The Department of Economics offers programs designed to improve the understanding of important economic problems and to provide the tools needed for the critical analysis of these problems and for dealing with them in practice.

On the undergraduate level, the department provides both for those who want to become professional economists and for those interested in a specialty related to economics, such as business, law, government, history, health care management, or environmental engineering. Still other students are simply interested in improving their understanding of society or making informed assessments of economic policies as citizens or making wise decisions about personal finances.

On the graduate level, the department provides advanced training for students preparing for careers as professional economists. The program encompasses such fields as macroeconomics, microeconomic theory, econometrics, labor economics, international economics, industrial organization, economic development, and finance, with an emphasis on the application of economic theory and quantitative methods. Because of the small number of graduate students admitted, they can work closely with faculty in graduate courses and seminars, and have easy and informal access to faculty members. Aside from traditional coursework, research, and special lectures, the department holds three weekly seminars to encourage collaboration and communication in different areas of economics. The seminars attract top scholars from throughout the world to discuss their work and also provide a forum for faculty and graduate students to present their recent research. The department also hosts two annual lecture series, the Johns Hopkins Distinguished Lectures in Economics and the Newcomb Lectures that invite reputed economists or scholars in related fields as guest speakers.

Financial Aid

The department offers a Departmental Fellowship to all enrolled students. This fellowship covers full tuition costs plus an annual stipend of $33,000 and full student health insurance coverage. The department guarantees financial support for five years of graduate study, conditional on satisfactory performance. Beginning in the third year of study, students are required to be teaching assistants or research assistants.

For further information about graduate study in economics, contact the director of graduate admissions, Department of Economics at econadmissions@jhu.edu.

Carl Christ Fellowship

In the academic year 1989–90, the department established the Carl Christ Fellowship fund to honor one of its faculty members for his distinguished service and achievements. The proceeds of the fund are used to support outstanding graduate students at the dissertation stage of their research.

For further information about graduate study in economics, contact the director of graduate admissions, Department of Economics at econadmissions@jhu.edu.

Center for Financial Economics (CFE)

Founded in 2008 and housed in the Economics Department in the Krieger School of Arts and Sciences at Johns Hopkins, the Center for Financial Economics blends the study of finance and economics, providing in-depth training and cutting-edge research in both. The dual research and teaching missions of the Center are premised on the belief that a deep understanding of modern economies requires an integrated treatment of finance and the broader economic forces driving economic progress.

The CFE offers an undergraduate minor, producing expertise in finance within the context of a top-notch liberal arts education. The minor will equip students with a thorough foundation in the workings of financial markets and their role in the broader economy, providing a foundation for careers in finance, business, academics, and government.

Programs

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.180.101. Elements of Macroeconomics. 3 Credits.
An introduction to the economic system and economic analysis, with emphasis on total national income and output, employment, the price level and inflation, money, the government budget, the national debt, and interest rates. The role of public policy. Applications of economic analysis to government and personal decisions. Prerequisite: basic facility with graphs and algebra.

AS.180.102. Elements of Microeconomics. 3 Credits.
An introduction to the economic system and economic analysis with emphasis on demand and supply, relative prices, the allocation of resources, and the distribution of goods and services, theory of consumer behavior, theory of the firm, and competition and monopoly, including the application of microeconomic analysis to contemporary problems.

AS.180.203. Faculty Research in Economics. 1 Credit.
This course will consist of a series of informal lectures by various professors in the Department of Economics. Each lecture will consist of a description of a professional research project which he/she has undertaken over the course of his/her professional career.
AS.180.101 and AS.180.102, both may be taken concurrently.

AS.180.210. Migrating to Opportunity? Economic Evidence from East Asia, the U.S. and the EU. 3 Credits.
Increased mobility of people across national borders, whether by choice or by force, has become an integral part of the modern world. Using a comparative perspective and an applied economics approach, the course explores the economic and political determinants, and (likely) consequences of migration flows for East Asia, the US and the EU. Lectures, assignments and in class discussions, will be built around the following topics: i) migrants' self-selection; ii) human capital investment decision-making; iii) remittance decisions and effects; iv) impacts on labor markets of both receiving and sending countries; and v) the economic benefits from immigration. Overall, the course will give students perspective on the why people choose or feel compelled to leave their countries, how receiving countries respond to migrants' presence, and the key economic policy concerns that are influencing the shaping of immigration policy in East Asia, the US, and the EU.
AS.180.101 AND AS.180.102

AS.180.214. The Economic Experience of the BRIC Countries. 3 Credits.
In 2001, Jim O'Neill, the Chief Economist at Goldman Sachs, coined the acronym BRIC to identify the four large emerging economies, Brazil, Russia, India and China. These economies have since had an amazing run, and have emerged as the biggest and fastest growing emerging markets. In this course, we look at the economic experiences of the BRIC countries for the past 50 years. We discuss the reasons that have contributed to their exceptional growth rates, with particular emphasis on their transformation into market economies. We also analyze the challenges that these countries continue to face in their development process.
AS.180.101 AND AS.180.102

AS.180.217. Game Theory in Social Sciences. 3 Credits.
Game Theory is the study of multiple person decision problems in which the well-being of a decision maker depends not only on his own actions but also on those of others. Such problems arise frequently in economics, political science, business, military science and many other areas. In this course, we will learn how to model different social situations as games and how to use solution concepts to understand players' behavior. We will consider various examples from different fields and will play several games in class. The emphasis of the class is on the conceptual analysis and applications and we will keep the level of mathematical technicalities at the minimum -- high school algebra and one term of calculus will be sufficient. Students who took AS.180.117 are not eligible to take AS.180.217.
AS.180.102 or instructor permission;Students may not have previously taken AS.180.117.

AS.180.221. The Informal Economy: Who Wins, Who Loses, and Why We Care About It.. 3 Credits.
The informal economy is one of the most complex economic and political phenomena of our time. It exists in rich and poor countries alike, currently employs almost half of the world's workers, about 1.8 billion people, and totals to economic activity of around $10 trillion. If the informal economy were an independent nation, it would be the second-largest economy in the world, after the United States and before China. In today's globalizing environment, are informal economies a poverty trap or an engine of growth? Do they stimulate entrepreneurship and popular empowerment, or promote exploitation? How does an improved understanding of the size and organization of informal economies affect service provision, social policy or taxation? What are the implications of the informal economy for social cohesion and popular politics? The proposed course will address these (as well as other) questions related to the informal economy to offer students an understanding of such complex phenomenon from a variety of perspectives. The course will comprise three parts. Part 1 will explore the complexities of the informal economy, and the effects of informality on policies of inclusive growth. Part 2 will draw on empirical evidence and comparative case studies to examine informal economies in various regions, including Africa, East Asia, North and South America, and Europe, highlighting variations in activities, relations with the state, global integration and economic outcomes. Finally, Part 3 will discuss the ongoing economic policy shift from punitive measures to accepting informality as a virtual space through which citizens flow from job-seeker to compliant entrepreneurs.
AS.180.101 AND AS.180.102

AS.180.223. Economic Development in Sub-Saharan Africa. 3 Credits.
Many sub-Saharan African countries are among the least developed countries in the world. In this course, we explore the economic development experiences of African countries, with more focus on sub-Saharan Africa. The course starts with a historical perspective, delves into development strategies, and examines evidence on successes and failures of some case study countries. We conclude by analyzing the many challenges that these countries continue to face in their development process. Elements of Microeconomics and Macroeconomics are required prerequisites. There would be group presentations on assigned readings.
AS.180.101 AND AS.180.102

AS.180.228. Economic Development. 3 Credits.
A comprehensive survey of economic behavior by households, farms and firms in poor countries and the role of and for governments. Discussions include measurement of income levels, economy-wide equilibrium, sources of growth, agriculture and industry, international trade and investment, savings, population, fertility, education, health, income distribution and public finances. Applies economic theory rigorously to interpret and evaluate the economic experience of poor countries. Diagnostic test on Elements of Economics is required in the second week. Grading based on 3 exams and one paper.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.229. Economics of Health and Education in South Asia. 3 Credits.
Human capital is an important factor of economic growth in South Asian economies, along with physical capital and technology. Addressing health and education challenges has implications for improving a country's human capital formation and income growth. In this course, we look at past and present health and educational outcomes in South Asian Countries. We discuss the gaps in access to education and health care services, the quality of education and health care services as well as the impacts on the productivity of the labor force. We also empirically analyze the link between economic growth and human capital development. Furthermore, we focus on some challenges and future policy options for economies in South Asia.
AS.180.101 AND AS.180.102

AS.180.231. Debates in Macroeconomics. 3 Credits.
This course covers some of the more contentious current debates in macroeconomics. Topics include: recent and proposed tax changes (are workers affected by the corporate tax?); unconventional monetary policies (have they helped?); modern monetary theory (sound doctrine or hokum?); why are interest rates so low? backlash against globalization (warranted? unprecedented?); immigration (economic bane or boon?); rising income inequality (causes? consequences? pervasiveness?); has competition waned in US markets? Students will use the tools of economics to analyze these and other pressing issues. Though definitive answers may prove elusive, sound economic analysis can shed considerable light, not least by unmasking the political biases that often drive protagonists on both sides of these debates.
AS.180.101 AND AS.180.102

AS.180.233. Economics of Transition and Institutional Change. 3 Credits.
This course will introduce students to the comparative analysis of institutions of existing capitalist systems and to the historical evolution of those institutions. By comparing the economic systems of different nations, we will try to reveal the institutional setups that either contribute or hinder economic performance. We will also examine the process of countries transforming their economies and investigate the factors that determine the differences in reforms' outcomes between countries.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.238. Rethinking Economics After the Great Recession. 3 Credits.
The financial crisis that began in the United States in 2007 threw virtually the entire world into recession. This class will look at the causes of the crisis and at how it unfolded. It will look into the conventional wisdom of economists, circa 2006, and why that wisdom proved to be so wrong. It will examine the financial innovations that contributed to the crisis, at the reasons financial regulators were blindsided, and at the reforms enacted after the crisis.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.239. Urban Economics. 3 Credits.
This course introduces students to the major ideas of modern urban economics focused on the causes and consequences of urban economic growth, urban poverty and a city's quality of life. We will analyze basic questions such as; Why is Silicon Valley in Silicon Valley? Why did Beijing become so polluted? Why is crime high in Baltimore? Why does rich San Francisco face a homelessness challenge? The role of federal, state, and local government in urban life will be explored.
AS.180.101 AND AS.180.102

AS.180.241. International Trade. 3 Credits.
Theory of comparative advantage and the international division of labor: the determinants and pattern of trade, factor price equalization, factor mobility, gains from trade and distribution of income, and theory and practice or tariffs and other trade restrictions. Recommended Course Background: AS.180.101.
AS.180.101 AND AS.180.102

AS.180.242. International Monetary Economics. 3 Credits.
This course presents International Monetary Economics theory and applies it towards gaining an understanding of recent events and current policy issues. The theory presented in this course covers a broad range of topics including exchange rate determination, monetary and fiscal policy in an open economy, balance of payments crisis, the choice of exchange rate, and international debt. The insights provided by these theoretical frameworks will enable us to discuss topics such as the global financial crisis, global financial imbalances, the Chinese exchange rate regime, and proposed changes in the international financial architecture.
AS.180.101 AND AS.180.102

AS.180.244. Market Design. 3 Credits.
We will study how the rules of a market impact behavior, and in turn whether this behavior leads to (un)desirable outcomes. We will cover how the lessons learned from both successful and failing markets have been used by economists to design new markets.It will help us address questions such as:(i) Can economics help with the shortage of donated kidneys? (ii) How should a ride share service assign cars to clients?(iii) Can changing the way school seats are assigned change the welfare of students in a city?The material is intended to be as accessible as possible, keeping the mathematical technicalities to a minimum (i.e. one-term of calculus would be sufficient).
AS.180.102

AS.180.246. Environmental Economics. 3 Credits.
This course presents a broad overview of the key issues in modern environmental economics with a focus on understanding and solving urban pollution challenges in developed and developing nations. This course explores how cities and nations can achieve the "win-win" of economic growth and reduced urban pollution. Special attention is paid to the incentives of households, firms and governments in reducing the production of pollution. The course examines a number of pollution challenges including; air, water, noise, garbage and the global challenge of climate change.

AS.180.248. Financial Writing and Analysis. 3 Credits.
There is an immense chasm between economic and financial commentary in academic discussions and that provided by private sector analysts and the press. Some of the difference is merely semantic, but much of the difference has real substance. Academic and nonacademic commentators tend to simply write off the other as being clueless in some way. Sorting out which bits of each style of analysis are most valuable and synthesizing them into a coherent commentary is a rare and valuable skill. This is a hands-on course with a goal of building skills reading and writing commentary in financial economics. The course begins critically studying commentary regarding prominent topics in the news over the recent months and then moves to writing "explainer" pieces for publication on the Center for Financial Economics blog. Students will work in teams both analyzing commentary, and writing and critiquing the work of fellow students.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.249. Gender Economics. 3 Credits.
"We've begun to raise daughters more like sons... but few have the courage to raise our sons more like our daughters." ? Gloria Steinem This course aims to explore the differences in economic outcomes observed among women and men. We will study those differences in earnings, income, asset ownership, hours of work, unpaid work, poverty, and the allocation of resources within the household. The course explores the gender dimensions of paid labor and how gender roles in unpaid work and in caring labor impact how men and women participate in the formal and informal economy. It will evaluate women's perspectives and experiences in the United States and around the world.
AS.180.101 AND AS.180.102

AS.180.252. Economics of Discrimination. 3 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Area: Writing Intensive
AS.180.102

AS.180.259. Demystifying Hedge Funds: A Firsthand Look at the Alternative Investment Industry. 3 Credits.
An introduction to hedge funds taught by two industry professionals and JHU alumnae. This course will examine the interplay between hedge funds, their investors, and investment banks. Students will explore types of hedge fund strategies, delve into market trends, and discuss key investment themes in the alternatives industry.
AS.180.101 AND AS.180.102

AS.180.260. Real Estate Economics and Finance. 3 Credits.
An introduction to the economic analysis of real estate markets. Various perspectives will be considered, including individual homeowners and renters, investors and financiers, and policymakers. Topics include the determinants of property valuations, financing considerations, real estate development, and analysis of real estate as an investment class. The course qualifies as an elective for the Financial Economics Minor.
AS.180.101 AND AS.180.102

AS.180.261. Monetary Analysis. 3 Credits.
This course analyzes the financial and monetary system of the U.S. economy and the design and implementation of U.S. monetary policy. Among other topics, we will examine the role of banks in the economy, the term structure of interest rates, the stock market, the supply of money, the role of the Federal Reserve in the economy, the objectives of monetary policy in the United States and current monetary policy practice.
AS.180.101 AND AS.180.102

AS.180.263. Corporate Finance. 3 Credits.
This course is an introduction to the financial management of a corporation. Students study the following broad questions. How should a firm decide whether to invest in a new project? How much debt and equity should a firm use to finance its activities? How should a firm pay its investors? How do taxes affect a firm's investment and financing decisions? What determines the value of a firm? The emphasis throughout the course is on the economic principles that underlie answers to these questions.
AS.180.101 AND AS.180.102

AS.180.266. Financial Markets and Institutions. 3 Credits.
Understanding design and functioning of financial markets and institutions, connecting theoretical foundations and real-world applications and cases. Basic principles of asymmetric information problems, management of risk. Money, bond, and equity markets; investment banking, security brokers, and venture capital firms; structure, competition, and regulation of commercial banks. Importance of electronic technology on financial systems.
AS.180.101 AND AS.180.102

AS.180.277. Economic Activity in the Black Community. 3 Credits.
This course uses the study of economic concepts and dynamics to increase our understanding of the activity and issues that arise in the urban Black Community. If you take this course, you will learn about the correlation of education, employment opportunities, and health to the economics of an area. While doing this, you will expand your understanding of economic theory to learn how the theoretical concepts and models can be applied to Black Communities. We will begin with African Americans in slavery in the United States and examine their economic contributions. We will move through history to present day to address issues and problems like: Why are many low-income level communities populated with large numbers of African Americans? What are the particular characteristics of those neighborhoods? Where do we generally find these types of neighborhoods? Learning and using the tools of GIS, students will map issues of importance by the neighborhood to show the relationship of economic activity in the Black Community to other communities.
AS.180.101 AND AS.180.102

AS.180.280. The History and Future of the Hedge Fund Industry. 3 Credits.
The precursors to modern hedge funds began more than 50 years ago, but in the 1990s the hedge fund, or alternative investments, industry began a period of rapid growth and evolution. With growth came controversy. Some argue that hedge funds, by allowing immense amounts of capital to be rapidly and freely deployed, play a vital role in pushing prices toward the efficient markets ideal. Others claim that hedge funds may accentuate speculative price dynamics, threatening the stability of the financial sector. While many hedge funds claim to offer outstanding returns to investors, data suggest that many clients end up paying high fees for unspectacular results. This course examines these and other controversies, while tracing the history of the alternative investments industry over the last 25 years.
AS.180.101 AND AS.180.102 AND (AS.180.266 OR AS.180.263 OR AS.180.367)

AS.180.285. Information and Investing Seminar. 3 Credits.
The course will seek to discuss and illuminate the information (news reports, industry reports, government statistics, and proprietary indicators) that investors use to make investment decisions.The course will be conducted in the framework of a weekly investment committee format wherein information is processed to maximize an investment portfolio's return to risk.Each class will be conducted in two parts. The first part will require students to share with the class information gathered from their assigned specialty (e.g.: fixed income, equities, emerging markets, commodities) and the second part will require group interaction as to what decisions need to be made to a hypothetical portfolio in order to maximize objectives.The course will require regular reading of financial and economic news as well as numerous assigned industry and academic research related to global finance.Other: this course will require quite a bit of reading and regular interaction in group discussion and with the instructor.
AS.180.280 or permission of instructor Kevin Heerdt or Robert Barbera

AS.180.289. Economics Of Health. 3 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
AS.180.102

AS.180.301. Microeconomic Theory. 4 Credits.
An introduction to the modern theory of allocation of resources, starting with the theories of the individual consumer and producer, and proceeding to analysis of systems of interacting individuals, first in the theory of exchange, then to systems which include production as well.
AS.180.102 AND (AS.110.106 OR AS.110.107 OR AS.110.108 OR AS.110.109) OR equivalent.;AS.180.101 may be taken concurrently.

AS.180.302. Macroeconomic Theory. 4 Credits.
The course provides a treatment of macroeconomic theory including a static analysis of the determination of output, employment, the price level, the rate of interest, and a dynamic analysis of growth, inflation, and business cycles. In addition, the use and effectiveness of monetary and fiscal policy to bring about full employment, price stability, and steady economic growth will be discussed.
AS.180.101 and (AS.110.106 or AS.110.107 or AS.110.108 or AS.110.109);AS.180.102 can be taken at the same time as AS.180.302.

AS.180.303. Topics in International Macroeconomics and Finance. 3 Credits.
The course will review selected topics in international macroeconomics and finance. The topics for the Fall of 2019 include: financial globalization; international portfolio diversification; capital account liberalization and the choice of the exchange rate regime in emerging markets; the global financial safety net; macroeconomic adjustment in the euro area.
AS.180.101 AND AS.180.102 AND AS.180.302

AS.180.309. Economics of Uncertainty and Information. 3 Credits.
In this course we'll discuss the theory of decision making in the face of risk, the theory of risk aversion and its applications to financial and insurance markets. Building on the theory of individual decision making under risk, we will study the economic implications of asymmetric information, the type of market failures produced by adverse selection and moral hazard problems, and the models that were advanced to analyze these problems, including incentive contracts, screening and signaling equilibria.
AS.180.301 OR AS.180.401

AS.180.310. Economics Of Antitrust. 3 Credits.
This course explores the economic rationale for, and consequence of, antitrust laws. In addition to economic analysis we will study landmark antitrust cases.
Area: Writing Intensive
AS.180.301 OR AS.180.401

AS.180.314. Mathematical Economics. 3 Credits.
This course traces the extent to which modern economic theory, particularly as it pertains to pure competition in market and non-market games under the rationality postulate.
AS.180.301

AS.180.315. Housing Problems and Policy: An Economics Perspective. 3 Credits.
This course uses economic theory and econometric research approaches as a lens on housing issues and policy. Housing is at the center of the effects of segregation and the Great Recession, and bears a significant connection to the labor market as well. This course briefly explores microeconomic theory specifically relevant to the housing market, then uses readings from academic social science literatures to dive deeper into these issues and others. Finally, students will examine public housing policies, using the literature and proposing statistical techniques to assess their effectiveness. The course will improve the understanding and use of basic econometric techniques with respect to policy questions as well as the ability to critically read academic literature.
(AS.180.301 OR AS.180.401)AND (EN.550.420 OR EN.550.310 OR EN.550.112 OR EN.550.113 OR EN.550.211 OR EN.550.311 OR EN.550.430 OR EN.550.435 OR EN.550.111 OR AS.280.345)

AS.180.327. Economics of Matching Markets. 3 Credits.
Matching markets are those markets where the identities or characteristics of the agents engaged in a transaction matter, not only the price. In fact, no monetary transactions may happen at all. Examples include donated organ allocation, school choice, refugee resettlement, among others. Although the mathematical pre-requisites are low, emphasis is given to proofs; thus, some degree of mathematical/logical maturity is assumed. Evaluation consists of problem sets, presenting a summary of an academic paper in-class, and a final paper (either original research or critical literature review).
AS.180.102;AS.180.244 AND (AS.180.301 OR AS.180.401), may be taken at the same time as AS.180.327.

AS.180.334. Econometrics. 3 Credits.
Introduction to the methods of estimation in economic research. The course begins with a review of basic statistics. This is followed by developing the primary method employed in economic research, the method of least squares, and an investigation of the performance of this method in a variety of important situations. The course considers a way to handle many of the situations in which ordinary least squares is not useful, the method of instrumental variables. The modeling of economic time series, binary dependent variables, panel data and differences in differences are all also considered. Applications are intended to showcase how the tools of econometrics can be brought to bear on important policy questions.
AS.180.301 OR AS.180.401, may be taken concurrently.;One semester of calculus, AS.280.345 OR EN.540.305 OR EN.553.211 OR EN.553.111 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.560.435 OR EN.560.348 OR EN.553.112 OR EN.540.382

AS.180.336. Macroeconomic Strategies. 3 Credits.
Will sketch out a strategy for anticipating economic turning points. Business cycle basics,monetary policy/financial market/real economy interactions will be reviewed. Long-term growth issues will be explored.
AS.180.101 AND AS.180.102 AND AS.180.302 or instructor permission.

AS.180.338. Political Economy and Development. 3 Credits.
Good governance is associated with desirable outcomes across countries and societies: higher life satisfaction, greater income per capita, lower child mortality, longer life expectancy, less disease, etc. But these statistical associations in the data are not sufficient to establish either that good governance truly causes such societal outcomes, or what types of policies produce them. This course asks: What are the determinants of good governance? Is good governance "good" beyond its intrinsic desirability? If so, how? We use a data-driven approach, focusing on quantitative empirical methods and their applications to policy. The goal is to develop skills to be savvy consumers, as well as producers, of policy-relevant evidence related to issues of governance, in rich and poor countries alike. Topics will include: democracy, corruption, conflict, culture, mass media, quotas, and foreign aid.
(AS.180.301 OR AS.180.401) AND AS.180.334

AS.180.345. Rationality: Meaning and Measurement. 3 Credits.
Economists generally work with a number of classic models of how people behave in different contexts. These models (such as utility maximization and expected utility maximization) are widely used because they are tractable and elegant, but are they also accurate models of human behavior? In this course, we examine the axiomatic foundations of these models, explore their implications for choice behavior, and discuss the empirical and experimental strategies economists have developed to test these models. The course would require you to solve mathematical problems; knowledge of mathematics up to the level of multi-variate calculus would be very helpful.
AS.180.301

AS.180.347. Macroeconomic Thinking 1936-2020: Evolution or Devolution?. 3 Credits.
This course charts a narrative for the evolution of macroeconomics from its very initiation to its present formulation in a way that is sensitive to issues of principle and of policy, and without becoming totally subservient to the disciplinary boundaries within which the problems are formulated and studied. Rather than macroeconomics as a subject that takes its shape in current conventional texts, the focus of the course shall be how it got there. As such, it touches on the development of ideas and intellectual history. The course will be mathematically self-contained but will pre-suppose conceptual sophistication that one expects after completion of courses in micro and macroeconomics at the intermediate level. The course is open to students in the sister-disciplines in anthropology, political science, and sociology, but it would be advisable for interested students in these departments to talk to the instructors.
AS.180.302

AS.180.349. Economics of Race, Gender and Culture. 3 Credits.
This course will review popular causal analysis tools used in economics research and cover papers on race, gender, and culture that used the causal analysis tools.This course will ask you to use STATA to solve problem sets and exams. Exams will take place in a computer lab.Students must be familiar with undergraduate-level econometrics.
AS.180.101 AND AS.180.102 AND AS.180.301 AND AS.180.334

AS.180.351. Labor Economics. 3 Credits.
The course discusses various issues in labor markets from the perspective of economic theory. We first study the major forces at work that shape labor market behavior; firms' labor demand and workers' labor supply. Then we discuss the equilibrium behavior of employment and wages. Using these tools, we also cover various applied topics in labor economics, such as minimum wage regulations, male-female wage differentials, human capital investment, worker mobility, and unemployment.
AS.180.301 OR AS.180.401

AS.180.352. Public Economics. 3 Credits.
This course explores issues related to expenditure and tax policies of governments, as well as views regarding the purpose of government and criteria for evaluating government actions. The course also includes a discussion of how group or collective choices are made within society, how environmental policies affect the level of pollution, and the importance of public debt.
AS.180.301 OR AS.180.401

AS.180.355. Economics of Poverty/Inequality. 3 Credits.
This course focuses on the economics of poverty and inequality. It covers the measurement of poverty and inequality, facts and trends over time, the causes of poverty and inequality with a focus on those related to earnings and the labor market, and public policy toward poverty and inequality, covering both taxation and government expenditure and programs. By the nature of the material, the course is fairly statistical and quantitative. Students should have an intermediate understanding of microeconomic concepts. Basic knowledge of regression analysis is also helpful.
Area: Writing Intensive
AS.180.301

AS.180.361. Rich Countries, Poor Countries. 3 Credits.
Why are some countries rich while some other countries poor? Why does a country’s income per person generally grow over time? We try to analyze these questions using the theoretical and empirical growth literature. We will study seminal growth models, and also try to explain cross-country income differences in terms of factors like geography, institutions and global integration. Knowledge of regression analysis (including instrumental variables estimation) is required.
AS.180.302 AND (AS.180.334 OR AS.180.434)

AS.180.363. Sex, Drugs and Dynamic Optimization: The Economics of Risky Behavior. 3 Credits.
We apply the tools of economic analysis to understand behaviors that are enjoyable today, but may have negative consequences in the future.
(AS.180.301 OR AS.180.401) AND AS.180.302;AS.180.334 can be taken concurrently.

AS.180.365. Topics in Macroeconomics. 3 Credits.
This course builds on AS.180.302 (Macroeconomic Theory) to consider the leading macroeconomic controversies of today (such as the appropriate monetary and fiscal policies of the Federal Reserve and U.S. Government). The classes will include frequent student presentations.
AS.180.302

AS.180.367. Investment-Portfolio Management. 3 Credits.
Investment securities and their markets, especially the stock market. The relations between expected return and risk. The determination of security prices. Financial portfolio selection. The assessment of the performance of managed portfolios.
(AS.180.301 OR AS.180.334 OR AS.180.401) AND (EN.553.111 OR EN.553.112 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.553.430)

AS.180.368. Managerial Economics and Business Strategy. 3 Credits.
Seminar on quantitative concepts, decision-making, and strategy in business organizations. Overall context is ‘value’ – how it is measured and maximized long term. Microeconomic theory of the firm, competitive analysis, corporate finance.
(AS.180.301 OR AS.180.401) AND (EN.550.111 OR AS.180.367 OR AS.180.263) or permission of the instructor.

AS.180.371. Industrial Organization. 3 Credits.
Investigation of firm behavior in markets characterized by imperfect competition. Imperfect competition lies in between monopoly and perfect competition and characterizes most major industries in modern capitalist economies. Central issues to be covered in the course include what determines the intensity of competition? What determines the extent of entry and exit? How is it that some firms consistently dominate their industries?
AS.180.301 OR AS.180.401

AS.180.389. Social Policy Implications of Behavioral Economics. 3 Credits.
Economists increasingly incorporate insights from psychology into models of rational decision-making. Known as "behavioral economics", this line of research considers how, for example, emotions, rules-of-thumb, biased beliefs and time-inconsistent preferences influence how we make choices. Behavioral economics increasingly pervades policy discussions on topics as diverse as: obesity, the role of media, subprime mortgages and voting patterns. Behavioral models are certainly novel, but do they help us to design superior social policies? With the goal of preparing students to address this question, this course (1) provides a thorough overview of the main contributions of behavioral economics, highlighting departures from more traditional economic models and (2) emphasizes how behavioral economic models might (or might not) improve how we think about social policy.
AS.180.301 OR AS.180.401;AS.180.334 OR AS.180.434 can be taken concurrently.

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Benefits of good health and its costs. Health demand and supply in poor countries. Welfare economics of Public Health. This is a writing seminar. There are some lectures on how to write a paper and on the substance of the economics of international health but the focus and only assignment is a 40-page paper by each student under the supervision of the instructor.
Area: Writing Intensive
AS.180.301 or AS.180.401;Students may not take AS.180.390 if they took AS.180.391.

AS.180.391. Economics of China. 3 Credits.
Discussion of the economic experience of Post-War China, primarily emphasizing topics rather than historical narrative: agriculture, industry including corporate governance and public enterprises, international trade, population, migration, education, health, public finances among other topics. This course is writing intensive and the only assignment for the course is a 40 page paper on some aspect of the Chinese economy to be done under the close supervision of the instructor. The course is not primarily a lecture course, although there will be some lectures on how to do a paper and on the substance of the Chinese economic experience.
Area: Writing Intensive
AS.180.301 OR AS.180.401;Students may not take AS.180.390 if they took AS.180.391.

AS.180.434. Advanced Econometrics. 3 Credits.
This is a faster-paced and more intensive version of Econometrics 180.334. You can use either 180.334 or 180.434 to satisfy the requirement for the economics major. This course is suitable for those students who prefer a more technical treatment of econometric methodologies.NOTE: Students may not take both 180.334 and 180.434.
AS.180.301 or AS.180.401, one semester of linear algebra, one semester of calculus, AS.280.345 or EN.580.305 or EN.550.211 or EN.550.111 or EN.550.310 or EN.550.311 or EN.550.420 or EN.560.435 OR EN.560.348.;Students may only receive credit for either AS.180.334 or AS.180.434.

AS.180.501. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.180.521. Research in Economics. 2 Credits.
The assignment in this course is to complete the initial stages of research for the Senior Honors Thesis in Economics. Students will work independently under the supervision of a thesis advisor from the department. Students must discuss with their departmental academic advisor about possible thesis advisors. They should get the approval from their thesis advisor, and register for the section of the course assigned to the thesis advisor, who will also be responsible for grade reporting. Open to Senior and Junior Economics majors. Note: This course cannot be counted as one of the five elective economics courses required for the Economics major.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.180.522. Senior Thesis. 3 Credits.
Students enrolled in this course will complete the Senior Honors Thesis under the supervision of a thesis advisor (who will have been chosen by the student prior to registration for AS.180.521). Students should register for the section of the course assigned to their thesis advisor. The thesis advisor will be responsible for submitting grades for their section. Note: This course cannot be counted as one of the five elective economics courses required for the Economics Major.
Area: Writing Intensive
AS.180.521;You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.180.600. General Equilibrium Theory.
The mathematical theory of general static equilibrium. The course will emphasize the formal mathematical expression of economic ideas and the ability to give a loose economic intuition a coherent logical meaning. Different mathematical structures in general equilibrium theory will be isolated and discussed. The text will be Debreu's book "Theory of Value". Recommended Course Background: AS.110.106, AS.180.301, and AS.180.302 or permission of the instructor.

AS.180.601. Microeconomic Theory I.
This course covers the basics of Walrasian general equilibrium theory as set out in Debreu's Theory of Value, and thereby covers the standard (neoclassical) partial equilibrium theories of production and consumption. In addition, it covers Kuhn-Tucker optimization theory and its specializations of concave and linear programming. Finally, it touches on order structures and monotone comparative statics, as well as decision making under risk. A subtext of the course will be an exploration of how loose economic ideas and intuitions can be given formal mathematical expression. Prerequisites: Economics PhD students or permission of the instructor

AS.180.603. Macroeconomic Theory I.
A comprehensive treatment of macroeconomic theory, including static analysis of aggregate output employment, the rate of interest, and the price level; aggregative theory of investment, consumption, demand and supply of money; empirical work on aggregative relationships.

AS.180.604. Macroeconomic Theory II.
First term: a comprehensive treatment of macroeconomic theory, including static analysis of aggregate output employment, the rate of interest, and the price level; aggregative theory of investment, consumption, demand and supply of money; empirical work on aggregative relationships. Second term: the macrodynamic theory of growth, cycles, unemployment and inflation, and selected subjects.

AS.180.605. Advanced Macroeconomics I.
Topics of recent research in macro-economics. Content will vary from year to year. Likely topics include implicit contract theory, search theory and unemployment, disequilibrium macroeconomic models, monetary policy and the control of inflation, contract-based rational expectations models, imperfect competition in macrodynamic models, business cycle models, empirical tests of rational expectations models, theories of investment behavior, and debt neutrality.Open to 2nd year Grad Students and up.

AS.180.606. Advanced Macroeconomics II.
Topics of recent research in macroeconomics. Prof. Ball's course covers nominal rigidities, dynamic-consistency theories of inflation, inflation inertia and the costs of disinflation, monetary policy, costs and benefits of price stability, benefits of output stabilization, alternative policy rules, measuring inflation, unemployment, efficiency-wage theories, the behavior of the NAIRU, macro in middle-income countries, high inflation and stabilization, currency crises. Prof. Carroll's course analyzes implications of the buffer-stock and habit formation theories of consumption for comovement of aggregate variables and asset pricing. The models are applied to study the phenomena of declining U.S. saving rate, the dynamic relationship between saving rates and growth, and the equity premium puzzle.
AS.180.603

AS.180.607. Macroeconometrics I.
The course is an attempt to provide a framework for discussing the techniques that are used in macroeconometric analysis. Generally the bias that it has is one of looking at these from the perspective of someone analyzing macroeconomic data for policy analysis. Consequently, many of the applications considered are drawn from the type of research conducted in central banks and finance ministries. Its emphasis is therefore upon the issues raised by the analysis of time series of macro-economic data. Today there is an emerging literature that looks at micro-economic data as well as conducting cross-country studies. We will tend to ignore that material as the methods used in such research are essentially those of micro-econometrics, although sometimes with adjustments made to reflect the nature of macro-economic time series.
AS.180.633

AS.180.609. Core Mathematics for Economics.
This course will develop the necessary mathematical language and tools that are to be regarded as a pre-requisite for graduate study in economics at Johns Hopkins. Specifically, the course will focus on set theory, linear algebra and real analysis.

AS.180.611. Economics of Uncertainty.
This course offers a review of subjective expected utility theory of decision making under uncertainty and choice based subjective probabilities. It also explores the motivation for the recent developments of non-expected utility theories under risk and under uncertainty. It examines the role of completeness and awareness in these theories as well as the theories of menu choice and random choice behavior.

AS.180.622. Game Theory.
The topics covered include solutions concepts such as dominance, rationalizability, Nash equilibrium, correlated equilibrium, subgame perfect equilibrium and Perfect Bayesian equilibrium. We will discuss both static and dynamic games and games of complete and incomplete information.
Prerequisite(s): AS.180.623
AS.180.623

AS.180.623. Economics of Information.
The course introduces the economic issues associated asymmetric information and analyses the institutions and mechanisms designed to mitigate the resulting inefficiencies. Topics include: Adverse selection; moral hazard; incentive contracts; and mechanism design.
Prerequisite(s): AS.180.622
Area: Writing Intensive
AS.180.600 AND AS.180.601

AS.180.626. Computational Methods.
This class will introduce students to the computational tools that are used to get things done in scientific research. Such tools include, but are not limited to, unix bash shell scripting, LaTeX/Beamer, virtual machines, git and github, tools for parallel computation, cloud services, and others. Brief treatments of special-purpose tools (like Mathematica for symbolic math) will conclude this part of the class. After this introduction, the course will involve an intensive introduction to the use of the Python language for scientific computation purposes, including a discussion of why Python dominates other choices like Matlab and Julia. The final third of the course will apply the tools in a practical application to a specific problem identified jointly between the instructor and the student. There is no required text; readings will be assigned in class. (The characteristic that distinguishes this class from alternatives is that this class will not teach specific algorithms nor frontier computational techniques; rather, it aims to expose students to a broad set of tools that they will use regularly thereafter).

AS.180.632. Topics in Applied Microeconometrics.
This course teaches methods for using micro-data to recover structural parameters of microeconomic models. We cover static models, but focus largely on single-agent dynamic programming, including "full solution" methods along with innovations that permit circumvention of daunting computational tasks. Additional topics will be partially based on students' interests, but will likely include: general equilibrium models, static and dynamic games, matching models, unobserved heterogeneity, structural methods with experimental data and biased expectations. The goal is to teach students to use structural methods in their own research, and so we will delve into the nuts and bolts of structural work, examining how researchers actually get from raw data to results. This includes: how the sub-sample for analysis is chosen, how the model is specified, how the programming problem is solved, which moments are generated, how these are matched to the analogous moments in the data and, importantly, how identification is established.

AS.180.633. Econometrics.
Mathematical models of economic behavior and the use of statistical methods for testing economic theories and estimating economic parameters. Subject matter will vary from year to year; statistical methods, such as linear regression, multivariate analysis, and identification, estimation and testing in simultaneous equation models, will be stressed.
AS.180.636

AS.180.634. Panel Data Models & Applications.
This course is a reading course for the panel data models in the economics department. We will focus on econometric theories that are commonly used in panel data analysis, although many of these techniques can be applied to other areas as well. In addition, we will discuss applications of these theories. The course material will start form chapter 10 & 11 in Wooldridge's book which covers linear panel data models. And then we discuss the discrete choice models from chapter 7 of Hsiao's book. After these, we will try to read papers relatedto panel data models.

AS.180.636. Statistical Inference.
Theory and applications of statistical inference. Topics include probability and sampling, distribution theory, estimation, hypothesis testing, and simple regression analysis. Statistical applications will be drawn from economics. Limited to graduate students in Economics except by permission of the chair. Recommended Course Background: AS.110.201, AS.110.302

AS.180.637. Microeconometrics I.
This is an advanced graduate course on major econometric techniques and models that are used in empirical microeconomics. We will cover topics like extremum estimators, empirical process, quantile regression, plugin estimator, Bootstrap, weak Instrumental variables, MCMC, and partial identification in this course.
AS.180.601 AND AS.180.622 AND AS.180.633 AND AS.180.636

AS.180.638. Microeconometrics II.
This course is the second in the microeconometrics sequence in the Economics Department. It will introduce a selection of models and techniques that are useful when a researcher wants to estimate a structural model, i.e. a model derived from economic theory. Structural models that try to incorporate restrictions derived from economic theory are used in empirical IO, but also in quantitative marketing research, labor economics and other fields that consider individual decision making. No attempt will be made to be comprehensive. Instead we will focus on a few areas that have been well-researched in recent years: dynamic discrete choice, microeconomic models with latent variables, program evaluation, the empirical analysis of auctions and nonseparable models. Some topics will be included only if time permits. The models and methods developed for these areas are relevant for other cases. The emphasis is on the interaction between economic theory and econometrics. Basic issues are specification and (nonparametric) identification, computational problems and the use of simulation, semiparametric estimation to avoid functional form and distributional assumptions that cannot be derived from economic theory.
AS.180.601 AND AS.180.622

AS.180.641. International Trade.
This is a graduate course in international trade. It will develop basic analytical tools and frameworks used in the general equilibrium analysis of international trade. Recent research topics will be discussed in the second half of the course.
AS.180.601 AND AS.180.603

AS.180.642. International Monetary Economics.
A link between the balance of payments and asset accumulation/decumulation, microeconomics of international finance and open-economy macroeconomics. The section on open-economy macroeconomics covers approaches to balance-of-payments adjustments, theories of exchange rate determination and monetary, fiscal, and exchange-market policies under fixed and flexible rate regimes.

AS.180.643. Topics of Game Theory.
This course covers topics such as repeated games, dynamic games, bargaining and strategic communication.
AS.180.622

AS.180.645. Topics in Economic Theory.
The course will cover matching markets, which typically deal with assignment problems with and without the use of transfers. Examples of these include school choice, course allocation, and organ exchange. We will cover the theoretical underpinnings, field applications, and empirical evaluations of these markets.

AS.180.646. Revealed Preference and Comparative Statics.
The overall theme of this course is the observable implications of optimizing choice. We will cover the theory of monotone comparative statics and supermodular games. We also discuss results in the revealed preference literature, such as Afriat's Theorem, that deal with the consistency of data with different canonical models. The course is useful to students doing research in pure or applied theory, where comparative statics tools/insights are often needed for model building. It could also be interesting to those with an empirical focus who would like to know more about revealed preference approaches to testing models and drawing inferences from them.

AS.180.647. Topics in Economic Theory and Finance.
This course studies the theory of asset trading in which agents hold different information and/or beliefs. Foundational papers as well as recent ones will be covered, with applications both within and outside of Finance. Topics include: information aggregation via prices; rational expectations equilibrium; market micro-structure; large auctions; herding/information cascades/price bubbles; dynamic models and learning.

AS.180.648. Topics in Applied Microeconomics.
This course will cover popular research designs in applied microeconomics, from reduced-form approach to structural estimation. The first half of this course will be devoted to studying methodologies in reduced-form approach and the second half will be about structural estimation. Students must be familiar with at least one programming language of own choice (python, matlab, R, Julia, Fortran, C/C++) and statistical package (STATA, R) to solve problem sets in this course. The course will introduce various papers related to unobserved heterogeneity in applied microeconomics literature.Basic programming skills are needed for dynamic programming in this course.
AS.180.600 AND AS.180.601

AS.180.649. Structural Approach in Family and Cultural Economics.
This course will introduce structual approach in applied microeconomics, with emphasis on models including endogenous unobservable heterogeneity. The first half of this course will cover popular estimators, such as simulated method of moments, indirect inference, conditional choice probability estimator. The course will cover both single agent problem and multi- agents problem, potentially including endogenious unobservable heterogeneity. The second half of this course will discuss multiple decision maker problem, so- called collective model, and family formation and dissolution model, and cultural economics.

AS.180.651. Labor Economics I.
Theories of the allocation of time and supply of labor, human capital, demand for labor, market equilibrium, and income distribution. As time allows, other topics, such as unemployment, unions, and compensating differences are discussed. Corequisite: AS.180.601

AS.180.661. Bayesian Methods and Machine Learning in Macro and Finance.
This course is composed of two parts. In the first half, we will cover an introduction to Bayesian methods and standard methods as Metropolis, Metropolis-Hasting, Gibbs sampling, etc. We will then review the relation between Bayesian methods and machine learning. In the second part, we will study how Bayesian methods and machine learning have been used in the macro and macro-finance literatures to handle DSGE's, VAR's, Markov-switching-VAR's, Time-Varying VAR's, textual analysis, forecasting, etc.

AS.180.662. Asset Pricing.
This course is an introduction and guide to the most important issues in asset pricing. It begins with classic concepts such as the Capital Asset Pricing Model and the Arbitrage Pricing Theory and continues through continuous-time dynamic no-arbitrage models. It covers both basic theory and classic empirical research. Recommended Course Background: AS.180.604, AS.180.633, AS.180.636 or instructor's permission.

AS.180.672. Industrial Organization.
First term: This course covers methods in applied empirical Industrial Organization. The focus will be on the use of econometric analysis and data both for descriptive and measurement purposes, and to test the predictions of economic theories. The course will cover demand estimation, cost and production function estimation, and estimation of auction models.Second term: The emphasis in this course is on empirical analysis of firm behavior. The first part of the course focuses on models of the internal organization of the firm. The second part considers empirical analysis of firm behavior in markets, with an emphasis on the "new industrial economics."
AS.180.601

AS.180.673. Advanced Economics of Labor.
This course is for graduate students at the 3rd year and above who wish to participate in a semester in-depth readings and discussion topics in labor economics and in econometric methods typically used in labor economics and in many other applied microeconomics fields. Students will have to participate in discussions of materials in each class. The topics covered in each semester are partly a function of student interest and their dissertation topics.

AS.180.690. Advanced Econometrics.
Advanced econometric techniques are often essential to innovative empirical work, but finding and implementing the right methods for a particular problem poses formidable challenges. This course/seminar aims to address these challenges by combining lectures and discussions of foundational econometric methods in areas of student interest (whether those interests be specific for thesis work or more speculative) with examples of implementation, including software development, in more of a 'workshop' environment. The emphasis will be on drawing on the resources of econometric theory to address specific empirical issues while at the same time developing implementation skills.

AS.180.694. Applied Microeconomics Workshop.
This is a weekly seminar series that brings in speakers from other universities to present their research in the field of applied microeconomics. Graduate Students only.
Area: Writing Intensive

AS.180.695. Microeconomic Theory Workshop.
This is a seminar series devoted to the presentation of research in microeconomic theory, typically by speakers from outside the department. Graduate students only.

AS.180.696. Macroeconomics Workshop.
This course features lectures by economists from other universities. They present research findings at the frontier of the field. Graduate students only.

AS.180.697. Research Seminar.
The purpose of this seminar is to train students to do research in economics. This course is for second year graduate students in the PhD program in Economics. For Graduate Students Only.

AS.180.891. Dissertation Research.
This course is for students working on the dissertation for the Ph.D. in Economics. It is graded pass-fail
Area: Writing Intensive

AS.180.899. Independent Study.

Cross Listed Courses

Asia

SA.552.100. Asia in International Finance. 4 Credits.
Examines the evolution of the financial systems of Japan and China from 1980 to the present, including structure, regulation, and functioning of these markets in domestic, regional and international contexts. National context includes an in depth review of the structure and operation of the financial markets of Japan and China, including: the key participants, the governmental and regulatory institutions that supervise them, various financial crises in each country with a focus on causes and solutions, reforms over time with a particular focus on liberalization of the financial system and related issues such as corporate governance and legal and accounting issues, the fiscal/monetary processes and policies in each country that affect the financial system, and the historical, political and social factors that affect institutions and policy. Regional context includes the Asian Financial Crisis, the structural causes, the roles of Japan and China, the IMF response and the various proposals to create regional solutions to future crises; roles of regional financial institutions (ADB, AIIB); China's Belt and Road Initiative and the degree/desirability of financial integration in Asia. The international perspective focuses on the geopolitical/geo-economic implications of the structure and regulation of financial markets. Current events/topics in finance relevant to the course are covered and students are encouraged to propose such topics for discussion. Taught by a SAIS alumnus with 30 years of investment banking and private equity experience in Asia and the US. Students wishing to take the class but lacking the prerequisites should email Professor Talarico at gtalari1@jhu.edu for permission to enroll.
Students may not register for this class if they have already received credit for SA.755.720[C];SA.100.304[C] AND ((SA.380.760[C] OR SA.510.102[C] OR SA.380.722[C] OR SA.510.108[C]) OR (SA.380.722[C] OR SA.510.108[C]))

Development, Climate, and Sustainability

SA.500.131. Venture Capital and Impact Investing in Emerging Markets. 2 Credits.
This class will thus focus on the intersection of venture capital and impact investing, on this newer asset class for emerging markets, and its specific application in the service of consciously creating impact. Given the roots of the early success stories in impact investing in the financial services sector, this class will focus primarily (although not exclusively) on financial inclusion, as it helps to demonstrate the progression of one impact investment sector that has had both early stage VC support and multiple exits. Financial inclusion also offers an ideal laboratory because it offers a service typically provided by private sector entities (albeit to fewer people than it should) and has been the source of entrepreneurs pursuing pro-poor innovations for decades, led and supported by Grameen, Accion, Women's World Banking, Opportunity International, and many others who pioneered microcredit. But the course will go well beyond the field's microcredit roots and explore what is happening on the frontier in the fintech revolution, as significant portions of the financial services sector begin to digitize and financial services increasingly are delivered via mobile phones. As such, this focus on financial inclusion will, in turn, highlight the power of investing and value creation in many of the newest pro-poor sectors.Click here to see evaluations, syllabi, and faculty bios
Students may not register for this class if they have already received credit for SA.400.795[C];SA.380.760[C] OR SA.510.102[C]

First Year Seminars

AS.001.132. FYS: Exploring Economic Inequality through the Lens of Literature. 3 Credits.
In this First-Year Seminar we examine inequalities in income, wealth and working conditions in the United States today; explore some causes of inequality; ask whether or not economists consider inequality to be a significant problem, and, if so, why; and consider appropriate policies to address it. Readings from literature, both past and present, will be paired with economics texts for our weekly discussions. The aim is not to show that inequality is always with us, but, on the contrary, to shed light on the distinctive nature of inequality in the 21st century. Students will have the opportunity to show how their own selections from literature, poetry, music, or film illuminate some dimension of current inequality. The inspiration for this course offering is that reading fiction at an early age motivated the instructor herself to study economics.

AS.001.149. FYS: What Is Poverty? A View from Economics and the Social Sciences. 3 Credits.
Social science is the scholarly study of society and social behavior. This First-Year Seminar will introduce students to the social sciences by studying poverty in America through the lens of economics and other social sciences, including sociology and anthropology. The quantitative approach taken by economics will be compared and contrasted with qualitative approaches. Illustrations of how the lives of the poor are led as depicted in ethnographic studies, movies, and literature will be studied to learn how integrated perspectives can be formed. Students will learn how to read scholarly articles with a critical eye, to speak about their interpretations of the material, and to write short critical essays. Students will also be introduced to quantitative analysis using graphs and tables. Group projects will be required. Guest lecturers bringing non-economics perspectives will visit the class.

History

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.

This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Writing Intensive

Interdepartmental

AS.360.247. Introduction to Social Policy and Inequality: Baltimore and Beyond. 3 Credits.

This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Area: Writing Intensive

AS.360.528. Problems in Applied Economics. 2 Credits.

This course focuses on a monetary approach to national income determination and the balance of payments. Money and banking, as well as commodity and financial markets, are dealt with under both central banking, as well as alternative monetary regimes. Particular emphasis is placed on currency board systems. Students learn how to properly conduct substantive economic research, utilizing primary data sources, statistical techniques and lessons from economic history. Findings are presented in the form of either memoranda or working papers of publishable quality. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C.. Bloomberg certification is a requisite.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

International Economics

SA.340.709. Statistics for Data Analysis. 4 Credits.

Covers basic statistical tools for data analysis. Emphasizes facility in problem-solving in statistical inference and two-variable regression and correlation analysis. Presents descriptive statistics, probability and probability distributions and their use in hypothesis testing. Uses computer to solve problems and to reinforce statistical concepts.

SA.340.710. Econometrics. 4 Credits.

Provides comprehensive introduction to econometrics. Develops tools for estimating functional relationships and critically reading empirical studies that use different econometric techniques; presents assumptions of multivariate regression and discusses the most common econometric problems and the potential consequences and remedies; and discusses omitted variables, sample selection, heteroscedasticity, autocorrelation, multicollinearity and use of discrete variables. Introduces instrumental variable technique. Uses statistical software in applied exercises.
SA.340.709[C] ORSA.999.702[C] OR SA.630.724[C]

States, Markets, and Institutions

SA.503.108. Watching Wall Street from Washington: Financial Market Analysis for the Public Sector. 4 Credits.

This course investigates the strategies for, as well as the relevance of, financial market analysis directed toward policy audiences. Students will develop a deeper understanding of global financial markets and learn how to leverage that understanding shape and achieve policy goals. The course will cover five major topics: 1) Basic techniques for financial market analysis across a variety of major asset classes; 2) The characteristics of financial market analysis – its forms, theoretical underpinnings, advantages, and deficiencies; 3) The hierarchy of policy relevance of financial market analysis; 4) Costs, risks, and difficulties of financial market analysis for the public sector; and 5) Future challenges and formulations of public sector market analysis given the technological developments in finance, money management, and trading.
Students may not register for this class if they have already received credit for SA.610.703[C];SA.100.304[C] OR SA.300.701[C] OR SA.300.706[C] OR SA.999.701[C]

The Americas

SA.551.100. Economics of Immigration. 4 Credits.

Examines the economic causes and consequences of international migration. The central focus is an economic analysis of the general patterns of population flows, their determinants and their impact. Analyzes these primarily within a comparative context of the North American experience, although also considers other case studies. Current US migration policy is examined so as to understand how the US system is 'broken' and what is meant by ' true immigration reform'. Includes consideration of the Canadian experience, in that Canadian immigration policy seems to get many things 'right'.
Students may not register for this class if they have already received credit for SA.840.715[C]

SA.551.102. Financial Crises and Policy Dilemmas in Emerging Markets and Latin America. 4 Credits.

The course will focus on key macroeconomic and financial policy issues with a focus on Emerging Markets. The course is divided into two parts. The first part explores the causes, dynamics and consequences of selected crises episodes affecting emerging markets, especially in Latin America; from the debt crises of the 1980's to the COVID-19 pandemic. The second part of the course addresses selected issues regarding crisis resolution, including the political economy of crises, their long run impacts on the economy, and the future of the international financial architecture. By the end of the course, it is expected that students will be able to identify the major factors leading to crises in emerging markets, assess the difficult policy trade-offs that policymakers face when dealing with crises, and evaluate alternative policy options.
Students may not register for this class if they have already received credit for SA.810.727[C]

Economics, Bachelor of Arts

Economics Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

The introductory courses AS.180.101 Elements of Macroeconomics and AS.180.102 Elements of Microeconomics are open to all students. Each 200-level course has at least one of AS.180.101 and AS.180.102) as a prerequisite. Some have both.

AS.180.301 Microeconomic Theory and AS.180.302 Macroeconomic Theory courses have AS.180.101 Elements of Macroeconomics and AS.180.102 Elements of Microeconomics as well as Calculus I (AS.110.106 or equivalent) as prerequisites. (AS.180.301 Microeconomic Theory can be taken concurrently with AS.180.101 Elements of Macroeconomics but only if the student has completed AS.180.102 Elements of Microeconomics. AS.180.302 Macroeconomic Theory can be taken concurrently with AS.180.102 Elements of Microeconomics but only if the student has completed AS.180.101 Elements of Macroeconomics). All 300-level courses above 301 and 302 have Microeconomic and/or Macroeconomic Theory (AS.180.301, AS.180.302) as prerequisites (or, with permission of the instructor, corequisites), as well as Elements of Economics and Calculus. Some 300-level courses have additional prerequisites; see individual course listings. Independent study is available, subject to the consent of the department and of the faculty member with whom the student wants to work.

Subject to the consent of the instructor and the DUS, graduate courses at the 600-level are open to qualified undergraduates in the spring of their junior year or later.

For the economics major, a minimum grade of C- or better is required for all courses meeting the requirements and courses may not be taken satisfactory/unsatisfactory. Courses directly equivalent to JHU courses from study abroad or taken at other universities may count towards requirements; however non-direct equivalent courses must be approved by the department's director of undergraduate studies. In all cases, at least 5 of the 10 required economics courses of the major must be taken at JHU. Internships, independent studies, and intersession courses do not apply towards major requirements.

Major Requirements

Code	Title	Credits
Economics Core		
AS.180.101	Elements of Macroeconomics [1]	3
AS.180.102	Elements of Microeconomics [1]	3
AS.180.301	Microeconomic Theory	4
AS.180.302	Macroeconomic Theory	4
AS.180.334	Econometrics	3
Economics Electives		
Three 200- or 300-level economics courses [2]		9
Two 300-level economics courses		6
Mathematics		
AS.110.106	Calculus I (Biology and Social Sciences) [3]	4
or AS.110.108	Calculus I (Physical Sciences & Engineering)	
Statistics		
EN.553.111	Statistical Analysis I	4
or EN.553.112	Statistical Analysis II	
or EN.553.211	Probability and Statistics for the Life Sciences	
or EN.553.310	Probability & Statistics for the Physical Sciences & Engineering	
or EN.553.311	Probability and Statistics for the Biological Sciences and Engineering	
or EN.553.420	Introduction to Probability	
or EN.553.430	Introduction to Statistics	
or AS.280.345	Public Health Biostatistics	
Total Credits		**40**

1. Students who use exam credits to satisfy the AS.180.101 Elements of Macroeconomics and/or AS.180.102 Elements of Microeconomics requirements must take additional courses in the department to reach a total of 10 courses in the department.
2. Please note: AS.180.203 Faculty Research in Economics, a S/U one-credit course, does not count as one of these three 200-level electives.
3. Or other equivalent courses approved by the DUS.

Additional Notes for Students

- EN.553.111 Statistical Analysis I or equivalent (any of the Statistics courses listed above) is a prerequisite for Econometrics.
- Except for AS.180.301 Microeconomic Theory, AS.180.302 Macroeconomic Theory, AS.180.334 Econometrics, AS.180.521 Research in Economics, and AS.180.522 Senior Thesis the department does not necessarily offer all 200- to 500-level courses every year. Students should plan their programs accordingly, in consultation with faculty.
- The Senior Honors Thesis sequence (AS.180.521 Research in Economics and AS.180.522 Senior Thesis) cannot be used to satisfy any of the requirements for the major. Anybody interested in pursuing the senior honors thesis should discuss this with the student's academic advisor not later than the end of the spring semester junior year.

Sample Program of Study

A typical program might include the following sequence of courses:

Course	Title	Credits
First Year		
First Semester		
AS.180.101	Elements of Macroeconomics	3
AS.110.106	Calculus I (Biology and Social Sciences)	4
	Credits	**7**
Second Semester		
AS.180.102	Elements of Microeconomics	3
EN.553.111	Statistical Analysis I	4
	Credits	**7**
Second Year		
First Semester		
AS.180.301	Microeconomic Theory	4
200 level elective		3
	Credits	**7**
Second Semester		
AS.180.302	Macroeconomic Theory	4
200 or 300 level elective		3
	Credits	**7**

Third Year		
First Semester		
AS.180.334	Econometrics	3
200 or 300 level elective		3
	Credits	**6**
Second Semester		
300 level elective		3
	Credits	**3**
Fourth Year		
First Semester		
300 level elective		3
	Credits	**3**
Second Semester		
200 or 300 level elective (optional)		
	Credits	**0**
	Total Credits	**40**

- The total credit count for the major includes AS.110.106 and EN.553.111. Students trying to take these courses after freshman or sophomore year are likely to run into serious schedule conflicts in the junior and senior years because of the need to fulfill the prerequisites for advanced courses. Consult with faculty at an early stage.

Honors in Economics

Departmental honors are awarded to those students who satisfy the following requirements:

- All economics courses applied to the major have been taken in the department.
- AS.180.521 Research in Economics and AS.180.522 Senior Thesis. The thesis may not be counted as one of the five economics electives.
- A grade point average of at least 3.5 for all economics courses.
- A grade point average of at least 3.5 for AS.180.301 Microeconomic Theory, AS.180.302 Macroeconomic Theory, AS.180.521 Research in Economics and AS.180.522 Senior Thesis.

Economics, Minor

Economics Minor Requirements

For the economics minor, a minimum grade of C- or better is required for all courses meeting the requirements and courses may not be taken satisfactory/unsatisfactory. Courses directly equivalent to JHU courses from study abroad or taken at other universities may count towards requirements; however non-direct equivalent courses must be approved by the department's director of undergraduate studies. In all cases, at least 50% of the 6 required economics courses of the minor must be taken at JHU. Internships and independent studies courses do not apply towards minor requirements.

Code	Title	Credits
AS.180.101	Elements of Macroeconomics	3
AS.180.102	Elements of Microeconomics	3
Four economics courses at the 200- or 300-level *		12
Total Credits		**18**

* Please note: 180.203 "Faculty Research in Economics", a S/U one-credit course, does not count as one of these courses.

No substitution of courses in other departments for economics electives may be made. Students who use exam credits to satisfy the AS.180.101 Elements of Macroeconomics and/or AS.180.102 Elements of Microeconomics requirements must take additional courses in the department to reach a total of 6 courses.

Economics, PhD

Admission Requirements

The admission of each applicant is decided by the Department as a whole and rests upon their academic record (especially economics and mathematics courses), GRE test scores, recommendations of scholars and instructors, and other pertinent information including a match between the research interests of the applicant and the faculty. To apply for admission, applicants are required to upload unofficial transcripts of all previous college and university study to their online application. Failure to upload unofficial transcripts will result in an inability to complete and submit the online application. In addition, we require at least two letters of recommendation. These recommendation letters should come from individuals who can comment on your scholarly skills. All applicants must submit scores from the Graduate Record Examination. Admitted students nearly always have very high quantitative GRE scores. Foreign applicants, who have not earned a degree in a university where English is the sole language of instruction, must take the TOEFL to satisfy the department that they are fluent in English. The department requires the TOEFL with a minimum score of 100 (internet based), 600 (paper based) or 250 (computer based), or IELTS with a bandscore of 7 in place of the TOEFL.

Students should have a knowledge of economic theory and statistics and a strong background in mathematics including differential and integral calculus and linear algebra. Almost all of our students enter with at least two semesters of calculus and linear algebra. In admissions decisions, we like applicants to have taken other mathematics courses as well, including more advanced calculus, differential equations, probability, and real analysis. We especially welcome applications from under-represented populations, as diversity is important in our graduate program.

Program Requirements

Preparation for the Dissertation. The program's first year is comprised of two semesters each of courses in microeconomic theory, macroeconomic theory, and mathematical methods, and one-semester courses in statistics and econometrics. Second-year students take courses in specific fields within economics. If necessary, students may take relevant courses in other departments such as Mathematics, Applied Mathematics and Statistics, Political Science, Public Health, Sociology, and Anthropology. Second-year students also begin their exposure to original research through research mentorships with faculty. A research paper is submitted near the end of the second year. Third-year students complete any remaining course work and prepare a dissertation proposal

Comprehensive Exam. This exam is administered by the department and consists of two written examinations designed to test the candidate's knowledge of both microeconomics and macroeconomics. The written examinations are taken prior to the start of the second year.

Dissertation. The dissertation is an original investigation worthy of publication, prepared under the supervision of three members of the faculty. A dissertation proposal is due near the end of the third year. Though it is feasible to finish the program in four years, students typically complete the Ph.D. in five or six years. The final requirement is a Graduate Board Oral Examination on the dissertation. The committee that administers the examination includes faculty from outside the department.

Requirements for the M.A. Degree

The department does not admit students from outside Johns Hopkins University who intend to work only for an M.A. However, it does offer this degree as an intermediate step toward the Ph.D. or as a final degree to some of those who do not complete their doctoral work.

Beyond the general university requirements, the department requires for the master's degree either two years of satisfactory graduate course work or one year of satisfactory graduate course work and an acceptable master's essay.

Financial Economics, Minor

Financial Economics Minor Requirements

The main objective of the minor is to provide students with training in the conceptual framework, guiding concepts, and technical tools of modern finance. The broader goal is to provide insights into the large and the small—the macro and micro—of how this framework helps us understand the workings of the economy.

The minor in financial economics includes five required courses and two elective courses with the POS-Tag ECON-FINMIN.

Code	Title	Credits
Required Courses		
AS.180.101	Elements of Macroeconomics	3
AS.180.102	Elements of Microeconomics	3
AS.180.263	Corporate Finance	3
AS.180.301	Microeconomic Theory	4
AS.180.367	Investment-Portfolio Management	3
Elective Courses		
Two additional financial economics elective courses with the POS-Tag ECON-FINMIN.		6
Total Credits		**22**

The minor is open to all majors. A minimum grade of C- or better is required for all courses and they may not be taken satisfactory/unsatisfactory. One cannot take both the economics and financial economics minor. For economics majors, there is a restriction on double-counting: the two elective courses counting toward the minor cannot also count toward the economics major.

English

http://english.jhu.edu/

The Department of English offers separate undergraduate and graduate programs, each designed to suit the needs of its particular student body. The undergraduate program, in the context of university requirements and elective courses, provides the basis for a liberal education and prepares students for graduate work or professional schools, such as medicine and law, as well as professional teaching and literary scholarship. The graduate program prepares advanced students for professional teaching careers in English literature.

Facilities

In addition to the the Sheridan Libraries, Johns Hopkins students have easy access to the 12 million volumes and innumerable historical manuscripts of the Library of Congress, as well as the library at Dumbarton Oaks, the Folger Library, the Freer Library, the library of the National Gallery, and many other specialized public collections. Students learn about advances in research and criticism and confer with leading American and European scholars and critics through participation in the activities of the Tudor and Stuart Club, the ELH Colloquium, and the department's other programming.

Programs

- English, Bachelor of Arts (p. 1820)
- English, Minor (p. 1821)
- English, PhD (p. 1821)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.060.107. Introduction to Literary Study. 3 Credits.
This course serves as an introduction to the basic methods of and critical approaches to the study of literature. Some sections may have further individual topic descriptions; please check in SIS when searching for courses.
Area: Writing Intensive

AS.060.108. Time Travel. 3 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peeking backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today. Writers will likely include Mark Twain, Edward Bellamy, Harold Steele Mackay, Ray Bradbury, Robert Heinlein, and Philip K. Dick. Movies will include *The Terminator*, *Back to the Future*, and *Primer*.
Area: Writing Intensive

AS.060.109. Robots, Androids, Slaves. 3 Credits.
Since the rise of Silicon Valley, tech enthusiasts and futurists have been debating the possibility of what has been called "the singularity" — the moment when artificial intelligence (AI) decisively and irreversibly surpasses human abilities. If this does happen, observers worry, it's not just that robots will take our jobs; will we become subservient to our new robot masters? Will we become extinct, and not because of climate change? This course explores such questions through the lens of literature and popular media. We will watch several films from the last 15 years or so that depict the rise of AI. We will ask about the roles tat gender, race and class have in our imagination of the work robots do. And we will read a range of short essays that approach the question of labor and technology from different angles than mass media usually do.

AS.060.129. Writing Africa Now. 3 Credits.
This course surveys post-2000 literary and cultural production from sub-Saharan Africa. Topics will include debates over genre and fiction's relevance to African experience, legacies of canonical writing about independence, urban Africa as violent or "tragic" landscape, and problems of scale and geographical context. Readings by authors such as Adichie, Wainaina, Duiker, and Vladislavic, and students will be introduced to the main print and online arteries of African intellectual discussion. This class is for non-majors and does not count towards the English major or minor.
Area: Writing Intensive

AS.060.135. American Nightmares: Burroughs, Highsmith, Dick. 3 Credits.
These three authors share a common starting point: Patricia Highsmith, William S. Burroughs and Philip K. Dick all began their careers writing mass market genre fiction in pre-Stonewall, pre-civil rights, Cold War 1950s America. Absorbing the stylistic codes of their respective marketplaces of suspense writing and lesbian romance, "drug fiend" confessional, and science fiction, each writer's conformist apprenticeship in pulp resurfaces in increasingly nightmarish forms in the violent and paranoid scenarios that dominate their mature work. Reading broadly in each author's short fiction, novels, and prose, we will sequentially examine Burroughs' "cut-up" techniques and "routines", Highsmith's free indirect discourse gone wrong, and Dick's disorienting temporal experiments as inflamed allergic reactions to generic codes. We will also examine the cinematic afterlives of these authors by looking at key scenes from three adaptations of their work: Alfred Hitchcock's Strangers on a Train (1951), David Cronenberg's Naked Lunch (1991), and Richard Linklater's A Scanner Darkly (2006).

AS.060.137. Doctors Without Borders: Literature, Medicine, and the Human Condition. 3 Credits.
Doctors play a significant role in shaping literary history as both writers and fictional subjects. From Chekhov to Sherlock Holmes, W. Somerset Maugham to Middlemarch, medical practice is imagined to bestow a privileged understanding of humanity in confrontation with questions of life and death. This course explores how writing about medicine connects long-established themes of mortality, authority, and ways of knowing to timely questions of global migration, cultural contact, and social justice. We will read literary writing by physicians as well as writing that depicts their work in detail, by authors including Nawal El Saadawi, Atul Gawande, Abraham Verghese, Damon Galgut, and Taiye Selasi.

AS.060.140. Diaries, Journals, Some Notes. 3 Credits.
A study of genres of private writings, focusing on the diary form. Readings will likely include diaries by Pepys, Boswell, Frank, Woolf, as well as critical and theoretical texts on the form.
Area: Writing Intensive

AS.060.142. Indigenous Science Fiction: (Re)making Worlds. 3 Credits.
This discussion-based seminar will survey science fiction written by indigenous authors in what are now the United States, Canada, and Australia. We will investigate by what means and to what ends this particular genre has been taken up by indigenous peoples both to reflect on their settler-colonial pasts and presents and to imagine decolonial futures. Texts may include: Leslie Marmon Silko, Almanac of the Dead; William Sanders, "The Undiscovered"; Daniel Heath Justice, The Way of Thorn and Thunder; Blake Hausman, Riding the Trail of Tears; Waubgeshig Rice, Moon of the Crusted Snow; Claire Coleman, Terra Nullius; Tanya Tagaq, Split Tooth. Fulfills the Global and Minority Literatures requirement.
Area: Writing Intensive

AS.060.148. Asian and Latinx American Literatures: Rethinking Empire. 3 Credits.
This course explores the transnational convergence of Asians/Asian Americans and Latinxs/ Latinx Americans from a history of multiple imperialisms to the neoliberal, globalized present. We will situate the racialization of Asian and Latinx peoples within a larger, global framework and think critically about areas of solidarity and tension between these two multi-ethnic groups through readings in literature, history, and sociology.
Area: Writing Intensive

AS.060.151. Doubles, Demons, and Dummies: The Literature of the Fantastic. 3 Credits.
Talking reflections. Dolls with knives. Dancing automatons. They are all part of the strange and dangerous world of the fantastic. This course examines the literature of the fantastic, or what we can refer to as creepy double, demon, and dummy stories. We'll look at everything from Poe to American Psycho in an attempt to figure out what just happened, why, and how it relates to literary meaning.

AS.060.163. William Faulkner, Race, and Southern Fiction. 3 Credits.
This course will introduce students to debates in American literary studies around questions of race, politics, and the history of the American South. The course will center around a reading of William Faulkner's Absalom, Absalom! alongside literary history, critical theory, and other pieces of fiction from the American South. We will use these texts to explore the transformations of ra-cial discourses in 19th and 20th century America, with close attention to how they influence the present.
Area: Writing Intensive

AS.060.164. Cyberpunk: High-Tech, Low Life. 3 Credits.
This course will examine the science fiction movement of cyberpunk as an aesthetic, narrative, and political reaction to late neoliberalism. We will read and discuss literature, film, and interactive media from this genre to develop an understanding of how cyberpunk texts register, refract, and attempt to reconcile antagonisms central to contemporary life.
Area: Writing Intensive

AS.060.165. Science Fiction and Climate Change. 3 Credits.
This course will examine representations of, and confrontations with, climate change in science fiction. Special focus will be given to indigenous futurisms as uniquely valuable perspectives on the climate crisis. We will examine these narratives alongside climate change discourse, literary theory, and literary criticism.
Area: Writing Intensive

AS.060.169. Literature and Visual Art. 3 Credits.
We'll glance at the history of the relations between painting and literature, before turning to the art of the past 200 years. What has drawn writers to place their powers against those of painters (in particular)? How have they managed the comparisons? How might we understand the distinctive powers and limitations of these two modes of responding to human experience? While we may have an exam, writing assignments will constitute most of your grade.
Area: Writing Intensive

AS.060.207. William Shakespeare. 3 Credits.
Who was William Shakespeare, and what can his poems, histories, comedies and tragedies tell us about our overlap with, and divergences from, the early modern world?

AS.060.208. English Literature from Chaucer to Behn. 3 Credits.
This course is a survey of English writing from the fourteenth to the seventeenth centuries. Tracing the evolution of vernacular literature in English from the late medieval period to the early modern period and onwards to the threshold of modernity, we will focus intensively upon four key works: Geoffrey Chaucer's "The Canterbury Tales," Book I of Edmund Spenser's "The Faerie Queene", John Milton's "Paradise Lost" and Aphra Behn's "Oroonoko." These works will be examined in their formal and generic dimensions as key examples of broader aesthetic changes in the constitution of "literature" as a category. They will also be placed in their political, religious, and social contexts. Through lectures, class discussion, written responses, and longer essay assignments, students will master the fundamentals of English literary history as well as the techniques of critical reading and writing.

AS.060.209. The Literary History of the Devil to 1800. 3 Credits.
This course reads major works in European literature before 1800 (give or take) depicting the devil. It examines the history of the various social, cultural and political guises under which the devil appears, and the function that representing radical evil performs, in literature and society. Among our readings will be Dante's Inferno; Milton's Paradise Lost; Goethe's Faust, Part One, and many other major Satanic works.

AS.060.210. British Literature II. 3 Credits.
This course provides a framework for grasping the dazzling variety and explosive innovation of literature in English during the last quarter-millennium. Attending both to textual details and to historical contexts, we will see how Wordsworth, Austen, Keats, Tennyson, Dickens, Wilde, Woolf, Rushdie, and other writers extend and undo tradition, illuminate their times and places as well as our own, and conspire to bring to us the intense experience distinctive to great literary art.

AS.060.211. How Not to be Afraid of Poetry. 3 Credits.
What is poetry? And why don't we like it? This course will explore what makes poetry turn ordinary language into something extraordinary. Opening up a range of poetry in English, the course will involve reading poetry aloud, thinking about poetry and its forms, and gaining experience in understanding poetry. Assignments will include attending to details small and large in poems, becoming an expert about a single poet, debating aesthetic issues, and composing short analytical papers about poems. There are two required written assignments, a midterm and a final examination.

AS.060.212. British Literature: 18th Century to the Prese. 3 Credits.
A survey of major authors such as Wordsworth, Keats, Austen, Tennyson, Dickens, Wilde, Woolf, Joyce, and Rushdie. Substantial attention to formal conventions as well as stylistic innovation, to aesthetic value as well as social meaning.

AS.060.216. Zombies. 3 Credits.
This lecture survey will attempt to answer why the zombie has become such a fixture in contemporary literature and cinema. We will track this figure across its many incarnations--from its late-eighteenth-century appearance in ethnographic fictions growing out of the modern cultures of racialized slavery in the Americas right up to twenty-first-century Hollywood blockbusters in which the origins of the figure in the cultures of racialized slavery are perhaps not overt yet continue to manifest. What are the implications of the zombie's arc from a particular human being targeted for domination by a sorcerer to a living-dead horde created by radiation or epidemic? "Texts" may include: Mary Shelley, Frankenstein; Edgar Allan Poe, "The Man Who Was Used Up"; H.P. Lovecraft, "Herbert West--Re-Animator"; Zora Neale Hurston, Tell My Horse; Victor Halperin, dir., White Zombie; George Romero, dir., Dead series; Edgar Wright, dir., Shaun of the Dead; Alejandro Brugués, dir., Juan de los Muertos; Colm McCarthy, dir., The Girl with All the Gifts; Colson Whitehead, Zone One; Jordan Peele, dir., Get Out. Fulfills the Global and Minority Literatures requirement.
Area: Writing Intensive

AS.060.217. Time Travel. 3 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peeking backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today.
Area: Writing Intensive

AS.060.219. American Literature to 1865. 3 Credits.
A survey course of American literature from contact to the Civil War.

AS.060.220. Clint Eastwood, Race and the American Western. 3 Credits.
Drawing from the body of work engaging and recording the Hollywood gunfighter and outlaw folk-hero Clint Eastwood, the course will investigate American cinematic representations of slavery and its absence, the Civil War, and racial formation along the United States' southwestern frontier in films produced from the 1950s through the contemporary period. A focus on the cultural icon Clint Eastwood enables a close examination of American cinematic fantasies of the frontier, frontier violence and the desire to escape or erase the tensions of race and slavery that have deeply permeated the American cultural consciousness, particularly the creation of American masculine ideals. The course will also take decided note of the national shift from liberal "Great Society Programs" of the 1960s to the conservative "neoliberal" social and cultural ideals in the 1980s and 1990s. Our purpose is to consider the organization and reformation of hegemonic power by way of the complex morality play the western film evokes, typically considering the interstitial geographies between civilization and savagery, belonging and alienation, and metropolitan and colonial outpost. We will privilege in our discussions the contested frontiers of racial dominion.

AS.060.221. The Modernist Novel: Consciousness and Crisis. 3 Credits.
A course on key novels written in Britain or its former colonies between 1900 and 1960. Major attention to the meanings of modernism across the arts as well as innovations in prose fiction.
Area: Writing Intensive

AS.060.222. American Literature, 1865 to today. 3 Credits.
A survey of American literature from 1865 to today.

AS.060.232. Detective Fiction. 3 Credits.
This lecture will trace the the history of English-language detective fiction through the nineteenth and twentieth centuries. Why does the figure of the detective appear when it does? How does it change over time, and what can we learn from that? We will pay special attention to the way clues and suspense operate, the role of the reader in figuring out the mystery, and the complicated relationship of the detective with official authority. Authors will likely include some selection of Wilkie Collins, Edgar Allen Poe, Arthur Conan Doyle, Agatha Christie, Dashiell Hammet, and Raymond Chandler.

AS.060.265. Nineteenth Century British Novel. 3 Credits.
Reading major novelists from the nineteenth century including Austen, C. Brontë, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.

AS.060.304. Large Novels. 3 Credits.
This course will look at novels that are not only large in size, but which also think about the meaning and methods of trying to capture huge segments of the world into a piece of art. How much can be fit into a novel? What is gained and what is lost? How large is too large? We will read Charles Dickens's Bleak House, Lev Tolstoy's War and Peace, and Herman Melville's Moby Dick.
Area: Writing Intensive

AS.060.308. The Essay Form and Creative Non-Fiction. 3 Credits.
We'll focus on the essay form, with special attention to recent creative non-fiction that responds to art and literature itself. Theoretical, stylistic, and formal issues will all be considered.
Area: Writing Intensive

AS.060.309. Slavery in Renaissance Literature. 3 Credits.
Against the backdrop of the rise of the European slave trade, how were slaves represented in early modern English literature? How was the condition of enslavement inflected by emergent nationalism, colonialism and theological constructions of difference? This course puts Renaissance literature into conversation with comparative histories of slavery and critical race theory. Authors include Aristotle, Terence, Epictetus, Christopher Marlowe, William Shakespeare, John Milton, Aphra Behn, Orlando Patterson, Kim Hall, Stephen Greenblatt, Mary Nyquist, Moses Finley and others.
Area: Writing Intensive

AS.060.313. Literature of the Settler Revolution. 3 Credits.
The nineteenth century saw the creation of an "Angloworld" as a result of what one historian has called "the settler revolution." In perhaps the largest mass migration in human history, millions of English-speakers (and others) invaded Indigenous worlds in what have consequently come to be known as the United States, Canada, and Australia. This seminar offers an introduction to nineteenth-century Indigenous and settler Anglophone writing in the US, Canada, and Australia with a view to understanding the role of literature in inciting, interrogating, and resisting this settler revolution.
Area: Writing Intensive

AS.060.314. Social Media Fictions. 3 Credits.
Writers around the world are now searching for ways to incorporate new modes of social interaction - e.g. Facebook, Twitter, text messaging, and Skype - into their print work. This course explores the various techniques they have adopted for this purpose, with an eye to critically evaluating their implications for narrative structure and its "reality effect." From Teju Cole's very public experiments with the Twitter novel to a Zimbabwean writer's attempt to capture plot turns through SMS, we will discuss the ways in which narrative is helped or hindered by the ubiquity of social media. Writers studied will include Tendai Huchu, Zadie Smith, Jonathan Franzen, and Eben Venter.
Area: Writing Intensive

AS.060.315. Literature of Incarceration. 3 Credits.
We will take up a history of writing from and about various carceral sites (prison, detention camps, etc-- as well as Circe' island and Jonah's whale) to see what they can teach us about larger questions of the movement (or not) of certain populations, the ideology and economies of imprisonment, and campaigns for the abolition of prisons.
Area: Writing Intensive

AS.060.316. Mapping the Global Metropolis. 3 Credits.
Cities have long taken on a central role in literature, but much of our reading about urban space is confined to a few Western hubs. And while the city has traditionally been a space for fictional characters to develop into national subjects, much of the most innovative contemporary writing sees the city as a character of its own. This course will address the representational challenges of globalization through fiction and genre-bending memoir about contemporary metropolises that act as its microcosm: Johannesburg, Lagos, Delhi, London, and New York. We will read primary works by Ivan Vladislavic, Chris Abani, Aravind Adiga, Zadie Smith, and Teju Cole, as well as supplementary excerpts from books including Capital, by Rana Dasgupta, Mike Davis' Planet of Slums, Ato Quayson's Oxford Street, Accra, and Loren Kruger's Imagining the Edgy City. Finally, the course will include theoretical readings about globality and representation, such as Fredric Jameson's essay on "Cognitive Mapping" and Arjun Appadurai's seminal book Modernity at Large.
Area: Writing Intensive

AS.060.317. Jane Austen Beyond England. 3 Credits.
This will be an in-depth study of Austen's novels with an emphasis on how they have traveled outside of the country of her birth – e.g. to the United States, India, and East Asia—through the work of individuals and the flows of global capitalism. Students will gain perhaps a disorienting sense of what Austen means in different cultures at different historical moments, and conduct individual research to learn more. Knowledge of another language is not necessary but could prove useful. The course will include a field-trip to the Alberta Burke Austen collection at Goucher College.
Area: Writing Intensive
AS.060.107

AS.060.320. Icons of Feminism. 3 Credits.
This course looks at four crucial figures who have haunted feminist thought and responses to feminism over the centuries. Sappho, known as the first female poet, remains an enigmatic icon of feminine desire and creativity; Antigone, the daughter of Oedipus and the heroine of Sophocles's play Antigone, still inspires feminist analyses of women's relationship to law, the state and civil society; and Joan of Arc, the militant maid of Orleans, troubles thinking about women and violence as well as women, religion and spirituality. The last figure is Mary Wollstonecraft, often cited as the first modern feminist. The course will examine literary works written about these iconic figures, as well as contemporary feminist writing about their influence and viability as models for the future of feminism.
Area: Writing Intensive

AS.060.326. Shakespeare: The Novel. 3 Credits.
What if King Lear had been a mother? What if the we thought about Othello through the lens of the holocaust? What if the indigene Caliban was the hero, not the villain? What if Miranda chose Caliban over her European suitor? (The Tempest) Could a modern-day Kate be tricked into marriage and "tamed" (The Taming of the Shrew)? When contemporary novelists rewrite Shakespeare, they pose questions left hanging in the play and bring the plays into our own world. In this course, we will read Shakespeare plays (King Lear, The Tempest, The Taming of the Shrew, Merchant of Venice) along with contemporary novelists that rewrite – and confront -- those plays (Jane Smiley, Caryl Phillips, J. M. Coetzee, Anne Tyler). Students will take up important literary questions about kinds of literature (plays vs novels), the canon, imitation, adaptation, and also address the themes of power, gender and sexuality, family dynamics, authority, colonization and the environment.
Area: Writing Intensive

AS.060.327. "All Art is Propaganda". 3 Credits.
This course will explore black literature written as protest. We will examine how, in the face of threats to black life, Frances E.W. Harper, Richard Wright, Amiri Baraka, and others have realized versions of W.E.B. Du Bois's objective: "all art is propaganda and ever must be, despite the wailing of the purists."
Area: Writing Intensive

AS.060.328. Malcolm and Martin: An Introduction to the Lives and Thought of Two Icons of the Black Freedom Struggle. 3 Credits.
Using their recorded speeches, written lectures and published writings and drawing from their biographies, this course will explore the important life work of Malcolm X and Martin Luther King Jr. We intend to upend traditional conversations about political radicalism and ethnic politics by analyzing these spokesmen associated most indelibly with black nationalism and racial integration, respectively.
Area: Writing Intensive

AS.060.331. The Literature of the Atlantic Slavery. 3 Credits.
This seminar will trace the historical development of the slavery debate in the Atlantic world through examination of key texts from a host of genres and locations—Quaker religious tracts, political documents like the Haitian Declaration of Independence, Cuban antislavery novels, slave narratives, and "classics" of American literature like Melville's Benito Cereno. We will consider how the institution of Atlantic slavery was variously represented, justified, and criticized, discovering in the process the deep structures of modern slavery discourse.
Area: Writing Intensive

AS.060.337. James Joyce's Ulysses. 3 Credits.
A careful semester-long reading of James Joyce's masterpeice Ulysses, one of the greatest and most intimidating novels in world literature.
Area: Writing Intensive

AS.060.341. Milton. 3 Credits.
This class will study Milton's poetry and prose across the whole of his writing career, with special attention to Paradise Lost, the great epic poem retelling the story of the fall of humankind. We will consider Milton's literary background, his contemporary political and social milieu, as well as critical debates that surrounding the poet, who was accused of being 'of the devil's party.' Pre-1800 course.
Area: Writing Intensive

AS.060.342. Contemporary Novel of Ideas. 3 Credits.
The novel of ideas is often traced to 18th century French or 19th century Russian writing, but it has come broadly to signify works of robust philosophical contemplation. The inherently slippery term seems to indicate a work in which "form" is subsidiary to "content," or at least, in which narrative structures adapt to prioritize thought rather than style, image, or even character. But how, exactly, and about what, do novels "think?" In large part, the novel of ideas is now conflated with a rote and recognizable brand of social realism. This course asks what might qualify as a novel of ideas today, both in terms of the novel's changing relation to geographical space (and thereby the formal spaces in which philosophy might lurk), and of the particular "ideas" it critiques or puts forth. We will read novelists including J.M. Coetzee, Marlene van Niekerk, Jonathan Franzen, Teju Cole, and Ronan Bennett within a longer literary-philosophical tradition, with reference to works such as Candide, War and Peace, Thus Spoke Zarathustra, and Kierkegaard's Diary of a Seducer.
Area: Writing Intensive

AS.060.343. Marxism and Literature. 3 Credits.
This course will provide a survey of some of the concepts in Marx's work, especially those to be found in volume 1 of Capital, that might help us get a clearer sense of 21st-century politics and culture. We will move outward from reading Marx to reading recent and classic texts in the Marxist critical tradition. We will discuss explicitly economic ideas about commodities, surplus value, and concrete and abstract labor, as well as historical and political ideas like "primitive accumulation" and the "uneven and combined development" of nations. We will think about what reading Marx and the Marxist tradition can help us see about colonialism, gender, race, technology, and the environment, as well as how it can clarify the character of economic crises. Toward the end of the term we will turn to literary texts, not necessarily "Marxist" themselves, to help us understand important questions that Marxism cannot tackle by itself, like: who are people, anyway? What do they hope for, when they write? Is there a Marxist idea of beauty, and is it different than everybody else's? Along with Marx, and anti-colonial, anti-racist and feminist writers in the Marxist tradition, we'll read work by the novelist NK Jemisin, and the poet Stephanie Young.
Area: Writing Intensive

AS.060.348. Virginia Woolf and Bloomsbury. 3 Credits.
An exploration of the achievements and investments of one of the most influential coteries in the history of Britain. In addition to delving into key fictions by Virginia Woolf, we will examine novels by Leonard Woolf and E. M. Forster, art criticism by Roger Fry and Clive Bell, biographical essays by Lytton Strachey, economic writings by John Maynard Keynes, and poetry by T. S. Eliot.
Area: Writing Intensive

AS.060.350. Reason and Romance: Literature of the British Eighteenth Century. 3 Credits.
Any era can be characterized by its oppositions and polarities, but perhaps few were more defined by their contradictions than the eighteenth century in Britain. Reason and passion, honor and ribaldry, skepticism and fantasy, tradition and revolution: in capturing the tensions between these dyads, the wildly energetic literature of the period furnishes a singular lens through which to examine questions of consciousness, gender, celebrity, race, political theater, and even life during a pandemic that continue to shape our lives today. Authors studied may include Frances Burney, Ottobah Cugoano, Daniel Defoe, Olaudah Equiano, John Gay, Samuel Johnson, Charlotte Lennox, Alexander Pope, Jonathan Swift, and Mary Wollstonecraft.
Area: Writing Intensive

AS.060.353. Margaret Atwood: Imagining Catastrophe. 3 Credits.
This is the moment for a course on the Canadian climate activist, poet, and novelist Margaret Atwood. Best known for her dystopian The Handmaid's Tale (1985), Atwood's monitory visions in poetry, short stories, non-fiction and novels attend to themes of malevolence, metamorphosis, memory, genetic mutation, totalitarianism, corporate control, feminism, and climate disaster, while rooted in traditions of folktale, myth, and ironic detachment. Among other works, including poetry and non-fiction, we will read novels The Handmaid's Tale, The Testaments, The Blind Assassin, Oryx and Crake, The Year of the Flood, and MaddAddam, exploring Atwood's "writing with intent." Seminar discussion; midterm; class presentations; two short papers and one final project.
Area: Writing Intensive

AS.060.354. Literature of the Sea. 3 Credits.
In this course, we will read 19th- and 20th-century American and British literature about the sea, using an approach informed by recent scholarship in what has been called Blue Humanities or Oceanic Studies.
Area: Writing Intensive

AS.060.355. Poetry and Politics Today. 3 Credits.
The history of poetry is full of political poems of every kind — odes, epics, dramatic persona poems. And the history of literary criticism is full of denunciations of poetry that gets "too political," and loses sight of its job to give pleasure. In this course, we will look at a range of contemporary poetry that tackles political issues — things like the causes of climate change; immigration crises; white supremacy; patriarchal gender systems; the legacies of colonialism — and study the ways it accomplishes its goals while still giving us the kinds of surprise in language that poetry has always promised. Reading will include (but not be limited to) work by Tongo Eisen-Martin, Cathy Park Hong, Sandra Simonds, Stephanie Young, and Wendy Trevino.
Area: Writing Intensive

AS.060.358. Virginia Woolf. 3 Credits.
Beautiful, acute, and consequential, Woolf's writing opens onto an extraordinary range of aesthetic, psychological, and political issues. In this seminar, we will read from her novels, essays, and diaries as well as the varied works of art and philosophy that influenced her.
Area: Writing Intensive

AS.060.359. Slavery in Early Modern Literature. 3 Credits.
Against the backdrop of the rise of the European slave trade, how were enslaved people represented in early modern English literature? How was the condition of enslavement inflected by emergent nationalism, colonialism and theological constructions of difference? This course puts Renaissance literature into conversation with comparative histories of slavery and critical race theory. Authors include Aristotle, Plautus, Thomas More, Bartolomé de las Casas, Christopher Marlowe, William Shakespeare, Philip Massinger, John Milton, Aphra Behn, Osman of Timisoara, Stephanie Smallwood, Michael Guasco, Saidiya Hartman, Herman Bennett, Orlando Patterson, Jared Sexton, and Mary Nyquist.
Area: Writing Intensive

AS.060.360. Politics, History and Autobiography. 3 Credits.
This is an intensive seminar exploring the political and historical dimensions of personal experience. The class is designed to introduce students to writing critically about their own lives and to understanding the function of autobiographical writing in the lives of black Americans. We function partly as a writers' workshop and partly as a critical review. The final goal of the seminar is a polished 15-20 page autobiographical essay and a 5-7 page critical review of an autobiography, such as would be found in the New York Review of Books.
Area: Writing Intensive

AS.060.361. The Politics of Memoir. 3 Credits.
This course explores the interlocking political and historical dimensions of personal experience, an account of ourselves and our relations ("the quest for competitive advantage between groups, individuals, or societies") that points us in the direction of what "is 'common' to the whole community." What does it mean for people who are not the chief actors or theoreticians of political movements to construe the record of their experience as an act of political intervention, an aid in our total understanding of the structure of popular belief and behavior? Furthermore, what happens when attempt to historicize and critique these recorded experiences? The class asks its members to focus closely on an episode of autobiographical experience as both an historical fossil and tangible politicized moment, particularly the places where race, gender and economic power are visible. By producing a "critical discourse of everyday life—by turning residual, untheorized everyday experience into communicable experience... one can reframe ostensibly private and individual experiences in terms of a collective struggle." To help our investigation we will read and analyze closely memoirs, many of them from the African American experience. We function partly as a writers' workshop and partly as a critical review. The final goal of the seminar is a polished 20-25 page autobiographical essay.
Area: Writing Intensive

AS.060.362. Medicine in Renaissance Literature. 3 Credits.
From quacks to plague, from humoralism to hypochondria, this course explores how early modern literature represents and occasionally satirizes medicine. Authors include Shakespeare, Jonson, Donne, Nashe, Browne and Moliere.
Area: Writing Intensive

AS.060.363. Henry James. 3 Credits.
This seminar will focus on the novels and short fiction of one of the most brilliant crafters of prose and plot ever to write in English. Extensive attention will be devoted to the intricacies of James's language; to his transatlantic situation; to his relationship to other authors; and to his place in the histories of literature, criticism, and theory. In a few instances, we will read his work in relation to writing by his brother, the pioneering philosopher and psychologist William James.
Area: Writing Intensive

AS.060.365. Malcolm and Martin: An Intro to the Lives and Thought of Two Icons of the Black Freedom Struggle. 3 Credits.
Using their speeches, written lectures and published writings and drawing from their biographies, this course will explore the important life work of Malcolm X and Martin Luther King Jr. We intend to upend traditional conversations about political radicalism and ethnic politics by analyzing these spokesmen associated most indelibly with black nationalism and racial integration, respectively.
Area: Writing Intensive

AS.060.369. Speculative Slavery and Liberatory Fiction. 3 Credits.
This course will introduce students to the study and genre of Black speculative fiction and Afrofuturism, through the lens of narratives focused on liberation/freedom. Liberatory fiction pushes the genre of Afrofuturism further to create space for the imagination to envision alternate futures and pasts, that rewrite history to aid in the process of liberation for black lives. The intended outcome of these texts is the liberation of its subjects and, in some cases, its readers to reflect on the contemporary. The liberation of subjects comes in the form of attaining collective or personal freedoms. This course will cover themes such as, gender and the speculative, the haunting of the post-slavery subject, and black apocalypses. All of these themes will be analyzed through reading both theory and narratives including: The Graphic Novel Adaptation of Octavia Butler's Kindred, Toni Morrison's Beloved, Saidiya Hartman's "Venus in Two Acts", and N.K. Jemisin's "The City Born Great".
Area: Writing Intensive

AS.060.374. Irish Literature. 3 Credits.
This course will introduce students to the long history of Irish literature, often relegated to a footnote or subsumed under the study of British literature broadly, from the medieval period until the contemporary era. Starting with the medieval Irish epic Táin Bó Cúailnge [The Cattle Raid of Cooley] and ending with Anna Burns' 2018 masterpiece Milkman, this course will introduce students to the ways in which a colonial literature changes over time as Ireland, England's first colony, is conquered and reconquered, rebels and revolts, and continues to confront the legacy of colonization as the nation remains divided between the North and the Republic today. Throughout the course, students will read texts written Jonathan Swift, Brian Ferriman, Peig Sayers, J.M. Synge, James Connolly, Elizabeth Bowen, Samuel Beckett, Edna O'Brien and others. This course will serve as a case study for students interested in literature of conflict, colonial and neo-colonial politics, and the fight for justice globally.
Area: Writing Intensive

AS.060.377. Edmund Spenser's Fairie Queene. 3 Credits.
After a diagnostic introduction to his early poetry, this reading intensive seminar will concentrate upon Edmund Spenser's masterpiece, The Faerie Queene (1590/1596), which we will read in its entirety.
Area: Writing Intensive

AS.060.381. The Asian American Novel. 3 Credits.
This course provides a foundation for reading Asian American novels. We will be discussing the origins of "Asian American" as a political coalition in the 1960s amidst a longer historical narrative of U.S. imperial and military projects and immigration policies that have influenced the racialization of those who identify with this multi-ethnic group. At the same time, we will be examining the limitations of this U.S.-centric perspective by rethinking the geopolitical spaces of both "Asia" and "the Americas" through transpacific and hemispheric lenses. Discussions will center around how the novel form could provide insight into linked social struggles and the new narratives of political community they imagine.
Area: Writing Intensive

AS.060.384. The Contemporary Novel. 3 Credits.
In the first two decades of the twenty-first century, writers of narrative fiction have been working furiously to keep up with the turbulence that global capitalism has visited on the world — war, political chaos, environmental catastrophe, massive forced migration and displacement — while trying to maintain ties to the techniques of narrative that gave the 19th century reality novel its successes and its prestige. In this course we will read a range of texts, mostly in translation, that stretch and deform those conventions in order to represent the lives and struggles of characters who are caught up in immense historical change. More and more often, novelists are choosing to depict characters drawn from what Marx would have called "surplus populations" — people for whom economic stability and personal safety are out of reach, partly because they are seen as not worth employing (or exploiting). Under these conditions, we will ask, is it only possible to tell tragic stories? What do happy endings look like? What do changes do character development and point of view have to undergo, for instance, to keep up with 21st-century history? Is realism still the best vehicle for telling these stories? Readings will include novels by Sally Rooney, Eduard Louis, Fernanda Melchor, Elena Ferrante, Marlon James, and Manoranjan Byapari, as well as secondary material by Sarah Chihaya, Merve Emre, Katherine Hill, Jill Richards, and the Endnotes collective.
Area: Writing Intensive

AS.060.388. Old World/New World Women. 3 Credits.
The course considers the transatlantic writing of three women in the early modern period, Anne Bradstreet, Aphra Behn, and Phillis Wheatley. We will consider issues of identity, spatiality, religion, commerce, enforced labor, sexuality, race, and gender, along with literary tradition, formal analysis and poetics. We will read a good deal of these early women writers. Foremost in our mind will be the question of how perceptions of space and time are mediated through the global experiences of early modernity.
Area: Writing Intensive

AS.060.389. Emily Dickinson. 3 Credits.
Dickinson's poetry, more than most, has seemed to prompt creativity in others. In the past two decades, especially, poets, writers, critics, and filmmakers have found their own voices in response to hers. We will focus on the formal, aesthetic, historical and gendered aspects of her poetry as we try to understand, and benefit from, this power to elicit response. Exams are unlikely. Instead, expect close attention to your own writing, as we pay close attention to hers.
Area: Writing Intensive

AS.060.391. Early American Literature. 3 Credits.
This course is an introduction to literatures drawn from across the Americas, although primarily the British North American colonies that would eventually become the United States, from first contact in 1492 up through the American wars of independence. Our readings are roughly organized according to chronology and genre. We will think about the adapted and emergent generic forms through which "the New World" was ongoingly invented, including genres like the Indian captivity narrative and the slave narrative that arguably make their debut in world literary history in the Americas during this time frame. We will conclude by attending to the rather late emergence of the novel in American literary history, reading four novels that appeared in the early US national period. The objective of the course is simply to contextualize and analyze a wide array of texts, each of which richly rewards the engaged reader, in order to trace the origins of American literatures. Course texts may include contact narratives (Columbus, Caminha, Smith, Hennepin); conquest narratives (Mather, Las Casas, Poma de Ayala); Indian captivity narratives (Cabeza de Vaca, Rowlandson, Staden); slave narratives (Gronniosaw, Jea, Cugoano); revolutionary polemics (Paine, Bolívar); and the earliest American novels: William Hill Brown, The Power of Sympathy; Hannah Webster Foster, The Coquette; Leonora Sansay, Secret History or, the Horrors of Santo Domingo; Charles Brockden Brown, Arthur Mervyn. Fulfills the pre-1800 requirement.
Area: Writing Intensive

AS.060.394. Class Fictions. 3 Credits.
This seminar investigates one of the central concerns of nineteenth-century fiction: social and economic class. Why did raising oneself from humble beginnings, and falling into poverty, become such familiar stories? And why are they still so familiar today? We will look at how a number of writers approached the topic of class mobility, each with a unique blend of excitement and anxiety. Authors will likely include Jane Austen, Honoré de Balzac (in translation), Charles Dickens, and William Dean Howells. In order to understand our topic better, we will also look at a selection of theoretical work on the nature of class.
Area: Writing Intensive

AS.060.397. Thomas Pynchon. 3 Credits.
Intensive reading of two major Pynchon novels, along with theories of modernity, postmodernity, etc.
Area: Writing Intensive

AS.060.400. Billie Holiday's Baltimore 1870-1960: A Reverse Classroom Journey in the Archives. 3 Credits.
This course will use the tools of the historical archive to etch a social history of Baltimore during the long Billie Holiday (1915-1959) era from the Reconstruction through post-World War II. Holiday's remarkable and unique art has earned her the title of the premier jazz singer of all-time, but unknown to most, her voice and experience were strongly shaped by her early life in Baltimore City, the city's black habitation and migration, its musical culture, its black middle and lower class, its urban density, as well as its cabaret and underworld life. Our task is to examine the city as an unfolding, racializing process, and to glean the evidence from multiple local archival sources to reconstruct some of the rough margins of possibility for the lived experience of Holiday's grandparents and parents, all born in Baltimore, as well as her own experience as truant, orphan, and sex assault victim in the 1920s. Two questions will occupy our interests intensely. How did the two black communities she lived in extensively evolve from the late 19th through the early 20th centuries? Second, what information can be unearthed about black musical culture--ragtime, marching bands, banjo and fiddle ditties, riverboat music--as it evolved in the post-World War I "jazz" age of sound recording and broadcasting? What was the artist's relationship to her urban geography? How did it change over space and time? What dimension of shared fate did she have with the community of black Baltimore domestic workers, laborers, artisans, and small business people from the first half of the twentieth century? In what manner did Baltimore's racial segregation and racism define her life and art? How was her consciousness as a vocal opponent to segregation shaped by her grooming in the city?
Area: Writing Intensive

AS.060.402. The Computer in Modern Literature. 3 Credits.
How have computers, and human interactions with computers, been represented in twentieth- and twenty-first-century literature? How have attitudes toward computers changed over that time? Now most books are written on computers, and many are read on them as well: what traces of these forms of production and consumption can we find in literary texts?
Area: Writing Intensive

AS.060.405. Psychoanalysis and Literature. 3 Credits.
In this course we will read some foundational texts by Sigmund Freud, and pair them with a select group of literary works--Sophocles' "Oedipus the King" and "Oedipus at Colonus", William Shakespeare's "Hamlet", Edgar Allan Poe's "The Purloined Letter", Wilhelm Jensen's "Gradiva"—which have inspired psychoanalytic ideas and generations of psychoanalytic literary interpretation.
Area: Writing Intensive

AS.060.406. Transfiguring the Renaissance. 3 Credits.
Tracing the poetics of bodily transformation then and now, this course puts early modern literature into dialogue with medical epistemologies of the sexed body and contemporary critical reflections upon transgender experience, embodiment and transition. Early modern texts might include Arthur Golding's translation of Ovid's "Metamorphosis", John Lyly's "Gallathea", Francis Beaumont's "Salmacis and Hermaphroditus", Ben Jonson's "Epicoene, or The Silent Woman", Middleton & Dekker's "The Roaring Girl" and John Milton's "Paradise Lost."
Area: Writing Intensive

AS.060.501. Independent Study. 3 Credits.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.060.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.060.509. Senior Essay. 3 Credits.
The English Department offers qualified majors the option of writing a senior essay. This is to be a one-semester project undertaken in the fall of the senior year, resulting in an essay of 30-35 pages. The senior essay counts as a three-credit course which can be applied toward the requirements for the major. Each project will be assigned both an advisor and a second reader. In addition, students writing essays will meet as a group with the Director of Undergraduate Study once or twice in the course of the project. The senior essay option is open to all students with a cumulative GPA of 3.6 or higher in English Department courses at the end of the fall term of their junior year. Project descriptions (generally of one to two pages) and a preliminary bibliography should be submitted to a prospective advisor selected by the student from the core faculty. All proposals must be received at least two weeks prior to the beginning of registration period during the spring term of the junior year. Students should meet with the prospective advisor to discuss the project in general terms before submitting a formal proposal. The advisor will determine whether the proposed project is feasible and worthwhile. Individual faculty need not direct more than one approved senior essay per academic year. Acceptance of a proposal will therefore depend on faculty availability as well as on the strength of the proposal itself. When completed, the senior essay will be judged and graded by the advisor in consultation with the second reader. The senior essay will not be part of the Department's honors program, which will continue to be based solely on a cumulative GPA of 3.6 in English Department courses.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.060.602. Proseminar.
This course is intended to train students in skills required by the discipline, help prepare them for a range of futures, and integrate them into the university community.

AS.060.603. Secularism & Theory.
This graduate seminar will construct a history of critical theory through the lens of contemporary narratives about secularization and methodological critiques of secularism.
Area: Writing Intensive

AS.060.604. Philology.
An examination of the many ways (both as old and then 'New', but also as the subject of a key 'return') that 'philology' has been claimed as the master category of literary study. The nuts and bolts of older philological procedures as well as the broadest theoretical claims for the term will be attended to.
Area: Writing Intensive

AS.060.607. Fiction and Doubt After 1888.
Examines the interrelation between fiction and doubt since the late nineteenth century. Authors may include Ward, Conrad, Joyce, Eliot, Stevens, Woolf, Baldwin, Flannery O'Connor, Ishmael Reed, Sefi Atta, R. O. Kwon.
Area: Writing Intensive

AS.060.613. American Movement.
This seminar examines representations of people in motion in U.S. writing from 1900 to the present. Migration, international and intranational, will be central to our study, but we'll also consider other forms of travel, transits of authorial and readerly attention, experiences of vagrancy and acceleration, and predicaments of stasis in primary texts as well as theoretical work around mobility. Authors and directors studied may include Simone de Beauvoir, Henry James, Gayl Jones, Jack Kerouac, Chang-Rae Lee, Claude McKay, Bernadette Mayer, Muriel Rukeyser, and Gertrude Stein.
Area: Writing Intensive

AS.060.614. Postcolonial/Global/World.
The field now known as "global Anglophone literature" has emerged from a complicated and rapidly advancing disciplinary lineage. A host of past and present recordings – including postcolonial, Commonwealth, Third World, global, transnational, world, and the Global South – provide a record of the wider profession's anxieties in relation to non-Western literary traditions. This course prepares graduate students to be able to articulate some of the subtle differences in approach that this nexus of closely related terms may obscure, from the heyday of postcolonial theory in the 1980s and 90s to contemporary subfields like Indian Ocean studies. In addition to key critical texts by theorists including Edward Said, Gayatri Spivak, Franco Moretti, Peter Hallward, and Emily Apter, students will be introduced to some outstanding recent methodologies and critiques from the adjacent body of work on comparative literature.
Area: Writing Intensive

AS.060.615. Human Rights Before Human Rights.
This course asks in what ways did literature mitigate population category distinctions within a pre-history of human rights from the period 1500-1700. We will take the situations of sponsored violence, and in particular, war captivity, in order to explore how premodern concepts of duties, rights, atrocity, inhumanity (and prohibitions against abuse) arise and become a locus of mimetic complexity within the literature of the period. Prospecting a historical transformation between ancient, early modern, and modern conceptions of rights, duties, and the human, readings may include: Euripides, Suppliant Women; Seneca, Trojan Women; Shakespeare, Troilus and Cressida; Cicero, Grotius, Gentili, Vitoria, Las Casas, Spenser, Bradstreet, Milton, Dryden, and Behn, as well as literature depicting violence resulting from Britain's East India Company's global intrusions. Splicing apart the "human" from "rights" we consider theoretical material from the liberal tradition and its critique; the problem of 'failed universals'; the historical connection between natural law and human rights; the distinctions drawn around legal and gendered categories of person; and critical race theory, with readings from Asad, Foucault, Moten, Wynter, Cavarero, Brown, Butler, Rawls, Dworkin, Drucilla Cornell, depending on the class's interests.
Area: Writing Intensive

AS.060.616. Milton.
A seminar covering the career of John Milton, including all his major poetry and much of his prose. There will be attention to the history of printing, publication and concepts of reading and writing, as well as to current issues and topics within early modern studies that bear on Milton (e.g. materialism, secularization, 'surface' reading, political theology, quantitative vs hermeneutic methods, actor-network theory). As such, the course will also be an introduction to various methods in early modern studies.
Area: Writing Intensive

AS.060.617. Black Print Culture.
Students interested in black print culture will engage in intensive archival research, both collaborative and individual, using the Sheridan Library's Rare Book and Manuscript collections. Texts include poems, printed lectures, pamphlets, novels, periodicals, ephemera, correspondence, etc., alongside relevant critical and theoretical reading.
Area: Writing Intensive

AS.060.618. Milton: Black and White.
In Milton: Black and White we will consider Milton and the discourses of racialized categories (poetical, political, and embodied), specifically attending to his role in the historical developments of white identity; concepts of justice; the genre of epic; and universal notions of personhood through the liberal tradition. We will also consider how Black writers have responded to Milton (including Phillis Wheatley, Frederick Douglass, Malcolm X, the gospel tradition, Toni Morrison, Chris Ofili) through readings of Paradise Lost and selected prose, as well as readings in contemporary critical theory.

AS.060.619. Sentimental Reasons.
Recent work in cognitive approaches to literature have led critics to return to the sentimental novel of the eighteenth-century as a "laboratory," in Daniel Goss's words, for the investigation of human emotion. There is no easy "fit" between these literary narratives and the narratives of cognitive science, nor between them and the regnant moral philosophy of the age (built upon the mechanism of human sympathy or upon "nervous" association). There is rather a discomfort that reveals social inequities as well as alternative possibilities for both thinking and feeling. The sentimental mode took hold in the circuits of the Atlantic world. This course will study several sentimental narratives that traveled promiscuously through those circuits: Bernardin de St. Pierre's Paul and Virginia, Sterne's Sentimental Journey, Mackenzie's Man of Feeling; Equiano's Interesting Narrative; Williams' Peru; and Brown's The Power of Sympathy. Alongside these works we will read studies by critics working the seams between affect and cognition, philosophy and literature, rhetoric and science. The course will provide a broad history of the sentimental mode, stretching to reflections on the links between the sentimental and the melodramatic. It will simultaneously attend to the experience of reading for sentiment, to forms of feeling and what those feelings know.
Area: Writing Intensive

AS.060.620. Thinking with Scale: Frameworks in Early Modernity.
Concepts include expansion, crowding, data collection, the miniscule, temporality, the planetary and the cosmic in the first age of European mercantile activity and colonial expansion. With readings from world-systems theory and theories of the anthropocene, our case studies will comprise pre-modern English literary texts, including Milton, Paradise Lost, Anne Bradstreet, The Four Monarchies, early modern science (Hooke, Newton), Defoe, The Storm, and early British and colonial American holdings in the Garrett Library. The class will be hands-on, working with material from Special Collections, and will include working towards a digital project (no digital project background necessary).
Area: Writing Intensive

AS.060.625. Theory of the Novel.
This course will look at the development of novel theory from the eighteenth century until the present. Authors will include Scott, Barbauld, Dallas, Lewes, Eliot, James, Shklovsky, Tomashevsky, Jakobson, Bakhtin, Lukács, Auerbach, Barthes, Jameson, Girard, Sedgwick, Moretti, Armstrong, Miller, Hale, Lynch, and Woloch. Novelists will likely include Madame de Lafayette, Austen, Goethe, and Wolfe.
Area: Writing Intensive

AS.060.627. Poetry and Performance.
This course will be devoted to the histories and theories of 19th-, 20th-, and 21st-century poetry and performance, beginning with William Wordsworth's and Samuel Taylor Coleridge's Lyrical Ballads. Upon hearing the poets read, William Hazlitt remarked that "[t]here is a chaunt in the recitation both of Coleridge and Wordsworth, which acts as a spell upon the hearer, and disarms the judgment." This early instance of reception history will provide the backdrop for our discussion throughout the semester. Besides Wordsworth and Coleridge, our reading list will include verse, theory, and criticism by Robert Browning, Walt Whitman, T.S. Eliot, James Weldon Johnson, Langston Hughes, William Carlos Williams, Charles Olson, Allen Ginsberg, Norman Pritchard, Amiri Baraka, Tracie Morris, Christian Bök, Lisa Gitelman, Frederich Kittler, Peter Middleton, John M. Picker, Susan Stewart, and others.
Area: Writing Intensive

AS.060.628. Literature and Human Rights: 1500-1720.
Today human rights and capabilities are two intertwined concepts. In the early modern period, these were much debated and literature was a key site for the development of these imperfect, variable and contested discourses. Reading literary works from the European tradition, in particular in Europeans' engagement with dissident groups both within and outside Europe, we will explore themes of embodiment, power, risk, vulnerability and the languages and practices of equivalence and domination in the variable discourses of humanitarianism, natural law, and rights in authors including Shakespeare, Grotius, Montaigne, Hobbes, Milton, Behn, Locke, Swift, Montagu and Defoe.
Area: Writing Intensive

AS.060.629. The History of the Book.
The course will account for the major transformations in the media used for writing from the scroll to the web as well as the rich account of this history and its theorizations.
Area: Writing Intensive

AS.060.636. Settler Colonialism: Theory, History, Literature.
This seminar offers an introduction to a key concept in contemporary critical theory and literary and cultural studies: settler colonialism, understood as a specific form of colonialism focused on the appropriation of land rather than the exploitation of labor and thereby involving the attempted elimination and replacement of indigenous polities and societies by an invading force. The course will have a dual focus: 1) tracing the theoretical distinction of settler colonialism from other forms of colonialism and tracking the critique implicit in this distinction of dominant forms of leftism that arguably presuppose a settler-colonial frame of reference; 2) tracking the history of what James Belich has called the “Anglo settler revolution” of the nineteenth century and engaging in a comparative analysis of the literatures produced in the course of that revolution in what are now Ireland, the United States, Canada, Australia, and elsewhere in the Pacific. We will especially attend to narrative fictions—often (self-) identified as “romances”—that chronicle settlement and register the temporal disruption of indigenous persistence and resistance. Secondary texts may include: Belich, Replenishing the Earth; Glen Coulthard, Red Skin, White Masks; Aileen Moreton-Robinson, The White Possessive; Eve Tuck and K. Wayne Yang, “Decolonization is Not a Metaphor”; Patrick Wolfe, Settler Colonialism and the Transformation of Anthropology. Primary texts may include: Charles Brockden Brown, Edgar Huntly; S. Alice Callahan, A Child of the Forest; Marcus Clarke, His Natural Life; Susanna Moodie, Roughing It in the Bush; Herman Melville, Typee; Sydney Owenson, The Wild Irish Girl; Simon Pokagon, Ogimawkwe Mitigwaki (Queen of the Woods); John Richardson, Wacousta or, The Prophecy; Catharine Maria Sedgwick, Hope Leslie; and the FX television series, Taboo.
Area: Writing Intensive

AS.060.637. Counterfactual Literature.
This course will focus on the formal, affective, ethical, and conceptual issues associated with forking-path texts—poems, fictions and films that openly offer alternative paths to the experience of individuals.
Area: Writing Intensive

AS.060.638. Whitman and the Whitmanian.
This course will take the occasion of the bicentennial of the birth of Walt Whitman as an occasion to think about the legacies of his poetry in American literary history, especially in contemporary poetry. We will read key texts of Whitman’s then move to more recent writing, paying attention to the key scholarship on Whitman from the last few decades, as well as to recent scholarship on poetry that is in dialog with the questions of democracy, capitalism, on the one hand, and form and address, on the other, that have shaped our reading of Whitman and of poetry in the Whitmanian mode.
Area: Writing Intensive

AS.060.639. The American Renaissance: History of a Field.
This seminar will provide an intensive introduction to antebellum nineteenth-century U.S. literature by way of tracking a critical formulation foundational to the field of American studies as whole: "the American Renaissance." Coined by F.O. Matthiessen in 1941, "the American Renaissance" initially referred to a canon of five white male writers (Ralph Waldo Emerson, Nathaniel Hawthorne, Herman Melville, Henry David Thoreau, and Walt Whitman) alleged to have produced work of distinction in two interrelated senses--the first specifically "American" literature deserving of academic study. We will follow the fortunes of this critical formulation, tracing how some of the authors in Matthiessen’s canon have subsequently been reinterpreted and repositioned as well as how "the American Renaissance" canon has been expanded and its very conceptualization contested. Primary authors whose work may be examined include William Apess, William Wells Brown, Lydia Maria Child, Frederick Douglass, Emerson, Margaret Fuller, Hawthorne, Harriet Jacobs, Melville, Harriet Beecher Stowe, and the anonymous author of Xicotencatl. Secondary works may include: Matthiessen, The American Renaissance (1941); Reynolds, Beneath the American Renaissance (1988); Michaels and Pease, The American Renaissance Reconsidered (1989); Crews, "Whose American Renaissance?" (1988); Colacurcio, "The American-Renaissance Renaissance" (1991); Avallone, "What American Renaissance?" (1997); Grossman, Reconstituting the American Renaissance (2003); Brickhouse, Transamerican Literary Relations (2004); Fluck, Romance with America (2009); Hager and Marrs, "Against 1865" (2013).
Area: Writing Intensive

AS.060.641. Close Reading, Exhaustive Reading, and the Novel.
How much can you say about a novel? How much of a novel can a critic interpret? The large scale of the novel form seems to resist the interpretive techniques of literary criticism, which look closely at a small number of textual examples. But what if we tried to read every word of a novel, and see it in all its forms: genre, structure, history, politics, biography, and so on? This seminar will look closely at a small number of Victorian novels (probably Dickens’ *David Copperfield* and Eliot’s *Daniel Deronda*, subject to change). We will approach these novels through a variety of theroetical lenses. There will be a special emphasis placed on the relations between form, history, and politics. This seminar will also offer students a chance to apply theories of literature and the novel often considered in abstract.
Area: Writing Intensive

AS.060.642. Reading Capital Now.
Since the 2008 financial crash, there’s been rising popular consciousness of capitalism’s crisis-bound character and, therefore, its vulnerability. But finance isn’t the only thing that capitalism has brought to a boiling point: for attentive readers of Marx, the mounting climate disaster, the COVID pandemic, and the struggle for Black Lives have only further highlighted the complex interconnections among our energy and food infrastructures, histories of racist and settler-colonial violence, the patriarchal organization of sexuality, and the maintenance of capitalist profitability no matter the social cost. The aim of this seminar is, first, to show how a thorough reading of the first volume of Marx’s Capital goes a long way toward helping us see all these histories and crises as part of a single, many-faceted dynamic, and second, to highlight 20th- and 21st-century Marxist work that takes Marx in new directions, from critiques of racial capitalism, colonialism, and the patriarchy of the wage, to studies of climate crisis and the global recomposition of the labor pool. Along with Marx, we’ll read work by WEB DuBois, James Boggs, Silvia Federici, Thiti Bhattacharya, Jairus Banaji, Nikhil Singh, Andreas Malm, the Endnotes collective, James Parisot, and others.
Area: Writing Intensive

AS.060.644. Oceanic Studies & the Black Diaspora.
In this course, we take up Hester Blum's blunt observation that "the sea is not a metaphor" in order to consider the visions and hopes black writers have associated with the sea, as well as the despair and trauma transatlantic slavery has left "in the wake," to quote Christina Sharpe.
Area: Writing Intensive

AS.060.645. What was Literary Character?.
What role did literary character play along the passage from ancient theories of dramatic action to contemporary theories of subjectivity and personhood? What role, specifically, did Shakespearean personhood play in the theorization of literature's capacity to stage and represent a portable, exemplary "self"? How do group categories of race, gender and class qualify and inflect the ostensive individuation of character outcomes? As test cases, in this course we will consider an array of early modern literary persons from before and after Shakespeare as depicted in poetry, drama and prose : Heywood's Lucrece, Marlowe's Tamburlaine, Shakespeare's Hamlet and Cleopatra, Middleton's Timon, Moliere's Alceste, Milton's Christ and Behn's Oroonoko. This course will range widely across theorists of literary character and the reader/character relationship, considering Aristotle, Theophrastus, Sir Thomas Overbury, Sigmund Freud, Aaron Kunin, Blakey Vermeule, Toril Moi, Rita Felski, Amanda Anderson, and Thomas Metzinger, among others.
Area: Writing Intensive

AS.060.649. The Essay Form & Academic Prose.
While we will spend some time with the history and theory of the essay, much of our time will be spent considering the contemporary essay and its form. Across the past decade, academics have increasingly published essays designed for non-specialists. We'll study many of them, both as objects of critical attention and of practical value. Writing assignments will include the option to write essays.
Area: Writing Intensive

AS.060.650. Character Studies.
What are literary characters? Can we imagine literature without them? And how do they relate to questions of form and society? Starting with Aristotle, and moving through 20th- and 21st-century critics such as Lukacs, Barthes, and Woloch. We will pay special attention to the historical relationship between theories of character and approaches to the novel.

AS.060.651. The Sensorium of Reading c. 1800.
This seminar aims to think hard about the embodied reader and the material realm of reading. Our work will position reading less as a strict function of cognition and more as a matter of phenomenology, sensation, and material structures. Though we will attend to question of vision (and loss of vision) we will also highlight other senses: hearing, touch, smell, taste and bodily proprioception. Course materials will include recent studies that link reading and the senses, as well as texts from the late eighteenth and early nineteenth-century, a moment when the idea of Literature emerged alongside a theorizing of media and mediation, and investigations linking aesthetics and phenomenology. Samuel Taylor Coleridge will be one guide for the seminar, but so will the ballad revival and the literature of abolition. Seminar participants are invited to target other periods and places in their own research projects for the seminar.
Area: Writing Intensive

AS.060.652. The Time and Space of Capital.
This course will look at the relationship between the logical and historical aspects of Marx's analysis of capitalism, which special emphasis on key arguments in volumes 2 and 3 of Capitalism. We will ask questions about capital's use of time and space in the service of accumulation, and read more recent secondary material all term from anti-colonial, feminist, queer, Indigenous, and Black radical traditions, in order to develop a fresh picture of the complex interrelation or different types of oppression and exploitation across capitalist history. Some familiarity with the concepts and argument of Capital, volume 1 will be helpful, but are not required.

AS.060.653. Dark Conceits: Allegory, Interpretation, and Psychoanalysis.
Bringing theological commentary and psychoanalytic diagnosis into conversation with historicism, formalism, sexuality studies and premodern critical race studies, this course uses Edmund Spenser's "Fairie Queene" to re-open the question of hermeneutics.
Area: Writing Intensive

AS.060.654. The Romance.
This graduate seminar takes a long view of the romance—the genre of literary imagination, par excellence—as originating and recurring in the Anglo world as a crucial technology of settler indigenization on stolen land and also of Indigenous resistance to settler fantasies of realization, from twelfth-century Norman England and Ireland to nineteenth-century North America and Australasia. Texts may include: Geoffrey of Monmouth, History of the Kings of Britain; Wace, Roman de Brut; Catharine Maria Sedgwick, Hope Leslie; Joseph Smith, The Book of Mormon; Mark Twain, A Connecticut Yankee in King Arthur's Court; Simon Pokagon, Queen of the Woods; Eleanor Catton, The Luminaries.
Area: Writing Intensive

AS.060.658. 1922 and Its Neighbors.
A course focusing on works published in the _annus mirabilis_ of modernism, 1922, and the years nearby. In addition to reading these texts in detail, we'll consider what it means to periodize at a granular level and how our primary texts and theoretical readings take up the problem of the neighbor as well as questions of of hospitality, community, social obligation, and domesticity.
Area: Writing Intensive

AS.060.668. The Slavery Debate in the Atlantic World.
This graduate seminar will trace the historical development of the slavery debate in the Atlantic world through examination of key texts from a host of genres and locations—Quaker religious tracts, political documents like the Haitian Declaration of Independence, Cuban antislavery novels, slave narratives, and "classics" of "American" literature like Melville's Benito Cereno. Our historical investigations into the rhetorical field of anti- and proslavery will be framed by a theoretical interest in political theology. How might critical reflection on sovereignty, recent and not so recent—from Derrida back to Bodin (widely acknowledged as having provided one of the first philosophical defenses of antislavery)—help us recast the intellectual history of the slavery debate and Atlantic radicalism, more generally?
Area: Writing Intensive

AS.060.800. Independent Study.
This course is a semester-long independent research course for graduate students. Students will have one-on-one assignments and check-in's with designated faculty throughout the semester.

AS.060.893. Individual Work.

AS.060.894. Independent Reading.

Cross Listed Courses

Agora Institute

AS.196.364. This is Not Propaganda. 3 Credits.
We live in an era of disinformation' mass persuasion and media manipulation run amok. More information was meant to improve democracy and undermine authoritarian regimes- instead the opposite seems to be happening. This course will take you from Russia to South Asia, Europe to the US, to analyze how our information environment has been transformed, why our old formulae for resisting manipulation are failing, and what needs to be done to create a model where deliberative democracy can flourish.
Area: Writing Intensive

Center for Africana Studies

AS.362.111. Introduction to African American Studies. 3 Credits.
This course introduces students to the interdisciplinary field of African American Studies, with attention to the literature, film, culture, history, and politics of black life in the United States. Our reading list will likely include texts by David Walker, Frederick Douglass, Frances E.W. Harper, Sutton Griggs, W.E.B. Du Bois, James Baldwin, Amiri Baraka, Toni Morrison, and others.

AS.362.201. African American Poetry and Poetics. 3 Credits.
In this course, we will follow the development of black poetry primarily as it has evolved in the United States. Beginning with the first published African American writers of the eighteenth century and ending with several important poets writing and performing today, we will consider the shape of the African American poetic tradition as commonly anthologized and as defined by our own theoretically-informed readings of the assigned literature. Attention will be given to both canonical and neglected literary movements and groups. Readings will include poetry and essays by Frances E.W. Harper, James Weldon Johnson, Langston Hughes, Gwendolyn Brooks, Amiri Baraka, Harryette Mullen, Tracie Morris, and others.

AS.362.305. Black Periodical Studies. 3 Credits.
This course explores the ways in which nineteenth- and twentieth-century black periodical culture fostered (and, at times, hampered) the literary and cultural production of the African diaspora. Authors will likely include Frederick Douglass, "Ethiop (William J. Wilson)," Frances E.W. Harper, Pauline Hopkins, W.E.B. Du Bois, Marcus Garvey, Jean Toomer, Langston Hughes, Richard Bruce Nugent, and others.
Area: Writing Intensive

AS.362.311. Black Utopias. 3 Credits.
In this course, we will read literary and historical texts that present visions of black utopia. Authors include "Ethiop" (William J. Wilson), Marcus Garvey, Octavia Butler, Toni Morrison, and others.
Area: Writing Intensive

Classics

AS.040.145. Story and Argument from Homer to Petrarch. 3 Credits.
Stories entertain us, but we also tell them to make a point. This course will explore the ways that stories were used to make points by Greek and Latin authors from Homer to Petrarch, while also looking at, and comparing them to, the techniques of argument contemporaneous thinkers were developing. This is a course about narrative and rhetoric but also about how and in what way stories matter.

AS.040.626. Plato and Poetry.
This graduate seminar will explore Plato's contributions to the "old quarrel" between poetry and philosophy, encompassing such topics as the relationship between poetic inspiration and human reason, the role of literature in pedagogy, and the metaphysical implications of poetic fiction. We will focus on several Greek texts from the Platonic corpus related to these themes, as well as some later sources that engage with Platonic ideas.

Comparative Thought and Literature

AS.300.319. The Modernist Novel: Mann, Woolf, and Joyce. 3 Credits.
In this course, we will survey the major works of three of the greatest, most relentless innovators of the twentieth century – Thomas Mann, Virginia Woolf, and James Joyce – who explored and exploded narrative techniques for depicting what Woolf called the "luminous halo" of life.
Area: Writing Intensive

AS.300.323. Shakespeare and Ibsen. 3 Credits.
William Shakespeare and Henrik Ibsen are the two most frequently performed playwrights in history, and both have been credited with reinventing drama: Shakespeare for the Elizabethan stage and Ibsen for the modern. In this course we will pair together plays by each author – those that stand in an explicit relation of influence as well as those that share a significant set of concerns – in order to investigate how each takes up and transform key problems in the literary, political, and philosophical tradition for their own historical moment. Plays to be studied: by Shakespeare, A Midsummer Night's Dream, Hamlet, Othello, King Lear, The Tempest, A Winter's Tale; by Ibsen, St. John's Night, Hedda Gabler, Rosmersholm, The Wild Duck, The Master Builder, When We Dead Awaken.

AS.300.336. Forms of Moral Community: The Contemporary World Novel. 3 Credits.
Literary and philosophical imaginations of moral community in the post-WWII period. Texts include: Coetzee, Disgrace; McEwan, Atonement; Achebe,Things Fall Apart; Ishiguro, An Artist of the Floating World; Roy, The God of Small Things; Lessing, The Grass is Singing; Mistry, A Fine Balance; Morrison, Beloved; and essays by Levi, Strawson, Adorno, Murdoch, and Beauvoir on the deep uncertainty over moral community after the crisis of World War II. Close attention to novelistic style and narrative will inform our study of the philosophical questions that animate these works. What does it mean to acknowledge another person's humanity? Who are the members of a moral community? Why do we hold one another responsible for our actions? How do fundamental moral emotions such as contempt, humiliation, compassion, gratitude, forgiveness, and regret reveal the limits of a moral community?

AS.300.337. The Tragic Tradition. 3 Credits.
This course offers a broad survey of tragic drama in the Western tradition, from its origins in ancient Greece to the twentieth century. In weekly lectures and discussion sections, we will study the specific literary features and historical contexts of a range of different works, and trace the continuities and transformations that shape them into a unified tradition. Key questions and themes throughout the semester will include what counts as tragic, the tragedy of social and political conflict, the bearing of tragedy on the meaning and value of life, the antagonistic relation between world and humans, the promises and dangers of tragedy for contemporary culture. Authors to be studied: Sophocles, Euripides, Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht, Pirandello, and Beckett.

AS.300.339. Introduction to Comparative Literature. 3 Credits.
This course offers an introduction to the history, theory, and praxis of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.

AS.300.340. Literature and Film of Unintended Consequences. 3 Credits.
Sometimes brilliant ideas and plans don't work as anticipated, or go very badly—for example, empowering the "invisible hand" of the market, building a huge hydroelectric dam, or plotting a double murder by two strangers. This course explores these and other fascinating literary instances of unintended consequences—the unanticipated results of actions that people planned ending up a very different way. Reading or watching mainly twentieth-century American literature and movies, as well as some essays and poetry, we will follow a range of different creators as they think about unplanned effects and why they matter. What can these works tell us about how we intend, act, or make meaning at the limits of our control? Texts will include films by Charlie Chaplin, Billy Wilder, and Alfred Hitchcock, poetry or fiction by Wallace Stevens, Patricia Highsmith, and Zadie Smith.
Area: Writing Intensive

AS.300.347. Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will pair literary works and films with texts from politics, philosophy, literary theory, and religion, that frame climate change as a fundamental challenge to our ways of making sense of the human condition.

AS.300.348. Modern Drama. 3 Credits.
This course offers a survey of modern drama, from the mid nineteenth century to the present. We will sample a broad range of dramatic styles and movements in order to uncover the variety of ways theatre has made sense of the human experience over the past two hundred years.

AS.300.349. Capitalism and Tragedy: from the 18th Century to Climate Change. 3 Credits.
In contemporary discussions of climate change, it is an increasingly prevalent view that capitalism will lead to the destruction of civilization as we know it. The notion that capitalism is hostile to what makes human life worth living, however, is one that stretches back at least to the early eighteenth century. In this class, we will examine key moments in the history of this idea in works of literature, philosophy, and politics, from the birth of bourgeois tragedy in the 1720s, through topics such as imperialism and economic exploitation, to the prospects of our ecological future today. Authors to be studied: George Lillo, Balzac, Dickens, Marx and Engels, Ibsen, Weber, Brecht, Arthur Miller, Steinbeck, Pope Francis, and contemporary fiction, politics and philosophy on climate change.

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course explores recent debates on being a person in culture, law, and philosophy. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Materials examined will be wide-ranging, including essays, philosophy, novels, science fiction, television, film. No special background is required.

AS.300.418. The Modernist Novel: James, Woolf, and Joyce. 3 Credits.
In this course, we will survey the major works of three of the greatest, most relentless innovators of the twentieth century – Henry James, Virginia Woolf, and James Joyce – who explored and exploded narrative techniques for depicting what Woolf called the "luminous halo" of life.
Area: Writing Intensive

AS.300.437. Literature and Philosophy of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola,Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches it climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence. Theoretical and philosophical texts on the everyday by Auerbach, Kierkegaard, Heidegger, Sartre, Beauvoir, Lefebvre, Certeau, and Wittgenstein will accompany our discussions.

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees..
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course explores recent debates on being a person in culture, law, and philosophy. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Materials examined will be wide-ranging, including essays, philosophy, novels, science fiction, television, film. No special background is required.
Area: Writing Intensive

AS.300.629. Theory, Now and Then: Autonomy, Form, Critique.
This course explores recent developments and disputes in critical theory in relation to their longer philosophical genealogies. The three topics—form, autonomy, and critique—have been the subject of much recent debate, contention, and new analysis, yet each was also a source of critical and philosophical interest in years past. Our aim will be to make sense of today's interventions in conversation with earlier theory. “Historical” theory writing will include Adorno, Lukács, Cavell, and Jameson; contemporary theory will include Nicholas Brown, Rita Felski, Caroline Levine, Mark McGurl, and Toril Moi.

AS.300.639. Literature and Philosophy of the Everyday.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read closely a set of novels by Flaubert, Mann, Dickens, Eliot, Zola,Tolstoy, and Woolf from the period between 1850 and 1950 in which the development of realism reaches it climax. These novels transform the conventions for the representation of lives of lower and middle class subjects, revealing such lives as capable of prompting reflection upon deep and serious questions of human existence. Theoretical and philosophical texts on the everyday by Auerbach, Kierkegaard, Heidegger, Sartre, Beauvoir, Lefebvre, Certeau, and Wittgenstein will accompany our discussions.

First Year Seminars

AS.001.100. FYS: What is the Common Good?. 3 Credits.
What is “the common good”? How do individuals consider this idea, this question, and how are societies led, or misled, by its pursuit? Together, we will explore sources from a range of perspectives: What can the story of Noah, for example, teach us about the question of the common good? Or the engineering of Baltimore public transportation, the notion of meritocracy in higher education, access to vaccines, the perniciousness of pandemics, prohibition of nuclear weapons, or data sharing among scientists? Drawing from movies, interviews, and readings (authors include Rachel Carson, James Baldwin, Bong Joon-ho, Spike Lee, Michael Sandel, and more), this course is as much about how we ask and interrogate hard questions as it is about the answers themselves. Engaging deeply with the sources and each other, students will discuss the texts in class, write short responses, and give occasional oral presentations. The course will culminate in a final, collaborative research project that seeks to map the common good and move the conversation forward.

AS.001.134. FYS: Great Books at Hopkins - a closer reading. 3 Credits.
Modeled after Johns Hopkin's longstanding Great Books course, this Freshman seminar offers a more focused selection of texts to allow in-depth reading and discussion, with greater attention to historical context. Texts will include: The Odyssey, Paradise Lost, Frankenstein, and Narrative of the Life of Frederick Douglass, written by himself, with excerpts from additional slave narratives. In-class lectures and discussions will be supplemented by occasional guest lectures and exhibits from the archives of Eisenhower Libraries. Prior attendance in Great Books at Hopkins is not required; upper class students who have previously taken Great Books may be admitted with permission of instructor.
Area: Writing Intensive

AS.001.163. FYS: Black Baltimore Archives - From Frederick Douglass to Billie Holiday. 3 Credits.
Black Baltimore Archives is an intense exploration (and excavation) of local African American history and narrative. Using the lives of Baltimore's most prominent artists-Frederick Douglass and Billie Holiday-this First-Year Seminar will explore questions connected to creating the historical record, assembling visual and sonic representations of black life, and the challenges that access and preservation pose to sustaining black community. We will visit the Afro-American Newspaper archives, the Maryland Center for History and Culture, the Maryland State Archives, and Morgan State University special collections, among other key archival repositories. Students will participate in a national conference and a local jazz event.

AS.001.172. FYS: Privacy and Surveillance. 3 Credits.
Few topics are more pressing to contemporary society as the right to privacy, in the face of both state and corporate and state surveillance. But the idea of a "right to privacy" has not always been with us. As E. L. Godkin put it in 1890, "Privacy is a distinctly modern product." Indeed, even 300 years ago, many of our own expectations of privacy would have been unheard of. This First-Year Seminar looks at the relation of privacy to modernity, through the lenses of literature, law, and social practices. How can works of art and thought from the past help us understand our own present?

History

AS.100.240. American Cultural Criticism. 3 Credits.
This course explores 20th century U.S. history through the works of writers and artists. We will ask how essays, novels, performance, and art can function as cultural and social criticism.
Area: Writing Intensive

AS.100.275. Passing in American Culture. 3 Credits.
This course explores passing narratives – stories that feature people who cross race, class, ethnic, or gender boundaries. We will consider what passing narratives can teach us about power and identity, especially as power is presumed to reside in the self and race is presumed to no longer matter.

AS.100.326. From Blood Feud to Black Death: European Society in the High Middle Ages, 1000-1400. 3 Credits.
Explores the development of society and institutions in the medieval west including kingship and law, religion and difference, gender and ideology. Looks closely at social responses to change and adversity.

AS.100.354. Playing in the White: Black Writers, the Literary Colorline and Writing Whiteness. 3 Credits.
This course will turn to known and not-so-known black writers during the early to mid-twentieth century who defied literary expectation and wrote stories that featured or focused on whiteness. We will consider what whiteness offered black writers and the political work that their literary experimentations did for a white American publishing industry.

AS.100.373. Crime, Punishment, Felony and Freedom: Law and Society in Pre-Modern England. 3 Credits.
Using legal texts as a window into English society, we will address the changing nature of royal power, trial by jury, treason, felony, and the freedoms enshrined in the Magna Carta.

AS.100.672. Medieval Materialities: Objects, Ontologies, Texts and Contexts.
We will use the meanings and methodologies of “materiality” to examine the medieval world, by analyzing objects, texts, networks, patterns of circulation and appropriation, aesthetics and enshrinement, production and knowledge communities.

AS.100.682. Introductory Topics in Computation for Scholarship in the Humanities.
The first half of this seminar course consists of non-mathematical introductions to, and discussions of, the fundamental motivations, vocabulary, and methods behind computational techniques of particular use for humanistic research. The second half combines selected readings chosen to address specific questions raised by these discussions with hands-on application to students' research goals. Each participant will lead discussion for one of the selected readings relevant to their interests.

AS.100.725. Sex and Slavery II.
Research and methods in the field of sexuality and slavery studies. Part 2: Caribbean & African Continent.

Interdepartmental

AS.360.133. Freshman Seminar: Great Books at Hopkins. 3 Credits.
Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University's rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2020 include Homer, Plato, Dante, John Donne, George Herbert, Christina Rosetti, Mary Shelley, Friederick Nietzsche, Isaac Bashevis Singer, Frederick Douglass.
Area: Writing Intensive

Modern Languages and Literatures

AS.211.203. Propaganda: From Blut und Boden to Post-Fact. 3 Credits.
This course taught by Writing Seminars professor Wayne Biddle and Media Studies professor Bernadette Wegenstein covers the 20th-century history of propaganda with special focus on its visual techniques, on censorship, and how media serve as sites of both control and resistance to power. We will pay particular attention to the influence of misinformation abetted by the new media revolution, and both the rise of the political rhetoric of "fake news" and the massive dissemination of actual fake news since the 2016 election. Students will write papers pegged to current issues and events using the critical framework developed in class. Cap 30 students. Reader: Jason Stanley: How Propaganda Works, Princeton University Press, 2015.
Area: Writing Intensive

AS.211.301. Nietzsche and Literature. 3 Credits.
Nietzsche and Literature is devoted to exploring the philosophy and literary works of the German philosopher Friedrich Nietzsche, and studying his impact on literature and literary modernism. Readings will include works by Nietzsche and by the literary writers he influenced, including Rainer Maria Rilke, Stefan George, Thomas Mann, Stefan Zweig, Hugo von Hofmannsthal, Franz Kafka, Jorge Luis Borges, Hermann Hesse, James Joyce, Wallace Stevens, and William Butler Yeats, and Else Lasker-Schüler.

AS.211.325. Representing Otherness in Literature and Film. 3 Credits.
The term 'Otherness' is known to be rooted in the Self-Other opposition as it emerged in German Idealism, adopted by psychoanalysis and transformed to Post-Colonial and Feminist theories. This theoretical framework will allow us to explore the role of the Other in literature and cinema. Students will become familiar with the historical development of the notion of the "stranger" through reading and analyzing various contemporary works of prose, poetry and cinema from various countries. We will analyze the ways in which these works depict Otherness and will investigate questions regarding their social, political and philosophical framework as well as the literary and cinematographic devices they employ. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.

AS.211.333. Representing the Holocaust. 3 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.
Cannot be taken by anyone who previously took AS.213.361

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relation. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli protest and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section 2.

AS.211.477. Renaissance Witches and Demonology. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did "The Witch" go from being "monstrous" to being "admirable" and even "sexy"? Answers are found in history and anthropology, but also in medicine, theology, literature, folklore, music, and the visual arts, including cinema.
Area: Writing Intensive
Students who have already taken AS.214.171 cannot take AS.211.477.

AS.211.479. Dante's Journey through the Afterlife. 3 Credits.
Dante's Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante's own time, and in terms of its relevance to our own societal and cultural concerns.
Area: Writing Intensive
AS.214.479

AS.211.480. Religious Themes in Film and Literature. 3 Credits.
This course would be of interest to anyone who would like to learn about the intersection of religion and modern culture. At the center of the course will stand a close study of the representation of religious themes and their role in modern literature and cinema. The works which we will deal with are not considered religious and yet they include religious themes as part of their narrative, images, language or symbolic meaning. We will trace in various works from various countries and genre, themes such as: divine justice, providence, creation, revelation, the apocalypse, prophecy, sacrifice and religious devotion. We will also study the ways in which Biblical and New Testament stories and figures are represented in these works. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.

AS.211.754. Modernist Primitivism.
This course will explore the aesthetics and politics of primitivism in European modernity, focusing on the visual arts and literature in German and Yiddish, but looking at the wider European context, including France and Russia. We will begin with the backgrounds of primitivism in Romanticism, looking especially at its ethnographic and colonial sources. We will then focus on the presence of anthropological and ethnographic discourses within various registers of modernist thought, literature, and visual culture, with special attention to visual and literary primitivism. Our central concerns will include: the attempt to create a modernist aesthetics grounded in ethnography; the primitivist critique of modernity; the place of primitivism in the historical avant-garde; the development of the notion of "culture" in modernity; and the aesthetics of modern ethnic and national identity. Key thinkers, artists, and writers to be considered include Herder; Gauguin; Picasso; Wilhelm Worringer; Carl Einstein; Hannah Höch; and Emil Nolde.

AS.211.777. The Critical Unconscious.
Criticism in the 21st century has tended to relegate psychoanalysis to a dustbin of fads that proliferated at the end of the prior century but that today are of interest only to balkanized cliques of devotees. Bucking this trend, this seminar will examine the intellectual history and abiding influence of psychoanalysis's key critical concept: the unconscious. Basing our discussions on in-depth readings from key thinkers in the analytic tradition such as Freud, Lacan, and Klein, as well as the post-analytic philosophical tradition, including Zizek, Butler, Laclau and Mouffe, Deleuze and Guattari, and Jameson, we will work to distill an understanding of the unconscious as essential to the practice of criticism tout court, and as inhering even in those discourses that have sought most stridently to distance themselves from it. Seminar discussions will take place in English; readings will be available in the original as well as in translation.
Area: Writing Intensive

AS.213.321. Bodies and Pleasures. 3 Credits.
This course traces a literary history of sexuality from the Middle Ages to contemporary women's writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures.

AS.213.328. German Literary Modernism. 3 Credits.
Taught in English. German Literary Modernism focuses on modernist works of literature between 1900-1930, considering central modernist authors against the backdrop of dramatic changes and events in European culture and society, including urbanization, technological change, the First World War, and social and artistic movements. Students will engage literary works--by such authors as Kafka, Rilke, Hofmannsthal and Thomas Mann--that express a sense of crisis about modern life, or provoke questions about the nature of reality, the human self, the reliability of perception, and the possibilities of language and art. ? Students have the option of an additional hour of German discussion and doing all the assignments in German for German-language credit (3+1) towards the major or minor. Students interested in that option should register for section 2.

AS.213.374. Existentialism in Literature and Philosophy. 3 Credits.
What does it mean to exist, and to be able to reflect on this fact? What is it mean to be a self? This course explores the themes of existentialism in literature and philosophy, including the meaning of existence, the nature of the self, authenticity and inauthenticity, the inescapability of death, the experience of time, anxiety, absurdity, freedom and responsibility to others. It will be examined why these philosophical ideas often seem to demand literary expression or bear a close relation to literary works. Readings may include writings by Kierkegaard, Nietzsche, Dostoevsky, Heidegger, Rilke, Kafka, Simmel, Jaspers, Buber, Sartre, de Beauvoir, Camus, and Daoud.
Area: Writing Intensive

AS.213.407. German Media Theory. 3 Credits.
German Media Theory is an advanced course for upper-level undergraduates and graduate students, giving an introduction and overview of the specifically German version of Media Studies that first gained traction in the 1980s. The term media refers not just to mass media but more broadly to devices that process, transfer and store information, reaching from the alphabet that changed the culture of writing, or the printing press made famous as the foundation of the 'Gutenberg galaxy' to computers and smart phones dominating our current lives. In this course we will cut across disciplinary boundaries to explore the multifaceted roots and formations of German media theory which combine literary poststructuralism, histories of science and technology, psychoanalysis, cybernetics, art history, and philosophy among other fields. Readings include works by Friedrich Kittler, Bernhard Siegert, Cornelia Vismann, Wolfgang Ernst, Walter Benjamin, Niklas Luhmann, Michel Foucault, Marshall McLuhan and many others. The course will be taught in English and all readings will be available in English.

AS.213.446. Nature and Ecology in German Literature and Thought. 3 Credits.
Nature and Ecology in German Literature and Thought considers the understanding and representation of the natural world in literary works and aesthetic theory from the 18th to the 20th centuries. We will consider such topics as poetic reverence for nature, anthropocentric representations of nature in literature, the thematization of landscape, the representation of animal life, the distinction between the human and animal as explored by literary writers, and ecologically-oriented critique of human consciousness. Readings may include works by such writers and thinkers as Goethe, Kant, Hölderlin, Nietzsche, Heidegger, Rilke, and Kafka, and more recent works of literary ecocriticism.

AS.213.623. Poetry and Philosophy.
This course will trace the tensions, antagonisms, and collaborations between poetry and philosophy as distinctive but fundamental expressions of human thought and experience. We will engage poetry as a form of artistic expression that compliments, completes, or challenges other forms of knowledge, and consider the range of philosophy's responses to poetry and poetics. Readings will include works by philosophical poets and poetic philosophers including Hölderlin, Schlegel, Rilke, Bachmann, Celan, Stevens, Heidegger, Gadamer, Adorno, Benjamin, Merleau-Ponty, Valéry, Wittgenstein, and Agamben.

AS.213.639. On the Difficulty of Saying I.
This course takes as its point of departure the position that language carries within it the traces of something that exceeds the cognitive grasp of the subject and to this extent undoes any claim to knowledge the subject might make. This position has been central to twentieth and twenty-first century thought from psychoanalysis and poststructuralism to media theory and new materialism. This course will not take issue with this position. It will examine instead how this position evolved from the Idealism of Fichte to the eerily inhuman, if not mechanical, talking figures in texts by Novalis ("Monolog"), Poe ("Maelzel's Chess Player"), Hoffmann ("Die Automate"), Büchner (Leonce und Lena), and Kafka ("Ein Bericht für eine Akademie"). We will explore the literature of the personal and impersonal in romantic and modernist texts in order to ask what moves and motivates works in which the first-person narrator would seem to be nothing more than a fiction—a staged phenomenon or a mechanical device.

AS.213.643. Franz Kafka in Philosophical and Literary Perspective.
This course is devoted to close study of the writings of Franz Kafka from both philosophical and literary perspectives. Writings will include Kafka's short prose works and novels along with philosophical and literary critical interpretations thereof. Readings may include commentaries by Walter Benjamin, Theodor Adorno, Hannah Arendt, Albert Camus, Giles Deleuze, and Giorgio Agamben. Primary texts for students from the German section will be in original; any other students may read Kafka in translation.

AS.213.687. Imagination in Philosophy and Literary Theory.
Imagination in Philosophy and Literary Theory is devoted to studying theories of imagination in the history of philosophy and literary theory, from the ancient Greeks to the present day. We will study philosophical conceptions of the role of imagination in memory, cognition, perception, and creativity, and assess traditional philosophical oppositions between imagination and reason, the imaginary and the real. Readings may include selections from Aristotle, Kant, Coleridge, Nietzsche, Husserl, Heidegger, Merleau-Ponty, Sartre, Dufrenne, Stevens, Iser, Ricoeur, Ryle, Wittgenstein, and Nussbaum.

AS.214.479. Dante Visits the Afterlife. 3 Credits.
One of the greatest works of literature of all times, the Divine Comedy leads us down into the torture-pits of Hell, up the steep mountain terrain of Purgatory, through the "virtual" space of Paradise, and then back to where we began: our own earthly lives. We accompany Dante on his journey, building along the way knowledge of medieval Italian history, literature, philosophy, politics, and religion. The course also focuses on the arts of reading deeply, asking questions of a text, and interpreting literary and scholarly works through discussion and critical writing. Conducted in English.
Area: Writing Intensive

AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at the production of an analysis that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma's illustrated sixteenth-century chronicles, D.F. Sarramiento's _Civilization and Barbarism_ (1845), and Anibal Quijano's "Coloniality of Power" (2000).
Area: Writing Intensive

AS.215.406. Novelist Intellectuals. 3 Credits.
What does a novelist's op-ed about economics have to do with her literary writing? In what ways does a fiction writer's essays on the environment inform how we read her novels? What happens when we find the political opinions of a writer objectionable? This undergraduate seminar will consider what the Spanish writer Francisco Ayala termed "novelist intellectuals," that is, literary writers who actively participate in a society's public sphere. Considering writers from Madrid to New York, from London to Buenos Aires, we will ask how one should hold a novelist's fictional and non-fictional writings in the balance and explore ways of reading that allow us to consider the public intellectual side and the aesthetic side of a novelist together.

AS.215.417. Literature of the Great Recession. 3 Credits.
The Great Recession—sometimes called the financial crisis or the economic crisis of 2008—brought financial markets to a halt and created significant political turmoil across the North Atlantic. But its impact on culture, and literature especially, has often been ignored. This seminar will travel across Europe, from Dublin to Madrid, from London to Reykjavík in order to examine how literature has registered this most recent economic crisis. We will focus on how crisis is narrated and the ways in which literary works have managed to provide a voice for marginalized social, economic, and political demands.

AS.215.718. Contemporaneity and Crisis.
How should one study contemporary literature and culture? Is "the contemporary" a period in and of itself? Does it require a distinct conceptual approach? This graduate seminar will examine various approaches that have emerged since Michel Foucault called his genealogies a "history of the present." We will pay special attention to contemporary literature and culture's most distinguishing feature today: crisis. Considering theories of crisis and "the contemporary" together, the course will explore how living in a time of overlapping crises—economic, political, social, cultural, environmental, and others—affects the way we interpret the world.

AS.215.747. Borges in Theory.
The course engages close readings of Borges critical essays and some of his fiction in order to establish the points of interpellation that Post-modern theory takes from or shares with Borges's meditation on the problem of writing.

Political Science

AS.191.310. Sex(uality) and Race as the Politics of the Beat Generation. 3 Credits.
This course focuses on the literature of the Beat Generation writers (Ginsberg, Kerouac, Burroughs, Snyder, Kaufman) of the late 1940s through the 1950s and 1960s. The Beats were a group of nomadic writers traveling the North American continent between San Francisco and New York with memorable stops in Denver and St. Louis, Missouri. Beat literature revolted against the constraining normalizing values of post war USA and celebrated freedom of expression, wanderlust, and the search for euphoria of body and mind in stream-of-consciousness narration. The course examines the relationship between society's dominant mores and beliefs (both contemporary and those of the 50's and 60's) and the counterculture, non-conformist philosophy as espoused by The Beats. The course focuses on Beat depictions of sexuality, gender and race in order to understand if these identity markers are but symptoms of social structures of oppression (racism, patriarchy, heterosexism) or if, alternatively, they can also signal, express and enact a new and different understanding of politics. Can the Beats help us envision new forms of (non-toxic) masculinity? Can they help us think of race in non-racist ways?
Area: Writing Intensive

Program in Museums and Society

AS.389.329. Author/Canon/Archive. 3 Credits.
Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works "lost" and some "rediscovered," while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literary culture, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you've never heard of, in terms of the relationship between authorship, stewardship, and status.

AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.
Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.

Study of Women, Gender, & Sexuality

AS.363.226. Women writers and the sonnet from the European Renaissance to the Harlem Renaissance. 3 Credits.
Shakespeare's description of his lover's eyes as 'nothing like the sun' is both an homage and a sendup of the 300-year-old Petrarchan tradition in which the male poetic persona remains forever enraptured by an unattainable female beloved, who never speaks. Beginning with a review of Shakespeare's sonnet sequence and selections from Petrarch's sonnets to an elusive Laura, we will read a series of fifteenth-and sixteenth-century women writers who inserted their own voices into this evolving tradition by allowing "Laura" to talk back. These include Vittoria Colonna (and her interactive sonnets with Michelangelo), Veronica Gambara, and Gaspara Stampa; dueling personas in sonnets by French poets Pernette du Guillet and Maurice Scéve, and sonnets by more familiar Shakespearean contemporaries Lady Mary Wroth and Sir Philip Sidney (both of whom reflect back on Petrarch but from quite different viewpoints). In the final section of the course we will apply our newly acquired historical perspective to selections from a more recently available corpus of female-authored sonnets from the Harlem Renaissance. All continental works will be read in translation; no previous familiarity with the topic is required.
Area: Writing Intensive

AS.363.338. The Poetics and Politics of Sex: Feminist Utopia in Theory and Fiction. 3 Credits.
This course examines the historical development of feminist utopia in theory and fiction. Readings will center Indigenous, Black, postcolonial, diasporic, and transnational perspectives that engage the topic of feminist utopia.
Area: Writing Intensive

AS.363.445. Reading Judith Shakespeare: Women and Gender in Elizabethan England. 3 Credits.
If Shakespeare had a sister who went to London to be a writer, what would she write? Virginia Woolf's account of the thwarted career of Shakespeare's hypothetical sister, Judith, in A Room of One's Own frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, and Mary Wroth. Working within a selected historical context, students will create fictional biographies of "Judith Shakespeare," including her perspective on our identified authors and a sample or description of Judith's own literary accomplishments. Secondary course readings will reflect contemporary economic, political, and religious contexts.
Area: Writing Intensive

Theatre Arts & Studies

AS.225.318. 21st Century Female Playwrights. 3 Credits.
This is a writing intensive class exploring the current wealth of women playwrights, including Pulitzer Prize winners: Wendy Wasserstein, Paula Vogel, Lynn Nottage, and Jackie Sibblies Drury (2019 Prize for FAIRVIEW). We will discuss Script Analysis and read (and see) plays by numerous writers including Claire Barron, Kia Corthron, Theresa Rebeck, Sarah Ruhl, Danai Gurira, Caleen Sinnette Jennings, and Hansol Jung. This class will include a mid-term and a Final Paper.
Area: Writing Intensive

English, Bachelor of Arts

English Major Requirements

(Also see Requirements for a Bachelor's Degree (p. 1587).)

In addition to demonstrating foreign language proficiency in at least one classical or modern foreign language, the English major requires students complete general courses in the humanities and social science, a required course in literary study (AS.060.107 Introduction to Literary Study), and nine additional English courses, of which at least three must be literature before 1800. Within the nine additional English courses, at least two and no more than four courses must be designated as lecture courses. Students may identify lecture courses by the presence of the POS-Tag ENGL-LEC in a course description in the schedule of classes. Pre-1800 literature courses are identified by the POS-Tag ENGL-PR1800, and Global and Minority Literature courses are identified by the POS-Tag ENGL-GLOBAL. Additional details include:

- Only two courses towards the nine required English courses for the major may be taken outside of the department and those must be cross-listed with the English department.
- Only two independent studies or senior essay courses may apply towards the major.
- Students must earn a grade of C- or better in all major requirements and courses may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
Two courses in the humanities or social sciences		6
Foreign language proficiency through the intermediate level		0-17
AS.060.107	Introduction to Literary Study *	3
Nine Additional English Courses (divided as follows): **		
One course in Global and Minority Literatures (POS-Tag ENGL-GLOBAL) ***		3
Two course in Pre-1800 Literature (POS-Tag ENGL-PR1800)		6
Six 200 to 400-level English courses		18
Total Credits		**36-53**

* Should be taken no later than sophomore year.

** Students are required to take at least two lecture courses and up to four lecture courses may apply towards this requirement. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the English course requirements of the major without permission of the Director of Undergraduate Studies. Typically, up to two courses taken through approved study abroad programs may be applied towards the major with approval of the director of undergraduate studies.

*** One of these three courses must be a non-lecture course.

Advising for Students

All students, whether their goals are professional or not, should choose courses in consultation with their major advisor to suit their individual needs and satisfy departmental requirements. Students planning to enter graduate school in English should study a second foreign language. Students who have not yet been assigned to a major advisor may discuss departmental requirements and curriculum planning with the Director of Undergraduate Studies.

Honors in English

Departmental honors are awarded to undergraduate English majors who achieve a cumulative average of 3.6 or higher for all English courses taken to satisfy the major requirements. For more information about Honors in English, contact the Director of Undergraduate Studies in English.

Senior Essay Option

Majors with a cumulative G.P.A. of 3.6 in English courses by the end of the fall semester of their junior year may apply to write a senior essay in the fall of their senior year. For further information and deadlines, contact the Director of Undergraduate Studies in English.

English, Minor

English Minor Requirements

Students who wish to graduate with a minor in English must take AS.060.107 Introduction to Literary Study, generally within one year of declaring the minor. Six additional English courses are required, of which at least two and no more than three must be lecture courses (identified by the POS-Tag ENGL-LEC). At least one of the six courses must be a pre-1800 course and at least one course must be a Global and Minority Literatures course. A maximum of one course offered by another department but is cross-listed in English may apply towards the minor. No 100-level courses may apply. Students must earn a grade of C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
AS.060.107	Introduction to Literary Study	3
One course in Pre-1800 Literature		3
One course in Global and Minority Literatures		3
Four additional 200-400 level English courses		12
Total Credits		**21**

English, PhD

The Department of English offers advanced programs and guided research leading to the Ph.D. degree in English and American literature in the following major literary fields: the Renaissance, the 18th century, the Romantic period, the Victorian period, American literature, and 20th-century literature.

The department accepts only full-time students working toward the Ph.D.; there is no autonomous M.A. program. Because of its small size and the close association between faculty and students, the department is able to offer an intensive program leading to the Ph.D. in five years.

Program Requirements

Students are required to enroll in three graduate courses in each of the semesters of their first year of study and two in each of the semesters of their second year. By the end of the third year, students will have completed 10 graduate seminars, an oral examination in two fields, and examinations in one or two foreign languages. Fourth-year students will receive dissertation fellowships.

Teaching experience is regarded as an important part of the graduate program, and graduate students are required to teach in the department's literature and expository writing courses during their second, third, and fifth years at Hopkins.

For further information about graduate study, contact the graduate coordinator at the Department of English or go to http://english.jhu.edu/graduate/.

Film and Media Studies

https://krieger.jhu.edu/film-media/

The Film and Media Studies Program offers a comprehensive education in all aspects of the art, theory, and history of the moving image. We offer courses in critical studies, screenwriting and filmmaking—narrative, documentary, experimental film, animation —within a rigorous curriculum designed to foster critical understanding and historical knowledge. Student filmmakers and scholars explore the relationship of film and media to modern cultures, literatures, art, history, and philosophy in a new 20,000 square foot facility that offers an enhanced learning environment as well as all the tools available to professional filmmakers: a large sound stage, a recording studio, computer labs, editing suites, a screening room, classrooms, and state-of-the-art equipment.

Our faculty, comprised of renowned scholars and filmmakers, is known for its dedication to teaching and promoting a highly collaborative and nurturing environment. Our small size allows us to offer undergraduates an unusual amount of hands-on experience, intensive mentoring, individual attention, and access to special opportunities.

Many of our students go on to attend graduate film school or to work in the film and media industries after graduation. Among our graduates are directors, screenwriters, producers, editors, actors, cinematographers, financial and marketing executives, film scholars and curators, entertainment lawyers, agents, digital technicians, and web designers. Our rapidly growing network of alumni provides graduates with essential support and mentoring, opening doors to a wide range of opportunities in the film and media industry. In addition, our undergraduates avail themselves of generous filmmaking grants and funding opportunities from a range of resources available only to FMS majors and minors.

Programs

- Film and Media Studies, Bachelor of Arts (p. 1833)
- Film and Media Studies, Minor (p. 1836)

Courses

AS.061.102. The Cannes Film Festival: Introduction and History. 1 Credit.
In recent decades, film festivals have become important venues for generating international audiences by simultaneously fostering aesthetic communities and creating marketing opportunities. This course considers the purpose and function of the film festival by examining the singularly influential festivals of Cannes. We will read about the culture, politics, and commerce of the festival, and compare Official Selection films with more the more unorthodox choices of the parallel sections: A Certain Regard and Directors' Fortnight. Meets 5x during the semester.Required for students participating in the Cannes Study Abroad. Open to all.

AS.061.103. Navigating the Entertainment Industry: A Preparation for Intersession. 1 Credit.
This course prepares students for FMS's Intersession field trip to Los Angeles, and also serves as an introduction to the professional skills necessary to navigate a career in film, television, and other fields of entertainment. Through discussion, hands-on practice, and guest lectures with FMS alumni, students will learn how to find their way in a complex industry, how to present themselves and their work, how to choose the right path, and how to cultivate the connections and opportunities they'll need to succeed. We will also discuss what to expect and how to make the most of the week-long intersession course, which introduces students to alumni in a range of professions in film, television, and entertainment. Meets 6 times during the semester. Required for students planning to enroll in The Entertainment Industry in Contemporary Hollywood. Open to all FMS majors and minors.

AS.061.120. The Art of the Screenplay. 3 Credits.
Screenwriting workshop. This course will look at the screenplay as both a literary text and blue-print for production. Several classic screenplays will be analyzed. We will intensively focus on character development, creating "believable" cinematic dialogue, plot development, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext, and visual story-telling. Several classic and contemporary films will be analyzed and discussed with film clips screened in class (PSYCHO, CHINATOWN, WITNESS, THE DEVIL WEARS PRADA, NO COUNTRY FOR OLD MEN, THE SOCIAL NETWORK, WINTER'S BONE, BOOKSMART, GET OUT). The art of the outline, proper script formatting and character development will be explored as students embark on writing their own 8-12 page screenplays that will be read in class and closely critiqued. Current marketplace and business requirements for screenplays will also be covered.
Area: Writing Intensive

AS.061.137. Virtual and Augmented Reality Technologies. 1 Credit.
This program will provide an overview of the cutting-edge tools and creators shaping the future's narrative journeys. As technologies, such as virtual and augmented reality, along with artificial intelligence and machine learning, continue to evolve, how will we create, share, and experience the most fundamental unit of human culture - the story?

AS.061.138. Acting for Filmmakers. 1 Credit.
This is a series of 3 workshops.1. ACTORS' HOMEWORK & CAMERA AS OBSERVER~Students will discuss and experiment with different methods of preparing for a role. Trying different methods, feel what works for them. We will work on short scenes and have an open discussion about goals, believability, emotional fatigue, distractions of the filming process. ~On the Sound Stage working in front of the camera: ~show how the camera watches performers' thoughts. ~differences between working in front of a camera and playing to a live audience. ~Shooting: coverage continuity eye lines & marks blocking & restricted movement 2. AUDITIONS AND CASTING: ~Students will be given a variety of scripts to audition for. ~Discussion of casting; from actors', directors' and casting directors' perspectives. ~How others perceive you- an exercise in diplomacy and self awareness. ~Preparing for an audition. both cold and rehearsed. ~Improv during auditions. ~Memorization (quick!) for auditions. ~We will rehearse and film auditions. ~Review and analyze audition videos.3. ACTORS DIRECTING DIRECTORS. Working in groups and/or pairs, students will explore what kinds of direction works for them and for others. Students will have an open discussion as to what they need to hear from their director. This will be a class where it is safe to learn what does and doesn't work when communicating with actors- from the actors' perspective. The goal is not to deliver a professional performance in the class, but to explore how it feels to be directed.

AS.061.140. Introduction to Cinema, 1892-1960. 3 Credits.
This course explores the fundamentals of film analysis and encourages students to embark on an exploration of the first half of our first century of movies. It teaches the basic elements of film form, as well as their use in films across the globe from the turn of the twentieth century through the start of World War II. Movements discussed include the silent comedy of Charles Chaplin, Buster Keaton, and Harold Lloyd, moody German Expressionism, the playful anarchy of Surrealism, the fundamentals of editing with Soviet Montage, the beauty of French poetic realism, the rule-breaking of Pre-Production Code cinema, the work of the young Alfred Hitchcock, and, of course, highlights of classical Hollywood filmmaking.
Area: Writing Intensive

AS.061.141. Introduction to Cinema, 1941-present. 3 Credits.
Introduction to Cinema provides an overview of American and international cinema from thepost World War II era to the present. Through lectures and discussion, weekly screenings, andintensive visual analysis of individual films, we will explore the aesthetic, cultural, political, andeconomic forces that have shaped the art and industry of film over the past 70 years. Regularquizzes, writing assignments, class participation required. Mandatory film screenings. Lab Fee $50.
Area: Writing Intensive

AS.061.145. Introduction to Digital Video Production: Visual Language. 3 Credits.
This course is a study of the visual language used to create a moving picture. Through screenings and discussion of films, videos, and related readings, students will develop a visual critical facility and will demonstrate this facility in a few response papers to screenings and video projects. The course will focus on image construction, including composition, framing, movement inside the frame and use of light as well as use of sound. Students will learn to be attentive to rhythm and tempo in picture editing and sound. In-class video assignments included, in which students will work in small groups of three.

AS.061.147. Visual Storytelling. 3 Credits.
This primer to screenwriting will emphasize the power of the image to deliver character, situation, and theme, and to advance even complex plots. Students will analyze narrative films, compose their own still and moving images with cellphone cameras, and write several short dramatic pieces to be read and workshopped by the group. They'll learn the basics of scene design and of screenplay format. For FMS majors in the screenwriting track, this course fulfills the Media and Narrative requirement . $50 lab fee.
Area: Writing Intensive

AS.061.148. Storytelling for Film and Fiction. 3 Credits.
Through the analysis of narrative films, short fiction, myths, fairy tales, and ghost stories, and through the workshopping of their own creative writing, students will explore the art and science of "a good story well told." The course will offer an introduction to dramatic and visual storytelling, and is an essential primer for upper-level screenwriting. Lab fee $50.
Area: Writing Intensive

AS.061.150. Introduction to Film Production. 3 Credits.
This course introduces students to basic considerations of shooting 16mm film. Through lectures and practice, the course approaches the basics of light meter readings, basic camera operations and shot composition. The course also highlights specific readings from classical film theory to augment weekly shooting exercises. Each week students, working in groups, shoot film exercises, providing a general overview of film production. For the final project, each group shoots and edits (physical edits) a short (3-5 minutes) film on 16mm black and white reversal film stock.

AS.061.152. Introduction to Digital Video Production. 3 Credits.
This course introduces students to the world of digital filmmaking. Through screenings, production assignments, and in-class labs, students will develop proficiency in digital cameras, sound recording devices, and software. Students will work individually to produce several video projects. For their final projects students will pitch an idea and develop a more complex film.

AS.061.154. Lights, Camera, Action: Bogart. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of films starring the legendary Humphrey Bogart. Short weekly written responses. No prior experience in film studies required; non-majors welcome. This one-credit course will meet September 3, 10, 17, 24, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.

AS.061.155. Lights, Camera, Action: Coming of Age Films. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of coming of age films. Short weekly written responses, in-class screenings, and emphasis on discussion over lecture. No prior experience in film studies required. This one-credit course will meet September 5, 12, 19, 26, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.

AS.061.156. Lights, Camera, Action: On Location. 1 Credit.
This mini-course will explore the role of place in film; location not merely as setting, but as character, condition, mode of thought. Real and imagined, found and constructed worlds will be considered. Are all cinematic worlds virtual? In-class screenings and an emphasis on discussion over lecture. This 1-credit course will be graded Pass/Fail. Perfect attendance required. Class meets September 19, 26, October 3, 10.

AS.061.159. Lights, Camera, Action: In the City. 1 Credit.
This mini-course will provide a survey of American and international films to which city as setting is integral. In-class screenings and emphasis on discussion over lecture. Four short written responses. No prior experience in film studies required. Due to the limited number of meetings, perfect attendance is required.

AS.061.166. Lights, Camera, Action: The Female Gaze. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of films directed by women. In-class screenings and emphasis on discussion over lecture. Short weekly written responses. No prior experience in film studies required; non-majors welcome. This one-credit course will meet September 2, 9, 16, 23, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.

