Explores how information and knowledge flow through political/social/economic configurations, forming and reforming the politics of everyday engagements at different scales. Topics such as mis/disinformation, commodification of information, embodied information, surveillance, and cyber-mediated information provide the context for analyzing practices, power, agency, and ethics. Critical security studies scholarship provides an overarching template, and we will also draw theoretical insights from multiple disciplines. The format will combine elements of seminar and workshop, and the emphasis will be on collaborative participation in the research process.

AS.190.637. The Colonial Constitution of the "Human".
This course inquires into the colonial constitution of the "human" across philosophical, legal, political, social and economic dimensions. Special attention is paid to the ways in which sexuality, gender, race, class and faith are complicit in this constitution. The course finishes by critically considering theories of the "post-human" from the perspective of both a colonial genealogy of the "human" and anti-colonial claims upon humanism.

AS.190.638. Racial Capitalism.
This graduate seminar will explore the imbrication of the theory, history, and politics of the logic of race and the logic of capital.

AS.190.641. Race and Ethnic Politics in the United States.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the "struggle with difference" within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Writing Intensive

AS.190.642. Institutions, Power, Ideas and Practices.
Comparative politics scholars have long identified institutions as a crucial source of cross-national variation in political life. Yet institutions are not static. We know from everyday experience that institutions change over time, sometimes quite fast. Scholars have attempted to address the problem of institutional change in various ways. Some institutionalist scholars underscore the endogenous logic of institutional evolution, whereas others resort to exogenous factors such as power. Constructivist and pragmatist scholars foreground ideas and practices as sources of institutional change. This course will explore these different strands of scholarship and attempt to reconstruct a fruitful dialogue between them."

AS.190.643. Practice and Process in International Relations Theory.
This course covers a series of special topics in IR theory with an emphasis on how an appreciation of practices and process provides a fresh perspective on old questions and raises new ones. The course will focus on the pertinent sociological literature and how this has been applied in IR.
Area: Writing Intensive

AS.190.644. Colonialism and Foreign Intervention in the Middle East and Africa.
How did colonial rule and post-colonial foreign intervention shape the history and politics of states in the Middle East and Africa? The first part of this course focuses on the colonial period, examining the era of conquest, considering how and whether colonial rule differed from other types of ruling arrangements, and studying how people in colonized territories reacted to conquest and foreign rule. Part Two focuses on post-colonial foreign military interventions. Part Three considers the potential long-term consequences of colonialism and foreign intervention. The course focuses on British, French, and American imperialism.
Area: Writing Intensive

AS.190.645. Black Politics.
Grad Students Only.

AS.190.646. CLR James: Black Marxism, Pan-Africanism and International Relations.
This course uses the life and writings of famous Trinidadian Marxist CLR James to explore a set of analytical issues of importance to understanding Pan-Africanism and international relations, including: political economy and slavery, culture and freedom, and the fraught relationship between black intellectuals and black masses.

AS.190.647. Community and Its Disconcents.
This course is inspired by Hannah Arendt's claim that the calamity of stateless people is "not that they are deprived of life, liberty and the pursuit of happiness" but that "they no longer belong to any community whatsoever." Rather than attempt to verify or disprove this claim, the course will use this claim as a provocation. How do we understand, experience, and imagine "community"? What does it mean to "belong" to a community? Is it possible not to belong to any community? Why is the language of community so ubiquitous? To help us consider these questions, we will read among others, Anderson, Freud, Harney and Moten, Joseph, LeGuin, McMillan, and Rousseau. A final paper of 20-30 pages is required.

AS.190.648. Writing for Research.
This course is designed to help graduate students in political science craft an original piece of high-quality writing. This class is open to students in their first, second, or third years of the graduate program. We will work on developing the skill of academic writing step by step, focusing first on the question of how to identify and articulate a good question, second on the skill of literature review, third on the art of theoretical engagement, and fourth on the presentation of evidence. During the semester, students may choose to turn a set of interests and questions into a prospectus draft. Alternatively, they may decide to use the class to turn a seminar paper into a dissertation chapter, or a revise a dissertation chapter into an article manuscript. Special sessions will bring other faculty to the class to talk about writing a dissertation and the peer-review process.

AS.190.649. The Economic and the Political.
The neoclassical paradigm of economics utterly excludes politics, yet a large swath of the subfield of "political economy" presupposes or is predicated upon that very paradigm. Neither approach can account for the distinct force of "the economic" as it continually interacts with "the political" (and the social, the cultural, etc.) This graduate seminar will be an experimental effort in exploring a whole new terrain of the economic — not another critique of the neoclassical paradigm, but the initial (re)formulation of a new approach to the economic and the political.

AS.190.651. Policy Dynamics.
Policy dynamics is the study of changes of the political system in its entirety, from the point of view of the system's outputs--what government actually does, or fails to do. It is dynamic in that it seeks to explain changes in what matters governments feel can or must be addressed, the tools that are available to deal with problems, and the interactions of government and non-government actors that generate change. Particular emphasis will be placed on studying policy dynamics over long periods of time, including such post-enactment issues as implementation, policy feedback on political identities and group formation, and policy durability.

AS.190.652. The Politics of Money, Debt and Credit.
This course will survey recent scholarship on the politics of monetary and financial flows in the economy. We will reflect on the significance and causes of changes in underlying political economy and institutions since the mid-20th century. We will pay special attention to the rise of a new political economy often characterized as neoliberal, and we will discuss how scholars within and beyond political science make sense of these changes.
Area: Writing Intensive

AS.190.653. Organizations.
Graduate students only. "Organizations are the fundamental building blocks of economic, social and political life. This course will examine how different disciplines (sociology, economics, political science) approach the problem of explaining how organizations operate, as well as exploring the structure and development of a very wide range of organizations (firms, interest groups, charitable foundations, universities, militaries, bureaucracies, international organizations, and professions)."

AS.190.654. The Development of the Conservative Movement.
The last twenty years has seen a flourishing of literature on conservatism across multiple disciplines. This course will survey that literature, placing it in a developmental context. Particular focus will be placed on the relationship between elite and mass conservatism, especially in the light of the rise of populism in the US, UK and elsewhere.

AS.190.655. Decolonizing Time and Memory.
This graduate seminar is a critical encounter with the colonial imprint on the politics of memory, temporality and race. We shall investigate the recent turn to "decolonize" virtually everything and ask what such efforts might entail given that the hallmarks of colonialism include a disavowal of the past, the capacity to set the clock to zero and begin the world anew, a linear conception of time and an abiding desire for temporal sovereignty. While investigating the possibility of decolonizing futurity, we will pay particular attention to the Promethean construction of the human race (and its constitutive others) across history. We shall confront the role of segregated temporality and mnemonic politics in modern race-making projects and their impact on the contemporary political imagination. Authors may include Nietzsche, Wynter, Fanon, Foucault, Deleuze, Anzaldúa, Baldwin, & Du Bois.

AS.190.657. Re-Turn to Language.
A central claim of structuralism is that all systems of meaning are structured along the lines of language. Post-structuralism challenges this claim but does not dismiss it so much as probe the ways in which these systems fail and reveal interesting things about how communication may (not) take place. What is sometimes called "post-post-structuralism" rejects the focus on language, emphasing instead how meaning is generated in and by culture or with the (mostly) unacknowledged collaboration of matter. This course will revisit these claims, challenges, and refusals within the context of contemporary, philosophy, literary theory, and political thought. We will read, among others, texts by Saussure, Liev-Strauss, Lacan, Barthes, Derrida, Foucault, Kristeva, Butler, and Barad. Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course.

AS.190.659. Postcolonial Political Economy.
There is currently an intermittent and under-examined relationship between postcolonial studies and critical political economy. The aim of this module is to help you to account for this relationship on your own terms. We will examine the entanglements of capitalism and colonialism by building unconventional conversations between classical political economists (as well as their 19th century successors) and thinkers and traditions invested in confronting colonialism and its legacies. We will focus primarily on regions affected by (Anglo) settler colonialism – especially the Americas and the Pacific.

AS.190.660. Democratic Resilience: US Democracy in Comparative and Historical Perspective.
What gives democratic regimes the ability to withstand challenges such as extreme polarization, racial and ethnic conflict, rising economic inequality, and institutional sclerosis and avoid the prospect of backsliding toward authoritarianism? This course will examine the problem of democratic resilience by locating the contemporary crisis of American democracy in comparative and historical perspective, bringing together literatures in comparative democratization and American politics.

AS.190.662. Reading (vols 2 & 3 of) Capital.
TBA

AS.190.664. Decolonizing Political Science: Contexts, Concepts, and Imaginations.
This graduate course explores the colonial contexts out of which key sub-fields of political science arose. The course then examines the colonial logics that underpin the conceptual formation of each sub-field. Finally, the course considers alternative knowledge traditions, emanating from minority communities and colonized peoples, which seek to alternatively explain the phenomena engaged with by each sub-field.

AS.190.666. Political Economy Of Development.
Graduate students only.

AS.190.667. Reconstructing International Relations Theory.
In this class, we will study IR theory in a reconstructive mode. We will return to foundational texts in light of more recent theoretical developments both in IR and social thought more broadly. Our goal will be to critically assess the basic epistemological, ontological, and historical assumptions of IR theory while charting paths for its possible futures.

AS.190.668. Rethinking Western Thought.
The history of Euro-American Political Thought has been criticized for its orientations to race, gender, class, Christianity, the subject, capitalism, colonialism, sociocentrism, and humanist exceptionalism. How deeply are those themes ensconced in early Christian traditions, secular orientations to the earth, practices of capitalism, and contemporary images of "the political"? What openings are discernible? The seminar starts with Hesiod's Theogony and a chapter from Tim Whitmarsh on atheism in ancient Greece. It then explores how Augustine consolidates sharp shifts in orientations to faith, divinity, nature, discipline, time and the earth. An agent of the first conquest of paganism. Readings in The City of God: Against the Pagans and The Confessions in relation to Foucault's newly translated book, Confessions of The Flesh. Then we turn to what might be called the second Christian/imperial conquest of paganism, launched during the 15th century Spanish invasion of the Americas. How did that conquest re-enact and differ from the first? Texts by Todorov, The Conquest of America, alongside essays by C.L.R. James and perhaps de Castro. Followed by essays from Kant, Marx, Arendt, or Deleuze/Guattari, to see how each consolidates or turns earlier western theories. The seminar then engages Dipesh Chakrabarty in The climate of history in a planetary age as he criticizes Euro-centered thought ("the political", the earth as background to politics, racism, exceptionalism, etc) and some currents in post-colonial thought. Critiques and augmentations will be explored, too.

