses.

EDUCATIONAL OBJECTIVES

Upon completion of the Global Health Certificate, individuals will be able to:

1. Describe individual, community, and organizational behaviors and change processes in cross-cultural and developing countries settings as a foundation for planning appropriate primary health care programs;
2. Apply relevant social and behavioral theories to diagnose and understand individual, social network, organizational, community, and policy-maker behaviors associated with the planning, implementation, evaluation, and maintenance of community-based primary health care programs;
3. Describe and critically evaluate the strengths, weaknesses, and sustainability of disease control programs and policies for major causes of death and disability in developing countries and discuss program and policy implementation obstacles and approaches to overcoming them;
4. Apply cultural competence and skills to global and diverse settings related to populations such as refugees, immigrants, and migrant workers;
5. Explain how to work effectively in countries and cultures with differing social and economic perspectives; and
6. Analyze the complexities of the social, economic, medical, political, and environmental factors that affect health.

International Health

Admissions

Complete certificate program admissions information and contact information is available on the certificate program page (https://publichealth.jhu.edu/academics/global-health-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All certificate coursework must be taken for a letter grade, a minimum grade of C must be earned in all certificate coursework, and a 2.75 or better overall GPA for all certificate coursework is required. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcripts will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Please note: The Global Health certificate program will not approve any course substitutions or waivers. The curriculum indicated below cannot be altered in any way for individual students.

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when the course is offered, and students should also check for pre-requisites and whether instructor consent is required.

Global Health Practice, Certificate

OVERVIEW

PLEASE NOTE: THIS PROGRAM CAN ONLY BE COMPLETED VIA FULLY ONLINE COURSES.

The Johns Hopkins Bloomberg School of Public Health offers fully online, part-time master's degree and certificate programs, designed for working professionals. Our Online Programs for Applied Learning (https://www.jhsph.edu/academics/online-programs-and-learning/online-programs-for-applied-learning/) (OPAL) focus on emergent industry sectors that have a resounding need for highly skilled professionals, with one of these sectors being Global Health. Our certificate program in Global Health Practice is geared towards early-to mid-career health professionals in the public, private, and NGO sectors. The certificate program will provide students with an overview of the basic components of global or international health, including health systems, health information, epidemiology/disease control, maternal and child health, and social, cultural, and behavioral factors in health and disease. This innovative program prepares students from diverse personal and professional backgrounds to organize, lead, and support effective global health practice initiatives across the globe.

EDUCATIONAL OBJECTIVES

Upon completion of the Certificate program in Global Health Practice, the individual will acquire skills necessary to:

1. Apply capacity building processes to global health programming in low and middle-income countries;
2. Identify and collaborate with a wide range of stakeholders whose active participation is required for successful global health programming at the community, sub-national, national and regional levels;
3. Apply ethical reasoning to the policy and programming decisions needed for designing and implementing global health programs in low and middle-income countries;
4. Exhibit a health equity and social justice lens in the design and conduct of global health programs;
5. Apply appropriate management processes in the design, implementation and evaluation of global health programs;
6. Demonstrate social, cultural and political awareness of the context in which global health programming takes place;
7. Conduct strategic analysis of factors that influence the success of global health programming.

LinkedIn® Group

We have established a LinkedIn® group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage you to join this professional networking community.

BSPH OPAL Programs in Global Health (https://www.linkedin.com/uas/login/?session_redirect=https%3A%2F%2Fwww.linkedin.com%2Fgroups%2F8676619%2F)

Additional Public Health Learning Resources

The Mid-Atlantic Regional Public Health Training Center provides links to many of its online learning resources, as well as external resources, databases and public health organizations. These can be used to supplement learning on a particular topic, or provide background material. Many of these resources are available for free via their website (https://www.jhsph.edu/research/centers-and-institutes/mid-atlantic-public-health-training-center/training_events/online_training.html).

The Welch Medical Library at Johns Hopkins has many resources related to research, writing and documentation on their YouTube channel (https://www.youtube.com/c/WelchMedicalLibrary/).

The School has a number of research and practice related seminar series (https://publichealth.jhu.edu/academics/lecture-series/) that occur throughout the year and contribute to the intellectual community of the School, for students, staff, and faculty. The Bloomberg School has a website (https://publichealth.jhu.edu/practice/resources-for-practitioners/) that provides some additional resources for practitioners as well.

Practitioners can also access dozens of courses from Bloomberg School faculty on Coursera (https://www.coursera.org/jhu/). Practice-focused offerings include courses on topics such as gun violence, food systems, health equity, biostatistics, and epidemiology, among others.

Admissions

Contact information and complete information about applying to this certificate program can be found on the certificate program page (https://publichealth.jhu.edu/academics/global-health-practice-certificate-program/) on the Bloomberg School of Public Health website.

Program Requirements

Students should follow the plan outlined below if they wish to complete the Certificate program in one year. This plan will also allow students to maintain minimum credits needed for financial aid eligibility each term, and to follow any prerequisite sequencing. Courses can be taken at a slower pace if needed, so long as course prerequisites are met.

The certificate program requires a minimum of 20 term credits and a minimum grade point average (GPA) of 2.75. Students must earn a minimum grade on a set of required program-specific core courses: "Pass" for courses offered only on a pass/fail basis: "C" or higher for courses offered for letter grading. The certificate program length is flexible; it can be completed in as little as one year, and must be completed within three years.

Notification of Certificate Program Completion

Students in OPAL certificate programs must complete and submit the Notification of Certificate Program Completion form to the OPAL program office **before the end of the add/drop period of the term of your last certificate course**; certificate program completions cannot be processed retroactively. If the deadline is missed, the certificate completion will be processed for the next available term.

For MAS students who did not apply to a certificate but will be completing as part of their degree, they can either apply for completion once the certificate courses are successfully completed, or at the end of their degree program. The certificate cannot be granted or included in the transcript until the form is submitted and verified by the certificate program.

It is preferable to complete the form electronically. Send the completed form to the OPAL program office as an email attachment. Certificates will be ordered for students approximately one month after the end of the term in the summer, spring, and fall. A template form for each of the OPAL certificates can be found in the Online Library of the OPAL Student Resources CoursePlus site. The blank form can be found on the School's website as well. Please **send the completed Notification form to OPAL-Office@jhu.edu** by the deadline noted above. Be sure to complete all personal information on the first page, and the year, term and grade for all completed courses. If needed, we can update the pending grades when they are submitted at the end of the term.

Global Tobacco Control, Certificate

OVERVIEW

PLEASE NOTE: THIS PROGRAM CAN ONLY BE COMPLETED VIA FULLY ONLINE COURSES.

The Johns Hopkins Bloomberg School of Public Health offers fully online, part-time master's degree and certificate programs, designed for working professionals. Our Online Programs for Applied Learning (https://www.jhsph.edu/academics/online-programs-and-learning/online-programs-for-applied-learning/) (OPAL) focus on emergent industry sectors that have a resounding need for highly skilled professionals, with one of these sectors being tobacco control. Tobacco use is the number one preventable cause of death in the world, and it is projected to kill one billion people in the 21st century unless effective tobacco control measures are implemented. In order to reduce and ultimately end the global burden of tobacco-caused death and disease, researchers and public health professionals need to be equipped with the necessary technical skills to support effective policy development and implementation. The overall aim of the fully online certificate program in Global Tobacco Control is to provide formal education to research scientists and public health professionals that equips them with the technical skills necessary to develop and effectively communicate the evidence that is required to support effective tobacco control policy development and implementation.

This fully online certificate program is offered in collaboration with the Institute for Global Tobacco Control (https://www.jhsph.edu/research/centers-and-institutes/institute-for-global-tobacco-control/capacity-building/certificate-program/). Please refer to their website for additional program information, including scholarship eligibility, application requirements and instructions, and deadlines.

EDUCATIONAL OBJECTIVES

Upon completion of the certificate program in Global Tobacco Control, the individual will acquire skills necessary to:

1. Describe the history of tobacco use and the tobacco epidemic;
2. Identify the types and sources of tobacco control evidence, including surveillance data, epidemiological studies, intervention-research, and program and policy evaluation studies;
3. Describe the specific activities, strategies and methods that have been undertaken to reduce tobacco use in countries around the world;
4. Discuss, compare and critique current global tobacco control efforts and strategies;
5. Articulate epidemiological, quantitative and qualitative research and evaluation methods using specific tobacco control examples;
6. Describe applied qualitative research techniques used in tobacco control, including direct observational studies, interviewing and focus groups, and analysis of tobacco industry documents;
7. Discuss theories of change and how they apply to tobacco control at individual, organizational and societal levels;
8. Recognize and describe communication approaches that are effective in educating, informing and persuading individuals, communities and policy decision makers concerning tobacco control;

9. Apply specific methods and approaches to improve leadership and management of tobacco control interventions;
10. Discuss tobacco industry strategies that undermine tobacco control interventions;
11. Describe tobacco product regulation in the context of the U.S. and abroad;
12. Apply writing skills to communicate confidently and effectively in a variety of professional formats.

LinkedIn © Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage you to join this professional networking community.

Additional Public Health Learning Resources

The Mid-Atlantic Regional Public Health Training Center provides links to many of its online learning resources, as well as external resources, databases and public health organizations. These can be used to supplement learning on a particular topic, or provide background material. Many of these resources are available for free via their website (https://www.jhsph.edu/research/centers-and-institutes/mid-atlantic-public-health-training-center/training_events/online_training.html).

The Welch Medical Library at Johns Hopkins has many resources related to research, writing and documentation on their YouTube channel (https://www.youtube.com/c/WelchMedicalLibrary/).

The School has a number of research and practice related seminar series (https://publichealth.jhu.edu/academics/lecture-series/) that occur throughout the year and contribute to the intellectual community of the School, for students, staff, and faculty. The Bloomberg School has a website (https://publichealth.jhu.edu/practice/resources-for-practitioners/) that provides some additional resources for practitioners as well.

Practitioners can also access dozens of courses from Bloomberg School faculty on Coursera (https://www.coursera.org/jhu/). Practice-focused offerings include courses on topics such as gun violence, food systems, health equity, biostatistics, and epidemiology, among others.

Admissions

Contact information and complete information about applying to the certificate program is available on the certificate program page (https://publichealth.jhu.edu/academics/global-tobacco-control-certificate-program/) on the Bloomberg School of Public Health website.

Program Requirements

The certificate program requires a minimum of 25 term credits and successful completion of all courses for a letter grade, as well as a minimum grade point average (GPA) of 2.75. Students must earn a grade of C or better in all certificate courses.

Students who are awarded full funding from the Institute for Global Tobacco Control are still considered part-time but they are required to enroll in at least six credits each term. For a student to be successful, it is important that they are able to spend at least four hours a week, per credit hour on course work. Even though the program is intended to be taken on a part-time basis, a student can expect to devote at least 24 hours every week to course work in each term. For students who are fully funded by the IGTC, the certificate program must be completed within 1 year of matriculation. For students who are self-funded, the program length is more flexible; it can be completed in as little as one year, and must be completed within three years.

The student should review the section of the website that addresses completion (p. 577) before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

Health and Human Rights, Certificate

Certificate Program in Health and Human Rights

EDUCATIONAL OBJECTIVES

The Certificate Program in Health and Human Rights is designed to:

1. Increase understanding among public health professionals regarding the key linkages between human rights and public health.
2. Explore the vital roles of health professionals in promoting human rights, including the right to health, advocating for protection of human rights, researching violations, and building a culture of human rights
3. Build familiarity with international human rights standards and institutions
4. Review how human rights concepts can be brought to bear on public health programs and policies, ranging from developing health system to responding to an epidemic of infectious disease.
5. Review how public health professionals can bring epidemiology and other methods of public health to investigate, analyze, and document abuses of human rights.

SPONSORING DEPARTMENT

Epidemiology (https://www.jhsph.edu/departments/epidemiology/)

ADMISSIONS

Complete certificate program admissions information and contact information is available on the certificate program page (https://publichealth.jhu.edu/academics/health-and-human-rights-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

In addition to the course requirements listed below, any certificate students who do not already complete Epidemiology coursework as part of their degree program must complete at least one Epidemiology course.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted and verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the JHSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for prerequisites and whether instructor consent is required for courses.

Health Communication, Certificate

Health Communication Certificate Program

EDUCATIONAL OBJECTIVES

Students completing the certificate program will be exposed to and have a basic understanding of the theoretical and applied aspects of Health Communication. Competencies achieved will include, but are not limited to:

1. Awareness of behavior change and communication theories
2. Knowledge of media effects and audiences uses of media/communication modes
3. Recognition of quantitative and qualitative methods used in the study of Health Communication.

Additionally, the Health Communication certificate program will familiarize students with the design and evaluation (formative, process, and summative) of communication messages, campaigns, and programs.

SPONSORING DEPARTMENT

Health, Behavior and Society

ADMISSION

Contact information and information about admissions to the certificate program can be found on the Bloomberg School of Public Health certificate program page (https://publichealth.jhu.edu/academics/health-communication-certificate-program/).

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. Any request to substitute a course that the faculty sponsors consider essential to meet the certificate program competencies must be given serious consideration. The student must propose the course to be substituted and present a rationale for the request. In no case will more than one substitution be permitted. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years. The student should review the section of the website that addresses completion (https://nam02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.jhsph.edu%2Facademics%2Fcertificate-programs%2FJHSPH_certificate_completion.html&data=04%7C01%7Cfturner4%40jhu.edu%7C2ac21a71fd474409a04d08d908a977a5%7C9fa4f438b1e6473b803f86f8aedf0de%7C0%7C0%7C637550346214143948%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiLC%7C1000&sdata=mszYnLXcg6%2FcGE4ven%2F8JXG%2FPZeeduIGpU%2BBiyLUdHg%3D&reserved=0)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://nam02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.jhsph.edu%2Fcourses&data=04%7C01%7Cfturner4%40jhu.edu%7C2ac21a71fd474409a04d08d908a977a5%7C9fa4f438b1e6473b803f86f8aedf0de%7C0%7C0%7C637550346214153940%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiLC%7C1000&sdata=Zo47nrmABQYDxXXzB%2BY5R%2BoJnofcd2jLYZ1hlQwKUNg%3D&reserved=0) to confirm when courses are offered. The term may change from what is listed in the table below and some courses are only offered every other year. Students should also check for prerequisites and whether instructor consent is required.

Note: It is STRONGLY RECOMMENDED that students interested in this certificate program take 410.653 (https://www.jhsph.edu/courses/course/410.653/01/2014/18940/) (Contemporary Issues in Health Communication) as a way to familiarize themselves with the different faculty and course offerings in Health Communication.

Note: Students who started the certificate program prior to AY21-22 may count 410.620 Program Planning for Health Behavior Change towards their total credits, since it was included in the curriculum before that year.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	

Required: 18 credits from the following courses:		
PH.180.634	Public Health Emergencies: Risk Communication and Decision Science	3
PH.301.645	Health Advocacy (typically offered onsite in 4th term)	3
PH.312.660	Marketing in Health Care Organizations (typically offered onsite in 3rd term and in Summer Institute)	3
PH.317.610	Risk Policy, Management and Communication (typically offered onsite in 2nd term)	3
PH.380.611	Fundamentals of Program Evaluation (typically offered onsite in 3rd term and online in 1st term)	4
PH.410.622	Strategic Leadership Principles and Tools for Health System Transformation in Developing Countries (typically offered onsite in 2nd term)	4
PH.410.650	Introduction to Persuasive Communications: Theories and Practice (typically offered onsite in 2nd term and Winter Institute)	4
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication (typically offered online in 2nd term)	3
PH.410.652	Interpersonal Influence in Medical Care (typically offered onsite in 4th term)	2
PH.410.653	Contemporary Issues in Health Communication (typically offered onsite in 1st term)	1
PH.410.654	Health Communication Programs I: Planning and Strategic Design (typically offered onsite in 4th term)	4
PH.410.655	Health Communication Programs II: Implementation and Evaluation (typically offered onsite in 4th term)	4
PH.410.656	Entertainment Education for Behavior Change and Development (typically offered onsite in 4th term)	4
PH.410.663	Media Advocacy and Public Health: Theory and Practice (typically offered onsite in 4th term)	3
PH.410.679	Decolonization, Global Communication, and Public Health (typically offered onsite in 4th term)	3
PH.410.733	Communication Network Analysis in Public Health Programs (typically offered onsite in 4th term)	4
PH.410.752	Children, Media, and Health (typically offered onsite in 3rd term)	3
PH.410.755	Health Communication Programs (typically offered online in 3rd term)	4
PH.410.840	Special Studies and Research in Health Behavior and Society (Must be approved by Dr. Storey; typically offered onsite in 1st, 2nd and 3rd terms)	1 - 22

Health Disparities and Health Inequality, Certificate

Health Disparities and Health Inequality Certificate Program

OVERVIEW

The goal of the certificate program is to train future leaders in research on health disparities and health inequality, and to train individuals to identify the underlying causes of health inequalities and how to develop and implement effective solutions.

EDUCATIONAL OBJECTIVES

Upon successful completion of this certificate program, students will:

1. Become knowledgeable of the current research on health disparities and health inequalities
2. Become knowledgeable on the underlying cause of health inequalities
3. Be able to identify, describe, and be knowledgeable regarding possible solutions to address/reduce health inequalities in different populations

ADMISSIONS INFORMATION

Contact information and complete information about applying to the certificate program can be found on the Bloomberg School of Public Health c (https://www.jhsph.edu/academics/certificate-programs/certificates-for-hopkins-students/health-disparities-and-health-inequality.html)ertificate program webpage (https://publichealth.jhu.edu/academics/health-disparities-and-health-inequality-certificate-program/).

Sponsoring Department

Health Policy and Management (http://www.jhsph.edu/departments/health-policy-and-management/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The requirements for the certificate program consist of taking the required Seminar in Health Disparities course, two terms of the Health Disparities Journal Club course, and taking thirteen or more credits from the elective courses listed below. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the program must be completed within three years.

The student should review the section of the website that addresses completion (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/) before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate review committee, and processed by the Registrar.

COURSE OF STUDY

The certificate requires a minimum of 18 academic credits of coursework. Questions regarding the course of study should be directed to the faculty sponsors.

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for prerequisites and whether instructor consent is required.

PH.340.692	Prisons, Public Health, and Human Rights (typically offered onsite in 4th term)	2
PH.340.698	Methods For Assessing Power, Privilege, and Public Health in the United States (typically offered onsite in 4th term, every other year)	4
PH.340.705	Advanced Seminar in Social Epidemiology (typically offered onsite in 3rd term every other year)	4
PH.380.604	Life Course Perspectives on Health (typically offered online in 1st and 2nd terms)	4
PH.380.624	Maternal and Child Health Legislation and Programs (typically offered online in 2nd term)	4
PH.380.635	Urban Health in Contemporary America (typically offered onsite in 4th term)	4
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth (typically offered onsite in 3rd term)	3
PH.380.666	Women's Health (typically offered onsite in 3rd term)	3
PH.380.667	Women's Health Policy (typically offered onsite in 4th term)	3
PH.380.756	Poverty, Economic Development, and Health (typically offered onsite in 2nd term every other year)	4
PH.380.768	Selected Topics in Women's Health and Women's Health Policy (typically offered online in 1st term)	4
PH.410.605	Fundamental Tools for Promoting Health Equity (typically offered online in 2nd term)	3
PH.410.606	Local and Global Best Practices in Health Equity Research Methods (typically offered online in 4th term)	4
PH.410.610	Housing Insecurity and Health (typically offered onsite in 4th term)	3
PH.410.611	Under Pressure: Health, Wealth & Poverty (typically offered onsite in 4th term)	3
PH.410.630	Implementation and Sustainability of Community-Based Health Programs (typically offered onsite in 4th term)	3
PH.410.631	Introduction to Community-Based Participatory Research: Principles and Methods (typically offered onsite in 2nd term)	3
PH.410.635	Applications of innovative Methods in Local and Global Health Equity Research (typically offered online in term 3 and onsite in Summer Institute)	4
PH.410.660	Latino Health: Measures and Predictors (typically offered onsite in 4th term)	3
PH.410.681	Gay, Bisexual and Other Men Who Have Sex With Men (MSM) and HIV: Theoretical Perspectives on the Us Epidemic (typically offered onsite in 3rd term)	3
PH.410.861	Graduate Seminar in Community-Based Research (typically offered onsite in 2nd term)	1
Students may also elect to complete a specials studies course, with permission from Dr. Roland Thorpe		

Health Education, Certificate

Health Education Certificate Program

EDUCATIONAL OBJECTIVES

Upon completion of this certificate program, certificate candidates will possess the knowledge and skills necessary to understand and modify the personal and environmental factors that influence health-related behaviors, and by doing so, impact the overall health of individuals and communities. Upon completion of the core courses of the certificate program, students will gain a broad understanding of health education principles, theories, and strategies, and will achieve the competencies considered central to effective health education. After completing core and elective courses, students will be able to:

1. Assess individual and community needs for health education;
2. Plan effective health education programs;
3. Implement health education programs;
4. Evaluate the effectiveness of health education programs;
5. Coordinate provisions of health education services;
6. Act as a resource person; and
7. Communicate health and health education needs, concerns and resources.

SPONSORING DEPARTMENT

Health, Behavior and Society

ADMISSION

Complete certificate program admissions and contact information is available on the Bloomberg School of Public Health certificate program page (https://publichealth.jhu.edu/academics/health-education-certificate-program/).

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. Any request to substitute a course that the faculty sponsors consider essential to meet the certificate program competencies must be given serious consideration. The student must propose the course to be substituted and present a rationale for the request. In no case will more than one substitution be permitted. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years. The student should review the section of the website that addresses completion (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/) before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. The term may change from what is listed in the table below and some courses are only offered every other year. Students should also check for prerequisites and whether instructor consent is required.

Health Finance and Management, Certificate

Health Finance and Management Certificate Program

NOTE: This certificate program may be completed entirely online!

OVERVIEW

The goal of this certificate program is to facilitate the development of knowledge and skills in the areas of management, finance and leadership within healthcare. The primary focus of the program is the U.S. health system. This certificate program can be completed online.

EDUCATIONAL OBJECTIVES

Upon completion of the certificate program in Health Finance and Management, students will be able to:

1. Describe the organization and primary financial systems of the U.S. healthcare delivery system
2. Describe current key policy and programmatic health care payment methodologies, and the impact of evolving value-based models.
3. Describe and apply key models (e.g. ACO) to optimize health care organization and delivery.
4. Evaluate various models of management and leadership, and leadership traits and characteristics necessary to meet the needs of complex and collaborative health care delivery systems.
5. Discuss challenges and opportunities related to the use and integration of data, data-gathering, and other aspects of health care information systems to improve efficiency and effectiveness within the health care delivery system.

ADMISSIONS

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/health-finance-and-management-certificate-program/) on the Bloomberg School of Public Health website.

Sponsoring Department

Health Policy and Management (https://www.jhsph.edu/departments/health-policy-and-management/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

A minimum of 18 credits of coursework is required. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements.The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for pre-requisites and whether the instructor consent is required.

PH.312.670	Negotiation in Health Care Settings (typically offered onsite in 4th term)	3
PH.312.693	Introduction to Comparative Effectiveness and Outcomes Research (typically offered online in 3rd term)	3
PH.312.700	Leading Organizations (typically offered online in 1st term and Summer Institute, and onsite in 1st term)	3
PH.312.701	Strategic Leadership and Decision Making (typically offered onsite and online in 2nd term)	3
PH.312.702	Leading Change: Building and Empowering Teams (typically offered onsite and online in 3rd term)	3
PH.312.703	Learning Organizations & Knowledge Management (typically offered onsite and online in 4th term)	3
PH.313.643	Health Economics (typically offered in 2nd term)	3
One of the following may be selected as an elective, but not both:		
PH.312.678	Introduction to Healthcare Quality and Patient Safety: A Management Perspective (typically offered onsite in 3rd term)	2
PH.309.731	Patient Safety in Developing Countries (typically offered in Summer Institute)	2

Healthcare Epidemiology and Infection Prevention and Control, Certificate

Healthcare Epidemiology and Infection Prevention and Control

OVERVIEW

The certificate is designed for masters and doctoral students at The Johns Hopkins University and junior and mid-level professionals with an interest in gaining exposure to the expertise and skills utilized by healthcare epidemiologists and infection preventionists. Healthcare epidemiologists and infection preventionists aim to prevent and control healthcare-associated infections, antimicrobial resistant and epidemiologically significant organisms and other adverse outcomes in the healthcare setting by translating research into practice.

Their expertise and activities include epidemiologic and laboratory investigation, surveillance for infections and antimicrobial resistant or significant organisms, policy development and implementation, education and information dissemination, implementation of interventions to prevent transmission or infectious complications, cost-benefit analyses of interventions, and patient-oriented research to inform and improve the science of healthcare epidemiology and infection control and to improve quality-of-care.

EDUCATIONAL OBJECTIVES

Upon completion of the certificate program, students will be able to:

1. Demonstrate use and mastery of specific methods relating to hospital epidemiology including surveillance (traditional and computerized), outbreak management, communicable diseases, antibiotic management and resistance, occupational health, quality and performance improvement, patient safety, and ethical considerations.
2. Utilize clinical research study designs as applied to healthcare epidemiology research including, outcomes measurement, risk factor assessment, semi-quantitative methods, survey methods, and qualitative research.
3. Discuss relevant thematic topics including isolation precautions and hand hygiene, infection control in special populations, healthcare system preparedness, and environmental aspects of infection control.
4. Work within groups to design studies, collect data, and effectively communicate results to clinicians and researchers from various disciplines through framing problems scientifically, determining preferred research methods, designing appropriate data collection methods, performing statistical analyses, and interpreting findings.

Sponsoring Department

Department of Epidemiology (https://www.jhsph.edu/departments/epidemiology/)

ADMISSIONS

Contact information and complete certificate admissions information is available on the certificate program (https://publichealth.jhu.edu/academics/healthcare-epidemiology-and-infection-prevention-and-control-certificate-program/) page on the JHSPH website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements.The student's transcripts will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (http://www.jhsph.edu/courses/) to confirm when courses are offered, and students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this onsite noncredit course in their first term of study)	
Required courses: Students must complete the following required courses (see footnote)		
Introductory Epidemiology Requirement: Students must complete either 340.601 or 340.721		
PH.340.601	Principles of Epidemiology (typically offered onsite in Summer and Summer Institute)	5
PH.340.721	Epidemiologic Inference in Public Health I (typically offered onsite in 1st term, and online in 1st, 3rd, Summer and Summer Institute)	5
Students must complete the following required course:		
PH.340.641	Healthcare Epidemiology (typically offered onsite in 2nd term)	4
Required Core Courses: Students must complete at least two of the following core courses		
PH.340.612	Epidemiologic Basis for Tuberculosis Control (typically offered onsite in 1st term, and online in 3rd and Summer Institute)	2
PH.340.627	Epidemiology of Infectious Diseases (typically offered onsite in 2nd term)	4
PH.340.653	Epidemiologic Inference in Outbreak Investigations (typically offered onsite in 1st term)	3
Elective Courses: Students must complete the 18 credit requirement through the following elective courses		
PH.182.625	Principles of Occupational and Environmental Hygiene (typically offered onsite in 2nd term)	4
PH.221.637	Health Information Systems (typically offered online in 2nd term)	3
PH.306.663	Legal and Ethical Issues in Health Services Management (typically offered onsite in 4th term)	3
PH.309.730	Patient Safety and Medical Errors (typically offered onsite in 3rd term)	3
PH.317.600	Introduction to the Risk Sciences and Public Policy (typically offered onsite in 1st term and online in 3rd term)	4
PH.410.755	Health Communication Programs (typically offered online in 3rd term)	4

Footnote:

JHSPH degree students who earn at least a B grade in one introductory epidemiology and one introductory biostatistics course may use these credits to fulfill the introductory epidemiology requirement; however, they will only be allowed to apply six credits from these courses toward the certificate. They must complete the 4-credit Healthcare Epidemiology course and at least 8 credits of core and elective courses.

Non-degree students may waive the introductory epidemiology requirement by providing a transcript from another institution demonstrating successful completion of at least one graduate level course in epidemiology and one in biostatistics. These students will still be required to complete the Healthcare Epidemiology course (4 credit units) and at least 14 credit units of core and elective courses.

Humane Sciences and Toxicology Policy, Certificate

Humane Sciences and Toxicology Policy Certificate Program

OVERVIEW

The certificate program will introduce, and explain the application of, the “3Rs,” (reduction, replacement and refinement), which are the guiding principles of humane science as well as demonstrate how the use of humane science principles in biomedical research can lead to more robust scientific methodology and knowledge. The program’s course of study covers the scientific principles needed to appreciate humane science and identify and evaluate its implications in biomedical research and public health policy. Persons completing the certificate program will be well equipped to translate new toxicological knowledge into scientifically credible product safety evaluations and hazard assessments and apply these concepts to environmental health decision making.

EDUCATIONAL OBJECTIVES

The educational objectives of this certificate program are:

1. To provide students with an understanding of the principles that govern the relationship between biomedical researchers and laboratory animals;
2. To demonstrate the application of transgenic, in-vitro, computational, non-mammalian and non-animal research in toxicology; and
3. To illustrate the ways in which humane science and alternatives are used in setting regulatory standards and making environmental health policy decisions.

ADMISSIONS

Contact information and complete certificate program admission information is available on the certificate program page (https://publichealth.jhu.edu/academics/humane-sciences-and-toxicology-policy-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION:

The certificate program requires a minimum of 19 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; however, the program must be completed within three years.

Students with prior training in toxicology or biostatistics may contact one of the Faculty Sponsors to discuss the possibility of substituting other coursework for either 187.610 "Public Health Toxicology" OR 140.615 "Statistics for Laboratory Scientists." Such students must complete a minimum of 18 credits of certificate program coursework.

Students should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student’s transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered, and students should check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Required Courses (students must complete all of the courses listed below but may choose to take either 180.601 or 180.609, not both).		
PH.180.601	Environmental Health (typically offered onsite in Summer and Summer Institute and online in 3rd term)	5
or		
PH.180.609	Principles of Environmental Health (typically offered onsite in 1st term)	4

PH.180.638	Animals in Research: Ethics (typically offered online in 4th term)	1
PH.187.610	Public Health Toxicology (typically offered onsite in 1st term and online in 2nd term)	4
PH.187.625	Animals in Research: Law, Policy, and Humane Sciences (typically offered online in 4th term)	3
PH.187.650	Alternative Methods in Animal Testing (typically offered online in 4th term)	3

Humanitarian Health, Certificate

Humanitarian Health Certificate Program

EDUCATIONAL OBJECTIVES

This certificate program focuses on humanitarian assistance in the international health context. The program is a major educational activity of the Center for Humanitarian Health. The Center receives technical assistance from the International Committee of the Red Cross, the Pan American Health Organization, the UN High Commission for Refugees, and various humanitarian agencies and organizations. Graduates will be able to:

1. Assess an emergency situation to identify immediate and longer-term assistance needs and additional resources required.
2. Identify specific health (including psychosocial and mental health) needs of populations affected; plan and implement activities to meet these needs, and monitor and evaluate the effectiveness of assistance provided.
3. Understand the principles of organization and administration of relief services in collaboration and cooperation with local and international non-governmental organizations, host governments, military forces and United Nations agencies.
4. Use epidemiologic skills to collect, analyze, and use information about natural and man-made disasters.

5. Plan and implement disaster preparedness, response and mitigation activities.
6. Identify disease outbreaks and to know how to contain them in a timely manner.
7. Know the public health consequences of natural disasters and their management.
8. Outline the basic requirements for a food and nutrition program for a disaster-affected population.
9. Use the basic principles of International Humanitarian Law (IHL) and human rights principles to understand the protection needs of displaced populations and to identify and document abuses.
10. Have a basic understanding of the political environment and use this to explain the various forces that affect population displacement.

ADMISSIONS

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/humanitarian-health-certificate-program/)on the Bloomberg School of Public Health website.

Sponsoring Department

International Health (https://www.jhsph.edu/departments/international-health/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student; however, the certificate program must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html) (p. 577)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted and verified by the certificate program and processed by the Registrar. In addition, students completing the certificate must submit this form via e-mail to the certificate faculty sponsor.

COURSE OF STUDY

Students should check the course directory (https://www.jhsph.edu/courses/) to confirm when the course is offered. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses		
PH.221.613	Introduction to Humanitarian Emergencies (typically offered onsite in 1st term)	3
PH.221.639	Health Care in Humanitarian Emergencies (typically offered online in 1st term and onsite in 2nd term)	3
PH.221.695	Seminar in Humanitarian Health (typically offered onsite in 1st, 2nd, and 3rd terms)	0.5
Core Elective Courses: Students must take at least one course (EITHER 221.611 OR 604.721 may be taken, but not both)		
PH.221.611	Food Security and Nutrition in Humanitarian Emergencies (typically offered onsite in 4th term)	2
PH.221.641	Measurement Methods in Humanitarian Emergencies (typically offered onsite in 2nd term)	2
PH.604.641	Disaster Preparedness (typically offered online in 2nd term)	2
PH.604.721	Securing Food Assistance and Nutrition in Humanitarian Emergencies (typically offered online in 2nd term)	2
Other Elective Courses: Students must select from the courses listed below to complete a total of 18 certificate credits. Courses are organized in tracks, but students may opt to select course from a single track to develop a more focused topical or methodological area of expertise, or may select courses from across tracks, as desired.		
Health Track		
PH.180.623	Infectious Disease Threats to Global Health Security (typically offered online in 3rd term)	3
PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (typically offered onsite in 2nd term)	4
PH.221.643	Armed Conflict and Health (typically offered onsite in 3rd term)	2
PH.221.661	Project Development for Primary Health Care in Developing Countries (typically offered onsite in 4th term)	4
PH.380.750	Migration and Health: Concepts, Rates, and Relationships (typically offered onsite in 3rd term)	3
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (typically offered online in 4th term)	3
Mental Health Track		
PH.221.634	Stress Management for Relief Workers (typically offered onsite in 2nd term)	2
PH.221.642	Mental Health Aspects of Disaster: Public Health Preparedness and Response (typically offered onsite in 2nd term)	2
PH.224.694	Mental Health Intervention Programming in Low and Middle-Income Countries (typically offered onsite in 3rd term)	3
PH.330.620	Qualitative and Quantitative Methods for Mental Health and Psychosocial Research in Low Resource Settings (typically offered onsite and online in 2nd term)	3
PH.330.680	Promoting Mental Health and Preventing Mental Disorders in Low- and Middle-income Countries (typically offered online in 4th term)	3
Nutrition Track		
PH.222.649	International Nutrition (typically offered onsite in 4th term)	3

Water and Sanitation Track (EITHER 221.623 OR 604.651 may be counted towards the certificate program, but not both)		
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health (typically offered onsite in 3rd term)	2
PH.221.623	Water, Sanitation and Hygiene in Humanitarian Emergencies (typically offered online in 3rd term)	2
PH.604.651	Introduction of Water, Sanitation and Hygiene in Emergencies (typically offered online in 3rd term)	2
Climate Change and Preparedness Track		
PH.180.607	Climate Change and Public Health (typically offered onsite in 4th term and online in Summer term)	3
PH.180.611	The Global Environment, Climate Change, and Public Health (typically offered onsite in 1st term)	4
PH.180.653	Climate Change: Avoiding Conflict and Improving Public Health (typically offered online in 4th term)	3
Human Rights Track		
PH.340.639	Assessing Epidemiologic Impact of Human Rights Violations (typically offered onsite in 4th term)	2
PH.340.683	Human Rights in Public Health Practice (typically offered onsite in 3rd term)	2
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies (typically offered onsite in 3rd term)	3
Management and Leadership Track		
PH.221.602	Applications in Managing Health Organizations in Low and Middle income Countries (typically offered onsite in 3rd term)	3
PH.221.608	Managing Non-Governmental Organizations in the Health Sector (typically offered onsite in 3rd term)	3
PH.221.614	International Political Science for Ph Practitioners (typically offered onsite in 2nd term)	2
PH.221.712	Leadership & Management in Humanitarian Health (typically offered online in 2nd term)	2
PH.312.700	Leading Organizations (typically offered onsite in 1st and Summer Institute terms and online in 1st and Summer Institute terms)	3
PH.410.622	Strategic Leadership Principles and Tools for Health System Transformation in Developing Countries (typically offered onsite in 2nd term)	4
Qualitative Methods Track		
PH.223.664	Design and Conduct of Community Trials (typically offered onsite in 3rd term)	4
PH.340.770	Public Health Surveillance (typically offered onsite in 2nd term and online in 3rd term and Summer Institute)	3
Spatial Analysis Track		
PH.340.696	Spatial Analysis I: ArcGIS (typically offered onsite in 1st term)	3

Injury and Violence Prevention, Certificate

Injury and Violence Prevention

OVERVIEW

Injury encompasses the undesirable consequences of a wide array of events, including crashes during transport, drowning, poisoning, falls, fires and burns, and intentional causes such as self-harm, homicide, and assault. An increasing recognition of the personal and societal costs of injury has resulted in the establishment of offices and programs especially dedicated to the prevention and control of injury within state and local health departments, as well as at the national level. There is a pressing need for public health professionals with specialized training in the prevention, analysis, and control of intentional and unintentional injuries.

EDUCATIONAL OBJECTIVES

Upon completion of the Certificate in Injury and Violence Prevention, consistent with the core competencies for the field, the student will:

1. Be able to describe and explain the importance of injury and/or violence as a major public health problem;
2. Be able to access, interpret, use, and present injury and/or violence data;
3. Be able to use problem-solving methodology to identify and develop appropriate intervention strategies;
4. Be able to evaluate injury and/or violence prevention activities;
5. Have demonstrated ability to develop, synthesize, and apply this knowledge by compiling an integrated program plan to address an injury and/or problem of interest to them;
6. Be able to stimulate change related to injury and/or violence prevention through policy, enforcement, advocacy, and education;
7. Be able to disseminate information on injury and/or violence prevention to the community, policymakers, leaders, and other key stakeholders, through diverse communication networks;
8. Have acquired in-depth knowledge, skills, and best practices necessary to address at least one specific injury and/or violence prevention topic and one type of intervention strategy.

Admissions

Contact information and complete information about applying to the certificate program is available on the certificate program page (https://publichealth.jhu.edu/academics/injury-and-violence-prevention-certificate-program/) on the Bloomberg School of Public Health website.

Sponsoring Department

Health Policy and Management (http://www.jhsph.edu/dept/hpm/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

In addition to the 3 required courses, students must complete at least 2 courses in a specific content area of injury and at least 2 courses related to 1 or more injury control strategies. Except for the Graduate Seminar, all required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. Students must successfully complete at least 20 credit hours among the required and elective courses.

The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the JHSPH course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered, and should also check pre-requisites and whether instructors consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses:		
PH.305.610	Issues in Injury and Violence Prevention (typically offered onsite in 1st term)	2
or		
PH.305.670	Principles and Practice of Injury Prevention (typically offered onsite in Summer Institute)	3
or		
PH.305.865	Advanced Seminar in Injury Prevention (typically offered onsite in Summer Institute)	2
In addition to one of the courses listed above, students are required to complete the following course:		
PH.305.861	Graduate Seminar in Injury Research and Policy (students are required to complete 4 terms of this course; typically offered onsite and virtual in 1st, 2nd, 3rd, 4th term)	1
Students must complete two of these courses on specific injury problems		
PH.221.612	Confronting the Burden of Injuries: A Global Perspective (typically offered onsite and online in 2nd term)	3
PH.301.627	Understanding and Preventing Violence (typically offered onsite and online in 2nd term)	3
PH.301.650	Crafting Effective Solutions to Gun Violence: Problem Solving Seminar (typically offered online in 4th term)	3
PH.305.615	Occupation Injury Prevention and Safety Policy and Practice	2
PH.305.630	Transportation Policy, Equity and Health (typically offered online in 4th term)	2
PH.330.640	Childhood Victimization: A Public Health Perspective (typically offered online in 4th term)	3
PH.330.674	Suicide As A Public Health Problem (typically offered onsite in 3rd and 4th terms and online in 4th term)	3
Students must complete two of the courses listed below in injury control methods:		
PH.300.712	Formulating Policy: Strategies and Systems of Policymaking in the 21st Century (typically offered online in 2nd term)	3
PH.301.645	Health Advocacy (typically offered online in 2nd term and onsite in 4th term)	3
PH.306.650	Public Health and the Law (typically offered onsite in 3rd term)	3
PH.317.600	Introduction to the Risk Sciences and Public Policy (typically offered onsite in 1st term and online in 1st and 3rd terms)	4
PH.410.620	Program Planning for Health Behavior Change (typically offered onsite in 1st term and Winter Institute and online in 1st term)	3
PH.410.625	Injury and Violence Prevention: Behavior Change Strategies (typically offered onsite in 4th term)	2
PH.410.630	Implementation and Sustainability of Community-Based Health Programs (typically offered onsite in 4th term)	3
PH.410.650	Introduction to Persuasive Communications: Theories and Practice (typically offered onsite in 2nd term and Winter Institute)	4
PH.410.651	Health Literacy: Challenges and Strategies for Effective Communication (typically offered online in 2nd term)	3
PH.410.663	Media Advocacy and Public Health: Theory and Practice (typically offered onsite in 4th term)	3
Recommended courses:		
PH.221.631	Evaluation Methods for Injury Interventions (typically offered online in 3rd term)	3
PH.300.713	Research and Evaluation Methods for Health Policy (This course only open to degree seeking MSPH Students in Health Policy; typically offered onsite in 3rd term)	3
PH.305.684	Health Impact Assessment (typically offered online in 3rd term)	3

International Healthcare Management and Leadership, Certificate

International Healthcare Management and Leadership Certificate Program

Please note: Certificate program may be completed entirely online

EDUCATIONAL OBJECTIVES

Upon completion of the certificate program in International Healthcare Management and Leadership the individual will be able to:

1. Evaluate and interpret major themes, issues and trends in global healthcare
2. Apply principles and practices of financial analysis and management in the healthcare field

3. Identify HIT tools and methods for evaluating the quality and effectiveness of health services and population health management
4. Utilize principles of strategic management and competitive analyses to support strategy development for health care organizations
5. Use evidence-based principles to analyze business issues and manage complex operations in international healthcare setting.

Admissions

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/international-healthcare-management-and-leadership-certificate-program/) on the Bloomberg School of Public Health website.

Requirements for successful completion

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate program must be completed within three years.

Leadership for Public Health and Healthcare, Certificate

Leadership for Public Health and Healthcare

Please Note: Certificate program may be completed entirely online!

OVERVIEW

The Leadership for Public Health and Healthcare certificate program provides evidence-informed coursework specific to leading change through teams and collaboration, strategic decision-making, and the ability to foster a learning environment. This certificate program is intended for public health and healthcare professionals who seek to enhance their skills and confidence to inspire, motivate, and influence change. Graduates of the certificate program will gain requisite skills enabling them to be more effective change agents and leaders within networks focused on improving health and healthcare delivery.

The program can be completed completely online and is designed for full-time students and part-time working professionals who wish to build or enhance knowledge and practice essential leadership skills for the 21st century.

EDUCATIONAL OBJECTIVES

The Leadership Certificate program will prepare current and future health practitioners, researchers, policymakers, and scholars to create ethical and diverse organizational cultures and craft and communicate a shared vision and values to inspire and motivate others to work effectively in understanding the impact of public health issues and implementing evidence-informed, sustainable solutions. Graduates of the Leadership Certificate will be equipped to lead the responsible development of new knowledge and new ways of saving lives and improving health to further progress across core disciplines in science and technology, and public health and medicine in Maryland, and beyond.

Admissions

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/leadership-for-public-health-and-healthcare-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

Please note: Certificate program may be completed entirely online

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/) before completing certificate program requirements. Lesbian, Gay, Bisexual, Transgender, and Queer (LGBTQ) Public Health, Certificate

Lesbian, Gay, Bisexual, Transgender, and Queer (LGBTQ) Public Health Certificate Program

OVERVIEW

Globally, LGBTQ (Lesbian, Gay, Bisexual, Transgender, and Queer)-focused public health is a growing field of study, but there is a dearth of training opportunities specifically related to social and behavioral factors. The addition of the Post-Baccalaureate Certificate Program in LGBTQ Public Health helps fulfill the School's strategic planning goal of strengthening and expanding diversity in terms of training in the School, and thus continuing as a leading institution for social and behavioral training and research in public health.

EDUCATIONAL OBJECTIVES

Upon successful completion of the certificate program, students will be able to:

1. Assess what is known and unknown in LGBTQ health research and critically read public health literature related to LGBTQ health.
2. Describe a range of psychological and sociological conceptualizations of LGBTQ health, health behavior, stigma, and illness in a cross-cultural context, and integrate these into culturally competent skills and attitudes.
3. Apply an ecological perspective to LGBTQ health, linking individual, social, community and environmental causes of disease and LGBTQ community health through theory and research.
4. Locate and evaluate health disparities both within and facing LGBTQ populations in the context of social behavioral, socio-ecologic, and other theoretical frameworks.
5. Analyze changes in political climates and how legal, policy and structural changes affect the translation of research findings regarding the health of LGBTQ populations.
6. Integrate an ecological perspective on LGBTQ health into the design of effective interventions, translating research findings through communications, advocacy, health policy and the law, to reduce health problems and disparities in LGBTQ populations.

SPONSORING DEPARTMENT

Health, Behavior and Society (https://www.jhsph.edu/departments/health-behavior-and-society/)

ADMISSIONS

Contact information and complete admissions information is available on the Bloomberg School of Public Health certificate program page (https://publichealth.jhu.edu/academics/lesbian-gay-bisexual-transgender-and-queer-lgbtq-public-health-certificate-program/).

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. Any request to substitute a course that the faculty sponsors consider essential to meet the certificate program competencies must be given serious consideration. The student must propose the course to be substituted and present a rationale for the request. In no case will more than one substitution be permitted. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years. The student should review the section of the website that addresses completion (https://nam02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.jhsph.edu%2Facademics%2Fcertificate-programs%2FJHSPH_certificate_completion.html&data=04%7C01%7Cfturner4%40jhu.edu%7C2ac21a71fd474409a04d08d908a977a5%7C9fa4f438b1e6473b803f86f8a%7C0%7C0%7C637550346214143948%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1ha%7C1000&sdata=mszYnLXcg6%2FcGE4ven%2F8JXG%2FPZeeduIGpU%2BBiyLUdHg%3D&reserved=0)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://nam02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.jhsph.edu%2Fcourses&data=04%7C01%7Cfturner4%40jhu.edu%7C2ac21a71fd474409a04d08d908a977a5%7C9fa4f438b1e6473b803f86f8aedf0dec%7C0%7C0%7C637550346214153940%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1ha%7C1000&sdata=Zo47nrmABQYDxXXzB%2BY5R%2BoJnofcd2jLYZ1hlQwKUNg%3D&reserved=0) to confirm when courses are offered. The term may change from what is listed in the table below and some courses are only offered every other year. Students should also check for prerequisites and whether instructor consent is required.

Note: Students who started the certificate program prior to AY21-22 may count 410.657 Communication Strategies for Sexual Risk Reduction towards their total credits, since it was included in the curriculum before that year.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Core Courses (Students must complete 3 out of the 4 courses, for a minimum of 9 credits):		
PH.306.660	Legal and Public Health Issues in the Regulation of intimacy (typically offered onsite in 4th term)	3
PH.306.670	Issues in LGBTQ Health Policy (typically offered onsite in 2nd term)	3
PH.410.681	Gay, Bisexual and Other Men Who Have Sex With Men (MSM) and HIV: Theoretical Perspectives on the Us Epidemic (typically offered onsite in 3rd term)	3
PH.410.683	Global Perspectives on LGBT Health (typically offered onsite in 3rd term)	3
PH.340.629	The Epidemiology of LGBTQ Health (typically offered onsite in 2nd term)	3
Key Area 1: Develop LGBTQ cultural competency skills and attitudes (minimum of 2 credits)		
PH.221.621	Gender and Health: Foundational Theories and Applications	2
PH.224.689	Health Behavior Change At the Individual, Household and Community Levels (typically offered onsite in 2nd term)	4
PH.301.615	Seminar in Health Disparities (typically offered onsite in 2nd term)	3
PH.410.652	Interpersonal Influence in Medical Care (typically offered onsite in 4th term)	2
PH.410.864	Critical Issues in Health Disparities (typically offered onsite in 1st, 2nd, 3rd terms)	1
Key Area 2: Linking social and environmental causes of disease and LGBTQ community health through theory and research (minimum 2 credits required):		
PH.221.701	Applications to Gender Analysis Within Health Research and Interventions (typically offered onsite in 2nd term)	2
PH.224.692	Methods in Formative Research and Human Centered Design for Intervention Development (typically offered online in 3rd term)	4
PH.305.684	Health Impact Assessment (typically offered onsite in 3rd term)	3
PH.306.625	Ethical Issues in Health Policy: Public Health and Health Care (typically offered onsite in 2nd term)	3
PH.330.674	Suicide As A Public Health Problem (typically offered onsite in 3rd term)	3
PH.340.627	Epidemiology of Infectious Diseases (typically offered onsite in 2nd term)	4
PH.340.639	Assessing Epidemiologic Impact of Human Rights Violations (typically offered onsite in 4th term)	2
PH.340.646	Epidemiology and Public Health Impact of HIV and AIDS (typically offered onsite in 1st term and online in 2nd term)	4
PH.340.666	Foundations of Social Epidemiology (typically offered onsite in 2nd term and online in Summer Institutes)	3
PH.340.683	Human Rights in Public Health Practice (typically offered onsite in 3rd term)	2
PH.380.663	Gender-Based Violence Research, Practice and Policy: Issues and Current Controversies (typically offered onsite in 3rd term)	3
PH.410.612	Sociological Perspectives on Health (typically offered onsite in 1st term)	3
PH.410.613	Psychosocial Factors in Health and Illness (typically offered onsite in 3rd term)	3

PH.410.616	Social and Behavioral Aspects of Public Health (typically offered onsite in Summer Institutes)	4
PH.410.620	Program Planning for Health Behavior Change (typically offered onsite in 1st term and Winter Institute)	3
Key Area 3: Community dimensions of practice skills and attitudes to include communications, advocacy, health policy and the law (minimum of 2 credits)		
PH.301.627	Understanding and Preventing Violence (typically offered onsite in 2nd term)	3
PH.301.692	The Role of Community-Based Organizations (Cbos) and Non-Governmental Organizations (Ngos) in Improving Global Public Health (typically offered onsite in Winter Institute)	3
PH.308.610	The Political Economy of Social inequalities and Its Consequences for Health and Quality of Life (typically offered in the Fall Institute in Barcelona, Spain)	3
PH.380.623	Adolescent Health and Development (typically offered online in 3rd term)	3
PH.380.725	The Social Context of Adolescent Health and Development (typically offered onsite in 4th term)	3
PH.380.761	Sexually Transmitted Infections in Public Health Practice (typically offered online in 4th term)	4
PH.410.668	Policy Interventions for Health Behavior Change (typically offered onsite in 2nd term)	3
PH.410.672	Organizing for Public Health with the Six Steps to Effective Advocacy: Turning Public Will into Public Policy (typically offered onsite in 3rd term and online in 3rd and Summer terms)	3
PH.410.677	Theory and Practice in Campaigning and Organizing for Public Health I (typically offered onsite in 3rd term)	4
PH.410.678	Theory and Practice in Campaigning and Organizing for Public Health II (typically offered onsite in 4th term)	4
PH.410.721	Translating Research into Public Health Programs and Policy (typically offered onsite in 4th term)	3

Maternal and Child Health, Certificate

Maternal and Child Health Certificate Program

Upon completion of the required courses of the Maternal and Child Health certificate program, individuals will gain a broad understanding of the field that focuses on the health and welfare of women and children. Competencies addressed include the following:

1. Understanding of the biological, social, and behavioral basis for a MCH program;
2. Knowledge of the historical development of the field of MCH;
3. Knowledge of significant past and current national legislative mandates relative to MCH, including the structure and roles of legislative and administrative bodies at the national, state, and local levels;
4. Ability to define and describe the MCH population in a community;
5. Understanding of the normal patterns of human growth and development;
6. Knowledge of the organization and financing of health systems in the U.S;
7. Understanding of the design, implementation and evaluation of MCH programs domestically and internationally;
8. Ability to identify essential gaps in existing programs serving mothers and children.