AS.061.202. Intermediate Film Production: Personal Essay Film. 3 Credits.
In this course students will consider variations of the personal essay film, wherein filmmakers explore their own experiences, both real and imagined. These films constitute dialogues between filmmaker and world using subjective approaches, including but not limited to first person narration. Students will make a short (4-6 minutes) 16mm film from original and possibly archival footage; their own filmic essays based upon personal experiences. We will look at the works of several essay filmmakers including Ross McElwee, Jean Luc Godard, Chris Marker, and Su Friedrich.

AS.061.205. Introduction to Screenwriting. 3 Credits.
In this course we will explore the basic principles of visual storytelling in narrative film as they apply to the design, creation, and revision of the screenplay. Specifically, we will focus on learning the craft of screenwriting — strategies, processes, and philosophies that writers can develop, practice, and rely upon as they progress through a series of screenwriting exercises and write a 12-page screenplay, which will be critiqued in-class during weekly table reads and with the Instructor (one-on-one) during office hours. Select professional screenplays will be read and analyzed — and clips from select films viewed — to further explore what works well on the page, and how it translates to working well onscreen. (Scripts and clips often selected from American films spanning the 60s through the 2000s.) Final Draft screenwriting software is required; a FREE 18-week trial will be made available for all students who don't already have Final Draft.
Area: Writing Intensive

AS.061.211. Intermediate Film Production: First Person/Third Person Essay Film. 3 Credits.
Each student shoots an essay film (16mm color and/or black and white) written either in first person or third person, or perhaps, both. The third person essay incorporates the ideas of various authors while the first person film is written chiefly from personal experience. Each film should run between 4-8 minutes. Lab Fee: $200. This course satisfies the Intermediate Film Production requirement.
AS.061.150

AS.061.213. Screening Difference: Race in American Film. 3 Credits.
This course will explore how race and ethnicity have been represented in popular American film from the early 20th century to the present. Weekly screenings, regular quizzes, and open discussion will emphasize close observation and critical thinking. Requirements include an oral presentation and a written analysis. No prior experience in film studies required; majors and non-majors welcome.

AS.061.214. Demystifying the Entertainment Business. 1 Credit.
For many, the entertainment business is alluring. For all, it's pretty confusing. Demystifying the Entertainment Business is a two-week online course that offers students insight into: behind-the-camera careers in the field (specifically writing, directing, producing, and developing); how to best prepare for those careers; and how to break into the industry once graduation finally comes. Students should be prepared to write and read scripts, offer feedback to their fellow students, shoot and edit videos, and create career goal maps and resumes. (Note: some level of basic shooting and video editing acumen will be necessary, as a short film deliverable will be required for successful course completion.) By the end of the course students will understated the basic mechanics of the entertainment industry and where they might like to fall within it, and they will walk away with a complete short film they've written and directed.

AS.061.218. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between literary modernism and modernist cinema: how Virginia Woolf's writings on the cinema connect with her use of shifting points-of-view as literary devices, how James Joyce influenced the Soviet filmmaker Sergei Eisenstein and how Eisenstein in turn influenced the American novelist John Dos Passos, how Franz Kafka's frequent trips to the movies reflect in his fiction, and how artists ventured broadly to develop experimental languages for expressing the new speeds and scales of modern life. Additional texts will be drawn from novels, essays, poems, and films from Ezra Pound, T. S. Eliot, Charlie Chaplin, Claude McKay, Zora Neale Hurston, Anita Loos, Andrei Bely, Dziga Vertov, Gertrude Stein, Louis Aragon, and René Clair. The course fulfills the writing intensive requirement and involves a series of essays on literature and cinema from a critical perspective.
Area: Writing Intensive

AS.061.219. Special Topics: Animation Workshop. 3 Credits.
Students will produce several animations using hand-made techniques, including drawinganimation, paper puppets and stop-motion. Screenings and readings will provide a historical and conceptual context to the exploration of animation as an experimental technique within both narrative and non-narrative works.

AS.061.221. Special Topics: Producing the Independent Film. 3 Credits.
This class will guide students through the process of producing an independent film in the United States. The chronology of lectures and coursework will follow the lifeline of a project, from conception through financing and development, production, postproduction, marketing, and exhibition. Students will learn how to package and pitch projects, budget and schedule a screenplay, develop a financing plan, supervise production and post-production, and mount a viable festival and distribution strategy.Lab Fee: $40

AS.061.226. Special Topics: Writing About Film. 3 Credits.
This workshop promotes more effective writing, hones interpretive skills, and encourages the development of a distinctive voice through a series of progressively more complex assignments. By sharing draft essays with the class, commenting on one another's work, and revising, students will learn to edit their own work and to thoughtfully critique others'. Fulfills the Film and Media Studies expository writing requirement. Lab Fee: $50
Area: Writing Intensive

AS.061.229. French New Wave. 3 Credits.
An exploration of the major films and directors of the French New Wave that is also designed to help students consolidate their skills in the analysis of film. The course will examine the origins of the French New Wave, looking at the directors as critics and as passionate film fans, along with the institutional and historical context of the films. It will also ask how the French New Wave changed the process of filmmaking, and transformed the way we think about the work of the director--inspiring more vocations in filmmaking than any other movement in cinema history. Film screenings T 7:30-10:00PM. $40 lab fee.

AS.061.232. Intermediate Video: Dreams, Psychosis, and Altered States in Cinema. 3 Credits.
In this production course, students will create multiple video projects that reflect the representation of dreams, psychosis, and altered states in cinema. We will screen and deconstruct a variety of feature films, video artworks, and music videos to understand the mechanics and language of subjective realism as a narrative form. We will trace this stylistic lineage from its roots in art house cinema to its rise as an accepted Hollywood modality. We will also explore editing and software techniques that will further students' ability to create stunning works of strange beauty.Basic proficiency with digital cameras and editing is required. This class fulfills the intermediate film production requirement.
AS.061.145 OR AS.061.152

AS.061.233. Intermediate Digital Video Production: Adobe After Effects. 3 Credits.
This course will serve as an introduction to Adobe After Effects. Students will learn a variety of motion graphics techniques such as digital character animation, rotoscoping, motion tracking, chroma key compositing and automating 3D cameras. Through screenings and discussions students will gain insight into the myriad of ways After Effects is used in Film and Television. Throughout the semester students will complete several short video art projects.
AS.061.152OR AS.061.145

AS.061.234. Intermediate Digital Video Production: Experimental Forms. 3 Credits.
This Production course focuses on key movements in both Experimental Film and Video Art. Production assignments will arise from: Structural Film, Performance Art, Lyrical Film, Psychedelic Video, and Experimental Ethnography. Students will explore how these movements developed outside (and at times in opposition to) the mainstream, and became integral to the aesthetics of contemporary art, film, and television. Students will think critically about the personal and societal function that video artwork serves, and gain insight into the history of Experimental Film. At the end of this course, students will have a more nuanced understanding of contemporary media art, and they will be more proficient in video editing and cinematography, which they can apply to future work on: commercials, music videos, webcasts, and feature films.
AS.061.152 OR AS.061.145

AS.061.235. Intermediate Digital Video Production: Advanced Camera. 3 Credits.
In this production course students will gain proficiency on a variety of Digital Cinema Cameras. Students will work with the Canon C300, C500, and FS7. We will discuss picture profiles, different lense options, external capture devices, and shotgun microphones. We will thoroughly explore the various unique functionality of each camera. Throughout the semester students will complete several cinematography focused video projects.
AS.061.145 OR AS.061.152

AS.061.237. Portrait Films. 3 Credits.
Portraiture has a long history in the arts, in painting, sculpture and photography. The film portrait is closer to these plastic arts, rather than traditional documentary, in that it approaches it's subject mostly though looking and finding new forms. Screenings will include the work of Andy Warhol, Philippe Garrel, Shirley Clarke, varied screen tests, some animation and more. Coursework will include a presentation, short papers and a film portrait.
AS.061.145 OR AS.061.152

AS.061.238. Reading the Moving Image. 3 Credits.
This course will emphasize close observation and critical thinking. Through weekly screenings and class discussion, students will practice noticing; seeing and hearing with fresh eyes and ears, and taking nothing on screen for granted. And they'll learn to reflect on and contextualize what they find, drawing evolved conclusions about how film texts communicate ideas and what those ideas may be. They'll consider all elements of cinematic form; an array of analytical frameworks including genre, historical era, authorship, and modes of production; and representations of gender, race, and class. Regular quizzes, a short oral presentation, and a short written analysis. No prior experience in film studies required; majors and non-majors welcome.
Area: Writing Intensive

AS.061.240. Hybrid Cinema: Spaces Where Documentary and Fiction Meet. 3 Credits.
From the films of Robert Flaherty, Jean-Luc Godard, Agnes Varda and Andy Warhol, through the work of Peter Watkins, Ulrich Seidl, Jia Zhangke, Lizzie Borden, Pedro Costa, Abbas Kiarostami, Kevin Jerome Everson, Sacha Baron Cohen and Chloé Zhao, this course explores the dominant techniques, the aberrations, and the virtues and limitations of hybrid filmmaking. Topics discussed include the ethics of representation, the significance of craft, questions of selection, narrative hegemony, the nature of performance, and the porous boundaries between documentary and fiction film. Students will be guided in their own hybrid filmmaking experiments throughout the semester.

AS.061.244. Film Genres. 3 Credits.
$40 lab feeA survey of American genres: the Western, the Gangster Film, Science Fiction, Horror, Comedy, Melodrama, and others. Twice-weekly screenings. Short film responses and a final paper, 10pp.
Area: Writing Intensive

AS.061.245. Introduction to Film Theory. 3 Credits.
This course offers an introduction to the major paradigms of film theory, covering how significant thinkers have conceived of the medium from its inception to the present day. Frequent film screenings help to illustrate key concepts. Topics include the classical opposition between formalist and realist film theories as well as critical approaches to narrative, spectatorship, and representation. Students are expected to enter the course ready to engage in discussion. Weekly film screenings. $50 lab fee.
Area: Writing Intensive
AS.061.140 OR AS.061.141

AS.061.248. Women Making Films About Women. 3 Credits.
This course will examine films (features and shorts) throughout the history of cinema beginning with Alice Guy-Blaché . We will look at how form reveals content, thematic issues and how films relate to the culture and politics of the filmmaker. Filmmakers include Germaine Dulac, Nelly Kaplan, Marguerite Duras, Chantal Ackerman, Barbara Hammer and Nina Menkes. Readings include critical essays, texts by the filmmakers and fiction. Assignments consist of weekly papers on the films.

AS.061.263. Poetry and the Moving Image. 3 Credits.
Using P. Adams Sitney's text: The Cinema of Poetry, this course will explore the relationship between poetry and the moving image. When experimental film began to define itself in the 1950s and 60s the terms cine-poem and film-poem were ubiquitous as identifying avant-garde cinema. Poetic structures in the moving image will be studied in relation to language, images and formation of meaning. Students will independently research a poet who greatly inspired and influenced a filmmaker/moving image artist and write on that filmmaker's work. One moving image project will be undertaken and completed during the semester as well. Weekly assignments will include screenings, reading, writing, and or video work.
Area: Writing Intensive

AS.061.266. Introduction to Writing for Television. 3 Credits.
This course will take novice television writing students from show concept to show bible and into the early stages of pilot writing. It teaches the basics of how to develop a television concept, and dramatic structure for television writing. Students will read analytical work on what makes a successful television series, dramatic structure, and effective characterization, and will engage in both critical readings and writing workshop. The result will be the creation of their own show bible and the beginnings of an original thirty-minute television pilot.
Area: Writing Intensive
AS.061.205

AS.061.267. Cultural History of the Internet. 3 Credits.
This course offers an introduction to internet studies through the many ways digital culture has touched our everyday lives: memes, blogs, gaming, social networking, instant messaging, and more. From its origins in connecting scientific researchers to its present form as a multi-device, multi-platform web connecting us to everything from each other to our smart homes, the internet has proven that nearly our entire social world can be processed as data and linked up. While this has meant greater connection, it has also raised questions about how we learn, communicate, behave, and organize. The internet has long promised new avenues of personal expression, but it has also brought with it the quandaries of echo chambers, information silos, and disinformation campaigns. In response to these complicating effects, the course offers an opportunity for students to develop the critical mapping tools necessary to orient oneself within this vast cultural network and its rapid historical unfolding.

AS.061.268. History of Computer Animation. 3 Credits.
This course offers a journey through the history of computer animation. We'll start with an archaeology of the digital image, look at experimental animations by early computer artists, and sketch out the work of engineers in developing techniques of wire-frame modeling, texture mapping, shadowing, and facial animation. Beginning with short films and digital sequences in otherwise live-action movies, we'll cover a wide variety of animation styles in an international context. Screenings will be drawn from a selection of fully computer-animated features, such as those from Studio Ghibli and Pixar; live-action movies with digital special effects in the mode of Tron (Lisberger, USA, 1982) and Terminator 2: Judgment Day (Cameron, USA, 1992); films that use computer software to aid traditional methods of animating, such as The Illusionist (Chomet, France, 2010) and Boy and the World (Abreu, Brazil, 2014); and animated documentaries, such as Waltz with Bashir (Folman, Israel, 2008) and Tower (Maitland, USA, 2016).

AS.061.269. Feminist Filmmaking: A Theory and Practice Workshop. 3 Credits.
In this workshop for 10 students (no gender preference) documentary filmmaker and media theorist Bernadette Wegenstein and filmmaker and director of the Saul Zaentz Film Innovation Fund co-teach the fundamental principles of gender theory and feminism as applied to practical filmmaking. We will cover the history of women filmmakers, as well as embark on a concrete mini-production where students will be placed in the roles of writers, directors, producers, cinematographers, and editors to make a feminist film. The anthology Feminist Film Studies(Hollinger) and Feminism and Documentary(Waldman/Walker) will be among the readings that our workshop is based on.
AS.061.145 OR AS.061.152

AS.061.270. The Body and Cinema. 3 Credits.
Before film even emerged as a popular entertainment form, motion pictures were used to study the human body for purposes of scientific inquiry and medical practice. The present-day crossovers between imaging science and cinema—the inclusion of medical imaging in movies and television shows, the deployment of informational videos and animations in telehealth, and the myriad ways that digital imaging itself is spurred on by the needs of scientific investigation and the demand for cultural works—suggest that what we know about the human body is caught up in a complex web of technical representations and cultural meanings. This course explores the construction of the human body within this array of cinematic practice. Our approach will be twofold: First, we will consider scientific and medical images not merely as powerful means of seeing what would otherwise be unseeable but also as technically enabled and culturally influenced ways of knowing, that is, images, as in cinema, that are historical and could be otherwise. Second, we will examine representations of the human body in the history of film, focusing on how bodies are represented, what bodies are privileged, and how bodies are figured using medical imaging.

AS.061.271. Intermediality: Between Word, Image, and Sound. 3 Credits.
This course explores film adaptation by considering how words, images, and sounds offer different affordances and constraints for creative expression. A central goal is to conceive of adaptation outside of typical discussions of fidelity to a source work and instead consider how different artistic media open up unique opportunities for storytelling. To this end, we will draw on a number of different intermedial translations, which may include from novel to film (The Night of the Hunter, from Davis Grubb's book to James Agee's screenplay to Charles Laughton's film), from short story to film (The Turin Horse), from graphic novel to film (Ghost World) or television series (HBO's Watchmen), from personal essay to documentary film (James Baldwin's The Devil Finds Work and I Am Not Your Negro), from poetry to film (O Brother, Where Art Thou), from play to film (A Raisin in the Sun and My Own Private Idaho), from radio drama to film (Sorry, Wrong Number), and film-to-film homage (Far From Heaven and All That Heaven Allows). We will also delve into the vagaries of film-to-book novelizations and the curious case of concurrently writing film and book, as in Stanley Kubrick and Arthur C. Clark's collaboration on the film and novel 2001: A Space Odyssey (both adapted from a short story).
Area: Writing Intensive

AS.061.301. Advanced Film Production: The mongrel film. 3 Credits.
In this course, each student is responsible for the design and production of a short 16mm film. The film may be shot on color and/or black and white negative stock. The format is Super 16mm. The film may include sync and/or non-sync sound. The idea behind the "mongrel" film is for the student to incorporate a variety of genres within this project. These may include stylistic elements typically associated with documentaries, experimental, narrative, animation, and lost and found films. Students are expected to have previously completed AS.061.150 and an intermediate level film production class.
AS.061.150

AS.061.302. Strategic Approaches to Filmmaking in 2021. 3 Credits.
The year 2020 challenged the film industry by imposing restrictions on our mobility, collaboration and access. Unable to gather in large groups or travel to the ideal location, much less rent equipment or leave the confines of our homes, moving-image makers found creative ways to embrace these limitations and continue making exceptional things. This intro-level production course will go back to basics in an attempt to define and explore the essential elements of visual storytelling. In this present, and in the future, how do we embrace the aesthetic challenges that come with limited resources and means? Can we make a compelling film or video without human subjects? Can we tell a dynamic story using only one location? Is there a possibility for drama when only one character appears on screen? Can sound be used to evoke the world outside the frame? And how do we make meaningful, relevant, transcendent work amidst a social, political and public health crisis? Over the course of the semester, students will be exposed to films and filmmakers who use these questions to stimulate their practice, and in turn, will be asked to address these challenging questions for themselves through the work they create for class. This course will fulfill the Advanced Filmmaking requirement for the major and minor. Students should have already completed an introductory and intermediate production course before enrolling.

AS.061.303. Podcasting: Critical and Creative Practice. 3 Credits.
In this critical studies course with a creative component, students will learn about the history and cultural significance of podcasting, develop tools for critically listening to and analyzing podcasts, and learn how to research, write for, and produce podcasts. Examples will come from a broad sample of narrative, documentary, interview, and discussion-based podcasts. While no formal training in audio production is necessary to take the course, students will be expected to learn the necessary skills to create their own podcasts. In-class demonstrations of microphones, editing software, and approaches to sound design will be offered, and students are encouraged to take advantage of office hours for further help with audio production.

AS.061.304. After Effects: Intermediate and Advanced Technique. 3 Credits.
This hybrid After Effects course will offer two simultaneous tracks of study. One for students using After Effects for the first time, the other for intermediate After Effects users who are looking to master the program. The class will meet to learn new techniques and to discuss each other's work and the instructor will regularly introduce exciting new material applicable for all skill levels. Students will have the option to create a motion graphics reel for their final project, a valuable asset when applying for any post-production job. The coursework will be supported with robust video tutorials, weekly group instruction, and critique as well as periodic individual meetings with the instructor. Additionally, the entire class will gather for several Zoom sessions with professionals working in the industry.

AS.061.305. Advanced Video Production: Comedy Films!. 3 Credits.
This course will be a hands-on, immersive, deep dive into executing comedic moments through cinematic tools and language. Through screenings and critique, we will analyze a diverse spectrum of films and television until we distill and synthesize that ineffable substance of what makes something funny. Subjects like “Spoof,” “Slapstick” and “Not Funny” will be covered. Students should expect multiple artist visits, time to edit in class and plenty of group discussion. Each student will create two short comedy films throughout the semester, and work collaboratively on a third. We will also have technical days devoted to operating advanced cameras such as the Canon C300 MK2. $100 lab fee.
AS.061.145 OR AS.061.152

AS.061.309. Advanced Video Production: Influence and Anxiety. 3 Credits.
This is an advanced production course focusing on artistic influence. Each student will be working with and around a filmmaker who greatly inspires and influences their work. The evolution of style will be considered. The work will include screenings, readings, and short projects all feeding into a final movie. This course fulfills the advanced production requirement. Students should have completed a Introductory and Intermediate Digital Video Production course prior to enrollment. $100 Lab fee.

AS.061.312. The Fallen World: Morally Complex Storytelling. 3 Credits.
A workshop devoted to creating complex characters in challenging moral landscapes. Students will view and discuss a wide range of films; and creative assignments may include profiles, short fiction, monologues, and dramatic scenes for the screen. Short critical and creative written exercises, and a longer, creative final project.
Area: Writing Intensive
AS.061.148 OR AS.061.205 OR AS.061.315 OR AS.061.316 OR Instructor Permission

AS.061.313. Personal Storytelling for the Screen. 3 Credits.
A workshop devoted to creating compelling short scripts based on personal experience. Analysis of screened films and collaborative development of student work will emphasize how unique worlds and world views can reflect a larger shared humanity. Short critical and creative written exercises, and a longer, creative final project.
Area: Writing Intensive
AS.061.148 OR AS.061.205 OR AS.061.315 OR AS.061.316 or Instructor permission.

AS.061.315. Screenwriting By Genre. 3 Credits.
Story design for the screenplay with special attention to the genres of comedy, horror, melodrama, and adventure. Regular workshops, short written exercises, and a longer final project.
Area: Writing Intensive
AS.061.148 OR AS.061.205 OR AS.061.270 OR permission of the instructor.

AS.061.316. Characters for the Screenplay. 3 Credits.
A workshop devoted to creating complex characters for the screen. Students will examine memorable film characters from the silent era to the present, with attention to how these characters are revealed through both the drama and the mise en scene. Weekly screenings. Short critical and creative written exercises and a longer, creative final project.Recommended Course Background: AS.061.148 OR AS.061.205 OR AS.061.265
Area: Writing Intensive

AS.061.317. Media and Narrative. 3 Credits.
Using narrative theory, this hybrid course teaches students the ins and outs of narrative forms that interact with cinema, engaging with both screenwriting and narrative studies. Using the adaptation of author Neil Gaiman’s Coraline to teach students the differences in narrative structure that align with fiction, the graphic novel, and the film, it also enables them to engage in their own adaptation. Taking an original concept from short fiction to a graphic novel treatment to a film treatment, culminating in a short film script and storyboard, the course teaches the fundamentals of narrative theory and encourages students to engage with them creatively.
Area: Writing Intensive
AS.061.205

AS.061.320. 21st Century Television Auteurs and American Culture. 3 Credits.
Since the rise of HBO in the late 1990s, cable, network, and streaming television has become home to a diverse range of "quality" shows that showcase strong perspectives by unique creators. These series creators work within an intensive commercial medium and a cultural context they speak to but cannot themselves determine. This course examines the relationship between the cultural milieu in which they create work and the show creator themselves. Featuring such examples as Donald Glover’s Atlanta, Michael Shur’s The Good Place, Phoebe Waller-Bridge’s Fleabag, Rebecca Sugar’s Steven Universe, Mindy Kaling’s The Mindy Project, and Terence Nance’s Random Acts of Flyness, among others, it encourages students to engage in aesthetic critique as well as cultural analysis, with the ultimate end of making students better understand the relationship between television and auteur, and be better able to engage with the culture in which they swim via its media.
AS.061.140 OR AS.061.141

AS.061.321. Environmental Cinema. 3 Credits.
An exploration of cinema’s unique capacity to reveal the world, this course presents an international and richly historical survey of environmental films. Examples come from narrative, documentary, and experimental filmmaking, including blockbusters, exposés of waste and pollution, guerrilla media projects, and poetic contemplations of landscapes and oceans. Filmmakers and artists include Andrei Tarkovsky, Angès Varda, Jia Zhangke, Lucy Walker, Ai Weiwei, Edward Burtynsky, and Werner Herzog.

AS.061.322. Women in Popular Film and Television. 3 Credits.
A survey of female beauty, villainy, comedy, and humanity in film and television from the silent era to the present. $50 lab fee.
AS.061.140 OR AS.061.141 or permission of instructor.

AS.061.323. Masculinities. 3 Credits.
From tap dancer to gangster, assassin to anguished teen, versions of the male in film from the silent era to the present. Cross-listed with Studies of Women, Gender, and Sexuality. One core course in Film and Media Studies is preferred but not required.

AS.061.326. Contested Ground: The American West on Film. 3 Credits.
Fantasized, mythologized, and revised: the cinematic west as landscape and idea through the lens of classical Hollywood and of contemporary independent women and indigenous filmmakers.

AS.061.328. Gangster Films. 3 Credits.
The bad guy as hero from Little Caesar to Goodfellas. Film screenings Th 7:30-10:00 PM, Sun 7:00-9:30 PM. Lab fee: $40.

AS.061.329. Left-Handed Endeavors: Crime Film. 3 Credits.
A survey of primarily American, 20th century, popular crime film: hits, heists, cons, organized crime, crimes of passion, and other "left-handed form[s] of human endeavor." Oral presentation, short critical response (5 pp.), essay (12 pp.).
AS.061.140 AND AS.061.141 AND AS.061.238 AND AS.061.144 or Instructor Permission.

AS.061.335. Monster Films. 3 Credits.
Monstrous others and monstrous selves in classic 20th century horror. One core course or permission required.
AS.061.140 OR AS.061.141 OR AS.061.238 or permission of instructor is required.

AS.061.336. American Landscapes on Film. 3 Credits.
American setting and identity: the frontier, the city, the highway, the sea, the small town, the suburb, and outer space as represented in popular film from the silent era to the present.
AS.061.140 OR AS.061.141 OR AS.061.238 OR AS.061.244 or instructor permission.

AS.061.339. A Cinema Of Anxiety: Film Noir. 3 Credits.
Shadows, dead ends, and dangerous women in the postwar films of Sam Fuller, John Huston, Fritz Lang, Anthony Mann, Jacques Tourneur, and others.

AS.061.340. The Body in French Cinema; Sexuality, Physicality, Vulnerability. 3 Credits.
This course explores how French films have interrogated the body. We will ask how they have attempted to come to terms with human physicality, desire, and fragility--and with the ability of cinema itself to move spectators emotionally and even physically. Themes explored will include sexuality, gender identity and disability. AS.061.140 or AS.061.141 or permission of instructor. $50 lab fee.
AS.061.140 OR AS.061.141 or instructor permission.

AS.061.346. Persistence of Vision: Time, Memory and the Past in Recent Global Cinema. 3 Credits.
This course will examine the ways film represents, remakes, and re-visions cultural and personal memory in a range of recent national and international films, including those by Chantal Akerman, Pedro Almdódovar, Lee Chang-dong, Claire Denis, Joanna Hogg, Hirokazu Kore-eda, Terrence Malick, Joshua Oppenheimer, Christian Petzold, Sarah Polley, Hong Sang Soo, and Jia Zhangke.

AS.061.347. Teens On Screen. 3 Credits.
This course will explore changing representations of adolescence in films from the 1950s to today across a range of mainstream Hollywood, independent, and international films. We'll examine how this dynamic and misunderstood genre shapes and reshapes perceptions of youth, and we'll discuss the frank and sometimes explosive ways teen films address difficult questions of race, class and sexual identity, often in the guise of "pure" entertainment. Recommended Course Background: Introduction to Cinema I or Introduction to Cinema II, or permission of instructor.

AS.061.348. Acting and Screenwriting for Narrative Productions. 3 Credits.
This pre-production course brings together student filmmakers from Maryland Institute College of Art (MICA) and from Johns Hopkins University (JHU), providing intensive training in the crucial aspects of preparing to shoot a successful narrative film. Students work with a professional screenwriter, allowing students to hone and improve their existing screenplays, practice the elements of writing for film, and learn how to do a script breakdown. Workshops on working with actors, taught by a professional actor, will teach students the ins and outs of casting and directing. Supplemental workshops will cover elements of pre-production such as budgets, production schedules, call sheets, and legal issues. Film screenings will train students to see films as festival curators do, with an eye toward what constitutes exciting, innovative filmmaking. This course is the prelude and prerequisite to Narrative Filmmaking II, a production course during which students will collaborate to shoot a short narrative film based on student screenplays.

AS.061.354. Invisible Cities. 3 Credits.
In Italo Calvino's book, Invisible Cities, Marco Polo depicts an eclectic array of imaginary, and fantastic, cities to Kublai Khan. Using this book as a guide, each student will create an imaginary city composed entirely from online archival footage. Following Calvino's advice, these projects will "take delight not in a city's seven or seventy wonders but in the answer it gives to a question of yours". Additional readings will include works by Louis Aragon, Walter Benjamin, Michel de Certeau, Rainer Maria Rilke, and W.G. Sebald. This course satisfies the Advanced Film Production requirement for FMS majors and minors.

AS.061.356. Narrative Productions. 6 Credits.
Narrative Productions is a joint production course for JHU and MICA undergraduates who have completed Acting and Screenwriting for Narrative Productions (AS.061.348). Students work in teams to produce a narrative short from a script written in AS.061.348. Students are assigned a primary and a secondary role on the production or post-production of their chosen film. Students fill all roles from casting, producing, direction, design, cinematography, sound recording and editing. Throughout the course, instructors will facilitate contact with relevant films and film professionals to illuminate the key creative roles necessary in the making of a successful narrative film. Instructors serve in an advisory role in the production of student projects, offering technical information and guidance throughout the filmmaking process. Students should be prepared to spend a significant amount of time outside of class working on their films.
AS.061.348

AS.061.361. Documentary Film Theory. 3 Credits.
Documentary Theory: The Work of Documentary in the Age of Reality Reproduction This course explores contemporary documentary film and video with an emphasis on selected directors and the theoretical implications suggested by their work. In particular, we look at the notion of the 'real' as it is constructed and maintained through and by documentaries. This inquiry necessarily involves a reflection that is philosophically as well as politically motivated. Directors include Errol Morris, Trinh Minh-ha, Ross McElwee, and Werner Herzog. Readings are eclectic, ranging from Annie Dillard to Martin Heidegger. Counts toward 300 or 400-level critical studies requirement.

AS.061.364. The Films of Alfred Hitchcock. 3 Credits.
Close examinations of Hitchcock's films from the Lodger to Frenzy. $40 lab fee.
Area: Writing Intensive

AS.061.365. The New Hollywood:American Films of the Seventies. 3 Credits.
This course will explore the extraordinary renaissance in American film that arose from the death of the studio system and ended with the advent of the blockbuster. We'll discuss how the political and cultural struggles over the Vietnam war, civil rights, and the feminist movement affected American filmmaking between roughly 1967 and 1980, heralded by a new generation of filmmakers working both within and outside of the system. Emphasis will be on both close formal analysis and historical contexts. Filmmakers to be discussed will include Robert Altman, Hal Ashby, Charles Burnett, Ivan Dixon, Francis Ford Coppola, Barbara Loden, Elaine May, Mike Nichols, Alan Pakula, Arthur Penn, Bob Rafelson, Martin Scorsese, Melvin Van Peebles, and Claudia Weill. This is a discussion-based class, and regular participation is required.
Area: Writing Intensive

AS.061.366. Labyrinths of Passion: The Films of Pedro Almodóvar. 3 Credits.
This course will explore a range of Almodóvar's work, from the early films emerging out of La Movida Madrileña up to and including The Human Voice and Parallel Mothers, with particular emphasis on All About My Mother, Talk to Her, Bad Education, Volver, and Pain and Glory. We will examine the director's influences and antecedents—Bunuel, Hitchcock, Sirk, Cassavetes, among others—against the backdrop of Spain's dramatic political and cultural transformation after the death of Franco. And we will closely analyze the characteristics that define Almodóvar's status as an auteur: his groundbreaking approach to sexuality, queer politics and gender transformation; his innovative use of melodrama; and his dazzlingly eclectic visual style.

AS.061.373. Intermediate Screenwriting. 3 Credits.
This course will explore strategy and process for developing a short screenplay from pre-existing literary or journalistic source material (short story, news/feature article, etc.). By exploring several "case studies" — feature films and the source material that inspired them — students will identify the practical strategies employed by professional screenwriters with the goal of employing such strategies with their own screenplay adaptations. Bulk of class will focus on designing, writing, and rewriting a 20-30 page screenplay, and sharing multiple drafts with the class (and with the professor one-on-one) for critique over the course of the semester. Each student should have 2-3 pieces of material under consideration for possible adaptation by the start of class. Discussions from time to time will also touch on the business of screenwriting. (Scripts and clips often selected from American films spanning the 60s through the 2000s.) Students will be required to purchase a license for Final Draft screenwriting software for $99. Students are expected to have previously completed AS.061.205 or another lower level screenwriting class.
Area: Writing Intensive

AS.061.374. Terrence Malick: The Poetics of Space. 3 Credits.
This course will closely examine Malick's films, with particular emphasis on his visionary manipulation of the epic vastness and lyrical intimacies of screen space. With this primary concern in mind, we will consider his films' engagement with philosophies of history and time; their increasingly experimental approach to narrative and stylistic conventions; and their enduring fascination with the interaction among the human, natural, and spiritual worlds. We will also look at recent films influenced by his work, including Carlos Reygadas's Silent Light and Shane Carruth's Upstream Color, addressing the question of what constitutes a "Malickian" cinema.
Area: Writing Intensive
AS.061.140 OR AS.061.141

AS.061.375. Surrealism and Film. 3 Credits.
We will define Surrealism through primary texts, including those of Andre Breton, Antonin Artaudand Rene Daumal and other works that defined and influenced the movement in the early part ofthe 20th century. Using an understanding of the practice of surrealism found in the readings, aswell as in surrealist games and automatic writing, we'll study a diverse group of filmmakersinfluenced by the practice, including Luis Buñuel, Joseph Cornell, Raul Ruiz and contemporary artists such as David Lynch. Assignments include weekly papers and one final creative project. Weekly film screenings Thursday 7:30-10:00 PM. $50 lab fee.Media, Online
Area: Writing Intensive

AS.061.378. Automatic Animation. 3 Credits.
A hand-made, 2-D animation course based on ideas of automatism. Students will create their own animated movie during the semester with in-class animation exercises. Readings will included Dada and Surrealist texts, poetry and theory of poetics. Sounds ideas will be discussed and pursued related to the ideas explored throughout the semester. $125 lab fee.
AS.061.145 OR AS.061.152

AS.061.380. French Cinema of Immigration, Cultural Identity, and Difference. 3 Credits.
An exploration of a series of contemporary French films that bear witness to the contemporary reality of France as a multi-ethnic society and ask essential questions about cultural identity. Is cultural and ethnic identity something that you are born into or it is a role that you elect or perform? How should individuals living today understand their relation to historical injustices? Are there things that we can learn only through relationships with people from other cultures? Screenings include works of Abdellatif Kechiche, Jacques Audiard, Claire Denis, Céline Sciamma, Michael Haneke, Mathieu Kassovitz, the Dardennes. $50 LAB FEE

AS.061.382. Explorations in Film Sound. 3 Credits.
This course traces the history of the soundtrack from Vitaphone at the coming of sound to Dolby Stereo in the New Hollywood era to the fully immersive, atmospheric sound systems of today's cinemas and home theaters. We consider major theories on the relationship between sound and image, the production of sound space, the role of the voice in cinema, and the effects of film music. Assignments will engage with the materials through both analytical reflection and short creative sound production. Screenings and examples are likely to include early sound classics, such as Sunrise (1927) and 42nd Street (1933); notable international innovators, such as The Testament of Dr. Mabuse (1933) and A Man Escaped (1956); pathbreaking stereo entries, such as Fantasia (1940) and Apocalypse Now (1979); recent exemplars of film music, such as In the Mood for Love (2000) and Morvern Callar (2002); and films that reflect on the very nature of sound recording, such as The Conversation (1974) and The Lives of Others (2006).
AS.061.140 OR AS.061.141

AS.061.384. Fabric of the Real. 3 Credits.
Maurice Merleau-Ponty writes, "the real is a closely woven fabric". In this course we will consider how several artistic disciplines weave their own version of that fabric. These disciplines include documentary film, prose poetry, landscape painting, literature, and music. The course will be predicated upon Martin Heidegger's essay, "The Age of the World Picture" and follow the lead of Roland Barthe's essay on the "effect of the real". We will also highlight various hybrid forms within these disciplines, with particular attention to the work of W.G.Sebald and StevenReich.

AS.061.391. Love and Film. 3 Credits.
In this course, we explore different understandings of "love" and the way that film has dealt with the concept as a medium. We explore a variety of approaches to the question of "love" - from the agapic to the familial to the romantic - through a series of interdisciplinary readings ranging from philosophy to anthropology. We will also equally explore the question of how film has engaged with the question of love as a concept, and what depictions of human affection - from the general to the personal - it has offered us. Screenings are required for this course. Lab fee: $50
Area: Writing Intensive
AS.061.140 OR AS.061.141 OR AS.061.226

AS.061.396. Modern Paris on Film. 3 Credits.
This course uses French film to examine the history of twentieth-century Paris. We will consider how filmmakers interpreted the social, political, and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. $50 lab fee.

AS.061.397. French Masculinities. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.

AS.061.399. Stop-Motion Puppet Animation. 3 Credits.
Students will create their own stop-motion models (puppets) based on a wire armature model. In small groups, students will design and create a simple set and make a short stop-motion movie using a DSLR camera. The question of "why animate" will be explored in student projects and responses to screenings. We will study the history of stop-motion puppet animation from Starewicz to Svankmajer to Nick Park.

AS.061.403. Advanced Screenwriting: Concocting the Thriller. 3 Credits.
If you love watching thrillers — and believe you are possessed with the right blend of obsession, stamina and blind faith required to write one — then please join us for 13 weeks of screenwriting exploration as we tangle with this most beguiling and and satisfying of film genres. By semester's end, you'll have written a "killer" first act of a feature script, developed a detailed step outline for acts 2 and 3, designed a look-book to inspire yourself and future collaborators, and hatched a plan to see you project through to completion (on your own, or in a future class.)
Area: Writing Intensive
AS.061.205 AND AS.061.373

AS.061.404. Advanced Screenwriting. 3 Credits.
Intensive workshop course where students will write a first draft of a feature-length screenplay. Classes will focus on the specific challenges of the students' works-in-progress, with an emphasis on developing a story idea that is suitable for a feature, and the craft to see it through to completion. Particular emphasis will be placed on the feature screenwriter's central challenge: creating enough of a structure in the early writing stages to keep the screenplay on track, while remaining open to new ideas for scenes and sequences that inevitably arise as the characters come to life. Select professional screenplays will be read and analyzed — and clips from select films viewed—to explore what works well on the page, and how it translates to working well onscreen. Students will aim to have a solid and workable first draft at the end of the semester, at which point avenues for further revision may be discussed. Throughout the course, Instructor will also devote a portion of class time to discuss the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99.
Area: Writing Intensive

AS.061.406. Animating Cartoons. 3 Credits.
Animating Cartoons: This class will focus on character animation. Through weekly screenings of cartoons and animations and reading comics, the form will be analyzed in class discussions and short papers. Students will create their own hand drawn character and create an extensive story board for an animation involving their character. A scene will be chosen and a short hand-drawn animation from the storyboard will be created.

AS.061.407. Advanced Screenwriting II. 3 Credits.
You've just finished the first draft of your feature screenplay or long-format teleplay. If you're like most mortals, including the teacher of this course, it's likely to be terrifically average. Here's the chance to make it good — and possibly great — with a semester's worth of systematic, high-octane rewriting. Hard labor, creative breakthroughs and a glimpse at what it takes to get Hollywood's attention included.
Area: Writing Intensive
AS.061.404

AS.061.409. The Films of P. T. Anderson: Innovation and Influences. 3 Credits.
This course will investigate Paul Thomas Anderson's stylistic and narrative innovations, as well as cinematic influences such as Altman, Kubrick, Scorsese, and Welles.

AS.061.413. Lost & Found Film. 3 Credits.
This course explores various elements of film production and filmic expression through a somewhat nebulous field typically described as lost films. Lost films (or as they are sometimes called, "orphan" films) can be generally described as films that have, for a variety of reasons, fallen out of the public view. They frequently come from educational, scientific, medical, or industrial films from the 1950s and 1960s. Using these films as source materials, lost film filmmakers explore and expose cultural conventions, visual icons, and historical value materials. Each week, students are responsible for re-editing sources found on an internet archive site. The assignments follow thematic concerns related to film editing. Students complete a final project (4-8 minutes). All editing for the course is accomplished with non-linear software, generally Adobe Premiere or Final Cut.

AS.061.440. Senior Capstone Project: Production. 3 Credits.
Permission required. Production track students complete an independent project. Should must have completed one advanced level FMS production course (POS tag FILM-PROD).

AS.061.441. Senior Capstone Project: Critical Studies. 3 Credits.
Critical studies track students complete an independent research project.

AS.061.501. Independent Study - Film. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.502. Independent Study:Film & Media. 1 - 3 Credits.
For students who wish to explore an aspect of film studies not covered by existing courses. The course may be used for research or directed readings/viewings and should include one lengthy essay or several short ones as well as regular meetings with the adviser.Permanently required: Lab Fee: $100 (if production related)
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.505. Internship-Film/Media. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.506. Internship-Film & Media. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.542. Senior Capstone Project: Screenwriting. 3 Credits.
Permission required. Screenwriting Track students complete an independent project.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.596. Ind Study - Film & Media. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.599. Internship-Film & Media. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

Cross Listed Courses

Art

AS.371.303. Documentary Photography. 3 Credits.
In this course, we will explore different genres and approaches to documentary photography and the questions inherent to this mode of image-making like representation, storytelling, records and archives, journalism, community engagement, research and personal perspective. Baltimore neighborhoods and contemporary issues will provide inspiration for student work. Students will learn camera operation, photo editing and produce a final documentary project on a subject of their choice as the culmination of their semester's work. Digital SLRs are available on loan for the semester. Attendance at first class is mandatory.

Comparative Thought and Literature

AS.300.312. Imagining Revolution and Utopia. 3 Credits.
What form should revolution take, and what should society look like after the revolution? What would happen to the state, family, home, status of women, human interrelations, and everyday life? These questions consumed radicals in 19th century Russia and Europe, and their answers helped to shape the political culture of the 20th century. This course examines theories of revolution and utopia and responses to them in literature, art and film. Primary case study is Russia and the Soviet Union, with a comparative look at influential European works.
Area: Writing Intensive

AS.300.324. Cinema of the 1930s: Communist and Capitalist Fantasies. 3 Credits.
Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender.

AS.300.340. Literature and Film of Unintended Consequences. 3 Credits.
Sometimes brilliant ideas and plans don't work as anticipated, or go very badly—for example, empowering the "invisible hand" of the market, building a huge hydroelectric dam, or plotting a double murder by two strangers. This course explores these and other fascinating literary instances of unintended consequences—the unanticipated results of actions that people planned ending up a very different way. Reading or watching mainly twentieth-century American literature and movies, as well as some essays and poetry, we will follow a range of different creators as they think about unplanned effects and why they matter. What can these works tell us about how we intend, act, or make meaning at the limits of our control? Texts will include films by Charlie Chaplin, Billy Wilder, and Alfred Hitchcock, poetry or fiction by Wallace Stevens, Patricia Highsmith, and Zadie Smith.
Area: Writing Intensive

AS.300.343. The Cinema of Revolution. 3 Credits.
This course examines global political revolutions through cinema and the ways in which cinema helped to make political revolutions. Early cinema was intimately intertwined with the Russian revolution, and Russian revolutionary cinema had a profound impact on the ways in which media was used for revolutionary purposes through the 20th century and around the world. Students will be introduced to films from a number of different countries, and the history and context of their production and reception. They will also learn methods of film analysis and produce their own video essay.

AS.300.366. Russian Avant-Garde Cinema. 3 Credits.
Russian cinema was born out of the intense artistic experimentation of the fin-de-siècle avant-garde and developed in a climate of dramatic political and cultural change in the twenties and thirties. While subject to draconian censorship in the Soviet period, it nonetheless engaged in active dialogue with the film industries of Western Europe and America and had a lasting impact on world cinema. This course examines the extraordinary flourishing of avant-garde cinema in the Soviet Union in the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and Dovzhenko, their theoretical writings, and their far-reaching influence on film and film theory. All readings in English, films subtitled in English.
Area: Writing Intensive

AS.300.367. Seeing Like a Woman. 3 Credits.
What does it mean to "see," think, desire, feel, speak, act, or write "like a woman"? Gendered notions of seeing have had an impact on politics and society long before the #metoo movement and far beyond debates about women's rights in isolation. This seminar examines the issues of female desire, subjectivity, spectatorship and performance in fiction, poetry, memoir and film from a variety of cultures and theoretical perspectives. This is not a course on "the image of the woman" in literature, film or politics, but a course in which we examine the ways in which both male and female theorists, novelists, poets, and filmmakers have imagined how women "see," feel, think and behave.
Area: Writing Intensive

AS.300.399. Cinema and Philosophy. 3 Credits.
What do films and philosophy have in common? Do films express, with their own means, philosophical problems that are relevant to our experience of ourselves and the world we live in? This term we will study such issues with a particular focus on questions of justice, truth, revenge, forgiveness, hope, hate, and fear.

East Asian Studies

AS.310.210. Documentary Photography in a Changing China. 3 Credits.
This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP).

First Year Seminars

AS.001.122. FYS: Global Cinema in the 21st Century. 3 Credits.
This First-Year Seminar introduces students to the intellectual life of the university by considering some of the riches of contemporary global cinema. After a brief introduction each week, you will watch the assigned film and read some texts to deepen your sense of how to analyze it and think about broader matters the director has taken on. During in-class discussion, we will consider what makes a particular film noteworthy, what the director seems to think about his/her national context, and how local issues intersect with broader questions about the human condition. How does the past shape us? What is justice? What is political action? Who are we responsible to? We will also consider aesthetics. What is a good director? How do we know we are watching good acting (especially when reading subtitles?) What impact do cinematography and editing have on our perception of a film? How do film makers speak to and quote one another?

AS.001.128. FYS: Deep Listening and Multimedia Sound Art. 3 Credits.
Sound plays a rich and complex role in our everyday lives and in our various forms of media art. In the past thirty years, sound studies has become a new addition to the study of the human senses, as well as the relationship of these senses to history, aesthetics, epistemology, culture, and art. How do we listen to the world around us? To different media? In this First-Year Seminar, we explore listening to the lived environment, to music, and to multimedia sound art ranging from performance art to cinema. The nexus of questions surrounding listening opens us up to a host of new texts and approaches: those of acoustic ecology, or how we experience sound via the lived and natural environment; those of the relationship between the senses and our emotions; those of the nature of musical listening; and those of the art world as it engages with sound. This seminar is a mixture of sound theory and practice. We will read, debate, and bring in examples. Students will create their own projects, both written and sonic. No prior experience in sound theory or sound practice are required.

Interdepartmental

AS.360.409. Humanities Research Lab: Documentary Pre-Production. 3 Credits.
This class will be a hands-on experience for students to be involved in the early stages of a documentary's making. Students will be working with the professor on researching, planning, and writing the treatment for a documentary about a forgotten feminist play (1927) from pre-Holocaust Vienna, where diversity and progressive thought were still possible. This romantic comedy centers around a self-determined matriarch, Therese, helping her three daughters navigate the expectations of rigid, societal beliefs – often leading by example – as they find their way into adulthood. Moving back and forth between the archive of its time both through the re-appropriation of Nazi newsreels and propaganda films, as well as ephemeral films of the time and the the new staging of the play, the film will take the audience inside a theater space where a vibrant environment of escapism smashes against the harsh reality of its time, which is as vivid as it was 80 years ago.

Modern Languages and Literatures

AS.211.222. Italian Cinema: The classics, the Forgotten and the Emergent.. 3 Credits.
This course traces the history of Italian cinema from the silent era to the new millennium, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall examine iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, that received international recognition and influenced other national, cinematic productions. We shall also look at the work of less famous, or independent filmmakers who received less critical attention. While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to the mise-en-scène, frame composition, camera movements, editing, and sound. This class is taught in English.

AS.211.316. Brazilian Cinema and Topics in Contemporary Brazilian Society. 3 Credits.
Course is taught in ENGLISH - This course is an introduction to the academic study of cinema as a communicative art and to Brazilian film. The films selected focuses on films from the late 1950s to the present and highlight import episodes and challenges in the advancement of the Brazilian society as well as its cinematic production with a special view to the film aesthetics through analysis from a number of critical perspectives, including class, race, gender as well as ethnicity, nationalism or national identity, colonialism, social changes, and the politics of representation. In this sense, the films and documentaries that we will be watching and studying encompass the period from the rise of New Cinema (Cinema Novo) up to films exploring the most recent trends, including movies launched up to 2016. Students wishing to do the course work in English, for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis.
Area: Writing Intensive

AS.211.333. Representing the Holocaust. 3 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.
Cannot be taken by anyone who previously took AS.213.361

AS.211.369. We Conduct: Editing a Documentary. 3 Credits.
This course will provide a hands-on opportunity to work with film director and professor of media studies Bernadette Wegenstein in the editing process of We Conduct, a documentary about the magic of orchestral conducting and the changing face of those who are called to this vocation. The film follows famed conductor Marin Alsop as she breaks new ground in her already distinguished career. The film was shot predominantly in Baltimore, but also in New York, São Paulo, Vienna, Lucerne, and London, with Shana Hagan (Los Angeles) as Director of Photography, additional cinematography by Judith Benedikt (Vienna), and John Benam (Baltimore). During the semester we will be looking at the various narratives in their rough format, and see the film take shape from treatment to full-fledged documentary narrative. Editor Victor Livingston based in Los Angeles will come to work with the class twice during the semester.

AS.211.386. Italian Cinema. 3 Credits.
Italian Cinema: The Classics, The Forgotten, The Emergent. This course traces the history of Italian cinema from the silent era to the contemporary period, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall discuss iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, (the classics) that received international recognition and had a global impact on film history, and also rare archival films by pioneer women filmmakers from the silent era (the forgotten). Finally, we'll discuss films released in the last decade (the emergent) that address issues such as migration and the ecological crisis. (Zoom Q&As with filmmakers will be part of curriculum). While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to frame composition, camera movements, editing, and sound. This is an intensive writing class taught in English.
Area: Writing Intensive

AS.211.444. The Apocalypse in Literature and Film. 3 Credits.
"Everything which we loved is lost! We are in a desert" – this emotional assertion was the reaction to Kazimir Malevich's 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.
Area: Writing Intensive

AS.211.480. Religious Themes in Film and Literature. 3 Credits.
This course would be of interest to anyone who would like to learn about the intersection of religion and modern culture. At the center of the course will stand a close study of the representation of religious themes and their role in modern literature and cinema. The works which we will deal with are not considered religious and yet they include religious themes as part of their narrative, images, language or symbolic meaning. We will trace in various works from various countries and genre, themes such as: divine justice, providence, creation, revelation, the apocalypse, prophecy, sacrifice and religious devotion. We will also study the ways in which Biblical and New Testament stories and figures are represented in these works. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.

Writing Seminars

AS.220.218. Writers on Film. 3 Credits.
An interdisciplinary course focusing on the film writings of poets, novelists, critics, and essayists such as Virginia Woolf, H.D., James Agee, James Baldwin, and Pauline Kael; and films showing the intertitle and screenplay work of writers such as Anita Loos, F. Scott Fitzgerald, William Faulkner, and Jean Cocteau. Participants will write weekly assignments on film from a critical perspective.
Area: Writing Intensive

AS.220.221. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between modernist literature and cinema in response to the social and technological changes of the twentieth century. Prominent figures include Charlie Chaplin, Ezra Pound, T. S. Eliot, Virginia Woolf, Franz Kafka, Sergei Eisenstein, Jean Epstein, John Dos Passos, Zora Neale Hurston, Paul Strand, and Gertrude Stein. Participants will write weekly assignments on films and readings from a critical perspective.
Area: Writing Intensive

Film and Media Studies, Bachelor of Arts

Film and Media Studies Major Requirements

(See also Requirements for a Bachelor's Degree (p. 1587).)

Because the program emphasizes the historical, cultural, and social context of cinema, Film and Media Studies is an excellent program for undergraduates interested in a broadly humanistic education as well as for those preparing for a career in the field. A departmental faculty advisor assigned to each undergraduate major helps plan individual courses of study. Undergraduates are encouraged to participate fully in all departmental activities.

In addition to core required courses, each student must complete a critical studies, screenwriting or production track for the major. All courses applied toward the major must be taken for a letter grade and a grade of C- or better must be earned. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the major without permission of the Director of Undergraduate Studies.

Code	Title	Credits
Core Required Courses		
AS.061.140	Introduction to Cinema, 1892-1960	3
AS.061.141	Introduction to Cinema, 1941-present	3
AS.061.226	Special Topics: Writing About Film	3
Foreign language (two semesters at elements level or demonstrated proficiency equivalent to one year of elements)		**6-9**
Completion of One Track in Critical Studies, Screenwriting, or Production		**33-36**

History

http://history.jhu.edu/

The Department of History offers students the opportunity to work intensively in the classroom and with individual faculty to discover the richness and complexity of history. Undergraduates begin with general courses, but progress quickly to courses that explore topics in depth and provide experience in researching, analyzing, and writing about the past. Graduate students work independently and with faculty advisors on reading and research in their fields of interest, while departmental seminars bring them together to discuss their research, forging a collegial intellectual culture. The department emphasizes European history, United States history, and the histories of Africa, Latin America, and China. Faculty and students participate in a variety of interdisciplinary programs, including Africana Studies, East Asian Studies, Latin American Studies, Judaic Studies, Museums and Society, the Program for the Study of Women, Gender & Sexuality, and International Studies.

Facilities

In addition to the Milton S. Eisenhower Library at the university, students in the Department of History can use the collections of the Peabody Institute Library, the Enoch Pratt Free Library, and the Maryland Historical Society in Baltimore, and of the Library of Congress, the National Archives, the Folger Shakespeare Library, and other specialized libraries in nearby Washington, D.C. There is provision for regular transportation to and from the Library of Congress. Also within easy distance are the holdings of specialized historical libraries and archives in Annapolis, Richmond, Williamsburg, Charlottesville, Wilmington, Harrisburg, Philadelphia, Trenton, Princeton, Newark, and New York.

Graduate Programs

The graduate program prepares professionally motivated students for careers as research scholars and college and university teachers. Hence it is designed for candidates who want to proceed directly to the Ph.D. degree, who have developed historical interests, and who are prepared to work independently. Within the areas of European history, American history, and the histories of Africa, Latin America, and China, the department emphasizes social/economic and intellectual/cultural history. Although diplomatic and political history are not emphasized, attention is given to the social, economic, and cultural bases of politics.

The program is organized around seminars rather than courses, credits, or grades. AS.100.781 The Seminar-AS.100.782 The Seminar and satellite seminars in European, American, and Comparative World History bring together students, faculty, and invited scholars from outside the university to discuss their research work. These departmental seminars create a lively intellectual community in which graduate students quickly become contributing members. The combination of flexibility, independence, and scholarly collegiality offered by the Hopkins program gives it a distinctive character.

Students select four fields (one major and three minor) and make their own arrangements with professors for a study program leading to comprehensive examinations at the end of the second year. Those arrangements may include taking a seminar in the field. One, and exceptionally two, minor field may be taken outside the Department of History. Students have maximum flexibility in the construction of individual plans of study, as well as the opportunity to work closely with several professors.

Admission and Financial Aid

In judging applications, the department puts particularly heavy emphasis on the quality of the student's historical interests and prior research experience. Each applicant must submit a sample of written work. Ordinarily no candidate for admission is accepted whose record does not indicate an ability to read at least one foreign language.

The department accepts only those students who plan to work in the specific fields of the faculty, and each student is admitted only with the approval of a particular professor. Applicants should indicate the proposed field of specialization at the time of application. With the concurrence of a new faculty advisor, students may, of course, later change their major professor.

The department normally provides full fellowship support for all admitted students including both tuition and a stipend. Students are encouraged to apply for external support if eligible.

Programs

- History, Bachelor of Arts (p. 1862)
- History, Bachelor of Arts/Master of Arts Four-Year Program (p. 1864)
- History, Minor (p. 1864)
- History, PhD (p. 1864)

Courses

AS.100.102. The Medieval World. 3 Credits.
This course explores selected topics in the political, economic, social, and intellectual history of Western Europe in the wider world in the period between the fall of the Roman Empire and the fourteenth century. Special emphasis will be given to understanding the ways in which medieval society functioned as it reorganized itself after the almost total collapse of the ancient world. Topics include: religious plurality, sovereignty and subjecthood, flourishing of learning, chivalric culture, crusading, and the plague and its effects. We will follow the interplay between material and cultural forces in the processes of social organization.
Area: Writing Intensive

AS.100.103. Early Modern Europe & the Wider World. 3 Credits.
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.

AS.100.104. Modern Europe and the Wider World. 3 Credits.
The Modern European World familiarizes students with key moments, ideas, communities, individuals, and movements which have formed European History since the Revolutionary era.

AS.100.108. Making America: Black Freedom Struggles to 1896. 3 Credits.
From slave revolts on the West African coast to national conventions and civil war, people of African descent have defined freedom and struggle in terms of kinship, diasporic connection, and fighting antiblack violence. This course explores the arc of that history and its role in the making of America.

AS.100.113. Making America: Race, Radicalism, and Reform. 3 Credits.
This course examines race and social movements in America from the Revolution to 1921.

AS.100.115. Modern Latin America. 3 Credits.
A class combining Latin American history since independence and digital humanities (revised with 2021 student feedback). Students will build guided research projects while thinking about questions of republicanism, freedom and unfreedom, migration, and development.

AS.100.122. Introduction to History of Africa (since 1880). 3 Credits.
An introduction to the African past since 1880.
Area: Writing Intensive

AS.100.123. Introduction to African History: Diversity, Mobility, Innovation. 3 Credits.
Introduction to three major themes in African history, from the precolonial era to the present.
Area: Writing Intensive

AS.100.128. Approaches to Jewish History. 3 Credits.
The course will provide an introduction to the study of Jewish History.

AS.100.129. Introduction to Modern Jewish History. 3 Credits.
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel.

AS.100.154. Modern Mexico from the Alamo to El Chapo. 3 Credits.
In this course we will use popular depictions of Mexico's heroes and villains, tragedies and triumphs to delve into both the nation's history and the importance of thinking historically.

AS.100.165. Japan in the World. 3 Credits.
This course is an introduction to Japan's history from 1800 to the present with emphasis on the influences of an increasing global circulation of ideas and people. Topics include the emperor system, family and gender, imperialism, World War II, the postwar economy, and global J-pop.

AS.100.170. Chinese Cultural Revolution. 3 Credits.
The Cultural Revolution was Mao Zedong's last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. (Previously offered as AS.100.219 and AS.100.236.)

AS.100.180. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography.

AS.100.190. Modern African American History, 1896 – present. 3 Credits.
This course introduces students to the defining social, political, and cultural moments that reflect the experience of African Americans in the United States, 1896 – present. Topics include the Great Migration, the Harlem Renaissance, the Black Freedom Struggle, African American politics, urban rebellion, mass incarceration, Hip Hop culture, the current movement for Black Lives, and more.

AS.100.193. Undergraduate Seminar In History. 3 Credits.
The first semester of the two-semester sequence required for majors, this course introduces students to the theory and practice of history. Following a survey of approaches to the study of the past and an introduction to research methods, students undertake original research and write an extended essay. Intended for history majors and prospective majors.
Area: Writing Intensive

AS.100.194. Undergraduate Seminar in History. 3 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Area: Writing Intensive
AS.100.193

AS.100.216. Reformation and Counter Reformation Europe. 3 Credits.
This course explores the series of religious and political conflicts that make up what are known now as the Reformation and Counter-Reformation in Europe.

AS.100.230. Bones, Blood, and Ecstasy: Religious Culture in Western Christendom, 1100-1700. 3 Credits.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture.
Area: Writing Intensive

AS.100.231. Worlds of Hip Hop. 3 Credits.
Worlds of Hip-Hop explores hip-hop as an arts movement whose forms, conventions, and standards responded to the specific political and social conditions to address questions of freedom and community.

AS.100.233. History of Modern Germany. 3 Credits.
There is more to Germany than beer, BMWs, and Bayern Munich. We explore politics, culture, economics and society to understand Germany and its role within Europe and the world from the 18th century to the 'Refugee Crisis', climate change and EU politics today.

AS.100.238. Expansion and the Early U.S. Republic. 3 Credits.
This course will introduce students to some major issues and problems in the history of the Early U.S. Republic, c. 1750 to 1815, by focusing on the theme of "expansion."

AS.100.240. American Cultural Criticism. 3 Credits.
This course explores 20th century U.S. history through the works of writers and artists. We will ask how essays, novels, performance, and art can function as cultural and social criticism.
Area: Writing Intensive

AS.100.241. American Revolution. 3 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the first republic in the Americas, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance.
Area: Writing Intensive

AS.100.243. China: Neolithic to Song. 3 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered.

AS.100.248. Japan in the World. 3 Credits.
An introduction to Japan's history from 1700 to the present, with emphasis on the influences of an increasing global circulation of ideas, goods, and people in early modern and modern times. Topics include samurai, nation-building, gender, imperialism, World War II, the postwar economy, and contemporary popular culture.

AS.100.250. The American Revolution in Unexpected Places. 3 Credits.
This course considers the American Revolution from the perspective of locations beyond the thirteen rebelling colonies. Covering a range of global hotspots, the focus is on events from 1763 to 1788.

AS.100.251. West African History. 3 Credits.
This course explores the rich history of West Africa and its place in the broader world. Topics include the environmental history of the Sahara desert, West African empires, and the rise of Nollywood and contemporary culture.
Area: Writing Intensive

AS.100.268. Jewish and Christian mysticism in the Middle Ages and the Early Modern Period. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.

AS.100.270. Europe since 1945. 3 Credits.
This class focuses on Europe from the end of World War II until today. We will discuss such topics as the Cold War, social democracy, the welfare state, the relationship to the US and the Soviet Union, decolonization, migration, 1989, European integration, neoliberalism, and the EU. We will discuss and analyze academic literature, movies, documentary films, textual and visual primary sources.

AS.100.273. A Comparative History of Jewish and Christian Mysticism. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 11th and the 19th centuries.

AS.100.275. Passing in American Culture. 3 Credits.
This course explores passing narratives – stories that feature people who cross race, class, ethnic, or gender boundaries. We will consider what passing narratives can teach us about power and identity, especially as power is presumed to reside in the self and race is presumed to no longer matter.

AS.100.282. Race & Power in Modern South Africa. 3 Credits.
Overview of modern South African history, with a focus on the origins of the racial state and the development of black liberation movements.

AS.100.283. Making and Unmaking Queer Histories, 1800-Present. 3 Credits.
Making and Unmaking Queer Histories introduces students to the major themes and historical developments which shape contemporary understandings of LGBTQ+-identified subjects and communities in the US and Western Europe.
Area: Writing Intensive

AS.100.291. Medicine in an Age of Empires, 1500-1800. 3 Credits.
How did medicine emerge as a distinctive body of knowledge and a profession in the early modern period? The answers lie in the histories of disease, empire, and global commerce.

AS.100.293. Historical Methods, Archives and Interpretations. 3 Credits.
Surveys methods, approaches, and practices of historical writing. It asks students to think about the questions historians ask, the archives they use, and the arguments they make. Students will be introduced to subversive and emancipatory potential of contemporary scholarship that importantly incorporates subaltern, marginalized, or formerly forgotten voices.
Area: Writing Intensive

AS.100.294. Undergraduate Seminar in History. 3 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Area: Writing Intensive

AS.100.295. American Intellectual History since the Civil War. 3 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Area: Writing Intensive

AS.100.301. America after the Civil Rights Movement. 3 Credits.
This course explores the history of late twentieth-century America by examining the social, economic, and political legacies of 1960s civil rights protest for the 1970s, 1980s, and 1990s.
Area: Writing Intensive

AS.100.303. Old Regime and Revolutionary France. 3 Credits.
Examines the history of France from the reign of Louis XIV to the French Revolution, focusing on early modern society, popular culture, absolutism, the Enlightenment, overseas empire, and the French and Haitian Revolutions.
Area: Writing Intensive

AS.100.304. Ecstasy: Mystical, Visionary, and Holy Women and their Writings in Medieval Europe, ca. 1000-1400. 3 Credits.
This course uses the writings of medieval women to explore their social and religious worlds and orients visionary writing within the broader narrative of religious movements from the 12th-14th centuries.
Area: Writing Intensive

AS.100.305. Peter to Putin: Survey. 3 Credits.
Seminar on modern Russia. No midterm and no final. 6 short weekly journals, two short papers, and two small quizzes.
Area: Writing Intensive

AS.100.310. The French Revolution. 3 Credits.
Political, social and cultural history of a turning-point in European history that witnessed the birth and death of democracy.

AS.100.314. The Enlightenment. 3 Credits.
Examines the Enlightenment, an intellectual movement that swept Europe in the eighteenth century to shape the modern world. Topics include science and religion; print culture; gender and sociability; political economy; and race, slavery, and colonialism.
Area: Writing Intensive

AS.100.319. History of American Reproductive Politics. 3 Credits.
This course examines reproductive politics in the United States from the colonial era to the present. Topics include contraception, abortion, and sterilization, emphasizing the impact of gender, class, and race.
Area: Writing Intensive

AS.100.321. Political Thought and Social Transformation in the Haitian Revolution and Early Independent Mexico, c. 1789-1850. 3 Credits.
This course will examine both the Haitian Revolution and the early period of Mexican independence by engaging with the ideas of actors within these events in international contexts.
Area: Writing Intensive

AS.100.323. America in the 1960s. 3 Credits.
The years between 1959, when the course begins, and 1971, when it ends, were tumultuous and divisive. This course explores the political, racial, and cultural struggles of a half century ago.
Area: Writing Intensive

AS.100.324. American Origins, ca. 1619-ca. 1776. 3 Credits.
This discussion-based seminar focuses on Colonial American history, using maps, objects, and other primary sources to examine such topics as colonialism, slavery, war, disease, trade, empire, and cultural encounters.

AS.100.326. From Blood Feud to Black Death: European Society in the High Middle Ages, 1000-1400. 3 Credits.
Explores the development of society and institutions in the medieval west including kingship and law, religion and difference, gender and ideology. Looks closely at social responses to change and adversity.

AS.100.327. The Islamic Age of Empires. 3 Credits.
In this course we will survey the political, social, intellectual, and cultural history of the three Islamic early modern gunpowder empires that ranged from “the Balkans to Bengal”: The Ottomans (1300-1922), the Safavids (1501-1736), and the Mughals (1526-1858).
Area: Writing Intensive

AS.100.329. Russian Imagination in Three Revolutions. 3 Credits.
Russian Literature and the arts in Revolutions of 1905, 1917, and Stalin era to 1941. Req: 6 journals of 350 words, 2 papers 1250, 2 quizzes. No midterm or final.
Area: Writing Intensive

AS.100.333. Making Money in the Atlantic World. 3 Credits.
The history of money is a history of power exercised by states, institutions, and individuals. It is also a history of the structural possibilities and constraints faced by people in the past. We will address making, using, and conceptualizing money in the early modern Atlantic World, a time and a place of expanding empires, extractive enterprises, and changing categories of difference like race, gender, and class.

AS.100.335. The American West. 3 Credits.
This course explores the expansion and creation of an American West—and its inhabitants—from the Constitution to the end of the nineteenth century.
Area: Writing Intensive

AS.100.336. The United Kingdom? A Cultural History of Four Nations, 1707-Present. 3 Credits.
This course delves into the variegated, often divergent national politics, social landscapes, and cultural shifts in England, Scotland, Wales, and Ireland since Britain’s Acts of Union in 1707.
Area: Writing Intensive
AS.100.101 OR AS.100.102 OR AS.100.103[OR AS.100.104

AS.100.340. Asian American Art and Activism: Third World, Feminist, and Queer Solidarities. 3 Credits.
This interdisciplinary course surveys critical themes related to Asian American art and activism including perspectives from history, art and visual culture, literature and gender and sexuality studies.
Area: Writing Intensive

AS.100.343. The Annales School. 3 Credits.
This is not a typical history course but one on historical theory and modern historiographical thought. How did historians in the past generations attempt to analyze the past? To what extent is history connected to other disciplines? What was the French contribution to contemporary historiography? What is "new history"? In this seminar, we are going to examine the scholarship of the French Annales, arguably the most influential and revolutionary “school” of historiography in the twentieth century. Students will read selected works of the Annales historians and discuss concepts such as economic history, serial history, longue durée, conjuncture, total history, mentalité, historical psychology, and historical anthropology.
Area: Writing Intensive

AS.100.346. Soviet-American Cold War. 3 Credits.
The focus will be on Soviet-American interactions, Cold-War Cultures, and the impact on both societies.
Area: Writing Intensive

AS.100.347. Early Modern China. 3 Credits.
The history of China from the 16th to the late 19th centuries.
Area: Writing Intensive

AS.100.348. 20th-Century China. 3 Credits.
Survey of the history of China from ca. 1895 to ca. 1976.
Area: Writing Intensive

AS.100.349. Entertaining America: Popular Culture from Blackface to Broadcast. 3 Credits.
"Entertaining America” will trace the history of popular culture in the United States, starting inthe 1830s, when blackface minstrelsy initiated a new wave of commercial performance, andending in the 1920s, when records, films, and radio ushered in the era of mass culture.
Area: Writing Intensive

AS.100.354. Playing in the White: Black Writers, the Literary Colorline and Writing Whiteness. 3 Credits.
This course will turn to known and not-so-known black writers during the early to mid-twentieth century who defied literary expectation and wrote stories that featured or focused on whiteness. We will consider what whiteness offered black writers and the political work that their literary experimentations did for a white American publishing industry.

AS.100.355. Sex and Society in Early Modern Europe. 3 Credits.
This course will examine how early modern views on the body, gender, and sexuality shaped beliefs about the abilities and rights of women and men.
Area: Writing Intensive

AS.100.360. The Modern British World: Imperial Encounters, Regimes, and Resistance, from the American Revolution to the present. 3 Credits.
The Modern British World introduces some of the major events, themes, and controversies that led to Britain’s global dominance and ultimate decline as an imperial power. This course focuses on varying forms of imperial governance, the interrelationships between metropole and colony, and the formation of British and colonial national identities.
Area: Writing Intensive

AS.100.361. Age of Tolstoy. 3 Credits.
Tolstoy and his era, 1820s to 1910s. Topics include state and politics, empire, the Russian identity, and forms of cultural expression. Students consider "War and Peace" and other masterworks.
Area: Writing Intensive

AS.100.365. Culture & Society in the High Middle Ages. 3 Credits.
This course will cover the period commonly known as the High Middle Ages, that is, the civilization of Western Europe in the period roughly from 1050 to 1350. . It is a period of exceptional creativity in the history of Western Europe and in medieval history specifically, a time when many of the most characteristic institutions of Europe came into being.
Area: Writing Intensive

AS.100.369. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography from the 19th century to the present.

AS.100.371. Modernity, Catastrophe, and Power in Jewish History: 1881 to the Present. 3 Credits.
Jewish history, politics, and culture across a century of enormous transformations and transformative enormities in Europe, the US, and the Middle East. Topics include: impacts on Jewish life of World War I, the Russian Revolution, and the post-imperial reordering of the Eastern Europe and the Middle East; Zionism and other modes of Jewish contestatory politics; the consolidation of American Jewry; Nazism and the Holocaust in Europe; formation and development of the State of Israel; the global reordering of Jewish life amid cross-currents of the Cold War, conflict in the Middle East, and success in the US. Substantial attention to recent and contemporary history including the dramatic changes in Israeli society and polity over the past forty years and the ongoing Israeli-Palestinian conflict.
Area: Writing Intensive

AS.100.373. Crime, Punishment, Felony and Freedom: Law and Society in Pre-Modern England. 3 Credits.
Using legal texts as a window into English society, we will address the changing nature of royal power, trial by jury, treason, felony, and the freedoms enshrined in the Magna Carta.

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.

AS.100.375. Histories of Women and the Vote. 3 Credits.
The year 2020 will mark 100 years since the 19th Amendment guaranteed American women the right to vote. Or did it? This course will examine the long history of women's voting rights in the United States, including the story that extends from a convention at Seneca Falls, NY to a constitutional amendment. It will also examine alternative stories, especially those of women of color whose campaigns for the vote did not end in 1920 – and continue until today.

AS.100.377. The Age of Reason on the Silver Screen: Cinematic Representations of the Enlightenment. 3 Credits.
This course will discuss the problem of historical representation on the basis of an analysis of movies depicting the Age of the Enlightenment.

AS.100.379. Brazil History and Cultures: A Glance from Baltimore. 3 Credits.
Using textual and visual documents (including books from Peabody Library), we will examine the contrasts of Brazilian history and culture, and its connections with 19th and 20th century Baltimore.

AS.100.383. Conversion and Apostasy in the Middle Ages. 3 Credits.
Compares religious transformation in medieval Europe and the Middle East (ca. 600-1500), including conquest and conversion; conversion narratives; apostasy, martyrdom and other encounters between medieval Jews, Christians, and Muslims. Pre-requisite for enrollment: Students must have taken one history course.

AS.100.384. Intoxicated: Commodities & Globalization in the Early Modern World. 3 Credits.
Each week we examine a commodity that defined a new era of global connectivity in the centuries after 1492, including money, medicines, slaves, and fashion.

AS.100.386. The Cold War as Sports History. 3 Credits.
Sport is key to understanding the Cold War. We will investigate how the Cold War has shaped sports, the Olympic movement, the role of athletes at home and abroad, how sports were used in domestic and foreign policy, and how Cold War sports reinforce or challenge notions of race, gender, and class.
Area: Writing Intensive

AS.100.387. Everyday Life in the Medieval Middle East. 3 Credits.
Explores the daily lives of non-elites in the medieval Middle East—food; housing; clothes; marriage and divorce; urban festivals—through primary documents (e.g. letters, court records) and artifacts (e.g. clothing).Pre-requisite for enrollment: Students must have taken one history course.

AS.100.389. History of Law and Social Justice. 3 Credits.
Cause lawyering aims to change the status quo. This course examines histories of this approach to social justice, from battles against the slave trade to contemporary campaigns for marriage equality.

AS.100.390. The Medieval Crusades: Cultural Convergence and Religious Conflict, 1000-1400. 3 Credits.
This course explores the origins of the idea of crusading, examines the experiences of those who traveled east, and analyzes the cultures of contact that developed ca. 1095 and 1291.

AS.100.392. The Art of Lying: Lie, Dissimulation, and the "Fake News" in Pre-modern Europe. 3 Credits.
The course will examine the early modern attitudes to lie and dissimulation.

AS.100.393. Think Globally, Research Locally: Early Maryland and the World. 3 Credits.
A research-intensive seminar, this course uses the rich history of Maryland to approach broader themes in early modern American and global history including colonialism, slavery, revolution, race, gender, and sex.

AS.100.394. Brazilian Paradoxes: Slavery, Race, and Inequality in Brazil (from a Portuguese Colony to the World's 8th Largest Economy). 3 Credits.
Place of contrasts, Brazil has a multi-ethnic cultural heritage challenged by social and racial inequalities. Its political life remains chaotic. We will examine these problems through Brazilian history and culture.

AS.100.395. History of Global Development. 3 Credits.
This course explores development as an ideology and a practice. From colonialism to the Cold War to contemporary NGOs, we will interrogate the history of our attempts to improve the world.
Area: Writing Intensive

AS.100.396. The Gender Binary and American Empire. 3 Credits.
This discussion-based seminar will explore some of the ways that the sex and gender binary was produced out of American statecraft in the late nineteenth and twentieth centuries. Particular attention will be paid to US imperialism, both domestically in its settler form, as well as in Hawaii, the Caribbean, and the Pacific. What happens to the study of the modern gender binary if it is treated as a transnational artefact of US imperialism's encounter with a multitude of cultures and nations?
Area: Writing Intensive

AS.100.397. The Trouble with "Diversity". 3 Credits.
Through archival, literary, and other cultural texts, this course considers the history of “diversity” as both a practice and concept, beginning with the arrival of “colorblindness” in the 1890s and moving through recent approaches to institutionalized multiculturalism.
Area: Writing Intensive

AS.100.404. John Locke. 3 Credits.
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.
Area: Writing Intensive

AS.100.408. Theorizing the Age of Enormity: Social Theory and the History of the 20th Century. 3 Credits.
We will read and analyze key works of social and critical theory produced in relation to 20th and 21st century problems of state and society, nationalism, empire, totalitarianism, genocide, capitalism, political order, gender, race, sexuality, secularism, religion, environmental catastrophe. Possible readings include Weber, Du Bois, Adorno, Arendt, Foucault, Balibar, Beckamong others.
Area: Writing Intensive

AS.100.409. Israel and Palestine from 1967 to the Present: a Current and Entangled History. 3 Credits.
Through intensive and extensive reading, we will explore contemporary Israeli society, politics, and culture, contemporary Palestinian society, politics, and culture under occupation, and the historical processes that have shaped both societies and their ongoing entanglement.

AS.100.410. Decolonizing The Museum: Case Studies. 3 Credits.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

AS.100.413. London 1580-1830: The History of Britain's capital city. 3 Credits.
Seminar-style class analyzing the social, cultural, gender, religious, economic, and political history of London from Shakespeare's time through revolutions, plague, fire, and commercial, colonial, and industrial expansion.
Area: Writing Intensive

AS.100.415. The Holocaust in Jewish History and in Global Culture. 3 Credits.
Key works on the history of Nazi Germany's murder of European Jewry during the Second World War; Jewish responses; the recasting of Jewish and global thought in relation to this signal event; genocide and 'ethnic cleansing' since the Holocaust.
Area: Writing Intensive

AS.100.416. History through Things: Objects, Circulation, and Encounters in the Medieval World. 3 Credits.
Objects from the past offer a powerful window into a set of experiences not recorded in texts. We will follow objects and things as they appear in lists, letters, and descriptions, as they travel surprising routes, and bring to life the medieval world before 1400.
Area: Writing Intensive

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, "virgins" in paradise, the sexual slavery of Yazidi women…. This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Writing Intensive

AS.100.422. Society & Social Change in 18th Century China. 3 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?

AS.100.423. Multiethnic Japan. 3 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas.
Area: Writing Intensive

AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Area: Writing Intensive

AS.100.430. Gender and Sexuality in African History. 3 Credits.
An upper-level history reading seminar with a focus on histories of gender and sexuality in colonial and postcolonial Africa.

AS.100.433. Free Speech and Censorship in the United States. 3 Credits.
This undergraduate research seminar examines censorship laws, practices, and debates over the past century; topics include political radicalism, indecency, pornography, and racist hate speech. In addition to discussing common readings, each student will choose a censorship case or issue to research and present to the class.

AS.100.438. The City Victorious: Medieval Cairo. 3 Credits.
What was medieval Cairo like? Students explore urban life in this imperial capital (969-1517), including food and market habits; relations between Jews, Christians, and Muslims; patronage; plague, drought, and famine.Pre-requisite for enrollment: Students must have taken two history courses.

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Writing Intensive

AS.100.444. Migrants and Refugees in Africa. 3 Credits.
A history of forced and voluntary migration and displacement in Africa, its causes and consequences, with a focus on refugees and labor migrants since 1960.

AS.100.445. Revolution, Anti-Slavery, and Empire 1773-1792: British and American Political Thought from Paine, Smith, and the Declaration of Independence to Cugoano, Wollstonecraft, and the Bill of Rights. 3 Credits.
This seminar-style course will focus on discussing British and American political thought from the "Age of Revolutions", a period also of many critiques of Empire and of many works of Antislavery. Readings include Paine's Common Sense and Rights of Man, the Declaration of Rights, the Constitution and Bill of Rights, the Federalist Papers; works by Smith, Burke, and Wollstonecraft; and antislavery works by Cugoano, Equiano, Rush, Wesley, and Wilberforce.
Area: Writing Intensive

AS.100.450. History Research Lab. 3 Credits.
In this course, students participate in a research "laboratory," engaging in direct research on an area of faculty's research, leading to the development of a collective, digital humanities project.
Area: Writing Intensive

AS.100.478. Japan from its Peripheries. 3 Credits.
An advanced undergraduate seminar on the history of modern Japan from the perspective of regions and people often considered as belonging to its geographical, cultural, social, and political peripheries.
Area: Writing Intensive

AS.100.482. Historiography of Modern China. 3 Credits.
Study of Western, Chinese, and Japanese understandings of the history of China, emphasizing their implications for cultural understanding and for policy.

AS.100.486. Jim Crow in America. 3 Credits.
This course explores the history, politics, and culture of legalized racial segregation in the United State between the mid-nineteenth and twentieth centuries – a regime commonly known as "Jim Crow."
Area: Writing Intensive

AS.100.490. Writing Power, or Dueling in Print with Light Sabers: An RIC Seminar on Scholarly Composition. 3 Credits.
A first-of-its kind seminar hosted by the Program in Racism, Immigration, and Citizenship, this course explores the practice of composition for professional writers. It considers the "light" and "dark" sides of clear, direct scholarly writing and intentional, academic obfuscation, respectively. Attendees will also learn strategies and potential hazards that accompany the written description of power in the Humanities and Social Sciences.
Area: Writing Intensive

AS.100.494. Senior Honors Seminar. 1 Credit.
A two-semester coordinating seminar for history majors writing senior honors theses. Admission is granted by instructor only after the student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Area: Writing Intensive
AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.

AS.100.495. Senior Honors Seminar. 1 Credit.
The Senior Honors Seminar is a coordinating seminar for senior history majors who are writing senior honors theses and wish to graduate with departmental honors. To be taken concurrently with AS.100.508, Senior Thesis.
Prerequisite(s): AS.100.508
Area: Writing Intensive

AS.100.497. 1968: Rebels, Revolutions & the Right-Wing Backlash. 3 Credits.
The sixties were a polarizing decade of unrest, revolutions, and fundamental change across Europe and the US. We will discuss 1968 through the lens of national case studies, the Cold War, and the history of Baltimore. This is a community-engaged class!
Area: Writing Intensive

AS.100.507. Senior Thesis. 3 Credits.
Two semesters. Senior thesis writers will undertake research in primary materials that will explore a significant historical issue or problem. The DUS will confirm admission as soon as the student has selected a faculty thesis advisor: the outside deadline for confirmation is May 1. AS.100.507 is to be taken concurrently with AS.100.494 Senior Honors Seminar.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.100.508. Senior Thesis. 3 Credits.
This seminar is required for senior history majors who are writing senior honors theses and wish to graduate with departmental honors.
Area: Writing Intensive
AS.100.507;You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.100.535. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.100.536. Independent Study. 1 - 3 Credits.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.100.601. Decolonizing The Museum: Case Studies.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

AS.100.602. The French Revolution.
Introduces graduate students to the rich historiography of the French Revolution. Topics include: revolutionary origins, political culture and radicalization, citizenship, violence, family & gender, the search for stability after the Terror, global revolution, Napoleon's Brumaire coup.

AS.100.603. Readings in the Early U.S. Republic.
Small intensive group reading: the course is primarily intended for students working on their graduate field lists. Other formats are possible with permission of the instructor.

AS.100.605. Modern Britain & the British Empire.
Modern Britain and the British World is a graduate seminar which familiarizes students with major themes and historiographic debates in Modern British and Modern British Imperial History.

AS.100.607. Consumer Revolution in Global Perspective.
First semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include cultural theory; fashion, gender, and social identity; capitalism, retail, and credit; Enlightenment and the public sphere; political economy; overseas empire; globalization; and the Atlantic revolutions.

AS.100.608. The Consumer Revolution in Global Perspective.
Second semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include capitalism and consumption; political economy; fashion, gender, and identity; Enlightenment and the public sphere; globalization; empire and colonization; and the Atlantic revolutions.

AS.100.609. "Baroque" as a Historical Category.
This seminar will discuss the use of the concept of the "Baroque", as developed in the history of art, architecture, and music, as a category of historical periodization.

AS.100.610. Readings in Medieval Islamic Cultural History.
The seminar examines scholarship on central questions in medieval Islamic cultural history including historical writing; the history of education and scholarly cultures; cultural patronage and urban development.

AS.100.613. Modern Japanese and Korean Histories.
A reading seminar on the interconnected histories and historiographies of Japan and Korea in the nineteenth and twentieth centuries.

AS.100.614. Seminar in Modern Chinese History.
A seminar covering major milestones in research on late imperial and modern Chinese history, primarily in English.Open to undergraduates with the permission of the instructor.

AS.100.615. States, Scribes, and Archives: Medieval Arabic Documentary Cultures.
Historical survey of scribal and archiving practices of medieval Islamic states (in comparative perspective); includes close readings of primary documents, including legal deeds, petitions, edicts, fiscal receipts, and administrative reports.

AS.100.616. Post-WWII French and Francophone Writing On History.
This seminar will focus on texts by post-1945 authors who wrote in French and engaged with what it means to write about the past and how to do so. Among those we will focus on are: Aimé Césaire, Frantz Fanon, Assia Djebbar, Simone de Beauvoir, Michel Foucault, Félix Guattari and Gilles Deleuze, Paul Ricoeur, Alain Corbin, Arlette Farge, François Hartog, Paul Ricoeur, Etienne Balibar, Jacques Rancière, Paul B. Preciado, Fernand Braudel.

AS.100.617. Black Political History and Activism in Modern America.
This course focuses on the emergence and development of various strains of Black political thought and action within the modern US. Our course will explore themes of equality, citizenship, democracy, and freedom throughout the 20th Century, specifically as it pertains to the Black experience in America.

AS.100.618. Historiography of Law and Empire.
Introduction to recent work on the history of law and empire, with a focus on critical legal history perspectives.

AS.100.619. Early Modern France.
The second part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the French Revolution.

AS.100.620. Early Modern France and the French Empire.
Part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the early nineteenth century. Topics include: state formation; political culture; political economy; commercial capitalism; the Enlightenment; popular culture; empire, race, and slavery; and the French and Haitian Revolutions.

AS.100.621. Historiography of the Western European 1970s and 1980s.
How have historians grappled with the quite recent past? We will explore histories of the 1970s and 1980s, with a focus on France, Germany, and the UK, as well as transnational and post-decolonization approaches.

AS.100.622. Religion in Modernity: Theories and Histories.
Drawing on key works in classic and contemporary social theory of religion and secularity as well as historical, ethnographic, and sociological monographs, this course investigates some scholars' answers to the question of why we might want to take "religion in modernity" as an object of study (or not), what kinds of roles and importance religion (or various institutions, impulses, practices, and ideas connected to major faith traditions) has/have arguably enjoyed in an arguably global modernity often imagined as intrinsically secular, whether and how it matters that the category of religion itself may be a modern invention intertwined with specifically Christian-European and European imperial and colonial projects, whether and how we should take “secularism” or “secularity” as our object of study no less than or more than religion, what special kinds of research agendas and assumptions the empirical study of 'religion' and its workings and significance in modern political and cultural life might demand, what sorts of scholarly value it might add, and how the answers to those questions change when we look to a global present which is sometimes framed as post-secular. A more theoretically and comparatively oriented first part of the course will give way to focused attention on historical, sociological, and ethnographic monographs, with much attention to European, North American, and Near Eastern histories and societies, but ample room for students interested in East Asian, South Asian, African, and Latin American religious formations to investigate those literatures and bring to bear in class discussion. Readings likely include Weber, Bergson, Asad, Charles Taylor, de Vries, Lambek, Das, Roger Friedland, Wuthnow, Margaret Jacobs, Blackbourn, Mahmood, Susan Harding, William Connolly, Chidester, Bryan Turner.

AS.100.623. Telling Japanese Histories.
A graduate-level seminar on the political, social, and intellectual concerns that have both shaped and undermined dominant ways of telling Japanese history, especially in Japan and the U.S. since 1945.

AS.100.627. Histories of Development.
Reading seminar on the history of development as both ideology and practice in the nineteenth and twentieth centuries.

AS.100.632. Capetian France: Documents, Devotions and Sovereign Authority.
Through a careful study of texts and objects produced for and by the Capetian rulers during the thirteenth century we will interrogate the creation of the French state, the cultivation of royal ideology, and its practice of sovereign power.
Area: Writing Intensive

AS.100.634. The Haitian Revolution.
This seminar examines the origins, course, and legacies of the Haitian Revolution (1791-1804), the most radical movement of the Age of Revolutions. It explores the colonial background, the overthrow of slavery, the founding of an independent nation, and the aftermath of revolution in the nineteenth century.

AS.100.638. Reading Seminar in Early Modern History.
This is a graduate seminar devoted to close reading of crucial works in early modern history and historiography.

AS.100.640. 20th-Century European Imperial and Transnational Histories.
This course will look at recent historiography on extranational approaches to 20th-century European histories, with a focus on France, the United Kingdom, USSR/Russia, and Germany.

AS.100.641. Global Catholicism in the Early Modern Period.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture. Graduate students only.

AS.100.643. Jewish Paths Through Modernity.
Intensive introduction to the key trends and trajectories in modern Jewish history and the major themes in Jewish historiography. Intended to serve both graduate students outside the Jewish history field and graduate students pursuing a field in modern Jewish history.
Area: Writing Intensive

AS.100.645. Race, Law, History.
This seminar examines the relationship of law to the construction of race and inequality in US history, investigating the legal archive through the perspectives of critical race theory and critical legal history. Course can be taken a maximum of two times.

AS.100.648. Crown, Court, and Charter: Political Culture in the High Middle Ages.
Explores mechanisms of political power and the rise of the state in Europe during the High Middle Ages by analyzing royal ideology, administrative growth, legal change, and cultural production.

AS.100.652. European Socialist Thought.
A survey of European socialist theories, including Marxism, anarchism, Social Democracy, feminism, and anti-imperialism. Authors include Proudhon, Marx, Engels, Bakunin, Bernstein, Lenin, Luxemburg, Sorel, Kollontai, Gramsci, and Fanon.

AS.100.653. Africa in the Twentieth Century.
Reading seminar in modern African history. Focus for 2022 will be on gender and sexuality.

AS.100.661. Racial Literacy in the Archives.
This course explores how to use race as a historical category of analysis, and teaches attendees how to locate how historical actors deploy race and racism to make claims, organize labor and identities, and imagine political possibility.

AS.100.664. Heresy and the Holy: Religion and Society in Medieval Europe.
The course explores the rise of heresy and holiness as categories during the Middle Ages.It traces the advent of religious movements, the effects of religious reform, the centralization of ecclesiastical authority, the rise of vernacular spirituality and dissent, and analyzes the historiographical and methodological approaches to the study of medieval religion.

AS.100.666. Topics in Modern Jewish History.
Continuation of AS.100.668 Colloquium in Modern Jewish History.

AS.100.671. Play and Violence in Medieval France.
Since the work of Geertz, Huizinga, Bakhtin and Caillois, among others, the intersection of play and violence has been a focal point for historians, anthropologists, literary scholars, even psychologists. This seminar traces the twin themes of violence and play as instantiated by the fighting classes in the High Middle Ages, beginning with the emergence of the tournament and the crusading movement in the eleventh century. By examining sources in Old French and Latin, we will contextualize music, dances, comedies, and contests that accompanied the violent rituals around which French aristocratic life revolved. Course may not meet weekly.
Area: Writing Intensive

AS.100.672. Medieval Materialities: Objects, Ontologies, Texts and Contexts.
We will use the meanings and methodologies of “materiality” to examine the medieval world, by analyzing objects, texts, networks, patterns of circulation and appropriation, aesthetics and enshrinement, production and knowledge communities.

AS.100.680. Reading Seminar in Early American History, c. 1500-1800.
Colonization and settlement in the Americas brought people from all kinds of places together. This course will explore those contacts, and how they shaped the American experience. The focus is on new books in early American history.

AS.100.681. Research Seminar in Atlantic History, 1600-1800.
Writing workshop for graduate students at all stages presenting work in progress. Discussion of theories, methods, and challenges of graduate student writing.

AS.100.682. Introductory Topics in Computation for Scholarship in the Humanities.
The first half of this seminar course consists of non-mathematical introductions to, and discussions of, the fundamental motivations, vocabulary, and methods behind computational techniques of particular use for humanistic research. The second half combines selected readings chosen to address specific questions raised by these discussions with hands-on application to students’ research goals. Each participant will lead discussion for one of the selected readings relevant to their interests.

AS.100.695. Problems in U.S. Social & Cultural History.
A graduate level seminar in social and cultural history in the 19th and 20th centuries.

AS.100.696. Problems in American Society and Culture.
An intensive graduate seminar exploring various topics in US social and cultural history, focusing on the period from the late 19th century to the late 20th century.

AS.100.700. American Intellectual History.
Readings on late nineteenth- and twentieth-century American and transatlantic social theory.

AS.100.707. The Black World.
This course explores the practice of writing and reading the history of African Americans and the wider African Diaspora. Participants will share written work and do close readings of primary and secondary texts exploring the black experience in Europe, Asia, Africa, and the Americas.

AS.100.708. The Black World II.
The Black World Seminar considers the making and meaning of blackness between the 14th and 20th centuries and Africans and people of African descent's impact on the making of the modern world, from the slave trade to the present. We explore, too, the historical forces which created blackness as a marker on the body and as a political and cultural identity.

AS.100.710. Reformation Europe.
A course discussing major recent works of historiography on Reformation Europe, examining Lutheranism, Calvinism and Anabaptism; iconoclasm, visual, and print culture; urban, social, and gender history; demonology and witchcraft; and martyrology, tolerance and intolerance.

AS.100.713. Black Womanhood.
What does a usable history of black womanhood (black queer and trans womanhood inclusive) look like? How do we imagine, create, and narrate black women's stories? Black women's history across time and space.

AS.100.716. Cultural Theory For Historians.
An examination of modern cultural theories, with emphasis on mass culture and consumerism. Authors include Simmel, Kracauer, Benjamin, Horkheimer, Adorno, Barthes, Debord, Bourdieu, and de Certeau.

AS.100.722. The History of Trans Femininity.
This seminar will offer training in feminist, queer, transgender and postcolonial approaches to the history of sexuality by exploring what methods are adequate to writing the history of trans femininity as a specifically nineteenth and twentieth century phenomenon. Areas of emphasis will include histories of sexology, sex work, social movements, and trans feminism and its opponents. The primary geographic focus will be the US, but through a transnational lens that connects to Western Europe, South Asia, and Latin America.

AS.100.724. Sex and Slavery.
Research and methods in the field of sexuality and slavery studies. Graduate students may take this course up to two times.

AS.100.725. Sex and Slavery II.
Research and methods in the field of sexuality and slavery studies. Part 2: Caribbean & African Continent.

AS.100.728. Historical Writing in the Middle Ages.
This course investigates the basic techniques of writing history and the matters traditionally covered in medieval historical texts by reading a series of exemplary medieval historiographical works. This is preceded by a section on theoretical orientations to the study of history and historiography in order to provide the analytic tools for analyzing medieval texts.

AS.100.729. Reading Seminar: British America and the Early United States in Atlantic Perspective.
Introduction to the history and historiography on British North America and the United States.

AS.100.730. Reading Seminar: British and French North America and the Early United States in Atlantic Perspective.
Continuation of AS.100.729 for students conducting field exams.

AS.100.731. Colonial Africa: French African Empire.
A reading seminar in colonial African history; the focus may be on French African empire.

AS.100.733. Reading Qing Documents.
Open also to advanced undergraduates with at least one semester of Classical Chinese. This course has several objectives. First and foremost, it is a hands-on document reading class designed to familiarize students with the skills, sources, and reference materials necessary to conduct research in Qing history. To that end, we will spend much of our time reading documents. At the same time, we will engage in problem solving exercises designed to develop and enhance basic research skills. Finally, we will consider important archive-based secondary works which demonstrate the ways in which historians have made use of Qing documents in their scholarship.

AS.100.735. Early Modern Britain and the Early Modern British Empire.

AS.100.736. Early Modern Britain and the Early Modern British Empire.

AS.100.738. Women, Genders and Sexualities.
In May 2020, Johns Hopkins will host the meeting of the Berkshire Conference on Women, Gender and Sexualities, a gathering of 1200 scholars from across the world. Our seminar will use the Berkshire Conference program to organize a set of readings that will anticipate the panels, roundtables, performances, and plenaries that will be on campus between May 28 and 31, 2020. Attendance at the conference is not required, but it is recommended.

AS.100.744. Twentieth Century France and the French Empire.
We will read and discuss recent monographs and historiographical essays that emerge from and inform French history, with particular attention transnational, imperial, Mediterranean, international, and colonial frames and questions.

AS.100.749. Social Theory for Historians: Marx, Durkheim, Weber.
An examination of the works of Marx, Durkheim, and Weber, as examples of the Hegelian, positivist, and hermeneutic traditions of social theory.

AS.100.751. Early Modern European Intellectual History.
Early Modern European Intellectual History

AS.100.753. Modern American Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly

AS.100.755. Modern American Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.756. Reading Seminar in Chinese History.
A seminar covering recent work on late imperial and modern Chinese history, primarily in English.

AS.100.757. Cultural Histories of Late Imperial China.
This reading seminar will introduce graduate students and advanced undergraduates (by permission) to recent studies of Late Imperial and Republican China that can (by various standards) be classified as works of cultural history.

AS.100.759. Arabic Historical Writing in the Middle Ages.
The course examines various genres of Arabic historical writing during the high and late Middle Ages (10th-15th c.). All primary readings are in English/French translation (no Arabic required).

AS.100.761. History of Capitalism.
Readings on the history of capitalism since the mid-nineteenth century, with an emphasis on the American context.

AS.100.762. History and Historiography of 19th France in Europe and the World.
This course will look at recent historiography on France and the French empire, notably in North Africa. We will pay particular attention to transnational and imperial questions.

AS.100.765. Problems in Women and Gender Studies.
An exploration of recent work in women's and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, difference, and civic orders.

AS.100.769. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome.

AS.100.770. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome. Graduate students only.

AS.100.781. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.782. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.783. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.784. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.785. Seminar: Early Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Early Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.786. Seminar: Early Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Early Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.787. Seminar: Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.788. General Seminar: Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.789. Seminar: American.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.790. General Seminar: America.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.791. Seminar: Latin American.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in Latin American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly

AS.100.792. General Seminar: Latin America.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in Latin American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.793. Seminar: African.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in African History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.794. General Seminar: Africa.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in African History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.797. First Year Graduate Workshop.
First-year graduate workshop for History PhD candidates only.

AS.100.798. First Year Graduate Workshop.
First-year graduate workshop for History PhD candidates only.

AS.100.801. Dissertation Research.
TBA

AS.100.802. Dissertation Research.

AS.100.803. Independent Study.
TBA

AS.100.804. Independent Study.

AS.100.890. Independent Study.

Cross Listed Courses

Agora Institute

AS.196.311. Democracy. 3 Credits.
Democracies around the world are under threat. This course introduces students to the philosophical foundations of democracy as well as the history of democratic revolutions, institutions, and principles. How can we defeat the most important contemporary challenges to democracy, including populism, authoritarianism and disinformation? And how can we revive the "democratic spirit" - in America and around the world?

AS.196.364. This is Not Propaganda. 3 Credits.
We live in an era of disinformation' mass persuasion and media manipulation run amok. More information was meant to improve democracy and undermine authoritarian regimes- instead the opposite seems to be happening. This course will take you from Russia to South Asia, Europe to the US, to analyze how our information environment has been transformed, why our old formulae for resisting manipulation are failing, and what needs to be done to create a model where deliberative democracy can flourish.
Area: Writing Intensive

Center for Africana Studies

AS.362.102. Anti-Racism 101. 3 Credits.
What is Anti-Racism? How do we identify racism's presence and effects, and how do we direct social and civic resources to end it? In this Freshman Seminar, students will learn from a series of faculty experts and invited guests about the history, workings, and legacies of racism. They'll also study present-day and past approaches – attempted and theorized – to abolish racism in the modern world.

AS.362.111. Introduction to African American Studies. 3 Credits.
This course introduces students to the interdisciplinary field of African American Studies, with attention to the literature, film, culture, history, and politics of black life in the United States. Our reading list will likely include texts by David Walker, Frederick Douglass, Frances E.W. Harper, Sutton Griggs, W.E.B. Du Bois, James Baldwin, Amiri Baraka, Toni Morrison, and others.

AS.362.112. Introduction to Africana Studies. 3 Credits.
This course introduces students to the field of Africana Studies. It focuses on the historical experience, intellectual ideas, theories, and cultural production of African-descended people. We will consider how people of the black diaspora remember and encounter Africa. We will explore, too, how such people have lived, spoken, written, and produced art about colonialism and enslavement, gender and mobility, violence and pleasure. This course will be thematically organized and invite you to center your own stories about black people within your understanding of the modern world and its making.

AS.362.204. Anti-Black Racism and Black Freedom Struggles: History, Theory, and Culture. 3 Credits.
In Anti-Black Racism and Black Freedom Struggles: History, Theory, and Culture, students will learn about key historical, intellectual, and political aspects of white supremacy as a system or racial domination, and anti-black racism as a central feature of that global system. This class will explore the historical forms that white supremacy has taken—from colonialism and plantation slavery to Jim Crow, gentrification, and mass incarceration—racial ideologies, and how modern political systems have hinged on racial oppression. Most important, we will explore how black people have responded to the structures and ideologies of white supremacy, their thinking about freedom, being, and rights, and their efforts to fit into the worlds in which they found themselves, to improve those societies, and those projects that sought radical alternatives to the an anti-black world.
Area: Writing Intensive

AS.362.309. Performing the Archive 2022: 200 Years of US-Liberia Migration. 3 Credits.
This seminar will explore some of the pivotal historical and contemporary connections between the US and Liberia since the first Black American settlers arrived in West Africa with the American Colonization Society in 1822. This course asks: What are implications of these stories of migration and reception for how we make sense of global anti-Blackness in the contemporary moment? How does performance provoke new questions about shared histories of those impacted by colonialism and the transatlantic slave trade? Why is a more in-depth understanding of 19th century Black political thought and the precolonial West African indigenous category necessary for developing theory on the political economy of race today? Through the lens of performance studies, students will analyze the documents in the American Colonization Society archive, to reimagine these early encounters as informed by historical documentation including folklore and pan-Africanist theory. Through exploring a range of historical and contemporary materials that center the problematic "indigenous/settler" binary, students will engage in a dramaturgical process which presents powerful possibilities for unlearning historical misrepresentations. In particular, students will develop theater-based projects that interrogate the spatio-temporal connections between the stories of both, free Blacks and those who were enslaved in Maryland and manumitted to go to Liberia, and the contemporary politics of Liberia-US migration.

Classics

AS.040.216. Exploring the Ancient Astronomical Imagination. 3 Credits.
This course takes us on an exploratory journey through the ancient astronomical imaginary. We will focus on ancient Greek and Roman ideas about the structure of the cosmos, the substance and nature of the stars, the Earth's place and role in the universe, ancient attempts to map the stars, and ancient beliefs about the significance of cosmic phenomena for events in the human world. The course will culminate in the extraordinary ancient tradition of lunar fictions, which are our earliest imaginative accounts of life on other worlds. Come join us for a voyage to the stars!

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.

Comparative Thought and Literature

AS.300.301. Women and Work in the US. 3 Credits.
This course offers an introduction to the political forces, cultural values, and social factors which have shaped the history of women's labor in the US. This course will ask question such as: Why do we place a higher value on work which takes place in the public sphere than work in the home? How do representations of work in literature and popular movies reinforce or subvert gender roles? How have women negotiated gendered and racial boundaries through political action or writing? Focusing on racialized labor, domestic labor, sex work, and factory work, the course will provide an interdisciplinary cultural study of women's work relevant to our current historical moment. Authors discussed include Saidiya Hartman, Harriet Beecher Stowe, Emma Goldman, and Kathi Weeks.
Area: Writing Intensive

AS.300.311. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.

Development, Climate, and Sustainability

SA.500.109. Facing the Oil Problem: The United States, Canada, OPEC and the World. 4 Credits.
Every aspect of foreign and domestic policy feels the effect of the oil problem. Solutions will be difficult. The course assesses direct and indirect costs of oil addiction, including global warming. Considers scenarios of supply disruption. Examines who controls oil and how. Explains "peak oil" and the loss of "spare capacity" to cushion price shocks. Looks at heavy oil production from Canada, America's largest oil supplier. Weighs energy initiatives, alternative energy development and future energy RD&D. Unravels complexities of the oil problem and explores what is to be done about it. (This is a cross-listed course offered by the Energy, Resources and Environment Program that also can fulfill a requirement for the Canadian Studies Program and the Latin American Studies Program.)
Students may not register for this class if they have already received credit for SA.680.759[C]

East Asian Studies

AS.310.106. Introduction to Korean History and Culture. 3 Credits.
This course offers a comprehensive overview of Korean history and culture from ancient times to the modern era. Through primary, secondary, and audio-visual sources, students will become familiar not only with the overall contours of the entirety of Korean history, but also with its cultural and religious legacy. The course combines lectures and class discussions.

AS.310.210. Documentary Photography in a Changing China. 3 Credits.
This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP).

AS.310.322. Korean History Through Film and Literature. 3 Credits.
In this course, students will engage with select topics in Korean history from premodern and modern times and examine how the past has been represented through various forms of film and literature. This will be combined with readings of academic articles to allow students to gauge the distance between scholarship and cultural expressions of history. Through this, students will be introduced to the highly contested and often polarizing nature of Korean history and the competition surrounding historical memory. Prior coursework in East Asian Studies strongly recommended.
Area: Writing Intensive

AS.310.326. Labor Politics in China. 3 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Area: Writing Intensive

English

AS.060.328. Malcolm and Martin: An Introduction to the Lives and Thought of Two Icons of the Black Freedom Struggle. 3 Credits.
Using their recorded speeches, written lectures and published writings and drawing from their biographies, this course will explore the important life work of Malcolm X and Martin Luther King Jr. We intend to upend traditional conversations about political radicalism and ethnic politics by analyzing these spokesmen associated most indelibly with black nationalism and racial integration, respectively.
Area: Writing Intensive

AS.060.361. The Politics of Memoir. 3 Credits.
This course explores the interlocking political and historical dimensions of personal experience, an account of ourselves and our relations ("the quest for competitive advantage between groups, individuals, or societies") that points us in the direction of what "is 'common' to the whole community." What does it mean for people who are not the chief actors or theoreticians of political movements to construe the record of their experience as an act of political intervention, an aid in our total understanding of the structure of popular belief and behavior? Furthermore, what happens when attempt to historicize and critique these recorded experiences? The class asks its members to focus closely on an episode of autobiographical experience as both an historical fossil and tangible politicized moment, particularly the places where race, gender and economic power are visible. By producing a "critical discourse of everyday life—by turning residual, untheorized everyday experience into communicable experience… one can reframe ostensibly private and individual experiences in terms of a collective struggle." To help our investigation we will read and analyze closely memoirs, many of them from the African American experience. We function partly as a writers' workshop and partly as a critical review. The final goal of the seminar is a polished 20-25 page autobiographical essay.
Area: Writing Intensive

AS.060.644. Oceanic Studies & the Black Diaspora.
In this course, we take up Hester Blum's blunt observation that "the sea is not a metaphor" in order to consider the visions and hopes black writers have associated with the sea, as well as the despair and trauma transatlantic slavery has left "in the wake," to quote Christina Sharpe.
Area: Writing Intensive

Europe and Eurasia

SA.554.102. Politics of Protest in Europe and Eurasia. 4 Credits.
This class provides students with an in-depth exploration of the motivations behind, strategies of, and societal changes produced by various instances of collective mobilization across Europe. Some of the main questions we seek to answer throughout this course are: Along what lines of grievance do social movements form? Why do people choose to protest collectively given threats of reprisal? What explains the rise in support for populist outreaches by far-right parties in Europe's most democratic countries? By examining a wide variety of movements, from labor mobilizations such as Poland's Solidarity to ethnic nationalist campaigns by groups such as the Basques and the Kurds, we use comparative analysis to identify points of convergence and divergence across cases. We explore how mobilization strategies spill across borders in "waves" of protest, such as those prefacing the collapse of the Soviet Union. We also investigate how developments in media and technology affect protest outcomes – and when they don't, such as the "Twitter Revolution" that failed in Moldova. Students will gain both empirical insights into particular cases across Europe as well as the conceptual tools used by scholars of comparative politics to analyze the puzzling but highly topical questions above.
Students may not register for this class if they have already received credit for SA.710.707[C]

European and Eurasian Studies

SA.710.737. Writing for Policy: A workshop on the journal, 'Survival: Global Politics and Strategy'. 4 Credits.
This seminar/workshop might also be titled "Writing and Editing for Policy Debate." Following short lectures and class discussion of fiction and non- fiction models for good writing, students will participate, in real time, in a 'shadow editorial process' putting together two issues of the bi-monthly journal, Survival: Global Politics and Strategy. Students will also meet with the instructor in individual tutorial sessions to assess and edit drafts of their own writing.

SA.710.763. Movement Towards European Unity. 4 Credits.
This course represents an introduction to the historical development of the European Community and the European Union. That said, the perspective I adopt is grounded more solidly in political science rather than history. My argument is that European integration can be explained as a function of three types of variables: Ideas, events, and ?unintended consequences?. The analytic claim is that European integration started and is perpetuated to shore up the weaknesses of individual nation-states and of the national state system. In other words, the course is grounded on a set of very specific (and very controversial) arguments and interpretations. These must be examined carefully, critically, comprehensively. They must be challenged. And, if necessary, they must be refuted. The material surveyed in the course should help you do all those things and more.

SA.710.783. EU Foreign Policy. 4 Credits.
The course offers both a general introduction and a more in-depth approach to the way in which the European Union (EU) acts in international relations. It is meant to provide a balanced analysis of all the main issues involved inside as well as outside Europe proper, and to stimulate the students to address specific themes while giving them a flavor of how policy is actually made in Brussels.

Film and Media Studies

AS.061.396. Modern Paris on Film. 3 Credits.
This course uses French film to examine the history of twentieth-century Paris. We will consider how filmmakers interpreted the social, political, and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. $50 lab fee.

AS.061.397. French Masculinities. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.

First Year Seminars

AS.001.101. FYS: The Hospital. 3 Credits.
Johns Hopkins invented the modern hospital along with modern medical education. This seminar will explore the history of the hospital from its monastic origins to its current form, with particular attention to how hospital design has reflected and reinforced ways of thinking about health, disease and medical treatment. We will also consider specialized hospitals and clinics, for the mentally ill, for particular diseases, for women and children, among other topics.

AS.001.102. FYS: Japanese Robots. 3 Credits.
Japan is a world leader in biomimetic robotics. Japanese society enthusiastically embraces robotic nurses, robotic guides, robotic waiters, robotic pets, and even robotic girlfriends. What are the origins of the Japanese love of robots? What role did robotics engineers play in creating the image of loveable robots? What societal fears do Japanese robots assuage and what hopes do they foster? In the course of the semester, students will learn about the evolution of Japanese robotics, and explore the implications of this evolution to humans' relationship with robots. While learning about Japanese robots, students will acquire skills necessary for college-level education, including how to write an email to a professor, how to organize and manage digital tools, how to navigate the information resources, and how to develop, complete, and present research projects. This course will equip students with skills essential to their success in college and beyond.

AS.001.103. FYS: When Worlds Collide - Science Goes Global. 3 Credits.
In this First-Year Seminar, we will explore instances of contact between different world cultures and pre-modern and modern science (16th-20th c.). The premise of the course is the understanding that in addition to the cultural, religious and political negotiations that took place during cross-cultural encounters, science also underwent a similar process. We understand science expansively, as the study of nature and the production of knowledge about it embedded in a particular cultural context. The historical episodes we will discuss are selections of instances where agents of the West—missionaries, explorers, businessmen, colonists, scientists—established prolonged contact with non-western cultures and engaged in conversations about their worldviews. Some cases considered include Jesuits in the Chinese imperial court, Spanish missionaries among the Maya, and English explorers in the Pacific islands.

AS.001.120. FYS: U.S. History of the Present. 3 Credits.
Which ideas, movements, problems, and conflicts define the contemporary United States—and where did they come from? In this First Year Seminar we'll study the history of this country over the last three decades to try to answer those questions. Using a range of written and visual materials, we'll investigate the history behind concepts like "globalization," "the free market," "identity politics," "culture wars," and the "War on Terror," and discuss the causes and consequences of the debates they provoked in this period. We'll also assess what's appealing and challenging about studying the very recent past and using it to interpret our present.

AS.001.145. FYS: The Haitian Revolution. 3 Credits.
Long overshadowed by the American and French Revolutions, the Haitian Revolution (1791-1804) is now widely recognized as one of the most important events in modern history. The most radical of the Atlantic Revolutions, it began with a massive uprising of the enslaved against the institution of slavery and culminated in the independence of the nation of Haiti. This First-Year Seminar will examine the origins, course, and legacy of the Revolution, addressing such issues as colonialism, racism, slavery, emancipation, human rights, and national sovereignty – issues that continue to shape the contemporary world.

AS.001.157. FYS: Leonardo da Vinci - Art, Science, and Medicine. 3 Credits.
How does a notary's son trained as a painter gain expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? How did an artist/engineer who brought few projects to completion come to have such a huge impact on later generations? This First-Year Seminar will focus critically on the myth of Leonardo's singularity while showing his achievements to be characteristic of the artisanal culture of his time.

AS.001.159. FYS: Apartheid as Analogy - Structures of Racial Hierarchy in South Africa, Baltimore, and Beyond. 3 Credits.
Sites of racial conflict, from Palestine to Baltimore, have been compared to South African Apartheid. This First-Year Seminar examines the creation of a totalizing system of racial segregation and exploitation in twentieth century South Africa, and how it can help us understand histories of race elsewhere in the world, including our own city.

AS.001.161. FYS: Books, Authenticity, and Truth. 3 Credits.
We are living through a crisis in how we take in information. Bombarded by information of all sorts coming at us on phones, tablets, and computer screens, it can be difficult to make sense of it all and harder still to determine whether something is true or false, authentic or inauthentic. The scale and speed of the change in media that we are undergoing is unprecedented in human history. Nevertheless, people in the past have faced moments of crisis – moments when writing seemed unreliable, when the format of written information changed, and when new publication formats forced reevaluations of the nature of truth. This First-Year Seminar will take us from Greco-Roman antiquity to the modern age, with stops along the way in the European Middle Ages, Renaissance, and Enlightenment. We will read selected texts that illuminate the place of writing, books, and the search for truth, think about the structure of libraries in the western Middle Ages and Renaissance, do extensive hands-on work with rare books, and visit other repositories of information, all toward the end of evaluating how the history of books and information can help us in our current quest to make sense of our world.

AS.001.163. FYS: Black Baltimore Archives - From Frederick Douglass to Billie Holiday. 3 Credits.
Black Baltimore Archives is an intense exploration (and excavation) of local African American history and narrative. Using the lives of Baltimore's most prominent artists-Frederick Douglass and Billie Holiday- this First-Year Seminar will explore questions connected to creating the historical record, assembling visual and sonic representations of black life, and the challenges that access and preservation pose to sustaining black community. We will visit the Afro-American Newspaper archives, the Maryland Center for History and Culture, the Maryland State Archives, and Morgan State University special collections, among other key archival repositories. Students will participate in a national conference and a local jazz event.

AS.001.166. FYS: The Pleasures of the Imagination - British culture in the eighteenth century. 3 Credits.
Music, Art, plays, novels, satires, and material culture all expanded dramatically in Britain in the long eighteenth century (c. 1714-1830). Contemporaries spoke of the rise of 'beauty', of the appreciation of the 'pleasures of the imagination', and of the rise of a culture of 'happiness'. This First-Year Seminar will introduce students to these exciting developments in British (and British American) culture.

Global Risk

SA.630.740. Risk in International Politics and Economics. 4 Credits.
This is a course on social science research methods as they apply to decision-making under conditions of uncertainty. In other words, it looks at how the skills of a social scientist can be put to use in the 'real world'. The course begins by looking at how decision makers anticipate future events, it explores what evidence they consider and what they ignore, and it looks at the standard models they apply in projecting the future based on the present. The case studies applied in this early part of the course focus on seemingly straightforward economic and financial questions. The problem is that most of the predictions that were made in these areas ended in disaster. Hence the course turns to explore the bias that is built into estimates of the future to understand whether the problem lies in the way the world works or in how we try to understand it. It introduces students to a conceptual vocabulary based on systems theory to make it easier to build more complex relationships into the analysis. And it explores the unintended consequences of policy decisions. Here the case studies move from economics to politics and from crisis to stagnation. This does not offer much of an improvement. Therefore the course makes a third analytic turn to bring the dynamics of human interaction more firmly into focus. It looks at negotiation, communication, and culture as possible sources of error or misunderstanding. The case studies focus on conflict, terrorism, and popular protest. By the end of the course students have a better grasp of where their predictions are likely to falter. They will also understand why such predictions must nevertheless be made. Risk in the international political economy derives from decision-making under conditions of uncertainty. The problem is that uncertainty is inevitable, but decisions must be made regardless of this.

History

AS.100.340. Asian American Art and Activism: Third World, Feminist, and Queer Solidarities. 3 Credits.
This interdisciplinary course surveys critical themes related to Asian American art and activism including perspectives from history, art and visual culture, literature and gender and sexuality studies.
Area: Writing Intensive

AS.100.410. Decolonizing The Museum: Case Studies. 3 Credits.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

AS.100.601. Decolonizing The Museum: Case Studies.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

History of Art

AS.010.208. Leonardo da Vinci: The Renaissance Workshop in the Formation of Scientific Knowledge. 3 Credits.
How does a notary's son trained as a painter come to claim expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? The course will focus critically on the myth of Leonardo's singularity and explore his achievements with regard to the artisanal culture of his time, as well as the problems of authority in the recognition of artisanal knowledge as scientific discovery.

AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez. 3 Credits.
Explores the different ways Early Modern painters and printmakers incorporated mirrors and optical reflections into their works for the sake of illusion and metaphor, deception and desire, reflexivity and truth-telling. Connecting sense perception and ethical knowledge, embedded mirror images often made claims about the nature of the self, the powers of art, and the superiority of painting in particular.

AS.010.235. Art, Medicine, and the Body: Middle Ages to Modernity. 3 Credits.
This course explores seven centuries of fruitful collaboration between physicians and artists, uncovering the shared discourses, diagnostic techniques and therapeutic agendas that united the art of picture-making with the art of healing. Topics include the origin and development of medical illustration; the long, cross-cultural history of the therapeutic artefact; the anatomical investigations of Renaissance artists such as Leonardo and Michelangelo; depictions of bodily pain and disease in the art of Matthias Grünewald and psychosomatic syndromes like melancholy in the work of Albrecht Dürer; the spectacularization of the body in Enlightenment science and the ethics of medical specimen display today -- all in order to bring the complex intersections of the history of medicine and the history of art into view.

AS.010.252. Sculpture and Ideology in the Middle Ages. 3 Credits.
This lecture course will offer a selective, thematic exploration of the art of sculpture as practiced in the Middle Ages, from the fall of the Roman empire in the 4th century CE to height of the Gothic era. The primary concern will be to analyze sculpture in all of its forms – monumental free-standing, architectural, liturgical, and commemorative – as the primary medium utilized by patrons, both private and corporate, to display political messages to an ever growing public.

AS.010.305. The Ethiopia at the Crossroads. 3 Credits.
Ethiopia played a foundational role in modern-day civilization and culture: as the find site of Lucy, the earliest bipedal hominid, the seat of the Queen of Sheba's kingdom, the second country in the world to adopt Christianity in the early 4th century CE, and the nexus of exchange between Africa, Europe, and Asia. In fall 2023, The Walters Art Museum will mount the exhibition tentatively titled, Ethiopia at the Crossroads, which addresses Ethiopia's relationship and artistic exchange with its surrounding cultures, including South Arabia, Nubia, Egypt, Byzantium, Armenia, Italy, and India. It also discusses the impact of Ethiopian art beyond its borders, bringing works of Ethiopian contemporary art into dialogue with the historical Ethiopian art that these artists draw upon in their work. The exhibition covers approximately 1,750 years of Ethiopian history with a special focus on the art of the medieval period, broadly conceived. The course will also offer insights into how a museum exhibition is developed from the initial concept to the physical presentation in the galleries.

AS.010.325. Blood, Gold, and Souls: The Arts of the Spanish Empire. 3 Credits.
From the sixteenth through the eighteenth centuries, visual forms and practices linked such far-flung places as Mexico City and Naples, Manila and Lima, Cuzco and Antwerp, Quito and Madrid: all cities in the Spanish Empire. This course is conceived as a voyage, moving city by city to explore objects that connected Spain's vast holdings. We will investigate how the Spanish Crown and the Catholic Church used visual strategies to consolidate political power and instill religious faith across the world; and, alternatively, we will consider how local conditions, concerns, and resistance reshaped those efforts. This course surveys a diverse range of artistic production: religious paintings and sculptures; maps used for imperial surveillance; luxury goods crafted from shimmering feathers, ceramics, ivory, and precious metals; urban design and architecture from the ports of Europe to the highland outposts of the Andes; ephemeral cityscapes for civic performances. In examining such materials, students will be introduced to the art historical methods and theoretical concerns used to study a wide diversity of objects within an imperial frame.

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire's formative centuries, when three successive capital — Bursa, Edirne, and Istanbul — served to visualize the sultans' growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.

AS.010.338. Art and the Harem: Women's Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem —as an institution, a physical space, and a community of women— from various art-historical perspectives, considering such topics as the harem's architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem's visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.

AS.010.339. Sex, Death, and Gender: The Body in Premodern Art, Medicine, and Culture, c. 1300-1600. 3 Credits.
To what extent was the body and its depiction a site of contestation, identification, or desire in the Middle Ages and Renaissance? If the body in the West since the 1800s is seen to have been shaped by the rise of photography and film, the institutionalization of biomedicine, and the establishment of techniques of surveyance and mechanization, then how was the body represented, disciplined, and experienced in the preceding centuries? In an age of unprecedented encounter with non-European bodies, what did it mean to describe and categorize bodies by race, region, or religion? These are some of the major questions this class seeks to answer, which is fundamentally interdisciplinary as it draws upon insights and methods from anthropology and the history of medicine and history of science to investigate how the body has been represented and imagined in the visual arts. The bodies of the suffering Christ, the female mystic, the dissected cadaver, the punished criminal, and the non-European 'Other' will loom large as we work to problematize notions of a normative body, whether in the premodern world or in the contemporary one. While most readings and lectures will concern the body and its representation in the Christian West during the later Middle Ages and Renaissance, students are encouraged to work on a topic of their choosing from any geographical area 1000-1800 CE for their research papers.
Area: Writing Intensive

AS.010.432. Therapies of Art and Literature from Antiquity to Early Modern Europe. 3 Credits.
This seminar examines the myriad ways artists and writers geared their work toward the therapeutic healing of mind, body, and soul, and the role images and texts could play in programs of individual and collective transformation. Taking as our point of departure the ancient tradition of spiritual exercises and inner dialogue, Petrarch's therapy of the passions, and the revival of consolatory letters, we will consider how the Christian artist could invest their work with medicinal, magical, sacramental, or spiritual efficacies, and even take on the mantle of a "physician of souls." Intersections with the histories of medicine and religion will lead us to the ways natural medicine and the thaumaturgical practices associated with pilgrimage could be transposed into the arena of spiritual therapy. Featured authors include Cicero, Marcus Aurelius, Augustine of Hippo, Boethius, Petrarch, Michel Foucault, Pierre Hadot, and Allain de Botton; artists include Hieronymus Bosch, Albrecht Dürer, Matthias Grünewald, and many others.
Area: Writing Intensive

AS.010.459. The illuminated charter: visual splendor, performance, and authenticity of medieval legal documents. 3 Credits.
This course investigates the complexities of medieval legal documents, their specific visuality and materiality, as well as practices of copying and forgery. We will address the aesthetics of legal documents, their graphic signs, seals, and paleography and the authenticating strategies used to corroborate their legitimacy. Another emphasis is set on the performative aspects of the medieval charters in court and church rituals. Comparison with contemporary illuminated sacred books will reveal the tight connections of monastic scriptoria and royal/imperial chanceries. The geographic focus is set wide, ranging from medieval Spain, to Carolingian and Ottonian chanceries in France and Germany, to the papal court in Rome and the imperial and monastic scriptoria in Byzantium.
Area: Writing Intensive

AS.010.604. Contested Patterns: Islamic Art History and Its Challenges.
Formed against the backdrop of nineteenth- and twentieth-century Orientalism and colonialism, the field of Islamic art history continues to grapple with the overwhelmingly Eurocentric assumptions, narratives, and approaches that shaped its emergence and development. These inherited perspectives and the debates they have sparked are the focus of this seminar, which critically examines the foundational characterizations of Islamic art—as ornamental, iconophobic, and timelessly other—together with the exhibitory, commercial, and scholarly contexts in which such ideas took root. Adopting a simultaneously thematic and chronological approach, the seminar will trace the ways in which diverse constellations of actors—including those from within the Islamic world itself—have variously established, consolidated, or challenged the field's underlying concepts. We will explore how this discursive process has intensified in our own time, in which a spate of scholarly and popular treatments have laid bare the tension between calls to reevaluate the field and an enduring impulse to reinscribe its established contours. Alois Riegl, Oleg Grabar, Gülru Necipoglu, Yasser Tabbaa, and Wendy Shaw are among the authors whose writings will be assessed and compared. Throughout the seminar, we will ground our historiographical inquiry in discussions of specific works and categories of Islamic art—particularly those like carpets that traditional frameworks have fetishized as decorative—and consider more fruitful avenues for addressing such material, making use of local collections to the extent that we can.

AS.010.615. Therapies of Art and Literature from Antiquity to Early Modern Europe.
This seminar examines the myriad ways artists and writers geared their work toward the therapeutic healing of mind, body, and soul, and the role images and texts could play in programs of individual and collective transformation. Taking as our point of departure the ancient tradition of spiritual exercises and inner dialogue, Petrarch's therapy of the passions, and the revival of consolatory letters, we will consider how the Christian artist could invest their work with medicinal, magical, sacramental, or spiritual efficacies, and even take on the mantle of a "physician of souls." Intersections with the histories of medicine and religion will lead us to the ways natural medicine and the thaumaturgical practices associated with pilgrimage could be transposed into the arena of spiritual therapy. Featured authors include Cicero, Marcus Aurelius, Augustine of Hippo, Boethius, Petrarch, Michel Foucault, Pierre Hadot, and Allain de Botton; artists include Hieronymus Bosch, Albrecht Dürer, Matthias Grünewald, and many others.

AS.010.671. The illuminated charter: visual splendor, performance, and authenticity of medieval legal documents.
This course investigates the complexities of medieval legal documents, their specific visuality and materiality, as well as practices of copying and forgery. We will address the aesthetics of legal documents, their graphic signs, seals, and paleography and the authenticating strategies used to corroborate their legitimacy. Another emphasis is set on the performative aspects of the medieval charters in court and church rituals. Comparison with contemporary illuminated sacred books will reveal the tight connections of monastic scriptoria and royal/imperial chanceries. The geographic focus is set wide, ranging from medieval Spain, to Carolingian and Ottonian chanceries in France and Germany, to the papal court in Rome and the imperial and monastic scriptoria in Byzantium.
Area: Writing Intensive

History of Science, Medicine, and Technology

AS.140.105. History of Medicine. 3 Credits.
Course provides an introduction to health and healing in the ancient world, the Middle Ages, and the Renaissance. Topics include religion and medicine; medicine in the Islamicate world; women and healing; patients and practitioners.

AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.
Medical practice is complex in Latin America and the Caribbean. Most countries in the region have universal healthcare; yet, the quality of clinical services varies widely, and is influenced by degrees of incorporation into—or marginalization from—social power structures. Many people take their health into their own hands by supplementing biomedicine with plant based remedies as well as religious and spiritual services. This course will interrogate the history and contemporary relevance of healthcare in Latin America and the Caribbean, with particular interest in how medicine intersects with colonialism, slavery, capitalism, neo-colonialism, grassroots revolutionary movements, the Cold War, and neoliberalism. Drawing on films, visual and performance art, and music, students will consider the ways in which race, gender, indigeneity, ability, class, and nation have affected people's experiences with medical practice. Informed by postcolonial and decolonial scholarship, we will also examine why Latin America and the Caribbean have become "laboratories" for the production of medical knowledge, and importantly, how that knowledge was created by indigenous, enslaved, and migrant people as well as professionals. Finally, we seek to understand individual health problems in relation to the social and political determinants of health. As such, the course prompts students to reflect on why healthcare professionals—in the United States and abroad—would benefit from historically-informed communication with patients and their communities. This is a discussion-based seminar that requires active participation. There are no exams. The course does not assume any previous knowledge of the history of medicine or Latin American history.
Area: Writing Intensive

AS.140.322. Follow the money: Science, technology, and the 'knowledge economy,' c.1800-present. 3 Credits.
This course examines the historical emergence of knowledge-driven economies, paying special attention to the funding, development, and use of science and technology for commercial purposes.
Area: Writing Intensive

AS.140.356. Man vs. Machine: Resistance to New Technology since the Industrial Revolution. 3 Credits.
This course analyzes different episodes of "luddism" in the history of science and technology, from the destruction of textile machinery in the early 1800s up to recent controversies about biotechnology and ICT.

AS.140.393. Technology and the Making of the Modern World. 3 Credits.
This course critically examines the role of technology in some of the main developments that have shaped the modern world, ranging from industrialization and globalization processes to the rise of new political ideologies and gender patterns. This course is co-taught by an instructor from the Smithsonian Institution and will include a public history research project.

AS.140.685. Histories of Reproduction.
While there is a vast literature on reproduction in a global context, this course will focus on the arc of what we might call decolonial histories of reproduction—those that center issues of justice, freedom, intimacy, and agency, as well as cultural negotiation, conflict, and change. Students will write critical histories of reproduction, with attention to the ways in which reproductive politics interface with institutions that exert hegemonic, racialized, gendered, and ableist forms of state power and colonial power. We will also appreciate the ways in which reproduction interacts with other—non geographically-bound, non-institutionalized, and non-state mediated—forms of biopolitical power. We will analyze how the historiography has evolved over time and discuss future directions in the field.

Interdepartmental

AS.360.408. Experiential Research Lab: "Holy" Conquest: Religion and Colonization in Sixteenth-Century Mexico. 3 Credits.
"When the Spanish unleashed their regime of colonization of what is present-day Mexico, their primary justification was the religious salvation of Indigenous people. Spaniards, along with other Europeans, arrived by the boatload to impose colonial order, taking up bureaucratic and ecclesiastical positions. The result was far from smooth—the sixteenth-century saw widespread disease, missionary violence on behalf of salvation, crop destruction and the recultivation of land, urban plans that radically altered the environment, the resettlement of entire populations, among other dramatic social and environmental events. This course investigates the complex and dynamic elements of colonial New Spain (as Mexico was called) from an interdisciplinary perspective. It tries to make sense of the chaotic landscape of the first century of Spanish colonial rule in New Spain. It is a research and writing intensive course that serves as an introduction to both the history and art history of this place and moment. Our meetings will act as a springboard for a group trip to Mexico during the January intersession to study objects and spaces in situ. Final projects will relate to materials viewed in person in Mexico. The costs for this trip are included for all students, no fees required. Knowledge of Spanish preferred but not required.
Area: Writing Intensive

AS.360.420. Humanities Research Lab: Making Maps of Mexico. 3 Credits.
Learn the basics of ArcGIS and data management as you help Prof. Lurtz publish an agricultural dataset and maps from 10 years before Mexico erupted in revolution. No experience necessary.

AS.360.612. Media Theory and Modernity.
This course will engage with 20th century critical theory and social inquiry that wrestles with the idea that new mediations have profoundly altered the character of human experience and subjectivity, and it will consider the questions that these theorists pose for our disciplines. How have modern subjectivity, gender, affect, reason, and politics been shaped by the technologies and structures of representation that mediate them? Among figures of interest: Marx, Freud, Eisenstein, Benjamin, Bakhtin, Adorno, Deleuze, Guy Debord, Haraway, Stuart Hall, Teresa de Lauretis, Kitterer, Sobchack, Berlant, Latour, Linda Williams, Ranciere, Orit Halpern.

AS.360.623. Latin America in a Globalizing World.
An interdisciplinary seminar on Latin America's role in global economic processes, from both historical and contemporary perspectives. Participants will engage with scholarly and primary texts as well as share written work. The Fall 2022 seminar will examine the topic of Latin American political thought.

AS.360.626. Latin America in a Globalizing World II.
The second in a two-semester graduate sequence, this course will be for graduate students and faculty to collaboratively workshop their own research and writing on topics related to Latin American studies.

Islamic Studies

AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the "other." The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.

AS.194.202. Never Forget: Muslims, Islamophobia, and Dissent after 9/11. 3 Credits.
In partnership with the social justice organization Justice for Muslims Collective, this community-engaged course and oral history project will explore how diverse Muslim communities navigated and contested belonging and political and cultural agency amidst state-sponsored violence and national debates on race, gender, citizenship and national security after 9/11 and during the ongoing War on Terror. Through history, ethnography, first-person narratives, film, fiction, and online resources, students will learn about the impact of 9/11 on American Muslim communities. This includes cultural and political resistance to imperialism, racism, and Islamophobia as well as to intersectional inequities within Muslim communities that were intensified in the context of Islamophobia. Students will learn about community activism and organizing from JMC, and complete a participatory action research project with the organization. This project is an oral history archive that will address gaps in the documentation of movement histories when it comes to early organizing against War on Terror policies by Muslim communities and communities racialized or perceived as Muslim. Students will be trained to record stories of resistance among leaders who organized and responded at the local and national-level in the Greater Washington region, to support the building of an archive that will shape a wide variety of future organizing and advocacy efforts.

AS.194.230. African-Americans and the Development of Islam in America. 3 Credits.
Muslims have been a part of the American fabric since its inception. A key thread in that fabric has been the experiences of enslaved Africans and their descendants, some of whom were Muslims, and who not only added to the dynamism of the American environment, but eventually helped shape American culture, religion, and politics. The history of Islam in America is intertwined with the creation and evolution of African American identity. Contemporary Islam in America cannot be understood without this framing. This course will provide a historical lens for understanding Islam, not as an external faith to the country, but as an internal development of American religion. This course will explicate the history of early Islamic movements in the United States and the subsequent experiences of African-Americans who converted to Islam during the first half of the twentieth century. We will cover the spiritual growth of African American Muslims, their institutional presence, and their enduring impact on American culture writ large and African-American religion and culture more specifically.

Medicine, Science and the Humanities

AS.145.106. Health, Science, Environment. 3 Credits.
Environment has an inexorable effect on human health, and certain human activities have had outsized impacts on the natural world and the ability of forms of life to thrive. This course brings medical humanities, history of science, and science & technology studies into conversation with environmental humanities to ask: how have our conceptions of the natural world emerged, and how have these shaped our understandings of bodies, ecologies, and health outcomes? How do we know and measure the environment and health, and to what effects? How have human and ecological health affected environmental politics? How have writers and artists understood and depicted their environments and environmental questions? Can works of fiction shape ecological transformations? What can we learn from case studies of health and environment in Baltimore and the Chesapeake Bay as well as in global contexts? Course topics will include ecology, epigenetics, toxicity, agriculture and food, radiation, air quality, and more-than-human entanglements.

Modern Languages and Literatures

AS.211.265. Panorama of German Thought. 3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? To what degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind as well as divide a community in this tradition? We will consider these and related questions in this course through careful readings of selected works.
Area: Writing Intensive

AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3 Credits.
Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsize impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; “the New Woman”; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin’s cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin’s rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation.

AS.211.329. Museums and Identity. 3 Credits.
The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.

AS.211.394. Brazilian Culture & Civilization. 3 Credits.
Did you know that Brazil is very similar to the United States? This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, politics, economy, art, literature, popular culture, theater, cinema, and music. The course will focus on how Indigenous, Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required). No Prereq. THERE IS NO FINAL EXAM.
Area: Writing Intensive

AS.211.477. Renaissance Witches and Demonology. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in medicine, theology, literature, folklore, music, and the visual arts, including cinema.
Area: Writing Intensive
Students who have already taken AS.214.171 cannot take AS.211.477.

AS.211.479. Dante's Journey through the Afterlife. 3 Credits.
Dante’s Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante’s own time, and in terms of its relevance to our own societal and cultural concerns.
Area: Writing Intensive
AS.214.479

AS.211.606. Literature and Truth: Forgery and Fakes.
Forgery is an eternal problem. It is a literary tradition in its own right, with connections to politics, Classics, religion, philosophy, and literary theory. Spurious writings impinge on social and political realities to a degree rarely confronted by criticism. This course offers a reading of the sort traditionally reserved for canonical works of poetry and prose fiction, spotlighting forgery’s imaginative vitality and its sinister impact on scholarship. Students will study manuscripts and incunabula drawn from JHU’s Bibliotheca Fictiva, the world’s premier collection of literary forgeries.
Area: Writing Intensive
Students cannot have taken AS.214.606.

AS.214.479. Dante Visits the Afterlife. 3 Credits.
One of the greatest works of literature of all times, the Divine Comedy leads us down into the torture-pits of Hell, up the steep mountain terrain of Purgatory, through the “virtual” space of Paradise, and then back to where we began: our own earthly lives. We accompany Dante on his journey, building along the way knowledge of medieval Italian history, literature, philosophy, politics, and religion. The course also focuses on the arts of reading deeply, asking questions of a text, and interpreting literary and scholarly works through discussion and critical writing. Conducted in English.
Area: Writing Intensive

AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at the production of an analysis that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma’s illustrated sixteenth-century chronicles, D.F. Sarramiento's _Civilization and Barbarism_ (1845), and Anibal Quijano's "Coloniality of Power" (2000).
Area: Writing Intensive

AS.215.309. An Interdisciplinary Introduction to the Study of Latin America. 3 Credits.
The course is an interdisciplinary introduction to the study of Latin America. It brings together archeology, ethno-history, art history, literature and environmental studies.
Area: Writing Intensive

AS.215.406. Novelist Intellectuals. 3 Credits.
What does a novelist's op-ed about economics have to do with her literary writing? In what ways does a fiction writer's essays on the environment inform how we read her novels? What happens when we find the political opinions of a writer objectionable? This undergraduate seminar will consider what the Spanish writer Francisco Ayala termed "novelist intellectuals," that is, literary writers who actively participate in a society's public sphere. Considering writers from Madrid to New York, from London to Buenos Aires, we will ask how one should hold a novelist's fictional and non-fictional writings in the balance and explore ways of reading that allow us to consider the public intellectual side and the aesthetic side of a novelist together.

AS.215.413. Cuba y España. 3 Credits.
La frase "más se perdió en Cuba" alude al singular rango de la antigua Provincia de Ultramar en el mapa geopolítico del colonialismo hispánico. Hemos de estudiar la prolongada relación entre España y Cuba, desde 1492 al presente, a través de materiales literarios, crónicas, artes plásticas, música y medios sociales al corriente. Enseñado íntegramente en español.
AS.210.311

AS.215.641. Guaman Poma, his 12 theses for an new understanding of the World Upside Down.
As of today, due to the work of Walter Mignolo, Ossio, Lamana and other scholars in Colonial Studies, the 1000 page letter of Guaman Poma to the King of Spain has become the pre-eminent text written on the question of coloniality of power as theorized by Anibal Quijano. Given that the concept is now central to colonial and modern studies, familiarity with the work of Guaman Poma is essential in the formation of all Latin Americanists and scholars interested in coloniality and imperial studies.
Area: Writing Intensive

AS.215.651. The idea of "Latin America": current debates on the fundamentals of the field.
The course will explore the history of the Idea of Latin America as a discursive and political entity. Students will read the work of Walter Mignolo, Maurico Tenorio Trillo and Fernando Digiovanni among other theorist and cultural historians.
Area: Writing Intensive

Near Eastern Studies

AS.130.119. Medicine in Ancient Egypt. 3 Credits.
A survey of medicine and medical practice in Egypt and, to a lesser extent, the ancient Near East in general. The abundant sources range from magical spells to surprisingly "scientific" treatises and handbooks. Readings are selected from translations of primary sources in the writings of ancient Egypt, Mesopotamia, and Israel. Topics will include the sources of our knowledge; the nature of medical practitioners, medical treatment, and surgery; beliefs about disease and the etiology of illness; concepts of contagion and ritual purity.

AS.130.126. Gods and Monsters in Ancient Egypt. 3 Credits.
A basic introduction to Egyptian Religion, with a special focus on the nature of the gods and how humans interact with them. We will devote particular time to the Book of the Dead and to the "magical" aspects of religion designed for protective purposes.

AS.130.136. History of Hasidism. 3 Credits.
Although it appears to be a relic of pre-modern Judaism, Hasidism is a phenomenon of the modern era of Jewish history. This course surveys the political and social history of the Hasidic movement over the course of the last three centuries. Students will also explore basic features of Hasidic culture and thought in their historical development. Cross-listed with Jewish Studies.

AS.130.153. A (Virtual) Visit to the Louvre Museum: Introduction to the Material Culture of Ancient Egypt. 3 Credits.
This course will present the Egyptological collections of the musée du Louvre in Paris, room by room, as in a real visit. The experience will be enhanced by the study of objects that are not shown to the public but are kept in the reserves of the museum. From the 4th millennium BC to Roman time, the iconic "masterpieces" of this world-renowned art museum, as well as its little-known artifacts, will allow us to explore the history and material culture of ancient Egypt. We will also learn to observe, describe and analyze archaeological objects, in a global manner and without establishing a hierarchy between them, while questioning their place in the museum and its particular language. The objective will be to go beyond the objects themselves and answer, in fine, the following questions: What do these objects tell us about the men and women who produced them, exchanged them, used them, and lived among them in antiquity? What do they also reveal about those who discovered them in Egypt, several millennia later, about those who collected them and sometimes traded them, and what does this say about the relations between Egypt and the Western countries over time? The courses will be complemented by visits to the rich Egyptian collections in Baltimore.

AS.130.245. The Archaeology of Gender in the Ancient Eastern Mediterranean. 3 Credits.
How do art historians and archaeologists recover and study genders and sexualities of ancient people? This writing-intensive seminar looks at texts and objects from ancient Egypt, Assyria, and Greece through the lens of gender and sexuality studies. Beyond exploring concepts of gender in the ancient Eastern Mediterranean, students will also consider how modern scholars have approached, recovered, and written about ancient gender identities. There are no prerequisites for this course.
Area: Writing Intensive

AS.130.248. Up the Nile: New Approaches to the History of Egyptology and Nubiology. 3 Credits.
King Tut, Napoleon, Champollion, Ozymandias, Nefertiti: the history of Egyptology is filled with big characters, huge monuments, and glimmering objects. But it is also made up of colonialist practices, looted sites, and forgotten scholarly contributions. "Up the Nile" examines the antiquarian, colonialist, racist, Western-centric, and patriarchal roots of modern Egyptology and Nubiology, and addresses how scholars and enthusiasts alike are continuing to grapple with these lasting legacies and biases. This class investigates how the Egyptians and Nubians thought of their own histories, as well as how other ancient cultures viewed the cultures of the Nile. It moves roughly chronologically, tracing understudied and marginalized voices from the Islamic, Medieval, and Ottoman periods into the 20th and 21st centuries. It examines the origins of scholarship, modern collecting, Egyptomania, and museums, delving into the problems and repercussions that still haunt us today. "Up the Nile" will engage with important and difficult aspects regarding Egyptology's and Nubiology's colonialist, racist, and sexist past and present. It asks: who decides who writes history, then and now?

AS.130.420. Seminar in Research Methods in Near Eastern Studies. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Writing Intensive

AS.132.609. Seminar in Research Methods in Near Eastern Studies.
Area: Writing Intensive

Political Science

AS.190.471. The University and Society. 3 Credits.

In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.

Program in Museums and Society

AS.389.155. The History of Fake News from The Flood to The Apocalypse. 3 Credits.

“Fake News” is everywhere in both past and present. Explore that history first-hand throughJHU’s rare book collection of literary and historical forgeries spanning millennia of human history.Students learn how to examine and investigate rare books.
Area: Writing Intensive

AS.389.165. Hands on History: Material Cultures of Knowledge from Antiquity to the Digital Age. 3 Credits.

This hands-on course deals entirely with JHU’s collections of rare books and manuscripts as a springboard to build skills in the close visual and physical examination of rare books and manuscripts. You will investigate the technological and aesthetic transformation of textual artifacts from ancient papyri to Gutenberg imprints to digital surrogates, and contribute to the accumulation of historical clues about their meaning and significance as material cultural objects. You will learn what goes into curating and conserving book and manuscript collections today, and how to evaluate the quality and significance of collections. Materials/topics will include ancient Babylonian cuneiform and Egyptian papyri; medieval illuminated manuscripts; incunabula; Renaissance illustrated books of the Scientific Revolution and Spanish Golden Age; cheap print and unique ephemera; early books by and about women; forgeries; and “digital humanities” initiatives at JHU. Students will make regular visits to the Special Collections Reading Room in the BLC throughout the semester.
Area: Writing Intensive

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.

This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.

AS.389.220. Queer Sixties. 3 Credits.

Introduction to queer & trans politics and culture in the period immediately preceding the gay liberation movement, from the early to late 1960s, focusing on intersections of race, sexuality, and gender. Course examines how we have come to narrate queer & trans history and investigates the ways archival practices shape conceptions of queer & trans life. Students learn research methods as they draw on and contribute to the university’s digitized archival collections.

AS.389.230. Queer & Trans Public History. 3 Credits.

This course introduces students to a blend of public history, queer studies and transgender studies. Students learn oral history and archival research methods as they draw on and contribute to the university’s archival, museum, and library collections.

AS.389.260. Cultural Heritage in Crisis. 3 Credits.

We explore the possible futures of cultural heritage and museums in times of accelerating climate change, pandemics, armed conflict and political and social turmoil by examining past and contemporary events.

AS.389.275. Interpreting Hopkins as Historic Site. 3 Credits.

This hands-on course explores interpretive strategies for historic sites and culminates in the production of original, research-based, outdoor interpretive exhibits on the Homewood Campus.

AS.389.303. World of Things. 3 Credits.

The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.

What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum

AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.

Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation’s museums, galleries, and libraries and used objects to shape taste and status in the U.S.

AS.389.325. Women of the Book: Female Miracle Workers, Mystics, and Material Culture, 1450-1800. 3 Credits.

From psycho-spiritual autobiographers to mystical bi-locating nuns, convent crèche-keepers to choristers of sacred music, from rock-star-status mystics to the hidden careers of women printers, engravers, and miracle-makers, this course will explore the remarkable intellectual, cultural, and imaginative contributions of women who found refuge, agency, and power within alternative lives.
Area: Writing Intensive

AS.389.340. Critical Issues in Art Conservation. 3 Credits.

The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology

AS.389.348. Queer Oral History. 3 Credits.

Students learn to conduct, analyze, and interpret their own oral histories as they contribute to a wide-ranging project documenting queer worldmaking in the Baltimore-Washington D.C. region. We engage with scholarship from performance studies, queer of color critique, LGBTQ history, and public humanities to consider the politics of storytelling and the promises of public-facing oral history projects. Students have the option of developing podcasts, multimedia projects, and public humanities proposals as their final assignment.

AS.389.357. Heaven on Earth: Art, Power, and Wonder in the Vatican from Antiquity to the Enlightenment. 3 Credits.

A material cultural exploration of the Vatican from the founding of St. Peter’s basilica in antiquity to the establishment of the Vatican Library and Museums in the Renaissance and Enlightenment.
Area: Writing Intensive

AS.389.373. Encountering American Art. 4 Credits.
Students investigate the Baltimore Museum of Art's American art collection and its presentation to the public alongside current scholarship on American art to develop strategies for a new permanent collection display that aligns with the museum's commitment to artistic excellence and social equity. M&S Practicum. Co-taught with BMA curator Virginia Anderson.

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revisualise and offer alternative stories. Class meets at the museum every other week.

AS.389.405. Visualizing Africa. 3 Credits.
Examines the history of African art in the Euro-American world, focusing on the ways that Western institutions have used African artworks to construct narratives about Africa and its billion residents.
Area: Writing Intensive

AS.389.410. Sharing Knowledge: Participatory Archives, Collaborative Storytelling, and Social Justice. 3 Credits.
This course introduces students to collaborative humanities projects that encourage democraticparticipation among publics more broadly conceived than the academy. We investigate indigenous research methods; collaborative oral history and ethnography; interactive theater;and community archives. Final projects draw on the university's archival, museum, and librarycollections.

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Writing Intensive

Research Methods

SA.100.408. Research Design and Casual Inference. 4 Credits.
This course introduces students to research methods that are commonly employed today in the field of international relations. The focus of the course is on research designs aimed at establishing causal inferences. There are four main sections to the class, each of which covers one major type of research design. The first section focuses on qualitative research methods. The second section turns to quantitative methods, particularly methods used for analyzing observational data (i.e. non-experimental data). In section III, we study experimental methods. The final section provides an overview of various quasi-experimental methods. Click here to see evaluations, syllabi, and faculty bios
Students may not register for this class if they have already received credit for SA.600.767[C];SA.100.401[C] OR SA.340.710[C]

SA.100.410. Theories & Methods of Qualitative Political Research. 4 Credits.
Research in the social sciences calls upon different methods for gathering information, interpreting data, drawing inferences, and advancing arguments. Qualitative methods rely on direct observation, narrative forms, and tools such as interviews, archival sources, media, participant observation, ethnographic analysis and historical documentation. Qualitative approaches may draw upon inductive techniques (assessing evidence directly) and deductive reasoning (drawing on stylized or logical relationships) when identifying patterns and crafting propositions. The purposes of qualitative methods are broadly similar to those of quantitative methods: drawing inferences (resilient generalizations) from evidence, developing causal arguments about the sources and mechanisms of events, and testing propositions about political behavior. Qualitative methods are also frequently partnered with quantitative methods in "mixed-method" research designs. However, the assumptions and procedures of qualitative methodology are distinct.
Students may not register for this class if they have already received credit for SA.600.774[C]

Security, Strategy, and Statecraft

SA.502.118. Kissinger Seminar: Contemporary Issues in American Foreign Policy and Grand Strategy. 4 Credits.
What is America's purpose in international affairs? What are the major challenges in U.S. foreign policy? What is the future of American power in a changing global system? This course examines these and other critical issues in U.S. foreign policy and global strategy. We will study the opportunities and dilemmas the United States confronts in dealing with terrorism and the Islamic State, great-power competition vis-a-vis Russia and China, the threat of nuclear proliferation and "rogue states," and other issues from international economics to transnational threats. We will consider whether America can maintain its international primacy, and what alternative strategies it might pursue in the future.
Students may not register for this class if they have already received credit for SA.200.734[C]

SA.502.122. Psychology and Decision-Making in Foreign Policy. 4 Credits.
Why do leaders, institutions, and states make the decisions they do? International Relations scholars are increasingly recognizing the importance of psychological and other decision-making approaches to understanding world affairs, particularly the crafting and implementation of foreign policy. In this course, we examine individual cognitive biases and heuristics, organizational culture, groupthink, and other dynamics that produce often surprising, suboptimal outcomes in international politics. A major purpose of the course is to think broadly about ways in which these approaches can help inform theoretical work done by political scientists and policy analysts to provide more nuanced understandings of otherwise confounding cases of foreign policy decision-making. We will also draw from numerous empirical examples of crisis decision-making, major foreign policy shifts, and intelligence failure across time and space to evaluate the relative efficacy of various approaches in explaining specific cases.
Students may not register for this class if they have already received credit for SA.600.738[C]

SA.502.134. World Order in the 21st Century. 4 Credits.
As we look forward several decades, what problems of statecraft are likely to confront us? Will the fragmentation of world politics into three distinct conflict regions, contrasting modes of alliance behavior, and the advent of cyberwarfare threaten national security, thus undermining the capacity to maintain world order in the 21st century? In the face of nuclear proliferation, is deterrence subject to a lowering of the nuclear threshold? By mid-century world population will be in decline in most of the Great Powers. Will globalization suffer? How will oil politics shape future options? Will the advent of aging, urbanization, and increased wealth assist the search for stability and peace? Or will abrupt structural changes on the cycles of relative power of the big states unleash a return of the conditions that led to world war in the first half of the 20th century? What strategies of leadership and balance are available to the United States and to the other Great Powers? How can diplomacy help guide statecraft to surmount these problems in the effort to sustain world order?
Students may not register for this class if they have already received credit for SA.600.788[C]

Sociology

AS.230.306. Plagues, Power, and Social Control. 3 Credits.
While developments in biomedicine and health care have led to the eradication, cure and management of many human health problems, disease, illness and health have also been the focus for aggressive social controls and population management. The technologies and practices of disease control and health management have been foundational to some of the most aggressive structures of oppression in recent history such as the Jewish Ghetto, the Concentration Camp, the South African Township and techniques of segregation. This course seeks to explore how epidemics and disease control are linked to larger questions of power, state craft and international dynamics. This course asks how have outbreaks of infectious disease shaped social and political action? How do societies respond to outbreaks and why? What do epidemic moments tell us about global structures of power and the dynamics of control? Drawing on historical cases including plague during the European Renaissance and before, the HIV/AIDS Pandemic and the West African Ebola Outbreak of 2013-2016, this course will introduce students to the history and practices of disease control as well as important theoretical perspectives by which to understand the sociological and historical effects of disease and the responses to them. Students will engage sociological concepts such as biopolitics, social construction of disease and illness and biosecurity and produce a final research paper examining the outcomes and responses to an epidemic event to show mastery of the topics covered in the course.
Area: Writing Intensive

States, Markets, and Institutions

SA.503.100. Comparative Political Economy. 4 Credits.
This course is intended to bridge the gap between economics and politics as taught at SAIS. First examines some of the main “currents” in the literature and familiarizes the student with different variants of political economy. Presents an overview of the classical liberal, Marxian/Polanyian and Keynesian understandings of the economy, each of which serves as both a primer to political economy and as an introduction to the main contemporary approaches. Then engages with what many scholars argue is the major approach in comparative political economy: rational choice theory. By contrast, the next section looks beyond the rationalist tradition to the nowadays somewhat neglected historical tradition. Building on the historical tradition, next examines institutionalist approaches, explaining institutional change and stability over time through path dependence and earlier arrangements. Concludes with more social constructivist understandings of political economy, emphasizing the powerful role of economic ideas in the evolution of economic policymaking over time.
Students may not register for this class if they have already received credit for SA.610.770[C]

SA.503.101. Contemporary Theory in International Relations. 4 Credits.
Examines the leading contemporary theories of international relations, showing how each contributes uniquely to the larger literature. How are alliances formed? What is the relationship between absolute and relative gains? How do wars begin? Emphasizes interrelationships, divergences and cumulative developments, from the balance of power to the latest in structural, rational choice and regime theory.
Students may not register for this class if they have already received credit for SA.600.702[C]

SA.503.104. International Political Economy of Emerging Markets. 4 Credits.
This course examines the relationship between politics and international economics in developing countries, with a focus on the emerging market economies. Throughout the course, we critically evaluate different political science theories of foreign economic policymaking in emerging markets. The course begins with an overview of theories of international political economy. The second section of the course focuses on developing countries’ embrace of economic globalization over the past thirty years. We examine different political reasons for why emerging market and developing countries have liberalized foreign trade, removed barriers to foreign investment, and reduced the state’s role in the domestic economy since the 1980s. The final section of the course of the course explores how globalization has impacted emerging market economies, and considers how governments in these countries have dealt with the new challenges that have emerged in this era of economic globalization
Students may not register for this class if they have already received credit for SA.610.700[C]

SA.503.105. Politics of International Economy. 4 Credits.
How does globalization affect state power? The course examines how market outcomes shape both politics and economics. Develops a dynamic understanding of international political economy and assesses its impact in rich/poor gap models, inequality questions, the convergences of productivity, and problems of trade liberalization and neomercantilism. Applications include state breakup, the oil dilemma and currency crises. Uses this dynamic approach to identify key regional problems in North America, Europe and Asia and to offer policy solutions.
Students may not register for this class if they have already received credit for SA.610.717[C]

SA.503.106. Public Opinion as a Driver for Policymakers: Analytical Tools and Illustrative Case Studies. 4 Credits.
A key driver in any democracy, public opinion determines who will govern and which policies will be likely to succeed. Contrary to general beliefs that public opinion is highly ephemeral, both practice and scientific evidence show that public opinion is a stable, measurable, and ultimately predictable phenomenon. To explore the issue both conceptually and in practice, the course will first offer a review and discussion of relevant literature on the subject and then analyze concrete case studies exploring the uses and misuses of public opinion and polling by political and policy stakeholders. Likely case studies will include primarily Latin American examples, such as the 2002 Lula election, but also extra-regional cases, such as the 2008 Obama election and the Arab Spring, among others. The final objective is to develop a critical eye when analyzing public policy and political problems.
Students may not register for this class if they have already received credit for SA.810.705[C]

SA.503.107. Research Seminar: Political Economy in the Shadow of Conflict. 4 Credits.
This is a research seminar organized around key ongoing debates in international relations, such as the role of institutions, audience costs, leaders, bargaining, reputation, interdependence, and ideas. The course will emphasize critical engagement of the empirical evidence presented in favor of theoretical arguments, encouraging students to devise rigorous new ways to test their observable implications. Can bargaining theory help us understand the outbreak, as well as the termination of, international conflict? Has growing economic integration among states changed the nature of military conflict? Are certain economic interest groups more prone to support military expansion than others? Do democratic institutions enable states to better signal their resolve to adversaries? By the end of the course, students will be able to recognize, engage, and develop their own taste for theoretical arguments, as well as present the most compelling empirical evidence for or against them.
Students may not register for this class if they have already received credit for SA.610.702[C]

Study of Women, Gender, & Sexuality

AS.363.201. Introduction to the Study of Women, Gender, and Sexuality. 3 Credits.
This course will serve as an intensive introduction to contemporary approaches to theories of gender and sexuality, and their relationship to cultural production and politics. Students will develop a historically situated knowledge of the development of feminist and queer scholarship in the 20th and 21st centuries, and consider the multiply intersecting forces which shape understandings of sexual and gender identity. We will consider both foundational questions (What is gender? Who is the subject of feminism? What defines queerness?) and questions of aesthetic and political strategy, and spend substantial time engaging with feminist and queer scholarship in comparative contexts. Students will be introduced to debates in Black feminism, intersectionality theory, third world feminism, socialist feminism, queer of colour critique, and trans* theory. We will read both canonical texts and recent works of scholarship, and the final weeks of the course will be devoted to thinking with our theoretical and historical readings against a selection of feminist and queer literature and cinema. No prior familiarity with the study of gender and sexuality is necessary.

AS.363.301. Feminist and Queer Theory. 3 Credits.
This course will encourage encounters with a number of concepts from a critical gendered perspective, including: sameness/difference, identity politics, race/gender, loyalty, security, queer ethics, and queerness in media.
Area: Writing Intensive

AS.363.302. Feminist and Queer Theory: Women in Western Thought an Introduction. 3 Credits.
Women in Western Thought is an introduction to (the history of) Western thought from the margins of the canon. The class introduces you to some key philosophical question, focusing on some highlights of women's thought in Western thought, most of which are commonly and unjustly neglected. The seminar will be organized around a number of paradigmatic cases, such as the mind/body question in Early Modern Europe, the declaration of the rights of (wo)men during the French revolution, the impact of slavery on philosophical thought, the MeToo debate and others. By doing so, the course will cover a range of issues, such as the nature of God, contract theory, slavery, standpoint epistemology, and queer feminist politics. Students will engage with questions about what a canon is, and who has a say in that. In this sense, Women in Western Thought introduces you to some crucial philosophical and political problems and makes you acquainted with some women in the field. The long term objective of a class on women in Western thought must be to empower, to inspire independence, and to resist the sanctioned ignorance often times masked as universal knowledge and universal history. People of all genders tend to suffer from misinformation regarding the role of women and the gender of thought more generally. By introducing you to women who took it upon themselves to resist the obstacles of their time, I am hoping to provide role models for your individual intellectual and political development. By introducing you to the historical conditions of the exclusion and oppression of women (including trans and queer women as well as black women and women of color), I hope to enable you to generate the sensitivities that are required to navigate the particular social relations of the diverse world you currently inhabit. By introducing philosophical topics in this way, I hope to enable you to have a positive, diversifying influence on you future endeavours.
Area: Writing Intensive

AS.363.345. Zora Neale Hurston: Ethnography as Method. 3 Credits.
While many recognize Zora Neale Hurston's creative literary work, her methodological innovations are often overshadowed. This course will examine Hurston's contributions to theorizing the African diaspora and creative use of ethnography.Dr. Amarilys Estrella, the 2020-2021 ACLS Emerging Voices Postdoc, will teach this course. For more info on Dr. Estrella, see https://history.jhu.edu/directory/amarilys-estrella/

Technology and Culture

SA.501.100. News Media & International Affairs. 4 Credits.
The purpose of this course is to provide deeper understanding of the interaction between the operations of the news media and the conduct of international relations. This will include an emphasis on how rapidly the major medium of exchange has passed in barely 50 years from newspapers to broadcast to the internet. The instruction will be through a combination of lectures, guest lectures, student discussion and papers. There will be an emphasis on clear and good writing. Student evaluation will be based on participation in discussion and papers.
Students may not register for this class if they have already received credit for SA.600.755[C]

SA.501.101. SAIS Women Lead Practicum. 4 Credits.
The SAIS Women Lead Practicum partners SAIS students with public, private, and non-governmental organizations and provides professional experiences through projects that advance women and contribute solutions to issues of global importance. Student teams work with clients to produce reports, policies or programs. Students will also be expected to participate in a research assignment during Winter Break (travel may be required). Upon their return, teams proceed to analyze, interpret and present results of findings to the SAIS community and clients. Students audit the course in the fall semester (in additional to their full load) and take the Practicum as a 4-credit course in the spring semester as part of their load. The application deadline is July 20. Click here for Capstone course application information
Students may not register for this class if they have already received credit for SA.600.729[C]

The Americas

SA.551.100. Economics of Immigration. 4 Credits.
Examines the economic causes and consequences of international migration. The central focus is an economic analysis of the general patterns of population flows, their determinants and their impact. Analyzes these primarily within a comparative context of the North American experience, although also considers other case studies. Current US migration policy is examined so as to understand how the US system is 'broken' and what is meant by ' true immigration reform'. Includes consideration of the Canadian experience, in that Canadian immigration policy seems to get many things 'right'.
Students may not register for this class if they have already received credit for SA.840.715[C]

SA.551.104. Middle Power Diplomacy. 4 Credits.
International relations scholarship pays close attention to the Great Powers, and concern over failed states. With the formation of the G20, there is a multilateral forum where Great Powers and the Rising Powers of Brazil, Russia, India, and China can shape the global agenda. Yet in every era and every stable international order there is an important role for Middle Powers – countries whose capacity to foster or disrupt order leads them to “punch above their weight” in international relations. Canada self-identifies as a Middle Power, but today the status of Middle Power is claimed by states in every region and on every continent.This course considers the dilemmas and strategies of Middle Power diplomacy, and how the United States, Great Powers and Small States interact with them. Over the course of the semester, we will consider what role Middle Powers play in the contemporary international system, and what to do about it.
Students may not register for this class if they have already received credit for SA.840.706[C]

History, Bachelor of Arts

History Major Requirements

(Also see Requirements for a Bachelor’s Degree. (p. 1587))

The Krieger School classifies history as both a social scientific and humanistic discipline. This accords very well with the wide range of explanatory and interpretive approaches to the past that now prevail in the discipline of history. One of the history program’s goals is to introduce students to these varied approaches. Although the department offers strong preparation for students who seek to specialize in a particular cultural or geographic region, history at Johns Hopkins is primarily issue and topic oriented. It also puts a premium on developing the capacity to reason comparatively and on deepening the student’s understanding of global connections among cultures in the past and in contemporary life.

The department offers undergraduate courses that range from large introductory classes to small, focused seminars that encourage intensive interaction with individual professors and with other students. Beyond the introductory level, most of our courses are writing intensive and promote in all students critical reading skills and the ability to formulate effective written arguments. Through its core curriculum, the major also cultivates skills specific to the historian, especially research and writing based upon the systematic analysis of primary documents.

The program’s overall aim is to deepen the critical habits of mind that arise from the study of time and change. These capacities are the hallmarks of liberal learning, but they are also the foundation for success in post-graduate studies and careers of many kinds, including business, law, and public affairs.

Major in History

- Students must earn a "C-" or higher grade in all courses used to satisfy major requirements, and may not count courses that are graded as satisfactory/unsatisfactory. If a student opts to take First-Year Seminar (AS.001.xxx) cross-listed with the History and earns an S grade, this course may apply towards major requirements even though it is graded satisfactory/unsatisfactory.
- For students who choose to focus on one geographical area (Europe, United States, Latin America/Caribbean, Atlantic, Africa, Asia, North Africa/Middle East), two courses must be taken outside the student's area of focus.
- At least 4 of the 8 history electives/upper level courses must be completed with courses taken directly from the JHU History department (AS.100.xxx).

Major Requirements

Code	Title	Credits
Introductory Courses		
Select one of the following options:		6
A) Two 100- or 200-level introductory courses offered by the History Department (AS.100.1xx or AS.100.2xx)		
B) One (1) 100- or 200-level introductory course offered by the History Department (AS.100.1xx or AS.100.2xx) plus one (1) First Year Seminar cross-listed with the History Department (AS.001.1xx)		
Method Requirement		
AS.100.293	Historical Methods, Archives and Interpretations (year 2 fall)	3
AS.100.388	Practicing Historical Research (year 2 spring or year 3 fall)	3
Elective Courses		
Two history courses at any level		6
Four 300-level or higher history courses		12
Additional Upper-Level Courses		
Select one of the following options:		6
A) Two 300-level or higher history courses		
B) AS.100.507 & AS.100.508 Senior Thesis [1]		
Second Language Requirement		

Language proficiency in a second language is required through the completion of the intermediate level. [2]	0-18
Total Credits	**36-54**

[1] Students must have a cumulative GPA of 3.25 and a cumulative GPA in history of 3.5 or higher by December of their junior year to be eligible for the senior thesis option to graduate with honors in history.

[2] Foreign language proficiency may be demonstrated by coursework or by special examination with permission of the History Director of Undergraduate Studies (DUS).

Cognate Courses The History Department encourages interdisciplinary work in cognate fields of learning. History minors are therefore strongly advised to take additional courses in any department, including the History Department, that relate to the student's major discipline in a historical way.

Sample Program

A sample path toward degree completion might include the following sequence of courses. Many alternative paths will also work. Please consult with your department advisor regarding alternative paths.

Course	Title	Credits
First Year		
First Semester		
(A) AS.100.1xx or AS.100.2xx Introductory Course, or (B) AS.001.1xx First Year Seminar cross-listed with History [1]		3
Introductory Language Course		3
	Credits	**6**
Second Semester		
(A) AS.100.1xx or AS.100.2xx Introductory Course, or (B) AS.001.1xx First Year Seminar cross-listed with History [1]		3
Introductory Language Course		3
	Credits	**6**
Second Year		
First Semester		
AS.100.293 Historical Methods, Archives and Interpretations		3
AS.100.xxx History Elective		3
Intermediate Language Course		3
	Credits	**9**
Second Semester		
AS.100.388 Practicing Historical Methods		3
AS.100.xxx History Elective		3
Intermediate Language Course		3
	Credits	**9**
Third Year		
First Semester		
AS.100.3xx - AS.100.4xx History Elective		3
AS.100.3xx - AS.100.4xx History Elective		3
	Credits	**6**
Second Semester		
AS.100.3xx - AS.100.4xx History Elective (perhaps, study abroad)		3
	Credits	**3**
Fourth Year		
First Semester		
AS.100.3xx - AS.100.4xx History Elective		3
AS.100.3xx - AS.100.4xx History Elective		3
	Credits	**6**
Second Semester		
AS.100.3xx - AS.100.4xx History Elective		3
	Credits	**3**
	Total Credits	**48**

[1] Students can progress through the major easily even if they take only one history course during their freshman year. There are two paths for the Introductory Course requirement: (A) two (2) introductory courses at the 100- or 200-level offered by the History Department, or (B) one (1) introductory course at the 100- or 200-level offered by the History Department *plus* one (1) First Year Seminar (AS.001.1xx) that is cross-listed with the History Department.

Senior Honors Option

Course	Title	Credits
Fourth Year		
First Semester		
AS.100.507	Senior Thesis	3
AS.100.494	Senior Honors Seminar	1
AS.100.3xx - AS.100.4xx: History Elective		3
	Credits	**7**
Second Semester		
AS.100.508	Senior Thesis	3
AS.100.495	Senior Honors Seminar	1
	Credits	**4**
	Total Credits	**11**

Honors Program in History (BA)

The history department strongly encourages all eligible history majors to pursue the honors track in history. The track culminates in the senior thesis, a yearlong, "capstone" research project completed under the direct supervision of an individual faculty advisor. Like all capstone projects, the senior thesis is intellectually challenging and its completion almost always brings with it a tremendous sense of accomplishment. It also hones the talented young historian's capacity to sustain a cogent argument based on primary evidence in the long form essay. These skills and the completion of a sustained independent project are also important practical assets when seeking a job or a post-graduate education.

A general cumulative GPA of 3.25 and a cumulative GPA in history of 3.5 are prerequisites for undertaking the senior thesis, and to obtain honors students will normally be expected to complete the thesis with a grade of A- or better. All thesis writers must also enroll in both the AS.100.507 Senior Thesis (fall, 3 credits) and AS.100.508 Senior Thesis (spring, 3 credits) and AS.100.494 Senior Honors Seminar (fall, 1 credit) and AS.100.495 Senior Honors Seminar (spring, 1 credit) - enrollment is by instructor's permission and will be granted only to students who have obtained a commitment from a faculty thesis advisor. This commitment should normally be obtained no later than April 30th of the junior year.

For questions about the honors track in history or finding a thesis advisor, consult your departmental advisor or the current Director of Undergraduate Studies.

History, Bachelor of Arts/Master of Arts Four-Year Program

The B.A.– M.A Program is an accelerated program that allows the undergraduate to complete a BA and an MA in history in four years. It is designed for students who demonstrate exceptional scholarly ability and assumes that the student will complete most other requirements for graduation by the end of the junior year. Minimum prerequisites for admission include a GPA of 3.8 or higher, completion of language requirements through the intermediate level by the end of the junior year, and the securing of a faculty sponsor in the department of history in advance of application. Students seeking admission into the BA-MA program shall submit a formal application to the regular graduate program in history: the application deadline is December 15 of the junior year.