AS.190.670. The Dream of the 90s: Political Theory, 1990-1995.
This graduate seminar will explore works from this extraordinary period in contemporary political theory.

AS.190.672. Money.
What is money? And given its absolute centrality to economics and politics, shouldn't political economy and political theory hold answers to this question? Instead, the history of both neoclassical economics and modern political thought is marked by eschewals or refusals of it or its importance. This graduate seminar will explore the theory and politics of money, through critical readings of orthodox theories, engagements with heterodox political economy, and encounters with contemporary political theory.

AS.190.675. Nuclear Weapons and Global Politics: History, Strategy, Race and Gender.
This course provides an analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. It offers a broad historical survey that starts with US involvement in the First World War, covers major developments of the twentieth century, and concludes with contemporary issues. Important themes include the developments underpinning the emergence of the liberal world order, strategies of containment during the Cold War, nuclear deterrence and antiproliferation efforts, the politics of international trade, alliance politics, technological and security policy, and the re-emergence of great power competition.

AS.190.676. Field Survey of International Relations.
This course provides a scaffold for the study of international relations theory, organized historically and by major approaches. The focus is on close reading and discussion of exemplars of important bodies of theory. Intended for doctoral students with IR as their major or minor field. Graduate students only.

AS.190.678. Law and Politics.
As a field, Law and Politics has evolved from the study of constitutional law and judicial politics to the political behavior of judges and their associates to the study of law and society, the operation of law and courts "on the ground" in the international arena as well as in the United States, historical institutionalism, and the carceral state. In this graduate course, we will review some of the classic texts in the field, with a focus on the tension between legal institutions and democratic politics. In particular, we will examine how that tension is manifest in the foundations of the American political system and in critical reflection on contemporary practices of American democracy. Students will turn in response papers every week on the reading. In addition, there will be two 10-20 page papers due during the semester. Graduate Students Only.

AS.190.679. The Political Poetics of Walt Whitman and Henry Thoreau.
A study of the works of Thoreau and Whitman, with an eye toward how they explore the process of outside influences upon subjectivity-formation. What are the powers and limits of Whitman's and Thoreau's experiments with language and writing (rhetoric, syntax, imagery, myth) as they seek to induce, cultivate, and transform influences? What role is played by physical encounters with the nonhuman agencies (of plants, animals, objects, divinities)?

AS.190.681. Race and Politics of Punishment in the U.S..
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold impacts for citizenship. In this graduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history, and racial orders seriously. Why did the carceral state expand in "fits and starts" and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system "makes race" and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields – history, sociology, law, and criminology – and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad's Condemnation of Blackness: Race, Crime, and the Making of Modern Urban America, Elizabeth Hinton's From the War on Poverty to the War on Crime, David Oshinsky's Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western's Punishment and Inequality in America, and Michael Fortner's Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.

AS.190.682. Regulatory Politics.
This graduate seminar considers regulatory politics in both the developing and developed world. Topics will explore the role of independent agencies, soft paternalism, co-regulation, regulatory failure, and other topics, across a host of sectors.

AS.190.683. Research Seminar/Political Parties.

AS.190.684. How to Be(Come) an Intellectual.
The university both provides a platform for critical intellectual life and, particularly during its neoliberalization, sets severe barriers to it. The latter involve increasing administrative entanglement with corporate and state forces of authoritarian control, disciplinary drives to narrow professionalism and reductive epistemologies, attacks on tenure and university governance, and cutbacks in university budgets. How can those with intellectual aspirations negotiate such departmental, professional, trustee and state pressures? What preparations and role models are conducive to help carve out such space in the academy? What critical role can intellectuals play today in and beyond the academy? What intellectual personae from the recent past are helpful here? The seminar will be divided into two parts. Part I will explore a group of academics who created intellectual space in the United States during a period resistant to it in the 1960s. Texts by Charles Taylor, Sheldon Wolin, Donna Haraway, Herbert Marcuse, Cornel West, Althusser, and me may be consulted. Part II moves into the contemporary era. Texts by Foucault, Theweleit, Latour, Haraway (again), and Moten may be reviewed, along with new explorations of relations between adjunct faculty and intellectual life. Readings for Part II thus remain in flux. But intersections between new fascist drives, climate change, racism, professional retreatism, and pandemics may be explored. Seminar assignments include a class presentation, two short papers, and regular participation in discussion.

AS.190.685. Critical theory, method, and application in International Relations.
Critical theories are often taught by focusing on their various philosophical and ethical claims. But how do you “apply” critical theories in the study of International Relations? Is “method” only a “mainstream” concern? This course seeks to relate philosophy and ethics to method with a (future) eye to dissertation writing. We will consider e.g. Marxist, feminist, postcolonial, and poststructural lines of inquiry, as well as, at the same time, a range of conceptual areas of inquiry – e.g., the affective, the normative, the poetic, the phenomenological, and the material.

AS.190.686. The Right to the City.
Over the past decade, political, economic, and cultural struggles in and over the city have become more important than ever before. Protests against the growing carceral state, against increasing wealth inequality, as well as revanchist attempts to rollback multicultural societal shifts all have the city as its core. While some Marxist thinkers suggest these struggles represent larger struggles over use- versus exchange-value, Black Radical thinkers connect these struggles to anti-black racism. In the wake of one world challenging movement – Black Lives Matter – and one world altering crisis – the Covid-19 pandemic - this course will reflect critically on these two traditions of thinking about the city and to rethink the Marxist tradition through the Black Radical tradition. We will anchor these conversations in an exploratory dialogue between two exemplars of each tradition - the French geographer Henri Lefebvre, and Detroit movement intellectuals James and Grace Lee Boggs. This class will be a vital component of the 2022-23 Sawyer Seminar.

AS.190.687. Philosophy and the Anthropocene.
How do philosophers such as Heidegger, Whitehead, Deleuze and Braidotti help us to think about the dynamics of the Anthropocene? What do anthropologists and geoscientists such as Anna Tsing, Bruno Latour, Jason Moore, Michael Benton, Jan Zalasiewics and Wally Broecker--teach those philosophies and us about the contemporary condition? Class presentations on assigned readings, seminar paper, and class discussions.

AS.190.688. Political Violence.
This undergraduate seminar is designed to introduce students to the comparative study of political violence and intra-state conflict. We will examine social science theories and empirical studies on a wide range of forms of political violence, including civil war, coups, state repression, communal violence, riots, terrorism, genocide, and criminal-political violence. We will study these phenomena at the micro, meso and macro levels, and focus on understanding their causes, dynamics, outcomes, and aftermath. The class will also equip students with an ability to analyze political violence by using social scientific tools.

AS.190.690. Statelessness.
This course will examine Hannah Arendt’s claim that the most “symptomatic group” of contemporary politics is “the existence of an ever-growing new people comprised of stateless persons.” We will consider what, if anything, this group may be a symptom of and its consequences for theories of law and politics. Among other authors we will read Arendt, Agamben, Brown, Foucault, Moten, Said, and Somers. A final paper of 20-30 pages is required.

AS.190.691. The Hopkins Seminar on Racial Politics.
This class surveys the ways in which racial politics has become an increasingly salient topic for Political Science. We examine how racial politics has been engaged with in various sub-fields, and how the study of racial politics might be pursued through cross-sub-field and inter-disciplinary interventions. The class also situates these investigations in the historical importance of Hopkins as a key site in the emergence of a racist discipline and, alternatively, as a site from which important interventions have been launched towards formulating an anti-racist Political Science.

AS.190.800. Independent Study.

AS.190.801. Summer Research.

AS.190.849. Graduate Research.

AS.191.131. An Introduction to Global Migration. 3 Credits.
We live in a world in motion. There are over 272 million migrants in the world today and these numbers are expected to increase in the next decades. Simultaneously, migration is one of the most contested contemporary issues and dominates politics and the media. This course provides students with a thorough understanding of key themes, policies, dilemmas and debates in migration. The first part will focus on theories of migration where students can learn about the history of migration, how and why migrants move today and what categories of migrants exist. The second part will focus on debates around migration and discursive strategies used to ’other’ migrants. Part three will focus on core issues in migration studies such as racism, integration, border controls and the link between migration and the economy.
Area: Writing Intensive

AS.191.303. Critical Race Theory, Law, and Criminal Justice. 3 Credits.
In this course, students will gain a foundational understanding of critical race theory, including its genesis in legal theory. The course will examine its relationship and importance to social movements, including through key concepts like intersectionality. The course will also use critical race theory to grapple with law, racial segregation, and the criminal justice system in the United States.
Area: Writing Intensive

AS.191.304. Writing Politics in an Age of Crisis. 3 Credits.
We live in an age of crisis. Social, political, and environmental disruptions both in the United States and around the world are the new normal. How do we – as individuals, citizens, and scholars – come to understand these issues? And how should we write about them? This course is designed to help students improve as writers, readers, and editors for a world where powerful young voices are more necessary than ever. The substantive focus of the course will be on the dynamics of interlinked contemporary political crises and on the responses available to individuals to address them. We will read a variety of scholarly, journalistic, and literary sources to inform our discussion and inspire our writing. However, this course is designed not as a standard seminar, but as a writing workshop. Students will write and critique a variety of pieces of different lengths and styles – including a political memoir, an op-ed, a long-form critical essay, and a piece of speculative fiction - spending the majority of in-class time on peer review, presentations, and writing exercises, which they will compile into a writing portfolio. Reading will include works by Alexander Chee, Ta-Nehisi Coates, Mary Annaise Heglar, Hunter S. Thompson, James Baldwin, Dave Zirin, Elizbeth Rush, Charlotte Shane, and Teju Cole, among many others.
Area: Writing Intensive