SPONSORING DEPARTMENT

Population, Family and Reproductive Health (https://www.jhsph.edu/departments/population-family-and-reproductive-health/)

ADMISSIONS

Complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/maternal-and-child-health-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the program must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted and verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. The term and time may change from what is listed in the table below and some courses are only offered every other year. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses (8 credits)		
PH.380.604	Life Course Perspectives on Health (typically offered onsite in 1st term and online in 2nd term)	4
PH.380.624	Maternal and Child Health Legislation and Programs (typically offered online and onsite in 2nd term)	4
Elective Courses: Students must take 10 total elective credits.Courses must include at least 2 of the 3 content areas represented by Groups A,B, and C		
Group A (Maternal, Fetal, and Perinatal Health):		

PH.221.627	Issues in the Reduction of Maternal and Neonatal Mortality in Low income Countries (typically offered onsite in 2nd term)	4
PH.380.661	Clinical Aspects of Maternal and Newborn Health (typically offered onsite in 3rd time)	3
PH.380.662	Critiquing the Research Literature in Maternal, Neonatal, and Reproductive Health (typically offered onsite in 2nd term)	4
PH.380.664	Reproductive and Perinatal Epidemiology (typically offered onsite in 4th term)	4
PH.380.765	Preventing Infant Mortality and Promoting the Health of Women, Infants and Children (typically offered online in 4th term)	3
Group B (Child Health):		
PH.223.663	Infectious Diseases and Child Survival (typically offered onsite in 3rd term)	3
PH.380.616	Child Health Epidemiology (typically offered onsite in 4th term)	3
PH.380.625	Evidence and Opportunities to Mitigate Childhood Adversity and Promote Well-Being (typically offered onsite in 3rd term)	3
PH.380.640	Children in Crisis: An Asset-Based Approach to Working With Vulnerable Youth (typically offered onsite in 3rd term)	3
PH.380.642	Child Health and Development (typically offered online in 2nd term)	3
PH.380.744	Nutrition and Growth in Maternal and Child Health (typically offered online in 3rd term)	3
Group C (Adolescent Health):		
PH.380.623	Adolescent Health and Development (typically offered online in 3rd term)	3
PH.380.720	Masculinity, Sexual Behavior & Health: Adolescence & Beyond (typically offered onsite in 2nd term)	3
PH.380.721	Schools and Health (typically offered onsite in 2nd term)	3
PH.380.725	The Social Context of Adolescent Health and Development (typically offered onsite in 4th term)	3
PH.380.747	International Adolescent Health (typically offered online in 4th term)	3
Group D (Additional Courses to Consider)		
PH.223.686	Child and Public Health in the Tropics (typically offered onsite in Summer and Winter Institutes)	4
PH.330.640	Childhood Victimization: A Public Health Perspective (typically offered onsite in 4th term)	3
PH.330.646	Autism Spectrum Disorder in Public Health (typically offered online in Summer Institute)	2
PH.380.625	Evidence and Opportunities to Mitigate Childhood Adversity and Promote Well-Being (typically offered onsite in 3rd term)	3
PH.380.665	Family Planning Policies and Programs (typically offered onsite in 3rd term)	4
PH.380.666	Women's Health (typically offered onsite in 3rd term)	3
PH.380.667	Women's Health Policy (typically offered onsite in 4th term)	3
PH.380.742	Family - Health, Public Health and Policy (typically offered onsite in 2nd term)	3
PH.380.762	HIV Infection in Women, Children, and Adolescents (typically offered online in 4th term)	4
PH.380.768	Selected Topics in Women's Health and Women's Health Policy (typically offered onsite in 1st term)	4

Mental Health Policy, Economics and Services, Certificate

Mental Health Policy, Economics and Services Certificate Program

OVERVIEW

The certificate program introduces current issues in mental health policy including economic evaluation of mental and substance disorders and their treatments; access to mental health care treatments and utilization patterns; and mental health care financing, insurance, and delivery system issues in the U.S. The certificate program also strives to orient mental health policy, economics, and services training within the broader context of ongoing national health care debates.

It is open to Johns Hopkins University graduate students interested in policy, advocacy and research careers within the field of mental health and junior and mid-level public health professionals interested in expanding their knowledge base and expertise in mental health services and economics and related policy issues.

EDUCATIONAL OBJECTIVES

Students completing the certificate will gain specialized knowledge of policy issues and economics relevant to mental disorders and mental health services. They will be able to:

1. Describe the types, organization and financing of service systems for the mentally ill in the US; strengths and weaknesses of these service systems; and historical and recent trends in the mental health care delivery system
2. Discuss the major legal and political developments in mental health care in the US over the last century and their impact on the diagnosis, treatment, and prevention of mental health illnesses and associated disabilities and co-morbidities
3. Interpret and provide input into the conduct of program evaluations, including economic evaluation of mental health interventions, and the design and implementation of mental health services and policy
4. Use economic theory to predict changes in delivery of, access to, and quality of mental health services in response to changes in national and local policies and incentives
5. Interpret and provide input into the conduct of health systems research related to mental health interventions, services, and policy.

Admissions

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/mental-health-policy-economics-and-services-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 19 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.
The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (http://www.jhsph.edu/courses/) to confirm when the courses are offered, and students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses: Students must complete the following required courses:		
PH.300.651	Introduction to the U.S. Healthcare System (typically offered onsite in 1st term and online in 4th term)	4
PH.313.790	Introduction to Economic Evaluation (typically offered online in 4th term)	3
PH.330.664	Introduction to Mental Health Services (typically offered onsite in 1st term)	3
PH.330.667	Mental Health and the Law (typically offered onsite in 3rd term)	3
Elective Courses: Students must complete at least two of the following elective courses		
PH.309.716	Advanced Methods in Health Services Research: Analysis (typically offered onsite in 1st term)	3
PH.313.641	Introduction to Health Economics (typically offered online in 3rd term)	3
PH.313.644	Intermediate Health Economics (typically offered onsite in 3rd term)	3
PH.330.603	Psychiatric Epidemiology (typically offered online in 2nd term)	3
PH.330.607	PREVENTION of MENTAL DISORDERS: PUBLIC HEALTH InterVENTIONS (typically offered onsite and online in 2nd term)	3
PH.330.628	Gaps and Opportunities in Public Mental Health: A Systems Approach (typically offered onsite in 2nd term)	3

Pharmacoepidemiology and Drug Safety, Certificate

Pharmacoepidemiology and Drug Safety Certificate

OVERVIEW

The Certificate Program in Pharmacoepidemiology and Drug Safety is designed for masters and doctoral degree students enrolled at Johns Hopkins Bloomberg School of Public Health and in other Johns Hopkins University divisions, including the Schools of Medicine and Nursing and the Krieger School of Arts and Sciences. It is also available to early and mid-career public health professionals who wish to expand their knowledge of pharmacoepidemiology and drug safety to inform their work in academic, regulatory, or industry settings.

EDUCATIONAL OBJECTIVES

This certificate program will provide learners with core knowledge of pharmacoepidemiology and drug safety, as well as insights from these fields that can inform the work of policy-makers, patients, clinicians and payers seeking to improve the quality and safety of medication use. Upon completion of the core courses required for the Pharmacoepidemiology certificate program, participants will have the ability to:

1. Identify the processes of drug development;
2. Explain key requirements in biomedical product regulation and their rationale;
3. Participate in the design of studies, both observational and experimental, to assess the effectiveness and safety of drugs;
4. Employ techniques to study the patterns and determinants of drug utilization;
5. Apply methods appropriate to the surveillance for adverse drug events.

ADMISSIONS

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/pharmacoepidemiology-and-drug-safety-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate requires a minimum of 20 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework.

The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered, and students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses: Students must take one of the following Epidemiology Series* * Non-degree students may waive the Epidemiology series by providing a transcript from another institution demonstrating successful completion of at least one graduate level course in epidemiology and one in biostatistics. These students must still complete a minimum of 20 term credits of required, core, and elective certificate program coursework. * Bloomberg Degree Students who earn at least a B in one introductory epidemiology (340.601, 340.721 or 340.751) and one biostatistics course (140.611, 140.621, 140.651, or 140.751) may use these courses to fulfill the Epidemiology series requirement		
In Series A, students may choose between either 340.601 or 340.721, and they must also complete 340.722		
PH.340.601	Principles of Epidemiology (typically offered onsite in Summer and Summer Institute)	5
PH.340.721	Epidemiologic Inference in Public Health I (typically offered online in 1st, 3rd, Summer and Summer Institute terms)	5
PH.340.722	Epidemiologic Inference in Public Health II (typically offered onsite in 2nd term, and online in terms 2 and 4)	4
In Series B, students must complete both 340.751 and 340.752		
PH.340.751	Epidemiologic Methods 1 (typically offered onsite in 1st term)	5
PH.340.752	Epidemiologic Methods 2 (typically offered onsite in 2nd term)	5
Required Courses: Students must also complete the following course:		
PH.340.645	Introduction to Clinical Trials (typically offered online in 2nd term)	3
Core Courses: Students must take at least 2 of the following 3 courses:		
PH.340.682	Pharmacoepidemiology Methods (typically offered online in 2nd term)	3
PH.340.684	Pharmacoepidemiology: Drug Utilization (typically offered onsite in 3rd term)	3
PH.390.631	Principles of Drug Development (typically offered onsite in 1st term)	2
Elective Courses: Students complete the 20 credit requirement by selecting among the following:		
PH.140.633	Biostatistics in Medical Product Regulation (typically offered onsite in 1st term)	2
PH.140.664	Causal Inference in Medicine and Public Health I (typically offered onsite in 3rd term and online in 4th term)	4
PH.140.665	Causal Inference in Medicine and Public Health II (typically offered onsite in 4th term)	3
PH.221.610	Pharmaceuticals Management for Under-Served Populations (typically offered onsite in 3rd term)	3
PH.308.630	U.S. Pharmaceutical Policy (typically offered onsite in 4th term)	3
PH.317.600	Introduction to the Risk Sciences and Public Policy (typically offered onsite in 1st term and online in 3rd term)	4
PH.317.610	Risk Policy, Management and Communication (typically offered onsite in 2nd term and online in 4th term)	3
PH.340.617	Pharmacoepidemiology (NB: This course is only appropriate for the certificate program if 340.682 was not taken. Course is typically offered onsite in Summer Institute.)	2
PH.340.722	Epidemiologic Inference in Public Health II (typically offered onsite in 2nd term, and online in terms 2 and 4)	4
PH.340.776	Study Design and Analysis for Causal Inference With Time-Varying Exposures (typically offered onsite in 4th term)	3
AS.410.651	Clinical Development of Drugs and Biologics	4

Population and Health, Certificate

Population and Health

OVERVIEW

The certificate is designed to serve two audiences—masters or doctoral degree students at The Johns Hopkins University and professionals—desiring to expand their knowledge of population dynamics and its linkages with public health issues and their ability to relate population-level concepts and measures of fertility, morbidity and mortality, and migration to health conditions. A population's health is shaped by fertility, mortality and migration patterns; and population numbers themselves provide the denominators of basic measures of public health, such as life expectancy, cause-specific mortality rates, and infection rates. Connecting a population and health perspective with public health epidemiology allows us to measure and assess the aggregate-level structure of and variation in health risks by age, sex, or other major factors and across the human life span.

EDUCATIONAL OBJECTIVES

Students completing the certificate will gain competency in;

1. Knowledge of the components and measures of population dynamics,
2. Knowledge of population dynamics' linkages with public health issues,
3. The ability to relate vital events and duration exposures with risk factors at the individual and population level.

Population Health Management, Certificate

OVERVIEW

PLEASE NOTE: THIS PROGRAM CAN ONLY BE COMPLETED VIA FULLY ONLINE COURSES.

The Johns Hopkins Bloomberg School of Public Health offers fully online, part-time master's degree and certificate programs, designed for working professionals. Our Online Programs for Applied Learning (https://www.jhsph.edu/academics/online-programs-and-learning/) (OPAL) focus on emergent industry sectors that have a resounding need for highly skilled professionals.

Population health management has emerged as an important strategy for health care providers and payers. The Certificate in Population Health Management prepares students to examine and respond to both challenges and opportunities to improve health within and across populations. The program is structured to guide health care professionals seeking to transform or create sustainable models of value-driven accountable care.

EDUCATIONAL OBJECTIVES

Upon completion of the Certificate program in Population Health Management, the individual will acquire skills necessary to:

1. Identify determinants of population health that impact health outcomes in a community and apply the essentials of public health practice to design low cost interventions;
2. Lead the formation and management of contemporary health care systems that consist of, and rely upon, diverse stakeholders in the organization and delivery of community-based models of care;
3. Communicate effectively to constituencies both within and outside of the health system;
4. Articulate and apply frameworks for collecting, analyzing, and using data to inform decisions, facilitate care coordination, and improve health outcomes of targeted populations within and outside the health system;
5. Develop effective collaboratives and support state and local public health agency efforts in assessing health needs, quality of services, and strategies for improving health services delivery.

LinkedIn © Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage you to join this professional networking community.

BSPH OPAL Population Health Management (https://www.linkedin.com/uas/login/?session_redirect=https%3A%2F%2Fwww.linkedin.com%2Fgroups%2F8673634%2F)

Additional Public Health Learning Resources

The Mid-Atlantic Regional Public Health Training Center provides links to many of its online learning resources, as well as external resources, databases and public health organizations. These can be used to supplement learning on a particular topic, or provide background material. Many of these resources are available for free via their website (https://www.jhsph.edu/research/centers-and-institutes/mid-atlantic-public-health-training-center/training_events/online_training.html).

The Welch Medical Library at Johns Hopkins has many resources related to research, writing and documentation on their YouTube channel (https://www.youtube.com/c/WelchMedicalLibrary/).

The School has a number of research and practice related seminar series (https://publichealth.jhu.edu/academics/lecture-series/) that occur throughout the year and contribute to the intellectual community of the School, for students, staff, and faculty. The Bloomberg School has a website (https://publichealth.jhu.edu/practice/resources-for-practitioners/) that provides some additional resources for practitioners as well.

Practitioners can also access dozens of courses from Bloomberg School faculty on Coursera (https://www.coursera.org/jhu/). Practice-focused offerings include courses on topics such as gun violence, food systems, health equity, biostatistics, and epidemiology, among others.

Admissions

Contact information and complete information about applying to the certificate program is available on the certificate program page (https://publichealth.jhu.edu/academics/population-health-management-certificate-program/) on the Bloomberg School of Public Health website.

Program Requirements

Students should follow the plan outlined below if they wish to complete the Certificate program in one year. This plan will also allow students to maintain minimum credits needed for financial aid eligibility each term, and to follow any prerequisite sequencing. Courses can be taken at a slower pace if needed, so long as course prerequisites are met. Students should check the course directory (http://www.jhsph.edu/courses/) to confirm when the courses are offered for students in OPAL programs.

The certificate program requires a minimum of 25 term credits and a minimum grade point average (GPA) of 2.75. Students must earn a minimum grade on a set of required program-specific core courses: “Pass” for courses offered only on a pass/fail basis: “C” or higher for courses offered for letter grading. The certificate program length is flexible; it can be completed in as little as one year, and must be completed within three years.

Course of Study

Course	Title	Credits
First Year		
First Term		
PH.550.860	Academic & Research Ethics at BSPH	
PH.602.631	Essentials of Population Health Management	3
PH.602.651	Principles and Applications of Advanced Payment Models in Population Health Management	3
	Credits	**6**
Second Term		
PH.602.671	Collective Impact: Developing and Leading Community Partnerships to Improve Population Health	3
PH.602.681	Applications in Accountable Care: Assessing Quality and Effectiveness of Population Health initiatives	3
	Credits	**6**
Third Term		
PH.600.701	Introduction to Epidemiology	4
PH.602.731	Population and Consumer Health Informatics	3
	Credits	**7**
Fourth Term		
PH.602.691	Managing Health Across the Continuum: Contemporary Models and Applications of Care Coordination and Management	3
PH.600.709	Statistical Concepts in Public Health 1	3
	Credits	**6**
	Total Credits	**25**

Notification of Certificate Program Completion

Students in OPAL certificate programs must complete and submit the Notification of Certificate Program Completion form to the OPAL program office **before the end of the add/drop period of the term of your last certificate course**; certificate program completions cannot be processed retroactively.

For MAS students who did not apply to a certificate but will be completing as part of their degree, they can either apply for completion once the certificate courses are successfully completed, or at the end of their degree program. The certificate cannot be granted or included in the transcript until the form is submitted and verified by the certificate program.

It is preferable to complete the form electronically. Send the completed form to the OPAL program office as an email attachment. Certificates will be ordered for students approximately one month after the end of the term in the summer, spring, and fall. A template form for each of the OPAL certificates can be found in the Online Library of the OPAL Student Resources site in CoursePlus. The blank form can be found on the School’s website as well. Please **send the completed Notification form to OPAL-Office@jhu.edu** by the deadline noted above. Be sure to complete all personal information on the first page, and the year, term and grade for all completed courses. If needed, we can update the pending grades when they are submitted at the end of the term.

Product Stewardship for Sustainability, Certificate

Product Stewardship for Sustainability, Certificate

NOTE: This certificate program may be completed entirely online!

OVERVIEW

The Certificate in Product Stewardship for Sustainability enables professionals to promote responsible design, development, and management of products throughout their life cycle. This certificate program addresses the need for professionals trained in minimizing the health, safety, environmental, and social impacts of a product and its packaging throughout all lifecycle stages, while also maximizing economic benefits. Individuals who complete a Certificate in Product Stewardship for Sustainability will gain competencies that will enable them to manage products and their packaging throughout all lifecycle stages while minimizing human health and ecological impacts.

The certificate program is designed for junior, mid-level, and executive-level professionals (non-degree students) desiring to expand their knowledge of product stewardship to advance their careers. These include working professionals who are already active in the product stewardship field, and those from a wide range of other backgrounds, including environmental health, regulatory compliance, industrial hygiene, occupational health and safety, sustainability, product development, supply chain, and law. The certificate program is also open to masters and doctoral degree students and post-doctoral trainees at the Johns Hopkins Bloomberg School Public Health and the Whiting School of Engineering.

EDUCATIONAL OBJECTIVES

Students completing the certificate program will be able to:

1. Describe the core functions, values and principles of environmental and occupational public health.
2. Identify and characterize product hazards, exposures, and risk through inherent product characteristics, uses, and misuses of products.
3. Identify points in the production and distribution processes that create risks for workers, communities, consumers, and the ecosystem.
4. Select and apply appropriate frameworks to analyze product risks to humans and the environment throughout product supply chains and product lifecycles.
5. Determine and document appropriate and effective systems for ongoing assessment and management of product and business risk.
6. Identify and evaluate current and emerging societal issues, regulatory requirements, and voluntary frameworks that may affect products throughout their lifecycle.
7. Assess risk throughout the products' movement within the supply chain (product trail) to determine if appropriate stewardship systems and risk management activities are in place.
8. Assess and apply best practices to improve product sustainability and competitive advantage while minimizing business risk through management and product development.

Sponsoring Department

Environmental Health and Engineering (https://publichealth.jhu.edu/departments/environmental-health-and-engineering/)

ADMISSIONS

Contact information and complete admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program in Product Stewardship for Sustainability requires a minimum of 18 term credits (please note that the EN courses below are listed with semester credits, but 3 semester credits is equivalent to 4.5 term credits). All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (p. 577) before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for prerequisites and whether instructor consent is required. All students must complete the free, online, non-credit course Introduction to Online Learning (https://courseplus.jhu.edu/core/index.cfm/go/course.home/cid/90/) prior to enrolling in online courses.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (course is offered in all academic terms. Students must also complete the free, non-credit online course Introduction to Online Learning)	
Students must complete two of the three EN courses and all of the PH courses on technical competency		
EN.575.623	Industrial Processes and Pollution Prevention (typically offered in the Fall Semester)	3
EN.535.662	Energy and Environment (typically offered in the Fall Semester)	3
EN.575.736	Designing for Sustainability: Applying a Decision Framework (typically offered in the Fall Semester)	3
PH.180.628	Introduction To Environmental and Occupational Health Law (typically offered online in the 4th term)	4
PH.187.640	Toxicology 21: Scientific Foundations (typically offered online in 2nd term)	1
PH.317.600	Introduction to the Risk Sciences and Public Policy (typically offered onsite in 1st term and online in 3rd term)	4

Public Health Advocacy, Certificate

Public Health Advocacy Certificate Program

OVERVIEW

Advocacy—working for policy change and better implementation of existing policies—is crucial to public health. As research and discovery are translated into policies and programs, the accurate interpretation and use of evidence are essential to political leaders, health care providers, potential clients, and the public at large.

Certificate program coursework will allow students to engage deeply with core theories and skills in public health advocacy, and to augment these with an understanding of how to apply these in a variety of policy and geographic settings. The certificate program will complement students' options for training in public health policy making with theoretical and practical insights into the role of advocacy in this process.

EDUCATIONAL OBJECTIVES

The primary goal of the certificate program is to develop students' abilities to translate research into practice, use evidence to inform public health policy, shift social norms and attitudes, and improve public health. The curriculum enables students to understand advocacy methods and apply evidence. Additionally, the program offers practical experience in public health advocacy.

Upon successful completion of the certificate program, students will be able to:

1. Discuss the role of political actors inside and outside governments in developing and implementing health policy

2. Identify other actors in the policy making process and how actors such as the media help shape policy

3. Improve policies and laws and their development, adoption, and implementation

4. Increase and influence better use of resources for interventions and scientific inquiry

5. Set agendas in policy circles and the media environment through higher visibility and understanding of issues

6. Shift public attitudes, behaviors, and social norms toward better public health.

ADMISSIONS

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/public-health-advocacy-certificate-program/) on the Bloomberg School of Public Health website.

PH.300.652	Politics of Health Policy (typically offered onsite in 4th term)	4
PH.300.712	Formulating Policy: Strategies and Systems of Policymaking in the 21st Century (typically offered onsite in 2nd term)	3
PH.301.627	Understanding and Preventing Violence (typically offered onsite in 2nd term)	3
PH.306.625	Ethical Issues in Health Policy: Public Health and Health Care (typically offered onsite in 2nd term)	3
PH.306.650	Public Health and the Law (typically offered onsite in 3rd term)	3
PH.308.604	Effective Writing for Public Health Change (typically offered onsite in Summer Institute)	3
PH.308.701	Effective Presentations and News Media Interviews: Practical Skills for Public Health Practitioners (typically offered online in Summer Institute and Winter Institute)	3
PH.312.693	Introduction to Comparative Effectiveness and Outcomes Research (typically offered online in 3rd term)	3
PH.317.610	Risk Policy, Management and Communication (typically offered onsite in 2nd term and online in 4th term)	3
PH.330.667	Mental Health and the Law (typically offered onsite in 3rd term)	3
PH.380.707	Advocating for Global Reproductive Health (typically offered onsite in Summer Institute)	2
PH.380.771	Understanding and Changing International Reproductive Health Policy (typically offered onsite in 4th term)	3
PH.380.880	Lessons in Leadership: Applications for Population, Family and Reproductive Health I (Must be taken with 380.881, 380.882, and 380.883; course is typically offered onsite in 1st term)	1
PH.380.881	Lessons in Leadership: Applications for Population, Family and Reproductive Health II (Must be taken with 380.880, 380.882, and 380.883; course is typically offered onsite in 2nd term)	1
PH.380.882	Lessons in Leadership: Applications for Population, Family and Reproductive Health III (Must be taken with 380.880, 380.881, and 380.883; course is typically offered onsite in 3rd term)	1
PH.380.883	Lessons in Leadership: Applications for Population, Family and Reproductive Health IV (Must be taken with 380.880, 380.881, and 380.882; course is typically offered onsite in 4th term)	1
PH.410.622	Strategic Leadership Principles and Tools for Health System Transformation in Developing Countries (typically offered onsite in 2nd term)	4
PH.410.642	TOBACCO CONTROL LEADERSHIP (typically offered onsite in 1st term)	2
PH.410.653	Contemporary Issues in Health Communication (typically offered onsite in 1st term)	1
PH.410.668	Policy Interventions for Health Behavior Change (typically offered onsite in 2nd term)	3
PH.550.608	Problem Solving in Public Health (typically offered onsite in Fall and Winter Institutes, and online in 3rd term)	4

Public Health Economics, Certificate

Public Health Economics Certificate Program

OVERVIEW

The certificate program in Public Health Economics is designed for graduate degree students and junior and mid-level professionals pursuing a career in public health, health care, health services, and health policy who wish to use economic tools to improve the health of populations. This certificate program is only available to students who are able to attend classes in Baltimore; it cannot be completed through online and institute courses.

EDUCATIONAL OBJECTIVES

Students who complete the certificate program will be able to:

1. Describe the appropriate role of cost-effectiveness and economic reasoning in the policy making process for health care in the United States and around the world
2. Participate in the conduct of economic evaluations related to new health interventions, and health systems, health services, or public health interventions
3. Perform statistical and other analytic or modeling tasks necessary to complete cost effectiveness analyses
4. Apply economic theory to predict responses to changes in policies and incentives provided by changes in the health system, in health services provision, or in public health
5. Contribute to the interpretation of economic evaluations and analyses for policy purposes

Admissions

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/public-health-economics-certificate-program/)on the Bloomberg School of Public Health website.

Statistical Series C for Applied Economics Program students		
AS.440.605	Statistics	3
AS.440.606	Econometrics	3
Required Health Economics Course: Students must complete Sequences E, F, and G		
Economics Sequence E		
PH.313.601	Economic Evaluation I (typically offered online and onsite in 1st term)	3
Economics Sequence F: Student may select either 313.643 or 313.641		
PH.313.610	Health Economics for Managers (typically offered onsite in 2nd term)	3
PH.313.641	Introduction to Health Economics (typically offered online in 3rd term)	3
PH.313.643	Health Economics (typically offered onsite and online in 2nd term)	3
Economics Sequence G		
PH.313.602	Economic Evaluation II (typically offered onsite and online in 2nd term)	3
Elective Courses: Students should select one elective course from the list below		
PH.221.619	Introduction to Microeconomics (typically offered onsite in 1st term)	3
PH.221.644	Econometric Methods for Evaluation of Health Programs (typically offered onsite in 3rd term)	4
PH.300.651	Introduction to the U.S. Healthcare System (typically offered onsite in 1st term and online in 4th term)	4
PH.309.620	Managed Care and Health insurance (typically offered onsite in 3rd term)	3
PH.309.716	Advanced Methods in Health Services Research: Analysis (typically offered onsite in 1st term)	3
PH.313.603	Economic Evaluation III (typically offered online and online in 3rd term)	3
PH.313.604	Economic Evaluation IV (typically offered onsite in 4th term)	3
PH.313.644	Intermediate Health Economics (typically offered onsite in 3rd term)	3
PH.380.756	Poverty, Economic Development, and Health (typically offered onsite in 2nd term, every other year)	4
AS.440.601	Microeconomic Theory	3
AS.440.602	Macroeconomic Theory	3
AS.440.622	Cost-Benefit Analysis	3

Public Health Informatics, Certificate

Public Health Informatics Certificate Program

Note: This certificate program may be completed entirely online!

OVERVIEW

The goal of the Public Health Informatics (PHI) Certificate Program is to offer grounding in methods and concepts of health informatics and health information technology for application to public health and population health. It is designed for current and future public health professionals who wish to develop PHI expertise or specialization to work in policy or management.

EDUCATIONAL OBJECTIVES

After completion of the certificate program, students will be able to:

1. Articulate strategic direction for public health informatics within an organization;
2. Match data standards to their proper use;
3. Identify knowledge, information, and data needs of project or program users and stakeholders;
4. Describe information system development, procurement, and implementation that meets public health program needs;
5. Evaluate information systems and applications;
6. Recognize use of informatics to integrate clinical health, environmental risk, and population health; and

7. Implement solutions that assure confidentiality, security, and integrity while maximizing availability of information for public health.

ADMISSIONS

Students should refer to the certificate program page (https://publichealth.jhu.edu/academics/public-health-informatics-certificate-program/) on the Bloomberg School of Public Health website for full information about the certificate admissions process, requirements and deadlines, as well as contact information for the program.

Sponsoring Department

Health Policy and Management (https://publichealth.jhu.edu/departments/health-policy-and-management/)

Information about the courses and program requirements is available here (p. 621)**, and admissions instructions are available** here (https://www.jhsph.edu/academics/certificate-programs/certificates-for-hopkins-and-non-degree-students/public-health-informatics.html)**.**

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade and a 2.75 or better overall GPA for all certificate courses is required. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (p. 577)before completing certificate program requirements. The student's transcripts will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for pre-requisites and whether instructor consent is required.

Please note that although course number 221.649 Introduction to Digital Health in Low- and Middle-Income Countries is no longer offered, certificate students who completed the course previously as part of their certificate program may count it as an elective course towards the total number of credits.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit course in their first term of study; course is typically offered online in 1st, 2nd, 3rd, and 4th terms, as well as Summer, and Summer and Winter Institute)	
Required Courses: 309.631 and EITHER 315.707 OR 312.633		
PH.309.631	Population Health Informatics (course is typically offered online in 2nd term)	3
PH.312.633	Health Management Information Systems (course is typically offered online in term 3)	3
PH.315.707	Introduction to Biomedical and Public Health Informatics (course is typically offered online in term 1)	3
Elective Options (12 academic credits)		
PH.221.637	Health Information Systems (course is typically offered online in term 2)	3
PH.309.635	Population Health: Analytic Methods and Visualization Techniques (course is typically offered online in term 4)	3
PH.315.700	Health Information Systems: Design to Deployment (course is typically offered online in term 3)	3
PH.315.703	Leading Change Through Health Informatics (course is typically offered online in term 2)	3
PH.315.709	Health Sciences Informatics, Knowledge Engineering and Decision Support (course is typically offered online in term 4)	3
PH.315.727	Database Querying in Health (typically offered online in 2nd term)	3
PH.550.714	Secondary Uses of Electronic Health Record Data (course is typically offered online in term 3)	3
Students may complete no more than 2 of the following GIS courses		
PH.340.696	Spatial Analysis I: ArcGIS (course is typically offered onsite in term 1)	3
PH.340.697	Spatial Analysis II: Spatial Data Technologies (course is typically offered onsite in term 2)	2
PH.340.701	Epidemiologic Applications of Gis (course is typically offered online in term 3 and onsite in Summer Institute)	2

Public Health Practice, Certificate

Public Health Practice Certificate Program

EDUCATIONAL OBJECTIVES

The certificate recipient will be able to:

1. Identify, analyze and use available disease and behavioral surveillance data
2. Apply leadership in the management of health systems organizations
3. Communicate effectively to constituencies both within and outside of the health system
4. Determine public health information needs
5. Use appropriate basic statistical, demographic, and epidemiologic techniques to evaluate data with attention to quality control issues
6. Support state and local public health agency efforts in assessing health needs, quality of services, and strategies for health services research
7. Identify and help fill needs for information and responses to new threats to public health.

Admissions

Contact information and complete certificate program admissions information can be found on the Bloomberg School of Public Health certificate program webpage (https://publichealth.jhu.edu/academics/public-health-practice-certificate-program/).

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 24 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (p. 577)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted and verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Required Courses:		
PH.305.607	Public Health Practice (Course is typically offered onsite in 2nd term and online in 4th term. Please note prerequisite course requirement)	4
PH.550.608	Problem Solving in Public Health (Course is typically offered onsite in Fall, Summer and Winter Institute and online in 3rd term. Please note: This course should be taken first)	4
Required Epidemiology Course: Students must choose either 340.601 or 340.721		
PH.340.601	Principles of Epidemiology (typically offered onsite in Summer and Summer Institute)	5
PH.340.721	Epidemiologic Inference in Public Health I (typically offered online in 1st and 3rd terms and Summer and Summer Institutes and onsite in 1st term)	5
Required Social and Behavioral Courses: Students must select one course		
PH.380.604	Life Course Perspectives on Health (typically offered onsite in 1st term and online in 2nd term)	4
PH.410.616	Social and Behavioral Aspects of Public Health (typically offered onsite in Summer Institute)	4
PH.410.650	Introduction to Persuasive Communications: Theories and Practice (typically offered onsite in 2nd term and Winter Institute)	4
Elective Courses: At least 6 credits of coursework must be taken		
PH.180.620	Introduction to Food Systems and Public Health (typically offered online in 2nd term)	4
PH.220.601	Foundations of International Health (typically offered onsite in 1st term and online in 1st and 4th terms)	4
PH.221.637	Health Information Systems (typically offered online in 2nd term)	3
PH.300.600	Introduction to Health Policy (typically offered online in 1st term)	4

Public Health Preparedness, Certificate

Public Health Preparedness Certificate Program

Students who would like to be trained to identify the major threats to public health; to identify public health issues during emergency situations; and how to integrate the risk sciences, public health practice and public health surveillance systems as they relate to preparedness and emergency response, should apply for this program.

EDUCATIONAL OBJECTIVES

The certificate program in Public Health Preparedness is designed to provide essential tools for public health practitioners to prepare for natural disasters, terrorism or other emerging threats. Specific objectives of the program are to:

1. Identify the major threats to public health and to identify public health issues in disasters
2. Describe the integration of risk sciences, public health practice and public health surveillance as it relates to public health preparedness and terrorism response

Contact Information

Complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/public-health-preparedness-certificate-program/) on the Bloomberg School of Public Health website.

Sponsoring Department

Health Policy and Management (https://publichealth.jhu.edu/departments/health-policy-and-management/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

All students are required to complete the three core courses (11 credits) and an additional 9 credits from the list of approved courses for a total of 20 credits to complete the certificate. Core courses required for this certificate program may not be waived or substituted. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework.

The student should review the section of the website that addresses completion (https://publichealth.jhu.edu/academics/academic-programs/certificate-programs/)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted and verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered. Students should also check for pre-requisites and whether instructor consent is required.

Public Health Training Certificate for American Indian Health Professionals

Public Health Training Certificate for American Indian Health Professionals

OVERVIEW

The overarching purpose of this public health certificate program is to promote participants' capacity to address American Indian population health disparities through multidisciplinary public health approaches and culturally competent strategies. The certificate program examines four quadrants of influence: physical, behavioral, political, and spiritual/emotional, which, in balance, comprise the sphere of public health for American Indian communities.

The certificate program is offered for credit to graduate students at The Johns Hopkins University Schools of Medicine, Nursing, and Public Health. It is also open to other health care professionals interested in the health of American Indians. The certificate can be earned over a three-year period through condensed format courses taught in January, June, and July in Baltimore.

The Johns Hopkins Center for American Indian Health offers additional training opportunities that are not-for-credit.

EDUCATIONAL OBJECTIVES

Environmental, Cultural, and Political Context

Students completing the certificate program will be able to:

1. Discuss how tribal sovereignty status impacts health policy and management
2. Understand the potential interface of tribal, federal, and private sectors in health system development
3. Discuss and provide examples of inter-relationships between the environment and the public's health
4. Describe the unique impact of mental, social, and emotional health status on tribal community well-being
5. Describe the components of effective community education and health communication campaigns
6. Understand factors affecting early child development unique to tribal communities

Public Health Research Skills

Those completing the certificate will be able to employ public health theory and logic frameworks and apply basic statistical, demographic, and epidemiologic techniques to:

1. Critique published public health research
2. Identify available disease, behavioral, and mental health surveillance data from American Indian communities
3. Identify how community based participatory research can be used to promote American Indian health
4. Understand how to identify health priority needs utilizing community based participatory research methods and to evaluate intervention impacts using health surveillance data from American Indian communities
5. Work with epidemiologists and other researchers to design community based interventions and other data collection efforts appropriate for American Indian communities
6. Recognize good data management practices
7. Understand the importance of research ethics and the composition and function of Institutional Review Boards (IRBs), with specific emphasis on IRB's role in tribal environments

Admissions

Complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/public-health-training-certificate-for-american-indian-health-professionals/) on the BSPH website.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses: Students must complete all three of the following courses		
PH.221.666	Introduction to American Indian Health Research Ethics (typically offered every other year, onsite in Summer Institute)	2
PH.221.667	An Interdisciplinary Approach to Understanding the Health of Native Americans (typically offered onsite in Winter Institute)	3
PH.221.670	Collecting, Analyzing and Using Public Health Data in Native American Communities (typically offered every other year, onsite in Summer Institute)	3
Elective Courses: Students must complete at least 10 credits of elective coursework		
PH.221.664	Prevention of Unintentional Injuries in American Indian Communities (typically offered onsite in Winter Institute, every other year)	2
PH.221.665	Early Childhood Intervention in Tribal Communities (typically offered onsite in Summer Institute, every other year)	2
PH.221.668	COVID-19 & Infectious Disease Outbreaks in Native American Communities (typically offered onsite in Summer Institute)	2
PH.221.669	American Indian Health Policy (typically offered every other year, onsite in Summer Institute)	2
PH.221.671	Introduction to Quantitative and Qualitative Research for American Indian Health (typically offered every other year, onsite in Summer Institute)	2
PH.221.672	Introduction to Data Management Using American Indian Health Data (typically offered every other year, onsite in Summer Institute)	2
PH.221.673	Mental Health in American Indian Communities (typically offered every other year, onsite in Winter Institute)	2

Public Mental Health Research, Certificate

Public Mental Health Research Certificate Program

OVERVIEW

This program is offered through the Department of Mental Health and provides graduate training in understanding the causes and consequences of mental disorders in populations. Courses describe clinical and behavioral features, the incidence and prevalence of disorders, and identify factors that promote or influence the occurrence, persistence, or severity of mental and behavioral disorders. Effective research strategies in public mental health include operationalization of case definitions, measurement in populations, design of prevention strategies, and analytical techniques. The goals are to increase the epidemiologic expertise of psychiatrists and other mental health professionals, and to increase the number of epidemiologists, biostatisticians, and health policy makers, with an interest in psychiatric disorders.

EDUCATIONAL OBJECTIVES

Upon completion of this certificate program, students will have enhanced understanding of the complex field of research in public mental health. After completing core and elective courses, students will be able to:

1. Understand and discuss the organization of diagnoses of mental disorders used in clinical and public health settings, as well as the available modalities for measuring the diagnoses in populations;
2. Realize and discuss the burden of mental disorders in the global population;
3. Recognize and describe the wide range of social and biological etiologic factors related to mental disorders;
4. Evaluate methods of prevention and treatment for mental disorders;
5. Be able to describe the system of treatment for mental disorders in the United States and around the world.

ADMISSIONS

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/public-mental-health-research-certificate-program/) on the BSPH website.

Sponsoring Department

Department of Mental Health (https://publichealth.jhu.edu/departments/mental-health/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

This certificate program consists of a minimum of 21 credits in the Department of Mental Health (18 credits for psychiatrists and clinical psychologists who elect to waive 330.617; permission to do so must be granted by the faculty sponsor). All required and elective courses must be taken for a letter grade, unless the course is only offered Pass/Fail; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; however, the certificate program must be completed within three years.

Tuition, application fee, and book costs are subject to change from one academic year to another academic year. The student should review the section of the website that addresses completion (p. 577)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when courses are offered.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses		
Students are required to complete 330.617		
PH.330.617	Psychopathology for Public Health (Note: Psychopathology for Public Health may be waived by psychiatrists and clinical psychologists, upon permission of the faculty sponsor; in which case, the minimum number of credits in the Department of Mental Health is 18, not 21. Course is typically offered online in 1st term)	3
Students are required to take 330.661 and either 330.603 or 330.669		
PH.330.603	Psychiatric Epidemiology (typically offered onsite in 2nd term and online in 3rd term every other year. Note:either 330.603 or 330.669 may be taken, but not both)	3
PH.330.669	Epidemiology of Major Mental Disorders (typically offered online in Summer Institute)	2
PH.330.661	Social, Psychological, and Developmental Processes in the Etiology of Mental Disorders (typically offered onsite in 3rd term)	3
Students may take either 330.607 or 330.664		
PH.330.607	PREVENTION of MENTAL DISORDERS: PUBLIC HEALTH InterVENTIONS (typically offered online in 3rd and 4th terms)	3
PH.330.664	Introduction to Mental Health Services (typically offered onsite in 1st term)	3
Elective Courses: Select additional courses from the Department of Mental Health totaling at least 9 more credits; 330.840 and 330.800 may not be used as electives towards this program. 21 credits total are required to complete the certificate program, except in the case of those students who were able to obtain approval to waive 330.617		

Quality, Patient Safety, and Outcomes Research, Certificate

Quality, Patient Safety and Outcomes Research Certificate Program

NOTE: This certificate program can be completed entirely online!

OVERVIEW

The certificate program is designed for graduate students from the Johns Hopkins Schools of Public Health, Medicine, and Nursing and health-related professionals interested in quality, patient safety, and outcomes research.

EDUCATIONAL OBJECTIVES

Those who complete the certificate program will gain competencies in quality, patient safety, and outcomes research; however the program does not provide training in conducting research. Students completing the certificate program will be able to:

Quality

1. Describe several frameworks and theories for assessing and improving the quality of medical care;
2. Describe current key policy and programmatic areas in quality of care;
3. Understand how to assess quality of care for a medical condition;
4. Describe key elements of published quality assessment and improvement studies;
5. Understand how to develop a workable quality improvement and evaluation plan.

Safety

1. Recognize the extent of problems in patient safety in medical care;
2. Describe the role of various systems and factors in creating safety and in causing errors and adverse events;
3. Discuss problems and issues in measuring and reporting safety;
4. Demonstrate knowledge of the basics of conducting an incident investigation and disclosing an adverse event;
5. Design solutions to improve patient safety;
6. Understand the ethical, legal, and regulatory implications related to patient safety.

Patient Outcomes Research

1. Argue for the importance and challenges of using patient and consumer reported measures in research, clinical practice, and program evaluation;
2. Compare the different types of instruments available to measure health related quality of life;
3. Critique the use of commonly used patient reported outcomes in specific applications;
4. Plan the development of a new questionnaire;
5. Understand the role of patient-centered outcomes research in improving health, including its place in the U.S. research portfolio; the importance of stakeholders in the research process, and policy implications related to implementation;
6. Identify study designs and methodologies unique to patient outcomes research.

Admissions

Contact information and complete information about applying to the certificate program is available on the certificate program page (https://publichealth.jhu.edu/academics/quality-patient-safety-and-outcomes-research-certificate-program/) on the Bloomberg School of Public Health website.

Sponsoring Department

Health Policy and Management (http://www.jhsph.edu/departments/health-policy-and-management/certificates/quality/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 21 term credits, including four required courses, and at least six credits of elective courses. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the program must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses: Students must complete the following required courses		
PH.309.712	Assessing Health Status and Patient Outcomes (typically offered online in 3rd term)	3
PH.309.730	Patient Safety and Medical Errors (typically offered online in 2nd term)	3
PH.311.615	Quality of Medical Care (typically offered online in 1st term)	3
PH.312.693	Introduction to Comparative Effectiveness and Outcomes Research (typically offered online in 3rd term)	3
Elective Courses: Students must complete at least nine credits from the following elective courses. Students should select from at least 2 domains, and may select courses from several domains		
Elective Courses:Domain 1: Quality of Care		
PH.221.722	Quality Assurance Management Methods for Developing Countries (typically offered onsite and online in 1st term)	4
PH.309.609	Palliative and Hospice Care: Quality of Care and Health Policy (typically offered onsite in Winter Institute)	2
PH.390.678	Introduction to Quality Improvement & Knowledge Translation Research (typically offered online in 1st term and onsite in 4th term)	3
Elective Courses: Domain 2: Patient Safety		
PH.309.600	Evaluating Quality Improvement and Patient Safety Programs (typically offered onsite in Winter Institute and online in 1st term)	3
PH.309.731	Patient Safety in Developing Countries (typically offered onsite in Summer Institute)	2
PH.312.678	Introduction to Healthcare Quality and Patient Safety: A Management Perspective (typically offered onsite in 3rd term)	2
Elective Courses: Domain 3: Health Economics and Economic Evaluation		
PH.313.790	Introduction to Economic Evaluation (typically offered online in 4th term)	3
Elective Courses: Domain 4: Health Care Management and Informatics		
PH.309.631	Population Health Informatics (typically offed online in 2nd term)	3
PH.312.600	Managing Health Services Organizations (typically offered online in 3rd term)	4
PH.312.620	Performance Measurement in Health Care (Performance Measurement in Health Care is typically offered onsite in Winter and Summer Institutes)	2
PH.312.633	Health Management Information Systems (typically offered online in 3rd term)	3
Elective Courses: Domain 5: Methods		
PH.340.606	Methods for Conducting Systematic Reviews and Meta-Analyses (typically offered onsite in 3rd term)	4
PH.340.686	Introduction to Systematic Reviews and Meta-Analysis (typically offered onsite in Summer Institute)	2
Elective Course: Domain 6: Practicum		
PH.309.864	Quality, Patient Safety, and Outcomes Research Practicum (This course is distinct from what students may have completed for their MPH Capstone and/or MPH Practicum. It is typically offered onsite in 2nd, 3rd and 4th terms)	3

Quantitative Methods in Public Health, Certificate

Quantitative Methods in Public Health Certificate Program

EDUCATIONAL OBJECTIVES

The certificate recipient will be able to:

1. Evaluate the methods used to measure health effects in populations;
2. Interpret basic, quantitative public health measures;
3. Judge policy implications of public health data and research;

4. Be familiar with the difficulties of collecting, interpreting and analyzing data and their implications;
5. Perform a critical review of public health/epidemiologic literature.

ADMISSIONS INFORMATION

For full admissions and contact information, please visit the certificate webpage (https://publichealth.jhu.edu/academics/quantitative-methods-in-public-health-certificate-program/) on the Bloomberg School of Public Health's website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 21 term credits of coursework. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (p. 577)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit course in their first term of study)	
Required Courses		
PH.140.611	Statistical Reasoning in Public Health I (offered online in 1st term, in person in Summer Institutes)	3
PH.140.612	Statistical Reasoning in Public Health II (offered online in 2nd term, in person in Summer Institutes)	3
PH.340.663	Epidemiology Workshop: Interpreting and Using Epidemiologic Evidence (2021-2022 course schedule TBA)	2
PH.550.608	Problem Solving in Public Health (usually offered online in 3rd term and in person in Baltimore in Summer and Winter Institute, and in Barcelona, Spain during the Fall Institute)	4
Students must complete either 340.601 or 340.721		
PH.340.601	Principles of Epidemiology (typically offered on-site in Summer and Winter Institutes)	5
PH.340.721	Epidemiologic Inference in Public Health I (typically offered online in 1st, 3rd, Summer and Summer Institute terms)	5
Students must complete either 340.722 or both 140.613 AND 140.614		
PH.340.722	Epidemiologic Inference in Public Health II (typically offered online in 2nd and 4th terms)	4
or		
PH.140.613	Data Analysis Workshop I (typically offered onsite in 3rd term and Summer and Winter Institutes)	2
and		
PH.140.614	Data Analysis Workshop II (typically offered onsite in 3rd term and in Summer and Winter Institutes)	2

Rigor, Reproducibility and Responsibility in Scientific Practice, Certificate

Rigor, Reproducibility and Responsibility in Scientific Practice Certificate Program

OVERVIEW

The Rigor, Reproducibility and Responsibility certificate program emphasizes research practice and applicable, introductory graduate level training in epistemology, logic, ethics, as well as quantitative and communication skills. The program specifically addresses the "3R" core norms of good scientific practice, applied across the health and science disciplines, which include fundamental and trans-disciplinary application skills in:
• Rigor, critical thinking and objectivity in scientific conduct
• Reproducibility through appropriate, quantitative research methodology
• Responsibility of scientists toward the research community and society

Participants will value the program's specific focus on the philosophical underpinnings that form the fundamental framework of how science works, thereby keeping a broad perspective in mind that allows them to understand the principles underlying good scientific practice research from the bench science to the public health disciplines

EDUCATIONAL OBJECTIVES

Upon completion of the certificate program, students will be able to:

1. Analyze research strategies, techniques, and data in the light of the norms of good scientific practice.
2. Formulate constructive critique of the research presented in the interdisciplinary primary literature.
3. Explain the basics of hypothesis testing, data analysis and visualization in science.
4. Apply fundamental logic and ethics considerations to observational and experimental approaches to study current problems in science and society.
5. Differentiate how causality is established among the scientific disciplines.
6. Appraise how limitations of causal inference can be mitigated in research and practice.
7. Describe the sources of error in scientific practice as well as approaches for error reduction.
8. Evaluate the impact of errors in discovery and innovation.
9. Apply evidence-based strategies to craft clear and concise, written communications.

10. Employ rhetoric and storytelling to strengthen the communication's impact.
11. Recognize the critical role of scientists in society.

SPONSORING DEPARTMENT

MOLECULAR MICROBIOLOGY AND IMMUNOLOGY (https://www.jhsph.edu/departments/w-harry-feinstone-department-of-molecular-microbiology-and-immunology/)

ADMISSIONS

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/rigor-reproducibility-and-responsibility-in-scientific-practice-certificate-program/)on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 18 term credits. All required and elective courses must be taken for a letter grade, if a letter grade is an option. Students must earn a minimum letter grade of C in each certificate course, and maintain a GPA of 2.75 or higher for the certificate courses. All courses must be completed within a three year period.

The student should review the section of the website that addresses completion (https://e-catalogue.jhu.edu/public-health/certificates/#courserequirementstext) before completing certificate program requirements. The student's transcripts will not indicate that the certificate was earned until the Notification of Completion form has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

Students should check the Bloomberg School of Public Health course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. The term and time may change from what is listed in the table below and some courses are only offered every other year. Students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses- Students are required to complete 4 core courses (12 credits required)		
PH.260.700	How Do We Know? - Theory and Practice of Science (typically offered online in 1st term, and hybrid in 3rd term)	3
PH.260.701	Anatomy of Scientific Error (typically offered online in 2nd and hybrid in 4th term)	3
PH.260.705	Fundamentals of Quantitative Reasoning in the Biomedical and Health Sciences (typically offered online in 3rd term)	3
PH.260.844	Causation (typically offered hybrid in both 2nd and 4th term)	3
Elective Courses (students must complete 6 or more credits from among the following courses, for a minimum of 18 certificate coursework credits)		
PH.260.704	Critical Dissection of the Scientific Literature: Taking the Scalpel to Journal Articles (typically offered online in 1st term and onsite in 3rd term)	3
PH.260.709	Evidence-Based Mentoring	3
PH.260.710	Communication Practice for Health Science Professionals (typically offered online in 2nd and 4th terms)	3
PH.260.715	Unleash Your Writing Superpower: Crafting Clear, Concise and Persuasive Prose (typically offered online in 2nd term)	3
All students are required to complete a capstone paper. The subject of the capstone must be approved in advance by the Certificate program director. Students may request permission to submit as their capstone a paper completed for one of the certificate courses, or, if desired, students may opt to complete PH.260.840 and to complete the capstone paper during this course		
PH.260.840	SS/R: Mol Microbiology & Imm (typically offered online in 1st, 2nd, 3rd, 4th and Summer terms)	1 - 22

Risk Sciences and Public Policy, Certificate

Risk Sciences and Public Policy Certificate Program

OVERVIEW

Risk professionals are under increased pressure to interpret complex environmental and health situations in creative ways. The certificate program provides multidisciplinary education designed to increase awareness of the scientific underpinnings of risk assessment and provide a bridge between science and policy that allows innovative public health solutions to complex problems. Risk assessment methods are applied to address a wide range of environmental and public health issues including chemical, microbiological, radiological exposures, natural and man-made disasters, and to evaluate new technologies. Risk assessors are employed in academic, governmental and non-governmental organizations across multiple sectors such as agriculture, energy, environmental protection, armed forces, public health, and transportation.

EDUCATIONAL OBJECTIVES

Upon conclusion of the Risk Sciences and Public Policy certificate program, the student will:

1. Be able to describe the importance of risk assessment in examining public health problems;
2. Be able to describe the methods of risk assessment and their applicability to public health problems;
3. Be able to discuss the scientific basis for assessing environmental and other public health risks;
4. Be able to complete and document a basic quantitative risk assessment for a chemical exposure;
5. Be familiar with the policy implications of the scientific relationships for reducing public health risks.

Admissions

Complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/risk-sciences-and-public-policy-certificate-program/) on the Bloomberg School of Public Health website.

Sponsoring Departments

Health Policy and Management (https://publichealth.jhu.edu/departments/health-policy-and-management/)
Environmental Health and Engineering (https://ehe.jhu.edu/)
Epidemiology (https://publichealth.jhu.edu/departments/epidemiology/)

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 26 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate program must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements. The student's transcripts will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program, and processed by the Registrar.

COURSE OF STUDY

The core curriculum consists of four core risk assessment and policy courses as well as three risk science courses that will introduce you to methods of risk assessment and its applications to public policy.

Students should check the BSPH course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for pre-requisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Required Courses		
PH.317.600	Introduction to the Risk Sciences and Public Policy (typically offered online in 1st and 3rd term)	4
PH.317.605	Methods in Quantitative Risk Assessment (typically offered online in 1st term and onsite in 3rd term)	4
PH.317.610	Risk Policy, Management and Communication (typically offered onsite in 2nd term and online in 4th term)	3
PH.317.615	Topics in Risk Assessment (typically offered online in 2nd term and onsite in 4th term. Of the 4 required courses, this one should be taken last)	2
In addition to the four core courses, students must also take three risk sciences courses, including Public Health Toxicology, one course in Epidemiology and one course in Biostatistics		
PH.187.610	Public Health Toxicology (typically offered online in 2nd term and onsite in 1st term)	4
Students must select one of the following courses in epidemiology:		
PH.340.601	Principles of Epidemiology (typically offered onsite in Summer and Summer Institute)	5
PH.340.680	Environmental and Occupational Epidemiology (typically offered onsite in 4th term)	4
PH.340.721	Epidemiologic Inference in Public Health I (typically offered onsite in 1st term, and online in 3rd term and Summer Institutes)	5
PH.340.722	Epidemiologic Inference in Public Health II (typically offered onsite in 2nd term and online in 2nd and 4th term)	4
PH.340.751	Epidemiologic Methods 1 (typically offered onsite in 1st term)	5
PH.340.769	Professional Epidemiology Methods (typically offered onsite in 3rd term)	4
To satisfy the Biostatistics requirement, students must select either (140.612 and 140.613), or 140.616, or 140.622, or 280.345		
PH.140.612	Statistical Reasoning in Public Health II (please note course prerequisites; course must be taken with 140.613; course is typically offered onsite in 2nd term and Summer Institute and online in 2nd term)	3
PH.140.613	Data Analysis Workshop I (course must be taken with 140.612; course is typically offered onsite in Summer and Winter Institutes)	2
PH.140.622	Statistical Methods in Public Health II (course is typically offered onsite and online in 2nd term)	4
PH.140.616	Statistics for Laboratory Scientists II (typically offered onsite in 4th term)	4
AS.280.345	Public Health Biostatistics (This is an undergraduate level course offered at the Johns Hopkins University's Krieger School of Arts and Sciences campus. The course is an acceptable course only for those Johns Hopkins University undergraduates who are accepted into the Risk Sciences and Public Policy certificate program.)	4
Optional Data Analysis Supplement Option for Students who Complete 140.612 Statistical Reasoning in Public Health:		
PH.182.613	Exposure Assessment Techniques for Health Risk Management (typically offered onsite and online in 3rd term)	3
PH.340.701	Epidemiologic Applications of Gis (typically offered onsite in Summer Institute and online in 3rd term)	2

Spatial Analysis for Public Health, Certificate

OVERVIEW

Please note: this program can ONLY be completed via fully online courses.