The program of study during the senior year includes 6-7 credits of graduate reading and research seminars or independent study each semester, mastery of the scholarship in the student's area of research concentration as demonstrated by the successful completion of a graduate field examination in that area of concentration; and, in lieu of the senior thesis, the completion of a major scholarly research essay equivalent in quality to those completed by first year graduate students in the regular doctoral program.

For questions and further details about the program, contact Megan Zeller, mzeller4@jhu.edu, Graduate Coordinator, Department of History, who can also provide details about application procedures.

History, Minor

History Minor Requirements

The minor in history offers to students majoring in other programs of study an opportunity to pursue a serious interest in history.

- Students must earn a "C-" or higher grade in all courses used to satisfy minor requirements and may not be taken satisfactory/unsatisfactory. If a student opts to take First-Year Seminar (AS.001.xxx) cross-listed with the History and earns an S grade, this course may apply towards minor requirements even though it is graded satisfactory/unsatisfactory.
- At least 2 of the 4 electives must be taken directly from the History Department.

Code	Title	Credits
Introductory Courses		
Select one of the following options:		6
A) Two 100- or 200-level introductory courses offered by the History Department (AS.100.1xx or AS.100.2xx)		
B) One (1) 100- or 200-level introductory course offered by the History Department (AS.100.1xx or AS.100.2xx) plus one (1) First Year Seminar cross-listed with the History Department (AS.001.1xx)		
Method Requirement		
AS.100.293	Historical Methods, Archives and Interpretations	3
Elective Courses		
One 200-level or higher history course		3
Three 300-level or higher history courses		9
Total Credits		**21**

Cognate Courses The History Department encourages interdisciplinary work in cognate fields of learning. History minors are therefore strongly advised to take additional courses in any department, including the History Department, that relate to the student's major discipline in a historical way.

History, PhD

Program Requirements

Students are required to have a reading knowledge of those foreign languages that are necessary for the satisfactory completion of their program of graduate study. Students in European history must have a reading knowledge of at least two languages, and students in medieval history must also have a reading knowledge of Latin. Students of Chinese history are expected to have reading knowledge of modern and classical Chinese and in most cases should also have reading knowledge of Japanese and/or a European language. Students in the Latin American area must have a reading knowledge of two of the following, depending upon their particular specialties: French, Spanish, Portuguese, or Dutch. In African history, students must have a reading knowledge of three languages including English and French. Depending upon their fields of specialization, students in African history may have other language needs. Students are expected to pass a written examination in one language within a month after entering the department, and they are required to do so before the end of the first year.

Each student is required to take a seminar under their major professor and to participate in at least one departmental seminar each semester.

The student's knowledge of four fields will be tested by written and oral examinations before the end of the second year of graduate study.

The student must write and defend a dissertation that is a major piece of historical research and interpretation based on primary sources and representing a contribution to historical knowledge. Its content, form, and style must be adequate to make it suitable for publication.

Normally, each student is required to perform some supervised teaching or research duties at some point during the graduate program, most often as a teaching fellow during the second and fourth years.

History of Art

http://arthist.jhu.edu/

Supporting a proud tradition of excellence in humanities scholarship and teaching, Johns Hopkins University offers students a diverse range of resources and opportunities for the study of art history. Courses are taught by an international faculty of respected research scholars, covering a broad temporal scope of the art and architecture of Europe, the Islamic world, Asia, the Americas, and the trans-Atlantic world. Participating in small classes with opportunities for close study of art in local and regional collections, students integrate their direct experience of works of art with the knowledge and critical perspective gained through historical research, discussion, and debate.

Programs leading to the BA, BA/MA, and PhD degrees emphasize the value of investigating works of art in their historical, intellectual, and social contexts, and enable students to deepen their understanding of cultural history in conjunction with courses in other departments and programs.

Art Collections and Resources

Located in a metropolitan region of unsurpassed museum collections and research institutions, Johns Hopkins is well situated for the study of art history. The Baltimore Museum of Art, with its rich holdings in modern and contemporary art, African Art, and the history of prints (to name just a few of its strengths), is directly adjacent to the Homewood campus. Downtown, and only a short shuttle ride away, is the renowned Walters Art Museum, which houses art from Asia, the Americas, Europe, and the Islamic world from the pre-historic era to the nineteenth century.

Easily accessible from Baltimore are the museums and galleries of Washington D.C., a short train ride to the south. The National Gallery of Art houses a world-class collection of European and American painting, sculpture, photography, and graphic arts from the Renaissance to the present day. Important collections of Byzantine art and the art of the ancient Americas are maintained at Dumbarton Oaks Research Library, and collections of Islamic, Asian, Ancient Near Eastern, and African art are housed in the Smithsonian's National Museum of Asian Art and National Museum of African Art. Works of modern and contemporary art are presented in the permanent collections and exhibitions of the Hirshhorn Museum, Smithsonian American Art Museum (SAAM), and the Phillips Collection. The collections at the National Museum for Women in the Arts, the Library of Congress, and the Textile Museum (at George Washington University) add to the richness of materials available for study.

Meanwhile, the Sheridan Libraries of Johns Hopkins maintains its own extensive art library on the Homewood Campus, alongside a Special Collections department which includes a strong collection of illustrated books, facsimiles, and artists' publications, and illustrated manuscripts, photography, and object collections housed at the Homewood Museums. The Johns Hopkins Archaeological Museum, which neighbors our department in Gilman Hall, houses objects from the ancient Mediterranean, Near East, and Americas, as well as some medieval Islamic works.

Programs

- History of Art, Bachelor of Arts (p. 1879)
- History of Art, Minor (p. 1880)
- History of Art, PhD (p. 1880)
- History of Art, Bachelor of Arts/Master of Arts (p. 1881)

Courses

AS.010.101. Introduction to Art History I. 4 Credits.
This introductory course explores and compares major developments in world art and architecture from the dawn of history, through several ancient and medieval civilizations, down to the era of the Black Death in Europe (mid-14th century). We will focus primarily on Egypt and the ancient Levant, the Mediterranean world of Greece and Rome, medieval Europe, the Islamic Middle East and Spain, and selected aspects of the arts of India, China, and Japan.
Area: Writing Intensive

AS.010.102. Introduction to Art History II. 4 Credits.
This introductory course explores and compares major developments in the arts primarily in Asia, Europe, North Africa, and North America from the fourteenth century to the present day, looking in particular at architecture, painting, sculpture, the arts of the object (ceramics, metalwork, etc.), printmaking, photography, and, starting in the twentieth century, new media. Throughout the semester, we will explore how the artistic practices and theories under consideration relate to their specific historical, intellectual, social, political, and geographical contexts, and we will also consider the roles that works of art and artists played in shaping many of those very same contexts

AS.010.103. Introduction to the Art of Asia. 3 Credits.
A survey of the art and architecture of Asia, from the ancient world to the present and including the Indian subcontinent, China, Japan, Korea, and Southeast Asia.

AS.010.110. Art of the Islamic World. 4 Credits.
This course is an introduction to the art of the Islamic world, covering a geography that stretches from Spain to India and a chronology that extends from the seventh century into our own time. Within this rich and varied continuum, we will look at a range of art forms—including architecture, painting, sculpture, ceramics, and calligraphy—in relation to such themes as patronage, production, function, and audience. A number of the artworks will be viewed firsthand in local collections. We will also explore the intersection of Islamic art with today's political realities.

AS.010.204. Italian Art in the Middle Ages. 3 Credits.
This course explores key monuments of medieval art and architecture in Italy from c. 400 until 1350. We will concentrate on historical, functional, and aesthetical aspects that lead to the creation of single monuments and art works. Emphasis is given to the analysis of "sacred space" by means of architecture, painted, and sculptural decoration, as well as ritual performances. Another focus is laid on the emergence on the political dimension of art for the creation of civic identity as well as in the context of the late medieval courts. We raise questions about the importance of materiality and science for the creation of medieval art works.
Area: Writing Intensive

AS.010.205. Art of Mesoamerica. 3 Credits.
This course provides a basis for the study of Mesoamerican visual cultures and urban settings. We will explore the artistic production of the Olmec, Maya, and Aztec as well as works created by the artists of Teotihuacan, Monte Albán, and West Mexico. With a focus on aesthetics and cultural function, case studies range from stone sculpture, painted ceramics, and screenfold codices, to architectural complexes from Mexico and Central America. Themes to be discussed include: representations of humans and deities, monumentality and rulership, mutilation and destruction of monuments, and ritual and political significance of materials.

AS.010.208. Leonardo da Vinci: The Renaissance Workshop in the Formation of Scientific Knowledge. 3 Credits.
How does a notary's son trained as a painter come to claim expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? The course will focus critically on the myth of Leonardo's singularity and explore his achievements with regard to the artisanal culture of his time, as well as the problems of authority in the recognition of artisanal knowledge as scientific discovery.

AS.010.210. The Art of Colonial Latin America. 3 Credits.
This course offers a broad introduction to the arts of colonial Latin America: students will become familiar with the artistic production in the areas of Latin America invaded and controlled by the Spanish Crown from the time of the conquests in the sixteenth century to independence movements in the early nineteenth century. We will explore a wide range of materials from maps to featherwork, paintings to urban grids, cathedrals to mummy bundles. The course is thematically organized, such that students will not only become familiar with the art of Latin America, but will come to understand critical topics related to the study of early modern colonialism: conquest, race, missionary control, literacy, extraction, and indigenous and imperial systems of governance.

AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez. 3 Credits.
Explores the different ways Early Modern painters and printmakers incorporated mirrors and optical reflections into their works for the sake of illusion and metaphor, deception and desire, reflexivity and truth-telling. Connecting sense perception and ethical knowledge, embedded mirror images often made claims about the nature of the self, the powers of art, and the superiority of painting in particular.

AS.010.214. Ancient Americas in Motion. 3 Credits.
This course critically examines the visual arts through the medium of documentary, historical, and Hollywood film. Coverage is mostly North America and Mesoamerica.

AS.010.232. Art and Architecture of the Global Medieval Mediterranean World. 3 Credits.
This course serves as an introduction to the art and architecture of the Mediterranean region between the early Christian period and the Second Crusade (c. 250-1150). We will analyze the interactions between WesternEuropean, Byzantine, and Islamic cultures through the development of religious art and architecture, asking specifically how these interactions were mediated by culturally distinct representational practices. The course will cover the broad Mediterranean region by focusing on specific sites of interaction around the Sea (i.e. Islamic Spain, Norman Sicily, Byzantine North Africa, Venice and the Adriatic Coast, and Crusader Palestine). Select topics will include: the rise of religious image theory and its effect on the visual cultures of the Mediterranean region; the trans-regional movement of artists, crafted objects, and artistic technologies; the history of urbanism and the production of artistic objects in port cities and centers of trade; and the concept of the Mediterranean as "Premodern Globalism." Readings will include both primary and secondary sources, and we will investigate a variety of methods and approaches to the interpretation of art objects.

AS.010.233. Asian Art Since 1945. 3 Credits.
This course examines the art and architecture of East, South, and Southeast Asia produced since the mid-twentieth century. We will engage with theoretical, visual, and political developments in the recent art of this region, reading statements by artists and architects, discussing the rising commercial and international profile of contemporary Asian art, and exploring established and emerging art histories of this period.Cross-list with East Asian Studies

AS.010.235. Art, Medicine, and the Body: Middle Ages to Modernity. 3 Credits.
This course explores seven centuries of fruitful collaboration between physicians and artists, uncovering the shared discourses, diagnostic techniques and therapeutic agendas that united the art of picture-making with the art of healing. Topics include the origin and development of medical illustration; the long, cross-cultural history of the therapeutic artefact; the anatomical investigations of Renaissance artists such as Leonardo and Michelangelo; depictions of bodily pain and disease in the art of Matthias Grünewald and psychosomatic syndromes like melancholy in the work of Albrecht Dürer; the spectacularization of the body in Enlightenment science and the ethics of medical specimen display today -- all in order to bring the complex intersections of the history of medicine and the history of art into view.

AS.010.240. Art and the Environment in the Ancient Eastern Mediterranean. 3 Credits.
What is the relationship between art and the environment? What are "geoaesthetics?" This course explores the interrelationships between ecosystem and creative responses and practices in the ancient Eastern Mediterranean. Specifically, the class will examine the intersections between artistic and architectural practices and the natural environment during the New Kingdom in ancient Egypt, the Neo-Assyrian period in ancient Mesopotamia, and the Minoan Bronze Age in the ancient Aegean.

AS.010.252. Sculpture and Ideology in the Middle Ages. 3 Credits.
This lecture course will offer a selective, thematic exploration of the art of sculpture as practiced in the Middle Ages, from the fall of the Roman empire in the 4th century CE to height of the Gothic era. The primary concern will be to analyze sculpture in all of its forms – monumental free-standing, architectural, liturgical, and commemorative – as the primary medium utilized by patrons, both private and corporate, to display political messages to an ever growing public.

AS.010.255. Contemporary Performance Art. 3 Credits.
Performance art is provocative and often controversial because it troubles, without dissolving, the distinction between art and life. Not just a matter of activating bodies, engaging viewers, or spurring participation, performance art asks what it means to perform, and what kinds of actions count, in contemporary culture. As such, performance art allows us to rethink established art historical concerns with form, perspective, and materiality, while offering critical insight into everyday life. We will explore how performance art addresses ingrained assumptions about action and passivity, success and failure, embodiment and mediation, "good" and "bad" feelings, emancipation and dependency.The study of performance art invites transdisciplinary approaches. Students from across the university are welcome. Our attention to a diverse array of artists and practices will be supplemented by readings in art history and criticism, as well as in feminist and queer theory, critical race theory, and political thought.

AS.010.265. Early Modern Dutch and Flemish Painting. 3 Credits.
Explores the major painters and printmakers working in the Netherlands during the sixteenth and early seventeenth centuries, the period that saw the outbreak of the Reformation, the revolt against Spanish rule, iconoclasm, the birth of the Dutch Republic, and the establishment of a Dutch colonial empire. Featured artists include Jan Gossaert, Pieter Aertsen, Pieter Bruegel the Elder, Jan Brueghel, Rembrandt van Rijn, Peter Paul Rubens, Jan Steen, Jan Vermeer, and others.

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.

AS.010.303. Transformations of an Empire: Power, Religion, and the Arts in Medieval Rome. 3 Credits.
This course investigates the impact of political, religious, and social change for the making of art and architecture in the city of Rome from Constantine the Great (ca. 274-337 CE) until 1308, when the papal court moved to Avignon. From being a thriving metropolis and the political center of an empire in a pagan, multi-ethnical society, Rome became a small town of a few thousand inhabitants dwelling in the ancient ruins under the spiritual leadership of a powerless Christian bishop and unprotected from the invasions of the migrating peoples from Eastern Europe and Central Asia. Later transformations concern the rise to political power of the popes, achieved by the military alliance with the Frankish dynasty of Charlemagne around 800, and the controversy over the superiority of power between the German emperors and the Roman popes. How did the transformation from worldly to religious power affect the architecture of public buildings in the city? What strategies were developed to visually promote the new religious leaders of the city, the popes, and the new Christian God? How did the new status of Rome as one of the most important Christian pilgrim sites with its countless bodies of Early Christian martyrs in the catacombs outside the city influence urban development? And finally, what impact did the economical ups and downs in these periods of transition have for the arts? As we try to reconstruct the 'image' and the appearance of medieval Rome, this course discusses ideas and concepts behind different forms of leadership, both political and religious, as they intersect with the power of the arts and the self-referential character of a city that is obsessed with its own past.
Area: Writing Intensive

AS.010.305. The Ethiopia at the Crossroads. 3 Credits.
Ethiopia played a foundational role in modern-day civilization and culture: as the find site of Lucy, the earliest bipedal hominid, the seat of the Queen of Sheba's kingdom, the second country in the world to adopt Christianity in the early 4th century CE, and the nexus of exchange between Africa, Europe, and Asia. In fall 2023, The Walters Art Museum will mount the exhibition tentatively titled, Ethiopia at the Crossroads, which addresses Ethiopia's relationship and artistic exchange with its surrounding cultures, including South Arabia, Nubia, Egypt, Byzantium, Armenia, Italy, and India. It also discusses the impact of Ethiopian art beyond its borders, bringing works of Ethiopian contemporary art into dialogue with the historical Ethiopian art that these artists draw upon in their work. The exhibition covers approximately 1,750 years of Ethiopian history with a special focus on the art of the medieval period, broadly conceived. The course will also offer insights into how a museum exhibition is developed from the initial concept to the physical presentation in the galleries.

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.

AS.010.309. The Idea of Athens. 3 Credits.
This thematic course will explore the art, architecture, material culture, and textual evidence from the ancient city of Athens, the many cultures and social positions that made up the ancient city, and the idea of the city as something far beyond its reality. We will take a number of field trips to museums in the area and some of your assignments will be based in local museums.

AS.010.315. Art of the Assyrian Empire, 1000-600 BCE. 3 Credits.
From 900 to 609 BCE, the Assyrian Empire dominated the ancient Near Eastern world, stretching from western Iran to the Mediterranean and Egypt. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This course provides an integrated picture of the imperial arts of this first world empire, situating it within the broader social and political contexts of the first millennium BCE. In its conquest of foreign lands, this powerful state came in contact with and appropriated a diversity of cultures, such as Phoenicia, Egypt, and Greece, which we will also study.

AS.010.316. Venice: Art, Architecture and Ecology from the Late Middle Ages to the Present. 3 Credits.
This course is an investigation into the fashioning of Venetian identity in architecture and the visual arts, with a particular address to the encounter with Byzantine and Islamic traditions and exchanges with other centers of the Italian peninsula.

AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
The course focuses on art and architecture in the political and religious contexts of the Middle East, from the 4th to the 14th c. The three monotheistic religions all claimed specific territories -- in particular the city of Jerusalem -- for cult practices. This situation resulted in military conflicts that had an impact of Jewish, Medieval, Byzantine, and Islamic art in the Holy Land. The political conflicts, which still plague the region today, are rooted in the complex situation of the medieval period. The Roman, Arab, Byzantine, and crusader invasions resulted however in exciting eclectic styles that characterize the art and architecture of the region. We will discuss concepts behind political and religious leadership, as they intersect with the power of the arts.
Area: Writing Intensive

AS.010.320. Art of Colonial Peru. 3 Credits.
Viewed within the dynamic historical context of colonial society, we consider the pictorial, sculptural, and architectural programs that ensued in viceregal Peru (1532-1825). We examine the role of religious orders, art schools, artisan guilds and cofradía, and consider the social and political implications of art patronage.

AS.010.322. Knowledge, Holiness, and Pleasure: The Illustrated Book in the Medieval World. 3 Credits.
The book was the primary source for the collection of knowledge in the Middle Ages. It was also the medium for the preservation and proliferation of the texts that underlay the three monotheistic religions (Judaism, Christianity, Islam). Finally, the book served as a source for elite entertainment, perhaps most importantly in Late Antiquity and the later Middle Ages. This course investigates the role of the illustrated book within the political, religious, and artistic developments that took place after the rise of Christianity from the end of the Roman Empire until the early modern period in the medieval West and in Byzantium, permeating Jewish and Islamic traditions. We will examine how the different types of books, such as horizontal and vertical scrolls, large and miniature size codices influenced the placement, conception, and style of the illustrations. The course also addresses processes of manufacture, issues of materiality (i.e. precious multi-media book covers, papyrus, parchment, paper), and the relationship between text and image. A major aspect of the seminar focuses on the performative aspect of the book in its wide range of functions: secular and liturgical, public and private. Students will be able to work first hand with manuscripts and facsimiles from the rare book collection of Eisenhower Library and the Walters Art Museum.

AS.010.325. Blood, Gold, and Souls: The Arts of the Spanish Empire. 3 Credits.
From the sixteenth through the eighteenth centuries, visual forms and practices linked such far-flung places as Mexico City and Naples, Manila and Lima, Cuzco and Antwerp, Quito and Madrid: all cities in the Spanish Empire. This course is conceived as a voyage, moving city by city to explore objects that connected Spain's vast holdings. We will investigate how the Spanish Crown and the Catholic Church used visual strategies to consolidate political power and instill religious faith across the world; and, alternatively, we will consider how local conditions, concerns, and resistance reshaped those efforts. This course surveys a diverse range of artistic production: religious paintings and sculptures; maps used for imperial surveillance; luxury goods crafted from shimmering feathers, ceramics, ivory, and precious metals; urban design and architecture from the ports of Europe to the highland outposts of the Andes; ephemeral cityscapes for civic performances. In examining such materials, students will be introduced to the art historical methods and theoretical concerns used to study a wide diversity of objects within an imperial frame.

AS.010.327. Asia America: Art and Architecture. 3 Credits.
This course examines a set of case studies spanning the last century that will enable us to explore the shifting landscape of Asian transnational art and architecture. Each week will focus on a different artist, group, exhibition, architect, urban space, or site to unpack artists' and architects' engagements with the changing landscape of immigration policies, movements to build solidarity with other artists of color, and campaigns for gender and sexual equality. The course will situate these artists within American art, and build an expansive idea of Asia America to include the discussion of artists whose work directly addresses the fluidity of location and the transnational studio practice.
Area: Writing Intensive

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire's formative centuries, when three successive capital — Bursa, Edirne, and Istanbul — served to visualize the sultans' growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.

AS.010.337. Global Amsterdam: The Golden Age of a Small but Mighty Metropolis. 3 Credits.
This course examines the visual and material culture of the Dutch Golden Age as the product of global forces. The young Dutch Republic quickly achieved a global reach in the seventeenth century. And Amsterdam served as its commercial capital, which by 1630 could be counted as one of the most important port cities in the world and home to the Dutch East India Company (VOC), the world's first multinational corporation. Moving an incredible quantity of goods (spices, silks, porcelain, coffee, precious stones, "exotic" arts, and slaves) generated not only the economic riches, but also the cultural touchpoints that would give rise to art produced by the likes of Rembrandt, Vermeer, Hals, and the many exceptional craftsmen that have left us some of the most enduring masterpieces of the seventeenth century. This course situates that art, and the city of Amsterdam itself, within networks that connected it to such far flung places as Japan, Jakarta, Surinam, Curacao, Brazil, and the Indian Subcontinent.
Area: Writing Intensive

AS.010.338. Art and the Harem: Women's Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem —as an institution, a physical space, and a community of women— from various art-historical perspectives, considering such topics as the harem's architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem's visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.

AS.010.339. Sex, Death, and Gender: The Body in Premodern Art, Medicine, and Culture, c. 1300-1600. 3 Credits.
To what extent was the body and its depiction a site of contestation, identification, or desire in the Middle Ages and Renaissance? If the body in the West since the 1800s is seen to have been shaped by the rise of photography and film, the institutionalization of biomedicine, and the establishment of techniques of surveyance and mechanization, then how was the body represented, disciplined, and experienced in the preceding centuries? In an age of unprecedented encounter with non-European bodies, what did it mean to describe and categorize bodies by race, region, or religion? These are some of the major questions this class seeks to answer, which is fundamentally interdisciplinary as it draws upon insights and methods from anthropology and the history of medicine and history of science to investigate how the body has been represented and imagined in the visual arts. The bodies of the suffering Christ, the female mystic, the dissected cadaver, the punished criminal, and the non-European 'Other' will loom large as we work to problematize notions of a normative body, whether in the premodern world or in the contemporary one. While most readings and lectures will concern the body and its representation in the Christian West during the later Middle Ages and Renaissance, students are encouraged to work on a topic of their choosing from any geographical area 1000-1800 CE for their research papers.
Area: Writing Intensive

AS.010.346. Art of the Cold War Era. 3 Credits.
The Cold War years bore witness to some of the most radical developments in modern art. An abiding question for artists, writers, and political figures too during this period was what role—if any—could art perform in social and political life, and in the struggle between capitalism and communism in particular. This course examines the political viability of art as this concern was taken up by groups and individuals throughout the world in response to rapidly shifting geopolitical circumstances. Beginning with the visual cultures of the United States and Soviet Union, the course will also examine artistic responses to the conditions of Cold War existence in and beyond countries of NATO and the Warsaw Pact. Proceeding roughly chronologically, the course is divided into twelve units following the art of the US, USSR, Western and Eastern Europe, China, and Japan, among others. It treats a wide variety of media as painting and sculpture, canonically privileged in the history of Western art, ceded ground to new forms of practice such as performance, film, and a deep, critical engagement with mass culture. In so doing, this course provides at once a global history of modern art and visual culture and a critical interrogation of their relationships to social change and political life during the 20th century and beyond.
Area: Writing Intensive

AS.010.349. Art and Interactions in the Eastern Mediterranean from 2000 to 500 BCE. 3 Credits.
The arts of Egypt, Greece and the Near East are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. From 2000 to 500 BCE (the Middle/Late Bronze and Iron Ages), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Egyptians, Near Easterners, Greeks and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war, imperialism, and colonization.
AS.010.301 - Titled "Art and Interactions in the Eastern Mediterranean from 2000 to 500 BCE" - Students who have taken that course in 2014 or prior are not permitted to take this course.

AS.010.350. Body and Soul: Medicine in the Ancient Americas. 3 Credits.
This course examines curative medicine in the Americas through its visual culture and oral histories. Philosophies about the body, health, and causes of illness are considered, as are representations of practitioners and their pharmacology. Case studies are drawn from cross the Americas (Aztec, Moche, Aymara, Paracas, American SW). Collections study in museums, Special Collections.

AS.010.352. Modern and Contemporary Art: Middle East and South Asia. 3 Credits.
This course will explore modern and contemporary art in colonial and postcolonial contexts from Bangladesh to northern Africa. How do artists negotiate demands to support their national and local identities while participating in modernism across borders? What role do secularism and spirituality have in modern art? How do anticolonial, Marxist, and feminist politics shape art in these regions? How do global economic forces and the rise of powerful collectors, private museums, and international art fairs shape art and artists working across this geographic area? We will foreground the role of women as artists, collectors, patrons, and scholars throughout.
Area: Writing Intensive

AS.010.364. Babylon: Myth and Reality. 3 Credits.
Babylon – the name resonates even today, from the biblical whore of Revelation to sci-fi. It evokes exotic places and time long past. But what do we really know about the ancient city and the civilization that flourished there thousands of years ago? The first part of this course examines the archaeological city of Babylon, located in the modern state of Iraq, and considers its artistic and architectural achievements in the context of Mesopotamian history. The second part of the class explores the ongoing impact of Babylon in the cultural imagination of later periods, from the Classical and biblical authors, to European artists, Hollywood movies, science fiction, and contemporary political movements.

AS.010.365. Art of the Ancient Andes. 3 Credits.
The ancient visual arts of Andean South America and their respective cultural contexts form the basis of this course. In conjunction with the Baltimore Museum of Art and the Johns Hopkins Archaeological Museum students will have access to collections for study.

AS.010.366. Native American Art. 3 Credits.
The works of Native American artists are examined and discussed in their respective social and historical contexts. Such works include Hopewell stone sculpture, Mimbres pictorial painting, and Tlingit guardian figures. We examine the concept of sacred landscape through analysis of monumental earthworks and effigy mounds, Anasazi architecture, and rock art. In conjunction with the Baltimore Museum of Art (BMA), and Johns Hopkins Special Collections, students will have access to collections for study.

AS.010.367. Photography, the Archive, and Memory. 3 Credits.
This seminar will culminate in an exhibition in the library, focused on the photographic works of Dayanita Singh (b. India, 1961) in Hopkins' collections. Singh's work delves deeply into her subjects, exploring issues of identity, the body, and sexuality as well as questions related to memory and the archive. She has long presented her photography in the form of the book, and as such we will pursue readings in photography, book arts, and the archive, and bring nineteenth-century illustrated books in our collection into dialogue with Singh's work. This will be a hands-on seminar: students will develop the framework for the exhibition, write the textual materials (labels, wall text), and decide on the arrangements of objects in the show.

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through an examination of colonial exhibitions, the rise of national, regional, and archaeological museums, and current practices of display and representation in institutions, we will explore how the image of South Asia has been constructed in the colonial, modern, and contemporary eras. We will engage with the politics of representation, spectacle, and the economies of desire as related to colonialism and the rise of modernity. Readings from postcolonial theory, museum studies, anthropology, history, and art history.
Area: Writing Intensive

AS.010.389. The Stone and the Thread. 3 Credits.
Advanced inquiry into imperial Inka architecture and fiber arts.
Area: Writing Intensive

AS.010.390. Ancient Americas Object Workshop. 3 Credits.
Analysis of ancient Americas collection held in the Johns Hopkins Archaeological Museum.
Area: Writing Intensive
AS.010.105 OR AS.010.407 OR AS.010.398 OR AS.010.365 OR AS.010.389 OR AS.010.366 OR AS.010.214 or in consultation with professor prior to registration.

AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.

AS.010.400. Research Lab: The Dutch Americas. 3 Credits.
The Dutch East India Company, or VOC, is historically and art historically well documented and firmly understood. But the Dutch also had significant holdings to the west via the Dutch West India Company, or WIC. They operated and held outposts in the present-day United States (New York/New Amsterdam), Caribbean (Surinam, Curaçao, Bonaire), Latin America (Brazil), and West Africa. Despite the abundance of materials associated with the WIC from this wide geography, these have been scarcely assessed by art historians, and a defined and comprehensive corpus has never been assembled. This class will act as a research lab in which to do so. In research teams, students will map artworks and objects created from that broad, transnational cultural ambit—categories that might include maps, landscape paintings, still life paintings featuring American flora and fauna, botanical illustrations, plantation architecture, luxury objects made from precious raw materials gathered in the Americas, the urban environment of slavery—and develop individual research questions around them.The class will run with a partner lab in the form of a course led by Professor Stephanie Porras at Tulane University. The course will feature speakers; and there is potential for funded travel to conduct research. We will start at the ground level; no previous knowledge about the field is required. Students from all disciplines are welcome.
Area: Writing Intensive

AS.010.405. The Medieval Image and Concepts of Authenticity. 3 Credits.
The course examines the notion of the authentic in conjunction with medieval images, relic veneration, and the practice of law. It investigates the construction, reception, and theoretical grounding of authenticity of reliquaries, icons, and imprints on cloth or seals, and legal documents. These objects elucidate artistic strategies such as cross media references, abstraction, mimesis and bricolage to convey an aura of authenticity. We address other authenticating factors, such as complex ritualized forms of communication. This is a new course for the undergraduate section, existing course is AS.010.644. Will be taught as a hybrid this Fall 2020.
Area: Writing Intensive

AS.010.407. Ancient Americas Metallurgy. 3 Credits.
This course addresses the technology, iconography and social significance of metals and draws on case studies from the Americas. Collections study in museums.

AS.010.409. Theories and Works of “The Baroque”. 3 Credits.
There is perhaps no more confounding, though also no more persistent, art historical concept than that of “the Baroque.” This course introduces students to foundational histories and critiques of “the Baroque” while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.
Area: Writing Intensive

AS.010.410. The Epistemology of Photography. 3 Credits.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Area: Writing Intensive

AS.010.413. Historical and Conceptual Bases of Art History. 3 Credits.
This course introduces students to the principal methods and theories of art history. Students will work through readings foundational for the discipline, texts that define key methodological consolidations in the twentieth century, and more recent (e.g. feminist, visual studies, global, post-colonial, and/or ecological) critiques and rethinking. Specific texts will vary by instructor, but the course seeks—in any instantiation—to include a plurality of perspectives.

AS.010.414. The Cartographic Imaginary: Maps, Charts, and the Navigation of the Early Modern Globe. 3 Credits.
In the early modern world, people traveled further and more routinely than ever before. This course looks at the tools used to facilitate such endeavors—from maps to navigational charts, from atlases to astrolabes. However, beyond mere logistical instruments for imperial expansion, colonial settlement, and commercial trade, these objects and pictures structured new ways of thinking about and imagining the world and its spaces. An armchair traveler in Amsterdam could envision a journey to and travel within a place like modern-day Indonesia; a Spaniard living in the highlands of present-day Bolivia could imagine, in period terms, "all the cities of the universe and more." This course attends to excavating the representational economies forged from the mass-production and wide circulation of navigational objects and pictorialized territories. Though the focus will be on the early modern period, we will read broadly and engage a wide range of theories; and students are encouraged to use the tools we develop in class to research representation from any time and place.
Area: Writing Intensive

AS.010.419. Passion Image, Passion Cult, Passion Drama: Narrative and Metaphor in the Middle Ages, Renaissance, and Beyond. 3 Credits.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.
Area: Writing Intensive

AS.010.423. Modern and Contemporary Art in South Asia. 3 Credits.
How does modernism operate in the colonial context, work with and against the nationalisms of new countries (India, Pakistan, Sri Lanka, Nepal, and Bangladesh), challenge existing norms of the art world and the art market, engage with the difficult and violent upheavals of Partition and sectarian conflict, and allow for experimentations and new forms all the while? This course will explore the history of the art of the subcontinent from c. 1880 to the present by critical engagement with the art, artists, and theories at play in the South Asian region.
Area: Writing Intensive

AS.010.424. Art and Colonialism: Nineteenth-century India. 3 Credits.
This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the "people of India," and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library's Special Collections.
Area: Writing Intensive

AS.010.431. Obsessed with the Past: the Art and Architecture of Medieval Rome. 3 Credits.
In antiquity, Rome became the capital of an empire, its growing status reflected in its sophisticated urban planning, its architecture, and the arts. While an abundance of studies explores the revival of this glorious past in the Renaissance, this seminar discusses various ways of the reception of antiquity during the medieval period. We address the practice of using "spolia" in medieval architecture, the appropriation of ancient pagan buildings for the performance of Christian cult practices, the continuation of making (cult)images and their veneration, the meaning and specific visuality of Latin script (paleography and epigraphy) in later medieval art. We discuss the revival and systematic study of ancient knowledge (f. ex. medicine, astronomy, and the liberal arts), in complex allegorical murals. As we aim to reconstruct the art and architecture of medieval Rome, this course discusses ideas and concepts behind different forms of re-building and picturing the past, as they intersect with the self-referential character of a city that is obsessed with its own history.
Area: Writing Intensive

AS.010.432. Therapies of Art and Literature from Antiquity to Early Modern Europe. 3 Credits.
This seminar examines the myriad ways artists and writers geared their work toward the therapeutic healing of mind, body, and soul, and the role images and texts could play in programs of individual and collective transformation. Taking as our point of departure the ancient tradition of spiritual exercises and inner dialogue, Petrarch's therapy of the passions, and the revival of consolatory letters, we will consider how the Christian artist could invest their work with medicinal, magical, sacramental, or spiritual efficacies, and even take on the mantle of a "physician of souls." Intersections with the histories of medicine and religion will lead us to the ways natural medicine and the thaumaturgical practices associated with pilgrimage could be transposed into the arena of spiritual therapy. Featured authors include Cicero, Marcus Aurelius, Augustine of Hippo, Boethius, Petrarch, Michel Foucault, Pierre Hadot, and Allain de Botton; artists include Hieronymus Bosch, Albrecht Dürer, Matthias Grünewald, and many others.
Area: Writing Intensive

AS.010.433. Hands-On Approaches to European Books and Prints before 1800. 3 Credits.
Baltimore's rich museum and library collections create a dynamic laboratory for students to gain an understanding of early modern European traditions of prints and books. Engraving, etching, woodcut, mezzotint, à la poupée; Rembrandt, Dürer, Aldus Manutius, Plantin-Moretus. This course will introduce students to the basic techniques, concepts, terms, and artists that shaped the production of reproductive works on paper in early modern Europe and their subsequent art historical study. All sessions will be taught out of local collections (BMA, Walters, NGA, Hopkins Special Collections); that is, this is a hands-on class that—while requiring no previous experience—will attend to the nitty-gritty details and methods of studying works in person, giving students the tools, expertise, and confidence to pursue their own research with historical printed materials.
Area: Writing Intensive

AS.010.440. Power Dressing: The Politics of Costume between the Ottoman Empire and the West. 3 Credits.
In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—how one dressed was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire's long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums—books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-century dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world's fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.
Area: Writing Intensive

AS.010.444. Classics Research Lab: Antioch Recovery Project (ARP). 3 Credits.
Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term "narcissism". Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard's Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.

AS.010.451. Script, Character, Scribble: Writing and Pseudo-Writing in Modern and Contemporary Art. 3 Credits.
Almost readable, but not quite: artists in the twentieth and twenty-first century played with script of all kinds, from ancient glyphs and Persian script to Roman typefaces and Korean Hangul. Artists also scribbled in ways that evoke writing without script or meaning. This course takes on the question of meaning-making in art through the form of script—flirting with that tantalizing feeling that we can almost read the work of art through the marks on its surface. We will engage with artists from around the world whose work grapples with knowledge, meaning, and script, and discuss the limits and possibilities of legibility, knowing, and language. In addition to painting and drawing, we will also discuss conceptual art, installation, video, architecture, tapestry, ceramics, graphic novel forms, book arts, and sculpture. We will have opportunities to situate these works within longer histories of script and pseudo-script and image-text relations. Our discussion-driven seminars will be guided by readings in art history and theory. The course carries no expectation that you are multi-lingual or have experience with multiple scripts. Central to our semester will be group trips to see art in person in DC and Baltimore. Assignments include an option for short, focused writing with feedback and opportunities to experiment with genre and to rewrite, or a longer seminar paper, chosen in consultation with the professor.
Area: Writing Intensive

AS.010.459. The illuminated charter: visual splendor, performance, and authenticity of medieval legal documents. 3 Credits.
This course investigates the complexities of medieval legal documents, their specific visuality and materiality, as well as practices of copying and forgery. We will address the aesthetics of legal documents, their graphic signs, seals, and paleography and the authenticating strategies used to corroborate their legitimacy. Another emphasis is set on the performative aspects of the medieval charters in court and church rituals. Comparison with contemporary illuminated sacred books will reveal the tight connections of monastic scriptoria and royal/imperial chanceries. The geographic focus is set wide, ranging from medieval Spain, to Carolingian and Ottonian chanceries in France and Germany, to the papal court in Rome and the imperial and monastic scriptoria in Byzantium.
Area: Writing Intensive

AS.010.501. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.010.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.010.521. Honors Thesis. 1 - 3 Credits.
Open to students by arrangement with a faculty advisor in the History of Art Department. Interested students should review the program description available in the department office.
Area: Writing Intensive

You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.010.603. Beyond Word & Image.
The relationship of "word" and "image" has been a central concern of both the history of art and other humanistic disciplines; and semiotics, (post-)structuralism, narrative studies, media studies, and theories of ekphrasis and representation have been marshalled to probe how visual and verbal systems work in conjunction, overlap, and conflict. Much less art historical attention has been paid to the visuality of writing itself. Against the backdrop of robust work on the relationship between text and image, this course focuses on text as image: the visuality of text, the imagistic dimensions of writing, Schriftbildlichkeit. The seminar takes as guiding premise that art historical method might be robustly brought to bear on the visual and material features of texts, both those that appear as part of traditional art historical media (paintings, sculptures, and architectural monuments) and those that have primarily remained within the purview of other humanistic subfields: books, archival documents, writers' manuscripts, epistolary communication, and inscriptions (both analog and digital). In this course, we will survey a broad range of textual objects, from ancient inscriptions to moveable type to digital texts to "writing" in twenty-first century artists' books; and we will work together towards assembling an art historical toolkit for excavating the full valences of texts, accounting for the ways they make meaning in linguistic, semiotic, formal, material, visual, and media-specific registers. Though art historical in focus, this course will be essentially interdisciplinary, and students from other subfields are warmly welcomed. There will be ample opportunity for discussing and studying objects in local collections.

AS.010.604. Contested Patterns: Islamic Art History and Its Challenges.
Formed against the backdrop of nineteenth- and twentieth-century Orientalism and colonialism, the field of Islamic art history continues to grapple with the overwhelmingly Eurocentric assumptions, narratives, and approaches that shaped its emergence and development. These inherited perspectives and the debates they have sparked are the focus of this seminar, which critically examines the foundational characterizations of Islamic art—as ornamental, iconophobic, and timelessly other—together with the exhibitory, commercial, and scholarly contexts in which such ideas took root. Adopting a simultaneously thematic and chronological approach, the seminar will trace the ways in which diverse constellations of actors—including those from within the Islamic world itself—have variously established, consolidated, or challenged the field's underlying concepts. We will explore how this discursive process has intensified in our own time, in which a spate of scholarly and popular treatments have laid bare the tension between calls to reevaluate the field and an enduring impulse to reinscribe its established contours. Alois Riegl, Oleg Grabar, Gülru Necipoglu, Yasser Tabbaa, and Wendy Shaw are among the authors whose writings will be assessed and compared. Throughout the seminar, we will ground our historiographical inquiry in discussions of specific works and categories of Islamic art—particularly those like carpets that traditional frameworks have fetishized as decorative—and consider more fruitful avenues for addressing such material, making use of local collections to the extent that we can.

AS.010.606. Approaches to Ancient Art.
The discipline of art history has passed through a number of major methodological and theoretical shifts since its inception (and in particular, over the last thirty years). Foundational disciplinary methods derive principally from the arts of Classical Greece, the Renaissance and contemporary periods. As the discipline embraces an enlarged field of inquiry, particularly drawing upon developments in anthropology, material culture studies, feminism, queer theory, and political theory, additional avenues for understanding the arts of the ancient world are emerging. The seminar focuses on how art historical method and theory – both foundational and emergent – might be profitably applied to the subfields of the ancient Near East and eastern Mediterranean (understood in the broadest sense).
Area: Writing Intensive

AS.010.607. The Epistemology of Photography.
This seminar will ask how photography produces ways of knowing: how does photography's reality-effect shape its dissemination and absorption? Is photography's emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.

AS.010.608. The Picture as Object.
The seminar will explore cases of European pre-modern picture-making in various media that solicit tactile as well as sensory engagement, and that call into question the "Albertian" metaphor of pictura as window. Case studies will include mosaics, reliefs, pastiglia, medals, portable paintings, et al."

AS.010.611. Seminar in Near Eastern Art.

AS.010.613. Geographies of Art: Theories and Cases Studies from the Renaissance to the Present.
The role of place in the art historiography of the Renaissance, with readings in geographical theory. The seminar will also consider the role in the art of Lorenzo Lotto, Gaudenzio Ferrari, Cesare da Sesto, Romanino, Moretto, Pordenone, Titian, and other artists active before the canon-formation enterprise of Giorgio Vasari definitively altered the map of Italian art after 1550.

AS.010.614. Research Lab: The Dutch Americas.
The Dutch East India Company, or VOC, is historically and art historically well documented and firmly understood. But the Dutch also had significant holdings to the west via the Dutch West India Company, or WIC. They operated and held outposts in the present-day United States (New York/New Amsterdam), Caribbean (Surinam, Curaçao, Bonaire), Latin America (Brazil), and West Africa. Despite the abundance of materials associated with the WIC from this wide geography, these have been scarcely assessed by art historians, and a defined and comprehensive corpus has never been assembled. This class will act as a research lab in which to do so. In research teams, students will map artworks and objects created from that broad, transnational cultural ambit—categories that might include maps, landscape paintings, still life paintings featuring American flora and fauna, botanical illustrations, plantation architecture, luxury objects made from precious raw materials gathered in the Americas, the urban environment of slavery—and develop individual research questions around them.The class will run with a partner lab in the form of a course led by Professor Stephanie Porras at Tulane University. The course will feature speakers; and there is potential for funded travel to conduct research. We will start at the ground level; no previous knowledge about the field is required. Students from all disciplines are welcome.
Area: Writing Intensive

AS.010.615. Therapies of Art and Literature from Antiquity to Early Modern Europe.
This seminar examines the myriad ways artists and writers geared their work toward the therapeutic healing of mind, body, and soul, and the role images and texts could play in programs of individual and collective transformation. Taking as our point of departure the ancient tradition of spiritual exercises and inner dialogue, Petrarch's therapy of the passions, and the revival of consolatory letters, we will consider how the Christian artist could invest their work with medicinal, magical, sacramental, or spiritual efficacies, and even take on the mantle of a "physician of souls." Intersections with the histories of medicine and religion will lead us to the ways natural medicine and the thaumaturgical practices associated with pilgrimage could be transposed into the arena of spiritual therapy. Featured authors include Cicero, Marcus Aurelius, Augustine of Hippo, Boethius, Petrarch, Michel Foucault, Pierre Hadot, and Allain de Botton; artists include Hieronymus Bosch, Albrecht Dürer, Matthias Grünewald, and many others.

AS.010.620. Theories and Geographies of the Baroque: 1600 to the Present.
Topics in artistic theory and multimedia practice from seventeenth century Italy and Spain to other early modern and modern global baroques.

AS.010.624. Art and Colonialism: Nineteenth-century India.
This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the "people of India," and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library's special collections.
Area: Writing Intensive

AS.010.625. Art and Interaction in the Bronze Age Eastern Mediterranean.
The arts of the Near East, Aegean and Egypt are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. During the Bronze Age (3000 to 1200 BCE), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Near Easterners, Greeks, Egyptians and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war and imperialism.Students are not expected to have extensive knowledge of all the areas, although some experience in at least one of them will be helpful. The course will interweave establishing a knowledge base necessary to tackle this topic with broader conceptual concerns and interdisciplinary approaches (art historical, archaeological, anthropological, and historical).There will be a final paper.

AS.010.631. Performing Power: Ceremonial, Diplomacy, and Gift-Giving in and beyond the Ottoman Empire.
As a major global power straddling three continents, the Ottoman Empire developed a rich and diversified ceremonial culture aimed at impressing local and international audiences alike. This seminar will explore the ways in which works of art and architecture provided settings and apparatus for, and were themselves shaped and enlivened by, the ceremonial acts in which they featured. Covering the period between the sixteenth and nineteenth centuries, we will address a range of case studies—including mosque inaugurations, royal processions, the reception of foreign ambassadors, and the exchange of diplomatic gifts—with regard to their sociopolitical, visual, material, and spatial contexts. A major concern of the seminar will be the question of how Ottoman ceremonies, together with their staging and attendant art forms, were adapted in response to changing conditions and audiences, particularly with the shift from the early modern to the modern period. While our focus will be on the Ottoman Empire, the course will also consider the ceremonial cultures of the various Asian and European polities with which the Ottomans interacted, investigating the points of comparison and contrast that defined these multifarious but connected interregional approaches.

AS.010.633. Theories and Works of "The Baroque".
There is perhaps no more confounding, though also no more persistent, art historical concept than that of "the Baroque." This course introduces students to foundational histories and critiques of "the Baroque" while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.
Area: Writing Intensive

AS.010.634. Rethinking the Renaissance: Alternatives to "Early Modernity".
"The Renaissance" as a periodization under attack, and its persistance; the hermeneutics of the Pre-Modern Image since Panofsky; the critique of Eurocentrism; challenges to and recuperations of iconology, assessing the contributions of semiotics, psycholanalysis and queer theory.

AS.010.638. Interrogating the Material Turn.
This course considers the turn to centering materials and materiality in the history of art. Since the publication of Michael Baxandall's Painting and Experience in Fifteenth Century Italy (1972) and in particular since the turn of the millennium, critical engagement with the materiality of art has proliferated. This seminar will tackle renewed investment in materiality within the discipline of art history and draw on perspectives from archaeology, philosophy, anthropology, conservation science, feminist and queer theory, and postcolonial studies, among others. Particular emphasis will be placed on the polycentrism of materiality as a theoretical lens that cuts across seemingly disjunct cultural, social, and political frames and subject positions. While this course focuses on the art of the ancient Mediterranean, students will be encouraged to bring their own subfields to bear on the material turn and to pursue research topics related their individual research goals. Open to interested students from all disciplines.

AS.010.639. Obsessed with the Past: the Art and Architecture of Medieval Rome.
In antiquity, Rome became the capital of an empire, its growing status reflected in its sophisticated urban planning, its architecture, and the arts. While an abundance of studies explores the revival of this glorious past in the Renaissance, this seminar discusses various ways of the reception of antiquity during the medieval period. We address the practice of using spolia in medieval architecture, the appropriation of ancient pagan buildings for the performance of Christian cult practices, the continuation of making (cult)images and their veneration, the meaning and specific visuality of Latin script (paleography and epigraphy) in later medieval art. We discuss the revival and systematic study of ancient knowledge (f. ex. medicine, astronomy, and the liberal arts), in complex allegorical murals. As we aim to reconstruct the art and architecture of medieval Rome, this course discusses ideas and concepts behind different forms of re-building and picturing the past, as they intersect with the self-referential character of a city that is obsessed with its own history.
Area: Writing Intensive

AS.010.641. Hands-On Approaches to European Books and Prints before 1800.
Baltimore's rich museum and library collections create a dynamic laboratory for students to gain an understanding of early modern European traditions of prints and books. Engraving, etching, woodcut, mezzotint, à la poupée; Rembrandt, Dürer, Aldus Manutius, Plantin-Moretus. This course will introduce students to the basic techniques, concepts, terms, and artists that shaped the production of reproductive works on paper in early modern Europe and their subsequent art historical study. All sessions will be taught out of local collections (BMA, Walters, NGA, Hopkins Special Collections); that is, this is a hands-on class that—while requiring no previous experience—will attend to the nitty-gritty details and methods of studying works in person, giving students the tools, expertise, and confidence to pursue their own research with historical printed materials.
Area: Writing Intensive

AS.010.644. The Medieval Image and Concepts of Authenticity.
The course examines the notion of the authentic in conjunction with medieval images, relic veneration, and the practice of law. It investigates the construction, reception, and theoretical grounding of authenticity of reliquaries, icons, and imprints on cloth or seals, and legal documents. These objects elucidate artistic strategies such as cross media references, abstraction, mimesis and bricolage to convey an aura of authenticity. We address other authenticating factors, such as complex ritualized forms of communication.

AS.010.646. Art and Architecture at the Eastern Frontier: Medieval Georgia.
This seminar investigates the fascinating landscape of medieval art and architecture of Georgia. Its specific geographic position in the South Caucasus, at the cross roads between the East and West, the Christian and Islamic Worlds, had a profound impact on the art and architecture in the region. Ancient sites show close connections with the Graeco-Roman World on the western border and with the Sassanid Empire in the East. The Christianization of the Kingdom of Kartli in the early fourth century resulted in close ties with the development of early Christian art in Syria, the Holy Land, and Byzantium. While the Christian religion remained an identifying factor during several hundred years of Muslim rule (736 to 1122) during which the city of Tbilisi was the capital of an emirate, Islamic motifs and style became an important factor for art works in medieval Georgia. Art and architecture with a specific Byzantine profile flourished in particular after the reunification of Georgia during the reign of King David the Builder (1073- 1125) and Queen Tamar (1184 to 1213). The cathedral and monastery of Gelati and Mzcheta, the murals in the royal monasteries of Vardzia and Khintsvisi, and the countless icons are a testimony to this relationship. We will discuss the specific diverse aesthetics and materiality (stone, enamel and metal works) of Georgian art with the goal to reassess the map of medieval art and architecture that currently does not include the Eastern Frontier. A mandatory c. 10 days field trip to Georgia is planned after classes end in May 2020.
Area: Writing Intensive

AS.010.649. Power Dressing: The Politics of Costume between the Ottoman Empire and the West.
In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—how one dressed was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire's long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums—books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-century dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world's fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.
Area: Writing Intensive

AS.010.650. Before and After Trent: the Image and Sacred Space in Rome and Spanish Italy.
The seminar will investigate the question of art and reform in three major centers of the Italian peninsula (Rome, Naples, Milan), with attention to parallel phenomena in other centers of Catholic Europe (Spain and the Spanish Netherlands). We will examine transformations in the practice of pilgrimage and the organization of sacred shrines, tensions between centralization and the persistence of the local, and the initiative of artists and architects in responding to the call for a "reform" of sacred art."

AS.010.652. Classics Research Lab: Antioch Recovery Project (ARP).
Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term "narcissism". Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard's Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.

AS.010.656. The Cut.
This seminar focuses on "the cut"—both as material practice and conceptual trope. Looking specifically at the early modern period, we will attempt to stitch together arts of cutting that have all too often been thought of separately or entirely in isolation—decoupage and inlaid stone, silhouette and turned ivory, repurposed drawing and perfectly hewn precious gem, pared-down panel and paper cut-out. To do so, we will look to expansive modern treatments and theorizations of "the cut" as literal gesture and figurative process, material technique and metaphoric mode. At stake is a reappraisal of creative paradigms that rest upon myths of wholeness, finitude, completion, generation, etc., and that thus undergird the early modern emergence of the very notion of "Art." This seminar thus asks whether recentering the cut has the potential to position the art object within more expansive fields of material culture and to resituate artistic production within less hegemonic frameworks of creation and creativity. Though focused on the early modern period, students are encouraged to pursue research in their own fields/periods of study.
Area: Writing Intensive

AS.010.659. Passion Image, Passion Cult, Passion Drama: Narrative and Metaphor in the Middle Ages, Renaissance, and Beyond.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.

AS.010.660. The Hegemony of Bodies.
Bodies—material, artistic, political, cartographic—and their breakdown, form the focus of this seminar. Situating this inquiry in the ancient Mediterranean, we will analyze the human body as an organizing term, giving rise to a robust set of practices and performances. We will consider the conception of atoms as bodies in motion, the role of direct democracy and assembly as they intersect with artistic practices of both figuration and other non-figural corpora, and the emerging body of medical knowledge that would eventually be gathered under the Hippocratic corpus. The Mediterranean sea itself as it connects with other bodies of water and forged connections between different land bodies will also be among the topics we explore. While organized around the ancient Mediterranean and its afterlives, students from all formations are very welcome.

AS.010.662. Script, Character, Scribble: Writing and Pseudo-Writing in Modern and Contemporary Art.
Almost readable, but not quite: artists in the twentieth and twenty-first century played with script of all kinds, from ancient glyphs and Persian script to Roman typefaces and Korean Hangul. Artists also scribbled in ways that evoke writing without script or meaning. This course takes on the question of meaning-making in art through the form of script—flirting with that tantalizing feeling that we can almost read the work of art through the marks on its surface. We will engage with artists from around the world whose work grapples with knowledge, meaning, and script, and discuss the limits and possibilities of legibility, knowing, and language. In addition to painting and drawing, we will also discuss conceptual art, installation, video, architecture, tapestry, ceramics, graphic novel forms, book arts, and sculpture. We will have opportunities to situate these works within longer histories of script and pseudo-script and image-text relations. Our discussion-driven seminars will be guided by readings in art history and theory. The course carries no expectation that you are multi-lingual or have experience with multiple scripts. Central to our semester will be group trips to see art in person in DC and Baltimore. Assignments include an option for short, focused writing with feedback and opportunities to experiment with genre and to rewrite, or a longer seminar paper, chosen in consultation with the professor.
Area: Writing Intensive

AS.010.671. The illuminated charter: visual splendor, performance, and authenticity of medieval legal documents.
This course investigates the complexities of medieval legal documents, their specific visuality and materiality, as well as practices of copying and forgery. We will address the aesthetics of legal documents, their graphic signs, seals, and paleography and the authenticating strategies used to corroborate their legitimacy. Another emphasis is set on the performative aspects of the medieval charters in court and church rituals. Comparison with contemporary illuminated sacred books will reveal the tight connections of monastic scriptoria and royal/imperial chanceries. The geographic focus is set wide, ranging from medieval Spain, to Carolingian and Ottonian chanceries in France and Germany, to the papal court in Rome and the imperial and monastic scriptoria in Byzantium.
Area: Writing Intensive

AS.010.672. Inventions of Antiquity. Constructing the Ancient Past in Early Modern Europe.
TBA

AS.010.702. 1525: Prints and Politics in the German Reformation.
Examines the involvement of prints, print culture, and the professional activity of the German painter-printmaker with the patterns of social and religious dissent, propagandizing, and political confrontation that marked the first decade of the Protestant Reformation, with a special focus on the revolutionary year 1525. Seminar includes planned visits to the print collections of the Baltimore Museum of Art and the National Gallery in Washington.

AS.010.703. Patterns of Attention in the Visual Arts.
This seminar aims to excavate six distinct modalities of attention and attentiveness in the visual arts from Middle Ages to Modernity (cultic, narrational, speculative, ethical, sexual, and artistic). While emphasizing European developments, close consideration will be given to the role of visual attention in Hindu and Islamic visual cultures, providing the opportunity for cross-cultural comparison. Each case study will consider the historically shifting roles given to vision, cognition, imagination, affect, desire and power-knowledge in the culturally prevalent patterns of attention we study, and explore how specific kinds of pictorial schema or spatial environments served to structure and guide, or deflect and disrupt, the attention of their beholders. Finally, we will ask whether the historical study of attention can suggest analytical models or ethical lessons for the (re)mobilization of attentiveness in our own art-historical methods.

AS.010.704. Pieter Bruegel the Elder: New Directions in Scholarship.
Examines major interpretations of the art and career of the great Flemish painter Pieter Bruegel the Elder (1525?-1569), with an emphasis on new approaches and research agendas. In the aftermath of the 450-year Bruegel Anniversary of 2019, with its major exhibitions and comprehensive catalogues, what comes next?

AS.010.708. Topics in Late Medieval Art.
A critical interrogation of past and current interpretative approaches to the devotional arts of western Europe, c. 1300-1500.
Area: Writing Intensive

AS.010.801. Special Rsrch & Problems.

AS.010.802. Spec Research/Problems.

AS.010.803. Individual Work.

AS.010.804. Individual Work.

AS.010.807. Summer Research.
Summer research for doctoral students

Cross Listed Courses

Classics

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.

First Year Seminars

AS.001.157. FYS: Leonardo da Vinci - Art, Science, and Medicine. 3 Credits.
How does a notary's son trained as a painter gain expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? How did an artist/engineer who brought few projects to completion come to have such a huge impact on later generations? This First-Year Seminar will focus critically on the myth of Leonardo's singularity while showing his achievements to be characteristic of the artisanal culture of his time.

History

AS.100.340. Asian American Art and Activism: Third World, Feminist, and Queer Solidarities. 3 Credits.
This interdisciplinary course surveys critical themes related to Asian American art and activism including perspectives from history, art and visual culture, literature and gender and sexuality studies.
Area: Writing Intensive

AS.100.410. Decolonizing The Museum: Case Studies. 3 Credits.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

AS.100.601. Decolonizing The Museum: Case Studies.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

Interdepartmental

AS.360.408. Experiential Research Lab: "Holy" Conquest: Religion and Colonization in Sixteenth-Century Mexico. 3 Credits.
"When the Spanish unleashed their regime of colonization of what is present-day Mexico, their primary justification was the religious salvation of Indigenous people. Spaniards, along with other Europeans, arrived by the boatload to impose colonial order, taking up bureaucratic and ecclesiastical positions. The result was far from smooth—the sixteenth-century saw widespread disease, missionary violence on behalf of salvation, crop destruction and the recultivation of land, urban plans that radically altered the environment, the resettlement of entire populations, among other dramatic social and environmental events. This course investigates the complex and dynamic elements of colonial New Spain (as Mexico was called) from an interdisciplinary perspective. It tries to make sense of the chaotic landscape of the first century of Spanish colonial rule in New Spain. It is a research and writing intensive course that serves as an introduction to both the history and art history of this place and moment. Our meetings will act as a springboard for a group trip to Mexico during the January intersession to study objects and spaces in situ. Final projects will relate to materials viewed in person in Mexico. The costs for this trip are included for all students, no fees required. Knowledge of Spanish preferred but not required.
Area: Writing Intensive

Modern Languages and Literatures

AS.211.329. Museums and Identity. 3 Credits.
The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.

Near Eastern Studies

AS.130.153. A (Virtual) Visit to the Louvre Museum: Introduction to the Material Culture of Ancient Egypt. 3 Credits.
This course will present the Egyptological collections of the musée du Louvre in Paris, room by room, as in a real visit. The experience will be enhanced by the study of objects that are not shown to the public but are kept in the reserves of the museum. From the 4th millennium BC to Roman time, the iconic “masterpieces” of this world-renowned art museum, as well as its little-known artifacts, will allow us to explore the history and material culture of ancient Egypt. We will also learn to observe, describe and analyze archaeological objects, in a global manner and without establishing a hierarchy between them, while questioning their place in the museum and its particular language. The objective will be to go beyond the objects themselves and answer, in fine, the following questions: What do these objects tell us about the men and women who produced them, exchanged them, used them, and lived among them in antiquity? What do they also reveal about those who discovered them in Egypt, several millennia later, about those who collected them and sometimes traded them, and what does this say about the relations between Egypt and the Western countries over time? The courses will be complemented by visits to the rich Egyptian collections in Baltimore.

AS.130.245. The Archaeology of Gender in the Ancient Eastern Mediterranean. 3 Credits.
How do art historians and archaeologists recover and study genders and sexualities of ancient people? This writing-intensive seminar looks at texts and objects from ancient Egypt, Assyria, and Greece through the lens of gender and sexuality studies. Beyond exploring concepts of gender in the ancient Eastern Mediterranean, students will also consider how modern scholars have approached, recovered, and written about ancient gender identities. There are no prerequisites for this course.
Area: Writing Intensive

AS.130.420. Seminar in Research Methods in Near Eastern Studies. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Writing Intensive

AS.132.609. Seminar in Research Methods in Near Eastern Studies.
Area: Writing Intensive

Program in Museums and Society

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.

AS.389.260. Cultural Heritage in Crisis. 3 Credits.
We explore the possible futures of cultural heritage and museums in times of accelerating climate change, pandemics, armed conflict and political and social turmoil by examining past and contemporary events.

AS.389.303. World of Things. 3 Credits.
The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum

AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.
Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation's museums, galleries, and libraries and used objects to shape taste and status in the U.S.

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology

AS.389.373. Encountering American Art. 4 Credits.
Students investigate the Baltimore Museum of Art's American art collection and its presentation to the public alongside current scholarship on American art to develop strategies for a new permanent collection display that aligns with the museum's commitment to artistic excellence and social equity. M&S Practicum. Co-taught with BMA curator Virginia Anderson.

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revisualise and offer alternative stories. Class meets at the museum every other week.

AS.389.405. Visualizing Africa. 3 Credits.
Examines the history of African art in the Euro-American world, focusing on the ways that Western institutions have used African artworks to construct narratives about Africa and its billion residents.
Area: Writing Intensive

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Writing Intensive

History of Art, Bachelor of Arts

History of Art Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

History of art majors choose from a variety of courses on the world's artistic and architectural traditions and are encouraged to pursue a curriculum that is both geographically and chronologically broad. They are also required to take an advanced course on the historical and conceptual bases of art history, and to demonstrate intermediate knowledge of a foreign language, which is an invaluable skill for art-historical research. All courses taken towards a History of Art major requirement must be taken for a letter grade and a grade of C- or higher must be achieved. If a student opts to take First-Year Seminar (AS.001.xxx) cross-listed with the History of Art and earns an S grade, this course may apply towards major requirements even though it is graded satisfactory/unsatisfactory. Full requirements are outlined below.

Code	Title	Credits
Core Courses		
AS.010.101	Introduction to Art History I	4
AS.010.102	Introduction to Art History II	4
AS.010.413	Historical and Conceptual Bases of Art History [1]	3
Five Advanced-Level Courses (010.2xx-4xx) [2]		
One course in ancient art history		3
One course in medieval art history		3
One course in Renaissance/early modern art history		3
One course in modern art history		3
One course in any period		3
Three Additional Courses		
Three elective courses. Only one of these elective courses may be at the 100-level and all electives must in the department or cross-listed with History of Art. [3]		9
Intermediate Knowledge of a Modern Foreign Language [4]		
Proficiency is verified by completion of courses through the second semester of the intermediate level or higher.		0-14
Total Credits		**35-49**

1. Course should be taken within one year of declaring, ideally before senior year.
2. **At least one must be at the 400 level**. Students should consult with their faculty advisor and/or the Director of Undergraduate Studies in choosing their courses, which should relate to at least two geographical and/or cultural contexts.
3. Exceptions to these rules may be reviewed with the director of undergraduate studies.
4. Those planning to continue to graduate school in the History of Art should discuss which language(s) to pursue with their advisor and/or the director of undergraduate studies.

Honors Program in History of Art

For graduation with honors, students must have a cumulative GPA of 3.7 or higher in History of Art and successfully complete an honors thesis.

HONORS THESIS

- The honors thesis comprises a significant expansion and deepening of a paper in a 400-level seminar into a 20-25 page paper, with figures, bibliography, and any appendices constituting additional pages.

- Students pursuing honors must make a formal request to do so in conjunction with a proposed mentor via the Honors Thesis Form.
- While writing the thesis, students enroll in Honors Thesis credits (AS.010.521 or AS.010.522 Honors Thesis, 3 credits). These credits are in addition to the normal major requirements and do not count as an elective or advanced course.

History of Art, Minor

History of Art Minor Requirements

Students majoring in another department may minor in Art History. All courses taken towards a History of Art minor requirement must be taken for a letter grade and a grade of C- or higher must be achieved. If a student opts to take First-Year Seminar (AS.001.xxx) cross-listed with the History of Art and earns an S grade, this course may apply towards minor requirements even though it is graded satisfactory/unsatisfactory.

Code	Title	Credits
Introduction to Art History courses		
AS.010.101	Introduction to Art History I	4
AS.010.102	Introduction to Art History II	4
Four History of Art Electives (AS.010.1xx-4xx) *		12
Total Credits		**20**

* Each course must be at least 3 credits. One FYS course (AS.001.xxx) cross-listed with History of Art may also apply towards this requirement.

History of Art, PhD

The graduate program is designed to give students working toward the PhD degree an encompassing knowledge of the history of art and a deep understanding of the theories and approaches pertaining to art historical research. The program emphasizes collaborative working relationships among students and faculty in seminars. Each PhD student benefits from supervision by a primary advisor in their field of study, while continuing to work closely with other department faculty. Students will routinely avail themselves of faculty expertise in other departments, dependent on their area of study.

The program also fosters a close familiarity with the outstanding art in the Baltimore–Washington area relevant to the student's area of study. In addition to the rich holdings of the Sheridan Libraries of Johns Hopkins University (which include collections of rare books at the Garrett Library, Special Collections at the Milton S. Eisenhower Library, and the George Peabody Library) graduate students have access to world-renowned collections and research facilities in Washington D.C.

Our recent PhD students have gone on to academic, administrative, and museum positions at institutions around the world including Aarhus University, American University of Paris, Arcadia University, Baylor University, Columbia University, DePaul University, Florida State University, Howard University, King's College London, Marshall University, National Museum of Denmark, Notre Dame University of Maryland, Oberlin College, Portland State University, University of Chicago, University of Pittsburgh, University of San Francisco, University of Texas Rio Grande Valley, Virginia Commonwealth University, and Wellesley College.

Admission Requirements

Admission and Financial Aid

Applicants to the Ph.D. program in History of Art should upload and submit all required application materials and supporting documents through the online application. For information about applying to the Ph.D. program in History of Art, please see the department's website (http://arthist.jhu.edu/graduate/admissions/). Applications must be completed by December 15.

To foster close student-faculty relationships and provide for the greatest flexibility in developing each graduate student's individual curriculum, the department strictly limits the number of students it admits each year.

All graduate students entering the program are guaranteed five years of support, contingent upon satisfactory progress year by year. This support covers the individual's full tuition costs and health insurance, and includes a stipend annually. Student stipends are guaranteed at the level stated in the letter of offer (for incoming students) and in the renewal letter (for continuing students) for the duration of the applicable period.

Outstanding graduate applicants from underrepresented communities are regularly nominated for the Kelly Miller Fellowship, named for the first African-American to attend Johns Hopkins, as a graduate student in the Department of Mathematics in 1887. The fellowship provides additional funding to support student research, travel, and study during the student's graduate career. In addition to the financial award, Kelly Miller Fellows benefit from quarterly programming designed to enhance the graduate experience and ensure professional success.

All ABD students (those who have completed all requirements but the dissertation, something that usually happens in year three) are strongly encouraged to apply for external grants and fellowships to support their dissertation research and writing. The department also has internal fellowships to support students beyond their fifth year. Funds to support summer and conference travel are also available through the department, the Dean's office, and cross-disciplinary programs. The Dean's Teaching Fellowship enables advanced students to propose, design, and teach an undergraduate seminar course and provides one semester of support. Further details available via our website.

PhD Requirements

In discussion with major and minor field advisors, History of Art Ph.D. students develop areas of concentration and courses of study to suit their intellectual interests and commitments. The art history faculty also encourages students to take full advantage of offerings in other departments, and students may, if they choose, develop a minor field in another discipline.

All students entering the Ph.D. program, regardless of the degree they hold, must complete four full semesters of coursework and pass the required language exams before being approved to take their qualifying exams (also known as the Ph.D. exams). In the first year, students normally take three courses at the graduate level per semester; in the second year, when students generally assume Teaching Assistant assignments (https://arthist.jhu.edu/graduate/graduate-teaching-and-museum-opportunities/), the student will normally take two courses at the graduate level per semester. As part of the coursework requirement, students must satisfactorily complete and submit all assigned papers and projects associated with the courses they have taken before being approved to take their qualifying exams.

All qualifying exams, regardless of the fields in which they are taken, are comprised of two written exams (one major field and one minor field), followed by an oral defense before the advisors and other department faculty. Exams should take place during the student's third year; in some instances (e.g. the need for additional specialized language training beyond the modern language requirement or additional coursework) the exams may be taken later.

After the successful completion of qualifying exams, it is expected that students will be ready to begin work towards the dissertation by formulating a proposal. The dissertation proposal should be approximately 6–8 pages in length (10 pages will be the maximum), with a list of works cited and a very selective sample of figures appended. Simple parenthetical references to the works cited list are preferable to footnotes. Each proposal must contain a relatively straightforward description of the principal object of study and the defining questions the work seeks to answer, as well as a working title that captures the subject and the theme. The body of the proposal often also includes discussion of the current state of research, the intended contribution of the work to the field, and a preview of the research agenda and its challenges.

Students, having ideally secured outside research funding, then proceed to pursue dissertation research and writing. When the dissertation is complete, the student must successfully defend the dissertation before a Graduate Board Orals committee consisting of three internal (departmental) readers and two external readers. Successful defense of the dissertation and electronic submission of the work, complete in all its components, marks the fulfillment of the program's degree requirements.

Art History Fields

Ancient

The department affords students of ancient art the opportunity to work with a faculty that includes experts in Greek, Roman, Mediterranean, and Ancient Near Eastern art and architecture. Students also benefit from close and long-standing relationships with the Departments of Classics (https://classics.jhu.edu/) and Near Eastern Studies, which provide training in the languages, literatures, and histories of the ancient world. Facilities of special relevance to students of ancient art include the Johns Hopkins Archaeological Museum (http://archaeologicalmuseum.jhu.edu/), located on campus inside Gilman Hall, and the extraordinary holdings of the Walters Art Museum (https://thewalters.org/) and the Baltimore Museum of Art (https://artbma.org/).

Medieval

Since its founding in 1947, the department has given special emphasis to the study of medieval art, and that tradition continues with a new generation of faculty bringing expertise in Early Medieval, Gothic, Islamic, Italian, and Mediterranean art and architecture to the program. Students also avail themselves of local expertise through the departments of History (http://history.jhu.edu/), English (http://english.jhu.edu/), and Modern Languages and Literatures (http://krieger.jhu.edu/modern-languages-literatures/), and frequently consult with curators at the Walters Art Museum, several of whom participate as adjunct faculty. The extraordinary collections at the Walters Art Museum and at Dumbarton Oaks are especially valuable for students interested in manuscript illumination and the portable object.

Early Modern and Renaissance

Another signature strength of the Department of the History of Art is its expertise in the Early Modern period, encompassing the art, architecture, and culture of Italy, the Spanish Empire, the Islamic world, and Northern Europe from the fourteenth to the eighteenth century. Graduate students in these areas participate in the programs of the Charles Singleton Center for the Study of Pre-Modern Europe (http://krieger.jhu.edu/singleton/), which sponsors collaborative research abroad and brings a steady stream of world-class lecturers to Baltimore. Students also benefit from the excellent collections of Islamic art, Italian and Northern Renaissance art, and the art of the Spanish Empire at the Walters Art Museum, the National Museum of Asian Art, the National Gallery, and the Philadelphia Museum of Art.

Modern

At Hopkins a diverse and challenging curriculum in modern art and criticism is offered by a research faculty of international prominence, supplemented by occasional visiting scholars and museum curators. Students oriented toward the study of criticism and aesthetic theory can also broaden their perspective and develop their critical skills by taking courses offered through the Comparative Thought and Literature, Philosophy, History, English, Modern Languages and Literatures, Political Science, and Anthropology, and with faculty affiliated with the programs in Women, Gender and Sexuality Studies, Africana Studies, Latin American Studies, and Islamic Studies. Distinctive collections at the Baltimore Museum of Art and at multiple institutions in Washington, D.C., (the Hirshhorn Museum, the Smithsonian American Art Museum, the National Museum of Asian Art, the Phillips Collection, and others) provide unparalleled resources for students of modern art at all levels.

History of Art, Bachelor of Arts/ Master of Arts

History Of Art Bachelor Of Art / Master of Art Program

BA/MA Degree Requirements in History of Art

Admission to the BA/MA program is restricted to current Johns Hopkins University undergraduate history of art majors who are pursuing the honors track in the department, including writing a senior honors thesis. Admission is based on outstanding performance in previous History of Art courses.

Students considering a five-year program are expected to declare their interest during the spring semester of their junior year. Prior to application, students must consult with the director of undergraduate studies, their faculty advisor, and the department administrator. A formal graduate application must be submitted via the graduate school admissions site (http://krieger.jhu.edu/graduate-admissions/) by the departmental deadline for graduate admissions (December 15th) in the fall semester of the senior year for admission to the program in the spring of the senior year, meeting the requirement for concurrent status. In the senior (fourth) year, students are to devise a program of study that would best prepare them to do advanced work in their final (fifth) year. All requirements for the BA must be completed by the end of the fourth year.

In the MA (fifth) year, students must:

- Take six graduate seminars in the History of Art Department
- Demonstrate reading proficiency in one modern language according to the department's modern language requirements

The BA and MA degrees are conferred consecutively: at the end of the senior year for the BA and the end of the fifth year for the MA. The department does not award degrees during the summer; students are expected to complete the degree requirements in conformance with the university Graduate Board spring deadlines. Specific departmental and Graduate Board deadlines are communicated to the student in due course.

Applicants interested in the BA/MA program must submit the following documentation:

- Application (https://applygrad.jhu.edu/apply/?sr=32d103dd-97ab-431e-9e3f-5943d554f69c)
- Statement of Purpose
  - Statements of purpose should be no more than three (3) pages long.
- Transcript(s)
- Sample of Work
  - The sample of work should be no more than 30 pages, including images and works cited. Most samples are between fifteen and twenty-five (15-25) pages.

Note that the GRE is **not** a requirement for admission into the BA/MA program and there is no application fee. The program is 50% of the yearly tuition cost.

History of Science and Technology

http://host.jhu.edu/

The Department of the History of Science and Technology offers an undergraduate program leading to the degree of Bachelor of Arts with a major in science, medicine, and technology, and a graduate program leading to the degree of Doctor of Philosophy.

Undergraduate Programs

The department offers a variety of courses that deal with the history of the conceptual and technical development of the sciences, as well as the cultural and social impact of science and technology on civilization. These courses are open to all undergraduates in the Schools of Arts and Sciences and Engineering. A few of the courses require some background in an appropriate science, but most are accessible to those with no specialized knowledge who want to understand the part science has played in shaping modern culture. Students who have concerns about their technical competence for a given course should consult the professor involved.

Programs

Courses

AS.140.105. History of Medicine. 3 Credits.
Course provides an introduction to health and healing in the ancient world, the Middle Ages, and the Renaissance. Topics include religion and medicine; medicine in the Islamicate world; women and healing; patients and practitioners.

AS.140.106. History of Modern Medicine. 3 Credits.
The history of medicine and public health from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.

AS.140.178. History of Biology. 3 Credits.
The course surveys the emergence and development of life sciences since the 1700s. It examines major ideas, approaches, and debates regarding life, along with their material and cultural underpinnings as well as social impacts. One crucial question throughout the course is how social and cultural contexts have shaped views of life at particular times and places. Topics include natural history, classification, morphology, cell theory, physiology, evolution, genetics and eugenics, molecular biology, biomedicine, and biotechnology. Lectures are supplemented with discussions about primary historical texts and scholarly articles. Students will learn about the course content, methods in historical inquiries of scientific fields, and will develop an original research essay as a final project.

AS.140.198. Technology and Environment in Japanese Films and Anime. 1 Credit.
In the course of the semester we will watch Japanese films and animation that touch upon topics of technology and environment. The list of screenings includes several blockbusters, classics in film studies, and documentaries. The course is a companion course to 140.398 “Godzilla and Fukushima,” but is also open to anyone interested. Students who do not take 140.398 will be required to write a short review paper by the end of the semester.

AS.140.227. Race, Racism and Medicine. 3 Credits.
How can we think about the interconnections between racism, theories of race and the practice of medicine? Living at a moment when racial disparities in health outcomes in the United States are still very stark, this course will provide a historically grounded approach to thinking about the roles that race and racism have played in healthcare, the production of health disparities as well as the role of medicine in the development of racist thought. While much of this course will focus geographically within the United States, this class will also explore global histories of medicine, encountering questions of race and medicine in Africa, the South Pacific and Asia. In addition to the analysis of primary source documents and historical texts, students will also be introduced to theoretical approaches to the study of race and racism from W.E.B. Dubois, Sylvia Wynter, Frantz Fanon and others.
Area: Writing Intensive

AS.140.228. Epidemic!: Diseases that Shaped our World. 3 Credits.
In this course, we will look at a number of key epidemic diseases in the pre-modern and modern world, from Black Death to COVID-19, and investigate how it affected medical thought and practice, as well as political, social and economic lives. We will pay special attention to how these diseases spread and how they affected and were influenced by questions of race, gender, sexuality and colonialism.

AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.
Medical practice is complex in Latin America and the Caribbean. Most countries in the region have universal healthcare; yet, the quality of clinical services varies widely, and is influenced by degrees of incorporation into—or marginalization from—social power structures. Many people take their health into their own hands by supplementing biomedicine with plant based remedies as well as religious and spiritual services. This course will interrogate the history and contemporary relevance of healthcare in Latin America and the Caribbean, with particular interest in how medicine intersects with colonialism, slavery, capitalism, neo-colonialism, grassroots revolutionary movements, the Cold War, and neoliberalism. Drawing on films, visual and performance art, and music, students will consider the ways in which race, gender, indigeneity, ability, class, and nation have affected people's experiences with medical practice. Informed by postcolonial and decolonial scholarship, we will also examine why Latin America and the Caribbean have become "laboratories" for the production of medical knowledge, and importantly, how that knowledge was created by indigenous, enslaved, and migrant people as well as professionals. Finally, we seek to understand individual health problems in relation to the social and political determinants of health. As such, the course prompts students to reflect on why healthcare professionals—in the United States and abroad—would benefit from historically-informed communication with patients and their communities. This is a discussion-based seminar that requires active participation. There are no exams. The course does not assume any previous knowledge of the history of medicine or Latin American history.
Area: Writing Intensive

AS.140.232. Food, Environment, and Society. 3 Credits.
A seminar discussing crucial events and processes in global history which have shaped how food production and consumption impacted the environment and human societies. Students will learn how food practices, originally bounded within certain places and cultures, became transformed in modern societies with the rise of modern agricultural, transportation and food processing technologies, as well as the public health and environmental consequences of these transformations. Sessions will include lectures, seminar discussions, field visits or guest speaker events, and some hands-on activities. For the final project, students will conduct original research on topics of interest and produce a multi-media, public-facing intellectual product.
Area: Writing Intensive

AS.140.245. Biology and Society in Asia. 3 Credits.
What major knowledge traditions about life's generation and function have taken shape in Asia that continue to shape our contemporary world? How have they fared in encounters with Western knowledge traditions? How have modern biology, biotechnology and biomedicine developed in Asia in recent years within distinct geopolitical contexts? This course addresses these questions with selected historical cases from China, India, Japan, Koreas and selected Southeast Asian countries. It first introduces concepts and frameworks of major non-Western knowledge systems about life such as yin-yang and five phases and examine how religions, politics, and cross-cultural encounters impacted these systems, their evolutions or replacements. Then the class will examine the political, material, cultural and institutional contexts of more recent development in the life sciences in Asia. Class activities include lectures, discussions, research seminars, a final research project, and possible conversations with visiting professors and field trips.

AS.140.301. History of Science: Antiquity To Renaissance. 3 Credits.
The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted.
Area: Writing Intensive

AS.140.302. Rise Of Modern Science. 3 Credits.
Survey of major scientific developments from the mid-18th century to the present.

AS.140.306. Science And Religion. 3 Credits.
Science and religion are crucial influences on Western culture. This course examines their interrelations during the past 2000 years, including the Athens-Jerusalem debate, medieval theology, the Galileo affair, evolution, and current issues.

AS.140.312. The Politics of Science in America. 3 Credits.
This course examines the relations of the scientific and technical enterprise and government in the United States in the 20th and 21st centuries. Topics will include the funding of research and development, public health, national defense, etc. Case studies will include the 1918 Spanish influenza epidemic, the Depression-era Science Advisory Board, the founding of the National Science Foundation and the National Institutes of Health, the institution of the President's Science Advisor, the failure of the Superconducting Supercollider, the Hubble Space Telescope, the covid pandemic, etc.

AS.140.316. Minds and Machines. 3 Credits.
Is the mind identical to the brain? Is the mind (or brain) a computer? Could a computer reason, have emotions, or be ethically culpable? How have computers changed our minds? This course examines such questions philosophically and historically. Topics include early AI research, computationalism, connectionism, 4EA cognitive science, simulation theory, and the Singularity.

AS.140.317. The Hydrologic Sphere: Histories of Water in the Colonial and Postcolonial World. 3 Credits.
Water supplies are becoming scarcer globally due to climate change. We use clean water—fresh and salt—in a variety of ways that provide comfort, stability, and health, making it one of the most valuable commodities on Earth. While countries in the Global North are beginning to see more frequent and lengthier droughts, those in the Latin America, Africa, and South Asia have long struggled over how to distribute and use their clean water supplies. This class will examine how colonialism and its far-reaching effects have created an environment of scarce water supplies in many areas of the world. Water access is difficult to achieve, but for much of the Global South, the colonial period helped craft the problems we see today. This class will ask what colonial and postcolonial technologies' construction and use teach us about equitable clean water distribution, how social and cultural identities influence water supplies and use, and why water has been such an important element—and commodity—in our world, especially where Europeans settled and oppressed local populations.
Area: Writing Intensive

AS.140.321. Scientific Revolution. 3 Credits.
How did the Western understanding of nature change between 1500 and 1720? We'll study the period through the works of astronomers and astrologers, naturalists and magi, natural philosophers and experimentalists, doctors and alchemists & many others.

AS.140.322. Follow the money: Science, technology, and the 'knowledge economy,' c.1800-present. 3 Credits.
This course examines the historical emergence of knowledge-driven economies, paying special attention to the funding, development, and use of science and technology for commercial purposes.
Area: Writing Intensive

AS.140.324. Commercializing Science: Academic Entrepreneurs from Kelvin to Venter. 3 Credits.
From the 19th century physicist William Thomson (Lord Kelvin) to contemporary geneticists such as Walter Gilbert and Craig Venter, academic scientists and engineers across a broad range of disciplines have commercialized academic knowledge and inventions as patentees, consultants, and entrepreneurs. This course examines the motives and strategies behind such commercialization activities, ethical issues associated with them, and the factors influencing their success. We will also explore the history of currently dominant policies and institutions designed to foster the commercialization of academic science and evaluate their impact from a longer-term perspective.
Area: Writing Intensive

AS.140.327. Science and Utopia. 3 Credits.
This seminar will explore the complex interaction between science, technology and utopian/dystopian thought from the late nineteenth century. Major utopians will include Bellamy, H.G. Wells, Mark Twain, Frank Lloyd Wright, Aldous Huxley, George Orwell, Sinclair Lewis, B.F. Skinner, Margaret Atwood, and Walt Disney.

AS.140.329. Women, Health, and Medicine in Colonial and Antebellum America. 3 Credits.
This class will examine the history of women's health and medicine in America from the 17th century to the mid-19th century, a period in which settler colonialism and the trans-Atlantic slave trade mixed European, Indigenous American, and African people and belief systems, resulting in diverse healing practices and understandings of the body and gender. Major themes addressed in the course include reproductive health, domestic and "alternative" medicine, as well as enslavement, racialized medicine, poverty, disability, and sexuality.
Area: Writing Intensive

AS.140.335. Photography in Science and Medicine (19th Century-Present). 3 Credits.
How did photography change science and medicine, and vice versa? This course explores how and why photography and related imaging techniques became central to a broad variety of fields of science and medicine, ranging from anthropology and astronomy to embryology, nuclear physics, and radiology. It also considers how these techniques were created in the first place and to what extent they affected the standing of photography as an "art-science." Central themes will include (among others) the status and objectivity of photographic evidence; the historical relationships between technical, scientific, and artistic change; the role of photography in disseminating scientific and medical knowledge and (mis)information; the racial and gender biases of scientific and medical photography; and photography's use as a tool of scientific exploration, measurement, and surveillance. Students will be developing their own research projects in consultation with the instructor.

AS.140.336. History of Mental Healthcare in the United States. 3 Credits.
In recent decades, much has been done in the United States to destigmatize mental illness and incorporate psychiatric services into broader systems of healthcare and welfare. As clinicians, policy makers, social scientists, activists, and other stakeholders have collaborated to promote mental health and reintegrate people with behavioral disorders into society, they have often contrasted their efforts with those made in the past, portraying community-based approaches as more efficacious and humane. Narratives like these, however, deemphasize many important continuities in the history of American psychiatry. In this discussion-based course, students will explore how concerns about citizenship and social control have shaped the organization and provision of mental healthcare in the United States from the early nineteenth century to the present day. They will also complete various assignments designed to hone their ability to evaluate historical arguments, conduct independent and collaborative research on primary sources, and communicate the results of their scholarship to professional and lay audiences.

AS.140.338. Unsafe America: Accidents, Disasters, and Society, 1800–2020. 3 Credits.
According to the latest data from the National Safety Council, accidents cause over 173,000 deaths and 48,300,000 injuries per year across the United States. Since the nineteenth century, accidents ranging from burns to car crashes to the Three Mile Island nuclear disaster have become increasingly central to American life. This course examines the history of accidents and why Americans have chosen to control some hazards but not others. We will investigate how accidents have changed over time alongside the introduction and spread of new technologies; cultural beliefs about safety; the economic and political interests of different stakeholders; and the efforts of safety experts, nonprofits, corporations, families, and the government to protect Americans from harm. On one level, this course traces the unexpected consequences of remaking the United States with modern industry, transportation, infrastructure, and consumer products. At the same time, it captures how the principles of free enterprise and personal responsibility continue to influence the American safety movement.
Area: Writing Intensive

AS.140.341. Humanoid Robots in Global History. 3 Credits.
Humanoid machines reflect their creators' ideals of humanity. Comparing examples from societies across the globe we will investigate what factors shaped these ideals, and how they manifested in technological design.
Area: Writing Intensive

AS.140.347. History Of Genetics. 3 Credits.
Intellectual and social history of the gene concept, including Mendelism, eugenics, medical genetics, DNA, genomics, and personalized medicine.
Area: Writing Intensive

AS.140.356. Man vs. Machine: Resistance to New Technology since the Industrial Revolution. 3 Credits.
This course analyzes different episodes of "luddism" in the history of science and technology, from the destruction of textile machinery in the early 1800s up to recent controversies about biotechnology and ICT.

AS.140.364. The City Course: Disciplinary Perspectives on Urban Life and Form. 3 Credits.
This course aims, first, at enlarging our understanding of cities by looking at them from a variety of disciplinary perspectives and, secondly, at examining the distinctive ways of thinking associated with disciplines from engineering, the sciences and medicine to anthropology, sociology, economics, archaeology, history and literature. Baltimore and cities from around the world will provide resource material. Lectures, discussions, term projects.

AS.140.374. Force and Matter from Galileo to Maxwell's Field Theory. 3 Credits.
This seminar will trace the concept of force and its interaction with matter from Galileo in the late sixteenth century to rise of field theory in the work of James Clerk Maxwell in the late nineteenth century. Major figures to be studied through primary source readings are Galileo, Kepler, Descartes, Hobbes, Newton, Boscovich, Schelling, Laplace, Fourier, Faraday, William Thomson (Lord Kelvin) and Maxwell.

AS.140.391. Individualized Medicine from Antiquity to the Genome Age. 3 Credits.
A seminar for advanced undergraduates. We explore the notion of the individual in medicine over twenty-five centuries, from the Hippocratics to the invention of the case study during the Renaissance to the current JHU medical curriculum. The history of medicine survey, AS.140.105 or AS.140.106, is recommended though not required. Graduate students are welcomed but should expect to do additional work and readings.
Area: Writing Intensive

AS.140.393. Technology and the Making of the Modern World. 3 Credits.
This course critically examines the role of technology in some of the main developments that have shaped the modern world, ranging from industrialization and globalization processes to the rise of new political ideologies and gender patterns. This course is co-taught by an instructor from the Smithsonian Institution and will include a public history research project.

AS.140.394. Heredity, Eugenics, and Society. 3 Credits.
In this course, we will examine the ways in which concepts of the gene, heredity, and innateness have both shaped and been shaped by society over the last two-plus centuries. Topics under discussion may include: eugenics, biological determinism, scientific racism, human breeding programs, genetics and gender, genetics and intelligence, genetic engineering including CRISPR, assisted reproductive technologies, sociogenomics, and polygenic risk scores. Term paper. AS.140.106 recommended.
Area: Writing Intensive

AS.140.395. Prosthetics and Technologies of Disability. 3 Credits.
The purpose of prosthetics seems to be fairly straightforward—to restore function that was lost due to the loss of a body part. According to this logic, the quality of prosthetics is measured in its ability to replicate lost human function and restore individuals with disabilities to normalcy. And indeed, numerous disability technologies enrich the experience of individuals in need of them. At the same time, these very technologies are often perceived as a marker of something abnormal, or, by the nature of their design prove to be an obstacle for mobility and access. Therefore, as much as prosthetics and other technologies of disabilities improve the quality of life, they also led to stigmatization, marginalization, and exclusion. By looking at prosthetics and disability in a variety of historical contexts, we will learn what kind of ideas of 'normalcy' they reflect, and how they shape the experience of individuals who use them.
Area: Writing Intensive

AS.140.396. Encoding Bias: Algorithms, Artificial Intelligence, and the History of Computing. 3 Credits.
How can an inanimate object be biased? How is it possible for a machine or software to discriminate on the basis of race, gender, or economic status? After all, machines are supposed be free from the lapses of judgement that can cloud human minds. And yet, the more we rely on digital technologies, the more we realize that algorithms are not as neutral and objective as we hoped they would be. This course traces the origins of computer bias to the aspirations, ideals, metaphors, hopes, fears, and, of course, biases of the people who developed computer technologies. During the semester, we will learn about the humble origins of computing technologies, the original, human "computers" in astronomical labs, Alan Turing's invention of a "digital" mechanical computer to decipher Nazi codes, the Cybernetics movement, the models of rationality and intelligence that guided the development of AI, the gendering of the computing profession, the advent of personal computers, and more. While exploring these episodes in the history of computing we will discuss and analyze the social and structural origins of computer and algorithm bias.
Area: Writing Intensive

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as "nature-loving," and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture.
Area: Writing Intensive

AS.140.401. The Knowledge City: from Silicon Valley to Bloomberg's New York. 3 Credits.
This seminar will explore the increasingly productive relationship between research universities and urban and regional development in the period after World War II to the present. Working with the faculty, participants will be expected to develop a research paper. Discussion, presentations, lectures.

AS.140.411. Senior Research Seminar. 3 Credits.

AS.140.412. Research Seminar. 2 Credits.
Departmental Majors Writing a Senior Thesis Only
Area: Writing Intensive

AS.140.423. Science and Science Fiction in Global Perspective. 3 Credits.
What can we learn from science fiction about the history of science and technology? What ideas about science do Sci-Fi novels manifest? Is the relationship between science and science fiction always the same, across different time periods and geographical areas? This course will explore these questions by taking a comparative perspective. Each meeting we will read a Sci-Fi novel from Europe, America, South and East Asia, and discuss it in conjunction with historical writing about relevant scientific developments. Reading Sci-Fi novels from 17th-century Germany, 19th-century England and India, and 20th-century Japan, China, Korea and the US, the students will explore how actual scientific developments were reflected in fiction, and what fictional depictions say about the aspirations and anxieties provoked by new technologies.
Area: Writing Intensive

AS.140.435. Ways of Knowing: New Histories of Science, Medicine, and Technology. 3 Credits.
What does it mean for science to have a history? Comparing newer approaches with classic works, we will explore different strategies for placing science, medicine, and technology in social context.
Area: Writing Intensive

AS.140.501. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.140.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.140.598. HoST Internship. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.140.601. Research Methods/Hist Sci.
This graduate seminar introduces students to a variety of methods, sources, and approaches used in the historical study of science, medicine, and technology. The emphasis will be on the development of skills crucial to the successful completion of research projects.

AS.140.609. Technology and Labor.
In recent years historians, anthropologists, and sociologists of technology show increasing interest in questions of human labor. Adding to the literature that explores emergence, production, and use of technology, the new direction seeks to uncover and to analyze human labor that is necessitated by emerging technologies, and that is often concealed by them. The course will cover several classic works but will mainly focus on recent exciting scholarship that explores the relationship between technology and labor.

AS.140.614. Media of Science, Medicine, and Technology.
This research seminar starts from the premise that the production and circulation of scientific knowledge has always been mediated: through parchment and paper, books and journals, laboratory notebooks and electronic datasets. Likewise the body in health and illness has mediated through material objects, from the uroscopy flask to the stethoscope to MRIs and PET scans. Students will explore the theory and method of media history in developing their own research projects in the history of science, medicine, and technology.

AS.140.641. Departmental Colloquium.
Reports by staff members, students, and invited speakers.

AS.140.642. Colloquium.
Reports by faculty, students, and invited speakers.

AS.140.660. Working with Manuscripts: Paleography, Codicology, and Editing.
This is a practical course on using manuscript materials (especially premodern documents). It covers how to read both Latin and early modern vernacular scripts in various formats (paleography), how to describe, date, and document manuscript materials (codicology), and how to edit texts and make critical (and not-so-critical) editions. Other related topics of interest to enrolled students are possible. The specific topics that will be stressed will respond to the interests and needs of those students who enroll. Students are encouraged to bring examples or problems from their own research for study, practice, and analysis.

AS.140.678. Catching Up: Responses to Technical Change in the 19th and 20th Centuries.
This research seminar focuses on varieties of paths to modernity by nations in the 19th and 20th centuries as driven by technological change. The approach will be comparative and its reach global. The emphasis will be on preparing a research paper by semester's end.

AS.140.679. Humanoid Robots in Global History.
Graduate section of AS.140.341.

AS.140.681. Graduate Readings in History of Science and Technology.
The course explores advanced topics in History of Technology, as well as in History of Science, Medicine, and Technology in East Asia.

AS.140.683. Non-human Agency in Science, Medicine, and Technology Studies.
Studies of non-humans repeatedly challenge the assumption that agency is an exclusively human prerogative. We not only witness animals scheme and carry out their plans, be also experience interaction with non-animate objects as if they had will and capacity to manipulate us. What is the relationship between anthropomorphization and agency? What does our attribution of agency to objects say about our understanding of agency as an analytical category? How do we integrate non-humans into our investigation of human activity? In this course we will explore studies of non-human agency in history, sociology, and anthropology of science, medicine, and technology. Learning from authors such as Donna Haraway, Anna Tsing, Bruno Latour, Sherry Turkle, Lucy Suchman, Cynthia Breazeal and others, we will examine human relationship with companion species, vermin, mycelium, humanoids, digital technologies, and others.

AS.140.684. Science and the Marketplace.
This seminar explores the global economic history of science and technology and the historical entanglements between science and capitalism by investigating various practices that were simultaneously scientific and economic or had both scientific and economic dimensions. Through this lens, which reflects recent trends in the historiography of science-economy relationships, this course seeks to develop new perspectives on topics ranging from the modern histories of scientific publishing and popularization to the acquisition and standardization of research tools and materials and the conduct of various forms of knowledge work. Specific interests of the seminar participants will be taken into account.

AS.140.685. Histories of Reproduction.
While there is a vast literature on reproduction in a global context, this course will focus on the arc of what we might call decolonial histories of reproduction—those that center issues of justice, freedom, intimacy, and agency, as well as cultural negotiation, conflict, and change. Students will write critical histories of reproduction, with attention to the ways in which reproductive politics interface with institutions that exert hegemonic, racialized, gendered, and ableist forms of state power and colonial power. We will also appreciate the ways in which reproduction interacts with other—non geographically-bound, non-institutionalized, and non-state mediated—forms of biopolitical power. We will analyze how the historiography has evolved over time and discuss future directions in the field.

AS.140.705. History of Science: Antiquity To Renaissance.
Graduate-level version of 140.301 with additional readings, discussions and assignments in seminar format.

AS.140.708. Rise of Modern Science.
Survey of history of science, 18th-20th c. Students are encouraged to attend lectures for 140.302, but seminar may be taken without attending those lectures.

AS.140.710. Scientific Revolution.
Reading intensive seminar that studies the events and ideas that transformed western science from Medieval natural philosophy to the experimental sciences (1500-1720s). Lecture meets with AS.140.321.

AS.140.801. Directed Readings & Dissertation.

AS.140.808. Graduate Independent Research.
Independent research for graduate students in the History of Science and Technology Department only.

AS.140.888. Dissertation Research.
For graduate students in the History of Science and Technology Department Only.

For current faculty and contact information go to http://host.jhu.edu/people/

History of Science and Technology, PhD

The graduate program in the history of science and technology leads to the Ph.D. degree. The object of the Ph.D. program is to provide the rigorous training necessary for a scholarly career in teaching and research; consequently, the focus of the student's activity will be the research seminars of the department. Faculty from the Institute of the History of Medicine in the School of Medicine also participate in the program.

Facilities

The Eisenhower Library and the Welch Medical Library contain about two million volumes, including the special collections of the Institute of the History of Medicine in Baltimore. These research facilities are supplemented by the rare book holdings at Evergreen House, the Pratt Library, and the Peabody Library.

Other important research collections are available to students. In Philadelphia, collections include the Science History Institute, the American Philosophical Society, and the Academy of Natural Sciences. The Hagley Museum and Library's collections in the history of American science and technology are within easy distance of campus, as are the incomparable holdings of the Smithsonian Institution, the Library of Congress, the National Library of Medicine, and other governmental agencies in Washington, D.C.

Financial Aid

The department has several graduate fellowships and teaching assistantships. Students may also be eligible for federal financial support through the National Science Foundation. Information on these and other fellowships can be obtained through the fellowship advisor at the student's college, or from the Fellowship Office of the National Academy of Sciences, National Research Council, Washington, D.C. 20025. In the recent past, doctoral candidates have also won support for their research in the United States and abroad through such sources as the Smithsonian Fellowships, the Fulbright-Hays grants, the Spencer Foundation, Consortium for History of Science, Technology and Medicine, Max Planck Institute for the History of Science, and the Deutscher Akademischer Austauschdienst (DAAD) Fellowship.

Admission Requirements

Application deadline is January 15. Applicants to the Ph.D. program in the History of Science and Technology should upload and submit all required application materials and supporting documents through the online application system. For additional information on admission requirements, please visit our admissions website (https://host.jhu.edu/graduate/admissions/).

For further information on our faculty and programs, please visit our website at: http://host.jhu.edu.

Program Requirements

Before candidates begin full-time research on their dissertations, they must prepare themselves adequately in the appropriate fields of knowledge, become skilled in the techniques of historical research, and be able to carry out a sustained piece of historical analysis and writing.

In the first year of the program students are introduced to the methods and techniques of research and complete a year-long survey course in the history of science or the history of medicine. Students in their second year of study present a research paper to the department. In the second and third years of study, students complete three "fields" or concentrations. One field should be within the Program, one in a historical discipline outside the Program, and the third is negotiable depending on student interests and needs. Our students have also done historical fields with curators or research historians at the Smithsonian Institution. The third field can extend beyond historical subjects and may involve a scientific subject, for example. A field is intended to demonstrate a student's mastery of a specific body of knowledge, both for the student's own scholarly work and as a preparation for teaching. The fields are individually arranged and satisfied. Before being admitted for formal candidacy for the degree, the student must also demonstrate a reading knowledge of two foreign languages. If a student's native language, excluding English, is research related, the native language may fulfil a language requirement. Students are expected to submit a dissertation prospectus by the end of the summer after their third year. The final requirement for the Ph.D. degree is the completion of a dissertation that is an original contribution to historical knowledge and of a standard suitable for publication.

The History of Science and Technology is by its nature interdisciplinary, and students are encouraged to undertake study in related areas such as history, philosophy, and the natural and medical sciences.

History of Science, Medicine and Technology, Minor

History of Science, Medicine, and Technology Minor Requirements

The department offers a minor which may be combined with other science, social science, or humanities majors. To complete the requirements for the minor, students must have a total of 18 credits in the history of science, medicine, or technology, including at least one survey course. A minimum grade of C- is necessary in all courses applied toward the requirements of the minor and requirements may not be taken satisfactory/unsatisfactory. Each course must be at least 3 credits.

Code	Title	Credits
Survey Course [1]		
Select one of the following:		3
AS.140.105	History of Medicine	
AS.140.106	History of Modern Medicine	

AS.140.301	History of Science: Antiquity To Renaissance	
AS.140.302	Rise Of Modern Science	
AS.140.321	Scientific Revolution	
Additional History of Science, Medicine & Technology Courses		
Two history of science, medicine & technology courses at any level (6 credits) and three 200-400 level history of science, medicine & technology courses (9 credits)		15
Total Credits		**18**

[1] Another course might serve to fulfill the survey course requirement with permission of the director of undergraduate studies.

History of Science, Medicine, and Technology, Bachelor of Arts

History of Science, Medicine, and Technology Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

Offered in cooperation with the Institute of the History of Medicine, this major allows students to combine substantive work in science with study of the social and historical context of modern science, medicine, and technology. The aim of the program is to produce graduates who are scientifically literate and technically competent, and who at the same time understand science and medicine not as static, autonomous enterprises but rather as modes of thought that have developed in specific social contexts.

The major is appropriate for any student planning a career in medicine or other areas of the health care industry. It is also flexible enough to serve as a basis for a variety of careers where an informed knowledge of science and technology and their impact on society is important. Such careers include broad areas of business and industry, journalism, teaching, museum work, and specialized areas of law and public policy.

- Sciences: Students are required to have a total of 30 credits in science, engineering, and mathematics courses coded (E, N, or Q), of which at least nine credits must be above the 100-level. Laboratory courses in science count toward this requirement. Calculus I is strongly recommended.
- History of Science, Medicine and Technology: A total of 24 credits of course work in the history of science, medicine and technology are required. These must include at least two survey courses and four additional courses above the 100-level.
- Students in their senior year may take graduate courses with permission.
- A minimum grade of C- is necessary in all courses applied toward the requirements of the major and requirements may not be taken satisfactory/unsatisfactory. Each course must be at least 3 credits.

Code	Title	Credits
Survey Courses [1]		
Select two of the following:		6
AS.140.105	History of Medicine	
AS.140.106	History of Modern Medicine	
AS.140.301	History of Science: Antiquity To Renaissance	
AS.140.302	Rise Of Modern Science	
AS.140.321	Scientific Revolution	
Additional History of Science, Medicine & Technology Courses [2]		
Two history of science, medicine & technology courses at any level		6
Four 200-400 level history of science, medicine & technology courses		12
Science, Math, or Engineering Courses (N, Q, or E)		
Nine credits of 200-level or higher N, Q, or E courses		9
Twenty-one credits of N, Q, or E courses at any level		21
Total Credits		**54**

[1] Other courses might serve to fulfill the survey course requirement with permission of the director of undergraduate studies.

[2] The courses AS.140.411 Senior Research Seminar and AS.140.412 Research Seminar may not be used towards this requirement

Sample Program of Study

A typical program might include the following sequence of courses:

Course	Title	Credits
First Year		
First Semester		
AS.140.1xx Freshman Seminar or other AS.140.xxx elective		3
Any level N,Q,E course		3
	Credits	**6**
Second Semester		
AS.140.1xx Freshman Seminar or other AS.140.xxx elective		3
Any level N,Q,E course		3
Any level N,Q,E course		3
	Credits	**9**
Second Year		
First Semester		
Survey course like AS.140.105 or AS.140.321		3
200 level or above N,Q,E course		3
	Credits	**6**
Second Semester		
Survey course like AS.140.106 or AS.140.302		3
200 level or above N,Q,E course		3
200 level or above N,Q,E course		3
	Credits	**9**
Third Year		
First Semester		
AS.140.xxx HSMT elective above 100 level		3
AS.140.xxx HSMT elective above 100 level		3
Any level N,Q,E course		3
	Credits	**9**
Second Semester		
AS.140.xxx HSMT elective above 100 level		3
Any level N,Q,E course		3
Any level N,Q,E course		3
	Credits	**9**
Fourth Year		
First Semester		
AS.140.411	Senior Research Seminar (Optional)	3

AS.140.xxx HSMT elective above 100 level		3
	Credits	**6**
Second Semester		
AS.140.412	Research Seminar (Optional)	2
Any level N,Q,E course		3
	Credits	**5**
	Total Credits	**59**

Honors in the Major

Students who demonstrate excellence in course work are eligible to write an honors thesis (AS.140.411 (http://e-catalog.jhu.edu/search/?P=AS.140.411) Senior Research Seminar and AS.140.412 (http://e-catalog.jhu.edu/search/?P=AS.140.412) Research Seminar) in their final year for additional credits. Students must have outstanding recommendations from two department members to be eligible for the thesis. Departmental honors are conferred if a student has a GPA of 3.5 or better in major requirements and receives a grade of A- or better on the thesis.

Interdisciplinary Studies

The undergraduate major in interdisciplinary studies allows students to combine disciplines in Krieger School of Arts and Sciences to develop a major focused on a particular topic or intellectual theme. Therefore, courses proposed for this interdisciplinary major must have coherence and build toward a rich exploration of a clear set of principles or questions.

Programs

- Interdisciplinary Studies, Bachelor of Arts (p. 1889)

Interdisciplinary Studies, Bachelor of Arts

Interdisciplinary Studies Major Requirements

(Also see Requirements for a Bachelor's Degree (p. 1587).)

Students in the humanities and social sciences who wish to design their own major, or who wish to divide their studies between departments, may create their own program in Interdisciplinary Studies. This interdisciplinary major may straddle several traditional disciplines but must maintain a substantive theme or focus. For example, a student interested in the American Revolutionary period may construct a curriculum including courses from History, English, History of Art, and Sociology. Another may wish to focus on children in poverty, drawing from Anthropology and Economics. Proposals for the interdisciplinary major should be submitted at the end of the sophomore year.

This major requires the support of a faculty advisor and the approval of the Arts and Sciences Curriculum Committee. A student wishing to complete this major must work with a full-time faculty member from the Homewood campus to construct a curricular plan that includes courses representing 45 to 60 credits. These courses can include all related prerequisites and related courses, such as language study. Independent study, research, and internships may be included. Twenty-one credits must be earned at the 300-level or higher. Courses from the School of Engineering are not permitted, except by petition.

The proposal should explain how each of these courses provides insight on the given topic, concept, issue, time period, etc. There is no need to defend the principle of interdisciplinary study, as that is a given, but the student must explain how the courses from two or more departments represent a conceptual whole.

After receiving approval from a sponsoring faculty advisor, the student then works with the Office of Academic Advising to finalize the proposal and to present it to the Curriculum Committee, consisting of faculty and undergraduates, who must approve the proposal by majority vote. After approval, the student continues to work with the faculty advisor and Academic Advising to oversee completion of requirements.

Rules:

- Students pursuing this major must still meet all other requirements for a bachelor's degree (p. 1587) in the Krieger School of Arts and Sciences.
- All courses for the major must be taken for a letter grade and students must earn a C- or better in courses completing major requirements.
- Students must earn 45-60 credits in the completion of the major.
- At least 21 credits must be completed at the 300-level or higher and may not be counted toward another major or minor.
- Courses offered by the School of Engineering may not be included in major requirements. (Some minor exceptions may be permissible.)

International Studies

http://krieger.jhu.edu/internationalstudies (http://krieger.jhu.edu/internationalstudies/)

The International Studies major is an interdisciplinary program drawn from the departments of political science, history, economics, languages, sociology, and anthropology. There are three programs in International Studies: a regular undergraduate major leading to the B.A. degree in four years, and two accelerated programs leading to a B.A. and M.A. degree in five years. One of the accelerated programs is in partnership with the Johns Hopkins School of Advanced International Studies in Washington, D.C. and the other is with political science institute Sciences Po in Paris. The three programs, and all other aspects of the International Studies Program, are described on the International Studies website.

Programs

- International Studies, Bachelor of Arts (p. 1934)
- International Studies Five-Year Accelerated B.A./M.A. Program with Sciences Po (p. 1936)
- International Studies Five-Year Accelerated B.A./M.A. Program with the Paul H. Nitze School of Advanced International Studies (SAIS) (p. 1936)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.192.150. States, Regimes & Contentious Politics. 3 Credits.
This course, which satisfies the gateway requirement for the major in International Studies, introduces students to the study of politics and political life in the world, with a particular focus on the Middle East, Latin America, and Africa. Throughout the course, we will analyze the sources of order and disorder in modern states, addressing a series of questions, such as: why did nation-states form? What makes a state a nation? Why are some states democracies while others are not? How do people organize to fight oppression? Why does conflict sometimes turn violent? What are the causes of ethnic war? Drawing on a mix of classic works and contemporary scholarship, we will discuss the answers that scholars have formulated to address these and other questions, paying special attention to research design and the quality of argumentation. This course also counts as a 100-level course in comparative politics required for political science majors.

AS.192.210. Library Research Seminar for International Studies and Social Sciences. 1 Credit.
Are you planning to do a research project for your independent study class, or preparing for a grant application, or working on a big research project for a research intensive class or graduation thesis, or just wishing to improve your research skills? If so, this course is for you! Through weekly two hour sessions over ten weeks, you will receive systematic training on major research tools, resources and techniques useful for any research project in international studies, political science, and other social science subjects. By the end of the course, you will be able to come up with a viable research topic, and complete a research statement that includes an abstract, problem statement and literature review based on in-depth research utilizing tools and techniques covered in the course. The skills you learn through the course will prepare you for any future research projects and advanced studies.

AS.192.225. Economic Growth and Development in East Asia. 3 Credits.
The course offers an overview of the complexities of East Asia's development experience from a variety of perspectives. It is divided into three parts to allow students to develop expertise in one or more countries and/or policy arenas, while cultivating a broad grasp of the challenges of "East Asia's fast-paced economic growth." Part I considers the origins of East Asian economic development, analyses the common economic variables behind the region's success, looks at the 1997-1998 East Asian financial crisis, its lessons and the economic renaissance that followed. Part II focuses on the development experiences of individual countries, with an emphasis on the ASEAN economies, NIEs, Japan and China. Part III considers topics of special interest to East Asia, including trends toward greater regional economic cooperation, trade integration, and issues related to poverty, migration, and inclusiveness.

AS.192.265. Introduction to Contemporary African Politics. 3 Credits.
This class provides an introduction to contemporary African politics. Africa is diverse, and its political landscape is rapidly changing. Dramatic events that have occurred in just over half a century in Africa, including but not limited to decolonization, the end of the Cold War, rapid democratization, urbanization, the youth bulge, conflicts, and most recently, the COVID-19 pandemic, etc. has significantly shaped the nature of state and society with implications for political outcomes in present-day Africa. This course unfolds in four parts. In part one, we examine Africa's recent political history focusing on how pre-colonial politics, slave trade, colonialism, and decolonization politics impact modern African states. Part two then examines the social forces that shape contemporary politics across the continent. These include ethnic groups, religion, gender, and civil society. With an understanding of these social forces, we then move on to part three, which will explore dynamics and structures that mediates these social forces, including democracy, development, social movements, and international relations. The final part examines Africa's critical issues and opportunities, including conflict, the youth bulge, regionalism/AfCFTA, climate change, gender (in)equality and women's empowerment, and the COVID-19 pandemic.

AS.192.270. International Migration, Diasporas and Development. 3 Credits.
International migration has emerged as one of most politically salient and contentious issues in the politics of advanced democracies. However, while the economic, political, and social impact of large immigrant inflows has prompted much debate and analysis in developed countries, the effects of emigration and diasporas on the source country are poorly understood. This seminar examines the economic and political challenges and opportunities of international migration and diasporas on countries of origin and policy options to address them.The seminar will examine a range of issues. Is the phenomenon of greater import in the current (and future) context than it has historically been and if so, why? How do selection characteristics of international migrants and reasons for leaving affect the country of origin? Why do diasporas differ in the forms of engagement with the country of origin? What explains the massive increases in financial remittances sent by immigrants to their countries of origin and what are their effects? The seminar will also examine non-pecuniary or "social" remittances, which reshape individual preferences and social norms and thereby influence economic, political, and social change. What are the human capital effects of international migration, ranging from the "brain-drain" of limited human capital to "brain-gain" effects arising from diasporic networks? How does the "long-distance" nationalism of diasporas that support more polarizing political parties and groups engaged in conflict affect international security? Finally, we will examine policies in both receiving and sending countries and how they affect outcomes in their countries as well as of migrants themselves. Are international agreements on migration feasible or will rising nationalism ensure that unilateral policies and bilateral arrangements prevail?
Area: Writing Intensive

AS.192.290. Informational World Orders. 3 Credits.
We are on the cusp of a new era of contention in global politics. For decades, politicians and experts assumed that global information networks like the Internet had an inherently liberal bias, and would weaken autocratic regimes like China and Russia. Now, we are discovering that authoritarian countries can use technology too. The result is increased clashes over information technology between democratic countries and non-democratic countries, and among democratic countries too. All of them find themselves sharing the same global networks, and fighting over how these networks ought to work. In this course, we'll debate the conflict between different informational world orders promoted by the US, Europe and China. We will examine when information technology helps strengthen democracy, and when it benefits autocracies instead. We'll explore how information markets work, and work through the logic of political fights over artificial intelligence and surveillance.

AS.192.305. Global Energy and Environment: A Political Economy Approach. 3 Credits.
Global environmental deterioration is a major threat to human wellbeing. How do governments cooperate to address international environmental problems? Why is the global environmental regime structured as it is? Can international agreements and organizations solve global environmental problems? These are the primary questions addressed in this seminar. Among other topics, we cover research on global climate cooperation, the relationship between trade liberalization and the environment, North South negotiations on environmental agreements, environmental activism, and the problem of energy poverty in non-OECD countries.The seminar also provides students with an opportunity to conduct original research. In addition to weekly readings and discussion, the students write a final paper for the class based on empirical research on global environmental governance. Students also participate in a simulation of global climate negotiations under the 2015 Paris Agreement on Climate Change.
Area: Writing Intensive

AS.192.315. Politics of India. 3 Credits.
India is the world's largest democracy and its second most populous country. This course introduces core issues in the study of modern Indian politics. The class is organized around the following topics: we trace India's journey to Independence; the consolidation of democracy in the early decades; the relationship between the state and the economy; the state's institutional architecture; how political parties and electoral campaigns operate; the threats posed by corruption, criminality and dynastic politics; the role of caste and religion in shaping politics; the political and economic consequences of economic liberalization; elections; and the recent rise of right-wing hindutva in the country. The focus is on building knowledge and understanding of the Indian case. But we will also consider to what extent India's experience is reflective of more general theories of politics, and how they might change because of what India can teach us. Class sessions will be interactive, with plenty of opportunity for group discussion. The reading list is diverse and draws from political science, sociology, history, and anthropology.
Area: Writing Intensive

AS.192.325. International Political Economy of Emerging Markets. 3 Credits.
This course examines the relationship between politics and international economics in emerging market and developing economies. Throughout the course, we critically evaluate different political science theories of foreign economic policymaking in emerging markets. The course begins with an overview of theories of international political economy. The second section of the course focuses on developing countries' embrace of economic globalization over the past thirty years. We examine different political explanations for why emerging market and developing countries have removed barriers to foreign trade and foreign investment since the 1980s. The final section of the course explores how globalization has impacted emerging market economies, focusing on the challenge of maintaining economic and financial stability in this era of economic globalization.

AS.192.360. Modern Warfare. 3 Credits.
This course examines modern warfare from the Second World War to the present. It takes a broad historical perspective. Strategic decision-making, technological change, experiences of the soldier, different concepts of warfare, and the effect of war on societies and the effect of societies upon war will be examined. Students will be introduced to critical texts and key primary source documents. The course will start with the Second World War. It will then go on to the nuclear revolution, the Korean War, and the early Cold War. From there, the subject matter will turn to examine people's war, focusing on Mao and the Chinese Civil War and then Vietnam. Next, the Arab-Israeli conflicts will be discussed before moving on to the strategic environment of the post-Cold War world and the long war against "terrorism" in Afghanistan, Iraq, Syria, and elsewhere. Finally, the course will look at recent technological change, clashes, and new players. Throughout, special attention will be paid to non-Western views and experience of war. The five main questions of the class will be: • How has the nature of warfare changed between 1939 and today? What is the nature of war today? What kind of war is possible today?• How has technology changed warfare?• What are the experiences of people, both soldiers and civilians, in war?• How has warfare affected societies and culture? How have societies and culture affected war?• How has warfare affected domestic and international political change?

AS.192.404. Democracy, Autocracy and Economic Development: Korea, Indonesia, and Myanmar. 3 Credits.
East Asia's "miracle growth" has not gone hand in hand with a decisive move toward democracy. The course explores the reasons why democratization proceeds slowly in East Asia, and seems to be essentially decoupled from the region's fast-paced economic growth. The course is divided into three parts. Part I introduces the specifics of East Asia's economic development strategies as well as key concepts of democracy, authoritarianism and military rule and the tensions between these theories and the East Asian experience. Part II will focus on the economic and political development experiences of Korea, Indonesia and Myanmar in light of what discussed in Part I. Finally, Part III presents lessons emerging from the comparison of Korea's, Indonesia's and Myanmar's economic and political developmental trajectories.

AS.192.410. Kissinger Seminar on American Grand Strategy. 3 Credits.
Enrollment is at the discretion of the instructor and space in the course is limited. To apply, email a one-page resume, one-page personal statement on why you want to take the class including how it contributes to your professional interests, and a writing sample of less than ten pages to KissingerCenter@jhu.edu by the end of the day on Sunday, October 24, 2021. This course is an initiative of the Henry A. Kissinger Center for Global Affairs at Johns Hopkins SAIS. It will expose exceptional undergraduate students to the study of grand strategy and the history of U.S. foreign policy. The course will explore critical moments, themes, and people in the history of American grand strategy, from Washington's Farewell Address to the statecraft of Donald Trump. The seminar will also consider key issues in U.S. grand strategy today, from climate change to the challenge of an assertive China. Students will also have the opportunity to meet with current and former policymakers who have worked on these issues in real time. The course will meet 9 times at Homewood and 4 times at the SAIS campus in Washington, D.C.; transportation between Homewood campus and SAIS will be provided.

AS.192.412. Politics of Inequality. 3 Credits.
At the heart of the study of politics is a question about who gets what and when. Consequently, inequality features as a central theme in the discipline. Scholars have studied how inequality shapes democratization, redistribution, voting behavior, and how the institutions of welfare and taxation in turn shape inequality. More recently, scholars have started to pay attention to how inequality across and within ethnicities, races, and gender may matter to political outcomes. The centrality of inequality is reflected in the significant increase in quantity and quality of research on this subject over the past two decades. This seminar is designed to provide you with a critical overview of the field, both theoretically and empirically. We will briefly review the normative foundations and conceptual complexities involved in the study of inequality. Measures of inequality vary in their analytical properties, and it is important to choose the right one. We will review the main issues when measuring inequality. We will then proceed thematically. We will examine the political, and institutional foundations of income inequality and also its effects on institutional development, political participation and voting choice. Next, we examine the individual-level determinants of economic and political preferences, and how inequality intersects with race and gender. We end with a discussion of the social effects of inequality and what constraints exist to addressing inequality.
Area: Writing Intensive

AS.192.415. The Battle of Ideas for the World Economy. 3 Credits.
This seminar is intended as a capstone intellectual experience for seniors and advanced juniors majoring in international studies. The course presumes some background in economics, comparative politics, and international relations. This course will hone your analytical and writing skills by exposing you to theoretically advanced forms of political economy argument in a "proposition-opposition" format. The seminar is organized around a series of thematic pairings, covering such political economy themes like free trade vs. protectionism, free market capitalism vs. socialism, democratic erosion vs. autocratic strength, hegemonic stability vs. US abdication of power, or whether the current populist wave has mainly economic or mostly cultural roots. Each segment will deal with a specific topic area. Our discussions will involve in-depth interrogations of the arguments of these 'pro-con' authors.
Area: Writing Intensive

AS.192.420. Global Health Policy. 3 Credits.
The world's countries—low, middle and high-income alike—face numerous health challenges, many shaped by processes connected to globalization. We are presently amidst one of the greatest global health challenges of the past century—the COVID-19 pandemic. But there are others that persist, including combating the HIV/AIDS pandemic, addressing non-communicable diseases, expanding health coverage and ensuring effective global governance for health. This course will examine these and other issues with an emphasis on facilitating your understanding and critical analysis of central issues in global health policy, and examining the role you can play to address health conditions—particularly those that affect disadvantaged populations.
Area: Writing Intensive

AS.192.425. The Politics and International Relations of Iran. 3 Credits.
This course provides a basis for understanding the political, economic and security dimensions of Iran's politics and the country's role in World politics. It will discuss the Islamic Republic of Iran's complicated political system and its international politics. A significant and geostrategically situated country, Iran is where Islamic ideology first attained power in form a major social revolution. The unfolding of that revolution has shaped the Middle East, and has posed one of the most important challenges to American foreign policy. As a revolutionary Islamic State Iran experienced a unique path to development and state-building. This course will introduce the students to the main ideological currents and political trends in Iranian politics. It will discuss the structure of its theocracy, and the working of its politics and economy. The course will also examine Iran's foreign policy posture, with focus on U.S.-Iran relations, quest for nuclear power, and Iran's regional policy.

AS.192.501. Internship- International Studies. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.192.591. Research- International Studies. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.192.598. Independent Study. 3 Credits.
Approval Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.192.599. Independent Study. 3 Credits.
Approval Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

Cross Listed Courses

Agora Institute

AS.196.300. Getting to Truth: How to Navigate Today's Media Jungle. 3 Credits.

Our democratic system depends on an informed public, but media today are polarized along ideological lines, undercut by economic and technological change and sometimes polluted with bogus stories written for profit or spin. In this course, taught by a veteran journalist, we will discuss the evolution of news, examine the current challenges and assess what citizens can do to get a fair understanding of what's going on. We'll use many concrete examples and students will have multiple writing assignments.
Area: Writing Intensive

AS.196.304. Democratic Challenges. 3 Credits.

Modern democracies like the U.S. are undergoing severe challenges from within and elsewhere. Internally, many of their citizens are newly skeptical of democracy, believing for example that elections are rigged. Outside, they face new competition from authoritarian systems such as China's government, which show no signs of converging towards democracy, and offer a possible alternative system of rule. Finally, democracies also have to engage with new policy challenges, such as racial justice and climate change. In this course, we will draw upon the collective wisdom of faculty at Johns Hopkins' new SNF Agora Institute, to understand better the political challenges that democracy faces, and the policy challenges that it has to respond to. We will put modern democratic challenges in their appropriate historical context. Has America really been a democracy in the past? We will ask about the social and political conditions under which democracy does well, and under which it fails. Finally, we will look at the new agenda of questions that democracy faces, and the means that it can draw on to confront them.
Area: Writing Intensive

AS.196.306. Democracy by the Numbers. 3 Credits.

How is democracy doing around the world? This course will help students to answer this question and ask their own questions about political systems by examining a variety of quantitative measures of facets of democracy in the U.S. and internationally. We consider general indices as well as those that focus on specific normatively-appealing aspects —the absence of fraud in and broader integrity of the electoral process itself, the guarantees of fundamental human rights to all, governments' effectiveness and accountability to the public, the equity of both representation and policy outcomes for minority groups and those historically disadvantaged or excluded, and the possibility and extent of civic engagement in non-government institutions. Wherever possible, the course will present evidence about the kinds of institutions and policies that seem to bolster democracy. Students can expect to gain hands-on experience with publicly-available subnational and national indicators of electoral and democratic quality.

AS.196.311. Democracy. 3 Credits.

Democracies around the world are under threat. This course introduces students to the philosophical foundations of democracy as well as the history of democratic revolutions, institutions, and principles. How can we defeat the most important contemporary challenges to democracy, including populism, authoritarianism and disinformation? And how can we revive the “democratic spirit” - in America and around the world?

AS.196.364. This is Not Propaganda. 3 Credits.

We live in an era of disinformation' mass persuasion and media manipulation run amok. More information was meant to improve democracy and undermine authoritarian regimes- instead the opposite seems to be happening. This course will take you from Russia to South Asia, Europe to the US, to analyze how our information environment has been transformed, why our old formulae for resisting manipulation are failing, and what needs to be done to create a model where deliberative democracy can flourish.
Area: Writing Intensive

Anthropology

AS.070.212. Minorites in South Asia. 3 Credits.

This course will introduce first-year students to the anthropology of modern South Asia from the lens of its varied minorities. We will interrogate ideas of nation, community, tradition, and belonging across the region to understand contemporary dilemmas of diversity, heterogeneity, and cultural citizenship.
Area: Writing Intensive

AS.070.241. African Cities. 3 Credits.

Over the past two decades, African cities have absorbed rapid population increase without accompanying economic growth. Students will review the major challenges of this mode of urbanization and explore the vibrant ways residents have sought to meet them. Following anthropology's commitment to lived experience, we will track these issues through the twists and turns of everyday life, and consider what they may say about urbanity more broadly in the 21st century. Topics include livelihood, the built environment, conflict and membership, and popular culture.
Area: Writing Intensive

AS.070.267. Culture, Religion and Politics in Iran. 3 Credits.

This is an introductory course for those interseted in gaining basic knowledge about contemporary Iran. The focus will be on culture and religion and the ways they in which they become interwoven into different kinds of political stakes.
Area: Writing Intensive

AS.070.295. Conflict and Security in a Global World. 3 Credits.

Students will be introduced to problems of global governance in the context of transnational conflicts, changing nature of war, new epidemics and pandemics, and the threats of planetary extinction. What are the ways security is imagined and what kinds of political passions are mobilized for security of people versus security of states.
Area: Writing Intensive

AS.070.324. Latin America in a Fracturing World. 3 Credits.

This course examines the multiple and overlapping crises afflicting Latin America today through an ethnographic lens. Featuring conversations with authors of recent work on the region's most pressing issues, we will explore the contours of knowledge production itself under conditions of precarity and violence. Discussions will include the retrenchment of borders, migration crises, the state management of life and death, the resurgence of authoritarianism, food insecurity, and resource conflicts.
Area: Writing Intensive

AS.070.332. Reverberations Of The Korean War. 3 Credits.
This course will takes the reverberations of the Korean War to examine the ways in which catastrophic violence is absorbed into and corrodes social life. Particular attention is paid to the transnational nature of conflict, how boundaries around peace and war are established, and how recent scholarly and artistic work on the Korean War has critically engaged dominant frameworks of memory and trauma. Readings will draw from fiction, ethnography, historiography and will also include film. This course also draws from the public syllabus on Ending the Korean War.
Area: Writing Intensive

AS.070.336. Ethnographic Perspectives on Brazil. 3 Credits.
This seminar offers an examination of Brazilian culture and politics through close readings of classic and contemporary ethnography. The course will track how anthropologists have approached the complexities and contradictions of Brazilian society. And, conversely, we investigate how studies in Brazil have prompted challenges to and generated innovations in anthropological thought.
Area: Writing Intensive

AS.070.342. Common Ground: Shared Resources, Social Economies. 3 Credits.
This course explores the idea and practice of the commons through various sites and objects (money, work, natural resources, urban land, knowledge and culture, etc.). We will examine the promise and limitations of local, grassroots social and economic forms of organization that propose alternatives to the market economy. Focusing on workers, consumers and housing cooperatives; community currencies; urban gardens; self-help associations; fair trade organizations and knowledge networks; we will enquire how these social economies propose autonomous forms of living together, and sharing resources, property and labor.
Area: Writing Intensive

AS.070.359. Korean War. 3 Credits.
This course takes the Korean War as a site to both explore: 1) contemporary historical and political transformations in East Asia and globally and 2) the ways in which violence, catastrophic loss, and separation are woven into everyday life. It will explore the Korean War through film, fiction, historiography, and draw on comparative materials in anthropology
Area: Writing Intensive

AS.070.367. Science and Technology in Africa. 3 Credits.
This course explores the role of science and technology in the making of African histories and politics. We will examine precolonial iron-working, healing, and weaving; the ways guns and railroads functioned as tools of empire; the role of hydroelectric dams in postcolonial nation building; and the rise of digital communication and payment systems in the present. Throughout, we will challenge commonsense distinctions between the material and the spiritual, designers and users, wealth and people.
Area: Writing Intensive

AS.070.380. Slumworld: Life in informal Settlements. 3 Credits.
One quarter of the planet's urban population lives today in slums, shantytowns, favelas, chawls, colonias and other forms of rudimentary settlements (according to UN Habitat). Despite their prevalence throughout the world, these places are still depicted as spaces of informality and abjection, rather than as sites of emergence ofinnovative - even if disadvantaged-, makeshift ways of producing the city. This course will combine ethnographic and geographical literature, as well as works of fiction and film to explore the lives of squatters and slum-dwellers in many regions of the world and examine in what way their practices, forms of dwelling, sociality, conflict and cooperation are constitutive of the urban experience.
Area: Writing Intensive

AS.070.389. Precarity in South Korea through TV and Film:Aesthetics and everyday life. 3 Credits.
This seminar explores how precarity in South Korea gains expression in the medium of TV and film. In particular, this seminar will focus on how the moving image brings the viewer into the texture of everyday life. We will focus on the TV show Misaeng and include films such as Parasite and Burning. TV and film will be paired with readings on the transformations of intimate life in contemporary South Korea and comparative work on precarity.
Area: Writing Intensive

AS.070.413. Reading Marx. 3 Credits.
This seminar offers a close reading of selected works of Karl Marx, along with supplemental secondary literature. We will explore how the central pillars of Marx's thought--including dialectical materialism, critical political economy, and utopian socialist thought—shape his critical method in interrogating the logic of capital.
Area: Writing Intensive

AS.070.425. Anthropology of Epidemics. 3 Credits.
In this course we will examine how forms of governance, politics, expert knowledge, and citizen actions are implicated in the emergence and management of epidemics.
Area: Writing Intensive

AS.070.465. Concepts: How to Read Hindu and Islamic Texts. 3 Credits.
What is the nature of anthropological concepts and what relations do they bear to concepts internal to a society? We invite students to think with key ideas from Hindu and Islamic traditions, asking if anthropological concepts are best seen as abstractions from the particular or as intertwined with ongoing lines of inquiry, say into the nature of the real and continual efforts to test it? Topics in ritual theory, grammar, aesthetics, translation, revelation, luminosity, figuration and the mythological among those to be considered.
Area: Writing Intensive

Center for Africana Studies

AS.362.115. Introduction to Police and Prisons. 3 Credits.
This introductory course will examine policing and prisons in the United States and beyond, with a focus on racial inequality. It will consist of three parts. First, we will define key concepts in police and prison studies. Then, we will explore the contemporary state of prisons and policing in the United States and look at debates around the rise of “mass incarceration” and aggressive forms of policing in the final third of the 20th century. Third, we will explore policing and prison in other parts of the globe in the contemporary moment, highlighting similarities and differences from the U.S. case. What can studying the instruments of social control in other societies reveal about our own? Students will develop an understanding of major trends, keywords, and debates in the literature on policing and prisons, with particular reference to race and racism.

AS.362.160. Land, Labour and Environmental Rights and Struggles in Contemporary Africa. 3 Credits.
‘Africa rising’ has become an influential, albeit contested, narrative used by institutions like the International Monetary Fund and World Economic Forum to describe the rapid economic growth in 21st century Africa. This rapid ‘economic growth has been accompanied by another type of ‘Africa Rising’ – a mushrooming of social protest and popular uprisings across the continent. The course will introduce important theoretical perspectives, debates, and examples to equip students to critically examine contemporary social dynamics through the interconnected themes of land, labor and environmental rights and struggles that have gripped the African continent. What has given rise to these awakenings? Who are the actors involved in these actions? What are their demands and strategies? What lessons does it hold for social movement theory and development more broadly? The first section focuses on land reclamation movements, the new wave of ‘land grabs’ and responses from below. The second section presents the role of labour movements and its intersection with popular uprisings. The third section considers responses from communities and movements to the ecological destruction and climate change.

AS.362.315. Black Against Empire. 3 Credits.
This course will examine the confrontation of Black social movements with imperialism in the twentieth century. How, we will ask, have key Black internationalist thinkers conceptualized and defined diaspora, capitalism, imperialism, war, and the global? What have been the effects of war and repression, as well as economic growth and globalization, on Black internationalism? Readings may include texts by W.E.B. Du Bois, Angela Y. Davis, Frantz Fanon, Ashley Farmer, Claudia Jones, Robin D.G. Kelley, Claude McKay, Huey P. Newton, Walter Rodney, Malcolm X, etc. Students will complete a research paper on a topic of their own choosing related to Black internationalism in the twentieth century.
Area: Writing Intensive

AS.362.413. African American Representations in the Western. 3 Credits.
The course will investigate American cinematic representations of African Americans, slavery (and more specifically its absence), the Civil War, and racial formation along the United States’ southwestern frontier in films produced from the 1950s through the contemporary period. The course closely examines American cinematic fantasies of the western frontier, frontier violence and the desire to escape or erase the tensions of race and slavery that have deeply permeated the American cultural consciousness, strongly shaping the production of American masculine ideals. The course will also take decided note of the national shift from liberal “Great Society Programs” of the 1960s to the conservative “neoliberal” social and cultural ideals in the 1980s and 1990s. Our purpose is to consider the organization and reformation of hegemonic power by way of the complex morality play the western film evokes, typically considering the interstitial geographies between blackness and whiteness, civilization and savagery, belonging and alienation, and metropolis and colonial outpost. We will privilege in our discussions the contested frontiers of racial dominion. Films include “Buck and the Preacher,” “The Battle of Algiers,” “Sgt. Rutledge,” and “Django Unchained.”
Area: Writing Intensive

Comparative Thought and Literature

AS.300.102. Great Minds. 3 Credits.
Introductory survey of foundational texts of modern philosophy, social and political thought, and literature. This semester will include works by Plato, René Descartes, Immanuel Kant, Karl Marx, Virginia Woolf, Ludwig Wittgenstein, Iris Murdoch, Cora Diamond, Judith Butler, Kwame A. Appiah, Jacques Derrida, and others. The course is taught in lectures and in seminar discussions.

AS.300.301. Women and Work in the US. 3 Credits.
This course offers an introduction to the political forces, cultural values, and social factors which have shaped the history of women’s labor in the US. This course will ask question such as: Why do we place a higher value on work which takes place in the public sphere than work in the home? How do representations of work in literature and popular movies reinforce or subvert gender roles? How have women negotiated gendered and racial boundaries through political action or writing? Focusing on racialized labor, domestic labor, sex work, and factory work, the course will provide an interdisciplinary cultural study of women’s work relevant to our current historical moment. Authors discussed include Saidiya Hartman, Harriet Beecher Stowe, Emma Goldman, and Kathi Weeks.
Area: Writing Intensive

AS.300.311. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the “history of ideas” different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call “ideas”? In what sense do they have a history? These are examples of the kind of questions addressed in the course.

AS.300.317. The Russian Novel. 3 Credits.
This course introduces students to the nineteenth century Russian novel and considers its lasting impact on world culture. We will read classic masterpieces of the psychological and philosophical novel, and their experimental forerunners. Short lectures on historical and cultural context and on methods of literary analysis will be combined with intensive group discussion. Novels include Anna Karenina, Crime and Punishment, Eugene Onegin, Dead Souls, and Hero of our Time.
Area: Writing Intensive

AS.300.322. Lu Xun And His Times: China's Long 20th Century And Beyond. 3 Credits.
The "founding father of modern Chinese literature," Lu Xun (1881-1936) saw himself as a contemporary of writers like Gogol, Ibsen, and Nietzsche in creating his seminal short stories and essays, and likewise, he has been seen by numerous Chinese, Sinophone, and East Asian writers as their contemporary since his lifetime until today. In this course, we will survey Lu Xun's canonical works and their legacies through a comparative approach. What echoes do Lu Xun's works have with the European and Russian texts he engaged with? Why did his works manage to mark a "new origin" of Chinese literature? How were his works repeated, adapted, and appropriated by Chinese writers from the Republican period through the Maoist era to the post-socialist present, even during the Covid-19 pandemic? How do we assess his cross-cultural reception? Are his times obsolete now that China is on the rise? Or, have his times come yet? Through our comparative survey, Lu Xun's works and their afterlives will offer us a window onto China's long twentieth century and beyond in a transnational context. All materials are provided in English translation.

AS.300.324. Cinema of the 1930s: Communist and Capitalist Fantasies. 3 Credits.
Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender.

AS.300.328. Contemporary Sinophone Literature and Film. 3 Credits.
A survey of contemporary literature and film from the peripheries of the Chinese-speaking world, with a special focus on Hong Kong, Taiwan, and overseas Chinese communities in Southeast Asia, the Americas, and Europe. We will not only examine literary and filmic works in the contexts of the layered histories and contested politics of these locations, but will also reexamine, in light of those works, critical concepts in literary and cultural studies including, but not limited to, form, ideology, hegemony, identity, history, agency, translation, and (post)colonialism. All readings are in English; all films subtitled in English.

AS.300.330. Modern East Asian Literatures Across Boundaries. 3 Credits.
Modern literature in East Asia is as much defined by creation of national boundaries as by their transgressions, negotiations, and reimaginations. This course examines literature originally written in Chinese, Japanese, and Korean in light of contemporary understandings of political, social, and cultural boundary demarcation and crossings. How do experiences of border-crossing create and/or alter literary forms? How, in turn, does literature inscribe, displace, and/or dismantle boundaries? Our readings will include, but not limited to, writings by intra- and trans-regional travelers, exiles, migrants, and settlers; stories from and on contested borderlands and islands (e.g. Manchuria, Okinawa, Jeju); and works and translations by bilingual authors. All readings are provided in English translation.

AS.300.331. The Authoritarian Image: Russian Cinema from Stalin to Putin. 3 Credits.
Vladimir Putin's charismatic authority has a deep history in Russian culture. We'll investigate that history through cinema, which Lenin called "the most important of the arts." While Soviet cinema often served as immersive propaganda, directors also found ways to question authority and power. Films to be screened range from Sergei Eisenstein's Ivan the Terrible (1944) to the 2013 documentary Pussy Riot: A Punk Prayer. This course will combine study of Russian and Soviet culture from the end of World War II to the present with study of film history, style, and technique.
Area: Writing Intensive

AS.300.332. From Chekhov to Chernobyl: Russian Literature of Environmental Catastrophe. 3 Credits.
Environmental degradation and disaster offer a steady backdrop to the 20th century in Russia and the Soviet Union. While the Soviet regime promised mastery over the environment and Russian culture valorized the harmonization of humans with the natural world, environmental catastrophe proved the folly of those dreams. We will read works by authors who havegrappled with this ongoing catastrophe and its implications for relations between human beings and the world. Texts range from short stories and novellas to modernist experimental fiction and documentary prose. We will also engage with materials in special collections and screen selected films. Authors include: Chekhov, Bulgakov, Platonov, Solzhenitsyn, Rasputin,Petrushevskaya, and the Nobel laureate Svetlana Alexievich.
Area: Writing Intensive

AS.300.341. Transwar Japanese and Japanophone Literatures. 3 Credits.
A survey of Japanese and Japanese- language literatures produced in Japan and its (former)colonies during the "transwar" period, or the several years before and after the end of WWII. This periodization enables us to take into account the shifting boundaries, sovereignties, and identities amid the intensification of Japanese imperialism and in the aftermath of its eventual demise. We aim to pay particular attention to voices marginalized in this political watershed, such as those of Japanese-language writers from colonial Korea and Taiwan, intra-imperial migrants, and radical critics of Japan's "postwar" regime. Underlying our investigation is the question of whether literature can be an agent of justice when politics fails to deliver it. We will introduce secondary readings by Adorno, Arendt, Levinas, Derrida, and Scarry, among others, to help us interrogate this question. All readings are in English.

AS.300.343. The Cinema of Revolution. 3 Credits.
This course examines global political revolutions through cinema and the ways in which cinema helped to make political revolutions. Early cinema was intimately intertwined with the Russian revolution, and Russian revolutionary cinema had a profound impact on the ways in which media was used for revolutionary purposes through the 20th century and around the world. Students will be introduced to films from a number of different countries, and the history and context of their production and reception. They will also learn methods of film analysis and produce their own video essay.

AS.300.347. Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will pair literary works and films with texts from politics, philosophy, literary theory, and religion, that frame climate change as a fundamental challenge to our ways of making sense of the human condition.

AS.300.366. Russian Avant-Garde Cinema. 3 Credits.
Russian cinema was born out of the intense artistic experimentation of the fin-de-siècle avant-garde and developed in a climate of dramatic political and cultural change in the twenties and thirties. While subject to draconian censorship in the Soviet period, it nonetheless engaged in active dialogue with the film industries of Western Europe and America and had a lasting impact on world cinema. This course examines the extraordinary flourishing of avant-garde cinema in the Soviet Union in the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and Dovzhenko, their theoretical writings, and their far-reaching influence on film and film theory. All readings in English, films subtitled in English.
Area: Writing Intensive

AS.300.410. China in Imagination. 3 Credits.
What is China? This question has gained new relevance amid the nation's recent rise as a global power. We survey how China was imagined, represented, and conceptualized in literature, film, and philosophical writings from mainland China, overseas Chinese communities, East Asia, and the West from the late nineteenth century to the present. Through exploring this complex history, we aim to understand China and the contemporary world in a diversified, historically self-reflective way. Topics of discussion include, but not limited to, representation, identity, form, allegory, exile, diaspora, modernism, translation, world history, and universality. All readings are in English; all films subtitled in English.

Earth & Planetary Sciences

AS.271.360. Climate Change: Science & Policy. 3 Credits.
Prereq: 270.103 or permission of instructor.This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.

AS.271.401. Environmental Ethics. 3 Credits.
Environmental Ethics is a philosophical discipline that examines the moral relationship between humans and the natural environment. For individuals and societies, it can help structure our experience of nature, environmental problems, human-environmental relations, and ecological awareness. Beginning with a comprehensive analysis of their own values, students will explore complex ethical questions, philosophical paradigms and real-life case studies through readings, films and seminar discussions. Traditional ethical theories, including consequentialism, deontology, and virtue ethics will be examined and applied. Environmental moral worldviews, ranging from anthropocentric to ecocentric perspectives, will be critically evaluated. Organized debates will help students strengthen their ability to deconstruct and assess ethical arguments and to communicate viewpoints rooted in ethical principles. Students will apply ethical reasoning skills to an examination of contemporary environmental issues including, among others, biodiversity conservation, environmental justice, climate change, and overpopulation. Students will also develop, defend and apply their own personal environmental ethical framework. A basic understanding of modern environmental history and contemporary environmental issues is required. Prior experience with philosophy and ethics is not required.
Area: Writing Intensive

AS.271.402. Water, Energy, and Food. 3 Credits.
The water, energy and food (WEF) nexus is a topic of growing interest in the research and policy communities. This course will survey WEF concepts and principles, introduce tools of analysis, and engage students in case studies of critical WEF issues in the United States and internationally.

AS.271.403. Environmental Policymaking and Policy Analysis. 3 Credits.
This course provides students with a broad introduction to US environmental policymaking and policy analysis. Included are a historical perspective as well as an analysis of future policymaking strategies. Students examine the political and legal framework, become familiar with precedent-setting statutes such as NEPA, RCRA, and the Clean Air and Clean Water Acts, and study models for environmental policy analysis. Cost benefit studies, the limits of science in policymaking, and the impact of environmental policies on society are important aspects of this course. A comparison of national and international policymaking is designed to provide students with the proper perspective. This course is taught in conjunction with an identical graduate course. All students will be expected to perform at a graduate level.

East Asian Studies

AS.310.106. Introduction to Korean History and Culture. 3 Credits.
This course offers a comprehensive overview of Korean history and culture from ancient times to the modern era. Through primary, secondary, and audio-visual sources, students will become familiar not only with the overall contours of the entirety of Korean history, but also with its cultural and religious legacy. The course combines lectures and class discussions.

AS.310.107. Introduction to Korean Studies. 3 Credits.
This course offers a comprehensive overview of Korean history, politics, and culture encompassing premodern, modern, and contemporary times. Through primary and secondary materials, students will learn about the formation of Korea as a complex interplay of dynastic changes, wars, colonialism, rapid modernization, migrations, and minority and diasporic politics. We will approach the study of Korea through a cultural studies perspective, paying close attention to systems of power, ideology, gender, race, and class.

AS.310.110. Literatures and Films of Korea and the Korean Diaspora. 3 Credits.
This survey course introduces students to major events and themes addressed in Korean literature and film such as: Japanese colonialism, modernity, capitalism, the Korean War, rapid industrialization, postmodernity, immigration, transnational adoption, and more. Students will examine the role of literature and film in the development of the nation and the depiction of the Korean and Korean-diasporic subject as a complex set of intersecting social identities that contend with race, class, and gender.
Area: Writing Intensive

AS.310.210. Documentary Photography in a Changing China. 3 Credits.
This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP).

AS.310.230. Chinese Politics and Society. 3 Credits.
This introductory course will familiarize students with the major dynamics of political and social change in contemporary China since 1949. The course will be divided chronologically into four main topics: 1. The contested processes of nation-state making in modern China before 1949; 2. The making of the socialist system during the Mao Years and its dismantling since 1978; 3. The Reform Era transformation to a market economy with Chinese characteristics; 4. The dynamic relationships among the state, market and society since the new millennium. Students will explore how scholars have explained major political and social changes with reference to individual and collective rationalities, specific organizational and institutional arrangements, and specific strategic and cultural mechanisms of Chinese political and social habits.

AS.310.285. Chinese Leaders: Institutions and Agency. 3 Credits.
This course is a broad survey of what leadership looks like in China. The main through-line of the course is the how China's leaders navigate the often challenging terrain between constraints and incentives, on the one hand, and opportunities to apply their own individual agency. We will explore the state as the arena in which all this takes place over time (to explore continuity and change) and across space (to explore adaptation and innovation). The course does not presume prior knowledge of China or Chinese language, but students new to the study of China are encouraged to pay special attention to the cumulative nature of the course and invest in the readings, particularly in the first four weeks. Although some of the themes of this course may minimally overlap with/ reinforce other Chinese politics courses offered at JHU, the approach to this class will be significantly different.

AS.310.302. China, Human Rights, and U.S. Policy Responses. 3 Credits.
This seminar explores select human rights issues in China (e.g., human rights impacts of the management of COVID-19, the Hong Kong protests, mass detentions/forced labor in Xinjiang province) and the extraterritorial reach of China's human rights challenges. As a practice and policy-oriented course, we will also investigate different responses and actions taken by the U.S. government and Congress, including hearings, legislation, reports, statements, etc. Class assignments include advocacy for Chinese prisoners of conscience (each student will “adopt” one currently detained PoC), and written work that mirrors real-world writing. We'll also have several human rights advocates and experts visit the class to share their experiences and insights. This seminar explores select human rights issues in China (e.g., human rights impacts of the management of COVID-19, the Hong Kong protests, mass detentions/ forced labor in Xinjiang province) and the extraterritorial reach of China's human rights challenges. As a practice and policy-oriented course, we will also investigate different responses and actions taken by the U.S. government and Congress, including hearings, legislation, reports, statements, etc. Class assignments include advocacy for Chinese prisoners of conscience (each student will “adopt” one currently detained PoC), and written work that mirrors real-world writing. We'll also have several human rights advocates and experts visit the class to share their experiences and insights.

AS.310.305. China, Southeast Asia, and U.S. National Security. 3 Credits.
The global political and security landscape of the 21st century will be shaped by the rivalry between two superpowers -- China and the U.S. For the foreseeable future, the geographic focus of that contest will be Southeast Asia and the surrounding maritime space, particularly the South China Sea. Southeast Asia is a complex, highly differentiated region of ten-plus nations, each with its own unique history and relationship with China. This course will introduce Southeast Asia as a key region -- geographically, economically, and strategically -- often overlooked by policymakers and scholars. It will also focus on the craft of national security strategy as the best tool for understanding the multi-sided competition, already well underway involving China, the U.S., and the Southeast Asian states.

AS.310.318. Eurasia's Transformation and the Global Implications. 3 Credits.
Eurasia, stretching from the Western Europe across Russia, Central Asia, and China to the Pacific, is by far the largest continent on earth, with a massive share of global population, economic output, and key natural resources. It has been traditionally Balkanized. Yet since the late 1970s, due to China's modernizations, the collapse of the Soviet Union, and a series of global geo-economic shocks, the nations of this Super Continent have become increasingly interactive, creating fluid new trans-regional political-economic patterns that remain remarkably unexplored. This course explores the critical junctures that made Eurasia the dynamic, growing colossus that it is becoming today, as well as the global implications, from a unique problem-oriented perspective. It looks first at the developmental and political challenges confronting China, Russia, and key European states as the Cold War waned, how the key nations coped, and how they might have evolved differently. It then considers the new challenges of the post-Cold War world, and how national and local leaders are responding today. Particular attention is given, in this problem—centric approach, to the challenges that growing Eurasian continental connectivity, epitomized in China's Belt and Road Initiative, are creating for US foreign policy and for the grand strategy of American allies in NATO, Japan, and Korea. Note: Some familiarity with Eurasian history and/or politics is recommended
Area: Writing Intensive

AS.310.320. Sociology of Urban China. 3 Credits.
Urban China has gone through two major social transformations since 1949: the embrace of a central planning socialist system between early 1950s and late 70s, and the embrace of neo-liberal market economy in the so-call "socialism with Chinese characteristics" since 1980. While the political regime remains the same over time, many profound changes have occurred in economic life, social life, cultural life, spiritual life and civil life. What really happened in the social transformation of urban China? What would explain those changes? How did people in different walk of life deal with those huge and deep social transformation? To address these concerns, we will exam a list of issues. Topics includes changes in population and demographic characteristics, employment structure and job market, workplace and residential communities, income and wealth distributions, segregation impacts of urban household registration systems, urban consumption patterns, courting cultures and dressing codes, spiritual practices, and social mobility and social stratifications. In the realm of public policies, we will pay special attentions to the issues of transportation, housing, medical service, public education, social insurance, and environmental protection. We will also study the characteristics of contentious politics and how social conflicts of power, interest, justice, cultural and belief were processed in urban China.

AS.310.322. Korean History Through Film and Literature. 3 Credits.
In this course, students will engage with select topics in Korean history from premodern and modern times and examine how the past has been represented through various forms of film and literature. This will be combined with readings of academic articles to allow students to gauge the distance between scholarship and cultural expressions of history. Through this, students will be introduced to the highly contested and often polarizing nature of Korean history and the competition surrounding historical memory. Prior coursework in East Asian Studies strongly recommended.
Area: Writing Intensive

AS.310.326. Labor Politics in China. 3 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Area: Writing Intensive

AS.310.328. COVID-19 and Human Rights in Asia. 3 Credits.
This seminar explores the impact of the Covid-19 pandemic and government responses on a range of human rights in Asia, with a focus on the cases of China, Japan, Taiwan, India, South Korea, and Myanmar. In the first part of the course, we will investigate the fundamentals of the international human rights system, the foundational Universal Declaration of Human Rights and core human rights treaties, and the role of civil society in protecting, defending , and advancing human rights. We will then explore the United Nations' human rights-based guidance for Covid-19 response and prevention, the right to health, and approaches to the balancing of rights and duties, including freedom of movement, freedoms of association and assembly, individuals' right to health and duties to others, the right to education, rights to privacy, freedom of expression, right to information (and the problem of disinformation) and governments' emergency powers (and their limits) to protect public health. Inequities and discrimination exacerbated by the Covid-19 pandemic will also be discussed, as will the necessity for international cooperation to effectively battle Covid-19 and vaccine inequity.

AS.310.335. Theorizing Race and Mixed-Race in Asia and its Diasporas. 3 Credits.
This class will explore the construction of race and its applications in Asia and its diasporas. Using the notion of "mixed-race" as an analytic, we will examine how the colonial origins of race and the ensuing Cold War have influenced concepts of national identity and belonging. Employing an inter-sectional approach towards race, gender, and sexuality, the course will draw on a variety of media including memoirs, archives, and videos, to contemplate the locus of race and mixed-race and their importance within the larger nexus of identity formation in Asia and its diasporas.
Area: Writing Intensive

AS.310.340. Development and Social Change in Rural China. 3 Credits.
This course will survey the major issues of development and social change in rural China since 1950s. These issues will be addressed in chronological order. They include land ownership and land grabbing, organization of rural economic, political, and social life, rural elections and village governance, development strategies, urban-rural relationship in resource allocation, rural modernization strategies in regard to irrigation, clean drinking water, electricity supply, hard paved road, education and rural medical service, women's rights and family life, rural consumption, and etc. This course will prepare students, both empirically and analytically, to understand what happened in rural China from 1949 to the present, and how we can engage in policy and theoretical discussions based on what we learn.

Economics

AS.180.101. Elements of Macroeconomics. 3 Credits.
An introduction to the economic system and economic analysis, with emphasis on total national income and output, employment, the price level and inflation, money, the government budget, the national debt, and interest rates. The role of public policy. Applications of economic analysis to government and personal decisions. Prerequisite: basic facility with graphs and algebra.

AS.180.102. Elements of Microeconomics. 3 Credits.
An introduction to the economic system and economic analysis with emphasis on demand and supply, relative prices, the allocation of resources, and the distribution of goods and services, theory of consumer behavior, theory of the firm, and competition and monopoly, including the application of microeconomic analysis to contemporary problems.

AS.180.210. Migrating to Opportunity? Economic Evidence from East Asia, the U.S. and the EU. 3 Credits.
Increased mobility of people across national borders, whether by choice or by force, has become an integral part of the modern world. Using a comparative perspective and an applied economics approach, the course explores the economic and political determinants, and (likely) consequences of migration flows for East Asia, the US and the EU. Lectures, assignments and in class discussions, will be built around the following topics: i) migrants' self-selection; ii) human capital investment decision-making; iii) remittance decisions and effects; iv) impacts on labor markets of both receiving and sending countries; and v) the economic benefits from immigration. Overall, the course will give students perspective on the why people choose or feel compelled to leave their countries, how receiving countries respond to migrants' presence, and the key economic policy concerns that are influencing the shaping of immigration policy in East Asia, the US, and the EU.
AS.180.101 AND AS.180.102

AS.180.214. The Economic Experience of the BRIC Countries. 3 Credits.
In 2001, Jim O'Neill, the Chief Economist at Goldman Sachs, coined the acronym BRIC to identify the four large emerging economies, Brazil, Russia, India and China. These economies have since had an amazing run, and have emerged as the biggest and fastest growing emerging markets. In this course, we look at the economic experiences of the BRIC countries for the past 50 years. We discuss the reasons that have contributed to their exceptional growth rates, with particular emphasis on their transformation into market economies. We also analyze the challenges that these countries continue to face in their development process.
AS.180.101 AND AS.180.102

AS.180.217. Game Theory in Social Sciences. 3 Credits.
Game Theory is the study of multiple person decision problems in which the well-being of a decision maker depends not only on his own actions but also on those of others. Such problems arise frequently in economics, political science, business, military science and many other areas. In this course, we will learn how to model different social situations as games and how to use solution concepts to understand players' behavior. We will consider various examples from different fields and will play several games in class. The emphasis of the class is on the conceptual analysis and applications and we will keep the level of mathematical technicalities at the minimum -- high school algebra and one term of calculus will be sufficient. Students who took AS.180.117 are not eligible to take AS.180.217.
AS.180.102 or instructor permission;Students may not have previously taken AS.180.117.

AS.180.221. The Informal Economy: Who Wins, Who Loses, and Why We Care About It.. 3 Credits.
The informal economy is one of the most complex economic and political phenomena of our time. It exists in rich and poor countries alike, currently employs almost half of the world's workers, about 1.8 billion people, and totals to economic activity of around $10 trillion. If the informal economy were an independent nation, it would be the second-largest economy in the world, after the United States and before China. In today's globalizing environment, are informal economies a poverty trap or an engine of growth? Do they stimulate entrepreneurship and popular empowerment, or promote exploitation? How does an improved understanding of the size and organization of informal economies affect service provision, social policy or taxation? What are the implications of the informal economy for social cohesion and popular politics? The proposed course will address these (as well as other) questions related to the informal economy to offer students an understanding of such complex phenomenon from a variety of perspectives. The course will comprise three parts. Part 1 will explore the complexities of the informal economy, and the effects of informality on policies of inclusive growth. Part 2 will draw on empirical evidence and comparative case studies to examine informal economies in various regions, including Africa, East Asia, North and South America, and Europe, highlighting variations in activities, relations with the state, global integration and economic outcomes. Finally, Part 3 will discuss the ongoing economic policy shift from punitive measures to accepting informality as a virtual space through which citizens flow from job-seeker to compliant entrepreneurs.
AS.180.101 AND AS.180.102

AS.180.223. Economic Development in Sub-Saharan Africa. 3 Credits.
Many sub-Saharan African countries are among the least developed countries in the world. In this course, we explore the economic development experiences of African countries, with more focus on sub-Saharan Africa. The course starts with a historical perspective, delves into development strategies, and examines evidence on successes and failures of some case study countries. We conclude by analyzing the many challenges that these countries continue to face in their development process. Elements of Microeconomics and Macroeconomics are required prerequisites. There would be group presentations on assigned readings.
AS.180.101 AND AS.180.102

AS.180.228. Economic Development. 3 Credits.
A comprehensive survey of economic behavior by households, farms and firms in poor countries and the role of and for governments. Discussions include measurement of income levels, economy-wide equilibrium, sources of growth, agriculture and industry, international trade and investment, savings, population, fertility, education, health, income distribution and public finances. Applies economic theory rigorously to interpret and evaluate the economic experience of poor countries. Diagnostic test on Elements of Economics is required in the second week. Grading based on 3 exams and one paper.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.229. Economics of Health and Education in South Asia. 3 Credits.
Human capital is an important factor of economic growth in South Asian economies, along with physical capital and technology. Addressing health and education challenges has implications for improving a country's human capital formation and income growth. In this course, we look at past and present health and educational outcomes in South Asian Countries. We discuss the gaps in access to education and health care services, the quality of education and health care services as well as the impacts on the productivity of the labor force. We also empirically analyze the link between economic growth and human capital development. Furthermore, we focus on some challenges and future policy options for economies in South Asia.
AS.180.101 AND AS.180.102

AS.180.233. Economics of Transition and Institutional Change. 3 Credits.
This course will introduce students to the comparative analysis of institutions of existing capitalist systems and to the historical evolution of those institutions. By comparing the economic systems of different nations, we will try to reveal the institutional setups that either contribute or hinder economic performance. We will also examine the process of countries transforming their economies and investigate the factors that determine the differences in reforms' outcomes between countries.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.238. Rethinking Economics After the Great Recession. 3 Credits.
The financial crisis that began in the United States in 2007 threw virtually the entire world into recession. This class will look at the causes of the crisis and at how it unfolded. It will look into the conventional wisdom of economists, circa 2006, and why that wisdom proved to be so wrong. It will examine the financial innovations that contributed to the crisis, at the reasons financial regulators were blindsided, and at the reforms enacted after the crisis.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.241. International Trade. 3 Credits.
Theory of comparative advantage and the international division of labor: the determinants and pattern of trade, factor price equalization, factor mobility, gains from trade and distribution of income, and theory and practice or tariffs and other trade restrictions. Recommended Course Background: AS.180.101.
AS.180.101 AND AS.180.102

AS.180.242. International Monetary Economics. 3 Credits.
This course presents International Monetary Economics theory and applies it towards gaining an understanding of recent events and current policy issues. The theory presented in this course covers a broad range of topics including exchange rate determination, monetary and fiscal policy in an open economy, balance of payments crisis, the choice of exchange rate, and international debt. The insights provided by these theoretical frameworks will enable us to discuss topics such as the global financial crisis, global financial imbalances, the Chinese exchange rate regime, and proposed changes in the international financial architecture.
AS.180.101 AND AS.180.102

AS.180.246. Environmental Economics. 3 Credits.
This course presents a broad overview of the key issues in modern environmental economics with a focus on understanding and solving urban pollution challenges in developed and developing nations. This course explores how cities and nations can achieve the "win-win" of economic growth and reduced urban pollution. Special attention is paid to the incentives of households, firms and governments in reducing the production of pollution. The course examines a number of pollution challenges including; air, water, noise, garbage and the global challenge of climate change.

AS.180.261. Monetary Analysis. 3 Credits.
This course analyzes the financial and monetary system of the U.S. economy and the design and implementation of U.S. monetary policy. Among other topics, we will examine the role of banks in the economy, the term structure of interest rates, the stock market, the supply of money, the role of the Federal Reserve in the economy, the objectives of monetary policy in the United States and current monetary policy practice.
AS.180.101 AND AS.180.102

AS.180.266. Financial Markets and Institutions. 3 Credits.
Understanding design and functioning of financial markets and institutions, connecting theoretical foundations and real-world applications and cases. Basic principles of asymmetric information problems, management of risk. Money, bond, and equity markets; investment banking, security brokers, and venture capital firms; structure, competition, and regulation of commercial banks. Importance of electronic technology on financial systems.
AS.180.101 AND AS.180.102

AS.180.289. Economics Of Health. 3 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
AS.180.102

AS.180.303. Topics in International Macroeconomics and Finance. 3 Credits.
The course will review selected topics in international macroeconomics and finance. The topics for the Fall of 2019 include: financial globalization; international portfolio diversification; capital account liberalization and the choice of the exchange rate regime in emerging markets; the global financial safety net; macroeconomic adjustment in the euro area.
AS.180.101 AND AS.180.102 AND AS.180.302

AS.180.338. Political Economy and Development. 3 Credits.
Good governance is associated with desirable outcomes across countries and societies: higher life satisfaction, greater income per capita, lower child mortality, longer life expectancy, less disease, etc. But these statistical associations in the data are not sufficient to establish either that good governance truly causes such societal outcomes, or what types of policies produce them. This course asks: What are the determinants of good governance? Is good governance "good" beyond its intrinsic desirability? If so, how? We use a data-driven approach, focusing on quantitative empirical methods and their applications to policy. The goal is to develop skills to be savvy consumers, as well as producers, of policy-relevant evidence related to issues of governance, in rich and poor countries alike. Topics will include: democracy, corruption, conflict, culture, mass media, quotas, and foreign aid.
(AS.180.301 OR AS.180.401) AND AS.180.334

AS.180.349. Economics of Race, Gender and Culture. 3 Credits.
This course will review popular causal analysis tools used in economics research and cover papers on race, gender, and culture that used the causal analysis tools.This course will ask you to use STATA to solve problem sets and exams. Exams will take place in a computer lab.Students must be familiar with undergraduate-level econometrics.
AS.180.101 AND AS.180.102 AND AS.180.301 AND AS.180.334

AS.180.351. Labor Economics. 3 Credits.
The course discusses various issues in labor markets from the perspective of economic theory. We first study the major forces at work that shape labor market behavior; firms' labor demand and workers' labor supply. Then we discuss the equilibrium behavior of employment and wages. Using these tools, we also cover various applied topics in labor economics, such as minimum wage regulations, male-female wage differentials, human capital investment, worker mobility, and unemployment.
AS.180.301 OR AS.180.401

AS.180.355. Economics of Poverty/Inequality. 3 Credits.
This course focuses on the economics of poverty and inequality. It covers the measurement of poverty and inequality, facts and trends over time, the causes of poverty and inequality with a focus on those related to earnings and the labor market, and public policy toward poverty and inequality, covering both taxation and government expenditure and programs. By the nature of the material, the course is fairly statistical and quantitative. Students should have an intermediate understanding of microeconomic concepts. Basic knowledge of regression analysis is also helpful.
Area: Writing Intensive
AS.180.301

AS.180.361. Rich Countries, Poor Countries. 3 Credits.
Why are some countries rich while some other countries poor? Why does a country's income per person generally grow over time? We try to analyze these questions using the theoretical and empirical growth literature. We will study seminal growth models, and also try to explain cross-country income differences in terms of factors like geography, institutions and global integration. Knowledge of regression analysis (including instrumental variables estimation) is required.
AS.180.302 AND (AS.180.334 OR AS.180.434)

AS.180.389. Social Policy Implications of Behavioral Economics. 3 Credits.
Economists increasingly incorporate insights from psychology into models of rational decision-making. Known as "behavioral economics", this line of research considers how, for example, emotions, rules-of-thumb, biased beliefs and time-inconsistent preferences influence how we make choices. Behavioral economics increasingly pervades policy discussions on topics as diverse as: obesity, the role of media, subprime mortgages and voting patterns. Behavioral models are certainly novel, but do they help us to design superior social policies? With the goal of preparing students to address this question, this course (1) provides a thorough overview of the main contributions of behavioral economics, highlighting departures from more traditional economic models and (2) emphasizes how behavioral economic models might (or might not) improve how we think about social policy.
AS.180.301 OR AS.180.401;AS.180.334 OR AS.180.434 can be taken concurrently.

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Benefits of good health and its costs. Health demand and supply in poor countries. Welfare economics of Public Health. This is a writing seminar. There are some lectures on how to write a paper and on the substance of the economics of international health but the focus and only assignment is a 40-page paper by each student under the supervision of the instructor.
Area: Writing Intensive
AS.180.301 or AS.180.401;Students may not take AS.180.390 if they took AS.180.391.

AS.180.391. Economics of China. 3 Credits.
Discussion of the economic experience of Post-War China, primarily emphasizing topics rather than historical narrative: agriculture, industry including corporate governance and public enterprises, international trade, population, migration, education, health, public finances among other topics. This course is writing intensive and the only assignment for the course is a 40 page paper on some aspect of the Chinese economy to be done under the close supervision of the instructor. The course is not primarily a lecture course, although there will be some lectures on how to do a paper and on the substance of the Chinese economic experience.
Area: Writing Intensive
AS.180.301 OR AS.180.401;Students may not take AS.180.390 if they took AS.180.391.

First Year Seminars

AS.001.107. FYS: Thinking and Writing Across Cultures - East Asia and the West. 3 Credits.
In this First-Year Seminar, we will explore what it means to think and write across multiple cultures in the contemporary world. What do we gain and/or lose when we think and write crossing cultural boundaries? How do knowledge and experience of two or more cultures help us think and act critically, creatively, and ethically? What does plurality of cultures mean to universal discourses such as science and technology? How can cultural differences help or hamper our efforts to tackle global problems like climate change? These are some of the guiding questions that we will investigate together in this course by examining novels, essays, autobiographies, travelogues, philosophical writings, and films that engage with multiplicity of cultures between East Asia -- especially China, Japan, and Korea – and the West as well as within East Asia.

AS.001.127. FYS: Public Opinion and Democracy. 3 Credits.
How does public opinion shape electoral behavior and the contours of democracy in the United States, and how have these relationships changed as techniques for measuring public opinion have evolved since the early twentieth century? To consider this question, the course introduces alternative perspectives on the features of a healthy democracy, including both historical perspectives and current arguments. Interweaved with this material, the course examines how public opinion is measured and interpreted by private pollsters, survey researchers, and data journalists. Emphasis is placed on the alternative claims that opposing analysts adopt, as well as how the technologies of data collection and analysis shape the permissibility of conclusions. Students will learn to interpret public opinion patterns, which requires a brief presentation of basic concepts from survey sampling, including what to make of the polling industry's most boring concept: margin of error.

History

AS.100.102. The Medieval World. 3 Credits.
This course explores selected topics in the political, economic, social, and intellectual history of Western Europe in the wider world in the period between the fall of the Roman Empire and the fourteenth century. Special emphasis will be given to understanding the ways in which medieval society functioned as it reorganized itself after the almost total collapse of the ancient world. Topics include: religious plurality, sovereignty and subjecthood, flourishing of learning, chivalric culture, crusading, and the plague and its effects. We will follow the interplay between material and cultural forces in the processes of social organization.
Area: Writing Intensive

AS.100.103. Early Modern Europe & the Wider World. 3 Credits.
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.

AS.100.104. Modern Europe and the Wider World. 3 Credits.
The Modern European World familiarizes students with key moments, ideas, communities, individuals, and movements which have formed European History since the Revolutionary era.

AS.100.108. Making America: Black Freedom Struggles to 1896. 3 Credits.
From slave revolts on the West African coast to national conventions and civil war, people of African descent have defined freedom and struggle in terms of kinship, diasporic connection, and fighting antiblack violence. This course explores the arc of that history and its role in the making of America.

AS.100.113. Making America: Race, Radicalism, and Reform. 3 Credits.
This course examines race and social movements in America from the Revolution to 1921.