AS.191.310. Sex(uality) and Race as the Politics of the Beat Generation. 3 Credits.
This course focuses on the literature of the Beat Generation writers (Ginsberg, Kerouac, Burroughs, Snyder, Kaufman) of the late 1940s through the 1950s and 1960s. The Beats were a group of nomadic writers traveling the North American continent between San Francisco and New York with memorable stops in Denver and St. Louis, Missouri. Beat literature revolted against the constraining normalizing values of post war USA and celebrated freedom of expression, wanderlust, and the search for euphoria of body and mind in stream-of-consciousness narration. The course examines the relationship between society's dominant mores and beliefs (both contemporary and those of the 50's and 60's) and the counterculture, non-conformist philosophy as espoused by The Beats. The course focuses on Beat depictions of sexuality, gender and race in order to understand if these identity markers are but symptoms of social structures of oppression (racism, patriarchy, heterosexism) or if, alternatively, they can also signal, express and enact a new and different understanding of politics. Can the Beats help us envision new forms of (non-toxic) masculinity? Can they help us think of race in non-racist ways?
Area: Writing Intensive

AS.191.325. Environmental Social Sciences meet Environmental Fiction. 3 Credits.
The course pairs readings of critical texts addressing environmental crises with literary fiction broadly dealing with the relationship between the human and the environment. We discuss the ways narratives affect our understanding of complex global phenomena, and how the tools of literary analysis can help us unpack the rhetorics and values of both fictional and nonfictional texts.
Area: Writing Intensive

AS.191.335. Arab-Israeli Conflict. 3 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.

AS.191.340. Cities, Space & Power. 3 Credits.
Gentrify! 80% of people live in urban areas. These locations are key for solving political dilemmas, including climate change, class, segregation, gender & immigration. This class explores all of these through the lens of gentrification. What does 20th century urban planning have to do with it? How can I talk to my friends about gentrification in Baltimore? Find out this and more!

AS.191.345. Russian Foreign Policy. 3 Credits.
This course will explore the evolution of Russian Foreign Policy from Czarist times to the present. The main theme will be the question of continuity and change, as the course will seek to determine to what degree current Russian Foreign Policy is rooted in the Czarist(1613-1917) and Soviet(1917-1991) periods, and to what degree it has operated since 1991 on a new basis. The main emphasis of the course will be on Russia's relations with the United States and Europe, China, the Middle East and the countries of the former Soviet Union--especially Ukraine, the Baltic States, Transcaucasia and Central Asia. The course will conclude with an analysis of the Russian reaction to the Arab Spring and its impact both on Russian domestic politics and on Russian foreign policy.

AS.191.352. Race, Class, and America. 3 Credits.
Through an intensive and in-depth reading of theorists, thinkers, historians, and political scientists, this course will take students through the deeply interconnected story of American race relations and labor politics. We will examine primary source material, such as the essays of Richard Wright and Ralph Ellison, the speeches of A. Philip Randolph, Bayard Rustin, and Martin Luther King, Jr., the memoirs of Charles Denby and Angelo Herndon, and the pamphlets of Claudia Jones; we will read historical accounts which situate these figures in their context; and we will engage critically with the fundamental topic: in the United States, what is the relationship between race and class; racism and exploitation; civil rights and labor activism? Toward the end of the course, we will examine recent scholarship that has returned to these themes to show how deeply imbricated America—its people, its institutions, its political economy—remains to this history.
Area: Writing Intensive

AS.191.354. Congress and Foreign Policy. 3 Credits.
This course is an introduction to the Congressional role in foreign policy. The Constitution grants the President the authority to conduct foreign policy. Yet it also gives Congress a substantial role in the shaping of foreign policy. The roles are not always clear, creating an inherent tension between these two branches of government and efforts on each side to increase their power. This class will address the "rules of the road" in conducting American foreign policy and how they change. The class will go beyond theory to include case studies that show the tension between Congress and the Administration – including the Iran Agreement, Climate Change, the use of sanctions and American policy towards Cuba. The course will include guest lecturers who work in Congress on the various aspects of foreign policy – including appropriations, intelligence, oversight and investigations. We will address the Congressional role in ratification of treaties and in declaring war. The class will consider the different ways that each branch of government approaches human rights and sanctions. The class will also address the domestic political aspects of foreign policy – including the role of advocacy groups and special interests and the political use of Congressional investigations. One class might be held in Washington D.C. at the U.S. Senate, so would require additional time for travel.

AS.191.358. Use of Force and the American State. 3 Credits.
This course examines the growth and development of the American state's coercive institutions, namely, the military and police. We will explore the ways in which the American state makes war, fights crime, and polices the boundaries of citizenship. While we tend to approach these topics from the perspective of international relations, law, or political philosophy, this course focuses on American politics and institutions. How did the United States secure control over a transcontinental territory in the absence of a large standing army? Why did the federal government try to criminalize vices, and how were these statutes enforced? How did violence influence the development of the American state, and to what extent do these historical processes explain warfare and law enforcement today?
Area: Writing Intensive

AS.191.372. Making Social Change. 1.5 Credits.
Aitchison Students Only.

AS.191.375. Thinking Organizationally about Politics. 3 Credits.
Aitchison Students Only.

AS.191.376. Public Policy Writing. 3 Credits.
Aitchison Students Only.
Area: Writing Intensive

AS.191.379. Thinking Strategically. 1.5 Credits.
Aitchison Students Only.

AS.191.381. Education Policy. 1.5 Credits.
Aitchison Students only

AS.191.382. Thinking Economically. 3 Credits.
Aitchison Students Only.

AS.191.383. Visualizing Data. 3 Credits.

AS.191.405. Modernity and the Slaughterhouse: Labor, Violence, and Animals in Contemporary Society. 3 Credits.
Steven Pinker opens his influential bestseller The Better Angels of Our Nature with the claim that "If the past is a foreign country, it is a shockingly violent one," going on to argue that the contemporary age is one marked by relatively more peace and less violence than ever before. Drawing on a long tradition of optimist thinkers, he credits this civilizational progress to a combination of the intellectual legacy of Enlightenment humanism, greater faith in scientific rationality and technological progress, a strong system of states and social institutions, and the development of democracy and the liberal market economy. For Pinker, this account holds as much for humans as it does for animals, and he goes so far as to claim the emergence of animal rights as "another rights revolution" akin to civil rights and women's rights. But does this account of modern society hold up under scrutiny? Or, more specifically, where does it fail? And how exactly does contemporary society relate to different forms of violence (against humans and animals) that it has not done away with?The historical processes described by Pinker have not only drastically changed human society, but they have also impacted how we interact with animals. The United States today produces and consumes more meat than ever, but most Americans live at an increasing geographic and perceptual distance from animals and the humans who work with them, relying on a system of industrial production and a complex division of labor. This course approaches the politics of this distribution of labor, violence, and human-animal relations from a site rarely considered in political analysis: the modern slaughterhouse. It engages with this institution as a historical and cultural object, using the story of its emergence and operation to ask broader questions about the politics of social change. We will draw on an interdisciplinary range of academic and non-academic works to explore a range of questions about the relationships between institutions and rationality, visibility and invisibility, hygiene and marginalization, and labor and society, and to examine the narratives ostensibly peaceful, liberal democracies tell themselves about violence, history, and progress
Area: Writing Intensive

AS.191.406. Capitalism: Politics and Political Thought in a Market Economy. 3 Credits.
The United States is a capitalist economy and we live in a capitalist world. This a fact we take for granted and therefore spend little time examining. Capitalism' proponents attribute our society's unprecedented wealth and technological advances to this economic system. Some go so far as to claim that modern democracy and social progress are impossible without a capitalist economy. Critics point to growing social inequality and a slew of environmental ills as proof of capitalism's unsustainability. Some suggest that capitalism is antithetical to true democracy and human flourishing. But what exactly is capitalism? How did it evolve in the USA and how does the form capitalism takes in the United States differ from the forms it takes elsewhere? And, crucially, how is capitalism shaped by – and how does it shape – contemporary politics? And how exactly is this all related to liberalism, conservatism, neoliberalism, libertarianism, socialism, and democratic socialism? This seminar is designed to help students critically approach these questions.Rather than taking simplistic pro-contra approach, this seminar will examine capitalism along four axes: as a political-economic system, a corollary set of structures and institutions, the force behind a specific form of state organization, and the determinant of how society and individuals act and see themselves. To explore these issues, we will focus on a number of contemporary political issues, with a primary geographic focus on the United States, including the following: the debates over the welfare state and socialized healthcare; unions, lobbies, and special interests; the connection between capitalism, culture, and ideology; the effects of a capitalist organization of labor of questions of race, gender, and citizenship; the commodification of the environment and other species; and the process of critique, resistance, and social change in a capitalist system. Throughout, we will discuss the theoretical and empirical arguments put forward by a historically and disciplinarily broad range of thinkers including Karl Marx, Simone Weil, John Locke, Adam Smith, Robert Nozick, Thomas Sewell, Nancy Fraser, David Graeber, Melinda Cooper, Andreas Malm, and Guy Debord, through to Alexandria Ocasio-Cortez and Elon Musk.
Area: Writing Intensive

AS.191.415. Fear and Loathing: Writing About Contemporary American Politics. 3 Credits.
This course is focused on reading, analyzing, and, most importantly, producing writing about the American political experience and contemporary events in American politics. We will use scholarly, print, and new media sources from different sides of the political spectrum, drawing on political and literary theory to inform our discussions. We will then try to do better: Students will write and workshop a variety of pieces of different lengths and styles, spending in-class time on peer critique, presentations, and writing exercises, which they will compile into a writing portfolio. We will discuss and write op-eds, memoirs, long-form book reviews, commentary essays, and satire. Throughout, we will devote considerable class time to critique and discussion of students' writing. Readings will include works by James Baldwin, William F. Buckley, Claudia Rankine, Hunter S. Thompson, Ta-Nehisi Coates, Alexander Chee, Angela Nagle, and Omar el Akkad. We will draw on political commentary from sources ranging from The Washington Post to Jacobin to The Onion, through to Facebook and Twitter. Throughout, we will consider a wide range of topics pertinent to writing about politics, including questions of the make-up of the public sphere and diverse audiences, the use of voice and language, the deployment of facts and rhetoric, the place of fiction and humor in political critique, and the rise of fake news and trolling.