The Johns Hopkins Bloomberg School of Public Health offers fully online, part-time master's degree and certificate programs, designed for working professionals. Our Online Programs for Applied Learning (https://www.jhsph.edu/academics/online-programs-and-learning/online-programs-for-applied-learning/) (OPAL) focus on emergent industry sectors that have a resounding need for highly skilled professionals, with one of these sectors being Global Health.

Spatial analysis is an emerging field with applications evolving that are vast and paramount, impacting public health at the local and global level. The carefully sequenced courses of the certificate program in Spatial Analysis for Public Health introduce and reinforce a unifying comprehensive spatial science paradigm, to include components of Spatial Data, GIS and Spatial Statistics.

EDUCATIONAL OBJECTIVES

Upon completion of the certificate program in Spatial Analysis for Public Health the individual will be able to:

1. Synthesize how geography affects public health;
2. Obtain and transfer information from spatial data technologies into a database appropriate for mapping;
3. Utilize a geographic information system to map and spatially integrate public health related databases;
4. Analyze maps using tools from the field of spatial statistics to describe and interpret distributions of health outcomes in a population;
5. Design and implement a spatial analysis protocol for addressing a public health problem.

LinkedIn © Group

We have established a LinkedIn group for each of the OPAL program areas in order to strengthen connections between current students, faculty, and alumni of OPAL programs, as well as to facilitate student-to-student peer networking.

Participation is voluntary, but we encourage you to join this professional networking community.

BSPH OPAL Spatial Analysis for Public Health (https://www.linkedin.com/uas/login/?session_redirect=https%3A%2F%2Fwww.linkedin.com%2Fgroups%2F8676099%2F)

Additional Public Health Learning Resources

The Mid-Atlantic Regional Public Health Training Center provides links to many of its online learning resources, as well as external resources, databases and public health organizations. These can be used to supplement learning on a particular topic, or provide background material. Many of these resources are available for free via their website (https://www.jhsph.edu/research/centers-and-institutes/mid-atlantic-public-health-training-center/training_events/online_training.html).

The Welch Medical Library at Johns Hopkins has many resources related to research, writing and documentation on their YouTube channel (https://www.youtube.com/c/WelchMedicalLibrary/).

The School has a number of research and practice related seminar series (https://publichealth.jhu.edu/academics/lecture-series/) that occur throughout the year and contribute to the intellectual community of the School, for students, staff, and faculty. The Bloomberg School has a website (https://publichealth.jhu.edu/practice/resources-for-practitioners/) that provides some additional resources for practitioners as well.

Practitioners can also access dozens of courses from Bloomberg School faculty on Coursera (https://www.coursera.org/jhu/). Practice-focused offerings include courses on topics such as gun violence, food systems, health equity, biostatistics, and epidemiology, among others.

Admissions

Contact information and complete information about applying to the certificate program is available on the certificate program page (https://publichealth.jhu.edu/academics/spatial-analysis-for-public-health-certificate-program/) on the Bloomberg School of Public Health website.

Program Requirements

Students should follow the plan outlined below if they wish to complete the Certificate program in one year. Courses can be taken at a slower pace if needed, so long as course prerequisites are met. Students should check the course directory (http://www.jhsph.edu/courses/) to confirm when the courses are offered for students in OPAL programs.

The certificate program requires a minimum of 18 term credits and a minimum grade point average (GPA) of 2.75. Students must earn a minimum grade on a set of required program-specific core courses: "Pass" for courses offered only on a pass/fail basis: "C" or higher for courses offered for letter grading. The certificate program length is flexible; it can be completed in as little as one year, and must be completed within three years.

Notification of Certificate Program Completion

Students in OPAL certificate programs must complete and submit the Notification of Certificate Program Completion (https://e-catalogue.jhu.edu/public-health/certificates/Notification_of_Certificate_Program_Completion6-4-2019.pdf) form to the OPAL program office **before the end of the add/drop period of the term of your last certificate course**; certificate program completions cannot be processed retroactively.

It is preferable to complete the form electronically. Send the completed form to the OPAL program office as an email attachment. Certificates will be ordered for students approximately one month after the end of the term in the summer, spring, and fall. A template form for each of the OPAL certificates can be found in the Online Library of the OPAL Student Resources site in CoursePlus. The blank form can be found on the School's website as well. Please **send the completed Notification form to OPAL-Office@jhu.edu** by the deadline noted above. Be sure to complete all personal information on the first page, and the year, term and grade for all completed courses. If needed, we can update the pending grades when they are submitted at the end of the term.

Training Certificate in Public Health

NOTE: This certificate program may be completed entirely online!

EDUCATIONAL OBJECTIVES

Upon completion of the Training Certificate in Public Health, the individual will be able to:

1. Use appropriate statistical methods for critical reading of reports of statistical analysis of public health problems.
2. Apply the basic concepts of epidemiology to the study of the patterns of disease and injury applied to public health.
3. Determine the role of environmental factors affecting the health of a population.
4. Identify the managerial and policy issues associated with the delivery, quality and costs of health care.
5. Identify the social, behavioral, and cultural factors related to population health.

ADMISSIONS INFORMATION

Full certificate admissions and contact information is available on the Bloomberg School of Public Health's certificate program webpage (https://www.jhsph.edu/academics/certificate-programs/certificates-open-to-non-degree-students-only/training-certificate-in-public-health.html).

REQUIREMENTS FOR SUCCESSFUL COMPLETION

The certificate program requires a minimum of 22 term credits. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework. The certificate program length is flexible; it varies from student to student, however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (p. 577)before completing certificate program requirements. The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the course catalogue (https://www.jhsph.edu/courses/) to confirm when the courses are offered. The term and time may change from what is listed in the table below and some courses are only offered every other year. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this noncredit online course in their first term of study)	
Required Courses: Students are strongly encouraged to complete the courses in Epidemiology and Biostatistics prior to taking courses in the remaining three core areas		
Biostatistics: Both courses are required		
PH.140.611	Statistical Reasoning in Public Health I (typically offered onsite in 1st term and Summer Institute, and online in 1st term)	3
PH.140.612	Statistical Reasoning in Public Health II (typically offered online in 2nd term, and onsite in 1st term and Summer Institute)	3
Epidemiology: Select either 340.601 or 340.721		
PH.340.601	Principles of Epidemiology (typically offered onsite in Summer and Summer Institute)	5
PH.340.721	Epidemiologic Inference in Public Health I (typically offered online in 1st and 3rd terms and Summer and Summer Institutes)	5
Environmental Health: Required Course		
PH.180.601	Environmental Health (typically offered online in 3rd term and onsite in Summer and Summer Institutes)	5
Social & Behavioral Sciences: Choose one course		
PH.221.688	Social and Behavioral Foundations of Primary Health Care (typically offered online in 3rd and Summer terms)	4
PH.380.604	Life Course Perspectives on Health (typically offered onsite in 1st term and online in 2nd term)	4
PH.410.620	Program Planning for Health Behavior Change (typically offered onsite in 1st term and Winter Institute and online in 4th term)	3
Management Sciences: Choose one course		
PH.305.607	Public Health Practice (typically offered onsite in 2nd term and online in 4th term)	4
PH.312.600	Managing Health Services Organizations (typically offered online in 3rd term)	4
PH.312.603	Fundamentals of Budgeting and Financial Management (typically offered online in 1st, 2nd, 3rd, 4th terms and Summer term)	3

Tropical Medicine, Certificate

Tropical Medicine Certificate Program

EDUCATIONAL OBJECTIVES

This certificate program is designed to provide training in tropical medicine and related public health issues through a multidisciplinary approach. It is also designed to prepare participants for working with current and emerging health problems in developing countries and health problems of travelers. This program focuses broadly on issues of tropical health and on clinical tropical medicine. Toward the program's conclusion, students will have acquired a strong scientific basis for preventing, diagnosis, treating, and controlling tropical health problems. The curriculum will consist of

1. Specific tropical diseases and detailed case studies stressing diagnosis, treatment, and the implementation of preventive control measures
2. Recent advances in diagnostic methodologies
3. Human behavior associated with the transmission of infection and of local perceptions of the disease
4. Laboratory sessions focusing on diagnostic methods for identification of blood, intestinal, and tissue parasites as well as their vectors.

Sessions include practical lab experience in parasitology and diagnosis.

Admissions

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/tropical-medicine-certificate-program/) on the Bloomberg School of Public Health website.

REQUIREMENTS FOR SUCCESSFUL COMPLETION

A minimum of 18 credits is required for completion. All required and elective courses must be taken for a letter grade; a minimum grade of C is required in all certificate coursework and students must maintain a 2.75 or better overall GPA for all certificate coursework.

The certificate program length is flexible; however, the certificate must be completed within three years.

The student should review the section of the website that addresses completion (https://www.jhsph.edu/academics/certificate-programs/JHSPH_certificate_completion.html)before completing certificate program requirements.The student's transcript will not indicate that the certificate was earned until the Notification of Completion has been submitted, verified by the certificate program and processed by the Registrar.

COURSE OF STUDY

Students should check the JHSPH course directory (https://www.jhsph.edu/courses/) to confirm when the courses are offered. Students should also check for prerequisites and whether instructor consent is required.

Code	Title	Credits
PH.550.860	Academic & Research Ethics at BSPH (All students are required to complete this online noncredit course in their first term of study)	
Students should complete 18 credits of coursework from the options listed below:		
PH.182.626	Issues for Water and Sanitation in Tropical Environmental Health (typically offered onsite in 3rd term)	2
PH.223.660	Tropical Medicine and Parasitology (typically offered onsite in Winter and Summer Institutes)	4
PH.223.667	Chronic Diseases in Low and Middle income Countries: Prevalence and Epidemiology (typically offered online in 3rd term and onsite in Summer Institute)	4
PH.223.682	Clinical and Epidemiologic Aspects of Tropical Diseases (typically offered onsite in 4th term and online in 2nd term)	4
PH.223.684	Vector-Borne Diseases in the Tropics (typically offered onsite in Summer Institutes)	4
PH.223.685	Tuberculosis, HIV and Other Chronic Infections in the Tropics (typically offered onsite in Summer Institute)	4
PH.223.686	Child and Public Health in the Tropics (typically offered onsite in Winter and Summer Institutes)	4
PH.223.688	Intestinal Infections in the Tropics (typically offered onsite in Summer Institute)	4
PH.224.691	Qualitative Data Analysis (typically offered online in 2nd and 4th terms and onsite in 4th term)	3
PH.260.601	Vector-Borne Disease Control (typically offered onsite in 4th term)	3
PH.260.623	Fundamental Virology (typically offered onsite in 1st term)	4
PH.260.631	Immunology, Infection and Disease (typically offered onsite in 2nd term)	3
PH.260.635	Biology of Parasitism (typically offered onsite in 2nd term)	5
PH.260.650	Vector Biology and Vector-Borne Diseases (typically offered onsite in 3rd term)	3
PH.260.656	Malariology (typically offered online in 3rd term)	4
PH.260.658	Advanced Malariology (typically offered onsite in 4th term)	2
PH.340.693	Investigation of Outbreaks (typically offered onsite in Winter and Summer Institutes)	2

Vaccine Science and Policy, Certificate

Vaccine Science and Policy Certificate Program

EDUCATIONAL OBJECTIVES

The certificate program provides a framework for understanding vaccine science and policy, from clinical research to implementation, in both the United States and internationally.
After successfully completing this certificate program, students will be prepared to:

1. Understand the detailed process of developing, preparing, evaluating and using vaccines;
2. Identify, analyze, and critique cutting-edge strategies for approaching vaccine development;
3. Identify and describe the scientific and policy obstacles preventing development of effective vaccines for several important human pathogens;
4. Understand current national and international policy issues in vaccine research, development, manufacturing, supply and utilization;

5. Understand global finance policies and strategies for funding vaccine research and development, for purchasing vaccines, and for the implementation and evaluation of vaccine delivery programs and campaigns;
6. Communicate with the key stakeholders and institutions involved in formulating vaccine policy in the United States and globally;
7. Explain policy and regulatory requirements and their application in clinical vaccine trials to assure quality and protection of human subjects;
8. Explain the Good Clinical Practice standards for the design, conduct, performance, monitoring, auditing, recording, analyses, and reporting of clinical vaccine trials.

ADMISSIONS

Contact information and complete certificate program admissions information is available on the certificate program page (https://publichealth.jhu.edu/academics/vaccine-science-and-policy-certificate-program/)on the Bloomberg School of Public Health website

Policies

Academic

Academic Ethics Code

Code of Academic Ethics

The faculty and students of the Bloomberg School of Public Health have the joint responsibility for maintaining the academic integrity and guaranteeing the high standard of conduct of this institution.

Students enrolled in the Bloomberg School of Public Health assume an obligation to conduct themselves in a manner appropriate to The Johns Hopkins University's mission as an institution of higher education. A student is obligated to refrain from acts which they know, or under the circumstances has reason to know, impair the academic integrity of the University. Violations of academic integrity include, but are not limited to: cheating; plagiarism; knowingly furnishing false information to any agent of the University for inclusion in the academic record; violation of the rights and welfare of animal or human subjects in research; and misconduct as a member of either School or University committees or recognized groups or organizations.

The Academic Ethics Code is contained in the school's Policy and Procedure Memorandum, Students – 1. This can be accessed through the School's website (https://my.jhsph.edu/_login/Wsb.Jhsph.Login.aspx?ReturnUrl=%2f_layouts%2f15%2fAuthenticate.aspx%3fSource%3d%252F&Source=%2F).

All students will be automatically registered for and must complete the School's online, not-for- credit course entitled: Academic and Research Ethics (550.860.82) during their first term of registration. The course can be accessed via CoursePlus and all students will receive notice of their registration from the Office of Records and Registration. Students who do not complete the course during their first term of registration will be blocked from registration for courses in the subsequent term.

The course instructs students on the terms of the academic ethics code and proper conduct of research, and it includes short quizzes which students must pass in order to be in good standing.

The online ethics course (550.860.82) can be accessed at: http://courseplus.jhsph.edu/ under the listing of Extradepartmental Courses.

For issues or concerns on matters related to academic integrity, please contact Professor Jon Vernick (jvernic1@jhu.edu), Director, Office of Academic Integrity (Office HH 594; Tel: 410-955-7982).

THE JOHNS HOPKINS BLOOMBERG SCHOOL OF PUBLIC HEALTH

OFFICE OF THE DEAN

Date Effective: May 9, 1983
Date Revised: April 6, 1993

Date Revised: January 21, 2006
Date Revised: October 26, 2006
Last Revision: June 30, 2018

SUBJECT: Academic Ethics Code

TABLE OF CONTENTS

POLICY

The faculty and students of the Bloomberg School of Public Health (the "School") have joint responsibility for maintaining academic integrity in the academic conduct and endeavors of the School.

An ethical code is based upon the support of both faculty and students who are charged with the responsibility to live honorably and to take action when necessary to safeguard the academic integrity of this University. Students enrolled in the School assume an obligation to conduct themselves in a manner appropriate to the Johns Hopkins University's mission as an institution of higher education. A student is obligated to refrain from academic misconduct, as defined below in the Academic Ethics Code. Allegations of academic misconduct will be addressed as set forth in the Academic Ethics Code.

PROCEDURES

Students and faculty should become familiar with the Academic Ethics Code, copies of which are provided in student and faculty publications and materials, posted on the website of the School, and can be obtained from the Director of the Office of Academic Integrity.

Students who enroll in courses at the Bloomberg School of Public Health, but whose home Division is elsewhere within the Johns Hopkins University, will be governed by the applicable Ethics Code of their home Division. For example, Johns Hopkins undergraduate students enrolled at the Krieger School of Arts and Sciences, who engage in an alleged violation of academic ethics while completing a Bloomberg School of Public Health course or activity, will be governed by the appropriate Ethics Code at the Krieger School of Arts and Sciences. BSPH students may enroll in courses in one or more other University divisions or schools. BSPH students are subject to this policy not only when enrolled in BSPH schools, but also when enrolled in courses in other University divisions or schools.

Academic misconduct in the context of those 'outside' courses will be subject to and resolved under this policy. Research Misconduct

Research misconduct is defined as fabrication, falsification, or plagiarism in proposing, performing, or reviewing research, or in reporting research results. For a complete definition, refer to The Johns Hopkins University Research Integrity Policy ("Policy") available at https://www.jhu.edu/assets/uploads/2017/08/university_research_integrity_policy.pdf. (http://www.jhu.edu/assets/uploads/2017/08/university_research_integrity_policy.pdf) The Policy applies to all University faculty, trainees, students, and staff engaged in the proposing, performing, reviewing, or reporting of research, regardless of funding source. Allegations of research misconduct regarding a student should be referred to the Research Integrity Officer for assessment under that Policy, but may also be directed to the department chair or Dean of the responsible unit where the alleged research misconduct occurred.

Non-Academic Misconduct

All issues of non-academic student misconduct will be subject to the University-wide Student Conduct Code. For more on this policy, please refer to http://studentaffairs.jhu.edu/policies/student-code/. (http://studentaffairs.jhu.edu/policies/student-code/)

ACADEMIC ETHICS CODE

PREAMBLE

It is the joint responsibility of faculty and students of the Johns Hopkins Bloomberg School of Public Health to maintain the academic integrity of the School. An ethical code helps ensure high standards of conduct and integrity prevail in the School community.

An ethical code is based upon the support of the academic community, students, and faculty alike, who are charged with two kinds of responsibility: Each member must live honorably and must also take action when necessary to report known or suspected academic misconduct.

The School has the responsibility to provide students with access to this Code. Electronic access on the School's website or paper copies available in the School's Office of Student Affairs are acceptable means of providing the code. Students have the responsibility to read the Academic Ethics Code, become familiar with its provisions, and complete any required academic ethics training in the time frame specified by the School. Thus, all students will be presumed to have knowledge of the provisions of this code as a consequence of enrollment in the Bloomberg School of Public Health. Lack of familiarity with the provisions of this code will not serve as a defense to any academic misconduct as defined by the code.

ARTICLE ONE. VIOLATIONS OF ACADEMIC INTEGRITY

A student is obligated to refrain from academic misconduct, as defined in this Code.

Academic misconduct is any action or attempted action that may result in creating an unfair academic advantage for oneself or an unfair academic advantage or disadvantage for any other member or members of the academic community. This includes a wide variety of behaviors such as altering academic documents or transcripts, gaining access to materials before they are meant to be available, and helping another individual to gain an unfair academic advantage. Nonexclusive examples of academic misconduct are listed below.

Violations of academic integrity include, but are not limited to: cheating, plagiarism, altering academic documents or transcripts, gaining access to materials before they are meant to be available, and helping another individual to gain an unfair academic advantage. Nonexclusive examples of academic misconduct are listed below.

ARTICLE TWO. DEFINITIONS

Section One

Cheating is broadly defined as using or attempting to use someone else's work or ideas in a context where you are expected to provide your own. Absent instruction by the faculty member in charge of the course to the contrary, examples of cheating include but are not limited to:

- Fraud, deceit, or dishonesty in an academic assignment, test or examination.
- Use or consultation of unauthorized or inappropriate materials (e.g., notes, books, etc.) on assignments, tests, or examinations.
- Unauthorized discussion of a test or exam during its administration.
- Copying content on an assignment, test or examination from another individual.
- Obtaining a test or examination or the answers to a test or examination before administration of the test or examination.
- Studying from an old test or examination whose circulation is prohibited by the faculty member.
- Use or consultation of unauthorized electronic devices or software (e.g., calculators, cellular phones, computers, tablets, etc.) in connection with assignments or during tests or examinations.
- Use of paper writing services or paper databases.
- Unauthorized collaboration with another individual on assignments, tests or examinations.
- Submission of an assignment, test or examination for a regrade after modifying the original content submitted.
- Permitting another individual to contribute to or complete an assignment, or to contribute to or take a test or examination on the student's behalf.
- Unauthorized submission of the same or substantially similar work, assignment, test or exam to fulfill the requirements of more than one course or different requirements within the same course.
- Tampering with, disabling, or damaging equipment for testing or evaluation.
- Furnishing false information to any agent of the university for inclusion in the academic record.
- Violation of the rights and welfare of animal or human subjects in research.

Section Two

Plagiarism is broadly defined as taking for one's own use the words, ideas, concepts or data of another without proper attribution. Plagiarism includes both direct use or paraphrasing of the words, thoughts, or concepts of another without proper attribution. Proper attribution includes: (1) use of quotation marks or single-spacing and indentation for words or phrases directly taken from another source, accompanied by proper reference to that source and (2) proper reference to any source from which ideas, concepts, or data are taken even if the exact words are not reproduced.

Examples of plagiarism include, but are not limited to:

- Use of material produced by another person without acknowledging its source and proper attribution.
- Use of another person's ideas or words without proper attribution.
- Submission of the same or substantially similar work of another person (e.g., an author, a classmate, etc.).
- Use of the results of another individual's work (e.g., another individual's paper, exam, homework, computer code, lab report, etc.) while representing it as your own.
- Use of paraphrased passages taken from published or unpublished sources without proper attribution.
- Wholesale copying of passages from works of others into homework, essays, term papers, dissertation or other assignment without proper attribution.

- Paraphrasing of another person's characteristic or original phraseology, metaphor, or other literary device without proper attribution.

Section Three

Other forms of academic misconduct include, without limitation: forgery/falsification/lying, facilitating academic dishonesty, unfair competition, and failing to follow applicable polices, procedures, or rules. Examples of these forms of academic misconduct include, without limitation:

Forgery/Falsification/Lying. The following are nonexclusive examples of forgery, falsification and lying:

- Falsification or fabrication of data/information for an assignment, on a test or exam, or in an experiment.
- Citation of nonexistent sources or creation of false information in an assignment.
- Attributing to a source ideas or information that is not included in the source.
- Forgery of university or other official documents (e.g., letters, transcripts, etc.).
- Impersonating a faculty or staff member.
- Request for special consideration from faculty members or university officials based upon false information or deception.
- Fabrication of a reason (e.g., medical emergency, etc.) for needing an extension on or for missing an assignment, test or examination.
- Claiming falsely to have completed and/or turned in an assignment, test, or examination.
- Falsely reporting an academic ethics violation by another student.
- Failing to identify oneself honestly in the context of an academic obligation.
- Providing false or misleading information to an instructor or any other university official.

Facilitating Academic Dishonesty. The following are nonexclusive examples of facilitating academic dishonesty:

- Intentionally or knowingly aiding another student to commit an academic ethics violation.
- Allowing another student to copy from one's own assignment, test, or examination.
- Making available copies of course materials whose circulation is prohibited (e.g., old assignments, texts or examinations, etc.).
- Completing an assignment or taking a test or examination for another student.
- Sharing paper mill/answer bank websites or information with other students.

Unfair Competition. The following are nonexclusive examples of unfair competition:

- Intentionally damaging the academic efforts of another student.
- Stealing another student's academic materials (e.g., books, notes, assignments, etc.).
- Denying university resources needed by another student (e.g., hiding library materials, stealing lab equipment, etc.).

Failing to Follow Applicable Policies, Procedures, Rules

- Failing to follow applicable JHU, divisional/school, program, course, and/or faculty policies, procedures, rules regarding academic ethics.

ARTICLE THREE. RESPONSIBILITIES OF STUDENTS AND FACULTY

Section One

All members of the academic community are responsible for the academic integrity of the University. Students and faculty alike must work together to minimize the possibility of violations of academic integrity.

Section Two

The faculty is responsible for the conduct of examinations, for announcing the ground rules for all work in a course at the beginning of the quarter in which the course is offered, and for the security of examination papers and teaching laboratories. Proctoring is at the discretion of the instructor.

Section Three

A student with knowledge or suspicion of any academic misconduct governed by this Academic Ethics Code is strongly encouraged to promptly report such violation, including the identity of the alleged violator(s), to the appropriate faculty member or to the Director of the Office of Academic Integrity. A student may not make a formal charge directly to the Academic Ethics Board. Formal charges to the Academic Ethics Board must be brought by the appropriate faculty member or by one of the deans responsible for student affairs.

ARTICLE FOUR. THE ACADEMIC ETHICS BOARD

Section One

The Academic Ethics Board (the "Board") consists of six students selected by the Student Assembly, four faculty members appointed by the Dean, the Director of the School's Office of Academic Integrity, and, under extraordinary circumstances, ad hoc members appointed by the Dean in accordance with Article Six, Section Three. The terms of service of members of the Board shall be determined by the Dean. The Dean may replace members of the Board that were appointed by them at their discretion. Reasonable efforts should be made to select students and faculty from diverse disciplines, departments, and, in the case of students, academic programs. At least one member of the Board shall be a full professor.

Section Two

The Board shall elect a chairman from among its members, and shall select other officers and staff as provided in its Bylaws.

Section Three

The Board, acting through the Director of the Office of Academic Integrity, is responsible for the maintenance of the academic integrity in the Bloomberg School of Public Health for all matters concerning adherence to the ethics code, including, but not limited to: (1) receiving reports of suspected violations, (2) consulting with members of the University community on ways to reduce possible violations, (3) appointing hearing panels, (4) maintaining confidential records, (5) orienting new students to the philosophy and terms of the ethics code, and (6) informing faculty and students of its activities.

Section Four

The Board shall find and use effective means to inform faculty and students of its activities on an annual basis.

Section Five

The Board, acting through the Director of the Office of Academic Integrity, shall submit to the office of one of the deans responsible for student affairs a written annual report, which shall not identify by name the individuals involved in its proceedings. The Committee shall disseminate this report to the Dean, faculty, and the Student Assembly.

ARTICLE FIVE. PROCEDURES FOR HANDLING SUSPECTED ACADEMIC MISCONDUCT

Section One

When evidence is found of suspected academic misconduct, the faculty member in charge of the course or activity may review the facts of the case with the student and attempt to resolve the case directly with the student to their mutual satisfaction. Proposed resolutions shall include only those sanctions specifically enumerated in Article Seven, Section One parts (a) - (j). Prior to a proposed resolution, the faculty member in charge of the course or activity has the responsibility to consult with the Director of the Office of Academic Integrity to determine if the student was part of an earlier resolution with a member of the faculty, or if the student was previously the subject of an academic misconduct hearing by a panel of the Academic Ethics Board. If it is determined that the student was part of a previous direct resolution with a faculty member or academic misconduct hearing and the present allegation is unrelated to the earlier allegation, the faculty member must forward the case directly to the Academic Ethics Board. A second or subsequent allegation against a student may not be resolved directly between the faculty member and the student and must be forwarded directly to the Academic Ethics Board.

If both the faculty member and the student agree upon a proposed resolution in accordance with this code, no further action regarding the academic misconduct in question shall be undertaken beyond the agreed upon sanctions. If such an agreement is reached, the resolution shall be communicated to the Director of the Office of Academic Integrity. The student's advisor and the student's academic program director or department chair shall also be notified unless the faculty member chooses not to make this part of the proposed resolution. The faculty member and student may co-sign a memo or other document that the case was resolved to the mutual satisfaction of each party. This resolution will not be placed in the student's permanent academic record unless that was part of the resolution.

A student who engages in a direct resolution forfeits the right to withdraw from the course in question, switch from a graded course to the pass/fail option, or petition for a grade change.

The faculty member shall notify the Academic Ethics Board when:

1. The faculty member cannot reach a resolution with the student;
2. The alleged misconduct is a second or subsequent offense;
3. The faculty member prefers to refer the case to the academic ethics board for resolution rather than attempt to resolve it directly with the student.

In addition to notifying the Board, the faculty member shall communicate the essential facts of the case in writing and all relevant documents to the Board. Reasonable efforts shall be made to make such statements within 30 days of the alleged academic misconduct, or within 30 days of reasonable knowledge.

Section Two

Upon receipt by the Academic Ethics Board of a charge of alleged academic misconduct, the Director of the Office of Academic Integrity, acting on behalf of the Academic Ethics Board, shall provide prompt notice of the charge to the student by hand delivery, electronic communication, or by certified mail, return receipt requested. The notice shall contain:

1. A description of the alleged violation(s) of academic integrity including insofar as possible the time, date, and place of the alleged act(s);
2. Information about when and where the hearing that will take place and the names of the members of the hearing panel and a statement of the right of the student to request recusal of panel members due to conflict of interest or bias;
3. A statement informing the student of the right to inspect in advance of the hearing any documentary evidence intended for use at the hearing as well as the chance to provide documentary evidence intended for use at the hearing;
4. A copy of the academic ethics code and bylaws of the academic ethics board.

Section Three

Upon receipt of a charge of a violation of academic integrity from a faculty member, the Academic Ethics Board, acting through the Director of Office of Academic Integrity, shall appoint a hearing panel, in accordance with

Section Six below, to consider the charge. The panel shall make a determination on whether academic misconduct occurred, in accordance with the procedures in Section Six below, and, if so, shall make a determination on appropriate sanctions in accordance with Article Seven.

Section Four

In the event of a violation of academic integrity in which it is inappropriate for any one faculty member to act as the person bringing the charge, a designee of the Dean or one of the deans responsible for student affairs shall act as the person bringing the charge.

Section Five

If the hearing panel finds that a student has engaged in academic misconduct, the student may appeal the decision of the hearing panel to the Dean of the Bloomberg School of Public Health, or to a designee of the Dean if the Dean was the faculty member making the initial charge of a violation of academic ethics, within 5 days of the decision of the hearing panel. Appeals are permitted only on one of the following grounds:

1. Procedural error that could have substantially affected the determination of responsibility;
2. New information that was not available at the time of the hearing and that could reasonably have affected the determination of responsibility.

The appeal must be in the form of a written statement setting forth the grounds for the appeal. All materials collected as part of the proceedings of the Academic Ethics Board hearing shall be provided to the Dean or designee to review in considering the appeal. A full written report of the disposition of each appeal shall be made by the Dean or designee within 14 days to the Academic Ethics Board. In the event that the Dean or designee does overrule the finding of the Hearing Panel, the Dean shall either ask the prior Hearing Panel to reconsider the matter or shall ask that a new Hearing Panel be convened and the alleged violation reexamined and a new hearing conducted. The Dean or designee shall not reverse a penalty imposed by the Academic Ethics Board, nor impose a different penalty.

The Registrar shall be notified immediately of an appeal to the Dean or designee. Transcripts are not to be furnished until resolution of the matter.

ARTICLE SIX. HEARING PANELS

Section One

When required under the procedures of Article Five, the Academic Ethics Board, acting through the Director of the Office of Academic Integrity, shall appoint a hearing panel of disinterested persons from among its members to consider a case. Members of the hearing panel may not be from the same Department as the student subject to the hearing. Hearing panel members shall disclose to the Director of the Office of Academic any factor which might reasonably make them unable to impartially decide either whether the student violated the Ethics Code or the appropriate penalty. Such members shall be excused from serving on the relevant hearing panel at the discretion of the Director of the Office of Academic Integrity.

Section Two

A hearing panel shall consist of five persons and a nonvoting, presiding officer, all ordinarily chosen from the members of the Board, the ratio of faculty and students on the panel being the same as on the Academic Ethics Board (i.e., 3 students, 2 faculty, and non-voting student presiding officer). The Director of the Office of Academic Ethics shall not serve on a hearing panel but shall be available to resolve questions about procedure under this Code that arise during a hearing.

Section Three

Under extraordinary circumstances the Dean may appoint ad hoc members to the Hearing Panel from among full- time faculty or full-time students from the Bloomberg School of Public Health who are not members of the Board. Such a circumstance might occur if a panel could not be constituted in a timely manner from among the members of the Board, if the workload of the Board was unusually heavy, or if enough students and faculty were excused under Section One (above).

Section Four

Hearings of the panel shall be open to the person bringing charges, the student, any witness called by either party during the course of that witness' testimony, the Director of the Office of Academic Integrity, and not more than one representative of the student affiliated with the Bloomberg School of Public Health (faculty, staff, and students of the School). Attorneys representing the student are not permitted at the hearing. Hearings shall be closed to spectators and the press. In the case of related academic misconduct allegations against multiple students, the Director of the Office of Academic Integrity shall make a determination of the optimal methods to conduct the hearing consistent with this Code and its bylaws.

Section Five

The accused shall be presumed not to have engaged in academic misconduct until found to have done so.

Section Six

The decision of the hearing panel on whether academic misconduct occurred shall be based upon a preponderance of the evidence standard and shall be communicated promptly in writing to the Dean of the Bloomberg School of Public Health, the student, and the faculty member bringing the charge(s). A finding that academic misconduct occurred shall also be communicated to the student's adviser and to the student's department chair or academic program head.

A "preponderance of the evidence" standard is an evidentiary standard that means "more likely than not." This standard is met if the proposition is more likely to be true than not true.

Section Seven

The vote of at least four of the five voting panel members is required for a finding that academic misconduct occurred.

Section Eight

Hearings shall be conducted in accordance with this PPM, including the Hearing Panel Procedures below.

Section Nine

If the student fails to appear for a hearing after having been duly provided with notice or withdraws from a hearing before its conclusion without the permission of the hearing panel, and if the hearing panel determines that such action is not excused (e.g., because of an unanticipated illness or other unexpected factor that prevents the student from attending), immediate suspension of the accused from the University may be imposed. Such a suspension shall continue until the hearing can be concluded with the student present.

ARTICLE SEVEN. PENALTIES

Section One

This section lists some of the sanctions that may be imposed upon students for violations of this Academic Ethics Code. The School reserves the right, in its discretion, to impose more stringent or different sanctions depending on the facts and circumstances of a particular case. Possible sanctions against students include, without limitation, one or more of the following:

An accused student found to engaged in academic misconduct may have, at the discretion of the Ethics Board, the following comment placed upon the academic transcript: ACADEMIC ETHICS CODE VIOLATION, DATE OF ETHICS BOARD MEETING.

1. Retake of the academic evaluation involved.
2. Score of zero in the academic evaluation involved.
3. Failure in the course.
4. Failure in the course with a notation on the transcript that the grade was for a violation of academic integrity.
5. Failure in the course with suspension from the University for at least one term as specified in the academic calendar.
6. Suspension from the University for at least one term as specified in the academic calendar with a notation on the transcript that the cause was a violation of academic integrity.
7. Failure in the course with suspension from the University for at least one term as specified in the academic calendar and notation on the transcript that the grade was for a violation of academic integrity.
8. Exclusion from a dissertation or thesis of all data collected under conditions that constitute a violation of the rights and welfare of animal or human subjects.
9. Suspension from the University for at least one term as specified in the academic calendar.
10. Expulsion from the University with a notation on the transcript that the cause was a violation of academic integrity.

If a finding has been made that misconduct occurred, before any sanction is imposed, the hearing panel shall determine by review of its confidential records by the Director of the Office of Academic Integrity whether the student has been found to have engaged in any prior violations of the academic ethics code.

A hearing panel shall make every effort to select a penalty appropriate to the severity of the offense, and may take into consideration any appropriate factors, including without limitation any mitigating or aggravating circumstances (such as inappropriate contact by the student with members of the Ethics Board during a Hearing brought to its attention), sanctions previously imposed upon other students for similar violations, as well as any record of or absence of prior academic misconduct. At least three of the five voting members of a hearing panel must vote for a particular sanction for that sanction to be imposed, with the exception of expulsion from the University which requires all five out of five votes.

Section Two

A finding of guilt in the first academic ethics hearing for a student who has previously not engaged in a direct resolution of an academic ethics violation shall result in the penalties selected from among (a) thru (j) or other appropriate penalty as determined by the hearing panel.

A finding of guilt in the first academic ethics hearing held for a student who has previously engaged in an academic ethics violation shall result in the penalties selected from among (b) thru (j) or other appropriate penalty as determined by the hearing panel. A notation on the student's transcript that academic misconduct has occurred must be placed on the transcript for a student who had previously been found to have engaged in academic misconduct in an earlier hearing.

Section Three

A student found to have engaged in academic misconduct in a course forfeits the right to withdraw from the course or to change a graded course to pass/fail, or to petition for a grade change, and any withdrawal from that course or change effected prior to the finding of academic misconduct shall be voided.

ARTICLE EIGHT. RECORDS

Section One

The Academic Ethics Board shall maintain among its records a list of names of students found to be guilty of violations of academic integrity. It is this list that is consulted to determine whether an offense is a first offense or is a second or subsequent offense.

Section Two

The records of the Academic Ethics Board shall be held in a locked file in the Dean's Office.

Section Three

Access to the records of the Academic Ethics Board shall be limited to the Dean of the Bloomberg School of Public Health, to the deans responsible for student affairs, the Director of the Office of Academic Integrity, and to members of the Board.

Section Four

A case file concerning a student (including all relevant documents, recording(s) of the hearing, documentary evidence introduced at hearings, etc.) shall be retained in the Office of the Dean for seven years after the student's last enrollment as a student or after the student otherwise leaves the University and shall then be destroyed.

Section Five

The Director of the Office of Academic Integrity shall maintain a central file of direct settlements of allegations of academic ethics code violations. Records of direct settlements shall be retained for seven years after completion of the case and kept in a central location accessible only to the Director of the Office of Academic Integrity and the deans responsible for student affairs.

ARTICLE NINE. BYLAWS AND AMENDMENTS

Section One

The Academic Ethics Board shall adopt Bylaws to govern its operation.

Section Two

Amendments to this Academic Ethics Code shall take effect when they are adopted in identical language by the General Counsel's Office of the University and the Advisory Board of the School.

HEARING PANEL PROCEDURES

Selection of Hearing Panel and Presiding Official

A hearing panel shall be convened from among the members of the Academic Ethics Board by the Director of the Office of Academic Integrity. Members of the Academic Ethics Board shall be informed of the name of the student and the person bringing the charge(s), and must disqualify themselves if for any reason they believe their ability to consider the charges in an impartial fashion will be affected. One faculty alternate and one student alternate shall be chosen in the same way. Any student or faculty member having the same departmental affiliation as either the accused or the accuser(s) is ineligible from participating on the hearing panel.

All members of the Academic Ethics Board, except the Director of the Office of Academic Integrity, are eligible to serve unless there is potential conflict of interest or bias with respect to the student or the person bringing the charge such as to call into question their ability to make an unbiased determination about the academic misconduct. The presiding official of the hearing panel shall be a student member who is agreed upon by consensus by the members of the hearing panel.

The document "Procedural Conduct of an Academic Ethics Hearing" was developed as a guide for the presiding official, and to acquaint all parties involved as to the procedures that may be reasonably expected during a hearing. A copy may be obtained from the Director of the Office of Academic Integrity or one of the deans responsible for student affairs.

Rights and Responsibilities of Individuals Before a Hearing

Section One

The student shall be notified in writing of a charge of a violation of academic integrity as provided in Article Five, Section Two of the Ethics Board Constitution. Written notice shall be provided to the student either by personal delivery, sent electronically, or sent to the student at the address appearing on University records. The names of hearing panel members, of the presiding official, and of the alternate members of the panel shall be included in the letter of notification. The student has the right to request that a member or members of the hearing panel be excused from service if the student believes the hearing panel member has a conflict of interest or bias that would prevent the panel member from impartially serving. The student shall state their reasons to the Director of the Office of Academic Integrity who shall make the final determination of the panel member's eligibility to serve.

Section Two

The person(s) bringing the charge and the student shall deposit with the Director of the Office of Academic Integrity any documentary evidence to be used at the hearing before the times given in Section Three of this Article.

Section Three

The student may select one person affiliated with the Bloomberg School of Public Health (faculty, staff, or student) to be their representative at the hearing (who may not be an attorney). The student may inspect all documentary evidence and, if practicable, will be furnished with copies of the evidence prior to the hearing. The person bringing the charge(s) may also inspect all documentary evidence provided by the student. If the Bloomberg School of Public Health is in session, inspection shall be permitted at least two days, excluding weekends and brief vacations, before the hearing. If the Bloomberg School of Public Health is not in session, inspection shall be permitted at least one week before the hearing.

Section Four

Security of the documentary evidence is to be maintained by the Director of the Office of Academic Integrity and may be inspected only in the presence of the Director of the Office of Academic Integrity. The evidence shall be deposited in the office of the Dean of the Bloomberg School of Public Health.

Section Five

The hearing panel members shall not be informed of details of the charge before the hearing is convened and shall scrupulously avoid discussing the pending hearing either with the parties concerned, possible witnesses, or any other persons. Panel members shall not discuss the merits of the charges with each other prior to entering into a determination of the charges.

Section Six

The student, the representative of the student, and the person(s) bringing the charge may discuss procedures with the presiding official or Director of the Office of Academic Integrity but may not approach members of the panel concerning any matter directly or indirectly related to the hearing, nor should any member of the hearing panel approach the student or the person(s) bringing the charge for any matter directly or indirectly related to the hearing.

Section Seven

The Dean shall designate a member of their staff in consultation with the presiding official to provide administrative support to the Hearing Panel and Board. This designee shall be free of conflict of interest or bias with respect to the case.

Joinder of Charges

Students charged with misconduct arising from a single incident or occurrence may have their hearings joined at the instance of the Director of the Office of Academic Integrity. Each student shall receive an individual finding on academic misconduct, even if multiple students are accused and are participants in a single hearing.

Charges of academic misconduct against a single student arising from two or more incidents or occurrences may be heard at one hearing at the instance of the Director of the Office of Academic Integrity. When such a joinder of charges is made, the hearing panel shall make separate findings on academic misconduct as to each change and make separate determinations of penalties for each charge. With respect to the determination of penalty under Article Seven, Section Two, the charge which occurs latest in time shall be considered the second or subsequent finding of guilt.

Individuals Present at Hearing

Section One

The presiding official, who shall act as a recorder, the Director of the Office of Academic Integrity, and members of the hearing panel shall be in attendance throughout the hearing.

Section Two

The student and the person bringing the charge(s) shall be present throughout the student's plea, statement, the presentation of evidence, and questioning.

The student may choose to have their representative (the representative is selected in accordance with Section Three above and may not be an attorney) present at the hearing throughout the student's plea, statement, the presentation of evidence, and questioning.

Section Three

The student and person bringing the charge(s) may call witnesses for the purposes of providing evidence or corroboration of evidence. Witnesses shall be present at the hearing only for the purpose of giving testimony and answering questions and only during the duration of their testimony and answering of questions. After testifying, witnesses shall remain available and shall inform the presiding official of their whereabouts and how they may be reached. The responsibility for informing witnesses about the hearing rests with the student and/or the person bringing the charge(s). Witnesses must uphold the confidential nature of the hearing process.

Hearing Procedure

Section One

Record. A full and complete record shall be made of the proceedings by a tape recording or other suitable device. The student shall be furnished a copy of the tape recording at their request for the purpose of preparing an appeal. No record of the panel deliberations shall be made. The hearing panel may, however, prepare a brief written report detailing the reasons for its findings on academic misconduct and for any sanctions imposed. Such reports, maintained by the Director of the Office of Academic Integrity, shall be used only to help establish uniformity of verdicts and penalties and shall be written so as not to divulge, directly or indirectly, the identity of individuals.

Section Two

Plea. After calling the hearing to order and introducing the panel, the presiding official shall read the charge(s) and ask the student to state whether they did or did not engage in academic misconduct.

In the case of more than one charge heard by the panel at a single hearing, if the accused pleads guilty as to any of the charges, the presiding member shall excuse the accuser(s), accused, and the accused's representative. The hearing panel shall then proceed directly to the determination of guilt or innocence for each charge on which a guilty plea has been entered.

For each charge in which the accused enters a plea of innocence, the hearing panel shall proceed with the presentation of the evidence.

Section Three

Presentation of Evidence.

1. If the student asserts that they did not engage in academic misconduct, the person bringing the charge(s) shall present testimony and evidence in support of the charges. After the testimony of each witness, the student, the representative of the

accused, the members of the panel, and the presiding official may ask questions.

2. The student and the representative of the student may then present testimony and evidence in support of the student's innocence. After the testimony of each witness, the person bringing the charge(s), the panel, and the presiding official may ask questions. Any evidence or testimony relevant to the charge(s) specified in the notice may be admitted into evidence and heard and reviewed by the panel.
3. After the presentations of the student and the person bringing the charge(s), any person in attendance, other than witnesses, may recall witnesses for further questioning.
4. At the conclusion of all the evidence and testimony, the student and the person bringing the charge(s) shall each have the opportunity to make a closing statement.
5. Following the closing statements, all individuals except the presiding official and members of the panel are excused. The student and the person bringing the charge(s) shall remain available and shall inform the presiding official of their whereabouts and how they may be reached.

Section Four

Findings. Each member of the panel will be asked to give a preliminary opinion concerning whether academic misconduct occurred for each charge. The case will then be discussed by the panel until each member is ready to vote. In the course of the deliberations the panel may review the documentary evidence or listen to the recording of the hearing or to any parts of the hearing. A single secret ballot will be taken on each charge. At least four votes (out of five) are required for a finding that academic misconduct occurred. The presiding official will count the ballots, maintain an orderly discussion, but will not express an opinion on the merits of the case or vote. The Director of the Office of Academic Integrity may answer questions of procedure based on the Academic Ethics Code but will not express an opinion on the merits of the case or vote. Once a determination has been made, the student, the student's representative, and the person bringing the charge(s) will be asked to return and the finding will be announced.

Section Five

Determination of Penalty. If a determination is made that the student engaged in academic misconduct, the student and the student's representative may present any mitigating circumstances to the panel. Corroborating witnesses of the mitigating circumstances may be called by the student.

If the hearing panel deems it necessary, it may obtain additional testimony from the person bringing the charge(s) or the student. In the course of the deliberations the panel may review the documentary evidence or listen to the recording of the hearing or to any parts of the hearing. After the presiding official and the panel members have no further questions, the student and the student's representative will be excused; and the panel will discuss the possible sanctions until a secret ballot results in a majority vote for a penalty. The presiding official may not vote or express an opinion. The student will be recalled to the hearing and the sanction(s) will be announced.

If the finding is that the student engaged in academic misconduct, the Director of the Office of Academic Integrity will communicate the finding and associated sanction to the student's adviser to the student's academic program head or department chair.

Recesses of the Panel

The presiding official may recess the hearing when it is deemed necessary. During a recess of the hearing no discussion of the case by panel members will be permitted.

ACADEMIC ETHICS BOARD BYLAWS

1. The presiding official on each Hearing Panel shall prepare a synopsis of the case heard by the Panel. Such synopsis shall specify the nature of the charge, the course in which the alleged violation took place, the determination of the hearing panel and penalty imposed, and the outcome of any appeal. The identity of the student and the individual bringing the charge shall not be included in the summary.
2. A breach of confidentiality of a case shall cause the removal of an Academic Ethics Board member by a majority of the Academic Ethics Board.
3. The Ethics Code Hearing Panel Procedures and Bylaws may be amended by the approval of three of the four faculty members and four of the six student members at a meeting of the Ethics Board for which notice has been given at least one week prior to the meeting. The wording of the proposed amendment shall be included with the notice of the meeting.
4. The Academic Ethics Board shall elect officers as needed. Officers shall be elected by a vote of three of the four faculty members and four of the six student members. The term of each office shall expire at the end of each academic year.
5. A member of the Board a Hearing Panel can be removed at any time by a majority vote of the Board.
6. The Director of the Office of Academic Integrity shall maintain a summary of previous Academic Ethics Board cases.
7. The Director of the Office of Academic Integrity shall, as needed, provide an annual orientation for the members of the Board to their duties and responsibilities, the Ethics Code, and the conduct of a hearing.

Academic Leave of Absence

Academic Leave of Absence Policy

June 24, 2019

Academic leave of absence refers and is limited to students in a degree program requiring continuous enrollment and have completed a minimum of one academic term of program coursework, and who, while in good academic standing, are forced to withdraw temporarily from graduate work due to reasons beyond their control, such as illness, military service, financial exigency, or pressing personal reasons justifying an interruption of the degree program. No academic activities may be conducted during leave and this leave may not be used to avoid payment of tuition. Students may be given a leave of absence for other reasons (e.g., medical leave) as noted elsewhere in this *Guidebook*. Students who have had federal financial aid may be subject to additional restrictions and should check with the Financial Aid Office (https://www.jhsph.edu/offices-and-services/student-affairs/financial-aid/). Academic leaves of absence are typically limited to one year except for military service. Students requiring additional terms of leave beyond the one year must complete a new Leave of Absence Application. No more than two years of leave may be granted. The period is regarded as an approved break in study. This does not mean, however, that a student working on a thesis who has completed all other degree requirements is entitled to a leave of absence.

Students planning to request a leave of absence must file an application, which is signed by the departmental chairman, the student's adviser, appropriate staff members in the area of Student Services, and the Office of Records and Registration. The form can be obtained from the departmental academic coordinator. An active file fee of $50 per term is assessed for each term within the leave of absence period. Prior to resuming the degree program, students on leave of absence must notify the department chair, the academic coordinator within their department and the associate director of Records and Registration. Upon return from leave of absence, students must register for a minimum of two successive terms before completion of their degree programs.

Post-doctoral fellows requiring an academic leave of absence should consult with their department academic coordinator to see if this is an appropriate option.

Important
The failure of a student to register without obtaining an approved leave of absence status will be considered a withdrawal. The student considered to be withdrawn must be formally readmitted before resuming a program of study. Upon readmission, a student must be registered for a minimum of two consecutive terms prior to completion of their degree program.

Time Limitations
To maintain degree candidacy:

- Students enrolled in master's degree programs must fulfill all requirements within the time limits prescribed for the program
- Full-time doctoral students must fulfill all requirements within seven calendar years after matriculation. Part-time doctoral students must fulfill all requirements within nine calendar years after matriculation. The academic clock is stopped for periods in which the student is approved for leave of absence

Compliance Line

Compliance Line

November 19, 2018

The mission of Johns Hopkins University is to educate its students and cultivate their capacity for life-long learning, to foster independent and original research, and to bring the benefits of discovery to the world. In service to this mission, the university strives to promote an environment of integrity, ethics and safety. All members of the Johns Hopkins community are expected to uphold these standards, which is why The Johns Hopkins Compliance Line was established. This independently administered hotline allows for anonymous (if desired) reporting of serious concerns or violations of any kind. Examples include violations of regulations for scientific and scholarly actions and breaches of student life policies. Any possible risk involving non-compliance with a law, regulation, or policy should be reported by calling the Compliance Line at 1-844-SPEAK2US (1-844-773-2528) or submitting a report online (https://johnshopkinsspeak2us.tnwreports.com/).

Grade Appeal Policy

11. Grade Appeal Policy

Final Amendment to PPM 1 Academic Programs
Approved January 26, 2017

11.1 Background:

The purpose of this Grade Appeal Policy is to ensure fairness in the assignment of grades for students at the Johns Hopkins Bloomberg School of Public Health. Grades should be based on mastery of course content and/or course learning objectives.

The School recognizes that faculty must be able to exercise their considered academic judgment and expertise in the assigning of a grade. A grade may not be appealed based solely on a difference of opinion between the student and the instructor regarding the content or quality of the student's work.

11.2 Permissible Bases for a Grade Appeal:

Only final course grades may be appealed through this formal process, though students remain free to discuss interim course assignment grades with their course instructor or base an appeal of a final grade on the grade awarded to an interim course assignment. Appeals must be brought within 45 days of the posting of a final course grade to SIS.

The final grade appeal must be based on one or more of the following factors only:

1. An error in the arithmetic computation of the grade;
2. The course Instructor failed to follow a written course policy or grading standards in the course assignment instructions, syllabus, course website, or other course materials or lecture in a manner that affected the final grade.

11.3 Not Covered by this Grade Appeal Process:

A faculty member's decision not to grade, or to penalize the grade of, an assignment submitted past the submission deadline, or an assignment submitted in a manner inconsistent with course instructions (e.g., to an incorrect drop box), may not be appealed unless that decision contradicts a written course policy stated in the course assignment instructions, syllabus, course website, lecture, or other course materials in a manner that affected the final grade.

Disputes regarding changes of grading system (e.g., to or from Pass/Fail to a letter grade) are not covered by this policy.

If the student believes that the faculty member's grading decision is based on animus toward the student or other inappropriate factor, that dispute will not be governed by this Grade Appeal Policy. It will instead be governed by PPM Faculty 8: Professional Misconduct.

Complaints by students involving matters other than course grades are not governed by this Grade Appeal Policy. They may be governed by PPM Students 7: Student Grievance Procedure.

Complaints alleging discrimination or harassment on the basis of race, color, sex, age, religion, sexual orientation, national origin or ethnic origin, or disability, or complaints of sexual harassment are not governed by this Grade Appeal Policy. Complaints of this nature are to be referred to the University's Office of Institutional Equity.

11.4 Process:

Step 1: Contact the Course Instructor
The student must first contact the course Instructor via dated email, within 45 days of the course grade having been posted to the SIS, to attempt to resolve the matter informally.