AS.100.115. Modern Latin America. 3 Credits.
A class combining Latin American history since independence and digital humanities (revised with 2021 student feedback). Students will build guided research projects while thinking about questions of republicanism, freedom and unfreedom, migration, and development.

AS.100.122. Introduction to History of Africa (since 1880). 3 Credits.
An introduction to the African past since 1880.
Area: Writing Intensive

AS.100.123. Introduction to African History: Diversity, Mobility, Innovation. 3 Credits.
Introduction to three major themes in African history, from the precolonial era to the present.
Area: Writing Intensive

AS.100.128. Approaches to Jewish History. 3 Credits.
The course will provide an introduction to the study of Jewish History.

AS.100.129. Introduction to Modern Jewish History. 3 Credits.
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel.

AS.100.154. Modern Mexico from the Alamo to El Chapo. 3 Credits.
In this course we will use popular depictions of Mexico's heroes and villains, tragedies and triumphs to delve into both the nation's history and the importance of thinking historically.

AS.100.165. Japan in the World. 3 Credits.
This course is an introduction to Japan's history from 1800 to the present with emphasis on the influences of an increasing global circulation of ideas and people. Topics include the emperor system, family and gender, imperialism, World War II, the postwar economy, and global J-pop.

AS.100.170. Chinese Cultural Revolution. 3 Credits.
The Cultural Revolution was Mao Zedong's last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. (Previously offered as AS.100.219 and AS.100.236.)

AS.100.180. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography.

AS.100.216. Reformation and Counter Reformation Europe. 3 Credits.
This course explores the series of religious and political conflicts that make up what are known now as the Reformation and Counter-Reformation in Europe.

AS.100.233. History of Modern Germany. 3 Credits.
There is more to Germany than beer, BMWs, and Bayern Munich. We explore politics, culture, economics and society to understand Germany and its role within Europe and the world from the 18th century to the 'Refugee Crisis', climate change and EU politics today.

AS.100.241. American Revolution. 3 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the first republic in the Americas, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance.
Area: Writing Intensive

AS.100.243. China: Neolithic to Song. 3 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered.

AS.100.248. Japan in the World. 3 Credits.
An introduction to Japan's history from 1700 to the present, with emphasis on the influences of an increasing global circulation of ideas, goods, and people in early modern and modern times. Topics include samurai, nation-building, gender, imperialism, World War II, the postwar economy, and contemporary popular culture.

AS.100.250. The American Revolution in Unexpected Places. 3 Credits.
This course considers the American Revolution from the perspective of locations beyond the thirteen rebelling colonies. Covering a range of global hotspots, the focus is on events from 1763 to 1788.

AS.100.251. West African History. 3 Credits.
This course explores the rich history of West Africa and its place in the broader world. Topics include the environmental history of the Sahara desert, West African empires, and the rise of Nollywood and contemporary culture.
Area: Writing Intensive

AS.100.268. Jewish and Christian mysticism in the Middle Ages and the Early Modern Period. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.

AS.100.270. Europe since 1945. 3 Credits.
This class focuses on Europe from the end of World War II until today. We will discuss such topics as the Cold War, social democracy, the welfare state, the relationship to the US and the Soviet Union, decolonization, migration, 1989, European integration, neoliberalism, and the EU. We will discuss and analyze academic literature, movies, documentary films, textual and visual primary sources.

AS.100.273. A Comparative History of Jewish and Christian Mysticism. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 11th and the 19th centuries.

AS.100.282. Race & Power in Modern South Africa. 3 Credits.
Overview of modern South African history, with a focus on the origins of the racial state and the development of black liberation movements.

AS.100.283. Making and Unmaking Queer Histories, 1800-Present. 3 Credits.
Making and Unmaking Queer Histories introduces students to the major themes and historical developments which shape contemporary understandings of LGBTQ+-identified subjects and communities in the US and Western Europe.
Area: Writing Intensive

AS.100.303. Old Regime and Revolutionary France. 3 Credits.
Examines the history of France from the reign of Louis XIV to the French Revolution, focusing on early modern society, popular culture, absolutism, the Enlightenment, overseas empire, and the French and Haitian Revolutions.
Area: Writing Intensive

AS.100.305. Peter to Putin: Survey. 3 Credits.
Seminar on modern Russia. No midterm and no final. 6 short weekly journals, two short papers, and two small quizzes.
Area: Writing Intensive

AS.100.310. The French Revolution. 3 Credits.
Political, social and cultural history of a turning-point in European history that witnessed the birth and death of democracy.

AS.100.314. The Enlightenment. 3 Credits.
Examines the Enlightenment, an intellectual movement that swept Europe in the eighteenth century to shape the modern world. Topics include science and religion; print culture; gender and sociability; political economy; and race, slavery, and colonialism.
Area: Writing Intensive

AS.100.321. Political Thought and Social Transformation in the Haitian Revolution and Early Independent Mexico, c. 1789-1850. 3 Credits.
This course will examine both the Haitian Revolution and the early period of Mexican independence by engaging with the ideas of actors within these events in international contexts.
Area: Writing Intensive

AS.100.329. Russian Imagination in Three Revolutions. 3 Credits.
Russian Literature and the arts in Revolutions of 1905, 1917, and Stalin era to 1941. Req: 6 journals of 350 words, 2 papers 1250, 2 quizzes. No midterm or final.
Area: Writing Intensive

AS.100.340. Asian American Art and Activism: Third World, Feminist, and Queer Solidarities. 3 Credits.
This interdisciplinary course surveys critical themes related to Asian American art and activism including perspectives from history, art and visual culture, literature and gender and sexuality studies.
Area: Writing Intensive

AS.100.343. The Annales School. 3 Credits.
This is not a typical history course but one on historical theory and modern historiographical thought. How did historians in the past generations attempt to analyze the past? To what extent is history connected to other disciplines? What was the French contribution to contemporary historiography? What is "new history"? In this seminar, we are going to examine the scholarship of the French Annales, arguably the most influential and revolutionary “school” of historiography in the twentieth century. Students will read selected works of the Annales historians and discuss concepts such as economic history, serial history, longue durée, conjuncture, total history, mentalité, historical psychology, and historical anthropology.
Area: Writing Intensive

AS.100.346. Soviet-American Cold War. 3 Credits.
The focus will be on Soviet-American interactions, Cold-War Cultures, and the impact on both societies.
Area: Writing Intensive

AS.100.347. Early Modern China. 3 Credits.
The history of China from the 16th to the late 19th centuries.
Area: Writing Intensive

AS.100.348. 20th-Century China. 3 Credits.
Survey of the history of China from ca. 1895 to ca. 1976.
Area: Writing Intensive

AS.100.360. The Modern British World: Imperial Encounters, Regimes, and Resistance, from the American Revolution to the present. 3 Credits.
The Modern British World introduces some of the major events, themes, and controversies that led to Britain’s global dominance and ultimate decline as an imperial power. This course focuses on varying forms of imperial governance, the interrelationships between metropole and colony, and the formation of British and colonial national identities.
Area: Writing Intensive

AS.100.361. Age of Tolstoy. 3 Credits.
Tolstoy and his era, 1820s to 1910s. Topics include state and politics, empire, the Russian identity, and forms of cultural expression. Students consider "War and Peace" and other masterworks.
Area: Writing Intensive

AS.100.365. Culture & Society in the High Middle Ages. 3 Credits.
This course will cover the period commonly known as the High Middle Ages, that is, the civilization of Western Europe in the period roughly from 1050 to 1350. . It is a period of exceptional creativity in the history of Western Europe and in medieval history specifically, a time when many of the most characteristic institutions of Europe came into being.
Area: Writing Intensive

AS.100.369. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography from the 19th century to the present.

AS.100.371. Modernity, Catastrophe, and Power in Jewish History: 1881 to the Present. 3 Credits.
Jewish history, politics, and culture across a century of enormous transformations and transformative enormities in Europe, the US, and the Middle East. Topics include: impacts on Jewish life of World War I, the Russian Revolution, and the post-imperial reordering of the Eastern Europe and the Middle East; Zionism and other modes of Jewish contestatory politics; the consolidation of American Jewry; Nazism and the Holocaust in Europe; formation and development of the State of Israel; the global reordering of Jewish life amid cross-currents of the Cold War, conflict in the Middle East, and success in the US. Substantial attention to recent and contemporary history including the dramatic changes in Israeli society and polity over the past forty years and the ongoing Israeli-Palestinian conflict.
Area: Writing Intensive

AS.100.373. Crime, Punishment, Felony and Freedom: Law and Society in Pre-Modern England. 3 Credits.
Using legal texts as a window into English society, we will address the changing nature of royal power, trial by jury, treason, felony, and the freedoms enshrined in the Magna Carta.

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.

AS.100.379. Brazil History and Cultures: A Glance from Baltimore. 3 Credits.
Using textual and visual documents (including books from Peabody Library), we will examine the contrasts of Brazilian history and culture, and its connections with 19th and 20th century Baltimore.

AS.100.384. Intoxicated: Commodities & Globalization in the Early Modern World. 3 Credits.
Each week we examine a commodity that defined a new era of global connectivity in the centuries after 1492, including money, medicines, slaves, and fashion.

AS.100.386. The Cold War as Sports History. 3 Credits.
Sport is key to understanding the Cold War. We will investigate how the Cold War has shaped sports, the Olympic movement, the role of athletes at home and abroad, how sports were used in domestic and foreign policy, and how Cold War sports reinforce or challenge notions of race, gender, and class.
Area: Writing Intensive

AS.100.387. Everyday Life in the Medieval Middle East. 3 Credits.
Explores the daily lives of non-elites in the medieval Middle East—food; housing; clothes; marriage and divorce; urban festivals—through primary documents (e.g. letters, court records) and artifacts (e.g. clothing).Pre-requisite for enrollment: Students must have taken one history course.

AS.100.389. History of Law and Social Justice. 3 Credits.
Cause lawyering aims to change the status quo. This course examines histories of this approach to social justice, from battles against the slave trade to contemporary campaigns for marriage equality.

AS.100.394. Brazilian Paradoxes: Slavery, Race, and Inequality in Brazil (from a Portuguese Colony to the World's 8th Largest Economy). 3 Credits.
Place of contrasts, Brazil has a multi-ethnic cultural heritage challenged by social and racial inequalities. Its political life remains chaotic. We will examine these problems through Brazilian history and culture.

AS.100.395. History of Global Development. 3 Credits.
This course explores development as an ideology and a practice. From colonialism to the Cold War to contemporary NGOs, we will interrogate the history of our attempts to improve the world.
Area: Writing Intensive

AS.100.396. The Gender Binary and American Empire. 3 Credits.
This discussion-based seminar will explore some of the ways that the sex and gender binary was produced out of American statecraft in the late nineteenth and twentieth centuries. Particular attention will be paid to US imperialism, both domestically in its settler form, as well as in Hawaii, the Caribbean, and the Pacific. What happens to the study of the modern gender binary if it is treated as a transnational artefact of US imperialism's encounter with a multitude of cultures and nations?
Area: Writing Intensive

AS.100.404. John Locke. 3 Credits.
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.
Area: Writing Intensive

AS.100.408. Theorizing the Age of Enormity: Social Theory and the History of the 20th Century. 3 Credits.
We will read and analyze key works of social and critical theory produced in relation to 20th and 21st century problems of state and society, nationalism, empire, totalitarianism, genocide, capitalism, political order, gender, race, sexuality, secularism, religion, environmental catastrophe. Possible readings include Weber, Du Bois, Adorno, Arendt, Foucault, Balibar, Beckamong others.
Area: Writing Intensive

AS.100.409. Israel and Palestine from 1967 to the Present: a Current and Entangled History. 3 Credits.
Through intensive and extensive reading, we will explore contemporary Israeli society, politics, and culture, contemporary Palestinian society, politics, and culture under occupation, and the historical processes that have shaped both societies and their ongoing entanglement.

AS.100.413. London 1580-1830: The History of Britain's capital city. 3 Credits.
Seminar-style class analyzing the social, cultural, gender, religious, economic, and political history of London from Shakespeare's time through revolutions, plague, fire, and commercial, colonial, and industrial expansion.
Area: Writing Intensive

AS.100.415. The Holocaust in Jewish History and in Global Culture. 3 Credits.
Key works on the history of Nazi Germany's murder of European Jewry during the Second World War; Jewish responses; the recasting of Jewish and global thought in relation to this signal event; genocide and 'ethnic cleansing' since the Holocaust.
Area: Writing Intensive

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, "virgins" in paradise, the sexual slavery of Yazidi women…. This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Writing Intensive

AS.100.422. Society & Social Change in 18th Century China. 3 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?

AS.100.423. Multiethnic Japan. 3 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas.
Area: Writing Intensive

AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Area: Writing Intensive

AS.100.430. Gender and Sexuality in African History. 3 Credits.
An upper-level history reading seminar with a focus on histories of gender and sexuality in colonial and postcolonial Africa.

AS.100.438. The City Victorious: Medieval Cairo. 3 Credits.
What was medieval Cairo like? Students explore urban life in this imperial capital (969-1517), including food and market habits; relations between Jews, Christians, and Muslims; patronage; plague, drought, and famine.Pre-requisite for enrollment: Students must have taken two history courses.

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Writing Intensive

AS.100.444. Migrants and Refugees in Africa. 3 Credits.
A history of forced and voluntary migration and displacement in Africa, its causes and consequences, with a focus on refugees and labor migrants since 1960.

AS.100.445. Revolution, Anti-Slavery, and Empire 1773-1792: British and American Political Thought from Paine, Smith, and the Declaration of Independence to Cugoano, Wollstonecraft, and the Bill of Rights. 3 Credits.
This seminar-style course will focus on discussing British and American political thought from the "Age of Revolutions", a period also of many critiques of Empire and of many works of Antislavery. Readings include Paine's Common Sense and Rights of Man, the Declaration of Rights, the Constitution and Bill of Rights, the Federalist Papers; works by Smith, Burke, and Wollstonecraft; and antislavery works by Cugoano, Equiano, Rush, Wesley, and Wilberforce.
Area: Writing Intensive

AS.100.478. Japan from its Peripheries. 3 Credits.
An advanced undergraduate seminar on the history of modern Japan from the perspective of regions and people often considered as belonging to its geographical, cultural, social, and political peripheries.
Area: Writing Intensive

AS.100.482. Historiography of Modern China. 3 Credits.
Study of Western, Chinese, and Japanese understandings of the history of China, emphasizing their implications for cultural understanding and for policy.

AS.100.497. 1968: Rebels, Revolutions & the Right-Wing Backlash. 3 Credits.
The sixties were a polarizing decade of unrest, revolutions, and fundamental change across Europe and the US. We will discuss 1968 through the lens of national case studies, the Cold War, and the history of Baltimore. This is a community-engaged class!
Area: Writing Intensive

History of Art

AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez. 3 Credits.
Explores the different ways Early Modern painters and printmakers incorporated mirrors and optical reflections into their works for the sake of illusion and metaphor, deception and desire, reflexivity and truth-telling. Connecting sense perception and ethical knowledge, embedded mirror images often made claims about the nature of the self, the powers of art, and the superiority of painting in particular.

AS.010.320. Art of Colonial Peru. 3 Credits.
Viewed within the dynamic historical context of colonial society, we consider the pictorial, sculptural, and architectural programs that ensued in viceregal Peru (1532-1825). We examine the role of religious orders, art schools, artisan guilds and cofradía, and consider the social and political implications of art patronage.

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire's formative centuries, when three successive capital — Bursa, Edirne, and Istanbul — served to visualize the sultans' growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.

AS.010.338. Art and the Harem: Women's Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem —as an institution, a physical space, and a community of women— from various art-historical perspectives, considering such topics as the harem's architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem's visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.

AS.010.352. Modern and Contemporary Art: Middle East and South Asia. 3 Credits.
This course will explore modern and contemporary art in colonial and postcolonial contexts from Bangladesh to northern Africa. How do artists negotiate demands to support their national and local identities while participating in modernism across borders? What role do secularism and spirituality have in modern art? How do anticolonial, Marxist, and feminist politics shape art in these regions? How do global economic forces and the rise of powerful collectors, private museums, and international art fairs shape art and artists working across this geographic area? We will foreground the role of women as artists, collectors, patrons, and scholars throughout.
Area: Writing Intensive

AS.010.400. Research Lab: The Dutch Americas. 3 Credits.
The Dutch East India Company, or VOC, is historically and art historically well documented and firmly understood. But the Dutch also had significant holdings to the west via the Dutch West India Company, or WIC. They operated and held outposts in the present-day United States (New York/New Amsterdam), Caribbean (Surinam, Curaçao, Bonaire), Latin America (Brazil), and West Africa. Despite the abundance of materials associated with the WIC from this wide geography, these have been scarcely assessed by art historians, and a defined and comprehensive corpus has never been assembled. This class will act as a research lab in which to do so. In research teams, students will map artworks and objects created from that broad, transnational cultural ambit—categories that might include maps, landscape paintings, still life paintings featuring American flora and fauna, botanical illustrations, plantation architecture, luxury objects made from precious raw materials gathered in the Americas, the urban environment of slavery—and develop individual research questions around them.The class will run with a partner lab in the form of a course led by Professor Stephanie Porras at Tulane University. The course will feature speakers; and there is potential for funded travel to conduct research. We will start at the ground level; no previous knowledge about the field is required. Students from all disciplines are welcome.
Area: Writing Intensive

AS.010.410. The Epistemology of Photography. 3 Credits.
This seminar will ask how photography produces ways of knowing: how does photography's reality-effect shape its dissemination and absorption? Is photography's emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Area: Writing Intensive

History of Science, Medicine, and Technology

AS.140.227. Race, Racism and Medicine. 3 Credits.
How can we think about the interconnections between racism, theories of race and the practice of medicine? Living at a moment when racial disparities in health outcomes in the United States are still very stark, this course will provide a historically grounded approach to thinking about the roles that race and racism have played in healthcare, the production of health disparities as well as the role of medicine in the development of racist thought. While much of this course will focus geographically within the United States, this class will also explore global histories of medicine, encountering questions of race and medicine in Africa, the South Pacific and Asia. In addition to the analysis of primary source documents and historical texts, students will also be introduced to theoretical approaches to the study of race and racism from W.E.B. Dubois, Sylvia Wynter, Frantz Fanon and others.
Area: Writing Intensive

AS.140.228. Epidemic!: Diseases that Shaped our World. 3 Credits.
In this course, we will look at a number of key epidemic diseases in the pre-modern and modern world, from Black Death to COVID-19, and investigate how it affected medical thought and practice, as well as political, social and economic lives. We will pay special attention to how these diseases spread and how they affected and were influenced by questions of race, gender, sexuality and colonialism.

AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.
Medical practice is complex in Latin America and the Caribbean. Most countries in the region have universal healthcare; yet, the quality of clinical services varies widely, and is influenced by degrees of incorporation into—or marginalization from—social power structures. Many people take their health into their own hands by supplementing biomedicine with plant based remedies as well as religious and spiritual services. This course will interrogate the history and contemporary relevance of healthcare in Latin America and the Caribbean, with particular interest in how medicine intersects with colonialism, slavery, capitalism, neo-colonialism, grassroots revolutionary movements, the Cold War, and neoliberalism. Drawing on films, visual and performance art, and music, students will consider the ways in which race, gender, indigeneity, ability, class, and nation have affected people's experiences with medical practice. Informed by postcolonial and decolonial scholarship, we will also examine why Latin America and the Caribbean have become "laboratories" for the production of medical knowledge, and importantly, how that knowledge was created by indigenous, enslaved, and migrant people as well as professionals. Finally, we seek to understand individual health problems in relation to the social and political determinants of health. As such, the course prompts students to reflect on why healthcare professionals—in the United States and abroad—would benefit from historically-informed communication with patients and their communities. This is a discussion-based seminar that requires active participation. There are no exams. The course does not assume any previous knowledge of the history of medicine or Latin American history.
Area: Writing Intensive

AS.140.245. Biology and Society in Asia. 3 Credits.
What major knowledge traditions about life's generation and function have taken shape in Asia that continue to shape our contemporary world? How have they fared in encounters with Western knowledge traditions? How have modern biology, biotechnology and biomedicine developed in Asia in recent years within distinct geopolitical contexts? This course addresses these questions with selected historical cases from China, India, Japan, Koreas and selected Southeast Asian countries. It first introduces concepts and frameworks of major non-Western knowledge systems about life such as yin-yang and five phases and examine how religions, politics, and cross-cultural encounters impacted these systems, their evolutions or replacements. Then the class will examine the political, material, cultural and institutional contexts of more recent development in the life sciences in Asia. Class activities include lectures, discussions, research seminars, a final research project, and possible conversations with visiting professors and field trips.

AS.140.312. The Politics of Science in America. 3 Credits.
This course examines the relations of the scientific and technical enterprise and government in the United States in the 20th and 21st centuries. Topics will include the funding of research and development, public health, national defense, etc. Case studies will include the 1918 Spanish influenza epidemic, the Depression-era Science Advisory Board, the founding of the National Science Foundation and the National Institutes of Health, the institution of the President's Science Advisor, the failure of the Superconducting Supercollider, the Hubble Space Telescope, the covid pandemic, etc.

AS.140.317. The Hydrologic Sphere: Histories of Water in the Colonial and Postcolonial World. 3 Credits.
Water supplies are becoming scarcer globally due to climate change. We use clean water—fresh and salt—in a variety of ways that provide comfort, stability, and health, making it one of the most valuable commodities on Earth. While countries in the Global North are beginning to see more frequent and lengthier droughts, those in the Latin America, Africa, and South Asia have long struggled over how to distribute and use their clean water supplies. This class will examine how colonialism and its far-reaching effects have created an environment of scarce water supplies in many areas of the world. Water access is difficult to achieve, but for much of the Global South, the colonial period helped craft the problems we see today. This class will ask what colonial and postcolonial technologies' construction and use teach us about equitable clean water distribution, how social and cultural identities influence water supplies and use, and why water has been such an important element—and commodity—in our world, especially where Europeans settled and oppressed local populations.
Area: Writing Intensive

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as "nature-loving," and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture.
Area: Writing Intensive

AS.140.423. Science and Science Fiction in Global Perspective. 3 Credits.
What can we learn from science fiction about the history of science and technology? What ideas about science do Sci-Fi novels manifest? Is the relationship between science and science fiction always the same, across different time periods and geographical areas? This course will explore these questions by taking a comparative perspective. Each meeting we will read a Sci-Fi novel from Europe, America, South and East Asia, and discuss it in conjunction with historical writing about relevant scientific developments. Reading Sci-Fi novels from 17th-century Germany, 19th-century England and India, and 20th-century Japan, China, Korea and the US, the students will explore how actual scientific developments were reflected in fiction, and what fictional depictions say about the aspirations and anxieties provoked by new technologies.
Area: Writing Intensive

Interdepartmental

AS.360.247. Introduction to Social Policy and Inequality: Baltimore and Beyond. 3 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Area: Writing Intensive

AS.360.420. Humanities Research Lab: Making Maps of Mexico. 3 Credits.
Learn the basics of ArcGIS and data management as you help Prof. Lurtz publish an agricultural dataset and maps from 10 years before Mexico erupted in revolution. No experience necessary.

Islamic Studies

AS.194.102. Islamic Pasts in the Contemporary World. 3 Credits.
This course will focus on the intellectual and cultural legacies of "Islamic pasts." It has been argued by scholars that Islam is not only a religion but a "civilization" with identifiable sensibilities, overlapping histories, and temporalities. This civilization once spread from the Atlantic coast of Africa to the Indian subcontinent and beyond, but regimes and dynasties have changed hands in many of these places, while remaining in place in others. What remains of Islamic pasts in places where Islam once reigned supreme but has either vanished, been reduced to minority status, or repressed in ongoing political projects? This course examines lost Islamic pasts in the contemporary world, using readings from anthropology, history, literature, and poetry. As the basis of this course, we will read four texts in their entirety focusing on four different geographic points of interest—Spain, India, the Balkans, and Palestine.

AS.194.105. Islam and its Cultural and Religious Diversity, 600-1600. 3 Credits.
While media often present Islam as a fairly univocal and compact cultural and religious system, news reports about tensions, hostility and at times open conflict within the Islamic world itself are frequent. Unity and internal diversity characterize Islam nowadays and have historical roots that have deeply shaped Islam since its very inception.This course will explore the historical origins of the dynamics of unity and diversity in Islam from the predication of Muhammad and the expansion of the first caliphate, to the formation of the Ottoman, Safavid and Mughal empires. By focusing on the historical events and the cultural production of the first millennium of Islam, this course will offer a thorough historical introduction to its cultural and religious complexity.

AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the “other.” The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.

AS.194.202. Never Forget: Muslims, Islamophobia, and Dissent after 9/11. 3 Credits.
In partnership with the social justice organization Justice for Muslims Collective, this community-engaged course and oral history project will explore how diverse Muslim communities navigated and contested belonging and political and cultural agency amidst state-sponsored violence and national debates on race, gender, citizenship and national security after 9/11 and during the ongoing War on Terror. Through history, ethnography, first-person narratives, film, fiction, and online resources, students will learn about the impact of 9/11 on American Muslim communities. This includes cultural and political resistance to imperialism, racism, and Islamophobia as well as to intersectional inequities within Muslim communities that were intensified in the context of Islamophobia. Students will learn about community activism and organizing from JMC, and complete a participatory action research project with the organization. This project is an oral history archive that will address gaps in the documentation of movement histories when it comes to early organizing against War on Terror policies by Muslim communities and communities racialized or perceived as Muslim. Students will be trained to record stories of resistance among leaders who organized and responded at the local and national-level in the Greater Washington region, to support the building of an archive that will shape a wide variety of future organizing and advocacy efforts.

AS.194.205. Islamic Mysticism: Traditions, Legacies, Politics. 3 Credits.
For over a thousand years, the Sufi tradition has been a dynamic force in Islamic social, political and spiritual life. The tradition offers a treasure trove of devotional literature and music, philosophical treatises, contemplative practices, and institutions of social and political organization. After unpacking the politics of the term “Sufi,” we will trace the historical development of the tradition from the early ascetics in Iraq and Syria to the age of trans-national Sufi orders, with case studies from South Asia, Turkey, and the United States. We will then move into some of the key constructs of the tradition of spiritual growth and character formation: the divine-human relationship, the stages of the spiritual path, contemplative and practical disciplines, ideas of sainthood, discipleship and ethical perfection, and the psychology of love. Throughout the class, we will explore the nature of experiential language and interrogate the tradition through the lens of gender. We will also experience Sufism through ritual and music.

AS.194.210. Race, Gender, Citizenship: Being Muslim in America. 3 Credits.
This course explores how American Muslims navigate and contest complex notions of belonging in the context of national conversations on race, gender, citizenship, and national security. With a focus on specific case studies that range from Black Muslim movements of the early twentieth century to the ongoing War on Terror, the course adds complexity to the public conversation on what it means to be Muslim - and what it means to be American. We will draw on history, ethnography, first-person narratives, films, blogs, documentaries and fiction. As a Community Engaged course, the class will include site visits and learning with and from Muslim communities in Baltimore.

AS.194.220. The Qur’an: Text and Context. 3 Credits.
For 1400 years, the Qur’an has played a central role in Muslim intellectual, spiritual, artistic and ritual life. This course will explore the sacred scripture of Islam through its foundational ideas, history of the text and thematic development, literary style, history and methods of interpretation, and role in Muslim spiritual and ritual life. We will also explore how the Qur’an weaves through literature, music and the visual arts.

AS.194.230. African-Americans and the Development of Islam in America. 3 Credits.
Muslims have been a part of the American fabric since its inception. A key thread in that fabric has been the experiences of enslaved Africans and their descendants, some of whom were Muslims, and who not only added to the dynamism of the American environment, but eventually helped shape American culture, religion, and politics. The history of Islam in America is intertwined with the creation and evolution of African American identity. Contemporary Islam in America cannot be understood without this framing. This course will provide a historical lens for understanding Islam, not as an external faith to the country, but as an internal development of American religion. This course will explicate the history of early Islamic movements in the United States and the subsequent experiences of African-Americans who converted to Islam during the first half of the twentieth century. We will cover the spiritual growth of African American Muslims, their institutional presence, and their enduring impact on American culture writ large and African-American religion and culture more specifically.

AS.194.305. Cultures of Pilgrimage in Islam. 3 Credits.
The hajj pilgrimage to Mecca is one of the pillars of Islam. But Muslims around the world also take part in many other pilgrimages, from the massive annual Shi'a pilgrimage to Karbala to the smaller ziyarat "visits" to Sufi saint shrines, to travel to centers of Islamic learning, to pilgrimage to isolated natural features like mountains, trees, valleys. What are the theologies that propel the act of travel in Islam? How are cities, architectures, economies shaped by these cultures? And how are these traditions affected by the wars and colonial projects that plague many Muslim-majority countries in the contemporary world? Readings in this course will draw from anthropology, philosophy, Islamic interpretive texts (tafsir), and travelogues.
Area: Writing Intensive

Modern Languages and Literatures

AS.211.222. Italian Cinema: The classics, the Forgotten and the Emergent.. 3 Credits.
This course traces the history of Italian cinema from the silent era to the new millennium, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall examine iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, that received international recognition and influenced other national, cinematic productions. We shall also look at the work of less famous, or independent filmmakers who received less critical attention. While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to the mise-en-scène, frame composition, camera movements, editing, and sound. This class is taught in English.

AS.211.224. Made in Italy: Italian style in context. 3 Credits.
Italy and the "Italian style" have become synonym of exquisite taste, class, and elegance thanks to the quality of Italian craftsmanship. This course will explore some of the major factors that contributed to the rise of Italian fashion and Italian industrial design as iconic all around the world. The classes will focus on the main protagonists and art movements that influenced the development of Italian style. We will analyze trends, clothing, and style not only in a historical context, but also through a critical apparatus that will include themes related to gender, culture, power, and politics.The course is taught in English. No knowledge of Italian is required, but those who can read in Italian will have an opportunity to do so. Everyone will learn some Italian words and expressions.

AS.211.231. Planet Amazonia: Culture, History, and the Environment. 3 Credits.
Without Amazonia, global warming could reach levels that threaten life on the planet. Yet, in an era of deforestation and climate change, Amazonia itself might be on the verge of disappearance, with disastrous consequences for the world. This course proposes interdisciplinary perspectives on Amazonia through a range of works drawn from history, anthropology, archeology, environmental studies, literature, and the arts. We'll look at texts by European travelers and missionaries who contributed to the paradoxical image of Amazonia as a "virgin paradise" or a "green hell"; scientific studies and artists' depictions of the region's flora and fauna; the often-overlooked history of human occupation of the region; and projects to colonize, develop, or conserve the world's largest tropical forest. What importance does Amazonia hold for Latin American and global geopolitics? How do art and literature, including indigenous writings, create, reinforce, or deconstruct clichés about the region? What alternative futures for our planet can Amazonia help us to imagine?

AS.211.265. Panorama of German Thought. 3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? To what degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind as well as divide a community in this tradition? We will consider these and related questions in this course through careful readings of selected works.
Area: Writing Intensive

AS.211.300. Niccolò Machiavelli's "The Prince": Understanding the Meaning and Legacy of a Masterpiece. 3 Credits.
Who was Niccolò Machiavelli? We often hear the term "Machiavellian" in reference to actors in business or politics, but what does it really mean? What does Machiavelli teach us about the nature and the dynamics of political power? Can Machiavelli's thought offer insights into today's politics and fast-changing world? The course aims to answer these questions by addressing three topics. First, we will study Machiavelli's life and times, particularly the events connected to his production and the context in which he wrote his main writings. We will see how the fifteenth-century Florentine humanism and the massive political changes affecting early modern Europe shaped Machiavelli's mindset. Second, we will familiarize ourselves with Machiavelli's thought by reading The Prince and excerpts from Discourses on Livy. Third, we will get acquainted with some of the main trends in the reception of Machiavelli in the 20th and 21st centuries. Special attention will be paid to interpretations of Machiavelli by Antonio Gramsci, Leo Strauss, Isaiah Berlin, John Greville Agard Pocock, Quentin Skinner, and John P. McCormick. We will also pay attention to modern television programs and films that show the width and depth of Machiavelli's legacy.

AS.211.316. Brazilian Cinema and Topics in Contemporary Brazilian Society. 3 Credits.
Course is taught in ENGLISH - This course is an introduction to the academic study of cinema as a communicative art and to Brazilian film. The films selected focuses on films from the late 1950s to the present and highlight import episodes and challenges in the advancement of the Brazilian society as well as its cinematic production with a special view to the film aesthetics through analysis from a number of critical perspectives, including class, race, gender as well as ethnicity, nationalism or national identity, colonialism, social changes, and the politics of representation. In this sense, the films and documentaries that we will be watching and studying encompass the period from the rise of New Cinema (Cinema Novo) up to films exploring the most recent trends, including movies launched up to 2016. Students wishing to do the course work in English, for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis.
Area: Writing Intensive

AS.211.327. Ecocinema: Framing Italy's Environmental Crises. 3 Credits.
Over the past decade, growing numbers of filmmakers in Italy have addressed ecological crises in their work. This class takes an eco-critical approach to contemporary Italian cinema, examining a body of compelling place-centered stories that deal with local and global issues. Defining the scope of eco-cinema and the ways we can interrogate films as ecological texts, we shall screen earth-centered films that raise consciousness about the consequences of human manipulation of the natural world; the complicity of industry, government, and organized crime in creating environmental crises; and the effects of economic and social malaise. Screenings include iconic films such as Michelangelo Antonioni's Red Desert (1963), more recent, critically acclaimed films such as Matteo Garrone's Gomorrah (2008), Alice Rohrwacher's Happy as Lazzaro (2018), and many others.

AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3 Credits.
Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsize impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; "the New Woman"; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin's cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin's rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation.

AS.211.329. Museums and Identity. 3 Credits.
The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.

AS.211.333. Representing the Holocaust. 3 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.
Cannot be taken by anyone who previously took AS.213.361

AS.211.349. JHU Bologna Program: Food for Thought: Gastronomy, Politics & Identity. 3 Credits.
Italian Culture course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students admitted to the JHU Summer Program in Bologna only.

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relation. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli protest and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section 2.

AS.211.386. Italian Cinema. 3 Credits.
Italian Cinema: The Classics, The Forgotten, The Emergent. This course traces the history of Italian cinema from the silent era to the contemporary period, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall discuss iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, (the classics) that received international recognition and had a global impact on film history, and also rare archival films by pioneer women filmmakers from the silent era (the forgotten). Finally, we'll discuss films released in the last decade (the emergent) that address issues such as migration and the ecological crisis. (Zoom Q&As with filmmakers will be part of curriculum). While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to frame composition, camera movements, editing, and sound. This is an intensive writing class taught in English.
Area: Writing Intensive

AS.211.394. Brazilian Culture & Civilization. 3 Credits.
Did you know that Brazil is very similar to the United States? This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, politics, economy, art, literature, popular culture, theater, cinema, and music. The course will focus on how Indigenous, Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor's permission required). No Prereq. THERE IS NO FINAL EXAM.
Area: Writing Intensive

AS.211.423. Black Italy. 3 Credits.
Over the last three decades Italy, historically a country of emigrants—many of whom suffered from discrimination in the societies they joined—became a destination for hundreds of thousands of migrants and refugees from various countries, and particularly from Africa. Significant numbers of these immigrants came to Italy as a result of the country's limited, though violent colonial history; others arrive because Italy is the closest entry-point to Europe. How have these migratory flows challenged Italian society's sense of itself? How have they transformed the notion of Italian national identity? In recent years, growing numbers of Afro- and Afro-descendant writers, filmmakers, artists and Black activists are responding through their work to pervasive xenophobia and racism while challenging Italy's self-representation as a 'White' country. How are they forcing it to broaden the idea of 'Italianess'? How do their counternarratives compel Italy to confront its ignored colonial past? And, in what way have Black youth in Italy embraced the #Blacklivesmatter movement? This multimedia course examines representation of blackness and racialized otherness, whiteness, and national identity through literary, film, and visual archival material in an intersectional framework. Examining Italy's internal, 'Southern question,' retracing Italy's colonial history, and recognizing the experiences of Italians of immigrant origins and those of immigrants themselves, we'll explore compelling works by writers and filmmakers such as Igiaba Scego, Gagriella Ghermandi, Maza Megniste, Dagmawi Yimer, and others.

AS.211.424. Climate Change Narratives: Human and Non-Human Transformative Storytelling. 3 Credits.
In The Great Derangement Indian novelist Amitav Ghosh writes that "the climate crisis is also a crisis of culture, and thus of imagination." Worldwide, climate and environmental change is stirring the imaginary of novelists, filmmakers, and artists who are finding ways to frame, emplot, or even perform, an unmanageable phenomenon like climate change. How is climate change shaping new modes of storytelling and aesthetics? How do film, literature, and environmentally conscious art transform our perception of the world we inhabit and its unpredictable changes? Can climate change narratives help us to imagine futures of possibilities, maybe dystopian, uncertain, or even happy, but futures nonetheless? This multimedia course explores, through a transnational perspective, a variety of contemporary novels, films, and other media that attempt answer these questions.

AS.211.478. Power and Resistance in French Political Thought. 3 Credits.
Today France is a multicultural, multi-ethnic society fractured by the memories of colonialism. Throughout the country's history, French thinkers – classical and contemporary – have questioned the foundations of power and focused critically not only on the claims of authority issuing from the top, but also on the compliance of the governed. What it is, they ask, that makes people stick together and recognize each other as citizens of one country? Is there such a thing as a shared history, and is Fraternité something more than a slogan? Works by La Boétie, Montaigne, Diderot, Robespierre, Tocqueville, Gobineau, Camus, Sartre, Memmi, Foucault and others.
Students may not have previously completed AS.212.341.

AS.212.353. La France Contemporaine. 3 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture. Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Students may not have taken AS.211.401.

AS.212.413. For the Record: Jazz Cultures of Modern France. 3 Credits.
Across the 20th century, mainstream and avant-garde French culture was deeply impacted by the presence of African American musicians and performing artists hailing from the jazz tradition. From the Josephine Baker craze of the 1920s to the second post-war which welcomed the innovations of bebop and sixties-era free improvisation, metropolitan France proved a space where expatriate and exiled Black Americans could both perpetuate the tradition and innovate by turns. At the same time, French tastemakers, critics, and musicians eager to adopt new forms and styles debated the extent to which American jazz music in its various strains could be "made French." This course in transcultural French studies will feature readings in music criticism, history, and literature, as well as frequent close listening. It will culminate in a local concert reflecting France's continued connection to and support of jazz and related improvised musics. Though some background in French language and in musical notation is desirable (students are encouraged to engage in original-source research), all core course readings will be provided in English. Discussion in English.

AS.212.431. Style, Gender and Politics from Marie-Antoinette to the Burqini. 3 Credits.
From effeminate kings, to slutty queens, to post-revolutionary dandies, to the manifest invisibility adopted by some French citizens today, debates on the gendering and styling of political bodies have always been central to power struggles in France. Students will read from sociology, history and literature in order to understand the complex interplay among fashion, gender and political identity.Taught in English, but French minor/major credit possible by completing written work in French and by attending a weekly discussion section conducted in French. Students interested in the 4-credit French option should enroll in section 2. All others should enroll in section 1.Special Notes: This course is meant to be a small class experience. Enrollment limits will be strictly enforced.

AS.213.407. German Media Theory. 3 Credits.
German Media Theory is an advanced course for upper-level undergraduates and graduate students, giving an introduction and overview of the specifically German version of Media Studies that first gained traction in the 1980s. The term media refers not just to mass media but more broadly to devices that process, transfer and store information, reaching from the alphabet that changed the culture of writing, or the printing press made famous as the foundation of the 'Gutenberg galaxy' to computers and smart phones dominating our current lives. In this course we will cut across disciplinary boundaries to explore the multifaceted roots and formations of German media theory which combine literary poststructuralism, histories of science and technology, psychoanalysis, cybernetics, art history, and philosophy among other fields. Readings include works by Friedrich Kittler, Bernhard Siegert, Cornelia Vismann, Wolfgang Ernst, Walter Benjamin, Niklas Luhmann, Michel Foucault, Marshall McLuhan and many others. The course will be taught in English and all readings will be available in English.

AS.213.423. Reflections on Modernity. 3 Credits.
Taught in English. Reflections on Modernity takes up the problems conflicts, and possibilities of modernity in aesthetic, literary, and philosophical texts. Questions about the modern self, our relationship to nature, to urban experience, to history and language, and the role of the artist and writer in reflecting on modern life. Texts include works by such authors as Kant, Nietzsche, Baudelaire, Weber, Rilke, Hofmannsthal, Simmel, Heidegger, Habermas, Foucault.

AS.214.362. Italian Journeys: Medieval and Early Modern. 3 Credits.
The Truth behind the Courtly Façade: «Of ladies, knights, of passions and of cutthroat competition»: the truth behind the romantic façade. What did life actually look like at Italian courts of the 1400 's and 1500's? We will reconstruct life at a Renaissance court through Italian history, literature, music and art of this period. Who were the stars of these scenes? We will explore the complex and intricate world of the Italian courts, including Florence and Ferrara, through the works of art they produced. The course will concentrate on historical, literary and visual representations including modern media such as film and television.
Area: Writing Intensive

AS.214.466. Utopias and Dystopias in Renaissance Culture. 3 Credits.
We will trace the dream of designing an ideal society and the danger of creating its opposite in the sixteenth and seventeenth century Italian and European thought.

AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at the production of an analysis that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma's illustrated sixteenth-century chronicles, D.F. Sarramiento's _Civilization and Barbarism_ (1845), and Anibal Quijano's "Coloniality of Power" (2000).
Area: Writing Intensive

AS.215.309. An Interdisciplinary Introduction to the Study of Latin America. 3 Credits.
The course is an interdisciplinary introduction to the study of Latin America. It brings together archeology, ethno-history, art history, literature and environmental studies.
Area: Writing Intensive

AS.215.380. Modern Latin American Culture. 3 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin- America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin-America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
AS.210.312;Students may earn credit for AS.211.380 or AS.215.380, but not both.

AS.215.390. Modern Spanish Culture. 3 Credits.
This course will explore the fundamental aspects of Spanish culture from the nineteenth to the twenty-first centuries. The course will offer a general survey of the history of Spain and will discuss texts, movies, songs, pictures, and paintings in relation to their social, political, and cultural contexts. This course will be of particular interest for students planning on spending a semester abroad in Spain—specially for those students going to the JHU Fall Semester in Madrid, at Carlos III University. Taught in Spanish. Recommended Course Background: AS.210.311 or appropriate Webcape score.AS.215.390 was formerly numbered AS.211.390
Students may not have previously completed AS.211.390.

AS.215.409. Catalonia and Independence. 3 Credits.
What is the Catalan independence movement? Where did it come from? What, exactly, does it advocate? This seminar will examine the history, politics, and culture of Catalonia in an attempt to understand why the push for independence has grown over the past decade. We will focus especially on the impact of nationalism, ideology, social history, economics, law, and language on the construction of Catalan identity. But we will also compare Catalonia to other regions in the Iberian Peninsula (the Basque Country, Galicia) as well as across Europe (Scotland, Northern Italy) and North America (Québec) in order to better understand how movements for regional autonomy and independence emerge today. Taught in English.

AS.215.412. Populism. 3 Credits.
What do Hugo Chávez, Marine Le Pen, and Donald Trump have in common? According to many from across the political spectrum, they are all populists. But what is populism, exactly, and how can it describe such disparate phenomena as left-wing social movements, xenophobic anti-immigrant policies, and economic redistribution? This advanced seminar will examine the history, culture, and political theory of populism. We will pay special attention to the resurgence of populism after the Great Recession and examine a number of cases from Latin America, Europe, and the United States.

AS.215.416. Mexican Empire: the Problem of Territory from Aztec Philosophy to Trump's Wall. 3 Credits.
This course with seminar option is devoted to Mexico, its past and present paths into a remote inside-out pre-imperial epoch inalienable from North-against-South histories across the American Narcoland from Honduras to Alaska. Our nonfictional materials combine detailed summaries and readings of Stuart Elden's The Birth of Territory and James Maffie's Aztec Philosophy: Understanding a World in Motion. The fictional matter concerns Roberto Bolaño's 1998 novel, Los detectives salvajes (The Savage Detectives), Corman McCarthy's apocalypse Western, 1985 Blood Meridian, and Carlos Reygadas' films, Post Tenebras lux (2012) and Nuestro tiempo (2018).

AS.215.417. Literature of the Great Recession. 3 Credits.
The Great Recession—sometimes called the financial crisis or the economic crisis of 2008—brought financial markets to a halt and created significant political turmoil across the North Atlantic. But its impact on culture, and literature especially, has often been ignored. This seminar will travel across Europe, from Dublin to Madrid, from London to Reykjavík in order to examine how literature has registered this most recent economic crisis. We will focus on how crisis is narrated and the ways in which literary works have managed to provide a voice for marginalized social, economic, and political demands.

AS.215.419. Colombia: Territory Against Nation. 3 Credits.
The nation of Colombia amounts to a large country partly made immense and hard to govern and corruptible by its territorial nexus and porous frontier with Venezuela. Starting from such polemic claim, leaning on misgovernance vs. excessive governmentality, we will study two novels, Laura Restrepo's Delirio/Delirium (2004) and Juan Gabriel Vásquez's The Noise of Things Falling (2011); both winners of the prestigious Planeta Prize. To what extent can literary fictions of such scope and ambitions, invested in deeply rooted family politics, help or harm the reader's political trust in nations as novels and fictions as nations?

AS.215.442. Whose Caribbean and the Epic of Race. 3 Credits.
We will study literary claims of epic colonial possession and aesthetic dispossession through close readings of five works in reverse chronological order: V.S. Naipaul's late historical novel, A Way in the World (1994); Derek Walcott's transoceanic poem, Omeros (1990); Alejo Carpentier's short anti-Enlightenment moral tale, El reino de este mundo (1949) and his short tale in celebration of Afro Cuban wizardry, Viaje a la semilla (1944); Aimé Césaire's prose poetry, mixed chronicle, Cahier d'un retour au pays natal, or Notebook of a Return to the Native Land (1939-1947). We will address questions of temporality and historicity (Heidegger) and a base-materialist political blocking of wild dreams as attainable through translation (Bataille). Such formal and epistemic problems will draw us into issues of race across the colonial spectrum of Caribbean histories.

AS.215.469. Mapping Identity in Modern Spain. 3 Credits.
What social, political, and economic forces make groups of people appear out of place in a given society? How have literary works contributed to counteracting the marginalization of certain groups? This course will look at how modern Spanish artists, writers, and intellectuals wrestled with questions of identity and marginalization. We will critically examine how the modern Spanish state was forged from restrictions on cultural difference and consider the various marginalized groups that were left in its wake. These groups include various peoples (e.g. the Romani), ideologies (e.g. anarchism, socialism, communism), social and economic classes (e.g. peasants, the working class), and regional identities (e.g. Catalonia, the Basque Country). Key texts in modern Spanish literature will prompt our investigation into how writers and artists reflected on, contested, and expressed the marginality of the country's various internal others. Taught in Spanish.

AS.216.305. Representations of the Other(s) in Israeli Culture. 3 Credits.
This course will use the concept of the Other to study the ways in which various marginal groups in Israel are represented in contemporary Israeli films, TV drama, prose-fiction, poetry and visual art. As a nation-state which was founded on the premise of a utopian vision of a just and fair society and as a promise for a safe haven for Jews escaping their status as Others, contemporary Israeli culture offers a unique case study. The course will run as a research seminar in which students will be encouraged to actively engage in analyzing the ways in which cultural productions depict the Other/s and Otherness as well as the social, political and psychological motivations and implications of these depictions. We will ask questions such as: who is considered as Other and by whom? What roles do the cultural representations play in shaping national collective identity, stereotypes and the perception of the self as Other? And how collective memory shapes Otherness?
Area: Writing Intensive

AS.216.342. The Holocaust in Israeli Society and Culture. 3 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse on the Holocaust in Israel and its development throughout the years. Through focusing on scholarly, literary, artistic, and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its society, politics, and collective self. The course is divided to three general categories: Historical and Sociological Perspective, Literary Perspective, and Cinematic Perspective. However, we will study the crossroad between these three categories, and will explore them in relation to one another.

AS.216.373. War in Israeli Arts and Culture. 3 Credits.
In this course we will study the various representations of what functions as one of Israel's most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.

AS.217.307. Cultura e Ditadura [Culture and Dictatorship]. 3 Credits.
In the 20th century, the Lusophone world saw the rise and fall of such authoritarian governments as the Estado Novo in Portugal (1933–74) and the military dictatorship in Brazil (1964–85). During this period, a series of revolutionary political movements sprung up, as well as innovative cultural production. How does culture respond to censorship? How do art and politics comment on and ultimately transform each other? In this course we will discuss novels, poetry, film, songs, and artworks from Brazil, Portugal, and Lusophone Africa that engage critically with dictatorships and their aftermaths. Topics include violence, trauma and memory, colonialism, post-colonialism, and decoloniality, race and the legacies of slavery, counterculture, and popular cultures. Readings and discussion in Portuguese. Interested students who have not completed course prerequisites should contact the instructor for permission to enroll.

AS.217.425. Latin American Ecocriticism. 3 Credits.
Increased awareness of climate change has led to a shift in the way we address and intervene in environmental issues in the new millennium. Yet the interest in making sense of the environment has a long history in literature and the arts. How have Latin American writers and artists understood and depicted their environments and environmental questions? How do the form and content of texts and cultural artifacts influence our understanding of the non-human world? Can works of fiction shape ecological transformations? In this course we will discuss texts from the early colonial period to the present, including the literary works of Graciliano Ramos, Horacio Quiroga, and Clarice Lispector; political ecology; film; Ana Mendieta's earth-body art; contemporary experiments in bio-art; postcolonial theory; and the intersection of environmental justice with such topics as nationalism and human rights. Going beyond ecocriticism's original focus on the Anglo-American world, we will engage recent scholarship on Latin America that sheds light on the region's cultural and geopolitical importance to the global climate, with particular attention to Brazil. This course aims to introduce students to current debates in Latin American Ecocriticism and the Anthropocene and thus contribute to an incipient but expanding field.

AS.217.427. Radical Women: Brazilian Literature, Art, and Culture. 3 Credits.
The vast body of work produced women artists and writers in Brazil has been marginalized by canonical cultural narratives, which are now being contested by a spate of scholarly and artistic projects. This course spotlights the production of women from the early twentieth century to the present, including renowned and lesser-known works. We'll discuss art, literature, and film alongside feminist theory, exploring radicality as it relates to aesthetics and politics. How do women's art, literature, and thought engage with and transform Brazilian cultural production? What are their contributions to global discussions about gender and sexuality? How do these works respond to historical events? Among the topics addressed are the body, feminism, race, indigeneity, and politics. We'll study Clarice Lispector's acclaimed stories, the first Brazilian proletarian novel written by modernist icon Patricia Galvão, known as Pagu, the diaries of Carolina Maria de Jesus, the emblematic paintings of Tarsila do Amaral, and Lygia Clark's artwork, as well as the booming scene of contemporary cinema and poetry. The course is taught in English, but those interested in doing the coursework in Portuguese (4 credits) should register for section 02.

Near Eastern Studies

AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3 Credits.
The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity's earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.

AS.130.216. History of the Jews in Pre-Modern Times, from the Middle Ages to 1789. 3 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.

Philosophy

AS.150.205. Introduction to the History of Modern Philosophy. 3 Credits.
An overview of philosophical thought in the seventeenth and eighteenth centuries. We shall focus on fundamental questions in epistemology (knowledge, how we acquire it, its scope and limits), metaphysics (the ultimate nature of reality, the relation of mind and body, free will), and theology (the existence and nature of God, God's relation to the world, whether knowledge of such things is possible): all questions that arose in dramatic ways as a result of the rise of modern science. The principal philosophers to be discussed are Descartes, Locke, Hume and Kant, though we shall also make the acquaintance of Spinoza, Leibniz and Berkeley.

AS.150.237. Foundations of Modern Political Philosophy. 3 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill.

AS.150.240. Intro-Political Philosop. 3 Credits.
This course begins by reviewing canonical texts in modern political philosophy beginning with Thomas Hobbes and John Locke and ends by exploring classic questions in contemporary debates in race, gender, and identity.
Area: Writing Intensive

AS.150.355. Philosophy of Law. 3 Credits.
In this course we will examine major issues in the philosophy of law, including the nature of law, the role of the Constitution in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required.

AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations

AS.150.425. Enlightenment Moral and Political Theory. 3 Credits.
An examination of some of the central texts of the Enlightenment, including works by Locke, Montesquieu, Rousseau, and Kant.
Area: Writing Intensive

AS.150.428. Spinoza's Theological Political Treatise. 3 Credits.
The course is an in-depth study of Spinoza's Theological-Political Treatise. Among the topics to be discussed are: Spinoza's Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza's theory of the State, the role of religion in Spinoza's political theory, the freedom to philosophize, the metaphysics of Spinoza's Theological-Political Treatise, and finally, the reception of the TTP.

AS.150.492. Plato's Republic. 3 Credits.
This course will be a close reading of Plato's Republic, with special attention to the parallel of city and soul, the relevance of metaphysics to politics, and the relation of aristocracy, democracy and tyranny.

Political Science

AS.190.101. Introduction to American Politics. 3 Credits.
This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.

AS.190.102. Introduction To Comparative Politics. 3 Credits.
To understand politics, the sound bites of the modern media take us only so far. In this course, we will take a step back and implement an intellectually rigorous method. Scholars of comparative politics use the method of comparison in order to illuminate important political phenomena of our times. Following this method, we will embark on a scholarly tour of the world and compare the politics of various countries. We will also trace these politics back to their historical sources. We will work from the assumption that there is something to be gained from such comparisons across space and time.

AS.190.108. Contemporary International Politics. 3 Credits.
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered. This course was previously AS.190.209.

AS.190.109. Politics of East Asia. 3 Credits.
This course examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. We analyze two enduring themes of classic and contemporary scholarship in comparative politics: development and democracy. The purpose is to introduce students to the various schools of thought within comparative politics as well as to the central debates concerning East Asian politics.

AS.190.111. Introduction to Global Studies. 3 Credits.
This course surveys scholarly approaches to processes, relations, institutions, and social structures that cross, subvert, or transcend national borders. The course will also introduce students to research tools for global studies. Students who have taken Contemporary International Politics 190.209 or International Politics 190.104 may not register.

AS.190.180. Introduction to Political Theory. 3 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, adn the relationship between freedom, responsibility, and political judgement. Spanning texts ancient, modern, and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past impossible? By wrestling with slavery (freedom's opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.

AS.190.204. Ancient Political Thought. 3 Credits.
The premise of this course is that a political perspective is tied up with a (meta)physical one, that is to say, with ideas about the nature of Nature and of the status of the human and nonhuman elements within it. How is the universe ordered? Who or what is responsible for it? What place do or should humans occupy within it? How ought we to relate to nonhuman beings and forces? We will read three different responses to such questions and show how they are linked to a particular vision of political life. In the first, the world into which human are born is ordered by gods whose actions often appear inexplicable: Prometheus Bound by Aeschylus, Oedipus the King by Sophocles, and Hippolytus by Euripedes will represent this tragic vision of the cosmos. In the second, Plato , in Republic and in Phaedrus, the forces of reason and eros play central and powerful roles. In the third, Augustine of Hippo presents a world designed by a benevolent, omnipotent God who nevertheless has allowed humans a share in their own fate. We end the course with Nietzsche's Birth of Tragedy , which offers a perspective on these three visions of the world -- the tragic, the rational, and the faithful -- which will help us evaluate them in the light of contemporary political and ecological concerns.
Area: Writing Intensive

AS.190.207. The Power of Rhetoric. 3 Credits.
In a time when people claim language "has no preference to facts, truths, or realities," the power of rhetoric is both vilified and lauded in the strongest possible terms. According to some, rhetoric is responsible for the dismissal of everything from political dissent to science as a species of "fake news". By contrast, others argue public life cannot be repaired without a "restoration" of rhetoric. What are these people talking about? This course will help us figure this out. Students will be introduced to the art of persuasive speech, writing, and visual media so as to be prepared to critically examine and evaluate the claims made for and about the role of language in contemporary politics. Topics will include informal logic, appeals, fallacies, figures and tropes. Among others, we will read texts by Aristotle, Austin, Barthes, Foucault, Freud, Kierkegaard, Nietzsche, and Zizek. In addition to a number of short exercises and writing assignments throughout the semester, there will be a mid-term and a final paper.

AS.190.220. Global Security Politics. 3 Credits.
Contemporary and emerging technologies of nuclear (weapons, terrorism, energy) outer space (missiles, missile defense, asteroids), biosecurity (bioweapons, pandemics, terrorism) and cyber (war, spying, surveillance) and implications for security, international politics, arms control, and political freedom.

AS.190.226. Global Governance. 3 Credits.
Global problems like poverty, financial instability, human rights abuses, and climate change threaten both international order and human well-being. In the absence of a world state, these problems must be addressed by an increasingly complex, transnational network of organizations and social groups. First, we will aim to understand and explain how global problems are governed through detailed case studies of International Organizations and Non-Governmental Organizations such as the United Nations, World Bank, Intergovernmental Panel on Climate Change, Amnesty International and more. Second, we will critically evaluate the successes and failures of these organizations and explore the possibilities for improving democratic governance at the global level.

AS.190.227. U.S. Foreign Policy. 3 Credits.
This course provides an analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. It offers a broad historical survey that starts with US involvement in the First World War, covers major developments of the twentieth century, and concludes with contemporary issues. Important themes include the developments underpinning the emergence of the liberal world order, strategies of containment during the Cold War, nuclear deterrence and antiproliferation efforts, the politics of international trade, alliance politics, technological and security policy, and the re-emergence of great power competition.

AS.190.228. The American Presidency. 3 Credits.
Over the past several decades, the power and importance of America's presidency have greatly expanded . Of course, presidential history includes both ups and downs, some coinciding with the rise and fall of national party systems and others linked to specific problems, issues, and personalities. We should train our analytic eyes, however, to see beneath the surface of day-to-day and even decade-to-decade political turbulence. We should focus, instead, on the pronounced secular trend of more than two and a quarter centuries of American history. Two hundred years ago, presidents were weak and often bullied by Congress. Today, presidents are powerful and often thumb their noses at Congress and the courts. For better or worse, we have entered a presidentialist era.

AS.190.244. Weapons of Mass Destruction. 3 Credits.
This course examines the impact of weapons of mass destruction on global politics and American interests. The first half of the course focuses on nuclear weapons, examining their development and targeting throughout the Cold War. The second half of the course examines contemporary issues involving nuclear weapons (including arms control, nuclear zero, terrorism, proliferation and defense). It also considers other weapons of mass destruction (or disruption) including chemical, biological, radiological and cyber weapons. The growing concerns about Artificial Intelligence will also be addressed. Requirements include a midterm and a final exam.

AS.190.245. The Politics of Global Development. 3 Credits.
Development is often assumed to be an economic issue. In this course we examine the politics of development on a global scale. We begin by looking at the colonial and Cold War histories of development. We then use these histories to contextualise contemporary development issues that directly affect international relations such as aid and debt, humanitarianism, food security, land "grabs", migration and indigenous rights. The course also seeks to understand the ways in which the issues underlying global development have always connected and continue to connect the peoples and polities of the Global North and Global South.

AS.190.249. Fictional World Politics: International Relations Through Fiction. 3 Credits.
The plots and settings of fictitious works provide "cases" for the exploration of international relations theories. Incorporates literature, film, and works of IR scholarship.
Area: Writing Intensive

AS.190.255. Race and Racism in International Relations. 3 Credits.
This course introduces students to the foundational importance of race and racism to the construction of our contemporary global order. Topics include the Crusades, European imperialism, eugenics, Apartheid, freedom struggles, decolonization, and global development.

AS.190.264. What You Need to Know About Chinese Politics (Part 1). 3 Credits.
What you need to know about Chinese politics covers the major scandals, political events, and policy debates that every China watcher needs to know. This first module of a two-semester experience brings together two professors, Prof. Andrew Mertha (SAIS) and Prof. John Yasuda (KSAS), with very different perspectives on China's past achievements, its political and economic futures, and the global implications of China's rise. The course seeks to give ample coverage to every major political question about China that is often missed in a semester long class. In addition to lively debates between the instructors, students can also expect guest speakers from the policy world, business, and the academy for a fresh take on what's going on in China today.

AS.190.267. Introduction to Political Economy. 3 Credits.
An introduction to the fundamental questions and concepts of political economy: money, commodities, profit, and capital. The course will study the nature of economic forces and relations as elements larger social and political orders.

AS.190.269. What you need to know about Chinese Politics, Part 2. 3 Credits.
This serves as a two-semester survey of Chinese politics from 1911-Present. This second module explores the politics of the reform and post-reform eras.

AS.190.283. Human Security. 3 Credits.
While traditional studies on security have focused largely on border protection, sovereign authority of the state, and interstate alliances, the threats posed to everyday people were not a central focus of security analyses until the end of the Cold War. The human security approach has evolved as a challenge to conventional thinking on security. This course will introduce the notion of human security, trace its emergence and evolution in the global political discourse, explore the theoretical scholarship from which it developed, and evaluate its effectiveness as a framework for addressing the most egregious threats human beings face today. From refugee flows, gender inequality, ethnic conflict, mass atrocities, poverty, to climate change, human security scholarship and policy has sought to examine the various threats to the lives of people that transcend national borders and allow us to break out of narrow thinking to develop innovative and globally-minded solutions.
Area: Writing Intensive

AS.190.284. Classics of Political Theory: Political Freedom. 3 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, and the relationship between freedom, responsibility and political judgment. Spanning texts ancient, modern and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past possible? By wrestling with slavery (freedom's opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.

AS.190.300. Racial Inequality, Policy and Politics in the US. 3 Credits.
While policies were passed to ensure equal opportunity for racially subjugated Americans, the United States witnessed increasing stratification of wealth and income and deepening concentration of poverty, stagnation in closing racial gaps, and new forms of inequality posed by the striking upsurge in contact with the criminal justice system at the bottom of the skills ladder and concentration of wealth at the top. At the same time, the welfare state came under attack and faced challenges posed by an aging population, women entering the labor force, deindustrialization, and international pressures of globalization. Social spending withered in some areas while spending on citizens was increasingly likely to happen through tax expenditures and private means. This course investigates the politics around these developments and competing perspectives in debates over redistributive policies in the United States and their impact on inequality, particularly race and gender inequality. We will examine the contours of inequality and explanations for why it has expanded over the past several decades. We explore why the US is exceptional in both the level of inequality it tolerates and the generosity and types of remedies to alleviate poverty in comparison to its European counterparts and debate the role of race, unions, electoral politics and institutions. We investigate several specific cases of persistent racial inequality – concentrated poverty, segregation, and incarceration. We investigate both how policies have reinforced racial and gender divisions from a top-down perspective as well as examining under what conditions the disadvantaged contest inequality, exploring how political struggle shapes policy from the bottom-up. The last part of the course examines the consequences of inequality and social policy for representation and citizenship and how economic inequality affects political representation and responsiveness of elites to masses.

AS.190.306. Latin American Politics and Society in Comparative and Historical Prespective. 3 Credits.
The seminar will introduce students to the political and economic trajectories of Latin America as a whole and of individual countries, including Mexico, Brazil, Argentina, and Chile. Special attention will be paid to the long-term trajectory of the political regime (democracy versus dictatorship) and of economic development (variations in GDP per capita). Competing theories, from economic dependence to historical institutionalism, will be examined for their contribution to our understanding of Latin America's relative economic backwardness and low quality democracies.
Area: Writing Intensive

AS.190.307. Race, Politics and Literature. 3 Credits.
Area: Writing Intensive

AS.190.308. Democracy and Dictatorship: Theory and Cases. 3 Credits.
The course will cover three topics: 1) The conceptualization of political regime, democracy and authoritarianism. We will also consider neighboring concepts of other macro-political structures—government, state, and administration—in order to be able to demarcate what is distinctive about the study of political regimes.2) The characterization of political regimes in most Western and some non-Western countries, in history and today. We will centrally focus on the so called "Waves of Democratization," but we will also consider stories with less happy outcomes, that is, processes that led to the breakdown of democracies and the installation of repressive dictatorships.3) The explanation(s) of the stability and change of political regimes around the world. Theoretical accounts of regime change come in many flavors—emphasis on economic versus political causes, focus on agents and choices versus structures and constraints, international versus domestic factors, among others. We will consider most of them.

AS.190.311. Disposable People: Race, Immigration and Biopolitics. 3 Credits.
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.

AS.190.315. Asian American Politics. 3 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.

AS.190.322. Future of American Democracy. 3 Credits.
For the most part, observers of American politics have not considered the possibility that the American democratic regime might be at risk. But the unexpected election of Donald Trump in 2016 and the subsequent course of his presidency have occasioned a great deal of uncertainty and anxiety about whether democracy in the United States is at risk and whether American political institutions can withstand the stresses of contemporary politics. This course will use the Trump era to explore the conditions that seem to threaten the stability of the American regime. We will begin by exploring the political circumstances that led to Trump's rise. We will then examine what we can learn from the experience of other countries about the conditions that make democracy either robust or fragile. Finally, we will consider how a set of contemporary political conditions in the United States — extreme partisan polarization, intense racial antagonism, growing economic inequality, and expanded executive power — contribute to the challenges facing American democracy today and in the future.
Area: Writing Intensive

AS.190.324. The Law of Democracy: The United States and Canada in Comparative Perspective. 3 Credits.
The Law of Democracy refers to the statutes, court decisions, and other practices that govern the electoral processes. Although the United States and Canada have a great deal in common, they have approached many of the problems involved in institutionalizing democracy quite differently. Recognizing these differences should contribute to understanding both the strengths, and the problems, of the two approaches. Specific topic will include the right to vote, political finance, delineation of district boundaries, electoral dispute resolution, and the role of electoral management bodies and elections administrators.

AS.190.325. Finding Equality in Law and Society. 3 Credits.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served these movements well and how it has worked. We will pay particular attention to movements based on race, gender, and economic class.

AS.190.326. Democracy And Elections. 3 Credits.
An examination of most aspects of democratic elections with the exception of th e behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.

AS.190.327. Politics of Information. 3 Credits.
Considers global and comparative politics of information, information technologies, and the Internet. Examines governance of information (ownership of information, rights to information, privacy) and governance of information technologies (domain names, social media websites, etc.).

AS.190.328. Political Thought in the Americas. 3 Credits.
Reflection on political ideas and institutions in the United States is often oriented by the notion that the US is in some sense exceptional. For some commentators, the US is exceptionally democratic, exceptionally stable, exceptionally productive, and exceptionally innovative. For others, the US is exceptionally racist, exceptionally unequal, exceptionally violent, and exceptionally unhealthy. What both sides share is a common point of comparative reference in Europe. For all these commentators, Europe is the norm against which all of the exceptional qualities of the US stand out. In this course, we will ask how well notions of US exceptionalism stand up against the different comparative references found in the Americas, focusing in particular on the history of political thought in the Americas. We'll begin by studying texts from the pre-colonial and colonial periods, noting similarities and differences between the political institutions, economies, and social and racial hierarchies of in the regions that comprised British, Spanish, Portuguese, and French America. Next, we'll consider the US, Latin American, and Caribbean independence movements, early constitutionalism, and debates on women's role in society, slavery, and the rights of Indigenous Americans, asking what, if anything, distinguished the US from its neighbors in its early years. Finally, we'll examine theories of imperialism, racism, patriarchy, exploitation, and environmental destruction that have emerged from the Americas in the course of the 20th century, to see how both shared and divergent historical experiences have shaped perspectives relevant to contemporary political issues.

AS.190.329. National Security-Nuclear Age. 3 Credits.
This course examines the impact of weapons of mass destruction on international politics with an emphasis on security issues. The first half of the course focuses on the history of nuclear weapons development during the Cold War and theories of deterrence. The second half of the class considers contemporary issues including terrorism, chemical and biological weapons, ballistic missile defense and proliferation. Requirements include a midterm, final and a ten page paper.

AS.190.331. America and the World. 3 Credits.
This course is a survey of the unique position of the United States in world politics. We will cover the broader international relations literature on the dynamics of hegemony and empire, from work in the realist tradition to more critical approaches. The course will encompass security politics as well as the economic and monetary dimensions of American influence. Interested students must have at least completed one 100 or 200 level introductory course in international relations.

AS.190.332. The University in Democracy. 3 Credits.
From the founding of the United States to the COVID-19 pandemic, modern universities have evolved into expansive, complex institutions that play a variety of indispensable roles in the support of democratic societies. They educate citizens as well as specialists; produce new knowledge that shapes discourse and public policy; foster reasoned debate; and act as engines of social mobility. They also incite a great deal of controversy, criticism, and distrust, including for how they have performed these roles. In this course, we will study the centuries-long relationship between universities and democracy, and assess how successfully these institutions (including Johns Hopkins) are fulfilling their most profound functions today.
Area: Writing Intensive

AS.190.333. American Constitutional Law. 3 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.

AS.190.334. Constitutional Law. 3 Credits.
Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.

AS.190.335. Imagining Borders. 3 Credits.
What is a border and why do borders matter in global politics. What do borders mean under conditions of globalization? An examination of the politics of borders, transborder flows, and networks within and across borders. The readings which come from political science and other disciplines, will include theoretical and case-specific works.

AS.190.338. Comparative Political Behavior. 3 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.

AS.190.339. American Racial Politics. 3 Credits.
Recommended Course Background: AS.190.214

AS.190.340. Black Politics I. 3 Credits.
This course is a survey of the bases and substance of politics among black Americans and the relation of black politics to the American political system up to the end of Jim Crow. The intention is both to provide a general sense of pertinent issues and relations over this period as a way of helping to make sense of the present and to develop criteria for evaluating political scientists' and others' claims regarding the status and characteristics of black American political activity.

AS.190.341. Korean Politics. 3 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations.Recommended students should take Intro to Comparative Politics or a course related to East Asia first.(CP)
Area: Writing Intensive

AS.190.342. Black Politics II. 3 Credits.
Recommended Course Background: AS.190.340.

AS.190.344. Seminar In Anti-Semitism. 3 Credits.
Jews exercise a good deal of power in contemporary America.. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America's citizens, about one-third of the nation's wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, "From the Vatican to the Kremlin, from the White House to Capitol Hill, the world's movers and shakers view American Jewry as a force to be reckoned with." Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become "a force to be reckoned with" than they found themselves banished to the political ma rgins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Area: Writing Intensive

AS.190.346. Foundations of International Relations Theory. 3 Credits.
This course is a broad conceptual introduction to international relations theory in a format that stresses close reading and critical discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field. By the end of the course, students will have a firm grasp of the core issues and debates in the field. The course is conceptually demanding; interested students should have at least completed an introductory course in political science.

AS.190.347. A New Cold War? Sino-American Relations in the 21st Century. 3 Credits.
"Can the United States and China avoid a new Cold War? One might think not given disputes over the South China Sea, Taiwan, Hong Kong, human rights, trade, ideology and so much more. Moreover, competition for influence in the developing world and American concerns as to whether China will replace it as the preeminent world power suggest a new Cold War is in the offing. Nevertheless, their extensive economic ties and need to work together to solve common problems such as climate change, nuclear proliferation, and pandemics argues against a continuing confrontation. This course will examine whether cooperation or conflict will define Sino-American relations, and whether a new Cold War—or even a shooting war—lies in the future."

AS.190.348. Business, Finance, and Government in E. Asia. 3 Credits.
Business, Finance, and Government in East Asia explores the dynamics of East Asia's economic growth (and crises) over the last fifty years. We will examine Japan's post-war development strategy, the Asian tiger economies, and China's dramatic rise. Centered on case studies of major corporations, this course examines the interplay between politics and economics in East Asia, and considers the following questions: How have businesses navigated East Asia's complex market environment? In what ways can the state foster economic development? How has the financial system been organized to facilitate investment? What are the long-term prospects for growth in the region?

AS.190.350. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include civil wars, targeted killings, terrorism, ethnic conflict and war itself. Students examine what makes types of political violence unique and what unites them.

AS.190.355. Comparative Racial Politics. 3 Credits.
This course surveys the major trends and approaches to the comparative study of race in political science and critically examines the link between race and politics. Topics include race and state formation, citizenship and national membership, immigration, racial regimes, and the political economy of race.

AS.190.356. The Social Contract and its Discontents. 3 Credits.
This course focuses on one of the most powerful stories told in the tradition of western political theory: the story of the social contract. This story is about the constitution of legitimate political authority. It is told in many ways and each version makes different assumptions, in particular about human nature, the power of reason, the value of order, and the character of justice. We examine this often-conflicting assumptions and explore how they continue to inform the way we think about the possibilities and problems of politics. Readings include texts by Arendt, Hobbes, Locke, Rousseau, Freud, Pateman, the Federalists, Derrida, and Douglass. Final grades are based on class participation, two exams and two papers.
Area: Writing Intensive

AS.190.357. The State of Nature. 3 Credits.
Though it is possible to imagine ways of addressing the multiple crises the world will face as the atmosphere warms, seas rise, and pollutants seep into the surface of the planet, any serious proposal will require a degree of coordination amongst nation-states that has proven impossible to achieve in the past. In this course, we will consider this difficult situation by treating it as an instance of an old problem in political theory: how to escape the infamous "state of nature," where individuals struggle to obtain the resources they need to survive at others' expense, rather than cooperating to satisfy their needs and address the threats they face in common. First, we will study some influential reflections on the state of nature by Hobbes, Locke, Rousseau, Freud, and Pateman, as well as efforts to apply the logic of the state of nature to problems in international politics by Kant, Wendt, Waltz, Enloe, and others. Then we will read contemporary work on the international politics of climate change and ask what it would take to start building the better world that is possible today.

AS.190.366. Free Speech and the Law in Comparative Perspective. 3 Credits.
This class explores the ideas and legal doctrines that define the freedom of speech. We will examine the free speech jurisprudence of the U.S. in comparison to that of other systems, particularly the jurisprudence of the European Court of Human Rights and the Supreme Court of Canada.

AS.190.368. Political Arts: Dada, Surrealism, and Societal Transformation. 3 Credits.
An exploration of the political aims, tactics, and strengths and liabilities, of Dada and Surrealism, as it operated in Europe and the Americas in the years between the World Wars, with a comparison to political conditions today.
Area: Writing Intensive

AS.190.370. Chinese Politics. 3 Credits.
This course is designed to help students better understand the politics of China. Lectures will focus on the tools of governance that China has employed to navigate its transition from plan to market, provide public goods and services to its citizens, and to maintain social control over a rapidly changing society. The course will draw heavily from texts covering a range of subjects including China's political economy, social and cultural developments, regime dynamics, and historical legacies. Students interested in authoritarian resilience, governance, post-communist transition, and domestic will find this course particularly instructive.

AS.190.372. Decolonizing Politics. 3 Credits.
This course introduces students to the colonial logics that underpin key categories and concepts in Political Science. Working through four sub-fields – political theory, political behavior, comparative politics and international relations, the course also introduces students to alternative knowledge traditions, emanating from minority communities and colonized peoples, which seek to explain the stuff of Political Science via anti-colonial logics.

AS.190.374. Political Violence. 3 Credits.
This undergraduate seminar is designed to introduce students to the comparative study of political violence and intra-state conflict. We will examine social science theories and empirical studies on a wide range of forms of political violence, including civil war, coups, state repression, communal violence, riots, terrorism, genocide, and criminal-political violence. We will study these phenomena at the micro, meso and macro levels, and focus on understanding their causes, dynamics, outcomes, and aftermath. The class will also equip students with an ability to analyze political violence by using social scientific tools.

AS.190.379. Nationalism and the Politics of Identity. 3 Credits.
Nationalism ties powerful organizations to political mobilization, territory, and individual loyalty. Yet nationalism is typically studied in isolation from other social formations that depend upon organizational – individual linkages. Alternative types of identity category sometimes depend similarly upon organizations that collect and deploy resources, mobilize individuals, erect boundaries, and promote strong emotional connections among individuals as well as between individuals and institutions. In this class, we study classic and contemporary works on nationalism, drawn from multiple disciplinary and analytic traditions, in the comparative context of alternative forms of identity. The focus of the class will be primarily theoretical, with no regional or temporal limitations.

AS.190.380. The American Welfare State. 3 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments – and explain the actual workings of policy – across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Trump. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Area: Writing Intensive
Students may take AS.190.380 or AS.360.380, but not both.

AS.190.381. Global Environmental Politics. 3 Credits.
Area: Writing Intensive

AS.190.382. Democracy and Development: Theory and Cases. 3 Credits.
Most wealthy countries are democracies. But not all democracies are wealthy—India, Costa Rica, and Mongolia are prominent examples of poor countries with democratic regimes. The course will examine the relation between economic development and political democratization under three big questions. (a) Under what conditions, and through which mechanisms, does economic development promote democracy? (b) If economic development is not possible in the foreseeable future, how do countries achieve stable democratization? (c) Under what conditions, and through which mechanisms, does democracy foster economic development?
Area: Writing Intensive

AS.190.384. Urban Politics & Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations.
Cross-listed with Africana Studies

AS.190.385. Urban Politics and Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross listed with Africana Studies.

AS.190.387. Parties and Elections in America. 3 Credits.
Considers how parties and elections structure political conflict, and facilitate (or not) democratic control of government. Topics include campaigns, voting behavior, election administration, money in politics, presidential nomination, and party coalitions.
Area: Writing Intensive

AS.190.388. Race and the Politics of Memory. 3 Credits.
This is a writing intensive, advanced undergraduate political theory seminar. The course will examine the politics of memory: how power shapes what is available to be remembered, the timing and occasions of memory, who is allowed to remember, and the spaces inside of which remembrance takes place. Specifically, the seminar will explore how segregated memory enables racial segregation and racial inequality. Toward that end, we shall investigate political and theoretical interventions potentially equipped to contest contemporary forms of racial amnesia haunting what some have labeled a "post-truth" world.
Area: Writing Intensive

AS.190.389. China's Political Economy. 3 Credits.
This course examines the most important debates about China's political economic development. After exploring Mao Zedong's disastrous economic policies, we will consider the politics of reform and opening under Deng Xiaoping, and finally conclude with China's state capitalist policies across a variety of issue areas. The course will cover literatures on financial reform, public goods provision, foreign trade and investment, agriculture, corruption, business groups, and regulatory development. Where possible we will draw comparisons with the economic experiences of other East Asian nations as well as other post-communist states.

AS.190.390. Race and American Democracy. 3 Credits.
While the United States has long been a democracy for white men, it has mostly been anything but democratic when seen through the eyes of Black Americans. But progress toward the expansion of democracy has occurred at a few times in American history. What made American democratization possible, and how might the United States again move toward more complete and inclusive democracy?

AS.190.391. Imperialism and Anti-Imperialism. 3 Credits.
Since antiquity, global politics have been defined by the struggle between imperialism and anti-imperialism. This course examines the arguments that have accompanied this struggle, considering influential texts written to defend or to denounce empires, as well as contemporary scholarship on imperial and anti-imperial ideologies. We will focus in particular on how imperial conflicts shaped natural law, international law, liberalism, and cosmopolitanism, as well as the connections between imperialism and contemporary capitalism, development assistance, and humanitarian intervention. The fundamental questions for the course are: What is an empire? and What would it mean to decolonize our world, our international institutions, and our minds?

AS.190.393. Nonviolent Resistance in World Politics. 3 Credits.
In this seminar we examine the origins, dynamics, and consequences of nonviolent struggles around the world. How do ordinary people organize for social change? What are the differences in people power campaigns in authoritarian and democratic contexts? When does nonviolent resistance succeed or fail, and what are the political consequences of these outcomes? In answering these questions, we will study the central ideas behind nonviolent action, learn about the most important scholarly discoveries in this field and analyze paradigmatic cases. Students will choose a historical or contemporary nonviolent movement to interrogate throughout the semester, as we learn new concepts, theories, and empirical patterns to make sense of them.
Area: Writing Intensive

AS.190.394. Comparative Politics of the Middle East and North Africa. 3 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors.

AS.190.396. Capitalism and Ecology. 3 Credits.
Capitalism and Ecology focuses on the relations between capitalism and climate during the era of the Anthropocene. How do capitalist processes of fossil extraction, consumption, production and governance contribute to the pace of climate warming, glacier flows, the ocean conveyor system, species loss and other phenomena? What are the effects and the possible modes of political response? How do the nonhuman, self-organizing processes such as glaciers, oceans and climate change on their own as they also amplify the effects of capitalist emissions? The course combines texts on capitalism and activism with those by geoscientists on how the nonhuman systems work. Books by authors in the fields of political theory, geology, anthropology, economics, philosophy and ethology will be drawn upon. Authors such as Michael Benton, Brian Fagan, Hayek, Naomi Klein, Fred Hirsch, Fred Pearce, van Dooren and Connolly are apt to be read to engage these issues. A previous course in political theory is recommended. The class is organized around student presentations on assigned readings. Two papers, 10-12 pages in length. Extensive class discussion.
Area: Writing Intensive

AS.190.398. Politics Of Good & Evil. 3 Credits.
The Politics of Good and Evil examines comparatively a series of classical myths and modern philosophies concerning the sources of evil, the nature of goodness and nobility, the relations of culture to politics, nature and the gods, the degree to which any metaphysic or theological faith is certain, and so on. It is a course in "elemental theory" in the sense that each text pursued challenges and disrupts others we read. Often the reader is disrupted existentially too, in ways that may spur new thought. A previous course in political theory or a theoretical course in the humanities is advised. A high tolerance for theory is essential. Texts on or by Sophocles, Job, Genesis ("J" version), Augustine, Voltaire, Nietzsche, James Baldwin, W. Connolly and Elizabeth Kolbert form the core of the class. Assignments: 1) One 12 page paper and a second 5-7 page paper, both anchored in the readings; 2) a class presentation on one text; 3) regular attendance and quality participation in class discussions.
Area: Writing Intensive

AS.190.402. Environmental Racism. 3 Credits.
This is an undergraduate political theory seminar that addresses the disproportionate impact of environmental destruction on racially stigmatized populations. We shall examine the logics of power whereby the natural world is subjected to exploitation and domination, in tandem with the subordination of racial subjects historically identified as closer to nature. Likewise, we will explore political and theoretical challenges to environmental racism, such as those posed by indigenous communities, decolonial theory, and political movements contesting the intersection of racial inequalities and ecological crises.
Area: Writing Intensive

AS.190.403. Arendt/Foucault. 3 Credits.
This upper-level undergraduate writing intensive course brings together the work of Hannah Arendt and Michel Foucault to focus on their critiques of modernity and their discussions of political change/revolution. Although Arendt and Foucault are often understood as coming from and supporting different political theoretical traditions, the course will also explore ways in which their shared debt to the work of Friedrich Nietzsche illuminates sometimes surprising commonalities and complementary positions. There is no final exam in this course but in addition to reading assignments, students will be required to write three papers.
Area: Writing Intensive

AS.190.404. Race and Debt: Living on Borrowed Time. 3 Credits.
This is an advanced undergraduate seminar that explores how racial stigma functions as a marker of being always already in debt. In view of the legacies of settler-colonialism, imperialism and chattel slavery, how is it that those from whom so much has been taken are nevertheless regarded as perpetually in debt? We shall examine the moral, economic and racialized logics of power through which a range of political subjects come to be regarded as ungrateful "takers" as opposed to "makers," and owing a debt to society. In so doing, we will investigate how temporality functions as a tool of power by considering how the indebted are made vulnerable to precarity, discipline, and disposability—in effect, forced to live life on borrowed time.
Area: Writing Intensive

AS.190.406. The Executive Branch. 3 Credits.
In the 19th Century America was noted for its courts, political parties and representative institutions. Today, America's political parties and representative institutions have declined in importance while the institutions of the executive branch have increased in importance. This seminar will examine the nation's key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week's readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.

AS.190.408. Sovereignty: Historical Perspectives and Contemporary Issues. 3 Credits.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development, current controversies, and its salience in international relations scholarship. Works in political theory and the international law literature will also inform our discussion. The course is open to advanced undergraduate students with previous coursework in political science. .
Area: Writing Intensive

AS.190.410. Beyond Bob Marley: Exploring the Rastafari Movement in the Greater Baltimore Area. 3 Credits.
This course uses a community based learning approach to inquire into the presence of the Rastafari community in the Baltimore area. Most people will have heard of Rastafari through the music of Bob Marley. People might not know, however, that Rastafari emerges out of and has been part of a global history of liberation struggles. This course is co-taught with a local Rastafari organization. You will be intellectually and practically equipped to take part in a project of original research on the Rastafari presence in the Baltimore region, starting with the demonization of the movement in the 1980s "war on drugs" and including the movement's response.

AS.190.412. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372)

AS.190.418. The End of Whiteness. 3 Credits.
This is a writing intensive, advanced undergraduate political theory seminar on racial formation. Specifically, the course explores the end of whiteness in multiple senses of the phrase. First, to what extent do the ends served by whiteness change, or remain continuous, over time? What power hierarchies and political goals has white identity been engineered to advance historically? We shall then examine the contemporary phenomenon whereby the end of white supremacy is conceived by some as the end of the world. This, in turn, will lead us to investigate how we should best understand white disavowal of threats of climate change and pandemics/health-care crises currently coursing through white identity politics. The last part of the course will be dedicated to exploring the end of whiteness in terms of the theories and practices potentially required to dismantle whiteness as white supremacy. Readings include Du Bois, Fanon, Painter, Baldwin, Moreton-Robinson, Hartmann, Olson
Area: Writing Intensive

AS.190.419. Race and Segregated Time. 3 Credits.
This course explores how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: criminal (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course.
Area: Writing Intensive

AS.190.421. Violence: State and Society. 3 Credits.
This course will examine violence that occurs mainly within the territory of nominally sovereign states. We will focus on violence as an object of study in its own right. For the most part, we will look at violence as a dependent variable, though in some instances it will function as an independent variable, a mechanism, or an equilibrium. We will ask why violence starts, how it "works" or fails to work, why it takes place in some locations and not others, why violence take specific forms (e.g., insurgency, terrorism, civilian victimization, etc.), what explains its magnitude (the number of victims), and what explains targeting (the type or identity of victims).

AS.190.423. Planetary Geopolitics. 3 Credits.
With the tools of geopolitics, course explores political debates over globalization of machine civilization and changes in scope and pace, space and place, and role of nature in human affairs.
Area: Writing Intensive

AS.190.424. Policy Disasters. 3 Credits.
Investigates the causes of large-scale policy disasters, examining the role of ideology, psychology, organization design and political incentives. Examples may be drawn from the Iraq War, Bay of Pigs, Hurricane Katrina, the U.S. Financial crisis, Shuttle Challenger disaster. economic development policy, privatization, and the Great Society. Limited to seniors or with permission of instructor. (CP / AP)

AS.190.425. The New Deal and American Politics. 3 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state.
Area: Writing Intensive

AS.190.426. Qualitative Research. 3 Credits.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first-hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?

AS.190.427. Political Economy of Japan and Korea. 3 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.
Area: Writing Intensive

AS.190.428. The Politics of Disaster in the Middle East and Beyond. 3 Credits.
This course examines the politics of natural and man-made disasters, including war, forced migration, drought, famine, earthquakes, tsunamis, storms, and epidemics. Focusing on the Middle East, it also presents comparative cases from Africa, South and Southeast Asia, and North America. In doing so, the class will examine the unique ways that different types of disasters interact with governance structures; social and economic inequalities; medical infrastructure; gender; race and ethnicity; and political cleavages. Throughout the course, students will learn basic elements of research design and methods in addition to welcoming experienced disaster response and analysis practitioners to class. Finally, the Politics of Disaster in the Middle East and Beyond addresses some of the philosophical aspects of working in and studying disaster-affected contexts, bringing an ethical sensibility to policy-relevant analysis.

AS.190.429. The Political Bases of the Market Economy. 3 Credits.
Although “the market” is conventionally understood as separate from “politics”, the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.

AS.190.431. Global Climate Governance. 3 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.

AS.190.433. Race and the Politics of Punishment in the US. 3 Credits.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold for citizenship. In this advanced undergraduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history and racial orders seriously. Why did the carceral state expand in "fits and starts" and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system "makes race" and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields - history, sociology, law and criminology - and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad’s Condemnation of Blackness: race, Crime, and the Making of Modern Urban America, Elizabeth Hinton’s From the War on Poverty to the War on Crime, David Oshinsky’s Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western’s Punishment and Inequality in America, and Michael Fortner’s Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Area: Writing Intensive

AS.190.434. Does Israel Have a Future?. 3 Credits.
Israel is one of the only countries whose existence is openly challenged. This class will examine the future of Israel focusing on international and domestic threats to its continued existence as a Jewish democracy. Outside threats to be considered include nuclear attack and the growing international movement to delegitimize Israel. domestic challenges include demographic changes, the role of religion in governance, and doubts as to whether one can be a Jewish state and still be a democracy. Lessons from the destruction of the ancient Israelite kingdoms and from contemporary state deaths will be included. The course will conclude by considering efforts that Israel can undertake to meet the threats it faces.

AS.190.437. Race and Ethnic Politics in the United States. 3 Credits.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the “struggle with difference” within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Writing Intensive

AS.190.438. Violence and Politics. 3 Credits.
This seminar will address the role of violence–both domestic and international–in political life. Though most claim to abhor violence, since the advent of recorded history, violence and politics have been intimately related. States practice violence against internal and external foes. Political dissidents engage in violence against states. Competing political forces inflict violence upon one another. Writing in 1924, Winston Churchill declared–and not without reason–that, "The story of the human race is war." Indeed, violence and the threat of violence are the most potent forces in political life. It is, to be sure, often averred that problems can never truly be solved by the use of force. Violence, the saying goes, is not the answer. This adage certainly appeals to our moral sensibilities. But whether or not violence is the answer presumably depends upon the question being asked. For better or worse, it is violence that usually provides the most definitive answers to three of the major questions of political life--statehood, territoriality and power. Violent struggle, in the form of war, revolution, civil war, terrorism and the like, more than any other immediate factor, determines what states will exist and their relative power, what territories they will occupy, and which groups will and will not exercise power within them. Course is open to juniors and seniors.

AS.190.440. European Politics in Comparative Perspective. 3 Credits.
Europe has been in a sense the first testing ground for theories of comparative politics, but many outsiders now see Europe as a pacified and somewhat boring place. This course will question conventional wisdom through an examination of European politics in historical and cross-national perspective. We will apply the comparative method to the study of European politics today, and conversely we will ask what Europe tells us more generally about politics. We will see that Europe is still a locus of intense conflict as well as remarkably diverse experimentation. Topics will include: political, legal, and economic governance; the evolution of democracy and fundamental rights, the welfare state, class stratification, immigration and race, the role of religion; European integration and globalization. Recommended background: Introduction to Comparative Politics.

AS.190.442. Civil Society. 3 Credits.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and global civil society. This course is open to graduate students from any discipline. Advanced undergraduate students must obtain permission from the instructor and are expected to keep up with graduate students during class discussions.
Area: Writing Intensive

AS.190.443. Politics of Outer Space. 3 Credits.
Intensive examination of the political aspects of human activities in outer space, past, present and future, with focus on militarization, earth-remote sensing, surveillance, navigation, resource exploitation, the Outer Space Treaty, and colonization.
Area: Writing Intensive

AS.190.450. Power. 3 Credits.
Power is a -- if not the -- key concept of international relations, yet there is no single definition of power that is accepted by all scholars in the field. In this course we will critically examine definitions of power from classic and contemporary works of international relations, political science, and related areas of study.

AS.190.451. Geopolitics. 3 Credits.
Intensive exploration of theories of how geography, ecology, and technology shape political orders. Case studies of ancient, early modern, global, and contemporary topics, including European ascent, industrial revolution, tropics and North South divide, climate change, geo-engineering and global commons (oceans, atmosphere and orbital space
Area: Writing Intensive

AS.190.452. Party Politics from the Founding to the Progressives. 3 Credits.
Though the torchlight parade has long since passed, American parties still stand in the shadow of the nineteenth-century Party Period. This course seeks to untangle the ideologies and practices of party politics from the Founding to the Progressive Era. Topics include the rise of mass parties, political violence, the coming of the Republican Party, the party politics of Reconstruction and westward expansion, corruption and the political machine, Populism, and movements for reform. We pay particular attention to comparisons between past and present, and to opportunities taken and foregone.
Area: Writing Intensive

AS.190.454. Nuclear Weapons and World Politics. 3 Credits.
An intensive examination of competing theories of the role of nuclear weapons in world politics and alternative global security orders. Focus on nuclear weapons and the interstate system, deterrence, war fighting, arms control, proliferation and terrorism, with select historical and contemporary case studies.
Area: Writing Intensive

AS.190.471. The University and Society. 3 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.

AS.190.473. Political Polarization. 3 Credits.
The American constitutional order, which was designed to operate without political parties, now has parties as divided as any in the democratic world. This course will examine explanations of how this happened, the consequences of party polarization for public policy and governance, and what if anything should be done about it.
Area: Writing Intensive

AS.190.474. Philosophy of Law. 3 Credits.
The philosophy of law or jurisprudence investigates the nature of law and what makes law, as it were, law. Thus, this course will examine various ways in which law has been defined and understood. It will also consider how law is distinguished from other systems of norms and values, such as morality, and how law is distinguished from other aspects of government, such as politics. In addition, the course will introduce students to discussions of legal reasoning and interpretation. Students will be required to participate in class discussion, take three exams, and write one paper.

AS.191.303. Critical Race Theory, Law, and Criminal Justice. 3 Credits.
In this course, students will gain a foundational understanding of critical race theory, including its genesis in legal theory. The course will examine its relationship and importance to social movements, including through key concepts like intersectionality. The course will also use critical race theory to grapple with law, racial segregation, and the criminal justice system in the United States.
Area: Writing Intensive

AS.191.335. Arab-Israeli Conflict. 3 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.

AS.191.345. Russian Foreign Policy. 3 Credits.
This course will explore the evolution of Russian Foreign Policy from Czarist times to the present. The main theme will be the question of continuity and change, as the course will seek to determine to what degree current Russian Foreign Policy is rooted in the Czarist(1613-1917) and Soviet(1917-1991) periods, and to what degree it has operated since 1991 on a new basis. The main emphasis of the course will be on Russia's relations with the United States and Europe, China, the Middle East and the countries of the former Soviet Union--especially Ukraine, the Baltic States, Transcaucasia and Central Asia. The course will conclude with an analysis of the Russian reaction to the Arab Spring and its impact both on Russian domestic politics and on Russian foreign policy.

AS.191.352. Race, Class, and America. 3 Credits.
Through an intensive and in-depth reading of theorists, thinkers, historians, and political scientists, this course will take students through the deeply interconnected story of American race relations and labor politics. We will examine primary source material, such as the essays of Richard Wright and Ralph Ellison, the speeches of A. Philip Randolph, Bayard Rustin, and Martin Luther King, Jr., the memoirs of Charles Denby and Angelo Herndon, and the pamphlets of Claudia Jones; we will read historical accounts which situate these figures in their context; and we will engage critically with the fundamental topic: in the United States, what is the relationship between race and class; racism and exploitation; civil rights and labor activism? Toward the end of the course, we will examine recent scholarship that has returned to these themes to show how deeply imbricated America—its people, its institutions, its political economy—remains to this history.
Area: Writing Intensive

AS.191.354. Congress and Foreign Policy. 3 Credits.
This course is an introduction to the Congressional role in foreign policy. The Constitution grants the President the authority to conduct foreign policy. Yet it also gives Congress a substantial role in the shaping of foreign policy. The roles are not always clear, creating an inherent tension between these two branches of government and efforts on each side to increase their power. This class will address the "rules of the road" in conducting American foreign policy and how they change. The class will go beyond theory to include case studies that show the tension between Congress and the Administration – including the Iran Agreement, Climate Change, the use of sanctions and American policy towards Cuba. The course will include guest lecturers who work in Congress on the various aspects of foreign policy – including appropriations, intelligence, oversight and investigations. We will address the Congressional role in ratification of treaties and in declaring war. The class will consider the different ways that each branch of government approaches human rights and sanctions. The class will also address the domestic political aspects of foreign policy – including the role of advocacy groups and special interests and the political use of Congressional investigations. One class might be held in Washington D.C. at the U.S. Senate, so would require additional time for travel.

AS.191.358. Use of Force and the American State. 3 Credits.
This course examines the growth and development of the American state's coercive institutions, namely, the military and police. We will explore the ways in which the American state makes war, fights crime, and polices the boundaries of citizenship. While we tend to approach these topics from the perspective of international relations, law, or political philosophy, this course focuses on American politics and institutions. How did the United States secure control over a transcontinental territory in the absence of a large standing army? Why did the federal government try to criminalize vices, and how were these statutes enforced? How did violence influence the development of the American state, and to what extent do these historical processes explain warfare and law enforcement today?
Area: Writing Intensive

AS.191.406. Capitalism: Politics and Political Thought in a Market Economy. 3 Credits.
The United States is a capitalist economy and we live in a capitalist world. This a fact we take for granted and therefore spend little time examining. Capitalism' proponents attribute our society's unprecedented wealth and technological advances to this economic system. Some go so far as to claim that modern democracy and social progress are impossible without a capitalist economy. Critics point to growing social inequality and a slew of environmental ills as proof of capitalism's unsustainability. Some suggest that capitalism is antithetical to true democracy and human flourishing. But what exactly is capitalism? How did it evolve in the USA and how does the form capitalism takes in the United States differ from the forms it takes elsewhere? And, crucially, how is capitalism shaped by – and how does it shape – contemporary politics? And how exactly is this all related to liberalism, conservatism, neoliberalism, libertarianism, socialism, and democratic socialism? This seminar is designed to help students critically approach these questions.Rather than taking simplistic pro-contra approach, this seminar will examine capitalism along four axes: as a political-economic system, a corollary set of structures and institutions, the force behind a specific form of state organization, and the determinant of how society and individuals act and see themselves. To explore these issues, we will focus on a number of contemporary political issues, with a primary geographic focus on the United States, including the following: the debates over the welfare state and socialized healthcare; unions, lobbies, and special interests; the connection between capitalism, culture, and ideology; the effects of a capitalist organization of labor of questions of race, gender, and citizenship; the commodification of the environment and other species; and the process of critique, resistance, and social change in a capitalist system. Throughout, we will discuss the theoretical and empirical arguments put forward by a historically and disciplinarily broad range of thinkers including Karl Marx, Simone Weil, John Locke, Adam Smith, Robert Nozick, Thomas Sewell, Nancy Fraser, David Graeber, Melinda Cooper, Andreas Malm, and Guy Debord, through to Alexandria Ocasio-Cortez and Elon Musk.
Area: Writing Intensive

AS.191.415. Fear and Loathing: Writing About Contemporary American Politics. 3 Credits.
This course is focused on reading, analyzing, and, most importantly, producing writing about the American political experience and contemporary events in American politics. We will use scholarly, print, and new media sources from different sides of the political spectrum, drawing on political and literary theory to inform our discussions. We will then try to do better: Students will write and workshop a variety of pieces of different lengths and styles, spending in-class time on peer critique, presentations, and writing exercises, which they will compile into a writing portfolio. We will discuss and write op-eds, memoirs, long-form book reviews, commentary essays, and satire. Throughout, we will devote considerable class time to critique and discussion of students' writing. Readings will include works by James Baldwin, William F. Buckley, Claudia Rankine, Hunter S. Thompson, Ta-Nehisi Coates, Alexander Chee, Angela Nagle, and Omar el Akkad. We will draw on political commentary from sources ranging from The Washington Post to Jacobin to The Onion, through to Facebook and Twitter. Throughout, we will consider a wide range of topics pertinent to writing about politics, including questions of the make-up of the public sphere and diverse audiences, the use of voice and language, the deployment of facts and rhetoric, the place of fiction and humor in political critique, and the rise of fake news and trolling.
Area: Writing Intensive

Program in Latin American Studies

AS.361.335. Colombia at War. 3 Credits.
The history of Colombia comes down to a tale of armed conflicts, protracted and renewed civil wars, coups, ethnic cleansing riots, narco wars, besides the struggles for independence from Spanish colonial rule and extractive capitalist exploitation. We will study the literary, journalistic, and historical record about warring and uncivil Colombia through fiction from Gabriel García Márquez (The General in his Labyrinth and News of a Kidnapping), Fernando Vallejo (The Virgin of the Assassins), and Juan Gabriel Vázquez (The Sound of Things Falling and The Secret History of Costaguana). We will also delve into the current peace process and disarming of the FARCS and the perils and promises that the absorption of the former combatants and recalcitrant holdovers pose to the skeptical and hopeful citizens and various political factions.

AS.361.336. Hugo Chávez, Fidel Castro, and Bolivar's Venezuela. 3 Credits.
Are the current extreme hard times in Venezuela's Bolivarian Republic irreversible? Is there a ballpark somewhere for Thomas Jefferson and Simón Bolívar to hold a debate match about democracy, achieved emancipations, republican values and the lure of dictatorship? The course welcomes serious and sharply political dialogue about ideals of democratic republicanism in clash from the rise and apparent fall of Fidelismo and Chavismo in the Caribbean region to the agitations and alliances dictated by Trump's seizure of American politics.

Program in Museums and Society

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered.
Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.

AS.389.260. Cultural Heritage in Crisis. 3 Credits.
We explore the possible futures of cultural heritage and museums in times of accelerating climate change, pandemics, armed conflict and political and social turmoil by examining past and contemporary events.

AS.389.405. Visualizing Africa. 3 Credits.
Examines the history of African art in the Euro-American world, focusing on the ways that Western institutions have used African artworks to construct narratives about Africa and its billion residents.
Area: Writing Intensive

Sociology

AS.230.150. Issues in International Development. 3 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.

AS.230.175. Chinese Revolutions. 3 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China's transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Area: Writing Intensive

AS.230.213. Social Theory. 3 Credits.
This course will focus on four classical social theorists whose ideas have greatly influenced how we study and understand society: Karl Marx, Emile Durkheim, Max Weber and W.E.B. DuBois. Students will gain an in-depth understanding of how each theorist answered three major questions: 1) what is the origin, structure and historical dynamic of modern society?; 2) how do we gain an accurate knowledge of society?; 3) what are the conditions of possibility for freedom in modern society? In comparing, applying and critiquing their respective theories, students will advance their own theory of society.
Area: Writing Intensive

AS.230.219. Land, Labor and Environmental Movements in Contemporary Africa. 3 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor, and environmental movements.Attention will be placed on the early 21st century.

AS.230.221. Global Social Change. 3 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g. WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis and global pandemics, among others. Lectures will be aided by documentary films and other multi-media materials. Special Note: Fulfills Economics requirement for IS GSCD track students only. Formerly offered as AS 230.353. Students who took AS.230.353 cannot take AS.230.221.
Area: Writing Intensive

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3 Credits.
This course surveys the impacts of colonialism in East and Southeast Asia. Special attention will be paid to the social and economic development in British Singapore and Hong Kong as well as Japanese Korea and Taiwan. Topics include free-trade imperialism, colonial modernity, anticolonial movements, pan-Asianism, and post-war U.S. hegemony.

AS.230.233. Inequality and Social Change in Contemporary China. 3 Credits.
This course examines the trajectory of economic development in China since the beginning of market reforms in the late 1970s, with a special focus on social inequality and forms of resistance that have emerged in response to the expansion of the market economy. The first part of the course focuses on understanding the academic debates around China's economic miracle and introduces students to theories about the relationship between market expansion and social resistance. The second part focuses on key thematic topics including the rural/urban divide, rural protest, urban inequality and labor unrest, gender and sexuality in social movements, environmental protests, and the politics of ethnic relations.

AS.230.238. Beyond the Wall: The Political Economy of the US and Mexico. 3 Credits.
Examining the exchange of culture, people, and commodities between the United States and Mexico since the 19th century, this course asks not just how US practices and policies have shaped Mexican society, but how, in turn, Mexico has shaped the United States. We will examine the social, political, and economic forces that have long pulled these two societies together – and pushed them apart.

AS.230.239. Coffee, Tea and Empires. 3 Credits.
The course introduces the transformation of the coffee and tea industries in the long nineteenth century against the backdrop of European and Japanese colonial expansion. It surveys the social changes in the colonial world under the development of the cash crop economy. It also analyzes how the consumption of such caffeinated beverages became sources of heritage makings both in the metropoles and colonies and the latter's postcolonial reconstructions.

AS.230.242. Race and Racism. 3 Credits.
Race has been important in social classifications and producing inequalities. This course is designed to provide you with a global understanding of how racial categories are created and maintained, how they change over time, and how they vary from place to place. It is organized in four parts. The first part introduces the concepts and analytical tools used by social scientists to study race. Of particular concern is power and the social construction rather than "natural" categories of race, as well as the general social processes involved in the maintenance and reproduction of these boundaries. In the second part, we will study the theories and dynamics racial category formation in the United States with attention to forms and processes of racial exclusion and oppression, and evidence of socio-economic inequalities based on race. In the third part of the course, we will compare these processes in the U.S. to those occurring in other countries. The fourth and final part of the course examines how race and racism shape political struggles and resistance movements.

AS.230.244. Race and Ethnicity in American Society. 3 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.

AS.230.250. Knowledge, Evidence, and Democracy. 3 Credits.
Fake news. Alternative facts. Follow the science. Misinformation. Disinformation. How can we understand the role of information, evidence, and scientific inquiry in politics? Where does information come from? How is it used? How can evidence, argument, and listening improve public conversations? This seminar will examine the connections between information, knowledge, evidence, and democracy, focusing mostly on the United States but with global examples as well.
Area: Writing Intensive

AS.230.265. Research Tools for Global Sociology and Development. 3 Credits.
This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students.Course previously titled "Research Tools and Technologies for the Social Sciences"

AS.230.304. (Making Space For) Black Thought. 3 Credits.
How do we think about the power relations at work in the scholarship we read and in the important texts we consider essential to our educational experience? This course will critically investigate the role that concepts of race and racism have played in formulating dominant perceptions of who can be the producers of knowledge and what constitutes authoritative knowledge itself. We will consider how and why thinkers and scholarship produced outside of Europe and North America are too often ignored for their scholarly contributions and the dynamics that lead to this situation. We will also explore how and why new and important perspectives emerge from engaging and centering voices from beyond traditional canonical works. With a particular focus on the forms of knowledge arising from European Enlightenment approaches to concepts of thought reason and objective knowledge, this course will critically engage students with a wide range of thinkers such asGWF Hegel, W.E.B. Du Bois, Angela Davis, Ralph Trouillot, Sadiya Hartman, Walter Rodney, Derek Walcott, Sylvia Wynter and Frantz Fanon. This course will focus largely on thinkers engaging within the Black Atlantic and black diaspora traditions to question how we might consider voices and thought from beyond Eurocentric positions in our own scholarly practice.

AS.230.306. Plagues, Power, and Social Control. 3 Credits.
While developments in biomedicine and health care have led to the eradication, cure and management of many human health problems, disease, illness and health have also been the focus for aggressive social controls and population management. The technologies and practices of disease control and health management have been foundational to some of the most aggressive structures of oppression in recent history such as the Jewish Ghetto, the Concentration Camp, the South African Township and techniques of segregation. This course seeks to explore how epidemics and disease control are linked to larger questions of power, state craft and international dynamics. This course asks how have outbreaks of infectious disease shaped social and political action? How do societies respond to outbreaks and why? What do epidemic moments tell us about global structures of power and the dynamics of control? Drawing on historical cases including plague during the European Renaissance and before, the HIV/AIDS Pandemic and the West African Ebola Outbreak of 2013-2016, this course will introduce students to the history and practices of disease control as well as important theoretical perspectives by which to understand the sociological and historical effects of disease and the responses to them. Students will engage sociological concepts such as biopolitics, social construction of disease and illness and biosecurity and produce a final research paper examining the outcomes and responses to an epidemic event to show mastery of the topics covered in the course.
Area: Writing Intensive

AS.230.315. Advanced Topics in International Development. 3 Credits.
This class offers an advanced engagement of various topics in international development. The course begins with an historical examination of the actors and global events, as well as the intellectual debates, that birthed the field of international development as a discrete area of study and practice. We will then analyze the evolving theories that dominated the first five decades of the international development effort. The final part of the course will examine more recent perspectives that have attempted to fill the intellectual void left by the demise of the traditional development paradigm. Here we will cover topics that span the global North and South, including issues of race/caste/ethnicity, migration, gender, and right-wing nationalism. Some prior knowledge of international development is recommended
Area: Writing Intensive

AS.230.316. African American Family. 3 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.

AS.230.317. Sociology of Immigration. 3 Credits.
This course surveys sociological theories and research on immigration to the U.S. Theoretical approaches include theories of international migration, economic sociology, immigration, and assimilation. Research topics include the impact of U.S. immigration laws and policies on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population and the U.S. labor market and economy, and the adaptation of the first and second generations.
Area: Writing Intensive

AS.230.318. The Political Economy of Modern India. 3 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Area: Writing Intensive

AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Writing Intensive

AS.230.325. Global Social Change and Development Practicum. 3 Credits.
This course provides "hands on" research experience in the field of global social change and development. The course fulfills the "research practicum" requirement for Sociology majors and is required for the GSCD track.

AS.230.327. Sociology of Revolution and Counterrevolution. 3 Credits.
In this course, students will learn about analyzing revolutionary and counterrevolutionary movements, with a focus on their strategic dimensions. Contributions from the military, counterinsurgency, sociology of revolution, historical materialist, world-system, and critical realist literature will provide different visions of strategy and tactics. The cases of Guatemala and Chile in the early 1980s and 1970s, respectively, will provide historical and empirical roots to class discussions about these different approaches and the possibilities of synthesizing them.
Area: Writing Intensive

AS.230.335. Medical Humanitarianism. 3 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.

AS.230.337. Global Crises: Past and Present. 3 Credits.
This course will compare the current global crisis with previous major crises of historical capitalism through a combination of theoretical and historical readings. Throughout, we will ask: What can a study of past crises tell us about the nature and future trajectory of the current global crisis? Special emphasis will be placed on (1) “the late-nineteenth century great depression”, (2) the Great Depression of the 1930s, and (3) the period of crisis and stagflation in the 1970s. We will be particularly concerned to understand the differential social and geopolitical impact of the crises. Which social classes bore the brunt of the disruptions in economic activity in each crisis? Which geographical areas or geopolitical groupings lost out (or benefited) from the crisis? How have environmental and ecological challenges resurfaced in each crisis including today?

AS.230.342. Resistance, Rebellion, and Revolution in Latin America. 3 Credits.
This course will examine the dynamics of transformative social change in Latin America and the Caribbean through analyses of resistance, rebellion, and revolution. Because revolutionary change is at once the most transformative and the most rare, this course will cover the exemplary cases of the Haitian, Mexican, and Cuban revolutions, but then also ask how theorists have understood the dynamics of both open rebellion and of everyday resistance in societies deeply structured by racial, gender, and class power, situated within an unequal world system. Attending to both local and global dynamics, this course will ask how Latin American dynamics have both conformed to and challenged universalist theories of social change.

AS.230.348. Climate Change and Society. 3 Credits.
This course will focus on the social dimensions of climate change. Drawing on global and multi-disciplinary scholarship, we will address such issues as: the history of fossil capitalism; the relationship between social inequality and “vulnerability” to climate change (including heat waves, drought, rising seas, and extreme weather); climate migration and the political economy of “adaptation”; the merits of various mitigation strategies, including the Green New Deal, conservation offsets, and geo-engineering; the roots of climate denialism; and climate justice movements. Students will write a final research paper on a sociological aspect of climate change.
Area: Writing Intensive

AS.230.349. Class, Race, and Political Struggle in Capitalist Societies. 3 Credits.
Does capitalism promote democracy and stability, or repression, racial conflict, and social unrest? Following the 2008 financial crisis, countries around the world have experienced severe economic and political crises, giving rise to explosive movements that have challenged the viability of capitalism and democracy as durable systems. By considering these developments, this course examines the core political dimensions of capitalist societies. We will define and discuss key terms, like capitalism, racial capitalism, the capitalist state, democracy, social movements, and more. We will pay special attention to the ways in which the economic, political, and ideological structures of capitalist societies shape and are shaped by social movements and political parties. The course is global in perspective, drawing on developments in many countries, with a special focus on the United States.
Area: Writing Intensive

AS.230.350. Capitalism, Dependency, and Development in Latin America. 3 Credits.
This course examines Latin American insertion into the global capitalist economy from the colonial period to the present. Examining various historical, sociological, and political-economic theories, this course will ask not only how Latin American economies and societies have developed their particular characteristics, but also how theorists within and outside the region have understood Latin American development over time.development over time.

AS.230.352. Chinese Diaspora: Networks and Identity. 3 Credits.
This course combines lecture and class discussion. It examines the history and historiography of Chinese overseas migration. Major issues include overseas Chinese as "merchants without empire," Chinese exclusion acts in the age of mass migration, the "Chinese question" in postcolonial Southeast Asia, as well as the making and unmaking of Chinese identity in the current wave of globalization.
Students may not have completed AS.230.217 previously.

AS.230.356. Power, Privilege, and Inequality. 3 Credits.
Race, class and gender are among key factors in systematic patterns of inequality in the United States (and globally). In this course, we examine the manner in which social inequality comes about and is maintained through a range of social institutions and daily social interactions. This class will examine how social institutions and daily social interactions structure the decisions individuals make and, in turn, how the decisions that individuals make serve to perpetuate or challenge existing social institutions and interactions. We will explore how the intersection of different forms of inequality, for example race and class or class and gender challenge traditional conceptions of inequality and provide insight into the processes that perpetuate inequality. We will use these sociological tools to develop what sociologist C. Wright Mills calls the "sociological imagination" and apply this imagination to contemporary debates in American society. We will discuss how the sociological imagination differs from the approach other disciplines in social science might take to study inequality.

AS.230.363. Sociology of Dispossession. 3 Credits.
The "grabbing" of land and natural resources has, in recent years, generated widespread political conflict across the world and put dispossession on the agenda of academics and policy-makers. Nevertheless, compared to other social relations of power, land dispossession has not been central to scholarly or public understandings of capitalism, the state, development, or politics. In this class, we will collectively explore the nascent field that we might call the sociology of dispossession. We will examine existing theories of dispossession, and proceed to challenge, reconstruct or supplant those theories as we consider a wide range of historical examples of dispossession from the English Enclosures and colonial plunder to contemporary urban redevelopment and rural land grabs. This is a reading- and writing-intensive seminar.
Area: Writing Intensive

AS.230.366. Black Social Thought and Social Movements. 3 Credits.
This course will examine the reciprocal relationship between Black social thought and social movements. How have social movements informed thinkers who grapple with questions of freedom and liberation in racially and economically stratified societies, and how have their ideas affected movement tactics? This course will look at 20th century movements and investigate connections between theory and practice through concepts like civil disobedience, internal colonialism, Black feminism, Black internationalism, and others.
Area: Writing Intensive

AS.230.367. Islamic Finance. 3 Credits.
Today, Islamic finance is a global industry comprising nearly $3 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called "Islamic finance" existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on usury in Islam and other religious and philosophical traditions, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.

AS.230.369. Sociology in Economic Life. 3 Credits.
This course discusses how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor.

AS.230.370. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Students may not have previously taken AS.230.223.

AS.230.378. Refugees, Human Rights, and Sovereignty. 3 Credits.
What is a refugee? Since World War II, states that have pledged to offer protection to refugees have frequently been drawn instead to the dictates of nationalism and communitarianism, which prioritize concern for their own citizens, rather than to the needs of forced migrants. As a result, even those migrants that have been formally recognized as refugees according to the 1951 UN Refugee Convention have not been assured of protection, and other migrants have been even less assured. In this course, we will locate the reasons for this reality in the legal, political, and historical underpinnings of political asylum. What is the difference between an asylum seeker and a refugee? How has the refugee category been redefined and contested by international bodies since 1951? How are the ambiguities of real-life violence and persecution simplified in asylum adjudication interviews that require clear, factual narratives? What kinds of protections are offered to asylum seekers, whether by UN bodies, NGOs, or host governments, and how have such protections varied geographically and historically? Finally, what protections, if any, are afforded to those migrants who are fleeing not persecution but rather "merely" endemic poverty or climate-induced displacement? The course draws on literature from sociology, history, anthropology, and international refugee law in order to understand the capacity (or lack thereof) of human rights discourses and declarations to contravene state sovereignty in the name of protecting the rightless.

AS.230.385. Schooling, Racial Inequality and Public Policy in America. 3 Credits.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual's family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement as well as the development and later evaluation of school desegregation policies. The course also considers case studies of current policy debates in the US, such as housing segregation and school resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.
Area: Writing Intensive

AS.230.386. The Making of the Asian Races Across the Pacific in the Long 20th Century. 3 Credits.
Focusing on the race-makings of the Asians across the Pacific in the long twentieth century, the course employs the reading materials that elucidate the constructions about the demographic categories of the Asian "races." We use prewar Japanese materials and Chinese nationalist thoughts to elaborate on the following themes: the internal distinction among the peoples grouped under the racial category of the Asians; the overall presentation about the generic category of the "Asian" peoplehood, as well as their alleged shared civilization and interests. The theoretical framework include concepts of capitalist reconfiguration of social boundaries through racism and the question of power behind the reproduction of racial hierarchy.

AS.230.389. The Value of Life: Racism, Capitalism and Health. 3 Credits.
We are generally told that you can't put a price on life or a price on our health but lives are quantified, valued and priced every day. In this class we will explore the ways in which life is valued in the modern world, its effects and the outcomes from it. We will also examine how forms of quantification and valuation have been employed to dehumanize and subjugate peoples, especially those racialized as different. Beginning with an exploration of human pricing during the trans-Atlantic Slave trade and continuing through to contemporary health care and health insurance practices, this course will examine how we value (monetarily) human existence in modernity. This course will introduce students to ideas emerging out of the Black Marxist Tradition, postcolonial thought, and critical feminist approaches to historical research. From the examination of insurance under slavery to the use of race corrections in medical algorithms, this class will confront students with the question- "how can we put a price on life?" and most importantly "Should we?".
Area: Writing Intensive

AS.230.393. Global Health and Human Rights. 3 Credits.
Is access to healthcare a fundamental human right? If so, then which global actors are obligated to provide healthcare to whom, and for how long? How do meanings of health and illness vary across time and place? And finally, how are human rights principles translated into frontline practice in order to promote well-being? This course takes a critical interdisciplinary approach to these questions through a series of global case studies ranging from humanitarian aid in post-tsunami Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana. How do international NGOs, UN bodies, and governments collaborate (or compete) to distribute healthcare in places beset by dire resource shortages? Do human rights principles carry legal weight across borders, and if so, could access to healthcare services and essential medicines be litigated in order to compel governments to provide it? And finally, what cultural assumptions do human rights discourses carry with them, and what happens if rights-based approaches are poorly received by recipient populations? Moving beyond the basic principle of healthcare as a human right, this course aims to bring this idea's history and politics into focus by offering an in-depth exploration of its ethics and implementation.
Area: Writing Intensive

AS.230.395. Contemporary Social Theory. 3 Credits.
What is the structure of society, how does it change, and how is it reproduced? What is the relation between social structures and our ideas about them? What are the conditions of possibility for human freedom? This course will examine how major social theorists of the 20th century advanced novel answers to these questions as they grappled with the historical events and social concerns of the 20thcentury—the Russian revolution and its degeneration into Stalinism, the failure of communist movements in the West, the rise and fall of fascism and Nazism, the consolidation of capitalist democracies and welfare states, the emergence of anti-colonial movements in the "Third World," and the persistence of race, gender and sexuality as forms of domination. In addition to understanding and comparing theories, we will assess their usefulness for understanding the present. This is a reading and writing-intensive seminar.
Area: Writing Intensive

AS.230.396. Politics and Society. 3 Credits.
This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, sources of authority, the relationship between political and economic power, the nation-state and nationalism, states and war, ideology and political contention, collective identity, social movements, and social revolutions. Fulfills Comparative Politics for International Studies.
Area: Writing Intensive

AS.230.397. The Political Economy of Drugs and Drug Wars. 3 Credits.
In the United States, we spend more than $100 billion annually on illegal drugs—and the government spends more than $50 billion a year to combat their sale and use. These statistics raise important and complicated social questions. This course will examine the production, sale, use, and control of illegal drugs from a historical and sociological perspective. We will have three objectives: to understand the social construction of drug use and illegality in the United States and other rich countries; to uncover the political and economic consequences of drug trafficking in those countries that produce drugs, particularly in Latin America; and to examine the political economy of drug control through the so-called War on Drugs, both domestically and internationally.

AS.230.405. Neoliberalism. 3 Credits.
Neoliberalism, a political project that seeks to subject all aspects of social life to free market force, has ascended to orthodoxy in developed and developing countries alike over the last four decades. This course is a reading seminar focused on some of the key classic and cutting-edge original texts that critically examine and debate the origins, socio-political impacts, and crisis of the neoliberal project. It will cover such topics as the genealogy of the neoliberal idea, neoliberal state, informalization of works, neoliberal cities, rise of the one percent, and global governance. Class will be a mix of lecture and seminar-style discussions. Requirements include reading memo, class presentation, and a term paper.
Area: Writing Intensive

AS.230.415. Social Problems in Contemporary China. 3 Credits.
In this course we will examine contemporary Chinese society, looking at economic development, rural transformation, urbanization and migration, labor relations, changes in class structure and family organization, health care, environmental problems, governance, and popular protest. The course is designed for both graduate and undergraduate students. Undergraduates must have already completed a course about China at Hopkins. Cross-listed with East Asian Studies.
Area: Writing Intensive

AS.230.418. Racial Capitalism: A Sociological Perspective. 3 Credits.
This course provides theoretical and historical approaches to examining the centrality of racism, imperialism, and colonialism to the origins and ongoing functioning of capitalism and the global political economy. We begin with the dominant theoretical frameworks used to study capitalism and carefully juxtapose these with theory and empirical analyses foregrounding capitalism’s connections to racial slavery/racialized labor exploitation, imperialism, colonialism, and gendered exploitation. Following this, we examine the unfolding of capitalism in the post-emancipation, post-independence, and neoliberal periods, paying close attention to inequalities produced within and between nations. We end by examining resistance to racial capitalism, as well as imagining alternative futures.
Area: Writing Intensive

AS.230.440. Port Cities and Historical Capitalism in Maritime Asia. 3 Credits.
The goal of the seminar is to examine the prospects and limits of understanding the incorporation of Asia in the capitalist world-system from the prism of oceanic connections. The theoretical thrust of this course is to develop but also to adapt Janet Abu-Lughod emphasis on the connections across port cities and littoral in the Afro-Eurasian continents before the long sixteenth century in her Before European Hegemony. But instead of looking at a port city as its adjacent hinterland polity’s gateway to global trade in the premodern era, the course examines the multifarious coast-hinterland relationships. The readings are organized by a chronological order, which begins with the historical maritime silk road between the third and thirteenth centuries, and will be followed by Asian port cities in the European age of empire and postwar American-led Cold War Structure, as well as the present-day Chinese New Silk Road Diplomacy. Students are expected to select an issue of regional tensions and to analyze its historical root.

AS.230.445. Sociology of Religion. 3 Credits.
This seminar tackles major issues in the classical and contemporary sociology of religion. We begin with Ibn Khaldun, Friedrich Nietzsche, Karl Marx, Max Weber, Émile Durkheim, and Mary Douglas, asking basic questions: What are religion and the sacred? Why do they exist? What is the relationship between religion and social structure? And what role does religion play in morality, solidarity, boundaries, exploitation, patriarchy, and macrohistorical transformations such as the rise of capitalism? Keeping this theoretical grounding (and its flaws and biases) in mind, we continue to probe the problem of religion in modernity through more-recent writings. Topics include the secularization debate (Are modernity and religion antithetical?); “religious markets” and rational-choice theories of religion; religious revivalism, evangelicalism, fundamentalism, and proselytizing movements; feminist and queer sociologies of religion; civil religion (Is standing for the national anthem a religious act?); embodiment and prayer; Orientalism and postcolonial interrogations of the secular; religious violence and nationalism; the intersectionality of religion with race, class, and caste; and religion and neoliberalism. Although dominant sociologies of religion have focused on Christianity in Western Europe and North America, this course applies a global lens, training significant focus on non-Western and non-Christian contexts.
Area: Writing Intensive

AS.230.465. Labor in the World System. 3 Credits.
This is an intensive reading seminar on working class formation from a comparative, historical and global perspective, including theoretical and empirical (case study) readings on changes over time in labor process, labor markets, and labor movements. We will build on a range of local case studies to establish spatial and temporal patterns, and discuss the connections between these global patterns and the dynamics of historical capitalism.
Area: Writing Intensive

Study of Women, Gender, & Sexuality

AS.363.301. Feminist and Queer Theory. 3 Credits.
This course will encourage encounters with a number of concepts from a critical gendered perspective, including: sameness/difference, identity politics, race/gender, loyalty, security, queer ethics, and queerness in media.
Area: Writing Intensive

AS.363.302. Feminist and Queer Theory: Women in Western Thought an Introduction. 3 Credits.
Women in Western Thought is an introduction to (the history of) Western thought from the margins of the canon. The class introduces you to some key philosophical question, focusing on some highlights of women's thought in Western thought, most of which are commonly and unjustly neglected. The seminar will be organized around a number of paradigmatic cases, such as the mind/body question in Early Modern Europe, the declaration of the rights of (wo)men during the French revolution, the impact of slavery on philosophical thought, the MeToo debate and others. By doing so, the course will cover a range of issues, such as the nature of God, contract theory, slavery, standpoint epistemology, and queer feminist politics. Students will engage with questions about what a canon is, and who has a say in that. In this sense, Women in Western Thought introduces you to some crucial philosophical and political problems and makes you acquainted with some women in the field. The long term objective of a class on women in Western thought must be to empower, to inspire independence, and to resist the sanctioned ignorance often times masked as universal knowledge and universal history. People of all genders tend to suffer from misinformation regarding the role of women and the gender of thought more generally. By introducing you to women who took it upon themselves to resist the obstacles of their time, I am hoping to provide role models for your individual intellectual and political development. By introducing you to the historical conditions of the exclusion and oppression of women (including trans and queer women as well as black women and women of color), I hope to enable you to generate the sensitivities that are required to navigate the particular social relations of the diverse world you currently inhabit. By introducing philosophical topics in this way, I hope to enable you to have a positive, diversifying influence on you future endeavours.
Area: Writing Intensive

AS.363.330. Ecofeminist Debates: Gender and Sexuality Beyond the Global West. 3 Credits.
This course develops an interdisciplinary and comparative approach to introduce students to ecofeminism through a special focus on its inflections in non-western contexts. Through class discussions and sustained writing engagement, we will develop an understanding of the history of ecofeminism, including theoretical debates linking gender perspectives with political mobilization, as well as ecofeminism's enduring influence on new intellectual and political movements.

International Studies, Bachelor of Arts

International Studies Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

Students considering a major in International Studies should begin introductory courses required of the major early in their college careers. Choices may include AS.180.101 Elements of Macroeconomics, AS.180.102 Elements of Microeconomics, the appropriate level of a foreign language, and one of the designated Gateway courses.

The international studies major is comprised of three main components:

- Foreign language study
- Courses in history, political science, and economics
- A focus area of the student's choosing

In addition, students must earn a grade of C- or better in all courses applied towards major requirements and courses may not be taken satisfactory/unsatisfactory. Students must also complete at least 5 courses at the 300 level or higher within the history, political science, and/or economics components of the major. This excludes courses used to fulfill the language requirement and focus area.

Foreign Language

Language proficiency through the second semester of the advanced/third-year level is required. If students have proficiency above the advanced/third-year level, they must take either: Option (A), two semesters of upper level literature or culture courses offered by the language departments and taught in the language of proficiency, or Option (B), take two semesters of another language. Waivers indicating advanced level/third-year language proficiency must be documented in the student's official academic record in order for a student to be eligible to complete Option A or B. To receive these waivers, students should contact the Center for Language Education or the Department of Modern Languages & Literatures to complete a proficiency exam on campus.

Core Courses

Courses fulfilling the specific requirements below are listed on the International Studies website (http://krieger.jhu.edu/internationalstudies/courses/).

- One Gateway course: AS.190.108 Contemporary International Politics, AS.190.111 Introduction to Global Studies , or AS.192.150 States, Regimes & Contentious Politics.
- One course in international relations (POS-Tag INST-IR)
- One course in American politics (POS-Tag INST-AP)
- Two courses in comparative politics (POS-Tag INST-CP)
- One course in political theory (POS-Tag INST-PT)
- Five courses in global history (identified by the POS-Tag INST-GLOBAL on the course description in the schedule of classes).
- Four courses in economics. Two courses must be AS.180.101 Elements of Macroeconomics and AS.180.102 Elements of Microeconomics. One must be an internationally-oriented course identified by the POS-Tag INST-ECON on the course description in the schedule of classes. The final course may be of the students' choosing from courses offered in the Economics Department at Johns Hopkins University. Both the Elements courses should be completed by the end of the sophomore year.

Focus Area Specialization

Every major in International Studies selects a specialization area, which consists of four courses within a coherent field of interest. Specialization fields may be organized in terms of area (e.g., Latin America, East Asia), theme (e.g., security studies, international economics), or language (e.g., Chinese, Spanish). These courses may not overlap with other requirements of the major.

Major Requirements

Code	Title	Credits
Foreign Language Study		
Two courses beyond the intermediate level or, if proficient based on exam, two additional language courses		6-10

Gateway Course		
AS.190.108	Contemporary International Politics	3
or AS.190.111	Introduction to Global Studies	
or AS.192.150	States, Regimes & Contentious Politics	
Political Science Courses		
One international relations course		3
One American politics course		3
Two comparative politics courses		6
One political theory course		3
Economics Courses		
AS.180.101	Elements of Macroeconomics	3
AS.180.102	Elements of Microeconomics	3
One AS.180.xxx course		3
One approved internationally-focused economics course [1]		3
History Courses		
Five global history courses with the POS-Tag INST-GLOBAL		15
Focus Area		
Four courses within a coherent field of interest		12
Total Credits		**63-67**

1. Approved internationally-focused economics courses are listed each semester on the International Studies website and can be identified by the POS-Tag INST-ECON on the course description in the schedule of classes.

Sample Plan of Study

Note: The plan below assumes the student begins language study at the Elements/First-Year level. Not displayed on the plan below is the requirement that at least 5 courses be taken at the 300 level or higher within the history, political science, and/or economics components of the major. This excludes courses used to fulfill the language requirement and focus area.

Course	Title	Credits
First Year		
First Semester		
AS.180.101	Elements of Macroeconomics	3
AS.190.108	Contemporary International Politics (or other gateway course)	3
History course (INST-GLOBAL)		3
Foreign language		4
	Credits	**13**
Second Semester		
AS.180.102	Elements of Microeconomics	3
Foreign language		4
Comparative politics (INST-CP) course		3
	Credits	**10**
Second Year		
First Semester		
Foreign language		3
International relations (INST-IR) course		3
AS.180.xxx Economics course		3
History course (INST-GLOBAL)		3
	Credits	**12**
Second Semester		
Foreign language		3
Political theory (INST-PT) course		3
Focus area course		3
	Credits	**9**
Third Year		
First Semester		
Foreign language		3
American politics (INST-AP) course		3
History course (INST-GLOBAL)		3
	Credits	**9**
Second Semester		
Foreign language		3
Comparative politics (INST-CP) course		3
Internationally-focused economics course (INST-ECON)		3
	Credits	**9**

First Semester		
Focus area course		3
Focus area course		3
History course (INST-GLOBAL)		3
	Credits	**9**
Second Semester		
Focus area course		3
History course (INST-GLOBAL)		3
	Credits	**6**
	Total Credits	**77**

Double-Major and Major-Minor Programs

Students may pursue one of International Studies' unique double-major or major-minor programs. These are offered in conjunction with affiliated departments and allow students to concentrate their course of study within a specific department or program while simultaneously benefiting from the interdisciplinary training offered by the International Studies major.

Students pursuing a double-major program will receive a major in International Studies as well as a major in the affiliated department or program. For example, students pursuing the Global Social Change and Development track will receive a double major in International Studies and Sociology. The student will have a faculty advisor from the affiliated department or program as well as an advisor in International Studies.

Students pursuing a major-minor program will receive a major in International Studies and a minor in the affiliated department or program (e.g., students pursuing the Global Italy track will receive a minor in Italian Studies) and benefit from a faculty advisor in the affiliated department or program.

Successful completion of an approved double-major or major-minor program will satisfy the International Studies major's focus area requirement.

Senior Thesis and Honors in the Major

International Studies majors also have the opportunity to write a senior thesis. A senior thesis is an extended original research project written under the supervision of a faculty advisor during the student's senior year. Thesis projects are best suited for students who have an interest in exploring a specific question and/or a field of knowledge beyond their previous course work. Students may complete a senior thesis regardless of GPA; however, those students with a 3.7 GPA (or above) in their International Studies major coursework, and who complete a senior thesis that is internationally-focused, will be eligible for honors in International Studies. Theses completed for any of the major's affiliated departments may be used to earn honors both in that departmental major and in International Studies.

Study Abroad

Studying abroad is especially valuable for International Studies majors. JHU encourages all IS majors to spend one or both semesters of their junior year abroad. International Studies sponsors a number of study abroad programs designed for IS majors and administers them in collaboration with the Office of Study Abroad.

The Junior Year or Semester Abroad at SAIS Europe, offered through the Bologna, Italy campus of the Paul H. Nitze School of Advanced International Studies (SAIS), allows motivated International Studies majors to spend all or part of their junior year taking graduate level classes. Students who spend their junior year or a semester in Bologna and subsequently apply for graduate studies at SAIS will receive advanced credit at SAIS for part of their work.

A similar exchange program with the French political science institute Sciences Po allows students to spend a semester or a year studying at one of Sciences Po's seven regional campuses: Paris, Menton, Reims, Poitiers, Le Havre, Nancy, or Dijon. Courses are offered in English as well as French and thus are open to students regardless of their knowledge of French. One of Europe's most prestigious universities, Sciences Po has a strong international focus and allows students to develop a cross-cultural and transatlantic perspective, while simultaneously offering unique access to the field of international affairs.

Additionally, the Office of Study Abroad offers a wide range of study abroad opportunities across the globe tailored to students' specific interests.

BA/MA Programs for International Studies Majors

The International Studies Program offers two BA/MA options for its undergraduates, one with the Johns Hopkins Paul H. Nitze School of Advanced International Studies (SAIS) (p. 846) in Washington, DC and the other at the renowned French political science institute Sciences Po (https://krieger.jhu.edu/internationalstudies/bama-programs/bama-program-with-sciences-po-paris/) in Paris. Admission to both programs is restricted to current Johns Hopkins University undergraduate International Studies and Political Science majors (Note: East Asian Studies majors may apply to the Nanjing, China campus for the BA/MA program with SAIS) and is based on strong academic performance, a high level of maturity, and a demonstrated interest in international affairs. See the program page for more information.

International Studies Five-Year Accelerated B.A./M.A. Program with Sciences Po

Five-Year Accelerated B.A./M.A. Program with Sciences Po

Students may apply to participate in a five-year accelerated B.A./M.A. program with Sciences Po, one of Europe's finest schools of political science. The B.A./M.A. Program is aimed principally at students who are interested in international affairs and who would like to develop their intellectual and professional capabilities from an international and multidisciplinary perspective. After the junior year, students spend two years at Sciences Po's Paris campus completing graduate-level coursework at the Paris School of International Affairs (PSIA), which houses the majority of Sciences Po's internationally-oriented master's programs. PSIA is a bilingual institution, thus students may choose to pursue either an English or French track. Students may also elect to pursue a master's degree at the School of Journalism, School of Communication, or School of Law. Students interested in an academic career may also choose to pursue a research master's with the Doctoral Program at Sciences Po. Students who are not proficient in French will also pursue French language training during their course of study.

Applicants follow an application and review process similar to the one for the SAIS BA/MA program in spring of the sophomore year. Students pay tuition to Johns Hopkins for the first year in Paris and to Sciences Po for the second. Financial aid from Johns Hopkins continues only through the end of a student's fourth year.

Progress toward the B.A./M.A. Degree

Students in the Sciences Po BA/MA program spend their first three years at the Homewood campus and the last two at Sciences Po. Students receive the B.A. degree at the end of their first year at Sciences Po and the M.A. at the end of their second year.

Students selected for the accelerated program may study abroad during their Homewood years on a case by case basis and should discuss their plans with the International Studies Program Director before submitting an application to the Office of Study Abroad.

International Studies Five-Year Accelerated B.A./M.A. Program with the Paul H. Nitze School of Advanced International Studies (SAIS)

Five-Year Accelerated B.A./M.A. Program with the Paul H. Nitze School of Advanced International Studies (SAIS)

For students wishing to pursue a master's degree after graduation from Hopkins, the university offers an accelerated and competitive International Studies B.A./M.A. Program drawing upon its resources at SAIS, located in Washington, D.C. Combining a liberal arts curriculum with a strong specialization in international studies, the program allows those enrolled to receive the B.A. and M.A. degrees in five years instead of the usual six.

Admission is limited to those students majoring in International Studies, Political Science or East Asian Studies (Nanjing, China campus only) and who are highly motivated toward careers for which a background in international studies is essential: research, teaching, or practice in international affairs. Financial assistance is available to those admitted based on need and on academic achievement. For more information go to http://krieger.jhu.edu/internationalstudies/bama-programs/bama-program-with-sais/.

Students admitted to SAIS through the Direct Matriculation Program (DMP) may be subject to additional requirements. https://apply.jhu.edu/apply/direct-matriculation-programs/

Progress toward the B.A./M.A. Degree

Students in the SAIS BA/MA program spend their first three years at the Homewood campus and the last two at SAIS. Students receive the B.A. degree at the end of their first year at SAIS and the M.A. at the end of their second year.

Students selected for the accelerated program may study abroad during their Homewood years on a case by case basis and should discuss their plans with the International Studies Program Director before submitting an application to the Office of Study Abroad.

Islamic Studies

https://krieger.jhu.edu/islamic/

The Islamic Studies Program meets the need for accurate and rigorous knowledge of a religious tradition that has shaped countless aspects of human history and culture, stands at the center of political and cultural debates in the United States, and yet continues to be examined reductively in the public square. The multidisciplinary minor in Islamic Studies provides the intellectual training to approach Islam - and the world - in a historically and culturally informed manner, challenging stereotypes while exploring the diversity, complexity, and creativity of Islam and Muslim communities world-wide. Special community-engaged courses also offer experiential opportunities in and around Baltimore that introduce students to lived religion and encourage self-awareness, critical consciousness, and sustained connections with organizations and communities in the city.

Programs

- Islamic Studies, Minor (p. 1942)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.194.102. Islamic Pasts in the Contemporary World. 3 Credits.
This course will focus on the intellectual and cultural legacies of "Islamic pasts." It has been argued by scholars that Islam is not only a religion but a "civilization" with identifiable sensibilities, overlapping histories, and temporalities. This civilization once spread from the Atlantic coast of Africa to the Indian subcontinent and beyond, but regimes and dynasties have changed hands in many of these places, while remaining in place in others. What remains of Islamic pasts in places where Islam once reigned supreme but has either vanished, been reduced to minority status, or repressed in ongoing political projects? This course examines lost Islamic pasts in the contemporary world, using readings from anthropology, history, literature, and poetry. As the basis of this course, we will read four texts in their entirety focusing on four different geographic points of interest—Spain, India, the Balkans, and Palestine.

AS.194.105. Islam and its Cultural and Religious Diversity, 600-1600. 3 Credits.
While media often present Islam as a fairly univocal and compact cultural and religious system, news reports about tensions, hostility and at times open conflict within the Islamic world itself are frequent. Unity and internal diversity characterize Islam nowadays and have historical roots that have deeply shaped Islam since its very inception.This course will explore the historical origins of the dynamics of unity and diversity in Islam from the predication of Muhammad and the expansion of the first caliphate, to the formation of the Ottoman, Safavid and Mughal empires. By focusing on the historical events and the cultural production of the first millennium of Islam, this course will offer a thorough historical introduction to its cultural and religious complexity.

AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the "other." The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.

AS.194.202. Never Forget: Muslims, Islamophobia, and Dissent after 9/11. 3 Credits.
In partnership with the social justice organization Justice for Muslims Collective, this community-engaged course and oral history project will explore how diverse Muslim communities navigated and contested belonging and political and cultural agency amidst state-sponsored violence and national debates on race, gender, citizenship and national security after 9/11 and during the ongoing War on Terror. Through history, ethnography, first-person narratives, film, fiction, and online resources, students will learn about the impact of 9/11 on American Muslim communities. This includes cultural and political resistance to imperialism, racism, and Islamophobia as well as to intersectional inequities within Muslim communities that were intensified in the context of Islamophobia. Students will learn about community activism and organizing from JMC, and complete a participatory action research project with the organization. This project is an oral history archive that will address gaps in the documentation of movement histories when it comes to early organizing against War on Terror policies by Muslim communities and communities racialized or perceived as Muslim. Students will be trained to record stories of resistance among leaders who organized and responded at the local and national-level in the Greater Washington region, to support the building of an archive that will shape a wide variety of future organizing and advocacy efforts.

AS.194.205. Islamic Mysticism: Traditions, Legacies, Politics. 3 Credits.
For over a thousand years, the Sufi tradition has been a dynamic force in Islamic social, political and spiritual life. The tradition offers a treasure trove of devotional literature and music, philosophical treatises, contemplative practices, and institutions of social and political organization. After unpacking the politics of the term “Sufi,” we will trace the historical development of the tradition from the early ascetics in Iraq and Syria to the age of trans-national Sufi orders, with case studies from South Asia, Turkey, and the United States. We will then move into some of the key constructs of the tradition of spiritual growth and character formation: the divine-human relationship, the stages of the spiritual path, contemplative and practical disciplines, ideas of sainthood, discipleship and ethical perfection, and the psychology of love. Throughout the class, we will explore the nature of experiential language and interrogate the tradition through the lens of gender. We will also experience Sufism through ritual and music.

AS.194.210. Race, Gender, Citizenship: Being Muslim in America. 3 Credits.
This course explores how American Muslims navigate and contest complex notions of belonging in the context of national conversations on race, gender, citizenship, and national security. With a focus on specific case studies that range from Black Muslim movements of the early twentieth century to the ongoing War on Terror, the course adds complexity to the public conversation on what it means to be Muslim - and what it means to be American. We will draw on history, ethnography, first-person narratives, films, blogs, documentaries and fiction. As a Community Engaged course, the class will include site visits and learning with and from Muslim communities in Baltimore.

AS.194.220. The Qur’an: Text and Context. 3 Credits.
For 1400 years, the Qur’an has played a central role in Muslim intellectual, spiritual, artistic and ritual life. This course will explore the sacred scripture of Islam through its foundational ideas, history of the text and thematic development, literary style, history and methods of interpretation, and role in Muslim spiritual and ritual life. We will also explore how the Qur’an weaves through literature, music and the visual arts.

AS.194.230. African-Americans and the Development of Islam in America. 3 Credits.
Muslims have been a part of the American fabric since its inception. A key thread in that fabric has been the experiences of enslaved Africans and their descendants, some of whom were Muslims, and who not only added to the dynamism of the American environment, but eventually helped shape American culture, religion, and politics. The history of Islam in America is intertwined with the creation and evolution of African American identity. Contemporary Islam in America cannot be understood without this framing. This course will provide a historical lens for understanding Islam, not as an external faith to the country, but as an internal development of American religion. This course will explicate the history of early Islamic movements in the United States and the subsequent experiences of African-Americans who converted to Islam during the first half of the twentieth century. We will cover the spiritual growth of African American Muslims, their institutional presence, and their enduring impact on American culture writ large and African-American religion and culture more specifically.

AS.194.305. Cultures of Pilgrimage in Islam. 3 Credits.
The hajj pilgrimage to Mecca is one of the pillars of Islam. But Muslims around the world also take part in many other pilgrimages, from the massive annual Shi’a pilgrimage to Karbala to the smaller ziyarat “visits” to Sufi saint shrines, to travel to centers of Islamic learning, to pilgrimage to isolated natural features like mountains, trees, valleys. What are the theologies that propel the act of travel in Islam? How are cities, architectures, economies shaped by these cultures? And how are these traditions affected by the wars and colonial projects that plague many Muslim-majority countries in the contemporary world? Readings in this course will draw from anthropology, philosophy, Islamic interpretive texts (tafsir), and travelogues.
Area: Writing Intensive

AS.194.401. Themes in Medieval Islamic Thought. 3 Credits.
This seminar examines medieval Muslim thinkers who addressed themes at the intersection of theology, philosophy, science, and ethics: the definition of the nature of God’s attributes, His uniqueness, transcendence and omnipotence; human freewill and the limits of human knowledge; the nature of the world; and the relationship among reason, religion, and science. The course will look at how these and other crucial themes were addressed by major medieval philosophers and philosophical schools not only in Islam, but also in Judaism and Christianity, and highlight similarities and differences among the three major monotheistic faiths.

AS.194.502. Independent Study. 3 Credits.
Approval Required
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

Cross Listed Courses

Anthropology

AS.070.267. Culture, Religion and Politics in Iran. 3 Credits.
This is an introductory course for those interseted in gaining basic knowledge about contemporary Iran. The focus will be on culture and religion and the ways they in which they become interwoven into different kinds of political stakes.
Area: Writing Intensive

AS.070.465. Concepts: How to Read Hindu and Islamic Texts. 3 Credits.
What is the nature of anthropological concepts and what relations do they bear to concepts internal to a society? We invite students to think with key ideas from Hindu and Islamic traditions, asking if anthropological concepts are best seen as abstractions from the particular or as intertwined with ongoing lines of inquiry, say into the nature of the real and continual efforts to test it? Topics in ritual theory, grammar, aesthetics, translation, revelation, luminosity, figuration and the mythological among those to be considered.
Area: Writing Intensive

Center for Language Education

AS.375.115. First Year Arabic. 5 Credits.
Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of studyNo Satisfactory/ Unsatisfactory

AS.375.116. First Year Arabic II. 4 Credits.
Continuation of AS.375.115. Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. May not be taken Satisfactory/ Unsatisfactory
AS.375.115 or instructor permission

AS.375.215. Second Year Arabic. 4 Credits.
Designed to bring students up to competency level required for third/ fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material--written, audio, and visual--will be used, and culture will be further expanded on as a fifth skill. Recommended Course Background: AS.375.115-116 or equivalent.
AS.375.116 or equivalent

AS.375.216. Second Year Arabic II. 4 Credits.
Continuation of AS.375.215. Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material--written, audio, and visual--will be used, and culture will be further expanded on as a fifth skill. Recommended Course Background: AS.375.215 or permission required.
AS.375.215 or instructor permission

AS.375.301. Third Year Arabic. 3 Credits.
Designed to enhance students' ability to read, discuss, and write about various topics covered in traditional and contemporary Arabic texts. Recommended Course Background: AS.375.216 or equivalent.
AS.375.116 or instructor permission

AS.375.401. Fourth Year Arabic. 2 Credits.
This is an introductory course to different periods of the Arabic literature. Selections of famous Arabic poetry and short prose works are the substance of the course.
AS.375.302 or equivalent

AS.375.402. Fourth Year Arabic II. 3 Credits.
This is an introductory course to different periods of the Arabic literature. Selections of famous Arabic poetry and short prose works are the substance of the course. Continuation of AS.375.401. Recommended Course Background: AS.375.302 or equivalent.
AS.375.401 or equivalent.

First Year Seminars

AS.001.183. FYS: What Does It Mean to Be Religious? Creativity, Experience, and the Individual. 3 Credits.
What do we mean when we say that something or someone is "religious?" Our First-Year Seminar unpacks this question through a comparative approach, and pays special attention to the ways in which this term has been applied to the study of Islamic cultures and Muslim experience. Through an exploration of the categories of experience, creativity and the individual, we offer a less presumptuous and more open-ended way of imagining the many things it may mean to be religious.

History

AS.100.327. The Islamic Age of Empires. 3 Credits.
In this course we will survey the political, social, intellectual, and cultural history of the three Islamic early modern gunpowder empires that ranged from "the Balkans to Bengal": The Ottomans (1300-1922), the Safavids (1501-1736), and the Mughals (1526-1858).
Area: Writing Intensive

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.

AS.100.383. Conversion and Apostasy in the Middle Ages. 3 Credits.
Compares religious transformation in medieval Europe and the Middle East (ca. 600-1500), including conquest and conversion; conversion narratives; apostasy, martyrdom and other encounters between medieval Jews, Christians, and Muslims. Pre-requisite for enrollment: Students must have taken one history course.

AS.100.387. Everyday Life in the Medieval Middle East. 3 Credits.
Explores the daily lives of non-elites in the medieval Middle East—food; housing; clothes; marriage and divorce; urban festivals—through primary documents (e.g. letters, court records) and artifacts (e.g. clothing).Pre-requisite for enrollment: Students must have taken one history course.

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, "virgins" in paradise, the sexual slavery of Yazidi women…. This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Writing Intensive

AS.100.438. The City Victorious: Medieval Cairo. 3 Credits.
What was medieval Cairo like? Students explore urban life in this imperial capital (969-1517), including food and market habits; relations between Jews, Christians, and Muslims; patronage; plague, drought, and famine.Pre-requisite for enrollment: Students must have taken two history courses.

History of Art

AS.010.103. Introduction to the Art of Asia. 3 Credits.
A survey of the art and architecture of Asia, from the ancient world to the present and including the Indian subcontinent, China, Japan, Korea, and Southeast Asia.

AS.010.110. Art of the Islamic World. 4 Credits.
This course is an introduction to the art of the Islamic world, covering a geography that stretches from Spain to India and a chronology that extends from the seventh century into our own time. Within this rich and varied continuum, we will look at a range of art forms—including architecture, painting, sculpture, ceramics, and calligraphy—in relation to such themes as patronage, production, function, and audience. A number of the artworks will be viewed firsthand in local collections. We will also explore the intersection of Islamic art with today's political realities.

AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
The course focuses on art and architecture in the political and religious contexts of the Middle East, from the 4th to the 14th c. The three monotheistic religions all claimed specific territories -- in particular the city of Jerusalem -- for cult practices. This situation resulted in military conflicts that had an impact of Jewish, Medieval, Byzantine, and Islamic art in the Holy Land. The political conflicts, which still plague the region today, are rooted in the complex situation of the medieval period. The Roman, Arab, Byzantine, and crusader invasions resulted however in exciting eclectic styles that characterize the art and architecture of the region. We will discuss concepts behind political and religious leadership, as they intersect with the power of the arts.
Area: Writing Intensive

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire's formative centuries, when three successive capital — Bursa, Edirne, and Istanbul — served to visualize the sultans' growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.

AS.010.338. Art and the Harem: Women's Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem —as an institution, a physical space, and a community of women— from various art-historical perspectives, considering such topics as the harem's architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem's visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.

AS.010.352. Modern and Contemporary Art: Middle East and South Asia. 3 Credits.
This course will explore modern and contemporary art in colonial and postcolonial contexts from Bangladesh to northern Africa. How do artists negotiate demands to support their national and local identities while participating in modernism across borders? What role do secularism and spirituality have in modern art? How do anticolonial, Marxist, and feminist politics shape art in these regions? How do global economic forces and the rise of powerful collectors, private museums, and international art fairs shape art and artists working across this geographic area? We will foreground the role of women as artists, collectors, patrons, and scholars throughout.
Area: Writing Intensive

AS.010.423. Modern and Contemporary Art in South Asia. 3 Credits.
How does modernism operate in the colonial context, work with and against the nationalisms of new countries (India, Pakistan, Sri Lanka, Nepal, and Bangladesh), challenge existing norms of the art world and the art market, engage with the difficult and violent upheavals of Partition and sectarian conflict, and allow for experimentations and new forms all the while? This course will explore the history of the art of the subcontinent from c. 1880 to the present by critical engagement with the art, artists, and theories at play in the South Asian region.
Area: Writing Intensive

AS.010.440. Power Dressing: The Politics of Costume between the Ottoman Empire and the West. 3 Credits.
In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—how one dressed was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire's long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums —books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-century dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world's fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.
Area: Writing Intensive

AS.010.451. Script, Character, Scribble: Writing and Pseudo-Writing in Modern and Contemporary Art. 3 Credits.
Almost readable, but not quite: artists in the twentieth and twenty-first century played with script of all kinds, from ancient glyphs and Persian script to Roman typefaces and Korean Hangul. Artists also scribbled in ways that evoke writing without script or meaning. This course takes on the question of meaning-making in art through the form of script—flirting with that tantalizing feeling that we can almost read the work of art through the marks on its surface. We will engage with artists from around the world whose work grapples with knowledge, meaning, and script, and discuss the limits and possibilities of legibility, knowing, and language. In addition to painting and drawing, we will also discuss conceptual art, installation, video, architecture, tapestry, ceramics, graphic novel forms, book arts, and sculpture. We will have opportunities to situate these works within longer histories of script and pseudo-script and image-text relations. Our discussion-driven seminars will be guided by readings in art history and theory. The course carries no expectation that you are multi-lingual or have experience with multiple scripts. Central to our semester will be group trips to see art in person in DC and Baltimore. Assignments include an option for short, focused writing with feedback and opportunities to experiment with genre and to rewrite, or a longer seminar paper, chosen in consultation with the professor.
Area: Writing Intensive

AS.010.631. Performing Power: Ceremonial, Diplomacy, and Gift-Giving in and beyond the Ottoman Empire.
As a major global power straddling three continents, the Ottoman Empire developed a rich and diversified ceremonial culture aimed at impressing local and international audiences alike. This seminar will explore the ways in which works of art and architecture provided settings and apparatus for, and were themselves shaped and enlivened by, the ceremonial acts in which they featured. Covering the period between the sixteenth and nineteenth centuries, we will address a range of case studies—including mosque inaugurations, royal processions, the reception of foreign ambassadors, and the exchange of diplomatic gifts—with regard to their sociopolitical, visual, material, and spatial contexts. A major concern of the seminar will be the question of how Ottoman ceremonies, together with their staging and attendant art forms, were adapted in response to changing conditions and audiences, particularly with the shift from the early modern to the modern period. While our focus will be on the Ottoman Empire, the course will also consider the ceremonial cultures of the various Asian and European polities with which the Ottomans interacted, investigating the points of comparison and contrast that defined these multifarious but connected interregional approaches.

AS.010.662. Script, Character, Scribble: Writing and Pseudo-Writing in Modern and Contemporary Art.
Almost readable, but not quite: artists in the twentieth and twenty-first century played with script of all kinds, from ancient glyphs and Persian script to Roman typefaces and Korean Hangul. Artists also scribbled in ways that evoke writing without script or meaning. This course takes on the question of meaning-making in art through the form of script—flirting with that tantalizing feeling that we can almost read the work of art through the marks on its surface. We will engage with artists from around the world whose work grapples with knowledge, meaning, and script, and discuss the limits and possibilities of legibility, knowing, and language. In addition to painting and drawing, we will also discuss conceptual art, installation, video, architecture, tapestry, ceramics, graphic novel forms, book arts, and sculpture. We will have opportunities to situate these works within longer histories of script and pseudo-script and image-text relations. Our discussion-driven seminars will be guided by readings in art history and theory. The course carries no expectation that you are multi-lingual or have experience with multiple scripts. Central to our semester will be group trips to see art in person in DC and Baltimore. Assignments include an option for short, focused writing with feedback and opportunities to experiment with genre and to rewrite, or a longer seminar paper, chosen in consultation with the professor.
Area: Writing Intensive

History of Science, Medicine, and Technology

AS.140.301. History of Science: Antiquity To Renaissance. 3 Credits.
The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted.
Area: Writing Intensive

Near Eastern Studies

AS.130.364. Archaeology of Arabia. 3 Credits.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.131.664.

AS.131.664. Archaeology of Arabia.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.130.364.

Political Science

AS.190.394. Comparative Politics of the Middle East and North Africa. 3 Credits.

This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors.

Sociology

AS.230.367. Islamic Finance. 3 Credits.

Today, Islamic finance is a global industry comprising nearly $3 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on usury in Islam and other religious and philosophical traditions, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.

AS.230.445. Sociology of Religion. 3 Credits.

This seminar tackles major issues in the classical and contemporary sociology of religion. We begin with Ibn Khaldun, Friedrich Nietzsche, Karl Marx, Max Weber, Émile Durkheim, and Mary Douglas, asking basic questions: What are religion and the sacred? Why do they exist? What is the relationship between religion and social structure? And what role does religion play in morality, solidarity, boundaries, exploitation, patriarchy, and macrohistorical transformations such as the rise of capitalism? Keeping this theoretical grounding (and its flaws and biases) in mind, we continue to probe the problem of religion in modernity through more-recent writings. Topics include the secularization debate (Are modernity and religion antithetical?); “religious markets” and rational-choice theories of religion; religious revivalism, evangelicalism, fundamentalism, and proselytizing movements; feminist and queer sociologies of religion; civil religion (Is standing for the national anthem a religious act?); embodiment and prayer; Orientalism and postcolonial interrogations of the secular; religious violence and nationalism; the intersectionality of religion with race, class, and caste; and religion and neoliberalism. Although dominant sociologies of religion have focused on Christianity in Western Europe and North America, this course applies a global lens, training significant focus on non-Western and non-Christian contexts.
Area: Writing Intensive

Study of Women, Gender, & Sexuality

AS.363.329. Gender and Sexuality Beyond the Global West: Gender and Sexuality in Contemporary Art in North Africa and the Middle East. 3 Credits.

This course aims to explore how gender and sexuality is situated in contemporary artistic practices in the geographical Middle East, through concepts of religion, war, revolution, resistance, nation-state, post-colonialism, and neoliberalism, especially as written and observed first-hand by artists, curators and scholars from the Middle East and North Africa region and their diasporas. Every week, under an overarching topic, notions of gender and sexuality will be questioned through works of selected artists across the region, as well as texts that provide the historical, theoretical, sociological and political background.
Area: Writing Intensive

Islamic Studies, Minor

Islamic Studies Minor Requirements

The Islamic Studies Program meets the need for accurate and rigorous knowledge of a religious tradition that has shaped countless aspects of human history and culture, stands at the center of political and cultural debates in the United States, and yet continues to be examined reductively in the public square. The multidisciplinary minor in Islamic Studies provides the intellectual training to approach Islam - and the world - in a historically and culturally informed manner, challenging stereotypes while exploring the diversity, complexity, and creativity of Islam and Muslim communities world-wide. Special community-engaged courses also offer experiential opportunities in and around Baltimore that introduce students to lived religion and encourage self-awareness, critical consciousness, and sustained connections with organizations and communities in the city.

The minor in Islamic Studies is open to all undergraduates regardless of major. All courses must be taken for letter grades and receive a grade of C- or higher. To count toward the minor, courses must, as a general rule, be worth three credits or more. Exceptions require the approval of the Director of Undergraduate Studies for the Program in Islamic Studies. Courses directly equivalent to JHU courses taken at other universities may count towards requirements; however non-direct equivalent external courses must be approved by the department's director of undergraduate studies. In all cases, at least four of the six required Islamic Studies courses required of the minor must be taken at JHU.

Code	Title	Credits
Courses [1, 2]		
Four Islamic studies elective courses at any level		12
Two Islamic studies elective courses at the 300 level or above		6
Total Credits		**18**

1. To complete the minor, students must complete both six courses *and* earn at least 18 credits. This is true even though some language courses count for more than three credits per semester (e.g., 4.5 credits).
2. A maximum of two of these courses may be language courses at any level. Languages can include: Arabic (which is offered at Homewood), Persian (which is offered at the School of Advanced International Studies [SAIS] in Washington, DC), Bahasa Indonesia (also offered at SAIS), Bahasa Malaysia, Bengali, Hausa, Punjabi, Turkish, and

Urdu. Additional languages may be approved by the Director of Undergraduate Studies.

Jewish Studies

http://krieger.jhu.edu/jewishstudies/

The Leonard and Helen R. Stulman Jewish Studies Program was founded in 2002 to coordinate the many academic activities at Johns Hopkins dedicated to the study of Jewish history, literature, language, philosophy, politics, and religion. The program gives students the opportunity to explore over three millennia of Jewish culture, ranging from ancient Israel to the present. The Stulman Program sponsors visiting professors and course offerings in a wide variety of disciplines, awards undergraduate travel funds and graduate fellowships, and provides many opportunities for students, faculty, and the general public to participate in a wide range of lectures, conferences, and other special events.

The program offers a minor to students interested in the many dimensions of Jewish life, religion, and culture, from ancient times to the present. It will also interest students who wish to study cultures and civilizations in which thinking about Jews and Judaism played an important role, that is, students interested in Christianity, Islam, or the culture of global modernity. Because of its interdisciplinary nature, the Jewish studies minor offers students access to a broad array of humanities and social sciences disciplines. It therefore serves as a good complement to many majors, as well as providing indispensable intellectual training to anyone interested in Jewish professional life.

For current faculty and contact information go to http://krieger.jhu.edu/jewishstudies/people/

Jewish Studies, Minor

Jewish Studies Minor Requirements

The Jewish Studies minor requires a minimum of six courses (amounting to at least 18 credits) selected from those approved by the Advisory Committee of the Jewish Studies Program. The courses must be from at least two departments, and at least three must be upper-level courses (300-level or above). All courses applied towards the minor must be taken for a letter grade and a grade of C- or better must be earned. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies. In addition, only two courses with any single professor can be counted towards the minor.

The requirements for a minor in Jewish studies are as follows:

Code	Title	Credits
Jewish Studies Courses		
Three courses at any level		9
Three 300-level or higher courses		9
Total Credits		**18**

Students may take up to two courses in Hebrew or Yiddish language study to apply towards the minor requirements.

Mathematics

http://www.mathematics.jhu.edu/

Mathematics is a way of defining and solving problems by combining logic with insight, and by finding patterns and structure. At a most basic level, we use the abstract concept of “number” to understand what we observe, and we develop the method of “counting”; at a higher level, we use the language of “calculus” to understand motion, and we develop the methods of differentiation and integration. But mathematics is more than just computations with numbers and derivatives. Math is a way of thinking—an art that describes the abstract structure of logic, reason, and the scientific method.

The Undergraduate program in the Department of Mathematics is intended both for students interested in preparing for graduate study and research in pure mathematics, and for students interested in using mathematics to pose and solve problems in the sciences, engineering, social sciences, or other areas. Undergraduate mathematics majors and minors will study:

- The foundations of analysis, which begins with the study of functions and their derivatives and integrals
- The fundamentals of advanced algebra, which is based on axiomatic systems involving operations of addition and multiplication in general settings
- Additional subjects such as geometry, probability, and topology
- Applications of mathematics to science and/or engineering.

The graduate program is designed primarily to prepare students for research and teaching in mathematics. It is naturally centered around the research areas of the faculty, which include algebraic geometry, algebraic number theory, data-intensive computation, geometric analysis, harmonic analysis, mathematical physics, partial differential equations, stochastic partial differential equations, and topology. The program can be supplemented in applied directions by courses in theoretical physics, computer science, mechanics, probability, and statistics offered in other departments of the Krieger School of Arts and Sciences and in the Department of Applied Mathematics and Statistics in the Whiting School of Engineering.

Facilities

The Mathematics Department resides in Krieger Hall on the Keyser Quad of the Homewood Campus. Adjacent to Krieger Hall, The University’s Milton S. Eisenhower Library has an unusually extensive collection of mathematics literature, including all the major research journals, almost all of which are also accessible electronically. The stacks are open to students. The department also has a useful reference library, the Philip Hartman Library. Graduate students share departmental offices, and study space can also be reserved in the university library. Graduate students may access the department’s Linux and Windows servers, as well as computers in graduate student offices. The department also hosts numerous research seminars, special lectures, and conferences throughout the academic year.

Programs

The Department of Mathematics offers Bachelor’s, Master’s, and Doctoral degrees across a variety of programs. Undergraduates can elect to pursue a major or minor in Mathematics; the major has an Honors designation available, as well as a four-year BA/MA program. Graduate students can pursue doctoral work in the department. We do not have a terminal Master's program at this time.

- Mathematics, Bachelor of Arts (p. 1953)
- Mathematics, Minor (p. 1955)
- Mathematics, Bachelor of Arts/Master of Arts (p. 1956)
- Mathematics, PhD (p. 1956)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.110.102. College Algebra. 3 Credits.
This introductory course will create a foundational understanding of topics in Algebra. An emphasis will be on applications to prepare students for future courses like Precalculus or Statistics. After a review of elementary algebra concepts, topics covered include: equations and inequalities, linear equations, exponents and polynomials, factoring, rational expressions and equations, relations and functions, radicals, linear and quadratic equations, higher-degree polynomials, exponential, logarithmic, and rational functions.

AS.110.105. Precalculus. 4 Credits.
This course provides students with the background necessary for the study of calculus. It begins with a review of the coordinate plane, linear equations, and inequalities, and moves purposefully into the study of functions. Students will explore the nature of graphs and deepen their understanding of polynomial, rational, trigonometric, exponential, and logarithmic functions, and will be introduced to complex numbers, parametric equations, and the difference quotient.

AS.110.106. Calculus I (Biology and Social Sciences). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Many applications to the biological and social sciences will be discussed.

AS.110.107. Calculus II (For Biological and Social Science). 4 Credits.
Differential and integral Calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Applications to the biological and social sciences will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Recommended Course Background: Grade of C- or Better in AS.110.106 or AS.110.108, or a 5 on the AP AB exam.

AS.110.108. Calculus I (Physical Sciences & Engineering). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor's theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.

AS.110.109. Calculus II (For Physical Sciences and Engineering). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor's theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines. Recommended Course Background: Grade of C- or Better in AS.110.106 or AS.110.108, or a 5 on the AP AB exam.

AS.110.113. Honors Single Variable Calculus. 4 Credits.
This is an honors alternative to the Calculus sequences AS.110.106-AS.110.107 or AS.110.108-AS.110.109 and meets the general requirement for both Calculus I and Calculus II (although the credit hours count for only one course). It is a more theoretical treatment of one variable differential and integral calculus and is based on our modern understanding of the real number system as explained by Cantor, Dedekind, and Weierstrass. Students who want to know the "why's and how's" of Calculus will find this course rewarding. Previous background in Calculus is not assumed. Students will learn differential Calculus (derivatives, differentiation, chain rule, optimization, related rates, etc), the theory of integration, the fundamental theorem(s) of Calculus, applications of integration, and Taylor series. Students should have a strong ability to learn mathematics quickly and on a higher level than that of the regular Calculus sequences.

AS.110.201. Linear Algebra. 4 Credits.
Vector spaces, matrices, and linear transformations. Solutions of systems of linear equations. Eigenvalues, eigenvectors, and diagonalization of matrices. Applications to differential equations.
Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113 OR AS.110.202 OR AS.110.302, or a 5 on the AP BC exam.

AS.110.202. Calculus III. 4 Credits.
Calculus of functions of more than one variable: partial derivatives, and applications; multiple integrals, line and surface integrals; Green's Theorem, Stokes' Theorem, and Gauss' Divergence Theorem.
Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113 OR AS.110.201 OR AS.110.212 OR AS.110.302, or a 5 or better on the AP BC exam.

AS.110.211. Honors Multivariable Calculus. 4 Credits.
This course includes the material in AS.110.202 with some additional applications and theory. Recommended for mathematically able students majoring in physical science, engineering, or especially mathematics. AS.110.211-AS.110.212 used to be an integrated yearlong course, but now the two are independent courses and can be taken in either order.
Grade of C- or better in (AS.110.201 or AS.110.212)

AS.110.212. Honors Linear Algebra. 4 Credits.
This course includes the material in AS.110.201 with additional applications and theory, and is recommended only for mathematically able students majoring in physical science, engineering, or mathematics who are interested in a proof-based version of linear algebra. This course can serve as an Introduction to Proofs (IP) course. Prerequisites: Grade of B+ or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam.
Area: Quantitative and Mathematical Sciences.
Grade of B+ or better in AS.110.107 or AS.110.109 or AS.110.113 or AS.110.202, or AS.110.302, or a 5 on the AP BC exam.

AS.110.225. Problem Solving Lab. 2 Credits.
This course is an introduction to mathematical reason and formalism in the context of mathematical problem solving, such as induction, invariants, inequalities and generating functions. This course does not satisfy any major requirement, and may be taken more than once for credit It is primarily used as training for the William Lowell Putnam Mathematics Competition. Area: Quantitative and Mathematical Sciences.

AS.110.275. Probability. 4 Credits.
This course follows the actuarial Exam P syllabus and learning objectives to prepare students to pass the SOA/CAS Probability Exam. Topics include axioms of probability, discrete and continuous random variables, conditional probability, Bayes' theorem, Chebyshev's Theorem, Central Limit Theorem, univariate and joint distributions and expectations, loss frequency, loss severity and other risk management concepts. Exam P learning objectives and learning outcomes are emphasized. Recommended Course Background: Calculus II
AS.110.107 OR AS.110.109

AS.110.276. Introduction to Financial Mathematics. 4 Credits.
This course is designed to develop students' understanding of fundamental concepts of financial mathematics. The course will cover mathematical theory and applications including the time value of money, annuities and cash flows, bond pricing, loans, amortization, stock and portfolio pricing, immunization of portfolios, swaps and determinants of interest rates, asset matching and convexity. A basic knowledge of calculus and an introductory knowledge of probability is assumed.