Agora Institute

AS.196.300. Getting to Truth: How to Navigate Today's Media Jungle. 3 Credits.
Our democratic system depends on an informed public, but media today are polarized along ideological lines, undercut by economic and technological change and sometimes polluted with bogus stories written for profit or spin. In this course, taught by a veteran journalist, we will discuss the evolution of news, examine the current challenges and assess what citizens can do to get a fair understanding of what's going on. We'll use many concrete examples and students will have multiple writing assignments.
Area: Writing Intensive

AS.196.301. Social Entrepreneurship, Policy, and Systems Change: The Future of Democracy. 3 Credits.
This course will explore the dynamics and interplay between social entrepreneurship, social change, and policy. Students will explore frameworks for social transformation and systems change, and explore whether stable governance and effective policies are necessary for sustainable change. The course will examine the intersection between social change and policy change, examining how the two concepts intersect while focusing on the end goal of systems change. Students will examine different case studies of social transformation (or proposed social transformation) from across the United States and world. Guest speakers will include diverse practitioners of social entrepreneurship who think about long-term pathways to transformative social change, and dynamic policymakers.While the course will include case studies on broader domestic and international challenges and models of social transformation, a larger focus will be on specific local social problems and solutions. This will manifest through class discussions and a final project based on the surrounding community.
Area: Writing Intensive

AS.196.364. This is Not Propaganda. 3 Credits.
We live in an era of disinformation' mass persuasion and media manipulation run amok. More information was meant to improve democracy and undermine authoritarian regimes- instead the opposite seems to be happening. This course will take you from Russia to South Asia, Europe to the US, to analyze how our information environment has been transformed, why our old formulae for resisting manipulation are failing, and what needs to be done to create a model where deliberative democracy can flourish.
Area: Writing Intensive

AS.196.600. Data-analysis for Social Science & Public Policy I.
We will gain experience with data-analysis geared towards understanding the social world. Our scope ranges from simple descriptions and predictions under strong assumptions to intervention analyses that provide a more trustworthy foundation for quantifying causal effects. The course will be offered in a hybrid modality and will have a heavy focus on computation. We will alternate between discussion sessions devoted to fundamental concepts, and lab sessions devoted to a combination of web- and instructor-led data-analyses. Whenever possible, examples using both R and Stata and using a range of national and cross-national data-sources relevant to the study of democracy will be provided.

Anthropology

AS.070.607. Schelling and Anthropology.
The 18th century German philosopher Schelling has been hugely influential on 20th century thought (Freud, Heidegger, Nancy, Zizek, Pierce) but remains unknown outside of philosophical circles. This neglect is unfortunate given that he has so much to offer anthropological inquiries into the relations between mind and matter, nature and culture, theology and mythology among other topics. This course places Schelling's writings and commentaries on his work alongside anthropological texts and figures to explore lines of productive conversation. The theme of a romanticism appropriate to our present will be consistently explored throughout the course.
Area: Writing Intensive

Comparative Thought and Literature

AS.300.402. What is a Person? Humans, Corporations, Robots, Trees. 3 Credits.
Knowing who or what counts as a person seems straightforward, until we consider the many kinds of creatures, objects, and artificial beings that have been granted—or demanded or denied—that status. This course explores recent debates on being a person in culture, law, and philosophy. Questions examined will include: Should trees have standing? Can corporations have religious beliefs? Could a robot sign a contract? Materials examined will be wide-ranging, including essays, philosophy, novels, science fiction, television, film. No special background is required.

AS.300.618. What is a Person? Humans, Corporations, Robots, Trees..

East Asian Studies

AS.310.230. Chinese Politics and Society. 3 Credits.
This introductory course will familiarize students with the major dynamics of political and social change in contemporary China since 1949. The course will be divided chronologically into four main topics: 1. The contested processes of nation-state making in modern China before 1949; 2. The making of the socialist system during the Mao Years and its dismantling since 1978; 3. The Reform Era transformation to a market economy with Chinese characteristics; 4. The dynamic relationships among the state, market and society since the new millennium. Students will explore how scholars have explained major political and social changes with reference to individual and collective rationalities, specific organizational and institutional arrangements, and specific strategic and cultural mechanisms of Chinese political and social habits.

AS.310.305. China, Southeast Asia, and U.S. National Security. 3 Credits.
The global political and security landscape of the 21st century will be shaped by the rivalry between two superpowers -- China and the U.S. For the foreseeable future, the geographic focus of that contest will be Southeast Asia and the surrounding maritime space, particularly the South China Sea. Southeast Asia is a complex, highly differentiated region of ten-plus nations, each with its own unique history and relationship with China. This course will introduce Southeast Asia as a key region -- geographically, economically, and strategically -- often overlooked by policymakers and scholars. It will also focus on the craft of national security strategy as the best tool for understanding the multi-sided competition, already well underway involving China, the U.S., and the Southeast Asian states.

AS.310.318. Eurasia's Transformation and the Global Implications. 3 Credits.
Eurasia, stretching from the Western Europe across Russia, Central Asia, and China to the Pacific, is by far the largest continent on earth, with a massive share of global population, economic output, and key natural resources. It has been traditionally Balkanized. Yet since the late 1970s, due to China's modernizations, the collapse of the Soviet Union, and a series of global geo-economic shocks, the nations of this Super Continent have become increasingly interactive, creating fluid new trans-regional political-economic patterns that remain remarkably unexplored. This course explores the critical junctures that made Eurasia the dynamic, growing colossus that it is becoming today, as well as the global implications, from a unique problem-oriented perspective. It looks first at the developmental and political challenges confronting China, Russia, and key European states as the Cold War waned, how the key nations coped, and how they might have evolved differently. It then considers the new challenges of the post-Cold War world, and how national and local leaders are responding today. Particular attention is given, in this problem—centric approach, to the challenges that growing Eurasian continental connectivity, epitomized in China's Belt and Road Initiative, are creating for US foreign policy and for the grand strategy of American allies in NATO, Japan, and Korea. Note: Some familiarity with Eurasian history and/or politics is recommended
Area: Writing Intensive

AS.310.326. Labor Politics in China. 3 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Area: Writing Intensive

AS.310.340. Development and Social Change in Rural China. 3 Credits.
This course will survey the major issues of development and social change in rural China since 1950s. These issues will be addressed in chronological order. They include land ownership and land grabbing, organization of rural economic, political, and social life, rural elections and village governance, development strategies, urban-rural relationship in resource allocation, rural modernization strategies in regard to irrigation, clean drinking water, electricity supply, hard paved road, education and rural medical service, women's rights and family life, rural consumption, and etc. This course will prepare students, both empirically and analytically, to understand what happened in rural China from 1949 to the present, and how we can engage in policy and theoretical discussions based on what we learn.

First Year Seminars

AS.001.106. FYS: Legal Fictions - Law and Humanities. 3 Credits.
A legal fiction is a fact assumed or created by courts to help reach a decision. In this First-Year Seminar, we study how legal fictions and fictions about law work in order to examine the possibilities and limits of fiction's (legal) power. Drawing from legal and literary thought, as well as plays, short stories, cases, and legal commentary, we critically explore the capacity of words to reveal (or conjure) some fundamental features of our shared worlds and discuss their impact in contemporary debates about justice. The course is designed with first-year students in mind and requires no prior knowledge of law.

AS.001.114. FYS: The Politics of Reproduction. 3 Credits.
The idea that the "personal" is "political" finds no greater example than in the politics of reproduction. From inheritance laws, the rights of the offspring of enslaved peoples, or policies to reduce (or increase) fertility, the modern nation state has had a great deal to say about the use and produce of human bodies. In this First-Year Seminar, we will examine how formal and informal institutions have governed reproductive practices over the past 200 years. We will look at how family structures and economic development map onto fertility, and at how technological innovations in fertility control (including birth control and IVF) have influenced women's economic and political participation. We will also consider whether reproductive policies have differential impacts for LGBTQ households. Finally, we examine the "dark side" of reproductive policies -- not only sterilization campaigns but also the treatment of sex workers and sex-selective abortion -- to understand how state policies have divided households based on race, class, and occupation.

AS.001.135. FYS: Free Speech and Its Limits. 3 Credits.
Freedom of speech is a core value for democracies -- and for universities, in which the freedom to challenge accepted beliefs is essential to advancing knowledge. The 1st Amendment to the US Constitution guarantees freedom of speech and of the press, as do the Canadian Charter of Rights and Freedoms, and the European Convention on Human Rights. But like other rights, my right to freedom of speech may conflict with yours, or with other important rights or societal objectives. As a result, freedom of speech cannot be (and in practice never is) unlimited. In this First-Year Seminar, we will be asking why freedom of speech has been accorded such importance, and how and why it might legitimately be limited, in politics, in business, in everyday life, and in universities, looking both at the United States and at other liberal democracies. Topics will include asking what should count as speech beyond the mere utterance of words; appropriate protections or limitations for hate speech and other offensive speech and for falsehoods; where the boundary between legitimate protest and unlawful infringement on the rights of others should be drawn; whether free speech includes an affirmative right to be informed, or an affirmative right to be let alone; appropriate regulations for social media; and campus speech codes.