Step 2: Contact Your Adviser or Other Faculty Member Who Agrees to Assist with a Possible Mediation of the Dispute

If efforts to resolve the matter with the course Instructor informally are unsuccessful, and the student wishes to proceed, the student must next discuss the matter with their adviser, or another faculty member of the student's choice (with that faculty member's agreement), to assist in a possible mediation of the dispute. If the student does not wish to discuss the matter with their adviser, and is unable to identify an alternative faculty member, they may ask the Director of their Academic Program to designate a faculty member with whom to discuss the matter and to assist with a possible mediation of the dispute.

Step 3: Contact the Designee of the Chair of the Department in which the Course is Taught
If the matter remains unresolved following Steps 1 and 2 (above), the student may proceed to Step 3.

Each Department Chair shall designate a faculty or staff member to serve as the contact for that Department's grade appeals. The Chair may designate themselves if they choose.

If the Chair is the instructor for the course in question, they must designate another faculty member for the resolution of the relevant dispute only.

If the course is an interdepartmental course (i.e., with a 550 designation), the Director of the School's Office of Academic Integrity will serve as the decision-maker for an appeal under Step 3.

To initiate Step 3, the student shall first complete the attached form (https://e-catalogue.jhu.edu/public-health/policies/academic/grade-appeal-policy/Grade_Appeal_Form_01262017.pdf) stating the bases for the appeal and attaching a brief summary of the nature of the appeal, the course syllabus, assignment

instructions, relevant information from the course website if any, and any other documentary materials relevant to the dispute.

The Designee of the Chair shall review the materials submitted by the student. If the Designee finds it helpful or necessary to gather additional information from either party, whether in person or in writing (e.g., via email), the designee shall notify both parties and offer each an opportunity to respond.

The Designee shall base their decision solely on whether one of the permissible basis or bases for appeal have been met, based on a preponderance of the evidence, and whether the final grade was affected as a result.

Step 4: Communication of Decision
The Designee of the Chair shall communicate their decision, stating the reason, to the student and course Instructor in writing (via email is permitted.) No further appeal is permissible. The course Instructor shall be responsible for promptly notifying the Registrar of any necessary grade change.

Grading System

Johns Hopkins Bloomberg School of Public Health Grading System

November 19, 2018

Purpose

The grading system at the Bloomberg School serves to document the academic progress of students. The system is designed to recognize superior work and provide indications of serious problems in academic work. Current students are expected to view their grades periodically by logging onto Self Service (https://sis.jhu.edu/sswf/Default.aspx).

Descriptive Interpretation

Two grading systems are used by all instructors in submitting grades. One is a traditional letter grading system and the other is a pass/fail option.

Quality

Grade	Points	Meaning
A	4.0	Excellent
B	3.0	Good
C	2.0	Fair (satisfactory)
D	1.0	Poor
F	0.0	Fail
P	n/a	Pass

In addition, the letter “I” is used to designate incomplete, “W” to indicate withdrawal, “MT” for multiterm courses (grade assigned at the end of a subsequent term), “MR” or “X” in cases where the instructor fails to report grades. (Note: I, MT, MR and X grades are not final grades.)

The designation “AU” indicates audit. Field Placement, Thesis Research, Postdoctoral Research, and Special Studies and Research are graded strictly pass/fail.

No course credit will be acquired for courses in which a grade of AU (audit), I (incomplete) or MR or X (grade not received from course instructor) is received.

No course credit will be acquired for courses in which a grade of F (fail) is received but the grade will be factored into the student's grade point average.

No course credit will be acquired for lower-level undergraduate courses taken interdivisionally at other divisions of the University. Courses numbered below xxx.300 are considered lower level undergraduate, e.g., AS 381.101, Beginning Hindi I.

Because not all divisions of the University share the same grading policies, the grades awarded by faculty are based on the procedures of the course's home division. The grades that appear on students' academic records reflect any appropriate conversions. Interdivisional registrants are advised to direct any questions to the registrar's office at their home division.

Satisfactory Academic Progress

Satisfactory academic progress is measured by the following as they relate to one another:

- To maintain satisfactory academic performance and good academic standing, all masters and certificate students must maintain a minimum grade point average of 2.75 and all doctoral students must maintain a minimum grade point average of 3.00 and grades of A, B, or P (pass) in all courses required by the School or by the student's department
- Written documentation of successful completion of all Bloomberg School and departmental degree requirements within the established time limitations
- Confirmation of satisfactory performance by the student's department and/or adviser as required. Each term the progress of students is reviewed and those students not making satisfactory

progress in terms of the cumulative grade point average and completion of requirements within established deadlines are identified for all academic departments. Students may not graduate unless in good academic standing. Additional policies regarding continuation in a program while not in good academic standing are left to individual programs. Whether a D is considered acceptable to serve as a prerequisite will be determined by the course's sponsoring department

IMPORTANT: Students receiving federal loans and federal work-study funding must adhere to the Federal Satisfactory Academic Progress Policy (https://www.jhsph.edu/offices-and-services/student-affairs/financial-aid/financial-aid-policies/) posted on the Financial Aid Office website.

Pass/Fail Option

Students at the Bloomberg School may elect to take courses on a pass/fail basis only with the consent of their academic adviser. Each department has determined for its own students which courses may be taken on a pass/fail basis. Students should consult their departmental requirements for specific grading requirements when considering the pass/fail option. Students who must submit grades to employers, to funding agencies, or to other academic programs should also consult the appropriate offices before electing the pass/fail option.

Instructors are expected to evaluate student performance without regard to grading status and to give students appropriate feedback regarding their performance throughout the term. A grade of P will be recorded on the official grade roster for those students who have elected the pass/fail option and whose performance would otherwise be rated as A, B, or C. Instructors should assign a grade of 'D' to students who register for a course Pass/Fail and do the equivalent of 'D' work and 'F' for students who do the equivalent of 'F' work.

If an adviser, student, or department needs to know the specific grade a student earns, the student should not enroll as pass/fail. There will be no retroactive changes from regular grading to pass/fail and vice versa. If a student transfers to a program that requires a standard letter grade for a course that the student completed pass/fail, the student must repeat the course or obtain a waiver from the department. After the published add/drop period, a pass/fail change is treated as a registration change with a $50 late charge fee. Under no circumstances can changes be made to registrations during the last two weeks of a term.

Current students are expected to review their registration periodically by logging onto Self Service (https://sis.jhu.edu/sswf/Default.aspx).

Deadlines for filing pass/fail requests will be adhered to without exception. Pass/fail forms cannot be accepted after the published deadline for each term. All students should consider carefully before exercising the pass/fail option. Pass/Fail or letter grades, once elected, may not be reversed on the student's official academic record after the published deadlines.

Incompletes

The designation "incomplete" (I) will be assigned by an instructor and entered on a student's transcript when the requirements for a course have not been completed on time. This is contingent on a mutual arrangement between the instructor and the student as to when the remaining coursework is to be completed. An incomplete must be made up and replaced by a final grade within 120 days after the conclusion of the course, or before graduation, whichever occurs first.

In the event an incomplete is not made up within the above stated time period, a final grade of I/F will be assigned. When a final grade is assigned to an incomplete, the final grade will be shown, but the letter I on the transcript will remain on the transcript as well.

Retake Policy

Students may take a didactic course up to three times. Students may only retake a course if they have earned a "C" or below. If a course is repeated, both grades will be shown on the student's academic record, and the quality points for both will be included in the student's grade point average. Students will only receive degree credit once for a repeated course.

Registration Changes

Changes in course registration may be made without penalty up to the end of the second week in any regular term. For courses offered during the regular summer, summer institute, winter intersession terms or irregularly scheduled courses, course-specific add/drop deadlines will apply. Students must obtain the instructor's approval for each course added to their official registration after the published add/drop period. It is the instructor's prerogative to deny a student's request to add a class during this time. Additionally, changes to and from "audit" are not permitted after the published add/drop period. Instructor permission is not required for a student dropping or withdrawing from a course during the prescribed add/drop period. However, the student's adviser must approve all registration changes. In the event of an approved withdrawal after the course change deadline, the letter W will be entered on the student's transcript. A late change fee of $50 will be assessed for each course change (excluding withdrawal) after the published add/drop period. Furthermore, there will be no refund of tuition for any withdrawals from courses after the published add/drop period. Under no circumstances can changes be made to registrations during the last two weeks of a term.

Current students are expected to review their registration periodically by logging onto Self Service (https://sis.jhu.edu/sswf/Default.aspx).

Students must resolve any registration holds before a registration change can be processed. Students making changes after the published add/drop period should notify the Office of Records and Registration (https://www.jhsph.edu/offices-and-services/student-affairs/records-and-registration/) once a hold has been removed.

Multiterm Courses

All courses at the School adhere to the registration and add/drop dates of the academic calendar. For multi-term courses, enrollment in part I necessitates enrollment in subsequent parts. Students must be enrolled in the Student Information System (SIS). If a student subsequently drops or fails to register for subsequent parts of a multi-term course, a grade of W (withdrawn) will be assigned for the previous part(s). Tuition for the previous part(s) will not be refunded. Students may not register for subsequent parts of the course without having enrolled in previous parts. After the two-week add/drop period, students have another four weeks to withdraw. A grade of W will be assigned for the current term (and previous term[s] if it is a multi-term course) and no tuition (https://www.jhsph.edu/admissions/tuition-and-fees/) will be refunded.

Audits

Audit and credit course registrations will be assessed at the same tuition rate. No course credit will be acquired for courses taken for audit. All courses taken for audit must have the instructor's approval. Courses may not be changed from credit to audit or vice versa after the designated add/ drop period. No exceptions can be made after the add/drop period has ended.

Note: Audited courses count toward tuition calculation and the 22 credit per term limit but do not count toward full-time enrollment status.

Reporting of Grades

Instructors will submit final grades to the Office of Records and Registration (https://www.jhsph.edu/offices-and-services/student-affairs/records-and-registration/) within ten days after the conclusion of the term in which their courses are given. Once a final grade is awarded and entered on a student's transcript, the grade may not be altered without the approval of the Committee on Academic Standards. In the event that this committee approves an alteration for reasons other than error, the original grade will be noted in a transcript comment. Any request for a grade change must be submitted within 120 days of the date upon which a course concludes in accordance with the School's academic calendar (https://www.jhsph.edu/academics/calendar/2018-2019.html). In the case of a graduating student, the grade change must be submitted prior to the last day of the term of graduation.

Grades of "X", MR or blank not resolved within 120 days of the date upon which a course concludes will be processed as withdrawals resulting in a "W" on the transcript. A late change fee of $50 will be assessed and there will be no tuition refund. The Bloomberg School reserves the right to amend the above terms and conditions when in its sole judgment such changes are deemed necessary.

Current students are expected to review their grades periodically by logging onto Self Service (https://sis.jhu.edu/sswf/Default.aspx).

Grade Appeal Policy

Only final course grades may be appealed through this formal process (p. 642), though students remain free to discuss interim course assignment grades with their course instructor or base an appeal of a final grade on the grade awarded to an interim course assignment. Appeals must be brought within 45 days of the posting of a final course grade to SIS.

Graduation Policy

Graduation Policy

November 19, 2018

Degrees are conferred three times a year. Diplomas bear the University conferral date in the summer, fall or spring. The graduation ceremony (https://www.jhsph.edu/student-life/convocation/) is held each May and is open to all graduates of that academic year. The School has its own convocation ceremony, typically conducted a day or two before Commencement, during which time doctoral students are hooded and master's candidates receive their diplomas.

All financial obligations must be satisfied prior to graduation. Diplomas and transcripts will not be issued to those students who have outstanding account balances from any University office.

Interdivisional Registration

Interdivisional Registration

Interdivisional registration permits students in other schools of the University to be admitted to courses at the Bloomberg School of Public Health on a space-available basis without the formalities of application. Likewise, Bloomberg School of Public Health students may enroll interdivisionally in courses offered by other divisions. When a course is taken "interdivisionally" it is part of the student's home academic record. Students wishing to register for courses at another JHU division should complete the SEAM online form (https://support.sis.jhu.edu/case/); final approval for enrollment is determined by the division hosting the course. Students are expected to have met any course registration restrictions and obtained any enrollment approvals prior to submitting the interdivisional request.

Because not all divisions of the University share the same grading policies or academic calendar, interdivisional registrants should consult their home division's Office of Records and Registration to learn the appropriate grade, credit, and term conversions among divisions.

Non-degree students are not eligible to register interdivisionally. Non-degree students interested in taking a course at another division will need to register with that division in a specific student category.

Students and post-doctoral fellows already registered full-time during the nine-month academic year need not pay additional tuition to the host division that has approved the interdivisional registration. Part-time students will be charged at the per credit rate. Interdivisional registration in the regular Summer term is restricted. Students should consult their home division's Office of Records and Registration for more information.

Bloomberg School of Public Health students will receive grades, but will not earn academic credit for courses that are lower-level undergraduate. Courses numbered below xxx.300 are considered lower-level undergraduate (e.g. AS 381.101, Beginning Hindi I).

Enrollments in other University divisions need not be taken "interdivisionally." Those students who want to pursue coursework that has no applicability to the Bloomberg School of Public Health program may register directly with the other University division; fees will be assessed at that division's rates.

Involuntary Leave of Absence

Involuntary Leave of Absence and Condition of Enrollment

November 19, 2018

Introduction

The University is committed to fostering a learning environment that enables students to thrive and participate fully in academic life. There are, however, occasions when a student's health interferes with their ability to take part in the academic community, and at such times the School provides the opportunity for the student to initiate a leave of absence. For instance, a student's mental or emotional health, medical condition, or inappropriate behavior or communication may necessitate a leave of absence or placement of conditions on continuing enrollment. The guidelines and procedures described herein are not intended to address such instances, for which long-standing policy exists. Rather, these guidelines and procedures shall apply in those extraordinary circumstances when a student has not or cannot voluntarily address the issues of concern.

Guidelines for Use

1. Involuntary Leave of Absence

In situations when a leave of absence is indicated, the Associate Dean for Student Affairs will encourage the student to initiate a voluntary leave of absence. If the student declines to do so, the Associate Dean may require an involuntary leave of absence. This step will be taken when necessary to protect the safety of the student or other individuals or to preserve the integrity of the University's learning environment. Such a decision may be based on behavior and/or communication that:

1. Harms or threatens harm to the health or safety of the student or others;
2. Causes or threatens to cause significant damage to the property or resources of the University;
3. Evidences chronic and/or serious drug or alcohol abuse;
4. Significantly disrupts the functioning of the University community.

Condition of Enrollment (COE)

When circumstances indicate that a leave of absence is not appropriate, the Associate Dean for Student Affairs[1] may nevertheless impose certain conditions as a requirement of continued enrollment. This step will be taken only after consultation with those responsible for oversight of the student's program of study.

Procedure

When the Associate Dean for Student Affairs[1] becomes aware, by whatever means, of the potential need for action, the following procedures will be initiated:

1. The Associate Dean will contact the student and describe the issues of concern. If this discussion alleviates all concerns, no further action is needed. Alternatively, procedures outlined below may also be initiated.
2. The Associate Dean may mandate a mental health or physical evaluation of the student. The Associate Dean may also specify conditions under which the student is allowed to remain at the University. Such conditions will be developed in consultation with others charged with oversight of the student's academic program and the Director of the Student Assistance Program. The Associate Dean will provide written notice to the student when such conditions are mandated.
3. If a leave of absence is indicated, and if the student so agrees, procedures governing voluntary leaves of absence shall apply.
4. When a leave of absence is indicated and the student declines to accept a voluntary leave, the Associate Dean will discuss the implications of an involuntary leave of absence. If the student continues to decline, the Associate Dean will initiate an involuntary leave of absence after consultation with those charged with oversight of the student's academic program and the Director of the Student Assistance Program. In urgent situations, the Associate Dean may initiate an involuntary leave of absence immediately. Under these circumstances, such consultation will be undertaken promptly thereafter. When an involuntary leave is imposed, the Associate Dean will provide the student with written notification to this effect. This notification will outline the steps required for re-entry into the academic program and also note other pertinent information regarding the student's status while on leave.

Re-Entry

A student seeking re-entry to the curriculum after a voluntary or involuntary leave as described under this policy will undergo a "fitness for return" evaluation by the Student Assistance Program and/or the appropriate health service (University or Occupational Health Services). Upon re-entry, the Associate Dean may impose conditions under which the student will be allowed to remain at the University (as described in Section III B). The Associate Dean will provide written notice to the student when such conditions are instituted.

Confidentiality

All records related to student leaves of absence and conditions placed on continuing enrollment will be maintained in accordance with applicable law and policy.

Multi-Term Course Policy

Multi-Term Course Policy

For multi-term courses, enrollment in part I necessitates enrollment in subsequent parts. *Students must be enrolled in SIS, the system of record*. If a student subsequently drops or fails to register for subsequent parts of a multi-term course, a grade of W (withdrawn) will be assigned for the first part. Tuition for the first part will not be refunded.

Students may not register for subsequent parts of the course without having enrolled in part I. After the drop period, students have another four weeks to withdraw. A grade of W will be assigned for the current term (and previous term[s] if it is a multi-term course) and no tuition will be refunded.

Post-Doctoral Fellow Student Status

Postdoctoral Fellows – Policy Guidelines and Procedures

From the Office of the Dean

Date Effective: December 19, 1989
Date Revised: December 9, 2004
Date Revised: February 28, 2008

Policy Guidelines

Definition
A Postdoctoral Fellow (PDF) is an individual who has previously earned a doctoral degree or its equivalent and is receiving advanced training in research or professional practice at the School under the aegis of one of the departments and its faculty.

Status
Although the PDF shall not be enrolled in a formal degree program, the fellow may take didactic courses for credit up to a maximum of 16 credits during their entire tenure as a fellow. A PDF is usually enrolled full-time; however, part-time PDF programs are possible depending on individual circumstances. PDF status and/or privileges are not granted to degree candidates who hold a previous doctoral degree.

Admissions
After receiving a completed application form from an applicant, it will be the responsibility of the Admissions Office to assemble a file which is sent to a department for evaluation.

The department reviews the file, rejects or accepts the applicant, communicates the decision to the applicant and the Admissions Office, and returns the file to the Admissions Office. Each department handles postdoctoral fellowship applications slightly differently. For the most current process for each department, refer to the School's website.

Financial Support for Postdoctoral Fellowships

Postdoctoral Fellows are charged a small set fee per term for tuition. The tuition may be supported from an extramural source such as a federal training grant or a private sponsorship. Postdoctoral Fellows without an extramural source of tuition support are eligible for School-wide postdoctoral fellow scholarship funds. The request for scholarship support should be generated by the PDF's department.

Certification

Upon satisfactory completion of the program planned for the PDF, the department chair shall notify the Records and Registration Office so that a certificate of completion may be prepared for the PDF. If a PDF is terminated as unsatisfactory or is withdrawing for personal reasons, the department chair shall report the matter to the Records and Registration Office without delay.

The Records and Registration Office will take the responsibility for having a certificate sent to the PDF following satisfactory completion of his stay at the School and for reporting this certification to the Committee on Academic Standards.

PROCEDURES

1. **Initial Contact**
   a. A prospective PDF may first contact either a department or the Admissions Office.
      i. If a department is contacted first, the department will ask the candidate to complete a PDF application form and submit it to the Admissions Office.
      ii. If the Admissions Office is contacted initially, the PDF application is handled in the same manner as any other application.
      iii. No application fee is required for PDFs.
      iv. If the applicant is already enrolled in another division of the University, that division can forward copies of the original credentials to the Admissions Office.
2. **Admissions Process**
   a. The Admissions Office assembles a file which includes (at least):
      i. a completed standard postdoctoral fellow application form;
      ii. proof of the doctoral degree (an official transcript or a letter from the dean of a school certifying that all requirements for the doctoral degree have been completed satisfactorily);
      iii. a curriculum vitae; and
      iv. one letter of reference from an individual with appropriate knowledge of the applicant.
   b. The file is sent to the department for evaluation.
      i. The department reviews the file and recommends acceptance or rejection of applicant on the review sheet. The form is signed by the department chair.
      ii. For applicants recommended for acceptance, the department adds the following information to file:
         1. beginning date of fellowship; and
         2. name of faculty mentor.
      iii. Applicant file (recommended or not recommended) is returned to Admissions Office.
   c. File of applicant which has been acted upon and endorsed by the department and endorsed by the Committee on Academic Standards.
      i. Following acceptance of applicant by department, the department prepares letter of acceptance including details of financial support with copies to the Admissions Office, the Records and Registration Office, Student Accounts and Business Services Office, Student Financial Services Office, department chair, and mentor.
      ii. If proof of completion of the doctoral degree requirements was provided by a letter from the previous institution, the postdoctoral fellow must also submit an official transcript confirming completion of doctoral degree within two academic terms of the start of their postdoctoral fellowship. Failure to do so will result in dismissal of the postdoctoral fellow.
   d. If applicant is not recommended for admission, the department prepares appropriate letter and copies the Admissions Office.
3. **Financial Aid Process**
   a. The charging of tuition to the PDF budget will be handled through the Distributed Graduate Aid system in the Student Financial Services Office, and automatically disbursed onto the postdoctoral fellow's tuition account. All expenditure processing is handled by the departmental administrative office of the PDF.
   b. Request for Scholarship Funds
      i. A department may request a scholarship for each PDF (new or continuing) who has been formally accepted and who has no other source of tuition payment by completing and submitting an Application for Postdoctoral Scholarship form.
      ii. Upon receipt of the application form, Student Financial Services personnel verify that the PDF has been formally accepted by the School and that no other known source of tuition support exists.
4. **Registration Process**
   a. Initial Registration
      i. The PDF registers in person or online through the Records and Registration Office in the initial term and during each established registration period thereafter. The PDF must maintain continuous registration for each term of research.
         1. The Records and Registration Office receives the file from Admissions and verifies that acceptance letter has been issued and details are in order.
         2. PDF is given all necessary registration materials. The following steps are then taken:
            a. PDF fills out personal data form; and
            b. PDF completes the course registration process. A PDF must register for a minimum of 12 credits per term. The 12 credits may be a combination of Postdoctoral Research (###.830) and courses of interest to the PDF. PDFs are not permitted to earn more than 16 credits of didactic course work for academic credit during their tenure as a postdoctoral fellow. However, this 16 credit limit may be extended for some special postdoctoral training programs if prior approval is obtained from the School's Committee on Academic Standards. Even in cases where an exception to the 16 credit limit has been granted, only 16 credits can be transferred to meet degree program requirements. There is no limit on the number of courses a fellow may audit. The PDF's adviser approves the registration request.
   b. **Continuing Registration**
      i. Each term the Records and Registration Office sends a list to departments with currently enrolled students, including PDFs.
      ii. Responsibility of Department Chair

1. When PDF completes training at the School, the department chair informs the Records and Registration Office.
2. If PDF is being terminated as unsatisfactory or is withdrawing for personal reasons, the department chair should report the matter to the Records and Registration Office without delay. The Records and Registration Office will refer the action to the Committee on Academic Standards as appropriate. It is the department's responsibility to inform the Student Financial Services Office and the Student Accounts and Business Services Office of any actions resulting in withdraw or termination of a postdoctoral fellow.

5. **Certification**
   a. Upon receiving verification on the PDF Status Form from a department chair that a PDF has satisfactorily completed their stay at the School, the Records and Registration Office makes arrangements to have a certificate prepared and forwarded to the PDF.
   b. PDF certification information is included in the Registrar's Report to the Committee on Academic Standards.

Student Grievance Policy

Student Grievance Procedure

From the Office of the Dean
Date Effective: June 25, 2015

Policy

On occasion, disputes arise between students and other members of the Hopkins Bloomberg School of Public Health community. The School encourages individuals involved in such disputes to resolve the matter directly between them. For those disputes that cannot be resolved informally, the following policy has been created to provide students or student groups with a formal process to seek resolution of a grievance. A grievance covered by these procedures is a complaint by a student or group of students alleging that they have been adversely affected in their capacity as students.

Conduct Covered by the Policy

Students may use this process to seek resolution to a situation in which they believe they have been harmed due to an arbitrary or capricious act or failure to act or a violation of a Johns Hopkins University or Hopkins Bloomberg School of Public Health procedure or regulation by an instructor or other member of the faculty or School of Public Health administrator or body.

Some conduct is governed by other policies in the School or by the University at large. As a result, the following are excluded from consideration under this grievance procedure:

1. Complaints alleging discrimination or harassment on the basis of race, color, sex, age, religion, sexual orientation, national origin or ethnic origin or disability or complaints of sexual harassment. Complaints of this nature are to be referred to the University's Office of Institutional Equity.

1. Complaints pertaining to general levels of salary, fringe benefits, or other broad areas of financial management and staffing. Such complaints should be referred to the divisional Human Resources office.
2. Complaints, the resolution or remedy of which, would conflict with a policy approved by the Board of Trustees of the University; a policy of The Johns Hopkins Hospital; federal, state or local laws or regulations; or any contract to which the University or School is a party.
3. A complaint pertaining to a subject matter within the purview of any standing committee of the University or School, unless the complaint arises from a committee's alleged failure to act or to follow the policies or procedures of the University or School. For example, disputes involving student advancement could only be considered under these procedures if the normal procedures for handling these matters were not followed.
4. Disputes regarding grades or other academic evaluation except where an error in recording the grade is alleged. Disputes regarding the incorrect recording of a grade should first be addressed to the Records and Registration Office.
5. Disputes that are personal in nature and do not involve the Grievant's academic activities.

Definitions

A Student is an individual currently enrolled in a degree program or a course for academic credit. A Student Group is any group of students in the School who are a party to the grievance. The Respondent is the faculty member, administrator or staff member named in the grievance as the person or persons responsible for the act or failure to act giving rise to the grievance. The Grievant is the student or student group bringing forth the grievance. The Responsible Dean is the dean assigned to oversee and mediate the grievance.

Procedures

Section One. Prior to filing a grievance under this procedure, a student with a complaint shall meet with the faculty member, administrator or staff member who is responsible for the matter giving rise to the complaint to discuss the issues involved and attempt to resolve the situation to the mutual satisfaction of the parties concerned. At the student's request, a department chair or an appropriate dean may be asked to help in the informal resolution of the complaint. When at all possible, complaints and disputes should be settled through informal means.

Section Two. If the matter is not resolved by the parties involved to their mutual satisfaction, a formal grievance may be filed within 60 days of the alleged adverse action, or within 60 days of the first date by which the student knew or should have known of the adverse action. The grievance must be in writing and include:

1. a statement of the grievance,
2. description of the alleged facts on which the grievance is based,
3. summary of steps taken to resolve the grievance,
4. name(s) of the person(s) thought to be responsible for the grievance,
5. other facts considered to be pertinent to the resolution of the grievance,
6. the remedy sought, and the
7. signature of the Grievant, including all members of a Student Group bringing a grievance.

Section Three. The grievance is addressed to the Associate Dean for Student Affairs (hereafter referred to as the Responsible Dean) who will promptly acknowledge receipt of the grievance.

Section Four. The Responsible Dean shall provide the Respondent(s) with a copy of the grievance and the name(s) of the Grievant(s), and will promptly set up individual meetings with the Grievant(s) and the Respondent(s).

Section Five. The Responsible Dean may ask the Grievant(s) and the Respondent(s) to attempt to mediate the grievance. If mediation is agreed to by all parties, every effort will be made to complete the process within four (4) weeks of the receipt of the grievance, with reasonable accommodation for the travel schedules of any of the parties.

Section Six. At any point in the above process before a grievance is referred to the Student Grievance Board, the Grievant and Respondent may come to mutual agreement on the resolution of the case, which may be mediated by the Responsible Dean. The Grievant and the Respondent will co-sign a memo or other document that the grievance was settled to the mutual satisfaction of each party. A written record is kept of the circumstances and resolution of the grievance for four (4) years. The record shall be kept in a central location accessible only to the Associate Dean for Student Affairs.

Section Seven. If the parties do not agree to mediation, or if mediation does not successfully resolve the grievance, then the Responsible Dean shall convene the Student Grievance Board who will hear the grievance in accordance with these procedures and make recommendations as to a resolution of the grievance if warranted.

Student Grievance Board

The Student Grievance Board is constituted to hear formal grievances in accordance with these procedures. It is designed to give students a recognized role in upholding the standards of professionalism and fair play at the School of Public Health and to give students an opportunity to have their grievances heard by their peers.

The Board reports to the Dean of the School. The Dean will assign a staff member to set up meetings, to circulate materials and otherwise provide administrative support to the Board. The Board is composed of six students and four faculty members. Students are selected by the Student Assembly at the beginning of each academic year from among the full-time student body. Faculty are selected by the Dean of the School from among the full-time faculty. Every effort is made to select students and faculty from diverse disciplines, departments, and—in the case of students—academic programs.

Hearing Panel Procedures

Section One. Upon receipt of a grievance, the Student Grievance Board will designate a Hearing Panel to consider the charges. A student member is designated by the Board to serve as the presiding non-voting officer for each hearing. The Hearing Panel shall consist of five student members (one of whom is the presiding non-voting officer) and three faculty members of the Student Grievance Board.

Section Two. Members of the Student Grievance Board will be excused from a particular Hearing Panel if they cannot be impartial due to the nature of their relationship with either the Grievant or the Respondent, or if they cannot reasonably expect to be available during the period of time when the hearing is expected to take place. The Student Grievance Board may appoint to a Hearing Panel full-time faculty or full-time students who are not members of the Board when an adequate number of members of the Board are unavailable, subject to approval by the available members of the Board.

Section Three. The Grievant and Respondent are informed of the date and time of the hearing, and of the names of the members of the Hearing Panel. Each has the responsibility to inform any witnesses and to obtain any documentary evidence in advance of the hearing.

Section Four. The names of all witnesses and copies of all evidence will be deposited with the Dean of the School or his designee in sufficient time such that both the Grievant and Respondent shall have adequate opportunity to examine the evidence in advance of the hearing, or to be provided with copies of the evidence. If the School is in session, inspection shall be permitted at least two school days before the hearing. If the School is not in session, inspection shall be permitted at least one week before the hearing.

Section Five. Hearings of the Panel shall be open to the Grievant, the Respondent, and not more than one representative of the Grievant and of the Respondent affiliated with the School, subject to University policy, which prohibits representation by outside counsel. In the case of multiple Grievants or Respondents in the same case, the Hearing Panel shall make a determination of the optimal method to conduct the hearing consistent with this Policy. Witnesses may remain in the hearing room only while giving testimony.

Section Six. The Hearing Panel members shall not be informed of details of the grievance before the hearing is convened and shall avoid discussing the pending hearing with the parties concerned, possible witnesses, or any other persons. The Grievant, the Respondent, and their representatives may discuss procedures with the presiding officer but may not approach members of the Panel concerning any matter directly or indirectly related to the hearing.

Section Seven. If a Respondent fails to appear for a hearing after having been duly served with notice or withdraws from a hearing before its conclusion without the permission of the Hearing Panel, the hearing will continue as if the Respondent were present. If a Grievant fails to appear, the grievance will be dismissed as to that Grievant.

Hearing Procedures

Section One. Record. A full and complete record shall be made of the proceedings by a tape recorder or other suitable device. Either party shall be furnished a copy of the tape recording at their request for the purpose of preparing an appeal. No transcript of the deliberations shall be made. The Hearing Panel may, however, prepare a brief written report detailing the reasons for their findings and recommended resolution.

Section Two. After calling the hearing to order and introducing the panel, the presiding official shall read the grievance and ask the Respondent to state whether they agree with it.

Section Three. Presentation of Evidence.

1. If the Respondent disagrees with the grievance, the Grievant shall present testimony and evidence in support of the grievance. After the testimony of each witness, the Respondent, the representatives of the Respondent, the members of the Panel, and presiding official may ask questions.
2. Following the conclusion of the Grievant's presentation, the Respondent and the representative of the Respondent may present testimony and evidence in support of their position, including any evidence of malice in the charge. After the testimony of each witness, the Grievant, the Panel, and the presiding official may ask questions. Any evidence or testimony relevant to the grievance specified in the notice may be admitted into evidence and heard by the Panel.

3. At the conclusion of all the evidence and testimony, the Respondent and the Grievant shall have the opportunity of making a closing statement.
4. Following the closing statements, all individuals except the presiding official and members of the Panel are excused.

Section Four. Determination. The Panel will discuss the case until each member is ready to vote. The decision of the Hearing Panel shall be based upon a preponderance of the evidence, by a majority vote of the Hearing Panel. The decision shall be communicated promptly in writing to the Dean of the School, to the Grievant and to the Respondent.

Section Five. Resolution. If the grievance is upheld, the Panel will discuss the resolution proposed by the Grievant and any other possible resolution until a resolution is identified and agreed to by a majority vote.

Section Six. Implementation of Resolution. The Panel shall promptly notify the Responsible Dean of its findings and recommended resolution. The Responsible Dean shall review the findings and recommended resolution and take the necessary action to implement the resolution.

Appeal Process

The Grievant or Respondent may appeal an adverse decision to the Dean of the School. The Dean shall base a decision to overrule a finding by the Student Grievance Board upon a determination that some procedural impropriety has unacceptably tainted the hearing. Any appeal shall be submitted in writing within five (5) days of the receipt of the decision from the Student Grievance Board, stating the specific reason(s) for the appeal. The Dean shall promptly review the matter, and their decision shall be communicated to the Grievant and Respondent in writing. The Dean's decision shall be final.

Student Grievance Board Bylaws

1. Documentary evidence and tapes of hearings conducted under the Student Grievance Procedure shall be maintained for a period of seven (7) years after completion of the case in the office of the Dean of the School.
2. All records of proceedings at hearings conducted under the Student Grievance Procedure shall be deemed confidential.
3. The presiding official of each case shall prepare a synopsis of the case. Such synopsis shall specify the nature of the charge, the determination of the Hearing Panel and resolution imposed, and the outcome of any appeal. The identity of the Respondent and Grievant shall not be divulged. The synopsis will be kept in the office of the Dean of the School.
4. A breach of confidentiality of a case by a member of the Student Grievance Board shall cause their removal from the Board, and may result in disciplinary action.
5. The Student Grievance Procedure Hearing Panel Procedures and Bylaws may be amended by the approval of three of the four faculty members and four of the six student members at a meeting of the Student Grievance Board for which notice has been given at least one week prior to the meeting. The wording of the proposed amendment shall be included with the notice of the meeting.
6. Other parts of the Student Grievance Procedure may be modified on approval of the School's Advisory Board and Student Assembly.
7. The Student Grievance Board shall elect officers as needed. Officers shall be elected by a vote of three of the four faculty members and four of the six student members. The term of each office shall expire at the end of each academic year.

Animal Research Policy

May 13, 2022

The Bloomberg School is committed to protecting the rights and welfare of animals used in research. All students involved in animal research must first complete an online training module, Animal Care and Use, available through myLearning in the JHU Portal, before beginning work with animals. Specialized training may also be required to carry out certain procedures. Additionally, upon joining a laboratory and before any animal research is initiated, students must be officially added to and approved by the JHU Animal Care and Use Committee (ACUC) as a student investigator on all ACUC protocols and amendments that they will be working on in their home lab or in the lab of a collaborator.

Institutional Animal Care and Use Committee

The care and use of animal subjects is regulated by the Animal Welfare Act, which is implemented by the U.S. Department of Agriculture. The University has one assurance with the federal government (the Office of Laboratory Animal Welfare [OLAW]) and, therefore, the University has one animal care and use committee (http://web.jhu.edu/animalcare/) (IACUC). Faculty from the Bloomberg School, the School of Medicine, and the Homewood campus serve on this committee.

An approved protocol MUST be obtained before animals can be purchased. Questions regarding submission of animal research protocols should be addressed to the IACUC Office at 443-287-3738.

Animal care and procurement is under the purview of Johns Hopkins Research Animal Resources (https://researchanimalresources.jhu.edu/). For those exposed to animals either directly or indirectly, their bedding, waste products, fresh animal tissues or equipment involved in animal use and care, Johns Hopkins requires the following to reduce health risks associated with animal exposures.

Medical

All faculty, staff, postdoctoral fellows, students and contractors who work with or are exposed to animals and/or their body fluids, fresh tissues, bedding or caging must be enrolled in the Animal Exposure Surveillance Program (AESP) (https://www.hopkinsmedicine.org/hse/forms/AESP/Index.html), managed by the Occupational Health Services (https://www.hopkinsmedicine.org/hse/occupational_health/) office, located at 98 N. Broadway, 4th floor.

This program allows Johns Hopkins to:

1. offer you appropriate protection from diseases associated with animal use and care,
2. review your current health status
3. monitor your health during employment.

Vaccinations/testing are performed free of charge by the Occupational Health Services office for the following:

1. Vaccinia vaccination for individuals exposed to non-highly attenuated orthopoxviruses that infect humans including cowpox, vaccinia and vaccinia subspecies (unless medically contraindicated).
2. Rabies vaccination for a limited number of individuals, including Animal Services Staff, those using wild caught animals, dogs (conditioned), some non-human primates and farm animals. If you have already been vaccinated for rabies, blood tests are needed every other year to be sure you are still protected.
3. Hepatitis B vaccination for those individuals who have not already been vaccinated.
4. Biannual tuberculosis (TB) screening is required for anyone who works around non-human primates.

To enroll in the AESP, and to inquire about testing and vaccination, please contact Occupational Health Services at 410-955-6211.

Training and Policies

The Department of Health, Safety and Environment (HSE) provides services and leadership to Johns Hopkins University in the areas of laboratory safety, pre-placement assessment, the use of personal protective equipment, incident and injury reporting, environmental monitoring, the treatment of occupational illness and injuries, fire safety, biological safety, chemical safety, facility and equipment safety, and employee safety training. Questions about policies or how to attend training should be directed to the HSE department at 410-955-5918. Information regarding training, policies and guidance are available online at the HSE homepage (https://www.hopkinsmedicine.org/hse/).

Wearing particular types of clothing (such as surgical gowns, scrubs or smocks) and other items (such as masks or goggles) while working is required for specific jobs in order to protect you from injury or illness. The University will provide these required items to you for use on the job as necessary. Inquiries regarding the appropriate personal protective equipment needed for a specific task can be directed to laboratory supervisors or the HSE department.

All faculty, staff and students must attend the Hazard Communication training session at least once during their employment. Most individuals should have received this training during New Employee Orientation. Questions about how to attend this training should be directed to the HSE department.

All faculty, staff and students with exposure to human or non-human primate blood borne pathogens will be entered in the Blood Borne Pathogen Exposure Control Program. Training is required when hired or before starting work with materials that may contain blood borne pathogens, and must be completed annually thereafter. Questions about how to attend this training should be directed to the HSE department.

All faculty, staff and students who use radioactive isotopes or handle animals (or their cages or bedding) that have been treated with radioactive isotopes must attend the Radiation Safety training session. Questions regarding this training should be directed to the Radiation Safety office at 410-955-3710.

Human Subjects Research

Human Subjects Research

May 12, 2022

The Bloomberg School is committed to protecting the rights and welfare of all individuals participating in research as study participants. To meet this obligation, our Institutional Review Board (https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/) provides oversight, guidance and ensures protection of persons participating in research. It is the responsibility of students and faculty to make certain that approval is obtained from the IRB before beginning any research involving human subjects. Applications are submitted online through our PHIRST system. Depending on the type of proposed research, we have two IRBs that review studies on the School’s behalf. The IRB is also responsible for determining whether certain research activities qualify for exempt status under federal regulations and institution policy. All faculty and students who are involved in human subjects research must also meet the compliance training requirements of the Bloomberg School IRB. To support students navigating this process, we have established an IRB Navigator (https://publichealth.jhu.edu/offices-and-services/institutional-review-board-irb/irb-navigator/) available to provide individualized assistance to students, reachable at IRBNav@jh.edu. Please also refer to the IRB website for additional information and specific requirements on conducting human research. For further information or support, please contact the IRB Office at jhsph.irboffice@jhu.edu.

Worker's Comp

Worker’s Compensation

November 19, 2009

If you are injured in the course of conducting research or providing services, you should report the matter to your supervisor promptly. Depending on the circumstances, you may be eligible to file a claim for workers compensation. For more information and to pursue a claim please JHMI’s Health, Safety and Welfare website (https://www.hopkinsmedicine.org/hse/workers_compensation/).

Student Life

Alternative Beverages

Alternative Beverages

November 19, 2018

The University recognizes alcoholism as a treatable disease and encourages affected students to use the services of the Johns Hopkins Student Assistance Program (http://jhsap.org/) (faculty and staff should contact the Faculty and Staff Assistance Program (http://hopkinsworklife.org/employee_assistance/fasap/)) It is University policy to offer non-alcoholic beverages at any University function at which alcohol is served. Refreshments should include several alternatives. All University academic and administrative personnel and directors of catering services should take note of this policy and plan functions accordingly.

Donation Drive Protocol

Donation Drive Policy

November 19, 2018

The Johns Hopkins Bloomberg School of Public Health (JHSPH) permits five major School-wide donation drives per year (1 per each of the School's academic terms) to support outside needs of SOURCE partnering community-based organizations in Baltimore. These drives are coordinated by SOURCE (the community engagement and service-learning center for the JHU Schools of Public Health, Nursing and Medicine) and include a campus-wide food drive, toiletry drive and other collections throughout the year. Clothing drives are excluded from these collections.

This practice ensures the validity and success of these types of events each year, and frees the School's hallways and common spaces for the numerous alumni and friends visiting the School, as well as conferences, speakers, and receptions that occur on school premises on a daily basis. As proponents of advocacy, volunteerism, donating and service with community, we seek to maximize our efforts and integrity in activities with the community.

Any student, student group or department wishing to organize, coordinate or co-sponsor a donation drive should first contact SOURCE at 410-955-3880 or SOURCE@jhu.edu. SOURCE can provide additional support, as well as ensure that drives do not overlap with one another. Those interested in organizing a donation drive should coordinate with SOURCE.

If departments or groups wish to host smaller donation drives, contained within their own departmental spaces and not utilizing common school locations, these activities may be acceptable. Groups should consult with SOURCE to be sure that smaller drives do not conflict with existing campus-wide donation drives.

Social Media Policy

Social Media Policy

November 19, 2018

Social media sites offer powerful means of communicating for faculty, staff, students, alumni and friends of the Johns Hopkins Bloomberg School of Public Health (JHSPH). We strongly encourage JHSPH students to use these platforms to communicate with their classmates, colleagues, and peers; to share news with the larger world; and to join in on conversations about news and happenings in their areas of interest. However, while social media sites create new opportunities to connect with others, students should be mindful of how their communications on personal social media accounts can and will reflect upon the School they attend, or organizations they've joined.

The Communications and Marketing team in the Office of External Affairs (OEA) manages the official social media accounts for JHSPH. The team, through the digital media manager and social media specialist, oversees and implements the School's social media policy, best practices, and daily content creation and distribution. The team also offers consultation and guidance for faculty, staff, students, departments/offices and affiliated groups wanting to update and/or potentially launch social media accounts. Their contact information can be found online (https://www.jhsph.edu/offices-and-services/office-of-external-affairs/contact.html).

Special Events Coordination

Special Events Coordination Policy

November 19, 2018

The External Affairs department coordinates all special events at the School of Public Health. The Special Events Team (SET) will assist you in coordinating all events at the School. Sponsors of student events will meet with the SET in the planning stages in order to ensure the security, safety and smooth coordination of their event. Students holding events are responsible for the appropriate fees and for contacting the Events Manager at sklein1@jhu.edu or at 410-614-1550 no less than a month prior to the event. SET will invite you to attend the Special Event Team meeting two weeks prior to the event to discuss your needs.

In general, student-sponsored events should be held for predominantly public health students and should be in accordance with the academic purposes of the Bloomberg School. "Content Approval" by the Associate Dean for Student Affairs is necessary for all student sponsored events. Additionally, if the event occurs during non-business hours (before 8 a.m. or after 5 p.m. or on weekends), you will need to submit your request in writing to eventrms@jhsph.edu.

Student Fundraising

Student Fundraising

November 19. 2018

Student fundraising is not permitted in JHSPH facilities. Students and/or student groups are not permitted to use the School's name when conducting fundraisers off campus.

CAREY BUSINESS SCHOOL

Our Mission

Johns Hopkins Carey Business School expands the university's pursuit of research, discovery, and education through dynamic learning opportunities, innovative faculty, and interdisciplinary collaborations to help shape leaders who seize opportunities to create lasting commercial and societal value.

Introduction

Johns Hopkins University

Established in 1876, Johns Hopkins University was the first American university dedicated to advanced study and scientific research. Today, Johns Hopkins continues as a leader in teaching, research, and community service and is the single largest university recipient of research and development funds from the federal government. There are 10 divisions within the university.

Johns Hopkins Carey Business School's faculty, administrative staff, and many of its programs are located in Baltimore, Maryland. Programs are also offered in Washington, D.C., as well as online.

The Krieger School of Arts and Sciences and the G.W.C. Whiting School of Engineering are based on the Homewood campus in north Baltimore. The School of Education houses its central administration and some programs in the Homewood campus' Education Building. Additional campus facilities are in Columbia and Montgomery County, Maryland. The School of Medicine, Bloomberg School of Public Health, and School of Nursing occupy a campus in East Baltimore, along with the Johns Hopkins Hospital, a separate but closely allied institution. The Peabody Institute, one of the nation's leading professional schools of music, is also located in Baltimore; the Paul H. Nitze School of Advanced International Studies is in Washington, D.C.; and the Applied Physics Laboratory is in Laurel, Maryland. International academic campuses are located in Nanjing, China; Bologna, Italy; and Singapore.

Johns Hopkins Carey Business School

Before Johns Hopkins was a hospital or a university, Johns Hopkins was a businessman building for what's next.

Even after he made his fortune, he remained committed to creating lasting value. It was that quest to build for what's next that drove Johns to create America's first research university and set a new course for education.

William Polk Carey also saw the chance to create lasting value for business education and pledging his support ensures that the future generations will have the same opportunity, like Johns, to thrive within change and advance society.

That vision of building for tomorrow continues with the Johns Hopkins Carey Business School. Students find their paths. Together, we build for what's next.

Some of the earliest business classes at Johns Hopkins challenged conventional wisdom. From the beginning, Henry L. Gantt—class of 1880 and inventor of the Gantt Chart, became a leading figure in the scientific management movement, presenting cutting-edge and often controversial ideas in his lectures at Johns Hopkins.

In 1916, Johns Hopkins added business and engineering courses for part-time students. Energetic individuals such as Gantt fostered the growth of the new field of business administration and the concept of "working smarter" to enhance efficiency and profits. Following World War II, the Johns Hopkins program produced more CPAs than any other school in Maryland.

Over time, the management science program became the first graduate-level business degree at Johns Hopkins with a focus on applying new findings in quantitative analysis and general systems theory. In 1991, the school developed new programs to address a business landscape incorporating transformed by technological innovation, emerging economies, and escalating politics, including specialized Master of Science programs and Master of Business Administration degree programs.

On December 4, 2006, Johns Hopkins trustees, in response to a gift from businessman William Polk Carey, voted to establish a new business school dedicated to producing innovative leaders with broad, interdisciplinary knowledge. The school was named after Carey's great-great-great-grandfather, James Carey of Loudon, a successful Baltimore merchant during the 18th and 19th centuries. On January 1, 2007, the new Carey Business School opened its doors for the first time.

Carey's $50 million donation, paired with $50 million to be raised by the university, was responsible for launching the Carey Business School. This was the largest gift ever in support of business education at Johns Hopkins.

Curriculum

Current academic programs include the Johns Hopkins MBA (full-time), and the Flexible MBA (part-time), designed to accommodate the needs of working professionals.

Also offered are a wide range of dual MBA programs (in collaboration with other Johns Hopkins schools) in areas such as government, biotechnology, medicine, public health, and design leadership (offered in collaboration with Maryland Institute College of Art). Specialized Master of Science degree programs are offered in business analytics and risk management, finance, health care management, information systems, marketing, and real estate and infrastructure, as well as a variety of graduate certificate programs, and non-credit Executive Education courses.

Full-Time Programs

Part-Time Programs

- Marketing (Part Time), Master of Science (p. 672)
- Real Estate and Infrastructure (Part Time), Master of Science (p. 680)

Dual Degree Programs

- Design Leadership, MBA/MA Dual Degree (p. 665)
- MBA/Applied Economics, MS Dual Degree (p. 673)
- MBA/Biotechnology, MS Dual Degree (p. 674)
- MBA/Communication, MA Dual Degree (p. 674)
- MBA/DNP Dual Degree (p. 675)
- MBA/Government, MA Dual Degree (p. 676)
- MBA/Healthcare Organizational Leadership, MSN Dual Degree (p. 677)
- MBA/JD Dual Degree (p. 679)
- MBA/MA in International Relations (p. 679)
- MBA/MD Dual Degree (p. 679)
- MBA/MPH Dual Degree (p. 680)
- MSF/MBA Dual Degree (p. 680)
- MSF/MBA Dual Degree (p. 680)

Graduate Certificates

- Financial Management, Graduate Certificate (p. 667)
- Financial Management, Graduate Certificate, Investments, Graduate Certificate, Applied Economics, MS (p. 668)
- Investments, Graduate Certificate (p. 671)
- Leadership Development Program, Graduate Certificate (p. 671)

Undergraduate Minor

- Business, Minor (p. 681)

Admission

Students seeking admission to a degree or certificate program must submit an online application and all required application documents outlined on the Carey Admissions website at https://carey.jhu.edu/programs/how-to-apply (https://carey.jhu.edu/programs/how-to-apply/), as well as the non-refundable application fee. Materials submitted as part of the application process will not be returned to the applicant. If an applicant does not waive their rights to the recommendation letter submitted on their behalf, they may request one single copy of each letter be emailed to the student (one time request only) **Or** the student can send a self-addressed, postage pre-paid envelope to the Admissions Office to request a single copy.

Johns Hopkins Carey Business School
Office of Admissions
100 International Drive
Baltimore, MD 21202

Materials required to apply (e.g., standardized test scores) and typical profile of admitted students (e.g. years of work experience, prior academic coursework) vary by program. Applicants are encouraged to contact the Office of Admissions or visit carey.jhu.edu/admissions (https://carey.jhu.edu/programs/admissions/) to determine specific admission criteria, suitability of prior degrees, or certification requirements for their desired programs of study. Students who provide fraudulent or misleading information by omitting relevant details during the admission process, or falsifying information will face disciplinary action to include withdrawal of the application. If fraudulent or misleading information is discovered after admission or enrollment, admission may be revoked and students removed from classes/dismissed from the program without a refund for tuition paid.

Applicants interested in admission to the Johns Hopkins Carey Business School may apply to only one master's program and/or certificate at a time and cannot file multiple applications concurrently to Carey. Once a decision has been made and released, if interested, applicants can file additional applications to other programs at Carey. If denied admission, applicants cannot apply again to the same program for the same enrollment term. Denied applicants are not eligible to reapply until the next start period for that particular program. Full-time programs begin once a year in August; part-time programs begin in fall and spring and select part-time programs begin in the summer.

For full-time programs, the Carey Business School reviews applicants by round (i.e. round 1, 2, and 3). Application deadlines and Carey decision dates are clearly indicated online at carey.jhu.edu/programs/admissions/how-to-apply/deadlines (https://carey.jhu.edu/programs/admissions/how-to-apply/deadlines/). Part-time programs at Carey use a rolling admissions process and files are reviewed upon receipt prior to the stated deadline. Application review times vary and are dependent upon the date and time an applicant completes the application file with all required documents. To expedite the process, applicants should utilize an E-transcript service to have official copies of undergraduate and/or graduate transcripts (or course-by-course evaluations for international students) sent before or at the time of submission of their application. E-transcript options include Scrip-Safe (scrip-safe.com (http://www.scrip-safe.com/)), Docufide (parchment.com (http://www.parchment.com/u/auth/login/)), or the National Student Clearinghouse (studentclearinghouse.org (http://www.studentclearinghouse.org)). Paper transcripts will only be accepted for applicants coming from institutions that do not offer an E-transcript option. Please visit carey.jhu.edu/programs/how-to-apply/ (http://www.carey.jhu.edu/programs/how-to-apply/) for more details.

Academic records (transcripts, diplomas, and degree certificates) for degrees earned from non-U.S. institutions must be evaluated by an authorized credential evaluation agency (naces.org/members (https://www.naces.org/members/)). Applicants who earned credits at a non-U.S. institution without earning a degree should submit an official English translation of the transcript from the institution where those credits were earned in lieu of a course-by-course evaluation. See the ***International Credential Evaluation*** section of this catalogue.

All applications to the Carey Business School should be submitted online at carey.jhu.edu/programs/admissions/how-to-apply (https://carey.jhu.edu/programs/admissions/how-to-apply/). Paper applications are no longer accepted. Electronic documents are required and will expedite the process. If hard copy documents must be sent, mail to:

Johns Hopkins Carey Business School
Office of Admissions
100 International Drive
Baltimore, MD 21202

To be eligible for federal financial aid, federal regulations require that students be accepted unconditionally into a 15-credit (or more) degree or certificate program, and maintain an enrollment status of at least half-time each semester. Note that conditionally admitted students who are taking the prerequisite credits necessary for full admission to their program may be considered for limited federal loan assistance for one or two semesters depending on the number of prerequisites required. Loans may not exceed tuition charges for the specific number of required credits, registration or course fees, and a book allowance.

Graduate Degree Requirements

Once admitted to a graduate degree program in the Carey Business School, students must complete all coursework at Johns Hopkins University, except with prior written approval from an advisor. **For more information, see the *Transfer of Graduate Credits* section of this catalogue.** Exceptions are rare, but will be considered on a case-by-case basis.

Graduate students enrolled in master's programs have six years to complete their degree. For information regarding specific degree requirements for each graduate program, please refer to the detailed program descriptions online at carey.jhu.edu/programs (http://www.carey.jhu.edu/programs/).