AS.110.301. Introduction to Proofs. 4 Credits.
This course will provide a practical introduction to mathematical proofs with the aim of developing fluency in the language of mathematics, which itself is often described as "the language of the universe." Along with a library of proof techniques, we shall tour propositional logic, set theory, cardinal arithmetic, and metric topology and explore "proof relevant" mathematics by interacting with a computer proof assistant. This course on the construction of mathematical proof will conclude with a deconstruction of mathematical proof, interrogating the extent to which proof serves as a means to discover universal truths and assessing the mechanisms by which the mathematical community achieves consensus regarding whether a claimed result has been proven.

AS.110.302. Differential Equations and Applications. 4 Credits.
This is a course in ordinary differential equations (ODEs), equations involving an unknown function of one independent variable and some of its derivatives, and is primarily a course in the study of the structure of and techniques for solving ODEs as mathematical models. Specific topics include first and second ODEs of various types, systems of linear differential equations, autonomous systems, and the qualitative and quantitative analysis of nonlinear systems of first-order ODEs. Laplace transforms, series solutions and the basics of numerical solutions are included as extra topics.Prerequisites: Grade of C- or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam. Area: Quantitative and Mathematical Sciences.
Grade of C- or better in AS.110.107 or AS.110.109 or AS.110.113 or AS.110.201 or AS.110.202 or AS.110.211 or AS.110.212, or a 5 on the AP BC exam.

AS.110.303. The Mathematics of Politics, Democracy, and Social Choice. 4 Credits.
This course is designed for students of all backgrounds to provide a mathematical introduction tosocial choice theory, weighted voting systems, apportionment methods, and gerrymandering. Inthe search for ideal ways to make certain kinds of political decisions, a lot of wasted effort couldbe averted if mathematics could determine that finding such an ideal were actually possible in thefirst place. The course will analyze data from recent US elections as well as provide historicalcontext to modern discussions in politics, culminating in a mathematical analysis of the USElectoral College. Case studies, future implications, and comparisons to other governing bodiesoutside the US will be used to apply the theory of the course. Students will use Microsoft Excel toanalyze data sets. There are no mathematical prerequisites for this course.
Area: Writing Intensive

AS.110.304. Elementary Number Theory. 4 Credits.
The student is provided with many historical examples of topics, each of which serves as an illustration of and provides a background for many years of current research in number theory. Primes and prime factorization, congruences, Euler's function, quadratic reciprocity, primitive roots, solutions to polynomial congruences (Chevalley's theorem), Diophantine equations including the Pythagorean and Pell equations, Gaussian integers, Dirichlet's theorem on primes.
Grade of C- or better in (AS.110.201 or AS.110.212)

AS.110.311. Methods of Complex Analysis. 4 Credits.
This course is an introduction to the theory of functions of one complex variable. Its emphasis is on techniques and applications, and it serves as a basis for more advanced courses. Functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions.
Grade of C- or better in (AS.110.202 or AS.110.211)

AS.110.365. Mathematical Foundations of AI Bias. 4 Credits.
At the end of this course students should be able to understand various sources of algorithmic bias; understand what types of bias can or cannot be addressed in a given data set; be able to reason over when different algorithms can be applied to a data set, and how they can be interpreted; take the outcomes of a given algorithm and reason about the bias of the output. Recommended Course Background: Vector calc, linear algebra, a suffiently advanced stats course, programming ability in R, matlab or python
AS.110.201 OR AS.110.202 OR EN.553.310

AS.110.375. Introduction to Mathematical Cryptography. 4 Credits.
An Introduction to Mathematical Cryptography is an introduction to modern cryptography with an emphasis on the mathematics behind the theory of public key cryptosystems and digital signature schemes. The course develops the mathematical tools needed for the construction and security analysis of diverse cryptosystems. Other topics central to mathematical cryptography covered are: classical cryptographic constructions, such as Diffie-Hellmann key exchange, discrete logarithm-based cryptosystems, the RSA cryptosystem, and digital signatures. Fundamental mathematical tools for cryptography studied include: primality testing, factorization algorithms, probability theory, information theory, and collision algorithms. A survey of important recent cryptographic innovations, such as elliptic curves, elliptic curve and pairing-based cryptography are included as well. This course is an ideal introduction for mathematics and computer science students to the mathematical foundations of modern cryptography.

AS.110.401. Introduction to Abstract Algebra. 4 Credits.
An introduction to the basic notions of modern abstract algebra and can serve as as Introduction to Proofs (IP) course. This course is an introduction to group theory, with an emphasis on concrete examples, and especially on geometric symmetry groups. The course will introduce basic notions (groups, subgroups, homomorphisms, quotients) and prove foundational results (Lagrange's theorem, Cauchy's theorem, orbit-counting techniques, the classification of finite abelian groups). Examples to be discussed include permutation groups, dihedral groups, matrix groups, and finite rotation groups, culminating in the classification of the wallpaper groups.Prerequisites: Grade of C- or better in 110.201 or 110.212 Area: Quantitative and Mathematical Sciences.
Grade of C- or better in (AS.110.201 or AS.110.212)

AS.110.405. Real Analysis I. 4 Credits.
This course is designed to give a firm grounding in the basic tools of analysis. It is recommended as preparation (but may not be a prerequisite) for other advanced analysis courses and may be taken as an Introduction to Proofs (IP) course. Topics include the formal properties of real and complex number systems, topology of metric spaces, limits, continuity, infinite sequences and series, differentiation, Riemann-Stieltjes integration. Prerequisites: Grade of C- or better in 110.201 or 110.212 and 110.202 or 110.211
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)

AS.110.406. Real Analysis II. 4 Credits.
This course continues AS.110.405 with an emphasis on the fundamental notions of modern analysis. Sequences and series of functions, Fourier series, equicontinuity and the Arzela-Ascoli theorem, the Stone-Weierstrass theorem, functions of several variables, the inverse and implicit function theorems, introduction to the Lebesgue integral.

AS.110.407. Honors Complex Analysis. 4 Credits.
AS.110.407. Honors Complex Analysis. 4.00 Credits.This course is an introduction to the theory of functions of one complex variable for honors students. Its emphasis is on techniques and applications, and can serve as an Introduction to Proofs (IP) course. Topics will include functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions, as well as applications to number theory and harmonic analysis.Area: Quantitative and Mathematical Sciences.This is not an Introduction to Proofs course (IP) and may not be taken as a first proof-based mathematics course except at the discretion of the instructor. This course satisfies a core requirement of the mathematics major as a second analysis course, and is a core requirement for honors in the major.
AS.110.405 OR AS.110.415

AS.110.411. Honors Algebra I. 4 Credits.
An introduction to the basic notions of modern algebra for students with some prior acquaintance with abstract mathematics. Elements of group theory: groups, subgroups, normal subgroups, quotients, homomorphisms. Generators and relations, free groups, products, abelian groups, finite groups. Groups acting on sets, the Sylow theorems. Definition and examples of rings and ideals.
Grade of C- or better in AS.110.212 OR AS.110.304 OR AS.110.113 OR AS.110.405 OR AS.110.415 OR AS.110.407 OR AS.110.413 OR AS.110.421

AS.110.412. Honors Algebra II. 4 Credits.
This is a continuation of 110.411 Honors Algebra I. Topics studies include principal ideal domains, structure of finitely generated modules over them. Introduction to field theory. Linear algebra over a field. Field extensions, constructible polygons, non-trisectability. Splitting field of a polynomial, algebraic closure of a field. Galois theory: correspondence between subgroups and subfields. Solvability of polynomial equations by radicals. Prerequisites: Grade of C- or better in 110.201 or 110.212.Area: Quantitative and Mathematical Sciences.
C- or better in AS.110.411

AS.110.413. Introduction To Topology. 4 Credits.
Topological spaces, connectedness, compactness, quotient spaces, metric spaces, function spaces. An introduction to algebraic topology: covering spaces, the fundamental group, and other topics as time permits.
Grade of C- or better in (AS.110.202 OR AS.110.211)

AS.110.415. Honors Analysis I. 4 Credits.
This highly theoretical sequence in analysis is reserved for the most able students. The sequence covers the real number system, metric spaces, basic functional analysis, the Lebesgue integral, and other topics.

AS.110.416. Honors Analysis II. 4 Credits.
Lebesgue integration and differentiation. Elementary Hilbert and Banach space theory. Baire category theorem. Continuation of AS.110.415, introduction to real analysis.
Grade of C- or better in AS.110.415

AS.110.417. Partial Differential Equations. 4 Credits.
Characteristics. classification of second order equations, well-posed problems. separation ofvariables and expansions of solutions. The wave equation: Cauchy problem, Poisson's solution,energy inequalities, domains of influence and dependence. Laplace's equation: Poisson's formula, maximum principles, Green's functions, potential theory Dirichlet and Neumann problems, eigenvalue problems. The heat equation: fundamental solutions, maximum principles. Recommended Course Background: AS.110.405 or AS.110.415

AS.110.421. Dynamical Systems. 4 Credits.
This is a course in the modern theory of Dynamical Systems. Topic include both discrete (iterated maps) and continuous (differential equations) dynamical systems and focuses on the qualitative structure of the system in developing properties of solutions. Topics include contractions, interval and planar maps, linear and nonlinear ODE systems including bifurcation theory, recurrence, transitivity and mixing, phase volume preservation as well as chaos theory, fractional dimension and topological entropy. May be taken as an Introduction to Proofs (IP) course.Prerequisites: Grade of C- or better in 110.201 or 110.212 OR 110.202 or 110.211 and 110.302 Area: Quantitative and Mathematical Sciences
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 or AS.110.211) AND 110.302

AS.110.422. Representation Theory. 4 Credits.
This course will focus on the basic theory of representations of finite groups in characteristic zero: Schur's Lemma, Mashcke's Theorem and complete reducibility, character tables and orthogonality, direct sums and tensor products. The main examples we will try to understand are the representation theory of the symmetric group and the general linear group over a finite field. If time permits, the theory of Brauer characters and modular representations will be introduced.
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.401 OR AS.110.411)

AS.110.433. Introduction to Harmonic Analysis and Its Applications. 4 Credits.
The course is an introduction to methods in harmonic analysis, in particular Fourier series, Fourier integrals, and wavelets. These methods will be introduced rigorously, together with their motivations and applications to the analysis of basic partial differential equations and integral kernels, signal processing, inverse problems, and statistical/machine learning.
(AS.110.201 OR AS.110.212 OR EN.550.291 OR EN.553.291) AND (AS.110.202 OR AS.110.211) AND (AS.110.405 OR AS.110.415)

AS.110.435. Introduction to Algebraic Geometry. 4 Credits.
Algebraic geometry studies zeros of polynomials in several variables and is based on the use of abstract algebraic techniques, mainly from commutative algebra, for solving geometric problems about these sets of zeros. The fundamental objects of study are algebraic varieties which are the geometric manifestations of solutions of systems of polynomial equations. Algebraic geometry occupies a central place in modern mathematics and has multiple conceptual connections with diverse fields such as complex analysis, topology and number theory.This course aims to provide to an undergraduate student majoring in mathematics the fundamental background to approach the study of algebraic geometry by providing the needed abstract knowledge also complemented by several examples and applications.

AS.110.439. Introduction To Differential Geometry. 4 Credits.
Theory of curves and surfaces in Euclidean space: Frenet equations, fundamental forms, curvatures of a surface, theorems of Gauss and Mainardi-Codazzi, curves on a surface; introduction to tensor analysis and Riemannian geometry; theorema egregium; elementary global theorems.
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.100.211)

AS.110.441. Calculus on Manifolds. 4 Credits.
This course provides the tools for classical three-dimensional physics and mechanics. This course extends these techniques to the general locally Euclidean spaces (manifolds) needed for an understanding of such things as Maxwell's equations or optimization in higher dimensional contexts, eg. in economics. The course will cover the theory of differential forms and integration. Specific topics include Maxwell's equations in terms of 4D Lorentz geometry, vector (in particular, tangent) bundles, an introduction to de Rham theory, and Sard's theorem on the density of regular values of smooth functions. The course is intended to be useful to mathematics students interested in analysis, differential geometry, and topology, as well as to students in physics and economics.

AS.110.443. Fourier Analysis. 4 Credits.
An introduction to the Fourier transform and the construction of fundamental solutions of linear partial differential equations. Homogeneous distributions on the real line: the Dirac delta function, the Heaviside step function. Operations with distributions: convolution, differentiation, Fourier transform. Construction of fundamental solutions of the wave, heat, Laplace and Schrödinger equations. Singularities of fundamental solutions and their physical interpretations (e.g., wave fronts). Fourier analysis of singularities, oscillatory integrals, method of stationary phase.
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)

AS.110.445. Mathematical and Computational Foundations of Data Science. 4 Credits.
We will cover several topics in the mathematical and computational foundations of Data Science. The emphasis is on fundamental mathematical ideas (basic functional analysis, reproducing kernel Hilbert spaces, concentration inequalities, uniform central limit theorems), basic statistical modeling techniques (e.g. linear regression, parametric and non-parametric methods), basic machine learning techniques for unsupervised (e.g. clustering, manifold learning), supervised (classification, regression), and semi-supervised learning, and corresponding computational aspects (linear algebra, basic linear and nonlinear optimization to attack the problems above). Applications will include statistical signal processing, imaging, inverse problems, graph processing, and problems at the intersection of statistics/machine learning and physical/dynamical systems (e.g. model reduction for stochastic dynamical systems).

AS.110.503. Undergraduate Research in Mathematics. 1 - 4 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.110.586. Independent Study. 1 - 4 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.110.587. DRP Independent Study. 1 Credit.
Directed Reading Program (DRP) Independent Study.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.110.599. Independent Study. 1 - 3 Credits.

AS.110.601. Algebra I.
The first of a two semester algebra sequence to provide the student with the foundations for Number Theory, Algebraic Geometry, Representation Theory, and other areas. Topics include refined elements of group theory, commutative algebra, Noetherian rings, local rings, modules, and rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.

AS.110.602. Algebra II.
The second of a two semester algebra sequence to provide the student with the foundations for Number Theory, Algebraic Geometry, Representation Theory, and other areas. Topics include refined elements of group theory, commutative algebra, Noetherian rings, local rings, modules, and rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.

AS.110.605. Real Analysis.
This course covers the theory of the Lebesgue theory of integration in d-dimensional Euclidean space, and offers a brief introduction to the theory of Hilbert spaces. Topics include the Lebesgue measure on Euclidean space, the Lebesgue integral, classical convergence results for the Lebesgue integral, Fubini's theorem, the spaces of L^1 and L^2 functions.

AS.110.607. Complex Variables.
Analytic functions of one complex variable. Topics include Cauchy integral theorems, residue theory, conformal mapping, harmonic functions, riemann mapping theorem, normal families. Other topics may include Mittag-Leffler theorem, Weierstrass factorization theorem, elliptic functions, Picard theorem, and Nevanlinna theory.

AS.110.608. Riemann Surfaces.
Abstract Riemann surfaces. Examples: algebraic curves, elliptic curves and functions on them. Holomorphic and meromorphic functions and differential forms, divisors and the Mittag-Leffler problem. The analytic genus. Bezout's theorem and applications. Introduction to sheaf theory, with applications to constructing linear series of meromorphic functions. Serre duality, the existence of meromorphic functions on Riemann surfaces, the equality of the topological and analytic genera, the equivalence of algebraic curves and compact Riemann surfaces, the Riemann-Roch theorem. Period matrices and the Abel-Jacobi mapping, Jacobi inversion, the Torelli theorem. Uniformization (time permitting).

AS.110.615. Algebraic Topology I.
Singular homology theory, cohomology and products, category theory and homological algebra, Künneth and universal coefficient theorems, Poincaré and Alexander duality theorems, Lefschetz fixed-point theorem, covering spaces and fundamental groups. Prerequsites: the equivalent of one semester in both Abstract Algebra and Real Analysis (specifically, point set topology).

AS.110.616. Algebraic Topology II.
Higher homotopy groups, CW complexes, cellular homology and cohomology, spectral sequences and comparison theorems, graded homological algebra, fibrations, Serre and Eilenberg-Moore spectral sequence, Eilenberg-MacLane spaces, Steenrod algebra, spectra.

AS.110.617. Number Theory I.
Elements of advanced algebra and number theory. Possible topics for the year-long sequence include local and global fields, Galois cohomology, semisimple algebras, class field theory, elliptic curves, modular and automorphic forms, integral representations of L-functions, adelic geometry and function fields, fundamental notions in arithmetic geometry (including Arakelov and diophantine geometry).

AS.110.618. Number Theory II.
Topics in advanced algebra and number theory. Possible topics for the year-long sequence include local and global fields, Galois cohomology, semisimple algebras, class field theory, elliptic curves, modular and automorphic forms, integral representations of L-functions, adelic geometry and function fields, fundamental notions in arithmetic geometry (including Arakelov and diophantine geometry).

AS.110.619. Lie Groups and Lie Algebras.
Lie groups and Lie algebras, classification of complex semi-simple Lie algebras, compact forms, representations and Weyl formulas, symmetric Riemannian spaces.

AS.110.631. Partial Differential Equations I.
This course is the first in the sequence about the general theory of PDEs. The beginning of the course will describe several important results of functional analysis which are instrumental for the study of PDEs: Hahn-Banach theorem, Uniform boundedness and closed graph theorems, reflexive spaces and weak topologies, elements of semi-group theory. Then we will describe the basic theory of Sobolev spaces and the standard existence theory for (initial) boundary value problems of elliptic/parabolic type. Finally, the rest of the course will be devoted to finer properties of solutions of elliptic equations such as maximum principles, Harnack principles and regularity.

AS.110.632. Partial Differential Equations II.
An introductory graduate course in partial differential equations. Classical topics include first order equations and characteristics, the Cauchy-Kowalevski theorem, Laplace's equation, heat equation, wave equation, fundamental solutions, weak solutions, Sobolev spaces, maximum principles. The second term focuses on special topics such as second order elliptic theory.

AS.110.633. Harmonic Analysis.
Fourier multipliers, oscillatory integrals, restriction theorems, Fourier integral operators, pseudodifferential operators, eigenfunctions. Undergrads need instructor's permission.

AS.110.637. Functional Analysis.
This class will explore basic aspects of functional analysis, focusing mostly on normed vector spaces. This will include the Hahn-Banach and open mapping theorems, a discussion of strong and weak topologies, the theory of compact operators, and spaces of integrable functions and Sobolev spaces, with applications to the study of some partial differential equations. Prerequisite: Real Analysis

AS.110.643. Algebraic Geometry I.
Introduction to affine varieties and projective varieties. Hilbert's theorems about polynomials in several variables with their connections to geometry. Abstract algebraic varieties and projective geometry. Dimension of varieties and smooth varieties. Sheaf theory and?some notions of cohomology. Applications of sheaves to?geometry;?e.g., theory of divisors, rudiments of scheme theory for the understanding of the Riemann-Roch theorem for curves and surfaces. Other topics may include Jacobian varieties, resolution of singularities, birational geometry on surfaces, schemes, connections with complex analytic geometry and topology.?

AS.110.644. Algebraic Geometry II.
Introduction to affine varieties and projective varieties. Hilbert's theorems about polynomials in several variables with their connections to geometry. Abstract algebraic varieties and projective geometry. Dimension of varieties and smooth varieties. Sheaf theory and?some notions of cohomology. Applications of sheaves to?geometry;?e.g., theory of divisors, rudiments of scheme theory for the understanding of the Riemann-Roch theorem for curves and surfaces. Other topics may include Jacobian varieties, resolution of singularities, birational geometry on surfaces, schemes, connections with complex analytic geometry and topology.

AS.110.645. Riemannian Geometry I.
This course is a graduate-level introduction to foundational material in Riemannian Geometry. Riemannian manifolds, a smooth manifold equipped with a Riemannian metric. Topics include connections, geodesics, Jacobi fields, submanifold theory including the second fundamental form and Gauss equations, manifolds of constant curvature, comparison theorems, Morse index theorem, Hadamard theorem and Bonnet-Myers theorem.

AS.110.646. Riemannian Geometry II.
This course covers more advanced topics in Riemannian geometry chosen at the instructors discretion. Possible topics include: minimal surface theory, geometric heat flows, harmonic mappings, Einstein manifolds, etc.

AS.110.653. Stochastic Differential Equations: An Introduction With Applications.
This course is an introduction to stochastic differential equations and applications. Basic topics to be reviewed include Ito and Stratonovich integrals, Ito formula, SDEs and their integration. The course will focus on diffusion processes and diffusion theory, with topics include Markov properties, generator, Kolmogrov's equations (Fokker-Planck equation), Feynman-Kac formula, the martingale problem, Girsanov theorem, stability and ergodicity. The course will briefly introduce applications, with topics include statistical inference of SDEs, filtering and control.

AS.110.707. Functional Analysis.

AS.110.710. What is... Seminar.
This is a professional development course for graduate students, where they will learn, practice, or enhance their skills at giving math talks. The course will run in the format of a "What is... Seminar", where each week one of the participants will present a 1 hour talk on an accessible and relatively self-contained topic, titled What is (insert your math notion of choice). In preparation for their talk, students will meet with the instructor at least once, where they will receive guidance and detailed advice to help them give a great talk. Although the definition of a "great talk" is subjective, participants should be willing to follow the instructors' advice. Graduate students at any stage of their PhD are encouraged to attend, regardless of their experience giving talks.

AS.110.711. Topics in Topos Theory.
Reading course to discuss Topics in Topos Theory

AS.110.712. Topics in Mathematical Physics.

AS.110.721. Topics In Homotopy Type Theory.
Homotopy type theory (HoTT) is a new proposed foundation system for mathematics that extends Martin-Löf's dependent type theory with Voevodsky's univalence axiom. Dependent type theory is a formal system for constructive mathematics, in which a theorem is proven by constructing a term in the type that encodes its statement. In Homotopy type theory, types are thought of as spaces and terms as points in those spaces. A proof that two terms in a common type are equal is now interpreted as a path between two points in a space. In particular, types might have interesting higher homotopical structure, which can be thought of as revealing fundamental differences between two proofs of a common proposition. One advantage of this foundation system is its amenability to computer formalization, which this course will illustrate by introducing the computer proof assistant Agda.

AS.110.722. Topics in Homotopy Theory.
The course will focus on recent developments in homotopy theory, such as Galois theory for E_n (n \geq 2) ring-spectra, and on connections with number theory; in particular, work of Bhatt, Hesselholt, Lurie, Scholze and others on topological Hochschild homology and its applications to geometry over the p-adic complex numbers.

AS.110.726. Topics in Analysis.
The topics covered will involve the theory of calculus of Functors applied to Geometric problems like Embedding theory. Other related areas will be covered depending on the interest of the audience.

AS.110.727. Topics in Algebraic Topology.

AS.110.731. Topics in Geometric Analysis.

AS.110.733. Topics In Alg Num Theory.

AS.110.737. Topics Algebraic Geometry.

AS.110.739. Topics in Analytic Number Theory.
This course will be on functional analysis (applied to number theory) and Connes-Meyer's spectral interpretation of zeroes of Hecke L functions. Topics will include : adeles, ideles, bornologies, spectral theory, condensed/liquid modules à la Scholze-Clausen, Pontryagin duality and almost-periodic functions, Tate's thesis, Connes-Meyer's spectral interpretation. Relations with category theory, quantum mechanics, Bost-Connes systems and non-commutative geometry will be evoked. This course will be designed to be appealing for students from analysis or from algebra.

AS.110.741. Topics in Partial Differential Equations.

AS.110.742. Topics In Partial Differential Equations.
In this course we will be discussing some dispersive evolution equations, primarily the nonlinear Schrodinger equation. Topics will include well -posedness theory, conservation laws, and scattering. The course will be accessible to students who have not taken graduate partial differential equations or functional analysis.

AS.110.745. Introduction to Curvature Flows.

AS.110.749. Topics in Differential Geometry.
In this class, we will study Aaron Naber and Jeff Cheeger's recent result on proving codimension four conjecture. We plan to talk about some early results of the structure on manifolds with lower Ricci bound by Cheeger and Colding. We will prove quantitative splitting theorem, volume convergence theorem, and the result that almost volume cone implies almost metric cone. Then we will discuss regularity of Einstein manifolds and the codimension four conjecture.

AS.110.750. Topics in Representation Theory.

AS.110.756. Topics in Algebra.
This will be a course in commutative algebra. Topics may include: Noetherian rings and modules, the Nullstellensatz, Hilbert basis theorem, localization, integrality, Noether normalization, primary decomposition, DVRs, Dedekind domains, dimension theory, smoothness and regularity, and homological methods.

AS.110.757. Topics in Stochastic Dynamical Systems.
The course will present an introduction to stochastic dynamical systems and some applications in model reduction and data assimilation. The main focus will be on stability and ergodicity of stochastic dynamical systems, including stochastic differential equations driven by white and fractional noise, and their numerical approximations. We will then discuss model reduction, focusing on Mori-Zwanzig formalism and approximation of the generalized Langevin equation, and methods on the parametric inference of related stochastic systems. Data assimilation and stochastic control will also be briefly introduced.

AS.110.771. Mathematics GTA Teaching Seminar.
he goals of this seminar center on the preparedness for graduate students in mathematics to engage in classroom instructions for undergraduates at Johns Hopkins University. This seminar augments the teaching orientation provided to graduate students by the CER and Mathematics Department by addressing (1) teaching-techniques: student-centered inclusive teaching strategies, facilitating small group work, incorporating student ideas and student thinking into active hole class discussions, and choosing appropriate mathematical tasks, (2) opportunities for practice teaching in classrooms before their first assignment to TA for a course in scaffolded micro-teaching experiences and (3) preparing for the practice of and documentation of a reflective teaching practice necessary for success in their careers as mathematicians and educators.

AS.110.791. Seminar in Analysis and Partial Differential Equations.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.793. Seminar in Topology.
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers.

AS.110.794. Seminar in Category Theory.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.795. Data Science Seminar.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.798. Seminar in Number Theory.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.799. Seminar in Algebraic Geometry.
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers.

AS.110.800. Independent Study-Graduates.

AS.110.801. Thesis Research.

Cross Listed Courses

Applied Mathematics & Statistics

EN.553.738. High-Dimensional Approximation, Probability, and Statistical Learning. 3 Credits.
The course covers fundamental mathematical ideas for certain approximation and statistical learning problems in high dimensions. We start with basic approximation theory in low-dimensions, in particular linear and nonlinear approximation by Fourier and wavelets in classical smoothness spaces, and discuss applications in imaging, inverse problems and PDE's. We then introduce notions of complexity of function spaces, which will be important in statistical learning. We then move to basic problems in statistical learning, such as regression and density estimation. The interplay between randomness and approximation theory is introduced, as well as fundamental tools such as concentration inequalities, basic random matrix theory, and various estimators are constructed in detail, in particular multi scale estimators. At all times we consider the geometric aspects and interpretations, and will discuss concentration of measure phenomena, embedding of metric spaces, optimal transportation distances, and their applications to problems in machine learning such as manifold learning and dictionary learning for signal processing.

Applied and Computational Mathematics

EN.625.603. Statistical Methods and Data Analysis. 3 Credits.
This course introduces statistical methods that are widely used in modern applications. A balance is struck between the presentation of the mathematical foundations of concepts in probability and statistics and their appropriate use in a variety of practical contexts. Foundational topics of probability, such as probability rules, related inequalities, random variables, probability distributions, moments, and jointly distributed random variables, are followed by foundations of statistical inference, including estimation approaches and properties, hypothesis testing, and model building. Data analysis ranging from descriptive statistics to the implementation of common procedures for estimation, hypothesis testing, and model building is the focus after the foundational methodology has been covered. Software, for example R-Studio, will be leveraged to illustrate concepts through simulation and to serve as a platform for data analysis. Prerequisite(s): Multivariate calculus.

EN.625.616. Optimization in Finance. 3 Credits.
Optimization models play an increasingly important role in financial decisions. This course introduces the student to financial optimization models and methods. We will specifically discuss linear, integer, quadratic, and general nonlinear programming. If time permits, we will also cover dynamic and stochastic programming. The main theoretical features of these optimization methods will be studied as well as a variety of algorithms used in practice. Prerequisite(s): Multivariate calculus and linear algebra. Course Note(s): Due to overlap in subject matter in EN.625.615 and EN.625.616, students may not receive credit towards the MS or post-master's certificate for both EN.625.615 and EN.625.616.

EN.625.633. Monte Carlo Methods. 3 Credits.
This course is an introduction to fundamental tools in designing, conducting, and interpreting Monte Carlo simulations. Emphasis is on generic principles that are widely applicable in simulation, as opposed to detailed discussion of specific applications and/or software packages. At the completion of this course, it is expected that students will have the insight and understanding to critically evaluate or use many state-of-the-art methods in simulation. Topics covered include random number generation, simulation of Brownian motion and stochastic differential equations, output analysis for Monte Carlo simulations, variance reduction, Markov chain Monte Carlo, simulation-based estimation for dynamical (state-space) models, and, time permitting, sensitivity analysis and simulation-based optimization. Course Note(s): This course serves as a complement to the 700-level course EN.625.744 Modeling, Simulation, and Monte Carlo. EN.625.633 Monte Carlo Methods and EN.625.744 emphasize different topics, and EN.625.744 is taught at a slightly more advanced level. EN.625.633 includes topics not covered in EN.625.744 such as simulation of Brownian motion and stochastic differential equations, general output analysis for Monte Carlo simulations, and general variance reduction. EN.625.744 includes greater emphasis on generic modeling issues (bias-variance tradeoff, etc.), simulation-based optimization of real-world processes, and optimal input selection.
Linear algebra and a graduate-level statistics course such as EN.625.603 Statistical Methods and Data Analysis.

EN.625.641. Mathematics of Finance. 3 Credits.
This course offers a rigorous treatment of the subject of investment as a scientific discipline. Mathematics is employed as the main tool to convey the principles of investment science and their use to make investment calculations for good decision making. Topics covered in the course include the basic theory of interest and its applications to fixed-income securities, cash flow analysis and capital budgeting, mean-variance portfolio theory and the associated capital asset pricing model, utility function theory and risk analysis, derivative securities and basic option theory, and portfolio evaluation.
Multivariate calculus and a course in probability and statistics (such as EN.625.603 Statistical Methods and Data Analysis).

EN.625.642. Mathematics of Risk, Options, and Financial Derivatives. 3 Credits.
The concept of options stems from the inherent human desire and need to reduce risks. This course starts with a rigorous mathematical treatment of options pricing, and related areas by developing a powerful mathematical tool known as Ito calculus. We introduce and use the well-known field of stochastic differential equations to develop various techniques as needed, as well as discuss the theory of martingales. The mathematics will be applied to the arbitrage pricing of financial derivatives, which is the main topic of the course. We treat the Black-Scholes theory in detail and use it to understand how to price various options and other quantitative financial instruments. Topics covered in the course include options strategies, binomial pricing, Weiner processes and Ito's lemma, the Black-Scholes-Merton Model, futures options and Black's Model, option Greeks, numerical procedures for pricing options, the volatility smile, the value at risk, exotic options, martingales and risk measures. Course Note(s): This class is distinguished from EN.625.641 Mathematics of Finance: Investment Science (formerly 625.439) and EN.625.714 Introductory Stochastic Differential Equations with Applications, as follows: EN.625.641 Mathematics of Finance: Investment Science gives a broader and more general treatment of financial mathematics, and EN.625.714 Introductory Stochastic Differential Equations with Applications provides a deeper (more advanced) mathematical understanding of stochastic differential equations, with applications in both finance and non-finance areas.
Multivariate calculus, linear algebra and matrix theory (e.g., EN.625.609 Matrix Theory), and a graduate-level course in probability and statistics (such as EN.625.603 Statistical Methods and Data Analysis).

EN.625.695. Time Series Analysis. 3 Credits.
This course will be a rigorous and extensive introduction to modern methods of time series analysis and dynamic modeling. Topics to be covered include elementary time series models, trend and seasonality, stationary processes, Hilbert space techniques, the spectral distribution function, autoregressive/ integrated/moving average (ARIMA) processes, fitting ARIMA models, forecasting, spectral analysis, the periodogram, spectral estimation techniques, multivariate time series, linear systems and optimal control, state-space models, and Kalman filtering and prediction. Additional topics may be covered if time permits. Some applications will be provided to illustrate the usefulness of the techniques. Course Note(s): This course is also offered in the Department of Applied Mathematics and Statistics (Homewood campus) as EN.553.639.
Graduate course in probability and statistics (such as EN.625.603 Statistical Methods and Data Analysis) and familiarity with matrix theory and linear algebra.

EN.625.714. Introductory Stochastic Differential Equations with Applications. 3 Credits.
The goal of this course is to give basic knowledge of stochastic differential equations useful for scientific and engineering modeling, guided by some problems in applications. The course treats basic theory of stochastic differential equations, including weak and strong approximation, efficient numerical methods and error estimates, the relation between stochastic differential equations and partial differential equations, Monte Carlo simulations with applications in financial mathematics, population growth models, parameter estimation, and filtering and optimal control problems. Prerequisite(s): Multivariate calculus and a graduate course in probability and statistics, as well as exposure to ordinary differential equations.

Chemical & Biomolecular Engineering

EN.540.468. Introduction to Nonlinear Dynamics and Chaos. 3 Credits.
An introduction to the phenomenology of nonlinear dynamic behavior with emphasis on models of actual physical, chemical, and biological systems, involving an interdisciplinary approach to ideas from mathematics, computing, and modeling. The common features of the development of chaotic behavior in both mathematical models and experimental studies are stressed, and the use of modern data-mining tools to analyze dynamic data will be explored. Knowledge of Linear Algebra and Ordinary Differential Equations is a prerequisite (at an undergraduate level); Some computing experience is desirable. Emphasis will be placed on the geometric/visual computer-aided description and understanding of dynamics and chaos.
((AS.110.201 OR AS.110.212) AND (AS.110.302 OR AS.110.306)) OR EN.553.291;Students may receive credit for only one of EN.553.473 OR EN.553.673 OR EN.540.468 OR EN.540.668.

EN.540.668. Introduction to Nonlinear Dynamics and Chaos. 3 Credits.
An introduction to the phenomenology of nonlinear dynamic behavior with emphasis on models of actual physical, chemical, and biological systems, involving an interdisciplinary approach to ideas from mathematics, computing, and modeling. The common features of the development of chaotic behavior in both mathematical models and experimental studies are stressed, and the use of modern data-mining tools to analyze dynamic data will be explored. Knowledge of Linear Algebra and Ordinary Differential Equations is a prerequisite (at an undergraduate level); Some computing experience is desirable. Emphasis will be placed on the geometric/visual computer-aided description and understanding of dynamics and chaos.
((AS.110.201 OR AS.110.212) AND (S.110.302 OR AS.110.306) OR EN.553.291[C];Students may receive credit for only one of EN.553.473 OR EN.553.673 OR EN.540.468 OR EN.540.668.

Computer Science

EN.601.442. Modern Cryptography. 3 Credits.
Modern Cryptography includes seemingly paradoxical notions such as communicating privately without a shared secret, proving things without leaking knowledge, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as zero-knowledge proofs, functional encryption and program obfuscation. The class will focus on rigorous proofs and require mathematical maturity. [Analysis]
Students may receive credit for only one of EN.600.442, EN.601.442, EN.601.642.;(EN.601.230 OR EN.601.231) AND (EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.553.421)

EN.601.642. Modern Cryptography. 3 Credits.
Same material as 601.442, for graduate students. Modern Cryptography includes seemingly paradoxical notions such as communicating privately without a shared secret, proving things without leaking knowledge, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as zero-knowledge proofs, functional encryption and program obfuscation. The class will focus on rigorous proofs and require mathematical maturity. [Analysis] Required course background: Probability & Automata/Computation Theory
Students may receive credit for only one of EN.601.442 OR EN.601.642.

Financial Mathematics

EN.555.642. Investment Science. 3 Credits.
This is the key introductory course for the financial mathematics program and introduces the major topics of investment finance. The investment universe, its context of markets, and the flow of global capital are introduced. Details of equities, interest, bonds, commodities, forwards, futures, and derivatives are introduced to varying degree. The concepts of deterministic cash flow stream, valuation, term structure theories, risk, and single- and multi-period random cash flows are presented. Here the neoclassical theory of finance is introduced including the topics of efficient markets, the risk-return twins leading to the mean variance Capital Asset Pricing Model (CAPM), the efficient frontier, the intertemporal models, and Arbitrage Pricing Theory (APT). Some introductory models of asset dynamics (including the binomial model), basic options theory, and elements of hedging are also included in this course. Course Note(s): This course is the same as EN.553.642 offered by through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.

EN.555.644. Introduction to Financial Derivatives. 3 Credits.
This is the first of a two-course sequence devoted to the mathematical modeling of securities and the markets in which they are created and exchanged. The basic cash, hybrid, and derivative instruments are reviewed and set in a rigorous mathematical context. This includes equities, bonds, options, forwards, futures, and swaps, as well as their dealer, overthe-counter, and exchange environment. Models of the term structure of interest rates, spot rates and, the forward rate curve are treated; derived from cash instruments (e.g., bonds and interest rates like LIBOR) as well as from derivatives (such as Eurodollar futures and swaps). Principles of static, discrete, continuous and dynamic probabilistic models for derivative analysis (including the Weiner process, Ito's Lemma, and an introduction to risk-neutral valuation) are applied to develop the binomial tree approach to option valuation, the Black-ScholesMerton differential equation, and the Black-Scholes formulas for option pricing. Course Note(s): This course is the same as EN.553.644 offered by through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.

EN.555.645. Interest Rate and Credit Derivatives. 3 Credits.
This is the second of a two-course sequence devoted to the mathematical modeling of securities and the markets in which they are created and exchanged. Focus turns to interest rate derivatives and the credit markets. The martingale approach to risk-neutral valuation is covered, followed by interest rate derivatives and models of the short rate process (including Heath, Jarrow & Morton and the Libor Market Model); analysis of bonds with embedded options and other interest rate derivatives (e.g., caps, floors, swaptions). Credit risk and credit derivatives, including copula models of time to default, credit default swaps, and a brief introduction to collateralized debt obligations will be covered. A major component of this course is computational methods. This includes data and time series analysis (e.g., estimation of volatilities), developing binomial and trinomial lattices and derivative analysis schemes, and numerical approaches to solving the partial differential equations of derivatives. Course Note(s): This course is the same as EN.553.645 offered through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.
EN.555.644 Introduction to Financial Derivatives

EN.555.646. Financial Risk Management and Measurement. 3 Credits.
This course applies advanced mathematical techniques to the measurement, analysis, and management of risk. The focus is on financial risk. Sources of risk for financial instruments (e.g., market risk, interest rate risk, credit risk) are analyzed; models for these risk factors are studied and the limitation, shortcomings, and compensatory techniques are addressed. Throughout the course, the environment for risk is considered, be it regulatory or social (e.g., Basel capital accords). A major component of the course are the Value at Risk (VaR) and Conditional VaR measures for market risk in trading operations, including approaches for calculating and aggregating VaR, testing VaR, VaR-driven capital for market risk, and limitations of the VaR-based approach. Asset Liability Management (ALM), where liquidity risk as well as market risk can affect the balance sheet, is analyzed. Here, models for interest rate, spread, and volatility risks are applied to quantify this exposure. Another major component of the course is credit risk. Sources of credit risk, how measured risk is used to manage exposure, credit derivatives, techniques for measuring default exposure for a single facility (including discriminant analysis and Mertonbased simulation), portfolio risk aggregation approaches (including covariance, actuarial, Merton-based simulation, macro-economic default model, and the macro-economic cashflow model - for structured and project finance). Finally, there is a brief introduction to concepts and tools that remain valid for large and extreme price moves, including the theory of copulas and their empirical testing and calibration. Course Note(s): This course is the same as EN.553.646 offered through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.

EN.555.647. Quantitative Portfolio Theory & Performance Analysis. 3 Credits.
This course focuses on modern quantitative portfolio theory, models, and analysis. Topics include intertemporal approaches to modeling and optimizing asset selection and asset allocation; benchmarks (indexes), performance assessment (including Sharpe, Treynor, and Jenson ratios) and performance attribution; immunization theorems; alpha-beta separation in management, performance measurement, and attribution; Replicating Benchmark Index (RBI) strategies using cash securities/ derivatives; Liability-Driven Investment (LDI); and the taxonomy and techniques of strategies for traditional management (Passive, Quasi-Passive [Indexing] Semi-Active [Immunization & Dedicated] Active [Scenario, Relative Value, Total Return and Optimization]). In addition, risk management and hedging techniques are also addressed. Course Note(s): This course is the same as EN.553.647 offered through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.

EN.555.648. Financial Engineering and Structured Products. 3 Credits.
This course focuses on structured securities and the structuring of aggregates of financial instruments into engineered solutions of problems in capital finance. Topics include the fundamentals of creating asset-backed and structured securities—including mortgage-backed securities (MBS), stripped securities, collateralized mortgage obligations (CMOs), and other asset-backed collateralized debt obligations (CDOs)—structuring and allocating cash-flows as well as enhancing credit; equity hybrids and convertible instruments; asset swaps, credit derivatives, and total return swaps; assessment of structure-risk interest rate-risk and credit-risk as well as strategies for hedging these exposures; managing portfolios of structured securities; and relative value analysis (including OAS and scenario analysis). Course Note(s): This course is the same as EN.553.648 offered through the full-time Applied Mathematics & Statistics department for the residence Master of Science in Engineering in Financial Mathematics.

First Year Seminars

AS.001.141. FYS: The Art of Mathematics. 3 Credits.
Mathematics is so much more that simply the language of science, or a set of techniques for solving quantitative-based problems. In fact, it is not a science at all, but an art, a construct of the imagination that not only provides structure to the reality of the world, but also gives form to anything and everything we can possibly imagine. Many of its fundamental principles and methods of employment are shared by artists of all types, from musicians to painters, sculptors, and poets. In this First-Year Seminar, we will explore these principles and methods shared by mathematicians and artists, like the notions of abstraction, metaphor, and pattern, the aesthetic quality both mathematicians and artists give to their work, the geometry of representation and visualization, the imagination as a tool of discovery and structure, and the use of mathematics in art, as well as the use of art in mathematics. Along the way, we will talk to artists and mathematicians, and hopefully visit the studios and galleries of each.

AS.001.184. FYS: The Mathematics of Politics, Democracy, and Social Choice. 3 Credits.
This First-Year Seminar is designed for students of all backgrounds to provide a mathematical introduction to social choice theory, weighted voting systems, apportionment methods, and gerrymandering. In the search for ideal ways to make certain kinds of political decisions, a lot of wasted effort could be averted if mathematics could determine that finding such an ideal were actually possible in the first place. The seminar will analyze data from recent US elections as well as provide historical context to modern discussions in politics, culminating in a mathematical analysis of the US Electoral College. Case studies, future implications, and comparisons to other governing bodies outside the US will be used to apply the theory of the course. Students will use Microsoft Excel to analyze data sets. There are no mathematical prerequisites for this course.

Mathematics

AS.110.433. Introduction to Harmonic Analysis and Its Applications. 4 Credits.
The course is an introduction to methods in harmonic analysis, in particular Fourier series, Fourier integrals, and wavelets. These methods will be introduced rigorously, together with their motivations and applications to the analysis of basic partial differential equations and integral kernels, signal processing, inverse problems, and statistical/machine learning.
(AS.110.201 OR AS.110.212 OR EN.550.291 OR EN.553.291) AND (AS.110.202 OR AS.110.211) AND (AS.110.405 OR AS.110.415)

AS.110.445. Mathematical and Computational Foundations of Data Science. 4 Credits.
We will cover several topics in the mathematical and computational foundations of Data Science. The emphasis is on fundamental mathematical ideas (basic functional analysis, reproducing kernel Hilbert spaces, concentration inequalities, uniform central limit theorems), basic statistical modeling techniques (e.g. linear regression, parametric and non-parametric methods), basic machine learning techniques for unsupervised (e.g. clustering, manifold learning), supervised (classification, regression), and semi-supervised learning, and corresponding computational aspects (linear algebra, basic linear and nonlinear optimization to attack the problems above). Applications will include statistical signal processing, imaging, inverse problems, graph processing, and problems at the intersection of statistics/machine learning and physical/dynamical systems (e.g. model reduction for stochastic dynamical systems).

AS.110.653. Stochastic Differential Equations: An Introduction With Applications.
This course is an introduction to stochastic differential equations and applications. Basic topics to be reviewed include Ito and Stratonovich integrals, Ito formula, SDEs and their integration. The course will focus on diffusion processes and diffusion theory, with topics include Markov properties, generator, Kolmogrov's equations (Fokker-Planck equation), Feynman-Kac formula, the martingale problem, Girsanov theorem, stability and ergodicity. The course will briefly introduce applications, with topics include statistical inference of SDEs, filtering and control.

AS.110.795. Data Science Seminar.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

For current faculty and contact information go to http://www.mathematics.jhu.edu/people/

Mathematics, Bachelor of Arts

Math Course Placement and Sequencing for All Homewood Students

There are three different versions of single variable calculus offered by the Mathematics Department, including 2 versions of semester courses in Calculus I and II, roughly equivalent to Calculus AB and BC in the College Board's Advanced Placement (AP) system, and a single semester honors version encompassing both Calculus I and II. Students should select their first course in mathematics at JHU based on their intended areas of study, prior experience and training in mathematics, and the results of an advisory Placement Exam offered to incoming freshmen. Students intending to major in mathematics, the natural sciences, or engineering, or who are interested in studying mathematics beyond a year of single variable calculus are strongly encouraged to begin with the AS.110.108 Calculus I (Physical Sciences & Engineering) - AS.110.109 Calculus II (For Physical Sciences and Engineering) sequence or AS.110.113 Honors Single Variable Calculus. Students majoring in other subjects, or who do not intend to continue taking mathematics courses beyond a year of calculus, may wish to take the sequence AS.110.106 Calculus I (Biology and Social Sciences) - AS.110.107 Calculus II (For Biological and Social Science). This latter sequence relates the methods of calculus to the biological and social sciences. A one-semester pre-calculus course (AS.110.105 Precalculus) is a pre-calculus course offered for students who would benefit from additional preparation in the basic tools (algebra, trigonometry and the properties of functions) used in calculus.

Entering students may receive course credit for Calculus I or Calculus I and II on the basis of the performance level on either the (AP) or International Baccalaureate (IB) exams (p. 1604). All students, regardless of completion of advanced placement exams previously, must take a departmental placement exam to determine their appropriate first course in mathematics. Additional placement information can be found here (http://mathematics.jhu.edu/undergraduate/placement-exams/).

After completing a full year of calculus, the courses AS.110.201 Linear Algebra, AS.110.202 Calculus III, or AS.110.302 Differential Equations and Applications may be taken in any order. The department offers honors courses of the former 2; AS.110.212 Honors Linear Algebra and AS.110.211 Honors Multivariable Calculus.

Mathematics Major Requirements

(Also see Requirements for a Bachelor's Degree (p. 1587).)

The undergraduate program in the Department of Mathematics is intended both for students interested in preparing for graduate study and research in pure mathematics, and for students interested in using mathematics to pose and solve problems in the sciences, engineering, social sciences, or other areas. Undergraduate mathematics majors will study:

- The foundations of analysis, which begins with the study of functions and their derivatives and integrals
- The fundamentals of advanced algebra, which is based on axiomatic systems involving operations of addition and multiplication in general settings
- Additional subjects such as geometry, probability, and topology
- Applications of mathematics to science and/or engineering.

A candidate for the Bachelor of Arts Degree in Mathematics is required to have completed the major requirements listed below. All courses used to meet these requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory (S/U) grading scheme.

One 300-level or higher math course		4
Two courses in any one of the approved applications of mathematics or other courses approved by the Director of Undergraduate Studies. [4]		8
Total Credits		**44**

1. Honors Single Variable is a single 4 credit course that will count toward the major or minor in mathematics as both Calculus I and Calculus II.
2. Majors are encouraged but not required to take honors variant.
3. AS.110.413 Introduction To Topology cannot be used for more than one requirement.
4. See table below for some examples of approved application courses. All other choices must be approved by the Director of Undergraduate Studies, and must be upper-level, quantitative in nature, and both from the same department or program.

Approved Courses in Areas of Application

	Total Credits	**42-44**

Honors Program in Mathematics

As a general guideline, departmental honors are awarded to recipients of the B.A. degree who have completed the following with a combined GPA of at least 3.6 out of 4.0:

- AS.110.415 Honors Analysis I and AS.110.416 Honors Analysis II,
- AS.110.411 Honors Algebra I, and AS.110.412 Honors Algebra II,
- AS.110.411 Honors Algebra I, or AS.110.412 Honors Algebra II, and AS.110.407 Honors Complex Analysis
- and one more course at the 400-level or above with a combined grade point average of at least 3.6/4.0.

J.J. Sylvester Prize

The J.J. Sylvester Prize in Mathematics, which carries a cash award, is given each year to the one of two top-performing graduating seniors majoring in mathematics for outstanding achievement.

Undergraduate Teaching Assistantships

The department awards many upper-level undergraduates the opportunity to act as recitation instructors to our freshman courses. This award enables a student to practice the art of teaching and communicating mathematics in an environment where they are hired as a formal instructor to aid the professor of a regular curriculum course as a Teaching Assistant (TA). Undergraduate TAs are fully mentored and monitored, and the position provides a valuable credential and experience.

Undergraduate Learning Goals

At the time of graduation, math majors should:

- Have a good working knowledge of the language of mathematics as embodied in the basic constructs of mathematics in the fundamental areas of algebra, analysis, and geometry
- Be able to analyze the logical structure of a scientific or mathematical problem and to develop a meaningful approach to a solution
- Be able to read, understand, and construct a well-formed proof
- Develop the mathematical maturity and skills necessary to extend their knowledge through self-study and independent research
- Be able to apply mathematical methods to solve research problems arising outside of mathematics
- Be able to formulate precise mathematical statements and questions
- Be able to effectively and successfully communicate mathematics in both oral and written form to a broad mathematical and lay audience.

Mathematics, Minor

Mathematics Minor Requirements

Students with a major in another department may be awarded a minor in mathematics upon completion of a set of core required courses and elective courses. All courses used to meet the mathematics minor requirements must be completed with a grade of C- or better and may not be taken using the S/U grading scheme. One course in the Applied Mathematics and Statistics Department (at the 300-level or above) may be substituted for one of the elective courses for the minor. One or two credit math courses may not apply. No other course substitutions are allowed.

Mathematics, Bachelor of Arts/ Master of Arts

By applying some courses simultaneously toward the requirements for the Bachelor of Arts degree and a Master of Arts degree, an advanced student can qualify for both degrees during the four years of undergraduate study. Admission to the BA/MA Program is by the standard graduate application form, completed and submitted no later than April 30 of the undergraduate student's junior year of study. With the application, the applicant must supply an official copy of the current transcript and a statement of purpose. The GRE exams are not required, and the graduate application fee is waived. In addition, the applicant must have one member of the faculty of the Department of Mathematics submit a letter of recommendation.

And while the application process for the BA/MA program is not competitive, it is contingent on the following:

- A current GPA of least a 3.0/4.0 in the 400-level mathematics courses taken while resident at the university, and
- at the time of application, a student must be a candidate for the honors designation in the undergraduate degree.

Note that the BA/MA must be completed within the four years that the student is an undergraduate, and that graduate student financial support is not available for BA/MA candidates.

All interested students must contact the academic program coordinator (course@math.jhu.edu) prior to applying.

Mathematics, PhD

Graduate

The goal of our PhD program is to train graduate students to become research mathematicians. Each year, an average of five students complete their theses and go on to exciting careers (https://mathematics.jhu.edu/graduate/placement/) in mathematics both inside and outside of academia.

Faculty research interests (https://mathematics.jhu.edu/people/) in the Johns Hopkins University Department of Mathematics are concentrated in several areas of pure mathematics, including analysis and geometric analysis, algebraic geometry and number theory, differential geometry, algebraic topology, category theory, and mathematical physics. The department also has an active group in data science, in collaboration with the Applied Math Department (https://engineering.jhu.edu/ams/).

The Department values diversity among its members, is committed to building a diverse intellectual community, and strongly encourages applications from all interested parties.

A brief overview of our graduate program is below. For more detailed information, please see the links at the right.

Program Overview

All students admitted to the PhD program receive full tuition fellowships and teaching assistantships. Teaching assistant salaries for the 2022-2023 academic year are $33,000, and exceptional applicants are also considered for supplementary fellowships. Students making satisfactory progress can expect to be supported for six years.

PhD candidates take two or three courses per semester over the first several years of the program. These are a mix of required and intermediate-level graduate courses, independent studies, and special topics classes offered by our faculty.

By the beginning of their second year, students are asked to demonstrate competency in algebra and in analysis by passing written qualifying exams in these two broad areas. Students are then expected to choose an advisor, who will supervise their dissertation and also administer an oral qualifying exam to be taken in the second or third year. More specifics about all these requirements are described on the requirements page (https://mathematics.jhu.edu/graduate/requirements/).

All graduate students are invited to attend weekly research seminars in a variety of topic areas (https://mathematics.jhu.edu/events/)as well as regular department teas and a weekly wine and cheese gathering attended by many junior and senior members of the department. A graduate student lunch seminar series provides an opportunity for our students to practice their presentation skills to a general audience.

PhD students will gain teaching experience as a teaching assistant for undergraduate courses. Most of our students lead two TA sections per week, under the supervision of both the faculty member teaching the course and the director of undergraduate studies. Students wanting more classroom experience (or extra pay) can teach their own sections of summer courses. First-year students are given a reduced TA workload in the spring semester, in preparation for the qualifying exams.

In addition to their stipend, each student is awarded an annual travel allowance to enable them to attend conferences for which limited funding is available or visit researchers at other institutions.

Financial Aid

Students admitted to the Ph.D. program receive teaching assistantships and full tuition fellowships. Exceptional applicants become candidates for one of the university's George E. Owen Fellowships.

William Kelso Morrill Award

The William Kelso Morrill Award for excellence in the teaching of mathematics is awarded every spring to the graduate student who best exemplifies the traits of Kelso Morrill: a love of mathematics, a love of teaching, and a concern for students.

Excellence in Teaching Awards

Three awards are given each year to a junior faculty member and graduate student teaching assistants who have demonstrated exceptional ability and commitment to undergraduate education.

Admission Requirements

Admission to the PhD program is based on primarily on academic records, letters of recommendation, and a personal statement. *The Department of Mathematics values diversity among its members, is committed to building a diverse intellectual community, and strongly encourages applications from all interested parties.*

Via the online application (http://grad.jhu.edu/apply/), applicants should submit:

- A Statement of Purpose
- An optional Personal Statement
- Transcripts from all institutions attended
- Three letters of recommendation
- Official GRE scores for both the general and the subject test
- Official TOEFL scores (if English is not your first language)

The required Statement of Purpose discusses your academic interests, objectives, and preparation. The optional Personal Statement describes your personal background, and helps us create a more holistic understanding of you as an applicant. If you wish you may also discuss your personal background in the Statement of Purpose (e.g. if you have already written a single essay addressing both topics), instead of submitting separate statements.

Application fee waivers are available based on financial need and/or participation in certain programs (http://grad.jhu.edu/apply/application-process/#1464027869971-8cbbde29-b882).

Many frequently asked questions about the graduate admission process are answered here (https://mathematics.jhu.edu/graduate/admissions/prospective-graduate-student-faq/).

No application materials should be mailed to the department. All application materials are processed by the Graduate Admissions Office (http://grad.jhu.edu/apply/).

Undergraduate Background

The following is an example of what the math department would consider a good background for a student coming out of a four-year undergraduate program at a college or university in the U.S. (assuming a semester system):

- Calculus in one variable (two semesters, or AP credits)
- Multivariable Calculus (one semester)
- Linear Algebra (one semester)
- Complex analysis (one semester)
- Real analysis (two semesters)
- Abstract algebra (two semesters)
- Point-set topology (one semester)

Many admitted students have taken upper-level undergraduate mathematics courses or graduate courses. Nevertheless, the department does admit very promising students whose preparation falls a little short of the above model. In such cases, we strongly recommend that the student start to close the gap over the summer, before arriving for the start of the fall semester.

Financial Support

Students admitted to the PhD program receive full tuition fellowships and teaching assistantships. Teaching assistant salaries for the 2022–2023 academic year are $33,000. Students making satisfactory progress can expect to be supported for six years. Exceptional applicants are considered for supplementary fellowships of $6,000 each year for three years.

Students from underrepresented groups may be eligible for other university-wide supplemental fellowships. Summer teaching is available for students seeking extra income.

Additional Information for International Students

Student Visa Information: The Office of International Services at Homewood (http://ois.jhu.edu/) will assist admitted international students in obtaining a student visa.

English Proficiency: Johns Hopkins University requires students to have adequate English proficiency for their course of study. Students must be able to read, speak, and write English fluently upon their arrival at the university. Applicants whose native language is not English must submit proof of their proficiency in English before they can be offered admission and before a visa certificate can be issued. Proficiency can be demonstrated by submitting results from either the Test of English as a Foreign Language (TOEFL) (http://www.toefl.org/) or the IELTS (https://www.ielts.org/en-us/). Johns Hopkins prefers a minimum score of 100 on the TOEFL or a Band Score of 7 on the IELTS. Results should be sent to Johns Hopkins directly by TOEFL or IELTS. Applicants taking the IELTS must additionally upload a copy of their score through the application system. However, do **not** send the student copy or a photocopy of the TOEFL.

Program Requirements

Course Requirements

Mathematics PhD candidates must show satisfactory work in Algebra (110.601-602), Real Variables (110.605), Complex Variables (110.607), and one additional non-seminar mathematics graduate course in their first year. The first-year algebra and analysis requirement can be satisfied by passing the corresponding written qualifying exam in September of the first year; these students must complete at least two courses each semester. In addition, PhD candidates must take Algebraic Topology (110.615) and Riemannian Geometry (110.645) by their second year. Students having sufficient background can substitute an advanced topology course for 110.615, or an advanced geometry course for 110.645 with the permission of the instructor.

Candidates must show satisfactory work in at least two mathematics graduate courses each semester of their second year, and if they have not passed their oral qualifying exam, in the first semester of their third year.

Qualifying Exams

Candidates must pass written qualifying exams by the beginning of their second year in Analysis (Real & Complex) and in Algebra. Exams are scheduled for September and May of each academic year, and the dates are announced well in advance.

Oral Exam

Candidates must pass an oral qualifying examination in the student's chosen area of research by April 10 of the third year. The topics of the exam are chosen in consultation with the faculty member who has agreed (provisionally) to be the student's thesis adviser, who will also be involved in administering the exam.

PhD Dissertation

Candidates must produce a written dissertation based upon independent and original research. After completion of the thesis research, the student will defend the dissertation by means of the Graduate Board Oral exam (http://krieger.jhu.edu/math/graduate/requirements/graduate-board-oral-exam/). The exam must be held at least three weeks before the **Graduate Board** deadline the candidate wishes to meet.

Our PhD program does not have a foreign language requirement.

Medicine, Science, and the Humanities

http://krieger.jhu.edu/msh (http://krieger.jhu.edu/msh/)

This is an interdisciplinary, humanities-based major using a cultural and historical context to explore scientific inquiry and the roots of medicine. The medicine, science, and the humanities major is ideal for students who plan to pursue careers in the science and health professions as well as those interested in issues of importance to science and medicine, and students who plan to pursue graduate work in a range of humanities, social science, or professional disciplines.

MSH Major Goals and Objectives

Goal

Medicine, science, and humanities majors will develop an interdisciplinary understanding of the cultural and historical roots of scientific inquiry and medicine, with the ability to apply these precepts to contemporary life.

Objectives

MSH majors will:

- Gain an introductory awareness of theory, interpretation, and methods in a specific humanistic topic related to science and/or medicine
- Acquire and develop skills of interpretation and analysis in a specific humanities discipline by focusing on primary and secondary sources such as literature, imagery, film, artifacts, and commentary
- Acquire fundamental skills of writing and oral presentation, emphasizing clear and logical exposition to enhance student readiness for subsequent graduate school, professional school, or the workforce
- Acquire knowledge and experience in the natural sciences
- Understand the advantages of multiculturalism through intermediate mastery of a language beyond English.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3 Credits.
In this course, four essential aspects of the theme of death and dying will be examined: Death and Medicine; Emotional Responses to Death; Burying and Commemorating the Dead; and Conceptions of Death. Specific topics relating to each of these aspects that will be covered include illness and causes of death; prevention of death; suicide; death and grief; burial practices; mourning the dead; public commemoration of the dead; life after death; and death and rebirth. Students will explore these topics from a historical-anthropological perspective with Paul Delnero, a specialist in the history and culture of the ancient Near East (Near Eastern Studies); from a literary perspective, by reading and writing poetry relating to these subjects with the acclaimed poet James Arthur (Writing Seminars); and from a musical perspective, through direct encounters with the music and creative process of the award-winning composer, Michael Hersch (Peabody).
Area: Writing Intensive

AS.145.104. Science, Medicine, Media. 3 Credits.
Much of our understanding of science and medicine is filtered through what we casually refer to as "the media": newspapers, magazines, television shows, films, and electronic social media. But the scientific world relies on its own media to produce and circulate knowledge: from scientific journals and conferences, to agar plates and petri dishes, cloud chambers and electrophoresis gels. Medical technologies from the stethoscope to the echocardiogram likewise mediate the perception of the body in health and disease, and increasingly our own understanding and perception of our bodies and our health is mediated via screens, scans, and images — without which we can hardly imagine ourselves anymore. Students will learn theoretical tools to critically assess the technologies that mediate our knowledge of our own bodies and the broader world, as well as practical tools in media production and visual storytelling (video, podcast, website etc.) to bring these analytics to bear on our broader understandings of science and medicine.
Area: Writing Intensive

AS.145.106. Health, Science, Environment. 3 Credits.
Environment has an inexorable effect on human health, and certain human activities have had outsized impacts on the natural world and the ability of forms of life to thrive. This course brings medical humanities, history of science, and science & technology studies into conversation with environmental humanities to ask: how have our conceptions of the natural world emerged, and how have these shaped our understandings of bodies, ecologies, and health outcomes? How do we know and measure the environment and health, and to what effects? How have human and ecological health affected environmental politics? How have writers and artists understood and depicted their environments and environmental questions? Can works of fiction shape ecological transformations? What can we learn from case studies of health and environment in Baltimore and the Chesapeake Bay as well as in global contexts? Course topics will include ecology, epigenetics, toxicity, agriculture and food, radiation, air quality, and more-than-human entanglements.

AS.145.201. Clues: Unreasoning the Medical Mystery. 3 Credits.
Foundational authors of detective fiction, including Edgar Allen Poe, Arthur Conan Doyle, and Pauline Hopkins, often used medical doctors and themes in their mystery plots. It’s no coincidence that medicine and crime fiction share a vocabulary of clues, evidence, and diagnosis. The mystery genre was integrally tied to the rise of scientific medicine as a respected profession. Indeed, classic detective stories are practically propaganda for the scientific method, showing readers how the powerful tools of observation and inference can solve any problem. Over the course of the 20th century, not only doctors, but also psychologists, social scientists and historians adopted the authoritative stance of the detective in constructing or reconstructing facts. However, as we study Sherlock Holmes and his modern proteges, such as TV doctor Gregory House, we will analyze how "medical mystery" narratives can limit our thinking about problems and solutions in medicine. We will consider post-modern detective stories that offer alternatives to the "Holmsian" model for understanding the complex clinical realities of today.
Area: Writing Intensive

AS.145.202. Health Care Activism in Baltimore and Beyond. 3 Credits.
National struggles over the right to health care, and over the health needs of marginalized groups, have taken distinctive forms in Baltimore City during the past century. The renowned Johns Hopkins University came to symbolize, for many residents, the power of medicine both to heal and to harm – and the need for community action. This course delves into the archives of local institutions to understand the work of activists and advocates who connected health, medicine, and social justice. We focus on specific sites, from the segregated wards of Johns Hopkins to the People’s Free Medical Clinic on Greenmount Avenue, where demands for equity changed the city’s health care landscape. Through interdisciplinary readings and conversations with local organizers, we consider how historical memory can serve as a creative resource for the art and politics of the present.
Area: Writing Intensive

AS.145.203. Constructing memories: between art and science. 3 Credits.
What is a personal memory? Is it a story or a scene, as if in a film? Is there such a thing as body memory? How tight is the connection between remembering and story-telling? Scientific articles and book chapters in cognitive psychology and the neurosciences can provide some answers to such questions. Two films, “Memento” and “Inside Out” can also help us grasp the impact of major scientific discoveries of how memory works. But our discussions will depend above all on literary and biographical accounts based on the experiences of “rememberers” such as St Augustine, Proust, Woolf, Freud, as well as on cases on amnesia documented by Oliver Sacks, Antonio Damasio, and David Shenk. The latter will help us understand why our ability to engage in mental time-travel is essential to our personal and social existence. Coming out of this course, you will not only have a better comprehension of how autobiographical memory works, you’ll have learned also how some of the sharpest scientific and philosophical minds of our times have tried to make sense of this mysterious human capacity.

AS.145.204. Graphic! Visualizing Medicine from Textbooks to Comics. 3 Credits.
Visuals play an important role in the history and practice of medicine, from medical textbooks to medical imaging, and from hospital signage and public health posters to comics and graphic novels. This course will examine the visual aspects of the history and practice of medicine by focusing on the rising genre of medical comics and graphic novels, known as “graphic medicine.” The course will embed this examination of “graphic medicine” in a wider examination of the various uses of visuals in medicine, the complicated history of class, race and gender in those uses, and how visuals have served different functions in the history and practice of medicine, from assisting medical diagnosis to enabling new forms of medical consumerism, and from facilitating doctor-patient communication to practicing art therapy, as well as presenting visual pathographies and documenting patients’ and caregivers’ experiences of disease. Through an assortment of primary sources that include medical comics and graphic novels, aided by a variety of secondary sources that embed these narratives in larger issues in the history of medicine, medical anthropology, and the medical humanities, the course will aim to introduce students to some of the most important themes in the field of “graphic medicine.”

AS.145.205. The Costs of Care: Writing about Illness in America. 3 Credits.
Health care can be expensive for those who receive it and those who provide it. In the United States, patients go into debt while doctors suffer from burnout and nurses rush through understaffed wards. The U.S. has the highest healthcare spending of any wealthy nation, yet suffers comparatively worse outcomes. This seminar brings together social science research with patient experiences that show the human face of the American health care debate. We read the work of scholars, poets, and medical practitioners who reflect on core questions: What should be the government’s role in healthcare provision? What alternative models have people in marginalized groups developed when the system fails them? Understanding both failures and successes gives us the tools to build new paths.
Area: Writing Intensive

AS.145.215. Representations of Pain and Suffering in Contemporary Culture. 3 Credits.
What does it mean to experience pain or encounter the suffering of another person in our post-truth era? This course explores the changing representation of pain and suffering in contemporary film, fiction, creative non-fiction, science and technology. Through analysesand close-readings of a variety of primary and secondary sources, we will consider the different ways twentieth- and twenty-first-century historical, cultural, and media representations have mediated pain and suffering. Such investigations allow us to understand the workings of pain in the present.
Area: Writing Intensive

AS.145.217. Neurofictions: History and Literature of the Mind Sciences. 3 Credits.
Neuroscience has a long way to go from mapping neural connections to a precise account of memory, emotion, and consciousness. But the limits of science have never stopped us from imagining its possible futures. Engaging two centuries of debate in the mind sciences and in western culture at large, this course looks at historical attempts to explain and control human consciousness. By placing each period's scientific texts in dialog with contemporaneous science fiction -- from Edgar Allan Poe to Ursula K. Le Guin -- we discover how theories about the brain can shape society while at the same time responding to social contexts.

AS.145.219. Science Studies and Medical Humanities: Theory and Methods. 3 Credits.
The knowledge and practices of science and medicine are not as self-evident as they may appear. When we observe, what do we see? What counts as evidence? How does evidence become fact? How do facts circulate and what are their effects? Who is included in and excluded from our common-sense notions of science, medicine, and technology? This course will introduce students to central theoretical concerns in Science and Technology Studies and the Medical Humanities, focusing on enduring problematics that animate scholars. In conjunction with examinations of theoretical bases, students will learn to evaluate the methodological tools used in different fields in the humanities to study the production and circulation of scientific knowledge and the structures of medical care and public health. This problem-centered approach will help students understand and apply key concepts and approaches in critical studies of science, technology, and medicine.
Area: Writing Intensive

AS.145.220. Health, Medicine, Gender, and Sexuality. 3 Credits.
This course invites students to take the perspective of gender and sexuality on health and medicine. In this course, we do not see gender and sexuality as a separate domain of health. Instead, we will learn how a gender perspective is in fact crucial for critically exposing the ways in which medicine is interpenetrated by social life and by law. For example, what technologies and discourses constitute “the normal”? How is sexuality braided into disease surveillance? How do we understand the lawfare on the terrain of reproductive rights? What aspects of disease are suppressed in dominant forms of knowledge production, due to the undervaluation of gendered forms of experience? We will take cases involving HIV/AIDS; reproductive justice and rights; poverty, marginality and queer kinship; and household patterns of care.

AS.145.303. Research in the Medical Humanities: A Practical Introduction. 3 Credits.
This seminar is designed to prepare students for an extended interdisciplinary writing project, such as an honor's thesis or an undergraduate research proposal. The first part will be devoted to establishing or consolidating skills in research, in methods, and in approaches specific to the medical humanities. Class meeting will involve different formats and types of preparation: studying examples of writing in different domains related to MSH, visits of specialists (e.g. librarians and authors), preparing a proposal to be presented in a workshop, and a well-documented capstone project outlining a proposal. You'll be asked to submit at regular intervals written results of your work in progress and you must be prepared as well to present your results orally at different important points in our unfolding semester.
Area: Writing Intensive

AS.145.305. Lives in Medicine: Exploring the Personal Writing of Patients and Practitioners. 3 Credits.
The personal accounts of patients and practitioners offer a rich exposure to human experience in medicine. What is it like to be a patient, to be sick or to face the threats or limits that illness presents? What is it like to be a doctor or nurse in this world of illness? In this course we will read such accounts as published in book form, discuss them in a seminar setting and write about them. We will select a small number from the thousands of such publications to introduce the student to this unique genre, emphasizing reading, writing and group discussion.
Area: Writing Intensive

AS.145.310. A Noble Profession? Doctors as Social and Political Actors. 3 Credits.
Medicine is a profession known for its ethical code of conduct—a code that is imbued with an ethos of neutrality and impartiality. However, real life shows us that doctors do not occupy a special moral class, but are rather members of social and political communities, citizens with grievances, political affiliations and loyalties, and are often subject to many social and political influences around them. This course will examine how doctors' political choices shape their medical practice, and how their medical practice—especially their temporally and spatially privileged access to bodily suffering and loss of life—shapes in turn their political choices. It investigates the roles of doctors, not simply as technical experts, but as social and political actors informed by technical expertise among other factors. Relying on histories, ethnographies, memoirs and even works of fiction, this course will explore narratives of doctors' social and political engagement in the US and around the globe.
Area: Writing Intensive

AS.145.350. MSH Research Capstone. 3 Credits.
The Research Capstone seminar prepares students to undertake original extended research in the medical humanities and science studies. The course will help students synthesize the interdisciplinary knowledge upon which the Medicine, Science, and the Humanities (MSH) major is built. Students will have the opportunity to form research topics, devise and execute research plans, write a research grant application, and share their work with the class. The course is aimed at MSH juniors seeking to create Honors projects, though the course is open to any student wishing to learn or enhance research skills.

AS.145.360. Incarceration and Health: Critical Perspectives. 3 Credits.
Can care exist in a space of punishment? Institutions of incarceration are inherently spaces of violence and social control and, in the U.S.'s current context of mass incarceration, racial oppression. Yet prisons, jails, and detention centers are required to provide individuals access to health care. How can we understand this convergence of care for the body and psyche with multiple forms of carceral violence? This course will examine modes of health and health care inside institutions of incarceration as they are situated within broader socio-political contexts that shape society's over-reliance on incarceration as a means of social and racialized control. Drawing on history, anthropology, sociology, legal theory, critical race studies, and public health, the course will explore the everyday realities inside institutions of incarceration as they relate to suffering and care and how those are connected to policies and processes of subjugation outside the institutions' walls. Case studies for examining these relationships include pregnancy, COVID-19, addiction, and mental illness behind bars. Students will engage with concepts such as disciplinary power, biopower, carceral and anti-carceral feminism, theories of care, medical abolition, and dual loyalty. While the course will primarily focus on the U.S. context, we will also draw comparisons to non-U.S. settings. Throughout the course we will seek to understand how institutions of incarceration are not, as popularly understood, isolated places "elsewhere," but implicitly porous with so-called free society—and therefore as exemplars for understanding the connections among health, inequality, and state institutions.
Area: Writing Intensive

AS.145.502. Medicine, Science & the Humanities Internship. 3 Credits.
An internship in Medicine, Science & the Humanities approved by the director of the program.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.145.510. Medicine, Science & the Humanities Independent Research. 1 - 3 Credits.
This course is for students in the Medicine, Science & the Humanities doing independent research. Course can be taken up to 3 credits with approval from the director.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.145.511. Medicine, Science & the Humanities Independent Research. 1 - 3 Credits.
This class is for the MSH majors completing their research project. Instructor approval required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.145.516. MSH Honors Thesis. 1 - 3 Credits.
This class is for the MSH majors completing their honors thesis. Instructor approval required. This course can be taken for up to 3 credits with instructor approval.

Cross Listed Courses

Anthropology

AS.070.381. Addiction: An anthropological approach to substance dependence in the U.S.. 3 Credits.
This course offers an advanced examination of the interpersonal, institutional, and societal dimensions of addiction in the United States. The course will be divided into four sections. This first section tracks the evolution of addiction from a moral problem of the will to a formal, biomedical disease category over the course of the 20th century. This section introduces the problem of addiction within the societal context of the United States, exploring questions of political governance, social control, and issues of race, class, and gender inequality. It asks the question: what is the social life of addiction in the United States? The second section of the course will ground these broad inquiries in the urban U.S. by examining how addiction overlaps with mass incarceration, poverty, and homelessness in the U.S. city. Over the course of this section, we will engage and reframe the crack crisis of the late 20th century. The third section of the course will shift our attention to the rural United States and how addiction overlays unemployment, social isolation, and the urbanization of the U.S. Through this social and institutional lens, the third course section will explore the contemporary opioid crisis and draw comparisons with the crack crisis. The course concludes with an examination of the personal dimensions of the addiction experience and explores substance dependence in the realms of kinship, love, and personal understandings of recovery.
Area: Writing Intensive

Classics

AS.040.152. Medical Terminology. 3 Credits.
This course investigates the Greek and Latin roots of modern medical terminology, with additional focus on the history of ancient medicine and its role in the development of that terminology.

Comparative Thought and Literature

AS.300.334. Love and its maladies. 3 Credits.
Much of what we know about love and desire we owe to fiction's ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like this lover. Just as nowadays film and television represent, as well as mold our conceptions of love, love-stories from the eighteenth-century onwards have given shape to gendered subjectivities in ways that still matter now. As, intriguingly, illness is a recurrent theme in many modern love stories, we will be prompted to decipher signs and symptoms in the bodies of mind of our protagonists. Why is it that in Western cultures, passion is tightly interwoven with a landscape of pain, suffering, and disease? In studying texts that represent major aspects of a romantic sensibility, we are indeed invited to trace the steps of a history of the body increasingly defined by gender and by medical knowledge. The readings for this class (all available in English) include: Austen, Persuasion; Balzac, The Unknown Masterpiece; Barthes, Lover's Discourse; Goethe; The Sorrows of Young Werther; Mann, Death in Venice; Winterson, Written on the Body.

AS.300.347. Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will pair literary works and films with texts from politics, philosophy, literary theory, and religion, that frame climate change as a fundamental challenge to our ways of making sense of the human condition.

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course explores recent debates on being a person in culture, law, and philosophy. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Materials examined will be wide-ranging, including essays, philosophy, novels, science fiction, television, film. No special background is required.

AS.300.439. Stories of hysteria. 3 Credits.
Many are the stories that recount episodes of hysteria, and we owe them not only to medicine. To the modern observer, they are a puzzle, involving strange beliefs about wandering wombs, demonic possession, and female virtue (or lack thereof). Closer to our time, contemporary media, as well as accounts in the social and clinical sciences have evoked cases of "mass hysteria" in America and across the globe. Marriage, it was thought for a long time, might be the best cure, which might be the reason case-studies of this illness can be as intriguing and troubling as novels. Against a backdrop of medical and historical materials, we will examine a selection of stories, from the 17th century onward, that evoke aspects of hysteria. They serve as our case-studies and as prompts to study an illness born at the convergence of histories and myths, of medical science, and of cultural and gender assumptions. Among the notions we will explore: The birth of psychoanalysis, trauma and PTSD, the concept of repression, the visual aspects of an illness and its spread in the arts, including cinema.

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees..
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course explores recent debates on being a person in culture, law, and philosophy. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Materials examined will be wide-ranging, including essays, philosophy, novels, science fiction, television, film. No special background is required.
Area: Writing Intensive

English

AS.060.108. Time Travel. 3 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peeking backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today. Writers will likely include Mark Twain, Edward Bellamy, Harold Steele Mackay, Ray Bradbury, Robert Heinlein, and Philip K. Dick. Movies will include *The Terminator*, *Back to the Future*, and *Primer*.
Area: Writing Intensive

First Year Seminars

AS.001.101. FYS: The Hospital. 3 Credits.
Johns Hopkins invented the modern hospital along with modern medical education. This seminar will explore the history of the hospital from its monastic origins to its current form, with particular attention to how hospital design has reflected and reinforced ways of thinking about health, disease and medical treatment. We will also consider specialized hospitals and clinics, for the mentally ill, for particular diseases, for women and children, among other topics.

AS.001.102. FYS: Japanese Robots. 3 Credits.
Japan is a world leader in biomimetic robotics. Japanese society enthusiastically embraces robotic nurses, robotic guides, robotic waiters, robotic pets, and even robotic girlfriends. What are the origins of the Japanese love of robots? What role did robotics engineers play in creating the image of loveable robots? What societal fears do Japanese robots assuage and what hopes do they foster? In the course of the semester, students will learn about the evolution of Japanese robotics, and explore the implications of this evolution to humans' relationship with robots. While learning about Japanese robots, students will acquire skills necessary for college-level education, including how to write an email to a professor, how to organize and manage digital tools, how to navigate the information resources, and how to develop, complete, and present research projects. This course will equip students with skills essential to their success in college and beyond.

AS.001.107. FYS: Thinking and Writing Across Cultures - East Asia and the West. 3 Credits.
In this First-Year Seminar, we will explore what it means to think and write across multiple cultures in the contemporary world. What do we gain and/or lose when we think and write crossing cultural boundaries? How do knowledge and experience of two or more cultures help us think and act critically, creatively, and ethically? What does plurality of cultures mean to universal discourses such as science and technology? How can cultural differences help or hamper our efforts to tackle global problems like climate change? These are some of the guiding questions that we will investigate together in this course by examining novels, essays, autobiographies, travelogues, philosophical writings, and films that engage with multiplicity of cultures between East Asia -- especially China, Japan, and Korea – and the West as well as within East Asia.

AS.001.108. FYS: Heart Matters. 3 Credits.
To the human imagination, the heart is more than a muscle and thumping pump keeping us alive. From the Renaissance to the present, writers have helped us make sense of our bodies, in health and in illness or pain. The history of the heart, meanwhile, starts in Antiquity, where it shapes our beliefs about life. One of our aims will be to trace the historical, cultural, and subjective meanings our minds have given to this "sublime engine." The other will be to discover how our scientifically inquisitive minds, backed up with technical skills and technological devices such as the stethoscope, have found new ways to take care of this volatile organ. Our materials will involve a constellation of texts in medical history, modern fiction in the form of poems and short-stories, and recent scientific prose on such topics as heart transplants, heart-monitoring implants, xenotransplants as well as heartbreaks.

AS.001.123. FYS: Wired to Read: the Science and the Art. 3 Credits.
We all think we know that reading is: of course, that's what you are doing right now, as you are trying to make sense of words I have written. But how do we do we do it? How do mere shapes and lines on the page suddenly begin to mean something? Is our brain wired for reading? Apart from our eyes, are other parts of the body involved? When did humans start to write and read? These are the kinds of questions we'll pursue. This First-Year Seminar will explore two distinctive perspectives: one literary, the other is scientific. We'll divide our attention between the study of chapters and articles that present scientific findings about how we read and a practical exploration of a novel. Literary works tax our brains in multiple ways and our example will show why and how. George Eliot's The Mill of the Floss, will serve as our case-study. We'll learn why fiction can make us cry or make us angry about the world, how word-pictures trigger our imagination, how a writer tricks us (or our brains?) into believing the things that words in print evoke. As a story of growth in adversity filled with memories, drama, and insights about society and gender, The Mill on the Floss is bound to hold your attention.

AS.001.139. FYS: Medicine and Cinema. 3 Credits.
This First-Year Seminar explores the intersection between medicine and film, looking at how medicine, medical providers, and narratives of illness and health are depicted in cinematic works. Some of the questions that the seminar pursues are: What are some of the medical issues that filmmakers focus on? How did the cinematic portrayal of medicine change over time? What role do these films play in shaping public perceptions of medicine, medical providers, and medical institutions? By watching a number of films throughout the semester and reading some accompanying texts, students will develop deeper knowledge both of the history of medicine in cinema and the tools that cinema offers to the telling medical stories.

AS.001.181. FYS: Introduction to Lives in Medicine - Exploring the Experience of Patients and Practitioners. 3 Credits.
Beyond scientific and technological advances in the classification and treatment of disease, beyond complex hospital and health delivery systems, beyond the immensity of the medical world itself there is a human world of experience that tells its stories in various ways. Patients, doctors, nurses and related healthcare providers inhabit this shared environment of intense personal experience, giving rise to various accounts: memoirs, autobiographies, blogs, websites and interviews that provide us with a rich resource for understanding the culture of medicine and the world of the sick. In this First-Year Seminar, we explore some of these accounts by reading from books and personal memoirs of patients and practitioners, looking at films and photographs, listening to interviews and discussing what we learn from such accounts and how they shape our understanding of the many worlds of health and medicine. As a complement to the scientific study of human biology and disease, this seminar offers the incoming student an introduction to a broad literacy in medicine, disease and human biology, focusing on the importance of individuals by exploring the records of their experiences and the ways in which they are made available to us.

AS.001.190. FYS: Poisons! A History. 3 Credits.
Poisons aren't what they seem. Sometimes they look like food. Sometimes they look like drugs. From cinnabar to cinnamon, from dragon blood to goat bezoars, poisons result from careful human construction, collection, and creation. They are objects of early chemistry. Far from killing us, poisons have been central to the history of medicine. Physicians in the past and present monitor dosage, drug combination, and drug preparation to mitigate poison toxicity while still maintaining drugs' therapeutic potencies. Knowledge about poisons, in other words, quietly undergirds most of human civilization. Poisons are what keep us alive. Or not.This First-Year Seminar comes to understand poisons in three ways. First, it takes on individual poisons (mercury, opium, among others) to introduce major themes in the history of science and science studies. Second, it engages with global perspectives in the history of medicine to understand how poisons were deployed, refined, and neutralized around the world. Third, it introduces frameworks in the philosophy of chemistry to analyze the social, conceptual, and practical demands on empiricism. Together, these three perspectives will shift students' perspectives on poisons from objects that kill to critiquing them as objects that are intimately tied to ideas of cure.

History

AS.100.291. Medicine in an Age of Empires, 1500-1800. 3 Credits.
How did medicine emerge as a distinctive body of knowledge and a profession in the early modern period? The answers lie in the histories of disease, empire, and global commerce.

AS.100.319. History of American Reproductive Politics. 3 Credits.
This course examines reproductive politics in the United States from the colonial era to the present. Topics include contraception, abortion, and sterilization, emphasizing the impact of gender, class, and race.
Area: Writing Intensive

AS.100.396. The Gender Binary and American Empire. 3 Credits.
This discussion-based seminar will explore some of the ways that the sex and gender binary was produced out of American statecraft in the late nineteenth and twentieth centuries. Particular attention will be paid to US imperialism, both domestically in its settler form, as well as in Hawaii, the Caribbean, and the Pacific. What happens to the study of the modern gender binary if it is treated as a transnational artefact of US imperialism's encounter with a multitude of cultures and nations?
Area: Writing Intensive

History of Art

AS.010.208. Leonardo da Vinci: The Renaissance Workshop in the Formation of Scientific Knowledge. 3 Credits.
How does a notary's son trained as a painter come to claim expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? The course will focus critically on the myth of Leonardo's singularity and explore his achievements with regard to the artisanal culture of his time, as well as the problems of authority in the recognition of artisanal knowledge as scientific discovery.

AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez. 3 Credits.
Explores the different ways Early Modern painters and printmakers incorporated mirrors and optical reflections into their works for the sake of illusion and metaphor, deception and desire, reflexivity and truth-telling. Connecting sense perception and ethical knowledge, embedded mirror images often made claims about the nature of the self, the powers of art, and the superiority of painting in particular.

AS.010.235. Art, Medicine, and the Body: Middle Ages to Modernity. 3 Credits.

This course explores seven centuries of fruitful collaboration between physicians and artists, uncovering the shared discourses, diagnostic techniques and therapeutic agendas that united the art of picture-making with the art of healing. Topics include the origin and development of medical illustration; the long, cross-cultural history of the therapeutic artefact; the anatomical investigations of Renaissance artists such as Leonardo and Michelangelo; depictions of bodily pain and disease in the art of Matthias Grünewald and psychosomatic syndromes like melancholy in the work of Albrecht Dürer; the spectacularization of the body in Enlightenment science and the ethics of medical specimen display today -- all in order to bring the complex intersections of the history of medicine and the history of art into view.

AS.010.350. Body and Soul: Medicine in the Ancient Americas. 3 Credits.

This course examines curative medicine in the Americas through its visual culture and oral histories. Philosophies about the body, health, and causes of illness are considered, as are representations of practitioners and their pharmacology. Case studies are drawn from cross the Americas (Aztec, Moche, Aymara, Paracas, American SW). Collections study in museums, Special Collections.

History of Science, Medicine, and Technology

AS.140.105. History of Medicine. 3 Credits.

Course provides an introduction to health and healing in the ancient world, the Middle Ages, and the Renaissance. Topics include religion and medicine; medicine in the Islamicate world; women and healing; patients and practitioners.

AS.140.228. Epidemic!: Diseases that Shaped our World. 3 Credits.

In this course, we will look at a number of key epidemic diseases in the pre-modern and modern world, from Black Death to COVID-19, and investigate how it affected medical thought and practice, as well as political, social and economic lives. We will pay special attention to how these diseases spread and how they affected and were influenced by questions of race, gender, sexuality and colonialism.

AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.

Medical practice is complex in Latin America and the Caribbean. Most countries in the region have universal healthcare; yet, the quality of clinical services varies widely, and is influenced by degrees of incorporation into—or marginalization from—social power structures. Many people take their health into their own hands by supplementing biomedicine with plant based remedies as well as religious and spiritual services. This course will interrogate the history and contemporary relevance of healthcare in Latin America and the Caribbean, with particular interest in how medicine intersects with colonialism, slavery, capitalism, neo-colonialism, grassroots revolutionary movements, the Cold War, and neoliberalism. Drawing on films, visual and performance art, and music, students will consider the ways in which race, gender, indigeneity, ability, class, and nation have affected people's experiences with medical practice. Informed by postcolonial and decolonial scholarship, we will also examine why Latin America and the Caribbean have become "laboratories" for the production of medical knowledge, and importantly, how that knowledge was created by indigenous, enslaved, and migrant people as well as professionals. Finally, we seek to understand individual health problems in relation to the social and political determinants of health. As such, the course prompts students to reflect on why healthcare professionals—in the United States and abroad—would benefit from historically-informed communication with patients and their communities. This is a discussion-based seminar that requires active participation. There are no exams. The course does not assume any previous knowledge of the history of medicine or Latin American history.
Area: Writing Intensive

AS.140.245. Biology and Society in Asia. 3 Credits.

What major knowledge traditions about life's generation and function have taken shape in Asia that continue to shape our contemporary world? How have they fared in encounters with Western knowledge traditions? How have modern biology, biotechnology and biomedicine developed in Asia in recent years within distinct geopolitical contexts? This course addresses these questions with selected historical cases from China, India, Japan, Koreas and selected Southeast Asian countries. It first introduces concepts and frameworks of major non-Western knowledge systems about life such as yin-yang and five phases and examine how religions, politics, and cross-cultural encounters impacted these systems, their evolutions or replacements. Then the class will examine the political, material, cultural and institutional contexts of more recent development in the life sciences in Asia. Class activities include lectures, discussions, research seminars, a final research project, and possible conversations with visiting professors and field trips.

AS.140.301. History of Science: Antiquity To Renaissance. 3 Credits.

The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted.
Area: Writing Intensive

AS.140.302. Rise Of Modern Science. 3 Credits.

Survey of major scientific developments from the mid-18th century to the present.

AS.140.316. Minds and Machines. 3 Credits.
Is the mind identical to the brain? Is the mind (or brain) a computer? Could a computer reason, have emotions, or be ethically culpable? How have computers changed our minds? This course examines such questions philosophically and historically. Topics include early AI research, computationalism, connectionism, 4EA cognitive science, simulation theory, and the Singularity.

AS.140.317. The Hydrologic Sphere: Histories of Water in the Colonial and Postcolonial World. 3 Credits.
Water supplies are becoming scarcer globally due to climate change. We use clean water—fresh and salt—in a variety of ways that provide comfort, stability, and health, making it one of the most valuable commodities on Earth. While countries in the Global North are beginning to see more frequent and lengthier droughts, those in the Latin America, Africa, and South Asia have long struggled over how to distribute and use their clean water supplies. This class will examine how colonialism and its far-reaching effects have created an environment of scarce water supplies in many areas of the world. Water access is difficult to achieve, but for much of the Global South, the colonial period helped craft the problems we see today. This class will ask what colonial and postcolonial technologies' construction and use teach us about equitable clean water distribution, how social and cultural identities influence water supplies and use, and why water has been such an important element—and commodity—in our world, especially where Europeans settled and oppressed local populations.
Area: Writing Intensive

AS.140.321. Scientific Revolution. 3 Credits.
How did the Western understanding of nature change between 1500 and 1720? We'll study the period through the works of astronomers and astrologers, naturalists and magi, natural philosophers and experimentalists, doctors and alchemists & many others.

AS.140.327. Science and Utopia. 3 Credits.
This seminar will explore the complex interaction between science, technology and utopian/dystopian thought from the late nineteenth century. Major utopians will include Bellamy, H.G. Wells, Mark Twain, Frank Lloyd Wright, Aldous Huxley, George Orwell, Sinclair Lewis, B.F. Skinner, Margaret Atwood, and Walt Disney.

AS.140.329. Women, Health, and Medicine in Colonial and Antebellum America. 3 Credits.
This class will examine the history of women's health and medicine in America from the 17th century to the mid-19th century, a period in which settler colonialism and the trans-Atlantic slave trade mixed European, Indigenous American, and African people and belief systems, resulting in diverse healing practices and understandings of the body and gender. Major themes addressed in the course include reproductive health, domestic and "alternative" medicine, as well as enslavement, racialized medicine, poverty, disability, and sexuality.
Area: Writing Intensive

AS.140.335. Photography in Science and Medicine (19th Century-Present). 3 Credits.
How did photography change science and medicine, and vice versa? This course explores how and why photography and related imaging techniques became central to a broad variety of fields of science and medicine, ranging from anthropology and astronomy to embryology, nuclear physics, and radiology. It also considers how these techniques were created in the first place and to what extent they affected the standing of photography as an "art-science." Central themes will include (among others) the status and objectivity of photographic evidence; the historical relationships between technical, scientific, and artistic change; the role of photography in disseminating scientific and medical knowledge and (mis)information; the racial and gender biases of scientific and medical photography; and photography's use as a tool of scientific exploration, measurement, and surveillance. Students will be developing their own research projects in consultation with the instructor.

AS.140.336. History of Mental Healthcare in the United States. 3 Credits.
In recent decades, much has been done in the United States to destigmatize mental illness and incorporate psychiatric services into broader systems of healthcare and welfare. As clinicians, policy makers, social scientists, activists, and other stakeholders have collaborated to promote mental health and reintegrate people with behavioral disorders into society, they have often contrasted their efforts with those made in the past, portraying community-based approaches as more efficacious and humane. Narratives like these, however, deemphasize many important continuities in the history of American psychiatry. In this discussion-based course, students will explore how concerns about citizenship and social control have shaped the organization and provision of mental healthcare in the United States from the early nineteenth century to the present day. They will also complete various assignments designed to hone their ability to evaluate historical arguments, conduct independent and collaborative research on primary sources, and communicate the results of their scholarship to professional and lay audiences.

AS.140.338. Unsafe America: Accidents, Disasters, and Society, 1800–2020. 3 Credits.
According to the latest data from the National Safety Council, accidents cause over 173,000 deaths and 48,300,000 injuries per year across the United States. Since the nineteenth century, accidents ranging from burns to car crashes to the Three Mile Island nuclear disaster have become increasingly central to American life. This course examines the history of accidents and why Americans have chosen to control some hazards but not others. We will investigate how accidents have changed over time alongside the introduction and spread of new technologies; cultural beliefs about safety; the economic and political interests of different stakeholders; and the efforts of safety experts, nonprofits, corporations, families, and the government to protect Americans from harm. On one level, this course traces the unexpected consequences of remaking the United States with modern industry, transportation, infrastructure, and consumer products. At the same time, it captures how the principles of free enterprise and personal responsibility continue to influence the American safety movement.
Area: Writing Intensive

AS.140.391. Individualized Medicine from Antiquity to the Genome Age. 3 Credits.
A seminar for advanced undergraduates. We explore the notion of the individual in medicine over twenty-five centuries, from the Hippocratics to the invention of the case study during the Renaissance to the current JHU medical curriculum. The history of medicine survey, AS.140.105 or AS.140.106, is recommended though not required. Graduate students are welcomed but should expect to do additional work and readings.
Area: Writing Intensive

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as "nature-loving," and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture.
Area: Writing Intensive

AS.140.411. Senior Research Seminar. 3 Credits.

AS.140.435. Ways of Knowing: New Histories of Science, Medicine, and Technology. 3 Credits.
What does it mean for science to have a history? Comparing newer approaches with classic works, we will explore different strategies for placing science, medicine, and technology in social context.
Area: Writing Intensive

Modern Languages and Literatures

AS.210.313. Medical Spanish. 3 Credits.
Medical Spanish is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in medicine and health-related fields in Spanish-speaking environments. The student will be able to participate in conversations on topics such as contrasting health systems, body structures, disorders and conditions, consulting your doctor, physical and mental health, first-aid, hospitalization and surgery on completion of this course. In completing the course's final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
AS.210.311 OR AS.210.312 or appropriate Spanish placement exam score.

AS.211.259. Introduction to Medical and Mental Health Interpreting. 3 Credits.
This course is a broad introduction to the fields of medical and mental health interpreting. Modules will include: (1) Three-way communication: managing role expectations and interpersonal dynamics; (2) Basic interpreting skills and techniques in a healthcare setting; (3) Ethical principles, dilemmas, and confidentiality; (4) Elements of medical interpreting; (5) Elements of mental health interpreting; (6) Trauma-informed interpreting: serving the refugee population. The course is taught in English, and has no foreign language pre-requisites.

AS.211.307. Labor in Theory, Literature, and Art. 3 Credits.
This seminar examines some of the ways we define, represent, and think about the concept of labor in capitalism. We will analyze and compare a wide variety of texts (literary, visual, and theoretical) that embody different, often contradictory, notions of the work we do, why we do it, and how it affects us. As we investigate different types of work—productive and unproductive, physical & intellectual, factory & office—a few of the questions we will ask are: What methods have writers and artists used to depict labor in the 20th and 21st centuries? How is labor stratified along racial and gender lines? Is it possible to imagine a post-work society? The course curates a range of cultural artifacts (short stories, manifestos, novel excerpts, visual art, and film) that employ aesthetic strategies like irony, humor, absurdity, and duration to represent the dynamics of labor in capitalism. Theoretical texts then provide varied conceptual viewpoints from which to compare, contrast, and synthesize our impressions and interpretations of art and literary works. By the end of the semester, we will have traced a trajectory of labor in capitalism from the early 20th century to our own strange and precarious present.
Area: Writing Intensive

AS.211.423. Black Italy. 3 Credits.
Over the last three decades Italy, historically a country of emigrants—many of whom suffered from discrimination in the societies they joined—became a destination for hundreds of thousands of migrants and refugees from various countries, and particularly from Africa. Significant numbers of these immigrants came to Italy as a result of the country's limited, though violent colonial history; others arrive because Italy is the closest entry-point to Europe. How have these migratory flows challenged Italian society's sense of itself? How have they transformed the notion of Italian national identity? In recent years, growing numbers of Afro- and Afro-descendant writers, filmmakers, artists and Black activists are responding through their work to pervasive xenophobia and racism while challenging Italy's self-representation as a 'White' country. How are they forcing it to broaden the idea of 'Italianess'? How do their counternarratives compel Italy to confront its ignored colonial past? And, in what way have Black youth in Italy embraced the #Blacklivesmatter movement? This multimedia course examines representation of blackness and racialized otherness, whiteness, and national identity through literary, film, and visual archival material in an intersectional framework. Examining Italy's internal, 'Southern question,' retracing Italy's colonial history, and recognizing the experiences of Italians of immigrant origins and those of immigrants themselves, we'll explore compelling works by writers and filmmakers such as Igiaba Scego, Gagriella Ghermandi, Maza Megniste, Dagmawi Yimer, and others.

AS.211.477. Renaissance Witches and Demonology. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did "The Witch" go from being "monstrous" to being "admirable" and even "sexy"? Answers are found in history and anthropology, but also in medicine, theology, literature, folklore, music, and the visual arts, including cinema.
Area: Writing Intensive
Students who have already taken AS.214.171 cannot take AS.211.477.

AS.212.696. Literature Confronts Science: Zola.
Zola worked with the theories of heredity of his time in the Rougon-Macquart novels. But he also attempted to use his understanding of biology and thermodynamics to reform the theory of the novel in general. This course will examine these two different effects of science on literature and try to see what leads an author to undertake such a project. For a more extended description, please see http://www.wilda.org/Courses/CourseVault/Grad/Zola/Syllabus.html. Advanced undergraduates with sufficient background may register for this course with permission of the instructor.

Near Eastern Studies

AS.130.420. Seminar in Research Methods in Near Eastern Studies. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Writing Intensive

Philosophy

AS.150.136. Philosophy & Science: An Introduction to Both. 3 Credits.
Philosophers and scientists raise important questions about the nature of the physical world, the mental world, the relationship between them, and the right methods to use in their investigations of these worlds. The answers they present are very different. Scientists are usually empiricists, and want to answer questions by experiment and observation. Philosophers don't want to do this, but defend their views a priori. Why? Can both be right? Readings will present philosophical and scientific views about the world and our knowledge of it. They will include selections from major historical and contemporary figures in philosophy and science. The course has no prerequisites in philosophy or science.

AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Area: Writing Intensive

AS.150.245. Philosophy of Mind. 3 Credits.
If we know anything, it is natural to think it is our own minds. Despite this, philosophers have long disagreed about the natures of the states which make up our minds. And there is equally little agreement as to what makes such states count as mental in the first place. This course will investigate the nature of different aspects of mind and their interrelations. Time permitting, we will explore debates and puzzles about perception, memory, imagination, dreaming, pain and bodily sensation, emotion, action, volition and those states commonly classed as propositional attitudes: knowledge, belief, desire and intention. This will put us in a position to ask what if anything unifies such phenomena as mental

AS.150.312. Applied Public Health Ethics and Decision-Making. 3 Credits.
In this course, students receive an introduction to core theoretical foundations and case studies in public and global health ethics. this course adopts an applied framework for understanding how public health ethical values are navigated in different decision-making processes. This course is geared toward juniors and seniors.
Area: Writing Intensive

AS.150.405. Evidence: An Introduction. 3 Credits.
What is evidence? Can it ever be disregarded in science, the law, or religion, and if so, when? What are the paradoxes of evidence (grue, ravens) and how can they be solved?

AS.150.450. Topics in Biomedical Ethics. 3 Credits.
Area: Writing Intensive

AS.150.474. Justice and Health. 3 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.

AS.150.476. Philosophy and Cognitive Science. 3 Credits.
This year's topic is perception. Questions will include: In what ways might perceptual states be like and unlike pictures? Does what we believe affect what we perceive? Is linguistic comprehension a kind of perception? This course is geared toward advanced undergraduates and graduate students in philosophy and in the mind brain sciences and related fields. Others may be successful in the course depending on their prior course of study.

Program in Museums and Society

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.

Public Health Studies

AS.280.120. Lectures on Public Health and Wellbeing in Baltimore. 1 Credit.
An introduction to Urban Health with Baltimore as a case study: wellbeing, nutrition, education, violence and city-wide geographic variation. Lectures by JH Faculty, local government/service providers and advocates.

Sociology

AS.230.341. Sociology of Health and Illness. 3 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.

Writing Seminars

AS.220.206. Writing about Science I: Daily News Journalism. 3 Credits.
This course is designed to teach students the skills of daily news reporting, with a focus on covering science news. Students will learn how turn scientific discoveries into lively and engaging prose for the general public, interview sources, and pitch stories to news organizations. The skills taught are applicable to all areas of journalism, not just science journalism.
Area: Writing Intensive

AS.220.317. Writing about Science II: Feature Writing Journalism. 3 Credits.
This course is designed to teach students the skills of long-form narrative journalism, with a focus on covering science news. Skills taught will include how to compose scenes, create three-dimensional characters, create narrative tension, and conduct on-site reporting. Class speakers will include award-winning science journalists from New York to DC, who will share the secrets of their craft. The primary writing assignment will be a 3,000-word feature piece that is pitched, reported, and workshopped throughout the course of the class. "Writing About Science I" is recommended as a prerequisite for this course. If you have not taken this, please contact instructor (dgrimm5@jhu.edu) to enroll.
Area: Writing Intensive

AS.220.424. Science as Narrative. 3 Credits.
Class reads the writings of scientists to explore what their words would have meant to them and their readers. Discussion will focus on the shifting scientific/cultural context throughout history. Authors include Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein, Heisenberg, Bohr, Crick and Watson.
Area: Writing Intensive

Medicine, Science, and the Humanities, Bachelor of Arts

Medicine, Science, and the Humanities Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

The Program in Medicine, Science, and the Humanities is an interdisciplinary major that focuses on humanistic approaches to understanding the knowledge constituted by the natural sciences and medicine. Students complete two introductory courses, a focus area in a core humanities area, additional courses in both the medical humanities and sciences, and foreign language through the intermediate level.
A minimum grade of C- or better is required for all courses applying towards major requirements and courses may not be taken satisfactory/unsatisfactory. Courses directly equivalent to JHU courses from study abroad or taken at other universities may count towards requirements; however non-direct equivalent courses must be approved by the director of undergraduate studies for the major.

Major Requirements:

Code	Title	Credits
AS.145.10x One introductory medical humanities course		3
AS.145.219	Science Studies and Medical Humanities: Theory and Methods	3
Four courses in one pre-approved humanities focus area [1]		12
Foreign language through the intermediate level		12-18
Six additional courses totaling at least 18 credits in the humanities and sciences		**18**
Two must be in the humanities with POS-Tag MSCH-HUM at the 200-400 level		
One must be in the humanities with POS-Tag MSCH-HUM at the 300 or 400 level		
Three must be in the sciences (courses with an N designator) [2]		
Total Credits		**48-54**

[1] See choices in **Focus Area choices** below.

[2] Two of the science course must be from the same department and one of them must be at the 200-level or higher.

Focus Area Choices:

Africana Studies

Code	Title	Credits
Two core courses in Africana Studies from the following list: *		6
AS.362.111	Introduction to African American Studies	
AS.100.122	Introduction to History of Africa (since 1880)	
AS.100.123	Introduction to African History: Diversity, Mobility, Innovation	
AS.362.112	Introduction to Africana Studies	
Two Africana Studies courses (or cross-listed with Africana Studies) at the 300-400 level.		6
Total Credits		**12**

* If offered, AS.100.121, AS.362.121, and AS.362.104 would also apply.

Anthropology

Code	Title	Credits
Two courses in the Anthropology Department at the 100-400 level (AS.070.1xx-AS.070.4xx)		6
Two courses in the Anthropology Department at the 300-400 level (AS.070.3xx-AS.070.4xx)		6
Total Credits		**12**

Archaeology

Code	Title	Credits
AS.136.101	Introduction To Archaeology	3
or AS.130.177	World Prehistory: An Anthropological Perspective	
One course with POS-Tag ARCH-ARCH at the 100-400 level		3
Two courses with POS-Tag ARCH-ARCH at the 300-400 level		6
Total Credits		**12**

Bioethics

Code	Title	Credits
AS.150.219	Introduction to Bioethics	3
AS.150.220	Introduction to Moral Philosophy	3
Two courses in the Philosophy Department (AS.150.3xx-4xx) with POS-Tag PHIL-BIOETH at the 300-400 level		6
Total Credits		**12**

Classics

Code	Title	Credits
Two Classics courses (or cross-listed with Classics) at the 100-400 level		6
Two Classics courses (or cross-listed with Classics) at the 300-400 level		6
Total Credits		**12**

East Asian Studies

East Asian language courses cannot be used to fulfill the focus area requirement. However, students pursing the East Asian focus area are encouraged to study an East Asian language to fulfill the foreign language requirement of the Medicine, Science, and Humanities major.

Code	Title	Credits
Two East Asian Studies courses (or cross-listed with East Asian Studies) at the 100-400 level		6
Two East Asian Studies courses (or cross-listed with East Asian Studies) at the 300-400 level		6
Total Credits		**12**

English

Code	Title	Credits
AS.060.107	Introduction to Literary Study	3
One period or theme course at any level **		3
Two course in the English department at the 300-400 level (AS.060.3xx-4xx courses)		6
Total Credits		**12**

** To identify these courses, students should select one course with either the POS-Tag of ENGL-PR1800 or ENGL-GLOBAL. If this course is at the 300 or 400 level in the English department, students will need another English courses at the 100-400 level to complete a total of 4 courses for the focus area.

Film and Media Studies

Students are encouraged to take AS.061.226 Special Topics: Writing About Film. This will count as the 200 level course with the POS-Tag FILM-CRITST.

Code	Title	Credits
AS.061.140	Introduction to Cinema, 1892-1960	3
or AS.061.141	Introduction to Cinema, 1941-present	
One course with POS-Tag FILM-CRITST at the 200 level		3
Two courses with POS-Tag FILM-CRITST at the 300-400 level		6
Total Credits		**12**

German

One of the four courses may be taught in English (identified with POS-Tag MLL-ENGL).

Code	Title	Credits
Four courses designated AS.210.3xx (German language only); AS.211.3xx-4xx (with POS-TAG GRLL-GERM) and AS.213.3xx-4xx		12

History

Code	Title	Credits
AS.100.293	Historical Methods, Archives and Interpretations	3
One course in the History Department at the 100-200 level (AS.100.1xx-2xx)		3
Two courses in the History Department at the 300-400 level (AS.100.3xx-4xx)		6
Total Credits		**12**

History of Art

Code	Title	Credits
AS.010.101	Introduction to Art History I	4
or AS.010.102	Introduction to Art History II	
One History of Art course (cross-listed with History of Art) at the 200-400 level		3
Two History of Art courses (or cross-listed with History of Art) at the 300-400 level		6
Total Credits		**13**

History of Science, Medicine, and Technology

Code	Title	Credits
One survey course selected from:		3
AS.140.105	History of Medicine	
AS.140.105	History of Medicine	
AS.140.301	History of Science: Antiquity To Renaissance	
AS.140.302	Rise Of Modern Science	
AS.140.321	Scientific Revolution	
One History of Science, Medicine, & Technology course (or cross-listed) at the 100-400 level		3
Two History of Science, Medicine & Technology courses (or cross-listed) at the 300-400 level		6
Total Credits		**12**

Italian

Code	Title	Credits
AS.210.351	Advanced Italian I	3
AS.210.352	Advanced Italian II	3
AS.214.362	Italian Journeys: Medieval and Early Modern	3
or AS.214.363	Italian Journeys: An Other Story	
One course AS.211.2xx-4xx with POS-Tag MLL-ITAL or AS.214.2xx-4xx		3
Total Credits		**12**

Latin American Studies

Code	Title	Credits
One survey course selected from: ****		3
AS.100.115	Modern Latin America	
AS.215.231	Introduction to Literature in Spanish	
One course cross-listed with Latin American Studies at the 100-400 level		3
Two courses cross-listed with Latin American Studies at the 300-400 level		6
Total Credits		**12**

**** If offered, AS.100.105 and AS.100.239 would also apply.

Near Eastern Studies

Code	Title	Credits
Two Near Eastern Studies courses (or cross-listed with Near Eastern Studies) at the 100-400 level		6

Two Near Eastern Studies courses (or cross-listed with Near Eastern Studies) at the 300-400 level	6
Total Credits	**12**

Philosophy

Of the four required courses, at least two courses must be at the 300-400 level. Either AS.150.111 or AS.150.112 will count, but not both.

Code	Title	Credits
One course in philosophy of science [1]		3
One course with POS-Tag PHIL-ANCIEN, PHIL-MODERN, PHIL-ETHICS, or PHIL-MIND		3
Two additional philosophy courses		6
Total Credits		**12**

1. Philosophy of science courses will have the POS-Tag PHIL-LOGSCI. However, as some courses with this POS-Tag are focused on logic, students will need to speak to the director of undergraduate studies to confirm if a course will apply.

Writing Seminars

Code	Title	Credits
AS.220.105	Introduction to Fiction & Poetry I	3
or AS.220.108	Introduction to Fiction & Nonfiction	
AS.220.106	Introduction to Fiction & Poetry II	3
AS.220.200	The Craft of Fiction	3
or AS.220.201	The Craft of Poetry	
One course in the Writing Seminars Department at the 300-400 level (AS.220.3xx-4xx)		3
Total Credits		**12**

Sample Program of Study

A typical program might include the following sequence of courses:

Course	Title	Credits
First Year		
First Semester		
Foreign language		4
AS.145.10x course		3
Natural science course at the 100 level		3
	Credits	**10**
Second Semester		
Foreign language		4
Natural science course at the 100 level		3
Course in selected focus area at any level		3
	Credits	**10**
Second Year		
First Semester		
AS.145.219	Science Studies and Medical Humanities: Theory and Methods	3
Foreign language		3
Natural science course at the 200 level		3
	Credits	**9**
Second Semester		
Foreign language		3
Course selected focus area at any level		3
	Credits	**6**
Third Year		
First Semester		
Course in selected focus area at the 300-400 level		3
	Credits	**3**
Second Semester		
Course in selected focus area at the 300-400 level		3
200-400 level Humanities elective with POS-Tag MSCH-HUM		
	Credits	**3**
Fourth Year		
First Semester		
200-400 level Humanities elective with POS-Tag MSCH-HUM		3
	Credits	**3**
Second Semester		
300-400 level Humanities elective with POS-Tag MSCH-HUM		3
	Credits	**3**
	Total Credits	**47**

Honors in the Major

Honors will be offered as an option to juniors with a minimum GPA of 3.50 in major requirements. Honors work will require enrollment in two courses, culminating with an original thesis paper (or equivalent scholarly or creative work) approximately 20-25 pages in length, whose topic is closely related to the student's humanities core area. Thesis projects may be supervised by a faculty member in the student's core area, or by another faculty member with expertise relevant to the topic. In either case the supervisory/mentoring role will be by arrangement between the student, MSH Director of Undergraduate Studies, and the faculty member being solicited. All topics and supervisors are to be approved by the Director of Undergraduate Studies. Juniors interested in the pursing honors option must apply with the Director of Undergraduate Studies before fall of the senior year. The application requires development of an approved research proposal with an accompanying mentorship plan.

For the first course requirement, all students hoping to pursue honors in the major must take the MSH Capstone course in the spring of their junior year. This capstone course may count as a 300 level MSCH-HUM POS-Tagged course. Completion of this course does not require a student to write a thesis in the senior year nor does it guarantee a student will be approved to write an honors thesis.

Typically, students are expected to write their thesis in fall of their senior year by enrolling in an honors-specific Senior Thesis course for 3 credits. These credits do not count as fulfilling a requirement of the major.

Military Science

http://www.krieger.jhu.edu/rotc (http://www.krieger.jhu.edu/rotc/)

The JHU Army Reserve Officers' Training Corps (ROTC) was among the first to be established by Congress in 1916 and is routinely ranked at the top of the Nation's 273 programs. Nearly 3,000 Hopkins students have received Army officer commissions through the program, with over 40 attaining the rank of general officer. Students can enter the program with as little as two years remaining as an undergraduate or may complete the requirements while pursuing a graduate degree. Upon graduation, Hopkins students are commissioned as a second lieutenant in the U.S. Army. Some are selected to attend a funded law school or several medical programs, while others serve in the Active Army, Reserves or National Guard. The Leadership and Management class specializes in leader development and is an excellent course for students aspiring to become leaders on campus and beyond. Additional information on military science or ROTC can be obtained at our building (behind the athletic center), by asking a current cadet, and by calling 1-800-JHU-ROTC or 410-516-7474. You can also visit the JHU ROTC website (https://krieger.jhu.edu/rotc/) to find further contact information.

Scholarship and Financial Assistance

To apply for an ROTC scholarship go to http://www.goarmy.com/rotc/scholarships.html. Scholarship opportunities are regularly improved and incentives are added. Applications for scholarships by qualified students are awarded throughout the semester. A non-scholarship program is also available. For health profession and nursing students, ROTC can offer numerous opportunities to achieve specialized education, additional postgraduate scholarships and accession/graduation bonuses.

Curriculum

The curriculum normally consists of a two-year Basic Course (freshmen / sophomores) and a two-year Advanced Course (juniors / seniors). Some modification to this curriculum is common, as with graduate or transfer students. Completing the 30-day Basic Camp at Fort Knox, KY, is equivalent to the Basic Course. Successful graduates of Basic Camp are normally offered ROTC scholarships and an opportunity to enroll in the Advanced Course. Junior-ROTC experience, prior military service and military academy attendance may also qualify for Basic Course completion.

All Advanced Course students are cadets and have a contractual agreement with the Army. These students attend the Advanced Camp at Fort Knox, KY, between the 300- and 400-level courses. This is a core requirement to commission in the Army and cannot be waived.

Army ROTC strives to develop values-based graduates who offer expert leadership to the campus, the community and the Army. As such, we offer and encourage cadets to participate in: paid leadership and technical internships; cultural and language immersion programs; a number of Army military school opportunities in: Europe, South America, the Republic of Korea, Alaska, Hawaii, and across the continental United States.

Extracurricular activities may also include: community assistance, Red Cross blood drives, tutoring for at-risk children, and volunteering at the Veterans Administration. Cadets may apply for additional military training such as skydiving, helicopter rappelling, mountaineering, and cold weather training. New and challenging opportunities routinely become available.

Air Force ROTC

While not part of the Military Science program at JHU, Hopkins students are able to participate in an Air Force ROTC program with an agreement with the University of Maryland. For more information, visit the their website (https://www.afrotc.com/).

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.374.101. Introduction to the Army. 2 Credits.
The MSL I course produces a Cadet who accepts the Army as a values-based organization and embraces the scholar-athlete-warrior ethos; who is familiar with individual roles and responsibilities in support of team efforts and problem solving processes in military and non-military situations; who demonstrates oral and written communication skills, understands resilience, and demonstrates a commitment to learning. MSL101 introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a big picture understanding of the Reserve Officers' Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army leader. As you become further acquainted with MSL101, you will learn the structure of the ROTC Basic Course program consisting of MSL101, 102, 201, 202, Fall and Spring Leadership Labs, and Basic Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student.Military Science courses require department permission and are restricted to active or inquiring ROTC members

AS.374.102. Foundations of Agile and Adaptive Leadership. 2 Credits.
The MSL I course produces a Cadet who accepts the Army as a values-based organization and embraces the scholar-athlete-warrior ethos; who is familiar with individual roles and responsibilities in support of team efforts and problem solving processes in military and non-military situations; who demonstrates oral and written communication skills, understands resilience, and demonstrates a commitment to learning. MSL102 introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a big picture understanding of the Reserve Officers' Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army leader. As you become further acquainted with MSL102, you will learn the structure of the ROTC Basic Course program consisting of MSL101, 102, 201, 202, Fall and Spring Leadership Labs, and Basic Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student.

AS.374.110. Basic Leadership Laboratory, ROTC 101. 1 Credit.
These introductory courses in a laboratory environment are designed to expose students to practical experiences, challenges and individual learning opportunities in a small group. Students learn the fundamentals of an organization and apply principles of leadership and management at the foundation level. Students develop military courtesy, organizational discipline, communication and basic leadership and management skills. Ultimately, students understand how to facilitate and lead a small group of four to five people as an integral part of a larger organization of 75-100 people through situational training opportunities in a variety of conditions. As a leadership practicum, students have the opportunity to serve in leadership positions and receive tactical and technical training. In addition to learning to lead groups of five to 100 people, students will also be exposed to training on first aid, operating Army equipment, Army activities such as rappelling and drill and ceremony. These laboratories are required for enrolled ROTC participants who desire to be considered for a commission in the Army. Corequisite: AS.374.101-AS.374.102.Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Prerequisite(s): AS.374.101 OR AS.374.102

AS.374.120. Basic Leadership Laboratory II. 1 Credit.
Students learn and apply team echelon leadership at an entry level. They continue development of military courtesy, discipline, communication and basic Soldier skills. Ultimately, students understand how to operate in and lead 4-5 persons through a program of training opportunities in a variety of conditions. Freshmen only.

AS.374.201. Leadership and Decision Making. 2 Credits.
The MSL II course produces a cadet grounded in foundational leadership doctrine and skills by following and leading small units to achieve assigned missions; who applies critical thinking and problem solving using Troop Leading Procedures (TLP); who comprehends the value of diversity and understands the officer's role in leading change; understands the fundamentals of the Army as a profession. MSL201 adds depth to the Cadets understanding of the Adaptability Army Learning Area. The outcomes are demonstrated through Critical and Creative Thinking and the ability to apply Troop Leading Procedures (TLP) to apply Innovative Solutions to Problems. The Army Profession is also stressed through leadership forums and a leadership self-assessment. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during Leadership LABs team building exercises, and Field Training Exercises.Military Science courses require department permission and are restricted to active or inquiring ROTC members.

AS.374.202. Army Doctrine and Team Development. 2 Credits.
MSL 202 focuses on Army doctrine and team development. The course begins the journey to understand and demonstrate competencies as they relate to Army doctrine. Army Values, Teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed.The ability to lead and follow is also covered through Team Building exercises in small units up to squad level. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during Leadership LABs (team building exercises, LTXs, VBS exercises). Includes a 1-Hour lab per week taught by MS III Cadets.The Army Reserve Officer Training Course (ROTC) Basic Course is an academically rigorous 2-year college program comprised of four semester courses of instruction, Leadership Labs (two sets, Fall/Spring), and the Cadet Basic Camp conducted at Fort Knox, KY.

AS.374.210. Basic Team Leadership. 1 Credit.
Students lead and assist in leading 4-5 person teams through a variety of training opportunities. They learn the troop-leading procedures, basic problem solving, and tactical skills aimed at military leadership. Students will mentor and assist members of their team with improving their own skills and leadership as well. Corequisite: AS.374.201.Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Prerequisite(s): AS.374.201

AS.374.220. Advanced Team Leadership. 1 Credit.
Students perform duties of and develop their leadership, as team leaders during a variety of induced training opportunities. Continued emphasis is placed on troop-leading-procedures and simple problem solving. Students lead physical fitness training and mentor subordinates in military, academic and extra-curricular activities. Successful completion of advanced team leadership allows students to progress into ROTC Advanced Courses. Sophomores only.

AS.374.301. Training Management and the Warfighting Functions. 2 Credits.
MSL301 Training Management and the Warfighting Functions, is an academically challenging course where you will study, practice, and apply the fundamentals of Army Leadership, Officership, Army Values and Ethics, Personal Development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a Leadership Lab, or during a Field Training Exercise (FTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you in to a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation System (COER). Successful completion of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY.Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Area: Writing Intensive

AS.374.302. Applied Leadership in Small Unit Operations. 2 Credits.
MSL302 Applied Leadership in Small Unit Operations, is an academically challenging course were you will study, practice, and apply the fundamentals of Army Leadership, Army Values and Ethics, Personal Development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a Leadership Lab, or during a Field Training Exercise (FTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you in to a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). Successful completion of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY.
Area: Writing Intensive

AS.374.307. Leadership in Military History. 2 Credits.
This course provides students with a historical perspective to decisions made by American military leaders: battlefield complexity, resource limitations, and teamwork deficiencies. Students cover major military engagements from the colonial period through the current operating environment. Students examine how leaders motivated their men, devised battle strategies, implemented rules of engagement, and managed supplies, transportation, and logistics for their troops. Requires permission of the Director of Military Science. Registration restricted to contracted ROTC cadets only.
Area: Writing Intensive

AS.374.310. Basic Tactical Leadership Laboratory. 1 Credit.
In Leadership Laboratory, students are given the opportunity to apply what they have learned in the classroom, in a tactical or field environment. Students learn and demonstrate the fundamentals of leadership by planning, coordinating, navigating, motivating, and leading squads in the execution of both garrison and tactical missions. Successful completing of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY. Corequisite: AS.374.301.Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Prerequisite(s): AS.374.301

AS.374.320. Advanced Tactical Leadership. 1 Credit.
Students further develop their leadership skills by directing and coordinating the efforts of 9-60 personnel on offensive, defensive and civil-support tactical-tasks. Develop written plans for garrison and field environments while supervising its execution. Ultimately, prepares students to excel at the four-week National Leadership Development and Assessment Course at Fort Knox, KY. Permission required. Juniors only.

AS.374.401. The Army Officer. 2 Credits.
MSL 401 Focuses on development of the Army Officer. It is an academically challenging course were you will develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. You will also learn about Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, you will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field grade officer level. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre.Military Science courses require department permission and are restricted to active or inquiring ROTC members.

AS.374.402. Company Grade Leadership. 2 Credits.
This is an academically challenging course were you will study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officer skills, Army Values and ethics, personal development, and small unit tactics at platoon level. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, mid-term exam, and a Capstone Exercise in place of the final exam. For the Capstone Exercise, you will be required to complete an Oral Practicum that you will be evaluated on your knowledge of the 20 Army Warfighting Challenges (AWFC) covered throughout MSL401 and 402 coursework. In addition, you could be assessed on leadership abilities during classroom PE, Leadership Labs, or during a Field Training Exercise (FTX). You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your cadre, PMS and other MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills. At the conclusion of this course, you will be able to plan, coordinate, navigate, motivate and lead a platoon in future operational environments. Successful completion of this course will assist in preparing you for your BOLC B course and is a mandatory requirement for commissioning.

AS.374.410. Advanced Planning & Decision Making I. 1 Credit.
Students develop a semester-long progression of programmed training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds from fall to spring semester as students master advanced problem solving, resource synchronization and executive decision making. Students evaluate, mentor and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Co-requisite: AS.374.401-AS.374.402. Recommended Course Background: AS.374.301-AS.374.302, AS.374.310-AS.374.320 and Basic Course.Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Prerequisite(s): AS.374.401 OR AS.374.402

AS.374.420. Advanced Organizational Planning. 1 Credit.
Students develop a semester-long progression of training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds on the first semester’s achievements through advanced problem solving, resource synchronization and executive decision making. Students evaluate and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Permission required. Seniors only.

AS.374.501. Independent Study. 1 Credit.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.374.512. Internship - Military Science. 1 - 3 Credits.
Students will select a topic relevant to the study of military leadership and will complete a project based on current military doctrine and the contemporary operating environment of current military operations. Permission required.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

Modern Languages and Literatures

https://krieger.jhu.edu/modern-languages-literatures/

The Department of Modern Languages and Literatures offers graduate and undergraduate courses in the languages, literatures, and cultures of France, Germany, Israel, Italy, Portugal, Latin America, and Spain. The language programs include a wide range of courses from introductory through conversation and composition to civilization. The literature programs treat all periods of literature from both historical and critical-theoretical perspectives. These courses emphasize the close reading of texts and modern theories of literary criticism, particularly those based on contemporary philosophy, psychoanalysis, anthropology, and linguistics. In addition, an active program of visiting professors and lecturers complements the core program offered by the faculty-in-residence.

Facilities

The Milton S. Eisenhower Library has collections that provide an ample basis for advanced research in modern languages and literatures. With the Peabody Library of The Johns Hopkins University in Baltimore and the Library of Congress and other libraries in nearby Washington, a variety of excellent research resources are available to students and faculty.

Undergraduate Programs

A major in the department prepares students for teaching language at the elementary level or for graduate work leading to advanced degrees in French, German, Italian, Latin American, Portuguese, or Spanish studies, or in comparative literature. It also provides excellent background for work in fields such as philosophy, history, international affairs, business, law, or medicine. Opportunities are available to study abroad. Students are encouraged to take advantage of these opportunities.

Requirements for the B.A.

Also see Requirements for a Bachelor's Degree (p. 1587).

Currently, the B.A. degree is offered in French, German, Italian, Romance Languages, or Spanish. A candidate for the B.A.degree in the Department of Modern Languages and Literatures should have a good command of the spoken language of their specialization, and a general familiarity with the literature written in that language. Each major requires *a minimum of 24 hours (or eight courses) beyond the first two years of language instruction; please see specific details for each individual major below.* The department also recommends that majors take courses in other literatures, history, philosophy, and anthropology.

The student who has had four years of German or a Romance language in high school or two years of German or a Romance language in college normally begins the major with Conversation and Composition (provided they have results commensurate with that level on the placement test) and (where offered) the undergraduate survey of literature. It is recommended that any student majoring in German or a Romance language spend at least one semester of junior year taking university courses in the country of study. Study abroad credit transfer is arranged by the student in consultation with the director of undergraduate studies and/or the relevant undergraduate language program director, and the Office of Study Abroad. In the senior year, a major may be permitted to take courses in the department at the graduate level.

A minor in German or one of the Romance languages is available to undergraduate students in any major. Like the various majors, the minors allow students to develop competence in German or a Romance language while receiving grounding in the culture and literature of that language. Five or six courses in the department beyond the first two years of language study are required for each minor option (see below for details).

Graduate Programs

In addition to general university requirements for the Ph.D., the following regulations apply to graduate students in the Department of Modern Languages and Literatures:

To be accepted into the Ph.D. program, students must demonstrate by an exceptionally strong academic record that they are capable of advanced study in literature. They will choose French, German, Italian, Latin American, or Spanish literature as the major field of interest. The student will normally take two to three years of graduate courses and devote the fourth year to study and research in the country on which the student's study concentrates. The well-prepared student can expect to receive the Ph.D. after five years of study. The graduate program in Modern Languages and Literatures emphasizes work in three complementary areas: literary history, close textual analysis (including *explication de texte*), and theory of interpretation. By way of preparing students in a variety of critical schools, the faculty and the visiting professors offer training in the different disciplines pertaining to critical theory, including philosophy, theory of language, psychoanalytic theory, intellectual history, and cultural anthropology.

In addition to the major language, the Ph.D. candidate must demonstrate proficiency in one or two other languages besides English, depending on the specialization. (See below for further information.)

A dissertation proposal, presented to the faculty and students in their section, is required before official admittance to candidacy for the Ph.D. for French, Italian and Spanish graduate students.

Admission Requirements

Application Procedures

Prospective graduate students may visit the departmental website (https://krieger.jhu.edu/modern-languages-literatures/) for further information on programs and faculty. All questions regarding the programs offered by the department should be emailed to mll@jhu.edu (grll@jhu.edu). Prospective students are encouraged to apply online through the secure Graduate Admissions website (https://www.jhu.edu/admissions/graduate-admissions/).

Courses

AS.210.101. French Elements I. 4 Credits.
Provides a multi-faceted approach to teaching language and culture to the novice French student. The first semester emphasizes listening and speaking, while laying the foundation in grammar structures, reading, and writing. This course is designed for true beginners: Students with any previous background must take the placement test (https://advising.jhu.edu/student-roadmap/freshmen/placement-exams/french/). May not be taken on a Satisfactory/Unsatisfactory basis. Contact: Claude Guillemard (cguille1@jhu.edu)

AS.210.102. French Elements II. 4 Credits.
The second semester of this intensive course for beginners provides students with the linguistic tools to read excerpts from a play (Antigone by Jean Anouilh), to polish a written autobiography, and to perform short oral skits. A variety of cultural materials help students acquire grammatical structures and expand their vocabulary.May not be taken on a Satisfactory/Unsatisfactory basis.
AS.210.101 or AS.210.103 or appropriate score on the placement exam (https://advising.jhu.edu/student-roadmap/freshmen/placement-exams/french/). Contact: Claude Guillemard cguille1@jhu.edu)

AS.210.103. Learner Managed French Elements I. 3 Credits.
This beginner course is specifically designed for students who have had some exposure to French. They must take the mandatory placement test: http://www.advising.jhu.edu/placement_french.php, and receive between 30 and 49. They will cover the first semester of French Elements at a pace suited for "false beginners" with major online components to supplement class instruction. Must complete the year with 210.102 to obtain credit. May not be taken on a Satisfactory/Unsatisfactory basis.

AS.210.105. Fast-Track Beginning French. 4 Credits.
This beginning French course is a fast-paced, intensive introduction to the French language and the culture of France and the French-speaking world, covering the content of French Elements 1 and 2 (AS 210.101-102) but in one semester. As such, it is meant for students who have some previous classroom or independent study of French (as assessed by a placement exam), or who are native or bilingual speakers of another Romance language. Classroom activities will emphasize spoken communication on a variety of topics, using relevant vocabulary and grammar. Extensive use of online resources outside of class will build skills in listening, reading, and writing. Completion of this class will allow students to enroll in Intermediate French 1 (AS 210.201).

AS.210.106. Italian through Food. 3 Credits.
This beginner's course will help you develop foundational linguistic skills in Italian while offering an overview of Italian food cultures, both past and present. By the end of this course, you will be able to navigate everyday situations (e.g. ordering a meal at a restaurant, describing your favorite dishes, talking about likes and dislikes) entirely in Italian, and will develop an appreciation for the history of Italian cuisine. Upon completion of this course, students are encouraged to enroll in AS210.152 (Italian Elements II) in the Spring term. Advanced speakers of other Romance languages (e.g. French, Spanish, Portuguese) are encouraged to enroll in AS.210.175 (Accelerated Italian for Speakers of Other Romance Languages I). Open to first-year students only.
Students who are taking/who took AS.210.151 or higher Italian language course are not allowed to register.

AS.210.111. Spanish Elements I. 4 Credits.
This is an introductory Spanish language course. On completion of this course, the students will have acquired the basic communication and grammatical skills necessary for speaking, writing, listening and reading in Spanish. Students will demonstrate these skills through their performance in class, by completing several online assignments, and by taking part in three group presentations in addition to two comprehensive exams which focus on the following thematic topics: Greetings, University Life, Family and Leisure. Students will also be introduced to the culture, history and geography of various Spanish and Latin American countries. The content covered in Spanish Elements 1 is the foundation for all consecutive Spanish courses. A placement exam is required to ensure the appropriate level. Your enrollment in Spanish Elements I will not be considered for approval until you have emailed the Spanish Language Director.

AS.210.112. Spanish Elements II. 4 Credits.
This introductory Spanish language course is a continuation of the content covered in Spanish Elements I. On completion of this course, the students will have further developed the communication and grammatical skills necessary for speaking, writing, listening and reading in Spanish. Students will demonstrate these skills through their performance in class, by completing several online assignments, and by taking part in three group presentations in addition to two comprehensive exams which focus on the following thematic topics: Food, Sports, Shopping, Travel, and Health. Students will also be introduced to the culture, history and geography of various Spanish and Latin American countries. The content covered in Spanish Elements II prepares the students for Intermediate Spanish.May not be taken satisfactory/unsatisfactory. No new enrollments permitted after 4th class session.Prerequisite: AS.210.111 or appropriate placement exam score.
AS.210.111 or Spanish placement exam score.

AS.210.120. Elementary Modern Hebrew. 3 Credits.
Elementary Modern Hebrew is the first exposure to the language as currently used in Israel in all its functional contexts. All components of the language are discussed: reading, writing, listening, and speaking. Simple idiomatic sentences and short texts in Hebrew are used. Students learn the Hebrew alphabet, words and short sentences. Cultural aspects of Israel will be intertwined throughout the course curriculum.

AS.210.121. Modern Hebrew for Beginners II. 3 Credits.
Hebrew for Beginners 106 is a continuation of Hebrew 105 and as such, students are required to have a foundation in Hebrew. The course will enhance and continue to expose students to Hebrew grammar, vocabulary, and syntax. All components of the Hebrew language will be emphasized in this course; we will highlight verbs, adjectives, and the ability to read longer texts. Speaking in Hebrew will also be highlighted to promote students' engagement and communication. Cultural aspects of the language will be incorporated into lessons as well.
AS.384.115 OR AS.210.120

AS.210.151. Italian Elements I. 4 Credits.
This course sequence (AS.210.151 and AS.210.152) is an introduction to Italian for students with no previous exposure to the language. By the end of the academic year, you will be able to meet basic needs in an Italian-only environment. Examples include introducing yourself, asking for and giving directions, ordering a meal at a restaurant, describing and asking information about places and people, and engaging in a simple phone conversation. Advanced speakers of other Romance languages (e.g. French, Spanish, Portuguese) are encouraged to enroll in AS.210.175 (Accelerated Italian for Speakers of Other Romance Languages I)

AS.210.152. Italian Elements II. 4 Credits.
Course helps students develop basic listening, reading, writing, speaking, and interactional skills in Italian. The content of the course is highly communicative, and students are constantly presented with real-life, task-based activities. Course adopts a continuous assessment system (no mid-term and no final). May not be taken Satisfactory/ Unsatisfactory. No previous knowledge of Italian is required.
AS.210.151 OR AS.210.106 or Placement Exam Part I.

AS.210.161. German Elements I. 4 Credits.
Four-skills introduction to the German language and culture. Develops proficiency in speaking, writing, reading and listening skills through the use of basic texts, multi-media and communicative language activities. Online tools required. May not be taken on a satisfactory/unsatisfactory basis. Tuesday section is a mandatory hour.

AS.210.162. German Elements II. 4 Credits.
Continuation to the introduction to the German language and a development of reading, speaking, writing & listening through the use of basic texts and communicative activities. The culture of the German-language countries is also incorporated into the curriculum. May not be taken on a S/U basis. Prerequisites: AS.210.161 or Placement Exam. Tuesday hour is mandatory.
AS.210.161 or appropriate score on placement exam.

AS.210.163. Elementary Yiddish I. 3 Credits.
Year-long course. Includes the four language skills, reading,writing, listening, and speaking, and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. This class will be using In Eynem, the brand new Yiddish language program from the Yiddish Book Center.Cannot be taken Satisfactory/Unsatisfactory.

AS.210.164. Elementary Yiddish II. 3 Credits.
Year-long course that includes the four language skills--reading, writing, listening, and speaking--and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. Both semesters must be taken with a passing grade to receive credit. Recommended Course Background: AS.210.163 or instructor permission.

AS.210.171. Accelerated Italian Elements I for Advanced Spanish Speakers. 4 Credits.
This course sequence is designed for advanced speakers of other romance languages (e.g. French, Spanish, Portuguese), and will cover the same material as the regular-track Italian Elements I and II and Intermediate Italian I and II courses. Upon completion of both semesters, students will be allowed to register for AS210.351 (Advanced Italian I).

AS.210.172. Accelerated Italian Elements II for Advanced Spanish Speakers. 4 Credits.
Course draws on the many similarities between Spanish and Italian to help students develop basic listening, reading, writing, speaking, and interactional skills in Italian in an accelerated fashion. The content of the course is highly communicative, and students are constantly presented with real-life, task-based activities. Course is taught in Spanish and Italian. Students successfully completing the course with a grade of A- or higher will be allowed to place into Advanced Italian I (AS210.351)
AS.210.171 with a grade of A- or higher.

AS.210.175. Accelerated Italian for Advanced Speakers of other Romance Languages. 3 Credits.
This course sequence (AS210.175 and AS210.176) is designed for advanced speakers of other Romance languages (e.g. French, Spanish, Portuguese), and will cover the same material as the regular-track Italian Elements I and II (AS.210.151 and AS.210.152) and Intermediate Italian I and II (AS.210.251 and AS.210.252) courses. Upon successful completion of both semesters, students will be allowed to register for AS.210.351 (Advanced Italian I).

AS.210.176. Accelerated Italian for Advanced Speakers of other Romance Languages II. 4 Credits.
This is the second part of an elementary Italian language course sequence designed for advanced speakers of other romance languages (e.g. French, Spanish, Portuguese). This course will cover the same material as the regular-track Intermediate Italian I and II courses. Students completing this course with a grade of B or higher will be allowed to register for AS210.351 (Advanced Italian I) in the Fall term. Pre-requisite: Completion of AS.210.175 with a grade of B or higher, or Italian Language Program Director permission.
AS.210.175 with a B or higher

AS.210.177. Portuguese Elements I. 4 Credits.
This one-year course introduces students to the basic skills in reading, writing, and speaking the language. Emphasis is placed on oral communication with extensive training in written and listening skills. Class participation is encouraged from the very beginning. All classes are conducted in Portuguese. Students must complete both semesters with passing grades to receive credit. May not be taken on a Satisfactory / Unsatisfactory basis. No previous knowledge of Portuguese is required.

AS.210.178. Portuguese Elements II. 4 Credits.
This course expands students knowledge of the basic language skills: reading, writing, listening, speaking. It uses a multifaceted approach to immerse students in the cultures of Brazil, Portugal, and Portuguese-speaking Africa. The focus of the course is on oral communication with, however, extensive training in grammar. The course is conducted entirely in Portuguese. Lab work required. Students must complete both semesters with passing grades to receive credit.
AS.210.177 or equivalent score on placement test or instructor approval.

AS.210.201. Intermediate French I. 3 Credits.
This course develops skills in speaking, listening comprehension, reading, and writing.Systematic review of language structures with strong focus on oral communication and acquisition of vocabulary; extensive practice in writing and speaking; readings and films from French-speaking countries. Recommended Course Background: AS.210.102 or AS.210.104 or appropriate score on Placement test I.

AS.210.202. Intermediate French II. 3 Credits.
This course develops skills in speaking, listening comprehension, reading, and writing. Systematic review of language structures with strong focus on oral communication and acquisition of vocabulary; extensive practice in writing and speaking; readings and films from French-speaking countries. Recommended Course Background: AS.210.201 or permission of instructor (sroos@jhu.edu).

AS.210.211. Intermediate Spanish I. 3 Credits.
Intermediate Spanish I is a comprehensive study of Spanish designed for students who have attained an advanced elementary level in the language. The course is organized around a thematic approach to topics relevant to contemporary Hispanic culture. Students will practice the four language skills in the classroom through guided grammatical and creative conversational activities and through the completion of three comprehensive exams. Outside of class, students will complete extensive online assignments and write three major compositions (as part of the three exams). In addition, students will broaden their knowledge of Hispanic culture by viewing a Spanish-language film and by reading several literary selections. Successful completion of Intermediate Spanish I will prepare students for the next level of Spanish (Intermediate Spanish II).There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
AS.210.112 or appropriate Spanish placement exam score.

AS.210.212. Intermediate Spanish II. 3 Credits.
Intermediate Spanish II is a comprehensive study of Spanish designed for students who have attained a mid-intermediate level in the language or who have completed Spanish 212. The course is organized around a thematic approach to topics relevant to contemporary Hispanic culture. Students will practice the four language skills in the classroom through guided grammatical and creative conversational activities and through the completion of three comprehensive exams. Outside of class, students will complete extensive online assignments and write three major compositions (as part of the three exams). In addition, students will broaden their knowledge of Hispanic culture by viewing a Spanish-language film and by reading several literary selections. Successful completion of Intermediate Spanish II will prepare students for the next level of Spanish (Advanced Spanish I).There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after September 13th.
AS.210.211 or appropriate Spanish placement exam score.

AS.210.220. Intermediate Modern Hebrew I. 3 Credits.
Intermediate Modern Hebrew enhances and enforces previous knowledge of Hebrew as acquired from previous foundational coursework and/or experience. Grammatical aspects of the language such as past and present tenses as well as combined and complex sentence syntax and construction would be applied. Reading comprehension and writing skills will be emphasized. Modern Israeli cultural links and facets of the Hebrew language will also be introduced to inform the holistic understanding of the modern language.
AS.384.116 OR AS.210.121 or equivalent

AS.210.221. Intermediate Modern Hebrew II. 3 Credits.
Intermediate Hebrew level II is a continuation of the course Hebrew 205 and as such is a requirement for entry. In the course, grammatical aspects of the language will be introduced in the focus of past and future tenses. Combined and complex sentences with proper syntax and reading comprehension and writing skills will be required. Modern Israeli cultural aspects of the Hebrew language will be introduced as well and will be part of the holistic understanding of the modern language.
AS.384.215 OR AS.210.220

AS.210.251. Intermediate Italian I. 3 Credits.
This course sequence (AS.210.251 and AS.210.252) will reinforce your ability to engage in complex daily tasks in Italian, and will introduce you to more formal academic and real-world topics. By the end of the academic year, you will be able to write a strong résumé and cover letter in the European format, sit a job interview in Italian, and participate in debates on simple topics. You will also read five engaging short stories, watch several Italian films, and discuss topics such as emigration and immigration from/to Italy, the protection of the environment, and the history of the Italian South.
AS.210.152 or placement exam.

AS.210.252. Intermediate Italian II. 3 Credits.
Taught in Italian. Course continues building on the four essential skills for communication presented in Intermediate Italian I (listening, speaking, reading, writing) on topics of increasing complexity. Course adopts a continuous assessment system. May not be taken Satisfactory/Unsatisfactory.
AS.210.251 OR appropriate placement exam scores (Parts I II).

AS.210.261. Intermediate German I. 3 Credits.
Taught in German. This course continues the same four-skills approach (speaking, writing, reading and listening) from the first-year sequence, introducing and practicing more advanced topics and structures. Expansion and extension through topical readings and discussion and multi-media materials. Online tools required. Prereq: 210.162 or placement exam. May not be taken on an S/U basis.
AS.210.162 or placement by exam.

AS.210.262. Intermediate German II. 3 Credits.
Taught in German. This course is designed to continue the four skills (reading, writing, speaking and listening) approach to learning German. Readings and discussions are topically based and include fairy tales, poems, art and film, as well as readings on contemporary themes such as Germany's green movement. Students will also review and deepen their understanding of the grammatical concepts of German. Prereq: 210.261 or placement exam May not be taken on an S/U basis.
AS.210.261 or placement by exam.

AS.210.263. Intermediate Yiddish I. 3 Credits.
For students who have completed one year of Yiddish language study or equivalent, this course will provide the opportunity to broaden and deepen their knowledge of Yiddish culture while continuing to improve their skills in reading, writing, listening and speaking Yiddish. Alongside textbook-based language work, students will read, listen to and interact with a variety of texts, for example literature, journalism and oral history.

AS.210.264. Intermediate Yiddish II. 3 Credits.
Continuation of Intermediate Yiddish I: this course will focus on the Yiddish language as a key to understanding the culture of Yiddish-speaking Jews. Topics in Yiddish literature, cultural history and contemporary culture will be explored through written and aural texts, and these primary sources will be used as a springboard for work on all the language skills: reading, writing, listening, and speaking.

AS.210.265. Individualized Yiddish Practicum. 3 Credits.
This course will allow students at any stage of Yiddish language acquisition to hone their skills in reading, writing, listening and speaking. The program will be individualized for each student according to his or her needs while at the same time providing joint activities in which all can participate.

AS.210.266. German Conversation. 1.5 Credits.
Taught in German. This course is designed for intermediate and above students who wish to improve their conversational and oral presentational language skills. The syllabus aims to provide useful, relevant language and necessary discourse structures to hold conversations and presentation on varied topics of an everyday, as well as academic nature. Students will practice German to build confidence, develop fluency and improve pronunciation and accuracy. Short texts, audio and films will provide the basis for discussion. Students fields of study and interests will be incorporated into the syllabus and tasks will be matched to the ability level of the students enrolled. Recommended course background: 210.262 or at least 3 semesters of college instruction or the equivalent. May be taken concurrently with other courses in German. May be taken S/U. Not for major or minor credit.

AS.210.267. German Across the Curriculum. 1 Credit.
Students in courses in History, CTL, Art History, Classics, Near Eastern Studies, WGS, and Philosophy augment their studies in those disciplines by reading short excerpts from the material assigned in the original German. The selected excerpts rotate among the disciplines, exposing students to a variety of texts and giving students the opportunity to collaborate across disciplines and acquaint themselves with the scholarly language in their respective majors and minors.

AS.210.275. Fast Portuguese for Spanish Speakers and speakers of other Romance Languages I. 4 Credits.
NO PREVIOUS KNOWLEDGE OF PORTUGUESE IS REQUIRED. This fast-paced one-semester course covers all content for Portuguese Elementary. This course is designed as an accelerated introductory course for speakers with a sound knowledge of Spanish OR other romance languages (e.g. French and Italian). The course will cover introductory aspects of Portuguese grammar and present relevant points of the cultures of the Portuguese speaking countries. Upon the successful completion of this course with a grade of C or higher, students may enroll in 210.277 Portuguese Intermediate. May not be taken on a Satisfactory / Unsatisfactory basis. No Prereq. THERE IS NO FINAL EXAM.

AS.210.277. Intermediate Portuguese I. 3 Credits.
Intermediate Portuguese I is designed for students who have attained an advanced elementary level in the language. The course offers training in the skills of the language with emphasis on expanding grammatical knowledge and vocabulary, while developing ease and fluency in the language through the use of a multifaceted approach. Course materials immerse students in the cultures of Brazil, Portugal, and Portuguese-speaking Africa, and reflect the mix of cultures at work in the contemporary Lusophone world. Upon the successful completion of Intermediate Portuguese I, students may enroll in the next level, Intermediate Portuguese II – AS.210.278. May not be taken on a satisfactory/unsatisfactory basis. Prereq: AS.210.275 or placement test. THERE IS NO FINAL EXAM.
AS.210.178 or AS.210.275 or equivalent score on placement test or instructor approval.

AS.210.278. Intermediate Portuguese II. 3 Credits.
Intermediate Portuguese II is designed for students who have attained a mid-intermediate level in the language or completed Intermediate Portuguese I AS.210.277. The course offers training in the skills of the language with emphasis on advancing grammatical knowledge, expanding vocabulary, and developing fluency in the language through the use of a multifaceted approach. Course materials immerse students in the cultures of Brazil, Portugal, and Portuguese-speaking Africa, and reflect the mix of cultures at work in the contemporary Lusophone world. Successful completion of Intermediate Portuguese II will prepare students for the next level Advanced Portuguese I – AS.210.391. May not be taken on a satisfactory/unsatisfactory basis. Prereq: AS.210.277 or placement test. THERE IS NO FINAL EXAM.
AS.210.277 or equivalent score on placement test or instructor approval.

AS.210.288. Portuguese: Conversation through Film & Music. 3 Credits.
Improve your Portuguese conversational and speaking skills through colorful Brazilian media. This course is designed for highly motivated undergraduate and graduate students who want to SPEAK Portuguese. Conversation sessions provide intensive work on communication skills through discussion on issues raised in films, news media & music. Grammar will be reviewed as needed outside of class with tutors or TA, freeing class time for more communicative activities. May not be taken on a Satisfactory / Unsatisfactory basis. Prereq: one semester of Portuguese (AS.210.177), two semesters of Spanish or Placement test.

AS.210.290. Accelerated Portuguese. 4 Credits.
NO PREVIOUS KNOWLEDGE OF PORTUGUESE IS REQUIRED. This accelerated one-semester course covers all content for Elementary Portuguese. Upon the successful completion of this course with a grade of C or higher, students may enroll in 210.277 Intermediate Portuguese. Encourages rapid acquisition by intensive exposure to the language through immersion activities, videos and culture. The course will cover relevant aspects of the Portuguese language grammar. Students will be encouraged to use the language through communicative activities, listening and writing activities. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory/ Unsatisfactory basis.

AS.210.301. Advanced French for Writing. 3 Credits.
Students in AS.210.301 will focus primarily on written expression, learning to 'decipher' classic and contemporary French texts, in order to expand their vocabulary and communicate their ideas in writing with clarity and accuracy. (A primary focus on oral expression is provided in AS.210.302; the two advanced-level courses may be taken in either order or simultaneously.)
Area: Writing Intensive

AS.210.302. Advanced French for Speaking. 3 Credits.
Students in 210.302 will focus primarily on oral expression through individual and group work on contemporary media (music, film, current events) in order to expand their vocabulary and become fluent in conversation across social-cultural contexts. (A primary focus on written expression is provided in 210.301; the two advanced-level courses may be taken in either order or simultaneously.)

AS.210.306. Medical French : Santé et Société. 3 Credits.
In this interactive language course (not exclusively designed for pre-meds), students learn how to communicate in the fields of public health, medicine, and humanitarian aid in a French-speaking environment. While acquiring new lexical and syntactic tools weekly, students examine and debate the current structures and issues of the French health system, through a variety of media (governmental websites, mainstream and specialized newspapers, movies, blogs, first-account books, etc.). A final project is tailored to each student's own area of interest. Please note that this course is taught by a language instructor, not a medical expert. Students may elect to take the exam for the French For Health Diploma: https://www.lefrancaisdesaffaires.fr/testsdiplomes/diplomes-francaisprofessionnel-dfp/sante/
AS.210.301 OR AS.210.302

AS.210.308. Acting French: learning about French language and culture through theater. 3 Credits.
This course proposes to enhance students' verbal (pronunciation, intonation, syntax, vocabulary) and nonverbal skills (body language, vocal projection, spatial awareness) by performing excerpts from French and Francophone plays ranging from the Middle Ages to the 21st century. A closer analysis of these excerpts will lead us to consider how theater uses the physicality and immediacy of human experience to create a more universal form of connectivity with the world.Recommended course background: AS.210.301.

AS.210.309. The Sounds of French. 3 Credits.
This course introduces students to the sound system of French: its development over centuries, its standardized Parisian form versus regional and international dialects and accents, and the popularity of "word games" (abbreviations, acronyms, and verlan). The course will include extensive practice in perceiving, articulating, and transcribing sounds, words, and intonation groups through viewing film clips, listening to songs, and completing in class lab assignments. Recorded speech samples obtained at the beginning, middle, and end of the semester will allow students to track their progress in moving toward more native pronunciation and intonation. Recommended Course Background: AS.210.202 or equivalent

AS.210.311. Advanced Spanish I. 3 Credits.
This course is a comprehensive study of the Spanish language focused on the continuing development of students' communicative abilities and their knowledge of Hispanic cultures. Students will expand their use of basic structures of Spanish with a special emphasis on more difficult grammatical and vocabulary aspects, and further improve both their oral and written skills. Students will sharper their critical thinking skills and listening abilities utilizing movies and written texts. This course combines an extensive use of an online component with class participation and three exams. Upon successful completion of this course, students will have acquired extended complex language tools that facilitate proficiency in Spanish and its use in various professional contexts. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
AS.210.212 OR AS.210.213 or appropriate Spanish placement exam score.

AS.210.312. Advanced Spanish II. 3 Credits.
This course is thorough review of the Spanish language focused on the development of students' communicative abilities and their knowledge of Hispanic cultures. Students will both expand their knowledge of the basic structures of Spanish, with special emphasis on more difficult grammatical and vocabulary aspects, and further improve on oral and written skills. Students will increase their critical thinking skills and listening abilities utilizing movies and written texts. This course combines an extensive use of an online component, class participation and three exams. Upon successful completion of this course, students will have acquired more complex language tools to become proficient in Spanish and its use in various professional contexts. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after the third class session.
AS.210.311 or appropriate Spanish placement exam score.

AS.210.313. Medical Spanish. 3 Credits.
Medical Spanish is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in medicine and health-related fields in Spanish-speaking environments. The student will be able to participate in conversations on topics such as contrasting health systems, body structures, disorders and conditions, consulting your doctor, physical and mental health, first-aid, hospitalization and surgery on completion of this course. In completing the course's final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
AS.210.311 OR AS.210.312 or appropriate Spanish placement exam score.

AS.210.314. Spanish for International Commerce. 3 Credits.
Spanish for international business is an overview of business topics in an international Spanish-speaking context with an emphasis on deep review of grammar and vocabulary acquisition. On completion of this course the student will have developed the ability to read and critically discuss business and government relations in Latin America and will have examine entrepreneurship, finance, marketing, business ethics, human resources and commerce in the Spanish speaking world. In completing the course's final project students will apply, synthesize, and reflect on what has been covered in the class by creating a professional dossier individualized to their own professional interests. Concepts learned in this course will be directly applicable to careers linked to international relations and will apply to various careers in business. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session. Language Program Director: Loreto Sanchez-Serrano
AS.210.311 or or appropriate Spanish placement exam score.

AS.210.315. Spanish for International Relations. 3 Credits.
Spanish for international relations is an advanced examination of grammar and an analysis of international relations' topics in Spanish. By completion of this course the student will have developed the ability to read, critically discuss and demonstrate mastery of political and socio-economic issues in Spanish-speaking environments. Potential topics include a survey of the professions in international relations, NGOs in Latin America, intellectual property, cultural diplomacy, remesas, regional coalitions and treaties, and the environment. Class presentations and final projects will allow students to apply, synthesize, and reflect on what has been learned in the class by participating in a global simulation that will include a written exercise individualized to their professional interests. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the 4th class session.
AS.210.311 or appropriate webcape score

AS.210.316. Advanced Spanish Conversation. 3 Credits.
Conversational Spanish surveys high-interest themes, discusses short films by contemporary Hispanic filmmakers and offers a thorough review of grammar. The student will be able to participate in conversations on topics such as personality traits, social media, political power, art and lifestyles on completion of this course. Conversational skills mastered during the course apply to all careers interconnected by Spanish. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
AS.210.311 or appropriate Spanish placement exam score.

AS.210.317. Adv Spanish Composition. 3 Credits.
This third-year course is a hands-on and process-oriented introduction to discussion and compositional analysis. On completion of this course, students will have improved their Spanish writing skills in various types of compositions they might be expected to write in academic settings and in real-life formats such as film reviews, letters to the editor, cover letters, etc. The course also focuses on refinement of grammar and vocabulary use.May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after September 13th.
Area: Writing Intensive
AS.210.312 or appropriate Spanish placement exam score.

AS.210.318. Spanish for Engineering. 3 Credits.
Spanish for engineering is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in the engineering field to develop their communicative strategies in the field of engineering. On completion of this course, students will be able to participate in conversations on topics such as applications of biomedical engineering in the diagnosis and treatment of different medical conditions, efficient use of energy and materials, design and construction of public works, development of electrical systems and development of solutions to environmental problems. In completing the course's final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests.There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third-class session.
AS.210.311

AS.210.319. Spanish for Public Health. 3 Credits.
Spanish for Public Health is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in the Public Health field such as government agencies, health care organizations, nonprofits, or health insurer companies, in Spanish-speaking environments. On completion of this course, the student will be able to participate in conversations on topics including health systems, reproductive biology, nutrition, epidemiology, mental health, and environmental health. In completing the course's final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests.
AS.210.311

AS.210.320. Advanced Modern Hebrew I. 3 Credits.
Advanced Modern Hebrew I will focus on conversational and interactive language skills to expose learners to attributes of different genres and layers of the language. Students will be introduced to various original texts and lingual patterns to better understand and formulate proper syntax. The course will include contemporary readings from Israeli journalism and essays, along with other relevant Hebrew resources to inform class discussions and students' reflective writings. Israeli cultural aspects will be integral to the course curriculum.
AS.384.216 OR AS.210.221 or equivalent

AS.210.321. Modern Hebrew via the Lens of Israeli Cinema. 3 Credits.
This course will expand students' fluencies in Modern Hebrew through Hebrew-dialogic Israeli and Palestinian cinema, examining and comparing several layers of a contemporary Hebrew-speaking society. For this class, students will view, discuss, and write about films with Hebrew as the primary spoken language. Through aural interpretation and subtitles, students will understand, analyze, and reflectively discuss the diversity of Hebrew-speaking cultures within society and the provenance and intentionalities of the dialects exhibited throughout a given film. Linguistic nuance, slang, and interpretive aspects of Hebrew as shown in the chosen films will prompt students to examine this modality of the expression of contemporary Hebrew. The course will be taught primarily in Hebrew and will be open to students who have matriculated to at least 200-level coursework of Modern Hebrew.
AS.384.315 OR AS.210.320 or instructor permission

AS.210.351. Advanced Italian I. 3 Credits.
This highly interactive course focuses on complex historical and contemporary themes, and is ideal, among others, for students who are specializing in international studies, medicine, psychology, and cognitive science. Students will analyze authentic texts and audiovisual materials on topics including the history of the Sicilian mafia, mental health and the deinstitutionalization movement in Italy, Europe and Italy in the 1960s-1980s, the role of curiosity and amazement in scientific discovery and art, and intercultural differences around hilarity. Taught in Italian.
Area: Writing Intensive
AS.210.252 or placement exam

AS.210.352. Advanced Italian II. 3 Credits.
Course presents a systematic introduction to a variety of complex cultural and historical topics related to present-day Italy, emphasizing intercultural comparisons, interdisciplinarity, and encouraging a personal exploration of such topics. Course adopts a continuous assessment system (no mid-term and no final).
Area: Writing Intensive
AS.210.351 OR appropriate placement exam scores (Parts I, II and III).

AS.210.361. Advanced German I: Cultural Topics of the Modern German-speaking World. 3 Credits.
Taught in German. Topically, this course focuses on defining moments in cultural history in German speaking countries in the 2nd half of the 20th century. Films, texts, including a full-length novel, and other media provide a basis for discussing events in post-war Germany from 1945 to 2000. A review and expansion of advanced grammatical concepts and vocabulary underlies the course. Focus on improving expression in writing and speaking. May not be taken on an S/U basis.
Area: Writing Intensive
AS.210.262 or placement exam.

AS.210.362. Advanced German II: Contemporary Issues in the German Speaking World. 3 Credits.
Taught in German. Topically, this course focuses on contemporary issues such as national identity, multiculturalism and the lingering social consequences of major 20th century historical events. Readings include literary and journalistic texts, as well as radio broadcasts, internet sites, music and film. Students read a full-length novel. Emphasis is placed on improving mastery of German grammar, development of self-editing skills and practice in spoken German for academic use. Introduction/Review of advanced grammar.
Area: Writing Intensive
AS.210.361 or equivalent score on placement test.

AS.210.363. Business German. 3 Credits.
Taught in German. Course is designed to familiarize students with the vocabulary and standards for doing business in Germany. Taking a cultural approach, students read texts and engage in discussion that elucidate the works of business, commerce & industry in Germany, the world's third largest economy. Emphasis is placed on vocabulary expansion and writing as it relates to business and business cases. May not be taken S/U. Recommended background: at least 4 semesters of college German (210.262) or equivalent.

AS.210.364. German for Medical & Public Health Professions. 3 Credits.
Taught in German. An introduction to the concepts and linguistic tools necessary for understanding the German health care system and public health fields. Designed for students with B1 or above language skills in German. Readings, role plays, videos and research projects will form the basis for learning. Linguistic focus on expanding vocabulary, increasing reading and listening comprehension while also honing grammatical control to increase accuracy in speaking and writing. Topics include the German health-care system, the body, typical interactions between patients and health care professionals, as well as the history of iconic institutions such as Berlin's Charite. Prerequisite: 4 semesters of college German or equivalent or permission of German LPD.
AS.210.262 OR AS.210.361 OR AS.210.362

AS.210.365. German for Science and Engineering. 3 Credits.
Taught in German. This course is designed to provide language training in German tailored to students of science & engineering. Germany has long been a world leader in engineering, most notably in chemical and mechanical engineering. Over the past decades, Germany also has taken a lead in environmental sciences and information technology. In addition, Germany is now becoming an increasingly attractive place to pursue degrees in the technical fields. This course will provide practice and expansion in all language skill areas: analysis of texts, hands-on-activities, preparation of presentations, and discussion of topics. Specific areas of interest to the course members will be taken into consideration for the selection of materials. [Does not replace 210.362 as prerequisite for upper level courses or as major requirement.]
AS.210.262 OR AS.210.361 OR AS.210.362 or equivalent or placement exam.

AS.210.367. Advanced Yiddish I. 3 Credits.
This course will provide students who have completed at least two years of Yiddish with the opportunity to hone their skills in all four language areas: reading, writing, listening, and speaking. In addition to advanced grammar study and readings in Yiddish literature, the course will take into account the interests of each individual student, allowing time for students to read Yiddish texts pertinent to their own research and writing.

AS.210.368. Advanced Yiddish II. 3 Credits.
Continuation of Advanced Yiddish I (AS.210.367). Students will continue to hone their skills in all four language areas: reading, writing, listening, and speaking. In addition to advanced grammar study and readings in Yiddish literature, the course will take into account the interests of each individual student, allowing time for students to read Yiddish texts pertinent to their own research and writing.

AS.210.391. Advanced Portuguese I: Language and Literature. 3 Credits.
This third-year course focuses on reading, writing, and oral expression. Students will read two complete works by major Brazilian, Portuguese, and/or Afro-Portuguese writers each semester, followed by intense writing and oral discussion on the topics covered. Grammar will be reviewed as necessary. All classes are conducted in Portuguese. Prereq: 210.278, placement test or instructor approval.
Area: Writing Intensive
AS.210.278 or equivalent score on placement test or instructor approval.

AS.210.392. Advanced Portuguese II. 3 Credits.
Advanced Portuguese II offers a systematic review of the Portuguese language focused on the development of students' communicative skills and their knowledge of the Lusophone culture. This course fosters the development of complex language skills that enhance fluency, accuracy and general proficiency in Portuguese and its appropriate use in professional and informal contexts. Students will concentrate on complex grammar concepts and the use of appropriate written and oral registers. Using a variety of cultural items such as current news, short stories, plays, films, videos, newspaper articles, and popular music, students discuss diverse topics followed by intense writing and oral discussion with the aim of developing critical thinking and solid communication skills. May not be taken on a satisfactory/unsatisfactory basis. Prereq: AS.210.391 or placement test.
Area: Writing Intensive
AS.210.391 or equivalent score on placement test or instructor approval.

AS.210.409. Le monde francophone. 3 Credits.
This course examines both sociolinguistic and cultural aspects of the French-speaking world and the relationship between la francophonie and France itself. We focus on five regions—Sub-Saharan Africa (Cameroun and Senegal), Northern Africa (Morocco and Algeria), the Caribbean (Martinique and Haiti), North America (Quebec), and Europe (Belgium) —and consider language features unique to those regional varieties, the status of French as opposed to other indigenous languages and creoles, the demographics of their speakers, and the representation of their culture in media (particularly in short stories, poetry, song, and film). A semester-long research project on one of these main areas will allow students to combine their study of the French-speaking world with other disciplines of interest to them.

AS.210.411. Translation for the Professions. 3 Credits.
Spanish Translation for the Professions surveys the field of contemporary translation theory and provides practice of translation from English to Spanish. Translation exercises may include comparing and contrasting texts of literature, medicine, health, law, technology, politics, and journalism. Students will identify and differentiate terminology specific to these various fields and will focus on practicing correct uses of the grammatical structures relevant to the translation of both English and Spanish. In the course's final projects students will apply, synthesize, and reflect on what has been learned in the class by completing a translation exercise individualized to their professional interests. Strategies of communication mastered in this course will help students of Spanish throughout their careers, in that achievement of the course objectives will help students discern, translate, and evaluate the usefulness of translations in different professional settings. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
Area: Writing Intensive
AS.210.313 OR AS.210.314 OR AS.210.315 OR AS.210.318 OR AS.210.319

AS.210.412. Community Based Learning - Spanish Language Practicum. 3 Credits.
This fourth-year course involves a specially designed project related to the student's minor concentration. On completion of this course, the student will be able to use the Spanish language in real world contexts. The student-designed project may be related to each student´s current employment context or developed in agencies or organizations that complement student's research and experimental background while contributing to the improvement of his/her language proficiency. There is no final exam. May not be taken satisfactory/unsatisfactory. No new enrollments permitted after first week of class.
Area: Writing Intensive
AS.210.411

AS.210.413. Curso de Perfeccionamiento. 3 Credits.
This forth-year course is an in-depth examination of the Spanish grammar, including a wider range of idiomatic expressions and usages than students might have previously encountered. On completion of this course, students will be able to achieve the ACTFL Advanced-Mid to high level in oral and written expression as well as in reading and listening skills. The course will also help to prepare students for the DELE Intermediate or Superior levels, offered by the Instituto Cervantes. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the 4th class session.
Area: Writing Intensive
(AS.210.312 OR AS.210.317) AND (AS.210.313 OR AS.210.314 OR AS.210.315)

AS.210.417. Eloquent French. 3 Credits.
This highly interactive, writing intensive course intends to 1) provide tools to help students reach linguistic proficiency in French (advanced lexical and idiomatic expressions, rhetorical devices used in complex argumentation; 2) sharpen analytical skills by applying the French method of Explication de textes to a variety of fictional and non-fictional discourses (film, literary excerpts, articles, social media); 3) help students develop their own voice in creative writing.
Area: Writing Intensive

AS.210.426. French for Reading and Translation. 3 Credits.
This course aims to provide proficiency in reading and translating? a variety of French texts from the humanities and social sciences. It is designed for undergraduate and graduate students with little or no background in French who wish to acquire a knowledge of French for research purposes 2) for Ph.D. candidates preparing to fulfill their a Foreign Language Proficiency requirement. Please note that this course does not provide speaking and listening skills, and can therefore not be taken as a substitute for other classes in the French Language curriculum (AS.210.xxx).

AS.210.501. French Independent Study/Language. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.210.551. Portuguese Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.210.596. German Internship - Summer. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.210.661. Reading and Translating German for Academic Purposes.
Graduate students only. Seniors may enroll with permission from LPD and instructor.Taught in English. This is the first semester of a year-long course designed for graduate students in other fields who wish to gain a reading knowledge of the German language. Seniors who intend to do graduate study in other disciplines are also welcome. Instruction includes an introduction to German vocabulary and grammatical structures as well as discussion of relevant translation practices. The goal of the course is for students to gain confidence in reading a variety of texts, including those in their own fields of study. No knowledge of German is assumed.

AS.210.662. Reading & Translating German for Academic Purposes II.
Taught in English. Seniors by permission & Graduate students only. This course is designed for graduate students in other departments who wish to gain reading knowledge of the German language and translation practice from German to English. This course is a continuation of the Fall semester. Focus on advanced grammatical structures and vocabulary. For certification or credit.
AS.210.661 or permission of instructor.

STEM to STEAM for Hispanics
Area: Humanities

AS.211.203. Propaganda: From Blut und Boden to Post-Fact. 3 Credits.
This course taught by Writing Seminars professor Wayne Biddle and Media Studies professor Bernadette Wegenstein covers the 20th-century history of propaganda with special focus on its visual techniques, on censorship, and how media serve as sites of both control and resistance to power. We will pay particular attention to the influence of misinformation abetted by the new media revolution, and both the rise of the political rhetoric of "fake news" and the massive dissemination of actual fake news since the 2016 election. Students will write papers pegged to current issues and events using the critical framework developed in class. Cap 30 students. Reader: Jason Stanley: How Propaganda Works, Princeton University Press, 2015.
Area: Writing Intensive

AS.211.222. Italian Cinema: The classics, the Forgotten and the Emergent.. 3 Credits.
This course traces the history of Italian cinema from the silent era to the new millennium, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall examine iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, that received international recognition and influenced other national, cinematic productions. We shall also look at the work of less famous, or independent filmmakers who received less critical attention. While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to the mise-en-scène, frame composition, camera movements, editing, and sound. This class is taught in English.

AS.211.224. Made in Italy: Italian style in context. 3 Credits.
Italy and the "Italian style" have become synonym of exquisite taste, class, and elegance thanks to the quality of Italian craftsmanship. This course will explore some of the major factors that contributed to the rise of Italian fashion and Italian industrial design as iconic all around the world. The classes will focus on the main protagonists and art movements that influenced the development of Italian style. We will analyze trends, clothing, and style not only in a historical context, but also through a critical apparatus that will include themes related to gender, culture, power, and politics.The course is taught in English. No knowledge of Italian is required, but those who can read in Italian will have an opportunity to do so. Everyone will learn some Italian words and expressions.

AS.211.231. Planet Amazonia: Culture, History, and the Environment. 3 Credits.
Without Amazonia, global warming could reach levels that threaten life on the planet. Yet, in an era of deforestation and climate change, Amazonia itself might be on the verge of disappearance, with disastrous consequences for the world. This course proposes interdisciplinary perspectives on Amazonia through a range of works drawn from history, anthropology, archeology, environmental studies, literature, and the arts. We'll look at texts by European travelers and missionaries who contributed to the paradoxical image of Amazonia as a "virgin paradise" or a "green hell"; scientific studies and artists' depictions of the region's flora and fauna; the often-overlooked history of human occupation of the region; and projects to colonize, develop, or conserve the world's largest tropical forest. What importance does Amazonia hold for Latin American and global geopolitics? How do art and literature, including indigenous writings, create, reinforce, or deconstruct clichés about the region? What alternative futures for our planet can Amazonia help us to imagine?