AS.001.137. FYS: The Power of Speech: Law, Politics, and the Humanities. 3 Credits.
What don't we do with words? Even silence makes manifest the power of speech. This First-Year Seminar will introduce you to some of the ways that power has been described and thought about. In addition to studying arguments that connect the power of speech to what it means to be human, we will explore various attempts both to protect and limit speech, taking into consideration not only how we do things with words but how words affect us. Topics that will be covered include freedom of speech, censorship, hate speech, silence, and storytelling. We will read texts in philosophy, politics, law, and literature, and we will watch at least one film.

AS.001.150. FYS: Master of the Senate. 3 Credits.
This First-Year Seminar offers an opportunity to think through the nature of political power, political institutions, and political ambition. We make our way through a single book: Robert Caro, Master of the Senate, an account of Lyndon Baines Johnson's dozen years in the US Senate, from 1949 to 1961. Through lively discussion centered around this completely riveting text, the class will explore central questions in politics (democratic and non-democratic) that reverberate far beyond the bygone world of the midcentury Senate.

AS.001.151. FYS: Citizenship and Society in the United States. 3 Credits.
Popular sovereignty — the idea that the people rule themselves — has been heralded as one of the preeminent innovations of the modern world. And over the course of the last two hundred or so years, a rising tide of nations committed themselves to the principles of popular sovereignty. Yet in recent years, the inevitability, soundness, and very viability of "rule by the people" has come into question. On the one hand, popular uprisings around the globe have rejected the decisions and practices of governing elites on the grounds that they are out of touch with the people's needs. On the other hand, these uprisings have resurrected and strengthened authoritarian practices and have facilitated the erosion of liberal rights long considered instrumental to preserving democracy. The result — turmoil, unrest, and uncertainty about what the future holds — is evident from Venezuela to England, Turkey to the United States. Can popular sovereignty survive? In what form will the people rule, and at what cost?This First-Year Seminar is an investigation into the idea and practice of popular sovereignty in the contemporary United States. We will explore this topic by actively consulting theory and empirical research in the social sciences. We will supplement this with our own research on the 2022 election, media coverage of issues, popular attitudes about democracy, and popular representation in government and by interest/advocacy groups.Additionally, this class is organized as a collaboration between two first-year seminars: one at Johns Hopkins, the other at Williams College. Over the course of the semester, the two seminars will meet frequently via videoconference to share research and discuss readings and ideas. This is intended to broaden the perspectives brought to bear on our investigation generally and, specifically, to allow each group to share real time research on the politics of the region in which their respective institutions are located.

AS.001.168. FYS: The Psychology of Mass Politics in the U.S.. 3 Credits.
Taught during the election season of 2022, this First-Year Seminar looks at the deeper psychological motivations of the American electorate. We begin by discussing the meaning of democracy and establishing a common understanding of American democracy specifically, placing the current moment into historical and international context. We then gradually dismantle the "folk theory" of democracy that assumes all voters are rational and economically-minded. Instead, we apply theories from social psychology to understand some essential questions about voter behavior. Why do people vote? How do they understand politics? How are their feelings and judgments affected by their own identities, biases, information sources, and by the messages they hear from leaders? Why have Americans grown so polarized? What role do racial and gender-based prejudice play? Is American politics headed toward a more violent future? We use evidence-based research from political science, sociology, and psychology to answer these questions.

AS.001.177. FYS: The Right to the City - Race, Class, and Struggle in Baltimore. 3 Credits.
Over the past decade, cities have become more important than ever before. Protests against policing, against increasing inequality, as well as attempts to rollback societal shifts all have the city as its core. While some suggest these struggles represent larger struggles over the relationship between labor and capital, Black Radical thinkers connect these struggles to anti-black racism. In the wake of one world challenging movement – Black Lives Matter – and one world altering crisis – the Covid-19 pandemic - this First-Year Seminar will reflect critically on these two traditions of thinking about the city by using Baltimore as a case study. This class will be taught alongside similar courses at other universities, offering students a deep dive into Baltimore.

History

AS.100.295. American Intellectual History since the Civil War. 3 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Area: Writing Intensive

AS.100.404. John Locke. 3 Credits.
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.
Area: Writing Intensive

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Writing Intensive

AS.100.445. Revolution, Anti-Slavery, and Empire 1773-1792: British and American Political Thought from Paine, Smith, and the Declaration of Independence to Cugoano, Wollstonecraft, and the Bill of Rights. 3 Credits.
This seminar-style course will focus on discussing British and American political thought from the "Age of Revolutions", a period also of many critiques of Empire and of many works of Antislavery. Readings include Paine's Common Sense and Rights of Man, the Declaration of Rights, the Constitution and Bill of Rights, the Federalist Papers; works by Smith, Burke, and Wollstonecraft; and antislavery works by Cugoano, Equiano, Rush, Wesley, and Wilberforce.
Area: Writing Intensive

History of Art

AS.010.327. Asia America: Art and Architecture. 3 Credits.
This course examines a set of case studies spanning the last century that will enable us to explore the shifting landscape of Asian transnational art and architecture. Each week will focus on a different artist, group, exhibition, architect, urban space, or site to unpack artists' and architects' engagements with the changing landscape of immigration policies, movements to build solidarity with other artists of color, and campaigns for gender and sexual equality. The course will situate these artists within American art, and build an expansive idea of Asia America to include the discussion of artists whose work directly addresses the fluidity of location and the transnational studio practice.
Area: Writing Intensive

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through an examination of colonial exhibitions, the rise of national, regional, and archaeological museums, and current practices of display and representation in institutions, we will explore how the image of South Asia has been constructed in the colonial, modern, and contemporary eras. We will engage with the politics of representation, spectacle, and the economies of desire as related to colonialism and the rise of modernity. Readings from postcolonial theory, museum studies, anthropology, history, and art history.
Area: Writing Intensive

AS.010.634. Rethinking the Renaissance: Alternatives to "Early Modernity".
"The Renaissance" as a periodization under attack, and its persistance; the hermeneutics of the Pre-Modern Image since Panofsky; the critique of Eurocentrism; challenges to and recuperations of iconology, assessing the contributions of semiotics, psycholanalysis and queer theory.

History of Science, Medicine, and Technology

AS.140.364. The City Course: Disciplinary Perspectives on Urban Life and Form. 3 Credits.
This course aims, first, at enlarging our understanding of cities by looking at them from a variety of disciplinary perspectives and, secondly, at examining the distinctive ways of thinking associated with disciplines from engineering, the sciences and medicine to anthropology, sociology, economics, archaeology, history and literature. Baltimore and cities from around the world will provide resource material. Lectures, discussions, term projects.

Interdepartmental

AS.360.247. Introduction to Social Policy and Inequality: Baltimore and Beyond. 3 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Area: Writing Intensive

AS.360.331. Methods for Policy Research. 3 Credits.
This course will introduce students to quantitative methods for studying social policy problems. Topics to be covered include descriptive statistics and sampling, correlation and causation, simple and multiple regression, experimental methods, and an introduction to cost-benefit analysis. The emphasis will be on the selection, interpretation and practical application of these methodologies in specific policy settings, rather than with formal proofs. Skills will be reinforced by hands-on exercises using statistical software. Over the course of the semester, students will critically analyze policy reports and empirical research in a range of policy areas and learn how to present this research to a non-specialist audience. Finally, we will discuss the pros and cons of quantitative vs. qualitative methodologies. The course will conclude with group presentations that draw on all these skills. Enrollment restricted to Social Policy minors only.

AS.360.366. Public Policy Writing Workshop. 3 Credits.
This workshop is designed to hone the analytical and communications skills necessary for effective formulation and advocacy of public policy. Topics include how to develop op-ed pieces and other forms of advocacy journalism, memoranda, position papers, and grant proposals. The workshop puts special stress on how to make a clear and persuasive exposition of complex or counter-intuitive policy arguments in the market place of ideas, including the challenges of writing for popular journals and communicating to specific audiences both in and out of government. Students receive intensive individual instruction, including close editing of their work and advice on how to publish or promote it in the public sphere. Enrollment restricted to Social Policy minors only.
Area: Writing Intensive

AS.360.401. Social Policy Seminar. 3 Credits.
This course is designed for students who have completed either the Baltimore intensive semester of the Social Policy Minor. The students will make presentations and pursue joint projects based on what they have learned during the intensive semesters concerning key social policy issues.

International Studies

AS.192.150. States, Regimes & Contentious Politics. 3 Credits.
This course, which satisfies the gateway requirement for the major in International Studies, introduces students to the study of politics and political life in the world, with a particular focus on the Middle East, Latin America, and Africa. Throughout the course, we will analyze the sources of order and disorder in modern states, addressing a series of questions, such as: why did nation-states form? What makes a state a nation? Why are some states democracies while others are not? How do people organize to fight oppression? Why does conflict sometimes turn violent? What are the causes of ethnic war? Drawing on a mix of classic works and contemporary scholarship, we will discuss the answers that scholars have formulated to address these and other questions, paying special attention to research design and the quality of argumentation. This course also counts as a 100-level course in comparative politics required for political science majors.

AS.192.225. Economic Growth and Development in East Asia. 3 Credits.
The course offers an overview of the complexities of East Asia's development experience from a variety of perspectives. It is divided into three parts to allow students to develop expertise in one or more countries and/or policy arenas, while cultivating a broad grasp of the challenges of "East Asia's fast-paced economic growth." Part I considers the origins of East Asian economic development, analyses the common economic variables behind the region's success, looks at the 1997-1998 East Asian financial crisis, its lessons and the economic renaissance that followed. Part II focuses on the development experiences of individual countries, with an emphasis on the ASEAN economies, NIEs, Japan and China. Part III considers topics of special interest to East Asia, including trends toward greater regional economic cooperation, trade integration, and issues related to poverty, migration, and inclusiveness.