Master's Programs

Applicants must submit an application for admission, the non-refundable application fee, and all other required supporting documentation (such as letters of recommendation, essay and resume), along with official transcripts from all post-secondary colleges or universities attended. Materials submitted to Admissions will not be returned to the applicant. Applicants to graduate degree programs must hold a bachelor's degree from an accredited college with a minimum cumulative grade point average of 3.00 on a 4.00 scale. Academic records from non-U.S. institutions must be evaluated by an authorized credential evaluation agency (see list in the ***International Credential Evaluation*** section of this catalogue for suggested agencies). Additionally, the admission process may include an interview. Some programs may require an in-person interview while other programs will allow for virtual interviews or interview videos uploaded with the application.

Additional materials are required for international student admission. Please see the ***International Student Admission Policy*** section for details.

Certificate Programs

Applicants to graduate certificate programs must hold a bachelor's degree from an accredited college or university recognized by the U.S. Department of Education with a minimum cumulative grade point average of 3.00 on a 4.00 scale. Additional application requirements vary by certificate program. Students have three years to complete the certificate.

Verification of Credentials

Accuracy is expected in all documents provided by all applicants. Applicants must not make inaccurate statements, submit fabricated credentials, or make material omissions on their applications or during an interview. Applicants must also not submit any false materials related to, or in connection with, seeking admission. Violation of this requirement will result in the application being rejected or withdrawn from consideration or the offer of admission being rescinded.

It is the policy of the Carey Business School to verify all documents and credentials in support of an application. Carey Business School staff and university officials reserve the right to verify the authenticity of any information submitted or provided during the admission process. Essays and letters of recommendation may be traced back to their origin in order to establish authenticity.

If a violation is discovered during the application process an applicant will be withdrawn from admission consideration. If a violation is discovered after an applicant has been admitted, the offer will be rescinded and the student is no longer eligible for enrollment— even if the student has already enrolled and is currently making progress in an academic degree or certificate program. A degree or certificate conferred by the Johns Hopkins Carey Business School may also be rescinded if admission to the School was previously offered based upon falsified or inaccurate information. The application fee and deposit(s), if applicable, are nonrefundable.

International Student Admission Policy

Demonstration of English Language Proficiency by Non-native Speaking Applicants

As one measure of potential for academic success while a student in the Carey Business School, international applicants must demonstrate proficiency in both written and spoken English.

To demonstrate proficiency, applicants must submit either official TOEFL (Test of English as a Foreign Language) scores, official PTE (Pearson Test of English) scores, or official IELTS (International English Language Testing System) scores if the undergraduate degree has not been earned from an accredited institution in the United States (or another country on this list (https://carey.jhu.edu/sites/default/files/2022-03/carey-toefl-ielts-exemptions-2019.pdf)). The preferred minimum TOEFL requirement is 600 (paper-based), 250 (computer-based), or 100 (internet-based). The TOEFL code for the Johns Hopkins Carey Business School is 0834. The preferred IELTS score is 7.0. The preferred PTE score is 70. Applicants will generally be required to provide additional evidence of English proficiency in their applications.

F-1 Visa Applicants

An international applicant requiring a student (F-1) visa to attend school must obtain admission to a degree program well in advance of the start of the semester. The Carey Business School does not issue I-20 forms for provisional acceptance to a degree program, nor does it issue an I-20 for any certificate programs. I-20s are issued, however, for conditional admissions, as well as for Master's degree programs. Applicants who require a student (F-1) visa and who plan to attend Carey Business School must be applying to a full-time program and are highly encouraged to apply by the Round 2 application deadline, which is in January of the year the student plans to enroll. The latest an application can be considered for international students who require a student (F-1) visa and who plan to attend the Carey Business School are April 1st for the fall semester and October 15th for the spring semester.

International applicants needing an F-1 visa are strongly encouraged not to wait until the final deadlines to apply. If applications and other required documents are not received on or before these deadlines. For program application deadline dates, visit carey.jhu.edu/programs/admissions/how-to-apply/deadlines (https://carey.jhu.edu/programs/admissions/how-to-apply/deadlines/).

After receipt of the acceptance letter from the Carey Business School and payment of the non-refundable enrollment deposit (initial deposit for full-time MS programs), international students will be sent an email from the Office of International Services (OIS) with information on the steps required to receive an I-20 form. The email will be sent to the address listed in the student's application. This message will be sent in early March or, if accepted later, within two weeks of payment of the enrollment fee. If the information is not received, please contact OIS at ois@jhu.edu.

Before an I-20 is issued, the international student is required to submit financial documentation to OIS via iHopkins, per the instructions. I-20 forms will not be issued until the student has accepted the offer of admission, the enrollment fee has been paid, and all required documents have been uploaded to iHopkins.

An overview of the process and the documentation required can be found online at JHU Office of International Services (https://ois.jhu.edu/Students/New_Students/).

Specific figures on the estimated expenses and the amount of funding required in order to be issued an I-20 can be found at the JHU Office of International Students - Carey - Expenses (https://ois.jhu.edu/Students/New_Students/#Expenses).

International applicants who hold visa types other than an F-1 visa and wish to enroll as part-time graduate special (non-degree) students should follow the application directions in this section. International graduate students attending other institutions in student (F-1) status during the regular academic year are also welcome to enroll as graduate special (non-degree) students during the summer. For more information, contact the Office of Admissions at 410-234-9220 or carey.admissions@jhu.edu, or OIS at 667-208-7001 or ois@jhu.edu.

Note: Financial aid is not available for international students.

International Credential Evaluation

Applicants who hold degrees from non-U.S. institutions must have their academic records evaluated by an authorized credential evaluation agency (see list of approved agencies below) before they can be considered for admission to a degree or certificate program. For degrees earned at non-U.S. institutions, an official course-by-course evaluation assessing the degree, the overall grade point average, and the courses taken, should be submitted. Final official course-by-course credential evaluations must be the equivalency of a U.S. degree and from a regionally-accredited university or college in the United States. Please do not send official foreign transcripts. Credential evaluations are used to assess a student's coursework against the U.S. grading system and to evaluate courses for possible transfer credit. In addition to submitting official academic records to the Carey Business School, applicants should make arrangements with an authorized credential evaluation agency for an evaluation of the degree, an assessment of the overall grade point average, and a course-by-course evaluation.

Fees and required documentation for evaluations may vary. Applicants are encouraged to contact the agency directly for additional information. We authorize evaluations from any NACES member agency (http://www.naces.org/members/). Our applicants most commonly choose one of the following:

World Education Services, Inc.
P.O. Box 5087
Bowling Green Station
New York, New York 10274-5087
Telephone: 202-331-2925

Inactive/Deactivated Certificate or Degree Applications

If it has been longer than one year since a student was admitted and the student did not enroll at the Carey Business School during that time, a new application and all supporting documents must be submitted.

Admission to Other Schools of the University

Carey Business School students who wish to transfer to one of the other schools in the university are required to submit an admission application to that school. Documentation submitted to the Carey Business School will not be forwarded to any other school in the university. Admission to the Carey Business School establishes no claim or priority for admission to any other school in the university.

Deferring Admission

Admitted students must accept the offer of admission and pay the non-refundable enrollment deposit (including initial and final deposits for full-time MS programs) prior to requesting deferral. Once the offer of admission has been accepted and the enrollment fee has been paid, students must submit a written deferral request to carey.admissions@jhu.edu and a deferral request form will be sent back to the student. Once the completed form has been received and processed, the deferral approval will be emailed back to the student. The offer of admission is only valid for a maximum of one year. Scholarships are not deferrable—all scholarship recipients will be reconsidered for a scholarship for the next year.

Conditional Admission

An applicant may be admitted on a conditional basis pending the completion of clearly defined conditions stated in their offer of admission letter. These conditions may include:

- official transcripts with degree conferred,
- official course by course evaluation with degree conferred,
- the completion of MBA Math or other requirements.

To successfully complete the condition, the applicant must fulfill the required condition within the time frame stated in the offer of admission.

Upon successfully meeting all of the conditions, students are notified by email that they are fully admitted to the program to which they have applied. Applicants who do not successfully meet all of the specified conditions within the stated time frame are notified in writing and cannot graduate from the Carey Business School.

Note: Applicants who have been conditionally admitted are not eligible for financial aid.

State-Specific Authorization for Online Courses

State authorization is subject to change according to the states in which the Johns Hopkins Carey Business School is authorized to recruit for online programs. Currently, the Carey Business School is authorized to recruit in most states for online programs. Applicants should, however, contact carey.admissions@jhu.edu if there are questions regarding a particular state.

Degrees and Certificates

The Carey Business School offers a wide array of degree and certificate programs that are listed on the following pages. The listing provides information about each program, from admission requirements to concentration areas. Please consult the school's website carey.jhu.edu/academics (http://www.carey.jhu.edu/academics/) for the most current information about each program. Click on a degree or certificate in the following list to view the description in this catalogue.

Graduate Programs

Full-Time Programs

- Master of Business Administration (p. 662) (54 credits)
- Master of Science in Business Analytics and Risk Management (p. 664) (36 credits)
- Master of Science in Finance (p. 666) (36 credits)
- Master of Science in Health Care Management (p. 669) (36 credits)
- Master of Science in Information Systems (p. 670) (36 credits)
- Master of Science in Marketing (p. 672) (36 credits)
- Master of Science in Real Estate and Infrastructure (p. 681) (36 credits)

Part-Time Programs

- Master of Business Administration (Flexible MBA) (p. 660) (54 credits)

- Master of Science in Business Analytics and Risk Management (p. 663) (36 credits)
- Master of Science in Finance (p. 665) (36 credits)
- Master of Science in Health Care Management (p. 668) (36 credits)
- Master of Science in Marketing (p. 672) (36 credits)
- Master of Science in Real Estate and Infrastructure (p. 680) (36 credits)

Dual Degree Programs

- MBA/JD (p. 679) (54 credits)
- MBA/MD (p. 679) (54 credits)
- MBA/MA in International Relations (118 credits)
- MBA/Doctor of Nursing Practice (p. 675) (66 credits)
- MBA/Master of Public Health (p. 680) (127 credits)
- Communication, MBA/MA (p. 674) (60 credits)
- Design Leadership, MBA/MA (p. 665) (66 credits)
- Government, MBA/MA (p. 676) (60 credits)
- Applied Economics, MBA/MS (p. 673) in (66 credits)
- Biotechnology, MBA/MS (p. 674) (77 credits)
- Nursing Health Systems Management, MBA/MS (p. 677) (65 credits)
- Master of Science in Finance/MBA (p. 680) (30 credits)

Graduate Certificate Programs

- Financial Management (p. 667) (16 credits)
- Investments (p. 671) (16 credits)
- Financial Management or Investments and MS in Applied Economics (p. 668) (38 credits)
- Leadership Development Program (p. 671) (15 credits)

Note: students who are receiving federal financial aid must maintain satisfactory progress by advancing 12 credits per year toward their degree. Graduate and post-master's certificate programs of less than 15 credits do not qualify for financial aid.

Undergraduate Minor

- Business Minor (p. 681)

Business Administration (Flexible), MBA

The Flexible MBA is designed for people with full-time work experience in private sector, governmental, or public sector organizations. The program emphasizes the latest concepts, practices, and skills that professionals need to be effective managers and leaders in a wide variety of organizations.

Program Requirements

The Flexible MBA curriculum consists of Business Foundations courses and electives. Students may earn up to three Specializations but none are required. Students may take any combination of elective courses that meet the credit requirement, whether they count toward a Specialization or not. Specializations are simply a way to think about organizing elective courses and are optional.

Specializations include:

- Business Analytics & Risk Management (BARM) (p. 660)
- Digital Marketing (p. 661)
- Entrepreneurial Marketing (p. 661)
- Entrepreneurship, Innovation & Technology (p. 661)
- Financial Management (p. 661)
- Health Care Management, Innovation & Technology (HMIT) (p. 661)
- Investments (p. 662)
- Public & Private Sector Leadership (p. 662)

Students enrolled in the online Flexible MBA program will be required to take one course with a mandatory residency, which includes a two-day synchronous component, to complete their degree. There will be additional, optional residency courses throughout the program. Onsite residencies will be held at the Carey Business School's Harbor East campus in Baltimore, MD.

Course scheduling allows for completion of the program in less than three years. Students must complete the required 54 graduate credits within six years. A waived course may be replaced with an equivalent number of credits in an advanced course.

Curriculum

The curriculum for the Flexible MBA program includes the following courses. Course sequence and availability of specific electives may vary. All courses are 2 credits unless otherwise noted.

Business Foundations (20 credits)

Code	Title	Credits
BU.210.620	Accounting and Financial Reporting	2
BU.520.601	Business Analytics	2
BU.120.601	Business Communication [1]	2
BU.220.620	Business Microeconomics	2
BU.231.620	Corporate Finance	2
BU.142.601	Leadership and Organizational Behavior	2
BU.410.620	Marketing Management	2
BU.680.620	Operations Management	2
BU.510.601	Statistical Analysis	2
BU.150.620	Strategic Management	2
Total Credits		**20**

[1] Designates course with a mandatory two-day residency component for online asynchronous sections

Electives (34 credits)

Students may fulfill this requirement with any Carey course for which they meet the pre-requisites and enrollment criteria. Electives may be used to earn one, two, or three Specializations, but no student is required to earn a Specialization to fulfill program requirements. Courses may count toward multiple Specializations, but no student may earn more than three Specializations.

Specializations (Optional)

BUSINESS ANALYTICS & RISK MANAGEMENT

Code	Title	Credits

Business Administration (Full Time), MBA

Business Administration (Full-Time), MBA

The full-time Johns Hopkins MBA is a two-year, cohorted program combining a cutting-edge business analytics education with professional leadership skill-building to navigate the complexities of fast-growing markets. The program teaches students to develop strategies and techniques to harness technological advancements and innovation and hone their skills through a curated mix of immersive experiential learning, classroom learning, and co-curricular experiences.

Student can choose between two pathways: Analytics, Leadership, and Innovation or Health, Technology, and Innovation. The pathways overlap at key points in the curriculum, and students will continue to build connections with their peers throughout the program.

The program requires the completion of 54 credits in two years, and cannot be accelerated. Course waivers are not granted in this program.

Requirements

In this full-time MBA (FTMBA) program, students choose between two pathways: Analytics, Leadership, and Innovation (ALI) or Health, Technology, and Innovation (HTI). Students will be expected to commit to a pathway selection at the end of the Fall I semester in year one, prior to taking their first foundational pathway-specific course in Fall II.

Analytics, Leadership, and Innovation (ALI) Pathway

Understanding the application of business analytics alone won't drive innovation. Students translate data insights into innovative solutions. Students will hone their leadership skills to engage the people around them to implement data-driven strategies.

32 Foundational credits

8 Pathway credits

14 Elective credits

Health, Technology, and Innovation (HTI) Pathway

To lead in the health industry, students have to be ready to navigate changing government regulations, new technologies, and increased competition. Students will leverage the power of Johns Hopkins University's health ecosystem and find technology-driven, human-centered solutions to complex health problems. With the Health, Technology, and Innovation pathway, students will build the specialized business-analytics and leadership skills to find technology-driven, human-centered solutions to complex health problems.

32 Foundational credits

10 Pathway credits

12 Elective credits

CURRICULUM

Foundations Week – The Full-Time MBA program kicks off with Foundations Week, Carey's innovative orientation program which takes place in the week prior to Fall I courses commencing. During Foundations Week, students will experience networking sessions with classmates, staff and faculty, alumni, and industry professionals. Students will work through experiential learning modules with Carey's Office of Experiential Learning, explore career opportunities with the Career Development Office, and experience a wide variety of teaming activities.

The NEXT Program - Students will be able to consult with their personalized advising team (faculty member, career coach, and external industry professional) to encourage the synthesis of curricular and co-curricular learning opportunities, to facilitate professional and leadership development, and to help students reach their full potential during their Carey FTMBA journey.

Curriculum

All courses are 2 credits unless otherwise noted.

Business Analytics and Risk Management (Part Time), Master of Science

The Master of Science in Business Analytics and Risk Management program develops managers and leaders with the knowledge and skills to anticipate and manage risks, while leveraging unique opportunities in chaotic environments. This program is designed to teach how to quantify risks and manage processes to change or respond to those risks.

The program also addresses how to lead and manage organizations during periods of dramatic change or crisis. Coursework provides exposure to a variety of areas of risk management and provides tools to integrate the management of a portfolio of risks that an Enterprise will face.

A Master of Science in Business Analytics and Risk Management provides graduates with the tools and knowledge to:

- Develop a thorough understanding of risk
- Protect shareholder value by managing the downside of risk
- Position the organization to better leverage the upside of uncertain outcomes
- Develop plans to protect reputation, information, financial assets, and personnel
- Improve decision making at all levels of the organization

Program Requirements

The program requires 36 credits. Part-time students must complete the program within six years.

Curriculum

The curriculum for the Master of Science in Business Analytics and Risk Management program includes the following courses. Course sequence and availability of specific electives may vary. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. All courses are 2 credits.

Code	Title	Credits

Total Credits		**36**

Business Analytics and Risk Management, Master of Science

The STEM-designated Master of Science in Business Analytics and Risk Management (BARM) full-time program equips managers to improve decision making processes based on a rigorous treatment of data and information using the management of risk as an underlying guide and framework. This program is designed to teach ways to: quantify multiple dimensions of hard business problems; analyze the structure and data related to those problems; and create rigorous approaches based on that analysis to guide business decisions. In each setting elements of Data Science, Decision Modeling, and Business Analysis are synthesized to facilitate management of both opportunities and risks. Coursework provides exposure to both a variety of analytical tools and aspects of risk management which enable managers to make better decisions for themselves and their organizations.

An MS in Business Analytics and Risk Management provides graduates with the tools and knowledge to:

- Convert raw data into useful information
- Present that information in compelling ways
- Use information to understand complex decision settings
- Create rigorous approaches to problem solving
- Construct persuasive arguments based on careful analysis
- Use information to diagnose problems
- Use analysis to prescribe approaches to improve performance
- Develop ways to predict future performance
- Improve decision making at all levels
- Add value to any organization in need of more analytical expertise

Program Requirements

The program requires 36 credits. Full-time MS students must complete the program in 3 semesters: fall, spring, and summer. Course waivers are not granted in this program.

Curriculum

The curriculum for the MS in BARM program includes the following courses. Course sequence and availability of specific electives may vary. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. All courses are 2 credits.

Design Leadership, MBA/MA Dual Degree

The MBA/MA in Design Leadership, in partnership with the Maryland Institute College of Art (MICA), enrolls students who want to be transformative business leaders at the highest levels by developing a next-generation approach to management and problem solving. Students' backgrounds are likely to include business management, marketing, engineering, finance, art and design, architecture, fine arts, and other fields. More information is available at https://carey.jhu.edu/programs/dual-degrees/design-leadership-ma-mba (https://carey.jhu.edu/programs/dual-degrees/design-leadership-ma-mba/).

Admission Requirements

Apply to the MBA/MA in Design Leadership through the Carey Business School. For more information, please visit https://carey.jhu.edu/programs/admissions/team (https://carey.jhu.edu/programs/admissions/team/).

Program Requirements

The MBA/MA in Design Leadership program is a 20 to 23-month, 66 credit program of study (42 MBA credits and 24 MA credits) that allows students to combine the skill sets of a traditional MBA with the design expertise increasingly needed in today's complex business world. Dual degree recipients receive both diplomas upon completion of both programs.

MBA Curriculum

The MBA curriculum consists of Business Foundations courses and electives. The curriculum for the MBA program includes the following courses. Students should consult with an academic advisor to ensure that they take courses in the approved sequence. All courses are two credits unless otherwise noted.

Business Foundations

Code	Title	Credits
BU.210.620	Accounting and Financial Reporting	2
BU.520.601	Business Analytics	2
BU.120.601	Business Communication	2
BU.220.620	Business Microeconomics	2
BU.231.620	Corporate Finance	2
BU.142.601	Leadership and Organizational Behavior	2
BU.410.620	Marketing Management	2
BU.680.620	Operations Management	2
BU.510.601	Statistical Analysis	2
BU.150.620	Strategic Management	2
Total Credits		**20**

Electives (22 credits)

Students may fulfill this requirement with any Carey course for which they meet the pre-requisites and enrollment criteria with two exceptions. BU.450.730 Design Leadership and BU.475.601 Foundations of Design Leadership do not count toward MBA elective credits within this program.

Electives may be used to earn one or two Specializations, but no student is required to earn a Specialization to fulfill program requirements. Courses may count toward multiple Specializations, but no student in this program may earn more than two Specializations. Students may take any combination of elective courses that meet the credit requirement, whether they combine toward a Specialization or not. Specializations are simply a way to think about organizing elective course options and are optional. See the Flexible MBA portion of this catalogue (p. 660) for details on available Specializations.

Finance (Part Time), Master of Science

The Master of Science in Finance (MSF) program prepares students for careers in financial analysis and management. This rigorous quantitative program relies on current technology and financial methodologies to analyze complex problems.

The coursework stresses the application of contemporary theories in a global context to develop financial modeling and analytical skills for value creation, leading to innovative solutions, while placing an emphasis on social responsibility and ethical conduct in finance as a means to sustainable economic growth and shared prosperity.

The Carey Part-Time MS in Finance program features:

- Johns Hopkins University world-class faculty and experienced practitioners in the field of finance
- A rigorous quantitative curriculum with emphasis on analytical techniques and their role in sophisticated risk pricing and investment decision-making
- Strong theoretical and practical foundations in the analysis of complex financial instruments, portfolio allocation and risk management, corporate finance, company valuation, and corporate governance
- A significant portion of the curriculum devoted to the CFA Institute's Candidate Body of Knowledge, preparing our students to sit for the CFA exams

Program Requirements

The program requires 36 credits. Part-time students must complete the program within six years.

Students enrolled in the online MSF program are required to take the Business Communication course. Asynchronous online sections of this course have a mandatory two-day residency component, which includes synchronous participation. Onsite residencies are held at the Carey Business School's Harbor East campus in Baltimore, MD.

Curriculum

The curriculum for the MSF program includes the following courses. Course sequence and availability of specific electives may vary and not all electives are available every term nor in every format. All courses are 2 credits.

Code	Title	Credits

Finance, Master of Science

The Master of Science in Finance with a STEM-designated concentration in Financial Econometrics helps build the entrepreneurial capacity of students to comprehend global financial markets with its implications on local investment environments.

The Carey MS in Finance program features:

- Johns Hopkins University world-class faculty and experienced practitioners in the field of finance
- A rigorous quantitative curriculum with emphasis on computational, statistical, and econometric techniques and their role in sophisticated financial decision-making
- Strong theoretical and practical foundations in the analysis of complex financial instruments, portfolio allocation and risk management, but also in corporate finance, company valuation, and corporate governance
- A significant portion of the curriculum devoted to the CFA Institute's Candidate Body of Knowledge, preparing our students to sit for the CFA exams
- STEM designation with OPT eligibility for full-time students

Program Requirements

The program requires 36 credits. Full-time MS Finance students must complete the program in three semesters: fall, spring, and summer. Course waivers are not granted in this program.

Curriculum

The curriculum for the MS in Finance program includes the following courses. Course sequence and availability of specific electives may vary. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. All courses are 2 credits unless otherwise noted.

Financial Management, Graduate Certificate

The financial markets have evolved dramatically in recent decades through the development of new financial instruments and techniques, integration of global markets, and advancements in information technology. The growth of global financial markets and rapid development of advanced analytical tools make the study of finance increasingly vital. In today's fast-paced, uncertain economic environment, financial managers require a sophisticated, global understanding of theory and analytical tools to make the right decision in a particular financial situation.

This certificate program is designed to prepare a student for a career in corporate financial management. This program is designed to give students a broad, thorough, and up-to-date foundation in finance and the practical tools needed to thrive as effective financial managers. The curriculum provides students with a strong foundation in financial theory, as well as technical skills, and a unique opportunity to develop analytical skills and critical thinking abilities by integrating theory into practice.

Program Requirements

The curriculum for the Graduate Certificate in Financial Management includes the following courses. Course sequence and availability of specific electives may vary. Students are required to complete the Graduate Certificate in Financial Management within three years. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. The certificate consists of eight courses (16 credits). All courses are two credits. Course waivers are not permitted for this certificate.

Total Credits		**16**

Certificate Policies

Students who are currently enrolled in a part-time degree program at the Carey Business School and wish to add a Graduate Certificate, must do so within the first year of study (no more than one academic year or 3 semesters after their start date). Graduate Certificates are not open to students in full-time programs. Please visit the Changing Degree Program (p. 687) section for details.

Students are only allowed to enroll in one Graduate Certificate program at a time.

Students who are currently enrolled in a part-time degree program at the Carey Business School may add either the Graduate Certificate in Financial Management or the Graduate Certificate in Investments, but not both.

Please note that only six credits earned as a non-degree student may be counted toward a Graduate Certificate from the Carey Business School.

Financial Management, Graduate Certificate, Investments, Graduate Certificate, Applied Economics, MS

Students may pursue an MS in Applied Economics and a Graduate Certificate in Financial Management or in Investments, taught in conjunction with the Zanvyl Krieger School of Arts and Sciences. Those interested, including current students of either school, should apply to the Dual MS Degree in Applied Economics/Graduate Certificate in Financial Management or in Investments through Advanced Academic Programs. The Carey Graduate Certificate in Investments accompanies preparation for the Chartered Financial Analyst (CFA) examination, which is preserved in the Dual Diploma program. Interested students should contact carey.admissions@jhu.edu.

Program Requirements

Students have the opportunity to earn both the MS in Applied Economics and a Graduate Certificate in Financial Management or in Investments for a total of 15 courses, eight at Arts and Sciences (Applied Economics) and seven at Carey. Additional information regarding the MS and Graduate Certificate requirements is available at https://carey.jhu.edu/programs/certificate-programs/ms-applied-economics-financial-management-investments-certificate (https://carey.jhu.edu/programs/certificate-programs/ms-applied-economics-financial-management-investments-certificate/)

Dual degree recipients receive both diplomas upon completion of both programs. Course requirements, which can be pursued simultaneously at both schools, are:

Applied Economics, MS

Code	Title	Credits
AS.440.601	Microeconomic Theory	3

Students pursuing this dual program may earn either of these graduate certificates, but not both.

Health Care Management (Part Time), Master of Science

The Master of Science in Health Care Management (MSHCM) program prepares students to assess and act on opportunities to innovate and improve productivity in the health care sector. The program is unique in its breadth, in recognition of the fact that the health care sector is large and diverse, comprising a variety of actors in multiple industries including the following:

- Providers: clinics, hospitals, health care services companies;
- Payers: public and private insurance, social insurance;
- Innovators: pharmaceutical manufacturers, device makers, software and hardware makers;
- Institutions: regulators, civil service, civil society, advocacy groups, foundations, and funders.

The MS in Health Care Management program provides students with the most relevant business skills to be effective and efficient leaders who will improve the quality and access to health care at appropriate cost in light of the regulatory, cultural, and ethical context of the relevant health care ecosystem.

The rigorous curriculum of the MS in Health Care Management program at the Johns Hopkins Carey Business School enables students to:

- Apply the most relevant business skills and principles, and make informed decisions based on this knowledge;
- Gain an in-depth understanding of complex health care issues in order to lead and change enterprises;
- Develop the knowledge, confidence, and judgment to anticipate needed changes in a dynamic industry.

Program Requirements

The program requires 36 credits. Part-time students must complete the program within six years.

Students enrolled in the online MSHCM program are required to take the Business Communication course. Asynchronous online sections of this course have a mandatory two-day residency component, requiring real-time, synchronous participation. Onsite residencies are held at the Carey Business School's Harbor East campus in Baltimore, MD.

Curriculum

The curriculum for the MSHCM program includes the following courses. Course sequence and availability of specific electives may vary and not all electives are available every term nor in every format. All courses are 2 credits.

Code	Title	Credits

Health Care Management, Master of Science

The full-time Master of Science in Health Care Management program prepares students to assess and act on opportunities to innovate and improve productivity in the health care sector. The program is unique in its breadth, in recognition of the fact that the health care sector is large and diverse, comprising a variety of actors in multiple industries including the following:

- Providers: clinics, hospitals, health care services companies;
- Payers: public and private insurance, social insurance;
- Innovators: pharmaceutical manufacturers, device makers, software and hardware makers;
- Institutions: regulators, civil service, civil society, advocacy groups, foundations, and funders.

This is the only business school degree program in the world that can harness the resources, reputation, and experience of Johns Hopkins University and its top-ranked schools of Medicine, Nursing, and Public Health.

The MS in Health Care Management program provides students with the most relevant business skills to be effective and efficient leaders who will improve the quality and access to health care at appropriate cost in light of the regulatory, cultural, and ethical context of the relevant health care ecosystem.

The rigorous curriculum of the MS in Health Care Management program at Johns Hopkins Carey Business School enables students to:

- Apply the most relevant business skills and principles, and make informed decisions based on this knowledge;
- Gain an in-depth understanding of complex health care issues in order to lead and change enterprises;
- Develop the knowledge, confidence, and judgment to anticipate needed changes in a dynamic industry.

Program Requirements

The program requires 36 credits. Full-time MS students must complete the program in 3 semesters: fall, spring, and summer. Course waivers are not granted in this program.

Curriculum

The curriculum for the MS in Health Care Management program includes the following courses. Course sequence and availability of specific electives may vary. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. All courses are 2 credits.

Code	Title	Credits
Required Coursework		
BU.120.601	Business Communication	2
BU.131.601	Business Leadership and Human Values	2
Core Courses		
BU.881.707	Accounting for Decision Making in Health Care	2

BU.881.711	Research and Policy Seminars in Health	
BU.883.707	The Wire: Business Solutions for Community Health Improvement	
Project-Based Courses		
Students will complete a two-part project-based course (2 credits each):		
BU.890.720	Health Care Consulting Practicum I	2
BU.890.725	Health Care Consulting Practicum II	2
Total Credits		**36**

In addition to the elective courses listed above, MS in Health Care Management students can select up to 2 non-health care courses (maximum 4 credits) as part of the 10 elective credits. These courses must be approved by the Academic Program Director and Academic Advisor. Students should contact their advisor for more information.

Information Systems, Master of Science

Information systems and technologies are revolutionizing the way we live and work. The rapid pace of technological advances requires a new generation of talented and tech-savvy business leaders who possess a framework of foundational knowledge to anticipate and manage change and recognize opportunities for business value creation by adapting and implementing new technologies. The Master of Science in Information Systems (MSIS) program prepares students to lead IT initiatives aimed at organizational success, providing secure infrastructure platforms and breakthrough strategic advantage.

The MSIS program is designed for:

- IS professionals who want to advance into leadership roles in their organizations or start their own business or consultancy.
- Business professionals who want to leverage their expertise in functional areas, recognizing that advances in IT are changing every part of an organization.
- Recent graduates who want to learn how information and related technologies can be decisive factors for organizations to succeed in the global marketplace.

The MSIS curriculum reflects the latest IS research and industry best practices.

The program curriculum bridges technology and business with coursework in: artificial intelligence, machine and deep learning, distributed computing, cybersecurity and data vulnerability, data sciences and business intelligence, data networks (telecommunications) infrastructures, emerging technologies, big data analytics, cloud and mobile technologies, IT development and global sourcing strategies, enterprise architecture, and managing complex projects. The MSIS core spans the foundational breadth of information systems and technologies, from hands-on experience with web services to high-level information systems strategy. Elective courses provide students the flexibility to specialize the program to address personal and career objectives.

Program Requirements

The program requires 36 credits. Full-time MS students must complete the program in three semesters: fall, spring, and summer. Course waivers are not granted.

Curriculum

The curriculum for the MSIS program includes the following courses. Course sequence and availability of specific electives may vary. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. All courses are 2 credits.

Code	Title	Credits

In addition to the elective courses listed above, MSIS students can select up to 2 courses (maximum 4 credits) from any area as part of the 12 elective credits. These courses must be approved by an academic advisor. The advisor-approved electives provide flexibility for students in tailoring their MSIS program.

Investments, Graduate Certificate

Mutual funds, trust departments, brokerage firms, and investment bankers require professionally trained financial managers. Today's fast-paced, technology-driven investment environment demands that market participants understand and employ the latest financial tools and techniques.

The Graduate Certificate in Investments is designed to meet the demands of professionals in the rapidly developing field of investments and finance. The curriculum is both rigorous and contemporary, applying modern investment theory to real-world scenarios. Case studies and projects are used at various points of the curriculum. The certificate program is structured to complement preparation for the Chartered Financial Analyst (CFA) examinations.

Program Requirements

Students have the option of taking courses for the certificate onsite, online, or a combination of both. Students are required to complete the Graduate Certificate in Investments within three years.

The curriculum for the Graduate Certificate in Investments includes the following courses. Course sequence and availability of specific electives may vary. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. The certificate consists of eight courses (16 credits). All courses are two credits. Course waivers are not permitted for this certificate.

Certificate Policies

Students who are currently enrolled in a part-time degree program at the Carey Business School and wish to add a Graduate Certificate, must do so within the first year of study (no more than one academic year or 3 semesters after their start date). Graduate Certificates are not open to students in full-time programs. Please visit the Changing Degree Program (p. 687) section for details.

Students are only allowed to enroll in one Graduate Certificate program at a time.

Students who are currently enrolled in a part-time degree program at the Carey Business School may add either the Graduate Certificate in Financial Management or the Graduate Certificate in Investments, but not both.

Please note that only six credits earned as a non-degree student may be counted toward a Graduate Certificate from the Carey Business School.

Leadership Development Program, Graduate Certificate

The Johns Hopkins Carey Business School Leadership Development Program (also known as LDP) is a nationally recognized opportunity for Black, Latinx, Indigenous, and all people of color to advance their leadership skills. After more than a quarter-century of operations and with over 550 graduates to date, the Leadership Development Program offers a curriculum and enriched programming that have enabled aspiring individuals to expand their perspectives, build new strengths, and fully realize their leadership potential.

The courses and activities within the program will propel student success both in business and in community settings as a multicultural manager. LDP students will actively build personal growth, organizational resilience, and focused networking, along with applicable business knowledge and skills for advancement as a decision maker and leader in today's rapidly changing global workplace.

Program Requirements

The depth of the Leadership Development Program experience involves two on-site residencies and online coursework (synchronous) between residencies. LDP students will engage in discussions with corporate, government, and nonprofit leaders and work in teams on real-time entrepreneurship, business, and community-based projects. The Leadership Development Program curriculum features case studies and simulations, while exploring and integrating dimensions of leadership approaches and strategies applicable in the multicultural and multinational environment.

LDP students are required to complete the graduate certificate in the Leadership Development Program in nine months. The certificate consists of six courses (12 credits).

Code	Title	Credits
BU.210.610	Accounting for Decision Making	2
BU.510.601	Statistical Analysis	2
BU.410.620	Marketing Management	2
BU.142.720	Managing in a Diverse & Global World	2
BU.120.650	Business and Leadership Communication	2
BU.142.690	Leadership Theory Into Practice	2
Total Credits		**12**

Residencies

Students in the LDP program are required to take part in two residencies to learn in-person from peers and Carey Business School faculty. Residencies take place once in the fall semester and once in the spring semester. Before each residency, you will receive a reading package with pre-module homework, case studies, and exercises that are required to complete for partial credit toward the next residency. Post-residency work includes online coursework, case studies, and take-home exams that you will complete to receive full credit for the residency.

Certificate Policies

Due to the unique nature and structure of the program, students who are currently enrolled in any degree or Graduate Certificate program at the Carey Business School are not eligible to enroll in the LDP Certificate.

Current LDP students are not eligible to concurrently enroll in any other degree or Graduate Certificate program at the Carey Business School. Students are welcome to apply to a degree or Graduate Certificate program upon completion of LDP.

Marketing (Part Time), Master of Science

The Master of Science in Marketing (MSM) program is deeply committed to the enhancement and facilitation of each student's career by combining a world-class education, with highly valuable practical experience, and the Hopkins mission of providing knowledge to the world to inspire our students to achieve their professional goals and make a positive impact in the world of business.

The MSM curriculum incorporates the latest knowledge and technology in the field. Course offerings provide students with a thorough foundation in marketing theory, analysis, and practical applications. The course sequence maximizes student learning by progressing logically from foundation and core theory to specific practice. The program focuses on the application of marketing theory, current and future trends, and state-of-the-art techniques required by marketing professionals for success in the global market.

Program Requirements

The program requires 36 credits. Part-time students must complete the program within six years.

Students enrolled in the online MSM program are required to take the Business Communication course. Asynchronous online sections of this course have a mandatory two-day residency component, which includes synchronous participation. Onsite residencies are held at the Carey Business School's Harbor East campus in Baltimore, MD.

Curriculum

The curriculum for the MSM program includes the following courses. Course sequence and availability of specific electives may vary and not all electives are available every term nor in every format. All courses are 2 credits.

Code	Title	Credits
Business Foundations		
BU.210.620	Accounting and Financial Reporting	2

Marketing, Master of Science

The Master of Science in Marketing with a STEM-designated concentration in Marketing Analytics is deeply committed to the enhancement and facilitation of each student's career by combining a world-class education with highly valuable and practical experience, and the Hopkins mission of providing knowledge to the world to inspire our students to achieve their professional goals and make a positive impact in the world of business.

The Marketing Analytics curriculum incorporates the latest knowledge and technology in the field. Course offerings provide students with a thorough foundation in marketing theory, analysis, and practical applications. The course sequence maximizes student learning by progressing logically from foundation and core theory to specific practice. The program focuses on the application of marketing theory, current and future trends, and state-of-the-art techniques required by marketing professionals for success in the global market.

Program Requirements

The program requires 36 credits. Full-time MS students must complete the program in 3 semesters: fall, spring, and summer. Course waivers are not granted in this program.

Curriculum

The curriculum for the MSM program includes the following courses. Course sequence and availability of specific electives may vary. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. All courses are 2 credits.

MBA/Applied Economics, MS Dual Degree

To allow students to better exploit the strong complementary nature between business and economics, the Carey Business School and the Johns Hopkins Zanvyl Krieger School of Arts and Sciences Applied Economics Program have eliminated the overlap between the MS in Applied Economics and the MBA. This enables students to earn both the MS degree and the MBA for fewer courses than if pursued separately.

Admission Requirements

Apply to the MBA/MS in Applied Economics through the Johns Hopkins Zanvyl Krieger School of Arts and Sciences. For more information, please visit https://advanced.jhu.edu/academics/graduate/ms-applied-economics/ms-applied-economics-mba-dual-degree (https://advanced.jhu.edu/academics/graduate/ms-applied-economics/ms-applied-economics-mba-dual-degree/)

Program Requirements

The program requires 66 credits, 42 credits (16 credits Flex MBA Business Foundation and 26 credits of electives) for the MBA. The 42 credits required for the MBA must be "BU" courses from the Carey Business School. Course scheduling allows for completion of the MBA portion of the program in 32 months. Students must complete the MBA portion within six years. A waived course must be replaced with an equivalent number of credits in an advanced course. Dual degree recipients receive both diplomas upon completion of both programs.

Dual degree recipients receive both diplomas upon completion of both programs. Course requirements, which can be pursued simultaneously at both schools, are:

MBA/Biotechnology, MS Dual Degree

The MBA/MS in Biotechnology program teaches fundamental and advanced principles of both business and biotechnology that cover accounting, negotiation, finance, and regulatory and legal matters, as well as biochemistry, biostatistics, and bioinformatics. With a perspective informed both by business and science, students work and learn in a team-oriented cohort. They emerge from the program—offered jointly with the Johns Hopkins Zanvyl Krieger School of Arts and Sciences—possessing the expertise and the confidence to become innovative managers in the biotechnology field. More information is available at https://carey.jhu.edu/programs/dual-degrees/mba-master-science-biotechnology (https://carey.jhu.edu/programs/dual-degrees/mba-master-science-biotechnology/).

Admission Requirements

Apply to the MBA/MS in Biotechnology through the Johns Hopkins Zanvyl Krieger School of Arts and Sciences. For more information, please visit https://advanced.jhu.edu/academics/graduate/ms-biotechnology/ms-biotechnology-mba-dual-degree/

Program Requirements

The program requires 82 credits, 42 credits (20 credits Flex MBA Business Foundation and 22 credits of electives) for the MBA and 40 credits in Biotechnology. The 42 MBA credits must be completed with "BU" courses from the Carey Business School. Dual degree recipients receive both diplomas upon completion of both programs.

MBA/Communication, MA Dual Degree

The Hopkins MBA/MA in Communication prepares managers in public and media relations, advertising, crisis communication, organizational development, and risk communication. It provides managers with the knowledge and skills to solve communication problems in the workplace, use new media to transform existing business practices, reach out to media and clientele, and manage corporate images. This program enables communication professionals to expand their knowledge and skills in business and management, preparing them to lead nonprofit, public sector, or commercial enterprises. Students in these degrees complete both the professional managerial education requirements of the MBA and the advanced disciplinary requirements of a specialized MA in Communication. More information is available at https://carey.jhu.edu/programs/dual-degrees/mba-ma-communication (https://carey.jhu.edu/programs/dual-degrees/mba-ma-communication/).

Admission Requirements

Apply to the MBA/MA in Communication through the Johns Hopkins Zanvyl Krieger School of Arts and Sciences. For information, please visit advanced.jhu.edu/academics/dual-degree-programs/communication-mba (https://advanced.jhu.edu/academics/dual-degree-programs/communication-mba/).

Program Requirements

The program requires 60 credits, 42 credits (20 credits Flex MBA Business Foundation and 22 credits of electives) for the MBA. All 42 MBA credits must come from "BU" courses at the Carey Business School. Course scheduling allows for completion of the MBA portion of the program in 30 months. A waived course must be replaced with an equivalent number of credits in an advanced course. Dual degree recipients receive both diplomas upon completion of both programs.

MBA/DNP Dual Degree

Students may pursue an MBA/Doctor of Nursing Practice offered through the School of Nursing and the Carey Business School. This area of study puts a nurse in rare company alongside leaders of health care or academic institutions setting a course for the future. Graduates of this program will be prepared to create and lead new models of care delivery for communities locally, across the nation, and around the world.

Admission Requirements

Apply through the School of Nursing website. Please visit nursing.jhu.edu/admissions/apply/index.html (https://nursing.jhu.edu/admissions/apply/).

Program Requirements

The program requires 67 credits, including 42 credits for the Flexible MBA (20 credits of Flex MBA Business Foundations and 22 credits of business electives) . All 42 MBA credits must be fulfilled with "BU" courses from the Carey Business School. Students must complete the MBA portion within six years. A waived course must be replaced with an equivalent number of credits in an advanced course. Dual degree recipients receive both diplomas upon completion of both programs.

MBA/Government, MA Dual Degree

The MBA/MA in Government prepares managers to move between the public and private sectors, or work for agencies that span the two. The program combines the public sector management strengths of the MA in Government with the private sector business savvy of the MBA. The MBA/MA in Government bridges the traditional separation of business leadership and public sector management. Advance your knowledge in government and politics, ethics, global economics, financial theory, and management, and set yourself apart from the competition in a career that overlaps public and private sectors. More information is available at https://carey.jhu.edu/programs/dual-degrees/mba-ma-government (https://carey.jhu.edu/programs/dual-degrees/mba-ma-government/).

Admission Requirements

For more information about the MBA/MA in Government with the Johns Hopkins Zanvyl Krieger School of Arts and Sciences, visit https://advanced.jhu.edu/academics/graduate/ma-government/ma-government-mba-dual-degree/

Program Requirements

The program requires 60 credits, 42 credits (20 credits of Flex MBA Business Foundations and 22 credits of electives) for the MBA. All 42 MBA credits must be fulfilled with "BU" courses from the Carey Business School. Course scheduling allows for completion of the MBA portion of the program in 32 months. A waived course must be replaced with an equivalent number of credits in an advanced course. Dual degree recipients receive both diplomas upon completion of both programs.

MA in Government Courses

Code	Title	Credits
Core Course - Required:		
AS.470.602	Government & Politics	3
AS.470.695	Proseminar: Essentials of Public and Private Management	3
Electives (Eight courses)		**24**
Total Credits		**30**

Although not required, the following courses are recommended electives for students in the dual degree program:

Code	Title	Credits
Electives		
AS.470.609	Leadership Skills in the 21st Century	
AS.470.616	Political Ideas, Strategy, and Policy Implementation	
AS.470.622	Money and Politics	
AS.470.630	Congress and the Making of Foreign Policy	

AS.470.638	Negotiating as a Leadership Skill
AS.470.641	Introduction to Advocacy and Lobbying
AS.470.645	The Budgetary Process
AS.470.688	Political Institutions and the Policy Process
AS.470.721	Comparative Federalism: The United States and the European Union
AS.470.728	Fundamentals of Nonprofits and Nonprofit Management
AS.470.736	Methods of Policy Analytics
AS.470.744	Trade and Security

Students wishing to earn a concentration must complete four of their electives in the concentration area. Concentrations are offered in Political Communication, Security Studies, and Democracy and Governance Studies. For MA/MBA students, the thesis requirement is optional. If you wish to write a thesis, you must take:

Code	Title	Credits
AS.470.850	Research and Thesis I: MA in Government	
AS.470.852	Research and Thesis II: MA in Government	
AS.470.800	Research & Thesis III: Government	

These three classes would count toward the eight government electives you must take to complete the MA/MBA. MA/MBA students who successfully complete and defend their thesis will be awarded honors at graduation.

MBA Courses

All dual-degree students are required to complete the following MBA courses. Dual degree recipients receive both diplomas upon completion of both programs.

Code	Title	Credits
Core Course - Required:		
BU.210.620	Accounting and Financial Reporting	2

MBA/JD Dual Degree

The MBA/JD program is a dual degree offered by the University Of Maryland Carey School Of Law and the Johns Hopkins Carey Business School to prepare students for complex challenges in business, industry, commerce, government organizations, and the nonprofit sector. The dual-degree program will provide a unique opportunity to add another dimension to the educational preparation of students who seek management and leadership responsibilities in legal practice, financing and delivery of legal services, development of new legal services, establishing and managing law firms, as well as pursuing a career focused on law and business in national and international organizations and academic institutions. More information is available at https://carey.jhu.edu/programs/dual-degrees/jd-mba (https://carey.jhu.edu/programs/dual-degrees/jd-mba/).

Admission Requirements

Applicants need to apply to both programs separately. For more information on University of Maryland Carey School of Law, please visit https://www.law.umaryland.edu/Prospective-Students/JD (https://www.law.umaryland.edu/Prospective-Students/JD/).

Program Requirements

Students complete 42 credits toward the MBA, which the Johns Hopkins Carey Business School provides, and will accept 12 credits transferred from University of Maryland Carey School of Law to complete the 54-credit degree. Students complete 76 credits which University Of Maryland Carey School Of Law provides toward the JD and will accept 9 credits transferred from Johns Hopkins Carey Business School to complete the 85-credit degree. Dual degree recipients will only receive both diplomas upon completion of both programs.

MBA/MA in International Relations

The MBA and Master in International Relations dual degree will prepare students for a career that requires business and leadership training in addition to a sophisticated understanding of international political, socioeconomic, and cultural issues. Students build expertise through diverse curriculum offerings from two of Johns Hopkins' most innovative institutions. With the Master in International Relations, students will gain both professional and substantive insights by developing an extensive global mindset through functional and regional focus areas. Combine this expertise from one of the best schools for international relations with the leadership and analytical skills gained through the Johns Hopkins MBA. Graduate ready to make a lasting impact across the globe.

Prospective students must submit both an application for the Full-Time MBA from the Johns Hopkins Carey Business School and an application for the MA in International Relations from the Johns Hopkins School of Advanced International Studies. For more details, please visit: https://carey.jhu.edu/programs/admissions/how-to-apply/dual-degrees (https://carey.jhu.edu/programs/admissions/how-to-apply/dual-degrees/).

The MBA and Master in International Relations (MAIR) dual degree curriculum is designed with flexibility paramount across the three years of study. The Johns Hopkins MBA is 54 credits, 12 of which may be applied from the MAIR program. The MAIR program is 64 credits, 16 of which may be applied from the MBA. The MBA/MAIR requires a total of 118 credits.

Students will also have options for how to begin their degree. They may choose to begin with one year of coursework in either the MBA or the MAIR program. The first year of coursework in either program must be completed prior to enrollment in the second year of courses.

MBA/MD Dual Degree

The Johns Hopkins dual-degree MBA/MD program is structured as a five year academic program, with students as full-time members of the medical school and the full-time MBA cohort as they progress through the program.

The program is designed to prepare physicians for leadership roles in medicine and in the health care industry. The proposed dual-degree program will give students a unique educational experience through the Genes to Society (GTS) medical school curriculum and Carey's full-time MBA program. More information is available at https://carey.jhu.edu/programs/dual-degrees/mba-md (https://carey.jhu.edu/programs/dual-degrees/mba-md/).

Admission Requirements

Students applying to the MD/MBA program will be required to meet the admissions criteria of the JHU School of Medicine and be admitted to the MD program. Once students are accepted by the School of Medicine, they have an opportunity to apply for the MBA/MD program. The applications will then be reviewed for business school admission by the Carey Admissions team.

Program Requirements

For the Carey MBA program, students are required to complete 54 credits. Up to 12 credits from the MD electives can be applied to program requirements for the MBA electives, subject to review and approval of the MD/MBA Academic Program Committee. Dual degree recipients receive both diplomas upon completion of both programs.

MBA/MPH Dual Degree

This unique 23-month full-time program of study will enable students to integrate the philosophies, functions, and competencies of the seemingly disparate fields of public health and business. Students in this program will acquire knowledge and skills in the principles of population-based health as well as finance and management, which will enable them to be effective managers and leaders in health-related agencies and organizations. Graduates will be able to assess the public health needs of a defined population; develop, analyze, and implement targeted health policies and programs; lead the process of change within one's own organization and community; manage health care organizations to achieve identified goals; and communicate messages to targeted audiences.

More information is available at https://carey.jhu.edu/programs/dual-degrees/mba-master-public-health (https://carey.jhu.edu/programs/dual-degrees/mba-master-public-health/).

Admission Requirements

Applications for the combined degree program must be obtained from and submitted to the Johns Hopkins Bloomberg School of Public Health and will be reviewed by the admissions committees of both the Johns Hopkins Bloomberg School of Public Health and the Carey Business School. For more information, please visit jhsph.edu/academics/degree-programs/master-of-public-health/academic-overview/combined-degrees-and-programs.html (http://www.jhsph.edu/academics/degree-programs/master-of-public-health/academic-overview/combined-degrees-and-programs.html).

Program Requirements

The program requires 127 credits (MPH and MBA based on School of Public Health credit system). Dual degree recipients receive both diplomas upon completion of both programs.

MSF/MBA Dual Degree

The MS in Finance/MBA is a partnership with the Cheung Kong Graduate School of Business (CKGSB), for students currently pursuing an MBA with CKGSB as well as recent MBA graduates from the school.

MSF/MBA students gain the technical skills to create innovative solutions in all aspects of management and finance. The part-time program is designed for working professionals advancing in their careers, to allow flexibility to take classes online, featuring mostly asynchronous learning activities with a few recommended or required synchronous (real-time) activities.

This program empowers working professionals to hone the skills they need to advance quickly in their careers within a flexible format. A significant portion of the MSF curriculum is devoted to the CFA Institute's Candidate Body of Knowledge, preparing students to sit for the CFA exams.

Who can apply and application process:

First and second year CKGSB MBA students, and alumni who completed their CKGSB MBA degree within the last 2 years, may apply.

New applicants who will be starting the MBA at CKGSB in Fall 2021 may apply to start the MSF/MBA dual program in Fall 2022.

To be qualified to be part of the dual degree program, applicants must be current CKGSB students or alumni from MBA program. Applicants also need to complete the new student application process to JHU Carey https://carey.jhu.edu/programs/admissions/how-to-apply (https://carey.jhu.edu/programs/admissions/how-to-apply/).

Program Requirements

The program requires 30 credits, some of which (up to four credits) may be satisfied using courses transferred from CKGSB. Students are admitted in the Fall semester each year and must follow a 20-month, cohorted program sequence.

Curriculum

The curriculum for the MSF portion of the MSF/MBA is based primarily on the Carey Business School MSF Part-Time curriculum with some adjustments specific to this dual degree program. Students must consult with an academic advisor to ensure they take the approved courses for this program in the approved sequence. All Carey MSF courses are 2 credits.

Real Estate and Infrastructure (Part Time), Master of Science

The Master of Science in Real Estate and Infrastructure (MSREI) part-time program is ideal for mid-career real estate professionals with industry experience. Working with academic and practitioner faculty, students develop the knowledge and skills needed to take advantage of the latest developments in this fast-changing profession. This core curriculum integrates the study of the major disciplines that influence real estate decisions: market analysis, law, investment analysis, finance, and development.

Program Requirements

The program requires 36 credits. Part-time students must complete the program within six years.

Curriculum

The curriculum for the MSREI program includes the following courses. Course sequence and availability of specific electives may vary. Students should consult with an academic advisor to ensure they take courses in the approved sequence. All courses are 2 credits.

Real Estate and Infrastructure, Master of Science

The Edward St. John Real Estate Program offers a Master of Science in Real Estate and Infrastructure (MSREI) degree program that provides students with a comprehensive understanding of real estate finance, investment, development, management, and capital markets.

The full-time MSREI program is guided by a faculty composed of Johns Hopkins professors and of Real Estate practitioners from the region's leading investment, development, planning, law, and architectural firms. A supportive network of alumni and business professionals is available to students throughout their 12-month course of study.