AS.211.240. Italian Culture and Civilization I. 3 Credits.
This class aims to introduce students to some major traits of Italian culture. This analysis explores topics that span from Art History, Fashion, including Film, to Food Culture, Pop Culture, and Politics. This first module will focus mostly on its aesthetic traditions, and their impact outside national boundaries. The course will be taught mostly in English with the opportunity to be introduced to elements of Italian language. No knowledge of Italian is required. This three-credit course counts toward the major and Minor in Italian, and the International Studies Global Italy concentration.

AS.211.251. The New Media Revolution and its Effects on Storytelling and Media Aesthetics. 3 Credits.
This course will highlight the change from a culture of mass media to social media in the recent media history. As examples of how story telling is affected throughout this paradigm shift, we will be taking into account such phenomena as AI storytelling, Video Vines, and News Feeds. In the age of Mass Media, spanning the rise of TV culture in the 1950s to the end of the 20th century, media had a unifying effect on American culture. With the rise of Cable TV in the 1990s to the ubiquity of internet entertainment sources to the invention of the iPhone and the rise of social media, this cultural unanimity had been shattered. In some ways this has caused a positive effect, as the forms of storytelling have proliferated and diversified, and there is more room for different voices and perspectives today than every before. In other ways the effects have been more insidious, with some critics pointing to social media as one of the main factors in the rise of our post-truth age. The age of social media has also certainly increased a sense of insecurity (FOMO) and attention deficit disorder in the millennials.

AS.211.259. Introduction to Medical and Mental Health Interpreting. 3 Credits.
This course is a broad introduction to the fields of medical and mental health interpreting. Modules will include: (1) Three-way communication: managing role expectations and interpersonal dynamics; (2) Basic interpreting skills and techniques in a healthcare setting; (3) Ethical principles, dilemmas, and confidentiality; (4) Elements of medical interpreting; (5) Elements of mental health interpreting; (6) Trauma-informed interpreting: serving the refugee population. The course is taught in English, and has no foreign language pre-requisites.

AS.211.265. Panorama of German Thought. 3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? To what degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind as well as divide a community in this tradition? We will consider these and related questions in this course through careful readings of selected works.
Area: Writing Intensive

AS.211.278. Eataly: An Exploration of Italian Food Cultures. 3 Credits.
Italian cuisine is often recognized as one of the finest in the world. This Freshman Seminar will offer an exploration of Italian food cultures past and present. Discussion topics will include the Slow Food Movement, the tension between local and global, food and social justice, and the representation of food in literature, film, and other media. The course is taught in English. No knowledge of Italian is required, and everyone will learn some Italian words and expressions.

AS.211.300. Niccolò Machiavelli's "The Prince": Understanding the Meaning and Legacy of a Masterpiece. 3 Credits.
Who was Niccolò Machiavelli? We often hear the term "Machiavellian" in reference to actors in business or politics, but what does it really mean? What does Machiavelli teach us about the nature and the dynamics of political power? Can Machiavelli's thought offer insights into today's politics and fast-changing world? The course aims to answer these questions by addressing three topics. First, we will study Machiavelli's life and times, particularly the events connected to his production and the context in which he wrote his main writings. We will see how the fifteenth-century Florentine humanism and the massive political changes affecting early modern Europe shaped Machiavelli's mindset. Second, we will familiarize ourselves with Machiavelli's thought by reading The Prince and excerpts from Discourses on Livy. Third, we will get acquainted with some of the main trends in the reception of Machiavelli in the 20th and 21st centuries. Special attention will be paid to interpretations of Machiavelli by Antonio Gramsci, Leo Strauss, Isaiah Berlin, John Greville Agard Pocock, Quentin Skinner, and John P. McCormick. We will also pay attention to modern television programs and films that show the width and depth of Machiavelli's legacy.

AS.211.301. Nietzsche and Literature. 3 Credits.
Nietzsche and Literature is devoted to exploring the philosophy and literary works of the German philosopher Friedrich Nietzsche, and studying his impact on literature and literary modernism. Readings will include works by Nietzsche and by the literary writers he influenced, including Rainer Maria Rilke, Stefan George, Thomas Mann, Stefan Zweig, Hugo von Hofmannsthal, Franz Kafka, Jorge Luis Borges, Hermann Hesse, James Joyce, Wallace Stevens, and William Butler Yeats, and Else Lasker-Schüler.

AS.211.307. Labor in Theory, Literature, and Art. 3 Credits.
This seminar examines some of the ways we define, represent, and think about the concept of labor in capitalism. We will analyze and compare a wide variety of texts (literary, visual, and theoretical) that embody different, often contradictory, notions of the work we do, why we do it, and how it affects us. As we investigate different types of work—productive and unproductive, physical & intellectual, factory & office—a few of the questions we will ask are: What methods have writers and artists used to depict labor in the 20th and 21st centuries? How is labor stratified along racial and gender lines? Is it possible to imagine a post-work society? The course curates a range of cultural artifacts (short stories, manifestos, novel excerpts, visual art, and film) that employ aesthetic strategies like irony, humor, absurdity, and duration to represent the dynamics of labor in capitalism. Theoretical texts then provide varied conceptual viewpoints from which to compare, contrast, and synthesize our impressions and interpretations of art and literary works. By the end of the semester, we will have traced a trajectory of labor in capitalism from the early 20th century to our own strange and precarious present.
Area: Writing Intensive

AS.211.311. Introduction to Romance Linguistics. 3 Credits.
If the modern-day Romance languages all evolved from Latin, how and why do they differ in so many important ways? What drives language change in the first place and why should this be the case? We approach these questions not only from a linguistic perspective (analyzing Romance sound systems, vocabulary, morphosyntax, and semantics), but from a cognitive-psychological and a socio-political perspective as well. Recommended Course Background: At least intermediate-level proficiency in a Romance language as assessed by coursework or placement exam; some previous coursework in linguistics is desirable but not necessary.

AS.211.316. Brazilian Cinema and Topics in Contemporary Brazilian Society. 3 Credits.
Course is taught in ENGLISH - This course is an introduction to the academic study of cinema as a communicative art and to Brazilian film. The films selected focuses on films from the late 1950s to the present and highlight import episodes and challenges in the advancement of the Brazilian society as well as its cinematic production with a special view to the film aesthetics through analysis from a number of critical perspectives, including class, race, gender as well as ethnicity, nationalism or national identity, colonialism, social changes, and the politics of representation. In this sense, the films and documentaries that we will be watching and studying encompass the period from the rise of New Cinema (Cinema Novo) up to films exploring the most recent trends, including movies launched up to 2016. Students wishing to do the course work in English, for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis.
Area: Writing Intensive

AS.211.325. Representing Otherness in Literature and Film. 3 Credits.
The term 'Otherness' is known to be rooted in the Self-Other opposition as it emerged in German Idealism, adopted by psychoanalysis and transformed to Post-Colonial and Feminist theories. This theoretical framework will allow us to explore the role of the Other in literature and cinema. Students will become familiar with the historical development of the notion of the "stranger" through reading and analyzing various contemporary works of prose, poetry and cinema from various countries. We will analyze the ways in which these works depict Otherness and will investigate questions regarding their social, political and philosophical framework as well as the literary and cinematographic devices they employ. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.

AS.211.327. Ecocinema: Framing Italy's Environmental Crises. 3 Credits.
Over the past decade, growing numbers of filmmakers in Italy have addressed ecological crises in their work. This class takes an eco-critical approach to contemporary Italian cinema, examining a body of compelling place-centered stories that deal with local and global issues. Defining the scope of eco-cinema and the ways we can interrogate films as ecological texts, we shall screen earth-centered films that raise consciousness about the consequences of human manipulation of the natural world; the complicity of industry, government, and organized crime in creating environmental crises; and the effects of economic and social malaise. Screenings include iconic films such as Michelangelo Antonioni's Red Desert (1963), more recent, critically acclaimed films such as Matteo Garrone's Gomorrah (2008), Alice Rohrwacher's Happy as Lazzaro (2018), and many others.

AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3 Credits.
Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsize impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; "the New Woman"; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin's cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin's rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation.

AS.211.329. Museums and Identity. 3 Credits.
The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.

AS.211.332. Heidegger's Being and Time and the Examined Life. 3 Credits.
This course will explore Heidegger's Being and Time with attention to such central concepts as Dasein's unique relation to Being, worldliness, care, authentic and inauthentic existence, attunement, understanding, projection, and being unto death. The first eight weeks will be devoted to a thorough reading of Being and Time and selected critical texts. The last five will consider works of art that expand our understanding of Heidegger's magnum opus.

AS.211.333. Representing the Holocaust. 3 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.
Cannot be taken by anyone who previously took AS.213.361

AS.211.342. Emerging Latin American Cinema. 3 Credits.
This survey of emerging cinema in Latin America focuses on thematic clusters such as gender identity, violence against women, the struggle for indigenous rights and recognition of their history, the politics of ecological crises, and the plight of youth who don't see a viable future. We will focus on films from Brazil, Mexico, Argentina, and Colombia, among other cultures.

AS.211.347. Monsters, Ghosts, and Golems. 3 Credits.
Modern Jewish culture is full of monsters, ghosts, golems, dybbuks, and other occult creatures. We will study the rich religious and folkloric traditions that these works draw on in order to better understand why Yiddish, German, Hebrew, and English literature from the 19th century to the present and why film from its beginnings are so full of the occult and the supernatural. We will pay special attention to the ways that monsters, spirits, and the like were deployed in modernist literature and film, in order to ask and answer major questions about modernity: what are the social and aesthetic consequences of technology and automation? what aspects of human nature are revealed by new insights into the psyche? All readings in English.

AS.211.349. JHU Bologna Program: Food for Thought: Gastronomy, Politics & Identity. 3 Credits.
Italian Culture course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students admitted to the JHU Summer Program in Bologna only.

AS.211.354. The Art, Craft, and Science of Translation. 3 Credits.
This course is an introduction to the growing field of Translation Studies. Broadly speaking, the translation process involves three major phases: (1) 'understanding' what someone else has written; (2) exploring the linguistic/cultural tools available (or not) in another language to convey the original meaning; and (3) taking responsibility for one's translation choices. What does it mean to 'understand' a text? Is it ever possible to find an 'equivalent' in another language? Can the translation process ever be objective, and what role, if any, does the translator's voice play? What practical tools are available to facilitate the translation process? Drawing from interdisciplinary theories and approaches to translation, this course will attempt to reflect on these questions, and provide an opportunity for some hands-on translation practice. Language pre-requisite: Completion of Advanced French I (AS210.301), Advanced Italian I (AS210.351), Advanced Spanish I (AS210.311), or instructor permission.
Area: Writing Intensive
AS.210.301 OR AS.210.351 OR AS.210.311 OR Instructor Permission

AS.211.356. Short Forms in German Literature. 3 Credits.
Taught in English. Before Twitter, there were the diverse short forms that evolved in the accelerating world of modernity to capture fleeting experiences, fragmentary perceptions, and flash-like insights: epigrams, aphorisms, fragments, feuilletons, parables, thought images, and mini-essays. The course offers an alternative history of German modernity by surveying masters of short forms from the 17th century to the present, such as Angelus Silesius, Lichtenberg, Novalis, Fr. Schlegel, Schopenhauer, Nietzsche, Kafka, Roth, Walser, Kracauer, Benjamin, Adorno, Blumenberg, and Kluge. Readings will be made available both in English translation and in the original German.

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relation. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli protest and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section 2.

AS.211.369. We Conduct: Editing a Documentary. 3 Credits.
This course will provide a hands-on opportunity to work with film director and professor of media studies Bernadette Wegenstein in the editing process of We Conduct, a documentary about the magic of orchestral conducting and the changing face of those who are called to this vocation. The film follows famed conductor Marin Alsop as she breaks new ground in her already distinguished career. The film was shot predominantly in Baltimore, but also in New York, São Paulo, Vienna, Lucerne, and London, with Shana Hagan (Los Angeles) as Director of Photography, additional cinematography by Judith Benedikt (Vienna), and John Benam (Baltimore). During the semester we will be looking at the various narratives in their rough format, and see the film take shape from treatment to full-fledged documentary narrative. Editor Victor Livingston based in Los Angeles will come to work with the class twice during the semester.

AS.211.374. Gendered Voices. 3 Credits.
The course will explore the notion of 'voice' in order to show how poetry, literature, philosophy, and music have been dealing with it throughout the ages. In particular, by focusing on classical figures such as the Sirens, Circe and Echo, as well as by considering the seminal discussions of the 'voice' in Plato and Aristotle, the course will address the gendered nature of the voice as a tool to seduce and manipulate the human mind. More specifically, the course will discuss the ways in which male, female, queer, gendered and un-gendered voices embody different functions. Course materials include classical, medieval and early modern sources as well as later rewritings of myths concerned with the voice by authors such as Jules Verne, Karen Blixen, Giuseppe Tomasi di Lampedusa, and Italo Calvino. A selection of theoretical works (e.g. Cavarero, Silverman, Dollar, Butler) will also be discussed. The course is taught in English and all materials will be available in English translation; Italian majors and minors should enroll in section 2.
Area: Writing Intensive

AS.211.386. Italian Cinema. 3 Credits.
Italian Cinema: The Classics, The Forgotten, The Emergent. This course traces the history of Italian cinema from the silent era to the contemporary period, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twentieth-first centuries. We shall discuss iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, (the classics) that received international recognition and had a global impact on film history, and also rare archival films by pioneer women filmmakers from the silent era (the forgotten). Finally, we'll discuss films released in the last decade (the emergent) that address issues such as migration and the ecological crisis. (Zoom Q&As with filmmakers will be part of curriculum). While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to frame composition, camera movements, editing, and sound. This is an intensive writing class taught in English.
Area: Writing Intensive

AS.211.394. Brazilian Culture & Civilization. 3 Credits.
Did you know that Brazil is very similar to the United States? This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, politics, economy, art, literature, popular culture, theater, cinema, and music. The course will focus on how Indigenous, Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor's permission required). No Prereq. THERE IS NO FINAL EXAM.
Area: Writing Intensive

AS.211.400. Topics in Romance Literatures. 3 Credits.
The Romance Avant-Garde: The course will examine the revolutionary contributions of literary artists from the French, Italian, Spanish, and Latin American traditions to the Avantgarde movements of the 20th century.
Area: Writing Intensive

AS.211.415. Thomas Mann's "The Magic Mountain". 3 Credits.
Taught in English. Stranded for seven years in an Alpine sanatorium, a young engineer is granted a highly unusual education, one that is at turns hilarious and stirring. He gains initiation into the mysteries of life, death, and love, and finds himself caught in the middle of dazzling arguments animated by the ideological conflicts of a continent on the brink of world war. A unique blend of comic portrayal, essayistic reflection, and ironic narration allows Mann to develop an absorbing panorama and an acute diagnosis of cultural crisis, making his novel from 1924 a key work of modernism. We will discuss the novel against the backdrop of the cultural currents and political developments to which it responds.

AS.211.423. Black Italy. 3 Credits.
Over the last three decades Italy, historically a country of emigrants—many of whom suffered from discrimination in the societies they joined—became a destination for hundreds of thousands of migrants and refugees from various countries, and particularly from Africa. Significant numbers of these immigrants came to Italy as a result of the country's limited, though violent colonial history; others arrive because Italy is the closest entry-point to Europe. How have these migratory flows challenged Italian society's sense of itself? How have they transformed the notion of Italian national identity? In recent years, growing numbers of Afro- and Afro-descendant writers, filmmakers, artists and Black activists are responding through their work to pervasive xenophobia and racism while challenging Italy's self-representation as a 'White' country. How are they forcing it to broaden the idea of 'Italianess'? How do their counternarratives compel Italy to confront its ignored colonial past? And, in what way have Black youth in Italy embraced the #Blacklivesmatter movement? This multimedia course examines representation of blackness and racialized otherness, whiteness, and national identity through literary, film, and visual archival material in an intersectional framework. Examining Italy's internal, 'Southern question,' retracing Italy's colonial history, and recognizing the experiences of Italians of immigrant origins and those of immigrants themselves, we'll explore compelling works by writers and filmmakers such as Igiaba Scego, Gagriella Ghermandi, Maza Megniste, Dagmawi Yimer, and others.

AS.211.424. Climate Change Narratives: Human and Non-Human Transformative Storytelling. 3 Credits.
In The Great Derangement Indian novelist Amitav Ghosh writes that "the climate crisis is also a crisis of culture, and thus of imagination." Worldwide, climate and environmental change is stirring the imaginary of novelists, filmmakers, and artists who are finding ways to frame, emplot, or even perform, an unmanageable phenomenon like climate change. How is climate change shaping new modes of storytelling and aesthetics? How do film, literature, and environmentally conscious art transform our perception of the world we inhabit and its unpredictable changes? Can climate change narratives help us to imagine futures of possibilities, maybe dystopian, uncertain, or even happy, but futures nonetheless? This multimedia course explores, through a transnational perspective, a variety of contemporary novels, films, and other media that attempt answer these questions.

AS.211.444. The Apocalypse in Literature and Film. 3 Credits.
"Everything which we loved is lost! We are in a desert" – this emotional assertion was the reaction to Kazimir Malevich's 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.
Area: Writing Intensive

AS.211.477. Renaissance Witches and Demonology. 3 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death between 1400 and 1800? What traits did European witch-mythologies share with other societies? After the witch-hunts ended, how did "The Witch" go from being "monstrous" to being "admirable" and even "sexy"? Answers are found in history and anthropology, but also in medicine, theology, literature, folklore, music, and the visual arts, including cinema.
Area: Writing Intensive
Students who have already taken AS.214.171 cannot take AS.211.477.

AS.211.478. Power and Resistance in French Political Thought. 3 Credits.
Today France is a multicultural, multi-ethnic society fractured by the memories of colonialism. Throughout the country's history, French thinkers – classical and contemporary – have questioned the foundations of power and focused critically not only on the claims of authority issuing from the top, but also on the compliance of the governed. What it is, they ask, that makes people stick together and recognize each other as citizens of one country? Is there such a thing as a shared history, and is Fraternité something more than a slogan? Works by La Boétie, Montaigne, Diderot, Robespierre, Tocqueville, Gobineau, Camus, Sartre, Memmi, Foucault and others.
Students may not have previously completed AS.212.341.

AS.211.479. Dante's Journey through the Afterlife. 3 Credits.
Dante's Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante's own time, and in terms of its relevance to our own societal and cultural concerns.
Area: Writing Intensive
AS.214.479

AS.211.480. Religious Themes in Film and Literature. 3 Credits.
This course would be of interest to anyone who would like to learn about the intersection of religion and modern culture. At the center of the course will stand a close study of the representation of religious themes and their role in modern literature and cinema. The works which we will deal with are not considered religious and yet they include religious themes as part of their narrative, images, language or symbolic meaning. We will trace in various works from various countries and genre, themes such as: divine justice, providence, creation, revelation, the apocalypse, prophecy, sacrifice and religious devotion. We will also study the ways in which Biblical and New Testament stories and figures are represented in these works. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.

AS.211.566. Independent Study - CAMS/undergraduate. 1 - 3 Credits.
requires permission of instructor
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.211.606. Literature and Truth: Forgery and Fakes.
Forgery is an eternal problem. It is a literary tradition in its own right, with connections to politics, Classics, religion, philosophy, and literary theory. Spurious writings impinge on social and political realities to a degree rarely confronted by criticism. This course offers a reading of the sort traditionally reserved for canonical works of poetry and prose fiction, spotlighting forgery's imaginative vitality and its sinister impact on scholarship. Students will study manuscripts and incunabula drawn from JHU's Bibliotheca Fictiva, the world's premier collection of literary forgeries.
Area: Writing Intensive
Students cannot have taken AS.214.606.

AS.211.612. Monuments and Monumentality.
As is clear from current events and debates surrounding monuments to the Confederacy, monuments play an outsize role in the public negotiation of history and identity and the creation of communal forms of memory. But monumentality is not restricted to statues or buildings. In this course we will study alternative forms of monumentality, especially in the 20th and 21st centuries. These alternative monumentalities — primarily literary, but including various material- and object-based expressions, and elaborations on institutional modes of monumentality — have assumed significance especially in minority and diaspora communities, and for other people and peoples outside the economic and political systems that endow and erect traditional public monuments. The primary case studies in this course will be forms of Holocaust commemoration, including the post-Holocaust large-scale Yiddish literary projects meant to serve Jewish communities in search of new forms of memorialization; and counter-monuments like Germany's Stolpersteine (stumbling stones). We will also consider contemporary debates around monuments in America and global manifestations of alternative monumentalities. All readings in English.

AS.211.616. Caribbean Fiction: Race, History, & Exoticism.
The Caribbean is often described as enigmatic, uncommon and supernatural. While foreigners assume that the Caribbean is exotic, this course will explore this assumption from a Caribbean perspective. We will examine the links between Caribbean and Old World imagination, the relationship between exoticism and Caribbean notions of superstition, and the way in which the Caribbean fictional universe derives from a variety of cultural myths. The course will be taught in English and all required texts are in English and English translations from French. A weekly session in French will be held for undergraduates wishing to count the course towards the French major and for interested graduate students. Open to all grad students and to undergraduates with permission of the instructor."
Area: Writing Intensive

AS.211.623. Reading Modern Hebrew Literature.
"And Jesus was a Jew with ear-locks and prayer shawl" claimed Uri Zvi Greenberg, the ultra-nationalist giant of modern Jewish poetry. A flesh-and-blood Jew, a demon, a spoiled student, an idol, a suffering brother, a (failed) Messiah, a nationalist rebel, a Greek god in a Jewish garb – these images of Jesus accompanied Jewish thought and literature for almost two thousand years. This course will study these images through a close reading of major Jewish texts from the Talmud to modern times.

AS.211.640. The Literature of Existence.
This seminar will explore some key expressions of what could loosely be called existentialist writing from the early twentieth century to the present day, to the end of coming to terms with an emerging "new politics of existence." While there will be some emphasis on Spanish language materials, including writings by José Ortega Y Gasset, Miguel de Unamuno, María Zambrano, and Jorge Luis Borges, we will also be reading important works by Martin Heidegger, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, and Martin Hägglund.
Area: Writing Intensive

AS.211.641. Women Filmmakers from the Margins.
Filmmaking remains an overwhelmingly male-dominated profession, but women are making significant inroads, and in so doing are leaving their distinctive mark on the medium. In this seminar we will examine the films of a group of women auteurs (those who write and direct their own films) who have endeavored to speak from the margins—be they social, geographical, or sexual—and whose work has challenged mainstream cinematic norms. The filmmakers whose work we will analyze may include Jane Campion, Australia; Aurora Guerrero, Mexico-USA; Claudia Llosa, Peru; Mira Nair, India-USA; Marialy Rivas, Chile; So Yong Kim, Korea.
Area: Writing Intensive

AS.211.658. Nomadic Narratives: Italian Women's Literature and Cinema.
This interdisciplinary graduate seminar examines the work of women writers, directors, and photographers in modern and contemporary Italy. We shall explore the question of female authorship and themes such as female subjectivity and mobility, women's participation in, or exclusion from, history. We shall read foundational texts such as Elsa Morante's La storia (1974), Anna Maria Ortese's collection of short stories Il mare non bagna Napoli (1953), and more contemporary novels such as Goliarda Sapienza's L'arte della gioia, and Elena Ferrante's L'amore molesto (1995). In the second part of the semester, we will study the work of female directors from different generations, from pioneer Elvira Notari, to mid-century Cecilia Mangini, and contemporary Alice Rohrwacher, as well as the work of photographers such as Carla Cerati and Letizia Battaglia.

AS.211.666. Graduate practicum: Mapping the Scholarly Landscape I (Research Skills).
From online resources to core printed reference works, this course acquaints students with the range of scholarly apparatus in the field of literary and cultural studies, with attention to issues of access, retrieval, and research. The course, which is required for all first-year graduate students in MLL, will be conducted in six (6) two-hour sessions.

AS.211.667. Graduate practicum: Mapping the Scholarly Landscape II (Tools for Professional development).
Spring Semester (coordinated by GRLL faculty with the participation of advanced grad students)1. Preparing a syllabus, marketing your classes (DTF, Summer, Intersession) [with the participation of successful DTF/Intersession instructors]Options for online teaching2. Writing a conference paper abstract; conference presentations 3. Organizing a conference/symposium [led by advanced grad students]4. How to get published (what, when, where)5. Academic review writing6. Options for fellowships/grants/career development

AS.211.713. The Culture of Algorithms.
This course proposes a study of the culture of algorithms for students of the literate space. True (deep) literacy is the ability to interpret a text or an object in its cultural, historical, conceptual, material or political contexts. With the evolution of digital cultures, literate practices have changed to incorporate the emerging cultural paradigms born out of the encounter of algorithms and computability with social practices embedded in the earlier literate traditions. Indeed, modern computation environments invite a new algorithmic hermeneutics grounded in both literate and scientific traditions. We will consider, among others, texts such as Bernard Chazelle's inaugural lesson at the Collège de France, "L'algorithmique et les sciences"; Leibniz on ordered problem solving; Condorcet on "social arithmetic"; Norbert Wiener, God and Golem, Inc.; Herbert Simon, "Bounded Rationality…"; Alan Turing, "Computing Machinery and Intelligence"; Steven Wolfram: Computation and the Future of the Human Condition; Leslie Valiant, Probably, Approximately Correct; Ed Finn, What Algorithms Want. Imagination in the Age of Computing; Daniel Cardon, À Quoi rêvent les algorithmes?; and of course Donald Knuth's classics, Literate Programming and "Computing Science and its Relation to Mathematics". Various modern novels also attempt to engage with the algorithmic, and these can form a counterpoint to the more technical or philosophical texts. For more information and a provisional syllabus, please go to http://www.wilda.org/Courses/CourseVault/Grad/Algorithms/Syllabus.html.This course will be taught in English. A few (short) texts are in French, so the ability to read French will be useful although not required.

AS.211.714. Ariadne's Threads: Metamorphosing Mythologies.
Abandoned by Theseus, Ariadne lamenting on the shore of Naxos embodies one of the most powerful tropes in literature and the arts. The fate of the heroine who helped Theseus out of the labyrinth became herself a thread (indeed, an inexhaustible series of threads) running across the ages and populating the imagination of poets, painters, composers. After exploring in detail the classical sources that canonized Ariadne's myth (Catullus, Carmina, 64; Ovid, Heroides, 10) as well as references to the myth found in other classical authors (Homer, Hesiod, Pausanias, Plutarch, Propertius), we will turn to the reception of Ariadne in literature and music (Ariosto, Rinuccini-Monteverdi, Haydn, Nietzsche, Strauss-Von Hofmannsthal). The analysis of the various case studies will focus on the rhetorical and poetical devices used by poets and composers to reenact the vocal features of Ariadne's lament.

AS.211.722. Global Feminist Filmmaking: a Theory in Practice Seminar.
This seminar examines recent emerging narrative and documentary global feminist filmmakers, applying feminist theory, intersectional theory, cine´ma ve´rite´, theory of nonviolence, and intersubjectivity to understand their work. Each week, we will examine one filmmaker's approach to their own personal practice of feminist filmmaking, and either interview them during our class or screen a pre-recorded zoom interview. In this seminar students will go beyond a theoretical feminist film criticism to one introduced into a lived and living feminist film practice. The filmmakers in question are Marialy Rivas (Chile), Elisabeth Scharang (Austria), Habiba Djahine (Algeria), Patricia Ortega (Venezuela and Argentina), Wanuri Kahiu (Kenya), Naomi Kawase (Japan), Sandra Kogut (Brazil), Kirsten Johnson (USA), TT the Artist (USA), Patricia Ramos (Cuba), Susana de Sousa Dias (Portugal), Claudia Llosa (Peru), Alina Marazzi (Italy), Rosine Mfetko Mbakam (Cameroun and Belgium).

AS.211.724. Media Artist in Residence Jane Jin Kaisen.
Media Artist in Residence Jane Jin Kaisen is a team-taught class between Bernadette Wegenstein (MLL) and Clara Han (Anthropology). In this class we will prepare the artist residency of Jane Jin Kaisen, a visual artist born in Jeju Island, South Korea and raised in Denmark. In the first part of the semester, we will cover theoretical questions raised in Jane Jin Kaisen's work such as cross-cultural adoption, diaspora, migration, war, gender and sexuality, and translation. In the second part we will involve students practically in questions of media arts curation for the artist's exhibit planned for April 2-9, 2022, at the Parkway Theatre, featuring three of her recent and acclaimed installations and films: The Woman, the Orphan, and the Tiger (2010), Apertures/ Rifts (2016), and Community of Parting (2019. In this class students will be closely involved with JHU's Center for Advanced Media Studies (CAMS), and the Baltimore Stavros Niarchos Parkway Theatre's artistic director Christy LeMaster. They will also meet the artist Jane Jin Kaisen during her residency.

AS.211.727. Humanity in Question.
Although it is often assumed that any inquiry into the human inevitably leads to pernicious forms of anthropocentrism, current debates about the Anthropocene suggest that we avoid such reflection at our own peril. Drawing on philosophy, biology, and sociology, Helmuth Plessner's Levels of Organic Life and the Human: An Introduction to Philosophical Anthropology (1928) offers a powerful account of humans' "excentric positionality," whose key ideas Plessner would further flesh out in his Political Anthropology (1931). Plessner's 1928 book was overshadowed, however, by the near-simultaneous appearance of Being and Time and Heidegger's imperious dismissals of philosophical anthropology. Disturbed by Heidegger's blindspot and its political consequences, during the World War II Hans Jonas, one of Heidegger's most original students, began to outline a conception of organic life as "an experiment with mounting stakes," with the highest stakes reached in human freedom. That conception, fully elaborated in The Phenomenon of Life: Toward a Philosophical Biology (1966), would serve as the basis for Jonas's influential theory of bioethical and ecological responsibility. Now that Plessner's key works are finally available in English translation, a joint examination of his, Heidegger's, and Jonas's conceptions is in order. We will ask what these three thinkers have to tell us about our current situation.

AS.211.732. The Literature of Speculative Genres: Science Fiction, Bandes dessinées, MMOGs, Mangas….
The francophone and anglophone worlds have longstanding distinct if complementary traditions for staging the primordial literary gesture, the imagining of the "What if". This course will confront the two cultures in early works like Cyrano de Bergerac's Histoire comique des états et empires du soleil, C. N. Ledoux's utopian workers' paradise, or Jules Verne's novels. It will then address the modern literate spaces in which the two traditions cross-fertilize each other— for example the French reception of Philip K Dick's oeuvre, Korogodski's Pink Noise-A Posthuman Tale, Catherine Dufour's Le Goût de l'immortalité, cyberpunk, mangas co-authored by francophone artists and writers, the "9e art" of the high graphic novels, especially the Cités obscures of Schuitten and Peeters, or hybrid French/anglophone MMOG communities like Ubisoft's Assassin's Creed. The materials will be in French or English, so the ability to understand French is necessary, with class discussion in English. Undergraduates are welcome with permission of the instructor, and this course may count for the French major or minor.

AS.211.748. Media Theory in the Age of Big Data.
This seminar will explore some key themes in contemporary media theory in an age when five tech giants have succeeded in infiltrating the daily lives of global citizens to an unprecedented degree in history. We will study the impact of this saturation on socioeconomic inequality as well as the implications of an almost total loss of privacy.Among the strategies of resistance to the capacity for surveillance these companies have developed we will focus in particular on current examples of feminist media art and voices from the global and cultural periphery as well as tendencies in these practices to emphasize a return to interpersonal connections and the embodied here and now. As case studies we nay include #metoo, slo-film movements from Southern Bahia in Brazil, and the financing and distribution of art films by mega media companies like Netflix.

AS.211.753. The Renaissance Comic Romance.
In the fifteenth and sixteenth centuries, Italian and French humanists transformed the medieval adventure stories of Charlemagne's and Arthur's knights. The course concentrates on Luigi Pulci's earthy, bourgeois Morgante, Teofilo Folengo's Macaronic (Latin/Italian dialect) Baldus, and Rabelais's encyclopedic Gargantua and Pantagruel, combining close analysis of their linguistic and narrative fabric with examples of their influence on later comic narrative masterpieces.
Area: Writing Intensive

AS.211.754. Modernist Primitivism.
This course will explore the aesthetics and politics of primitivism in European modernity, focusing on the visual arts and literature in German and Yiddish, but looking at the wider European context, including France and Russia. We will begin with the backgrounds of primitivism in Romanticism, looking especially at its ethnographic and colonial sources. We will then focus on the presence of anthropological and ethnographic discourses within various registers of modernist thought, literature, and visual culture, with special attention to visual and literary primitivism. Our central concerns will include: the attempt to create a modernist aesthetics grounded in ethnography; the primitivist critique of modernity; the place of primitivism in the historical avant-garde; the development of the notion of "culture" in modernity; and the aesthetics of modern ethnic and national identity. Key thinkers, artists, and writers to be considered include Herder; Gauguin; Picasso; Wilhelm Worringer; Carl Einstein; Hannah Höch; and Emil Nolde.

AS.211.777. The Critical Unconscious.
Criticism in the 21st century has tended to relegate psychoanalysis to a dustbin of fads that proliferated at the end of the prior century but that today are of interest only to balkanized cliques of devotees. Bucking this trend, this seminar will examine the intellectual history and abiding influence of psychoanalysis's key critical concept: the unconscious. Basing our discussions on in-depth readings from key thinkers in the analytic tradition such as Freud, Lacan, and Klein, as well as the post-analytic philosophical tradition, including Zizek, Butler, Laclau and Mouffe, Deleuze and Guattari, and Jameson, we will work to distill an understanding of the unconscious as essential to the practice of criticism tout court, and as inhering even in those discourses that have sought most stridently to distance themselves from it. Seminar discussions will take place in English; readings will be available in the original as well as in translation.
Area: Writing Intensive

AS.211.866. Independent Study - CAMS/graduate.
requires permission of instructor

AS.212.318. Women in French Literature of the 17th and 18th Centuries. 3 Credits.
This course will examine the changes in the relationship of women to literature in France before the French Revolution from several points of view: (1) What were the social and intellectual contexts of gender distinctions? (2) How did men writing about women differ from women writing about women? (3) How were these questions affected by the changing norms of literary productions? Texts by Mme. de Sévigné, Molière, Mme. de Lafayette, Prévost, Diderot, Rousseau, Laclos, and Beaumarchais.
Area: Writing Intensive

AS.212.333. Introduction à la littérature française I. 3 Credits.
Readings and discussion of texts of various genres from the Middle Ages to the 20th century. The two semesters (212.333 and 212.334) may be taken in either order. Students may co-register with an upper level course during this course. 212.333 covers the time period from the Middle Ages to the Revolution.
Area: Writing Intensive
AS.210.30] AND AS.210.302

AS.212.334. Introduction à la littérature française II. 3 Credits.
Readings and discussion of texts of various genres covering the time period from the Revolution to the 20th century. This sequence is a pre-requisite to all further literature courses. Students may co-register with an upper-level course during their second semester.
Area: Writing Intensive
AS.210.301 OR AS.210.302 or at least one semester of AS.210.301 or AS.210.302 with a grade of A and written permission of the instructor.

AS.212.340. Topics in French Cinema: Immigration, identité, différence culturelle. 3 Credits.
An exploration of immigration, identity, and cultural differences through the lens of recent French and Francophone films. Focus on discussion and analyses of film sequences in class and on oral presentations. Students will have the opportunity to progress in vocabulary, oral expression, and in critical analysis. Films studied include works of Kassowitz, the Dardennes, Kechiche, Sciamma, Haneke, and Audiard. Conducted in French. Recommended course background: completion of AS. 210.301 or equivalent score on Placement test.

AS.212.353. La France Contemporaine. 3 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture. Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Students may not have taken AS.211.401.

AS.212.402. The Count of Monte Cristo and its Avatars. 3 Credits.
Alexandre Dumas's Le Comte de Monte Cristo (1844-46) is widely regarded as one of the most popular novels of all time and as one of the best adventure novels ever written. Perhaps no other masterpiece of French literature has been subjected around the world to such countless film adaptations, including animation, television series, and serials. This course aims to study and contextualize the reasons behind this sustained transnational and transcultural interest. Close reading and analysis of Dumas' novel will provide a good point of departure to explore problems that cut across nineteenth-century French society: politics, social class, revolution, family, love and desire, revenge, justice, science, and religion. Course conducted in French; most films in English or with English subtitles.

AS.212.403. Voodoo and Literature. 3 Credits.
This course will examine the various ways voodoo, as the Unknown, has been represented, misrepresented, recuperated, and interpreted in the aftermath of the Haitian Revolution from the early nineteenth century to the present day. While historians have debunked the role of voodoo in the aftermath of the Haitian Revolution, the literary representation of the slaves in captivity is often associated with the will to liberation enacted in the secret practice of voodoo on the plantation. The history of voodoo in Saint-Domingue (Haiti) is intertwined with the history of colonial subversion, ancestral medicine, and the physical resistance of the enslaved people. Yet the most defining event in the armed uprising by the enslaved, the ceremony of Bois Caiman (August 14, 1791) still divides historians, novelists, and anthropologists. Where history and anthropology seem to flounder in trying to capture the mystery of such ceremony, literature soars majestically, maintaining the mystery by using the freedom of the imagination as its sole support. Might the transmission of voodoo during the colonial period, be understood as the historical mode of preservation of an ancestral secret practice that can only be transmitted through oral tradition and rituals, which may have been lost in the attempt to produce written translations ? Readings in French and English may include works by Alejo Carpentier, Aimé Césaire, Patrick Chamoiseau, Marie Chauvet, Edwidge Danticat, René Depestre, Zora Neale Hurston, Frédéric Marcelin, Alfred Métraux, Toni Morisson, Jacques Roumain, Simone Schwarz-Bart, William Seabrook, Derek Walcott, Richard Wright, to be supplemented by films, an art exhibit, music, and cultural demonstrations of voodoo. Course taught in French. Discussion in French and EnglishCross-listed with Humanities Center
Area: Writing Intensive

AS.212.406. The City in French Literature. 3 Credits.
The city is an integral theme, even a privileged character, in the literary and speculative texts of the 17th and 18th century. It is often understood to stand in opposition to the royal court and embodies the spirit of the people in a way related to the modern notion of "solidarity". This course will look at a number of examples of the peculiar status of the French city (especially Paris) from the late Renaissance through the First Empire. Selections from Marguerite de Valois, Mme de Sévigné, Montesquieu, Diderot, Rousseau, Turgot, Ruault, Rétif de la Bretonne, Mercier, Saint-Just, Robespierre, Napoléon Bonaparte, with a coda from Balzac and Michelet. Please note: taught in French
AS.212.333 OR AS.212.334

AS.212.413. For the Record: Jazz Cultures of Modern France. 3 Credits.
Across the 20th century, mainstream and avant-garde French culture was deeply impacted by the presence of African American musicians and performing artists hailing from the jazz tradition. From the Josephine Baker craze of the 1920s to the second post-war which welcomed the innovations of bebop and sixties-era free improvisation, metropolitan France proved a space where expatriate and exiled Black Americans could both perpetuate the tradition and innovate by turns. At the same time, French tastemakers, critics, and musicians eager to adopt new forms and styles debated the extent to which American jazz music in its various strains could be "made French." This course in transcultural French studies will feature readings in music criticism, history, and literature, as well as frequent close listening. It will culminate in a local concert reflecting France's continued connection to and support of jazz and related improvised musics. Though some background in French language and in musical notation is desirable (students are encouraged to engage in original-source research), all core course readings will be provided in English. Discussion in English.

AS.212.419. Romans africains d'expression française [French-Language Novels of Sub-Saharan Africa]. 3 Credits.
Across the 20th century, mainstream and avant-garde French culture was deeply impacted by the presence of African American musicians and performing artists hailing from the jazz tradition. From the Josephine Baker craze of the 1920s to the second post-war which welcomed the innovations of bebop and sixties-era free improvisation, metropolitan France proved a space where expatriate and exiled Black Americans could both perpetuate the tradition and innovate by turns. At the same time, French tastemakers, critics, and musicians eager to adopt new forms and styles debated the extent to which American jazz music in its various strains could be "made French." This course in transcultural French studies will feature readings in musiccriticism, history, and literature, as well as frequent close listening. It will culminate in a local concert reflecting France's continued connection to and support of jazz and related improvised musics. Though some background in French language and in musical notation is desirable (students are encouraged to engage in original-source research), all core course readings will be provided in English. Discussion in English.
AS.212.334

AS.212.429. Honors Thesis Prep. 1 Credit.
This course will meet three times during the Fall semester to enable all French majors to prepare their thesis subject, thesis bibliography, and abstract prior to the writing of the Senior Thesis (AS.212.430) in the Spring semester of their senior year. This course is required of all French majors and must be taken during the Fall semester of their senior year. Schedule TBA upon consultation with the class list, as there are only three group meetings. The rest of the meetings are in individual appointments with the DUS or another chosen French professor.Prerequisites: AS.212.333-334 and either prior enrollment or concurrent enrollment in AS.210.417 Eloquent French.
AS.210.417;AS.212.333 AND AS.212.334

AS.212.430. French Honors Thesis. 3 Credits.
An in-depth and closely supervised initiation to research and thinking, oral and written expression, which leads to the composition of a senior thesis in French.Recommended Course Background: AS.212.429
Area: Writing Intensive

AS.212.431. Style, Gender and Politics from Marie-Antoinette to the Burqini. 3 Credits.
From effeminate kings, to slutty queens, to post-revolutionary dandies, to the manifest invisibility adopted by some French citizens today, debates on the gendering and styling of political bodies have always been central to power struggles in France. Students will read from sociology, history and literature in order to understand the complex interplay among fashion, gender and political identity.Taught in English, but French minor/major credit possible by completing written work in French and by attending a weekly discussion section conducted in French. Students interested in the 4-credit French option should enroll in section 2. All others should enroll in section 1.Special Notes: This course is meant to be a small class experience. Enrollment limits will be strictly enforced.

AS.212.433. Reason and Revolution. 3 Credits.
The French Revolution in relation to the literature and political thought of the Enlightenment: Montesquieu, Rousseau, Beaumarchais, Condorcet, Robespierre, Mme de Stael and the revolutionary theater. Recommended Course Background: AS.212.333 or AS.212.334. http://www.wilda.org/Courses/CourseVault/Undergrad/ReasonRev/syllabus.html
Area: Writing Intensive

AS.212.436. Cultures of Love. 3 Credits.
From the time of its invention, as a kind of counterfeit religion, in the Hispano-Arabic world, love has been an unsettling, paradoxical, transgressive phenomenon: mystical, adulterous, con game, parlor game, poison, illness. Taking a literary, sociological and anthropological approach, this course will try to grasp some of the challenges posed by love's protean discourse: from the fin'amor born in women-ruled Medieval courts, to the language of 17th-century women mystics, to libertinage, to the cold intimacies of today's emotional capitalism. Taught in French.
Area: Writing Intensive
AS.210.301

AS.212.437. Diderot and the French Enlightenment. 3 Credits.
Denis Diderot's early work was dominated by his work on the natural sciences and the Encyclopédie. In later years, his literature addressed the social applications of knowledge: economic, anthropological, political, and moral issues structured his aesthetic concerns. As an author in continual conversation with his contemporaries and who was instrumental in the creation of an engaged intellectual community, his fiction, philosophical texts and critical works serve as the ideal lens to bring into focus the peculiarities of the French Enlightenment. Among the texts to be considered will be articles from the Encyclopédie, the Supplément au voyage de Bougainville, Le Rêve de d'Alembert, the Salon de 1767, Le Neveu de Rameau, extracts from his Essai sur les règnes de Claude et de Néron… This class will be taught in French.Recommended Course Background - AS.212.333
Area: Writing Intensive

AS.212.439. Aimer Son Prochain? Sympathie, Différence, Hostilité. 3 Credits.
Une exploration des diverses manières de produire et réguler l'amour de l'autre au sein d'une société hiérarchique et compétitive: que cet autre soit un concitoyen ou un étranger, un inférieur ou un supérieur, qu'il nous ressemble ou non. Du roman, à l'anthropologie, à la sociologie, au débats sur le vivre-ensemble à l'Assemblée Nationale, nous examinerons les rêves pacificateurs de la politesse aristocratique, l'institution de la solidarité républicaine, les blessures de la socialité coloniale. Cours et textes à lire en français.
Area: Writing Intensive

AS.212.440. Pandemic and Vaccination as Cultural Watershed in the Ancien Régime. 3 Credits.
What is a plague? What does it mean to protect your society from such diseases? This was a fraught, even violently debated political, social and moral, more than a medical question in the French Enlightenment, and it marked the literate culture of the Age of Enlightenment. Early on, pandemics and vaccination were understood in radically different ways in England (especially by the Princess of Wales) and in France, still dominated by a view of plagues as divine punishment. In Enlightenment literature, both fiction and nonfiction, the disease is secondary to the experience of the conscious sufferer, or to its sociopolitical consequences. We will approach these issues first via a quick overview of explanations of the plague, then discuss the 18th-century smallpox vaccination debates (one of Princess Caroline's letters, Voltaire on vaccination in two of his Lettres anglaises, extracts of Rousseau's novel La Nouvelle Héloïse). We will then consider the hugely influential mid-century debate space within the magisterial Encyclopédie of Diderot and d'Alembert. Finally, we will pass to late-18th-century texts that inflect culturally, politically and socially the consequences and metaphors of pandemics on the cusp of the Revolution. Texts to be read include Laclos' Liaisons dangereuses and a short essay by Guillotin (the inventor of the guillotine) on the citizen's experience of illness and contagion in a post-aristocratic, Revolutionary state. This will be a writing-intensive course, focused on close readings of texts in 2 explications de texte (written close analyses of a selected passage). The second paper may be a more extensive study, still based on textual analysis, but which may address a historical context or set of texts that particularly interest the student. This course will be taught in French.
Area: Writing Intensive
AS.212.333

AS.212.449. France, terre des migrations [French Histories of Migration]. 3 Credits.
Comme le Canada ou les Etats-Unis, la France est une grande terre d'immigration qui depuis le 19e siècle a accueilli sur son sol des populations du monde entier. En examinant témoignages, textes de fiction et films documentaires, nous suivrons les expériences contrastées de diverses vagues de migrants chassés par la faim, le chômage ou les persécutions. Quels mécanismes ont favorisé ou freiné l'intégration économique, sociale et civique de ces migrants qui ont rejoint la République française? Que veut dire "être immigré" aujourd'hui?
Recommended Course Background: AS.212.333 OR AS.212.334
AS.211.401

AS.212.452. The Character Function. 3 Credits.
What do we really mean when we talk about a "character" in a discursive work? What are the structuring, esthetic and heuristic functions of such forms of agency? How has the concept of the character evolved from the early modern period to the present day? A sampling of the cases to be considered: Descartes, Racine, Marivaux, Diderot, Rousseau, Napoleon, Michelet, Zola, avatars and "digital angels". This course will be taught in French.Recommended Course Background - AS.212.333

AS.212.454. French Theater: Reading and Practice. 3 Credits.
Reading modern theater in French can be exciting: a battle waged with words instead of swords, a battle of wit and of style. The literature of the nineteenth century was marked by major literary battles opposing young Romantic writers against an old school of Academicians. This battle was fought largely in and through the theatre. In this course the classroom space itself becomes a stage in which to reenact or rehearse some of these battles, through careful readings of texts and by exploring all possible literary contexts. Participants will read together a number of plays as well as take part in collaborative learning and creative activities. Readings to include texts by Césaire, Dumas, Hugo, Marivaux, Musset, Scribe, Sartre, and Vigny. Readings and discussion in French.
Area: Writing Intensive

AS.212.651. Romantisme et Indigénisme.
Le romantisme littéraire, en tout temps et en tout lieu, est contagieux. Ce qui a fait la force pérenne du romantisme français au XIXe siècle, c'est sa capacité de susciter de nouveaux modèles en France et de miroiter son élan esthétique au-delà des frontières nationales. Ce séminaire abordera principalement la question du romantisme français et la manière dont ses prolégomènes ont été appropriées par une ancienne culture coloniale.
Area: Writing Intensive

AS.212.679. Romantique et Romanesque: Desire, History, and Politics in 19th Century French Novel.
Literary critics from René Girard to Jacques Rancière assert that French literature of the 19th century— itself arguably the century of the novel— is fundamentally romantic. What does that mean? Is the French novel intrinsically romantic? Our discussion could well start with Girard's Vérité romanesque et mensonge romantique, which presents a new conception of the novel in correlation with human philosophy, and concludes that the "roman romanesque" is not "romantique," because romanesque adhered to the truthfulness of its subject while the romantic scenario is linked to its deceit. However, the real theoretical focal point is not the position of contemporary critics on romantic and non-romantic narrative scenarios, but the following characterization from 1903 of the "roman romanesque" by Academician Émile Faguet (1847-1916): "Ce n'est point du tout le roman à aventures extraordinaires et tumultueuses. Celui-là, je l'appellerais plutôt le roman mélodramatique. J'entends par roman romanesque celui qui, très délibérément, s'attache à nous présenter des caractères exceptionnels qui ne cessent pas d'être vrais." The course will introduce the socio-cultural complexity of novelistic forms and techniques of the literary movement familiarly known among the critics as "le romanesque français" from the Restoration to the early Third Republic. Readings by Balzac, Constant, Dumas, Flaubert, Hugo, Sand, Staël, and Stendhal. Taught in French.

AS.212.684. Fabrique de la banlieue parisienne [The Making of the Paris Suburbs].
Parler de "la banlieue parisienne", qu'est-ce à dire? Et si ce singulier induisait en erreur? Selon les époques, la banlieue fut tour à tour verte, grise, rouge ou néon vif. Appréhendée à la croisée des discours sur l'urbain et des productions culturelles, elle est le lieu de conflits idéologiques entre le capital et le salariat, entre "le Français" et "l'étranger", entre progressisme et nostalgie, entre droit et non-droit. La dialectique qui se tisse entre représentations artistiques (romans, photographies, films), pratiques sociales (arts de faire, modes d'habitation et de déplacement) et représentations idéales (urbanisme, architecture) formera l'objet de ce parcours critique embrassant un siècle de banlieue parisienne. Textes de Céline, Simenon, Queneau, Fallet, Rochefort, Daeninckx, Charef, Djaïdani; films de Duvivier, Dhéry, Godard, Rohmer, Cabrera, Ly. *Open to undergraduate French majors with permission of instructor.

AS.212.696. Literature Confronts Science: Zola.
Zola worked with the theories of heredity of his time in the Rougon-Macquart novels. But he also attempted to use his understanding of biology and thermodynamics to reform the theory of the novel in general. This course will examine these two different effects of science on literature and try to see what leads an author to undertake such a project. For a more extended description, please see http://www.wilda.org/Courses/CourseVault/Grad/Zola/Syllabus.html. Advanced undergraduates with sufficient background may register for this course with permission of the instructor.

AS.212.702. Une Littérature révolutionnaire.
The 1st half of the semester will consider some of the theoretical underpinnings (Montesquieu, Rousseau, Condorcet) and a few examples of Revolutionary rhetoric, especially the trial of Louis XVI and the late speeches of Robespierre. The 2nd half of the semester will study memoirs and literary works produced during the Revolution's aftermath and 19th-century attempts to culturally digest the Revolution. Please note: taught in French

AS.212.711. Baudelaire and Flaubert: Literary Life in the Year 1857.
Charles Baudelaire (1821-1867) and Gustave Flaubert (1821-1880): two young men from wealthy families, two opponents of bourgeois education, two aborted social callings, two terminal illnesses, two resounding failures before literary institutions, two adventures in love, two satanic fascinations, two notorious literary trials, two conceptions of the craft of writing, two approaches to realism, two criticisms of romantic art, two models of poetic inspiration, two aesthetics of language, two cults of Beauty, all for one and a unique literature. This seminar will be devoted to the literary life of two writers whose canon for more than a century has occupied a central place of importance in contemporary literary criticism. It will be our task to place their work in perspective within the context of the rise of modernism, which is to say, the new status of literature as of the year 1857. We shall endeavor, thus, to discern the authenticity of the creative relationship of each artist with himself and subsequently with others. The point will be to foreground three fundamental principles that will aid in grasping the evolution of the literary world under the Second Empire and under the Third Republic: literary history, writing and the elevation of the writer (Bénichou). Our work will be based on three or four texts by Baudelaire and Flaubert, it being understood that additional works of criticism will illuminate the discussion of these texts.
Area: Writing Intensive

AS.212.720. Le Livre Antillais: Culture/Écriture.
On s'arrête trop souvent pour souligner l'inexistence d'une véritable sphère du livre lorsqu'on aborde la littérature haïtienne, mais assez rarement pour s'interroger sur la place de cet objet dans la fiction. Il semble que la représentation du Livre et ses avatars sont partout dans les œuvres des écrivains antillais depuis le 19esiècle. Car lire et écrire jouent un rôle non négligeable dans la représentation culturelle, esthétique et politique qu'ils se font de leur société qui subit une quelconque tyrannie. Ce séminaire sera consacré essentiellement à la question du livre dans un contexte antillais. Aussi s'interrogera-t-on sur la personne de l'auteur antillais, sa présence dans l'œuvre fictionnelle, sa conception fétichisée du livre et de l'écriture au travers de l'esthétique, du social et du politique, en prenant pour exemples quelques romans de Marie Chauvet, René Depestre, Frankétienne, Fernand Hibbert, Dany Laferrière, Émile Ollivier, René Philoctète.
Area: Writing Intensive

AS.212.726. Approches géopoétiques: théâtre, poésie, roman.
Chaque genre littéraire développe un rapport particulier à l'espace, tout autant qu'au temps. Au théâtre, l'espace est à la fois abstrait, dans la mesure où le texte théâtral fait subir au monde une réduction à l'extrême, et concret, en ce que la mise-en-scène actualise un ensemble de possibles devant le public. Dans le domaine de la poésie, l'espace fait l'objet d'évocations diverses et changeantes ; il peut être intensément présent ou être renvoyé à l'arrière-plan au profit de la seule voix, siège de la "conscience" poétique. Le récit de fiction, lui, fort de sa visée mimétique, semble engendrer un imaginaire spatial plus marqué, que celui-ci se crée à partir de topoï communément admis ou qu'il intègre des précisions géographiques ou architecturales, comme le veut l'esthétique réaliste. Le but de ce séminaire sera de confronter ces trois imaginaires de l'espace en littérature, afin d'en arriver à une meilleure compréhension des ressources propres aux textes littéraires et de leur possible théorisation. Ouvrages et articles critiques d'Ubersfeld, Collot, Westphal, Moretti, Bouvet et Camus; œuvres d'expression française, à lire in extenso ou sous forme d'extraits, de Corneille à Koltès, de Lamartine à Glissant, de Voltaire à Volodine...
Area: Writing Intensive

AS.212.741. Rousseau: Citizenship and Exile.
Throughout his life Rousseau presented himself by turns as the citizen of a Republic, a stateless outcast, the resident of a vanishing homeland of the heart, and the focal point of an international conspiracy. He invented new foundations for political communities that could never be implemented or were misunderstood during the revolutionary Terror. The families he portrayed were both patriarchal and defiantly anti-normative. He affirmed his desire to belong and insisted on his irreducible difference; he extolled friendship and engineered breakups. Through readings of Rousseau's major political, autobiographical and fictional works we shall examine how and why communities, personal identity and citizenship are alternately built and destroyed. Taught in French. Course open to undergraduates with permission of the instructor.

AS.212.751. Franco-Algerian Screens: Exoticism, Revolution, Independence.
From exoticist features of the 1920s and 1930s and political works of the 1960s, to family sagas and personal essays looking back on a conflicted past from the standpoint of the new century, Algeria has featured prominently in the French cinematographic imaginary. The independent North African nation has likewise produced compelling narratives that address the colonial legacy, the armed struggle for independence and its aftermath. Addressing from both sides of the Mediterranean an entangled political and cultural history, this course places in critical context conflicting screen representations as well as the institutions, individuals, and publics associated with them. The course will be taught in English, however most course materials will be in French. Undergraduates may take with permssion of the instructor and completion of AS.212.333 and AS.212.334. Graduate students need not have completed the prererquisite courses.

AS.212.757. Romans Africains D'expression Française [French-language Novels of Sub-saharan Africa].
Depuis la période coloniale finissante, le roman africain d'expression française a porté les espoirs et les déceptions d'un continent tiraillé entre panafricanisme et nationalisme, patrimoine traditionnel et modernité, courants séculiers et religieux. Que signifie le choix d'écrire des romans en une langue de colonisation qui est aussi, dans les sociétés multiethniques du Mali, du Sénégal ou encore du Congo, une langue fédératrice auréolée de prestige? Quels publics les romanciers visent-ils à atteindre, et à quel point la forme romanesque permet-elle d'exposer des griefs ou de dénoncer des états de fait tout en faisant apparaître des alternatives? Nous éclairerons, en étudiant des auteur.e.s francophones d'Afrique noire, trois temps forts: l'éveil politico-culturel menant aux indépendances d'abord (Kane, Oyono, Ouologuem, Kourouma); la construction de nouvelles identités africaines ensuite (Sembene, M. Bâ, Sony Labou Tansi); et enfin, les violences génocidaires au Rwanda qui laissent, sur les consciences et les corps, des marques indélébiles (Tadjo, B. Diop, Mukasanga).

AS.212.778. Les écritures contemporaines aux confins des genres [Contemporary French Writing Beyond the Genres.
Le système des genres littéraires consacré par la vieille trinité "roman, poésie, théâtre" ne fait plus la loi. Depuis les années 1980 ont émergé en France des formes d'écriture hybrides s'appuyant sur le montage, le recyclage, le catalogue ou encore la traduction intermédiale. Notre objet sera d'interroger le statut de l'objet littéraire et de la figure de l'écrivain dans un paysage artistico-médiatique que caractérisent la surproduction de textes et d'images et une certaine déréalisation du lien social.

AS.212.781. L'entre-deux-guerres en toutes lettres [French Literature Between the Wars].
French literary culture between the wars (1919-1939) promoted the novel as a forum for social comment and formal experimentation alike. Questioning the psychological biases of the 'roman d'analyse' and reacting to the collective tragedy of the Great War, interwar writers updated the French language as well as narrative 'technique' in light of emergent theories (psychoanalysis, Marxism, phenomenology). Readings from Aragon, Breton, Céline, Cocteau, Colette, Dabit, Malraux, Némirovsky, Queneau, and Simenon.

AS.212.785. The Enlightenment and its Critics.
Are imperialism, universalism, soulless rationalism, reckless exploitation of nature, and social engineering the legacy of a so-called "Enlightenment project," as many have argued in the wake of World War II? This course explores some core aspects of that critique, from Rousseau to Foucault, while testing them against examples of the plurality of discursive practices that we call Enlightenment. Readings and discussion in French. Course open to undergraduates with the instructor's permission.
Area: Writing Intensive

AS.212.791. Film Theory and Critical Methods.
Film Theory and Critical Methods surveys critical approaches to the study of film. Each week we examine a different theoretical approach to filmic representation, with emphasis variously placed on a style, genre, region of production, or period. We will be examining global film traditions from East Asia to Latin America, Western Africa, Europe, and North America. Seminar discussions will incorporate examples from films that students both view on their own as well as during the Wednesday evening screenings, which are mandatory for all seminar participants.

AS.212.801. French Independent Study.

AS.212.802. French Dissertation Research.

AS.212.803. French Proposal Preparation.
1st semester: Develop list of already-read works in your chosen field to develop a thesis subject. Identify 2 co-advisors of the ABD project; the expectation is that 1 will direct the thesis following the ABD defense. Register in this advisor's section (01: Desormeaux; 02: Anderson; 03: Russo; 04: Schilling). 1st month: Discuss with co-advisors your understanding of the core research question(s) and prepare a provisional abstract (an ongoing working tool). The abstract includes 1) well-articulated thesis statement; 2) description of proposed methodology; 3) list of proposed primary works to be studied; 4) justification of the project's relevance to the field and its interdisciplinary reach. It should be accompanied by a report on your literature search: situate your project within the existing scholarly corpus. 2nd month: prepare an annotated bibliography of primary and secondary works. Expect it to expand significantly during ABD prep as well as after the ABD defense. 3rd month: review and modify the abstract with the co-advisors; develop a provisional outline of your ABD text. Present a reading list for the period between the 1st and 2nd semesters of proposal prep. 2nd semester: Meet with the co-advisors to report on the interim research and revisit if necessary the proposed outline and abstract. Submit proposal for the sample chapter. 1st month: begin writing the sample chapter. 2nd month: in the light of how the sample chapter is progressing, review the outline with the co-advisors, then begin writing a narrative of potential thesis chapters. 3rd month: once the foregoing are drafted, write up the methodological introduction and finalize the annotated bibliography. Finally, review the abstract for completeness and revise the ABD for language and formatting. The ABD must be approved by the ABD co-advisors before it is distributed for defense. Goal: ~25 pages of supporting material; ~30-page writing sample; an annotated bibliography. ABD is not to exceed 75 pp.

AS.212.804. French Summer Research.

AS.213.205. Outsiders, outlaws, outcasts. 3 Credits.
Introduction to the close reading of German-language literature in the original. We read and discuss literary works in which experiences of crisis give rise to novel forms of selfhood. Authors may include Tieck, Kleist, Büchner, Droste-Hülshoff, Heine, Keller, Storm, Kafka, and others. We will ask how narrative form can represent breakdowns in established ways of sense-making. Attention will be paid to writers' divergent responses to the challenges of modernity. Readings, discussion, and writing assignments in German.

AS.213.311. Wege aus der Krise: politisches Theater heute. 3 Credits.
Course taught in German. Klimakrise, sogenannte Flüchtlingskrise, Gesundheitskrise, Krise der Demokratie: Eine Krise nach der anderen stellt sich ein oder wird zumindest ausgerufen. Das Resultat ist jedes Mal Weltverlust, wenn auch auf sehr unterschiedliche Weise. Es gibt also grundsätzliche Probleme, mit denen sich politisches Theater heute auseinanderzusetzen hat. In Deutschland und Österreich hat das Theater traditionell und aktuell einen hohen gesellschaftlichen Stellenwert. Allerdings ist auch die Welt des Theaters seit Frühjahr 2020 aufgrund des Gebots, soziale Kontakte einzuschränken, weitgehend zusammengebrochen. Dennoch arbeiten Theatermacher*innen weiter daran, den großen Problemen unserer Zeit zu begegnen. Welche Entwürfe bieten zeitgenössische Stücke, um uns als Gesellschaft Wege aus der Krise zu weisen.
AS.210.362

AS.213.313. Utopia: Idyllic Pasts, New Frontiers. 3 Credits.
Taught in German. This course will explore the vision in German romantic and modern literature of ideal communities. We will examine the relation of past and to future in these works as well as the way they conceive humans and nature, earth and heavens, bodies and machines. To what extent is a utopia something crafted? To what degree is it presented as a fashioned setting like a work of art? What does the image of utopia tell us about the act of imagining at the heart of literature? To what extent does envisioning a utopia amount to inhabiting one? Why is a utopia at once every place and no place (u-topos)? Reading to include works by Klopstock, Novalis, Hoffmann, Kleist, Nietzsche, Scheerbart, Walser and Jünger.
AS.210.361 AND AS.210.362

AS.213.314. Texte sehen, Bilder lesen. 3 Credits.
Taught in German. This course examines the intersections of literature and the visual arts. We will read texts by writers influenced by artists and explore art that mobilizes text; and we will examine the relationships between text and image in both illustrated books and artworks. We will also consider the visual dimensions of texts themselves, asking how texts sometimes come to function imagistically or even as images in their own right. We will work across different periods of literary and visual production, and specific topics will include: theories of text and image; manuscript illumination and early printing; typography; concrete poetry; artists' books; text art; and graphic novels. The course will include visits to the Baltimore Museum of Art, the Walters Art Museum, Special Collections at the Sheridan Library, and a letterpress shop.
Area: Writing Intensive
AS.210.362 or Instructor Permission

AS.213.315. Playtime…auf deutsch. 3 Credits.
Taught in German. German discussions of theater have largely focused on Greek tragedy and how this classical genre can be adapted for the modern stage. Yet comedies (or Lustspiele) have played an equally important role in German cultural productions and discourse from the early modern figure of the buffoon (Hanswurst) to reflections on puppet theater and to larger philosophical and anthropological inquiries into play. In this course we will read several theoretical texts on comedy and play by Aristotle, Huizinga, Kant, Schiller, and Kleist before turning to various comedies by Lessing, Kotzebue, Kleist, Brentano, Droste-Hülshoff, Büchner and Brecht. The culmination of the class will be a theatrical production.
AS.210.362 or Instructor approval

AS.213.321. Bodies and Pleasures. 3 Credits.
This course traces a literary history of sexuality from the Middle Ages to contemporary women's writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures.

AS.213.328. German Literary Modernism. 3 Credits.
Taught in English. German Literary Modernism focuses on modernist works of literature between 1900-1930, considering central modernist authors against the backdrop of dramatic changes and events in European culture and society, including urbanization, technological change, the First World War, and social and artistic movements. Students will engage literary works--by such authors as Kafka, Rilke, Hofmannsthal and Thomas Mann--that express a sense of crisis about modern life, or provoke questions about the nature of reality, the human self, the reliability of perception, and the possibilities of language and art. ? Students have the option of an additional hour of German discussion and doing all the assignments in German for German-language credit (3+1) towards the major or minor. Students interested in that option should register for section 2.

AS.213.340. Flucht und Migration: Literarische Erkundungen. 3 Credits.
We will study how contemporary German literature reflects the experiences of migrants and refugees. Jenny Erpenbeck's novel Gehen, ging, gegangen (2017) and Sasha Marianna Salzmann's novel Außer sich (2018) will serve as our main examples, complemented with shorter texts and other material on the historical and political contexts.

AS.213.354. Introduction to German Poetry. 3 Credits.
This class will introduce students to German poetry from the eighteenth to the twentieth century. We will read selected poems by Goethe, Eichendorff, Mörike, George, Hofmannsthal, Rilke, Trakl, Celan, and Bachmann. In addition we will read several theoretical reflections on poetry by literary critics and philosophers which examine the lyric form and the curious world that poetry constructs. Readings and discussion in German.

AS.213.360. Animals and Animality in Literature and Philosophy. 3 Credits.
(300-level, taught in English) critically engages the presentation and imagination of animals and other non-human life in modern literature, philosophy, and thought. We will examine the figure of the animal and the means of conceptual differentiation between the animal and the human, considering animals' relation to or perceived exclusion from language, pain, embodiment, sexuality, and the visual gaze. The course is ideal for students interested in fascinating themes in literature and how they reflect philosophical concerns. No prior courses in philosophy are required. Students will read philosophical texts alongside literary works in learning the conceptual history of animals and of humanity as a distinct species. Expect fascinating readings and engaging, lively discussions. Readings may include works by Marx, Nietzsche, Freud, Heidegger Derrida, Agamben, Poe, Kleist, Hofmannsthal, Rilke, Kafka, Mann, Pirandello, and Coetzee.
Area: Writing Intensive

AS.213.373. Sex und Macht. 3 Credits.
We will discuss postwar and contemporary literature and films that grapple with the effect of unequal power structures on sexual relations. Taught in German.

AS.213.374. Existentialism in Literature and Philosophy. 3 Credits.
What does it mean to exist, and to be able to reflect on this fact? What is it mean to be a self? This course explores the themes of existentialism in literature and philosophy, including the meaning of existence, the nature of the self, authenticity and inauthenticity, the inescapability of death, the experience of time, anxiety, absurdity, freedom and responsibility to others. It will be examined why these philosophical ideas often seem to demand literary expression or bear a close relation to literary works. Readings may include writings by Kierkegaard, Nietzsche, Dostoevsky, Heidegger, Rilke, Kafka, Simmel, Jaspers, Buber, Sartre, de Beauvoir, Camus, and Daoud.
Area: Writing Intensive

AS.213.377. Wassermänner Und Meerjungfrauen. 3 Credits.
Schriftsteller*innen haben immer wieder Geschichten von Wassermenschen erzählt. Was für eine Faszination birgt das Leben im Wasser? Was ist an diesen Zwitterwesen— Männer mit Schwimmhäuten, Frauen mit Fischschwänzen—so interessant? Was geht verloren, wenn solche Amphibien sich für immerauf dem Land einrichten? Tatsächlich sind alle Menschen Wasserwesen— zu einem Großteil aus Wasser bestehend. Aber dieses Lebenselement wird zunehmend gefährdet und gefährlich. Was nun? Wir werden literarische Texte aus der Romantik, Moderne und Gegenwart sowie ein paar Filme analysieren, um diesen Fragen nachzugehen

AS.213.378. Seeing the World by Foot. 3 Credits.
TAUGHT IN GERMAN. Few traditions have placed more emphasis than German literature on the importance of walking for finding one's way on earth and in the cosmos. From Schiller and Novalis to Thomas Bernhard and Werner Herzog, walking has been conceived not only as a journey outwards but also inwards into uncharted terrain of memory, the unconscious, and the imagination. In this course we will read short texts on wandering by Schiller, Chamisso, Goethe, Novalis, Tieck, Stifter, Walser, Bernhard, Herzog and Sebald with an eye toward the relationships that walking establishes between past and present, reality and imagination, time and space and inner and outer experience.
AS.210.361 AND AS.210.362

AS.213.380. Ghost Stories, Haunted House and Other Occult Phenomena. 3 Credits.
From the eighteenth century to the modern period, German authors have been obsessed with uncanny phenomena that blur the line between the natural world and the supernatural world of ghosts, spirits, and magic. We will explore the encounter with otherworldly phenomena in this course with a special emphasis on the status of literature as a play of semblance or collection of shadows. Why have ghost stories been so persistent in the modern era when science and reason are said to dominate our understanding of the world? Is the occult the dark side of science? What kind of knowledge does literature yield? What can literature tell us about what is random, obscure, or inexplicable?

AS.213.407. German Media Theory. 3 Credits.
German Media Theory is an advanced course for upper-level undergraduates and graduate students, giving an introduction and overview of the specifically German version of Media Studies that first gained traction in the 1980s. The term media refers not just to mass media but more broadly to devices that process, transfer and store information, reaching from the alphabet that changed the culture of writing, or the printing press made famous as the foundation of the 'Gutenberg galaxy' to computers and smart phones dominating our current lives. In this course we will cut across disciplinary boundaries to explore the multifaceted roots and formations of German media theory which combine literary poststructuralism, histories of science and technology, psychoanalysis, cybernetics, art history, and philosophy among other fields. Readings include works by Friedrich Kittler, Bernhard Siegert, Cornelia Vismann, Wolfgang Ernst, Walter Benjamin, Niklas Luhmann, Michel Foucault, Marshall McLuhan and many others. The course will be taught in English and all readings will be available in English.

AS.213.423. Reflections on Modernity. 3 Credits.
Taught in English. Reflections on Modernity takes up the problems conflicts, and possibilities of modernity in aesthetic, literary, and philosophical texts. Questions about the modern self, our relationship to nature, to urban experience, to history and language, and the role of the artist and writer in reflecting on modern life. Texts include works by such authors as Kant, Nietzsche, Baudelaire, Weber, Rilke, Hofmannsthal, Simmel, Heidegger, Habermas, Foucault.

AS.213.437. Phenomenology and Literature. 3 Credits.
Phenomenology and Literature engages the most fertile interchanges between literature and philosophy in the 20th century, focusing on the roots of phenomenology in German philosophy and its connections with and expansion to literary writing. Themes include: the nature of literary experience, including the experience of reading and writing, literary and phenomenological descriptions of reality, the literary construction of the self, and the understanding of literary imagination from a phenomenological perspective. We will read philosophers and literary theorists such as Nietzsche, Husserl, Heidegger, Sartre, Camus, Merleau-Ponty, Blanchot, Beauvoir, Hamburger, Ingarden and Iser in connection with the works of many modernist writers, including Rainer Maria Rilke, Franz Kafka, Hugo von Hofmannsthal, Thomas Mann, Thomas Bernhard, Virginia Woolf, Marcel Proust, and Wallace Stevens.
Area: Writing Intensive

AS.213.446. Nature and Ecology in German Literature and Thought. 3 Credits.
Nature and Ecology in German Literature and Thought considers the understanding and representation of the natural world in literary works and aesthetic theory from the 18th to the 20th centuries. We will consider such topics as poetic reverence for nature, anthropocentric representations of nature in literature, the thematization of landscape, the representation of animal life, the distinction between the human and animal as explored by literary writers, and ecologically-oriented critique of human consciousness. Readings may include works by such writers and thinkers as Goethe, Kant, Hölderlin, Nietzsche, Heidegger, Rilke, and Kafka, and more recent works of literary ecocriticism.

AS.213.509. German Honors Program. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.213.510. German Honors Program. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.213.607. Critical Ecologies of Literary Modernism.
Critical Ecologies of Literary Modernism will trace the origins of ecocritical literary modernism. Beginning with Hölderlin and Nietzsche, who most radically identified the source of estrangement from nature in human cognition itself, we will explore how innovations in conceiving human cognition and practice play out ecologically in the work of German modernists Hugo von Hofmannsthal, Rainer Maria Rilke, Franz Kafka, Else Lasker-Schu¨ler, Robert Musil, and Bertoldt Brecht, as well as in the modernist works of Virginia Woolf, D.H. Lawrence, William Carlos Williams, T.S. Eliot, Wallace Stevens, Elizabeth Bishop, Françis Ponge and Albert Camus. Grounded in modern German thought and extending across multiple literary modernisms, we will see that what have been taken as the subjective or aestheticized concerns of modernist writing can be recognized as critical ecologies of human cognition and practice, while exposingmodernist anxiety about the technological advances of human habitats, the expanse ofurbanization, the reach of human intervention in nature, and the underlying animality within human thinking and perception. These works may also initiate forms of imagined intimacy with nature and non-human life in modernist works.
Area: Writing Intensive

AS.213.618. Nietzsche.
The first premise of this seminar is that Nietzsche's works are not simply expositions of ideas. Rather, they testify to an effort to overcome nihilism, that is, to make a life of writing worth living by turning it into an enthralling experiment in which basic tenets of Western culture are pitted against themselves. Our second premise is that this project cannot be adequately understood without attention paid to the peculiarly German form of cultural crisis that confronted the young Nietzsche, the characteristically German turn to Greek antiquity that defined his beginnings, and the grand project of national renewal to which he dedicated his energies during his early alliance with Wagner—the encounter with whom Nietzsche continued to view as the most important event of his life even after he repudiated Wagner. The selection of works we discuss will therefore be bookended on one end by The Birth of Tragedy and a few other early writings, and on the other end by Nietzsche's final settling of scores with Wagner. A recurrent theme will be the shifting relation between aesthetic delight and the will to truth in Nietzsche's writings.

AS.213.620. Robert Walser, Literary Miracles and Virgin Births.
One of the most remarkable features of Robert Walser's writing is that the narrator consistently orchestrates or engineers his birth. He crafts a narrative that enables him to pass from the page into life in a form of literary transubstantiation in which the word is made flesh. This is the miracle of Walser's writing. It is also a perversion of the Platonic and mystical ideal of a virgin birth. This seminar will explore Walser's work against this historical and theological backdrop with special emphasis on the nexus of religion and psychosis, as evidenced in Daniel Paul Schreber's memoir and Freud's analysis thereof. We will consider the perversion at the heart of Walser's work that makes literature the sphere of wonders and miracles in an otherwise disenchanted world. Reading knowledge of German is required for this course, as many of Walser's works have not been translated into English. In addition to Walser' work, we will also read Plato, Meister Eckhart, Mechthild of Magdeburg, Schreber, Freud, and Beierwaltes on neo-Platonism.

AS.213.622. Possible Worlds: Fiction and Contingency from Leibniz to Tieck.
In 1689, as Leibniz began to understand that contingent phenomena exist, he declared that they pulled him out of an "abyss." What contributed decisively to this insight was not only infinitesimal calculus but also the novel, whose fictive worlds could be given the status of the possible, even if they had no place in the existing "series of the universe." The result of the convergence of literature and mathematics prompted by Leibniz's epistemic breakthrough included new practices of writing and of inventing possible worlds. We will take up these questions in the seminar beginning with Leibniz's Theodicy and Blanckenburg's Essay on the Novel (1774), followed by readings of selected novels from Wieland's Agathon to Dorothea Schlegel's Florentin as well as (more or less) fantastical shorter narratives from Goethe to Tieck. We will also consider theories of fiction and possible worlds from Doležel to Lamarque. Course taught by the Max Kade Visiting Professor Christiane Frey.

AS.213.623. Poetry and Philosophy.
This course will trace the tensions, antagonisms, and collaborations between poetry and philosophy as distinctive but fundamental expressions of human thought and experience. We will engage poetry as a form of artistic expression that compliments, completes, or challenges other forms of knowledge, and consider the range of philosophy's responses to poetry and poetics. Readings will include works by philosophical poets and poetic philosophers including Hölderlin, Schlegel, Rilke, Bachmann, Celan, Stevens, Heidegger, Gadamer, Adorno, Benjamin, Merleau-Ponty, Valéry, Wittgenstein, and Agamben.

AS.213.624. Reading Sand.
Why is there "a world in a grain of sand"? And why in German literature is it a "sandman" who brings dreams? The specific materiality of sand allows for a broad range of metaphorical uses with strong epistemological implications. With its small discrete grains of the same size, sand is barely limited in its potential to coalesce into formations that can be counted yet remain innumerable and to dissolve. Exploring sand in literary texts means to deal with issues like the history of the microscope, the problem(s) of infinity, "sandy" or "grainy" mediality and loose grounds as well as the subjects of remembrance, dream and the historicity of the human being. In this seminar we will read texts by Barthold Heinrich Brockes, Theodor Kornfeld, Jorge Luis Borges, Italo Calvino, Ingeborg Bachmann, Stefan Heym, Paul Celan, E. T. A. Hoffmann and Bodo Kirchhoff. The discussion will be in English, but reading knowledge of German is required for the course material. This course will be taught by Max Kade Visiting Professor, Annina Klappert

AS.213.626. Husserl's Ideas: An Introduction to Phenomenology.
The first volume of Husserl's Ideas I (1913) provides an overarching picture of the phenomenological method that came to define much twentieth-century German and French thought. This course will consider the foundational concepts introduced in this volume (eidetic analysis, intentionality, bracketing, correlationism, time consciousness, the natural attitude and the phenomenological reduction) as well as responses to them by Merleau-Ponty, Derrida, Heidegger and others. We will also consider Husserl's later efforts to incorporate history, other minds, and even that which is other-than-mind into his idealist system.

AS.213.630. Modern Orpheus: Rilke and Celan.
In the Sonnets to Orpheus Rilke proclaims, “Singing is being” [Gesang ist Dasein], in an affirmation of the life attained through art that Nietzsche spoke of in The Birth of Tragedy. This is not an individual life but the whole of being, in which poet and reader share, provided they surrender to the movement of the song, the rhythm of its words. Celan’s halting rhythm could not be more different than Rilke’s, and yet his poetry also invites the reader to surrender to the work, albeit not to the words but to the wounds it opens within them, to the silence it exposes in speech. This course will consider the Orphic tradition and its aftermath as seen in Rilke’s and Celan’s work. Special attention will be paid to the status of the unsayable (das Unsägliche for Rilke, das Unsagbare for Celan) in both writer’s poetry, prose and translations, especially from the French.

AS.213.636. Hölderlin and His Readers.
Hölderlin’s works develop vast intellectual constructions in a poetic language of striking rhythmical power, while remaining anxiously concerned with the conditions of lyric utterance. Although his work responded to the literary and philosophically currents as well as the revolutionary politics and Philhellenism of his time, it proved untimely. Yet the same severe features that alienated contemporaries would lead such 20th-century poets as George, Rilke, and Celan to celebrate and emulate Hölderlin. We will examine how Hölderlin’s early contributions to post-Kantian idealism paved the way for his poetic project, as well as his odes and elegies, and some of the poetological writings. The late hymns will be discussed in detail against the backdrop of Hölderlin’s engagement with ancient tragedy and his Empedocles project. Since Hölderlin’s works have elicited literary criticism of the highest order as well as influential reflections on the aims and challenges of literary interpretation, our readings of Hölderlin will proceed in dialogue with such critical responses.
Area: Writing Intensive

AS.213.639. On the Difficulty of Saying I.
This course takes as its point of departure the position that language carries within it the traces of something that exceeds the cognitive grasp of the subject and to this extent undoes any claim to knowledge the subject might make. This position has been central to twentieth and twenty-first century thought from psychoanalysis and poststructuralism to media theory and new materialism. This course will not take issue with this position. It will examine instead how this position evolved from the Idealism of Fichte to the eerily inhuman, if not mechanical, talking figures in texts by Novalis (“Monolog”), Poe (“Maelzel’s Chess Player”), Hoffmann (“Die Automate”), Büchner (Leonce und Lena), and Kafka (“Ein Bericht für eine Akademie”). We will explore the literature of the personal and impersonal in romantic and modernist texts in order to ask what moves and motivates works in which the first-person narrator would seem to be nothing more than a fiction—a staged phenomenon or a mechanical device.

AS.213.643. Franz Kafka in Philosophical and Literary Perspective.
This course is devoted to close study of the writings of Franz Kafka from both philosophical and literary perspectives. Writings will include Kafka’s short prose works and novels along with philosophical and literary critical interpretations thereof. Readings may include commentaries by Walter Benjamin, Theodor Adorno, Hannah Arendt, Albert Camus, Giles Deleuze, and Giorgio Agamben. Primary texts for students from the German section will be in original; any other students may read Kafka in translation.

AS.213.668. Kleist im Kontext.
This seminar will explore the narrative, dramatic, and quasi-journalistic work of Heinrich von Kleist in its philosophical and literary environment. We will examine how Kleist comments on and parodies the positions of the enlightenment, German Idealism, Weimar classicism, and the theater establishment. We will pay particular attention to the way he combines the verbal and the visual in his performative, narrative, and syntactic strategies, and analyze how this contributes to a specifically Kleistian sense of humor.Grading: P/F

AS.213.679. Haitian Revolution: German Responses.
We will explore how contemporary German thinkers and writers reacted to the Haitian Revolution, what their interests were, and how later generations of writers responded to earlier reactions, perhaps tried to do better and used the historical material for their own purposes. Possible authors: Hegel, Humboldt, Kleist, Zschokke, Seghers, Müller, Fichte, Buch, Öziri and others.

AS.213.687. Imagination in Philosophy and Literary Theory.
Imagination in Philosophy and Literary Theory is devoted to studying theories of imagination in the history of philosophy and literary theory, from the ancient Greeks to the present day. We will study philosophical conceptions of the role of imagination in memory, cognition, perception, and creativity, and assess traditional philosophical oppositions between imagination and reason, the imaginary and the real. Readings may include selections from Aristotle, Kant, Coleridge, Nietzsche, Husserl, Heidegger, Merleau-Ponty, Sartre, Dufrenne, Stevens, Iser, Ricoeur, Ryle, Wittgenstein, and Nussbaum.

AS.213.742. New Objectivity: Program and Projects.
The course will focus on the aesthetics and discourse of “New Objectivity” in Weimar German literature. The ideals of sobriety and coldness called for a direct and unadorned view of the routines of modern work and love and found proponents not only among writers of the avant-garde but also, and with less fanfare, among authors who worked in popular genres like adventure novels. In this course, we will investigate how the desire for objectivity responded to a cultural crisis in the aftermath of World War I and how it guided the choice of genres (biography, reportage, non-fiction, modernist novel) as well as encouraged factographic styles of writing. Authors to be discussed include Egon Erwin Kisch, Joseph Roth, Siegfried Kracauer, Ilja Ehrenburg, B. Traven, Irmgard Keun, Gabriele Tergit, and Marieluise Fleißer. Class discussion will be in English or German depending students’ preferences. Reading will be in German.

AS.213.761. Literary Aesthetics.
This course explores literature in the context of the aesthetic tradition in philosophy. Themes include literature as mimesis, or the representation of reality, its relation to truth, untruth, and possibility, literature as the revealing of being, literary imagination, the distinctiveness of literary language and expression, the role of the literary author. Readings may include background selections from Plato and Aristotle, but the course will focus on philosophical interest in literature since the late 18th century, and may include Kant, Hölderlin, Nietzsche, Heidegger, Sartre, Blanchot, Bachelard, among other readings. Course will be taught by the Kurrelmeyer Chair in German. Taught in English.

AS.213.763. Contemporary Theater: Gender/Violence.
The course explores 21st-century German theater in its diverse aesthetic and textual forms. Due to comparatively generous funding, German non-commercial theater has over the last decades been able to develop, adapt, and maintain a great variety of at one point "experimental" artistic styles, including frequently stark depiction of gender and violence. We will focus on the ways in which the productions take up, amplify, displace, disrupt, and/or reinforce cultural codes and images of gender and violence both in their symbolic and physical dimension. Topics include the "directors' theater," political theater, "pop-theater," "discourse-theater," "new documentary theater," "post-migratory theater," postcolonial theater and live art. The readings may include Nobel laureate Elfriede Jelinek, Dea Loher, René Pollesch, Milo Rau, Falk Richter, Sasha Marianna Salzmann and various works of shared authorship such as She She Pop, Rimini Protokoll, Gintersdorfer/Klaßen, and Yael Ronen. The Tuesday sessions will be used for the joint viewing of production recordings. Taught in English. Course material in German. No sessions after March 27th.

AS.213.800. Independent Study-German.

AS.213.804. German Summer Research.

AS.213.812. Directed Dissertation Research.

AS.213.813. German Qualifying Paper Preparation.

AS.214.304. Founding Mothers: Female Genealogies in Medieval and Renaissance Italian Literature. 3 Credits.
In this course we will explore the problem of the relationship of women to dynastic power in the literature and culture of late medieval and Renaissance in Italy. Beginning from Giovanni Boccaccio's famously ambivalent portraits of women in the Decameron and his treatise On Famous Women, we will locate women within an early modern system of inherited power and literary representations. We will then move to study a series of genealogically motivated chivalric poems (such as Orlando innamorato, Orlando furioso, Floridoro, Gerusalemme liberata) which propose a number of roles for women: warriors, queens, saints, monsters, saviors, poets, founders. These texts return again and again to the key role of women in establishing and maintaining dynastic continuity within noble families, but also to the dangers they pose to dynastic stability. We will try to understand how these literary texts work within the social and political context of the Italian city- states of this period. We will also study the involvement of women in the production and circulation of literary texts, focussing on notable patrons of the arts like Isabella d'Este and Lucrezia Borgia, and on important poets like Vittoria Colonna.

AS.214.362. Italian Journeys: Medieval and Early Modern. 3 Credits.
The Truth behind the Courtly Façade: «Of ladies, knights, of passions and of cutthroat competition»: the truth behind the romantic façade. What did life actually look like at Italian courts of the 1400 's and 1500's? We will reconstruct life at a Renaissance court through Italian history, literature, music and art of this period. Who were the stars of these scenes? We will explore the complex and intricate world of the Italian courts, including Florence and Ferrara, through the works of art they produced. The course will concentrate on historical, literary and visual representations including modern media such as film and television.
Area: Writing Intensive

AS.214.363. Italian Journeys: An Other Story. 3 Credits.
What does it mean to be "other," and how can reading about experiences of otherness affect our understanding of historical moments? In this interdisciplinary survey of contemporary Italian literature, students will read through the lens of "the other" in order to highlight both the milieu of lived experiences (often lived by the authors themselves) outside of sociocultural ideals, and the role they play within modern Italian canon. Combining gender studies, animal studies, posthumanism, and other theoretical frameworks, students will examine works from authors such as Sibilla Aleramo, Carlo Levi, Elena Ferrante, Igiaba Scego, and directors Vittorio De Sica, and Alice Rohrwacher. Taught in English—students wishing to do coursework in Italian should register for AS.214.363 (02).

AS.214.422. Ugly Beasts, Talking Monkeys: The Medieval Animal. 3 Credits.
This seminar explores the boundaries between humans and animals in the medieval world and beyond. Reading literary texts such as Giovanni Boccaccio's Decameron, Moderata Fonte's Floridoro, Luigi Pulci's Morgante and medical texts such as Girolamo Fracastoro's On Contagion, we will trace the formation of distinctions between species.The categories we will use to investigate the distinctions between animals and humans include metamorphosis, contagion, education, taxonomy, subjugation, hunting, representation, anthropomorphism and zoomorphism, wilderness, misogyny, and promiscuity. To probe these categories and distinctions, we will make use of a series of critical approaches, from critical animal studies to posthumanism, within the disciplinary specificity of Medieval Studies.

AS.214.434. Elena Ferrante and her Brilliant Friends: Contemporary Italian Women Writers. 3 Credits.
Elena Ferrante is Italy's most acclaimed contemporary novelist, although her true identity remains unconfirmed. Having been translated into and published in 45 languages, with over 15 million copies sold worldwide, her 'Neapolitan Quartet' triggered what has been called 'Ferrante Fever.' Through reading and discussion of Ferrante's works (novels, letters, and a fairytale) and their screen adaptations— the HBO TV series My Brilliant Friend and Maggie Gyllenhaal's The Lost Daughter (2022) —we shall discover the reasons behind this global, literary phenomenon while exploring themes such as gender, memory, trauma, women's participation in, or exclusion from, history, and the internal violence of a rapidly changing society. In addition to Ferrante's works, we shall also read Anna Maria Ortese, Elsa Morante, and Fabrizia Ramondino to understand the influence of women writers from previous generations on Ferrante's work. This class is taught in English. Additional discussion sessions in Italian will be offered.

AS.214.466. Utopias and Dystopias in Renaissance Culture. 3 Credits.
We will trace the dream of designing an ideal society and the danger of creating its opposite in the sixteenth and seventeenth century Italian and European thought.

AS.214.479. Dante Visits the Afterlife. 3 Credits.
One of the greatest works of literature of all times, the Divine Comedy leads us down into the torture-pits of Hell, up the steep mountain terrain of Purgatory, through the "virtual" space of Paradise, and then back to where we began: our own earthly lives. We accompany Dante on his journey, building along the way knowledge of medieval Italian history, literature, philosophy, politics, and religion. The course also focuses on the arts of reading deeply, asking questions of a text, and interpreting literary and scholarly works through discussion and critical writing. Conducted in English.
Area: Writing Intensive

AS.214.561. Italian Independent Study. 0 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.214.562. Italian Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.214.607. Teoria e Prassi della Glottodidattica dell'Italiano.
The goal of this course is to familiarize Graduate Student Instructors in Italian with foundational elements of Second Language Acquisition and foreign language teaching. The course will (1) acquaint students with historical and current theories of foreign language pedagogy; (2) demonstrate strategies to integrate theoretical knowledge into everyday practice, both in terms of instructional delivery, and materials development; (3) introduce participants to basic evaluation tools to critically assess teaching practices and tools in terms of quality, relevance, validity, reliability and other theory-based criteria; (4) help participants to articulate their own pedagogical training and philosophy of teaching in preparation for the academic job market. Taught in Italian.

AS.214.608. Vico: Mythology, Philology, and Forgery.
In this course we will examine Giambattista Vico's innovative effect on intellectual history, in light of recent discoveries regarding Vico's publication history. Extensive work in Special Collections will be featured.

AS.214.610. The Nonhumans of Renaissance Humanism.
This course is an exploration of the notions of the human that emerge when interrogating pre-modern Italian literary constructions of nonhuman entities (water, earth, flora, fauna, objects, buildings, cities, automata, demons, angels, gods, and God). We will read work by authors such as Dante, Petrarch, Boccaccio, Pico, Alberti, Leonardo, Sannazaro, Baldi, and Della Porta, as well as parts of the Hypnerotomachia Poliphili, and selections from bestiaries, herbaria, and books of emblems. Accompanying these readings are recent studies in critical theory on posthumanism and transhumanism, animal studies, ecocriticism, and phenomenology.

AS.214.685. Donne e scrittura tra '500 e '600.
While women's contributions to Italian Renaissance literature have long been acknowledged, their creative output continued well into the 17th century. This course focuses on some of the protagonists of this extraordinary season, from Lucrezia Marinella and Arcangela Tarabotti to Elena Lucrezia Cornaro Piscopia, who in 1678 became the first woman in the world to receive a university degree. Taught in Italian

AS.214.747. Umberto Eco: Medievalist, Postmodernist, Narratologist.
Umberto Eco was one of the most prolific and flamboyant authors of the 20th and early 21st centuries. Trained as a medievalist, he became one of the central figures in literary theory as well as a best-selling novelist, essayist, and public intellectual. We will explore his long career as both narratologist and narrator and its foundations in intellectual history. Works will include Il nome della rosa, Il pendolo di Foucault, Opera aperta, and The Limits of Interpretation.
Area: Writing Intensive

AS.214.748. Giambattista Vico and the Old Science.
Giambattista Vico's Principi di scienza nuova (1725, 1730, 1744) was intended to found an "ideal" and "eternal" model of human development. Vico emphasizes the importance of both philology and philosophy to his project, and attempts to break the mold of thinking about the history of humanity by exposing the preconceptions and misconceptions that arose from attempts to square "sacred history" with "profane" or non Judaeo-Christian history, creating a philosophy (or even a science) of mythology.
Area: Writing Intensive

AS.214.757. Tasso, Poet of Doubt.
A reading of Tasso's Gerusalemme liberata along with relevant poetic, literary-theoretical, philosophical, and theological texts.
Area: Writing Intensive

AS.214.766. Italy and Environmental Humanities.
This seminar examines a variety of literary texts and films, produced in Italy from the post-war period to the contemporary era, from material eco-critical perspectives. While maintaining a focus on Italy, this course addresses broad questions within the field of environmental humanities: what is the Anthropocene and how it has been conceptualized? How is has been framed chronologically? How do we interrogate a text from an ecocritical perspective? What is a non-anthropocentric narrative? What is the task of the eco-scholar? What is the goal of environmentally concerned scholarship? What does it mean to teach 'ecocritally'? Literary texts include works by Italo Calvino, Carlo Cassola, Paolo Volponi, Anna Maria Ortese, and films by directors Roberto Rossellini, Pier Paolo Pasolini, Pietro Marcello, and Alice Rohrwacher. Critical and theoretical readings will include Marco Armiero and Marcus Hall's Nature and History in Modern Italy, Timothy Morton's Humankind, Serenella Iovino Ecocriticsm and Italy, and Rosi Braidotti's The Posthuman.

AS.214.804. Italian Summer Research.

AS.214.861. Italian Independent Study.

AS.214.862. Italian Dissertation Research.

AS.214.863. Italian Proposal Preparation.

AS.215.231. Introduction to Literature in Spanish. 3 Credits.
The main objective of this course is to examine and discuss specific authors and topics in literature in Spanish from the Middle Ages to the 20th century. The course is designed to cover a selection of Hispanic texts from Spain and Latin America. Literary genres to be studied will include narratives, poetry, and drama. The bulk of each class session will be dedicated to the discussion of the assigned readings. This course is taught in Spanish. This course is required for the major in Spanish.

AS.215.290. Latin American Critical Perspectives on Colonialism: From the 'World Upside Down' to the 'Coloniality of Power'. 3 Credits.
This course, taught in English, examines how indigenous and local (postcolonial) intellectuals in Latin America responded to the ideology and practices of Spanish Colonialism in the earliest post-conquest years (1532), continued to battle colonialism during the period of the wars of independence, and finally arrived at the production of an analysis that shows how modernity is but the other face of colonialism. Among key works to be discussed are Guaman Poma's illustrated sixteenth-century chronicles, D.F. Sarramiento's _Civilization and Barbarism_ (1845), and Anibal Quijano's "Coloniality of Power" (2000).
Area: Writing Intensive

AS.215.309. An Interdisciplinary Introduction to the Study of Latin America. 3 Credits.
The course is an interdisciplinary introduction to the study of Latin America. It brings together archeology, ethno-history, art history, literature and environmental studies.
Area: Writing Intensive

AS.215.336. Don Quijote. 3 Credits.
A close reading and discussion primarily in Spanish of Cervantes' masterpiece, with concentration on its major themes and contributions to the formation of the modern novel. We will use A. Murillo's edition of the novel, Editorial Castalia.
AS.210.311 AND AS.210.312

AS.215.380. Modern Latin American Culture. 3 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin- America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin-America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
AS.210.312;Students may earn credit for AS.211.380 or AS.215.380, but not both.

AS.215.390. Modern Spanish Culture. 3 Credits.
This course will explore the fundamental aspects of Spanish culture from the nineteenth to the twenty-first centuries. The course will offer a general survey of the history of Spain and will discuss texts, movies, songs, pictures, and paintings in relation to their social, political, and cultural contexts. This course will be of particular interest for students planning on spending a semester abroad in Spain—specially for those students going to the JHU Fall Semester in Madrid, at Carlos III University. Taught in Spanish. Recommended Course Background: AS.210.311 or appropriate Webcape score.AS.215.390 was formerly numbered AS.211.390
Students may not have previously completed AS.211.390.

AS.215.406. Novelist Intellectuals. 3 Credits.
What does a novelist's op-ed about economics have to do with her literary writing? In what ways does a fiction writer's essays on the environment inform how we read her novels? What happens when we find the political opinions of a writer objectionable? This undergraduate seminar will consider what the Spanish writer Francisco Ayala termed "novelist intellectuals," that is, literary writers who actively participate in a society's public sphere. Considering writers from Madrid to New York, from London to Buenos Aires, we will ask how one should hold a novelist's fictional and non-fictional writings in the balance and explore ways of reading that allow us to consider the public intellectual side and the aesthetic side of a novelist together.

AS.215.407. Power And Gender In Hispanic American Novels And Films. 3 Credits.
We will analyze and discuss four novels and three films impacted by gender violence and political idolatry under shattering stress. Oficio de tinieblas or The Book of Lamentations (1962) by Rosario Castellanos (Mexico). Zama (1956) by Antonio di Benedetto (Argentina). Delirio or Delirium (2004) by Laura Restrepo (Colombia). El ruido de las cosas al caer or The Noise of Things Falling (2011) by Juan Gabriel Vásquez (Colombia). In addition, we will examine in depth films by Lucrecia Martel (Argentina): the short Rey muerto (1995), La ciénaga (2001), and her own version of Zama (2017). Course taught in Spanish.
AS.210.312

AS.215.409. Catalonia and Independence. 3 Credits.
What is the Catalan independence movement? Where did it come from? What, exactly, does it advocate? This seminar will examine the history, politics, and culture of Catalonia in an attempt to understand why the push for independence has grown over the past decade. We will focus especially on the impact of nationalism, ideology, social history, economics, law, and language on the construction of Catalan identity. But we will also compare Catalonia to other regions in the Iberian Peninsula (the Basque Country, Galicia) as well as across Europe (Scotland, Northern Italy) and North America (Québec) in order to better understand how movements for regional autonomy and independence emerge today. Taught in English.

AS.215.412. Populism. 3 Credits.
What do Hugo Chávez, Marine Le Pen, and Donald Trump have in common? According to many from across the political spectrum, they are all populists. But what is populism, exactly, and how can it describe such disparate phenomena as left-wing social movements, xenophobic anti-immigrant policies, and economic redistribution? This advanced seminar will examine the history, culture, and political theory of populism. We will pay special attention to the resurgence of populism after the Great Recession and examine a number of cases from Latin America, Europe, and the United States.

AS.215.413. Cuba y España. 3 Credits.
La frase "más se perdió en Cuba" alude al singular rango de la antigua Provincia de Ultramar en el mapa geopolítico del colonialismo hispánico. Hemos de estudiar la prolongada relación entre España y Cuba, desde 1492 al presente, a través de materiales literarios, crónicas, artes plásticas, música y medios sociales al corriente. Enseñado íntegramente en español.
AS.210.311

AS.215.414. Blood Cinema in films by Pedro Almodóvar, Julio Medem, and Alejandro Amenábar. 3 Credits.
Films by three leading Spanish male directors from different generational backgrounds and sexual and political orientations. We will study their respective filming and mythmaking of kinship and regional passions in mixing love with hate, attraction with rejection. Our dialogue will revive and debate the polemical psycho-analytic theses in Marsha Kinder's Blood Cinema: The Reconstruction of National Identity in Spain.
AS.210.311 OR AS.210.312

AS.215.416. Mexican Empire: the Problem of Territory from Aztec Philosophy to Trump's Wall. 3 Credits.
This course with seminar option is devoted to Mexico, its past and present paths into a remote inside-out pre-imperial epoch inalienable from North-against-South histories across the American Narcoland from Honduras to Alaska. Our nonfictional materials combine detailed summaries and readings of Stuart Elden's The Birth of Territory and James Maffie's Aztec Philosophy: Understanding a World in Motion. The fictional matter concerns Roberto Bolaño's 1998 novel, Los detectives salvajes (The Savage Detectives), Corman McCarthy's apocalypse Western, 1985 Blood Meridian, and Carlos Reygadas' films, Post Tenebras lux (2012) and Nuestro tiempo (2018).

AS.215.417. Literature of the Great Recession. 3 Credits.
The Great Recession—sometimes called the financial crisis or the economic crisis of 2008—brought financial markets to a halt and created significant political turmoil across the North Atlantic. But its impact on culture, and literature especially, has often been ignored. This seminar will travel across Europe, from Dublin to Madrid, from London to Reykjavík in order to examine how literature has registered this most recent economic crisis. We will focus on how crisis is narrated and the ways in which literary works have managed to provide a voice for marginalized social, economic, and political demands.

AS.215.419. Colombia: Territory Against Nation. 3 Credits.
The nation of Colombia amounts to a large country partly made immense and hard to govern and corruptible by its territorial nexus and porous frontier with Venezuela. Starting from such polemic claim, leaning on misgovernance vs. excessive governmentality, we will study two novels, Laura Restrepo's Delirio/Delirium (2004) and Juan Gabriel Vásquez's The Noise of Things Falling (2011); both winners of the prestigious Planeta Prize. To what extent can literary fictions of such scope and ambitions, invested in deeply rooted family politics, help or harm the reader's political trust in nations as novels and fictions as nations?

AS.215.421. Blood and Honor in the Spanish Golden Age. 3 Credits.
In this class we will study a selection of the often violent and suspenseful literature that served to entertain both the masses and the nobility during the height and rapid decline of the Spanish Empire. We will delve into how the literary establishment, in particular the theater, disseminated and sometimes questioned social and gender norms, all while wrestling with the at times deadly code of honor that permeated Spanish society. (Course taught in Spanish)

AS.215.442. Whose Caribbean and the Epic of Race. 3 Credits.
We will study literary claims of epic colonial possession and aesthetic dispossession through close readings of five works in reverse chronological order: V.S. Naipaul's late historical novel, A Way in the World (1994); Derek Walcott's transoceanic poem, Omeros (1990); Alejo Carpentier's short anti-Enlightenment moral tale, El reino de este mundo (1949) and his short tale in celebration of Afro Cuban wizardry, Viaje a la semilla (1944); Aimé Césaire's prose poetry, mixed chronicle, Cahier d'un retour au pays natal, or Notebook of a Return to the Native Land (1939-1947). We will address questions of temporality and historicity (Heidegger) and a base-materialist political blocking of wild dreams as attainable through translation (Bataille). Such formal and epistemic problems will draw us into issues of race across the colonial spectrum of Caribbean histories.

AS.215.448. The Politics of Spanish Painting. 3 Credits.
How is painting political? What would it mean for a painting to make a political intervention? Can a painting, through its subject, composition, and style, make political arguments and claims? Understanding painting as a repository for social, economic, and political relations, this course will examine the works of major Spanish painters from El Greco to Picasso. We will pay special attention to the ways in which painters developed a particular "political vision" of Iberia and the world. Paintings will be paired with texts ranging from art history and criticism to literature, history, and political philosophy. Taught in Spanish.

AS.215.460. Modern Mexico and the Culture of Death. 3 Credits.
Drawing from sources in popular culture, literature, folk religion, and the media, we will explore the myths and daily practices of death-related representations of Mexico's survival against enemies, from within the state apparatus, and the insertion into it of drug traffickers, on both sides of the so-called Crystal Frontier with the US.

AS.215.463. Borges: His Fiction and Critical Essays. 3 Credits.
This course will deal with close readings of Borges ficciones and critical essays in order to determine how his thinking on the problem of writing and thinking is fictionalized in his stories.
Area: Writing Intensive

AS.215.465. Wild Surrealism: Lorca, Dalí, Buñuel. 3 Credits.
Spanish surrealism emerged unevenly. Some writers and artists sought out the surrealist label while others rejected or ignored it altogether. Some attempted to adhere to André Breton's "Surrealist Manifesto" while others went decidedly against its principles. Yet surrealism, in one way or another, took over the Spanish artistic scene during the 1920s and '30s. Today, it is associated with Federico García Lorca, Salvador Dalí, and Luis Buñuel. Friends, roommates, and even lovers, Lorca, Dalí, and Buñuel came to define surrealism's acceptance, rejection, and indifference in Spain. This seminar will examine the moment of Spanish surrealism through these three figures. The course will include the study of film, art, drama, poetry, and nonfiction. Taught in Spanish.Recommended Course Background: AS.215.390 or AS.215.231

AS.215.469. Mapping Identity in Modern Spain. 3 Credits.
What social, political, and economic forces make groups of people appear out of place in a given society? How have literary works contributed to counteracting the marginalization of certain groups? This course will look at how modern Spanish artists, writers, and intellectuals wrestled with questions of identity and marginalization. We will critically examine how the modern Spanish state was forged from restrictions on cultural difference and consider the various marginalized groups that were left in its wake. These groups include various peoples (e.g. the Romani), ideologies (e.g. anarchism, socialism, communism), social and economic classes (e.g. peasants, the working class), and regional identities (e.g. Catalonia, the Basque Country). Key texts in modern Spanish literature will prompt our investigation into how writers and artists reflected on, contested, and expressed the marginality of the country's various internal others. Taught in Spanish.

AS.215.477. La Habana Miami: One World and Two Cities. 3 Credits.
Havana and Miami make up the oldest US enclave city linked to a foreign one under US Embargo access. We will study a unique counterpoint Hispanic Exiled culture which considers itself protected by American Exceptionalism

AS.215.525. Spanish Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.215.526. Spanish Independent Study. 1 - 3 Credits.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.215.603. Napoleon's Haitian Cosmos from Boukman to Bolívar.
A seminar on middle-modern to late-modern fictions by Alejo Carpentier (1949-1962 El reino de este mundo and El siglo de las luces), Carlos Fuentes (1980 Una familia Lejana), and Gabriel García Márquez (1989 El general en su laberinto). Reread as defunct belles-lettres. Main critical and theoretical points of in-depth reference: Derek Walcott's rogue Robinson-Crusoe Caribbean poetics and Jared Hickman's exorbitant Black Prometheus. Taught in English.

AS.215.604. To Die in Mexico.
The seminar adopts and translates recent ideological revisions of Mexico's alternate modernities; impacted by postcolonial, subaltern, and decolonial theories of Latin American exceptionality. The plural character of these combined exceptions and exemptions and refusals to reincorporate Mexicanness into modernizing Occidentalism will be foregrounded in two historical moments: modernismo-to-modernism, in convulsed Mexico (1900-1927) and criollista Nueva España "Baroque" hybridized and myth-invested ethics of nationhood (1604/1690): Bernardo de Balbuena's Grandeza Mexicana (1604)/Carlos Sigüenza y Góngora's Infortunios de Alonso Ramírez (1690). These materials will be framed in Europe's modernist, re-mythologized "Waste Land" (T.S. Eliot), as "brought home" to America in Hart Crane's The Bridge (a poem largely conceived and reborn in Cuba's Isla de Pinos.)(Fluent reading knowledge of Spanish)

AS.215.606. Engaging with the Global Hispanophone.
This course is envisioned as an invitation to branch out beyond the traditional archives of Hispanism, as we engage with the cultural production of 'peripheral' territories in the so-called Hispanic world, including regions that have recently been grouped within the category of the "Global Hispanophone." This rubric aspires to incorporate the cultures and historical experiences of territories once bound by the Spanish Empire in North Africa, the Gulf of Guinea, and the Philippines. In this reconfiguration of our intellectual and geographic maps of Hispanic studies, we will place these regions' pasts and presents in dialogue with other areas traditionally more central to our disciplines, while giving particular centrality to Africa. The course is thus informed by a determination to break away from the overarching Iberian/Latin American binary, an even some configurations of Atlantic Studies, and to embrace other communities, histories, experiences, and repertoires. We will ask: what might an engagement with this new archive of the Global Hispanophone entail for the broader fields, and for the scholarly practices, of Latin American, Caribbean, Latinx, Iberian, or Atlantic studies today? How might engaging with one or more of the geographical areas involved –Western Sahara, Ceuta, Melilla, Morocco, Algeria, the Philippines, Equatorial Guinea and perhaps others not fully covered in this course– alter, or transform, our approach to the respective fields?

AS.215.607. Utopia, Text, Torture.
We will examine and stress-test writings that graphically breach and exploit established literary discourses in direct or indirect reference to unbound self-consciousness. This mode of textual introspection struggles against false consciousness as a form of self-absorbed torture (matching routine practices by the dictorships that rule over any sense of actuality in these novels). Textual imprisonment (often hyper-sexualized) escapes and humiliates these otherwise triumphantly gendered writers. Diamela Eltit, Lumpérica (1983); José Donoso, La desesperanza (1986); Néstor Perlongher, O negocio do miché. Prostitução viril em Sao Paulo (1987), La prostitución masculina (1993) or El negocio del deseo (1999); Mario Vargas Llosa, El paraíso en la otra esquina (2003); Laura Restrepo, Delirio (2004). In each case, aspects of dictatorship as specific South American despotism should loudly impact our discussions.

AS.215.613. Ricardo Piglia, Borges, Derrida and Argentina's Eighteenth Century.
A voice in Piglia's Artificial Respiration claims that Argentina did not have an eighteenth century or the Eighteenth Century. Besides Piglia's palimpsest novel, we'll study a handful of texts by Borges. Passages from Leopoldo Marechal's Adan Buenosayres, and Derrida's The Beast and the Sovereign Volume Two, in reference to Heidegger's The Fundamental Concepts of Metaphysics and Defoe's Robinson Crusoe. Taught in English.

AS.215.631. Contemporary Latin American Cinema: History, Theory, and Practice.
This seminar presents a transnational history of Latina American cinema from the 1960s to the present, with a special regard to its global influence. Starting with the Cuban Revolution and the subsequent founding of the ICAIC, we'll examine how politics and aesthetics shape each other. We'll discuss the manifestos and films of the so-called New Latin American Cinema, including Tercer Cine, Cine Imperfecto, and Cinema Novo; the filmography made during the continent's various dictatorships; and post-dictatorship debates on memory. We'll also engage with a recent theoretical and cinematic production on gender, sexuality, the non-human, and new cinematic postcolonial approaches. In December, we will visit the International Festival of New Latin American Cinema of Havana to continue discussions in the setting of Latin America's largest film festival. Some knowledge of Spanish will be necessary to take this class.

AS.215.633. Spectacle, Subjectification, and Reality Literacy in Early Modern Society.
In this seminar we will examine the widespread deployment of cultural production in the early modern period in the service of generating social cohesion around an emerging national project, primarily in the case of Spain. At stake will be how cultural practices can determine a shared sense of reality, often at odds with the interests of marginal groups, as well as the strategies that emerge to counteract and question those practices. While reading knowledge of Spanish is desirable, graduate students from other disciplines who wish to explore these theoretical questions with regard to a different cultural corpus are welcome. Graded Pass/Fail.

AS.215.640. Borges, Derrida, Heidegger and the Paradoxes of Perception.
In this seminar we will the examine the ways in which Jorge Luis Borges's narratives intersect with lines of inquiry pursued by Martin Heidegger and Jacques Derrida around perception, knowledge, language, time, and space.
Area: Writing Intensive

AS.215.641. Guaman Poma, his 12 theses for an new understanding of the World Upside Down.
As of today, due to the work of Walter Mignolo, Ossio, Lamana and other scholars in Colonial Studies, the 1000 page letter of Guaman Poma to the King of Spain has become the pre-eminent text written on the question of coloniality of power as theorized by Anibal Quijano. Given that the concept is now central to colonial and modern studies, familiarity with the work of Guaman Poma is essential in the formation of all Latin Americanists and scholars interested in coloniality and imperial studies.
Area: Writing Intensive

AS.215.651. The idea of "Latin America": current debates on the fundamentals of the field.
The course will explore the history of the Idea of Latin America as a discursive and political entity. Students will read the work of Walter Mignolo, Maurico Tenorio Trillo and Fernando Digiovanni among other theorist and cultural historians.
Area: Writing Intensive

AS.215.718. Contemporaneity and Crisis.
How should one study contemporary literature and culture? Is "the contemporary" a period in and of itself? Does it require a distinct conceptual approach? This graduate seminar will examine various approaches that have emerged since Michel Foucault called his genealogies a "history of the present." We will pay special attention to contemporary literature and culture's most distinguishing feature today: crisis. Considering theories of crisis and "the contemporary" together, the course will explore how living in a time of overlapping crises—economic, political, social, cultural, environmental, and others—affects the way we interpret the world.

AS.215.747. Borges in Theory.
The course engages close readings of Borges critical essays and some of his fiction in order to establish the points of interpellation that Post-modern theory takes from or shares with Borges's meditation on the problem of writing.

AS.215.748. Public Humanities Writing Workshop.
Humanists possess a reservoir of scholarly abilities that prime them for contributing to debates well beyond the academy. This semester-long workshop will introduce graduate students to the basics of writing for such broad audience. Each session will be organized around particular topics in public humanities writing, including the pitching, writing, editing, and publishing processes of newspapers, magazines, and online outlets. We will also consider the forms of writing that most allow scholars to draw from their academic training and research: reviews, personal essays, op-eds, interviews, and profiles. Throughout the course we will see how the interdisciplinarity, comparativism, and multilingualism of fields from across the humanities can be helpful for reaching wide audiences. Beyond the nuts and bolts of getting started in so-called "public" writing, this course aspires to teach graduate students how to combine quality writing with academic knowledge, scholarly analysis with a general intellectual readership—and, ultimately, make academic knowledge a public good. Taught in English.

AS.215.791. Film Theory and Critical Methods.
Placed at the crossroads of aethestics and politics, psychology and economics, the history of technology and popular culture, film has emerged as the interdisciplinary object of study par excellence. Based on intensive weekly viewing and on classic and contemporary statements in film theory, this seminar—required for the Graduate Certificate in Film and Media—opens up questions of film language, authorship, genre, spectatorship, gender, technology, and the status of national and transnational cinemas.

AS.215.804. Spanish Summer Research.

AS.215.826. Spanish Independent Study.

AS.215.827. Spanish Dissertation.

AS.215.828. Spanish Proposal Preparation.

AS.216.300. Contemporary Israeli Poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, Dalia Rabikovitch, Erez Biton, Roni Somek, Dan Pagis, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Against the background of the poetry of these famous poets we will study recent developments and trends in Israeli poetry, including less known figures such as Mois Benarroch, Shva Salhoov and Almog Behar. Through close reading of the poems, the course will trace the unique style and aesthetic of each poet, and will aim at presenting a wide picture of contemporary Hebrew poetry.

AS.216.305. Representations of the Other(s) in Israeli Culture. 3 Credits.
This course will use the concept of the Other to study the ways in which various marginal groups in Israel are represented in contemporary Israeli films, TV drama, prose-fiction, poetry and visual art. As a nation-state which was founded on the premise of a utopian vision of a just and fair society and as a promise for a safe haven for Jews escaping their status as Others, contemporary Israeli culture offers a unique case study. The course will run as a research seminar in which students will be encouraged to actively engage in analyzing the ways in which cultural productions depict the Other/s and Otherness as well as the social, political and psychological motivations and implications of these depictions. We will ask questions such as: who is considered as Other and by whom? What roles do the cultural representations play in shaping national collective identity, stereotypes and the perception of the self as Other? And how collective memory shapes Otherness?
Area: Writing Intensive

AS.216.342. The Holocaust in Israeli Society and Culture. 3 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse on the Holocaust in Israel and its development throughout the years. Through focusing on scholarly, literary, artistic, and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its society, politics, and collective self. The course is divided to three general categories: Historical and Sociological Perspective, Literary Perspective, and Cinematic Perspective. However, we will study the crossroad between these three categories, and will explore them in relation to one another.

AS.216.373. War in Israeli Arts and Culture. 3 Credits.
In this course we will study the various representations of what functions as one of Israel's most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.

AS.216.500. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.216.601. Eastern European Literature.
Twentieth-century and contemporary Eastern European Literature is the locus of poetry and the essay. In this course we shall examine classic authors, such as Bruno Schulz, Zbigniew Herbert, and Adam Zagajewski, as well as those less known in the English-speaking world: Zuzanna Ginczanka, Ota Pavel, Henryk Grynberg, Oksana Lutsyshyna. We will consider verse, poetic prose and lyrical essays. The issues that will inform our readings will be internal and actual emigration, translingualism, and the persistence of war. Polish, Ukrainian, Hungarian, Czech, Serbo-Croatian, but also French and American English are the languages in which these authors speak to us. Eastern European literature resonates with voices that have, time and again, brushed against catastrophe.

AS.216.611. Modern Hebrew Literature and Its Quest for the Sacred.
Modern Hebrew literature emerged during the nineteenth century as part of the Haskalah movement, which attempted to break from the traditional modes of Jewish intellectual and social life while also offering a new understanding of Judaism. The Hebrew literature that arose in this period embraced the rebellious nature of the Haskalah and is therefore commonly characterized as secular in nature, defying Orthodoxy and rejecting the old Hebrew God. Against this clear-cut distinction between religious and secular literature, this seminar will study the ways in which modern Hebrew literature has maintained a vital dialogue with the divine and the sacred. We will read and analyze prosefiction, poetry and publicist essays in order to track the various theological trends that were part of this self- declared secular national literature. The reading will include texts by Ahad Haam, Bialik, Shlonsky, Brenner, Agnon, Grinberg and Goldberg, as well as more contemporary writers like Amichai, Ravikovitch, Wallach, Behar and Pedaya.This course will be taught in Hebrew.

AS.216.615. Exilic Chronotope.
The concept of exile relies on the existence of differentiated space and of borders. It also presupposes affective attachment: to be exiled is to be forcibly removed from the space of belonging. And yet time cannot be excluded from a consideration of exile. Hence exilic chronotope, the timespace of forcible displacement. Beginning with the canonical banishment from the Garden of Eden, the seminar will trace the implications of exile in its historical and metaphysical sense: social alienation caused by displacement, creative fulfillment of the distance from home, phenomenological aspects of exilic topology. The readings and visual works will include Georg Simmel, Alfred Schuetz, Kurt Zadek Lewin, Charles Baudelaire, Walter Benjamin, Siegfried Kracauer, Aby Warburg, Mascha Kaleko, Zuzanna Ginczanka, Charlotte Salomon, and Daniel Mendelson.

AS.216.620. Jesus in Modern Hebrew Literature.
This seminar will track the changes in the representations of Jesus in modern Hebrew literature. Reading will include prose-fiction, poetry, drama, and intellectual essays from the late 19th century to the beginning of the 21st century. We will study the mutual influences of the scholarship on Jesus, national Zionist ideology, changes in cultural and theological perceptions of Jesus and the literary representations of his figure.

AS.216.643. Realism and Anti-Realism in Modern Hebrew Literature.
This seminar seeks to trace the narrative dynamics and literary means of modern Hebrew Literature through a close examination of the tension between its realistic and anti-realistic trends. It begins with theoretical questions regarding the definition of realism as a literary genre. After this introductory section, the seminar is divided to three different periods in modern Hebrew literature, each is analyzed within the framework of its relation to realism. The first period is the turn of the 20th century and its first decades, reading works by writers such as Yosef Haim Brenner, Shmuel Yosef Agnon and Devora Baron. In the second period we study the post Israeli statehood period through reading works by A.B. Yehoshua, Amos Oz, Amalia Khanana Carmon and Yehoshua Knaz. The third part of the course deals with prose-fiction that is considered post-modernistic and includes writers such as David Grossman, Orly Castel-Bloom Yoel Hofmann, and Ronit Matalon.
Area: Writing Intensive

AS.216.707. Modern Hebrew Women's Prose-Fiction.
In this graduate seminar we will read and discuss modern Hebrew women's prose-fiction and novels in the Hebrew original. We will study the historical background in which they emerged and their various literary means of expressing a feminine voice. We will read works by writers such as Amalia Kahanna- Carmon, Savyon Liebrecht, Ronit Matalon, Orly Castel-Bloom, Michal Govrin, Yehudit Hendel, Nurit Zarchi, Ester Peled and Maya Arad.Required Course Background: Knowledge of Hebrew
Area: Writing Intensive

AS.216.800. Independent Study.

AS.216.802. Yiddish Independent Study.
Yiddish Independent Study

AS.216.804. Hebrew/Yiddish Summer Research.

AS.217.301. Literary Readings in Portuguese. 3 Credits.
This discussion-based course for continuing students of Portuguese focuses on a wide range of Lusophone literary sources from the modern and contemporary periods. We'll read seminal texts from Europe, the Americas, and Africa, paying close attention to language and context. How do forms, ideas, and genres travel across the Atlantic? What shape do they take according to different geographies, cultures, and histories? Topics include the legacies of empire and slavery, theoretical debates about the formation of Brazilian Literature, national identity, (post)colonialism, representations of nature, and indigeneity. Students will read in the original Portuguese innovative prose works by Machado de Assis and Clarice Lispector; the poetry of Fernando Pessoa; concrete poetry, and modernist manifestos, among other things. Recommended Course Background: AS.210.278

AS.217.307. Cultura e Ditadura [Culture and Dictatorship]. 3 Credits.
In the 20th century, the Lusophone world saw the rise and fall of such authoritarian governments as the Estado Novo in Portugal (1933–74) and the military dictatorship in Brazil (1964–85). During this period, a series of revolutionary political movements sprung up, as well as innovative cultural production. How does culture respond to censorship? How do art and politics comment on and ultimately transform each other? In this course we will discuss novels, poetry, film, songs, and artworks from Brazil, Portugal, and Lusophone Africa that engage critically with dictatorships and their aftermaths. Topics include violence, trauma and memory, colonialism, post-colonialism, and decoloniality, race and the legacies of slavery, counterculture, and popular cultures. Readings and discussion in Portuguese. Interested students who have not completed course prerequisites should contact the instructor for permission to enroll.

AS.217.425. Latin American Ecocriticism. 3 Credits.
Increased awareness of climate change has led to a shift in the way we address and intervene in environmental issues in the new millennium. Yet the interest in making sense of the environment has a long history in literature and the arts. How have Latin American writers and artists understood and depicted their environments and environmental questions? How do the form and content of texts and cultural artifacts influence our understanding of the non-human world? Can works of fiction shape ecological transformations? In this course we will discuss texts from the early colonial period to the present, including the literary works of Graciliano Ramos, Horacio Quiroga, and Clarice Lispector; political ecology; film; Ana Mendieta's earth-body art; contemporary experiments in bio-art; postcolonial theory; and the intersection of environmental justice with such topics as nationalism and human rights. Going beyond ecocriticism's original focus on the Anglo-American world, we will engage recent scholarship on Latin America that sheds light on the region's cultural and geopolitical importance to the global climate, with particular attention to Brazil. This course aims to introduce students to current debates in Latin American Ecocriticism and the Anthropocene and thus contribute to an incipient but expanding field.

AS.217.427. Radical Women: Brazilian Literature, Art, and Culture. 3 Credits.
The vast body of work produced women artists and writers in Brazil has been marginalized by canonical cultural narratives, which are now being contested by a spate of scholarly and artistic projects. This course spotlights the production of women from the early twentieth century to the present, including renowned and lesser-known works. We'll discuss art, literature, and film alongside feminist theory, exploring radicality as it relates to aesthetics and politics. How do women's art, literature, and thought engage with and transform Brazilian cultural production? What are their contributions to global discussions about gender and sexuality? How do these works respond to historical events? Among the topics addressed are the body, feminism, race, indigeneity, and politics. We'll study Clarice Lispector's acclaimed stories, the first Brazilian proletarian novel written by modernist icon Patricia Galvão, known as Pagu, the diaries of Carolina Maria de Jesus, the emblematic paintings of Tarsila do Amaral, and Lygia Clark's artwork, as well as the booming scene of contemporary cinema and poetry. The course is taught in English, but those interested in doing the coursework in Portuguese (4 credits) should register for section 02.

Cross Listed Courses

Anthropology

AS.070.472. Rumors, Conspiracy Theories And Disinformation. 3 Credits.
Our present is said to be rife with more rumors, conspiracy theories and disinformation than ever before. Is this moment so different from previous, historical moments of crisis? Haven't these modes of expression always been present, albeit at the margins of the political order? What does it say about knowledge to have multiple "regimes of truth" (Foucault)? How does a new media landscape based in algorithmic modularity, and particularly social media, change the set up from an old analogue media economy? This course, co-taught by an, a literary theorist, and a media theorist, aims to provide a diversity of theoretical and methodological perspectives to help us examine the current state of reality.
Area: Writing Intensive

AS.070.607. Schelling and Anthropology.
The 18th century German philosopher Schelling has been hugely influential on 20th century thought (Freud, Heidegger, Nancy, Zizek, Pierce) but remains unknown outside of philosophical circles. This neglect is unfortunate given that he has so much to offer anthropological inquiries into the relations between mind and matter, nature and culture, theology and mythology among other topics. This course places Schelling's writings and commentaries on his work alongside anthropological texts and figures to explore lines of productive conversation. The theme of a romanticism appropriate to our present will be consistently explored throughout the course.
Area: Writing Intensive

AS.070.672. Rumors, Conspiracy Theories And Disinformation.
Our present is said to be rife with more rumors, conspiracy theories and disinformation than ever before. Is this moment so different from previous, historical moments of crisis? Haven't these modes of expression always been present, albeit at the margins of the political order? What does it say about knowledge to have multiple "regimes of truth" (Foucault)? This course, co-taught by an, a literary theorist, and a media theorist, aims to provide a diversity of theoretical and methodological perspectives to help us examine the current state of reality.
Area: Writing Intensive

Classics

AS.040.626. Plato and Poetry.
This graduate seminar will explore Plato's contributions to the "old quarrel" between poetry and philosophy, encompassing such topics as the relationship between poetic inspiration and human reason, the role of literature in pedagogy, and the metaphysical implications of poetic fiction. We will focus on several Greek texts from the Platonic corpus related to these themes, as well as some later sources that engage with Platonic ideas.

Comparative Thought and Literature

AS.300.337. The Tragic Tradition. 3 Credits.
This course offers a broad survey of tragic drama in the Western tradition, from its origins in ancient Greece to the twentieth century. In weekly lectures and discussion sections, we will study the specific literary features and historical contexts of a range of different works, and trace the continuities and transformations that shape them into a unified tradition. Key questions and themes throughout the semester will include what counts as tragic, the tragedy of social and political conflict, the bearing of tragedy on the meaning and value of life, the antagonistic relation between world and humans, the promises and dangers of tragedy for contemporary culture. Authors to be studied: Sophocles, Euripides, Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht, Pirandello, and Beckett.

AS.300.347. Imagining Climate Change. 3 Credits.
Climate change poses an existential threat to human civilization. Yet the attention and concern it receives in ordinary life and culture is nowhere near what science tells us is required. What are the causes of this mismatch between crisis and response? What accounts for our collective inability to imagine and grasp this new reality, and how can it be overcome? In pursuit of these questions, we will pair literary works and films with texts from politics, philosophy, literary theory, and religion, that frame climate change as a fundamental challenge to our ways of making sense of the human condition.

AS.300.349. Capitalism and Tragedy: from the 18th Century to Climate Change. 3 Credits.
In contemporary discussions of climate change, it is an increasingly prevalent view that capitalism will lead to the destruction of civilization as we know it. The notion that capitalism is hostile to what makes human life worth living, however, is one that stretches back at least to the early eighteenth century. In this class, we will examine key moments in the history of this idea in works of literature, philosophy, and politics, from the birth of bourgeois tragedy in the 1720s, through topics such as imperialism and economic exploitation, to the prospects of our ecological future today. Authors to be studied: George Lillo, Balzac, Dickens, Marx and Engels, Ibsen, Weber, Brecht, Arthur Miller, Steinbeck, Pope Francis, and contemporary fiction, politics and philosophy on climate change.

AS.300.608. The Physics and Metaphysics of Handwriting.
When word processing machines that can be held in the palm of a hand, why use pen and paper? Handwriting -- and its juxtaposition against digital forms of communication -- offers a unique approach to studying human interactions and the ways in which meaning, truth, intimacy, and agency are shaped by our changing technologies. At a time of exponential growth in machine writing, a study of this older form of communication enables a comparative approach that, perhaps surprisingly, opens up what are contemporary political questions. Centered on a few case-studies involving works by Sand, Chopin, Manet, Giacometti, Mallarmé, and Proust, this course takes a backward glance at a culture of written expression at a great remove from our word processing world and yet explicitly vested in an aesthetics of free expression. This modern graphological culture saw in the tracings of the hand, the uniquely personal marks of an intertwining of mind, body, and of subjectivity. Merleau-Ponty and recent word on embodiment will provide us with critical tools for our investigations into the "physics" of this activity, as will the methods of textual criticism and the new domain of creativity studies. The "metaphysics" of handwriting call, meanwhile, for a return to Heidegger, to Derrida and other major contemporary theorists of writing. They will help us see how hand and digital writing emerge as fundamentally different modes of human expression – philosophically and politically. Knowledge of French is not required for this course. Undergraduates accepted with the permission of the professor.

First Year Seminars

AS.001.110. FYS: How We Read. 3 Credits.
This First-Year Seminar invites you to think about reading as a cognitive process, a cultural obsession, and a history of revolutions. We will consider the act of reading from a range of perspectives (cognitive science, literary, political, and sociological) and examine artefacts of reading culture (manuscripts, books as material objects, the screens that dominate contemporary life). We will activate these perspectives in order to grapple with the range of values associated with reading – moral panics and political virtues, ideas of isolation and community, shifting concepts individual and public. Sources will range from Kant's "What is Enlightenment?" to RadioLab podcasts, to hands-on work with materials in the MSEL's Special Collections.

AS.001.112. FYS: Story, Song, Food, And Film - A Thousand Years Of Jewish Culture. 3 Credits.
Most Jews in America today are descendants of Ashkenazi Jews from Central and Eastern Europe. This First-Year Seminar will introduce students to the thousand-year history and culture of Ashkenazi Jews through their vernacular, Yiddish. How did Ashkenazi Jews maintain a distinct identity, even while borrowing cultural forms from their non-Jewish neighbors? How did Jews in the modern period challenge tradition and create new forms of Jewish identity? How did Eastern European immigrants adapt to life in America? In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will explore food culture by preparing Ashkenazi Jewish dishes. No prior knowledge of Yiddish is necessary for this course.

AS.001.123. FYS: Wired to Read: the Science and the Art. 3 Credits.
We all think we know that reading is: of course, that's what you are doing right now, as you are trying to make sense of words I have written. But how do we do we do it? How do mere shapes and lines on the page suddenly begin to mean something? Is our brain wired for reading? Apart from our eyes, are other parts of the body involved? When did humans start to write and read? These are the kinds of questions we'll pursue. This First-Year Seminar will explore two distinctive perspectives: one literary, the other is scientific. We'll divide our attention between the study of chapters and articles that present scientific findings about how we read and a practical exploration of a novel. Literary works tax our brains in multiple ways and our example will show why and how. George Eliot's The Mill of the Floss, will serve as our case-study. We'll learn why fiction can make us cry or make us angry about the world, how word-pictures trigger our imagination, how a writer tricks us (or our brains?) into believing the things that words in print evoke. As a story of growth in adversity filled with memories, drama, and insights about society and gender, The Mill on the Floss is bound to hold your attention.

AS.001.125. FYS: Matchmaker, Matchmaker! Love, Marriage, and Modern Jewish Identity. 3 Credits.
Should children accept the match their parents make for them, or at least choose a partner their parents approve of? Is marriage a pillar of traditional society, or a passport to new ways of thinking and being? How do questions of love and marriage help us to understand changes in Jewish life and identity in the modern period? In this First-Year Seminar, we will examine these questions in a broad range of stories, plays, and films spanning Europe and America, including the American movie Fiddler on the Roof and the stories on which it is based by Yiddish writer Sholem Aleichem.

AS.001.138. FYS: Soccer in Brazil: Opium of the Masses. 3 Credits.
Did you know that we can explain various aspects of Brazil and Brazilian society such as race, politics and national identity through studying its national sport? Futebol offers a unique perspective on politics, race and citizenship in Brazil. This First-Year Seminar seeks to understand Brazilian culture through the historic national pastime of futebol. In addition to the main textbooks chosen for the seminar, by reading a variety of texts from newspapers, academic journals, fiction and film, students will be able to find their own approach to understanding the phenomenon of futebol within the social and political traditions of Brazil. Students who have already taken AS.211.294 are not eligible to take AS.001.138.

AS.001.143. FYS: Poets, Physicists, Philosophers, and the Ultimate Nature of Reality. 3 Credits.
In this First-Year Seminar we will explore the long and mostly untold story behind the most revolutionary discoveries of modern physics—quantum mechanics and relativity—a story written, astonishingly, in the languages of poetry, fiction, and philosophy. Shuttling between twentieth-century Germany and Argentina by way of eighteenth-century Prussia, with stopovers in Plato's Greece and Dante's Italy, we will pursue the age-old riddle of how the human mind interacts with the physical world; tangle with theologians as they ponder the nature of free will; interrogate cosmologists as they attempt to grasp the shape the universe; and, finally, explores the implications of these profound problems for our understanding of reality today.

AS.001.144. FYS: Literary Multilingualism. 3 Credits.
What does it mean to live and to write in more than one language? This is a particularly charged question in today's globalized world. In this First-Year Seminar, we will explore texts and films produced by multilingual writers and directors, who reflect on the experiences of the multilingual subject; their concerns range from the turmoil of living between identities and cultures, to the playful experience of daily life and existence opened up through thinking and working in multiple languages. Main questions will include: In what ways do languages influence how writers write? How does the presence of multiple languages in a text structure a reading experience and for whom? How do texts by multilingual writers destabilize conceptions of national literature? While some texts we will read were originally composed in English, the majority were written by multilingual writers in other languages. Finally, therefore, we will address what it means to read translated into English texts that were, in some sense, already produced "in translation."

AS.001.170. FYS: Vive la Différence? The Love-Hate Relationship Between France and the USA. 3 Credits.
What do French views on culture, society, and politics tell us about ourselves? France is frequently misunderstood and criticized in US media, yet books and articles touting various aspects of a "French" lifestyle are bestsellers. French media, for its part, commonly engages in US-bashing, yet the popularity and influence of American culture there are undeniable. Why have many prominent Black American writers sought refuge in France, while many French intellectuals have chosen to bring their academic work to American universities, including The Johns Hopkins University? A cross-cultural examination will allow this First-Year Seminar to bring to light many aspects of the complex relationship between these two countries that are historical allies yet ofttimes rivals. We will explore and discuss food, language, cinema, diplomacy, and health, as well as conceptions of friendship, family, identity, and social justice. Course includes a meal at a French restaurant, a museum visit, film screening, and guest speakers.

History

AS.100.233. History of Modern Germany. 3 Credits.
There is more to Germany than beer, BMWs, and Bayern Munich. We explore politics, culture, economics and society to understand Germany and its role within Europe and the world from the 18th century to the 'Refugee Crisis', climate change and EU politics today.

AS.100.377. The Age of Reason on the Silver Screen: Cinematic Representations of the Enlightenment. 3 Credits.
This course will discuss the problem of historical representation on the basis of an analysis of movies depicting the Age of the Enlightenment.

AS.100.497. 1968: Rebels, Revolutions & the Right-Wing Backlash. 3 Credits.
The sixties were a polarizing decade of unrest, revolutions, and fundamental change across Europe and the US. We will discuss 1968 through the lens of national case studies, the Cold War, and the history of Baltimore. This is a community-engaged class!
Area: Writing Intensive

AS.100.602. The French Revolution.
Introduces graduate students to the rich historiography of the French Revolution. Topics include: revolutionary origins, political culture and radicalization, citizenship, violence, family & gender, the search for stability after the Terror, global revolution, Napoleon's Brumaire coup.

AS.100.682. Introductory Topics in Computation for Scholarship in the Humanities.
The first half of this seminar course consists of non-mathematical introductions to, and discussions of, the fundamental motivations, vocabulary, and methods behind computational techniques of particular use for humanistic research. The second half combines selected readings chosen to address specific questions raised by these discussions with hands-on application to students' research goals. Each participant will lead discussion for one of the selected readings relevant to their interests.

History of Art

AS.010.204. Italian Art in the Middle Ages. 3 Credits.
This course explores key monuments of medieval art and architecture in Italy from c. 400 until 1350. We will concentrate on historical, functional, and aesthetical aspects that lead to the creation of single monuments and art works. Emphasis is given to the analysis of "sacred space" by means of architecture, painted, and sculptural decoration, as well as ritual performances. Another focus is laid on the emergence on the political dimension of art for the creation of civic identity as well as in the context of the late medieval courts. We raise questions about the importance of materiality and science for the creation of medieval art works.
Area: Writing Intensive

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.

AS.010.432. Therapies of Art and Literature from Antiquity to Early Modern Europe. 3 Credits.
This seminar examines the myriad ways artists and writers geared their work toward the therapeutic healing of mind, body, and soul, and the role images and texts could play in programs of individual and collective transformation. Taking as our point of departure the ancient tradition of spiritual exercises and inner dialogue, Petrarch's therapy of the passions, and the revival of consolatory letters, we will consider how the Christian artist could invest their work with medicinal, magical, sacramental, or spiritual efficacies, and even take on the mantle of a "physician of souls." Intersections with the histories of medicine and religion will lead us to the ways natural medicine and the thaumaturgical practices associated with pilgrimage could be transposed into the arena of spiritual therapy. Featured authors include Cicero, Marcus Aurelius, Augustine of Hippo, Boethius, Petrarch, Michel Foucault, Pierre Hadot, and Allain de Botton; artists include Hieronymus Bosch, Albrecht Dürer, Matthias Grünewald, and many others.
Area: Writing Intensive

AS.010.615. Therapies of Art and Literature from Antiquity to Early Modern Europe.
This seminar examines the myriad ways artists and writers geared their work toward the therapeutic healing of mind, body, and soul, and the role images and texts could play in programs of individual and collective transformation. Taking as our point of departure the ancient tradition of spiritual exercises and inner dialogue, Petrarch's therapy of the passions, and the revival of consolatory letters, we will consider how the Christian artist could invest their work with medicinal, magical, sacramental, or spiritual efficacies, and even take on the mantle of a "physician of souls." Intersections with the histories of medicine and religion will lead us to the ways natural medicine and the thaumaturgical practices associated with pilgrimage could be transposed into the arena of spiritual therapy. Featured authors include Cicero, Marcus Aurelius, Augustine of Hippo, Boethius, Petrarch, Michel Foucault, Pierre Hadot, and Allain de Botton; artists include Hieronymus Bosch, Albrecht Dürer, Matthias Grünewald, and many others.

Interdepartmental

AS.360.133. Freshman Seminar: Great Books at Hopkins. 3 Credits.
Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University's rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2020 include Homer, Plato, Dante, John Donne, George Herbert, Christina Rosetti, Mary Shelley, Friederick Nietzsche, Isaac Bashevis Singer, Frederick Douglass.
Area: Writing Intensive

AS.360.623. Latin America in a Globalizing World.
An interdisciplinary seminar on Latin America's role in global economic processes, from both historical and contemporary perspectives. Participants will engage with scholarly and primary texts as well as share written work. The Fall 2022 seminar will examine the topic of Latin American political thought.

Medicine, Science and the Humanities

AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3 Credits.
In this course, four essential aspects of the theme of death and dying will be examined: Death and Medicine; Emotional Responses to Death; Burying and Commemorating the Dead; and Conceptions of Death. Specific topics relating to each of these aspects that will be covered include illness and causes of death; prevention of death; suicide; death and grief; burial practices; mourning the dead; public commemoration of the dead; life after death; and death and rebirth. Students will explore these topics from a historical-anthropological perspective with Paul Delnero, a specialist in the history and culture of the ancient Near East (Near Eastern Studies); from a literary perspective, by reading and writing poetry relating to these subjects with the acclaimed poet James Arthur (Writing Seminars); and from a musical perspective, through direct encounters with the music and creative process of the award-winning composer, Michael Hersch (Peabody).
Area: Writing Intensive

Music

AS.376.428. Mozart Operas. 3 Credits.
Wolfgang Amadeus Mozart wrote his first opera in 1767 at the age of 11. By the time of his death at age 35, he had written 22 full-length operas. Many of these operas are still performed today in opera houses around the world. In this course, we will discuss the enduring popularity of these works. We will discover how these operas were created, delving into the many important collaborations Mozart had with singers, librettists, impresarios, and patrons. We will analyze the words and music of the operas and how they combine to create three-dimensional characters for which his operas are known, such as the melancholy but determined Countess in The Marriage of Figaro, or the cowardly but loyal Papageno in The Magic Flute. Cultural norms have shifted dramatically between Mozart's time and ours, and we will examine how Mozart's operas have been received from their premieres through to today. We will think about how the operas have been translated, adapted, and circulated to different audiences in different eras and locations. Finally, we will reflect on our position as modern audience members, watching recent productions of the operas which reinterpret the works in alternative settings or times and studying the ways in which opera companies promote Mozart's works.
Area: Writing Intensive

Philosophy

AS.150.400. Simone de Beauvoir. 3 Credits.
Seminar on Beauvoir's moral philosophy, covering the major works of the 1940s. Readings will include selections from The Blood of Others, Pyrrhus and Cineas, All Men are Mortal, The Ethics of Ambiguity, and The Second Sex. Open to graduate students and advanced undergraduates. (Beginning undergraduates should contact Professor Kosch.) No prerequisites.
Area: Writing Intensive

Program in Latin American Studies

AS.361.336. Hugo Chávez, Fidel Castro, and Bolivar's Venezuela. 3 Credits.
Are the current extreme hard times in Venezuela's Bolivarian Republic irreversible? Is there a ballpark somewhere for Thomas Jefferson and Simón Bolívar to hold a debate match about democracy, achieved emancipations, republican values and the lure of dictatorship? The course welcomes serious and sharply political dialogue about ideals of democratic republicanism in clash from the rise and apparent fall of Fidelismo and Chavismo in the Caribbean region to the agitations and alliances dictated by Trump's seizure of American politics.

Program in Museums and Society

AS.389.155. The History of Fake News from The Flood to The Apocalypse. 3 Credits.
"Fake News" is everywhere in both past and present. Explore that history first-hand throughJHU's rare book collection of literary and historical forgeries spanning millennia of human history.Students learn how to examine and investigate rare books.
Area: Writing Intensive

AS.389.165. Hands on History: Material Cultures of Knowledge from Antiquity to the Digital Age. 3 Credits.
This hands-on course deals entirely with JHU's collections of rare books and manuscripts as a springboard to build skills in the close visual and physical examination of rare books and manuscripts. You will investigate the technological and aesthetic transformation of textual artifacts from ancient papyri to Gutenberg imprints to digital surrogates, and contribute to the accumulation of historical clues about their meaning and significance as material cultural objects. You will learn what goes into curating and conserving book and manuscript collections today, and how to evaluate the quality and significance of collections. Materials/topics will include ancient Babylonian cuneiform and Egyptian papyri; medieval illuminated manuscripts; incunabula; Renaissance illustrated books of the Scientific Revolution and Spanish Golden Age; cheap print and unique ephemera; early books by and about women; forgeries; and "digital humanities" initiatives at JHU. Students will make regular visits to the Special Collections Reading Room in the BLC throughout the semester.
Area: Writing Intensive

AS.389.325. Women of the Book: Female Miracle Workers, Mystics, and Material Culture, 1450-1800. 3 Credits.
From psycho-spiritual autobiographers to mystical bi-locating nuns, convent crèche-keepers to choristers of sacred music, from rock-star-status mystics to the hidden careers of women printers, engravers, and miracle-makers, this course will explore the remarkable intellectual, cultural, and imaginative contributions of women who found refuge, agency, and power within alternative lives.
Area: Writing Intensive

AS.389.357. Heaven on Earth: Art, Power, and Wonder in the Vatican from Antiquity to the Enlightenment. 3 Credits.
A material cultural exploration of the Vatican from the founding of St. Peter's basilica in antiquity to the establishment of the Vatican Library and Museums in the Renaissance and Enlightenment.
Area: Writing Intensive

French, Bachelor of Arts

French Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

The program stress the importance of students meeting each semester with their appointed faculty advisor to ensure a coherent and adequate course of study and students with previous exposure to French must take a web-based language placement test to determine the appropriate course level in which to enroll when selecting their first French language course. Of the ten courses required for the French major, only one may be a course taught in English (indicated under either the 211 and 212 prefixes with a MLL-ENGL POS-Tag. Six of the ten courses must be completed through the French Program at JHU on the Homewood campus. The program encourages students to study abroad and students should be sure to follow all required procedures for the approval of study abroad coursework. All major requirements must be completed with a grade of C or better and may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
Required Courses		
AS.210.301	Advanced French for Writing	3
AS.210.302	Advanced French for Speaking	3
AS.212.333	Introduction à la littérature française I	3
AS.212.334	Introduction à la littérature française II	3
AS.210.417	Eloquent French (no later than fall of senior year)	3
AS.212.353	La France Contemporaine	3
Elective Courses [1]		**12**
At least one course numbered AS.212.4xx is required for the major		
Up to one course numbered AS.210.3xx-4xx (in French) may be counted towards the major		
Up to one course listed as AS.211.xxx with POS-Tag MLL-FREN may be counted towards the major		
Any remaining electives must be AS.212.3xx-4xx		
Total Credits		**30**

[1] No more than one course may be taught in English.

Honors in French

Qualified majors may earn Honors in French by meeting the minimal GPA requirement (3.7 in all French classes) and completing four credits capstone thesis. This includes the 1-credit "Thesis Prep" and the 3-credit "Senior Thesis." Note that these courses, usually taken in the Senior year, are in addition to the 10 required three-credit courses.

French, Minor

French Minor Requirements

All minor requirements must be completed with a grade of C or better and may not be taken satisfactory/unsatisfactory. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies. All courses for the minor must be taught in French (no courses with POS-Tag MLL-ENGL apply). Students are expected to consult with either the Director of Undergraduate Studies or the appointed French faculty advisor to review all elective course selections.

French, PhD

French

In addition to general university requirements for the Ph.D., the following regulations apply to graduate students in the Department of Modern Languages and Literatures:

To be accepted into the Ph.D. program, students must demonstrate by an exceptionally strong academic record that they are capable of advanced study in literature. The student will normally take two to three years of graduate courses and devote the fourth year to study and research in the country on which the student's study concentrates. The well-prepared student can expect to receive the Ph.D. after five years of study. The graduate program in Modern Languages and Literatures emphasizes work in three complementary areas: literary history, close textual analysis (including *explication de texte*), and theory of interpretation. By way of preparing students in a variety of critical schools, the faculty and the visiting professors offer training in the different disciplines pertaining to critical theory, including philosophy, theory of language, psychoanalytic theory, intellectual history, and cultural anthropology.

In addition to the major language, the Ph.D. candidate must demonstrate proficiency in one or two other languages besides English, depending on the specialization. (See below for further information.)

A dissertation proposal, presented to the faculty and students in their section, is required before official admittance to candidacy for the Ph.D.

For students who choose to specialize in an early modern period (medieval, Renaissance, or 17th century), proficiency in Latin is required by the end of the third semester. Students may also choose a minor field: another Romance literature, modern criticism, comparative literature, medieval studies, or some other field connected with the student's major field.

Graduate Study Abroad

The Department encourages and expects graduates student to do research abroad during their program of study. In the French section, an exchange program with the École Normale Superieure offers the opportunity for graduate students to study in Paris, where they are encouraged to participate to research programs at ENS, EHESS, and other Universities; an exchange program with University Paris-Diderot-Paris 7 offers the opportunity for graduate or post-graduate students in French to study and teach in Paris; and the University of Geneva offers a fellowship each year for a grad student in the French section. Ph.D. students in the French section are also encouraged to apply for the Chateaubriand scholarship offered by the Embassy of France.

After presenting a research proposal to their advisor, with the approval of that advisor and the head of section, students may elect to go abroad for a semester or the entire academic year in order to conduct research essential to their dissertation.

Financial Aid

The department has a number of fellowships for graduate students. Awards include university fellowships, which carry stipends and teaching fellowships for teaching one section of an undergraduate language course each semester, in addition to remission of tuition fees. All graduate students are expected to do four years of apprentice teaching of elementary and intermediate level undergraduate courses as part of their professional preparation. The amount of classroom teaching required is usually three to four hours a week. Students are admitted for five years, fully funded, subject to annual review to assure satisfactory progress. In addition, stipends (equivalent to that year's teaching fellowship) are available for study abroad during the third or fourth year.

Fourth- and fifth-year graduate students may also compete for Dean's Teaching Fellowships, which provide opportunities for the design and teaching of undergraduate courses in literature, cultural studies, or intellectual history.

Admission Requirements

Application Procedures

Prospective graduate students may visit the departmental website at https://krieger.jhu.edu/modern-languages-literatures/ for further information on programs and faculty. All questions regarding the programs offered by the department should be emailed to mll@jhu.edu (grll@jhu.edu). Prospective students are encouraged to apply online through the secure Graduate Admissions website (https://applygrad.jhu.edu/apply/?sr=1bf0a763-446d-4552-b7f6-4b450a7fa62f).

German Bachelor of Arts/Master of Arts

The department offers highly qualified students the option to complete a combined degree in five years. To receive the B.A./M.A. degree, the student must complete advanced courses in German literature and pass the departmental written and oral master's examinations. Students interested in this option should make an appointment with the Director of Undergraduate Studies no later than the spring of their junior year to discuss the options available to them.

German, Bachelor of Arts

German Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

Students are encouraged to declare their intent to major in German in their sophomore year and to make an advising appointment with the Director of Undergraduate Studies to discuss their academic plans, including options for a study abroad semester or year.

Majors must complete a minimum of nine courses (at least 3 credits each) in German beyond AS.210.262 Intermediate German II.

Majors are required to complete the Advanced German sequence, (AS.210.361 Advanced German I: Cultural Topics of the Modern German-speaking World and AS.210.362 Advanced German II: Contemporary Issues in the German Speaking World), which counts for 6 credits (2 courses) and is a prerequisite for upper level AS.213.xxx seminars taught in German. Of the remaining seven courses, majors choose courses designated AS.210.3xx (German language), AS.211.xxx (with POS-TAG MLL-GERM), courses in other departments with POS-TAG MLL-GERM, and AS.213.xxx. No more than 6 credit hours of translation courses (courses in English with POS-Tag MLL-ENGL) may be used to fulfill major requirements and five of the nine courses for the major must be taken at Hopkins. All major requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
AS.210.361	Advanced German I: Cultural Topics of the Modern German-speaking World	3
AS.210.362	Advanced German II: Contemporary Issues in the German Speaking World	3
Seven additional German courses [1]		21
Total Credits		**27**

[1] Courses designated AS.210.3xx (German language), AS.211.xxx (with POS-TAG MLL-GERM), AS.213.xxx, or courses in other departments with POS-TAG MLL-GERM apply towards the additional 21 credits.

Sample Program of Study

The following 4-year plan presents a sample guideline for students starting with no prior knowledge in German. Beyond the completion of the Advanced German sequence, the selection of courses suggested below is just a suggestion; students are free to choose other courses and vary the sequence as long as they complete the total number of credit hours and do not exceed the maximum number of credits for courses taught in English. Students with prior knowledge in German must take the departmental placement exam before registering for a German class. It is recommended that they discuss specific arrangements for the completion of their requirements with the DUS.

Honors in German

The Department of German offers an Honors Program for highly qualified undergraduates. Students must have a minimum GPA of 3.5 to qualify for the program. Students will work on a project in German literature and thought under the guidance of a faculty advisor. The program is completed by a senior essay more comprehensive in scope than a seminar paper. Students interested in the honors program should meet with the Director of Undergraduate Studies no later than the spring semester of their junior year to discuss the requirements and outline the research project to be conducted the following year.

German, Minor

German Minor Requirements

Students are encouraged to declare their intent to minor in German in their sophomore year and to make an advising appointment with the Director of Undergraduate Studies to discuss their academic plans, including options for a study abroad semester or year.

Students must complete a minimum of 6 courses (with each course counting for at least 3 credits) in German beyond Elementary German (AS.210.161 German Elements I-AS.210.162 German Elements II) and Intermediate German (AS.210.261 Intermediate German I-AS.210.262 Intermediate German II).

Minors are required to complete the Advanced German sequence, (AS.210.361 Advanced German I: Cultural Topics of the Modern German-speaking World-AS.210.362 Advanced German II: Contemporary Issues in the German Speaking World), which counts for 6 credits (2 courses) and is a prerequisite for upper-level AS.213.xxx seminars taught in German. Students with previous proficiency exempting them from taking Advanced German I or II are required to take a course(s) from the AS.213.2xx-AS.213.4xx series to reach the required 6 courses.

Of the remaining four courses, minors choose courses designated AS.210.3xx (German language), AS.211.xxx (with POS-TAG MLL-GERM), courses in other departments with the POS-TAG MLL-GERM, and AS.213.xxx. No more than three (3) credits of courses taught in English (courses with POS-Tag MLL-ENGL) may be used to fulfill minor requirements. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies. All minor requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
AS.210.361	Advanced German I: Cultural Topics of the Modern German-speaking World	3
AS.210.362	Advanced German II: Contemporary Issues in the German Speaking World	3
Four additional German courses [1]		12
Total Credits		**18**

[1] Courses designated AS.210.3xx (German language), AS.211.xxx (with POS-TAG MLL-GERM), AS.s13.xxx, or courses in other departments with POS-TAG MLL-GERM apply towards the additional 12 credits.

German, PhD

German

In addition to general university requirements for the Ph.D., the following regulations apply to graduate students in the Department of Modern Languages and Literatures:

To be accepted into the Ph.D. program, students must demonstrate by an exceptionally strong academic record that they are capable of advanced study in literature. The student will normally take two to three years of graduate courses and devote the fourth year to study and research in the country on which the student's study concentrates. The well-prepared student can expect to receive the Ph.D. after five years of study. The graduate program in Modern Languages and Literatures emphasizes work in three complementary areas: literary history, close textual analysis, and theory of interpretation. By way of preparing students in a variety of critical schools, the faculty and the visiting professors offer training in the different disciplines pertaining to critical theory, including philosophy, theory of language, psychoanalytic theory, intellectual history, and cultural anthropology.

In addition to the major language, the Ph.D. candidate must demonstrate proficiency in one or two other languages besides English, depending on the specialization.

In addition to fulfilling the general university requirements for advanced degrees, candidates for the M.A. must demonstrate fluency in spoken German, be able to write German reasonably well, have a good knowledge of the history of German language and literature, be familiar with the general cultural background, and have read extensively in German literature, particularly in the periods after 1700. During their first two years at Hopkins, candidates for the M.A. degree must pass two topical examinations. After the M.A., two major qualifying papers are required under the supervision of two advisors, chosen by the candidate, before work on the dissertation can be undertaken.

Graduate Study Abroad

The Department encourages and expects graduates student to do research abroad during their program of study. Exchange programs with the FU Berlin (Friedrich Schlegel Graduate School of Literary Studies), the University of Hamburg, and the Humboldt University, offer the opportunity for graduate students in the German section to study in Germany. In addition, the German section offers Max Kade travel grants for research in a German-speaking country.

After presenting a research proposal to their advisor, with the approval of that advisor and the head of section, students may elect to go abroad for a semester or the entire academic year in order to conduct research essential to their dissertation.

Financial Aid

The department has a number of fellowships for graduate students. Awards include university fellowships, which carry stipends and teaching fellowships for teaching one section of an undergraduate language course each semester, in addition to remission of tuition fees. All graduate students are expected to do four years of apprentice teaching of elementary and intermediate level undergraduate courses as part of their professional preparation. The amount of classroom teaching required is usually three to four hours a week. Students are admitted for five years, fully funded, subject to annual review to assure satisfactory progress.

In addition, stipends (equivalent to that year's teaching fellowship) are available for study abroad during the third or fourth year.

Fourth- and fifth-year graduate students may also compete for Dean's Teaching Fellowships, which provide opportunities for the design and teaching of undergraduate courses in literature, cultural studies, or intellectual history.

Admission Requirements

Application Procedures

Prospective graduate students may visit the departmental website at https://krieger.jhu.edu/modern-languages-literatures/ for further information on programs and faculty. All questions regarding the programs offered by the department should be emailed to mll@jhu.edu (grll@jhu.edu). Prospective students are encouraged to apply online through the secure Graduate Admissions website (https://applygrad.jhu.edu/apply/?sr=1bf0a763-446d-4552-b7f6-4b450a7fa62f).

Italian, Bachelor of Arts

Italian Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

The major requires completion of language courses through Advanced Italian I and II (AS.210.351 Advanced Italian I-AS.210.352 Advanced Italian II), two courses (6 credits) from the "Italian Journeys" series, including "Medieval and Early Modern" (AS.214.362 Italian Journeys: Medieval and Early Modern) and "Modern and Contemporary" (AS.214.363 Italian Journeys: An Other Story), and four elective courses (or the equivalent of 12 credits) from the Italian Culture series (AS.211.200-AS.211.499 with the POS-Tag MLL-ITAL) and the Italian Literature series (AS.214.200-214.499). It may also include one course in Italian film/history/art history (if approved by the DUS) and one independent study in the senior year (taken after completing an Italian Literature series course). At least two of the four elective courses (or the equivalent of 6 credits) must be conducted in Italian. At least five of the eight courses for the major must be taken at JHU. All major requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
Required Core Courses		
AS.210.351	Advanced Italian I	3
AS.210.352	Advanced Italian II	3
AS.214.362	Italian Journeys: Medieval and Early Modern	3
AS.214.363	Italian Journeys: An Other Story	3
Electives		
Two AS.211.2xx-4xx or AS.214.2xx-4xx taught in Italian		6
Two AS.211.2xx-4xx (related to Italian) or AS.214.2xx-4xx taught in English or Italian [1]		6
Total Credits		**24**

[1] Please note that the Italian program offers 1-credit courses in Italian culture (211.xxx) taught in English that can be freely combined as long as the total number of credits taken satisfies the general requirements. Courses taught in English are identified in the Schedule of Classes by the POS-Tag MLL-ENGL.

Sample Program of Study

The plan is conceived as a guideline for students starting with no previous skills in Italian language. The sequence of language courses is strongly recommended in order to complete all the requirements for the major by senior year. It is conceivable, though, to postpone Italian Elements to sophomore year.

Honors in Italian

Students have the opportunity to earn honors in the major by successfully completing an honors senior essay. Italian majors who select this option may enroll, during either fall or spring semester of their senior year, in a for-credit independent study dedicated to the preparation of the honors senior essay.

Italian, Minor

Italian Minor Requirements

Language courses through Intermediate Italian I and II (AS.210.251 Intermediate Italian I-AS.210.252 Intermediate Italian II) or equivalent placement as well as Advanced Italian I and II (AS.210.351 Advanced Italian I-AS.210.352 Advanced Italian II). One course (3 credits) from the "Italian Journeys" series, including "Medieval and Early Modern" (AS.214.362 Italian Journeys: Medieval and Early Modern) or "Modern and Contemporary" (AS.214.363 Italian Journeys: An Other Story) Three additional courses (or the equivalent of 9 credits) from the Italian Culture series (AS.211.200-499 with POS-Tag MLL-ITAL) and the Italian Literature series (AS.214.200-499). One independent study is acceptable toward the course requirements, provided it is taken after completing a course from the Italian Literature series. At least two of the three courses (or the equivalent of 6 credits) must be conducted in Italian. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies. All minor requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
AS.210.351	Advanced Italian I	3
AS.210.352	Advanced Italian II	3
AS.214.362	Italian Journeys: Medieval and Early Modern	3
or AS.214.363	Italian Journeys: An Other Story	
Three Additional Italian Courses *		9

* Only one course can be taught in English (courses with POS-Tag MLL-ENGL).

Italian, PhD

Italian

In addition to general university requirements for the Ph.D., the following regulations apply to graduate students in the Department of Modern Languages and Literatures:

To be accepted into the Ph.D. program, students must demonstrate by an exceptionally strong academic record that they are capable of advanced study in literature. The student will normally take two to three years of graduate courses and devote the fourth year to study and research in the country on which the student's study concentrates. The well-prepared student can expect to receive the Ph.D. after five years of study. The graduate program in Modern Languages and Literatures emphasizes work in three complementary areas: literary history, close textual analysis, and theory of interpretation. By way of preparing students in a variety of critical schools, the faculty and the visiting professors offer training in the different disciplines pertaining to critical theory, including philosophy, theory of language, psychoanalytic theory, intellectual history, and cultural anthropology.

In addition to the major language, the Ph.D. candidate must demonstrate proficiency in one or two other languages besides English, depending on the specialization.

In addition to the major language, the student must demonstrate proficiency in two other foreign languages. The student must take a minimum of five semesters of graduate courses. After this period, normally in the third year, the student will take examinations which, if completed successfully, will lead to candidacy for the Ph.D.

Graduate Study Abroad

The Department encourages and expects graduates student to do research abroad during their program of study. Italian graduate students can take advantage of a wealth of formal and informal contacts with Italian scholars, archives, and institutes.

After presenting a research proposal to their advisor, with the approval of that advisor and the head of section, students may elect to go abroad for a semester or the entire academic year in order to conduct research essential to their dissertation.

Financial Aid

The department has a number of fellowships for graduate students. Awards include university fellowships, which carry stipends and teaching fellowships for teaching one section of an undergraduate language course each semester, in addition to remission of tuition fees. All graduate students are expected to do four years of apprentice teaching of elementary and intermediate level undergraduate courses as part of their professional preparation. The amount of classroom teaching required is usually three to four hours a week. Students are admitted for five years, fully funded, subject to annual review to assure satisfactory progress. In addition, stipends (equivalent to that year's teaching fellowship) are available for study abroad during the third or fourth year.

Fourth- and fifth-year graduate students may also compete for Dean's Teaching Fellowships, which provide opportunities for the design and teaching of undergraduate courses in literature, cultural studies, or intellectual history.

Graduate students conducting research in Italian studies compete each year for two Charles S. Singleton Travel Grants for study in Italy. This program is administered by the department and is open to graduate students from other departments.

Admission Requirements

Application Procedures

Prospective graduate students may visit the departmental website at https://krieger.jhu.edu/modern-languages-literatures/ for further information on programs and faculty. All questions regarding the programs offered by the department should be emailed to mll@jhu.edu (grll@jhu.edu). Prospective students are encouraged to apply online through the secure Graduate Admissions website (https://applygrad.jhu.edu/apply/?sr=1bf0a763-446d-4552-b7f6-4b450a7fa62f).

Romance Languages, Bachelor of Arts

Romance Languages Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

The Department offers a Romance Languages major in two different configurations: a dual-language option, where the student specializes in two Romance languages, and a three-language option, where the student specializes in three Romance languages. Students interested in pursuing a Romance Languages major should get in touch with the Directors of Undergraduate Studies for each language. Students majoring in Romance Languages will be assigned an advisor for each relevant language, including a primary advisor in their main field of specialization. Six of the twelve courses must be taken at JHU.

All major requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory.

Required of All Romance Languages Majors

Code	Title	Credits
AS.211.400	Topics in Romance Literatures	3
Completion of a dual language or triple language option		36-42
Total Credits		**39-45**

Dual Language Options

Students must complete the requirements listed below for two languages (French, Italian, or Spanish). They must also take the 3-credit, capstone course AS.211.400 Topics in Romance Literatures

French

Code	Title	Credits
AS.210.301	Advanced French for Writing	3

Honors in the Romance Languages Major

Dual-language option:

Verification of a 3.5 or higher cumulative GPA and a 3.7 GPA in your major requirements is required at the time of graduation. Honors are conferred upon successful completion of the 3-credit Senior Thesis in Romance Languages.

Prepared under faculty mentorship during the Fall or Spring of the final year of study, the 3-credit Senior Thesis in Romance Languages (AS.211.4xx) compares literary and cultural materials embedded in two or more Romance traditions. Students wishing to complete the Senior Thesis should notify the advisor(s) the semester prior to registering.

Three-language option:

No Honors track is available. Majors wishing to pursue Honors in Romance Languages should pursue the dual-language option leading to the preparation of the Senior Thesis in Romance Languages.

Spanish, Bachelor of Arts

Spanish Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

The Spanish Major consists of 9 courses. All students must take the Spanish language placement exam before registering for a Spanish course. Speakers with prior language proficiency should consult with the Spanish major advisor about the waiver of language courses. Note, however, that a waived language course may not be used to substitute for one of the nine required courses of the major. All major requirements must be completed with a grade of C or better and may not be taken satisfactory/unsatisfactory. Students may include a focus on Spanish for the professions in their Spanish major - see footnotes below. One course taught in English may be counted towards the major requirements. Courses taught in English can be identified by the MLL-ENGL POS-Tag. Of the nine courses for the major, five must the taken on the Homewood JHU campus.

The program strongly recommends that Spanish majors study abroad, either for a semester in the Hopkins in Madrid program or for a summer or winter intersession term in our programs in Salamanca (Spain) and Coronado (Costa Rica). The Hopkins in Madrid Program, which is for advanced language students, allows students to complete a significant number of major requirements while abroad. Hopkins is also affiliated with a number of other study abroad programs. Students wishing to understand how transfer courses taken elsewhere apply towards the major should contact Loreto Sánchez- Serrano.

Code	Title	Credits
AS.210.311	Advanced Spanish I (or an additional AS.215.xxx course)	3
Four courses numbered AS.215.2xx - AS.215.4xx or AS.210.3xx-AS.210.4xx (taught in Spanish) [1]		9
Three courses numbered AS.215.2xx - AS.215.4xx		9
One course numbered AS.215.4xx		6
Total Credits		**27**

[1] Spanish for the professions track: Students may specialize in Spanish for the professions by taking three of the following in order to fulfill part of the requirements of the Spanish major: (1) one course from AS.210.314 Spanish for International Commerce or AS.210.313 Medical Spanish or AS.210.315 Spanish for International Relations or AS.210.318 Spanish for Engineering or AS.210.319 Spanish for Public Health; and (2) both courses AS.210.411 Translation for the Professions and AS.210.412 Community Based Learning - Spanish Language Practicum.

Sample Program of Study

This plan assumes the student is starting at the beginning level of the language.

Honors in the Major

Honors in Spanish requires a cumulative GPA of 3.5 or higher, and GPA of 3.7 or higher major required courses.

Spanish for the Professions, Minor

Spanish for the Professions Minor Requirements

The Spanish for the Professions Minor consists of 6 courses. All students must take the Spanish language placement exam before registering for a Spanish course. Speakers with prior language proficiency should consult with the Spanish minor advisor about the waiver of language courses. Note, however, that a waived language course may not be used to substitute for one of the six required courses of the minor. All minor requirements must be completed with a grade of C or better and may not be taken satisfactory/unsatisfactory. One course taught in English may be counted towards the minor requirements. Courses taught in English can be identified by the MLL-ENGL POS-Tag.

Spanish Language and Hispanic Cultures, Minor

Spanish Language and Hispanic Cultures Minor Requirements

The Spanish Language and Hispanic Cultures Minor consists of 6 courses. All students must take the Spanish language placement exam before registering for a Spanish course. Speakers with prior language proficiency should consult with the Spanish minor advisor about the waiver of language courses. Note, however, that a waived language course may not be used to substitute for one of the six required courses of the minor. All minor requirements must be completed with a grade of C or better and may not be taken satisfactory/unsatisfactory. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies. One course taught in English may be counted towards the minor requirements. Courses taught in English can be identified by the MLL-ENGL POS-Tag.

One course from the 215.4xx series		3

Spanish, PhD

Spanish

In addition to general university requirements for the Ph.D., the following regulations apply to graduate students in the Department of Modern Languages and Literatures:

To be accepted into the Ph.D. program, students must demonstrate by an exceptionally strong academic record that they are capable of advanced study in literature. The student will normally take two to three years of graduate courses and devote the fourth year to study and research in the country on which the student's study concentrates. The well-prepared student can expect to receive the Ph.D. after five years of study. The graduate program in Modern Languages and Literatures emphasizes work in three complementary areas: literary history, close textual analysis, and theory of interpretation. By way of preparing students in a variety of critical schools, the faculty and the visiting professors offer training in the different disciplines pertaining to critical theory, including philosophy, theory of language, psychoanalytic theory, intellectual history, and cultural anthropology.

In addition to the major language, the Ph.D. candidate must demonstrate proficiency in one or two other languages besides English, depending on the specialization.

In addition to the major language, the student must demonstrate proficiency in two other foreign languages.

The student must take a minimum of four semesters of graduate courses. After this period, normally in the third year, the student will present a dissertation prospectus that, if completed successfully, will lead to candidacy for the Ph.D.

Graduate Study Abroad

The Department encourages and expects graduates student to do research abroad during their program of study. Spanish students may elect to make their fourth year a non-teaching year.

After presenting a research proposal to their advisor, with the approval of that advisor and the head of section, students may elect to go abroad for a semester or the entire academic year in order to conduct research essential to their dissertation.

Financial Aid

The department has a number of fellowships for graduate students. Awards include university fellowships, which carry stipends and teaching fellowships for teaching one section of an undergraduate language course each semester, in addition to remission of tuition fees. All graduate students are expected to do four years of apprentice teaching of elementary and intermediate level undergraduate courses as part of their professional preparation. The amount of classroom teaching required is usually three to four hours a week. Students are admitted for five years, fully funded, subject to annual review to assure satisfactory progress. In addition, stipends (equivalent to that year's teaching fellowship) are available for study abroad during the third or fourth year.