AS.192.404. Democracy, Autocracy and Economic Development: Korea, Indonesia, and Myanmar. 3 Credits.
East Asia's "miracle growth" has not gone hand in hand with a decisive move toward democracy. The course explores the reasons why democratization proceeds slowly in East Asia, and seems to be essentially decoupled from the region's fast-paced economic growth. The course is divided into three parts. Part I introduces the specifics of East Asia's economic development strategies as well as key concepts of democracy, authoritarianism and military rule and the tensions between these theories and the East Asian experience. Part II will focus on the economic and political development experiences of Korea, Indonesia and Myanmar in light of what discussed in Part I. Finally, Part III presents lessons emerging from the comparison of Korea's, Indonesia's and Myanmar's economic and political developmental trajectories.

AS.192.410. Kissinger Seminar on American Grand Strategy. 3 Credits.
Enrollment is at the discretion of the instructor and space in the course is limited. To apply, email a one-page resume, one-page personal statement on why you want to take the class including how it contributes to your professional interests, and a writing sample of less than ten pages to KissingerCenter@jhu.edu by the end of the day on Sunday, October 24, 2021. This course is an initiative of the Henry A. Kissinger Center for Global Affairs at Johns Hopkins SAIS. It will expose exceptional undergraduate students to the study of grand strategy and the history of U.S. foreign policy. The course will explore critical moments, themes, and people in the history of American grand strategy, from Washington's Farewell Address to the statecraft of Donald Trump. The seminar will also consider key issues in U.S. grand strategy today, from climate change to the challenge of an assertive China. Students will also have the opportunity to meet with current and former policymakers who have worked on these issues in real time. The course will meet 9 times at Homewood and 4 times at the SAIS campus in Washington, D.C.; transportation between Homewood campus and SAIS will be provided.

AS.192.415. The Battle of Ideas for the World Economy. 3 Credits.
This seminar is intended as a capstone intellectual experience for seniors and advanced juniors majoring in international studies. The course presumes some background in economics, comparative politics, and international relations. This course will hone your analytical and writing skills by exposing you to theoretically advanced forms of political economy argument in a “proposition-opposition” format. The seminar is organized around a series of thematic pairings, covering such political economy themes like free trade vs. protectionism, free market capitalism vs. socialism, democratic erosion vs. autocratic strength, hegemonic stability vs. US abdication of power, or whether the current populist wave has mainly economic or mostly cultural roots. Each segment will deal with a specific topic area. Our discussions will involve in-depth interrogations of the arguments of these ‘pro-con’ authors.
Area: Writing Intensive

Modern Languages and Literatures

AS.211.300. Niccolò Machiavelli's "The Prince": Understanding the Meaning and Legacy of a Masterpiece. 3 Credits.
Who was Niccolò Machiavelli? We often hear the term “Machiavellian” in reference to actors in business or politics, but what does it really mean? What does Machiavelli teach us about the nature and the dynamics of political power? Can Machiavelli’s thought offer insights into today’s politics and fast-changing world? The course aims to answer these questions by addressing three topics. First, we will study Machiavelli’s life and times, particularly the events connected to his production and the context in which he wrote his main writings. We will see how the fifteenth-century Florentine humanism and the massive political changes affecting early modern Europe shaped Machiavelli’s mindset. Second, we will familiarize ourselves with Machiavelli’s thought by reading The Prince and excerpts from Discourses on Livy. Third, we will get acquainted with some of the main trends in the reception of Machiavelli in the 20th and 21st centuries. Special attention will be paid to interpretations of Machiavelli by Antonio Gramsci, Leo Strauss, Isaiah Berlin, John Greville Agard Pocock, Quentin Skinner, and John P. McCormick. We will also pay attention to modern television programs and films that show the width and depth of Machiavelli’s legacy.

AS.211.394. Brazilian Culture & Civilization. 3 Credits.
Did you know that Brazil is very similar to the United States? This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, politics, economy, art, literature, popular culture, theater, cinema, and music. The course will focus on how Indigenous, Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required). No Prereq. THERE IS NO FINAL EXAM.
Area: Writing Intensive

Philosophy

AS.150.312. Applied Public Health Ethics and Decision-Making. 3 Credits.
In this course, students receive an introduction to core theoretical foundations and case studies in public and global health ethics. this course adopts an applied framework for understanding how public health ethical values are navigated in different decision-making processes. This course is geared toward juniors and seniors.
Area: Writing Intensive

AS.150.313. Technology, Democracy, and Social Justice. 3 Credits.
This course will consider healthcare technologies through the lens of political values: democracy and social justice. At a broad level, we will ask of these technologies: Who should decide on their design and use when the experts don’t resemble the public and the public lacks expertise? How can we provide broad access to the benefits of these new technologies without exposing vulnerable people to further risk and unfairness? More narrowly, the course will focus on four technologies that affect healthcare: anti-malarial “gene drive” mosquitoes, medical AI, genomic data collection, and social media. Gene drives hold the promise of modifying mosquitoes to prevent the spread of infectious disease, but they also expose people in lower-income countries to unanticipated risks. Artificial intelligence and genomic data can deliver scarce medical resources to those who need it most and tailor it to minorities based on their precise characteristics. But they can also exacerbate existing unfairness while exposing minorities to risks of further discrimination and surveillance. Social media has a similar potential to deliver crucial health data, especially in a pandemic. But it also promotes the spread of misinformation among the populations most in need of help. This course will consider how we can balance the benefits and risks of these novel technologies and who gets to decide that balance.
Area: Writing Intensive

AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations

Sociology

AS.230.318. The Political Economy of Modern India. 3 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Area: Writing Intensive

AS.230.357. Baltimore and Beyond. 3 Credits.
This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore's history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City's programs and policy approaches to addressing the city's most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only.
Area: Writing Intensive
Students that took AS.360.357 may not take AS.230.357

Study of Women, Gender, & Sexuality

AS.363.416. WGS Internship/Practicum: Feminist Animals: Sex, Nature, and Nonhumans. 3 Credits.
Introducing feminist approaches to ecology and nonhumans, this course considers the interconnections between heteropatriarchal domination and the domination of nonhuman animals and ecologies. What different sensibilities and ways of seeing sex and gender open up when attention shifts to nonhumans? What tensions within and between feminism, animal liberation, and ecological concern come to the fore when each approach is alongside the others? How does the study of nonhumans extend the promise of feminism, and vice versa? In responding to these questions, we will see the real breadth of issues that the theory and practice of feminism can address.
Area: Writing Intensive

For current faculty and contact information go to http://politicalscience.jhu.edu/people/

Political Science, Bachelor of Arts

Political Science Major Requirements

(See also Requirements for a Bachelor's Degree (p. 1587).)

All courses applied towards the major must be taken for a letter grade and students must receive a grade of C or higher. At least six of the 12 political science courses required of the major must be taken at JHU. Only one letter-graded independent study of 3 credits may apply towards the major (unless honors thesis). The Department of Political Science does not award credit for the Advanced Placement Exam in government.

Code	Title	Credits
Subfield Courses		
One 100- level 3-credit course in American Politics (AP)		3
One 100- level 3-credit course in Comparative Politics (CP)		3
One 100- level 3-credit course in International Relations (IR)		3
One 100- level 3-credit course in Political Theory (PT)		3
100 level courses beginning with 191 do not count toward introductory political science subfield courses		
Writing Intensive Course		
One 3-credit writing intensive course in political science. This course may overlap with one of the 12 required political science courses and KSAS writing requirement. The course may be at any level.		
Political Science Elective Courses		
Three (9 credits) political science courses at any level		9
Five (15 credits) political science courses at the 300 or 400 level		15
At least four courses beyond the introductory classes ("100" level) must be taken with tenure-track or tenured professors in the Department of Political Science. These courses are usually denoted with a "190" designation though occasionally there are exceptions. Check with the DUS or Political Science coordinator if you have any questions as to whether a particular class meets this requirement. (For students entering in the 2021 class and beyond.)		
Cognate Courses		
At any level for a total of 12 credits selected from the following areas: history, history of art, history of science & technology, philosophy, anthropology, geography, economics, sociology, psychology, and courses offered by the SNF Agora Institute		12
Total Credits		**48**

Sample Program of Study

World Politics and Global Governance Double Major

The World Politics and Global Governance (WPGG) (http://politicalscience.jhu.edu/undergraduate/world-politics-and-global-governance-double-major/) program offers an intellectually rigorous path for students who want to understand world politics from a broad interdisciplinary perspective. Completing this course of study satisfies the requirements for a double major in political science and international studies. Students take courses from one of five different thematic foci: Global governance and law; Political economy; International security; Borders and identities; Environmental politics. The WPGG program enables students to develop their analytical skills and their critical judgment as citizens of the world. The program provides excellent preparation for professional careers as well as for graduate studies in political science, public affairs, law, business, and beyond. http://politicalscience.jhu.edu/undergraduate/world-politics-and-global-governance-double-major/

Honors Thesis Program

Seniors may choose to write a senior research thesis. After the student has obtained approval from a faculty sponsor to supervise the project, the student will enroll in three-credit thesis colloquium course during the fall semester of their senior year. If at the end of the fall semester adequate progress has been made and the project warrants further work, the student must enroll in a three-credit independent study supervised by the faculty sponsor.

Students who complete a distinguished senior thesis and have a final major GPA (including final semester grades) of 3.7 will be awarded departmental honors. All students may choose to write a thesis, regardless of GPA, provided they have a detailed proposal approved by a faculty member at the beginning of the fall semester of their senior year.

All thesis-related courses apply to the total of 12 political science courses required for graduation in the major.

Political Science, PhD

The Johns Hopkins University Department of Political Science is known for its strength in theory and in innovative and trans-disciplinary approaches to uncovering new knowledge, and the program of doctoral study draws on these strengths to provide rigorous training. Our program is designed for highly qualified, intellectually curious, and creative graduate students who can benefit by learning from and contributing to this community of scholars.

Doctoral students develop in-depth knowledge of a major field and a minor field (or two major fields), chosen from American politics, comparative politics, international relations, law and politics, and political theory. In addition, doctoral students may complete a certificate in comparative racial politics.