The full-time program is designed for students who are prepared to be challenged by a fast pace and heavy course load. The program is ideal for real estate professionals with fewer than eight years of experience. Foundation, core, and elective courses are offered at the Washington D.C. campus. Elective courses are offered in the day, evening, and on Saturdays. Students may choose to structure their Real Estate and Infrastructure Capstone to provide hands-on industry experience.

Program Requirements

The MSREI program requires 36 credits. Full-time MS students must complete the program in 3 semesters: fall, spring, and summer. Course waivers are not granted in this program.

Curriculum

The curriculum for the MSREI program includes the following courses. Course sequence and availability of specific electives may vary. Students must consult with an academic advisor to ensure that they take courses in the approved sequence. All courses are 2 credits.

Business, Minor

Please note that after the Spring 2021 semester, all business minor questions and advising will be through the Carey Business School & the Business minor requirements will change. For questions, contact Michael Tyler at Carey_BusinessMinor@jhu.edu

The Carey Business minor offers Johns Hopkins undergraduates a focused, quantitative minor that will prepare them for careers in small companies, major corporations, consultancies, as well as acceptance into graduate business programs.

- The primary objective for the minor is to help students position themselves as leaders among their peers in the private sector, government, the non-profit sector, and the world of social enterprises. At the conclusion of their program, successful students will be able to:
- Enter a variety of careers such as finance, management, real estate, marketing, accounting, and consulting.

- Create, analyze, and implement value propositions about projects and products for the benefit of various audiences, from shareholders to local communities.
- Establish and manage brands and products and also institutions and organizations.
- Build, manage and grow valuable and lasting relationships with clients, customers, shareholders, creditors, and local communities.
- Recognize, understand, capitalize on, and generate changing trends in local and global economies.
- Be responsible business leaders who are engaged citizens of their communities, cities, and countries.

The minor offers an instructional program that combines critical analysis and theoretical grounding in a broad set of required courses and hands-on experience through an experiential capstone course.

The new requirements for the business minor will only apply to students who declare the minor starting in the fall 2021 semester. Students who declared the minor prior to fall 2021, can find the previous minor requirements here: https://engineering.jhu.edu/cle/business-minor/

PROGRAM REQUIREMENTS

- Seven required courses
- One capstone course

COURSE AND CREDIT REQUIREMENT

The Business minor requires a minimum of 24 credits. Business courses are open to all Johns Hopkins Arts & Sciences and Engineering students.

Policies and Resources

Academic Ethics Policy

Academic Ethics Policy

1. Preamble

   The Johns Hopkins University (University or JHU) and the Carey Business School (Carey or School) maintain a reputation for academic excellence and integrity. As members of this community, we hold ourselves to the highest standards of ethical behavior in our endeavor to create knowledge for the world. All members of our community have a personal and professional responsibility to uphold an environment of excellence, respect, integrity, and leadership in our community and in their academic endeavors at Carey and the University.

2. Statement of Commitment

   Carey expects graduates to be innovative business leaders and exemplary global citizens. The Carey community believes that honesty, integrity, and community responsibility are qualities inherent in an exemplary citizen. The objective of the Academic Ethics Policy (AEP or Policy) is to create an environment of trust and respect among all members of the Carey academic community and hold Carey students accountable to the highest standards of academic integrity and excellence.

   It is the responsibility of every Carey student, faculty member, and staff member to familiarize themselves with the AEP and its procedures. Failure to become acquainted with this information will not excuse any student, faculty, or staff from the responsibility to abide by this Policy. The AEP requires that each student in any course taken at Carey act with honesty and integrity in all academic activities and that each student endeavor to hold their peers to the same standard. The Policy exists to: (1) ensure the highest level of personal and professional conduct by our students, and (2) provide a fair, deliberative, impartial, timely, and efficient process for resolving allegations of academic misconduct.

   Upon witnessing an alleged violation of the AEP, a student, faculty member, or staff member must inform the responsible faculty member (if known) and the Executive Director of Student Affairs of both the alleged violation and the name of the student accused of committing the alleged violation. The report should be in writing, preferably using the reporting form which can be obtained from the Student Affairs Office (carey.student@jhu.edu) or by visiting the AEP webpage (https://carey.jhu.edu/student-experience/school-policies/academic-ethics-policy (https://carey.jhu.edu/student-experience/school-policies/academic-ethics-policy/)), unless circumstances are such that an immediate oral report should be made (e.g., during a quiz or final examination). If an oral report is made, it should be followed as promptly as possible with a written report. Each member of the Carey community, as a person of integrity, has a personal obligation to adhere to this requirement. It is only by upholding the AEP that members of the entire Carey community can contribute to the School's ability to maintain its high standards and its reputation. Students aware of a violation who fail to report it may also be found in violation of this Policy. Note, the filing of complaints of academic misconduct that the individual knows to be false is prohibited.

   Violations of this Policy are viewed as a serious matter and may result in sanctions and corrective measures as described below.

Carey, in collaboration with students and faculty, offers training and educational opportunities for students to learn about the AEP. Some examples include a virtual tutorial, student and faculty videos, sessions at new student orientations or during the semester, and the student AEP pledge (https://carey.jhu.edu/student-experience/school-policies/academic-ethics-policy/pledge (https://carey.jhu.edu/student-experience/school-policies/academic-ethics-policy/pledge/)). All students are expected to familiarize themselves with the AEP and are required to take the AEP pledge in the Student Information System (SIS) after completing the AEP course in the Learning Management System. Failure to complete any training will not excuse any student from responsibility to abide by this Policy. The Academic Ethics Board and the Student Affairs Office are available to answer any inquiries about this Policy at carey.student@jhu.edu or 410-234-9240.

3. Scope

   The AEP applies to all Carey students.

4. Cross-Divisional Enrollments

   Carey students may enroll in courses in one or more other University divisions or schools. Carey students are subject to this policy not only when enrolled in Carey courses, but also when enrolled in courses in other University divisions or schools. Academic misconduct in the context of those "outside" courses will be subject to and resolved under this policy.

5. Non-Academic Misconduct

   All issues of non-academic student misconduct will be subject to the University-wide Student Conduct Code (for more on this code, please refer to https://studentaffairs.jhu.edu/policies-guidelines/student-code (https://studentaffairs.jhu.edu/policies-guidelines/student-code/)).

6. Authority

   Carey Academic Ethics Board

   The Carey Academic Ethics Board (AEB) adjudicates alleged violations of the AEP as described below. The Academic Ethics Board comprises Carey students and faculty, and the Executive Director of Student Affairs (or designee). The faculty representatives are appointed by the Vice Dean for Faculty and Research. Student representatives are selected by the Student Services Office via a nomination and interview process. Those students interested in serving as student Co-Chairs may inform the Student Affairs Office via this process. Based on a review of the pool of interested students, the Executive Director of Student Affairs will appoint the student representatives and Co-Chairs for one-year terms. Student representatives may be reappointed for additional terms. The Academic Ethics Board is comprised of at least ten (10) faculty representatives, ten (10) student representatives, and the Executive Director of Student Affairs (or designee).
   Faculty have the authority to resolve certain first-time offenses, as described in Section 8 below.

   Carey Academic Ethics Board Panel

   The Academic Ethics Board Panel is charged with determining, based on a preponderance of the evidence, whether a student's actions constitute a violation of this Policy and, if so, determining (an) appropriate sanction(s) as described below. The Academic Ethics Board Panel is comprised of one (1) student Co-Chair, two (2) additional students, three (3) faculty representatives, and the Executive Director of Student Affairs (or designee). A majority vote is required for Panel decisions, except that unanimity is required for a sanction of expulsion. The Executive Director of Student Affairs (or designee) does not have voting rights.

   Jurisdiction

   The AEB has jurisdiction over the following, without limitation:

   Removal and Vacancies

   A faculty or student representative may be removed from the Academic Ethics Board or a particular Panel if they have not met the expectations required of a Board member. This decision will be made by the Executive Director of Student Affairs (or designee) with regard to student representatives and by the Vice Dean for Faculty and Research with regard to faculty representatives. Any vacancies in student representatives, including student Co-Chairs, will be filled by the Executive Director of Student Affairs (or designee) and any vacancies in faculty representatives will be filled by the Vice Dean for Faculty and Research.

   - Violations of the Academic Ethics Policy
   - Violations may include, but are not limited to, the following:
     - Cheating, plagiarism, unpermitted collaboration, forgery of academic documents, facilitating academic dishonesty, unfair competition, failure to report a violation, or adhere to policies
     - Improper use of intellectual property

7. Academic Misconduct

   Academic misconduct is prohibited by this Policy. Academic misconduct is defined as any action or attempted action that may result in creating an unfair academic advantage for oneself or an unfair academic advantage or disadvantage for any other member or members of the academic community. This includes a wide variety of behaviors such as cheating, plagiarism, altering academic documents or transcripts, gaining access to materials before they are meant to be available, and helping another individual(s) to gain an unfair academic advantage. Nonexclusive examples of academic misconduct are listed below.

   - Cheating
     - fraud, deceit, or dishonesty in an academic assignment, text, or examination • use or consultation of unauthorized or inappropriate materials (e.g., notes, books, etc.) on assignments, tests, or examinations
     - unauthorized discussion of a test or examination during its administration
     - copying content on an assignment, test, or examination from another individual(s)
     - obtaining a test or examination or the answers to a test or examination before administration of the test or examination (e.g., either an electronic copy or hard copy)
     - studying from an old test or examination whose circulation is prohibited by the faculty member
     - use or consultation of unauthorized electronic devices or software (e.g., calculators, cellular phones, computers, tablets, etc.) in connection with assignments, tests, or examinations
     - use of paper writing services or paper databases

- unauthorized collaboration with another individual(s) on assignments, tests, or examinations
- submission of an assignment, test, or examination for a re-grade after modifying the original content submitted
- permitting another individual(s) to contribute to or complete an assignment, or to contribute to or take a test or examination on the student's behalf
- unauthorized submission of the same or substantially similar work, assignment, test, or examination (e.g., a paper, etc.) to fulfill the requirements of more than one course or different requirements within the same course
- tampering with, disabling, or damaging equipment for testing or evaluation

- Plagiarism
  - use of material produced by another person without acknowledging its source
  - submission of the same or substantially similar work of another person (e.g., an author, a classmate, etc.) without proper attribution and citation
  - dual submission of an assignment
  - use of the results of another individual's work (e.g., another individual's paper, examination, homework, computer code, lab report, etc.) while representing it as your own
  - improper documentation/acknowledgement of quotations, words, ideas, views, or paraphrased passages taken from published or unpublished sources
  - wholesale copying of passages from works of others into your homework, essay, term paper, or dissertation without acknowledgment
  - paraphrasing of another person's characteristic or original phraseology, metaphor, or other literary device without acknowledgment
- Forgery/Falsification/Lying
  - falsification or fabrication of data/information for an assignment, text, or examination, or in an experiment
  - citation of nonexistent sources or creation of false information in an assignment
  - attributing to a source ideas or information that is not included in the source
  - forgery of University or other official documents (e.g., letters, transcripts, etc.)
  - impersonating a faculty or staff member
  - request for special consideration from faculty members or university officials based upon false information or deception
  - fabrication of a reason (e.g., medical emergency, etc.) for needing an extension on or for missing an assignment, test, or examination
  - claiming falsely to have completed and/or turned in an assignment, test, or examination
  - falsely reporting an academic ethics policy violation by another student
  - failing to identify yourself honestly in the context of an academic obligation
  - providing false or misleading information to a faculty member or any other University official
- Facilitating Academic Dishonesty
  - intentionally or knowingly aiding another student to commit an Academic Ethics Policy violation
  - allowing another student(s) to copy from one's own assignment, test, or examination
  - making available copies of course materials whose circulation is prohibited (e.g., old assignments, texts, or examinations, etc.)
  - completing an assignment or taking a test or examination for another student(s)
  - sharing paper mill/answer bank websites or information with another student(s)
  - any improper use of intellectual property (including unauthorized class recordings)
- Unfair Competition
  - intentionally damaging the academic efforts of another student(s)
  - stealing another student's academic materials (e.g., books, notes, assignments, etc.)
  - denying another student needed University resources (e.g., hiding library materials, stealing lab equipment, etc.)
- Failing to Report Alleged Violation
  - failing to report any known or suspected violation of the AEP
- Failing to Follow Applicable Policies, Procedures, Rules
  - failing to follow applicable JHU, divisional/school, program, course, and/or faculty policies, procedures, and rules regarding academic ethics

8. Faculty-Student Resolution of First-Time Offenses

   If a student is suspected of academic misconduct, the faculty member responsible for the course in which the misconduct allegedly occurred must, if feasible, promptly review the facts of the case with the student. If the faculty member believes that academic misconduct has occurred, the faculty member must first contact the Student Affairs Office (carey.student@jhu.edu) to determine whether the offense is a first or subsequent offense. If a first offense, the faculty member may choose to resolve the case directly with the student in accordance with this section (i.e., the faculty member and student may reach an agreement on the resolution of the alleged misconduct; note that neither the faculty member nor the student are obligated to resolve a complaint under this section). A faculty member may not resolve a second or subsequent offense directly with the student. The maximum sanction that can be imposed by a faculty member in a resolution of a first offense is a zero on the assignment. The faculty member must submit all relevant information regarding any agreement reached with the student to the Student Affairs Office. If such an agreement is reached, the Student Affairs Office will promptly provide the student with a letter outlining the resolution that includes the charges, a summary of the evidence, the findings, and the sanctions agreed upon.

   In addition, the faculty member shall notify the Student Affairs Office when:

   - The faculty member cannot reach an agreement with the student (e.g., the student denies cheating or does not agree with the proposed sanction, etc.)

   - The reported violation is a second or subsequent offense for the same student

- The faculty member prefers to refer the case to the Executive Director of Student Affairs for resolution
- In the case of a first offense, the faculty member believes that the sanction warranted is greater than zero on the assignment In such instances, the case will proceed to the next phase of resolution as outlined in Section 9 below.

9. Hearings

The Executive Director of Student Affairs (or designee) may dismiss a case for a lack of sufficient information or if the alleged conduct does not fall within conduct prohibited by this Policy. Absent these circumstances, the case will be resolved per the proceedings described below.

First-Time Offenses Not Informally Resolved Between a Faculty Member and Student – Administrative Hearing or Academic Ethics Board Panel Hearing

In the case of a first offense that is not resolved between the faculty member and student, the Executive Director of Student Affairs (or designee) shall investigate and recommend one of two options: Administrative Hearing or Academic Ethics Board Panel Hearing. The gathering of case information may include meetings with or requests for statements from the student and witnesses, and review of any related information. In making this recommendation, the Executive Director of Student Affairs (or designee) shall also consider the nature of the alleged misconduct and potential sanctions, prior academic misconduct history of the student (if any), and other relevant information and factors.

Second and Subsequent Offenses

Second and subsequent offenses must be heard by the Academic Ethics Board. For a second or subsequent violation, as a general matter, the only sanctions that may be imposed are suspension or expulsion, provided that the Academic Ethics Board has discretion to impose a lesser sanction in the rare instances when warranted by the facts and circumstances of a particular case.

Administrative Hearing (For First-Time Offenses Only)

An Administrative Hearing involves a meeting between the Executive Director of Student Affairs (or designee, who serves as a "hearing administrator") and the student. The Executive Director of Student Affairs (or designee) may also meet with witnesses and others involved, and obtain and review relevant evidence.

The Executive Director of Student Affairs (or designee) will review the allegations and evidence with the student and give the respondent an opportunity to respond. The Executive Director of Student Affairs (or designee) will then determine based on preponderance of the evidence whether the student is responsible for the alleged Policy violation(s), and, if so, issue (an) appropriate sanction(s).

Academic Ethics Board Panel Hearing

The Academic Ethics Board Panel Hearing is a closed proceeding, meaning that no one other than the Panel members and necessary faculty and staff members may be present (along with, if applicable, the student or witnesses). The student and witnesses called to the hearing will be present in the hearing room only when making a statement or being questioned by the Panel. The student is strongly advised to be present and present their case. If the student does not appear for a hearing, the hearing will be conducted as scheduled in their absence and a determination made that may result in dismissal or other sanctions.

In general, hearings will proceed as follows, although the Academic Ethics Board Panel has discretion to alter the order or manner in which it hears or receives evidence, and to impose time limits on any stage of the process:

Witnesses

The Executive Director of Student Affairs (or designee) or the Academic Ethics Board Panel may request the presence of any witness with relevant information about a case. The student may also request the Panel to hear from witnesses with relevant information. Absent exceptional circumstances, the student should inform the Executive Director of Student Services (or designee) in writing at least three (3) business days in advance of any meeting or hearing of the names of the witnesses and to what they will attest. The Executive Director of Student Affairs (or designee) or Panel may determine whether and if and the extent to which witnesses will be permitted to participate or questioned in any meeting or hearing, including whether their testimony is relevant.

- introductions • summary of reported charges
- opening statement from the Panel indicating the context, charge(s), and evidence
- opening statement from the student
- questioning of the student by the Panel
- questioning of the witnesses, if any, by the Panel
- closing statement from the student

10. General Procedures

In connection with the resolution of alleged Policy violations, a student shall:

The student has the right for a fair and timely hearing in accordance with the AEP. A student may raise the potential conflict of interest about any University personnel or student participating in the resolution process. A student may also decline to participate in the resolution process. The School may, however, continue the process without the student's participation.

Communications under this Policy will be conducted with students primarily through their official University email address, and students are expected to check their official University email on a regular basis.

- be notified in writing of the allegations in advance of any meeting or hearing;
- be notified in writing of the charges, and the date, time, and location of the hearing, and the identity of the hearing administrator and members of the Academic Ethics Board who may sit on the hearing committee in advance of the hearing;
- have the opportunity to review in advance of any meeting or hearing any relevant information to be considered by any faculty member, hearing administrator, or Panel consistent with the

Family Educational Rights and Privacy Act of 1974 (FERPA), as amended, and to protect other confidential information;

- be notified in writing of the outcome of any hearing, namely the findings, determination of responsibility, and any sanctions; and be notified in writing of the outcome of any appeal.

11. Evidentiary Standard

A "preponderance of the evidence" standard will be used to determine responsibility for alleged violations of this Policy. A "preponderance of the evidence" standard is an evidentiary standard that means "more likely than not." This standard is met if the proposition is more likely to be true than not true.

12. Appeals

Except in the case of a resolution for first-time offenses with a faculty member, the student may appeal the hearing administrator's or Academic Ethics Board Panel's finding of responsibility and/or sanction(s). A student may file any appeal within five (5) business days of the date of the notice of outcome solely on one or more of the following grounds:

- procedural error that could have materially affected the determination of responsibility or sanction(s);
- new information that was not available at the time of the hearing and that could reasonably have affected the determination of responsibility or sanction(s); and
- excessiveness of the sanction(s).

Any appeal must be filed in writing to the Dean via the Office of Student Affairs (email or hard copy). An appeal will involve a review of the file; the appeal does not involve another hearing. The Dean may consult with appropriate University personnel and the Academic Ethics Board Panel in reviewing an appeal. On review of the appeal, the Dean may:

- affirm the decision of the Panel;
- enter a revised determination of responsibility and/or revise the sanction(s); or
- remand the matter to the hearing administrator or Panel to reconsider the determination of responsibility and/or sanction(s); or
- convene a new Panel to consider the case.

The Dean will simultaneously send the appeal determination, with the reasons therefor, to the Office of Student Affairs and to the student. The decision of the Dean is final. No further appeals are permitted.

13. Sanctions

The Academic Ethics Board Panel may impose one or more sanctions (which may include one or more corrective and educational measures that the Panel deems appropriate and commensurate with the Policy violation). In doing so, the Panel may consider:

This section lists some of the sanctions that may be imposed upon students for violations of the AEP. Carey reserves the right, in its discretion, to impose more stringent or different sanctions than those listed below depending on the facts and circumstances of a particular case. Sanctions for academic misconduct under this Policy are generally cumulative in nature.

A student found in violation of the AEP in a course may not avoid the Policy and any potential sanctions by withdrawing from a course.

The following is a non-exhaustive list of possible sanctions and what these sanctions typically mean. The specific conditions imposed under each sanction (e.g., the terms of a suspension, etc.) will depend on the specific facts and circumstances of each case:

Formal Warning
The student is notified in writing that their actions constitute a violation of the AEP, and may be subject to other actions (e.g., re-taking an examination or failure in a course).

Academic
These sanctions may include but are not limited to grade adjustments, including failure on any work within the course or failure in the course itself, requiring extra credit to be completed, or re-submission of an assignment, or re-taking a test or examination. This may include a notation on the student's official Carey academic transcript. For example, if the sanction is an "F" for the course, "F due to Academic Dishonesty" may be permanently noted on the student's official Carey transcript.

Transcript Notations
Academic misconduct may be noted on a student's academic transcript.

Corrective or Educational Measures
The student may, for example, be required to write and submit a reflection paper as an opportunity to learn and reflect and/or be required to engage in other corrective or educational measures.

Probation
The student is notified that further violations of the AEP within the stated period of time will result in the student being considered for immediate suspension or other appropriate disciplinary action. If at the end of the specified time period no further violations have occurred, the student is removed from probationary status.

Suspension
The student is suspended from the University for a specified period of time. A permanent notation of the suspension will be displayed on the student's University records and academic transcript. The conferring of an academic degree may be deferred for the duration of the suspension. A student must request in writing and then receive written permission from the Executive Director of Student Affairs (or designee) prior to re-enrollment or reapplication. Academic work completed at another institution while on suspension will not be recognized for credit transfer.

Expulsion
The student is expelled from the University. Expulsion means the permanent removal of the student from the University. Expulsion includes a forfeiture of all rights and degrees not actually conferred at the time of the expulsion, permanent notation of the expulsion on the student's University records and academic transcript, withdrawal from all courses according to divisional policies, and the forfeiture of tuition and fees. Any student expelled from the University is prohibited future re-application to the University.

- the specific academic misconduct at issue;
- the student's academic misconduct history; and
- other appropriate factors.

14. Records

A case file concerning a student will be retained for the duration of the student's enrollment at Carey plus seven (7) years from the date that the student graduates or otherwise leaves the University.

15. Amendments to the Academic Ethics Policy

Significant amendments to the AEP must be approved by the Vice Dean for Faculty and Research, the Vice Dean for Education, the Dean, and a faculty vote (vote passing with simple majority). Minor amendments to the AEP may be made by the Vice Dean for Faculty and Research or the Vice Dean for Education with notification to the Dean.

Academic Progress and Standards

Program Continuity and Completion

A student must be continuously enrolled in their program. Any student not enrolling and successfully completing courses at the Carey Business School for a period of one year or more must petition to restart their program. In addition, a student must complete all program requirements within six years of starting their first course at the Carey Business School. Any student not completing their program within six years must petition for an extension.

Academic Progress

Graduate students at the Carey Business School must have a minimum 2.85 grade point average to graduate and must maintain at least a 2.85 cumulative grade point average (2.85 on a 4.00 scale) to remain in good academic standing. Students receive credit for courses in which they receive grades lower than a B, except the F grade which does not earn any credits. Students need to repeat any required course in which they receive an F (please refer to Repeating a Course under the Grading Policy for further details).

Graduate students will be placed on academic probation if their cumulative grade point average falls below 2.85. Grades will be reviewed for academic progress at the end of each semester or for full-time programs at the end of each term. Students whose cumulative GPA falls below 2.85 must meet with their advisors to discuss resources such as tutoring or workshops so that they can raise their GPA to assure continued progress toward graduation. A Probation Hold will be placed on the student record for any student with a cumulative GPA below 2.85. Students will be removed from academic probation when their cumulative grade point average reaches 2.85.

If enrolled in a full-time program, students on academic probation who do not raise their cumulative grade point average to 2.85 by the completion of the following semester, or following term if enrolled in a one-year program, may be suspended. After a period of one semester, academically suspended students are required to meet with their academic advisors and may then submit a written petition for reinstatement on a probationary basis.

A student will be dismissed a) when it is not possible for a student to attain the required 2.85 GPA within the school's academic policies, and/or b) when a student fails the same course a second time. Students cannot re-apply to the same academic program from which they were dismissed; however, they can apply to a different academic program, though they are not guaranteed admission.

Note: These policies are for determining satisfactory academic progress. Please review the Financial Aid section of this handbook to determine the standards for satisfactory progress for eligibility to receive or continue to receive financial assistance.

Academic Standards

Johns Hopkins University and the Carey Business School expect the highest academic standards from its students. The awarding of degrees and certificates is based upon satisfactory completion of all degree/certificate requirements with student performance that meets the expectations of the faculty, as well as compliance with University and School regulations. The Academic Board of the Carey Business School reviews all student applications for graduation and makes recommendations for degree/certificate conferral to the president of the University.

The University does not guarantee the awarding of a degree or certificate to students enrolled in any academic program. Any breach of academic standards may result in disciplinary actions against the student(s) involved. Please see the Academic Ethics Policy section for an overview of procedures.

Changing Degree Program

Changing Degree Program

Degree and certificate seeking students in the Carey Business School who wish to change enrollment to another degree or certificate program within the school should contact their Academic Advisor to discuss the process. A new application may be required for applicants seeking to enroll in a new degree program. Students may only request to change enrollment to a different program during the open admission cycle for that program. Students are not automatically admitted to the desired program; their requests will be reviewed by an admissions committee.

Note: Financial aid recipients must notify the Financial Aid office when changing or adding a degree or certificate program. Students in F-1 status must notify the Office of International Services for a new I-20 to reflect the change in program. Students using VA benefits must notify the VA Certifying Official in the Registrar's Office when changing or adding a degree or certificate.

Second Degree Option

Current Full-Time Carey Business School students may pursue a second degree in a number of academic programs. Current Full-Time Master of Science (MS) students at Carey who wish to obtain a second Full-Time MS degree at Carey must complete a minimum of 24 credits in as few as two semesters. Current Full-Time MS students who wish to obtain an MBA degree as the Second Degree Option must complete a minimum of 36 credits in as few as three semesters. Current Full-Time MBA students who wish to obtain a Full-Time Master of Science degree must complete a minimum of 18 credits in as few as two semesters.

Admissions requirements for the second degree:

- Completion of Second Degree Option application (application fee is waived)
- New personal essay (maximum 500 words)
- 1 letter of recommendation
- Updated resume
- Carey Business School transcript

Students cannot begin work on their second degree credits until they have graduated with their first degree. Students cannot earn a second degree in an area of concentration for their first degree.

Note: Any current student who was conditionally admitted to Carey must complete their conditional requirements as noted in their admission letter (such as submission of final transcripts with degree conferred or credential evaluation showing equivalency of a U.S. bachelor's degree).

Adding a Certificate

Students who are currently enrolled in a part-time degree program at the Carey Business School and wish to add a certificate must submit an online application to the Office of Admissions. Students in part-time programs must submit within the first year of study (no more than one academic year or 3 semesters after their start date). Graduate Certificates are not open to students in full-time programs.

Part-time MS in Finance and Flexible MBA students may add either the Graduate Certificate in Financial Management or the Graduate Certificate in Investments, but not both.

Note: Financial aid recipients must notify the Financial Aid office when changing or adding a degree or certificate program. Those in F-1 status must notify the International Services office for a new I-20 to reflect the change in program. Students using VA benefits must notify the VA Certifying Official in the Registrar's Office when changing or adding a degree or certificate.

Grading Policy

Grading Policy

At Carey, we are committed to fostering a learning environment and assessing academic performance based on merit.

Core & Foundation Courses: The grade point average should not exceed 3.35.

A class is considered "Foundation" or "Core" if the course is listed as such, regardless of the percentage of students taking the course as an elective.

Elective Courses: The grade point average should not exceed 3.45.

The grading system used for official grades for all Carey Business School courses is as follows:

- 'A+' is not awarded at any level.
- 'A' is reserved for those who demonstrate extraordinary performance as determined by the instructor.
- 'A-' is awarded only for excellent performance.
- 'B+' and 'B' are awarded for good performance.
- 'B-', 'C+', 'C', and 'C-' are awarded for adequate but substandard performance.
- 'D+', 'D', and 'D-' are not awarded at the graduate level.
- 'F' indicates the student's failure to satisfactorily complete the course work. If laboratory work is part of a course in which an 'F' is received, both the lecture and laboratory work must be repeated unless the instructor in the course indicates otherwise. If the course is not required for graduation, it need not be repeated; the grade, however, remains on the transcript and is calculated into the grade point average.
- An 'I' (Incomplete) grade is used when the instructor is not prepared to give a final grade for the course because of some justifiable delay in the student's completion of specific course work. Both the instructor and the student should complete the Incomplete Grade Contract and submit it to the Registrar's office within 5 business days of the last scheduled class meeting. A final grade is submitted to the Registrar's Office by the instructor after grading the student's completed work. All work must be completed and the final grade submitted within four weeks after the start of the following semester. In the event that the work is not completed within this time frame, a grade of 'F' replaces the 'I' on the student's transcript.
- 'P' indicates successful completion of course work. No quality points assigned.
- 'R' indicates that a course has been repeated. When a course is repeated, both the original and repeated course grades appear on the academic record; however, only the repeated course grade is used in calculating the grade point average. Course credit can be applied toward degree requirements only once, even if a course is repeated. Both the original and repeated course are indicated with an 'R' on the academic record.
- 'W' (Withdrawal) indicates an official withdrawal approved by the Registrar's Office. It is not assigned by the instructor. If a student wishes to withdraw from a course, an add/drop form must be submitted by the deadline in the Withdrawal Schedule.
- 'X' indicates the grade has not yet been submitted by the instructor.

No notation on an official report may be changed except to correct an error or replace an 'I' (Incomplete) grade.

Carey courses may not be audited.

Note: A cumulative GPA below 2.85 would make a student ineligible for graduation. Our Academic Advisors work with students whose GPA falls below this level to develop a plan to maintain good academic standing.

Grade Point Average

Both semester and cumulative grade point averages are noted on a student's academic record. To calculate grade point average (GPA), multiply the number of credits for each course by the quality points associated with the grades received in each course; add up quality points; then add up credits and divide quality points by the number of credits. The quality points used for all official grades at the Carey Business School are listed in the following table.

Grade	Quality Points
A	4.00
A-	3.70
B+	3.30
B	3.00
B-	2.70
C+	2.30
C	2.00
C-	1.70
D+[1]	1.30
D[1]	1.00
D-[1]	0.70
F	0.00

[1] 'D+, 'D', and 'D-' are not awarded at any level.

Grade Appeals

Students wishing to appeal a grade must contact their academic advisor within two weeks of the grade having been assigned by the instructor.

The student's academic advisor will guide the student through the appeal process. After consulting with the academic advisor and receiving a grade appeal form, students will have two weeks to file the grade appeal with the advisor. Appeals must be submitted no later than four weeks from the date the grade was assigned by the instructor. To be successful, a student must show that

1. there was a clerical error; or
2. that criteria different from those in the syllabus were used to award grades; or
3. the instructor used an arbitrary or inconsistent standard.

Examples of arbitrary standards could include differences in political or ethical positions of the instructor and student(s). The student must demonstrate that an accommodation was not reached with the instructor of record, and clearly delineate which appeal criteria are the basis of the petition.

If there is no successful resolution, the appeal will be forwarded to the Chair of the Grade Appeal Committee (GAC). The GAC will investigate and make a determination of the remedy, if warranted. The remedy will be communicated to the Vice Dean for Education, who will inform all parties of the decision.

A student may appeal the decision of GAC to the Dean of the Carey Business School. The dean's role in an appeal of a grade appeal decision is only to assess whether there were procedural errors or whether there is new information that was not considered by the committee that could have materially affected the decision. The Dean has final authority on the appropriate remedy.

Receiving Your Grades

Online: Currently enrolled students can access their semester grades and access/print an official grade report using sis.jhu.edu/sswf (http://sis.jhu.edu/sswf/).

Students who need additional assistance should contact the Office of the Registrar. (https://support.sis.jhu.edu/case/)

Incomplete Grades

An 'I' (Incomplete) grade is used when the instructor is not prepared to give a final grade for the course because of some justifiable delay in the student's completion of specific course work. Both the instructor and the student should complete the Incomplete Grade Contract and submit it to the Registrar's office within 5 business days of the last scheduled class meeting. A final grade is submitted to the Registrar's Office by the instructor after grading the student's completed work. All work must be completed and the final grade submitted within four weeks after the start of the following semester. In the event that the work is not completed within this time frame, a grade of 'F' replaces the 'I' on the student's transcript.

Repeating a Course

A graduate student may improve their cumulative GPA by repeating a maximum of three courses (not to exceed 6 credits) in which the student received a grade of C, C- or F. Although both courses will remain on the student's permanent record, the last grade received will be the grade used to determine credit toward a degree and GPA. The first and second attempt will be recorded with both the grade earned and the symbol R to denote it has been repeated. The repeat must be in the same course and must be taken at the Johns Hopkins Carey Business School.

The repeat will not change notations regarding academic standing or academic discipline in the student's official record for the semester containing the first or second attempt. No course can be repeated more than once.

Note: For federal financial aid recipients, students may only receive federal aid for repeating a course in which an F grade was received.

Graduation

Graduation

The Johns Hopkins University confers degrees at the end of the summer, fall, and spring semesters. The University Commencement and divisional graduation ceremonies are held in May. The Carey Business School also holds a graduation ceremony in August for summer graduates. The May graduation program will include the names of those students who applied to graduate by the deadlines for the 2022-2023 academic year.

A student who expects to receive more than one degree or certificate must complete a separate graduation application for each degree and/or certificate. Applicants are required to apply by the deadline and within the same academic semester they complete their degree requirements. The Graduation Application is available online using SIS (https://sis.jhu.edu/sswf/). Students in dual and joint degree/certificate programs must apply for graduation from both degree/certificate programs. Late applications for the spring semester may need to wait until the following academic year depending on the time the application is submitted. Students planning to graduate should complete all coursework before the semester ends and should not request or receive the grade of 'I' (Incomplete) during their final term.

Deadlines for Submitting the Graduation Application Form for Academic Year 2022-2023

Term	Date
August completion	June 10, 2022
December completion	September 16, 2022
May completion	February 17, 2023

Students who have submitted the Application for Graduation receive an automated application confirmation which is emailed to their JHU email address. Applicant names are placed on the tentative graduation list for the semester in which they anticipate completing their degree requirements. The graduation application is the first step of the degree audit process. To be eligible to graduate, all students must complete the requirements of their Academic Program of Study. For Master candidates, credits may be no older than 6 years; for Graduate Certificate candidates, credits may be no older than 3 years.

The Carey Business School Academic Board meets three times each year to review candidates for graduation. Students completing all requirements at the end of summer session are reviewed by the

Academic Board in August; those finishing at the end of the fall semester are reviewed in December; and those finishing at the end of spring semester are reviewed in May.

Graduation ceremony information is sent via JHU email in March for the May ceremonies. Information is sent in late June for the August ceremony. To receive their diplomas, students must pay all student accounts in full. Additionally, any outstanding charges of misconduct and violations of academic integrity must be settled before a diploma will be released. Johns Hopkins University diplomas indicate the degree (e.g., Master of Business Administration, Master of Science – Finance) without identifying the student's concentration. Students who apply on time and complete their studies will have their diplomas direct mailed, typically within 4-6 weeks after conferral.

Graduation Awards and Honors

Beta Gamma Sigma

Beta Gamma Sigma is the international honor society serving business programs accredited by AACSB International - The Association to Advance Collegiate Schools of Business. Membership in Beta Gamma Sigma is the highest recognition a business student anywhere in the world can receive in a business program accredited by AACSB International. Carey students in the top 20% of their class receive an invitation for membership.

Edward J. Stegman, CPA, Memorial Award

The Edward J. Stegman, CPA, Memorial Award for Excellence in Business Scholarship is named in memory of Edward J. Stegman, founder of Stegman & Company, who taught Business Economics and Accounting at Johns Hopkins University from 1928 until 1945.

Since 1975, over 430 high-achieving graduating students have earned this prestigious award. The Award is currently presented to graduating students with the highest GPA in the full-time MBA program, the full-time MS programs, and the part-time graduate programs.

Attendance Policy

Attendance Policy

Participation in lectures, discussions, and other activities is an essential part of the instructional process. Faculty members often include classroom participation and attendance in student grading and evaluation. Instructors will clearly communicate expectations and grading policy in the course syllabus.

Students are expected to attend class; those who are compelled to miss a class meetings must inform their instructors of the reasons for absences prior to the class meeting. For severe weather-related incidents, hospitalization, etc., a student should present documentation to their advisor to determine that the absence is qualified. The advisor in turn will then contact the instructor who will be responsible for working with the student to make-up any missed coursework.

Students who will miss a class meeting for a religious observance are expected to notify the course instructor and their academic program at the beginning of the term. The student is expected to work with the course instructor to make-up any missed coursework.

Students who expect to miss several class sessions for personal, professional, or other reasons are encouraged to meet with their academic advisors to consider alternative courses prior to registration.

Policies and Procedures for On-Site, Hybrid, and Remote-Live Classes

For information on policies and procedures for on-site, hybrid, and remote-live classes, please visit the policies and procedures website at: https://carey.jhu.edu/student-experience/school-policies/hybrid-classes-policies-and-procedures (https://carey.jhu.edu/student-experience/school-policies/hybrid-classes-policies-and-procedures/).

Carey Inclement Weather Information

In order to maintain the academic integrity of our programs, it is important that any class session that is missed due to weather, instructor illness or other emergency is made up, and that any missed material is covered. However, faculty members have considerable latitude over how the class sessions will be made up and have two options from which to choose.

They may:

- Plan and schedule a virtual class session
- Re-schedule the class period to a designated make-up day (Designated make-up days are scheduled at the end of each 8-week term or semester.)

Whenever a class session is cancelled, each faculty member may choose the appropriate make-up alternative for that particular class. The faculty member must notify the students in the class and the Office of Education about which option will be used to make up the class period.

This policy is designed to address those situations when a single class day has been cancelled. Weather emergencies or other events that result in multiple-day cancellations will be handled on a case-by-case basis. Please call the University Weather Emergency Line at 410-516-7781 or 1-800-548-9004 or visit jhu.edu/alert (https://jhu.edu/alert/) for more information.

Leave of Absence

Leave of Absence

A Leave of Absence (LOA) may be granted to Johns Hopkins Carey Business School students in appropriate circumstances following review of the student's application from the LOA Committee. Students may apply for up to one calendar year and a minimum of one semester of leave when medical conditions, compulsory military service, financial difficulty, or, personal or family hardships prevent them from continuing their graduate studies. To be approved for a LOA, students must complete the Application for Student Leave of Absence (https://forms.office.com/Pages/ResponsePage.aspx?id=OPSkn-axO0eAP4b4rt8N7MlTB5bqvK9Ajfcdvb-STBRURDYySTAyU1IySVJaQ0JUMkxWMEFBRzI0WS4u) and provide proper documentation. International students must submit the application prior to leaving the country to avoid any issues with their visa status.

Leaves should be timed, whenever possible, to come at the end of a term, preferably at the end of a full academic year. During the leave period, a student may not pursue any study at the University. Neither coursework completed at another institution of higher education, nor coursework completed at any division of Johns Hopkins, while on LOA may be used toward completion of the student's academic program requirements. The period of time that a student is on an approved LOA is not counted toward the time of completion of the requirements of their academic program of study. When on an approved LOA the student is not enrolled or registered for the period of leave and therefore is not permitted to use University services or facilities.

All students who are absent for more than one calendar year and who did not obtain an approved LOA will be required to apply for readmission through the Office of Admissions before being considered for re-enrollment. The duration of an unapproved absence is applied toward the maximum time students have to complete their degree requirements.

The Johns Hopkins Carey Business School also reserves the right to place a student on an Involuntary LOA in certain circumstances. Please see ***Involuntary Leave of Absence and Condition of Enrollment Policy*** below.

1. **Process for Requesting a Leave of Absence**
   To apply for a Leave of Absence (LOA), students must complete the Application for Student Leave of Absence (https://forms.office.com/Pages/ResponsePage.aspx?id=OPSkn-axO0eAP4b4rt8N7MlTB5bqvK9Ajfcdvb-STBRURDYySTAyU1IySVJaQ0JUMkxWMEFBRzI0WS4u). International students must ensure that they have discussed their plans with the Office of International Services (https://ois.jhu.edu/) and have obtained appropriate approval.

   Proper documentation addressing one of the permitted reasons a student would qualify for a LOA must accompany the application, as indicated below:
   - Medical Condition: a letter from a medical provider
   - Military Service: a letter or verification from the Armed Forces
   - Personal or Family Hardship: a personal letter
   - Financial Difficulty: a personal letter
     Students will be notified of a final decision by the Registrar's Office. It is highly recommended that students enrolled in the University's student health benefits plan contact the Student Services Office as early as possible to obtain information on how the LOA will affect their enrollment plan.

2. **Process for Returning from a Leave of Absence**
   When returning from a Leave of Absence, the student must complete the Reinstatement Application for Student Leave of Absence (https://forms.office.com/Pages/ResponsePage.aspx?id=OPSkn-axO0eAP4b4rt8N7MlTB5bqvK9Ajfcdvb-STBRUQ1hSTEpNNjZTN0VIU0IzSlBETVhVMzBONy4u) before being permitted to enroll or register for classes. The form must be accompanied by documentation (from one of the sources below) that explains what progress has taken place in the student's absence that would enable them to be successful upon return.
   - Medical Condition: a letter from a medical provider
   - Military Service: a letter or verification from the Armed Forces
   - Personal or Family Hardship: a personal letter
   - Financial Difficulty: a personal letter
     In addition, students applying to return to study should refer to the following timeline:

Semester of Return	Earliest Submission	Latest Submission
Fall 1 or 2	March 15	August 1
Intersession	October 15	December 1
Spring 1 or 2	October 15	January 1
Summer	March 15	May 1

     Students will be notified of a final decision by the Registrar's Office.
     If the student does not return to the academic program immediately after the approved leave ends, and they do not apply for an LOA extension, their student record is made inactive. LOA extensions will be reviewed and approved on a case-by-case basis.
     In order to return to academic work at a later time, the student must formally reapply for admission through the Office of Admissions.

3. **Leave of Absence Refund Policy**
   - If a LOA is approved before the start of a semester, a full refund is provided to the student's account.
   - If a LOA is approved after the first day of classes, the standard Refund Policy will apply to all courses dropped in the specified term (please see Refund Policy in Appendix D Schedules and Charts).
   - No other fees are eligible for refund.
   - To request an exception to the refund schedule, students must submit a General Petition Form (https://carey.jhu.edu/sites/default/files/2021-04/general-petition-form.pdf) to the Registrar's Office.
   - Petitions must be accompanied by documentation of the circumstances leading to the request. Students who experience severe medical conditions, compulsory military service, or personal or family hardships will be considered for 100% tuition refund. The Financial Aid Office is required by federal statute to recalculate federal financial aid eligibility for students who take a leave of absence prior to completing 60% of a payment period or term. Please review the policy (http://carey.jhu.edu/current-students/financial-aid/policies/title-iv-funds/) regarding federal aid (Title IV Funds).

4. **Appeal**
   The student may appeal the reinstatement decision in writing to the Vice Dean for Education within five (5) business days of the date of the notice of the decision. The student may not remain on campus during this time. The appeal may be filed on the sole grounds of:
   - New information is available
   - Incorrect facts were used to determine the decision
   - Procedural impropriety
     The student should provide documentation to support their appeal.

Involuntary Leave of Absence and Condition of Enrollment Policy

There are two types of Involuntary Leaves of Absence:

- Interruption to an Academic Program Plan
- Concerning Student Behavior and/or Communications

Interruption to an Academic Program Plan

Full-time MS students who drop or fail a course only offered in a particular term annually may experience an interruption in their academic program plan, if that course is a prerequisite to future courses. Students who drop or fail required prerequisite courses may be placed on an Involuntary Leave of Absence until the prerequisite course is offered the following year. Graduation date will be affected. International students will need to contact the Office of International Services to determine visa and travel consequences on leave.

Concerning Student Behavior and/or Communications

The University is committed to fostering a learning environment that supports students throughout their time at the University and at the Carey Business School. This policy is not intended to be disciplinary in nature, and is designed to allow the University to respond to certain student behavior and/or communications of concern.

Occasionally, students may experience a disruption in their academic journey due to physical, mental or emotional health difficulties that may necessitate a Leave of Absence. If a student declines to take a Leave of Absence voluntarily, the Involuntary LOA Committee may nevertheless convene and determine if a mandatory Involuntary LOA should be invoked.

The Involuntary LOA Committee has the authority to place a student on an Involuntary Leave of Absence based on behavior and/or communication that the Involuntary LOA Committee reasonably believes:

- May harm or threatens harm to the health or safety of the student or others;
- May cause or threatens to cause significant damage to the property or resources of the University;
- Evidences chronic and/or serious drug or alcohol abuse; and or
- Disrupts the functioning of the University community.

If a student with a disability known to the University exhibits the above behavior or communication, before placing the student on a mandatory leave of absence, the University will do an individualized assessment to determine if there are reasonable accommodations that would permit the student to continue their academic journey at Carey without taking a LOA.

The Executive Director of the Student Affairs Office (or designee) will call upon the Involuntary LOA Committee to review the request. The Involuntary LOA Committee will include, as needed, the Sr. Director for Academics, the Registrar, and/or other Johns Hopkins representatives such as a Johns Hopkins Student Assistance Program (JHSAP) representative (or designees), and be chaired by the Executive Director of Student Affairs (or designee). The Involuntary LOA Committee could consult with the Office of General Council (OGC) as needed.

1. **Involuntary Leave of Absence Procedure**

   When the Involuntary LOA Committee becomes aware, by whatever means, of the potential need for action, the following procedures may be initiated:

   a. The Involuntary LOA Committee will contact the student and describe the issues of concern. If this discussion alleviates concerns appropriately, no further action is needed. Alternatively, procedures outlined below may also be initiated.

   b. The Involuntary LOA Committee may mandate a mental health or physical evaluation of the student. After consulting with others charged with oversight of the student's academic program and the Director of the Student Assistance Program, the Involuntary LOA Committee may take one of the following actions:
      - Permit the student to remain at the University, and specify the conditions under which the student is allowed to remain at the University.
      - If a Leave of Absence is indicated, and the student is in agreement and willing to take a Leave of Absence, the Involuntary LOA Committee will provide the student with written notification outlining the steps required for re-entry into the academic program and also noting other pertinent information regarding the student's status while on leave.
      - If a Leave of Absence is indicated and the student is not willing to take a Leave of Absence, the student may be placed on an Involuntary Leave of Absence.

   c. In urgent situations, the Involuntary LOA Committee may initiate an Involuntary Leave of Absence immediately.

2. **Process for Returning from an Involuntary Leave of Absence**

   A student seeking reinstatement after an Involuntary Leave of Absence, due to concerning Student Behavior and/or communications, will undergo a "fitness for return" evaluation by the Johns Hopkins Student Assistance Program (JHSAP) and/or the appropriate health service (University or Occupational Health Services). The Involuntary LOA Committee will review all relevant documents and recommendations to determine the student's readiness for reinstatement. The Involuntary LOA Committee may impose conditions under which the student will be allowed to return to and remain at the University (as described in Section 1B). The Involuntary LOA Committee will provide written notice to the student of such conditions and will notify the student as to the decision regarding reinstatement. If a student is cleared for reinstatement, the student's Academic Advisor will work with the student to ensure a smooth return.

   A student seeking reinstatement after an Involuntary Leave of Absence due to Academic Program interruption, will follow the same procedures to **Return from a Leave of Absence** as outlined above.

3. **Appealing Denial of Reinstatement**

   In the event that a student's request for reinstatement is denied on grounds of health or safety, the student may appeal the reinstatement decision in writing to the Vice Dean for Education within five (5) business days of the date of the notice of the decision. The student may not remain on campus during this time. The appeal may be filed on the sole grounds of:
   - New information is available
   - Incorrect facts were used to determine the decision
   - Procedural impropriety
     The student should provide documentation to support their appeal.

4. **Confidentiality**
   All records related to student leaves of absence and conditions placed on continuing enrollment will be maintained in accordance with applicable law and policy.

Registration

Registration

The Registrar's Office is available Monday through Friday, 8:30 a.m. - 4:30 p.m. Students may register using one of two convenient methods:

- **Online via SIS:** Online registration is available via SIS self-service (http://sis.jhu.edu/sswf/) to students who are fully admitted and current in their program of study. During registration periods, SIS is available 24 hours a day, 7 days a week.
- **Online Add/Drop Form:** The SEAM's online form (https://support.sis.jhu.edu/case/) may be completed online. When submitted, this form is sent directly to the Registration Team for review and processing when registration in SIS is not available.

Registration Policies

Students are encouraged to register as early as possible during each registration period because a section may close before the end of registration. Please note that all outstanding debts to Johns Hopkins University must be paid in full in order to register for the following semester.

Students may not attend a class without being officially registered for that class. Auditing is not allowed at the Carey Business School.

Students may only register for classes during terms in which they have been formally admitted.

Online courses are typically reserved for students admitted to online programs or programs that require a combination of online and onsite coursework.

Course Schedule

The course schedule is available online (http://sis.jhu.edu/classes/). *Course information posted to this website is subject to change without advanced notice.*

Adding a Course

A student wishing to add a course must do so by the end of the first week of the session. Students may add courses by using one of the registration options mentioned above. It is the responsibility of the student to be aware of the Registration and Refund Deadlines. (https://carey.jhu.edu/student-experience/services-resources/registrar/course-add-drop/) Online add/drop forms must be submitted with sufficient business time for processing prior to the start of the second week of the session.

Waitlists

Students attempting to register for a course that is full (is at its enrollment limit), may be placed on the waitlist by going to SIS self-service. (http://sis.jhu.edu/sswf/) Please note that students may be placed on the waitlist for only one section of a particular course. Students will be contacted via their JHU email address only if an opening occurs prior to the first class meeting of the course. Waitlisting for a course is not an official registration; therefore, no payment is required until a seat in the class is confirmed. Students may not attend classes for sections in which they are waitlisted.

When a seat becomes available in a course that has a waitlist, an email is sent out to waitlisted students' JHU email addresses for however many seats are open. Waitlists do not operate in real time. These emails are sent out each morning Monday-Friday, when applicable. Waitlists do not operate over the weekend.

Dropping a Course

Students may drop a course without financial penalty during the first week of the session via SIS self-service (see Registration and Refund Deadlines (https://carey.jhu.edu/student-experience/services-resources/registrar/course-add-drop/) for exact dates). After the first week of the session, students who drop a course receive a pro-rated tuition refund in accordance with the Registration and Refund Deadlines (https://carey.jhu.edu/student-experience/services-resources/registrar/course-add-drop/) for the session. Tuition refunds are calculated from the date of receipt of the add/drop form in the Registrar's Office. Students dropping a course after the first class meeting should notify the instructor of their decision.

Note: Financial aid recipients will have their aid award adjusted according to credits registered.

Students dropping to less than half-time status may have their aid canceled and will be responsible for any debit balance created. Students using VA benefits should contact the VA Certifying Official in the Registrar's Office when adding or dropping a course

Withdrawing from a Course

To withdraw from a course, students must submit a withdrawal request using the SEAM's online form (https://support.sis.jhu.edu/case/). Students may not withdraw from courses using SIS. Notice to the instructor of intent to withdraw is not sufficient, nor are telephone withdrawals accepted. The last date to withdraw from a class without academic penalty (without receiving the grade of F) is published by the Registrar's Office under the Registration Deadlines (https://carey.jhu.edu/student-experience/services-resources/registrar/course-add-drop/). Students who withdraw after the deadline or stop attending class at any time without properly submitting an official add/drop form receive an 'F' (Failure) for the course. Tuition refunds are calculated from the date of receipt of the add/drop form in the Registrar's Office. International students on an F-1 visa are advised to contact the Office of International Services before withdrawing from or dropping a course.

Note: Federal aid recipients who withdraw from all coursework in a semester may have aid returned to the federal government according to federal "Return of Title IV funds" regulations, a copy of which can be obtained from the Office of Financial Aid. Aid recipients who withdraw from some courses in the semester but not all their courses may have their aid awards adjusted to the reduced cost of attendance. Students who drop to less than half-time status prior to beginning the class may have their federal aid canceled, even if some portions have already been refunded to them for living expenses. Students will receive a bill from the school for the balance due. Withdrawing from classes may also impact future aid eligibility. Financial Aid recipients are advised to consult with their academic advisor and the financial aid staff prior to withdrawing from classes. Students using VA benefits should contact the VA Certifying Official immediately.

Course Load

Full-time students may not enroll in more than 16 credits total per semester.

Part-time students may not enroll in more than 10 credits total per semester, unless approved by an academic advisor.

For Graduate Level Students (Fall and Spring Semesters)

- Not registered – 0 credits
- Less than ½-time – 1 to 4 credits
- Half-time – 5 to 6 credits
- ¾-time – 7 to 8 credits
- Full-time – 9 or more credits

For Graduate Level Students (Summer Only)

- Not registered – 0 credits
- Less than ½-time – 1 to 2 credits
- Half-time – 3 to 4 credits
- ¾-time – 5 credits
- Full-time – 6 or more credits

Independent Study Requests

Matriculated students who wish to study a topic or area not represented in the curriculum may complete an independent study request form. Students may only complete an independent project on a topic that does not duplicate either a course offered at Carey, or coursework transferred from another college or university.

Students must request guidelines and proposal forms from their academic advisor and may not register for the independent study until their proposals are approved in writing by their academic advisor, faculty sponsor, and academic program director. Proposal forms must be submitted by the following deadlines:

- April 1st for Summer semester,
- May 1st for Fall semester,
- November 1st for Spring semester.