Fourth- and fifth-year graduate students may also compete for Dean's Teaching Fellowships, which provide opportunities for the design and teaching of undergraduate courses in literature, cultural studies, or intellectual history.

Admission Requirements

Application Procedures

Prospective graduate students may visit the departmental website at https://krieger.jhu.edu/modern-languages-literatures/ for further information on programs and faculty. All questions regarding the programs offered by the department should be emailed to mll@jhu.edu (grll@jhu.edu). Prospective students are encouraged to apply online through the secure Graduate Admissions website (https://applygrad.jhu.edu/apply/?sr=1bf0a763-446d-4552-b7f6-4b450a7fa62f).

Museums and Society

http://krieger.jhu.edu/museums/

The Program in Museums and Society is concerned with the institutions that shape knowledge and understanding through the collection, preservation, interpretation, and/or presentation of art, material culture, heritage, or natural and scientific specimens. It focuses on the role of museums (broadly defined) and their collections in societies past and present, including their historical, cultural, intellectual, and political significance.

A minor in Museums and Society complements study in a range of fields, including but not limited to anthropology, archaeology, history, history of art, and history of science and technology. Many courses include visits to or focused work in local and regional institutions, including on-campus collections (Archaeological Museum, Homewood Museum, Evergreen Museum and Library, and the Sheridan Libraries).

Whether they are researching a historical artifact or debating the obligations of public institutions, students in the program are challenged to approach their discipline from a new angle. While some may choose to pursue a museum career, the program has the larger goal of encouraging critical, careful thinking about some of the most influential cultural institutions of our day.

Programs

Courses

AS.389.155. The History of Fake News from The Flood to The Apocalypse. 3 Credits.
"Fake News" is everywhere in both past and present. Explore that history first-hand throughJHU's rare book collection of literary and historical forgeries spanning millennia of human history.Students learn how to examine and investigate rare books.
Area: Writing Intensive

AS.389.165. Hands on History: Material Cultures of Knowledge from Antiquity to the Digital Age. 3 Credits.
This hands-on course deals entirely with JHU's collections of rare books and manuscripts as a springboard to build skills in the close visual and physical examination of rare books and manuscripts. You will investigate the technological and aesthetic transformation of textual artifacts from ancient papyri to Gutenberg imprints to digital surrogates, and contribute to the accumulation of historical clues about their meaning and significance as material cultural objects. You will learn what goes into curating and conserving book and manuscript collections today, and how to evaluate the quality and significance of collections. Materials/topics will include ancient Babylonian cuneiform and Egyptian papyri; medieval illuminated manuscripts; incunabula; Renaissance illustrated books of the Scientific Revolution and Spanish Golden Age; cheap print and unique ephemera; early books by and about women; forgeries; and "digital humanities" initiatives at JHU. Students will make regular visits to the Special Collections Reading Room in the BLC throughout the semester.
Area: Writing Intensive

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.

AS.389.202. Introduction to the Museum: Issues and Ideas. 3 Credits.
Museums face practical, political and ethical challenges, including economic difficulties, debates over interpretation of culture and pressure to demonstrate social value. This course considers how museums are answering these challenges.

AS.389.220. Queer Sixties. 3 Credits.
Introduction to queer & trans politics and culture in the period immediately preceding the gay liberation movement, from the early to late 1960s, focusing on intersections of race, sexuality, and gender. Course examines how we have come to narrate queer & trans history and investigates the ways archival practices shape conceptions of queer & trans life. Students learn research methods as they draw on and contribute to the university's digitized archival collections.

AS.389.230. Queer & Trans Public History. 3 Credits.
This course introduces students to a blend of public history, queer studies and transgender studies. Students learn oral history and archival research methods as they draw on and contribute to the university's archival, museum, and library collections.

AS.389.240. Archaeological Museum Practicum: Collections Management. 3 Credits.
Students will learn current procedures for surveying, cataloguing, documenting and rehousing collections using objects from the Archaeological Museum. This is a hands-on practicum course working closely with museum staff.

AS.389.242. Museum Education: From Contested Knowledge to Reflective Narrative. 3 Credits.
This practicum course critically considers current art and history museum education practices and explores social justice discourses through museum visits, visitor studies, and museum learning strategies.

AS.389.250. Conservation of Material Culture: Art, Artifacts and Heritage Sites. 3 Credits.
This course will introduce students to the field of art conservation through the study of paintings, paper, books, objects, contemporary sculpture and historic preservation. Topics covered will include: methods of manufacture, agents of deterioration, preservation initiatives, conservation treatment and ethics, and conservation science. Cross-listed with History of Art.Class usually meets at 1:30 - 3:50 PM, except for days with field trips.

AS.389.260. Cultural Heritage in Crisis. 3 Credits.
We explore the possible futures of cultural heritage and museums in times of accelerating climate change, pandemics, armed conflict and political and social turmoil by examining past and contemporary events.

AS.389.275. Interpreting Hopkins as Historic Site. 3 Credits.
This hands-on course explores interpretive strategies for historic sites and culminates in the production of original, research-based, outdoor interpretive exhibits on the Homewood Campus.

AS.389.280. Of and For Everyone: Diversity, Equity, Inclusion and Access in the Museum. 3 Credits.
How are museums responding to the pressures to be more equitable, inclusive, and accessible towards public audiences and their staff? Students go behind the scenes of the Smithsonian, Baltimore Museum of Industry and Baltimore Museum of Art to meet with working groups and staff charged with transforming their institutions. Includes site visits, hands-on experiences and research on best practices.

AS.389.303. World of Things. 3 Credits.
The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.311. From Treasure House to Production House: Exploring New Roles for the Museum in the 21st Century. 3 Credits.
Students work with the Director of, the Peale Center for Baltimore History and Architecture as it reinvents itself as a museum for the twenty-first century. Involves working with community story-tellers in residence. Extra time is to allow for field trip travel - most days class runs 1:30-3:50.

AS.389.314. Commemoration, Mourning, and Race: The Stories of Mount Auburn Cemetery. 3 Credits.
In partnership with Mount Auburn Cemetery in Baltimore, owned and operated by the Sharp Street Memorial United Methodist Church, this community-engaged course will address the African American cemetery in general, and the Mount Auburn Cemetery in particular, as a place of multiple meanings: a sacred site of private mourning, a public place of commemoration, a representation of racism, an historic accomplishment. This course will require on-site research that contributes to the cemetery's interests.

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum

AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.
Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation's museums, galleries, and libraries and used objects to shape taste and status in the U.S.

AS.389.324. The BMA Seminar: Digital Interpretation. 3 Credits.
When museums shut their galleries in response to the global pandemic they saw a surge in digital audiences and engagement, athough not everyone can access digital content equally. Continued public health risks bring new challenges to digital interpretation, while universal access as well as embedded racial and gender bias remain significant issues. Students research what works and what doesn't in digital interpretation for art museums, centering social equity and accessibility in their assessment, and develop principles and guidelines for the museum's digital interpretation strategy.

AS.389.325. Women of the Book: Female Miracle Workers, Mystics, and Material Culture, 1450-1800. 3 Credits.
From psycho-spiritual autobiographers to mystical bi-locating nuns, convent crèche-keepers to choristers of sacred music, from rock-star-status mystics to the hidden careers of women printers, engravers, and miracle-makers, this course will explore the remarkable intellectual, cultural, and imaginative contributions of women who found refuge, agency, and power within alternative lives.
Area: Writing Intensive

AS.389.329. Author/Canon/Archive. 3 Credits.
Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works "lost" and some "rediscovered," while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literary culture, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you've never heard of, in terms of the relationship between authorship, stewardship, and status.

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology

AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.
Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.

AS.389.347. Landscaping Baltimore: Designing and Interpreting JHU's Neighborhood. 3 Credits.
This course will explore the landscape history and current arrangement of the area around JHU's Homewood campus, including Evergreen Museum, coinciding with the bi-centennial of the birth of Frederick Law Olmsted whose design firm played a central role in developing plans for and around JHU. The course will culminate in a student-produced exhibit for a public audience.

AS.389.348. Queer Oral History. 3 Credits.
Students learn to conduct, analyze, and interpret their own oral histories as they contribute to a wide-ranging project documenting queer worldmaking in the Baltimore-Washington D.C. region. We engage with scholarship from performance studies, queer of color critique, LGBTQ history, and public humanities to consider the politics of storytelling and the promises of public-facing oral history projects. Students have the option of developing podcasts, multimedia projects, and public humanities proposals as their final assignment.

AS.389.357. Heaven on Earth: Art, Power, and Wonder in the Vatican from Antiquity to the Enlightenment. 3 Credits.
A material cultural exploration of the Vatican from the founding of St. Peter's basilica in antiquity to the establishment of the Vatican Library and Museums in the Renaissance and Enlightenment.
Area: Writing Intensive

AS.389.373. Encountering American Art. 4 Credits.
Students investigate the Baltimore Museum of Art's American art collection and its presentation to the public alongside current scholarship on American art to develop strategies for a new permanent collection display that aligns with the museum's commitment to artistic excellence and social equity. M&S Practicum. Co-taught with BMA curator Virginia Anderson.

AS.389.379. Interpreting Historic Sites for the 21st Century. 3 Credits.
Students go behind the scenes at JHU's own Evergreen Museum and Library to investigate how historic sites design spaces for learning, community engagement, leisure, as well as for exhibitions and special events. Students consider the history of Evergreen and its inhabitants and create concepts for how to engage communities in that history and story. Multiple class meetings take place at the Evergreen Museum.

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revisualise and offer alternative stories. Class meets at the museum every other week.

AS.389.405. Visualizing Africa. 3 Credits.
Examines the history of African art in the Euro-American world, focusing on the ways that Western institutions have used African artworks to construct narratives about Africa and its billion residents.
Area: Writing Intensive

AS.389.410. Sharing Knowledge: Participatory Archives, Collaborative Storytelling, and Social Justice. 3 Credits.
This course introduces students to collaborative humanities projects that encourage democraticparticipation among publics more broadly conceived than the academy. We investigate indigenous research methods; collaborative oral history and ethnography; interactive theater;and community archives. Final projects draw on the university's archival, museum, and librarycollections.

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Writing Intensive

AS.389.502. Independent Study- Museum and Society. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.389.521. Capstone in Museums and Society. 1 - 3 Credits.
The Capstone allows students to develop and carry out their own, hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, lecture, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program's Director, in keeping with the University's Independent Work Policy. Instructor permission required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.389.522. Capstone in Museum and Society. 1 - 3 Credits.
The Capstone allows students to develop and carry out their own, hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program's Director, in keeping with the University's Independent Work Policy.
AS.389.201;AS.389.202;You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

Cross Listed Courses

Anthropology

AS.070.379. Social Ecology Studio. 3 Credits.
This course will grapple with the social and cultural dimensions of contemporary ecological problems through a local, project-based approach. Coursework will be organized on a studio basis in partnership with a local environmental organization, Friends of Stony Run. Continuing a collaborative project initiated in the fall of 2019, we will work together to develop interpretive materials for the Stony Run stream and urban watershed adjoining our campus.

English

AS.060.617. Black Print Culture.
Students interested in black print culture will engage in intensive archival research, both collaborative and individual, using the Sheridan Library's Rare Book and Manuscript collections. Texts include poems, printed lectures, pamphlets, novels, periodicals, ephemera, correspondence, etc., alongside relevant critical and theoretical reading.
Area: Writing Intensive

First Year Seminars

AS.001.164. FYS: Curating Women. 3 Credits.
From the women who created the Museum of Modern Art in New York City to the "Because of Her" working group across the Smithsonian's museums, this First-Year Seminar investigates the hidden women of many distinct social positions, racial and ethnic identities whose labor shaped the museums we know today and considers how museums tell the stories of women, including transgender women, in the arts, sciences, and history.

AS.001.169. FYS: Inventing a City - Exploring Baltimore Through Maps and Mapping. 3 Credits.
Using maps from the 17th century to the present, students in this First-Year Seminar will explore the historical and contemporary landscape of their new hometown -- Baltimore. These primary sources will show how Baltimore was invented and developed in popular imagination to become the most vital port on the US Eastern Seaboard, but also a symbol American post-industrial decline. Students will have the chance to map how they see Baltimore, by learning and applying Geographic Information Systems (GIS) and converting geospatial data into visual stories. With the goal of fostering a deeper understanding of this complex city, and a student's place in it, the class will include explorations outside of the classroom. The course will culminate with the creation of a small exhibit whose content and venue will be decided upon mutually by students during the course of the semester.

History

AS.100.410. Decolonizing The Museum: Case Studies. 3 Credits.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

History of Art

AS.010.305. The Ethiopia at the Crossroads. 3 Credits.
Ethiopia played a foundational role in modern-day civilization and culture: as the find site of Lucy, the earliest bipedal hominid, the seat of the Queen of Sheba's kingdom, the second country in the world to adopt Christianity in the early 4th century CE, and the nexus of exchange between Africa, Europe, and Asia. In fall 2023, The Walters Art Museum will mount the exhibition tentatively titled, Ethiopia at the Crossroads, which addresses Ethiopia's relationship and artistic exchange with its surrounding cultures, including South Arabia, Nubia, Egypt, Byzantium, Armenia, Italy, and India. It also discusses the impact of Ethiopian art beyond its borders, bringing works of Ethiopian contemporary art into dialogue with the historical Ethiopian art that these artists draw upon in their work. The exhibition covers approximately 1,750 years of Ethiopian history with a special focus on the art of the medieval period, broadly conceived. The course will also offer insights into how a museum exhibition is developed from the initial concept to the physical presentation in the galleries.

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through an examination of colonial exhibitions, the rise of national, regional, and archaeological museums, and current practices of display and representation in institutions, we will explore how the image of South Asia has been constructed in the colonial, modern, and contemporary eras. We will engage with the politics of representation, spectacle, and the economies of desire as related to colonialism and the rise of modernity. Readings from postcolonial theory, museum studies, anthropology, history, and art history.
Area: Writing Intensive

AS.010.424. Art and Colonialism: Nineteenth-century India. 3 Credits.
This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the "people of India," and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library's Special Collections.
Area: Writing Intensive

AS.010.444. Classics Research Lab: Antioch Recovery Project (ARP). 3 Credits.
Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term "narcissism". Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard's Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.

Modern Languages and Literatures

AS.211.329. Museums and Identity. 3 Credits.
The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.

Near Eastern Studies

AS.130.247. Digging for Legitimacy Archaeology, Museums, and Ideology. 3 Credits.
Archaeology was born out of Western Colonial endeavors into Africa, the Middle East, Asia, and the Americas. Large scale excavations conducted by the United Kingdom, France, Germany, Italy, and the United States resulted in the removal and transfer of valuable (culturally and monetarily) material culture from local stewards and stakeholders to the West. To this day the discipline of archaeology is still saddled by its colonial past and the Hollywood interpretation of archaeologists as saviors of ancient treasures. Today, most interaction between people and ancient objects is facilitated via the museum. In this course we will explore 19th- 21st century archaeological and museum practices and the role they play in modern narratives of identity and representation in the America and the Middle East. Students will engage with the historical, legal, economic, and ethical implications of archaeology and analyze how political, religious, cultural, and academic institutions have leveraged archaeology and cultural artifacts to reify and legitimize their pursuits and ideologies.

AS.130.248. Up the Nile: New Approaches to the History of Egyptology and Nubiology. 3 Credits.
King Tut, Napoleon, Champollion, Ozymandias, Nefertiti: the history of Egyptology is filled with big characters, huge monuments, and glimmering objects. But it is also made up of colonialist practices, looted sites, and forgotten scholarly contributions. "Up the Nile" examines the antiquarian, colonialist, racist, Western-centric, and patriarchal roots of modern Egyptology and Nubiology, and addresses how scholars and enthusiasts alike are continuing to grapple with these lasting legacies and biases. This class investigates how the Egyptians and Nubians thought of their own histories, as well as how other ancient cultures viewed the cultures of the Nile. It moves roughly chronologically, tracing understudied and marginalized voices from the Islamic, Medieval, and Ottoman periods into the 20th and 21st centuries. It examines the origins of scholarship, modern collecting, Egyptomania, and museums, delving into the problems and repercussions that still haunt us today. "Up the Nile" will engage with important and difficult aspects regarding Egyptology's and Nubiology's colonialist, racist, and sexist past and present. It asks: who decides who writes history, then and now?

AS.130.334. Egyptian Funerary Arts in the Archaeological Museum. 3 Credits.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.

AS.133.706. Egyptian Funerary Arts in the Archaeological Museum.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.

Museums and Society, Minor

Museums and Society Minor Requirements

Course requirements for the minor in Museums and Society are designed to introduce students to a broad set of historical, theoretical, and practical museum issues and to give them the opportunity to explore museums first-hand. Prospective minors should consult with the Director of Undergraduate Studies for guidance in designing a program of study.

- A minimum of six different courses (amounting to at least 18 credits) selected from those approved by the program.
- Required courses: AS.389.201 Introduction to the Museum: Past and Present and one additional introductory course in museum practice or contemporary issues [POS tag: PMUS-INTRO].
- Four additional courses in the program: Of these courses, at least three must be 300-level or higher and at least two different primary disciplines must be represented; these four courses must also include a minimum of three credits of "practicum" work. [POS-Tag: PMUS-PRAC]
- Courses used to satisfy minor requirements must be taken for a letter grade. Students must earn a "C-" or higher grade in all courses used to satisfy minor requirements.

Code	Title	Credits
Introductory Courses		
AS.389.201	Introduction to the Museum: Past and Present	3
Introductory Course (with POS tag: PMUS-INTRO)		3
Upper-Level Electives		
Select four Upper-Level Electives		12
At least three must be 300-level or higher courses		
Three credits of practicum work (POS-Tag PMUS-PRAC)		
Two courses must be from at least two different primary disciplines		
Total Credits		**18**

Sample Program of Study

A sample path toward completion might include the following sequence, but many other paths are possible. Please consult with the Director of Undergraduate Studies for guidance.

Course	Title	Credits
First Year		
First Semester		
AS.389.201	Introduction to the Museum: Past and Present	3
	Credits	**3**
Second Semester		
One PMUS-INTRO course		3
	Credits	**3**
Second Year		
First Semester		
One 300-level seminar		3
	Credits	**3**
Second Semester		
One 300-level seminar		3
	Credits	**3**
Third Year		
First Semester		
A practicum course		3
	Credits	**3**
Fourth Year		
First Semester		
A 300+ level practicum course -or- a 300+ level seminar course		3
	Credits	**3**
	Total Credits	**18**

Additional Details

Introduction to the Museum sequence: Ideally, students should take at least one introductory course before enrolling in more focused courses, but this is not required.

Departmental Distribution: In keeping with the interdisciplinary nature of the program, students are encouraged to explore various fields and must complete courses in at least two different primary disciplines beyond Museums and Society. Primary disciplines are defined either as the home department for the course (identified by the course's three-digit prefix), as the first cross-listing beyond Museums and Society, or as the home discipline of the instructor. Students should seek guidance from the program to ensure they are fulfilling this requirement, and should note that Independent Study and Capstone credits cannot be applied to it.

Practicum Work: Practicum credits can be earned only from courses designated as Museums and Society "practicum" in the course description [POS-Tag: PMUS-PRAC].

Independent Study and Capstone: Students have two options for pursuing independent work for credit in Museums and Society. The Independent Study typically takes a more traditional academic approach to research and presentation; the Capstone encourages research that is engaged with collections and results in an alternative, often public project. Students interested in these options should consult the university's independent work policy and follow the guidelines outlined under Independent Research (http://krieger.jhu.edu/museums-society/academics/independent-research/). Approval for credit will not be given until a project has been officially approved by an appropriate mentor, in full and frequent consultation with the Program in Museums and Society. No more than 3 credits of independent work can be applied to the minor.

Internships: Internships are valuable opportunities to expand horizons, learn in the field, and investigate real-world applications of academic work. The Program in Museums and Society highly encourages students to explore internship options and works with the Career Center to identify opportunities to do so. However, while the program sponsors interns for academic credit when needed by the host institution, such credit cannot be used to satisfy minor requirements. Students interested in receiving credit for independent work should consider the Independent Study and Capstone options instead.

Other Information: No course other than the Independent Study or Capstone may be counted toward the minor more than once (up to a maximum of 3 credits).

Music

http://www.krieger.jhu.edu/music (http://www.krieger.jhu.edu/music/)

The Peabody Institute of The Johns Hopkins University is an internationally acclaimed music conservatory. The Peabody campus, located at historic Mount Vernon Place, is on the university shuttle bus route between Homewood campus and the medical institutions in East Baltimore. Faculty of the Peabody Institute offer classes on the Homewood campus that are open to all undergraduates.

Qualified Hopkins undergraduates may, for no extra charge, register for classes in music history, music theory, music education, recording techniques, and computer music offered on the Peabody campus. There are also limited opportunities to take private lessons and participate in ensembles.

Concerts

Homewood students are welcome to attend Peabody's many concerts and are entitled to one complimentary ticket per concert, excluding opera and dance productions. Multiple performances of the same program do not count as separate concerts. Students can order tickets or e-tickets through University Tickets, accessible through the Peabody website (http://www.peabody.jhu.edu/). To pick up will-call tickets, students need to show their Hopkins ID at the Peabody Box Office, Monday through Friday, 10 a.m. to 4 p.m, or during the hour before the concert. The Box Office is in the lower level of the Grand Arcade in the Conservatory building; call (667) 208-6620.

Private Lessons

Private lessons are available to students at varying levels of accomplishment on a musical instrument or by voice.

- Half-hour or hour lessons are offered for credit in the Peabody Conservatory for the intermediate to advanced musician.
- Non-credit lessons are available in the Peabody Preparatory, space permitting.

The annual registration fee will be waived for all JHU students. School of Arts and Sciences and Engineering students are eligible to receive a cross-registration discount of 25 percent for Preparatory private lessons by obtaining a cross-registration form from their division each semester. There is a lesson fee for KSAS and WSE undergraduate students for lessons at the Conservatory and students may check with the Registrar's Office for the current fee.

Students wishing to take advantage of this opportunity should consult the Peabody Conservatory and/or Preparatory catalogs for more information.

Auditions for lesson assignments at the intermediate or advanced level take place at the beginning of each term. Please see the following website for annual and semesterly updates regarding audition dates, repertoire, and fees: https://krieger.jhu.edu/music/music-lessons/

Students may sign up for Mattin Center instrumental practice facilities by bringing their Jcard to the office of Student Leadership & Involvement, also located in the Mattin Center.

Ensemble Membership

Membership in the Hopkins Symphony Orchestra, the Johns Hopkins University Band, and the Hopkins Glee Club, all of which rehearse and perform on the Homewood campus, is open to all university students. Membership in the Hopkins Symphony Orchestra is by audition on a space-available basis. Seating is limited, especially in the winds. Contact the HSO Office in Shriver Hall at 410-516-6542 for audition information, which can also be found on the Hopkins Symphony Orchestra website (https://studentaffairs.jhu.edu/hso/current-season/auditions/).

Participation in the Peabody-Hopkins Chorus and Peabody Singers is open to all university students upon completion of a satisfactory audition. Please contact Ensemble Coordinator, 667-208-6628 (email TBA), if you wish to schedule an audition or would like additional information.

Advanced instrumentalists who wish to be considered for membership in Peabody's large instrumental ensembles—the Peabody Symphony Orchestra, Peabody Concert Orchestra, Peabody Wind Ensemble, Peabody Camerata (contemporary music), Peabody Improvisation and Multimedia Ensemble, and Peabody Jazz Orchestra—are welcome to take part in the placement audition process which takes place each fall during the week prior to Peabody's registration process. In order to be given an audition slot, instrumentalists must be taking private minor lessons with a Peabody instructor, and that instructor must inform the Peabody Ensemble Office that they've evaluated the player's ability to be on par with that of the student's peers at Peabody. Occasional exceptions to this policy have been made for players of instruments which are uncommon or currently under-represented at Peabody. Due to the fact that each of the instrumental ensembles can accommodate only a certain number of players of each instrument, placement into these ensembles is made on a space-available basis, with priority given to Peabody instrumental majors for whom participation in large ensembles is a degree requirement.

Please direct any questions regarding participation in Peabody's large ensemble program to Ensemble Coordinator, 667-208-6628.

Programs

- Music, Minor (p. 2030)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.376.111. Rudiments of Music Theory and Musicianship. 3 Credits.
This course introduces written and aural music fundamentals including notation, scales, intervals, chords, rhythm, meter and sight-singing. Students will compose melodies and short pieces and complete listening projects. Course does not count towards the completion of the minor.

AS.376.166. Star Trek Music- The Franchise Frontier. 3 Credits.
Music defines the Star Trek experience. Through their continued reuse and repetition, Star Trek's many musical themes go beyond their original audiovisual frameworks to operate as learned musical-cultural texts. As Star Trek has expanded its content into a myriad of installments and media platforms, this musical symbolism has proved vital in articulating both these differences and "sameness."This online, asynchronous course uses Star Trek's music as a tool to investigate musical branding and the creation of meaning in the media we consume every day. Through close viewings—and listenings—of film, television episodes, video games, computer games, commercials, and other media, we will explore the meaning(s) these media construct and acquire as they are re-used and re-purposed in audiovisual contexts. Your work will include studying media clips, television episodes, and some feature-length films; short readings in which we interact with both current and classic scholarly literature; regular discussion posts and responses to our content; a weekly reflection journal of short posts; and a final paper/project on a Star Trek music topic of your choice (1500 words). In so doing, we will hone your analytical skills by learning to critically evaluate filmic media and craft arguments about the roles of music/sound in film.

AS.376.190. Learn Music by Writing It. 3 Credits.
This course uses composition and song-writing projects to introduce music fundamentals to students with little or no musical background. Topics will include rhythm and meter, pitch and intervals, scales, chords, and harmony, and how to read and write music in both traditional and popular presentations. We will cover standard classical music notation (score, Roman numerals, traditional theory terminology) as well as popular (lead-sheet notation and performance conventions). This course has no prerequisite.

AS.376.211. Music Theory I. 3 Credits.
Introduction to basic principles of tonal music through listening, analysis and music making. Students study melody, harmony, voice leading, figured bass and dissonance treatment, and will also undertake short composition projects. Must have taken the qualifying examination or AS.376.111. Recommended to be taken concurrently with AS.376.221.

AS.376.212. Music Theory II. 3 Credits.
This course continues the aural and written work of the previous course, but focuses on chromatic harmony while continuing the study of melody, counterpoint, and figured bass. Prerequisite: Music Theory I.
AS.376.211

AS.376.221. Musicianship I. 2 Credits.
An introduction to basic musicianship skills. The course is divided into performance skills (sight singing, rhythm reading, basic piano, and improvisation) and aural skills (recognition of pitch, chords, rhythms, melodies, and other musical structures). Topics include major and minor keys and simple time signatures. Emphasis is placed on developing effective practice techniques. Pre-requisite: AS.376.111 (Rudiments of Music Theory and Musicianship) or placement exam.

AS.376.222. Musicianship II. 2 Credits.
A continuation of the skills developed Musicianship I. The course is divided into performance skills (sight singing, rhythm reading, basic piano, and improvisation) and aural skills (recognition of pitch, chords, rhythms, melodies, and other musical structures). Topics include minor keys, chromatic melody and harmony, compound time signatures, and syncopation). As in Musicianship I, emphasis is placed on developing effective practice techniques. Pre-requisite: AS.376.221 (Musicianship I) or placement exam.

AS.376.231. Western Classical Music. 3 Credits.
This course offers an introduction to music of the Western "classical" tradition through the study of a select number of works written over the course of the last four hundred years. In examining these musical works, all of which were remarkable for their time and which many still value today, we will consider their identity both as timeless aesthetic objects and as particular moments in cultural history. We will frame our work within the historical, philosophical, and political contexts of the time, and more recent critical assessments will help us evaluate the circumstances that have shaped reception of this repertoire over the past four centuries. In addition to the works and composers treated in our textbook, we will supplement our study throughout the semester with a consideration of the lives and works of individuals whose stories are less well-known. Ultimately, we will work to understand the particular challenges, opportunities, and responsibilities related to continued engagement with so-called "classical" music in the 21st century. Close attention is given to techniques of musical listening, and to details of first performances, with a consideration of the problems involved in assembling such a picture. No previous knowledge of musical notation or terminology is required. 3 credits.

AS.376.242. Introduction to Popular Music. 3 Credits.
A survey of the stylistic features and social contexts of American popular music since the 1950s.

AS.376.244. Electronic Music Production. 3 Credits.
Students will be introduced to electronic music production techniques and software, and how both can be used to produce a wide range of genre specific results. Skills such as beat matching, intricate use of quantization, virtual instrument editing, automation, sampling, mixing, mastering, effect usage and use of plugins will be explored.

AS.376.245. Introduction to Sound, Audio, and Recording Arts. 3 Credits.
In this course we will undertake a comprehensive survey of sound, audio and the related technology. While covering sound recording from an historical perspective, we'll touch on related material in physics, music, psychology and acoustics. In lab exercises and assignments, students will have the opportunity to learn in a hands-on environment as practical applications of the lecture material are explored. Assignments will include critical listening, in addition to basic recording, editing and mixing of audio. The course will culminate in a comprehensive final project.

AS.376.250. Introduction to Computer Music. 3 Credits.
Introduction to Computer Music is an opportunity for people with no specialized training in music to explore electronic art music as a long-standing, if obscure, body of art, then to participate in creative work in the style. Participants will gain a heuristic understanding of forms of musical composition that operate outside the conventions of regular rhythm and harmony as they record and manipulate sound to sculpt it into original musical works. The lecture portion combines an historical overview of electronic music, rudiments of acoustics and musical perception, and instruction in compositional techniques and in using computers as creative musical tools. The laboratory portion, given at the Digital Media Center, serves as a workshop for creative exploration and for the completion of assigned creative projects including original works of digital sound art.

AS.376.252. Jazz History. 3 Credits.
The primary focus of this course is a survey, investigation, and study of jazz music and how it shaped American history from its origins to current times. Upon completion of this course students will be able to: discuss why jazz is important, both musically and culturally; learn the nuances of a new art form; demonstrate that jazz is a huge part of American heritage; explore parallels between jazz and both American and world history; and become a receptive and knowledgeable audience for jazz.

AS.376.258. Jazz Improvisation and Theory. 3 Credits.
The primary focus of this performance/theory course is designed to help students acquire and develop basic language for improvisation in a collaborative environment. Throughout the semester, the course will develop these skills through songs drawn from standard jazz repertoire, examining improvised solos by master musicians, and understanding the application of fundamental theory concepts in performance situations. Enrolled students should be comfortable with theory rudiments such as note reading, scales, and intervals. No textbook is required, but students should have access to an instrument (singers are welcome).

AS.376.259. Theory of 20th Century Popular Song. 3 Credits.
This class will explore the way harmonic concepts codified in the western classical tradition over the last few centuries are represented and expanded upon in 20th and 21st century popular music. We will examine a number of harmonic techniques using a wide array of genres, ranging from jazz to Broadway to rock to pop to R&B/soul to hip-hop. This course will focus on listening, analysis, and composition techniques.

AS.376.303. Musical Theater from Aristophanes to Leonard Bernstein. 3 Credits.
This course examines the birth of musical theatre from Greek tragedy through the liturgical and secular plays of the middle ages and Renaissance, to the classical and romantic singspiels, operettas, and zarzuelas of the modern era, by such figures as Aristophanes, Adam de la Halle, Hildegard of Bingen, Angelo Poliziano, Juan del Encina, Wolfgang Amadeus Mozart, Gilbert and Sullivan, Ernesto Lecuona, Igor Stravinsky, and Kurt Weill. These will serve as a backdrop for a closer examination of the musicals of Jerome Kern, Cole Porter, George Gershwin, Irving Berlin, Richard Rodgers, Harold Arlen, Frank Loesser, Leonard Bernstein and others. In addition to studying and placing the works of these Broadway giants into a social, political, and economic context, we will study and perform from representative musicals and attend a performance at the Lyric Theatre. Student will be expected to write a capstone project.
Area: Writing Intensive

AS.376.330. History of Opera. 3 Credits.
A basic course in the origin and development of opera and its dissemination throughout the Western world.

AS.376.332. A Cappella Arranging. 1 Credit.
Students will learn how to arrange pre-existing melodies or songs for various vocal ensembles. Music theory I as a prerequisite recommended but not required.

AS.376.334. World Music & Cultures. 3 Credits.
The general purpose of this course is to introduce students to the scholarly study of traditional, popular, and classical music from around the world through reading, discussion, close listening of recordings, and observation of ethnographic and commercial films. We will be primarily concerned with using music as a lens through which to better understand cultural concepts including diaspora, religion, colonialism, creolization, and tradition. Area case studies will include India, East Asia, Sub-Saharan Africa, the Caribbean, and the Middle East.

AS.376.336. Beethoven and the Transformation of Musical Style. 3 Credits.
A survey course focusing on the life and music of Ludwig van Beethoven, whose compositions transformed and revolutionized music of the 19th century. Students will become acquainted with Beethoven's major works, including piano sonatas, string quartets, and symphonies. No previous musical background is necessary. NOTE: The year 2020 marks the 250th anniversary of Beethoven's birth.

AS.376.342. Caribbean Music. 3 Credits.
This course will explore the many genres of traditional and popular music that have emerged among the peoples and cultures of the Caribbean region and its Diaspora. We will examine the social, political, and economic issues that have shaped the region's music and how that music may have intersected with migration, colonization, ethnicity, race and tourism. Using a "participantobservation" approach, students will read about, listen to and research a variety of musical experiences within the relevant sociopolitical context. Students should expect to fully participate in discussions about the assigned readings and music, and should be prepared to conduct their own research and share their own or newly acquired knowledge of contemporary and "historical/traditional" musical themes, and local and regional artists. Our collective goal will be to enjoy as well as to think critically about music, culture and performance and within a moreinformed understanding of the complex, multi-varied and multi-vocal context—know as "The Caribbean".

AS.376.344. Powerful Women in Opera. 3 Credits.
Many opera scholars have noted that opera abuses its female characters. Many operatic heroines die, whether from violent acts or chronic diseases. However, women in opera also wield great power through their voices as ambitious queens, cunning servants, magical beings, and femmes fatales. In this course we will examine how these female characters operate through explorations of the operas' historical context, their texts and scores, and modern performance practice. Spanning from the 17th to 21st centuries, the repertoire studied in this class will provide an introduction to opera history. At the same time, we will delve deeply into different ways to do close analyses of opera through the lens of gender, reading the work of such thinkers as Carolyn Abbate, Naomi Andre, Adriana Caverero, Catherine Clément, and Wayne Koestenbaum.

AS.376.348. The Symphonic Century. 3 Credits.
The symphony occupies a prominent place within the history of Western classical music in the "long" nineteenth century. At once a canvas for daring innovations in style and form and a genre strongly allied with notions of "tradition," the nineteenth-century symphony brings together a complex set of issues that illuminate the broader history of music and musical culture of the past 200 years. This course introduces the iconic works of the symphonic tradition, with a focus on music of Haydn, Mozart, Beethoven, Schubert, Berlioz, Schumann, Mendelssohn, Brahms, Bruckner, and Mahler. As we aim to discover what made this music so remarkable in its time and why so many people still care about it today, we will consider each symphony both as a timeless work of art and as a particular moment in cultural history. Close attention will be given to the techniques of musical listening, and our work will be deeply rooted within the historical, philosophical, and political contexts of the time. There are no pre-requisites for the course apart from a willingness to open one's ears and to engage creatively and critically with some of the most extraordinary music ever written.

AS.376.371. Introduction to Music Cognition. 3 Credits.
What underlies our aesthetic response to music? How and why are we able to identify certain sounds as music? To what extent are music and natural language similar? What is it about music that evokes such powerful emotions such as happiness and sadness? What is unique to musical creativity? Examining such questions from cognitive science, neuroscience, psychology, and philosophical perspectives, this course explores relevant research and theory in the emerging domain of music perception and cognition. Students will complete a final research paper on the topic of their choice that integrates the course material.

AS.376.372. Topics in Music Cognition. 3 Credits.
This course explores the similarities and differences between music and language, the effects of musical training on cognitive development, and the expressive power of music, with an introduction to music and its role in film. We will read relevant research and theory on these topics from cognitive science, neuroscience, psychology, musicology, and philosophical perspectives.

AS.376.404. History of Musical Instruments. 3 Credits.
The history, technology, and performance of Western European musical instruments, their precursors, and their non-western counterparts, addressed by experts and explored on visits to historic collections.Recommended prerequisite: AS.376.231 "Western Classical Music".
Area: Writing Intensive

AS.376.407. Music and Evolution. 3 Credits.
This course will examine the bio-cultural evolution of music in light of recent interdisciplinary research on the social bases of human cognitive evolution, and explore its implications for current debates in musicology, ethno- musicology, psychology of music, and human cognitive evolution.
Area: Writing Intensive

AS.376.428. Mozart Operas. 3 Credits.
Wolfgang Amadeus Mozart wrote his first opera in 1767 at the age of 11. By the time of his death at age 35, he had written 22 full-length operas. Many of these operas are still performed today in opera houses around the world. In this course, we will discuss the enduring popularity of these works. We will discover how these operas were created, delving into the many important collaborations Mozart had with singers, librettists, impresarios, and patrons. We will analyze the words and music of the operas and how they combine to create three-dimensional characters for which his operas are known, such as the melancholy but determined Countess in The Marriage of Figaro, or the cowardly but loyal Papageno in The Magic Flute. Cultural norms have shifted dramatically between Mozart's time and ours, and we will examine how Mozart's operas have been received from their premieres through to today. We will think about how the operas have been translated, adapted, and circulated to different audiences in different eras and locations. Finally, we will reflect on our position as modern audience members, watching recent productions of the operas which reinterpret the works in alternative settings or times and studying the ways in which opera companies promote Mozart's works.
Area: Writing Intensive

Cross Listed Courses

First Year Seminars

AS.001.111. FYS: What's Music Do?. 3 Credits.
Why do we listen to music? What use is it? Does it have medical applications? How can it improve our lives? This First-Year Seminar looks at the various ways that music can change the world. WMD is for musician and non-musician alike. It is designed for students with all sorts of musical tastes and academic interests. It also challenges the usual "top down" approach of most courses, where the professor decides all the material that will be studied and leads all the class discussions. While I do assign certain texts and lead certain discussions, the students also determine much of what we study and lead many of our discussions. This means that sometimes you will be in the position of teacher and guide the rest of us to an understanding of your perspective. By honing your research skills, you will introduce us to your interests through many different media: film, essay, podcast, scientific paper, musical composition, etc. If you are a doctor in the making, you may diagnose the health benefits of music on Alzheimer's patients. If you are a dancer, you might ask how music-inspired movement strengthens society. Future scientists can wonder at music's ability to solve problems, and future philosophers can ponder music as a path to the good life. Meanwhile, musicians themselves might ask how music benefits its creators in contrast to its consumers, and whether they can control how their art gets used. Our listening will be similarly broad: from folk to popular, classical to jazz, and any other variety of sound you can convince us is musical. But the ultimate goal of this seminar and its diversity is not just to ask what music does for us as individuals and to pursue those isolated areas of interest. It is also to hone the foundational ability of communication: to read and to write for, to talk and to listen to our colleagues.

AS.001.117. FYS: Composer Biographies in Film. 3 Credits.
This First-Year Seminar focuses on the lives of Mozart, Beethoven, Schumann, and Chopin and the depictions of their lives in film during the 20th century. The seminar provides both an introduction to film analysis and music history biography. In the last module, we will examine the canon of Western art music composers and consider historiographical issues along lines of gender, race, and other American demographics within this inherited tradition--all toward a collaborative final project.

Modern Languages and Literatures

AS.211.374. Gendered Voices. 3 Credits.
The course will explore the notion of 'voice' in order to show how poetry, literature, philosophy, and music have been dealing with it throughout the ages. In particular, by focusing on classical figures such as the Sirens, Circe and Echo, as well as by considering the seminal discussions of the 'voice' in Plato and Aristotle, the course will address the gendered nature of the voice as a tool to seduce and manipulate the human mind. More specifically, the course will discuss the ways in which male, female, queer, gendered and un-gendered voices embody different functions. Course materials include classical, medieval and early modern sources as well as later rewritings of myths concerned with the voice by authors such as Jules Verne, Karen Blixen, Giuseppe Tomasi di Lampedusa, and Italo Calvino. A selection of theoretical works (e.g. Cavarero, Silverman, Dollar, Butler) will also be discussed. The course is taught in English and all materials will be available in English translation; Italian majors and minors should enroll in section 2.
Area: Writing Intensive

Recitals

PY.350.701. Computer Music Recital (UG). 2 Credits.
Undergraduate recital for Computer Music Majors.
Prerequisite(s): Co-enrollment in major lessons required: PY.100.100[C] or PY.100.101[C] or PY.050.100[C] or PY.050.101[C].
Majors only

For current faculty and contact information go to http://peabody.jhu.edu/faculty (http://peabody.jhu.edu/faculty/)

Music, Minor

Music Minor Requirements

http://krieger.jhu.edu/music/minor-requirements/

The School of Arts and Sciences offers a music minor to students majoring in other fields. The minor is intended for students who have some training and background in music and wish to pursue their interest in a systematic way without getting their degree in the field. It consists of a selection of music courses, including music history, music theory, ensembles, and/or lessons at Peabody. Students must earn a grade of C- or better in all courses applied towards the minor and courses can not be taken satisfactory/unsatisfactory without a formal appeal in writing and approvals by the program director and vice dean of undergraduate education.

Code	Title	Credits
AS.376.231	Western Classical Music	3
AS.376.211	Music Theory I	3
AS.376.221	Musicianship I	2
AS.376.212	Music Theory II	3
AS.376.222	Musicianship II	2
One music history course at any level		3
One 300- or 400-level music history course		3
Applied music experience (lessons/ensembles) [1]		0-2
Total Credits		**19-21**

[1] Two semesters of lessons or ensembles with the approval of minor advisor.

Applied Music Experience

Since the study of music should always take place in the context of practical music making, students completing the minor in music must participate in an applied music experience for at least two semesters. Students must select an applied music experience in consultation with their advisor, who will approve the applied music experience. These experiences are not required to be for academic credit. Most students will select either private instrument lessons at Peabody or participation in an ensemble at Peabody or on the Homewood campus.

Please consult the Krieger Music Minor pages for updates regarding audition dates and fees for credit lessons via Peabody Conservatory and non-credit lessons via Peabody Preparatory.

Natural Sciences Area Major

The Natural Sciences Area major allows students to combine appropriate upper-level courses in two different areas of natural science. Students may bridge biology and chemistry, chemistry and physics, or some other combination as long as the curriculum forms a coherent whole. The major prepares students for careers in medicine, dentistry, or veterinary science, if the introductory courses chosen by the student include those prescribed for admission to these professional schools.

Students selecting the Natural Sciences Area major can also go on to graduate study in natural science, though they may have to take some remedial work in graduate school, if their undergraduate program does not include courses usually required by a traditional major in a particular subject.

Programs

- Natural Sciences Area, Bachelor of Arts (p. 2030)

Natural Sciences Area, Bachelor of Arts

Natural Sciences Area Major Requirements

(Also see Requirements of a Bachelor's Degree (p. 1587).)

The Natural Sciences Area major allows students to combine appropriate upper-level courses in two different areas of natural science. Students may bridge biology and chemistry, chemistry and physics, or some other combination as long as the curriculum forms a coherent whole. The major prepares students for careers in medicine, dentistry, or veterinary science, if the introductory courses chosen by the student include those prescribed for admission to these professional schools.

Students selecting the Natural Sciences Area major also go on to graduate study in natural science, though they may have to take some remedial work in graduate school, if their undergraduate program does not include courses usually required by a traditional major in a particular subject.

The requirements of the natural sciences area major are:

Code	Title	Credits
Science and Math Core Courses		
AS.110.106	Calculus I (Biology and Social Sciences)	4
or AS.110.108	Calculus I (Physical Sciences & Engineering)	
AS.110.107	Calculus II (For Biological and Social Science)	4
or AS.110.109	Calculus II (For Physical Sciences and Engineering)	
or AS.110.113	Honors Single Variable Calculus	
AS.030.101 & AS.030.105	Introductory Chemistry I and Introductory Chemistry Laboratory I	4
AS.030.102 & AS.030.106	Introductory Chemistry II and Introductory Chemistry Laboratory II	4
or AS.030.103	Applied Chemical Equilibrium and Reactivity w/lab	
AS.171.101	General Physics: Physical Science Major I	4
or AS.171.103	General Physics I for Biological Science Majors	
or AS.171.107	General Physics for Physical Sciences Majors (AL)	
AS.171.102	General Physics: Physical Science Major II	4
or AS.171.104	General Physics/Biology Majors II	
or AS.171.108	General Physics for Physical Science Majors (AL)	
AS.173.111	General Physics Laboratory I	1

AS.173.112	General Physics Laboratory II	1
Science Electives		
Natural science or quantitative credits at any level [1]		20
At least five courses of upper level natural science electives at the 300- or 400-level in at most 2 departments [2]		15
Humanities and Social Science Electives [3]		
Humanities or social science credits at any level [4]		12
At least four courses of humanities or social science electives at the 300- or 400-level in at most 2 departments		12
Total Credits		**85**

1. While students typically take these credits at the 100- or 200-level, 300- or 400-level N or Q credits not used to fulfill the upper level science elective credits may be used.
2. Laboratory, research, internship, and independent study courses may not be used. Permission to count courses from more than two departments is often granted if the material involved constitutes a coherent program (for example, biochemistry courses from Biology, Biophysics and Chemistry). No more than two (2) courses and no more than six (6) credits may be taken in appropriate areas of engineering, mathematics, applied math and statistics, or (N)-coded psychology.
3. At least 9 credits must be in the humanities and at least 9 credits must be in the social sciences.
4. While students typically take these credits at the 100- or 200-level, 300- or 400-level H or S credits not used to the fulfill the upper level humanities or social science electives may be used.

Minimum GPA Standards

Students must maintain an overall grade point average of 2.0 in their major. Satisfactory/unsatisfactory graded courses may not count towards major requirements.

Double Major Restrictions

Students majoring in another natural sciences major may not double major with the Natural Sciences Area Major.

Near Eastern Studies

http://neareast.jhu.edu/

The Department of Near Eastern Studies offers programs in four main areas: Egyptology, Assyriology, Northwest Semitic languages and literatures (including the Hebrew Bible), and Near Eastern Archaeology and art. The department approaches Near Eastern civilizations primarily through their own records, and language study is therefore an important part of the curriculum. However, many undergraduate courses require no knowledge of foreign languages and any interested student may take them.

Facilities

The university's Milton S. Eisenhower Library contains an outstanding collection of books and journals in the branches of Near Eastern studies pursued by the department. The Johns Hopkins Archaeological Museum has a collection of Near Eastern antiquities, including excellent study collections of Egyptian artifacts and Palestinian pottery. The Baltimore-Washington area is especially rich in library and museum facilities. Of special interest to students of the Near East are the Walters Art Museum, the Smithsonian Institution, and the Library of Congress.

Programs

- Near Eastern Studies, Bachelor of Arts (p. 2041)
- Near Eastern Studies, Minor (p. 2042)
- Near Eastern Studies, PhD (p. 2042)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.130.101. Ancient Near Eastern Civilizations. 3 Credits.
Review of important issues in ancient Near Eastern history and culture from the Neolithic era to the Persian period. Included will be an examination of the Neolithic agricultural revolution, the emergence of cities, states and writing, and formation of empires. Cultures such as Sumer and Akkad, Egypt, the Hittites, Israelites, Assyrians, Babylonians, and Persians will be discussed.

AS.130.119. Medicine in Ancient Egypt. 3 Credits.
A survey of medicine and medical practice in Egypt and, to a lesser extent, the ancient Near East in general. The abundant sources range from magical spells to surprisingly "scientific" treatises and handbooks. Readings are selected from translations of primary sources in the writings of ancient Egypt, Mesopotamia, and Israel. Topics will include the sources of our knowledge; the nature of medical practitioners, medical treatment, and surgery; beliefs about disease and the etiology of illness; concepts of contagion and ritual purity.

AS.130.124. Texts, Tablets, and Tweets: The Sociolinguistics of Writing. 3 Credits.
This course examines the evolution of writing and the relationship between speech and writing in ancient and modern societies. We will examine the ways in which orthography, scripts, and the visual components inherent to written language (e.g., scripts, fonts, emoticons, diacritics etc.) are used to create and/or project certain social identities in these new written spaces. A primary aim of this course is to generate discussion regarding the ways in which writing in all of its forms—at the institutional, group, and individual level, in official documents, in emails, texts, tweets, and graffiti, using standardized and non-standard orthographies, in both regulated and unregulated spaces—can be a social and often political act of identity. The writing assignments for the course will encourage you to consider the ways in which writing can be harnessed to express social identities. You will work as a group to develop your own writing system and present it to the class. This will hone your creative and critical thinking skills and give you practice collaborating on a project. You will also research and conduct an original analysis on a corpus of writing.

AS.130.126. Gods and Monsters in Ancient Egypt. 3 Credits.
A basic introduction to Egyptian Religion, with a special focus on the nature of the gods and how humans interact with them. We will devote particular time to the Book of the Dead and to the "magical" aspects of religion designed for protective purposes.

AS.130.136. History of Hasidism. 3 Credits.
Although it appears to be a relic of pre-modern Judaism, Hasidism is a phenomenon of the modern era of Jewish history. This course surveys the political and social history of the Hasidic movement over the course of the last three centuries. Students will also explore basic features of Hasidic culture and thought in their historical development. Cross-listed with Jewish Studies.

AS.130.140. Hebrew Bible / Old Testament. 3 Credits.
The Bible is arguably the most read and yet most misinterpreted book of all time, one of the most influential and yet most misapplied work of literature. The Hebrew Bible (Old Testament) is Scripture to Jews and Christians yet also a rich collection of literature w/ numerous literary genres that has been highly influential on secular Western culture. At its core, it is our most important literary source that (when wed with archaeology) helps us to understand the people and culture of Iron Age Israel and Judah. This is an introductory course surveying of the books of the Hebrew Bible (Old Testament) giving primary attention to the religious ideas they contain and the ancient contexts in which they were composed. Topics include: The Academic Study of Religion, Ancient Creation Accounts, Ancestral Religion, The Exodus and Moses, Covenant, Tribalism and Monarchy, The Ideology of Kingship, Prophecy, Priestly Sources, Psalms, Wisdom Literature, and Apocalyptic Thought.

AS.130.152. After Babylon: Mesopotamia from Athens to Anime. 3 Credits.
This course is an exploration of how ancient Mesopotamian art, literature, history, and culture have been transmitted from the fall of Babylon in 539 BCE to the present day and the ways in which they have been adapted and transformed along the way. While all aspects of ancient Mesopotamia will be under discussion, the course will principally focus on the narratives of Gilgamesh, Semiramis/Shammuramat, and Sardanapalus/Assurbanipal. After briefly introducing ancient Mesopotamia, we will see how the region and its history are portrayed in biblical, Classical, Quranic, and medieval sources. From there we will discuss the “rediscovery” of Mesopotamia and the decipherment of cuneiform. The latter half of the course will then be devoted to Mesopotamia in 20th and 21st century popular culture.

AS.130.153. A (Virtual) Visit to the Louvre Museum: Introduction to the Material Culture of Ancient Egypt. 3 Credits.
This course will present the Egyptological collections of the musée du Louvre in Paris, room by room, as in a real visit. The experience will be enhanced by the study of objects that are not shown to the public but are kept in the reserves of the museum. From the 4th millennium BC to Roman time, the iconic “masterpieces” of this world-renowned art museum, as well as its little-known artifacts, will allow us to explore the history and material culture of ancient Egypt. We will also learn to observe, describe and analyze archaeological objects, in a global manner and without establishing a hierarchy between them, while questioning their place in the museum and its particular language. The objective will be to go beyond the objects themselves and answer, in fine, the following questions: What do these objects tell us about the men and women who produced them, exchanged them, used them, and lived among them in antiquity? What do they also reveal about those who discovered them in Egypt, several millennia later, about those who collected them and sometimes traded them, and what does this say about the relations between Egypt and the Western countries over time? The courses will be complemented by visits to the rich Egyptian collections in Baltimore.

AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3 Credits.
The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity’s earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.

AS.130.177. World Prehistory: An Anthropological Perspective. 3 Credits.
How and why did our nomadic hunting and gathering ancestors become farmers? What led agricultural societies to build cities, develop writing, religious institutions, wage war, and trade for exotic goods? This course surveys prehistory and ancient history from the origins of human culture to the emergence civilization. Although prehistory and ancient history yield evidence of tremendous cultural diversity this course emphasizes common elements of past human experience, culture, and culture change. These include the origins of modern humans and their adjustment to a variety of post-ice age environments, shifts from hunting and gathering to agricultural lifeways, and the initial development of the world’s earliest cities and civilizations.

AS.130.202. Ancient Mythology. 3 Credits.
This course explores the mythology of the ancient Near East from the invention of writing in Sumer in 3000 B.C. until the conquest of Alexander the Great near the end of the first millennium B.C. Mythological texts from Mesopotamia, Egypt, Anatolia, the Levant, and the Bible will be read from a comparative perspective. Special attention is paid to the origin and development of the epic, culminating in the great Epic of Gilgamesh, but considerable time is also given to the vast mythological and historical literature, and such diverse genres as love poetry, proverbs, humorous dialogues, Omens, and legal and medical texts. All readings are in English translation.

AS.130.203. Archaeology of Africa: From Human Origins to the Emergence of Civilizations. 3 Credits.
This course examines Africa’s ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.

AS.130.214. The Origins of Civilization: A Cross-Cultural Perspective. 3 Credits.
One of the most significant transformations in human history was the “urban revolution” in which cities, writing, and social classes formed for the first time. In this course, we compare five areas where this development occurred: China, Mesopotamia, the Indus Valley, Egypt, and Mesoamerica (Mexico/Guatemala/Honduras/Belize). In each region, we review the physical setting, the archaeological and textual evidence, and the theories advanced to explain the rise (and eventual collapse) of these complex societies.

AS.130.216. History of the Jews in Pre-Modern Times, from the Middle Ages to 1789. 3 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.

AS.130.223. Ancient Revolutions: The Archaeology of Culture Change. 3 Credits.
The last 250,000 years have seen many moments that could be referred to as “revolutions” in art, technology, or other aspects of human society. The “Human Revolution” of the Upper Paleolithic saw the birth of artistic ability and symbolic thinking in hominids. We call the transition from hunting and gathering to settled agriculture the “Neolithic Revolution,” while the “Urban Revolution” gave us complex societies and urban life. Times of dynamic change gave rise to important aspects of our shared behavioral and societal identity. They have become the subject not only of much archaeological investigation, but also of popular discourse about the human past. This class will explore famous cultural “revolutions” by looking at the causes and consequences of these important changes. We will evaluate the archaeological evidence, and through it interrogate the term “revolution” itself. What do we mean when we speak of “revolutions?” Are there other ways to think of past social and technological change, and when, if ever, do we truly see “revolutions” in the human condition in the ancient past?

AS.130.245. The Archaeology of Gender in the Ancient Eastern Mediterranean. 3 Credits.
How do art historians and archaeologists recover and study genders and sexualities of ancient people? This writing-intensive seminar looks at texts and objects from ancient Egypt, Assyria, and Greece through the lens of gender and sexuality studies. Beyond exploring concepts of gender in the ancient Eastern Mediterranean, students will also consider how modern scholars have approached, recovered, and written about ancient gender identities. There are no prerequisites for this course.
Area: Writing Intensive

AS.130.246. Writing History in the Ancient Mediterranean World. 3 Credits.
Just what does it mean to "write history"? In this course, we will read a selection of historical texts from ancient Egypt, Mesopotamia, Greece, and Rome, in order to examine how these cultures conceived of, and narrated, their own pasts. A major focus will be how these texts were created in order to understand or control the present. We will also examine how these texts have come down to us, and in what ways this might affect how we use them in constructing our own historical narratives. No prior knowledge of the ancient world necessary; all texts read in English translation.
Area: Writing Intensive

AS.130.247. Digging for Legitimacy Archaeology, Museums, and Ideology. 3 Credits.
Archaeology was born out of Western Colonial endeavors into Africa, the Middle East, Asia, and the Americas. Large scale excavations conducted by the United Kingdom, France, Germany, Italy, and the United States resulted in the removal and transfer of valuable (culturally and monetarily) material culture from local stewards and stakeholders to the West. To this day the discipline of archaeology is still saddled by its colonial past and the Hollywood interpretation of archaeologists as saviors of ancient treasures. Today, most interaction between people and ancient objects is facilitated via the museum. In this course we will explore 19th- 21st century archaeological and museum practices and the role they play in modern narratives of identity and representation in the America and the Middle East. Students will engage with the historical, legal, economic, and ethical implications of archaeology and analyze how political, religious, cultural, and academic institutions have leveraged archaeology and cultural artifacts to reify and legitimize their pursuits and ideologies.

AS.130.248. Up the Nile: New Approaches to the History of Egyptology and Nubiology. 3 Credits.
King Tut, Napoleon, Champollion, Ozymandias, Nefertiti: the history of Egyptology is filled with big characters, huge monuments, and glimmering objects. But it is also made up of colonialist practices, looted sites, and forgotten scholarly contributions. “Up the Nile” examines the antiquarian, colonialist, racist, Western-centric, and patriarchal roots of modern Egyptology and Nubiology, and addresses how scholars and enthusiasts alike are continuing to grapple with these lasting legacies and biases. This class investigates how the Egyptians and Nubians thought of their own histories, as well as how other ancient cultures viewed the cultures of the Nile. It moves roughly chronologically, tracing understudied and marginalized voices from the Islamic, Medieval, and Ottoman periods into the 20th and 21st centuries. It examines the origins of scholarship, modern collecting, Egyptomania, and museums, delving into the problems and repercussions that still haunt us today. “Up the Nile” will engage with important and difficult aspects regarding Egyptology’s and Nubiology’s colonialist, racist, and sexist past and present. It asks: who decides who writes history, then and now?

AS.130.249. Everything She Says is Done for Her: Exploring the Spheres of Influence of Women in Ancient Egypt. 3 Credits.
How did women move within their gendered spheres of influence in ancient Egyptian society? How do scholars discuss women in the ancient world and what are the spheres influence often allotted to women? How can we investigate the lives of women through the material record? What methodologies are applied by scholars to study women in antiquity? This course seeks to explore these questions and much more. The course will utilize textual and material evidence to examine and deconstruct the economic, social, religious, and political roles of women in ancient Egypt.

AS.130.300. History of Ancient Mesopotamia. 3 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.

AS.130.301. History of Ancient Syria-Palestine. 3 Credits.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.

AS.130.302. History: Ancient Syria-Palestine II. 3 Credits.
A survey of the history of Ancient Syria and Cannan, including ancient Israel. Taught with AS.134.661. Cross-listed with Jewish Studies.

AS.130.334. Egyptian Funerary Arts in the Archaeological Museum. 3 Credits.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.

AS.130.338. The Talmud as Read in the Middle Ages: The Sugya of Kavod HaBriot (Human Dignity). 3 Credits.
In the early Middle Ages the Talmud emerged as the defining document of official Jewish religion and culture, and remained so until the dawn of the Modern Era. Jewish scholars in many different countries, and in a wide variety of cultural contexts, developed certain ways of reading, interpreting, and applying the Talmud. In the process, they produced an immense corpus of commentary and law. This course will examine how and why the Talmud was studied in these centuries by Jews who mined it, subject by subject, for emotional, philosophical, and legal meaning.

AS.130.346. Introduction to the History of Rabbinic Literature. 3 Credits.
Broadly surveying classic rabbinic literature, including the Talmud and its commentaries, the legal codes and the response, this seminar explores the immanent as well as the external factors that shaped the development of this literature, the seminal role of this literature in Jewish self-definition and self-perception, and the role of this literature in pre-modern and modern Jewish culture.

AS.130.348. Survey Jewish History as Relected in Responsa Literature: How Immutable Judaism Wrestles with Change. 3 Credits.
How does a religious system which defines its ancient laws as God-given and unchangeable apply them to radically different and changing social, political and intellectual situations? This course explores the literature of "Questions and Answers"(She'elot u-Teshuvot), the Jewish legal responsa which have struggled to match Jewish religious law to modern life for fifteen centuries. A sweeping survey of Jewish history as revealed by one of its most impenetrable yet fascinating sources.

AS.130.353. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS. 3 Credits.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.131.653.

AS.130.354. Archaeological Method and Theory. 3 Credits.
Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced.

AS.130.357. Geographic Information Systems in Archaeology. 3 Credits.
Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI's ArcGIS software. Taught with AS.131.657.

AS.130.364. Archaeology of Arabia. 3 Credits.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.131.664.

AS.130.373. Prophets and Prophecy in the Bible. 3 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?

AS.130.376. Ancient Magic and Ritual. 3 Credits.
This course will introduce students to the vast body of rituals that were practiced and performed in antiquity, with a particular emphasis on rituals from ancient Mesopotamia, Egypt, and the Hebrew Bible. In addition to examining rituals from a comparative perspective, anthropological and sociological studies of ritual will be read and discussed to shed light on the social, cultural, and political significance of ritual in the ancient world and beyond.
Area: Writing Intensive

AS.130.378. Geoarchaeology: Applications of Earth Science to Archaeology. 3 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.

AS.130.381. Elementary Akkadian. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Co-listed with AS.132.600

AS.130.382. History of Mesopotamia II. 3 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.

AS.130.383. Elementary Akkadian II. 3 Credits.
An introduction to the paleography, grammar, and lexicon of the Akkadian language, and the reading of simpler texts in that language.Continues AS.130.381

AS.130.388. Elementary Sumerian. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Sumerian language, and the reading of simpler texts in that language.

AS.130.389. Elementary Sumerian II. 3 Credits.
An introduction to the paleography,, grammar and lexicon of the Sumerian language and the reading of simpler texts in that language.

AS.130.400. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2055-1650 B.C.). In the second semester, literary texts and royal inscriptions will be read. Course meets with AS.133.600.

AS.130.401. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2011- 1700 B.C.). Co-listed with AS.133.601.
AS.130.400 or equivalent.

AS.130.420. Seminar in Research Methods in Near Eastern Studies. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Writing Intensive

AS.130.440. Elementary Biblical Hebrew. 3 Credits.
Introduction to the grammar, vocabulary, and writing system of biblical Hebrew.

AS.130.441. Elementary Biblical Hebrew II. 3 Credits.
Survey of grammar and reading of simple texts. May not be taken on a satisfactory/unsatisfactory basis. A continuation of Elementary Biblical Hebrew I.
AS.130.440

AS.130.442. Readings - Hebrew Prose. 3 Credits.
Reading of biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings. Cross-listed with Jewish Studies.

AS.130.443. Readings - Hebrew Prose and Poetry. 3 Credits.
Reading of Biblical Hebrew Prose, from texts such as the Pentateuch, Joshua, Judges, Samuel, and Kings.

AS.130.501. Readings & Research. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.504. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.505. Archaeology Fieldwork. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.506. Independent Study-Archaeology Fieldwork. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.510. Archaeology Major Honors Thesis I. 3 Credits.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.511. Archaeology Major Honors Thesis II. 3 Credits.
Area: Writing Intensive
AS.130.510;You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.590. Independent Study. 0 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.131.600. Seminar Near Eastern History.
Seminar in Near Eastern History.

AS.131.601. Seminar Near Eastern History: Mesopotamia.
A three-year history cycle required of all graduate students and forming the core of our graduate program. One year each will be devoted to Egyptian history, Mesopotamian history, and Syro-Palestinian history.

AS.131.613. Archaeology of Africa: From Human Origins to the Emergence of Civilizations.
This course examines Africa's ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.

AS.131.634. Seminar: Near Eastern Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).

AS.131.635. Seminar: Near East Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).

AS.131.653. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.130.353.

AS.131.654. Advanced Archaeological Method and Theory.
Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced.

AS.131.657. Geographic Information Systems in Archaeology.
Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensible tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI's ArcGIS software.Taught with AS.130.357.

AS.131.664. Archaeology of Arabia.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.130.364.

AS.131.678. Geoarchaeology: Applications of Earth Science to Archaeology.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.

AS.131.800. Readings & Research.

AS.131.801. Readings And Research.

AS.131.848. Dissertation Research.

AS.131.849. Dissertation Research.

AS.131.850. Summer Independent Research.
Independent summer research

AS.132.600. Elementary Akkadian.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language.

AS.132.601. Elementary Akkadian II.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language.

AS.132.606. Intermediate Akkadian Texts.
In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden's Akkadisches Handwoerterbuch.

AS.132.607. Intermediate Akkadian Texts.
In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden's Akkadisches Handwoerterbuch.

AS.132.608. Akkadian Letters.
This course introduces students to letters written in the Akkadian language from a variety of historical periods. Recommended course background: AS.132.600 and AS.132.601.

AS.132.609. Seminar in Research Methods in Near Eastern Studies.
Area: Writing Intensive

AS.132.612. Advanced Akkadian.
Students read texts in the original Akkadian cuneiform with attention to their philological, archaeological, historical, and literary features. The seminar topic varies from semester to semester but usually consists either of texts of various genres from a single period (e.g., Neo-Assyrian) or texts of various period from a single genre (e.g., letters).

AS.132.631. Literature and Religious Texts.

AS.132.643. Ancient Magic and Ritual.
This course will introduce students to the vast body of rituals that were practiced and performed in antiquity, with a particular emphasis on rituals from Ancient Mesopotamia, Egypt, and the Hebrew Bible. In addition to examining rituals from a comparative perspective, anthropological and sociological studies of ritual will be read and discussed to shed light on the social, cultural, and political significance of ritual in the ancient world and beyond.

AS.132.644. Treaties And Diplomacy.
Reading treaties and related materials in Akkadian.

AS.132.701. Elementary Sumerian II.

AS.132.710. Advanced Sumerian.
We will read Letter Collection B and related materials in the original cuneiform.

AS.132.711. Advanced Sumerian.
In this course a selection of Sumerian texts from different periods and genres will be read and discussed from a linguistic, philological, historical, and literary perspective.

AS.132.800. Mesopotamian Seminar.
Research and discussion on topics of current interest.

AS.132.801. Mesopotamian Seminar.
Research and discussion on topics of current interest.

AS.133.304. Let's Play! Games from Ancient Egypt and Beyond. 3 Credits.
The ancient Egyptians played many games, as we do today. Board games, ball games, games of skill, etc., were not only part of daily life, but also had a role to play in religious practices and beliefs. Although the rules of the games are largely unknown to us, archaeological objects, funerary images, and texts help us to better understand their roles and meanings in ancient Egyptian culture. These various sources also show how games reflect some facets of the organization of the society, and reveal how the ancient Egyptians perceived some aspects of their world - social hierarchy, gender division, representation of death, relationship to chance/fate/divine will, etc. This course will present the evolution of games and play in Ancient Egypt from the 4th millennium B.C., with the first board game discovered in the tomb of a woman, through those deposited in the tomb of Tutankhamun, and up to the Roman period, with the games engraved on the ground by soldiers in the fortresses of the Eastern Desert. Particular attention will be paid to the travels of the games - Egyptian games played outside of Egypt and games of foreign origin played inside Egypt - because they allow for a better understanding of the intercultural connections that were established in between Egypt, Nubia, the Near East in general and the Mediterranean world. By replacing the games in their archaeological, historical and cultural contexts, the course is also intended as an original introduction to the civilization of ancient Egypt.

AS.133.600. Introduction To Middle Egyptian.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2135-2000 B.C.). In the second semester, literary texts and royal inscriptions will be read.

AS.133.601. Introduction To Middle Egyptian (Hieroglyphs).
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2011-1700 B.C.). Co-listed with AS.130.401
AS.133.600 or equivalent.

AS.133.610. Middle Egyptian Texts.
In this course we read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian Required.

AS.133.611. Middle Egyptian Texts.
In this course we read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian Required.

AS.133.616. Let's Play! Games from Ancient Egypt and Beyond.
The ancient Egyptians played many games, as we do today. Board games, ball games, games of skill, etc., were not only part of daily life, but also had a role to play in religious practices and beliefs. Although the rules of the games are largely unknown to us, archaeological objects, funerary images, and texts help us to better understand their roles and meanings in ancient Egyptian culture. These various sources also show how games reflect some facets of the organization of the society, and reveal how the ancient Egyptians perceived some aspects of their world - social hierarchy, gender division, representation of death, relationship to chance/fate/divine will, etc. This course will present the evolution of games and play in Ancient Egypt from the 4th millennium B.C., with the first board game discovered in the tomb of a woman, through those deposited in the tomb of Tutankhamun, and up to the Roman period, with the games engraved on the ground by soldiers in the fortresses of the Eastern Desert. Particular attention will be paid to the travels of the games - Egyptian games played outside of Egypt and games of foreign origin played inside Egypt - because they allow for a better understanding of the intercultural connections that were established in between Egypt, Nubia, the Near East in general and the Mediterranean world. By replacing the games in their archaeological, historical and cultural contexts, the course is also intended as an original introduction to the civilization of ancient Egypt.

AS.133.620. Hieratic.

AS.133.630. Old Egyptian.

AS.133.631. Old Egyptian.

AS.133.640. Late Egyptian.

AS.133.641. Late Egyptian Texts.
An introduction to the grammar and texts of Late Egyptian.

AS.133.646. Demotic Texts.

AS.133.647. Demotic Texts.

AS.133.648. Intro To Coptic.

AS.133.649. Advanced Coptic.
In this class we will read Coptic texts of various genres.

AS.133.706. Egyptian Funerary Arts in the Archaeological Museum.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.

AS.133.751. Seminar in Egyptian Art and Archaeology: Egyptian Art in Museums.
This course will utilize Egyptian collections in museums as a basis for studying Egyptian art. An aim is to evaluate how the experience of the objects impacts approaches to the discipline.

AS.134.101. GOD 101: The Early History of God - Origin, Character, Practice. 3 Credits.
In a world of big ideas, there is none larger than that of God. Divinity is an ever-present topic for both religious devotees and hard core secularists —for anyone who embraces the humanities or ponders what makes us human. Humans are, for better and worse, homo-religiosus (humans who practice religion) as much as homo-sapiens. But what do we know of God historically? How do we go about reconstructing divinity from ancient texts and archaeology? How do we best walk back in time to understand ancient Middle Eastern cultures that gave birth to notions of the divine that have come down to today's Judaism, Christianity and Islam? This course looks synthetically at the vast topic of God—exploring questions of historical origin, how God was characterized in literature (mythic warrior, king, parent, judge, holy, compassionate) and how God was represented in iconography, both materially and abstractly. Secondly, how did belief intersect with practice? Using the indow of divinity, this course will peer into the varieties of religion experience, exploring the royal use of religion for power, prestige and control balanced against the intimacy of family and household religion. It will probe priestly prerogatives and cultic status, prophetic challenges to injustice, and the pondering of theodicy by poetic sages.

AS.134.301. Introduction to the Pentateuch. 3 Credits.
This course surveys the linguistic and literary structure of the Pentateuch, with a focus on P and non-P in Genesis and Exodus. A second and equally important focus will be the history of scholarship and its broader impact on the study of the history and religion of ancient Israel and Judah. We will examine critical issues in the study of the Pentateuch, focusing on scholarly reconstructions of composition and redaction and key literary themes. Throughout our examination of the biblical text, we will also address parallels to other ancient Near Eastern corpora.

AS.134.400. Northwest Semitic Epigraphy. 3 Credits.
This course will provide an introduction to West Semitic dialects as reflected in inscriptions from the first millennium BCE. We will survey the grammar (phonology, morphology, syntax, and lexicon) of epigraphic Hebrew, Phoenician, and known Transjordanian languages (Moabite, Ammonite, Edomite). We will also discuss the methodological challenges inherent to the study of script evolution, scribalism, and the reconstruction of NWS languages through the study of inscriptions. This course will also introduce students to scholarship outside of the field of NWS and Hebrew Bible on literacy, the study of visual grammar, and the socio-semiotic approach to the study of writing.

AS.134.404. The Book of Job. 3 Credits.
Reading portions of the Book of Job in Hebrew. In addition to increasing proficiency in biblical Hebrew, the course also involves critical exegesis including grammatical analysis and textual criticism. Students will interact with various aspects of interpretation for the Book of Job (e.g., philology, text history, structure, literary history, message, poetics, rhetoric, philosophy, theology and reception history).

AS.134.406. Kings, Prophets, and Scribes: The Creation of "Israel" in the Deuteronomistic History. 3 Credits.
This class will introduce students to "The Deuteronomistic History," which comprises the biblical books of Deuteronomy, Joshua, 1-2 Samuel and 1-2 Kings. The narrative arc of this "history" spans the giving of the law to Moses to the rise and fall of the monarchies of Israel and Judah, respectively in the Neo-Assyrian and Neo-Babylonian periods. During this course we will examine the reasons why biblical scholars have argued in varying ways that this body of text represents the work of a group of ideologically driven scribes, the Deuteronomists; we will also investigate the primary texts themselves for evidence for divergent views about the need for a king in Israel and the role and fate of the royal house of David. We will also explore the relationship between the books of the former prophets (Joshua>2 Kings) and Deuteronomy, which is a book that concludes the Pentateuch. This course requires students to engage with the biblical text in the original Hebrew language at an advanced level. We will also engage with biblical scholarship regarding the scope, purpose, and nature of a cohesive Deuteronomistic History, as well as with dissenting voices that probe the unity of these biblical books.

AS.134.408. The Book of Ezekiel. 3 Credits.
A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions.

AS.134.409. Prophets and Prophecy in the Hebrew Bible. 3 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?"

AS.134.410. Kings and Chronicles. 3 Credits.
This course surveys scholarship on the histories of Israel and Judah as presented in Kings and Chronicles. The course also addresses changes in the Hebrew language in the first millennium BCE.
AS.130.440 OR AS.130.441

AS.134.450. Seminar in Hebrew: Archaic Biblical Poetry. 3 Credits.
Translation and analysis of selected texts in Biblical Hebrew giving attention to advanced features of grammar and syntax. Topic: "Archaic Biblical Poetry".

AS.134.604. The Book Of Job.
Reading portions of the Book of Job in Hebrew. In addition to increasing proficiency in biblical Hebrew, the course also involves critical exegesis including grammatical analysis and textual criticism. Students will interact with various aspects of interpretation for the Book of Job (e.g., philology, text history, structure, literary history, message, poetics, rhetoric, philosophy, theology and reception history)

AS.134.606. Kings, Prophets, and Scribes: The Creation of "Israel" in the Deuteronomistic History.
This class will introduce students to "The Deuteronomistic History," which comprises the biblical books of Deuteronomy, Joshua, 1-2 Samuel and 1-2 Kings. The narrative arc of this "history" spans the giving of the law to Moses to the rise and fall of the monarchies of Israel and Judah, respectively in the Neo-Assyrian and Neo-Babylonian periods. During this course we will examine the reasons why biblical scholars have argued in varying ways that this body of text represents the work of a group of ideologically driven scribes, the Deuteronomists; we will also investigate the primary texts themselves for evidence for divergent views about the need for a king in Israel and the role and fate of the royal house of David. We will also explore the relationship between the books of the former prophets (Joshua>2 Kings) and Deuteronomy, which is a book that concludes the Pentateuch. This course requires students to engage with the biblical text in the original Hebrew language at an advanced level. We will also engage with biblical scholarship regarding the scope, purpose, and nature of a cohesive Deuteronomistic History, as well as with dissenting voices that probe the unity of these biblical books.

AS.134.607. Texts, Tablets, and Tweets: The Sociolinguistics of Writing.
This course examines the evolution of writing and the relationship between speech and writing in ancient and modern societies. We will examine the ways in which orthography, scripts, and the visual components inherent to written language (e.g., scripts, fonts, emoticons, diacritics etc.) are used to create and/or project certain social identities in these new written spaces.A primary aim of this course is to generate discussion regarding the ways in which writing in all of its forms—at the institutional, group, and individual level, in official documents, in emails, texts, tweets, and graffiti, using standardized and non-standard orthographies, in both regulated and unregulated spaces—can be a social and often political act of identity. The writing assignments for the course will encourage you to consider the ways in which writing can be harnessed to express social identities. You will work as a group to develop your own writing system and present it to the class. This will hone your creative and critical thinking skills and give you practice collaborating on a project. You will also research and conduct an original analysis on a corpus of writing.

AS.134.608. Book Of Ezekiel.
A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions. Cross-listed with Jewish Studies.

AS.134.609. Prophets and Prophecy in the Hebrew Bible.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?"

AS.134.623. Pentateuch.
This course surveys the linguistic and literary structure of the Pentateuch. A second and equally important focus will be the history of scholarship and its broader impact on the study of the history and religion of ancient Israel and Judah.

AS.134.650. Seminar in Hebrew:.

AS.134.651. Seminar: Hebrew.

AS.134.652. Seminar in Ancient Israelite Religion.
Topics include history of scholarship, methodology, representations of deity, the aniconic tradition, solar Yahwism, sacred space, blood rituals, passover, royal cult, family religion, divination, prophecy, incantations, etc.

AS.134.660. History of Ancient Syria/Palestine.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.

AS.134.661. History: Ancient Syria-Palestine II.
A survey of the history of Ancient Syria and Cannan, including Ancient Israel.

AS.134.700. Northwest Semitic Epigraphy.

AS.134.720. Ugaritic I.
A year-long course studying Ugaritic language and literature. The first semester will focus on grammar and translating a representative selection of mythological texts. The second semester will concentrate on ritual texts. The course will also be epigraphic in nature using both conventional and digital techniques.

AS.134.721. Ugaritic II.
A continuation of AS.134.720 with emphasis on the mythological and ritual texts from Ugarit. A digital epigraphy lab will also form part of the course.

AS.134.744. Survey Of Aramaic Texts.

AS.134.747. Archaic Aramaic.
An advanced course in Aramaic devoted to the study of Old Aramaic inscriptions. We will be translating and analyzing a selection of texts from Northern Syria (e.g. Bar-Rakib; Hadad; Kuttamuwa, Nerab, Panamuwa, Sefire, Zakkur), Southern Syria (e.g. Bar-Hadad/Melqart Stela, Hazael, Tel Dan) and Northern Mesopotamia (e.g. Tell Fakhariyah). Students will be expected to vocalize such texts as a study in historical and comparative linguistics and to clarify their understanding of the morphology and syntax.

Cross Listed Courses

Archaeology

AS.136.101. Introduction To Archaeology. 3 Credits.
An introduction to archaeology and to archaeological method and theory, exploring how archaeologists excavate, analyze, and interpret ancient remains in order to reconstruct how ancient societies functioned. Specific examples from a variety of archaeological projects in different parts of the world will be used to illustrate techniques and principles discussed.

Classics

AS.040.216. Exploring the Ancient Astronomical Imagination. 3 Credits.
This course takes us on an exploratory journey through the ancient astronomical imaginary. We will focus on ancient Greek and Roman ideas about the structure of the cosmos, the substance and nature of the stars, the Earth's place and role in the universe, ancient attempts to map the stars, and ancient beliefs about the significance of cosmic phenomena for events in the human world. The course will culminate in the extraordinary ancient tradition of lunar fictions, which are our earliest imaginative accounts of life on other worlds. Come join us for a voyage to the stars!

Earth & Planetary Sciences

AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.

First Year Seminars

AS.001.147. FYS: Reading Ancient Middle Eastern Literature. 3 Credits.
The Middle East is home to some of the world's earliest and most important literature. In this First-Year Seminar, students will read in translation a selection of texts from different traditions that flourished in the pre-Islamic Middle East. Sample readings include the Epic of Gilgamesh, the Descent of Ishtar to the Netherworld, and the battle between David and Goliath from the Hebrew Bible. As we read, we will consider why ancient Middle Eastern literature may be more relevant to our own present moment than ever before.

History

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.

AS.100.383. Conversion and Apostasy in the Middle Ages. 3 Credits.
Compares religious transformation in medieval Europe and the Middle East (ca. 600-1500), including conquest and conversion; conversion narratives; apostasy, martyrdom and other encounters between medieval Jews, Christians, and Muslims. Pre-requisite for enrollment: Students must have taken one history course.

AS.100.615. States, Scribes, and Archives: Medieval Arabic Documentary Cultures.
Historical survey of scribal and archiving practices of medieval Islamic states (in comparative perspective); includes close readings of primary documents, including legal deeds, petitions, edicts, fiscal receipts, and administrative reports.

AS.100.682. Introductory Topics in Computation for Scholarship in the Humanities.
The first half of this seminar course consists of non-mathematical introductions to, and discussions of, the fundamental motivations, vocabulary, and methods behind computational techniques of particular use for humanistic research. The second half combines selected readings chosen to address specific questions raised by these discussions with hands-on application to students' research goals. Each participant will lead discussion for one of the selected readings relevant to their interests.

History of Art

AS.010.205. Art of Mesoamerica. 3 Credits.
This course provides a basis for the study of Mesoamerican visual cultures and urban settings. We will explore the artistic production of the Olmec, Maya, and Aztec as well as works created by the artists of Teotihuacan, Monte Albán, and West Mexico. With a focus on aesthetics and cultural function, case studies range from stone sculpture, painted ceramics, and screenfold codices, to architectural complexes from Mexico and Central America. Themes to be discussed include: representations of humans and deities, monumentality and rulership, mutilation and destruction of monuments, and ritual and political significance of materials.

AS.010.240. Art and the Environment in the Ancient Eastern Mediterranean. 3 Credits.
What is the relationship between art and the environment? What are “geoaesthetics?” This course explores the interrelationships between ecosystem and creative responses and practices in the ancient Eastern Mediterranean. Specifically, the class will examine the intersections between artistic and architectural practices and the natural environment during the New Kingdom in ancient Egypt, the Neo-Assyrian period in ancient Mesopotamia, and the Minoan Bronze Age in the ancient Aegean.

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.

AS.010.315. Art of the Assyrian Empire, 1000-600 BCE. 3 Credits.
From 900 to 609 BCE, the Assyrian Empire dominated the ancient Near Eastern world, stretching from western Iran to the Mediterranean and Egypt. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This course provides an integrated picture of the imperial arts of this first world empire, situating it within the broader social and political contexts of the first millennium BCE. In its conquest of foreign lands, this powerful state came in contact with and appropriated a diversity of cultures, such as Phoenicia, Egypt, and Greece, which we will also study.

AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
The course focuses on art and architecture in the political and religious contexts of the Middle East, from the 4th to the 14th c. The three monotheistic religions all claimed specific territories -- in particular the city of Jerusalem -- for cult practices. This situation resulted in military conflicts that had an impact of Jewish, Medieval, Byzantine, and Islamic art in the Holy Land. The political conflicts, which still plague the region today, are rooted in the complex situation of the medieval period. The Roman, Arab, Byzantine, and crusader invasions resulted however in exciting eclectic styles that characterize the art and architecture of the region. We will discuss concepts behind political and religious leadership, as they intersect with the power of the arts.
Area: Writing Intensive

AS.010.349. Art and Interactions in the Eastern Mediterranean from 2000 to 500 BCE. 3 Credits.
The arts of Egypt, Greece and the Near East are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. From 2000 to 500 BCE (the Middle/Late Bronze and Iron Ages), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Egyptians, Near Easterners, Greeks and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war, imperialism, and colonization.
AS.010.301 - Titled "Art and Interactions in the Eastern Mediterranean from 2000 to 500 BCE" - Students who have taken that course in 2014 or prior are not permitted to take this course.

AS.010.364. Babylon: Myth and Reality. 3 Credits.
Babylon – the name resonates even today, from the biblical whore of Revelation to sci-fi. It evokes exotic places and time long past. But what do we really know about the ancient city and the civilization that flourished there thousands of years ago? The first part of this course examines the archaeological city of Babylon, located in the modern state of Iraq, and considers its artistic and architectural achievements in the context of Mesopotamian history. The second part of the class explores the ongoing impact of Babylon in the cultural imagination of later periods, from the Classical and biblical authors, to European artists, Hollywood movies, science fiction, and contemporary political movements.

AS.010.389. The Stone and the Thread. 3 Credits.
Advanced inquiry into imperial Inka architecture and fiber arts.
Area: Writing Intensive

AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.

AS.010.444. Classics Research Lab: Antioch Recovery Project (ARP). 3 Credits.
Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term “narcissism”. Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard’s Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.

AS.010.611. Seminar in Near Eastern Art.

AS.010.625. Art and Interaction in the Bronze Age Eastern Mediterranean.
The arts of the Near East, Aegean and Egypt are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. During the Bronze Age (3000 to 1200 BCE), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Near Easterners, Greeks, Egyptians and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war and imperialism.Students are not expected to have extensive knowledge of all the areas, although some experience in at least one of them will be helpful. The course will interweave establishing a knowledge base necessary to tackle this topic with broader conceptual concerns and interdisciplinary approaches (art historical, archaeological, anthropological, and historical).There will be a final paper.

AS.010.646. Art and Architecture at the Eastern Frontier: Medieval Georgia.
This seminar investigates the fascinating landscape of medieval art and architecture of Georgia. Its specific geographic position in the South Caucasus, at the cross roads between the East and West, the Christian and Islamic Worlds, had a profound impact on the art and architecture in the region. Ancient sites show close connections with the Graeco-Roman World on the western border and with the Sassanid Empire in the East. The Christianization of the Kingdom of Kartli in the early fourth century resulted in close ties with the development of early Christian art in Syria, the Holy Land, and Byzantium. While the Christian religion remained an identifying factor during several hundred years of Muslim rule (736 to 1122) during which the city of Tbilisi was the capital of an emirate, Islamic motifs and style became an important factor for art works in medieval Georgia. Art and architecture with a specific Byzantine profile flourished in particular after the reunification of Georgia during the reign of King David the Builder (1073- 1125) and Queen Tamar (1184 to 1213). The cathedral and monastery of Gelati and Mzcheta, the murals in the royal monasteries of Vardzia and Khintsvisi, and the countless icons are a testimony to this relationship. We will discuss the specific diverse aesthetics and materiality (stone, enamel and metal works) of Georgian art with the goal to reassess the map of medieval art and architecture that currently does not include the Eastern Frontier. A mandatory c. 10 days field trip to Georgia is planned after classes end in May 2020.
Area: Writing Intensive

Medicine, Science and the Humanities

AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3 Credits.
In this course, four essential aspects of the theme of death and dying will be examined: Death and Medicine; Emotional Responses to Death; Burying and Commemorating the Dead; and Conceptions of Death. Specific topics relating to each of these aspects that will be covered include illness and causes of death; prevention of death; suicide; death and grief; burial practices; mourning the dead; public commemoration of the dead; life after death; and death and rebirth. Students will explore these topics from a historical-anthropological perspective with Paul Delnero, a specialist in the history and culture of the ancient Near East (Near Eastern Studies); from a literary perspective, by reading and writing poetry relating to these subjects with the acclaimed poet James Arthur (Writing Seminars); and from a musical perspective, through direct encounters with the music and creative process of the award-winning composer, Michael Hersch (Peabody).
Area: Writing Intensive

Program in Museums and Society

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum

For current faculty and contact information go to http://neareast.jhu.edu/people/

Near Eastern Studies, Bachelor of Arts

Near Eastern Studies Major Requirements

(Also see Requirements for a Bachelor's Degree (p. 1587).)

The ancient Near East is where history begins. It is where the first crops were sown, the first towns built, and where writing was first invented. The origins of Western culture are to be found in its great civilizations, from the three great monotheistic religions—Christianity, Islam, and Judaism—to everyday aspects of our life that we take for granted, such as the alphabet and marking time by hours and minutes. The Near Eastern studies major can be the focal point of a broad liberal arts education, as well as a basis for graduate study. An undergraduate major can specialize in one of the four main areas of specialization of the department - Egyptology, Assyriology, Northwest Semitic languages and literatures (including the Hebrew Bible), and Near Eastern Archaeology and Art - or in the civilizations of the ancient Near East in general.

Students must earn a "C-" or higher grade in all courses used to satisfy major requirements and courses may not be taken satisfactory/unsatisfactory. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the major without permission of the Director of Undergraduate Studies.

Code	Title	Credits
Introductory Courses		
Select two of the following:		6
AS.130.101	Ancient Near Eastern Civilizations	
AS.130.126	Gods and Monsters in Ancient Egypt	
AS.130.140	Hebrew Bible / Old Testament	
AS.130.170	Diplomacy and Conflict in the Ancient Middle East	
Upper-Level Core Courses		
Select two of the following:		6
AS.130.301	History of Ancient Syria-Palestine	
AS.130.302	History: Ancient Syria-Palestine II	
AS.130.300	History of Ancient Mesopotamia (when offered)	
AS.130.382	History of Mesopotamia II (when offered)	
Four 300-level courses in a focus area of art and archaeology, history and culture, or language [1]		12
Three Near Eastern Studies courses at any level		9
AS.130.420	Seminar in Research Methods in Near Eastern Studies	3
Total Credits		**36**

[1] Students pursuing the language focus area need to select four courses from the following languages: Akkadian, Arabic, Ancient Egyptian, Biblical Hebrew, Modern Hebrew or Sumerian. These may not be 300-level.

Note: AS.130.420 Seminar in Research Methods in Near Eastern Studies - This writing intensive seminar covers different selected topics in order help students develop skills in specific research areas such as critical reading, analysis, interpretation, and writing. Specific topics vary each semester. AS.130.420 Seminar in Research Methods in Near Eastern Studies is required of NES Majors, but is also open to non-majors who have taken at least one 100-level and one 300-level Near Eastern Civilization course, or with the consent of the instructor. It is recommended that NES majors take the class during their sophomore or junior years.

Sample Program of Study

A typical path toward degree completion might include the following sequence of courses:

Course	Title	Credits
First Year		
First Semester		
Near Eastern elective at any level #1		3
	Credits	**3**
Second Semester		
Required intro course #1		3
	Credits	**3**
Second Year		
First Semester		
Required intro course #2		3
	Credits	**3**
Second Semester		
Near Eastern elective at any level #2		3
Course in focus area at 300 level #1		3
	Credits	**6**
Third Year		
First Semester		
Required upper level core course #1		3
AS.130.420	Seminar in Research Methods in Near Eastern Studies	3
	Credits	**6**
Second Semester		
Required upper level core course #2		3
Course in focus area at 300 level #2		3
	Credits	**6**
Fourth Year		
First Semester		
Course in focus area at 300 level #3		3
Near Eastern elective at any level #3		3
	Credits	**6**
Second Semester		
Course in focus area at 300 level #4		3
	Credits	**3**
	Total Credits	**36**

Honors

Those seniors wishing to be considered for departmental honors may choose to write a senior thesis. A student must maintain a 3.5 GPA in the major (through the junior year) to be eligible for departmental honors. It is advisable for such students to contact a faculty member to supervise the thesis during the spring semester of their junior year and to notify the department's Director of Undergraduate Studies. The student should then register for two semesters of independent study in the senior year. The student will need to complete the thesis and submit it for approval to their faculty advisor in the final semester of their coursework.

Near Eastern Studies, Minor

Near Eastern Studies Minor Requirements

To minor in Near Eastern Studies, a student must complete six courses (18 credits) from among the department's offerings. One of these courses must be from among the Department's regularly offered introductory courses to the ancient Near East: AS.130.101 Ancient Near Eastern Civilizations; AS.130.126 Gods and Monsters in Ancient Egypt; and AS.130.170 Diplomacy and Conflict in the Ancient Middle East. The remaining five courses are selected, in consultation with the director of undergraduate studies in Near Eastern Studies, to meet the needs and interests of the student. Minors may wish to survey all of the different fields covered by the department or to focus on a single ancient language, culture, or methodology in more depth.

Students must earn a "C-" or higher grade in all courses used to satisfy minor requirements and courses may not be taken satisfactory/unsatisfactory. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies. All courses must be at least 3 credits.

Code	Title	Credits
Select one of the following:		3
AS.130.101	Ancient Near Eastern Civilizations	
AS.130.126	Gods and Monsters in Ancient Egypt	
AS.130.140	Hebrew Bible / Old Testament	
AS.130.170	Diplomacy and Conflict in the Ancient Middle East	
5 Additional Near Eastern Studies Courses (AS.130.xxx)		15
Total Credits		**18**

Near Eastern Studies, PhD

The graduate program, the oldest of its kind in the nation, is designed to train professional scholars and teachers in four main areas: Egyptology, Assyriology, Northwest Semitic languages and literatures (including Hebrew Bible), and Near Eastern archaeology and art. The courses may be modified in particular years to suit the needs of students currently in residence. Reading and private study under the direction of the faculty are considered as important as work in class. The seminars allow small groups of students and faculty to engage in close study of special problems. As the program is intended to lead to the Ph.D., students are admitted as candidates for the M.A. only in unusual cases.

Financial Aid

The department awards all students admitted to the Ph.D. program an annual fellowship covering full tuition and a full stipend for living expenses for up to five years. During this period, students may be occasionally asked to serve as a teaching or research assistant. In addition, the period of support may be extended by the various competitive awards available to advanced students within the university. When appropriate, the department will award travel stipends for graduate students to participate in archaeological excavations in the Near East or visit collections in this country and abroad.

For further information on graduate study in Near Eastern Studies, visit the departmental website at http://neareast.jhu.edu/.

Program Requirements

Students working full time toward the Ph.D. may expect to do three to four years of course work, after which comprehensive examinations must be written before work on the dissertation begins. The examinations cover a student's major and minor fields of concentration. After passing these examinations, the student, in consultation with the faculty, prepares a dissertation proposal for faculty consideration and then proceeds to write the dissertation.

An ability to read scholarly French and German is necessary, and an examination in one of these must be passed within the first semester of residence at Hopkins. The examination in the other may be delayed not more than one year. Some command of Greek and Latin is necessary to pursue biblical studies.

Neuroscience

http://krieger.jhu.edu/neuroscience (http://krieger.jhu.edu/neuroscience/)

Neuroscience is the study of the nervous system and how it functions. Neuroscientists study the nervous system from all levels, ranging from molecules interacting with cell membranes to brain systems subserving cognitive functions such as language. Dramatic progress has been made at all levels, and the field continues to grow. On the Homewood campus, researchers studying the nervous system are in the departments of Biology, Biomedical Engineering, Biophysics, Cognitive Science, and Psychological and Brain Sciences and in the Krieger Mind/Brain Institute. Their presence provides the opportunity for an innovative, interdepartmental program which offers a broad overview of the neuroscience field, as well as more advanced training in one of four focus areas.

Cellular and Molecular Neuroscience (CM) focuses on the mechanisms by which information flows within and between cells in the nervous system, and the mechanisms through which the cellular structure of the nervous system develops and is maintained. Topics include the molecular basis of membrane permeability, action potentials, sensory transduction, synaptic transmission, neuronal modulation, mechanisms of drug action, and the molecular basis of genetic disorders of the nervous system.

Cognitive Neuroscience (CG) focuses on how cognitive functions, such as vision or language, are implemented by the brain. Drawing upon a variety of techniques for probing the working brain at cognitive and neural levels, including functional neuroimaging, analysis of cognitive impairments in brain-damaged patients, and electrophysiological techniques, research in cognitive neuroscience seeks to relate mental representations and computations to brain mechanisms and processes.

Computational Neuroscience (CP) focuses on applying mathematical tools and theories to investigate brain function. This discipline incorporates a diverse set of approaches from mathematics, physics, engineering, and computer science, to understand how the nervous system processes information. Such principles are used to answer questions across a variety of domains of neuroscience: cellular/molecular, systems and circuits, behavioral and cognitive.

Systems Neuroscience (ST) seeks to relate brain structure and functioning to behaviors and related physiological processes. Research in this area explores the description and analysis of neural circuits. This includes identifying the brain nuclei and interconnections making up a circuit, identifying and investigating the implicated neurotransmitters, and characterizing the intrinsic and extrinsic factors that modulate the development and adult functioning of the circuit. Topics as diverse as learning and memory, communication, sensory systems, and motivated behaviors (e.g., reproduction, feeding, and aggression) are explored from this perspective.

Neuroscience Program Committee

The Neuroscience Program Committee coordinates course offerings, oversees the program's interdepartmental courses, reviews and updates the administration of the program, makes decisions about admission to the B.S./M.S. program, approves proposed research programs and mentors for students in the B.S./M.S. mentored research program, and evaluates the final reports and presentations from the research year.

Programs

- Neuroscience, Bachelor of Science (p. 2053)
- Neuroscience, Bachelor of Science/Master of Science (p. 2055)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.080.140. Neuroscience and Human Behavior. 1 Credit.
Consider how behavioral neuroscience can help you understand these curiosities and more: a native Australian man suffers a stroke, recovers, but can only speak Chinese; altering but one neural receptor in the prairie vole will change it from a monogamous to polygamous animal; neurodegenerative disease can cause fits of uncontrollable laughter, despite nothing being funny. Learn how cells and chemicals result in complex behavior and critically examine whether or not the mind is an organic computer in this behavioral neuroscience program.

AS.080.160. Neurobiology: Cellular & Systems. 1 Credit.
Establish a foundation for advanced study of neuroscience in research and medicine. Your curriculum will cover university-level cellular, network, and behavioral neurobiology using engaging evidence-based educational models that encourage enthusiasm and uninhibited critical thought. Additional emphasis will be placed on familiarizing you with the laboratory and research methods useful in a scientific career. There are no prerequisites, but a background in biology is helpful.

AS.080.250. Neuroscience Laboratory. 3 Credits.
This course will give students the "hands-on" experience of the inter-disciplinary nature of neuroscience. Students will use anatomical and neuro-physiological techniques to understand the basic underlying principles of neuroscience.
(AS.080.305 AND AS.080.306) OR AS.200.141

AS.080.301. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3 Credits.
What does a rat exploring it's environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. Topics will include motor function, emotional and motivational states, disorders such as dementia and schizophrenia, among others. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures.
AS.200.141 OR AS.080.105 OR (AS.080.305 and AS.080.306), OR by instructor permission.

AS.080.303. Structure of the Nervous System. 3 Credits.
This course takes a structural biological approach to studying the nervous system. In using a systems approach it provides students of cellular-molecular and computational neuroscience with a thorough introduction to functional, microscopic and submicroscopic organization of the brain, spinal cord and peripheral nervous system.
AS.080.305 AND AS.080.306

AS.080.304. Neuroscience Learning and Memory. 3 Credits.
This course is an advanced survey of the scientific study of learning and memory. Different perspectives will be used to review the science of learning and memory including the cellular-molecular basis of synaptic plasticity, the functional circuitry involved in learning and memory and memory systems in the brain. The course is designed to provide a deep understanding of the issues and current debates in learning and memory research and focuses specifically on animal models of memory and memory impairment. This is an interactive lecture course with a strong emphasis on student participation.
AS.200.141 OR (AS.080.305 AND AS.080.306) OR (AS.020.312 AND AS.020.306) or instructor permission.

AS.080.305. Neuroscience: Cellular and Systems I. 3 Credits.
(Formerly Nervous Systems I) Neuroscience: Cellular and Systems I is a fully integrated, two-semester course that surveys the cellular and molecular biology of neurons as well as the structure and function of the nervous system. Students must register for Neuroscience: Cellular and Systems II offered in the second term. Course open to JHU undergraduates only.
AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.080.105 OR AS.050.105 or instructor permission.

AS.080.306. Neuroscience: Cellular and Systems II. 3 Credits.
(Formerly Nervous Systems II) Neuroscience: Cellular and Systems II uses the functional organization of the somatosensory system as a means to examine mechanisms of neutral development. Generation and maturation of neurons, guidance of axons, formation of synapses and the regressive events that shape the adult nervous system will be examined. At the same time we will explore the structure and function of brain regions that allow us to feel pain and temperature, detect vibration, recognize shape and perceive where we are in space. Finally, the single-neuron events that lead to adaptive changes in function will be explored in the context of central nervous system control of movement and of higher order functions of speech and memory. Students who do not register for Neuroscience: Cellular and Systems I offered during the first term should not register for this class.
AS.080.305

AS.080.308. Neuroeconomics. 3 Credits.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience.
AS.080.306 OR AS.200.141 OR AS.020.312

AS.080.310. Synaptic Function and Plasticity. 3 Credits.
The function of the nervous system is based on synaptic transmission between neurons. Synapses are not static structures, but dynamically change with experience. Experience-dependent synaptic plasticity not only allows proper development of the nervous system in tune with the environment, but also is the basis for learning and memory. This course will cover the structure and function of synapses, and how they are altered by experience to encode information.
(AS.020.305 AND AS.020.306) OR (AS.080.305 AND AS.080.306)

AS.080.314. How to Live a SPECtacular Life. 3 Credits.
Good mental health is key to living a happy and healthy life. This statement is true whether you are an elementary, middle, high school, or college student. It is also true if you are a recent graduate in the work force, middle aged, retired or elderly. According to the literature, to achieve good mental health you need to focus on the role that the brain plays in our Social, Physical, Emotional and Cognitive (SPEC) health. These are four key components needed to achieve and maintain good mental health. The main focus of the course will be mental health. Using the research, we will come up with tools to help educate individuals, at any point in their lifespan, on how to live a SPECtacular life.
Area: Writing Intensive
AS.080.306

AS.080.316. Prefrontal Cortex- Computational Models and Neurophysiology. 3 Credits.
The course will cover the function of the prefrontal cortex. We will discuss various computational models of prefrontal function and neurobiological evidence for these models. The class will consist of lectures, student presentations, and discussions.
AS.080.305 AND AS.080.306 or Instructor Permission.

AS.080.321. Computational Neuroscience. 3 Credits.
This course is designed to give students an overview of computational neuroscience. The topics discussed will cover many exciting domains of the field including neural coding, decision-making, learning, attention and connectomics. Lectures will be complemented with hands on experience working with computational models using Matlab and/or other programming language. The overarching goal of the course is to increase overall literacy in the field of computational neuroscience and to gain an appreciation of the interplay between experimental and theoretical neuroscience.
AS.080.306 OR AS.200.141. Familiarity with programing in Matlab will be helpful but not necessary.

AS.080.326. Neurobiology and Diseases of the Peripheral Nervous System. 3 Credits.
This course will cover neurobiology and disorders of the peripheral nervous system (PNS). A particular emphasis will be on cellular interactions within the PNS and with target tissues. For example, the two principal components of the peripheral nerves- axons and Schwann cells- have intimate and continuous cellular communications that are critical for physiological function of the PNS. The course will teach how these cellular interactions are developed, maintained throughout life, and are impacted by injury and diseases.
AS.080.305 AND AS.080.306

AS.080.328. Behavioral Neuroscience Lab. 3 Credits.
Class designed to give students first-hand knowledge of the behavioral procedures and techniques used to study behavior in the field of neuroscience. Students will gain hands-on experience by carrying out some of the behavioral tasks used to assess animals under specific behavioral domains, discuss why certain aspects (i.e. genotype, environment conditions, group size, etc.) are important factors to consider when designing, planning, and carrying out such experiments, and learn the relevance of behavioral research in translational medicine.
AS.200.141 OR AS.200.302 OR AS.080.301 OR (AS.080.305 AND AS.080.306) or permission by instructor.

AS.080.334. Unraveling Circuits in Systems Neuroscience- Emerging Techniques. 3 Credits.
Rapid technological development in neuroscience provides researchers with new tools and strategies to ask important questions about the neural basis of behavior. In this course, we will examine some of these emerging techniques, along with a sampling of the questions they have allowed scientists to answer. We will consider the conceptual insights that arise from answering these questions, as well as investigate the fundamental science behind the cutting-edge techniques that allow us to understand brain function in health and disease.
AS.080.305 AND AS.080.306 or Instructor Approval

AS.080.336. Brain-Body Interactions in Health and Disease. 3 Credits.
Both classical and recent primary research papers that deal with cross signaling of other major organs with the nervous system, particularly the central nervous system, will be discussed. Students will be exposed to emerging literature on how peptides, signaling molecules, and hormones effect the nervous system function both in health and in diseases.
AS.080.305 AND AS.080.306

AS.080.339. Cognitive Neuroscience of Aging. 3 Credits.
When will I start forgetting things? Do I have Alzheimer's disease? What can I do to minimize the chances I experience cognitive decline with aging? This class will spend a significant amount of time exploring the answers to all of these questions and many more. We will review basic information about cognitive neuroscience techniques such as fMRI, DTI, PET, and EEG and explore how aging changes the brain. The heart of the class will be about cognitive changes with aging with a focus on attention, executive function, memory, and emotion. The class will end with discussions about Alzheimer's disease and Parkinson's disease as well as lifestyle choices that increase/decrease the chances of healthy aging.
Area: Writing Intensive
AS.200.141 OR AS.080.306

AS.080.345. Great Discoveries in Neuroscience. 3 Credits.
This course examines the historical and intellectual context of selected, key advances in neuroscience, how they were made and the impact they had on an understanding of the nervous system. Particular attention will be paid to advances in cellular and molecular neuroscience. Among the topics covered will be the discovery of monoamine neurotransmitters and of endocannabinoids, the role of neurotrophins in neural development, and prion-based diseases of the brain.
AS.080.306

AS.080.355. Computational Principles of Biological Vision. 3 Credits.
Even though we take it for granted, vision is a superpower. It is so central to how most of us interact with the world, and so effortless, that we are unaware of the astronomically complex computations that underlie it. There are no computer vision programs that can match the performance of the human visual system in understanding the real, physical, 3D world. On the biological side, vision is the most thoroughly studied sensory system. As such, vision is a rich target for computational understanding of the brain. Vision is the topic that both of us actively study, and remain passionately excited about. In this course, we present our up-to-the-minute synthesis of what we consider to be the most important insights into how vision, especially object vision, works, at the level of biological information processing. We believe the result is a coherent, mechanistic account of how the brain transforms images into visual understanding. We know of no textbook that provides a comparable viewpoint. In addition to presenting this visual information processing framework, we hope to teach you how to critically evaluate current research papers within that framework. To this end, we will be incorporating discussions of current research papers into our lectures and assignments. The course will feature a series of weekly lectures (delivered as videos) and a weekly assignment. The weekly assignment will be an essay, and will make up the largest portion of your grade. The remainder of your grade will come from one larger final essay. We will offer 2 weekly, voluntary Zoom meetings to discuss any questions about the material that might have come up.

AS.080.360. Diseases & Disorders of the Nervous System. 3 Credits.
(EN.580.421 AND EN.580.422) OR (AS.020.305 AND AS.020.306) OR AS.080.306 or instructor permission.

AS.080.366. Neuroscience of Pain. 3 Credits.
This course is a systems-oriented course focusing on the basic neural processing of pain signals in both the spinal cord and the brain. Class lectures will cover the anatomical and molecular basis for the transmission and perception of pain signals, basic concepts such as allodynia, hyperalgesia, peripheral and central sensitization, remodeling, the pathophysiology of chronic pain disorders and the cognitive and emotional aspects of pain. We will also discuss the regulation of pain signals by descending systems, and current practices and new advances in the treatment of pain.
Area: Writing Intensive
AS.080.305 OR AS.080.306 OR AS.020.312 or permission of instructor.

AS.080.370. The Cerebellum: Is it just for motor control?. 3 Credits.
The cerebellum is traditionally thought to be involved in movement and motor control, and observations of patients with cerebellar damage do in fact show motor deficits. However, since the proliferation of functional MRI, cerebellar activations have been observed in a surprising number of brain activation studies that were designed to investigate the neural correlates of cognitive function. Over the past 2 decades, an increasing number of investigators have tried to characterize the role of the cerebellum in cognitive function. Through lectures and reading discussions this course will survey cerebellar circuitry, neuroimaging and neuromodulatory methods for investigating the cerebellum, and traditional and non-traditional functions of the cerebellum, including cerebellar involvement in cognitive functions such as language, working memory, and executive control.
(AS.080.306 AND AS.080.203) OR AS.050.203

AS.080.411. Advanced Seminar: Neuroscience I. 3 Credits.
For students in the first semester of the BS/MS Program. Instructor permission required.

AS.080.412. Advanced Seminar: Neuroscience II. 3 Credits.
For students in the 2nd semester of the BS/MS Program. Permission Required.

AS.080.413. Advanced Seminar: Neuroscience III. 3 Credits.
For students in the 3rd semester of the BS/MS Program. Permission Required.

AS.080.500. Scientific Communication: Neuroscience. 0.5 Credits.
Scientific communication is crucial to encouraging engagement with the public and advancing science. The Scientific Communication course consists of a two hour research orientation session held at the beginning of the semester and a two hour exit session held at the end of the semester. In addition to the two in-person sessions, students will work with faculty and peers to hone their ability to communicate complex topics to a broad audience. These interactions will take place over the course of the semester via Blackboard and have a more flexible timeline. See special notes section for specific meeting day/time for the two in-person sessions. Students need to complete two semesters of Scientific Communications. Students are strongly encouraged to only take Scientific Communications when they are either actively involved in research or have completed at least three credits of research. See Neuroscience Research website for more details.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.505. Practicum in Language Disorders- Community Based Learning. 2 Credits.
This course provides the opportunity to learn about adult aphasias, language disorders which are one of the most common consequences of stroke. You will receive training in supportive communication techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Independent mode of transportation required. Co-listed as AS.050.500 in Cognitive Science. Find out more about the practicum site at https://www.leagueforpeople.org/scale.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.;Students must have earned an A- or Better in AS.050.105 OR AS.050.203 OR AS.080.203 OR AS.050.311, or obtain instructor's permission.

AS.080.511. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.531. Research Neuroscience-Freshmen. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.534. Neuroscience Research- Freshmen. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.541. Research Neuroscience – Neuroscience Majors. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.544. Research Neuroscience – Neuroscience Majors. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.555. Neuroscience DUS Approved Research. 1 - 3 Credits.
TBA
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.582. Neuroscience: Internship. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.592. Research Neuroscience – Freshmen. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).

AS.080.601. Neuroeconomics -Graduate Level.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience. Only graduate students can register for this course. Instructor signature is required.

AS.080.610. Experiential Learning: HopKids – Kennedy Krieger Institute.
This experiential learning experience provides the opportunity to learn and interact with children recovering from brain, spinal, and musculoskeletal injuries. Students will travel to the Kennedy Krieger Institute to volunteer in the Child Life Department where they will participate in a variety of therapeutic activities including playing with the children and helping them achieve goals on Saturdays (days/times TBA). Students will gain valuable clinical experience while learning patient empathy. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

AS.080.612. Experiential Learning: KEEN (Kids Enjoying Exercise Now).
In this experiential learning experience, students will work with children who have a variety of neurological disabilities, including autism, cerebral palsy and Down syndrome through exercise and recreational activities. We partner with the KEEN (Kids Enjoy Exercise Now), a nonprofit organization. Student “coaches” will receive a profile for the KEEN athlete that they will pair up with during a session. Students will receive initial training and then select 4 sessions to attend. Sessions are held on the first and third Sunday of each month during the semester at KEEN centers in Maryland. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be via student carpools using Zipcars, personal vehicles or Hop Vans. No credit - S/U Grading Only

AS.080.614. Experiential Learning: Making Neuroscience Fun.
The goal of Making Neuroscience Fun (MNF), a community outreach program, is to educate Baltimore city and county elementary school students, on how to achieve good mental health by focusing on the role the brain plays in our Social, Physical, Emotional and Cognitive (SPEC) health. The MNF- Brain Health: It's SPECtacular program focuses on using scientific research as the foundation for developing information about mental health and relaying the information in an age-appropriate manner. The elementary school students (pre-K through 5th grade) learn about their brain and how to keep it healthy and our students learn valuable communication skills. Hopkins students will receive initial training and certification on content & presenting skills prior to participating and will then be part of the new launch of the program. In order to participate, students must be available either 7am-11am or 11am-3pm at least one day per week, Monday-Friday. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times of the orientation/exit sessions). Transportation to the schools will be via student carpools using Zipcars or personal vehicles. No credit - S/U Grading Only

AS.080.616. Experiential Learning: HopKids- Children's Center.
This experiential learning experience provides students the opportunity to learn, play and interact with children receiving treatment in over 20 different specialties including dermatology, endocrine, GI, immunology, urology, plastics and hematology. Students will volunteer in outpatient clinics at the Johns Hopkins Children's Center where they will encourage, provide developmentally supportive play for children and participate in a variety of activities including art projects, coloring, board games, and reading. Students will gain valuable clinical experience and be exposed to a wide range of children with a variety of diseases/illnesses. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times. Students will sign up for 5 shifts on a first-come, first-serve basis after the mandatory orientation. Shifts are Mondays 1pm-3pm, Tuesdays 10am-12pm, Wednesdays 1pm-3pm, Thursdays 10am-12pm and Fridays 10am-12pm throughout the semester. Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Volunteer shifts will take place at outpatient clinics in the Rubenstein Child Health Building. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

AS.080.618. Experiential Learning: Helping an Aging Community: Social and Cognitive Support for Seniors.
This experiential learning opportunity provides a hands-on experience, working side-by-side with elderly individuals at the Keswick Multi-care Center and the Roland Park Place. Students will have a chance to interact with residents that have both short-term and long-term cognitive and physical impairments. The residents typically live on the premises but may also be participating in a daytime care only program. Students will interact with the residents in various enriching ways in order to develop a better understanding of how our mind and body ages with time. Students will gain hands-on experience working with residents with dementia, Alzheimer's and other cognitive impairments that effect the body and the brain. 4 students per semester. Students MUST attend a mandatory orientation and a mandatory exit session to be held onsite (Day/Time TBD). Students are required to provide a written description of their experiences and to discuss their experiences at the exit session. Time Commitment: 2-3 hours a week for the entire semester. Must provide medical immunization records to include- flu shot and PPD (tuberculosis). Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

AS.080.620. Theoretical and Computational Neuroscience.
The objective of this class is to introduce fundamentals of quantitative neuroscience. The focus is on understanding basic information processing in neurons and networks of neurons, with some more advanced topics added. Knowledge of basic calculus and linear algebra is required.

AS.080.630. Bodian Seminar Series.
The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures, which will be announced per e-mail. Undergraduate students who register for this course are asked to study a publication by the speaker, as provided with the announcement, and to prepare a question for each speaker together with a brief discussion of the possible answers. Permission required for undergraduate students.

AS.080.631. Bodian Seminar Series.
Graduate students and Seniors with instructor permission. The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures. About 12 lectures are scheduled per semester (see http://www.mb.jhu.edu/seminars.asp). Speakers, titles of lectures, and dates are announced to participants per e-mail. The announcements also include links to one or two recent publications of the speaker. Undergraduate students who register for this course are asked to study these papers and to prepare a question for each speaker together with a brief discussion of the possible answers. Question and discussion have to be in writing and turned in the day before the lecture. Undergraduates must e-mail the instructor for permission (cfetsch@jhu.edu) prior to registering for the course.

AS.080.660. Commencement Project.
This course is for BA/MS students that have completed their year of research and are now working on their final thesis. In this course, students devote their semester to preparing their final thesis documentation and move forward with their Master's Thesis Defense which is the last piece to the program. This course is for BA/MS student only and students should only register for this course in their last semester in the program.

AS.080.849. Teaching Practicum.
Permission required. Graduate students only.

AS.080.850. Mentored Research: Neuroscience I.
For students in the BS/MS Program first semester. Permission required.

AS.080.851. Mentored Research: Neuroscience.
Permission Required. For students in the BS/MS Program.
Area: Writing Intensive

AS.080.852. Mentored Research: Neuroscience II.
For students in the BS/MS Program second semester. Permission required.

ME.440.300. Research Practicum. 0 Credits.
N/A

ME.440.301. Research in Neuroscience (Undergraduate). 1 Credit.
N/A

ME.440.699. Neuroscience Elective. 0 Credits.
For Medical Students only. Specialized Topics in Neuroscience. Refer to Medical Student Electives Book located at https://www.hopkinsmedicine.org/som/students/academics/electives.html.

ME.440.701. Diseases of the Brain. 0 Credits.

ME.440.702. Cellular Substrates of Learning and Memory. 1 Credit.

ME.440.705. Cellular and Molecular Basis of Neural Development II. 1.5 Credits.
This is a seminar and reading course devoted to the discussion of the cellular and molecular processes underlying neuronal development.

ME.440.707. Molecular Mechanisms in Synaptic Transmission. 2 Credits.
An advanced seminar and reading course devoted to the molecular and cellular mechanisms underlying synaptic transmission and the regulation of synaptic plasticity. We will discuss fundamental discoveries in th eareas of synapse formation, transmitter release, vesicle recycling, ribbon synapses, dendritic modulation, LTP/LTD, and homeostatic regulation. Students will present two papers and provide written answers to questions about the assigned reading.

ME.440.709. Neuropharmacology. 1.5 Credits.
The course will illustrate the use of diverse approaches (molecular, biochemical, electrophysiological and behavioral) to decipher how psychotropic drugs impact the brain. The course will utilize a lecture format for the first two classes and then switch to a “journal club” format in which students will present classic and recent articles. Topics to be covered include: opiates, benzodiazepines, antipsychotic drugs, and antidepressant drugs.

ME.440.710. Molecular Mechanisms Of Cell Death: Necrosis To Apoptosis. 0 Credits.

ME.440.711. Cellular and Molecular Basis of Neural Development I: Neuronal Differentiation. 1.5 Credits.
A seminar and reading course devoted to the discussion of the cellular and molecular processes underlying neuronal development. Topics include cell proliferation and migration, nervous system patterning, differentiation of neurons and glia, morphogen and growth factor signaling mechanisms, neuronal polarity, and neural stem cell biology. Examples from vertebrate and invertebrate model systems will be covered. This course is designed to complement The Cellular and Molecular Basis of Neural Development II: Axon Guidance and Synaptogenesis, offered alternate years.

ME.440.712. Science, Ethics and Society. 0.5 Credits.
This is a required course for first year Neuroscience students. The course format will consist of focused discussions with the course director and rotating faculty on pre-assigned case studies and more informal discussions about various topics.

ME.440.715. Trends in the Neurobiology of Aging. 0.5 Credits.
This course will reveiw recent research progress in the fields of agin and neurodegenerative disorders with coverage of cellular, moleular, and systems neuroscience.

ME.440.718. Neurobiology. 1 Credit.
For Non-Neuroscience Program students only. This course provides a comprehensive introduction to cellular and molecular neurobiology. Areas covered by the basic science faculty include the following: Neural development (cell specificaion, differentiation, axon guidance, synapse formation); Cellular electrophysiology (ionic conductances, resting potential, action potentials); Molecular biology of synaptic transmission (neurotransmitters and receptors); Sensory transduction (phototransduction, other sensory systems); Synaptic plasticity (mechanisms of synapse modification); and Cellular basis of neurological and psychiatric disorders.

ME.440.720. The Retinal Ganglion Cell. 0 Credits.

ME.440.721. Development and Function of the Spinal Cord Circuitry. 0 Credits.

ME.440.722. Visual System. 0 Credits.
From outer segments of photoreceptors to the Fusiform Face Area of the cerebral cortex we hav ecome to understand how the visual system works at each of many fundamental levels. This course examines the basis for perception of visible objects at each of these levels. We will use teh secondary literature (scientific reviews) to accent the hard-won truths about visual system functional organization and to highlight ongoing controversies. Students will be led through carefully chosen reviews in a series of lectures and written summaries prepared by faculty. Three exams and a final exam will test students not on their memorization of minutiae but on their understanding of fundamental principles.

ME.440.723. Writing About the Brain. 3 Credits.
The goal of this course is to train working neuroscientists to effectively and clearly communicate ideas aboout nervous system function of a general audience

ME.440.724. Neuroscience Career Skills. 1 Credit.
This course is intended to help graduate students in the Neuroscience Graduate Program obtain an appreciation of options, challenges, and steps towards careers in the field of neuroscience.

ME.440.725. Neurobiology of Substance Abuse Disorders. 0 Credits.

ME.440.726. The Hypothalamus: The Brain's Master Homeostat. 1.5 Credits.
The hypothalamus is he central regulator of a broad range of homeostatic behaviors essential to survival, and plays a key role in controlling emotional and appetitive behaviors. This course offers an overview of both historical and recent work on this vital brain region. Topics covered will include the evolution and development of the hypothalamus, control of circadian rhythms and sleep, regulation of hunger and body temperature, as well as hypothalamic regulation of sexual, defensive, and affiliative behavior.

ME.440.727. Brain Diseases: Neurodevelopmental Diseases. 2 Credits.
This course will consider the emerging unity of approaches and concepts in understanding a range of brain diseases such as schizophrenia, bipolar disorder, autism and related disorders.

ME.440.728. Brain Diseases: Neurodegenerative Diseases. 2 Credits.
The course will provide an in-depth examination of the biology of the classic neurodegenerative diseases such as Huntington’s disease, Parkinson’s disease, ALS and Alzheimer’s disease, and other diseases may be considered depending on student and faculty interest.

ME.440.729. Emerging Strategies in Understanding Innate Behaviors. 0 Credits.
This course will focus on the neural control of homeostatic, appetitive and emotional behaviors, with an emphasis on the pypothalamus. It offers an overview of bothhistorical and recent work on this vital brain region. Topics covered will include the evolution and development of the hypothalamus, control of circadian rhythms and sleep, regulation of hunger and body temperature, as well as hypothalamic regulation of sexual, defensive, and social behavior. Each class will include 20-30 minutes of introductory lecture, followed by in-class discussion of 2 relevant recent papers. The final grade will be based on class participation and one 6- page review article or mock grant proposal on any related topic. An optional lecture on good grant writing practices will also be offered.

ME.440.730. Submitting Your First Paper. 0.5 Credits.
This course is taught by Neuroscience Training Program faculty and provide "how to" training and guidance to second year Neuroscience students.This course covers: knowing when you are ready to write, getting started, writing transparent methods, generating figures, writing an effective discussion section, citation manager, writing for rigor and reproduciblity, choosing appropriate statistics, how to choose a journal, peer review, and how to respond to reviews.

ME.440.800. Research in Neuroscience. 0 Credits.
Research in Neuroscience.

ME.440.801. Readings in Neuroscience (Journal Club). 1 Credit.
A weekly talk on current literature topics of special interest. Students present either journal articles or their own research depending on their year in the program.

ME.440.802. Current Topics in Neuroscience (Research Seminar). 1 Credit.
Weekly lecture on current research by active researchers. Topics are chosen so that an overall balance of subjects in neuroscience are covered in the course of a year. Students receive a reading list before the seminar and will be given an opportunity to meet with outside speakers.

ME.440.803. Teaching in Neuroscience. 0 Credits.
TBD

ME.440.804. Directed Readings in Neuroscience. 0 Credits.
Independent course work, directed by assigned faculty member.

ME.440.807. Topics in Somatosensory Research. 0 Credits.
TBD

ME.440.808. Physiology of Sensory Transduction. 1.5 Credits.
A reading/presentation course focusing on visual and chemical transductions. The electrophysiological approach will be emphasized. A couple of long or several short papers will be presented and discussed by students each week.

ME.440.810. Readings In Systems Neuroscience. 1 Credit.
A weekly talk on current literature topics of special interest. Students present journal articles for discussion.

ME.440.811. Neuroscience Cognition I. 4.5 Credits.
This is the first half of a 4-quarter course on the cellular and molecular basis of neural function adn the neural basis of perception, cognition, and behavior. Topics covered in this half include (1) development and structure of the nervous system, (2) cellular neurophysiology, (3) neural signaling and coding, and (4) audition, vocalization, and language. Lectures will be presented by faculty in the Neuroscience, Neurology, Biomedical Engineering, Psychology, and Cognitive Science departments. The course will also include discussion sections based current literature and several neurotechniques sessions designed to familiarize student with current experimental approaches in cellular, systems and molecular neurosciences. This course is required of all students in the Neuroscience Graduate Program.

ME.440.812. Neuroscience Cognition II. 4.5 Credits.
This is the second half of a 4-quarter course on the cellular and molecular basis of neural function and the neural basis of perception, cognition, and behavior. Topics covered in this half include (1) perception of objects, space, and self, (2) movement and balance, (3) learning and memory, (4) neurological and psychiatric disorders, and (5) global function in the nervous system. Lectures will be presented by faculty in the Neuroscience, Neurology, Biomedical Engineering, Psychology, and Cognitive Science Departments. The course will also have a laboratory component. This course is required of all students in the Neuroscience Graduate Program.

ME.440.813. Current Issues in Systems and Cognitive Neuroscience. 1 Credit.
The mammalian brain is an information processing system without parallel. It excels at recognizing objects and substances, reconstructing space, making decisions, and controllig complex behaviors. The neural mechanisms underlying these abilities are studied by a large community of systems and cognitive neuroscientists. This research has generated a rapidly evolving field of high-profile discoveries and lively debates between competing laboratories. Our course aims to convey a clear sense of this field by focusing on current experimental and conceptual controversies regarding organization and function in the primate nervous system. Each week will focus on a different topic represented by two or more recent papers (selected by an instructor) reflecting timely questions or opposing points of view. Students will present the papers informally and direct a debate over the relative merits of hte conflicting view points.

ME.440.814. Research in Neuroscience (BCMB). 0 Credits.
Thesis Research

ME.440.815. Stem Cells: Unit of Development and Unit of Regeneration. 0 Credits.
This is a seminar and reading course devoted to discussion of different types of stem cells. The course will highlihgt ongoing research at JHU and current advances in the stem cell field.

ME.440.816. Topics in Cortical Plasticity. 0 Credits.
Experience-dependent changes in cortical synapses and circuits are critical for proper development of the nervous system and for memory storage. This course will focus on recent findings on fundamental mechanisms of plasticity from synapses to circuit level through discussions of recent research papers.

ME.440.817. Psychedelics. 0 Credits.
In this course we will explore the history and uses of psychoactive compounds, the neurobiological basis of their activity, and their potential for healing. Along the way we will attempt to debunk some of the most common myths about this especially controversial class of drugs. Each session, one student will take the lead in discussing the assigned primary research articles (except for 2-3 documentary film sessions, which will take up the whole period). Beyond didactic learning, this graduate level course is designed to hone students' skills in oral presentations, critical thinking, as well as composition and editing of manuscripts.

ME.440.818. Bioenergetics, Neuroplasticity and Brain Health. 1 Credit.
Overindulgent sedentary lifestyles are increasingly common with adverse consequences for trajectories of brain health in current and future generations. This course will review findings from studies of humans and animals that are elucidating the cellular and molecular mechanisms by which energy intake and exercise affect structural and functional neuroplasticity. This topic will be considered from a bioenergetic perspective with emphases on brain evolution, developmental neurobiology, adult neuroplasticity and disorders of mood and cognition. The course will consist of a series of introductory lectures, and subsequent class meetings in which hot topics in the field are discussed.

ME.440.819. Rigor, Reproducibility, and Responsibility in Science. 2 Credits.
In this course, students will learn the professional norms and practices central to a successful scientific career. Also, students will learn about what constitutes scientific misconduct and about proper behavior involving issues of authorship and various conflicts of interest. Students will be exposed to rules, regulations, and ethics relating to animal and human experimentation. Further, participants will learn about how to choose a lab, keep proper records, deliver presentations, and seek funding.

ME.440.820. Circuits and Brain Disorders. 2 Credits.
The course is designed to serve as an introduction to neurodegenerative disorders of the nervous system, and is intended to provide a balance of basic neurobiology, clinical presentation, biomarkers, genetics, and therapeutic approaches. One of the goals would be to highlight the distinct circuitry that is most impacted by each disorder. The curriculum includes: (1) one lecture per week and (2) a coordinated journal club once per week.

ME.440.821. Readings in Neuroscience Journal Club. 0 Credits.
Neuroscience training program journal club.

ME.440.822. Computational Principles of Biological Vision. 3 Credits.
This course will present up-to-the-minute synthesis of what are considered the most important insights into how vision, especially object vision, works, at the level of biological information processing. The result will be a coherent, mechanistic account of how the brain transforms images into visual understanding. Also, this course will teach how to critically evaluate current research papers within that framework by incorporating discussions of current papers into the lectures and assignments.

ME.440.823. Grant Writing Skills. 1 Credit.
The course covers topics such as: writing a clear and compelling specifics aims page; writing a concise background section; preliminary data; stating a clear hypothesis; describing how data will be analyzed and how results will be predicted; power analysis and sufficient sample size; problems and alternatives; devising a budget and justification; and using vertebrate and human subjects.

ME.440.824. Cell Physiology of Visual and Olfactory Transductions. 1 Credit.
A reading/student presentation course focusing on visual and olfactory transductions studied by single-cell electrophysiology.

ME.440.825. Quantitative Neurogenomics. 3 Credits.
Modern molecular neuroscience involves an understanding of how the organization and use of the genome contributes to the development, structure, and function of the nervous system. Regulation of the genome and gene expression across different cell types, conditions, and spatial domains can provide insight into the functional organization of the brain and the etiopathology of disease. In this course, students will learn, through a combination of didactic, interactive, and hands-on sessions, the basics of genomic and transcriptional data analysis as applied to current questions in neuroscience. Students will outline and develop workflows and algorithms for both bulk and single-cell analysis of gene expression and genomic data using publicly available datasets. Finally, students will explore methods for spatial analysis of gene expression and how application of newer technologies can enhance understanding of anatomy and connectivity.

Cross Listed Courses

Behavioral Biology

AS.290.400. Comparative Neural Systems and Behavior Research Discussions. 0.5 Credits.
This course is required concurrently with research in the Comparative Neural Systems Research and Behavior lab. During the scheduled meetings we will discuss scientific papers, policies and procedures, research ethics and other information related to activities in the lab. At the end of the semester, students will present their research in groups. This course is only open to students doing research in the Neural Systems and Behavior Lab.

Cognitive Science

AS.050.105. Introduction to Cognitive Neuropsychology. 3 Credits.
When the brain is damaged or fails to develop normally, even the most basic cognitive abilities (such as the ability to understand words, or perceive objects) may be disrupted, often in remarkable ways. This course explores a wide range of cognitive deficits, focusing on what these deficits can tell us about how the normal brain works. Topics include brain anatomy and causes of brain damage, reading and spelling deficits, unilateral spatial neglect, hemispheric disconnection, cortical plasticity, and visual perception of location and orientation. Students read primary sources: journal articles that report deficits and discuss their implications.

AS.050.315. Cognitive Neuropsychology of Visual Perception: The Malfunctioning Visual Brain. 3 Credits.
When we think about our ability to see, we tend to think about our eyes, but in fact vision happens mostly in the brain. This course explores the remarkable perceptual deficits that occur when the visual regions of the brain are damaged or fail to develop normally, focusing on what these perceptual malfunctions tell us about normal visual perception. Topics include visual system anatomy and physiology; functional specialization in the lower visual system as revealed by cerebral achromatopsia (color blindness resulting from brain damage) and akinetopsia (impaired motion perception); cortical plasticity in the visual system; spatial deficits in perception and action; and the implications of high-level visual deficits, including prosopagnosia (impaired face recognition), Charles Bonnet syndrome (complex visual hallucinations in blind areas of the visual field), blindsight (accurate responding to visual stimuli despite apparent inability to see them), and aphantasia (lack of visual imagery).
AS.050.105 OR AS.050.203 OR AS.080.203 OR AS.050.101 OR AS.200.110 OR AS.200.211 or instructor's permission.

AS.050.326. Foundations of Cognitive Science. 3 Credits.
This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion. Also offered as AS.050.626.
Area: Writing Intensive

AS.050.332. Developmental Cognitive Neuroscience. 3 Credits.
In-depth examination of the current literature on cognitive development in the context of developmental cognitive neuroscience. Please see course prerequisites. Meets with AS.050.632.
AS.050.101 OR AS.050.339 OR AS.200.132 OR AS.050.105 OR Instructor's Permission.

AS.050.339. Cognitive Development. 3 Credits.
This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.

AS.050.626. Foundations of Cognitive Science.
Also offered as AS.050.326. This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion.
Area: Writing Intensive

AS.050.639. Cognitive Development.
Also offered as AS.050.339. This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.

First Year Seminars

AS.001.109. FYS: Why'd Your Brain Sign You up for This?. 3 Credits.
This First-Year Seminar will explore the neuroscience of choice. In addition to exploring the neurobiology of choice, we will dabble with philosophical ideas of free will and determinism. We will also touch on questions related to culpability. For example, are people who break the law but suffer from brain damage responsible for their actions? Sound interesting? Well, why stop there? Let's sit back, eat some popcorn and take a look at how popular culture depicts the neuroscience of choice in the movies. Yes, with your help, we can do it all – but will you choose to???

AS.001.115. FYS: Illusions, Delusions, and Other Confusions. 3 Credits.
Most people think the strongest kind of evidence in a criminal case is a confident eyewitness. Most students think re-reading textbook materials or class notes is the best way to prepare for an exam. And all too many people think that measles vaccines cause autism. All three of these ideas are wrong. In this First-Year Seminar, we will explore what modern psychology has uncovered about how our intuitions concerning human nature deceive us, and lead to incorrect ideas such as the ones just mentioned. We will discuss a wide variety of topics including "the attention economy," groupthink, and subliminal perception.

Psychological & Brain Sciences

AS.200.141. Foundations of Brain, Behavior and Cognition. 3 Credits.
A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.

AS.200.304. Neuroscience of Decision Making. 3 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience.
AS.080.305 AND AS.080.306 or instructor permission

AS.200.329. Real World Human Data: Analysis & Visualization. 3 Credits.
Experiments in human cognition typically involve careful manipulation and control of variables in order to answer specific questions about the mind or brain. However, digital devices now provide an ocean of incidental human data: information collected continuously about our behavior and physiological states as we go about our lives. These incidental datasets are often large and noisy, and pose different analysis and visualization challenges from more traditional manipulated experiments. In this course students will learn computational tools and qualitative approaches for exploring, visualizing and interpreting large human data. The course emphasizes computer-based analysis of open-source human behavioral and neuroimaging datasets. Analyses will be conducted in MATLAB. Instructor will grant approval as long as you have previous programming experience (roughly equivalent to material covered in an introductory-level programming course). Self-taught or real-world experience can be applicable in lieu of previous formal classroom instruction.

AS.200.334. Human Memory Psychology. 3 Credits.
This class will survey the behavioral and biological science of human memory. Historical perspectives as well as modern controversies will be discussed. Intersections with other fields such as law, education, medicine, and technology will be highlighted. The course will be a mixture of lectures and group discussions.

AS.200.344. Behavioral Endocrinology. 3 Credits.
This course examines both the evolution and mechanisms of hormonal effects on behavior across animals, including humans. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, stress and social behavior. Additionally, this course emphasizes developing skills in hypothesis testing and critically assessing the scientific literature. Cross-listed with Behvioral Biology and Neuroscience.
(AS.200.141 OR AS.080.306) OR (AS.020.151 AND AS.020.152) or instructor's permission

AS.200.370. Functional Human Neuroanatomy. 3 Credits.
This course examines the general organizing principles of the anatomy of the human central nervous system and how this anatomical organization relates to function, from the level of neural circuits, to systems, to behavior. Students will learn to identify neuroanatomical structures and pathways in dissections and MRI images through computerized exercises. Readings and lectures will emphasize general structure-function relationships and an understanding of the functional roles of particular structures in sensory, motor, and cognitive systems.
Recommended Course Background in addition to pre-requisite AS.080.305: AS.080.306 OR AS.050.203 OR AS.080.250
AS.080.305

AS.200.376. Neuropsychopharmacology. 3 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on biological concepts underlying structures and functions of the brain that relate to mental disorders. An introduction to neurobiology and brain function is presented as it applies to the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience. Enrollment limited to juniors and seniors.
(AS.080.305 AND AS.080.306) OR AS.020.306 AND AS.020.312) OR (AS.200.141 AND AS.020.306)

For current faculty and contact information go to https://krieger.jhu.edu/neuroscience/people/

Neuroscience, Bachelor of Science

Neuroscience Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

Neuroscience is the study of the nervous system and how it functions. Neuroscientists study the nervous system from all levels, ranging from molecules interacting with cell membranes to brain systems subserving cognitive functions such as language. Dramatic progress has been made at all levels, and the field continues to grow. On the Homewood campus, researchers studying the nervous system are in the departments of Biology, Biomedical Engineering, Biophysics, Cognitive Science, and Psychological and Brain Sciences and in the Krieger Mind/Brain Institute. Their presence provides the opportunity for an innovative, interdepartmental program which offers a broad overview of the neuroscience field, as well as more advanced training in one of four focus areas.

General Information

- Students are encouraged to complete an optional introductory course in their freshman year, such as AS.200.141 Foundations of Brain, Behavior and Cognition or AS.050.105 Introduction to Cognitive Neuropsychology . Either of these courses will satisfy the prerequisite for AS.080.305 Neuroscience: Cellular and Systems I. Foundations of Brain, Behavior and Cognition will also satisfy the prerequisite for AS.080.250 Neuroscience Laboratory.
- Students interested in attending medical school will need to take a second semester of organic chemistry and its corresponding laboratory and biochemistry to meet medical school admission requirements; however, these courses are not major requirements.
- Students are required to select their advanced neuroscience elective courses from one of four approved focus areas: cellular and molecular neuroscience, cognitive neuroscience, computational neuroscience, or systems neuroscience. Approved courses fulfilling this requirement are found on the neuroscience website (http://krieger.jhu.edu/neuroscience/bs-program/courses/) or in the schedule of classes.
- Students considering double majoring in Public Health should plan to take only one of the Probability and Statistics course options listed below. AS.280.345 (https://e-catalogue.jhu.edu/search/?P=AS.280.345) Public Health Biostatistics will not fulfill the Neuroscience Major requirements.
- To apply towards the major, all courses must be taken for a letter grade and a grade of C- or better is required.

Code	Title	Credits
Neuroscience Sequence		
AS.050.203	Neuroscience: Cognitive (spring)	3
AS.080.250	Neuroscience Laboratory (fall/spring)	3
AS.080.305	Neuroscience: Cellular and Systems I (fall)	3
AS.080.306	Neuroscience: Cellular and Systems II (spring)	3
Mathematics, Statistics, and Science Courses		
EN.553.211	Probability and Statistics for the Life Sciences	4
or EN.553.310	Probability & Statistics for the Physical Sciences & Engineering	
or EN.553.311	Probability and Statistics for the Biological Sciences and Engineering	
or EN.553.111 & EN.553.112	Statistical Analysis I and Statistical Analysis II	
AS.110.106	Calculus I (Biology and Social Sciences)	4
or AS.110.108	Calculus I (Physical Sciences & Engineering)	
AS.110.107	Calculus II (For Biological and Social Science)	4
or AS.110.109	Calculus II (For Physical Sciences and Engineering)	
or AS.171.113	Subatomic World	
AS.030.101 & AS.030.105	Introductory Chemistry I and Introductory Chemistry Laboratory I	4
AS.030.102 & AS.030.106	Introductory Chemistry II and Introductory Chemistry Laboratory II	4
or AS.030.103	Applied Chemical Equilibrium and Reactivity w/lab	
AS.030.205	Introductory Organic Chemistry I	4
AS.171.101	General Physics: Physical Science Major I	4
or AS.171.103	General Physics I for Biological Science Majors	
or AS.171.107	General Physics for Physical Sciences Majors (AL)	
AS.173.111	General Physics Laboratory I	1
AS.171.102	General Physics: Physical Science Major II	4
or AS.171.104	General Physics/Biology Majors II	
or AS.171.108	General Physics for Physical Science Majors (AL)	
AS.173.112	General Physics Laboratory II	1
Biology Sequence [1 and 2]		
Select one biology course with lab of the following:		6-8
AS.020.151 & AS.020.153	General Biology I and General Biology Laboratory I (see footnote about AP Biology credits) [1]	
AS.020.152 & AS.020.154	General Biology II and General Biology Lab II (see footnote about AP Biology credits) [1]	
AS.020.303 & AS.250.253	Genetics and Protein Engineering and Biochemistry Lab (see footnote) [3]	
or AS.020.31	Biochemistry Project lab	
AS.020.305 & AS.020.315	Biochemistry and Biochemistry Project lab	
or AS.250.25	Protein Engineering and Biochemistry Lab	
or AS.250.25	Protein Biochemistry and Engineering Laboratory	
AS.020.306 & AS.020.316	Cell Biology and Cell Biology Lab	
AS.020.374 & AS.020.377	Comparative Physiology and Comparative Physiology Lab	
Advanced Neuroscience Elective Courses and Focus Area		

Nine credits of 300-level or higher approved courses from one of four focus areas: systems neuroscience, cognitive neuroscience, computational neuroscience, or cellular and molecular neuroscience		9
Three credits of 300-level or higher approved course outside of focus area selected above		3
If pursuing the Computational Neuroscience focus area, EN.553.291 (or the combo of AS.110.201/212 and AS.110.303) and AS.250.205 are required in addition to the 12 credits in advanced courses required for the focus area.		
If pursuing the Cellular and Molecular Neuroscience focus area, AS.020.306 and AS.020.316 must be selected as the required biology course with lab		
Research [4]		
Six credits of neuroscience research		6
AS.080.500	Scientific Communication: Neuroscience	0.5
AS.080.500	Scientific Communication: Neuroscience	0.5
Total Credits		**71-73**

1 For students with Biology credit from an exam (AP, IB, GCE), exam credit may not use credits towards this requirement. Therefore, these student must take at least one biology course and its lab at JHU. Students who elect to take General Biology I or II with its lab will lose the corresponding exam credits.

2 Students planning on taking the MCAT should consider whether or not they have a solid biology background coming into JHU. If they are unsure they should consult Pre-Professional advising and consider taking General Biology I and II along with the associated labs.

3 AS.020.340 Developmental Genetics Lab can be taken during the **fall semester only.** AS.250.253 Protein Engineering and Biochemistry Lab OR AS.020.315 Biochemistry Project Lab can be taken either in the fall or spring semester.

4 Research must be conducted in one of the neuroscience laboratories participating in the program. **Students must register for two semesters** of AS.080.500 (https://e-catalogue.jhu.edu/search/?P=AS.080.500) Scientific Communication: Neuroscience for a **total of 1 credit.** Students are strongly encouraged to only take Scientific Communications when they are either actively involved in research or have completed at least three credits of research.

Sample Program

The following course sequence is only a suggestion and is based on the assumption that there are no AP/IB/TR credits applied. Please consult with your faculty advisor when selecting and registering for classes, as there are multiple ways to complete the major.

Course	Title	Credits
First Year		
First Semester		
AS.030.101	Introductory Chemistry I	3
AS.030.105	Introductory Chemistry Laboratory I	1
AS.110.106	Calculus I (Biology and Social Sciences)	4
Biology Option 1 [1]		3
Biology Lab Option 1		1
	Credits	**12**
Second Semester		
AS.030.102	Introductory Chemistry II	3
AS.030.106	Introductory Chemistry Laboratory II	1
AS.110.107	Calculus II (For Biological and Social Science)	4
Biology Option 2 [1]		3
Biology Lab Option 2		1

Upper Level Neuroscience Course #3		3
	Credits	**6**
Second Semester		
Upper Level Neuroscience Course #4		3
	Credits	**3**
	Total Credits	**72-80**

1 Biology Course Options and Biology Lab Options can be taken in any year. For Students who are obtaining a Cellular and Molecular focus area, one of the biology options must be Cell Biology with lab.

[2] AS.080.305 Neuroscience: Cellular and Systems I & AS.080.306 Neuroscience: Cellular and Systems II can be taken sophomore or junior year.
[3] Research in Neuroscience can be taken at any time.
[4] AS.080.250 Neuroscience Laboratory can be taken any time after completing AS.200.141 Foundations of Brain, Behavior and Cognition or AS.080.305 Neuroscience: Cellular and Systems I & AS.080.306 Neuroscience: Cellular and Systems II.

Honors in the Major

To receive honors in Neuroscience, students must meet the following criteria:

- Earn a GPA of 3.5 or better in major requirements
- Earn 9 credits of required research
- Presentation of research findings at the Day of Research in Engineering, Arts, Medicine and Sciences (DREAMS) during the Fall or Spring semester
- Receive a recommendation from research mentor

Neuroscience, Bachelor of Science/ Master of Science

BS/MS Program

Undergraduate students in the Krieger School of Arts and Sciences may pursue a five-year BS/MS in neuroscience, which involves a year of intense research and seminars in addition to courses for the major.

The principal aim of the BS/MS program is to allow students with a serious interest and commitment to pursuing research in a future MD, MD/PhD, or PhD program to spend a year conducting laboratory research full-time. Students are expected to concentrate fully on their research, attend seminars and journal clubs, and write extensively about their research and related topics.

The BS/MS program is structured to provide students with a genuine, intensive research experience in an area of systems neuroscience, cognitive neuroscience, or cellular and molecular neuroscience.

The typical candidate is a senior who has completed all required courses for the major and has a major GPA of at least 3.5. The application process begins each fall semester (September–October), when the program administrator sends an email with specific due dates and requirements to students. Accepted students begin their research year in the spring semester of their senior year. The program covers 50 percent of the tuition cost for a student's fifth year of study.

Requirements for the B.S./M.S. Degree

Current JHU undergraduate Neuroscience majors who wish to apply for the B.S./M.S. Program in their junior or senior year must meet the following minimum requirements (prior to applying):

- A minimum 3.5 GPA in all required courses for the undergraduate major and cumulative GPA of 3.5.
- Completion of all courses required 6 credits of research for the JHU B.S. degree in Neuroscience.
- Completion of the neuroscience sequence as well as the mathematics and science courses required for the BS.

Students in the BS/MS program must complete all requirements for the BS degree in neuroscience, as well as a total of 43 credits of advanced and specialized courses to complete the MS degree. The additional requirements for the MS degree are as follows:

Advanced Seminars in Neuroscience (6 credits)

The Advanced Seminar in Neuroscience is offered in the fall and spring terms.

Final Spring Courses (12 credits)

Degree requirements include 12 credits of additional advanced course work (300-level or above). At least three credits must be at 400-level or above. Courses must be related to the study of neuroscience and ideally focused on the student's concentration of study and area of research. Students may choose courses from the approved list of undergraduate advanced courses. (In addition, up to six additional credits of the Advanced Seminar in Neuroscience, and/or statistics courses, graduate courses and seminars may be taken with the approval of the program director.)

Mentored Research (24 credits)

During the research year, students will complete a total of 24 credits of mentored research. Students must complete nine credits of research in a spring academic term, six in the summer and an additional nine in the fall.

B.S./M.S. Commencement Project (1 credit)

After completing the research year, students must register for a one-credit independent study course intended to track the progress and defense of the student's final research project.

Writing Requirement

Writing is an integral part of scientific work; accordingly, one aim of the mentored research year is to train students in scientific writing. BS/MS students prepare a research proposal for admission to the program, as well as a final report in scientific journal article format. Students are required to write 4 brief (>10 double-spaced pages) review papers in the spring and summer terms of their research year.

Note: This masters degree is only open to current Johns Hopkins University undergraduate students pursuing a major in neuroscience.

Philosophy

http://philosophy.jhu.edu/

The William H. Miller III Department of Philosophy offers programs and courses at the undergraduate and graduate levels. The courses cover major periods in the history of Western philosophy and many of the main topics of systematic investigation: epistemology, metaphysics, ethics, aesthetics, philosophy of language, mathematical logic, and philosophy of science.

The undergraduate courses are designed to introduce students to the history of philosophy and its place in Western civilization, to teach them how to read philosophical texts, and to help them think about philosophical problems, including those that arise in other disciplines. Students may major in philosophy or use it as a concentration for an area major in Humanistic Studies. They may also study philosophy along with another subject, either by constructing a double major or by taking courses designed to help them develop philosophical perspectives on their own fields of interest.

The graduate program is intended primarily for those planning to teach philosophy and make their own contributions to it. While the acquisition of a broad background in the history and different systematic fields of philosophy is required, students will have ample opportunity to develop their own special interests.

The William H. Miller III Department of Philosophy encourages its students to take advantage of the rich resources of other departments at Johns Hopkins University. As a look at their offerings will show, numerous philosophically important courses are offered by such departments as Political Science (political philosophy), History of Science and Technology (philosophy of science), the Humanities Center (hermeneutic, interpretive, and literary theory), and Cognitive Science.

Programs

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.150.111. Philosophic Classics. 3 Credits.
The course introduces students to philosophy by critically examining selected texts in the Western philosophical tradition. Philosophers whose ideas will be examined include Plato, Descartes, Rousseau and Nietzsche.
Area: Writing Intensive

AS.150.112. Philosophical Problems. 3 Credits.
An introduction to philosophy through several central problems. This year’s topics are free will, death, time, and race.

AS.150.118. Introduction to Formal Logic. 3 Credits.
An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion of an argument follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life.

AS.150.125. Life and Death. 3 Credits.
This course will address some of the Big Picture questions about human life using the methods of analytic philosophy. These questions include: What am I, and what kinds of things could happen to me before I’d no longer be me? Should I be afraid of death? Is it better to be than to never have been anything at all? When is it permissible to end a life? To what extent do I live my life freely?

AS.150.136. Philosophy & Science: An Introduction to Both. 3 Credits.
Philosophers and scientists raise important questions about the nature of the physical world, the mental world, the relationship between them, and the right methods to use in their investigations of these worlds. The answers they present are very different. Scientists are usually empiricists, and want to answer questions by experiment and observation. Philosophers don’t want to do this, but defend their views a priori. Why? Can both be right? Readings will present philosophical and scientific views about the world and our knowledge of it. They will include selections from major historical and contemporary figures in philosophy and science. The course has no prerequisites in philosophy or science.

AS.150.161. Introduction to Nietzsche. 3 Credits.
This course will provide an introduction to Nietzsche’s thought. We shall read and discuss selections from each period of his philosophical development. Students will receive a grade based on a combination of attendance, participation, and a final essay, drafts of which will be discussed with the instructor prior to the final due date.
Area: Writing Intensive

AS.150.193. Philosophy of Language Seminar: Proper Names and Definite Descriptions. 3 Credits.
In talking with each other, we often use proper names like 'Juliet' and definite descriptions like 'The most beautiful fresco in Italy' to pick out persons and objects in our world. But what do these expressions mean exactly? In this seminar, we’ll slowly and carefully work through some classic philosophical texts that address this issue. These texts will provide an introduction to the philosophy of language, and to analytic philosophy in general.
Area: Writing Intensive

AS.150.201. Introduction To Greek Philosophy. 3 Credits.
A survey of the earlier phase of Greek philosophy. Socrates, Plato, and Aristotle will be discussed, as well as two groups of thinkers who preceded them, usually known as the pre-Socratics and the Sophists.

AS.150.205. Introduction to the History of Modern Philosophy. 3 Credits.
An overview of philosophical thought in the seventeenth and eighteenth centuries. We shall focus on fundamental questions in epistemology (knowledge, how we acquire it, its scope and limits), metaphysics (the ultimate nature of reality, the relation of mind and body, free will), and theology (the existence and nature of God, God’s relation to the world, whether knowledge of such things is possible): all questions that arose in dramatic ways as a result of the rise of modern science. The principal philosophers to be discussed are Descartes, Locke, Hume and Kant, though we shall also make the acquaintance of Spinoza, Leibniz and Berkeley.

AS.150.215. Problems with Knowledge, Evidence, and Action. 3 Credits.
This course covers a selection of recent work in epistemology and serves as an introduction to these topics. Issues to be discussed include new approaches to the nature of knowledge and skepticism, normative aspects of the way we handle information in our decision-making, epistemic injustices, and epistemic requirements for democratic discourse.
Area: Writing Intensive

AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Area: Writing Intensive

AS.150.220. Introduction to Moral Philosophy. 3 Credits.
An introduction to moral philosophy through in-depth and critical reading of selected texts from the history of philosophy. The philosophers whose texts will be discussed include Aristotle, Kant, Mill, and Hannah Arendt.

AS.150.223. Formal Methods of Philosophy. 3 Credits.
For better or for worse (and we think better), during the last century or so, philosophy has become infused with logic. Logic informs nearly every area of philosophy; it is part of our shared language and knowledge base. Vast segments of literature, especially in contemporary analytic philosophy, presuppose basic competence in logic and a familiarity with associated formal methods, particularly set theoretical. The standard philosophy curriculum should therefore guarantee a minimum level of logic literacy, thus enabling students to read the literature without it seeming like an impenetrable foreign tongue. This course is an introductory survey of the formal methods that a contemporary philosopher should be familiar with. It is not mathematically demanding in the way that more advanced courses in metalogic and specialized topics may be. The emphasis is on basic comprehension, not on mathematical virtuosity.

AS.150.235. Philosophy of Religion. 3 Credits.
Can one prove or disprove the existence of God? What is the relation between reason and faith? Are science and religion at odds with one another? We will consider historically significant discussions of these questions as well as important contemporary writings.

AS.150.237. Foundations of Modern Political Philosophy. 3 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill.

AS.150.240. Intro-Political Philosop. 3 Credits.
This course begins by reviewing canonical texts in modern political philosophy beginning with Thomas Hobbes and John Locke and ends by exploring classic questions in contemporary debates in race, gender, and identity.
Area: Writing Intensive

AS.150.245. Philosophy of Mind. 3 Credits.
If we know anything, it is natural to think it is our own minds. Despite this, philosophers have long disagreed about the natures of the states which make up our minds. And there is equally little agreement as to what makes such states count as mental in the first place. This course will investigate the nature of different aspects of mind and their interrelations. Time permitting, we will explore debates and puzzles about perception, memory, imagination, dreaming, pain and bodily sensation, emotion, action, volition and those states commonly classed as propositional attitudes: knowledge, belief, desire and intention. This will put us in a position to ask what if anything unifies such phenomena as mental

AS.150.260. Introduction to Metaphysics. 3 Credits.
Metaphysics addresses fundamental questions about the nature and structure of reality. This course will offer an introduction to metaphysics, and a survey of metaphysical debates about topics including free will, possibility and necessity, and arguments for the existence of God.

AS.150.300. Prometheus Editorial Workshop. 1 Credit.
Prometheus is an international undergraduate philosophy journal published by students at Johns Hopkins University. The purpose of the journal is to promote philosophic discourse of the highest standard by offering students an opportunity to engage in open discussion, participate in the production and publication of an academic journal, and establish a community of aspiring philosophers. Students enrolled in this workshop will act as the staff readers for the journal. For more information, please visithttps://prometheus.students.jh.edu/Prerequisite: MUST have taken one philosophy course

AS.150.301. Majors Seminar:. 3 Credits.
Topics change by semester. Please view class search to see what the topic is for a specific term.
Area: Writing Intensive

AS.150.307. Plato's Phaedrus. 3 Credits.
This is a reading course. Together we will do a close reading of one of Plato's masterpieces, the Phaedrus. We will also use this text to address general questions of interpretation, such as how to approach a philosophical classic, how to discern its underlying idea, etc.

AS.150.312. Applied Public Health Ethics and Decision-Making. 3 Credits.
In this course, students receive an introduction to core theoretical foundations and case studies in public and global health ethics. this course adopts an applied framework for understanding how public health ethical values are navigated in different decision-making processes. This course is geared toward juniors and seniors.
Area: Writing Intensive

AS.150.313. Technology, Democracy, and Social Justice. 3 Credits.
This course will consider healthcare technologies through the lens of political values: democracy and social justice. At a broad level, we will ask of these technologies: Who should decide on their design and use when the experts don't resemble the public and the public lacks expertise? How can we provide broad access to the benefits of these new technologies without exposing vulnerable people to further risk and unfairness? More narrowly, the course will focus on four technologies that affect healthcare: anti-malarial "gene drive" mosquitoes, medical AI, genomic data collection, and social media. Gene drives hold the promise of modifying mosquitoes to prevent the spread of infectious disease, but they also expose people in lower-income countries to unanticipated risks. Artificial intelligence and genomic data can deliver scarce medical resources to those who need it most and tailor it to minorities based on their precise characteristics. But they can also exacerbate existing unfairness while exposing minorities to risks of further discrimination and surveillance. Social media has a similar potential to deliver crucial health data, especially in a pandemic. But it also promotes the spread of misinformation among the populations most in need of help. This course will consider how we can balance the benefits and risks of these novel technologies and who gets to decide that balance.
Area: Writing Intensive

AS.150.330. Decisions, Games & Social Choice. 3 Credits.
We investigate rational decision making at the individual and group level. In the first section of the course on decision theory, we consider how a single rational agent will act in a choice situation given her knowledge, or lack thereof, about the world and her particular risk profile. In the second section on game theory, we explore different kinds of competitive and cooperative strategic interactions between agents, and we define different kinds of solutions, or equilibria, of these games. We also apply game theory to the study of morality, convention, and the social contract. In the final section of the course on social choice theory, we turn to group decision making with a focus on the impossibility results of Arrow and Sen.

AS.150.331. Themes from the Philosophy of Religion. 3 Credits.
Religion has always been a contested and extensively debated topic throughout the history of philosophy, and the topics from the philosophy of religion are still relevant today. In this course, we will look at several of those topics: what is religion? Do we have reason to believe or not believe in God? How does God relate to the world (or are there many Gods)? How can we understand religious practice? And what role (if any) should religion play in our society?

AS.150.355. Philosophy of Law. 3 Credits.
In this course we will examine major issues in the philosophy of law, including the nature of law, the role of the Constitution in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required.

AS.150.356. Political Philosophy and Public Health Ethics. 3 Credits.
In 2015, Rand Paul generated controversy by insisting that parents should have complete discretion over whether to vaccinate their children. When pressed to come up with a defense for this policy, Paul replied, "The state doesn't own your children. Parents own the children, and it is an issue of freedom and public health." His rationale for his policy proposal and the responses to it hint at several fundamental questions about the role of the State as it pertains to producing health, as well as more practically oriented questions concerning policy. In this seminar, we will consider both sorts of questions. We will consider the merits of and objections to various policies such as cigarette bans, mandatory seatbelt or helmet laws for motorists, taxes for sugary beverages, and prohibitions of the private sale of organs. We will also ask more philosophical questions: When discussing public health, what constitutes 'the public'? And how should we connect public health and policy measures to salient concepts such as legitimacy, justice, coercion, manipulation, paternalism, autonomy, liberty, privacy, and parental rights? In asking these questions, both at the level of policy and more philosophically, we will engage with a variety of political theories, including various strands of feminism, anarchism, libertarianism, perfectionism, critical race theory, leftist theories, broadly consequentialist theories, and public reason liberalism. Must have some background in philosophy or bioethics.
AS.150.219 OR AS.150.220 OR AS.150.237 OR AS.150.240

AS.150.400. Simone de Beauvoir. 3 Credits.
Seminar on Beauvoir's moral philosophy, covering the major works of the 1940s. Readings will include selections from The Blood of Others, Pyrrhus and Cineas, All Men are Mortal, The Ethics of Ambiguity, and The Second Sex. Open to graduate students and advanced undergraduates. (Beginning undergraduates should contact Professor Kosch.) No prerequisites.
Area: Writing Intensive

AS.150.401. Greek Philosophy: Plato and His Predecessors. 3 Credits.
A study of pre-Socratic philosophers, especially those to whom Plato reacted; also an examination of major dialogues of Plato with emphasis upon his principal theses and characteristic methods. Cross-listed with Classics.
Area: Writing Intensive

AS.150.402. Aristotle. 3 Credits.
A study of major selected texts of Aristotle.
Area: Writing Intensive

AS.150.403. Hellenistic Philosophy. 3 Credits.
A study of later Greek philosophy, stretching roughly from the death of Aristotle to the Roman imperial period. Epicureans, Stoics, and Skeptics will be the main philosophical schools examined.
Area: Writing Intensive

AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations

AS.150.405. Evidence: An Introduction. 3 Credits.
What is evidence? Can it ever be disregarded in science, the law, or religion, and if so, when? What are the paradoxes of evidence (grue, ravens) and how can they be solved?

AS.150.406. Tragedy and Living Well. 3 Credits.
This course revisits the idea of tragedy as represented in Ancient Greek thought for the purpose of approaching questions of flourishing and ethical living from a different angle.
Area: Writing Intensive

AS.150.409. Wittgenstein On Certainty. 3 Credits.
Wittgenstein's On Certainty consists of four notebooks containing remarks on knowledge, certainty, doubt and truth. In this course, we will undertake a close study of Wittgenstein's notes, critically examining competing interpretations of Wittgenstein's ideas and the different use of those ideas have been taken up in current debates about philosophical skepticism.

AS.150.410. The Philosophy of Afrofuturism I. 3 Credits.
The main goal of speculatibe fiction is to render a familiar world slightly unfamiliar to then ask familiar questions in new ways. Afrofuturism as a genre of sci-fi, fantasy, and horror written by and about black people, applies this ethic to the problems of race, broadly speaking. In this course we survey major texts to philosophically inquire into phenomena like incaceration., Slavery and it's lingering effects, and colonialism among other themes.
Area: Writing Intensive

AS.150.411. Modal Psychology. 3 Credits.
In this seminar, we'll consider recent theoretical and experimental work by philosophers, psychologists, and cognitive scientists on the impact of our modal judgments (i.e., our judgments about whether a state or event is possible or not, statistically probable or not, morally bad or not, and so forth) in various cognitive domains. Among other things, we'll look at recent studies suggesting that our moral judgments can affect our judgments about whether an agent is free to act, our selection of causes, and our simulation of counterfactual possibilities in surprising ways.

AS.150.415. Typefaces and Meaning. 3 Credits.
While linguists and philosophers have developed deep and intricate theories of meaning for natural language, considerably less attention has been paid to how the form of written and printed language can itself communicate content. In this seminar, we'll look at recent theoretical and experimental work across a range of different disciplines that converges on the idea that typeface choice can be a rational means to communicate and construct different personae. To get clearer about this phenomenon, we'll also look at philosophical work on meaning, and related research on sociolinguistic variation and the semantics and pragmatics of expressive language.

AS.150.417. Kant's 'Critique Of Pure Reason'. 3 Credits.
An examination of the philosophy of Immanuel Kant, with emphasis on The Critique of Pure Reason.

AS.150.418. Hermeneutics and Critrical Theory. 3 Credits.
An introduction to two of the most important and influential schools in twentieth-century German philosophy. This course examines the works of four leading representatives of these schools, i.e. Heidegger, Gadamer, Horkheimer, and Habermas.

AS.150.419. Kant's Critique/Judgment. 3 Credits.
This course will examine closely and in detail the aesthetic and teleological parts of Kant's third masterpiece, The Critique of the Power of Judgment.

AS.150.420. Mathematical Logic I. 3 Credits.
Mathematical Logic I (H,Q) is the first semester of a year long course. It introduces the two notions of validity and provability for both sentential logic and first-order predicate logic, showing in each case that there is a system of derivation such that any argument is valid if and only if the conclusion is provable from the premises. The result is non-trivial since validity is a semantic notion involving the preservation of truth, while a proof is a finite syntactic object whose correctness can be effectively decided. The goal of the course, however, is to learn how to formulate mathematical theories in first-order logic and to explore various of their properties (or lack thereof) such as completeness, decidability, axiomatizability, finite axiomatizability, and consistency. The course concludes with a brief introduction to model theory and the interpretability of one theory in another, which is the basis for relative consistency proofs in mathematics.

AS.150.421. Mathematical Logic II. 3 Credits.
Euclid set a precedent for the codification of mathematics by axiomatizing the set of geometric truths. An obvious question that arises is whether all branches of mathematics are axiomatizable, especially fundamental ones, such as arithmetic. In the late nineteenth century, what became known as Peano arithmetic was proposed as an axiomatization. The essential feature of an axiomatization is that, although one might have an infinite number of axioms, as does Peano arithmetic, one must have a decision procedure for determining whether a given proposition is or is not an axiom. In 1931, Gödel proved the astounding result that, not only is Peano arithmetic incomplete in the sense that it does not entail all arithmetic truths, but any attempted axiomatization of arithmetic is incomplete, and thus the set of arithmetic truths must be undecidable. Subsequently, Alfred Tarski showed the set of arithmetic truths is not even definable. Also, by finding a finitely axiomatizable undecidable subtheory of Peano arithmetic, Alonzo Church was able to show that there is not even an effective procedure for determining whether a given sentence is a logical truth.Finally, in his 1931 paper, Gödel argued a second incompleteness theorem, viz., that any theory strong enough to express its own consistency, as he showed Peano arithmetic to be, cannot prove its own consistency unless it is inconsistent. We will cover these and other results that have had a profound effect on the foundations of mathematics. It remains an open question whether so basic a theory as Peano arithmetic is consistent.
AS.150.420

AS.150.422. Axiomatic Set Theory. 3 Credits.
A development of Zermelo-Fraenkel set theory (ZF), including the axiom of choice (ZFC), a system in which all of mathematics can be formulated (i.e., entails all theorems of mathematics). Although, we'll do an exposure to transfinite ordinals and cardinals in general so that you can get a sense for how stupendously “large” these can be, the main thrust concerns certain simple, seemingly well-posed conjectures whose status appears problematic. For example, the Continuum Hypothesis (CH) is the conjecture that the cardinality of the real numbers is the first uncountable cardinality, i.e., the first cardinality greater than that of the set of natural numbers. Equivalently, there is no uncountable subset of real numbers strictly smaller in cardinality than the full set of reals. (You'd think that if there were one, you would be able eventually to find such.) Cantor thought that CH is true, but could not prove it. Gödel showed, at least, that if ZFC is consistent, then so is ZFC+CH. However, Paul Cohen later proved that if ZFC is consistent, then so is ZFC + the negation of CH. In fact, CH could fail in astoundingly many ways. For example, the cardinality of the continuum could be (weakly) inaccessible, i.e., of a cardinality that cannot even be proved to exist in ZFC (although the reals can certainly can be proved to exist in ZFC). So, are there further, intuitively true axioms that can be added to ZFC to resolve the cardinality of the continuum, and CH is definitely true or false? Or, as Cohen thought, does CH simply lack a definite truth value?

AS.150.423. Theory of Knowledge. 3 Credits.
An advanced introduction to the central problems, concepts and theories of contemporary philosophical epistemology (theory of knowledge). Topics to be explored will includes: what is knowledge (and why do we want it)?; theories of justification (foundationalism, the coherence theory, etc.); externalism and internalism in epistemology; skepticism, relativism and how to avoid them. Reading from contemporary sources.

AS.150.425. Enlightenment Moral and Political Theory. 3 Credits.
An examination of some of the central texts of the Enlightenment, including works by Locke, Montesquieu, Rousseau, and Kant.
Area: Writing Intensive

AS.150.426. Philosophy and Disability. 3 Credits.
In this course, we will consider various philosophical issues related to disability. What counts as a disability? What obligations do we have, both as individuals and as a society, to people with disabilities? What counts as respecting people with disabilities, and what counts as unjustifiable discrimination against them?
Area: Writing Intensive
AS.150.219 OR AS.150.220

AS.150.428. Spinoza's Theological Political Treatise. 3 Credits.
The course is an in-depth study of Spinoza's Theological-Political Treatise. Among the topics to be discussed are: Spinoza's Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza's theory of the State, the role of religion in Spinoza's political theory, the freedom to philosophize, the metaphysics of Spinoza's Theological-Political Treatise, and finally, the reception of the TTP.

AS.150.430. Hegel's Phenomenology of Spirit. 3 Credits.
From the opening chapter on "Sense-certainty" to the concluding "Absolute Knowledge," we will follow Hegel's account of the experience of consciousness through the transitions to self-consciousness, reason, spirit, and religion.

AS.150.432. Philosophy of Memory. 3 Credits.
Memory is amongst the most fundamental capacities of the mind. Without memory, we would be limited to our present experience, and many of our other cognitive capacities and social practices would be impossible. In this course we will investigate interconnected questions including: What is the nature of memory and of its different varieties? How should we study memory: what should be the roles of psychology, neuroscience, and introspection? If someone loses many of their memories due to injury or disease, are they still the same person—and should we still respect their past wishes and hold them responsible for their past deeds? What kinds of memory do other animals have and is this morally significant? Is forgetting always bad, or do we have a duty to remember? How do collective memory and public memorials relate to individual memory, and what lessons does the study of individual memory have for the politics of collective memory?
Area: Writing Intensive

AS.150.433. Philosophy of Space & Time. 3 Credits.
Is space an entity that exists independently of matter (substantivalism), or is it only an abstraction from spatial relations between bodies (relationism)? Is there a lapse of time even when nothing changes, or is time only a measure of motion? Are motion and rest contrary properties or states of a body, or are there only changes in the positions of bodies relative to one another? Philosophers and physicists have disputed these questions from antiquity to the present day. We survey the arguments and attempt to find a resolution. But there are further questions. What is the significance of incongruent counterparts (left hands vs. right hands)? Is there a fact of the matter as to the geometry of space (flat, hyperbolic or elliptical), or as to whether space-like separated events occur at the same time? What is the principle of relativity? Does Einstein's theory have consequences for the substantivalist/relationist debate? What is the status of spacetime in current physics and cosmology? Why does time but not space have a "direction"? Are past, present and future objective features of reality, or are they merely "stubborn illusions"? Does time flow? If not, how do we account for our sense of the passage of time?

AS.150.434. Formal Methods of Philosophy. 3 Credits.
For better or for worse (and we think better), during the last century or so, philosophy has become infused with logic. Logic informs nearly every area of philosophy; it is part of our shared language and knowledge base. Vast segments of literature, especially in contemporary analytic philosophy, presuppose basic competence in logic and a familiarity with associated formal methods, particularly set theoretical. The standard philosophy curriculum should therefore guarantee a minimum level of logic literacy, thus enabling students to read the literature without it seeming like an impenetrable foreign tongue. This course is an introductory survey of the formal methods that a contemporary philosopher should be familiar with. It is not mathematically demanding in the way that more advanced courses in metalogic and specialized topics may be. The emphasis is on basic comprehension, not on mathematical virtuosity. Co-taught with AS.150.223 Formal Methods of Philosophy.