Students have opportunities to work closely with faculty and to pursue independent research, and faculty and doctoral students benefit from strong connections with colleagues in other social science and humanities disciplines and opportunities to collaborate with them.

The preparation of the next generation of scholars in the field of political science is a key part of the Johns Hopkins political science department faculty's commitment to research and advancing the understanding of politics. The doctoral program reflects the distinctive strengths of the department's cross-cutting intellectual orientations (encompassing the themes of power and inequality, identities and allegiances, agency and structure, and borders and flows), realized in faculty and PhD student research and teaching.

The department and Krieger School of Arts and Sciences provide opportunities for developing teaching and other career-related skills.

Financial Support

The department ordinarily provides financial aid to all students admitted to the graduate program unless they hold fellowships from sources outside the university. Departmental fellowships cover full tuition and an annual stipend. Assuming satisfactory progress toward the PhD, students can normally expect to receive funding for five years. All students receiving financial aid are expected to serve as teaching assistants for one semester of each academic year beginning their second year at the university.

Admission Requirements

The Department of Political Science admits approximately 16 new graduate students each year, selected from approximately 200 applications. Our entering class is typically around 10 students.

The deadline for application for admission to graduate study and the award of financial assistance is December 15 (most years). Decisions are made exclusively in late February or early March and announced by March 15.

A bachelor's degree (or equivalent) and results of the Graduate Record Examination are required for application. Students whose native language is not English must take the TOEFL examinations or provide other evidence of fluency in English (such as a degree from an institution in which the language of instruction is English.) A broad background in the liberal arts and sciences is preferred.

More information on applying can be found at http://grad.jhu.edu/apply/application-process/.

All applications should be submitted online.

Program Requirements

The requirements for the PhD in political science are divided between those that must be satisfied by all candidates for that degree and those particular to the student's major and minor fields.

Department-wide Requirements

All candidates for the PhD must satisfy the following requirements:

Course Requirements

- To fulfill the requirements for the PhD in Political Science students must complete 12 courses at the 600-level with a grade of B or better.

- Of these 12 courses, eight must be graduate-level (600-level) courses taken in the Political Science Department.
- No more than two of these eight courses (600-level) may be Independent Studies.
- If a graduate student is interested in taking an undergraduate-level course, the student must make arrangements to take a graduate-level Independent Study with the professor teaching that course. (NB: As noted above, a student may take no more than two Independent Studies for credit toward fulfilling the requirements of the PhD).
- A graduate student may take no more than one graduate-level course at another division of Johns Hopkins University (i.e. SAIS, Public Health, etc.) for credit toward fulfilling the requirements of the PhD in Political Science.
- Students may make a formal request to the DGS to have up to two graduate-level courses taken at another institution count for credit toward fulfilling the requirements of the PhD in Political Science at JHU.

Foreign Language Requirement

All students must demonstrate proficiency in a foreign language. This requirement can be fulfilled as follows:

1. Demonstrate fluency in a foreign language (granted automatically for students whose first language is not English).
2. Complete four semesters of college-level foreign language instruction.
3. Pass a translation exam.
4. Earn a degree from a University where instruction is not in English.
5. With a degree from an institution in which the language of instruction is a language other than English.
6. Place into a third-year foreign language course through online placement tests (see GRLL website).

Comprehensive Examination Requirement

Students are required, at a minimum, to take comprehensive exams in one major field and one minor field. Students may also elect to take two major exams or a major exam and two minor exams (one of which may be outside the Department of Political Science).

Faculty members in the field write and evaluate the exams and determine the format. Major field comprehensive exams take place over two days (8 hours per day); minor field exams take place over one day. The fields within the department are: American Politics, Law and Politics, Political Theory, Comparative Politics and International Relations.

Students choosing a second minor outside the Political Science Department must devise a coherent program of study in that discipline, in consultation with their Political Science faculty advisor and with faculty from the other department. Students choosing an external minor must complete a minimum of three courses at the 600 level in the external minor's discipline, earning a grade of B or better. They must also pass a comprehensive examination prepared and evaluated in consultation with faculty of the Department of Political Science by the instructors in those courses.

Dissertation

The dissertation is the capstone of doctoral education, and it must be a substantial work of independent scholarship that contributes to knowledge in the student's field of study. Students must identify a tenure-track or tenured member of the Political Science faculty who is willing to supervise the preparation of their dissertation. A dissertation prospectus must be submitted to two professors (one of whom must be the dissertation advisor) and that prospectus must be accepted by them both.

Defense

Students must pass a final examination that takes the form of a defense of the doctoral dissertation that is conducted under the rules of the Graduate Board of Johns Hopkins University.

Note: Exceptions may be made to some of these requirements but only with the approval of the graduate student's advisor and the Political Science Department's Director of Graduate Studies.

Field-specific Requirements

Field-specific basic expectations, procedures, and requirements are stated below. These are implemented, interpreted, and adjusted in the light of the intellectual orientations and objectives of individual students. It is important that students work closely with their advisors and with the faculty in their major and minor fields in constructing and pursuing their programs of study.

American Politics

Students majoring and minoring in American Politics will work with at least two faculty members to develop a plan of study that includes recommended course work and other preparation needed to pass a comprehensive exam. Students completing a major are expected to demonstrate a breadth of knowledge sufficient for framing a dissertation in the relevant disciplinary literature and teaching undergraduate courses in the field; students who pursue a minor may focus more narrowly on an area of study in which they demonstrate fluency. These may include, but are not limited to, the following areas of faculty interest:

- American Political Institutions (Congress, Courts, and the Executive)
- Urban Politics
- American Political Development
- Race and Politics
- Political Behavior and Public Opinion
- Public Policy
- American Political Thought
- Political Parties and Elections

In addition, students majoring in the field are strongly encouraged to take AS.190.602 Introduction to Quantitative Political Science as part of their course of study.

Comparative Politics

All students majoring and minoring in this Comparative Politics will become conversant with major substantive and methodological debates in the field, and be able to comment on the key theoretical literature in several of those debates. They will normally also develop knowledge of at least one world region. Students majoring or minoring in Comparative Politics are required to take AS.190.625 Theories of Comparative Politics and at least one seminar in quantitative or qualitative methods. Students are expected to master the material covered in these courses, as well as others with more specialized topics.

Students will take a comprehensive exam that will test their ability to engage with several areas of theoretical debate in Comparative Politics, and their ability to use comparative examples to support their arguments. Students may focus on (but are not limited to):

- Civil Society
- Institutional Theories
- Transnational Relations, Social Movements, and Contentious Politics
- Political Parties, Interest Groups, Representation, and Political Behavior
- Comparative Political Economy
- Comparative Racial Politics, Nationalism, and Migration and Citizenship
- The Political Economy of Development
- Economic and Political Transitions
- Ideas and Politics

Within the spirit of this division of the overall field, students may propose alternative delineations of thematic subfields.

Students working in specific thematic and substantive subfields within Comparative Politics will be required to demonstrate competence in methodologies and bodies of theory judged by the faculty to be necessary for quality research and teaching in those subfields.

Requirements for the Major Exam

Student taking the major exam are expected to compile a reading list that includes at least six fields, including a general "Theories of Comparative Politics" field. The reading list must be approved by the student's advisor at least six weeks before the exam. We strongly advise students to submit their reading lists to all of the CP faculty for feedback at least a few months before the exam. A minimum of three CP faculty members will read each major exam.

Requirements for the Minor Exam

Students taking the minor exam should seek two readers among the CP faculty for their exams. Students are expected to compile a reading lists that includes at least four fields, including a general "Theories of Comparative Politics" field. The reading list must be approved by the two readers at least six weeks before the exam. We strongly advise students to submit their reading lists to all of the CP faculty for feedback at least a few months before the exam.

International Relations

All students majoring or minoring in International Relations will be required to be conversant with the major theoretical, substantive, and methodological themes and debates of the field. It is strongly recommended that students take AS.190.676 Field Survey of International Relations and a methods course.

Students majoring in International Relations will take an examination covering two subfields. The first subfield must be International Politics. The other subfield is to be determined in consultation with faculty teaching International Relations. Choices include but are not restricted to:

- International Law and Diplomacy
- International Relations Theory
- International Security Studies
- Science, Technology, and Art and International Relations
- Global Political Economy

Students minoring in International Relations will take a comprehensive examination in International Politics.

Political Theory

Students majoring in Political Theory will take a comprehensive examination covering the following two subfields:

- Contemporary Political Theory
- History of Political Thought

Each student preparing for a major comprehensive exam will propose six or seven thinkers in the history of thought, six or seven recent or contemporary thinkers, and three or four issue areas. Examination questions are composed in light of the theorists and issues articulated in the exam prospectus.

The minor comprehensive exam in political theory asks the student to select half the number of thinkers required for the major exam and three issue areas.

Preparation for these examinations will be arranged in consultation with relevant faculty.

Students majoring in political theory will also take at least one minor field from American Politics, Law and Politics, Comparative Politics, or International Relations.

Law and Politics

Law and politics focuses on American constitutional thought, judicial politics, law and society, and philosophy of law. Students learn not only about the history and context of American constitutional developments, but also about the operation of the judicial branch of government in the past and the present. Studying how courts and judges do their work, students also consider how that work has changed over time. Students explore how legislation as well as court decisions reflect and influence a society's policies, politics, and moral commitments. In addition, they examine how social movements, interest groups, and professional networks help to shape law's content and implementation.

Students may major or minor in law and politics. In either case, students work closely with at least two members of the faculty to develop a plan of study regarding coursework and additional reading to prepare them for comprehensive exams. Majors are expected to demonstrate a breadth of knowledge in the field sufficient for framing a dissertation and for teaching undergraduate courses; minors may focus more narrowly on a particular area of study.

Progress Toward the PhD

The time necessary to obtain a PhD in the department varies according to the preparation individual students bring to the program, the scope and complexity of their dissertation topics, and other factors. Students are required to make satisfactory progress, meaning that they must work toward fulfilling the requirements in a timely manner. Students are encouraged to satisfy the department's foreign language requirement by the time of their first comprehensive exam. Most students take their comprehensive examinations in the third year in the program. Students who have completed all requirements except the dissertation must work to complete their dissertations as quickly as is reasonable given the unique circumstances of their course of study, and they must periodically demonstrate progress on the dissertation.