Students may not take more than one independent study.

Interdivisional Registration

During the fall and spring terms, degree-seeking graduate students at the Carey Business School may register for courses in another school at Johns Hopkins by submitting a request using the SEAM's online form (https://support.sis.jhu.edu/case/). Students admitted to full-time programs may enroll in courses at other divisions without additional tuition charges during fall and spring semesters, but will be responsible for any additional fees. Students admitted to part-time programs pay the per-credit tuition rate of the school offering the course and any additional fees required.

Students from other divisions in the university may request to enroll in courses offered by the Carey Business School by submitting their registration request via the SEAM's online form (https://support.sis.jhu.edu/case/), including any necessary permission from their academic advisor or the appropriate school program director or advisor. Courses must be taken for a grade. Carey Business School students have priority in registering for Carey Business School courses. Students from other JHU divisions who request to take Carey courses will have their enrollments processed at least 2 weeks prior to the start of the session. All interdivisional students must abide by these policies, procedures, and deadlines. All published prerequisites for the course must be met prior to enrollment.

Undergraduate students from other divisions in the university are not allowed to enroll in graduate-level courses at the Carey Business School.

During the summer session, students do not follow the interdivisional registration procedures noted above. Students from other Johns Hopkins divisions in full-time programs that are not in session who want to enroll in Carey Business School summer courses have to be admitted as a Carey non-degree seeking student. Those students should then follow the registration procedures outlined in the Registration section. For more information, contact the Registrar's Office (https://support.sis.jhu.edu/case/).

Interdivisional registration is not available during the summer for Carey Business School Students. Carey students who would like to take classes at other Johns Hopkins divisions during the summer should contact the Registrar's Office of the other division to confirm enrollment requirements. Students will be responsible for the tuition and fees for summer interdivisional courses.

Note: Financial Aid recipients and students using VA benefits should inform the Office of Financial Aid of any interdivisional registration.

Refunds

Part-Time Students

Students who officially withdraw during an academic term will receive tuition refunds based on the Refund Deadlines (https://carey.jhu.edu/student-experience/services-resources/registrar/course-add-drop/) provided below. Refunds apply only to the tuition portion of a student's charges and are calculated from the date that the school receives an official add/drop form.

Federal aid recipients who withdraw from all coursework may have aid returned to the federal government according to federal "Return of Title IV funds" regulations.

Those partially withdrawing may have their aid awards adjusted to the reduced cost of attendance. Students who drop to less than half-time prior to commencing the courses that require half-time attendance will have their federal aid canceled, even if some portions have already been refunded to them for living expenses. Students receive a bill from the school for any remaining balance due.

If a course is canceled by the school, the tuition is refunded in full. All other refunds approved in the Registrar's Office will be in accordance with the refund schedule. A refund may take 4 to 6 weeks to process. Students will receive refunds according to their original method of payment.

Full-Time Students

Students who officially withdraw prior to an academic term will receive a full tuition refund, excluding Health Insurance and other non-refundable fees.

A full-time student who is academically suspended, receives an honor code violation, and/or is required to leave Carey for a semester or permanently, will not receive a refund for tuition charged at the time of the suspension or departure. A prorated portion of the tuition will be applied to future semesters based on the refund schedule for academically suspended students. If a student fails to return or is dismissed permanently, no refund will be given. In instances where a student is receiving federal financial aid, the aid will be recalculated and refunded to the federal government. The student is still responsible for the entirety of the tuition.

In order to receive the degree for the full-time student's program of study, the student must pay the entire published cost of the tuition, regardless of the number of terms needed to complete the degree.

Exceptions to the Refund Policy: Students who experience events beyond their control may request an exception to the course refund policy by submitting a General Petition Form (https://carey.jhu.edu/sites/default/files/2021-04/general-petition-form.pdf) to the Registrar's Office. Petitions must be submitted in the same semester in which the course was taken and must be accompanied by documentation of the circumstances leading to the request. Students who experience severe medical problems, a death in their immediate family, or who are called into active military duty may receive a 100% refund. Other requests will be reviewed on a case-by-case basis, and refund amounts (if awarded) will be decided by the Registrar. Petitions are reviewed monthly, and notification of the final decision is sent to the student by email.

Student Accounts

Student Accounts

For general inquiries about student accounts, specifically receipt of payments, refunds, online tuition payments, financial holds, 1098-T forms, collections, company billing, and more, please call the Student Accounts Office (SAO) at 410-234-4755 or request support through SEAM's online form (https://support.sis.jhu.edu/case/).

There are multiple tuition payment options. Follow the guidelines to ensure that your tuition is received and any financial aid refunds are disbursed.

Tuition Payments and Penalties

Students with approved financial aid should elect to be electronically billed and will be responsible for any charges not covered by their award. Students enrolled in a Johns Hopkins Carey Business School program should see Schedule A (https://carey.jhu.edu/student-experience/services-resources/student-accounts/schedule-a/) for billing periods and a payment due date. A late payment fee of $250 will be assessed if payment is not received by the due date. Students who choose the monthly payment plan may use Schedule B (https://carey.jhu.edu/student-experience/services-resources/student-accounts/schedule-b/) as a payment guide.

Students with outstanding balances will receive financial holds. A financial hold prohibits students from registering for future courses and receiving services until the balance is paid in full. Students with a financial hold may also be prohibited from participating in Carey-sponsored events, activities, or excursions. Payments from students seeking to register may be kept and applied against prior obligations to the university. Delinquent accounts turned over to the collection agency may be assessed a penalty fee, in addition to the outstanding debt.

Tuition Payment Options

For students in full-time programs:

- Pay online with an electronic check
- Pay with a check by mail
- Pay with a sponsor or employer contract
- Pay via wire transfer
- *Enroll in the Nelnet/Tuition Management Systems (TMS) monthly payment plan

For students in part-time programs:

- Pay online with an electronic check
- Pay with a check by mail
- Pay with a sponsor or employer contract
- Pay by Johns Hopkins University tuition remission (available to University employees and only covers tuition)
- Pay via wire transfer
- *Enroll in the Nelnet/Tuition Management Systems (TMS) monthly payment plan

Payment options are subject to change

Pay your bill electronically

Students are required to have a current Johns Hopkins University email address and a valid Johns Hopkins Enterprise Directory. Notification of outstanding tuition balances will be sent electronically to your Johns Hopkins email account.

Billing statements are emailed the second Wednesday of each month if activity has occurred since the last billing cycle. Students are required to make payment upon notification of this bill or if there is an outstanding balance. Balances not paid by the due date will be assessed a $250 late payment fee. Paper statements are no longer mailed to students.

In order to ensure receipt of your bill, you should update your email address in SIS. For our current billing periods and due dates, seeSchedule A.

Pay your account online

The fastest way to have your tuition payment credited to your student account is to pay via SIS Self Service. To make payments online or view your student account, go to https://sis.jhu.edu/sswf/. #Full-time and part-time students can only use the electronic check option when paying their tuition online.

If you submit a paper or electronic Automatic Clearing House check that is returned by the bank, you will be charged a $35 returned check fee, placed on financial hold, and may be removed from courses for which you are currently registered. Grades, transcripts, and diplomas may be withheld, and you will be prevented from registering for future courses until payment is secured.

Pay with a check, by mail, or in person

Checks for tuition and fees should be made payable to Johns Hopkins University and should reference the student's Hopkins/Person ID. Payments can be mailed to the Student Accounts Shared Services Team:

JHU Third Party Payer & Payment Processing Team (TPP Team)
Johns Hopkins University Garland Hall
B33 3400 N. Charles Street
Baltimore, MD 21218

Paying by check authorizes the school to electronically debit your account. Once the transaction has been completed, the actual check will be destroyed, and checks will not be returned.

If you submit a paper or electronic ACH check that is returned by the bank, you will be charged a $35 returned check fee, placed on financial hold, and may be removed from courses for which you are currently registered. Grades, transcripts and diplomas, and any other services may be withheld, and you will be prevented from registering for future courses until payment is secured. Payments from students seeking to register may be kept and applied against prior obligations to the university.

Make monthly payments

Full-time and part-time students have the option to defer tuition by enrolling in the monthly payment plan. To enroll, contact Nelnet/Tuition Management Systems (TMS) by phone at 1-800-722-4867#or visit their website at careyjhu.afford.com to sign up online.

Payment plans are semester-specific and cannot be used to pay past due balances from previous semesters. Book charges cannot be included in the payment plan.

To enroll in the payment plan, students should have their Hopkins ID and the full amount of tuition, fees, and healthcare insurance premium (if applicable) ready. Intersession courses can be included in the spring semester payment plan. Students must acknowledge the payment options and associated fees. There is an enrollment fee of $55 per semester. *Please note: these fees are not determined or collected by JHU.*

If payment has not been made in accordance with the payment schedule, TMS has the right to assess a $40 late payment fee and/or terminate the agreement.

In addition, if a student is no longer eligible to participate in the monthly payment plan, a $75 termination fee will be charged to the student account by SAO and the student will not be allowed to receive any future services until the account is paid in full.

Employer/sponsor contract

Students with outside organizations sponsoring their tuition and fees are required to submit official documentation and complete a brief acknowledgement section in SIS Self-Service.#Johns Hopkins University Third Party Payer coordinates the sponsor billing process. The TPP team prepares and sends invoices for qualified tuition and manages all correspondence regarding sponsor contracts.

For detailed instructions and information,visit the TPP#website. This website includes information on how to upload the required documentation, FAQs, and contact information for the Johns Hopkins Third Party Payer team.

Johns Hopkins tuition remission

If you are a Johns Hopkins University employee participating in the tuition remission benefit plan:

Tuition remission covers tuition costs for part-time courses only. Fees are not covered.

A completed tuition remission application for each course must be submitted to the Office of Student Accounts. Please upload your application(s) via our SEAM's online form.

If the remission does not cover the entire cost of tuition, you are required to pay the remaining balance at the time of registration. You can select the monthly payment plan to pay for tuition not covered by the tuition remission benefit or choose to be electronically billed.

You can visit thetuition remission section#of the Johns Hopkins Benefits Site for your remission application and other important remission information.

Wire transfer

Please be sure to include your student ID number and/or other identifying information with the wire transfer. Once the wire transfer is completed, notify the Office of Student Accounts.

International students may choose to wire payment information directly to Johns Hopkins University or use our service with Western Union. Information for both options is provided below:

International Wire Transfers - Western Union for International Payments

Johns Hopkins University partners with Western Union Business Solutions to process wire payments from international students. This payment option allows students to pay the university their student account balance in the currency of their choice and provides a simple and secure method for initiating payments electronically. We encourage all international students to choose this cost effective and efficient method of payment.

Begin the wire transfer process#or log on to your SIS Self-Service account.#Go to the billing tab and select "Summary or Statements." The "Pay by International Wire Transfer" link is one of your payment options.

OR

If you are a student or sponsor who would like to wire tuition payments:

Please be sure to include your student ID number or other identifying information with the wire transfer. After the wire transfer is completed, please notify the Student Accounts Office of your payment amount and date of remittance.

Refunds

Tuition refund from dropped or cancelled courses

Students who become eligible to receive a refund as a result of a dropped or cancelled course will be issued a refund to the original method payment. The following exceptions apply:

- Wire transfer or Western Union payments will be refunded in the form of a check, unless otherwise requested.
- Institutional aid awards will be evaluated accordingly for dropped or cancelled courses.
- Financial aid awards will be evaluated for a student refund according to financial aid eligibility requirements.
- Johns Hopkins employee tuition remission will receive a remission benefit reversal of 100 percent. Tuition remission does not cover tuition costs from courses not completed. Please see theBenefits Office#for more information.

Financial aid refund

Once all tuition and fees have been covered by financial aid, students are eligible to receive a refund of the excess aid that remains on their account. If you do not wish to receive a refund, please contact the Student Accounts Office or Financial Aid to discuss your options throughSEAM's online form. Otherwise, the credit balance will be sent to BankMobile#and refunded to you according to your selected refund preference.

Expect to receive a Refund Selection Kit from BankMobile via U.S. mail. You will also receive an email which will be sent to the email address on record with the school. If your address is#not in the U.S., you will not receive a kit. All students, please be sure to review and update your address in SIS. This can be done by logging intoSIS Self-Service. For more information about BankMobile, visit this link: http://bankmobiledisbursements.com/refundchoicessso/

Financial aid

Financial aid at the Carey Business School refers to a broad range of scholarship, grant, and loan programs. When students apply for financial aid, they are generally applying for all of the potential programs for which they might be eligible. Based on the eligibility guidelines for each program, available funding, and the student's own financial resources, students will be offered one or more types of aid. The basic premise behind financial aid is that students (and their families where applicable) are responsible for paying for college costs to the extent that they are able. Financial aid supplements each student's own financial resources.

Learn more about financial aid .

Transfer of Graduate Credit

Transfer of Graduate Credit

The transfer without replacement policy applies to all part-time programs.

The maximum number of credits earned at another accredited college or university, or at another school within Johns Hopkins University, that may be transferred without replacement into a graduate degree program in the Carey Business School in no case can exceed six credits. Any request for transfer credit must be submitted within the first semester. Coursework must be completed within the last 5 years and the student must have a "B+" or better in the completed coursework. Faculty Course Leads make the final decision on course equivalencies, but student should start the process with their academic advisor.

A maximum of 6 credits may be transferred and the combination of transfer credits and course waivers may not exceed 10 credits. The Waiver Exam policy is separate from the Transfer of Graduate Credit policy.

Waiver Exams

Waiver Exams

The Carey Business School anticipates that students will complete all required coursework and credits needed for completion of the degree (or certificate) at Johns Hopkins University. Part-time students who enter Carey with professional work experience and prior completed course work at the undergraduate level in the following areas: **Statistical Analysis** or **Accounting & Financial Reporting** may request a course waiver.

Part-time students seeking a course waiver must have a B+ or better in the undergraduate course and pass a waiver exam offered at the Carey Business School within the first semester of study at Carey. A maximum of 4 credits may be waived with the aforementioned criteria. Students who seek to take a waiver exam must notify their academic advisor. All determinations regarding the grade for the exam (pass or fail) are final and not eligible for appeal. Students who pass the waiver examination must complete the equivalent number of credits in an advanced course. This policy is separate from the ***Transfer of Credit*** policy.

If a student has completed a professional exam (CPA, CFA, et cetera), please consult with the assigned Academic Advisor to receive more information regarding waiver with replacement.

Eligibility, Exam Format and Student Preparation

Waiver exams are available to part-time students only. Students have the option of either completing the courses or waiving the course by passing the waiver exam. Waiver exams may be taken only once.

For more information, students should contact their academic advisor for assistance through the process.

Registering and Scheduling an Exam

Waiver exams are administered in an online Learning Management System format three times a year—in January, May and in August. Students must complete registration three weeks prior to the start of the semester and will have one week to complete the exam.

To register, students must submit an Add/Drop form to their academic advisor, and submit a payment of $100 (fee subject to change without notice) per exam. Any questions pertaining to registration for waiver exams should be directed to the Academic Advising Office at 410-234-9320. Students who are paying with JHU tuition remission should contact their Human Resources Office for clarification regarding the pass/fail policy.

Please note the following:

- Waiver exams are to be taken prior to the semester in which registration occurs.

- Waiver exam course sites are available for a full week, three weeks before the start of the semester.
- Waiver exams are administered through the online Learning Management System format.
- Students must complete the New Student Orientation (NSO) before receiving access to the waiver exam Learning Management System site.
- Registration for waiver exams does not carry over to the next semester. Semesters are defined as: May (summer), August (fall) and January (spring).

Non-Degree Programs

Courses

PY.410.419. Orchestral Repertoire - Trombone. 1 Credit.
The development of orchestral skills through low brass sectionals; performance in trombone choir, departmental recitals, and mock orchestral auditions.
Brass majors only

PY.410.420. Orchestral Repertoire - Trombone. 1 Credit.
The development of orchestral skills through low brass sectionals; performance in trombone choir, departmental recitals, and mock orchestral auditions.
Brass majors only

PY.410.453. Orchestral Repertoire - Horn. 1 Credit.
Open to all horn students who wish to experience a variety of performing situations involving solo and orchestral repertoire. Includes a class recital and mock audition each semester.
Brass majors only

PY.410.454. Orchestral Repertoire - Horn. 1 Credit.
Open to all horn students who wish to experience a variety of performing situations involving solo and orchestral repertoire. Includes a class recital and mock audition each semester.
Brass majors only

PY.410.457. Orchestral Repertoire - Trumpet. 1 Credit.
Open to all trumpet students who wish to experience a variety of performing situations involving solo and orchestral repertoire.
Brass majors only

PY.410.458. Orchestral Repertoire - Trumpet. 1 Credit.
Open to all trumpet students who wish to experience a variety of performing situations involving solo and orchestral repertoire.
Brass majors only

PY.410.459. Respiratory Function - Brass. 1 Credit.
Basic techniques of breathing and breath control for brass instruments tailored to the student's instrument with a goal of enhancing one's use of air and efficiency to improve performances. Consists of five private one-hour lessons during the semester. Enrollment is limited to three students per semester.
Brass or Woodwind majors only

PY.410.547. Brass Ensemble (UG). 1 Credit.
Performance of large brass ensemble repertoire and British-style brass band repertoire; rehearsal of important orchestral literature for brass.

PY.410.548. Brass Ensemble (UG). 1 Credit.
Performance of large brass ensemble repertoire and British-style brass band repertoire; rehearsal of important orchestral literature for brass

PY.410.847. Brass Ensemble (GR). 1 Credit.
Performance of large brass ensemble repertoire and British-style brass band repertoire; rehearsal of important orchestral literature for brass.

PY.410.848. Brass Ensemble (GR). 1 Credit.
Performance of large brass ensemble repertoire and British-style brass band repertoire; rehearsal of important orchestral literature for brass

PY.310.411. Junior Bach Program. 0.5 - 3 Credits.
Weekly, one-on-one lessons in composition for middle-school students from the St. Ignatius Loyola Academy and Baltimore Leadership School for Young Women. The course culminates in a concert of new student works at the end of each semester.
Open to Composition Majors and those with instructor permission. Non-Composition majors should email the instructor's permission to peabodyregistrar@jhu.edu to be registered.

PY.310.513. Composers of the AACM. 1 Credit.

PY.310.515. Music Now. 2 Credits.
An elective designed to familiarize students with composers, ensembles, and ideas associated with early 21st century music.

PY.310.516. Music Now. 2 Credits.
An elective designed to familiarize students with composers, ensembles, and ideas associated with early 21st century music.

PY.310.545. Composition Seminar (UG). 1 Credit.
Informal sessions in which works of students and faculty are discussed and important contemporary works, trends and techniques are analyzed. Required for composition majors. Open to others with permission of chair of department.
Composition majors only. Non-majors interested in auditing the course should email department chair approval to peabodyregsitrar@jhu.edu.

PY.310.546. Composition Seminar (UG). 1 Credit.
Informal sessions in which works of students and faculty are discussed and important contemporary works, trends and techniques are analyzed. Required for composition majors. Open to others with permission of chair of department.
Composition majors only. Non-majors interested in auditing the course should email department chair approval to peabodyregsitrar@jhu.edu.

PY.310.691. Composition Portfolio MM. 2 Credits.
The completion of works of major proportions, for full orchestra and chamber ensemble, as required in the Master of Music degree program. Graded on a S/U basis.
Composition majors only.

PY.310.793. Compositions/Commentary. 6 Credits.
The completion of works of major proportions, for full orchestra and chamber ensemble, accompanied by a substantial written commentary, as required in the Doctor of Musical Arts degree program.
Composition majors only.

PY.310.845. Composition Seminar (GR). 1 Credit.
Informal sessions in which works of students and faculty are discussed and important contemporary works, trends and techniques are analyzed. Required for composition majors. Open to others with permission of chair of department.
Composition majors only. Non-majors interested in auditing the course should email department chair approval to peabodyregsitrar@jhu.edu.

PY.310.846. Composition Seminar (GR). 1 Credit.
Informal sessions in which works of students and faculty are discussed and important contemporary works, trends and techniques are analyzed. Required for composition majors. Open to others with permission of chair of department.
Composition majors only. Non-majors interested in auditing the course should email department chair approval to peabodyregsitrar@jhu.edu.

PY.350.409. Hip Hop Music Production 1. 2 Credits.
A history and workshop course designed to illuminate the history of Hip Hop music.

PY.350.410. Hip Hop Music Production 2. 2 Credits.
Conceived as a follow-up class to "Hip Hop Music Production: History and Practice 1", this course is designed to further explore production styles and techniques of prominent as well as lesser known producers, and to provide students with opportunities to build on production skills learned in "Hip Hop Music Production: History and Practice 1". Students will have the opportunity to produce hip hop in a number of different styles, as well as to learn mixing and mastering techniques used to bring a recording project to completion.
Completion of Hip Hop Music Production 1 needed, PY.350.409[C].

PY.350.463. Introduction to Computer Music. 3 Credits.
A study of the techniques, repertoire, and aesthetics of computer music. Composition and research projects are completed using the resources of the Computer Music Studios. Participation in at least one public program.

PY.350.464. Introduction to Computer Music 2. 3 Credits.
A study of the techniques, repertoire, and aesthetics of computer music. Composition and research projects are completed using the resources of the Computer Music Studios. Participation in at least one public program.
Completion of Introduction to Computer Music 1 needed, PY.350.463[C].

PY.350.465. Introduction to Web Design. 3 Credits.
Designed for music students with limited computer experience, this course will provide the skill and awareness to use the computer, the World Wide Web and Internet technologies to support your musical career from the classroom to the concert stage. (May be used for general and music electives.)

PY.350.466. Introduction to Programming. 3 Credits.
This course is designed for musicians and digital artists who wish to learn Multimedia Programming. We will use the Python programming language to examine techniques and algorithms to manipulate sounds, images, movies, text and web pages. Also, we will learn to acquire and use related open-source programs and libraries to simplify our work. No previous programming experience is required.

PY.350.545. Computer Music Seminar (UG). 1 Credit.
The seminar focuses on the work of student and faculty composers, with class discussion of on current developments in the field of computer music. Required for computer music majors. Open to others with permission of the faculty.
Computer Music majors only. Non-majors interested in auditing the course should email department chair approval to peabodyregsitrar@jhu.edu.

PY.350.546. Computer Music Seminar (UG). 1 Credit.
The seminar focuses on the work of student and faculty composers, with class discussion of on current developments in the field of computer music. Required for computer music majors. Open to others with permission of the faculty.
Computer Music majors only. Non-majors interested in auditing the course should email department chair approval to peabodyregsitrar@jhu.edu.

PY.350.691. Master's Thesis. 2 Credits.
A scholarly work describing the author's research activities as required for the Research track of the MM program in Computer Music.
Computer Music majors only.;Completion of or co-enrollment in Research Practicum required, PY.350.842[C].

PY.350.693. Portfolio. 2 Credits.
The completion and submission of works of major proportions that utilize computer technology as required by the Master of Music degree program in Computer Music. The compositions must be written during your tenure at Peabody and be approved by your major teacher and departmental faculty. Graded on a S/U basis.
Computer Music - Composition Track majors only.

PY.350.835. Studio Techniques. 3 Credits.
A course that covers advanced computer music studio techniques, including advanced use of MIDI, analog and digital synthesizer programming, sample editing and processing, Time Code and synchronization, and recording and production techniques. Prerequisite: Introduction to Computer Music or equivalent.
Computer Music majors only.;Completion of Introduction to Computer Music 2 required, PY.350.464[C].

PY.350.837. Digital Music Programming 1. 3 Credits.
This course teaches computer programming theory and skills pertaining to computer music composition, performance, and research. The primary focus of the course is the Max/MSP/Jitter suite of programming tools. Prerequisites: Introduction to Computer Music; Studio Techniques, or equivalent.
Prerequisite(s): Students must co-register in Synthesis Theory 1, PY.350.867[C].
Completion of Introduction to Computer Music required, PY.350.464[C].

PY.350.838. Digital Music Programming 2. 2 Credits.
The purpose of Digital Music Programming II combined with Synthesis Theory II is to learn to implement Digital Audio Signal Processing theories and techniques in various programming environments suited to musical composition, performance and research. In particular, we will study SuperCollider, Pd, Processing, Arduino programming, and reading realtime interfaces. Prerequisites: Synthesis Theory I and Digital Music Programming I. Corequisite: Synthesis Theory II.
Prerequisite(s): Students must co-register in Synthesis Theory 2, PY.350.868[C].
Completion of Digital Music Programming 1 required, PY.350.837[C].

PY.350.840. History of Electroacoustic Music. 3 Credits.
The History of Electroacoustic Music is an overview of the development of electroacoustic music in the twentieth century. Intended for the student with little or no knowledge of this field's history and literature, the course is designed to provide a general familiarity with the major trends and developments as well as to allow for more detailed study on topics of particular interest to the class.
Computer Music majors only.

PY.350.841. Research Practicum. 4 Credits.
An intensive course for those following the computer music research/technology track. Substantial individual projects will be pursued. Enrollment by permission of the instructor.
Computer Music - Research Track majors only. Non-Research Track Computer Music majors may take course with department approval.

PY.350.842. Research Practicum. 4 Credits.
An intensive course for those following the computer music research/technology track. Substantial individual projects will be pursued. Enrollment by permission of the instructor.
Computer Music - Research Track majors only. Non-Research Track Computer Music majors may take course with department approval.;Completion of previous semester required, PY.350.841[C].

PY.350.845. Computer Music Seminar (GR). 1 Credit.
The seminar focuses on the work of student and faculty composers, with class discussion of on current developments in the field of computer music. Required for computer music majors. Open to others with permission of the faculty.
Computer Music majors only. Non-majors interested in auditing the course should email department chair approval to peabodyregsitrar@jhu.edu.

PY.350.846. Computer Music Seminar (GR). 1 Credit.
The seminar focuses on the work of student and faculty composers, with class discussion of on current developments in the field of computer music. Required for computer music majors. Open to others with permission of the faculty.
Computer Music majors only. Non-majors interested in auditing the course should email department chair approval to peabodyregsitrar@jhu.edu.

PY.350.867. Synthesis Theory 1. 2 Credits.
This course examines digital signal processing techniques as applied to computer music applications. A primary focus is on the Csound music programming language. Designed for computer music majors and recording arts majors, but open to others with permission of instructor. Prerequisites: Introduction to Computer Music; Studio Techniques, or equivalent.
Prerequisite(s): Students must co-register in Digital Music Programming 1, PY.350.837[C].
Completion of Introduction to Computer Music required, PY.350.464[C].

PY.350.868. Synthesis Theory 2. 2 Credits.
The purpose of Synthesis Theory II combined with Digital Music Programming II is to learn to implement Digital Audio Signal Processing theories and techniques in various programming environments suited to musical composition, performance and research. In particular, we will examine advanced synthesis theory, animation, psychoacoustic principles, algorithmic composition and video processing, and realtime hardware interfaces. Prerequisites: Synthesis Theory I and Digital Music Programming I. Corequisite: Digital Music Programming II.
Prerequisite(s): Students must co-register in Digital Music Programming 2, PY.350.838[C].
Completion of Synthesis Theory 1 required, PY.350.867[C].

PY.330.311. Conducting. 1 Credit.
A basic course in orchestral techniques. Offered fall and spring.

PY.330.411. Conducting (Intermediate). 1 Credit.
Designed for the student who desires more intensive study in conducting. Literature will be sequenced with the more difficult works in the Advanced Conducting course. Prerequisite: Basic Conducting or permission of instructor.

PY.330.412. Conducting (Intermediate). 1 Credit.
Designed for the student who desires more intensive study in conducting. Literature will be sequenced with the more difficult works in the Advanced Conducting course. Prerequisite: Basic Conducting or permission of instructor.

PY.330.413. Conducting (Advanced). 1 Credit.
Designed for the student who desires more intensive study in conducting. Prerequisite: Intermediate Conducting or permission of the instructor.

PY.330.414. Conducting (Advanced). 1 Credit.
Designed for the student who desires more intensive study in conducting. Prerequisite: Intermediate Conducting or permission of the instructor.

PY.330.845. Conducting Seminar. 4 Credits.
A seminar in all aspects of conducting as a profession, from orchestra management to program making. Videotapes of each week's rehearsal with the conductor's orchestra will be discussed. Required of all conducting majors
Graduate Conducting majors only

PY.330.846. Conducting Seminar. 4 Credits.
A seminar in all aspects of conducting as a profession, from orchestra management to program making. Videotapes of each week's rehearsal with the conductor's orchestra will be discussed. Required of all conducting majors.
Graduate Conducting majors only

PY.330.849. Wind Conducting Seminar. 1 Credit.
The Graduate Wind Conducting Seminar provides an environment for listening, discussion, analysis, and historical perspectives of wind literature both new and 'standard.' It is a lab class, attendance is required.
Graduate Wind Conducting majors only

PY.330.850. Wind Conducting Seminar. 1 Credit.
The Graduate Wind Conducting Seminar provides an environment for listening, discussion, analysis, and historical perspectives of wind literature both new and 'standard.' It is a lab class, attendance is required.
Graduate Wind Conducting majors only

PY.330.851. Wind Conducting Seminar (DMA). 1 Credit.
The Graduate Wind Conducting Seminar provides an environment for listening, discussion, analysis, and historical perspectives of wind literature both new and 'standard.' It is a lab class, attendance is required.
Graduate Wind Conducting majors only

PY.330.852. Wind Conducting Seminar (DMA). 1 Credit.
The Graduate Wind Conducting Seminar provides an environment for listening, discussion, analysis, and historical perspectives of wind literature both new and 'standard.' It is a lab class, attendance is required.
Graduate Wind Conducting majors only

PY.800.101. Ballet 1a. 3 Credits.
PY.800.101 consists of a daily 80-minute long Ballet technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment.Designed to further develop technical skills, PY.800.101 focuses on developing strength, proper alignment and correct execution of ballet steps and combinations, emphasizing proper placement of body, head, arms, and legs.
Open to Dance majors only.

PY.800.102. Ballet 1b. 3 Credits.
PY.800.102 consists of a daily 80-minute long Ballet technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment.Designed to further develop technical skills, PY.800.102 focuses on developing strength, proper alignment and correct execution of ballet steps and combinations, emphasizing proper placement of body, head, arms, and legs.
Open to Dance majors only.

PY.800.103. Modern 1a. 3 Credits.
PY.800.103 consists of a daily 80-minute long Modern Dance technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment. Intensive study of Modern Dance technique providing continued development of the body as an instrument for modern dance with an emphasis on alignment and technique, efficiency, self-correction, style and composition.
Open to Dance majors only.

PY.800.104. Modern 1b. 3 Credits.
PY.800.104 consists of a daily 80-minute long Modern Dance technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment. Intensive study of Modern Dance technique providing continued development of the body as an instrument for modern dance with an emphasis on alignment and technique, efficiency, self-correction, style and composition.
Open to Dance majors only.;Completion of Modern 1a required, PY.800.103[C]

PY.800.105. Jazz Dance. 2 Credits.
PY.800.105 consists of a bi-weekly 80-minute long technique studio class in Jazz Dance with possible readings, video viewings, reflection journal and performance attendance with written assignment An intermediate level technique course, PY.800.105 emphasizes movement sequences incorporating isolation and syncopation for the student on an intermediate level.

PY.800.106. West African Dance. 2 Credits.
PY.800.106 consists of a once a week 90-minute long West African Dance studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment. Exploring movements of traditional dance styles to contemporary, PY.800.106 is an introduction course to West African Dance and Culture. Open to non-majors.

PY.800.107. Afro Fusion. 2 Credits.
PY.800.107 consists of a twice a week 80-minute long Afro Fusion technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment.Intensive study of Afro Fusion technique providing continued development of the body as an instrument for movement with an emphasis on technique, style and composition. Dance is a continuum of learning. African Diaspora dance is the study of an ever-evolving people rooted in culture. In order to study the dance you must have an understanding of the people.In this course, when we speak of Afro-fusion we are referring to the culture, tradition and experience of people of color. More specifically, we are referring to the people that make up the African Diaspora. Traditionally, in the African community dance is interwoven into the culture of the people. Be it work or play, the body takes on a rhythm and a movement that becomes the dance of the people.Afro-Fusion Dance technique consists of a progression of strengthening exercises that increase skills of coordination, rhythm and flexibility while building core strength and endurance. Traditional styles of West African dance will be seamlessly fused with popular vernacular styles of movement.

PY.800.108. Screen Dance. 2 Credits.
PY.800.108 consists of a once a week 80-minute studio/lab class with possible readings and video viewings. Intensive study of the history, theory and fundamental skills of Screen Dance. This is an elective course that can be taken multiple times for credit.
Open to Dance majors only.

PY.800.109. Gaga. 2 Credits.
PY.800.109 consists of a bi-weekly 80-minute long technique studio class. Gaga--the movement language created by Ohad Naharin, artistic director and choreographer of Batsheva Dance Company in Israel--is a continuous, sensation-based movement class. Students are encouraged to deeply listen to the body and to physical sensations. The research of Gaga is fundamentally physical, and insists on a specific process of embodiment through rich imagery. Gaga is improvisational in nature and focuses on each participant's personal connection to the language. There are no mirrors in Gaga, and there are no observers. The class moves in continuum without breaks for an hour and fifteen minutes.
Open to Dance majors only.

PY.800.110. Tap. 2 Credits.

PY.800.111. Tap 2. 2 Credits.

PY.800.116. Jazz Dance 2. 2 Credits.
Open to Dance majors only.

PY.800.117. Latin Dance Styles. 2 Credits.

PY.800.201. Ballet 2a. 3 Credits.
PY.800.201 consists of a daily 80-minute long Ballet technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment.Designed to further develop technical skills, PY.800.201 focuses on developing strength, proper alignment and correct execution of ballet steps and combinations, emphasizing proper placement of body, head, arms, and legs.
Open to Dance majors only.;Completion of Ballet 1b required, PY.800.102[C]

PY.800.202. Ballet 2b. 3 Credits.
PY.800.202 consists of a daily 80-minute long Ballet technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment.Designed to further develop technical skills, PY.800.202 focuses on developing strength, proper alignment and correct execution of ballet steps and combinations, emphasizing proper placement of body, head, arms, and legs.
Open to Dance majors only.;Completion of Ballet 2a required, PY.800.201[C]

PY.800.203. Modern 2a. 3 Credits.
PY.800.203 consists of a daily 80-minute long Modern Dance technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment.Intensive study of Modern Dance technique providing continued development of the body as an instrument for modern dance with an emphasis on alignment and technique, efficiency, self-correction, style and composition.
Open to Dance majors only.;Completion of Modern 1b required, PY.800.104[C]

PY.800.204. Modern 2b. 3 Credits.
PY.800.204 consists of a daily 80-minute long Modern Dance technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment.Intensive study of Modern Dance technique providing continued development of the body as an instrument for modern dance with an emphasis on alignment and technique, efficiency, self-correction, style and composition.
Open to Dance majors only.;Completion of Modern 2a required, PY.800.203[C]

PY.800.301. Ballet 3a. 3 Credits.
PY.800.301 consists of a daily 60-minute long Ballet technique online classes with possible readings, video viewings, reflection journal and performance virtual attendance with written assignment. Designed to further develop technical skills, PY.800.301 focuses on developing strength, proper alignment and correct execution of ballet steps and combinations, emphasizing proper placement of body, head, arms, and legs.
Open to Dance majors only.;Completion of Ballet 2b required, PY.800.202[C]

PY.800.302. Ballet 3b. 3 Credits.
Open to Dance majors only.;Completion of Ballet 3a required, PY.800.301[C]

PY.800.303. Modern 3a. 3 Credits.
PY.800.303 consists of a daily 80-minute or 60-minute long Modern Dance technique studio class with possible readings, video viewings, reflection journal and performance attendance with written assignment. Intensive study of numerous Modern Dance Techniques, including Muller Polarity Technique, providing continued development of the body as an instrument for modern dance with an emphasis on alignment and technique, efficiency, self-correction, style and composition.
Open to Dance majors only.;Completion of Modern 2b required, PY.800.204[C]

PY.800.304. Modern 3b. 3 Credits.
Open to Dance majors only.;Completion of Modern 3a required, PY.800.303[C]

PY.800.401. Ballet 4a. 3 Credits.
Open to Dance majors only.;Completion of Ballet 3b required, PY.800.302[C]

PY.800.402. Ballet 4b. 3 Credits.
Open to Dance majors only.;Completion of Ballet 4a required, PY.800.401[C]

PY.800.403. Modern 4a. 3 Credits.
Open to Dance majors only.;Completion of Modern 3b required, PY.800.304[C]

PY.800.404. Modern 4b. 3 Credits.
Open to Dance majors only.;Completion of Modern 4a required, PY.800.403[C]

PY.800.411. Pilates. 2 Credits.

PY.800.412. Hip Hop. 2 Credits.
Open to Dance majors only.

PY.800.501. Rehearsal/Performance Collaboration Fall. 1 Credit.
PY.800.501 consists of daily/weekly rehearsals with faculty and/or guest choreographers, culminating in a performance of some kind. Designed to further develop performance and technical skills, PY.800.501 focuses on developing & refining proper rehearsal etiquette, memorization proficiency, active listening aptitude, improvisation skills and performance technique.
Open to Dance majors only.

PY.800.502. Rehearsal/Performance Collaboration Spring. 1 Credit.
PY.800.502 consists of daily/weekly rehearsals with faculty and/or guest choreographers, culminating in a performance of some kind. Designed to further develop performance and technical skills, PY.800.502 focuses on developing & refining proper rehearsal etiquette, memorization proficiency, active listening aptitude, improvisation skills and performance technique.
Open to Dance majors only.

PY.800.503. Student Dance Company 1. 2 Credits.
Open to Seniors only. Students must have completed Ballet 3b and Modern 3b.

PY.800.504. Student Dance Company 2. 2 Credits.
Open to Dance majors only.;Open to Seniors only. Must have completed Ballet 3b and Modern 3b.

PY.800.521. Elementary Yoga. 1 Credit.
Elementary Yoga is a gentle movement meditation practice. Asanas (poses) are held for a longer period of time, allowing connective tissues to release and energy to flow through the body. While open to all students, priority will be given to Conservatory Dance majors.

PY.810.201. Somatic Practices 1. 3 Credits.
PY.810.201 is a 3 credit, bi-weekly, 80-minute long Somatics course inclusive of lecture, discussion, guided movement explorations and sequences, readings, presentations and journal reflection.
Open to Dance majors only.

PY.810.202. Somatic Practices 2. 3 Credits.
Open to Dance majors only.;Completion of Somatic Practices 1 required, PY.810.201[C]

PY.810.302. Kiniseology. 3 Credits.
Open to Dance majors only.

PY.810.304. Body Conditioning. 2 Credits.
Dancer specific cross-training & self-care techniques for peak performance and career longevity.
Open to Dance majors only.

PY.820.201. Critical Dance Studies 1. 3 Credits.
Open to Dance majors only.

PY.820.202. Critical Dance Studies 2. 3 Credits.
Open to Dance majors only.;Completion of Critical Dance Studies 1 required, PY.820.201[C]

PY.820.204. The Business of Dance. 1 Credit.

PY.820.301. Dance of the African Diaspora. 3 Credits.
Open to Dance majors only.

PY.820.401. Dance Pedagogy. 3 Credits.
Principles and techniques of the pedagogy of dance, including a survey of contemporary models for movement education. Prerequisites: at least one semester of Somatic Practices and one semester of Choreography. Open to Dance majors only.

PY.830.101. Music for Dance. 3 Credits.
Open to Dance majors only.

PY.830.102. Dance Production. 2 Credits.
PY.830.102 consists of a bi-weekly 80-minute long theory/laboratory class with readings, video viewings, research project and written assignments. An introduction to the fundamental aspects of dance production, PY.830.102 focuses on the various steps to launch a production/dance festival, possibly including such things as fundraising, publicity, lighting, grant writing, creating media content, etc.
Open to Dance majors only.

PY.830.104. Movement as Sound. 2 Credits.

PY.830.110. Choreolab. 2 Credits.
Open to Dance majors only.

PY.830.201. Contact Improvisation. 2 Credits.
Creative exploration of partner and small-group dance forms following shared points of contact.

PY.830.202. Improv/Authentic Movement. 2 Credits.
Open to Dance majors only.

PY.830.203. Contemporary Partnering. 2 Credits.

PY.830.301. Choreography 1. 3 Credits.
This Choreography Course is designed as an opportunity for student artists to explore the interdisciplinary and cross-sector possibilities of embodiment, performance, and dance-making. How might we integrate, interrogate, and influence our worlds of thought and praxis through the power of our crafts? Students will work in movement-based laboratories, and critical discourse, unpacking the cultural and sociopolitical dynamics at work in our institutional, programmatic, relational, and personal frames. Processes will include, Improvisation, Journaling, and Group Sharing that encourage a holistic lens in perceiving, making, and interrogating performance and other art forms.
Improv/Authentic Movement completion required (PY.830.202[C]).;Open to Dance majors only.

PY.830.302. Choreography 2. 3 Credits.
Choreography 1 needed (PY.830.301[C]).;Open to Dance majors only.

PY.830.303. Choreography 3. 3 Credits.

PY.450.619. Accompanying & Coaching Skills 1. 2 Credits.
An in-depth study of basic accompanying and vocal coaching skills, including diction and phonetics, standard aria repertoire, operatic and oratorio coaching, discussion of voice types and the fach system, ornamentation, and musical style. Also incorporates score preparation techniques, strategies for playing orchestral piano reductions, continuo/recitative playing, musical theater styles, synthesizer skills, lead sheet reading, transposition, and improvisation. Prepares students for young artist internship auditions and positions. Open to qualified piano, conducting, and other keyboard students at the graduate level, this course is required for all Ensemble Arts majors. Enrollment by instructor permission.

PY.450.620. Accompanying & Coaching Skills 2. 2 Credits.
A continuation of Accompanying and Coaching Skills 1. An in-depth study of basic accompanying and vocal coaching skills, including diction and phonetics, standard aria repertoire, operatic and oratorio coaching, discussion of voice types and the fach system, ornamentation, and musical style. Also incorporates score preparation techniques, strategies for playing orchestral piano reductions, continuo/recitative playing, musical theater styles, synthesizer skills, lead sheet reading, transposition, and improvisation. Prepares students for young artist internship auditions and positions. Open to qualified piano, conducting, and other keyboard students at the graduate level, this course is required for all Ensemble Arts majors. Enrollment by instructor permission.

PY.450.621. Sonata Class. 2 Credits.
Designed for concentrated study of the sonata and instrumental chamber music literature. Audition/permission of the instructor required.

PY.450.622. Sonata Class. 2 Credits.
Designed for concentrated study of the sonata and instrumental chamber music repertoire. Enrollment by audition or permission of instructor

PY.450.625. Accompanying & Coaching Skills 3. 2 Credits.

By invitation of instructor.

PY.360.501. Friday Noon:30 Recital Series. 0.5 Credits.
Student performances covering all historical periods and a variety of genre. Attendance required in the first two semesters of undergraduate enrollment.

PY.360.503. Friday Noon:30 (Alt Project). 0.5 Credits.
A concert attendance project required in the third and fourth semesters of undergraduate enrollment.

PY.360.505. Music Speaks. 2 Credits.
Exploration of repertoire to explore the process behind their imagining and creation in an effort to move an audience to a deeper understanding.

PY.470.431. Guitar Literature 1 (UG). 2 Credits.
A study of the literature for the guitar from the Renaissance to the present. Offered in alternate years.
Open to Guitar majors only.

PY.470.432. Guitar Literature 2 (UG). 2 Credits.
A study of the literature for the guitar from the Renaissance to the present.
Open to Guitar majors only.;Completion of Guitar Literature 1 (UG) required, PY.470.431[C].

PY.470.545. Guitar Seminar (UG). 1 Credit.
A seminar for performance and discussion of the guitar and related repertoire. Required of all guitar majors in all semesters of enrollment.
Open to Guitar majors only.

PY.470.546. Guitar Seminar (UG). 1 Credit.
A seminar for performance and discussion of the guitar and related repertoire. Required for guitar majors.
Open to Guitar majors only.

PY.470.585. Guitar Music Skills 1. 1 Credit.
The application of theoretical skills to the guitar, including harmony, rhythm, transposition, and analysis.
Open to Guitar majors only.

PY.470.586. Guitar Music Skills 2. 1 Credit.
The application of theoretical skills to the guitar, including harmony, rhythm, transposition, and analysis.
Open to Guitar majors only.;Completion of Guitar Skills 1 required, PY.470.585[C]

PY.470.587. Guitar Music Skills 3. 1 Credit.
A continuation of 470.585-586 for guitar majors; emphasis on form, analysis, transposition, and sight-reading.
Open to Guitar majors only.;Completion of Guitar Skills 2 required, PY.470.586[C]

PY.470.588. Guitar Music Skills 4. 1 Credit.
A continuation of Guitar Music Skills 3; emphasis on form, analysis, transposition, and sight-reading.
Completion of Guitar Skills 3 required, PY.470.587[C];Open to Guitar majors only.

PY.470.631. Guitar Literature 1 (GR). 2 Credits.
A study of the literature for the guitar from the Renaissance to the present. Offered in alternate years.
Open to Guitar majors only.

PY.470.632. Guitar Literature 2 (GR). 2 Credits.
A study of the literature for the guitar from the Renaissance to the present. Offered in alternate years.
Open to Guitar majors only.;Completion of Guitar Literature 1 (GR) required, PY.470.631[C].

PY.470.637. Guitar Pedagogy 1. 2 Credits.
A study of guitar instructional principles and procedures for their application. Graduate students enrolled in this course will be required to do more advanced and specialized research and documentation.
Open to Guitar majors only.

PY.470.638. Guitar Pedagogy 2. 2 Credits.
A study of guitar instructional principles and procedures for their application.
Open to Guitar majors only.;Completion of Guitar Pedagogy 1 required, PY.470.637[C].

PY.470.845. Guitar Seminar (GR). 1 Credit.
A seminar for performance and discussion of the guitar and related repertoire. Required of all guitar majors in all semesters of enrollment.
Open to Guitar majors only.

PY.470.846. Guitar Seminar (GR). 1 Credit.
A seminar for performance and discussion of the guitar and related repertoire. Required for guitar majors.
Open to Guitar majors only.

PY.420.495. Harp Repertoire. 2 Credits.
Individual performances of standard and contemporary repertoire with discussion of both musical and practical aspects of performance.
May include chamber performances. Required for harp majors in each semester.
Harp majors only.

PY.420.496. Harp Repertoire. 2 Credits.
Individual performances of standard and contemporary repertoire with discussion of both musical and practical aspects of performance.
May include chamber performances. Required for harp majors in each semester.
Harp majors only.

PY.420.545. Harp Seminar (UG). 1 Credit.
Varying topics relative to different aspects of the profession, including audition preparation, arranging, orchestral techniques, amplification, resume writing. For all majors from sophomore year. Expectations vary with topic, but normally involve preparation as well as participation.
Harp majors only.

PY.420.546. Harp Seminar (UG). 1 Credit.
Varying topics relative to different aspects of the profession, including audition preparation, arranging, orchestral techniques, amplification, and résumé writing. Available to all harp majors; minimum of four semesters suggested.
Harp majors only.

PY.420.629. Harp Pedagogy 1. 2 Credits.
Materials covered in the first semester include principles of hand position, fingering, placing, sequencing of materials, and choice of music, as these apply to beginning students at every age level. The second semester consists of continued discussion as above, plus a practicum level in which each member of the class must teach one student for 12 weeks, after which a mini-recital will provide the basis for group evaluation and final discussion. Graduate students are further expected to prepare specialized teaching materials for beginners. May be taken by all majors beginning sophomore year and may be repeated (at least one year is required).
Harp majors only.

PY.420.630. Harp Pedagogy 2. 2 Credits.
Instructional principles and procedures for their application, with an initial focus on young beginners; successive semesters expand to intermediate level. Two semesters of Pedagogy I prerequisite for participation in the Pedagogy II HarpAdventures/Practicum/Outreach program. Required for harp majors starting in the sophomore year, may be taken earlier by permission.
Harp majors only.

PY.420.647. Harp Pedagogy 3. 2 Credits.
Normally added after the second semester of Pedagogy I. Pedagogy II/HarpAdventures is a practicum that provides instructional and administrative experience for Harp Pedagogy students. This course also functions as an ongoing community engagement project and is repeated every semester.
Harp majors only.

PY.420.648. Harp Pedagogy 4. 2 Credits.
Normally added after the second semester of Pedagogy I. Pedagogy II/HarpAdventures is a practicum that provides instructional and administrative experience for Harp Pedagogy students. This course also functions as an ongoing community engagement project and is repeated every semester.
Harp majors only.

PY.420.845. Harp Seminar (GR). 1 Credit.
Varying topics relative to different aspects of the profession, including audition preparation, arranging, orchestral techniques, amplification, resume writing. For all majors from sophomore year. Expectations vary with topic, but normally involve preparation as well as participation.
Harp majors only.

PY.420.846. Harp Seminar (GR). 1 Credit.
Varying topics relative to different aspects of the profession, including audition preparation, arranging, orchestral techniques, amplification, and résumé writing. Available to all harp majors; minimum of four semesters suggested.
Harp majors only.

PY.380.315. Continuo 1: Figured Bass. 2 Credits.
Designed to develop the skill of continuo playing, fluent reading and improvising from a figured bass, this course uses exercises and repertoire in a cumulative approach. Open to all qualified keyboard students as well as non-keyboard students with proficient keyboard skills and permission of the instructor.

PY.380.337. Baroque Violin/Viola Class. 1 Credit.
An introduction to the playing of early repertoire on period violin or viola and bow. The student will learn the basics of baroque technique and will be introduced to a range of music, from early Baroque to early Classical, and its interpretation from a historical perspective.

PY.380.338. Baroque Violin/Viola Class. 1 Credit.
An introduction to the playing of early repertoire on period violin or viola and bow. The student will learn the basics of baroque technique and will be introduced to a range of music, from early Baroque to early Classical, and its interpretation from a historical perspective.

PY.380.351. Viola Da Gamba Class. 1 Credit.
An introduction to the playing technique of the viola da gamba through easy to intermediate-level ensemble literature. A preparatory step to consort playing and the viol solo literature. Prior string experience is not necessary.

PY.380.352. Viola Da Gamba Class. 1 Credit.
An introduction to the playing technique of the viola da gamba through easy to intermediate-level ensemble literature. A preparatory step to consort playing and the viol solo literature. Prior string experience is not necessary.

PY.380.431. Baroque Oboe Class. 1 Credit.
Students will learn important tenets of 18th century performance practice by looking at major repertoire such as Bach cantatas and Passions, and sonatas and concertos by Handel and Telemann. Focus will be given to relevant examples from J.J. Quantz's 1752 treatise on performance practice. Study may be done entirely on baroque oboe, or a combination of modern oboe with some experimentation on baroque oboe.

PY.380.433. Lute Literature & Notation 1. 2 Credits.
This class will focus on the primary compositional trends and corresponding performance practices of early, middle, high and late baroque music for lute, archlute and theorbo. Each two-hour meeting will be divided into 2 parts: sharing of information from light research assignments and in-class performances of repertoire that demonstrate relevant compositional styles and performance practices, as well as points for consideration when transcribing for classical guitar. Research and performance assignments will be shared among students from week to week. Required for MM guitar majors.

PY.380.434. Lute Literature & Notation 2. 2 Credits.
Intensive study of repertoire and genres for Renaissance lute and vihuela through listening, transcribing, and performance of selected works from French, Italian, and German tablatures. Works of Francesco da Milano and John Dowland will be a main focus. Required for MM guitar majors.

PY.380.435. Viola da Gamba Literature. 1 Credit.
A chronological survey of the viola da gamba and its literature from the 16th to 18th centuries. The class will be an opportunity to become familiar with a rich repertoire little known to non- specialists, and to learn about how the world of the baroque era relates to our own. No prior experience in historical performance is required. Prerequisite: History of Music 1, 2, or permission of instructor.
Undergrads need PY.610.321[C] OR PY.610.322[C] in order to enroll. Grads need to have passed the Musicology Proficiency exam or passed the music history review course.

PY.380.436. Early Cello Literature. 1 Credit.
A chronological survey of violoncello literature, pedagogical as well as musical, with an emphasis on historical techniques and performance practices of the 17th, 18th, and 19th centuries. No prior experience in historical performance is required, but some familiarity with cello repertoire is expected. Prerequisite: History of Music 1, 2, or permission of instructor.
Undergrads need PY.610.321[C] OR PY.610.322[C] in order to enroll. Grads need to have passed the Musicology Proficiency exam or passed the music history review course.

PY.380.437. Baroque Violin Literature. 1 Credit.
A chronological survey of the violin and viola literature, pedagogical and musical, from its origins in the 16th century to the high baroque of the 18th century. No prior experience in historical performance is required, but some familiarity with violin repertoire is expected. Prerequisite: History of Music 1, 2, or permission of instructor.
Undergrads need PY.610.321[C] OR PY.610.322[C] in order to enroll. Grads need to have passed the Musicology Proficiency exam or passed the music history review course.

PY.380.438. Classical Strings Literature. 1 Credit.
A chronological survey of the solo and, especially, chamber music for strings from the time of Leopold Mozart through Beethoven's life and beyond, with consideration of the music's social contexts and performance practices. Included will be an overview of the pedagogical material. No prior experience in historical performance is required. Prerequisite: History of Music 1, 2, or permission of instructor.
Undergrads need PY.610.321[C] OR PY.610.322[C] in order to enroll. Grads need to have passed the Musicology Proficiency exam or passed the music history review course.