AS.150.436. Philosophy of Gender. 3 Credits.
In this class we will examine philosophical questions about gender, and about the intersections between gender and other social categories including race, class and sexuality. We will focus specifically on questions about the metaphysics of gender and other social categories.

AS.150.437. Kierkegaard. 3 Credits.
A survey of the works of Danish philosopher Søren Kierkegaard, considered by many to be the most important figure in the history of what came to be called 'existential philosophy', and one of the great moral psychologists in the history of western philosophy. We will read a broad selection from Kierkegaard's pseudonymous works, including Either/Or, Fear and Trembling, The Concept of Anxiety and The Sickness unto Death.
Area: Writing Intensive

AS.150.441. Paradoxes of Agency and Belief. 3 Credits.
This course will focus on issues arising from the Socratic paradoxes of agency and from Moore's Paradox. Readings will include Platonic dialogues, the ethical writings of Kant, Fichte and Hegel, selections from Moore and Wittgenstein, and writings by contemporary philosophers of agency.

AS.150.442. Wittgenstein. 3 Credits.
An advanced introduction to the philosophical work of Ludwig Wittgenstein. We shall begin by examining the central ideas of Wittgenstein's Tractatus Logico-Philosophicus against the background of the philosophical work of Frege and Russell. We shall then move on to the Philosophical Investigations, paying special attention to his searching self-criticisms and to the "rule-following" and "private language" problems, as highlighted by Saul Kripke's pathbreaking but controversial account of Wittgenstein's argument.
Area: Writing Intensive

AS.150.445. Berkeley's Idealism. 3 Credits.
Idealism is the view that, at bottom, whatever is - is an idea. For the idealist, to be is to be perceived. George Berkeley is probably the most famous idealist among European philosophers, and on this seminar we will read closely two of his major texts: Principles of Human Knowledge and Three Dialogues between Hylas and Philonus. Topics to be discussed include: the nature of bodies, the nature of the mind, the possible sources of our ides, and Berkeley's understanding of God.

AS.150.447. The Logic of Spinoza's Ethics. 3 Credits.
One of the unique aspects of Spinoza's major work, the Ethics, is its formal or "geometric" structure. The book is written following the model of Euclid's Elements, with Definitions, Axioms, Propositions, and Demonstrations. In this seminar, we scrutinize the deductive structure of the Ethics and some of its earlier drafts. We consider the role and epistemic status of the definitions and axioms, attempt to provide rigorous reconstructions of some of its key propositions, and also investigate the possibility of alternative routes between these propositions.

AS.150.448. The Religion of Morality. 3 Credits.
In the wake of the Enlightenment criticism of traditional forms of religion, philosophers attempted to give religion a rational basis by equating it with moral practice. We will examine this religion of morality with the goal of determining whether it can vindicate its claim to be a genuine religion. We will read texts by Rousseau, Kant, Fichte, Hegel and Emerson.

AS.150.449. New Foundations for Mathematics. 3 Credits.
With the appearance of Zermelo-Fraenkel set theory (ZF) in the early 20th century and the subsequent identification of first-order logic, the problem of an adequate foundations for mathematics was thought to have been solved. The emergence of category theory (Cat) in the latter half of the century and more recently of homotopy type theory (HoT) has been seen to undermine ZF's foundational status and to threaten to replace it. In this course we will (1) see how ZF serves as a foundation, (2) learn a bit of Cat and HoT, and (3) discuss what the foundations can and should be (if any).

AS.150.450. Topics in Biomedical Ethics. 3 Credits.
Area: Writing Intensive

AS.150.451. Animal Points of View. 3 Credits.
Are non-human animals conscious? Do they possess a stream of consciousness like our own? This course will explore these questions by asking what it is for an animal to possess a point of view and a temporal point of view in particular.

AS.150.452. Freedom of Will & Moral Responsibility. 3 Credits.
What are freedom of the will and moral responsibility? Are they compatible with determinism or naturalism? This course will examine various philosophers' answers to these questions.
Area: Writing Intensive

AS.150.453. Hegel's Logic. 3 Credits.
This seminar is a close study of Hegel's major work, the Science of Logic. Among the issues to be discussed are the questions: How should philosophy begin and what - if anything - can it take for granted? We will also attempt to scrutinize Hegel's attitude toward the law of non-contradiction.

AS.150.455. Ethics And Animals. 3 Credits.
Area: Writing Intensive

AS.150.458. The Biggest Hits in Philosophy of Science (20th and 21st Centuries). 3 Credits.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who got us where we are in the field today. Quine said: Philosophy of science is philosophy enough. Is it?

AS.150.459. Counterfactual Reasoning, Normative & Descriptive Aspects. 3 Credits.
Counterfactual reasoning is reasoning about what would be the case if things had been other than they are: If it had been sunny and so I didn't run into that store for cover from the rain, maybe I would never have met my future partner! How ought one to reason counterfactually? How do people in fact do it? Counterfactual reasoning might seem like a narrow topic, but it is of fundamental importance to both scientific and everyday inquiry, where it is intimately connected to the use of imagination, planning for the future, assessment of and learning from the past, providing explanations, understanding fictions, and constructing experiments. This course will explore both normative and empirical aspects of counterfactual reasoning, drawing upon readings in philosophy, psychology, and linguistics. An overarching goal of this course is to arrive at a better understanding of counterfactuality that is informed by research across these different disciplines.

AS.150.461. Theory Of Value. 3 Credits.
What is value? What is the difference between instrumental and final value? What is the relation of ethical and economic value? This course will explore a range of answers to these questions, with special focus on the role of desire and reason in determining value. Readings will include historical and contemporary authors.

AS.150.464. Hegel's Philosophy of Right. 3 Credits.
This course will be a close reading of G.W.F. Hegel's Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel's Logic, and the relation of individual and social conceptions of freedom.

AS.150.465. Topics in the Philosophy of Physics. 3 Credits.
This course will consider some philosophical topics in the foundations of physics. Entropy and the arrow of time -- why time has a direction, whether it can be explained in terms of entropy, and what role the arrow of time plays in causation and emergence. Anthropics and indexical uncertainty -- approaches to probability, reference classes, the cosmological multiverse, Boltzmann brains, simulation and doomsday arguments. Foundations of quantum mechanics -- the measurement problem, many-worlds, probability and structure, alternative approaches.

AS.150.473. Classics of Analytic Philosophy. 3 Credits.
A reading of some of the classic philosophical works in 20th Century Analytic Philosophy, beginning with G. Frege and ending with V.O. Quine.

AS.150.474. Justice and Health. 3 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.

AS.150.475. The Nature and Significance of Animal Minds. 3 Credits.
Humans have a complicated relationship with other animals. We love them, befriend them and save them. We hunt, farm and eat them. We experiment on and observe them to discover more about them and to discover more about ourselves. For many of us, our pets are amongst the most familiar inhabitants of our world. Yet when we try to imagine what is going on in a dog or cat's mind — let alone that of a crow, octopus or bee — many of us are either stumped about how to go about this, or (the science strongly suggests) get things radically wrong. Is our thought about and behaviour towards animals ethically permissible, or even consistent? Can we reshape our habits of thought about animals to allow for a more rational, richer relationship with the other inhabitants of our planet? In this course, students will reflect on two closely intertwined questions: an ethical question, what sort of relationship ought we to have with animals?; and a metaphysical question, what is the nature of animal minds? Readings will primarily be from philosophy and ethics and the cognitive sciences, with additional readings from literature and biology. There are no prerequisites for this class. It will be helpful but certainly not necessary to have taken previous classes in philosophy (especially ethics and philosophy of mind) or in cognitive science
Area: Writing Intensive

AS.150.476. Philosophy and Cognitive Science. 3 Credits.
This year's topic is perception. Questions will include: In what ways might perceptual states be like and unlike pictures? Does what we believe affect what we perceive? Is linguistic comprehension a kind of perception? This course is geared toward advanced undergraduates and graduate students in philosophy and in the mind brain sciences and related fields. Others may be successful in the course depending on their prior course of study.

AS.150.480. Death and Dying. 3 Credits.
What is death? How should we think about death? How should we think about it? How should we treat those who are dying including ourselves? This course will examine these and other philosophical questions.
Area: Writing Intensive

AS.150.481. Hobbes' Leviathan. 3 Credits.
Thomas Hobbes' Leviathan is a masterpiece of modern political philosophy. This class is an in-depth study of that work.

AS.150.482. Food Ethics. 3 Credits.
Eating is an essential human activity: we need to eat to survive. But how should we eat? In this course, we consider such ethical questions as: Is it morally wrong to make animals suffer and to kill them in order to eat them? What is the extent of hunger and food insecurity, in this country and globally, and what should we as individuals do about it? Should the government try to influence our food choices, to make them healthier?

AS.150.483. Evidence, Foundations of Probability, and Speculation. 3 Credits.
The course examines major theories about the meaning of evidence and probability, and in terms of these provides answers to the questions “What is a scientific speculation?” and “When, if at all, is speculating important or even legitimate in science?” No preview study of evidence or probability is required.

AS.150.485. Descartes and Spinoza. 3 Credits.
Descartes and Spinoza are two of the leading philosophers of the modern period. In the class we will study the works of both figures. Special attention will be assigned to Spinoza’s early works.

AS.150.486. Moral Imagination. 3 Credits.
This course explores the relationship between moral principles and how we use imagination to put or fail to put principles to work. We will read widely and eclectically in exploring this relationship.

AS.150.491. American Philosophy: Pragmatism. 3 Credits.
Studies of major figures in the history of American philosophy beginning with the 19th century. The course focuses on the development of pragmatism in the work Peirce, James and Dewey. Other philosophers, such as Royce and Mead, may also be studied.

AS.150.492. Plato's Republic. 3 Credits.
This course will be a close reading of Plato’s Republic, with special attention to the parallel of city and soul, the relevance of metaphysics to politics, and the relation of aristocracy, democracy and tyranny.

AS.150.498. Modal Logic and Its Applications. 3 Credits.
In the first part of the course, we’ll investigate the theory of modal logic, considering its syntax, semantics, and proof theory. We’ll then turn to some its philosophical applications: epistemic logic, counterfactuals, deontic logic, intuitionistic logic, and the metaphysics of time.

AS.150.511. Directed Study. 3 Credits.
Individual study of special topics, under regular supervision of a faculty member. Special permission is required.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.150.512. Directed Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.150.551. Honors Project. 3 Credits.
See departmental major adviser.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.150.552. Honors Project. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.150.603. Seminar in Modern Philosophy.
German-style colloquium for advanced graduate students working in the history of modern philosophy. Course will meet synchronously online every other week for the duration of the academic year. Spring offering will carry a separate course number.

AS.150.604. Graduate Seminar in the Philosophy of Science: The Big Issues.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who, in the 20th and 21st centuries, got us where we are in the field today. And Quine added: philosophy of science is philosophy enough. Is it?

AS.150.606. Seminar on Skepticism - Ancient & Modern.
Course will focus on ancient skepticism as a way of life, and on the role of epistemological argument in skepticism so conceived. The seminar will end with a brief look at early modern reactions to ancient skepticism.

AS.150.607. Graduate Seminar: Knowledge and Perception.
How does perception reveal the world, if it does? Why have philosophical reflections on perception often led to skepticism? For background, we will start with readings from Ayer and Austin (on the sense-datum theory), and Sellars (on the Myth of the Given). We will then spend time on contemporary "disjunctive" accounts of perceptual consciousness, with readings from McDowell, Travis and (possibly) others.

AS.150.609. Fichte, Schelling and Spinoza.
Spinoza constituted a major philosophical interlocutor for both Fichte and Schelling. In this class will study the critical reception of Spinoza by the two philosophers. Among the topics we intend to discuss are: freedom, God, the concept of substance, the nature of thought, and reason.Recommended Course Background: Previous acquaintance with Spinoza's ethics.

AS.150.612. The Birth of German Idealism.
This course will mainly consist of close readings of the work F.H. Jacobi, J.G. Fichte, and F.W.J. Schelling. We will focus on the issues of freedom and systematicity in the transformation of Kant’s critical philosophy through the influence of Spinoza.

AS.150.613. Graduate Seminar: Topics in the Philosophy of Mind - Perception.
Recent work on the philosophy of perception, including Tyler Burge’s new book Perception: First Form of Mind

AS.150.616. Is Scientific Knowledge Possible?.
Philosophical Views of Descartes, Newton, Duhem, Popper, Carnap, Goodman (grue), Kuhn, and Feyerabend.

AS.150.617. Origins of Analytic Philosophy; Frege to Carnap.
Course description forthcoming. Previous philosophy classes of History of Modern Philosophy and/or Elementary Logic useful. This class is geared toward graduate students in philosophy.

AS.150.619. Topics in Hegel's Philosophy: The Philosophy of Right.
This course will be a close reading of G.W.F. Hegel’s Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel’s Logic, and the relation of individual and social conceptions of freedom.

AS.150.620. Political Philosophy.
A high level review of key thinkers in contemporary political thought.
Area: Writing Intensive

AS.150.622. Graduate Seminar: Metametaphysics.
Metametaphysics is the study of the nature and viability of metaphysics. In this seminar we will engage with questions about metametaphysics, including questions about the relationship between metaphysics and science, responses to deflationist challenges, and the nature of social metaphysics.

AS.150.623. Seminar in German Idealism.
This course explores the transformation of Kantian idealism by F.W.J. Schelling and G.W.F. Hegel in their early years in Jena. Readings will include Schelling's System of Transcendental Idealism as well as Hegel's "Difference" essay and Faith and Knowledge.

AS.150.632. Formal Logic.
"An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion of an argument follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life." Co-listed with AS.150.118 (for undergraduate students) (01-F 11:00-11:50am).

AS.150.633. Kant's Opus Postumum.
This research seminar examines the reasons that led Kant to revise his transcendental philosophy late in life. Special attention to problems in the Metaphysics of Nature and the Metaphysics of Morals. Students should be familiar with Kant's theoretical and practical philosophy.

AS.150.635. Graduate Seminar: Truthmaker Semantics & Pragmatics.
An investigation into the theory of truthmaker semantics and pragmatics and its applications to various problems in philosophical logic and linguistics. This course is geared toward graduate students. Some background in mathematical logic will be useful in this class.

AS.150.642. Seminar on Ancient Greek Ethics.
The seminar will focus on the ethical system of the Stoics. Stoic ethics is notorious for a number of apparently extreme assertions, such as "Virtue is the only good", "Virtue is sufficient for happiness", and "The wise man is happy on the rack". Yet the system had a wide following, over several centuries, in both the Greek and Roman worlds; and its devotees (including at least one Roman emperor, and a close adviser to another) were certainly not all fanatics. We will attempt to make sense of this ethical outlook, with particular focus on the relations among virtue, wisdom and happiness.

AS.150.645. Truthmakers.
An investigation into the metaphysics and semantics of truthmakers and their application in various areas of philosophy.

AS.150.651. Animal Points of View.
Are non-human animals conscious? Do they possess a stream of consciousness like our own? This course will explore these questions by asking what it is for an animal to possess a point of view and a temporal point of view in particular.

AS.150.653. Seminar: Philosophy of Physics.
Physicists, natural philosophers and ordinary people have long held that space and time are fundamental entities, the stage as it were for all bodies and their interactions. Although relativity now teaches us that space and time are not fundamental, but aspects of a single entity, spacetime, it is typically thought that the latter is strictly fundamental, especially given its dynamical role in general relativity as the gravitational field. Yet recent attempts to unify general relativity and quantum mechanics reject this view and instead hold that spacetime emerges from something non-spatiotemporal and more fundamental. But what is the nature of this emergence and from what does spacetime emerge? We will examine a variety of proposals and ask (i) what it means for spacetime to emerge from non-spatiotemporal features and (ii) how this compares with philosophical theories of emergence. On one approach in particular, spacetime (gravity) emerges from the entropy of quantum entanglement. Thus, because it appears to come in various forms, we will also be concerned to understand the concept of entropy. But we will consider other approaches as well (e.g., loop quantum gravity and causal set theory) and attendant issues such as the black hole information loss paradox, the holographic principle, and the conjecture that entangled particles are connected by a wormhole.

AS.150.668. Graduate Seminar on Essence.
An exploration of historical and contemporary work on the metaphysics of essence, and related questions about modality, explanation, identity and the Principle of Sufficient Reason. Readings will include work from Aristotle, Spinoza, Kripke and Fine. This course is open to upper level undergraduate students with the permission of the instructor.

AS.150.669. Topics in Practical Philosophy.
An investigation into central topics in practical philosophy.

AS.150.675. Recent Works in Skepticism.
We all take it for granted that perceptual experience yields knowledge of the world around us. But in his Meditations on First Philosophy, Descartes presents new and puzzling thought experiments. He asks whether there is any way to be sure that, when he tales himself to be experiencing things in the world around him, he is not dreaming. From there, he goes on to imagines an Evil Demon with the power to manipulate the total course of his (Descartes's) experience, so that what he naturally takes to be experience of the world around him is really a kind of perpetual dream: a simulation or virtual reality, as we might say today. Descartes's problem, which has made its way into popular culture through films like those in the "Matrix" series, remains a source of philosophical puzzlement. While no one believes that skeptical hypotheses like Demon or computer deception are true, it is not easy to say how we can exclude them. Given that the deception is systematic, it seems that any 'evidence' I cite could itself be part of the simulation. So how do I (or could I) know (for sure) that I'm not the victim of the Deceiver or the Matrix? We shall examine some of the latest attempts to respond to Descartes's challenge. Does the "How could I know?" question admit of a theoretical answer. Is the question itself somehow ill-posed? Can we answer it without making significant concessions to skepticism? What can we learn about knowledge (or the concept of knowledge) by coming to understand how skepticism arises and how it goes wrong (if it does)? Readings from contemporary sources.

AS.150.676. Graduate Seminar: Current Topics in Philosophy.
Rather than having a set topic, the point of this seminar is to stay up-to-date with the current philosophy literature by working through 1-2 recently published papers each week. The papers covered will depend on the research interests of the seminar participants (and my own).

AS.150.677. Moral Imagination.
This course explores the relationship between moral principles and how we use imagination to put or fail to put principles to work. We will read widely and eclectically in exploring this relationship.

AS.150.678. Social Construction.
An exploration of the metaphysics of social construction, examining different theories of social construction and related questions about social ontology, scientific realism and the boundaries of metaphysics.

AS.150.688. Philosophy of Psychology.
An examination of recent philosophical and empirical work on perception and consciousness.

AS.150.810. Independent Study.

AS.150.811. Directed Study.
Please see AS.150.810 for section numbers to use when registering.

AS.150.812. Directed Study.
Please see AS.150.810 for section number to use when registering.

AS.150.813. Seminar in Modern Philosophy.
German-style colloquium for graduate students working in the history of modern philosophy. We will read newly-published work, invite speakers, and have presentations by advanced graduate students. First- and second-year students may register for a grade. Advanced graduate students in history of modern should audit/present

AS.150.821. Research Seminar in Language and Mind.
A workshop for current departmental research in language and mind. Permission required.

AS.150.822. READINGS AND SKILLS IN CONTEMPORARY PHILOSOPHY PART I.
This course provides skills training for a successful career in philosophy, through engagement with contemporary work across a wide range of areas of philosophy. As a class, we will choose accessible articles of general interest recently published in top journals. Each student will be responsible for presenting one of these articles to the class and leading discussion, with guidance from the instructors. All students will be required to carefully and closely read each paper for each class, and come prepared to discuss it in depth. The aim of this part of the course is to learn how to read and analyze articles, present work, and engage in constructive philosophical discussion. After presenting the paper, each presenter will be required to write a short reply. As a class, we will then engage in a mock review process, crafting anonymous referee reports, revising replies in the light of these, and writing letters to the editor explaining the revisions. The aim of this part of the course is to gain knowledge and skills relevant to writing philosophy and successful publication. The course is open to 1st and 2nd year Philosophy PhD students only. It will meet every other week in both the fall and the spring semesters; each semester is worth 2 credits and students are required to enroll in both. Grading will be based predominantly on participation and effort

AS.150.823. READINGS AND SKILLS IN CONTEMPORARY PHILOSOPHY II.
This course provides skills training for a successful career in philosophy, through engagement with cutting-edge contemporary work across a wide-range of areas of philosophy. As a class, we will choose accessible articles of general interest recently published in top journals. Each student will be responsible for presenting one of these articles to the class and leading discussion, with guidance from the instructors. All students will be required to carefully and closely read each paper for each class, and come prepared to discuss it in depth. The aim of this part of the course is to learn how to read and analyze articles, present work, and engage in constructive philosophical discussion. After presenting the paper, each presenter will be required to write a short reply to it, in the style of the relevant journal. As a class, we will then engage in a mock review process, crafting anonymous referee reports, revising replies in the light of these, and discussing these as editors. The aim of this part of the course is to gain knowledge and skills relevant to writing philosophy and successful publication. The course is open to 1st and 2nd year graduate students. It will meet every other week in both the fall and the spring semesters; each semester is worth 2 credits and students are required to enroll in both. Grading will be based predominantly on participation and effort. Upper-year graduate students may audit the course by permission of the instructors, conditional on their commitment to attend and engage as full members of the class; if student numbers are high, priority with respect to presentations will be given to 1st and 2nd year students.
Area: Writing Intensive
AS.150.822

AS.150.824. Research Seminar.
For 3rd and 4th year Philosophy graduate students working on their Qualifying Papers and Dissertation Proposals. Meets every other week.

AS.150.825. Research Seminar.
In this course students will present drafts of Qualifying Papers and first dissertation chapters, receiving feedback from students, the instructor and other relevant faculty.

AS.150.850. Summer Research.
Students research and develop their dissertation topic.

Cross Listed Courses

Classics

AS.040.626. Plato and Poetry.
This graduate seminar will explore Plato’s contributions to the “old quarrel” between poetry and philosophy, encompassing such topics as the relationship between poetic inspiration and human reason, the role of literature in pedagogy, and the metaphysical implications of poetic fiction. We will focus on several Greek texts from the Platonic corpus related to these themes, as well as some later sources that engage with Platonic ideas.

Comparative Thought and Literature

AS.300.399. Cinema and Philosophy. 3 Credits.
What do films and philosophy have in common? Do films express, with their own means, philosophical problems that are relevant to our experience of ourselves and the world we live in? This term we will study such issues with a particular focus on questions of justice, truth, revenge, forgiveness, hope, hate, and fear.

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course explores recent debates on being a person in culture, law, and philosophy. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Materials examined will be wide-ranging, including essays, philosophy, novels, science fiction, television, film. No special background is required.

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees..
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course explores recent debates on being a person in culture, law, and philosophy. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Materials examined will be wide-ranging, including essays, philosophy, novels, science fiction, television, film. No special background is required.
Area: Writing Intensive

East Asian Studies

AS.310.335. Theorizing Race and Mixed-Race in Asia and its Diasporas. 3 Credits.
This class will explore the construction of race and its applications in Asia and its diasporas. Using the notion of "mixed-race" as an analytic, we will examine how the colonial origins of race and the ensuing Cold War have influenced concepts of national identity and belonging. Employing an inter-sectional approach towards race, gender, and sexuality, the course will draw on a variety of media including memoirs, archives, and videos, to contemplate the locus of race and mixed-race and their importance within the larger nexus of identity formation in Asia and its diasporas.
Area: Writing Intensive

First Year Seminars

AS.001.121. FYS: Socrates and his Intellectual Context. 2 Credits.
This First-Year Seminar will focus on the figure of Socrates. Socrates wrote nothing, so we depend on others for our knowledge of him. We will examine the ways he is portrayed by several different authors, including Plato. We will also examine some other ideas around in his time - some of which were pretty radical - and consider how he may have reacted to them. Finally, we will examine his influence on later thought.

AS.001.142. FYS: The Physics of Democracy. 3 Credits.
This First-Year Seminar considers what we can learn about democratic societies by thinking of them as complex physical systems. We will discuss voting and social choice theories and their relationship to renormalization and emergence; organization and segregation in complex systems: power laws, inequality, and polarization; and the dynamics of information and opinions: networks, bubbles, filters, and phase transitions.

AS.001.188. FYS: Skepticism - Ancient, Modern, Contemporary. 3 Credits.
Can we gain knowledge of reality, or is everything a matter of opinion? Does it matter? Why do we want (or need) knowledge anyway? Questions like this have been the stock in trade of philosophical skeptics throughout the entire history of our Western philosophical tradition. This First-Year Seminar will involve close readings of some classic works on the topic of skepticism with a view to understanding some of the main arguments for (and against) skepticism: how they work and how they may have changed over time. Readings include selections from Sextus Empiricus, Descartes, Hume and Wittgenstein.

History

AS.100.295. American Intellectual History since the Civil War. 3 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Area: Writing Intensive

Islamic Studies

AS.194.401. Themes in Medieval Islamic Thought. 3 Credits.
This seminar examines medieval Muslim thinkers who addressed themes at the intersection of theology, philosophy, science, and ethics: the definition of the nature of God's attributes, His uniqueness, transcendence and omnipotence; human freewill and the limits of human knowledge; the nature of the world; and the relationship among reason, religion, and science. The course will look at how these and other crucial themes were addressed by major medieval philosophers and philosophical schools not only in Islam, but also in Judaism and Christianity, and highlight similarities and differences among the three major monotheistic faiths.

Modern Languages and Literatures

AS.211.265. Panorama of German Thought. 3 Credits.
This course introduces students to major figures and trends in German literature and thought from the sixteenth to the twentieth century. We will pay particular attention to the evolution of German political thought from the Protestant Reformation to the foundation of the German Federal Republic after WWII. How did the Protestant Reformation affect the understanding of the state, rights, civic institutions, and temporal authority in Germany? How did German Enlightenment thinkers conceive of ethics and politics or morality and rights? How do German writers define the nation, community, and the people or das Volk? What is the link between romanticism and nationalism? To what degree is political economy, as developed by Marx, a critical response to romanticism? How did German thinkers conceive of power and force in the wake of World Wars I and II? What are the ties that bind as well as divide a community in this tradition? We will consider these and related questions in this course through careful readings of selected works.
Area: Writing Intensive

AS.211.640. The Literature of Existence.
This seminar will explore some key expressions of what could loosely be called existentialist writing from the early twentieth century to the present day, to the end of coming to terms with an emerging "new politics of existence." While there will be some emphasis on Spanish language materials, including writings by José Ortega Y Gasset, Miguel de Unamuno, María Zambrano, and Jorge Luis Borges, we will also be reading important works by Martin Heidegger, Jean-Paul Sartre, Simone de Beauvoir, Albert Camus, and Martin Hägglund.
Area: Writing Intensive

AS.211.777. The Critical Unconscious.
Criticism in the 21st century has tended to relegate psychoanalysis to a dustbin of fads that proliferated at the end of the prior century but that today are of interest only to balkanized cliques of devotees. Bucking this trend, this seminar will examine the intellectual history and abiding influence of psychoanalysis's key critical concept: the unconscious. Basing our discussions on in-depth readings from key thinkers in the analytic tradition such as Freud, Lacan, and Klein, as well as the post-analytic philosophical tradition, including Zizek, Butler, Laclau and Mouffe, Deleuze and Guattari, and Jameson, we will work to distill an understanding of the unconscious as essential to the practice of criticism tout court, and as inhering even in those discourses that have sought most stridently to distance themselves from it. Seminar discussions will take place in English; readings will be available in the original as well as in translation.
Area: Writing Intensive

AS.213.360. Animals and Animality in Literature and Philosophy. 3 Credits.
(300-level, taught in English) critically engages the presentation and imagination of animals and other non-human life in modern literature, philosophy, and thought. We will examine the figure of the animal and the means of conceptual differentiation between the animal and the human, considering animals' relation to or perceived exclusion from language, pain, embodiment, sexuality, and the visual gaze. The course is ideal for students interested in fascinating themes in literature and how they reflect philosophical concerns. No prior courses in philosophy are required. Students will read philosophical texts alongside literary works in learning the conceptual history of animals and of humanity as a distinct species. Expect fascinating readings and engaging, lively discussions. Readings may include works by Marx, Nietzsche, Freud, Heidegger Derrida, Agamben, Poe, Kleist, Hofmannsthal, Rilke, Kafka, Mann, Pirandello, and Coetzee.
Area: Writing Intensive

AS.213.374. Existentialism in Literature and Philosophy. 3 Credits.
What does it mean to exist, and to be able to reflect on this fact? What is it mean to be a self? This course explores the themes of existentialism in literature and philosophy, including the meaning of existence, the nature of the self, authenticity and inauthenticity, the inescapability of death, the experience of time, anxiety, absurdity, freedom and responsibility to others. It will be examined why these philosophical ideas often seem to demand literary expression or bear a close relation to literary works. Readings may include writings by Kierkegaard, Nietzsche, Dostoevsky, Heidegger, Rilke, Kafka, Simmel, Jaspers, Buber, Sartre, de Beauvoir, Camus, and Daoud.
Area: Writing Intensive

AS.213.423. Reflections on Modernity. 3 Credits.
Taught in English. Reflections on Modernity takes up the problems conflicts, and possibilities of modernity in aesthetic, literary, and philosophical texts. Questions about the modern self, our relationship to nature, to urban experience, to history and language, and the role of the artist and writer in reflecting on modern life. Texts include works by such authors as Kant, Nietzsche, Baudelaire, Weber, Rilke, Hofmannsthal, Simmel, Heidegger, Habermas, Foucault.

AS.213.437. Phenomenology and Literature. 3 Credits.
Phenomenology and Literature engages the most fertile interchanges between literature and philosophy in the 20th century, focusing on the roots of phenomenology in German philosophy and its connections with and expansion to literary writing. Themes include: the nature of literary experience, including the experience of reading and writing, literary and phenomenological descriptions of reality, the literary construction of the self, and the understanding of literary imagination from a phenomenological perspective. We will read philosophers and literary theorists such as Nietzsche, Husserl, Heidegger, Sartre, Camus, Merleau-Ponty, Blanchot, Beauvoir, Hamburger, Ingarden and Iser in connection with the works of many modernist writers, including Rainer Maria Rilke, Franz Kafka, Hugo von Hofmannsthal, Thomas Mann, Thomas Bernhard, Virginia Woolf, Marcel Proust, and Wallace Stevens.
Area: Writing Intensive

AS.213.623. Poetry and Philosophy.
This course will trace the tensions, antagonisms, and collaborations between poetry and philosophy as distinctive but fundamental expressions of human thought and experience. We will engage poetry as a form of artistic expression that compliments, completes, or challenges other forms of knowledge, and consider the range of philosophy's responses to poetry and poetics. Readings will include works by philosophical poets and poetic philosophers including Hölderlin, Schlegel, Rilke, Bachmann, Celan, Stevens, Heidegger, Gadamer, Adorno, Benjamin, Merleau-Ponty, Valéry, Wittgenstein, and Agamben.

AS.213.626. Husserl's Ideas: An Introduction to Phenomenology.
The first volume of Husserl's Ideas I (1913) provides an overarching picture of the phenomenological method that came to define much twentieth-century German and French thought. This course will consider the foundational concepts introduced in this volume (eidetic analysis, intentionality, bracketing, correlationism, time consciousness, the natural attitude and the phenomenological reduction) as well as responses to them by Merleau-Ponty, Derrida, Heidegger and others. We will also consider Husserl's later efforts to incorporate history, other minds, and even that which is other-than-mind into his idealist system.

AS.213.643. Franz Kafka in Philosophical and Literary Perspective.
This course is devoted to close study of the writings of Franz Kafka from both philosophical and literary perspectives. Writings will include Kafka's short prose works and novels along with philosophical and literary critical interpretations thereof. Readings may include commentaries by Walter Benjamin, Theodor Adorno, Hannah Arendt, Albert Camus, Giles Deleuze, and Giorgio Agamben. Primary texts for students from the German section will be in original; any other students may read Kafka in translation.

AS.213.687. Imagination in Philosophy and Literary Theory.
Imagination in Philosophy and Literary Theory is devoted to studying theories of imagination in the history of philosophy and literary theory, from the ancient Greeks to the present day. We will study philosophical conceptions of the role of imagination in memory, cognition, perception, and creativity, and assess traditional philosophical oppositions between imagination and reason, the imaginary and the real. Readings may include selections from Aristotle, Kant, Coleridge, Nietzsche, Husserl, Heidegger, Merleau-Ponty, Sartre, Dufrenne, Stevens, Iser, Ricoeur, Ryle, Wittgenstein, and Nussbaum.

AS.214.479. Dante Visits the Afterlife. 3 Credits.
One of the greatest works of literature of all times, the Divine Comedy leads us down into the torture-pits of Hell, up the steep mountain terrain of Purgatory, through the “virtual” space of Paradise, and then back to where we began: our own earthly lives. We accompany Dante on his journey, building along the way knowledge of medieval Italian history, literature, philosophy, politics, and religion. The course also focuses on the arts of reading deeply, asking questions of a text, and interpreting literary and scholarly works through discussion and critical writing. Conducted in English.
Area: Writing Intensive

AS.215.640. Borges, Derrida, Heidegger and the Paradoxes of Perception.
In this seminar we will the examine the ways in which Jorge Luis Borges’s narratives intersect with lines of inquiry pursued by Martin Heidegger and Jacques Derrida around perception, knowledge, language, time, and space.
Area: Writing Intensive

Study of Women, Gender, & Sexuality

AS.363.302. Feminist and Queer Theory: Women in Western Thought an Introduction. 3 Credits.
Women in Western Thought is an introduction to (the history of) Western thought from the margins of the canon. The class introduces you to some key philosophical question, focusing on some highlights of women’s thought in Western thought, most of which are commonly and unjustly neglected. The seminar will be organized around a number of paradigmatic cases, such as the mind/body question in Early Modern Europe, the declaration of the rights of (wo)men during the French revolution, the impact of slavery on philosophical thought, the MeToo debate and others. By doing so, the course will cover a range of issues, such as the nature of God, contract theory, slavery, standpoint epistemology, and queer feminist politics. Students will engage with questions about what a canon is, and who has a say in that. In this sense, Women in Western Thought introduces you to some crucial philosophical and political problems and makes you acquainted with some women in the field. The long term objective of a class on women in Western thought must be to empower, to inspire independence, and to resist the sanctioned ignorance often times masked as universal knowledge and universal history. People of all genders tend to suffer from misinformation regarding the role of women and the gender of thought more generally. By introducing you to women who took it upon themselves to resist the obstacles of their time, I am hoping to provide role models for your individual intellectual and political development. By introducing you to the historical conditions of the exclusion and oppression of women (including trans and queer women as well as black women and women of color), I hope to enable you to generate the sensitivities that are required to navigate the particular social relations of the diverse world you currently inhabit. By introducing philosophical topics in this way, I hope to enable you to have a positive, diversifying influence on you future endeavours.
Area: Writing Intensive

AS.363.306. Feminist and Queer Theory: Race, Class, Gender, Sexuality-Intersectional Feminist Theory. 3 Credits.
In this course, we will get to know intersectional feminist philosophy through the lens of a Black feminist epistemology. What does this mean? That means that we will focus on how the contributions of Black feminist authors can bring out the specific political and philosophical nature of an intersectional theoretical framework.

Theatre Arts & Studies

AS.225.328. The Existential Drama: Philosophy and Theatre of the Absurd. 3 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre -- and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürrenmatt, Frisch, Havel, Witkiewicz, and Mrozek.
Area: Writing Intensive

Philosophy, Bachelor of Arts

Philosophy Major Requirements

(Also see Requirements for a Bachelor’s Degree (p. 1587).)

Philosophy poses such fundamental questions as: What can we know? How should we live? and How do the results of human inquiry, obtained so far, hang together? It is an excellent preparation for professional studies such as law and medicine; it provides perspective on other disciplines such as psychology, mathematics, literature, and political science; and it centers on a set of questions that thinking people cannot avoid. At Hopkins it can be studied in a variety of ways.

A number of our courses are designed to provide broad introductions to the subject. Both AS.150.111 Philosophic Classics and AS.150.112 Philosophical Problems cover a wide range of topics, the former through the study of some of the major texts of Western thought, the latter by more systematic examination of representative issues. Either one will show a student a variety of approaches to philosophical problems. The courses AS.150.201 and AS.150.205 offer historically oriented introductions to the subject, giving the student a basic grasp of the development of philosophy in two of its major periods. Other courses, such as AS.150.118 Introduction to Formal Logic, AS.150.223 Formal Methods of Philosophy, and AS.150.220 Introduction to Moral Philosophy, are designed for students with an interest in the particular areas they cover. All of these courses are readily available without prior study of philosophy.

The 400-level courses are open to graduate students as well as to undergraduates. Some require no previous course work in philosophy. Others presuppose some familiarity with philosophy, such as would be provided by one of the introductory courses. Still others require more specific preparation. A student with questions about whether they have the background for a particular 400-level course should consult either the instructor or the departmental undergraduate studies.

A student who wants to study an area of philosophy not provided for in the regular curriculum or to undertake a special project of writing and research should consult with a faculty member about taking AS.150.511 Directed Study-AS.150.512 Directed Study. An undergraduate who has the proper background may enroll in a graduate seminar if the instructor approves.

Requirements

Philosophy majors must take 11 departmental courses. A minimum of six courses must be at the 300 level or higher. Of the two general introductory courses, AS.150.111 Philosophic Classics and AS.150.112 Philosophical Problems, only one may count toward the major, and two total 100-level courses may count toward the major. Majors are required to take the Undergraduate Seminar, preferably in the junior year. Courses in which a grade of D is received may not count toward the major, nor may courses taken satisfactory/unsatisfactory.

Other courses must be distributed by taking at least one course in each of the five following categories:

- Ancient philosophy
- Modern philosophy
- Logic, philosophy of science, or philosophy of mathematics
- Philosophy of mind, theory of knowledge, philosophy of language, or metaphysics
- Ethics, aesthetics, or political philosophy

The first two categories are normally satisfied by taking AS.150.201 (http://e-catalog.jhu.edu/search/?P=AS.150.201) Introduction To Greek Philosophy and AS.150.205 (http://e-catalog.jhu.edu/search/?P=AS.150.205) Introduction to the History of Modern Philosophy.The student thus has four or five additional electives after satisfying the distribution requirements.

Well-qualified majors may be admitted to a graduate seminar during their senior year. They should consult their major advisor.

If you have any questions or concerns regarding these requirements, please contact the director of undergraduate studies.

AS.150.245	Philosophy of Mind	3
AS.150.476	Philosophy and Cognitive Science	3
Ethics, Aesthetics, or Political Philosophy		
AS.150.219	Introduction to Bioethics	3
AS.150.220	Introduction to Moral Philosophy	3
AS.150.240	Intro-Political Philosop	3
AS.150.452	Freedom of Will & Moral Responsibility	3

Double Majors

The department encourages linking the study of philosophy with the study of other disciplines. For example, the subject matter and course requirements of the philosophy and psychology departments are such as to make a double major both practical and intriguing. Similarly, knowledge of literature or the history of art is pertinent to the study of aesthetics; a solid understanding of science is valuable for those interested in the philosophy of science; and students of ethics benefit considerably by combining their work with study of political theory and of the political realities in which morality must function. Members of the department are available to assist students in planning double majors tailored to their interests.

Honors Program in Philosophy

Students with an overall GPA of 3.0 and a Philosophy GPA of 3.5 or higher (or outstanding recommendations from three department members) are eligible for the Senior Honors Thesis Program. In addition to the 11 courses required for the major, successful applicants take AS.150.551 Honors Project and AS.150.552 Honors Project, to write a thesis of about 50 pages under the supervision of a faculty member. The thesis must be completed prior to spring vacation of senior year. If the student withdraws prior to completion of a thesis, a satisfactory/unsatisfactory grade will be awarded.

The grade for the thesis will depend on the thesis itself and an oral examination about it, conducted by the thesis adviser and two other faculty members. Graduation Honors will be awarded to those whose work receives an A- or better. For more information about the Honors Program, contact the department's director of undergraduate studies.

Code	Title	Credits
Honors Thesis Program		
AS.150.551	Honors Project	3
AS.150.552	Honors Project	3

BA/MA Program

The department offers an accelerated BA/MA program. See the BA/MA Program page for more information.

Learning Outcomes

A student who graduates with a BA in philosophy will be able to demonstrate:

- A broad understanding of the work of major figures in the history of philosophy, both ancient (especially Plato and Aristotle) and modern (especially the period of Descartes through Kant)
- Familiarity with the most important topics in a range of areas that are typically regarded as lying at the center of contemporary philosophical thought, including metaphysics, theory of knowledge, philosophy of mind, and philosophy of language
- Familiarity with the most important topics in ethics and political philosophy
- Familiarity with formal logic, including the ability to understand the logical symbolism used in many contemporary philosophical texts
- The capacity to think analytically and creatively about philosophical texts and issues
- The capacity to express philosophical ideas and support them effectively in argument, both in writing and orally.

Philosophy, Bachelor of Arts/Master of Arts

The department now offers an accelerated BA/MA program. The requirements for the BA and for the MA remain unchanged, but in the combined BA/MA program, two 400-level courses taken as part of the BA can also be used toward the MA. This means that the MA requires only eight additional courses, rather than the 10 required for a free-standing MA.

Program Requirements

The department now offers an accelerated BA/MA program. The requirements for the BA and for the MA remain unchanged, but in the combined BA/MA program, two 400-level courses taken as part of the BA can also be used toward the MA. This means that the MA requires only eight additional courses, rather than the 10 required for a free-standing MA. For full details of the MA program and the BA/MA program, see the

Requirements handbook (2015 and after) in the Graduate section here and on the department website.

In order to be admitted to the BA/MA program, you must already be a philosophy major; you can apply in the spring term of your junior year or any time in your senior year. If you meet the qualification for the BA honors thesis (overall GPA of 3.0, philosophy GPA of 3.5), you will automatically be admitted; others may be admitted on a case-by-case basis. Interested students should contact the chair of the department, Professor Steven Gross (https://philosophy.jhu.edu/directory/steven-gross/).

Please note that there is no departmental financial aid for BA/MA students. However, BA/MA students whose MA-level studies extend into a fifth year get a 50% discount on their tuition in their fifth year.

All application material and supporting documents should be uploaded through the online application; these include:

- Online application (https://applygrad.jhu.edu/apply/)—be sure to select Combined Graduate Student option
- Transcripts: unofficial transcripts must be uploaded through the online application.

Philosophy, Minor

Philosophy Minor Requirements

Philosophy minors must take seven departmental courses, which should include the following:

- At least one course in the history of philosophy, either ancient or modern.
- At least one course in two of the following areas:
  - Logic, philosophy of science, or philosophy of mathematics
  - Ethics, aesthetics, or political philosophy
  - Philosophy of mind, theory of knowledge, philosophy of language, or metaphysics

Students must earn a C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
One course in history of philosophy (ancient or modern)		3
Two courses, each from a different focal area		6
Four additional courses		12
Total Credits		**21**

Minor Restrictions

- Either AS.150.111 Philosophic Classics or AS.150.112 Philosophical Problems, but not both, may count as one of the seven courses. Neither is a required course.

Philosophy, PhD

When the Johns Hopkins University was founded in 1876, it was the first university in the United States designed as a center for research and doctoral education. Among its earliest graduate students were Josiah Royce and John Dewey; C.S. Peirce was an early faculty member. The William H. Miller III Department of Philosophy continues this tradition today, preparing graduate students to make original contributions to the field and to pursue careers in college and university teaching. With the support of an unprecedented gift by alumnus William H. Miller, the Department has increased guaranteed PhD funding to six years and is expanding the size and breadth of the faculty.

Usually there are about 15 graduate students taking courses and seminars, and another 15 at various stages in the writing of their dissertations. Because classes are small, we look for students who wish to take advantage of the individual attention available here. The Department's purpose is to provide opportunities for students to develop special interests within a program that also ensures breadth of knowledge. We offer classes, seminars, and directed study in the history of ancient, modern, and contemporary Western philosophy, and in the systematic areas of epistemology, metaphysics, ethics, philosophy of science, philosophy of physics, philosophy of language, philosophy of mind, philosophy of mathematics, mathematical logic, and aesthetics. Courses with relevance to philosophy are frequently offered in other departments, and in certain circumstances these may be used toward the PhD or MA course requirements in philosophy.

For more information on the requirements for the PhD, financial aid, and other support refer to the Department's website (https://philosophy.jhu.edu/graduate/graduate-requirements/).

Admission Requirements

While an undergraduate major in philosophy is good preparation for graduate study in the department, applications are welcomed from students with other majors whose interests are now turning toward philosophy.

To apply, please read the information below and on the Graduate Admissions website (https://www.jhu.edu/admissions/graduate-admissions/), and complete the application online.

If applying to more than one department, please send complete application materials for each department. All application documents must be provided in English (either the original or translations of the original documents). If you are unable to secure translations to English, we recommend that you contact World Education Services (http://www.wes.org/).

All application materials and supporting documents should be uploaded through the online application; these include:

- Online application (https://applygrad.jhu.edu/apply/?sr=1bf0a763-446d-4552-b7f6-4b450a7fa62f)
- Application fee
- Statement of Purpose (briefly state your area of interest at the beginning of your Statement of Purpose; upload through the online application)
- Letters of recommendation (at least two): Letters of recommendation should be submitted and uploaded electronically following the instructions in the online application.
- Transcripts: Unofficial transcripts must be uploaded through the online application. Applications will be ready for review with unofficial transcripts, but official transcripts will be required if an offer of admission is made
- GRE scores (mandatory)
- TOEFL or IELTS score (for international applicants)
- Sample of work (the sample should reflect the applicant's area of interest, and generally does not have to be more than 20 pages in length).

Application Deadline

The deadline for applications is January 15 or, if January 15 falls on a weekend or a holiday, the next business day. Admissions decisions will be made around March 15.

For questions or inquiries about the online application and supporting documents, contact the Graduate Admissions office using the online contact form (https://applygrad.jhu.edu/register/?id=6ac9a6f3-2129-4bf5-ab36-8ab80fcd2f5e). You may also contact the Department's administrative office at philosophy@jhu.edu or 410-516-7524.

Physics and Astronomy

http://physics-astronomy.jhu.edu/

Johns Hopkins is the nation's first research university. That emphasis on research continues to this day and forms the backbone of the undergraduate and graduate programs in the Department of Physics and Astronomy. The department's research program is focused into four areas of excellence:

- Astrophysics
- Condensed Matter Physics
- Elementary Particle Physics
- Plasma Physics

For graduate students interested in these fields, the department offers world-class research opportunities in a friendly and supportive setting. For undergraduates, JHU offers exposure to cutting-edge research combined with a level of personal attention that is typically found only in liberal arts colleges. Nearly all physics majors at JHU work on research projects and many begin as freshmen or sophomores.

All research builds upon an established body of knowledge. To be effective researchers, teachers, or professionals, both undergraduate and graduate students must acquire a core knowledge of physics. Our undergraduate and graduate courses are designed to cover the core subjects at the appropriate levels, leading to advanced courses on a variety of specialized topics. As a consequence, students having different backgrounds or different ultimate objectives can select those parts that are most appropriate for them. The selections are made under the guidance of a faculty advisor. The advisor aids the student in making the most efficient use of their time and ensures that their program contains a reasonable balance among classroom and laboratory, mathematics, seminars, and introduction to research.

Donald E. Kerr Memorial Prize

In recognition of Dr. Kerr's work in microwave physics, the department awards the Donald E. Kerr Memorial Prize each year to the most outstanding undergraduate major graduating in physics.

Facilities

The Department of Physics and Astronomy's first facility was Rowland's measuring engine for determining the solar spectrum in the 1880s. Ever since that time the Department has maintained a long and continuous history in instrumentation. In recent decades this has extended to instrumentation for space missions. The Department maintains a Class-1000 clean room for microfabrication and nanofabrication, a high bay lab, professional and student machine shops, and supports a world-renowned Instrument Development Group (IDG) with six full-time engineers and three full-time machinists.

Among the diverse techniques used for studying condensed matter physics are magnetometry/susceptometry, specific heat and transport measurements, atomic force and magnetic force microscopy, X-ray and electron diffraction, terahertz spectroscopy, and neutron scattering at the nearby NIST Center for Neutron Research and at the Spallation Neutron Source, ORNL. A variety of cryostats, He3 refrigerators, and He3-He4 dilution refrigerators together with high temperature ovens, electromagnets, and superconducting magnets allow measurements to be made from 0.05 K to 1100 K and in magnetic fields up to 14 Tesla. Apparatus for the preparation of samples includes two image furnaces for floating zone growth, single-crystal growth vacuum furnaces, box and tube furnaces, arc furnaces, several high vacuum and ultra-high vacuum chambers for thin film fabrication using evaporation, MBE, pulsed laser deposition, sputtering, and focused ion beam (FIB) milling. Also available on campus are cutting-edge transmission electron microscopes and scanning electron microscopes.

In astrophysics, research groups have state-of-the-art laboratories for testing cryogenic transition-edge bolometer detectors with SQUID read-out electronics, and closed-cycle helium crogenics. Recent instrumentation advances include the design and manufacture of large free-standing polarization grids and novel high-bandwidth smooth-wall feed horns. Current activities include development of microwave and millimeter-wave instruments for far-infrared and microwave astronomy and cosmology.

The research groups in the department have a wide range of state-of-the-art computer facilities including high performance clusters with over a thousand processors and the largest database at a university—over a petabyte. All undergraduate majors and graduate students have access to high performance workstations.

Financial Aid

Graduate students in good standing are normally supported by a combination of fellowships, research assistantships and teaching assistantships. The financial package covers full tuition, individual health insurance, and an academic year salary commensurate with that of other leading research institutions. Teaching assistantship is a common mode of financial support; experience in teaching is a valuable part of the Ph.D. program. A teaching assistantship supports the student during the academic year and is supplemented by a research assistantship during the summer. The assistant is expected to help in the teaching of the general physics course and other introductory and major courses. The typical teaching duties include leading a problem-solving section or laboratory exercises and homework grading. Research assistantships are based on the availability of funding to the research advisor and are arranged directly with them. Research assistantships provide an opportunity for deep engagement in ongoing experimental or theoretical research. In addition, the department and the University offer several fellowships on a competitive basis, some covering travel, supplies or research expenses and some covering a semester's or a year's worth of the entire financial package. Some students are supported by external fellowships, such as the pre-doctoral fellowship of the National Science Foundation.

All fellows and teaching and research assistants in the Department of Physics and Astronomy register as full-time students and thus fulfill their residence requirements while holding appointments. Loans and work-study arrangements are available from the Office of Financial Aid.

Graduate Programs

Graduate study in physics and astronomy at JHU is intended primarily to prepare Ph.D. graduates for careers in teaching and research in physics and astronomy, or in applications such as biophysics, space physics, and industrial research. Entering students may elect to work toward a Ph.D. in physics or a Ph.D. in astronomy and astrophysics. The two programs are similar in structure but have somewhat different course requirements (see the programs tab). A wide range of research projects —both theoretical and experimental—are available for graduate students in Astrophysics (http://physics-astronomy.jhu.edu/groups/astro/), Condensed Matter Physics (http://physics-astronomy.jhu.edu/research/condensed-matter-physics/), Particle Physics (http://www.pha.jhu.edu/~morris/jhu_hep/jhu_hep.html), and Plasma Spectroscopy (http://physics-astronomy.jhu.edu/research/plasma-spectroscopy/).

Programs

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.171.101. General Physics: Physical Science Major I. 4 Credits.
First semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Corequisite: AS.110.108-AS.110.109, AS.173.111-AS.173.112

AS.171.102. General Physics: Physical Science Major II. 4 Credits.
Second semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Intro to Mechanics I (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.123)
Prerequisites: A grade of C- or better in either Physics I or the first semester of Engineering Mechanics (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR (EN.530.103 OR EN.530.123)

AS.171.103. General Physics I for Biological Science Majors. 4 Credits.
First-semester of two-semester sequence in calculus-based general physics, tailored to students majoring in one of the biological sciences. In this term, the topics covered include the basic principles of classical mechanics and fluids as well as an introduction to wave motion. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113).Midterm exams are given at 8am Tuesdays, so students must leave their schedules open at this time in order to be able to take these exams

AS.171.104. General Physics/Biology Majors II. 4 Credits.
This two-semester sequence is designed to present a standard calculus-based physics preparation tailored to students majoring in one of the biological sciences. Topics in electricity & magnetism, optics, and modern physics will be covered in this semester. Midterm exams for every section are given during the 8 AM section time!Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: C- or better in AS.171.101 or AS.171.103 or AS.171.105 or AS.171.107; Corequisite: AS.110.109, AS173.112 or OR EN.530.123.

AS.171.105. Classical Mechanics I. 4 Credits.
An in-depth introduction to classical mechanics intended for physics majors/minors and other students with a strong interest in physics. This course treats fewer topics than AS.171.101 and AS.171.103 but with greater mathematical sophistication. It is particularly recommended for students who intend to take AS.171.201-AS.171.202 or AS.171.309-AS.171.310. Recommended Corequisites: AS.173.115 and AS.110.108

AS.171.106. Electricity and Magnetism I. 4 Credits.
Classical electricity and magnetism with fewer topics than 171.101-103, but with greater mathematical sophistication. Particularly recommended for students who plan to take AS.171.201-AS.171.202. Recommended Course Background: C- or better in AS.171.105; Corequisite: AS.173.116, AS.110.109

AS.171.107. General Physics for Physical Sciences Majors (AL). 4 Credits.
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an "active learning" style with most class time given to small group problem-solving guided by instructors. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113)

AS.171.108. General Physics for Physical Science Majors (AL). 4 Credits.
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an "active learning" style with most class time given to small group problem-solving guided by instructors. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Engineering Mechanics (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.123)
Can be taken concurrently or as a prerequisite: (AS.110.107 OR AS.110.109 OR AS.110.211 OR AS.110.113)

AS.171.113. Subatomic World. 3 Credits.
Introduction to the concepts of physics of the subatomic world: symmetries, relativity, quanta, neutrinos, particles and fields. The course traces the history of our description of the physical world from the Greeks through Faraday and Maxwell to quantum mechanics in the early 20th century and on through nuclear physics and particle physics. The emphasis is on the ideas of modern physics, not on the mathematics. Intended for non-science majors.

AS.171.114. Powering the world: the science of energy. 3 Credits.
We all know that the energy we use on a daily basis can come from a variety of sources, but a discussion of the merits and drawbacks to those sources more often leads to political argument than fact-based scientific dialogue. This course, meant for science and non-science students alike, explores the principles behind how energy from fossil fuels, solar, wind, nuclear, and other resources is produced, how efficiently the energy can be harnessed, and what effect the process has and will have on our environment and society today and in the future. Students will apply this fundamental understanding to compare and understand how each source could be used in real world scenarios. Ultimately, the course is intended to help students use a scientific perspective to shape their opinions when faced with these controversial topics.

AS.171.118. Stars and the Universe: Cosmic Evolution. 3 Credits.
This course looks at the evolution of the universe from its origin in a cosmic explosion to emergence of life on Earth and possibly other planets throughout the universe. Topics include big-bang cosmology; origin and evolution of galaxies, stars, planets, life, and intelligence; black holes; quasars; and relativity theory. The material is largely descriptive, based on insights from physics, astronomy, geology, chemistry, biology, and anthropology.

AS.171.201. Special Relativity/Waves. 4 Credits.
Course continues introductory physics sequence (begins with AS.171.105-AS.171.106). Special theory of relativity, forced and damped oscillators, Fourier analysis, wave equation, reflection and transmission, diffraction and interference, dispersion. Meets with AS.171.207.

AS.171.202. Modern Physics. 4 Credits.
Course completes four-semester introductory sequence that includes AS.171.105-AS.171.106 and AS.171.201. Planck's hypothesis, de Broglie waves, Bohr atom, Schrodinger equation in one dimension, hydrogen atom, Pauli exclusion principle, conductors and semiconductors, nuclear physics, particle physics.

AS.171.204. Classical Mechanics II. 4 Credits.
Principles of Newtonian and Lagrangian mechanics; application to central-force motion, rigid body motion, and the theory of small oscillations. Recommended Course Background: AS.110.108 and AS.110.109, AS.110.202, AS.171.201, or AS.171.309. AS.110.201 or equivalent is strongly recommended.

AS.171.205. Introduction to Practical Data Science: Beautiful Data. 3 Credits.
The class will provide an overview of data science, with an introduction to basic statistical principles, databases, fundamentals of algorithms and data structures, followed by practical problems in data analytics. Recommend Course Background: Familiarity with principles of computing.

AS.171.207. Special Relativity. 1 Credit.
Three-week introduction to special relativity for students who elect to take AS.171.209 in place of AS.171.201.

AS.171.301. Electromagnetic Theory II. 4 Credits.
Static electric and magnetic fields in free space and matter; boundary value problems; electromagnetic induction; Maxwell's equations; and an introduction to electrodynamics.

AS.171.303. Quantum Mechanics I. 4 Credits.
Fundamental aspects of quantum mechanics. Uncertainty relations, Schrodinger equation in one and three dimensions, tunneling, harmonic oscillator, angular momentum, hydrogen atom, spin, Pauli principle, perturbation theory (time-independent and time-dependent), transition probabilities and selection rules, atomic structure, scattering theory. Recommended Course Background: AS.110.302 or AS.110.306.
(AS.171.204) AND (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)

AS.171.304. Quantum Mechanics II. 4 Credits.
Fundamental aspects of quantum mechanics. Uncertainty relations, Schrodinger equation in one and three dimensions, tunneling, harmonic oscillator, angular momentum, hydrogen atom, spin, Pauli principle, perturbation theory, transition probabilities and selection rules, atomic structure, scattering theory. Recommended Course Background: AS.171.303, AS.171.202, AS.171.204, AS.110.202.

AS.171.310. Biological Physics. 4 Credits.
Introduces topics of classical statistical mechanics. Additional topics include low-Reynolds number hydrodynamics and E&M of ionic solutions, via biologically relevant examples.

AS.171.312. Statistical Physics/Thermodynamics. 4 Credits.
Undergraduate course that develops the laws and general theorems of thermodynamics from a statistical framework.
Calculus II (AS.110.107 or AS.110.109 or AS.110.113). Linear Algebra (AS.110.201 or AS.110.212) and Calculus III (AS.110.202 or AS.110.211)

AS.171.313. Introduction to Stellar Physics. 3 Credits.
Survey of stellar astrophysics. Topics include stellar atmospheres, stellar interiors, nucleosynthesis, stellar evolution, supernovae, white dwarfs, neutron stars, pulsars, black holes, binary stars, accretion disks, protostars, and extrasolar planetary systems. Recommended Course Background: AS.110.108-AS.110.109, AS.171.202

AS.171.314. Introduction to Galaxies and Active Galactic Nuclei. 3 Credits.
This course will introduce student to the physics of galaxies and their constituents: stars, gas, dust, dark matter and a supermassive black hole in the central regions.Recommended Course Background: AS.110.108-AS.110.109, AS.171.202

AS.171.321. Introduction to Space, Science, and Technology. 3 Credits.
Topics include space astronomy, remote observing of the earth, space physics, planetary exploration, human space flight, space environment, orbits, propulsion, spacecraft design, attitude control and communication. Crosslisted by Departments of Earth and Planetary Sciences, Materials Science and Engineering and Mechanical Engineering. Recommended Course Background: AS.171.101-AS.171.102 or similar; AS.110.108-AS.110.109.

AS.171.324. Learn to Think Statistically. 3 Credits.
We live in a data-rich world where the flux of information increases exponentially. We will learn how to think statistically and see patterns and structure in many systems around us: news reports, images, cities, social networks, etc. We will learn how to use this knowledge to analyze data, make decisions and predictions. We will explore correlations, patterns, entropy, fractals. This course will allow students to better understand the complex world we live in. The course will occasionally involve some coding. Junior, senior and graduate students only. More at https://bit.ly/3iJ90ps

AS.171.402. Applied Quantum Information. 3 Credits.
This course will provide a basic introduction to quantum computing and quantum algorithms. This course will cover celebrated quantum algorithms that are of interest in the long term in addition to having a particular focus on near-term quantum algorithms for specific applications (e.g., material simulation, approximate optimization and machine learning) that can be readily studied on currently available hardware. Course attendees will also receive hands-on experience in near-term quantum algorithm implementation on the IBM Quantum Experience (IBM QE), a publicly available quantum computing platform.Recommended Background : Calculus, Python (Basic), Linear Algebra, Basic Quantum Mechanics (Preferred/Optional)

AS.171.405. Condensed Matter Physics. 3 Credits.
Undergraduate course covering basic concepts of condensed matter physics: crystal structure, diffraction and reciprocal lattices, electronic and optical properties, band structure, phonons, superconductivity and magnetism. Co-listed with AS.171.621Recommended Course Background: AS.171.304, AS.110.201-AS.110.202.

AS.171.406. Condensed Matter Physics. 3 Credits.

AS.171.408. Nuclear and Particle Physics. 3 Credits.
Basic properties of nuclei, masses, spins, parity. Nuclear scattering, interaction with electromagnetic radiation, radioactivity, Pions, muons, and elementary particles, including resonances. Recommended Course Background: AS.171.303

AS.171.410. Physical Cosmology. 3 Credits.
This course provides an overview of modern physical cosmology. Topics covered include: the contents, shape, and history of the universe; the big bang theory; dark matter; dark energy; the cosmic microwave background; Hubble's law; the Friedmann equation; and inflation. Recommended Course Background: (AS.171.101-AS.171.102), or (AS.171.103-AS.171.104), or (AS.171.105-AS.171.106), or (AS.171.107-AS.171.108), or equivalent.

AS.171.411. Light and Optics. 3 Credits.
What is light? How does it propagate and interact with matter? How do we use it to transmit information? How does technology make use of light? This course is designed for majors in physics as well as other science and engineering departments.

AS.171.416. Numerical Methods for Physicists. 4 Credits.

AS.171.425. Group Theory in Physics. 3 Credits.
Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology.Recommended Prerequisite: AS.171.304

AS.171.430. Introduction to Quantum Field Theory. 3 Credits.
Quantum Field Theory marries the principles of special relativity with quantum mechanics and provides a remarkably consistent description of a wide variety of phenomena, ranging from the theory of elementary particles to processes in condensed matter physics. It is an essential element in the toolkit of every physicist. In this course, we provide an introduction to this vast topic and aim to provide an intuitive understanding of this field. We will start by learning how to think about quantum mechanics in a manner consistent with special relativity (the Klein Gordon and Dirac equations), learn how to estimate relativistic quantum processes (Feynman diagrams), analyze nonsensical infinities that arise in these theories (Renormalization) and conclude with an overview of the Standard Model of Particle Physics (QCD and Electroweak theory). The course is aimed at introducing the student to how physicists think about these issues and it is a stepping stone to graduate study in this topic.
AS.171.304

AS.171.449. Astrophysical Plasmas. 3 Credits.
This course is for both graduate students and undergraduate students. There is no prerequisite although reading for introductory texts will be supplied where useful. Postdocs are also welcome to attend. Topics that will be discussed include: 1.Gravitational Wave Astronomy (related to cosmic plasmas),2. Ultra-High Energy Cosmic Rays,3. Black Hole Electrodynamics, 4.the Intergalactic, Interstellar and Intra-Cluster Medium, 5.Pulsars, 6.Magnetars, 7.Stellar and Galactic Dynamos,8.Solar Flares and CMEs, 9.Gamma Ray Bursts, 10.Supernovae and their Remnants, 11. Radio Sources and Jets and, 12. the universal cosmic plasma from earliest times13.Finally the detailed dusty plasmas around protostellar and protoplanetary disks including debris components of comets, asteroids planetesimals and interstellar intruders. We will spend roughly one week on each topic. In class, we will combine the lectures with reading interesting new papers from the current literature and it is expected that students will be sufficiently fluent in this field by the end of the semester to critically discuss and analyze such papers as experts.

AS.171.501. Independent Research- Undergraduate. 3 Credits.
Students may register for independent research with a faculty member in the Department of Physics and Astronomy. A research plan should be sent to the Director of Undergraduate Study before the add/drop date that includes project details, the number of hours of effort each week and the number of credits. This course may not be used for one of the two electives required for a BA, but one semester of research may be used as one of four focused electives in a BS program.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.171.502. Undergraduate Independent Research. 1 - 3 Credits.
Research done in senior year in conjunction with experimental equipment of intermediate laboratory or as special project in research group. Credit for independent study given to junior and senior students who act as tutors.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.171.597. Independent Research. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.171.603. Electromagnetic Theory.
Classical field theory, relativistic dynamics, Maxwell's equations with static and dynamic applications, boundary-value problems, radiation and propagation of electromagnetic waves, advanced topics in electrodynamics in media and plasmas

AS.171.605. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation.

AS.171.606. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time -independent and time - dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation. Recommended Course Background: AS.171.303 and AS.171.304

AS.171.610. Numerical Methods for Physicists.
Topics in applied mathematics used by physicists, covering numerical methods: linear problems, numerical integration, pseudo-random numbers, finding roots of nonlinear equations, function minimization, eigenvalue problems, fast Fourier transforms, solution of both ordinary and partial differential equations. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.

AS.171.611. Stellar Structure and Evolution.
Basic physics of stellar structure and evolution will be discussed with emphasis on current research.

AS.171.612. Interstellar Medium and Astrophysical Fluid Dynamics.

AS.171.613. Radiative Astrophysics.
A one-term survey of the processes that generate radiation of astrophysical importance. Topics include radiative transfer, the theory of radiation fields, polarization and Stokes parameters, radiation from accelerating charges, bremsstrahlung, synchrotron radiation, thermal dust emission, Compton scattering, properties of plasmas, atomic and molecular quantum transitions, and applications to astrophysical observations.

AS.171.618. Observational Astronomy.
How do we observe the Universe at each wavelength and what do we see? This course will present the knowledge required for astronomical observations across the entire spectrum. For each wavelength range (gamma rays, X-rays, UV, visible, IR, radio) we will discuss the typeof detector used, the range of possible observations and current open questions. We will also discuss the dominant astronomical and terrestrial sources across the spectrum, and study the differences between ground- and space-based observations.

AS.171.620. Soft Matter Physics.
This course is aimed at both graduate students and upper level undergraduate students. It will cover a range of topics going from the traditional areas of soft matter (polymers, liquid crystals, membranes) to newer areas at the intersection with biological physics and condensed matter. In class, we will combine lectures with reading and discussing papers from the current literature. In the second part of the course, students will at turn lead the paper discussions.

AS.171.621. Condensed Matter Physics.
This sequence is intended for graduate students in physics and related fields. Topics include: metals and insulators, diffraction and crystallography, phonons, electrons in a periodic potential, transport. Co-listed with AS.171.405

AS.171.622. Condensed Matter Physics.
This sequence is intended for graduate students in physics and related fields. Topics include superconductivity, magnetism, metal-insulator transitions, low dimensional materials, quantized hall effect.

AS.171.625. Experimental Particle Physics.
For graduate students interested in experimental particle physics, or theory students, or students from other specialties. Subjects covered: experimental techniques, including particle beams, targets, electronics, and various particle detectors; and a broad description of high energy physics problems. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.

AS.171.627. Astrophysical Dynamics.
This is a graduate course that covers the fundamentals of galaxy formation, galactic structure and stellar dynamics and includes topics in current research.

AS.171.630. First Year Research.

AS.171.639. Group Theory in Physics.
Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology.

AS.171.642. Second Year Research.

AS.171.644. Exoplanets and Planet Formation.
A graduate-level introduction to the properties of the solar system, the known exoplanet systems, and the astrophysics of planet formation and evolution. Topics also include the fundamentals of star formation, protoplanetary disk structure and evolution, exoplanet detection techniques, and the status of the search for other Earths in the Galaxy. Upper-level undergraduates may enroll with the permission of the instructor.

AS.171.646. General Relativity.
An introduction to the physics of general relativity. Principal topics are: physics in curved spacetimes; the Equivalence Principle; the Einstein Field Equations; the post-Newtonian approximation and Solar System tests; the Schwarzschild and Kerr solutions of the Field Equations and properties of black holes; Friedmann solutions and cosmology; and gravitational wave propagation and generation.

AS.171.648. Physics of Cell Biology: From Mechanics to Information.
Cells are actively-driven soft materials – but also efficient sensors and information processors. This course will cover the physics of those cellular functions, from the mechanics of DNA to the sensing of chemical signals. Questions answered include: How does polymer physics limit how quickly chromosomes move? Why do cells use long, thin flagella to swim? What limits the accuracy of a cell's chemotaxis?Some experience with partial differential equations required. No biology knowledge beyond the high school level necessary. Some problem sets will require minimal programming.

AS.171.649. Astrophysical Plasmas.
This course is for both graduate students and undergraduate students. There is no prerequisite although reading for introductory texts will be supplied where useful. Postdocs are also welcome to attend. Topics that will be discussed include: 1.Gravitational Wave Astronomy (related to cosmic plasmas),2. Ultra-High Energy Cosmic Rays,3. Black Hole Electrodynamics, 4.the Intergalactic, Interstellar and Intra-Cluster Medium, 5.Pulsars, 6.Magnetars, 7.Stellar and Galactic Dynamos,8.Solar Flares and CMEs, 9.Gamma Ray Bursts, 10.Supernovae and their Remnants, 11. Radio Sources and Jets and, 12. the universal cosmic plasma from earliest times13.Finally the detailed dusty plasmas around protostellar and protoplanetary disks including debris components of comets, asteroids planetesimals and interstellar intruders. We will spend roughly one week on each topic. In class, we will combine the lectures with reading interesting new papers from the current literature and it is expected that students will be sufficiently fluent in this field by the end of the semester to critically discuss and analyze such papers as experts.

AS.171.652. Exoplanets and their Atmospheres.
This course covers the basic theory of planetary atmospheres as applied to extrasolar planets. The fundamental physical processes related to the structure, composition, radiative transfer, chemistry and dynamics of planetary atmospheres are covered, with an emphasis on those related to observable exoplanet properties. We also provide an overview of the observational techniques of exoplanetary atmospheres and discuss the habitability of exoplanets.

AS.171.698. Physics Beyond the Standard Model.
The Standard Model of particle physics has withstood every direct experimental test, explaining physics from sub nuclear to cosmological length scales. But, we know that it is not a complete theory. It fails to explain observational facts such as the nature of dark matter and dark energy. The theory is also beset by theoretical problems such as the hierarchy, strong CP, cosmological constant and the black hole information problem. Attempts to explain these puzzles have not been successful. In this course, we will highlight the main obstacles towards solving these problems and discuss new approaches to these problems, both from the experimental and theoretical point of view.

AS.171.701. Quantum Field Theory.
Introduction to relativistic quantum mechanics and quantum field theory. Canonical quantization; scalar, spinor, and vector fields; scattering theory; renormalization; functional integration; spontaneous symmetry breaking; Standard Model of particle physics.

AS.171.702. Quantum Field Theory II.
Introduction to relativistic quantum mechanics and quantum field theory. Recommended Course Background: AS.171.605-AS.171.606 or equivalent.

AS.171.703. Advanced Statistical Mechanics.
Brief review of basic statistical mechanics and thermodynamics. Then hydrodynamic theory is derived from statistical mechanics and classical treatments of phase transitions, including Ginzburg-Landau theory.

AS.171.704. Phase Transitions and Critical Phenomena.
Course covers phase transitions and critical phenomena. Building on the ideas of spontaneous symmetry breaking and scale invariance at a critical point we develop Landau's theory of phase transitions and the apparatus of renormalization group using both analytic and numerical techniques for studying interacting systems.

AS.171.708. Gravitational Waves.
In September 2015, one hundred years after Einstein's prediction of the existence of gravitational waves, the LIGO/Virgo collaboration detected the gravitational radiation produced by the merger of two black holes, marking the beginning of a new era in astronomy. This course will review the theory of gravitational waves, the main astrophysical and cosmological sources of gravitational radiation, and the modeling of these sources through numerical and analytical techniques. We will discuss how present and future gravitational wave detections on Earth and in space can be used to study the astrophysics of compact objects (such as black holes and neutron stars) and to test Einstein's theory of general relativity.

AS.171.732. Elementary Particle Physics.
Description TBA

AS.171.749. Machine Learning for Scientists.
Artificial Intelligence is penetrating the world at many levels. Neural networks have changed the ways we interact with data and think about statistics. For scientists, it is important to understand the fundamental concepts behind these systems, why they work, what are their potential and limitations. This course will provide an introduction to the subject, including aspects of statistics, information theory, optimization, and neural network architectures. We will alternate between theory and applications in python. More at https://bit.ly/3LEAg7D

AS.171.750. Cosmology.
Review of special relativity and an introduction to general relativity, Robertson-Walker metric, and Friedmann equation and solutions. Key transitions in the thermal evolution of the universe, including big bang nucleosynthesis, recombination, and reionization. The early universe (inflation), dark energy, dark matter, and the cosmic microwave background. Development of density perturbations, galaxy formation, and large-scale structure.

AS.171.752. Black Hole Astrophysics.
Black holes are the central engines for a wide variety of astrophysical objects: Galactic X-ray sources, active galactic nuclei, gamma-ray bursts, stellar tidal disruptions, and black hole mergers. Although the mass distribution of astrophysical black holes spans ten orders of magnitude and their circumstances can vary tremendously, the physical processes relevant to them are often closely related. The class will begin with an overview of astrophysical black hole phenomenology and then review the most important physical mechanisms responsible for their observed properties: relativistic orbits for both matter and photons; accretion dynamics and radiation; relativistic jet launching, propagation, and radiation; binary black hole dynamics and gravitational wave emission; and lastly, black hole creation.

AS.171.753. String Theory.

AS.171.755. Fourier Optics and Interferometry in Astronomy.
A course for advanced undergraduate and beginning graduate students covering the principles of optics and image formation using Fourier Transforms, and a discussion of interferometry and other applications both in radio and optical astronomy.

AS.171.762. Advanced Condensed Matter.
This course is designed for graduate students interested in learning the language, techniques, and problematic of modern quantum many-body theory as applied to condensed matter physics.

AS.171.764. Experimental Techniques in Condensed Matter Physics.
This course will be a survey of modern techniques in experimental condensed matter physics and is intended for graduate students interested in this area, but others interested in this topic (especially condensed matter the- ory students) are encouraged to enroll. Topics include low temperature techniques, transport, the SQUID and other magnetic probes, digital and analog signal processing, scattering (neutron, X-ray, and light), EPR, NMR, data analysis, and Monte Carlo. Sample preparation, including crystal and film growth and lithography will also be covered.

AS.171.781. Symmetry and anomalies in quantum systems.
This course with cover various aspects of gauge symmetries and anomaly cancelations, Anomaly matching and EFT, phases of matter, topological states, SPT phases, edge mode, discrete symmetries, aspect of quantum gravity and anomaly cancelations, QCD at low energies and chiral symmetry. A background in quantum mechanics and quantum field theory is recommended for the course.

AS.171.782. Advanced Particle Theory: Quantum Gravity.
Advanced course on the AdS/CFT correspondence and its relationship with contemporary research topics.

AS.171.783. Black Hole Physics.
General Relativity predicts its own demise in the existence of singular black hole solutions. There have been mounting astrophysical evidence that black holes do exist in nature. Thus they are not just pathologies of the theory but fundamental objects in gravity that require understanding. Theoretically, they serve as "laboratories" for studies in quantum gravity; indeed, most of the research in the field aims to resolve various paradoxes and puzzles that emerge when one tries to understand physics inside or outside black holes. The goal of this course is to elucidate these paradoxes and puzzles. First, we will study the classical properties of black holes in general relativity such as horizons, causal history, singularity theorems, area theorems and black hole mining. Next, we will study semi-quantum and quantum properties such as black hole thermodynamics, Hawking radiation, black hole evaporation. We will also explore modern results and perspectives on the fundamental physics of black holes that are necessary for current research. A background in general relativity and quantum field theory is recommended for the course.

AS.171.801. Independent Research- Graduates.

AS.171.802. Independent Research-Graduate.

AS.171.803. Independent Research-Graduate.

AS.172.203. Contemporary Physics Seminar. 1 Credit.
This seminar exposes physics majors to a broad variety of contemporary experimental and theoretical issues in the field. Students read and discuss reviews from the current literature, and are expected to make an oral or written presentation. Recommended Course Background: AS.171.101-AS.171.102, AS.171.103-AS.171.104, or AS.171.105-AS.171.106.

AS.172.601. Department Colloquium.

AS.172.604. Joint JHU/STScI Colloquium.
A joint JHU Department of Physics and Astronomy and Space Telescope Science Institute Colloquium Series.

AS.172.633. Language Of Astrophysics.
Survey of the basic concepts, ideas, and areas of research in astrophysics, discussing general astrophysical topics while highlighting specialized terms often used compared to physics.

AS.172.732. CAS Research Seminar.

AS.172.751. Elementary Particle Physics Seminar.

AS.172.752. Elementary Particle Physics Seminar.

AS.172.753. Advanced Particle Theory Seminar.

AS.172.754. Advanced Particle Theory Seminar.

AS.172.763. Condensed Matter Physics Seminar.

AS.172.764. Condensed Matter.

AS.173.111. General Physics Laboratory I. 1 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Corequisite: AS.171.101, AS.171.103, AS.171.105 or AS.171.107, or EN.530.123.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.173.112. General Physics Laboratory II. 1 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Recommended Course Background: AS.173.111; Corequisite: AS.171.102.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.171.101 OR AS.171.102 OR AS.171.104 OR AS.171.106 OR AS.171.108 OR EN.530.123

AS.173.115. Classical Mechanics Laboratory. 1 Credit.
Experiments chosen to complement the lecture course Classical Mechanics I, II AS.171.105-AS.171.106 and introduce students to experimental techniques and statistical analysis. Corequisite: AS.171.105.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.173.116. Electricity and Magnetism Laboratory. 1 Credit.
Experiments chosen to complement Electricity and Magnetism AS.171.106 and introduce students to experimental techniques and statistical analysis.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.173.308. Advanced Physics Laboratory. 3 Credits.
A broad exposure to modern laboratory procedures such as holography, chaos, and atomic, molecular, and particle physics.
Area: Writing Intensive
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

Cross Listed Courses

Applied Mathematics & Statistics

EN.553.793. Turbulence Theory. 3 Credits.
An advanced introduction to turbulence theory for graduate students in the physical sciences, engineering and mathematics. Both intuitive understanding and exact analysis of the fluid equations will be stressed. Previous familiarity with fluid mechanics is not required, although it could be helpful.

Chemistry

AS.030.691. Hardware, Software and Materials Chemistry.

The course is designed to provide the essential principles and concepts underlying the modern study of the structure and properties of solids in bulk crystals, thin films, and nanoscale objects. Topics include basic crystallography, structure determination by x-ray, neutron, and electron diffraction, fundamental concepts of bonding in solids, lattice dynamics, electronic band structure, magnetism, and strongly correlated electron behavior. Particular emphasis is placed on the impact of the structure, dimensionality, and electron count on electrical and magnetic properties (electric conduction, superconductivity, thermoelectricity, etc). More course info available at http://occamy.chemistry.jhu.edu.. Cross-listed with Physics and Astronomy

First Year Seminars

AS.001.105. FYS: The Science Behind the Fiction. 3 Credits.

In this First-Year Seminar, we will seek to answer questions including: could you forge Beskar? What would it take to make a light saber? Is "Image, enhance" really possible? What is possible today? What might be possible in the future? And, what may never be possible, as it violates the laws of nature as we know them? We will take an empiricist approach, gathering data on the needed properties via screenings and related research, and then applying physical principles to reveal feasibility.

AS.001.140. FYS: What Everyone Should Know about How Science Works. 3 Credits.

Science and scientists often bear the brunt of public displeasure over current events. Recent debates over CoVID (the safety and effectiveness of vaccines, masks, and isolation), climate change, and many other controversies raise questions about the reliability of scientific results and what it means to conduct research. What is and what is not scientific? How can non-scientists determine whether a scientific result is "right?" In this First-Year Seminar, we will explore what scientists do -- the practices of science -- and how they set standards of knowledge. Discussions will be organized around current pressing topics, including: What does it mean to "follow the science" or "do your own research" in the age of COVID? Will science save us from the ravages of climate change? Who or what has ultimate authority over the direction of scientific advances? When are new scientific announcements important new results and when are they just click bait hype? Who pays for science and should we care? What is meant by replication and is it bad if it doesn't happen? How does scientific publication work and what issues have arisen? Why do scientists often get bad press, and is it fair?

AS.001.142. FYS: The Physics of Democracy. 3 Credits.

This First-Year Seminar considers what we can learn about democratic societies by thinking of them as complex physical systems. We will discuss voting and social choice theories and their relationship to renormalization and emergence; organization and segregation in complex systems: power laws, inequality, and polarization; and the dynamics of information and opinions: networks, bubbles, filters, and phase transitions.

AS.001.185. FYS: Dynamics of Fundamental Science to General Society. 3 Credits.

This First-Year Seminar will explore how important results in physics and astronomy are discovered, their transformative implications to the basic understanding of nature and their impact on the progress of society. Students will explore how simple rules obtained from the lab or in idealized settings imply the complex behaviors and dynamics observed in the natural world, and how they back-reaction on society. An example of topic that will be explored is General Relativity, a subject that emerged purely from theoretical considerations by Einstein which have revolutionized our basic understanding of the physical world and have reshaped the fields of physics and astronomy. On the other hand, General Relativity is necessary for satellite timing which revolutionized communication in human society. Another example is the basic physics experiments and research that lead to the invention of the transistor and the ensuing revolution of the information age. The students will explore the value of scientific thinking and its necessity in building a more robust society that can effectively serve its citizens. The course will aim to help students understand how the various tools used in the lab and idealized settings can be effectively applied to solve important problems beyond academic settings. For example, the course can explore the unique perspectives that physicist and astronomers can bring to bear to the emerging world of data science and artificial intelligence. These are both topics that will reshape society in more ways that we can predict.

Interdepartmental

AS.360.339. Planets, Life and the Universe. 3 Credits.

This multidisciplinary course explores the origins of life, planet formation, Earth's evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level (300+) courses in sciences (Biophysics, Biology, Chemistry, Physics, Astronomy, Math, or Computer Science)
Students may not register for this class if they have already received credit for AS.020.334 OR AS.020.616 OR AS.171.333 OR AS.171.699 OR AS 270.335 OR AS.360.671

AS.360.671. Planets, Life and the Universe.

Replace description with the following--"This multidisciplinary course explores the origins of life, planet formation, Earth's evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level (300+) courses in sciences (Biophysics, Biology, Chemistry, Physics, Astronomy, Math, or Computer Science)
Students may not register for this class if they have already received credit for AS.020.616 OR AS.020.334 OR AS.171.333 OR AS.171.699 OR AS.270.335 OR AS.360.339.

Philosophy

AS.150.465. Topics in the Philosophy of Physics. 3 Credits.

This course will consider some philosophical topics in the foundations of physics. Entropy and the arrow of time -- why time has a direction, whether it can be explained in terms of entropy, and what role the arrow of time plays in causation and emergence. Anthropics and indexical uncertainty -- approaches to probability, reference classes, the cosmological multiverse, Boltzmann brains, simulation and doomsday arguments. Foundations of quantum mechanics -- the measurement problem, many-worlds, probability and structure, alternative approaches.

Astronomy and Astrophysics, PhD

Advising

In the beginning of every fall semester, the department organizes a series of events (graduate orientation, various seminars and presentations) to provide an in-depth overview of research activities in the department. During a two-day research jamboree, students discuss possible research projects with multiple faculty members either in individual meetings or in a group setting. These events help familiarize the student with the department, with the faculty and with the expectations of the graduate program.

To help guide students through the first two years of the program, all entering graduate students are assigned an academic advisor who works closely with them during their first year. This first-year advisor meets regularly with the student to determine courses of study, familiarize them with the department, and help them find research opportunities. The first-year advisor works with the student until a thesis advisor has been appointed. During the orientation, the first-year advisor reviews the undergraduate record with the student. If there are any gaps in the physics background, the first-year advisor may recommend additional coursework or independent reading.

Admission Requirements

A complete application will include:

- Statement of purpose. We look for a thoughtful, well-written statement that shows the ability to overcome challenges, dedication to attain chosen goals, a capacity for creativity, an understanding of physics and/or astronomy, and any other indication of potential for research.
- Three letters of recommendation. Recommendation letters should help us evaluate your capacity for research, the most important criterion for admission.
- Transcripts of all previous work. Transcripts submitted with the application may be unofficial transcripts. Successful applicants who accept the offer of admission must supply an official transcript before they can begin the PhD program at JHU. In the case of students in the final year of their bachelors program, the official transcript must show completion of all coursework required for the degree.
- TOEFL or IELTS for international students. A reproduction is acceptable. Johns Hopkins prefers a minimum score of 600 (paper-based) or 250 (computer-based) or 100 (Internet-based) on the Test of English as a Foreign Language (TOEFL).
- $75 non-refundable application fee. The application fee may be waived (http://krieger.jhu.edu/graduate-admissions/apply/how-to-apply/#fees).

Note: submission of General GRE and Physics GRE scores is optional.

Successful applicants applying in the last year of their Bachelor's program will need to demonstrate the completion of their Bachelor's degree program before they can begin the Ph. D. program at JHU.

Program Requirements

The Ph.D. program has strong emphasis on early and active involvement in graduate research. Thus, students are required to have a research advisor and file a research summary every semester they are enrolled in the program, starting with the first one. Furthermore, students must complete the required courses with a grade of B- or better; the coursework is typically done over the first two years. In the beginning of the second year, students complete the research examination, and in the beginning of the third year – the University's Graduate Board Oral examination, both of which are based on completed or proposed research. During the first two years, students are typically involved in introductory research projects, which may or may not be related to their thesis work, and sometimes work with several different advisors, but they must identify (and have an agreement with) a thesis advisor no later than the beginning of their third year in the program, after which point students focus on their thesis research. The thesis is to be completed by no later than the end of the 6th year, ending with an oral presentation of the thesis to a faculty committee.

Course Requirements

Ph.D. in Physics

Students must complete the following courses:

Code	Title	Credits
AS.171.603	Electromagnetic Theory	
AS.171.605 & AS.171.606	Quantum Mechanics and Quantum Mechanics	0
AS.171.703	Advanced Statistical Mechanics	

Ph.D. in Astronomy and Astrophysics

Students must complete the following courses:

Code	Title	Credits
AS.171.611	Stellar Structure and Evolution	
AS.171.612	Interstellar Medium and Astrophysical Fluid Dynamics	
AS.171.613	Radiative Astrophysics	
AS.171.627	Astrophysical Dynamics	
AS.172.633	Language Of Astrophysics	

Students in both programs must receive at least a B- in each required course, or they will be required to retake the specific course once more and pass it.

The department offers a wide range of graduate physics, astrophysics, mathematical methods and statistics classes, and while only five are required, the students are encouraged to use the flexibility of the graduate program and the available classes to design programs of study that best prepare them for their chosen area of research. In addition to the required courses listed above, below is the list of the graduate courses that have been taught in recent years:

Code	Title	Credits
AS.171.610	Numerical Methods for Physicists	
AS.171.618	Observational Astronomy	
AS.171.620	Soft Matter Physics	
AS.171.621 & AS.171.622	Condensed Matter Physics and Condensed Matter Physics	
AS.171.622	Condensed Matter Physics	
AS.171.625	Experimental Particle Physics	
AS.171.639	Group Theory in Physics	
AS.171.644	Exoplanets and Planet Formation	
AS.171.646	General Relativity	

AS.171.648	Physics of Cell Biology: From Mechanics to Information
AS.171.649	Astrophysical Plasmas
AS.171.652	Exoplanets and their Atmospheres
AS.171.698	Physics Beyond the Standard Model
AS.171.701 & AS.171.702	Quantum Field Theory and Quantum Field Theory II
AS.171.704	Phase Transitions and Critical Phenomena
AS.171.708	Gravitational Waves
AS.171.732	Elementary Particle Physics
AS.171.749	Machine Learning for Scientists
AS.171.750	Cosmology
AS.171.752	Black Hole Astrophysics
AS.171.753	String Theory
AS.171.755	Fourier Optics and Interferometry in Astronomy
AS.171.762	Advanced Condensed Matter
AS.171.783	Black Hole Physics
AS.171.764	Experimental Techniques in Condensed Matter Physics
AS.171.781	Symmetry and anomalies in quantum systems
AS.171.782	Advanced Particle Theory: Quantum Gravity

Students in both programs must receive at least a B- in each required course, or they will be required to retake the specific course once more and pass it.

First and Second-Year Research Requirement

By the end of September, the student chooses their first research advisor among the professorial faculty and starts working on the first-semester research project. If the proposed research advisor does not hold a primary appointment as a tenure-track or research faculty member in the Department of Physics and Astronomy, the form must be co-signed by a PHA faculty member, who will provide mentorship (relevant department faculty members list) (https://physics-astronomy.jhu.edu/people/#filter=faculty). This requirement holds for all semesters of research. The first-semester project continues through intersession in January. The spring-semester research project continues until the end of the spring semester. The summer semester lasts from June through August. Students may continue with one advisor through the entire first year, or they may choose to cycle through several different research advisers from one semester to the next.

This system of semester projects continues during the first two years of the program, when students also complete required coursework. The nature of these first- and second-year research projects varies from student to student, from advisor to advisor and from one sub-field of physics to another. Some may be self-contained research projects that lead to published scientific papers and may or may not be related to the thesis research in later years. Listing of recent publications by our graduate students (http://sites.krieger.jhu.edu/pags/academics/graduate-research/). Others may comprise reading or independent-study projects to develop background for subsequent research. In other cases, they may be first steps in a longer-term research project.

This system accommodates both the students who have chosen the direction of their thesis work before graduate school and those who would like to try a few different things before committing to a long-term project. As students get more familiar with the department and the research opportunities, they zero in on their thesis topic and find a thesis advisor. This may happen any time during the first two years, and students are required to find a thesis advisor by the beginning of the third year.

Thesis Research and Defense

Securing a mutual agreement with a thesis advisor is one of the most important milestones of our graduate program. Students must find a thesis advisor and submit the thesis advisor form before the first day of their 3rd year. The form represents a long-term commitment and serious efforts in planning and communication between the student and the advisor. If the proposed thesis advisor does not hold a primary appointment as a tenure-track or research faculty member in the Department of Physics and Astronomy, the form must be co-signed by a PHA faculty member, who will serve as the departmental advisor of record (relevant department faculty members list) (https://physics-astronomy.jhu.edu/people/#filter=faculty).

Students should start their thesis planning no later than the beginning of the summer after the second year. By this time in the program, many students have identified projects and advisors of interest during their research rotations in the 1st and 2nd years. In these cases, students should discuss with their prospective advisors their mutual expectations for the scope and the timeline of the thesis and when an agreement is reached, submit the thesis advisor form. If by the summer after their 2nd year, the student does not have a clear idea of who they want to work with for their thesis, they should reach out to different faculty of interest, to 1st / 2nd year academic advisors, and/or to the Chair of the graduate program committee (Director of graduate studies). In these cases the student’s goal for the summer is to identify a thesis advisor and to reach an agreement regarding a thesis topic. In all cases, the thesis advisor form must be submitted before the 1st day of the 3rd year.

Physics, Bachelor of Arts

Physics Major Requirements (B.A.)

(See also Requirements for a Bachelor’s Degree (p. 1587).)

The major program is structured so that nearly all students take the same classes during the first two years and must complete the same list of core upper-level courses during their second two years, but permits a variety of choices in upper-level electives. The total number of credits required for the B.A. degree is 120. By the end of the four years our students share an understanding of classical mechanics, electromagnetism, statistical physics and quantum mechanics, and have acquired physics lab skills that will support them in graduate school or in a host of other pursuits.

A grade of C- or higher is required for a course to be counted towards major requirements. This includes required math courses. An exception for a single course taken in the year before graduation may be granted by the Director of Undergraduate Studies under extenuating circumstances.

Core Courses

Mathematics

The standard mathematics requirements for all physics majors consist of:

Code	Title	Credits
AS.110.108	Calculus I (Physical Sciences & Engineering)	4
AS.110.109	Calculus II (For Physical Sciences and Engineering)	4

or AS.110.113	Honors Single Variable Calculus	
AS.110.202	Calculus III	4
or AS.110.211	Honors Multivariable Calculus	
AS.110.302	Differential Equations and Applications	4
AS.110.201	Linear Algebra	4
or AS.110.212	Honors Linear Algebra	
Total Credits		**20**

PHYSICS
The standard physics requirements for all physics majors consist of:

Code	Title	Credits
AS.171.105	Classical Mechanics I	4
AS.173.115	Classical Mechanics Laboratory	1
AS.171.106	Electricity and Magnetism I	4
AS.173.116	Electricity and Magnetism Laboratory	1
AS.171.201	Special Relativity/Waves	4
AS.172.203	Contemporary Physics Seminar	1
AS.171.204	Classical Mechanics II	4
AS.171.312	Statistical Physics/Thermodynamics	4
AS.171.301	Electromagnetic Theory II	4
AS.171.303	Quantum Mechanics I	4
AS.171.304	Quantum Mechanics II (or Topics in Modern Physics)	4
AS.173.308	Advanced Physics Laboratory	3
Total Credits		**38**

B.A Additional Requirements

Code	Title	Credits
Two Additional Upper Level Physics Courses		6
Total Credits		**6**

* For the B.A. in Physics students must take two additional courses (at least 3 credits each) at the 300-600 level in the Department of Physics and Astronomy or approved physics-related courses in other departments. Students who intend to continue Physics in graduate school are strongly encouraged to take these electives in Physics and Astronomy, and take AS.171.304 Quantum Mechanics II.

Note: AS.171.101 General Physics: Physical Science Major I**-**AS.171.102 General Physics: Physical Science Major II**,** AS.171.103 General Physics I for Biological Science Majors-AS.171.104 General Physics/Biology Majors II **or** AS.171.107 General Physics for Physical Sciences Majors (AL)-AS.171.108 General Physics for Physical Science Majors (AL) **with their labs is acceptable in place of** AS.171.105 Classical Mechanics I-AS.171.106 Electricity and Magnetism I**,** AS.173.115 Classical Mechanics Laboratory-AS.173.116 Electricity and Magnetism Laboratory.

Honors in the Major

Honors in Physics is granted to graduating students who achieve a GPA of 3.5 or higher in all courses taken to fulfill the major requirements.

Senior Thesis

Any student majoring in the department may write a senior thesis, based on original research conducted under the supervision of a member of the faculty. Arrangements for this research will be made on an individual basis. The department views the writing of a senior thesis as an excellent capstone experience to an undergraduate education in physics, and encourages all students to consider it.

Physics, Bachelor of Science

Physics Major Requirements (B.S.)

(See also Requirements for a Bachelor's Degree (p. 1587).)

The major program is structured so that nearly all students take the same classes during the first two years and must complete the same list of core upper-level courses during their second two years, but permits a variety of choices in upper-level electives. The total number of credits required for the B.S. in Physics degree is 126. By the end of the four years our students share an understanding of classical mechanics, electromagnetism, statistical physics and quantum mechanics, and have acquired physics lab skills that will support them in graduate school or in a host of other pursuits.

A grade of C- or higher is required for a course to be counted towards major requirements. This includes required math courses. An exception for a single course taken in the year before graduation may be granted by the Director of Undergraduate Studies under extenuating circumstances.

Core Courses

Mathematics

The standard mathematics requirements for all physics majors consist of:

Code	Title	Credits
AS.110.108	Calculus I (Physical Sciences & Engineering)	4
AS.110.109	Calculus II (For Physical Sciences and Engineering)	4

Additional Requirements

Code	Title	Credits
Five Additional Elective Courses		
Four Courses in One Area		12-16
One Additional Course		3-4
Total Credits		**15-20**

* For the B.S. in Physics five (5) additional courses (at least 3 credits each) at the 200-600 level in the following departments: Physics and Astronomy, Biology, Biophysics, Chemistry, Cognitive Science, Earth and Planetary Sciences, Mathematics, Neuroscience and/or the School of Engineering (excluding courses listed as 500.xxx, 660.xxx, 551.xxx and 661.xxx). These courses must constitute a coherent and rigorous program of study approved by the Departmental Advisor and Director of Undergraduate Studies no later than the registration period for the fall semester of the senior year. At least four (4) of these courses must be taken within a single department or program in the Krieger School of Arts and Sciences or the Whiting School of Engineering (note: called "Department elective" in the Sample Program of Study). One (1) semester of research may be used as one elective.

Note: AS.171.101 General Physics: Physical Science Major I-AS.171.102 General Physics: Physical Science Major II**,** AS.171.103 General Physics I for Biological Science Majors-AS.171.104 General Physics/Biology Majors II **or** AS.171.107 General Physics for Physical Sciences Majors (AL)-AS.171.108 General Physics for Physical Science Majors (AL) **with their labs is acceptable in place of** AS.171.105 Classical Mechanics I-AS.171.106 Electricity and Magnetism I**,** AS.173.115 Classical Mechanics Laboratory-AS.173.116 Electricity and Magnetism Laboratory.

Sample Program of Study

A typical B.S. in Physics program might include the following sequence of courses:

***Note: Because students arrive with a wide range of mathematical preparation, each student should consult the Department of Mathematics to determine the best individual plan.**

Honors in the Major

Honors in Physics is granted to graduating students who achieve a GPA of 3.5 or higher in all courses taken to fulfill the major requirements."

Senior Thesis

Any student majoring in the department may write a senior thesis, based on original research conducted under the supervision of a member of the faculty. Arrangements for this research will be made on an individual basis. The department views the writing of a senior thesis as an excellent capstone experience to an undergraduate education in physics, and encourages all students to consider it.

Physics, Bachelor of Science/Master of Science

Requirements for Four-year Bachelor/Master's in Physics

Requirements for acceptance into the four-year Bachelor/Master's in Physics.

- The program is open only to current JHU undergraduates.
- Interested students should apply no later than the end of the fall semester of their junior year.
- A minimum GPA of 3.6 in courses taken in the department of Physics & Astronomy (PHA) at the time of the application is required.
- The following courses or their analogs must be completed or in progress by the time of the application: AS.171.105 Classical Mechanics I/AS.171.106 Electricity and Magnetism I, AS.173.115 Classical Mechanics Laboratory/AS.173.116 Electricity and Magnetism Laboratory, AS.171.201 Special Relativity/Waves/AS.171.207 Special Relativity, AS.171.204 Classical Mechanics II, AS.171.301 Electromagnetic Theory II, AS.171.303 Quantum Mechanics I

As part of the application, the student must submit to the Director of Undergraduate Studies:

- A research advisor form signed by a faculty member in the Department of Physics & Astronomy who has agreed to supervise a minimum of two semesters of graduate-level research of a scope appropriate for the M.A. degree and on a subject appropriate for the Department of Physics & Astronomy.
- A research plan approved by the research advisor.
- A plan to satisfy the course requirements both for the B.A. or B.Sci. degree in Physics and for the M.A. degree in Physics or Astronomy & Astrophysics by the end of their fourth year at JHU.

Requirements for completing the four-year Bachelor/Masters in Physics.

- The student must satisfy all JHU requirements for a B.A. in Physics or a B.Sci. in Physics to be eligible for the M.A. degree.
- The student must complete the course requirements for the M.A. degree using courses outside of those used for the B.A. or B.Sci. degree.
- For the M.A. in Physics, the student must complete eight graduate courses. For the M.A. in Astronomy and Astrophysics, the student must complete eight graduate courses plus the AS.172.633 Language Of Astrophysics seminar.
- As part of the eight graduate courses, the student must pass the core graduate courses with a grade of B- or better. For the M.A. in Physics, the core courses are Quantum Mechanics I (AS.171.605 Quantum Mechanics), Quantum Mechanics II (AS.171.606 Quantum Mechanics), Advanced Statistical Mechanics (AS.171.703 Advanced Statistical Mechanics), and Electromagnetic Theory (AS.171.603 Electromagnetic Theory). For the M.A. in Astronomy & Astrophysics, the core courses are Stellar Structure & Evolution (AS.171.611 Stellar Structure and Evolution), Interstellar Medium & Astrophysical Fluid Dynamics (AS.171.612 Interstellar Medium and Astrophysical Fluid Dynamics), Radiative Processes (AS.171.613 Radiative Astrophysics), and Astrophysical Dynamics (AS.171.627 Astrophysical Dynamics). At most one of the core graduate courses may be replaced with

another graduate course with a comparable workload and level, by prior approval of the graduate program committee.

- As part of the eight graduate courses, between two and four of the courses must be research semester courses (AS.171.501 Independent Research- Undergraduate/AS.171.502 Undergraduate Independent Research, at 3 credits per semester).
- For every semester of research, the student must submit written research reports to the graduate program committee of the same format as that required for first- and second year students in the Ph.D. program.
- The student must pass a research examination of the same format as that required for second-year students in the Ph.D. program.
- The student must maintain status as a full time undergraduate while completing the M.A. requirements. The full program (B.A. or B.Sci. plus the M.A. degrees) should be completed in four years or less.

Physics, Minor

Physics Minor Requirements

To earn a minor in Physics, a student must complete four (4) courses (at least 3 credits each) at the 200-level or above, plus AS.172.203 Contemporary Physics Seminar.

Restrictions: A grade of "C-" or better must be earned in required courses, which may not be taken S/U.

Physics, PhD

Admission Requirements

To obtain admission, a student is expected to submit evidence that they have a good chance to succeed.

A complete application will include:

- Statement of purpose. We look for a thoughtful, well-written statement that shows the ability to overcome challenges, dedication to attain chosen goals, a capacity for creativity, an understanding of physics and/or astronomy, and any other indication of potential for research.
- Three letters of recommendation. Recommendation letters should help us evaluate your capacity for research, the most important criterion for admission.
- Transcripts of all previous work. Transcripts submitted with the application may be unofficial transcripts. Successful applicants who accept the offer of admission must supply an official transcript before they can begin the PhD program at JHU. In the case of students in the final year of their bachelors program, the official transcript must show completion of all coursework required for the degree.
- TOEFL or IELTS for international students. A reproduction is acceptable. Johns Hopkins prefers a minimum score of 600 (paper-based) or 250 (computer-based) or 100 (Internet-based) on the Test of English as a Foreign Language (TOEFL).
- $75 non-refundable application fee. The application fee may be waived (http://krieger.jhu.edu/graduate-admissions/apply/how-to-apply/#fees).

Note: submission of General GRE and Physics GRE scores is optional.

Successful applicants applying in the last year of their Bachelor's program will need to demonstrate the completion of their Bachelor's degree program before they can begin the Ph.D. program at JHU.

Advising

All entering students are assigned to a first-year advisor who works closely with the student through the first two years of graduate study, or until a thesis advisor is found. The first-year advisor advises the student on courses of study, helps familiarize them with the department and provides guidance in finding research opportunities. In the beginning of each fall semester, the department holds a "research jamboree" where incoming students are introduced to the research in the department through a series of brief talks, lab tours, and research group open houses. Thus, the students are familiar, immediately upon their arrival, with the scope of research in the department and can identify prospective research advisors they may wish to work with.

Program Requirements

The Ph.D. program has strong emphasis on early and active involvement in graduate research. Thus, students are required to have a research advisor and file a research summary every semester they are enrolled in the program, starting with the first one. Furthermore, students must complete the required courses with a grade of B- or better; the coursework is typically done over the first two years. In the beginning of the second year, students complete the research examination, and in the beginning of the third year – the University's Graduate Board Oral examination, both of which are based on completed or proposed research. During the first two years, students are typically involved in introductory research projects, which may or may not be related to their thesis work, and sometimes work with several different advisors, but they must identify (and have an agreement with) a thesis advisor no later than the beginning of their third year in the program, after which point students focus on their thesis research. The thesis is to be completed by no later than the end of the 6th year, ending with an oral presentation of the thesis to a faculty committee.

Course Requirements

Ph.D. in Physics

Students must complete the following courses:

Code	Title	Credits
AS.171.603	Electromagnetic Theory	
AS.171.605 & AS.171.606	Quantum Mechanics and Quantum Mechanics	
AS.171.703	Advanced Statistical Mechanics	

Ph.D. in Astronomy and Astrophysics

Students must complete the following courses:

Code	Title	Credits
AS.171.611	Stellar Structure and Evolution	
AS.171.612	Interstellar Medium and Astrophysical Fluid Dynamics	
AS.171.613	Radiative Astrophysics	
AS.171.627	Astrophysical Dynamics	
AS.172.633	Language Of Astrophysics	

Students in both programs must receive at least a B- in each required course, or they will be required to retake the specific course once more and pass it.

The department offers a wide range of graduate physics, astrophysics, mathematical methods and statistics classes, and while only five are required, the students are encouraged to use the flexibility of the graduate program and the available classes to design programs of study that best prepare them for their chosen area of research. In addition to the required courses listed above, below is the list of the graduate courses that have been taught in recent years:

Code	Title	Credits
AS.171.610	Numerical Methods for Physicists	
AS.171.618	Observational Astronomy	
AS.171.620	Soft Matter Physics	
AS.171.621	Condensed Matter Physics	
AS.171.625	Experimental Particle Physics	
AS.171.639	Group Theory in Physics	
AS.171.644	Exoplanets and Planet Formation	
AS.171.646	General Relativity	
AS.171.648	Physics of Cell Biology: From Mechanics to Information	
AS.171.649	Astrophysical Plasmas	
AS.171.701	Quantum Field Theory	
AS.171.704	Phase Transitions and Critical Phenomena	
AS.171.708	Gravitational Waves	
AS.171.732	Elementary Particle Physics	
AS.171.750	Cosmology	
AS.171.752	Black Hole Astrophysics	
AS.171.753	String Theory	
AS.171.755	Fourier Optics and Interferometry in Astronomy	
AS.171.762	Advanced Condensed Matter	
AS.171.783	Black Hole Physics	
AS.171.749	Machine Learning for Scientists	
AS.171.764	Experimental Techniques in Condensed Matter Physics	

First and Second-Year Research Requirement

First-year students must find, by the end of the third week of class in the fall semester, and by the end of the first week of class the second semester, as well as before the summer term begins, a member of the professorial faculty to advise them in some type of research project. If the proposed research advisor does not hold a primary appointment as a tenure-track or research faculty member in the Department of Physics and Astronomy, the student must select a co-advisor who is a PHA faculty member. The students are required to submit a short written summary of that research experience at the end of the semester. Students may continue with one advisor through all three semesters, or they may choose to cycle through several different research advisors. In some cases, one of these first-year research advisors may become a thesis advisor, but in others, the thesis advisor may change. This research requirement continues until the end of the second year, or until the student finds a thesis advisor.

The nature of these first-year research projects may vary from student to student, from one advisor to another, and from one sub-field of physics to another. In some cases they lead to published research. In other cases, they may be first steps in a longer-term research project. And in some cases, they may comprise reading or independent-study projects to develop background for subsequent research. It is left to the individual advisor to determine what the written summary should entail. These research projects are not research assistantships and are performed in addition to other graduate student responsibilities (teaching and graduate classwork), although they are typically merged with RA-supported research for those students supported by RAs.

Thesis Research and Defense

Securing a mutual agreement with a thesis advisor is one of the most important milestones of our graduate program. Students must find a thesis advisor and submit the thesis advisor form before the first day of their 3rd year. The form represents a long-term commitment and serious efforts in planning and communication between the student and the advisor. If the proposed thesis advisor does not hold a primary appointment as a tenure-track or research faculty member in the Department of Physics and Astronomy, the form must be co-signed by a PHA faculty member, who will serve as the departmental advisor of record (relevant department faculty members list) (https://physics-astronomy.jhu.edu/people/#filter=faculty).

After the student chooses a thesis advisor, the student forms their Thesis Committee consisting of the advisor and two other faculty members (all Thesis Committees contain at least two full-time faculty from the department). These committees function as extended advisory bodies; students have the opportunity to discuss their progress and problems with several faculty. They also conduct one formal annual review of each student's progress. Research leading to the dissertation can be carried out not only within the Department of Physics and Astronomy, but with appropriate arrangements, either partly or entirely at other locations if necessitated by the project goals. At the conclusion of thesis research, the student presents the written dissertation to the faculty committee and defends the thesis in an oral examination.

Requirements for the M.A. Degree

Although the department does not admit students who intend to pursue the master's degree exclusively, students in the department's Ph.D. program and students in other Ph.D. programs at Johns Hopkins may apply to fulfill the requirements for the M.A. degree in the Department of Physics and Astronomy. Students from other JHU departments must seek approval from their home department and from the Department of Physics and Astronomy.

Before beginning their M.A. studies, students must have mastered the undergraduate physics material covered by the following courses:

Code	Title	Credits
AS.171.204	Classical Mechanics II	4
AS.171.303 & AS.171.304	Quantum Mechanics I and Quantum Mechanics II	8
AS.171.312	Statistical Physics/Thermodynamics	4

Courses taken elsewhere may qualify at the discretion of the Graduate Program Committee (normally this requirement is satisfied by the Ph.D.-track students before they arrive at JHU as they have completed a B.A. or B.Sci. in Physics at another institution).

To qualify for the M.A. degree in Physics, students must complete eight one-semester 3-credit graduate-level courses in the Department of Physics and Astronomy and pass the departmental research exam. For the M.A. degree in Astronomy, students must complete eight one-semester 3-credit graduate-level courses in the Department of Physics and Astronomy, plus the seminar “Language of Astrophysics” and pass the departmental research exam. The student must receive a grade of B- or above in each of the courses; graduate courses can be retaken once in case of failure.

Of the eight one-semester courses, four must be the core courses listed above in the Ph.D. requirements and two must be Independent Graduate Research courses. The remaining two course requirements for the M.A. degree may be fulfilled either by 3-credit graduate electives or by additional Independent Graduate Research. The research courses must include an essay or a research report supervised and approved by a faculty member of the Department of Physics and Astronomy.

Under most circumstances students pursuing their Ph.D. qualify for the M.A. degree by the end of their second year if they have taken all four core courses in their discipline at JHU, the “Language of Astrophysics” seminar (for M.A. in Astronomy), four semesters of Independent Graduate Research, and passed the research exam. Graduate courses taken at another institution or in another department at JHU in most cases do not count toward the M.A. requirements (therefore, students who are interested in the M.A. degree, but are planning to waive any graduate courses because they have passed a comparable graduate course at another institution, should discuss their eligibility for the M.A. degree with the Academic Program Administrator as soon as they arrive at JHU). Students should expect that no M.A. requirements can be waived; that the minimal research requirement is two semesters; and that at most one of the core courses can be substituted by another (non-research) graduate course in exceptional circumstances. Any requests for M.A. course substitutions must be made to the Graduate Program Committee at least a year before the expected M.A. degree so that the committee can recommend an appropriate substitution.

Political Science

http://politicalscience.jhu.edu

The programs of the Political Science Department are designed to help students attain a deeper understanding of politics and civic life in its various dimensions. The department encourages students to become sophisticated theoretically and to study politics in global and comparative perspective. We divide the curriculum into American Politics, Comparative Politics, Political Theory, and International Relations (and Law and Politics at the graduate level). Students are encouraged to develop expertise in several of these areas.

The department has 32 faculty members. The undergraduate program offers a broad range of courses about politics and government at local, state, national, and international levels. In addition to taking courses on the Homewood campus, students can do independent research under the guidance of a faculty mentor, take courses at the Nitze School of Advanced International Studies (SAIS) in Washington, D.C., and participate in the Aitchison Public Service Undergraduate Fellowship Program at the Johns Hopkins Washington Center.

Intellectual Orientation

In addition to our work within the traditional fields of Political Science, faculty research engages four clusters of activity that cut across the various subfields while speaking to core questions of politics: power and inequality, identities and allegiances, agency and structures, and borders and flows.

Power and Inequality

In many ways, political science is the study of power. This includes the wide array of rules, authority structures, and forms of violence at the local, national, transnational and international levels, as well as how the value, distribution, and accumulation of resources create conditions of security and insecurity among nation states, regions, economic classes, or populations.

Identities and Allegiances

A second cluster of research centers on questions of identity and the various allegiances and attachments organized around them. These include how racial, ethnic, gender, and sexual identities inform citizenship and nationalism, the organization of civil society, or the formation of social movements.

Agency and Structure

A third cross-cutting area of activity in the department explores questions of agency and structures. Agency includes entrepreneurship, innovation and creative action, and the agency of material things. Structures include formal and informal institutions, particularly the rules, roles, and regulations that guide human relations in the public, private, and non-profit worlds, among states and within them, at the global level and in local communities.

Borders and Flows

A fourth cluster examines borders and flows. Research in this area examines the movement of people, ideas, material objects, and natural forces across space and over time. A focus on borders and flows informs the study of territorial regimes, sovereignty, religious intensities, immigration and diasporas, globalizing capital, information, and ecological politics.

Undergraduate Programs

Political Science courses can contribute to two different majors:

Political Science, Bachelor of Arts

The major in political science described below is designed for students interested in intensive study of the institutions, theory, and problems of politics, government and modern political culture.

International Studies, Bachelor of Arts

The department contributes to an interdisciplinary program leading to B.A. or B.A./M.A. degrees in International Studies. This program and its requirements are described under International Studies (https://e-catalogue.jhu.edu/arts-sciences/international-studies/).

Programs

Courses

AS.190.101. Introduction to American Politics. 3 Credits.
This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.

AS.190.102. Introduction To Comparative Politics. 3 Credits.
To understand politics, the sound bites of the modern media take us only so far. In this course, we will take a step back and implement an intellectually rigorous method. Scholars of comparative politics use the method of comparison in order to illuminate important political phenomena of our times. Following this method, we will embark on a scholarly tour of the world and compare the politics of various countries. We will also trace these politics back to their historical sources. We will work from the assumption that there is something to be gained from such comparisons across space and time.

AS.190.108. Contemporary International Politics. 3 Credits.
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered. This course was previously AS.190.209.

AS.190.109. Politics of East Asia. 3 Credits.
This course examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. We analyze two enduring themes of classic and contemporary scholarship in comparative politics: development and democracy. The purpose is to introduce students to the various schools of thought within comparative politics as well as to the central debates concerning East Asian politics.

AS.190.111. Introduction to Global Studies. 3 Credits.
This course surveys scholarly approaches to processes, relations, institutions, and social structures that cross, subvert, or transcend national borders. The course will also introduce students to research tools for global studies. Students who have taken Contemporary International Politics 190.209 or International Politics 190.104 may not register.

AS.190.180. Introduction to Political Theory. 3 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, adn the relationship between freedom, responsibility, and political judgement. Spanning texts ancient, modern, and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past impossible? By wrestling with slavery (freedom's opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.

AS.190.204. Ancient Political Thought. 3 Credits.
The premise of this course is that a political perspective is tied up with a (meta)physical one, that is to say, with ideas about the nature of Nature and of the status of the human and nonhuman elements within it. How is the universe ordered? Who or what is responsible for it? What place do or should humans occupy within it? How ought we to relate to nonhuman beings and forces? We will read three different responses to such questions and show how they are linked to a particular vision of political life. In the first, the world into which human are born is ordered by gods whose actions often appear inexplicable: Prometheus Bound by Aeschylus, Oedipus the King by Sophocles, and Hippolytus by Euripedes will represent this tragic vision of the cosmos. In the second, Plato , in Republic and in Phaedrus, the forces of reason and eros play central and powerful roles. In the third, Augustine of Hippo presents a world designed by a benevolent, omnipotent God who nevertheless has allowed humans a share in their own fate. We end the course with Nietzsche's Birth of Tragedy , which offers a perspective on these three visions of the world -- the tragic, the rational, and the faithful -- which will help us evaluate them in the light of contemporary political and ecological concerns.
Area: Writing Intensive

AS.190.207. The Power of Rhetoric. 3 Credits.
In a time when people claim language "has no preference to facts, truths, or realities," the power of rhetoric is both vilified and lauded in the strongest possible terms. According to some, rhetoric is responsible for the dismissal of everything from political dissent to science as a species of "fake news". By contrast, others argue public life cannot be repaired without a "restoration" of rhetoric. What are these people talking about? This course will help us figure this out. Students will be introduced to the art of persuasive speech, writing, and visual media so as to be prepared to critically examine and evaluate the claims made for and about the role of language in contemporary politics. Topics will include informal logic, appeals, fallacies, figures and tropes. Among others, we will read texts by Aristotle, Austin, Barthes, Foucault, Freud, Kierkegaard, Nietzsche, and Zizek. In addition to a number of short exercises and writing assignments throughout the semester, there will be a mid-term and a final paper.

AS.190.220. Global Security Politics. 3 Credits.
Contemporary and emerging technologies of nuclear (weapons, terrorism, energy) outer space (missiles, missile defense, asteroids), biosecurity (bioweapons, pandemics, terrorism) and cyber (war, spying, surveillance) and implications for security, international politics, arms control, and political freedom.

AS.190.223. Understanding the Food System. 3 Credits.
This course examines the politics and policies that shape the production and consumption of food. Topics include food security, obesity, crop and animal production, and the impacts of agriculture on climate change. We will also consider the vulnerabilities of our food system to challenges such as the Covid-19 pandemic, as well as efforts to transform food and agriculture through new food technologies and grass-roots movements to create a more democratic food system.
Students who have completed AS.190.405 may not enroll in this class.

AS.190.226. Global Governance. 3 Credits.
Global problems like poverty, financial instability, human rights abuses, and climate change threaten both international order and human well-being. In the absence of a world state, these problems must be addressed by an increasingly complex, transnational network of organizations and social groups. First, we will aim to understand and explain how global problems are governed through detailed case studies of International Organizations and Non-Governmental Organizations such as the United Nations, World Bank, Intergovernmental Panel on Climate Change, Amnesty International and more. Second, we will critically evaluate the successes and failures of these organizations and explore the possibilities for improving democratic governance at the global level.

AS.190.227. U.S. Foreign Policy. 3 Credits.
This course provides an analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. It offers a broad historical survey that starts with US involvement in the First World War, covers major developments of the twentieth century, and concludes with contemporary issues. Important themes include the developments underpinning the emergence of the liberal world order, strategies of containment during the Cold War, nuclear deterrence and antiproliferation efforts, the politics of international trade, alliance politics, technological and security policy, and the re-emergence of great power competition.

AS.190.228. The American Presidency. 3 Credits.
Over the past several decades, the power and importance of America's presidency have greatly expanded . Of course, presidential history includes both ups and downs, some coinciding with the rise and fall of national party systems and others linked to specific problems, issues, and personalities. We should train our analytic eyes, however, to see beneath the surface of day-to-day and even decade-to-decade political turbulence. We should focus, instead, on the pronounced secular trend of more than two and a quarter centuries of American history. Two hundred years ago, presidents were weak and often bullied by Congress. Today, presidents are powerful and often thumb their noses at Congress and the courts. For better or worse, we have entered a presidentialist era.

AS.190.244. Weapons of Mass Destruction. 3 Credits.
This course examines the impact of weapons of mass destruction on global politics and American interests. The first half of the course focuses on nuclear weapons, examining their development and targeting throughout the Cold War. The second half of the course examines contemporary issues involving nuclear weapons (including arms control, nuclear zero, terrorism, proliferation and defense). It also considers other weapons of mass destruction (or disruption) including chemical, biological, radiological and cyber weapons. The growing concerns about Artificial Intelligence will also be addressed. Requirements include a midterm and a final exam.

AS.190.245. The Politics of Global Development. 3 Credits.
Development is often assumed to be an economic issue. In this course we examine the politics of development on a global scale. We begin by looking at the colonial and Cold War histories of development. We then use these histories to contextualise contemporary development issues that directly affect international relations such as aid and debt, humanitarianism, food security, land "grabs", migration and indigenous rights. The course also seeks to understand the ways in which the issues underlying global development have always connected and continue to connect the peoples and polities of the Global North and Global South.

AS.190.249. Fictional World Politics: International Relations Through Fiction. 3 Credits.
The plots and settings of fictitious works provide "cases" for the exploration of international relations theories. Incorporates literature, film, and works of IR scholarship.
Area: Writing Intensive

AS.190.255. Race and Racism in International Relations. 3 Credits.
This course introduces students to the foundational importance of race and racism to the construction of our contemporary global order. Topics include the Crusades, European imperialism, eugenics, Apartheid, freedom struggles, decolonization, and global development.

AS.190.264. What You Need to Know About Chinese Politics (Part 1). 3 Credits.
What you need to know about Chinese politics covers the major scandals, political events, and policy debates that every China watcher needs to know. This first module of a two-semester experience brings together two professors, Prof. Andrew Mertha (SAIS) and Prof. John Yasuda (KSAS), with very different perspectives on China's past achievements, its political and economic futures, and the global implications of China's rise. The course seeks to give ample coverage to every major political question about China that is often missed in a semester long class. In addition to lively debates between the instructors, students can also expect guest speakers from the policy world, business, and the academy for a fresh take on what's going on in China today.

AS.190.267. Introduction to Political Economy. 3 Credits.
An introduction to the fundamental questions and concepts of political economy: money, commodities, profit, and capital. The course will study the nature of economic forces and relations as elements larger social and political orders.

AS.190.269. What you need to know about Chinese Politics, Part 2. 3 Credits.
This serves as a two-semester survey of Chinese politics from 1911-Present. This second module explores the politics of the reform and post-reform eras.

AS.190.283. Human Security. 3 Credits.
While traditional studies on security have focused largely on border protection, sovereign authority of the state, and interstate alliances, the threats posed to everyday people were not a central focus of security analyses until the end of the Cold War. The human security approach has evolved as a challenge to conventional thinking on security. This course will introduce the notion of human security, trace its emergence and evolution in the global political discourse, explore the theoretical scholarship from which it developed, and evaluate its effectiveness as a framework for addressing the most egregious threats human beings face today. From refugee flows, gender inequality, ethnic conflict, mass atrocities, poverty, to climate change, human security scholarship and policy has sought to examine the various threats to the lives of people that transcend national borders and allow us to break out of narrow thinking to develop innovative and globally-minded solutions.
Area: Writing Intensive

AS.190.284. Classics of Political Theory: Political Freedom. 3 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, and the relationship between freedom, responsibility and political judgment. Spanning texts ancient, modern and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past possible? By wrestling with slavery (freedom's opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.

AS.190.300. Racial Inequality, Policy and Politics in the US. 3 Credits.
While policies were passed to ensure equal opportunity for racially subjugated Americans, the United States witnessed increasing stratification of wealth and income and deepening concentration of poverty, stagnation in closing racial gaps, and new forms of inequality posed by the striking upsurge in contact with the criminal justice system at the bottom of the skills ladder and concentration of wealth at the top. At the same time, the welfare state came under attack and faced challenges posed by an aging population, women entering the labor force, deindustrialization, and international pressures of globalization. Social spending withered in some areas while spending on citizens was increasingly likely to happen through tax expenditures and private means. This course investigates the politics around these developments and competing perspectives in debates over redistributive policies in the United States and their impact on inequality, particularly race and gender inequality. We will examine the contours of inequality and explanations for why it has expanded over the past several decades. We explore why the US is exceptional in both the level of inequality it tolerates and the generosity and types of remedies to alleviate poverty in comparison to its European counterparts and debate the role of race, unions, electoral politics and institutions. We investigate several specific cases of persistent racial inequality – concentrated poverty, segregation, and incarceration. We investigate both how policies have reinforced racial and gender divisions from a top-down perspective as well as examining under what conditions the disadvantaged contest inequality, exploring how political struggle shapes policy from the bottom-up. The last part of the course examines the consequences of inequality and social policy for representation and citizenship and how economic inequality affects political representation and responsiveness of elites to masses.

AS.190.306. Latin American Politics and Society in Comparative and Historical Prespective. 3 Credits.
The seminar will introduce students to the political and economic trajectories of Latin America as a whole and of individual countries, including Mexico, Brazil, Argentina, and Chile. Special attention will be paid to the long-term trajectory of the political regime (democracy versus dictatorship) and of economic development (variations in GDP per capita). Competing theories, from economic dependence to historical institutionalism, will be examined for their contribution to our understanding of Latin America's relative economic backwardness and low quality democracies.
Area: Writing Intensive

AS.190.307. Race, Politics and Literature. 3 Credits.
Area: Writing Intensive

AS.190.308. Democracy and Dictatorship: Theory and Cases. 3 Credits.
The course will cover three topics: 1) The conceptualization of political regime, democracy and authoritarianism. We will also consider neighboring concepts of other macro-political structures—government, state, and administration—in order to be able to demarcate what is distinctive about the study of political regimes.2) The characterization of political regimes in most Western and some non-Western countries, in history and today. We will centrally focus on the so called "Waves of Democratization," but we will also consider stories with less happy outcomes, that is, processes that led to the breakdown of democracies and the installation of repressive dictatorships.3) The explanation(s) of the stability and change of political regimes around the world. Theoretical accounts of regime change come in many flavors—emphasis on economic versus political causes, focus on agents and choices versus structures and constraints, international versus domestic factors, among others. We will consider most of them.

AS.190.311. Disposable People: Race, Immigration and Biopolitics. 3 Credits.
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.

AS.190.315. Asian American Politics. 3 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.

AS.190.319. Policy & Politics Design. 3 Credits.
The study of public policy is the study of power—who has it, how it is acquired, and how policies themselves grant or diminish the power of individuals and groups. It is also the study of choice—how political actors make consequential decisions to deploy their resources in different ways, some of which enhance magnify their power while others diminish it. This class will examine the scholarly literature on how public policy is made and how it can be changed. We will also engage directly with actors seeking to change public policy, in order to integrate our academic knowledge with their practical experience.
Area: Writing Intensive

AS.190.322. Future of American Democracy. 3 Credits.
For the most part, observers of American politics have not considered the possibility that the American democratic regime might be at risk. But the unexpected election of Donald Trump in 2016 and the subsequent course of his presidency have occasioned a great deal of uncertainty and anxiety about whether democracy in the United States is at risk and whether American political institutions can withstand the stresses of contemporary politics. This course will use the Trump era to explore the conditions that seem to threaten the stability of the American regime. We will begin by exploring the political circumstances that led to Trump's rise. We will then examine what we can learn from the experience of other countries about the conditions that make democracy either robust or fragile. Finally, we will consider how a set of contemporary political conditions in the United States — extreme partisan polarization, intense racial antagonism, growing economic inequality, and expanded executive power — contribute to the challenges facing American democracy today and in the future.
Area: Writing Intensive

AS.190.324. The Law of Democracy: The United States and Canada in Comparative Perspective. 3 Credits.
The Law of Democracy refers to the statutes, court decisions, and other practices that govern the electoral processes. Although the United States and Canada have a great deal in common, they have approached many of the problems involved in institutionalizing democracy quite differently. Recognizing these differences should contribute to understanding both the strengths, and the problems, of the two approaches. Specific topic will include the right to vote, political finance, delineation of district boundaries, electoral dispute resolution, and the role of electoral management bodies and elections administrators.

AS.190.325. Finding Equality in Law and Society. 3 Credits.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served these movements well and how it has worked. We will pay particular attention to movements based on race, gender, and economic class.

AS.190.326. Democracy And Elections. 3 Credits.
An examination of most aspects of democratic elections with the exception of th e behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.

AS.190.327. Politics of Information. 3 Credits.
Considers global and comparative politics of information, information technologies, and the Internet. Examines governance of information (ownership of information, rights to information, privacy) and governance of information technologies (domain names, social media websites, etc.).

AS.190.328. Political Thought in the Americas. 3 Credits.
Reflection on political ideas and institutions in the United States is often oriented by the notion that the US is in some sense exceptional. For some commentators, the US is exceptionally democratic, exceptionally stable, exceptionally productive, and exceptionally innovative. For others, the US is exceptionally racist, exceptionally unequal, exceptionally violent, and exceptionally unhealthy. What both sides share is a common point of comparative reference in Europe. For all these commentators, Europe is the norm against which all of the exceptional qualities of the US stand out. In this course, we will ask how well notions of US exceptionalism stand up against the different comparative references found in the Americas, focusing in particular on the history of political thought in the Americas. We'll begin by studying texts from the pre-colonial and colonial periods, noting similarities and differences between the political institutions, economies, and social and racial hierarchies of in the regions that comprised British, Spanish, Portuguese, and French America. Next, we'll consider the US, Latin American, and Caribbean independence movements, early constitutionalism, and debates on women's role in society, slavery, and the rights of Indigenous Americans, asking what, if anything, distinguished the US from its neighbors in its early years. Finally, we'll examine theories of imperialism, racism, patriarchy, exploitation, and environmental destruction that have emerged from the Americas in the course of the 20th century, to see how both shared and divergent historical experiences have shaped perspectives relevant to contemporary political issues.

AS.190.329. National Security-Nuclear Age. 3 Credits.
This course examines the impact of weapons of mass destruction on international politics with an emphasis on security issues. The first half of the course focuses on the history of nuclear weapons development during the Cold War and theories of deterrence. The second half of the class considers contemporary issues including terrorism, chemical and biological weapons, ballistic missile defense and proliferation. Requirements include a midterm, final and a ten page paper.

AS.190.331. America and the World. 3 Credits.
This course is a survey of the unique position of the United States in world politics. We will cover the broader international relations literature on the dynamics of hegemony and empire, from work in the realist tradition to more critical approaches. The course will encompass security politics as well as the economic and monetary dimensions of American influence. Interested students must have at least completed one 100 or 200 level introductory course in international relations.

AS.190.332. The University in Democracy. 3 Credits.
From the founding of the United States to the COVID-19 pandemic, modern universities have evolved into expansive, complex institutions that play a variety of indispensable roles in the support of democratic societies. They educate citizens as well as specialists; produce new knowledge that shapes discourse and public policy; foster reasoned debate; and act as engines of social mobility. They also incite a great deal of controversy, criticism, and distrust, including for how they have performed these roles. In this course, we will study the centuries-long relationship between universities and democracy, and assess how successfully these institutions (including Johns Hopkins) are fulfilling their most profound functions today.
Area: Writing Intensive

AS.190.333. American Constitutional Law. 3 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.

AS.190.334. Constitutional Law. 3 Credits.
Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.

AS.190.335. Imagining Borders. 3 Credits.
What is a border and why do borders matter in global politics. What do borders mean under conditions of globalization? An examination of the politics of borders, transborder flows, and networks within and across borders. The readings which come from political science and other disciplines, will include theoretical and case-specific works.

AS.190.338. Comparative Political Behavior. 3 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.

AS.190.339. American Racial Politics. 3 Credits.
Recommended Course Background: AS.190.214

AS.190.340. Black Politics I. 3 Credits.
This course is a survey of the bases and substance of politics among black Americans and the relation of black politics to the American political system up to the end of Jim Crow. The intention is both to provide a general sense of pertinent issues and relations over this period as a way of helping to make sense of the present and to develop criteria for evaluating political scientists' and others' claims regarding the status and characteristics of black American political activity.

AS.190.341. Korean Politics. 3 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations.Recommended students should take Intro to Comparative Politics or a course related to East Asia first.(CP)
Area: Writing Intensive

AS.190.342. Black Politics II. 3 Credits.
Recommended Course Background: AS.190.340.

AS.190.344. Seminar In Anti-Semitism. 3 Credits.
Jews exercise a good deal of power in contemporary America.. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America's citizens, about one-third of the nation's wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, "From the Vatican to the Kremlin, from the White House to Capitol Hill, the world's movers and shakers view American Jewry as a force to be reckoned with." Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become "a force to be reckoned with" than they found themselves banished to the political ma rgins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Area: Writing Intensive

AS.190.346. Foundations of International Relations Theory. 3 Credits.
This course is a broad conceptual introduction to international relations theory in a format that stresses close reading and critical discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field. By the end of the course, students will have a firm grasp of the core issues and debates in the field. The course is conceptually demanding; interested students should have at least completed an introductory course in political science.

AS.190.347. A New Cold War? Sino-American Relations in the 21st Century. 3 Credits.
"Can the United States and China avoid a new Cold War? One might think not given disputes over the South China Sea, Taiwan, Hong Kong, human rights, trade, ideology and so much more. Moreover, competition for influence in the developing world and American concerns as to whether China will replace it as the preeminent world power suggest a new Cold War is in the offing. Nevertheless, their extensive economic ties and need to work together to solve common problems such as climate change, nuclear proliferation, and pandemics argues against a continuing confrontation. This course will examine whether cooperation or conflict will define Sino-American relations, and whether a new Cold War—or even a shooting war—lies in the future."

AS.190.348. Business, Finance, and Government in E. Asia. 3 Credits.
Business, Finance, and Government in East Asia explores the dynamics of East Asia's economic growth (and crises) over the last fifty years. We will examine Japan's post-war development strategy, the Asian tiger economies, and China's dramatic rise. Centered on case studies of major corporations, this course examines the interplay between politics and economics in East Asia, and considers the following questions: How have businesses navigated East Asia's complex market environment? In what ways can the state foster economic development? How has the financial system been organized to facilitate investment? What are the long-term prospects for growth in the region?

AS.190.350. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include civil wars, targeted killings, terrorism, ethnic conflict and war itself. Students examine what makes types of political violence unique and what unites them.

AS.190.355. Comparative Racial Politics. 3 Credits.
This course surveys the major trends and approaches to the comparative study of race in political science and critically examines the link between race and politics. Topics include race and state formation, citizenship and national membership, immigration, racial regimes, and the political economy of race.

AS.190.356. The Social Contract and its Discontents. 3 Credits.
This course focuses on one of the most powerful stories told in the tradition of western political theory: the story of the social contract. This story is about the constitution of legitimate political authority. It is told in many ways and each version makes different assumptions, in particular about human nature, the power of reason, the value of order, and the character of justice. We examine this often-conflicting assumptions and explore how they continue to inform the way we think about the possibilities and problems of politics. Readings include texts by Arendt, Hobbes, Locke, Rousseau, Freud, Pateman, the Federalists, Derrida, and Douglass. Final grades are based on class participation, two exams and two papers.
Area: Writing Intensive

AS.190.357. The State of Nature. 3 Credits.
Though it is possible to imagine ways of addressing the multiple crises the world will face as the atmosphere warms, seas rise, and pollutants seep into the surface of the planet, any serious proposal will require a degree of coordination amongst nation-states that has proven impossible to achieve in the past. In this course, we will consider this difficult situation by treating it as an instance of an old problem in political theory: how to escape the infamous “state of nature,” where individuals struggle to obtain the resources they need to survive at others’ expense, rather than cooperating to satisfy their needs and address the threats they face in common. First, we will study some influential reflections on the state of nature by Hobbes, Locke, Rousseau, Freud, and Pateman, as well as efforts to apply the logic of the state of nature to problems in international politics by Kant, Wendt, Waltz, Enloe, and others. Then we will read contemporary work on the international politics of climate change and ask what it would take to start building the better world that is possible today.

AS.190.365. Research and Inquiry in the Social Sciences. 3 Credits.
How do we assess research in the social sciences? What makes one study more persuasive than another? What are the advantages and disadvantages of the main methods used in research in the social sciences? What are the elements that go into designing a research project? This course considers these questions, introducing students to the basic principles of research design.

AS.190.366. Free Speech and the Law in Comparative Perspective. 3 Credits.
This class explores the ideas and legal doctrines that define the freedom of speech. We will examine the free speech jurisprudence of the U.S. in comparison to that of other systems, particularly the jurisprudence of the European Court of Human Rights and the Supreme Court of Canada.

AS.190.368. Political Arts: Dada, Surrealism, and Societal Transformation. 3 Credits.
An exploration of the political aims, tactics, and strengths and liabilities, of Dada and Surrealism, as it operated in Europe and the Americas in the years between the World Wars, with a comparison to political conditions today.
Area: Writing Intensive

AS.190.370. Chinese Politics. 3 Credits.
This course is designed to help students better understand the politics of China. Lectures will focus on the tools of governance that China has employed to navigate its transition from plan to market, provide public goods and services to its citizens, and to maintain social control over a rapidly changing society. The course will draw heavily from texts covering a range of subjects including China’s political economy, social and cultural developments, regime dynamics, and historical legacies. Students interested in authoritarian resilience, governance, post-communist transition, and domestic will find this course particularly instructive.

AS.190.372. Decolonizing Politics. 3 Credits.
This course introduces students to the colonial logics that underpin key categories and concepts in Political Science. Working through four sub-fields – political theory, political behavior, comparative politics and international relations, the course also introduces students to alternative knowledge traditions, emanating from minority communities and colonized peoples, which seek to explain the stuff of Political Science via anti-colonial logics.

AS.190.374. Political Violence. 3 Credits.
This undergraduate seminar is designed to introduce students to the comparative study of political violence and intra-state conflict. We will examine social science theories and empirical studies on a wide range of forms of political violence, including civil war, coups, state repression, communal violence, riots, terrorism, genocide, and criminal-political violence. We will study these phenomena at the micro, meso and macro levels, and focus on understanding their causes, dynamics, outcomes, and aftermath. The class will also equip students with an ability to analyze political violence by using social scientific tools.

AS.190.379. Nationalism and the Politics of Identity. 3 Credits.
Nationalism ties powerful organizations to political mobilization, territory, and individual loyalty. Yet nationalism is typically studied in isolation from other social formations that depend upon organizational – individual linkages. Alternative types of identity category sometimes depend similarly upon organizations that collect and deploy resources, mobilize individuals, erect boundaries, and promote strong emotional connections among individuals as well as between individuals and institutions. In this class, we study classic and contemporary works on nationalism, drawn from multiple disciplinary and analytic traditions, in the comparative context of alternative forms of identity. The focus of the class will be primarily theoretical, with no regional or temporal limitations.

AS.190.380. The American Welfare State. 3 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments – and explain the actual workings of policy – across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Trump. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Area: Writing Intensive
Students may take AS.190.380 or AS.360.380, but not both.

AS.190.381. Global Environmental Politics. 3 Credits.
Area: Writing Intensive

AS.190.382. Democracy and Development: Theory and Cases. 3 Credits.
Most wealthy countries are democracies. But not all democracies are wealthy—India, Costa Rica, and Mongolia are prominent examples of poor countries with democratic regimes. The course will examine the relation between economic development and political democratization under three big questions. (a) Under what conditions, and through which mechanisms, does economic development promote democracy? (b) If economic development is not possible in the foreseeable future, how do countries achieve stable democratization? (c) Under what conditions, and through which mechanisms, does democracy foster economic development?
Area: Writing Intensive

AS.190.384. Urban Politics & Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations.
Cross-listed with Africana Studies

AS.190.385. Urban Politics and Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross listed with Africana Studies.

AS.190.386. The Right to the City. 3 Credits.
Over the past several years the city has been the center of almost every significant political struggle we've had over the past several years, from Occupy Wall Street to Black Lives Matter. Theorists, activists, and scholars have argued for a specific "right to the city". What does that right look like? What might it look like? How has it informed political struggle over space and time? This course will seek to answer this question.
Area: Writing Intensive

AS.190.387. Parties and Elections in America. 3 Credits.
Considers how parties and elections structure political conflict, and facilitate (or not) democratic control of government. Topics include campaigns, voting behavior, election administration, money in politics, presidential nomination, and party coalitions.
Area: Writing Intensive

AS.190.388. Race and the Politics of Memory. 3 Credits.
This is a writing intensive, advanced undergraduate political theory seminar. The course will examine the politics of memory: how power shapes what is available to be remembered, the timing and occasions of memory, who is allowed to remember, and the spaces inside of which remembrance takes place. Specifically, the seminar will explore how segregated memory enables racial segregation and racial inequality. Toward that end, we shall investigate political and theoretical interventions potentially equipped to contest contemporary forms of racial amnesia haunting what some have labeled a “post-truth” world.
Area: Writing Intensive

AS.190.389. China’s Political Economy. 3 Credits.
This course examines the most important debates about China’s political economic development. After exploring Mao Zedong’s disastrous economic policies, we will consider the politics of reform and opening under Deng Xiaoping, and finally conclude with China’s state capitalist policies across a variety of issue areas. The course will cover literatures on financial reform, public goods provision, foreign trade and investment, agriculture, corruption, business groups, and regulatory development. Where possible we will draw comparisons with the economic experiences of other East Asian nations as well as other post-communist states.

AS.190.390. Race and American Democracy. 3 Credits.
While the United States has long been a democracy for white men, it has mostly been anything but democratic when seen through the eyes of Black Americans. But progress toward the expansion of democracy has occurred at a few times in American history. What made American democratization possible, and how might the United States again move toward more complete and inclusive democracy?

AS.190.391. Imperialism and Anti-Imperialism. 3 Credits.
Since antiquity, global politics have been defined by the struggle between imperialism and anti-imperialism. This course examines the arguments that have accompanied this struggle, considering influential texts written to defend or to denounce empires, as well as contemporary scholarship on imperial and anti-imperial ideologies. We will focus in particular on how imperial conflicts shaped natural law, international law, liberalism, and cosmopolitanism, as well as the connections between imperialism and contemporary capitalism, development assistance, and humanitarian intervention. The fundamental questions for the course are: What is an empire? and What would it mean to decolonize our world, our international institutions, and our minds?

AS.190.393. Nonviolent Resistance in World Politics. 3 Credits.
In this seminar we examine the origins, dynamics, and consequences of nonviolent struggles around the world. How do ordinary people organize for social change? What are the differences in people power campaigns in authoritarian and democratic contexts? When does nonviolent resistance succeed or fail, and what are the political consequences of these outcomes? In answering these questions, we will study the central ideas behind nonviolent action, learn about the most important scholarly discoveries in this field and analyze paradigmatic cases. Students will choose a historical or contemporary nonviolent movement to interrogate throughout the semester, as we learn new concepts, theories, and empirical patterns to make sense of them.
Area: Writing Intensive

AS.190.394. Comparative Politics of the Middle East and North Africa. 3 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors.

AS.190.396. Capitalism and Ecology. 3 Credits.
Capitalism and Ecology focuses on the relations between capitalism and climate during the era of the Anthropocene. How do capitalist processes of fossil extraction, consumption, production and governance contribute to the pace of climate warming, glacier flows, the ocean conveyor system, species loss and other phenomena? What are the effects and the possible modes of political response? How do the nonhuman, self-organizing processes such as glaciers, oceans and climate change on their own as they also amplify the effects of capitalist emissions? The course combines texts on capitalism and activism with those by geoscientists on how the nonhuman systems work. Books by authors in the fields of political theory, geology, anthropology, economics, philosophy and ethology will be drawn upon. Authors such as Michael Benton, Brian Fagan, Hayek, Naomi Klein, Fred Hirsch, Fred Pearce, van Dooren and Connolly are apt to be read to engage these issues. A previous course in political theory is recommended. The class is organized around student presentations on assigned readings. Two papers, 10-12 pages in length. Extensive class discussion.
Area: Writing Intensive

AS.190.398. Politics Of Good & Evil. 3 Credits.
The Politics of Good and Evil examines comparatively a series of classical myths and modern philosophies concerning the sources of evil, the nature of goodness and nobility, the relations of culture to politics, nature and the gods, the degree to which any metaphysic or theological faith is certain, and so on. It is a course in “elemental theory” in the sense that each text pursued challenges and disrupts others we read. Often the reader is disrupted existentially too, in ways that may spur new thought. A previous course in political theory or a theoretical course in the humanities is advised. A high tolerance for theory is essential. Texts on or by Sophocles, Job, Genesis ("J" version), Augustine, Voltaire, Nietzsche, James Baldwin, W. Connolly and Elizabeth Kolbert form the core of the class. Assignments: 1) One 12 page paper and a second 5-7 page paper, both anchored in the readings; 2) a class presentation on one text; 3) regular attendance and quality participation in class discussions.
Area: Writing Intensive

AS.190.402. Environmental Racism. 3 Credits.
This is an undergraduate political theory seminar that addresses the disproportionate impact of environmental destruction on racially stigmatized populations. We shall examine the logics of power whereby the natural world is subjected to exploitation and domination, in tandem with the subordination of racial subjects historically identified as closer to nature. Likewise, we will explore political and theoretical challenges to environmental racism, such as those posed by indigenous communities, decolonial theory, and political movements contesting the intersection of racial inequalities and ecological crises.
Area: Writing Intensive

AS.190.403. Arendt/Foucault. 3 Credits.
This upper-level undergraduate writing intensive course brings together the work of Hannah Arendt and Michel Foucault to focus on their critiques of modernity and their discussions of political change/revolution. Although Arendt and Foucault are often understood as coming from and supporting different political theoretical traditions, the course will also explore ways in which their shared debt to the work of Friedrich Nietzsche illuminates sometimes surprising commonalities and complementary positions. There is no final exam in this course but in addition to reading assignments, students will be required to write three papers.
Area: Writing Intensive

AS.190.404. Race and Debt: Living on Borrowed Time. 3 Credits.
This is an advanced undergraduate seminar that explores how racial stigma functions as a marker of being always already in debt. In view of the legacies of settler-colonialism, imperialism and chattel slavery, how is it that those from whom so much has been taken are nevertheless regarded as perpetually in debt? We shall examine the moral, economic and racialized logics of power through which a range of political subjects come to be regarded as ungrateful “takers” as opposed to “makers,” and owing a debt to society. In so doing, we will investigate how temporality functions as a tool of power by considering how the indebted are made vulnerable to precarity, discipline, and disposability—in effect, forced to live life on borrowed time.
Area: Writing Intensive

AS.190.405. Food Politics. 3 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies. A student who takes AS.190.223 (Understanding the Food System) in Summer 2021 cannot also enroll in this course.
Area: Writing Intensive
A student who takes AS.190.223 (Understanding the Food System) cannot also enroll in this course.

AS.190.406. The Executive Branch. 3 Credits.
In the 19th Century America was noted for its courts, political parties and representative institutions. Today, America’s political parties and representative institutions have declined in importance while the institutions of the executive branch have increased in importance. This seminar will examine the nation’s key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week’s readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.

AS.190.408. Sovereignty: Historical Perspectives and Contemporary Issues. 3 Credits.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development, current controversies, and its salience in international relations scholarship. Works in political theory and the international law literature will also inform our discussion. The course is open to advanced undergraduate students with previous coursework in political science. .
Area: Writing Intensive

AS.190.409. Research Seminar in State Politics. 3 Credits.
The United States Constitution creates a federal system that leaves a great deal of power in the hands of the individual states. Each year, the states collectively adopt nearly 20,000 new laws, an average of 400 per state, while the U.S. Congress in recent years has on average enacted hardly more than 150 new statutes. In terms of spending, state and local governments collectively spent $3 trillion dollars last year–almost as much as the federal government. The states are especially important in the realms of education, health care, environmental policy and transportation. In all these areas, to be sure, the states share power with the federal government but possess considerable discretionary authority. Despite the importance of the states, most Americans know little about them. Hardly anyone knows much about their state’s executive branch or legislature. In a recent survey, most Americans couldn’t say whether their state had a constitution (they all do). In this seminar we will explore some of the mysteries of state politics. Each student will develop a research project designed to discover something about the states that no one else knows.
Area: Writing Intensive

AS.190.410. Beyond Bob Marley: Exploring the Rastafari Movement in the Greater Baltimore Area. 3 Credits.
This course uses a community based learning approach to inquire into the presence of the Rastafari community in the Baltimore area. Most people will have heard of Rastafari through the music of Bob Marley. People might not know, however, that Rastafari emerges out of and has been part of a global history of liberation struggles. This course is co-taught with a local Rastafari organization. You will be intellectually and practically equipped to take part in a project of original research on the Rastafari presence in the Baltimore region, starting with the demonization of the movement in the 1980s “war on drugs” and including the movement’s response.

AS.190.412. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372)

AS.190.418. The End of Whiteness. 3 Credits.
This is a writing intensive, advanced undergraduate political theory seminar on racial formation. Specifically, the course explores the end of whiteness in multiple senses of the phrase. First, to what extent do the ends served by whiteness change, or remain continuous, over time? What power hierarchies and political goals has white identity been engineered to advance historically? We shall then examine the contemporary phenomenon whereby the end of white supremacy is conceived by some as the end of the world. This, in turn, will lead us to investigate how we should best understand white disavowal of threats of climate change and pandemics/health-care crises currently coursing through white identity politics. The last part of the course will be dedicated to exploring the end of whiteness in terms of the theories and practices potentially required to dismantle whiteness as white supremacy. Readings include Du Bois, Fanon, Painter, Baldwin, Moreton-Robinson, Hartmann, Olson
Area: Writing Intensive

AS.190.419. Race and Segregated Time. 3 Credits.
This course explores how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: criminal (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course.
Area: Writing Intensive

AS.190.421. Violence: State and Society. 3 Credits.
This course will examine violence that occurs mainly within the territory of nominally sovereign states. We will focus on violence as an object of study in its own right. For the most part, we will look at violence as a dependent variable, though in some instances it will function as an independent variable, a mechanism, or an equilibrium. We will ask why violence starts, how it "works" or fails to work, why it takes place in some locations and not others, why violence take specific forms (e.g., insurgency, terrorism, civilian victimization, etc.), what explains its magnitude (the number of victims), and what explains targeting (the type or identity of victims).

AS.190.423. Planetary Geopolitics. 3 Credits.
With the tools of geopolitics, course explores political debates over globalization of machine civilization and changes in scope and pace, space and place, and role of nature in human affairs.
Area: Writing Intensive

AS.190.424. Policy Disasters. 3 Credits.
Investigates the causes of large-scale policy disasters, examining the role of ideology, psychology, organization design and political incentives. Examples may be drawn from the Iraq War, Bay of Pigs, Hurricane Katrina, the U.S. Financial crisis, Shuttle Challenger disaster. economic development policy, privatization, and the Great Society. Limited to seniors or with permission of instructor. (CP / AP)

AS.190.425. The New Deal and American Politics. 3 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state.
Area: Writing Intensive

AS.190.426. Qualitative Research. 3 Credits.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first-hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?

AS.190.427. Political Economy of Japan and Korea. 3 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.
Area: Writing Intensive

AS.190.428. The Politics of Disaster in the Middle East and Beyond. 3 Credits.
This course examines the politics of natural and man-made disasters, including war, forced migration, drought, famine, earthquakes, tsunamis, storms, and epidemics. Focusing on the Middle East, it also presents comparative cases from Africa, South and Southeast Asia, and North America. In doing so, the class will examine the unique ways that different types of disasters interact with governance structures; social and economic inequalities; medical infrastructure; gender; race and ethnicity; and political cleavages. Throughout the course, students will learn basic elements of research design and methods in addition to welcoming experienced disaster response and analysis practitioners to class. Finally, the Politics of Disaster in the Middle East and Beyond addresses some of the philosophical aspects of working in and studying disaster-affected contexts, bringing an ethical sensibility to policy-relevant analysis.

AS.190.429. The Political Bases of the Market Economy. 3 Credits.
Although "the market" is conventionally understood as separate from "politics", the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.

AS.190.431. Global Climate Governance. 3 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.

AS.190.433. Race and the Politics of Punishment in the US. 3 Credits.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold for citizenship. In this advanced undergraduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history and racial orders seriously. Why did the carceral state expand in "fits and starts" and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system "makes race" and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields - history, sociology, law and criminology - and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad's Condemnation of Blackness: race, Crime, and the Making of Modern Urban America, Elizabeth Hinton's From the War on Poverty to the War on Crime, David Oshinsky's Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western's Punishment and Inequality in America, and Michael Fortner's Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Area: Writing Intensive

AS.190.434. Does Israel Have a Future?. 3 Credits.
Israel is one of the only countries whose existence is openly challenged. This class will examine the future of Israel focusing on international and domestic threats to its continued existence as a Jewish democracy. Outside threats to be considered include nuclear attack and the growing international movement to delegitimize Israel. domestic challenges include demographic changes, the role of religion in governance, and doubts as to whether one can be a Jewish state and still be a democracy. Lessons from the destruction of the ancient Israelite kingdoms and from contemporary state deaths will be included. The course will conclude by considering efforts that Israel can undertake to meet the threats it faces.

AS.190.437. Race and Ethnic Politics in the United States. 3 Credits.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the “struggle with difference” within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Writing Intensive

AS.190.438. Violence and Politics. 3 Credits.
This seminar will address the role of violence–both domestic and international–in political life. Though most claim to abhor violence, since the advent of recorded history, violence and politics have been intimately related. States practice violence against internal and external foes. Political dissidents engage in violence against states. Competing political forces inflict violence upon one another. Writing in 1924, Winston Churchill declared–and not without reason–that, "The story of the human race is war." Indeed, violence and the threat of violence are the most potent forces in political life. It is, to be sure, often averred that problems can never truly be solved by the use of force. Violence, the saying goes, is not the answer. This adage certainly appeals to our moral sensibilities. But whether or not violence is the answer presumably depends upon the question being asked. For better or worse, it is violence that usually provides the most definitive answers to three of the major questions of political life--statehood, territoriality and power. Violent struggle, in the form of war, revolution, civil war, terrorism and the like, more than any other immediate factor, determines what states will exist and their relative power, what territories they will occupy, and which groups will and will not exercise power within them. Course is open to juniors and seniors.

AS.190.440. European Politics in Comparative Perspective. 3 Credits.
Europe has been in a sense the first testing ground for theories of comparative politics, but many outsiders now see Europe as a pacified and somewhat boring place. This course will question conventional wisdom through an examination of European politics in historical and cross-national perspective. We will apply the comparative method to the study of European politics today, and conversely we will ask what Europe tells us more generally about politics. We will see that Europe is still a locus of intense conflict as well as remarkably diverse experimentation. Topics will include: political, legal, and economic governance; the evolution of democracy and fundamental rights, the welfare state, class stratification, immigration and race, the role of religion; European integration and globalization. Recommended background: Introduction to Comparative Politics.

AS.190.442. Civil Society. 3 Credits.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and global civil society. This course is open to graduate students from any discipline. Advanced undergraduate students must obtain permission from the instructor and are expected to keep up with graduate students during class discussions.
Area: Writing Intensive

AS.190.443. Politics of Outer Space. 3 Credits.
Intensive examination of the political aspects of human activities in outer space, past, present and future, with focus on militarization, earth-remote sensing, surveillance, navigation, resource exploitation, the Outer Space Treaty, and colonization.
Area: Writing Intensive

AS.190.450. Power. 3 Credits.
Power is a -- if not the -- key concept of international relations, yet there is no single definition of power that is accepted by all scholars in the field. In this course we will critically examine definitions of power from classic and contemporary works of international relations, political science, and related areas of study.

AS.190.451. Geopolitics. 3 Credits.
Intensive exploration of theories of how geography, ecology, and technology shape political orders. Case studies of ancient, early modern, global, and contemporary topics, including European ascent, industrial revolution, tropics and North South divide, climate change, geo-engineering and global commons (oceans, atmosphere and orbital space
Area: Writing Intensive

AS.190.452. Party Politics from the Founding to the Progressives. 3 Credits.
Though the torchlight parade has long since passed, American parties still stand in the shadow of the nineteenth-century Party Period. This course seeks to untangle the ideologies and practices of party politics from the Founding to the Progressive Era. Topics include the rise of mass parties, political violence, the coming of the Republican Party, the party politics of Reconstruction and westward expansion, corruption and the political machine, Populism, and movements for reform. We pay particular attention to comparisons between past and present, and to opportunities taken and foregone.
Area: Writing Intensive

AS.190.454. Nuclear Weapons and World Politics. 3 Credits.
An intensive examination of competing theories of the role of nuclear weapons in world politics and alternative global security orders. Focus on nuclear weapons and the interstate system, deterrence, war fighting, arms control, proliferation and terrorism, with select historical and contemporary case studies.
Area: Writing Intensive

AS.190.471. The University and Society. 3 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.

AS.190.473. Political Polarization. 3 Credits.
The American constitutional order, which was designed to operate without political parties, now has parties as divided as any in the democratic world. This course will examine explanations of how this happened, the consequences of party polarization for public policy and governance, and what if anything should be done about it.
Area: Writing Intensive

AS.190.474. Philosophy of Law. 3 Credits.
The philosophy of law or jurisprudence investigates the nature of law and what makes law, as it were, law. Thus, this course will examine various ways in which law has been defined and understood. It will also consider how law is distinguished from other systems of norms and values, such as morality, and how law is distinguished from other aspects of government, such as politics. In addition, the course will introduce students to discussions of legal reasoning and interpretation. Students will be required to participate in class discussion, take three exams, and write one paper.

AS.190.476. Frantz Fanon's Global Politics: Racism, Madness, and Colonialism. 3 Credits.
“The abnormal is he who demands, appeals, and begs” – Frantz Fanon. This course explores the writings and politics of Frantz Fanon, the radical anti-colonial author, psychiatrist, diplomat, and revolutionary who inspired decolonial and anti-racist struggles across the globe. We will situate Fanon’s writings in the global historical context of decolonization, and ask how they can illuminate contemporary questions of madness, racism, fascism, and empire. In addition to reading Fanon’s work, we will trace his influence on radical social movements, political thought, and global politics, and explore the limits and promises of culture, art, and film for social transformation.

AS.190.498. Thesis Colloquium. 3 Credits.
Open to and required for Political Science majors writing a thesis. International Studies majors writing a senior thesis under the supervision of a Political Science Department faculty member may also enroll. Topics include: research design, literature review, evidence collection and approaches to analysis of evidence, and the writing process. The course lays the groundwork for completing the thesis in the second semester under the direction of the faculty thesis supervisor. Students are expected to have decided on a research topic and arranged for a faculty thesis supervisor prior to the start of the semester. Seniors. Under special circumstances, juniors will be allowed to enroll. Enrollment limit: 15.
Area: Writing Intensive

AS.190.499. Senior Thesis. 3 Credits.
Seniors also have the opportunity to write a senior research thesis. To be eligible to write this thesis, students must identify a faculty sponsor who will supervise the project.
Area: Writing Intensive

AS.190.501. Internship-Political Science. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.502. Political Science Internship. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.504. Internship-International Relations. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.535. Independent Study - Freshmen. 3 Credits.
Permission required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.536. Independent Study-Freshmen. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.537. Independent Study-Sophomores. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.538. Independent Study-Sophomores. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.539. Independent Study-Juniors. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.540. Independent Study-Juniors. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.541. Independent Study-Seniors. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.542. Independent Study-Seniors. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.543. Independent Research. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.544. Independent Research. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.592. Summer Internship. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.598. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.599. Research - Summer. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.601. Qualitative Research.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?

AS.190.602. Introduction to Quantitative Political Science.
An introduction to measurement and data analysis in contemporary American political science. Measurement topics will include the formation of indices and cumulative scales. Analytic topics will topics include sampling variations, statistical association and causation, as manifested in contingency tables and correlation and regression. Emphasis will be on fundamental concepts and assumptions, and on comprehension and evaluation of the scholarly literature. Advanced undergraduates by permission only.

AS.190.604. Foucault and Kant.
This seminar will explore Kant and Foucault comparatively across the registers of ontology, morality, epistemology, time, and politics. How does each move into and across these registers? How do the two thinkers inform and challenge one another? Texts will include: Kant, The Critique of Practical Reason, Conflict of the Faculties, Perpetual Peace and Other Essays, The Anthropology (sections); Foucault, The Order of Things (chapters), Discipline and Punish, “On the Genealogy of Ethics,” “What Was Enlightenment?”, and Subjectivity and Truth.

AS.190.605. Enviromental racism.
Environmental racism has largely been understood in terms of environmental policy-making that discriminates against people of color, particularly with respect to the state-sanctioned siting of toxic waste facilities, the distribution of pollutants, food-deserts, and the exclusion of non-white peoples from leading positions in the environmental movement. This graduate seminar explores environmental racism more broadly, pushing beyond its conventional, place-based understandings and approaching the corresponding logics that produce human disposability and environmental waste from the standpoint of both space and time. Examining colonial legacies of coding racial others in terms natural disasters, epidemics, infestations, non-human animals and dirt, we shall investigate how the natural world is subjected to exploitation and domination in tandem with the subordination of racial subjects historically identified with nature and rendered expendable. In other words, we shall illuminate the logics of power through which race-making coincides with waste-making. Accordingly, we will explore political and theoretical challenges to environmental racism in multiple registers; such as those posed by indigenous studies, decolonial thinkers and Afro-diasporic theories contesting the intersection of racial biopolitics, ecological crises and racial capitalism in an era of proliferating human disposability. Authors considered may include; Mbembe, Du Bois, Hage, Glissant, Césaire, Wynter & Chakrabarty.

AS.190.607. Decolonizing the Episteme: Knowledge, Empire and the Academy.
What complicity does the Western academy have with empire? How might the development of certain intellectual dispositions be implicated in the challenges of imperial rule? And how might such implications have produced influential concepts and theories? In this course we will consider the ways in which - and extent to which - the academy’s claim to epistemic privilege has a colonial provenance. Seniors permitted with instructor permission only.

AS.190.610. Process Philosophies and Political Manifestos.
What do the process philosophies of Bergson, Whitehead and Daoism have to say to political manifestos advanced by writers such as Marx and Engels, Naomi Klein, Hardt and Negri, Dziga Vertov, Haitian and French revolutionaries, Folco Portinari. How, in turn, can the latter illuminate, deform, or inform them? The readings in this seminar bounce back and forth between the cosmic politics of process philosophy and a variety of short manifestos designed to speak to the vicissitudes of today.

AS.190.612. Comparative Citizenship and Immigration Politics.
Graduate students only. Examines the contemporary political dynamics of migration, citizenship, and race concentrating on North America, Europe and East Asia. We will focus on how citizenship and immigration policies shape immigrant political identities, claims, and strategies as well as how immigrants impact public debates and policies in receiving societies.

AS.190.613. Political Arts: Dada, Surrealism, and Societal Transformation.
An exploration of the political aims and tactics, and strengths and liabilities, of Dada and Surrealism, as it operated in Europe and the Americas in the years between and after the World Wars. Readings by Andre Breton, Leonora Carrington, Georges Bataille, Roger Caillois, Meret Oppenheim, College of Sociology, and others. Seniors allowed by permission of instructor only.

AS.190.616. American Political Development.
An examination of state-building and nation-building throughout American political history. (AP)

AS.190.617. The Politics of Finance.
This graduate seminar considers the relationship between finance and state building in both the developing and developed world. Topics will explore the role of central banking, the development of equity and debt markets, bubble economy politics, the effects of financialization, and financial regulatory politics.

AS.190.619. Great Powers in the Middle East and North Africa.
How have Great Powers shaped the history and politics of states in the Middle East and North Africa? For over a century, Great Powers have been extensively involved in the region: they established colonies, protectorates, and mandates during colonial period; afterward, they employed military force to constrain and shape regimes. Focusing primarily on Great Britain, France, and the United States, this course examines the causes and consequences of foreign military intervention from colonial conquest through the post-colonial period. Students will critically assess claims that link Great Power actions to current-day conditions in the region through evaluating contemporary scholarship and analyzing the history of selected cases.

AS.190.620. Stengers, Nietzsche and Whitehead: Three Process Philosophies.
This seminar explores the philosophies of Stengers, Nietzsche and Whitehead comparatively, focusing on their philosophies of agency, multitemporality, affect in ethics and politics, flirtations with panexperientialism, and accounts of planetary/culture imbrications. We will also read contemporary engagements with all three on subjectivity, biology and politics, the Anthropocene, democracy, the shapes of logic, and the visiccitudes of time. Primary texts by Stengers may be Another Science is Possible and Thinking with Whitehead, by Nietzsche Daybreak, Thus Spoke Zarathustra, and the Late Notebooks. For Whitehead, Process and Reality and Modes of Thought. Presentation, class discussions, and a seminar paper.

AS.190.621. Poesis and Politics.
This graduate seminar will investigate how an aesthetic approach to political concepts and practices – in particular the concept of the polity and the practice of judgment – responds to, troubles, and complicates political thought. In the company of Plato, Kant, Heidegger, Arendt, and Auden, we will explore two related sets of questions. First, what are the advantages and disadvantages of figuring the polity as a work of art or as an artistic creation? Second, how might poetry play a role in politics? Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course, drawing on the work of at least two of the thinker-poets discussed.

AS.190.622. Republicanism, Realism, and Liberalism.
Close reading of major texts in western political thought on violence, security and politics developed by republicans, realists and liberals

AS.190.623. Law's Love: Command, Submission, Obligation, Power.
This course focuses on the affective dimensions of law, a power that both creates and preserves the system of rules which a particular country or community recognizes as regulating the actions of its members and which it may enforce by the imposition of penalties. Two related questions will guide our examination of the affection dimensions of law: What are the grounds of law? Why do we obey law? Students will turn in response papers every week on the reading. In addition, there will be a 20-30 page paper due at the end of the semester.

AS.190.625. Theories of Comparative Politics.
This seminar is intended for graduate students planning to take the comprehensive exam in comparative politics, either as a major or as a minor. In addition to exploring central methodological debates and analytic approaches, the seminar reviews the literature on state-society relations, political and economic development, social movements, nationalism, revolutions, formal and informal political institutions, and regime durability vs. transition. Graduate students only.

AS.190.626. Quantitative Methods for the Study of Politics.
This course is intended as Ph.D.-level introduction to applied statistics, with a focus on the identification of causal effects in the tradition of the Neyman/Rubin potential outcomes framework. Prior coursework in applied statistics or quantitative methods will be useful but is not required. Upon completion of the course, students will be in a position to understand and critically assess scholarship that uses instrumental variables, difference-in-differences, regression discontinuity, and other quasi- and natural-experimental research designs. Formal mathematical proof will be kept to a minimum. Students will be asked to adapt existing code and write some of their own code in R.

AS.190.627. Gilles Deleuze and Classical Theory.
What can Deleuze teach classical Eurocentric theories? And what can representatives of those traditions teach him? We will read Deleuze in relation to theorists he has examined, such as Plato, Lucretius, Spinoza, Kant, Kafka, Nietzsche and Hegel, as we seek to hear the history of political theory in a new key. Concepts and issues such as politics, history, time, culture/nature divisions, capitalism, the source of ethics, the shape of political ideals, and the nature of explanation will come up for review. The course will typically read a text from a classical thinker and then consult Deleuze's engagements with them.

AS.190.628. Hobbes & Spinoza.
A close reading of Leviathan by Thomas Hobbes (1588-1679) and Ethics by Baruch Spinoza (1632-1677), with consideration of important commentaries on these works. What conceptions of the human being, nature, reason, God, and freedom are defended and affirmed by Hobbes and Spinoza? What rhetorical strategies accompany their theories of self, ethics, social life?

AS.190.629. American Racial Politics.
Race is not a biological fact but rather a social construction. However, it is a social construction with very real consequences. Definitions of citizenship, allocation of state resources, attitudes about government and government policy, the creation of government policy, all shape and are shaped by race and racial classifications. Serving as a critical corrective to American politics treatments that ignore race, this class will examine how race functions politically in the United States. While not required, some knowledge of statistics is helpful.

AS.190.630. Interpretation and Critique of Political Ideas.
This is a graduate seminar on the interpretive and critical problems that arise when political theorists read and write about texts from long, long ago or far, far away. The first part of the course will consider approaches to the history of European political thought influenced by Marx, Foucault, Strauss, Skinner, and Arendt, amongst others. Readings will include both major methodological statements and examples of interpretive and critical scholarship undertaken by proponents of these different schools of thought. In the second part of the course, we will ask whether and how methods developed to analyze and learn from the history of political thought can be applied to the study of political thinkers who lived and wrote outside western Europe and North America. Major questions for consideration in both parts of the course include: Can old ideas help us solve problems arising in contemporary politics and political theory? What can we learn from intellectual traditions unconnected to our own? What do we have to do in order to understand the ideas contained within a given text? Do we have to understand a text for it to be useful to us?

AS.190.631. Making Social Policy.
Examines American social policy in comparative perspective. Special attention to issues of poverty and inequality, and their relation to the political system.

AS.190.632. The Development of American Political Institutions.
This course explores institutional development in American national politics, from the Founding until the present. It traces parties, Congress, the presidency, bureaucracy, and courts, and also examines how those institutions have interacted with one another across American history. Throughout the course, we will consider how ideas, interests, procedures, and sequence together shape institutions as they collide and abrade over time. Finally, although it hardly covers the entire corpus across the subfield, the course is also designed to prepare students to sit for comprehensive examinations in American politics.

AS.190.633. Black Political Thought.
This course will introduce you to a survey of Black political thought. Our examination will cover the time period between the latter years of the Transatlantic Slave Trade and the present. In the first two thirds of the course we will deal with primary texts (including but not limited to Incidents in the Life of a Slave Girl, The Souls of Black Folk, and The Wretched of the Earth), and in the last third we will deal with modern day attempts to wrestle with the ideas in these texts (including but not limited to Intimate Justice and Critique of Black Reason).

AS.190.634. Political Corruption.
Political corruption is widely seen to be an impediment to economic and political development and stability. But what is political corruption? The common definition of corruption as abuse of power for private gain is too vague to be of serious scholarly use. Is “abuse” culturally specific or merely a synonym for “illegal” - or even worse, for undesirable according to some unspecified standard? Does “private gain” refer only to under-the-table cash payments to a corrupt official, or does it extend to intangible private benefits, and does it extend to gains for identifiable favored groups (“club goods”) and may or may not include the corrupt official him or herself?This seminar will focus on several questions. How should political corruption be defined, and what is at stake in the choice if definition? Are there identifiable patterns to, or types of, political corruption? What conditions encourage or discourage corruption, and how might corruption be controlled or limited? What are the consequences of corruption - and are they necessarily all negative?

AS.190.635. Theories of Constitutional Governance.
This class is focused on the nature of constitutions and the way that they should and do work within a political system, with particular emphasis on the U.S. context. We will examine both normative and empirical arguments about the relationship between politics and constitutional law. More specifically, we will think about how societies and individual actors should make meaning out of constitutional texts, how they do seem to make meaning out of those texts, and the conditions that give rise to constitutional drafting and change. Graduate students only.

AS.190.636. Information/Knowledge/Power/Politics.