PY.380.439. Baroque Cello Class. 1 Credit.
This course combines the history of the violoncello with hands-on experience. Students have use of Peabody's recently "baroqued" instruments and work with primary source tutorials as an introduction to performance practice. Solo and ensemble playing are integral to the course. The art of bowed continuo playing is stressed and practiced in ensembles with other "original" instruments.

PY.380.440. Baroque Cello Class. 1 Credit.
This course combines the history of the violoncello with hands-on experience. Students have use of Peabody's recently "baroqued" instruments and work with primary source tutorials as an introduction to performance practice. Solo and ensemble playing are integral to the course. The art of bowed continuo playing is stressed and practiced in ensembles with other "original" instruments.

PY.380.441. Baroque Ornamentation 1. 2 Credits.
A detailed two-semester course exploring the varied ornamentation practices of Baroque music from around 1600-1765. Emphasizing original sources, improvisation, and performance practice, students learn to execute, add and improvise ornamentation in styles appropriate to the time and national style. The fall semester focuses on ornamentation in the 17th century in Italy, France, Germany and England. The spring semester can only be taken after completion of the fall semester, and focuses on ornamentation in the 18th century.

PY.380.442. Baroque Ornamentation 2. 2 Credits.
A detailed two-semester course exploring the varied ornamentation practices of Baroque music from around 1600-1765. Emphasizing original sources, improvisation, and performance practice, students learn to execute, add and improvise ornamentation in styles appropriate to the time and national style. The fall semester focuses on ornamentation in the 17th century in Italy, France, Germany and England. The spring semester can only be taken after completion of the fall semester, and focuses on ornamentation in the 18th century.
Completion of Baroque Ornamentation 1 required, PY.380.441[C]

PY.380.443. Baroque Flute Class. 1 Credit.
An introduction to the baroque flute (transverse and common) and to its literature from the 18th century, with attention to questions of style, articulation and ornamentation. This class operates on three tracks: beginning group instruction on baroque flute; private or semi-private lessons for advancing baroque flute players; and performance practice-based coaching of baroque repertoire performed on modern flutes. This class interacts with the annual Bach Marathon. No prior historical performance training is required, but students who are not proficient on modern flute should seek permission from the instructor.

PY.380.444. Baroque Flute Class. 1 Credit.
An introduction to the baroque flute (transverse and common) and to its literature from the 18th century, with attention to questions of style, articulation and ornamentation. This class operates on three tracks: beginning group instruction on baroque flute; private or semi-private lessons for advancing baroque flute players; and performance practice-based coaching of baroque repertoire performed on modern flutes. This class interacts with the annual Bach Marathon. No prior historical performance training is required, but students who are not proficient on modern flute should seek permission from the instructor.

PY.380.445. Continuo 2: Advanced Continuo. 2 Credits.
A continuation of Continuo 1: Figured Bass (380.315). Students build upon the basic skills of reading figured bass by playing a wide range of repertoire with other instrumentalists and singers. Students learn to shape the bass line, develop ensemble skills and improvise creative realizations. Repertoire includes 17th and 18th c. works from Italy, France, Germany and England for instruments or voice, including a focus on recitative.
Completion of Continuo 1 required, PY.380.315[C].

PY.380.447. Early Wind Literature 1. 1 Credit.
A chronological survey of the literature for recorder, flute, and oboe from the beginnings of soloistic composition in the late 16th century through the end of the 18th century, with attention to historical context and performance practice. Includes history and development of the instruments themselves and consideration of how the recorder, flute, and oboe repertoires over-lap, differ, and developed over time. No prior early music experience is necessary.

PY.380.448. Early Wind Literature 2. 1 Credit.
A chronological survey of the literature for recorder, flute, and oboe from the beginnings of soloistic composition in the late 16th century through the end of the 18th century, with attention to historical context and performance practice. Includes history and development of the instruments themselves and consideration of how the recorder, flute, and oboe repertoires over-lap, differ, and developed over time. No prior early music experience is necessary.
Completion of Early Wind Literature 1 required, PY.380.447[C].

PY.380.457. Bach/Weiss/Ornamenting Lute & Guitar. 2 Credits.
A practical course, with the goal of achieving sophisticated, idiomatic ornamentations of high baroque German lute music and their arrangements for classical guitar. Students will apply everything studied directly to their instruments and perform their homework in class. Offered on an as-needed basis.

PY.380.491. Harpsichord Tuning and Maintenance. 1 Credit.
A course in tuning and basic maintenance, with special emphasis on historical temperaments and tuning by ear. Includes some study of the various national styles of construction and development of harpsichords. Majors must pass this course with a grade of B or higher. Offered on an as-needed basis.

PY.380.543. Early Vocal Literature: Baroque. 2 Credits.
Transition from Renaissance to Baroque – monody, opera and oratorio, aria, and recitative. There will be an emphasis on coached, in-class performances.

PY.380.544. Early Vocal Literature: Medieval/Renaissance. 2 Credits.
A study of vocal works and styles from the Middle Ages to the Renaissance, from chant and early polyphony to mass, motet, madrigal, and lute song. There will be an emphasis on coached, in-class performances of chants of Hildegard, medieval motets, English lute songs, and English ballads.

PY.250.001. English Level 1a.
This intensive integrated one-year course for Academic Purposes aims to develop the English language skills of listening, speaking, reading, and writing necessary for success in Peabody classes. Placement is determined through an entrance exam and a personal interview. Students placed in this class must complete the course with a grade of S in order to proceed with their degree requirements. Attendance is mandatory.

PY.250.002. English Level 1b.
This intensive one-year course develops the English skills of listening, speaking, reading, and writing necessary for success in Peabody classes. Placement is determined through an entrance exam and a personal interview. Students placed in this class must complete the course with a grade of B or better in order to proceed with their degree requirements. Attendance is mandatory.
PY.250.001[C]

PY.250.007. English Level 2a - Grad Studies.
This intensive course for international graduate students develops English skills for academic success. The first semester emphasizes oral communication, including listening and note taking, class discussion, and conversation; academic vocabulary, reading and writing; and cultural differences in and out of the classroom. The second semester concentrates on expository writing, especially resource-based writing, self-evaluation, and editing; critical reading; and informal and formal presentations. Placement is determined through an entrance exam and a personal interview. Students placed in this class must complete the course with a grade of B or better in order to proceed with their degree requirements. Attendance is mandatory.

PY.250.008. English Level 2b - Grad Studies.
This intensive course for international graduate students develops English skills for academic success. The first semester emphasizes oral communication, including listening, note taking, class discussion, presentations, academic vocabulary, and cultural differences in and out of the classroom. The second semester concentrates on expository writing, editing, and critical reading. Placement is determined through an entrance exam and a personal interview. Students placed in this class must complete the course with a grade of B or better in order to proceed with their degree requirements. Attendance is mandatory.
PY.250.007[C]

PY.250.111. Italian 1a. 4 Credits.
A thorough study of the fundamentals of the four language skills: comprehension, speaking, reading, and writing. Concentrating on practical everyday situations, the course aims to provide students with the vocabulary, expressions, and grammatical structures needed to achieve a functional use of Italian. Open to undergraduates only.

PY.250.112. Italian 1b. 4 Credits.
A thorough study of the fundamentals of comprehension, speaking, reading, and writing, this course aims to provide students with the vocabulary, expressions, and grammatical structures needed to achieve a functional use of Italian. Portions of the course are conducted online. Open to undergraduates only. Non-voice majors may take this course for elective credit after completing the full Humanities Core Curriculum.
PY.250.111[C]

PY.250.121. German 1a. 3 Credits.
A thorough study of the fundamentals of the four language skills: comprehension, speaking, reading, and writing. Concentrating on practical everyday situations, the course aims to provide students with the vocabulary, expressions, and grammatical structures needed to achieve a functional use of German. Open to undergraduates only.

PY.250.122. German 1b. 3 Credits.
A thorough study of the fundamentals of the four language skills: comprehension, speaking, reading, and writing. Concentrating on practical everyday situations, the course aims to provide students with the vocabulary, expressions, and grammatical structures needed to achieve a functional use of German. Open to undergraduates only.
PY.250.121[C]

PY.250.131. French 1a. 3 Credits.
A thorough study of the fundamentals of the four language skills: comprehension, speaking, reading, and writing. Concentrating on practical everyday situations, the course aims to provide students with the vocabulary, expressions, and grammatical structures needed to achieve a functional use of French. Open to undergraduates only.

PY.250.132. French 1b. 3 Credits.
A thorough study of the fundamentals of comprehension, speaking, reading, and writing, this course aims to provide students with the vocabulary, expressions, and grammatical structures needed to achieve a functional use of French. Open to undergraduates only. Non-voice majors may take this course for elective credit after completing the full Humanities Core Curriculum.
PY.250.131[C]

PY.260.021. ESL Writing Intensive 1. 3 Credits.
A year-long course designed for international students who are new to writing in English. Course objectives: teaching students the elements of formal writing, including spelling, grammar, vocabulary, sentence structure, paragraph structure, and the elements of thesis, evidence, and conclusion.

PY.260.022. ESL Writing Intensive 2. 3 Credits.
A year-long course designed for international students new to writing in English. The course introduces foundational writing practices and teaches formal writing skills. Course objectives: teaching students the elements of formal writing, including spelling, grammar, vocabulary, sentence structure, paragraph structure, and the elements of thesis, evidence, and conclusion.
PY.260.021[C]

PY.260.023. Critical Writing Intensive 1. 3 Credits.
A year-long course to prepare students for college-level writing. This course introduces students to foundational academic writing skills in summary, citation, use of evidence, analysis, and argument. Assignments focus on sentence- and paragraph-level coherence, while reinforcing the conventions of standard American English in academic settings.

PY.260.024. Critical Writing Intensive 2. 3 Credits.
A year-long course to prepare students for college-level writing. This course introduces stu-dents to foundational academic writing skills in summary, citation, use of evidence, anal-ysis, and argument. Assignments focus on sentence- and paragraph-level coherence, while reinforcing the conventions of standard American English in academic settings.
PY.260.023[C]

PY.260.115. Core 1. 3 Credits.
Introduction to the practice of analytical thinking and writing in the context of reading foundational historical, philosophical, and/or literary texts. Course objectives: ensuring competence in writing and critical analysis. Students will write four analytical papers (3-4 pages each).

PY.260.216. Core 2. 3 Credits.
Introduction to the basics of writing a research paper. Course objectives: ensuring competence in academic research and writing. Students will select a research topic, find source materials, and complete a formal academic research paper (10-15 pages), with appropriate references properly documented. Prerequisite: Core 1 or approved placement.
PY.260.115[C]

PY.260.241. Art History: European Art Survey, Renaissance - 1855. 3 Credits.
An introduction to the history of art. Open to undergraduates only. Art History 1 surveys European art from the 14th through the mid-19th centuries. It surveys Renaissance painting, sculpture, and architecture in Italy and Northern Europe, its origins in Medieval art, and examines shifts in artistic concepts and forms from the 16th through the mid-18th centuries that led to the emergence of Mannerist, Baroque, and Rococo art. The course concludes with an examination of Neoclassicism, Romanticism, and Realism up through the mid-19th century. Artistic movements, styles and influences relevant to the development of western art will be covered, with the inclusion of some American art traditions as time permits. Additional commentary as it relates to music history will be interwoven.

PY.260.252. Art History: Modernism. 3 Credits.
An introduction to the history of art. Open to undergraduates only. This course offers a survey of avant-garde European and American art from the mid-19th century to the present. Some of the many artistic movements covered include Realism, Impressionism, Post-Impressionism, German Expressionism, Cubism, Dada, Surrealism, De Stijl, early American Modernism, Abstract Expressionism, Pop Art, Minimalism, Conceptual Art, and Postmodernism. Additional commentary as it relates to music history will be interwoven.

PY.260.261. Introduction to Psychology. 3 Credits.
An introduction to the fields and research methods of contemporary psychology, including such topics as biological and social bases of behavior, human development, perception, memory, learning theory, intelligence, and abnormal behavior. Special emphasis will be placed on subjects of importance to music education. Open to undergraduates only.

PY.260.313. Katharine the Great: An Everlasting Film Star. 3 Credits.
How does an artist endure? What makes one star last while another fizzles? Katharine Hepburn, 1907-2003, is ranked by the American Film Institute (AFI) as the "greatest female star in the history of American cinema." She lived as originally as so many of the film heroines she portrayed. This humanities seminar examines the roles and movies that defined the pioneering Hepburn as an actress, a businesswoman, and progressive thinker in American history. Along the way, we will trace pivotal events and cinematic trends in the 20th century contributing to Hepburn's legacy.

PY.260.315. Evil in Philosophy, Film, & Literature. 3 Credits.
What is “evil”? How is it depicted in the arts? –In order to address these questions, our two main readings this semester will be Goethe’s drama Faust and Bulgakov’s novel The Master and Margarita. While Goethe’s work is a tragedy, Bulgakov’s novel is a satirical dark comedy. We will pair these readings with selected philosophical essays depicting, for example, Kant’s theory of “radical evil”, and movies, such as “Hannah Arendt”. The discussion topics in this class will be challenging for their intellectual depth, but at the same time incredible fun and entertaining.

PY.260.330. Asian Representation in Film and TV. 3 Credits.
Depictions of East Asian and Asian-American characters in film and television have evolved since the earliest days of Hollywood. Alongside world events and US immigration patterns, representation shifted and a host of stereotypes emerged. Consider the wise guru, the exotic girlfriend, and the martial arts sidekick among many portrayals. This liberal arts seminar offers historical context and critical tools for analyzing and discussing these representations while gaining acquaintance with a range of films and television series.

PY.260.344. Opera: Research as Rehearsal. 3 Credits.
Interesting opera is created not just by memorizing a score and mindlessly practicing and repeating it. Thoughtful research is also a form of rehearsal. Performance can be enhanced and understanding deepened by studying an opera’s literary sources, mining its historical context, viewing related artworks, and studying its production history. In other words, doing the work of a dramaturge. Every semester in which it is offered, “Research as Rehearsal” will take as its subject an opera currently being rehearsed by the Peabody Opera Theatre Program. This year we will focus on Handel’s Semele, scheduled for performance in March. We will read such texts as Ovid’s Metamorphoses (a literary source for the opera) and excerpts from Euripides’ Bacchae (since Semele is the mother of Dionysus). We will study paintings like Gustav Moreau’s Jupiter et Sémélé and Peter Paul Rubens’ Death of Semele. Since the performance will be staged in a 1920s style, we will read F. Scott Fitzgerald’s Great Gatsby and watch film versions of the novel. We will also investigate the ways in which this opera’s origins in a pagan Greek myth affected its first London reception during the period of Lent and how that in turn affected future rewrites of the opera. Open to Graduates and Undergraduates.

PY.260.359. Core 3. 3 Credits.
Introduction to methods and practices in the humanities, social sciences, or natural sciences. Course objectives: ensuring competence in understanding critical methodol-ogies and academic debate. Students will write two critical assessments involving evidence, evaluation, synthesis, and conclusion (4-6 pages each) and pass a final exam or final project. Students must earn a C+ or better to pass the course. Prerequisite: Core 2 or approved placement.
PY.260.216[C]

PY.260.360. Core 4. 3 Credits.
Sustained consideration of the role of art (music, literature, fine arts, film) in all aspects of society, focusing on particular periods in history or under particular regimes and political structures. Course objectives: ensuring that students have the opportunity to think historically about the role of art and culture in political society and about the economic and cultural systems supporting the creation of art (e.g. patronage, guilds). Students will be required to write one historical “review” of a work of art in historical context (2-3 pages) and one historical research paper (6-8 pages minimum). Students must earn a C+ or better to pass the course. Prerequisite: Core III or approved placement.
Completion of Core 2 required, PY.260.216[C]

PY.570.101. Jazz Seminar. 1 Credit.
Jazz Seminar is a course designed to cover general performance practices, topics, repertoire and varying styles within the genre.
Open to Jazz majors only.

PY.570.102. Jazz Seminar. 1 Credit.
Jazz Seminar is a course designed to cover general performance practices, topics, repertoire and varying styles within the genre.
Open to Jazz majors only.

PY.570.127. Jazz Theory Fundamentals 1. 2 Credits.
Designed to establish and reinforce the fundaments of chord scales, harmonic and melodic functions, ear-training, and writing standard forms in jazz. The course also explores basic jazz theory lingo, terms, and nomenclature, as well as transcription, basic reharmonization techniques, and a brief introduction to composition devices of the 20th century. Prepares students for Jazz Improvisation 1 (570.561) and Jazz Keyboard Studies (570.259-260).
Open to Jazz majors only.

PY.570.128. Jazz Theory Fundamentals 2. 2 Credits.
The second part of Jazz Th. Fund. focuses extensively on analysis and composition of standard and through-composed forms using concepts studied in the 1stpart of the course. It also studies the application of 20th century composition devises, as well as basic re-harmonization techniques, modal writing, and an introduction to standard voicings. Prepares students for Jazz Improvisation, Jazz Theory/Keyboard Lab, Arranging.
Open to Jazz majors only.;Completion of Jazz Theory Fundamentals 1 required, PY.570.127[C].

PY.570.259. Jazz Keyboard Studies 1. 2 Credits.
The introduction of the fundamental grammar, vocabulary, and structure of the jazz idiom through the study of its notational conventions, melodic and harmonic functions, and their application on the piano. Prerequisites: Jazz Fundamentals (570.127–128) or placement by instructor.
Open to Jazz majors only.

PY.570.260. Jazz Keyboard Studies 2. 2 Credits.
The introduction of the fundamental grammar, vocabulary, and structure of the jazz idiomthrough the study of its notational conventions, melodic and harmonic functions, and theirapplication on the piano. Prerequisites: Jazz Fundamentals (570.127–128) or placement byinstructor
Open to Jazz majors only.;Completion of Jazz Keyboard Studies 1 required, PY.570.259[C].

PY.570.359. Advanced Jazz Harmony 1. 2 Credits.
A continuation of the techniques and harmonic concepts studied in Jazz Keyboard Studies 1-2. Prerequisites: Jazz Fundamentals (570.127–128) or placement by instructor
Open to Jazz majors only.

PY.570.360. Advanced Jazz Harmony 2. 2 Credits.
A continuation of the techniques and harmonic concepts studied in Jazz Keyboard Studies 1-2. Prerequisites: Jazz Fundamentals (570.127–128) or placement by instructor.
Open to Jazz majors only.;Completion of Advanced Jazz Harmony 1 required, PY.570.359[C].

PY.570.361. Jazz Arranging 1. 2 Credits.
A beginning study of the language, techniques, and disciplines employed in arranging music for various jazz ensembles, including orchestration, notation, rhythmic embellishment, melodic ornamentation, chord substitution, and harmonization techniques. . Prerequisites: Jazz Fundamentals (570.127–128) or placement by instructor.
Open to Jazz majors only.

PY.570.362. Jazz Arranging 2. 2 Credits.
A beginning study of the language, techniques, and disciplines employed in arrangingmusic for various jazz ensembles, including orchestration, notation, rhythmic embellishment,melodic ornamentation, chord substitution, and harmonization techniques. . Prerequisites:Jazz Fundamentals (570.127–128) or placement by instructor.
Open to Jazz majors only.;Completion of Jazz Arranging 1 required, PY.570.361[C].

PY.570.363. Sight Reading. 1 Credit.
"Sight Reading" is a jazz course that is aimed to help the student better their sight reading, starting at the beginner level and working up to advanced material. Students will read jazz transcriptions from, along with the actual recording to play towards, jazz legends such as Miles Davis, Charlie Parker, Cannonball Adderly, Sonny Rollins and John Coltrane. Upon completion of this course, students will have a better grasp on sight reading material at a much rapid pace."

PY.570.431. Global Improvisation. 2 Credits.
A performance/workshop class designed to encourage musical creativity and provide studentswith techniques and strategies for musical improvisation within a collaborative,supportive, and structured environment. The class will include instruction in many aspectsof improvisation and regular audio and video examples of improvisational music will beused to expose students to the variety of ways in which creative musicians are using improvisation in our rapidly changing musical landscape. The majority of student's time willbe spent playing for each other to build confidence and gain knowledge through personalexperience.

PY.570.459. Jazz Composition 1. 2 Credits.
Practical approaches to composition for jazz forces in the jazz idiom, with an emphasis on analysis of standards and projects for small forces. Open to Jazz majors only.

PY.570.495. Afro-Diasporic Percussion. 1 Credit.
This is a hands-on course open to all majors. Studies part of the extensive repertoire and vocabulary performed by drumming ensembles of Peru, Colombia, Venezuela, Puerto Rico, and Cuba, among others. It also introduces participants to hand-drumming techniques, as well as historical contexts of Afro-Diasporic music in the continent and the application of these languages in contemporary music.

PY.570.561. Jazz Improvisation 1. 2 Credits.
A performance/theory course designed to help students acquire and develop basic language for improvisation through the practical application of information learned in 720 • 127-128 Jazz Fundamentals: chords, scales/modes, melody, rhythm, patterns, harmonic progression, and song forms. Incorporates the performance and examination of several vehicle types, including songs drawn from standard jazz repertoire. Special emphasis will be devoted to the performance and analysis of various improvised solos by master musicians. In addition, development of technical facility, listening/hearing skills, sound, and musical awareness will be addressed. Prerequisites: 570.127-128 Jazz Fundamentals and 570.570 Jazz History or placement by the instructor. Open to Jazz majors only.

PY.570.562. Jazz Improvisation 2. 2 Credits.
A performance/theory course designed to help students acquire and develop basic languagefor improvisation through the practical application of information learned in Jazz Fundamentals(720.127–128). Incorporates the performance and examination of several vehicletypes, including songs drawn from standard jazz repertoire. Special emphasis is devoted tothe performance and analysis of various improvised solos by master musicians. In addition,development of technical facility, listening/hearing skills, sound, and musical awarenesswill be addressed. Open to majors only. Prerequisites: Jazz Fundamentals (570.127–128)and Jazz History (570.570) or placement by instructor.
Open to Jazz majors only.;Completion of Jazz Improvisation 1 required, PY.570.561[C].

PY.570.563. Jazz Improvisation 3. 2 Credits.
The continued development of knowledge and skills acquired in Jazz Improvisation I with emphasis on increased fluency and mastery. Prerequisite: Jazz Improvisation 2 or placement by the instructor.
Open to Jazz majors only.;Completion of Jazz Improvisation 2 required, PY.570.562[C].

PY.570.564. Jazz Improvisation 4. 2 Credits.
The continued development of knowledge and skills acquired in Jazz Improvisation I withemphasis on increased fluency and mastery. Open to majors only. Prerequisite: Jazz Improvisation 1-2 (530.561–562) or placement by instructor.
Open to Jazz majors only.;Completion of Jazz Improvisation 3 required, PY.570.563[C]

PY.570.569. Jazz Analysis/History 1. 2 Credits.
This course covers two main areas of focus: people and methods. It surveys the chronological origins and proliferation of jazz through various styles and artists. The development of jazz as an art form will be traced from the acculturation of Africans in America to the present day by learning about its major instrumentalists, ensembles, composers, arrangers, innovators, revivalists, and revisionists. It also explores the techniques and processes that have been employed by jazz musicians to help make it into the highly structured and evolved art form that it is today. Students will read a wide array of primary and secondary sources and listen to a range of recordings — all with the goal of discovering the various processes, meanings, functions, and experiences of jazz. This class places a strong emphasis on developing listening skills.

PY.570.570. Jazz Analysis/History 2. 2 Credits.
This course has two main areas of focus: 1) The People—a survey of the chronological history of jazz through the use of texts, recordings, videos, and guest lecturers. The development of jazz as an art form will be traced from the acculturation of Africans in America to the present day by learning about its major instrumentalists, ensembles, composers, arrangers, innovators, revivalists, and revisionists. 2) The Methods—a survey of the techniques and processes that have been employed by jazz musicians to help make it into the highly structured and evolved art form that it is today. Students will have experience with first-hand performance, arranging, and composing, along with lectures, demonstrations, and extensive discussion.
Completion of Jazz Analysis/History 1 required, PY.570.569[C].

PY.510.112. Introduction to Music Education. 1 Credit.
An overview of music teaching as a profession, including an examination of contemporaryphilosophical and pedagogical trends in music education as well as roles and attitudes ofthe elementary and secondary school music teacher.
Open to Music Education majors only.

PY.510.211. Brass Class. 2 Credits.
Study of the trumpet, trombone, horn, and tuba with an emphasis on methods and materialsfor the instruction of beginners in the public school setting.
Open to Music Education majors only.

PY.510.212. Woodwinds Class. 3 Credits.
Study of the clarinet, flute, oboe, bassoon, and saxophone with emphasis on methods and materials for instruction of beginners in the public school setting.
Open to Music Education majors only.

PY.510.213. Basic Instrumental Pedagogy. 1 Credit.
Study of the trumpet, clarinet, and violin to familiarize guitarists, vocalists, and pianists with fundamental concepts of brass, woodwind, and stringed instrument playing. Also includes elementary pedagogy related to those instruments.
Open to Music Education majors only.

PY.510.223. Percussion Class. 1 Credit.
Study of the percussion instruments. Emphasis is on playing techniques, percussion notation,and diagnosis of student problems. Also included are basic maintenance and repairprocedures.
Open to Music Education majors only.

PY.510.237. Secondary Choral Ensemble 1. 2 Credits.
Development of conducting skills and rehearsal strategies appropriate to the secondary school choir. Also includes methods of teaching singing in the large ensemble setting.
Open to Music Education majors only.

PY.510.238. Conducting the Secondary Instrumental Ensemble 1. 2 Credits.
Development of conducting skills and rehearsal strategies appropriate to the secondaryschool band/orchestra. Also includes methods of teaching wind, string, and percussionplaying in the large ensemble setting. Open to majors only.
Open to Music Education majors only.

PY.510.311. Techniques for Teaching Elementary General Music. 3 Credits.
An eclectic approach to teaching vocal and general music in elementary and middle school. Includes organization of instruction, selection of appropriate materials, theories of learning, childhood development, and basic guitar instruction. Observation and guided teaching in local schools are required. Open to majors only.
Open to Music Education majors only.

PY.510.312. Progressive Methods: Instrumental Music. 3 Credits.
Progressive Methods: Instrumental Music is designed to provide students with opportunities to develop and refine instrumental music teaching skills, strategies, and progressive techniques through teaching experiences in remote and/or in-person classroom and rehearsal settings in the public schools. Educational Psychology Content is now covered in Literacy in the Content Areas I and II. Along with best practices in pedagogy for specific instruments and voice, the weekly practicum experiences will include knowledge and practical application of learning theories, classroom management strategies and development of lesson plans with integrated literacy in the content area knowledge. The Guitar Skills component emphasizes strategies for group class instruction at the secondary level while continuing to develop guitar skills for effective modeling.
Open to Music Education majors only.

PY.510.313. Techniques for Teaching Secondary Instrumental Music. 3 Credits.
Principles of secondary education and activities of Conducting the Secondary InstrumentalEnsemble (510.338), plus independent projects and workshops related to marching bandand jazz ensembles. Open to certification candidates only
Open to Music Education majors only.

PY.510.314. Progressive Methods: Secondary General/Vocal Music. 3 Credits.
A performance-based approach to teaching vocal and general music in secondary schoolsand continued study of an eclectic approach to teaching general music. Includes principlesof secondary education, organization of instruction, selection of appropriate materials, theoriesof learning, and adolescent development. Observation and guided teaching in localschools included. Open to majors only.
Open to Music Education majors only.

PY.510.324. Strings Class. 3 Credits.
Study of the violin, viola, cello, and double bass with emphasis on methods and materials for instruction of beginners in the public school setting.
Open to Music Education majors only.

PY.510.337. Secondary Choral Ensemble 2. 2 Credits.
Development of conducting skills and rehearsal strategies appropriate to the secondary school choir. Also includes methods of teaching singing in the large ensemble setting.
Open to Music Education majors only.

PY.510.338. Conducting the Secondary Instrumental Ensemble 2. 2 Credits.
Development of conducting skills and rehearsal strategies appropriate to the secondaryschool band/orchestra. Also includes methods of teaching wind, string, and percussionplaying in the large ensemble setting. Open to majors only.
Open to Music Education majors only.;Completion of previous course required, PY.510.238[C].

PY.510.411. Intern Teaching. 6 - 12 Credits.
Supervised student teaching in public schools daily for one semester (8 weeks in elementary, 7 weeks in secondary).
Open to Music Education majors only.

PY.510.414. Music & the Neurodiverse Learner. 3 Credits.
An overview of inclusive teaching strategies for music educators centered on universal design, accessibility, and intersectionality, framed through a disability justice lens.
Open to Music Education majors only.

PY.510.441. Intern Teaching Seminar. 1 Credit.
Concomitant with 411, the seminar is devoted to discussion of problems related to teaching music in the schools. Special emphasis is on practices in the secondary school.
Open to Music Education majors only.

PY.510.609. Advanced Conducting Techniques for Music Educators. 2 Credits.
Advanced Conducting Techniques for Music Educators is designed to help graduate music education students develop score reading and analysis skills, formulate interpretive ideas, as well as develop conducting techniques to communicate those interpretations discovered during score study.
Open to Music Education majors only.

PY.510.611. Psychology of Music Teaching. 2 Credits.
Application of selected theories of learning to teaching music in the elementary and secondary school. Characteristics of childhood and adolescent development will also be examined with implications for designing appropriate musical instruction.

PY.510.612. Research in Music Education. 2 Credits.
A seminar in research specific to music education. Prepares the teacher to read and interpretmusic education research in professional publications. The course includes an examinationof basic procedures of historical, descriptive, and experimental research in musiceducation. Offered in alternate years.
Open to Music Education majors only.

PY.510.613. History & Philosophy of Music Education. 2 Credits.
A seminar on historical and philosophical perspectives of music education. Includes the study of the history of music education in the United States and various philosophies of music education. Offered in alternate years.
Open to Music Education majors only.

PY.510.614. Supervision & Curriculum Development. 2 Credits.
Supervision and Curriculum Development is designed to examine the role of the music supervisor or department coordinator in the public schools including issues concerning curriculum, class scheduling, staff supervision/evaluation/improvement of instruction, budgets, public relations and research problems in planning and executing a modern program. The course includes the development of curriculum guides and materials with specific focus on individual areas of interest.
Open to Music Education majors only.

PY.510.616. Music Education Independent Study. 1 - 3 Credits.
Elective credit may be granted for graduate courses or workshops in an area of specialization; Orff, Kodaly, Dalcroze, or Suzuki certification; courses included in JHU's Carey Business School or School of Education. Students may also enroll in Music Education Electives through Peabody as an Independent Study, with permission of a Music Education Faculty member.

PY.510.620. Kodaly, Orff, Dalcroze: A General Music Methods Seminar. 2 Credits.
A survey of three major general music methods, Kodaly, Orff, and Dalcroze. other methods will be covered depending on the time left in the course. Primarily for graduate Music Education majors.

PY.510.621. Graduate Practicum. 2 Credits.
Observation and guided teaching in a variety of settings, designed to enhance and expand the teaching skills of the practicing educator. Includes individualized video-taping of teaching demonstrations and follow-up conferences. Practicum experiences are arranged according to student interests and needs and may include teaching and supervisory internships.
Open to Music Education majors only.

PY.510.691. Independent Field Study. 4 Credits.
The Independent Field Study is the culmination of applied academic material gained through the graduate music education coursework. The Field Study, usually completed at the end of the degree program, will be a scholarly document dealing with current issues in music education. It may be a research project, a curriculum development project, a lecture-recital or any other type of project concerned with current music education issues. The pre-requisite: Music Bibliography and Research in Music Education courses ensure that the student has the content knowledge and skills needed to complete original research or a research informed project in their field/area of interest. The purpose of the study is to allow the graduate student to demonstrate their working knowledge of research, writing, teaching, psychology, and philosophy within the field of music education in a scholarly document. The music education instructor of the student's choosing chairs the study.
Open to Music Education majors only.

PY.710.109. Theory 1 Intensive. 3 Credits.
This course includes study of fundamentals, melody, diatonic harmony, and analysis and composition of short homophonic and polyphonic pieces.
Only Undergraduates who test into this course will be allowed to register.

PY.710.110. Theory 2 Intensive. 3 Credits.
A continuation of techniques learned in Theory 1 Intensive and the study of figured bass and chromatic harmony. Also includes an introduction to basic musical forms. Open to undergraduates only.
Completion of Theory Intensive 1 required, PY.710.109[C].

PY.710.111. Theory 1. 3 Credits.
The study of voice leading, melody, figured bass, and diatonic harmony, through analysis and composition. Open to undergraduates only.
Only Undergraduates who test into this course will be allowed to register.

PY.710.112. Theory 2. 3 Credits.
A continuation of techniques learned in Music Theory 1. Studies include non-chord tones and figuration, sequence, tonicization and modulation, chromaticism, and basic principles of form. Open to undergraduates only.
Previous course, Theory 1, needed, PY.710.111[C]

PY.710.113. Theory 1-2. 3 Credits.
This course begins with a reinforcement of chromatic part-writing and voice-leading, and then focuses on two- and three-voice counterpoint in the Baroque style. Placement by examination. Open to undergraduates only.
Only Undergraduates who test into this course will be allowed to register.

PY.710.211. Theory 3. 3 Credits.
This course is a study of music of the Baroque era including invention and fugue, through analysis and model composition. Open to undergraduates only.
Previous course needed, PY.710.112[C] OR PY.710.110[C]

PY.710.212. Theory 4. 3 Credits.
This course centers on music from Viennese Classicism through the emergence of Romanticism, using examples from a variety of genres and formal designs. Open to undergraduates only.
Previous course, Theory 3, needed, PY.710.211[C]

PY.710.214. Theory 3-4. 3 Credits.
A continuation of Music Theory 1–2 (710.113), this class completes the study of the Baroquestyle and moves on to the Classical style and the harmonic, formal, and contrapuntal techniquesin music of the 19th century. Open to undergraduates only.
Completion of Theory 1-2 required, PY.710.113[C].

PY.710.311. Theory 5. 3 Credits.
A study of the music of the late-19th through 21st centuries. Open to undergraduates only.
Completion of previous course needed, PY.710.212[C] OR PY.710.214[C]

PY.710.312. Theory 6. 3 Credits.
Students take one of several specially-designated electives. Open to undergraduates only.
Completion of Theory 5 needed, PY.710.311[C]

PY.710.412. Instrumentation & Arranging. 3 Credits.
A course designed to introduce students to idiomatic writing for orchestral instruments, individually and in standard combinations. Lectures, listening, and score study will be complemented by arranging exercises. Open to Computer Music, Music Education, and Music for New Media majors (others by permission of the instructor). This class may not be used for graduate theory seminar credit.
Open to Computer Music, Music Education, and Music for New Media majors only. Others may take course with permission of instructor.

PY.710.413. Orchestration 1. 3 Credits.
A course for composers and conductors studying instrumental technique and ensemble combinations as demonstrated in orchestral literature, 1750 to the present. Open to conductors and composition majors only. Course must be taken for the entire school year. May not be used for graduate seminar credit.

PY.710.414. Orchestration 2. 3 Credits.
A course for composers and conductors studying instrumental technique and ensemble combinations as demonstrated in orchestral literature, 1750 to the present. Open to conductors and composition majors only. Course must be taken for the entire school year. May not be used for graduate seminar credit.
Completion of Orchestration 1 needed, PY.710.413[C].

PY.710.415. Graduate Theory Review.
An intensive review of the materials and techniques of tonal music, including diatonic and chromatic harmony, part writing, and analysis.

PY.710.462. Music Theory Minor Capstone. 1 - 3 Credits.
This course is required for an undergraduate minor in Music Theory.

PY.710.611. 20th-Century American Symphonic Works. 3 Credits.
This analysis course is for anyone interested in exploring the musical languages expressed within a wide variety of 20th-century American symphonic works. We will explore works by diverse American composers, contextualize their practices via short readings, and develop several analytical approaches to illuminate their music. Special emphasis will be placed on the development of a nuanced foundation from which students will learn to respond critically to the discourse of culturally responsive intersectional analysis.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.612. Mozart. 3 Credits.
This course delves into the music of Wolfgang Amadeus Mozart. We will cover genres including solo sonatas, concertos, chamber music, symphonies, and opera, as well as a range of musical forms. Works will come from both earlier and later periods in Mozart's short life, though the focus will be on his maturity. In some cases we will also briefly examine other contemporary composers in order to better understand what sets Mozart apart and has made him so uniquely beloved. While it is not a performance practice class, we will discuss current understanding of certain performance practice issues in the course of our study, and a range of recordings will be used to demonstrate evolving understandings of this style.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.613. Music And Meaning. 3 Credits.
A consideration of how meaning is conveyed in tonal music. This course includes discussion of semiotic and formalist approaches to characterizing meaning in absolute music, while working towards an inclusive method of analysis considering expressivity as emanating from formal structure
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.614. Why We Get Chills: Music Analysis Meets Cognition. 3 Credits.
This course consults literature in the field of music cognition to explore how it may inform music analysis, which in turn has implications for both performer and listener.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.619. Chamber Music Analysis. 3 Credits.
Analysis of chamber music in various styles, with particular emphasis on works being currently performed in Peabody's chamber music program.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.620. Song Analysis. 3 Credits.
An exploration of the interactions between text and music within the art-song repertoire from various style periods, drawing on theories of drama, linguistics, cognition, and music. Open to graduate students only.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.622. Music Of Scriabin - Pitch Structure/Form. 3 Credits.
The study of musical content in relation to harmonic, tonal, motivic and formal aspects of Scriabin's technique. A significant part of the discussions will be devoted to innovations in pitch structure and form, as well as large-scale musical projects of Scriabin. In particular, we will cover the topics of three stylistic periods in Scriabin's biography, the evolution of his harmony on the examples of harmonic analysis of preludes, etudes, piano miniatures and orchestral compositions. The format of this seminar will include student performances, short presentations and exercises in harmonization.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.624. Amy Beach & Florence Price. 3 Credits.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.625. Dance Music of the Renaissance. 3 Credits.
The study of Renaissance dance as a crucial source for the formation of the common practice styles.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.627. Improvisation for Classical Musicians. 3 Credits.
This course focuses on developing skills in improvisation in Baroque and Classical styles through the understanding of harmony, proper voice leading, good melodic accompaniment, cadence, modulation, and sequence. Topics include melody harmonization, ornamentation and variation, prelude, the free fantasia, and the cadenza. If time permits, chorale setting and fugue. Open to graduate students only.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.629. Music Since 1970. 3 Credits.
Analysis of recent experimental music in a variety of aesthetic styles. Focus will be placed on the structural foundations for these works and its basis in manipulation of time and sonority.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.631. Schubert. 3 Credits.
This seminar will explore Schubert's music in a range of genres, with particular attention to chamber and solo works. Our discussions will be informed by a range of past and present scholars, though our focus will be the scores themselves. Our goal is the development of analytic and persuasive skills, a deeper and clearer understanding of Schubert's style, and, ideally, some sense of how the composer creates his unique 'magic' via distinctive structural and expressive power.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.633. Renaissance Counterpoint. 3 Credits.
An examination through composition of the musical practice of the late Renaissance, including modal theory, species counterpoint, and imitative composition in two and three parts.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.634. Baroque Counterpoint. 3 Credits.
The course concentrates on the contrapuntal practice of J.S. Bach, including analysis and composition of a suite movement, invention, fugue, and chorale-prelude or passacaglia. Open to graduate students only.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.641. Opera Analysis. 3 Credits.
This analysis course is for anyone interested in operatic character development through the use of tonal region, melodic/harmonic growth, development and long-range structural goals. We will explore some of the most beloved characters of opera from the perspective of the musical structures on which they are built. Special emphasis will be placed on developing a nuanced understanding of these characters through the clues buried in the music.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.642. Art of Partimento. 3 Credits.
Partimento is a method of harmony and composition teaching developed in Naples in the 18th Century, which was the basis of conservatory education from the time of Pergolesi though Verdi. It uses figured and unfigured basses as the foundation for extempore and written-out compositions, starting with the simplest chord progression patterns and working up to entire movements. This is a skills-based course in which students will realize examples from the partimento tradition at the keyboard. All students are welcome; keyboard skills required.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.643. Music 1900-1945: German. 3 Credits.
A survey of the important trends in music in the first half of the 20th century. This seminar focuses on the Second Viennese School and Hindemith and examines both the music and the common theoretical tools for its analysis.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.644. Music 1900-1945. 3 Credits.
A survey of important trends in music from the turn of the 20th century. Emphasis on score analysis and listening.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.647. Analysis Early 19c Piano Lit. 3 Credits.
A detailed analysis of representative works from the piano repertoire. Open to graduate students only.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.648. Analysis 19c Piano Lit. 3 Credits.
A detailed analysis of representative works from the piano repertoire. Open to graduate students only.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.649. Music Theory Pedagogy. 3 Credits.
This course investigates and discusses available teaching resources for students who may wish to teach undergraduate theory, including current technology, as well as classroom observation and practice teaching.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.650. Theory Pedagogy Internship. 3 Credits.
This course consists of a semester of supervised teaching for students in Peabody's Master of Music in Music Theory Pedagogy (MM MTP) program.

PY.710.651. Style Analysis of Pierrot Lunaire. 3 Credits.
Analysis of Schoenberg's Pierrot lunaire, its musico-poetic precedent and its lasting impact on dramatic chamber music.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course.

PY.710.658. Expanding the Music Theory Canon. 3 Credits.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C]

PY.710.659. Intersections of Gender & Music Theory. 3 Credits.
This analysis course is for anyone interested in the intersections of gender and music theory. We will explore a wide variety of works by women, contextualize their practices via short readings, and develop creative analytical approaches to illuminate their music. Special emphasis will be placed on living composers and the development of a nuanced analytical tool kit to respond critically and contribute to the discourse of intersectional analysis.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.660. Tonal Composition: Baroque. 3 Credits.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.663. Tonal Analysis Principles. 3 Credits.
A study of techniques for the analysis of common-practice tonal music. A variety of forms, genres, and styles will be explored.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.667. Beethoven String Quartets. 3 Credits.
This course is a study of the string quartets of Beethoven.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.671. Music in Image: Theory of Film Music. 3 Credits.
The study of music in film, emphasizing the emergence of the idea of montage, the question of diegetic and non-diegetic presentations, and the problems of rhythm and meter in both visual and acoustic domains.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.677. Fugue: Bach/Shostakovich. 3 Credits.
This course examines the wide-ranging use of fugue in music from the high baroque to the mid-20th century. The class focuses on the techniques and designs themselves, and how those techniques and designs relate to both the larger works studied and the broader musical styles of the times.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.685. Music Theory Pedagogy Project. 3 Credits.
Designed for Music Theory Pedagogy students, the project will examine a specific aspect of music theory teaching. Students work under the supervision of a faculty advisor. Open to graduate students only. May not be used for seminar credit.

PY.710.687. Well Tempered Clavier Book 1. 3 Credits.
A detailed analysis of the preludes and fugues in Book 1 of Bach's Well-Tempered Clavier.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.710.688. Well Tempered Clavier Book 2. 3 Credits.
A detailed analysis of the preludes and fugues in Book 2 of Bach's Well-Tempered Clavier.
Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].;Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.

PY.710.692. Wind Music Orchestration. 3 Credits.
This course explores orchestration developments in repertoire for the modern concert wind band. We will focus on developing an understanding the works of several key contributors to the repertoire and engage in stylistic reductions and model orchestration projects.
Graduate students must meet music theory seminar proficiency requirements in order to enroll in this course. Undergraduates must be Composition or Computer Music majors.;Open to Composition, Computer Music, and Theory minor Undergraduate students; must first complete PY.710.212[C] or PY.710.214[C].

PY.715.119. Ear Training 1 Intensive. 2 Credits.
This course focuses upon the development of sight-singing and dictation skills from the diatonic major and minor modes. Open to undergraduate students only.

PY.715.120. Ear Training 2 Intensive. 2 Credits.
This course continues a study of diatonic music through sight-singing and dictation skills, with an increased emphasis on harmonic dictation and subdivisions of the beat. Open to undergraduate students only who have successfully completed Ear Training 1.
Completion of Ear Training/Sightsinging Intensive 1 required, PY.715.119[C].

PY.715.123. Ear Training 1. 2 Credits.
This course focuses upon the development of sight-singing and dictation skills from the diatonic major and minor modes. Open to undergraduate students only.

PY.715.124. Ear Training 2. 2 Credits.
This course continues a study of diatonic music through sight-singing and dictation skills, with an increased emphasis on harmonic dictation and subdivisions of the beat. Open to undergraduate students only who have successfully completed Ear Training 1.
Completion of Ear Training/Sightsinging 1 required, PY.715.123[C]

PY.715.125. Ear Training Perfect Pitch 1. 2 Credits.
A Perfect Pitch accelerated version of 710 • 123 and 710 • 223 that covers the material of the two-year course in one year. Open to undergraduate students only.

PY.715.223. Ear Training 3. 2 Credits.
This course introduces concepts of tonicization and modulation through sight-singing and dictation skills. Additional topics include reading C clefs in Bach chorales, hearing structure in compositions in binary form, and rhythmic techniques such as syncopation. Open to undergraduate students only who have taken or passed out of Ear Training 1+2.
Completion of previous course needed, PY.715.124[C] OR PY.715.120[C].

PY.715.224. Ear Training 4. 2 Credits.
This course continues a study of chromatic music through sight-singing and dictation skills with an increased emphasis on modulating to far-related keys, advanced rhythmic techniques, diatonic modes, and aural study of large-scale forms such as sonata form. Open to undergraduate students only who have successfully completed Ear Training 3.
Completion of Ear Training/Sightsinging 3 required, PY.715.223[C].

PY.715.226. Ear Training Perfect Pitch 2. 2 Credits.
A Perfect Pitch accelerated version of Ear-Training 1 (710.123) and Ear-Training 2 (710.223)that covers the material of the two-year course in one year. Open to undergraduate studentsonly.
Completion of Ear Training/Sightsinging Perfect Pitch 1 required, PY.715.125[C]

PY.715.323. Ear Training 5. 2 Credits.
After a short review of highly chromatic late 19th- and early 20th-century music, this class focuses on atonal music, beginning with the late works of Liszt and Wolf and continuing into the music of today. Open to undergraduates who have successfully completed PY.715.224 (Ear Training 4) or PY.715.226 (Ear Training Perfect Pitch) and all graduate students.
Undergraduates need to have completed PY.715.224[C] or PY.715.226[C]. Graduate students must satisfy the music theory proficiency requirement.

PY.715.425. Ear Training Review.
A graduate review course in the principles of ear-training, dictation, sight-singing, and clefs. Open to graduate students only.

PY.715.426. Ear Training Review Intensive 2.
A graduate review course in the principles of ear-training, dictation, sight-singing, and clefs. Open to graduate students only.

PY.715.155. Keyboard Studies 1. 2 Credits.
A study of basic skills involved in reading, harmonization, transposition, improvisation, and analysis. Section assignments are determined by audition. To be taken in conjunction with Music Theory 1-2. Open to undergraduate students only.

PY.715.156. Keyboard Studies 2. 2 Credits.
A study of basic skills involved in reading, harmonization, transposition, improvisation, and analysis. Section assignments are determined by audition. To be taken in conjunction with Music Theory 1-2. Open to undergraduate students only.
Completion of Keyboard Studies 1 required, PY.715.155[C].

PY.715.157. Keyboard Studies 1-2. 2 Credits.
An accelerated study of basic skills involved in reading, harmonization, transposition, improvisation, and analysis. Section assignments are determined by audition. To be taken in conjunction with Music Theory 1-2. Open to undergraduate students only.

PY.715.255. Keyboard Studies 3. 2 Credits.
A continuation of PY.710.155-156, Keyboard Studies 1 & 2. Emphasis on harmonic and formal analysis as tools for sight-reading and memorization. Repertoire includes solo and duet works, accompaniments, and score-reading. To be taken in conjunction with Music Theory 3-4. Open to undergraduate students only.
Completion of PY.715.156[C] or PY.715.157[C] required.

PY.715.256. Keyboard Studies 4. 2 Credits.
A continuation of 710.155-156, Keyboard Studies 1 & 2. Emphasis on harmonic and formal analysis as tools for sight-reading and memorization. Repertoire includes solo and duet works, accompaniments, and score-reading. To be taken in conjunction with Music Theory 3-4. Open to undergraduate students only.
Completion of Keyboard Studies 3 required, PY.715.255[C].

PY.715.258. Keyboard Studies 3-4. 2 Credits.
An accelerated study of basic skills involved in reading, harmonization, transposition, improvisation, and analysis. Section assignments are determined by audition. To be taken in conjunction with Music Theory 1-2 or Music Theory 3-4. Open to undergraduate students only.
Completion of Keyboard Studies 1-2 required, PY.715.157[C].

PY.610.321. History of Music 1. 3 Credits.
A survey of music in the Western classical tradition from antiquity to the late 17th century.
Prerequisite(s): Students cannot take more than one Music History at the same time.
Sophomores must have completed PY.260.115[C] AND PY.260.216[C] in order to enroll in this course.

PY.610.322. History of Music 2. 3 Credits.
A survey of music in the Western classical tradition from the early 18th century to the late 19th century.
Prerequisite(s): Students cannot take more than one Music History at the same time.
Sophomores must have completed PY.260.115[C] AND PY.260.216[C] in order to enroll in this course.

PY.610.323. History of Music 3. 3 Credits.
A survey of music in the Western classical tradition from the early 20th century to the present day.
Prerequisite(s): Students cannot take more than one Music History at the same time.
Sophomores must have completed PY.260.115[C] AND PY.260.216[C] in order to enroll in this course.

PY.610.324. Music History in Global Contexts. 3 Credits.

PY.610.414. Musicology Practicum. 1 Credit.

PY.610.601. Music History Review.
A review course covering classical antiquity to the 21st century. Students must earn a passing grade in this course before enrolling in graduate seminars in Musicology. Open to graduate students only. Offered in the summer and fall.

PY.610.605. English Music from Dunstaple to Adès. 3 Credits.
In this seminar we'll explore the roots and developments of English music across nearly seven centuries. Divided into a series of case studies centered around composers, major works, and institutions, this course will investigate English music from a variety of angles. We begin with the organum of the High Middle Ages, explore the Tudor polyphony of the English Reformation, courtly music of the Restoration, Thomas Arne, George Frederic Handel, the English choral revival, Stanford, Elgar, Holst, Vaughan Williams, and Britten. We end our inquiry with the diverse musical paths English music has taken in the last fifty years, finally stopping with Adès's recent opera, The Exterminating Angel. The aim of this course is twofold, to provide students with a clear chronology and to familiarize them with important repertoire, while still addressing critical issues in interaction between music and theology, politics, and gender—to name a few
Graduate students must meet musicology seminar proficiency requirements in order to enroll in this course.;Undergraduates need to have successfully completed 2 out of 3 following courses in order to register: PY.610.321[C], PY.610.322[C], PY.610.323[C].

PY.610.606. Decolonizing Ethnomusicology. 3 Credits.
This course will examine the colonialist underpinnings of ethnomusicology and its persistent effects on current understandings of music in a global context. We will analyze foundational texts in the field, along with newer works that attempt to undo the colonialist legacy upon which the discipline is built.

PY.610.608. George Gershwin's World. 3 Credits.
This course is designed as a series of highlights. We will explore a wide range of musical works and cultural topics related to George Gershwin's life and career. Questions to be posed over the course of the semester will include: Who were Gershwin's colleagues and collaborators? How did Gershwin's music interact with the racial terrain of American culture during the Jim Crow era? And does it continue to engage with issues of race today? How has Gershwin's legacy been shaped by American political and business interests? Did technology play a role in the shaping of his "American" sound? If yes, then how did technology influence Gershwin's creative identity? Students will be asked to lead discussions about Gershwin's compositions, so success is dependent upon setting aside blocks of time on a regular basis to complete the various listening and reading assignments. Written assignments will include creating annotated playlists related to various facets of Gershwin's career and a final research paper/long-form essay that relates to material discussed in class.
Undergraduates need to have successfully completed 2 out of 3 following courses in order to register: PY.610.321[C], PY.610.322[C], PY.610.323[C].;Graduate students must meet musicology seminar proficiency requirements in order to enroll in this course.

PY.610.609. Music Therapy from Antiquity to Today. 3 Credits.
Graduate students must meet musicology seminar proficiency requirements in order to enroll in this course.;Undergraduates need to have successfully completed 2 out of 3 following courses in order to register: PY.610.321[C], PY.610.322[C], PY.610.323[C].

PY.610.610. Nadia Boulanger. 3 Credits.
Cited as “the most influential teacher since Socrates,” Nadia Boulanger (1887-1979) taught and nurtured generations of young musicians throughout her adult life. Amongrenowned American composers whom she mentored are Aaron Copland, Elliott Carter, Quincy Jones, and Philip Glass. Who was this extraordinary woman who witnessed two world wars and distinguished herself as a legendary pedagogue? What were her teaching methods? How did a Parisienne guide and shape the career trajectories of so many American composers and musicians? This class will explore these questions and many more. In addition to examining history and identifying Boulanger’s impact on the current state of musical composition, our course will initiate an oral history project to capture the accounts of the last generation of musicians to work directly with Boulanger toward preserving her legacy.
Graduate students must meet musicology seminar proficiency requirements in order to enroll in this course.;Undergraduates need to have successfully completed 2 out of 3 following courses in order to register: PY.610.321[C], PY.610.322[C], PY.610.323[C].

PY.610.611. American Film Music and Classical Hollywood Style. 3 Credits.