The Master of Arts degree is offered only to students who have been admitted into the PhD program. For the M.A., the student must complete at least seven one-semester courses at the 600-level with a grade of B or better, and demonstrate an effective reading knowledge of one approved foreign language.

Program In Latin American Studies (PLAS)

The Program in Latin American Studies (PLAS) promotes the study of the histories, cultures, societies, and political systems of Latin America and the Caribbean at the Johns Hopkins University. PLAS's curricular offerings and extracurricular activities provide undergraduate and graduate students with opportunities to explore the rich political, aesthetic, intellectual, and scientific traditions of Latin America. Drawing on faculty expertise across the disciplines, PLAS aims to generate new perspectives on Latin America, the Caribbean, and the Latinx experience in the United States. PLAS coordinates an undergraduate minor in Latin American studies.

Information about PLAS may be found on its website: http://krieger.jhu.edu/plas (http://krieger.jhu.edu/plas/)

- Latin American Studies, Minor (p. 2118)

Cross-listed courses applicable to the PLAS minor include:

AS.010.205 (01) Art of Mesoamerica

This course provides a basis for the study of Mesoamerican visual cultures and urban settings. We will explore the artistic production of the Olmec, Maya, and Aztec as well as works created by the artists of Teotihuacan, Monte Albán, and West Mexico. With a focus on aesthetics and cultural function, case studies range from stone sculpture, painted ceramics, and screenfold codices, to architectural complexes from Mexico and Central America. Themes to be discussed include: representations of humans and deities, monumentality and rulership, mutilation and destruction of monuments, and ritual and political significance of materials.

AS.010.398 (01) Tombs for the Living

Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.

AS.010.350 (01) Body and Soul: Medicine in the Ancient Americas

This course examines curative medicine in the Americas through its visual culture and oral histories. Philosophies about the body, health, and causes of illness are considered, as are representations of practitioners and their pharmacology. Case studies are drawn from cross the Americas (Aztec, Moche, Aymara, Paracas, American SW). Collections study in museums, Special Collections.

AS.100.115 (01) Modern Latin America

A class combining Latin American history since independence and digital humanities (revised with 2021 student feedback). Students will build guided research projects while thinking about questions of republicanism, freedom and unfreedom, migration, and development.

AS.100.379 (01) Brazil History and Cultures: A Glance from Baltimore

Using textual and visual documents (including books from Peabody Library), we will examine the contrasts of Brazilian history and culture, and its connections with 19th and 20th century Baltimore.

AS.140.685 (01) Histories of Reproduction

While there is a vast literature on reproduction in a global context, this course will focus on the arc of what we might call decolonial histories of reproduction—those that center issues of justice, freedom, intimacy, and agency, as well as cultural negotiation, conflict, and change. Students will write critical histories of reproduction, with attention to the ways in which reproductive politics interface with institutions that exert hegemonic, racialized, gendered, and ableist forms of state power and colonial power. We will also appreciate the ways in which reproduction interacts with other—non geographically-bound, non-institutionalized, and non-state mediated—forms of biopolitical power. We will analyze how the historiography has evolved over time and discuss future directions in the field.

AS.190.306 (01) Latin American Politics and Society in Comparative and Historical Perspective

The seminar will introduce students to the political and economic trajectories of Latin America as a whole and of individual countries, including Mexico, Brazil, Argentina, and Chile. Special attention will be paid to the long-term trajectory of the political regime (democracy versus dictatorship) and of economic development (variations in GDP per capita). Competing theories, from economic dependence to historical institutionalism, will be examined for their contribution to our understanding of Latin America's relative economic backwardness and low quality democracies.

AS.211.294 (01) Freshman Seminar: Soccer in Brazil: Opium of the Masses

Futebol offers a unique perspective on politics, race and citizenship in Brazil. This course seeks to understand Brazilian culture through the historic national pastime of futebol. In addition to the main textbooks chosen for the class, by reading a variety of texts from newspapers, academic journals, fiction and film, students will be able to find their own approach to understanding the phenomenon of futebol within the social and political traditions of Brazil. No knowledge of Portuguese is required, but those who can read in Portuguese will have an opportunity to do so. Everyone will learn some Portuguese words and expressions. This class may count toward the Minor in Portuguese.

AS.211.394 (01) Brazilian Culture & Civilization
Did you know that Brazil is very similar to the United States? This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, politics, economy, art, literature, popular culture, theater, cinema, and music. The course will focus on how Indigenous, Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today.

AS.215.407 (01) Power And Gender In Hispanic American Novels And Films

We will analyze and discuss four novels and three films impacted by gender violence and political idolatry under shattering stress. Oficio de tinieblas or The Book of Lamentations (1962) by Rosario Castellanos (Mexico). Zama (1956) by Antonio di Benedetto (Argentina). Delirio or Delirium (2004) by Laura Restrepo (Colombia). El ruido de las cosas al caer or The Noise of Things Falling (2011) by Juan Gabriel Vásquez

(Colombia). In addition, we will examine in depth films by Lucrecia Martel (Argentina): the short Rey muerto (1995), La ciénaga (2001), and her own version of Zama (2017). Course taught in Spanish.

AS.217.425 (01) Latin American Ecocriticism

Increased awareness of climate change has led to a shift in the way we address and intervene in environmental issues in the new millennium. Yet the interest in making sense of the environment has a long history in literature and the arts. How have Latin American writers and artists understood and depicted their environments and environmental questions? How do the form and content of texts and cultural artifacts influence our understanding of the non-human world? Can works of fiction shape ecological transformations? In this course we will discuss texts from the early colonial period to the present, including the literary works of Graciliano Ramos, Horacio Quiroga, and Clarice Lispector; political ecology; film; Ana Mendieta's earth-body art; contemporary experiments in bio-art; postcolonial theory; and the intersection of environmental justice with such topics as nationalism and human rights. Going beyond ecocriticism's original focus on the Anglo-American world, we will engage recent scholarship on Latin America that sheds light on the region's cultural and geopolitical importance to the global climate, with particular attention to Brazil. This course aims to introduce students to current debates in Latin American Ecocriticism and the Anthropocene and thus contribute to an incipient but expanding field.

AS.217.427 (01) Radical Women: Brazilian Literature, Art, and Culture

The vast body of work produced women artists and writers in Brazil has been marginalized by canonical cultural narratives, which are now being contested by a spate of scholarly and artistic projects. This course spotlights the production of women from the early twentieth century to the present, including renowned and lesser-known works. We'll discuss art, literature, and film alongside feminist theory, exploring radicality as it relates to aesthetics and politics. How do women's art, literature, and thought engage with and transform Brazilian cultural production? What are their contributions to global discussions about gender and sexuality? How do these works respond to historical events? Among the topics addressed are the body, feminism, race, indigeneity, and politics. We'll study Clarice Lispector's acclaimed stories, the first Brazilian proletarian novel written by modernist icon Patricia Galvão, known as Pagu, the diaries of Carolina Maria de Jesus, the emblematic paintings of Tarsila do Amaral, and Lygia Clark's artwork, as well as the booming scene of contemporary cinema and poetry.

AS.230.342 (01) Resistance, Rebellion, and Revolution in Latin America

This course will examine the dynamics of transformative social change in Latin America and the Caribbean through analyses of resistance, rebellion, and revolution. Because revolutionary change is at once the most transformative and the most rare, this course will cover the exemplary cases of the Haitian, Mexican, and Cuban revolutions, but then also ask how theorists have understood the dynamics of both open rebellion and of everyday resistance in societies deeply structured by racial, gender, and class power, situated within an unequal world system. Attending to both local and global dynamics, this course will ask how Latin American dynamics have both conformed to and challenged universalist theories of social change.

AS.230.397 (01) The Political Economy of Drugs and Drug Wars

In the United States, we spend more than $100 billion annually on illegal drugs—and the government spends more than $50 billion a year to combat their sale and use. These statistics raise important and complicated social questions. This course will examine the production, sale, use, and control of illegal drugs from a historical and sociological perspective. We will have three objectives: to understand the social construction of drug use and illegality in the United States and other rich countries; to uncover the political and economic consequences of drug trafficking in those countries that produce drugs, particularly in Latin America; and to examine the political economy of drug control through the so-called War on Drugs, both domestically and internationally.

AS.360.420 (01) Humanities Research Lab: Making Maps of Mexico

Learn the basics of ArcGIS and data management as you help Prof. Lurtz publish an agricultural dataset and maps from 10 years before Mexico erupted in revolution. No experience necessary.

AS.376.342 (01) Caribbean Music

This course will explore the many genres of traditional and popular music that have emerged among the peoples and cultures of the Caribbean region and its Diaspora. We will examine the social, political, and economic issues that have shaped the region's music and how that music may have intersected with migration, colonization, ethnicity, race and tourism. Using a "participant observation" approach, students will read about, listen to and research a variety of musical experiences within the relevant sociopolitical context. Students should expect to fully participate in discussions about the assigned readings and music, and should be prepared to conduct their own research and share their own or newly acquired knowledge of contemporary and "historical/ traditional" musical themes, and local and regional artists. Our collective goal will be to enjoy as well as to think critically about music, culture and performance and within a more informed understanding of the complex, multi-varied and multi-vocal context—know as "The Caribbean".

Latin American Studies, Minor

Requirements for the Minor

Students who wish to minor in Latin American Studies must complete a minimum of 18 credits comprising of at least six courses offered by the Program in Latin American Studies (AS.361.xxx) or cross-listed with the Program in Latin American Studies. In addition, students must demonstrate proficiency through the intermediate language in either Spanish or Portuguese by either taking courses or by proficiency documentation through the language program. Language courses taken to meet the minimum proficiency of the minor do not count towards the six required courses. Of the six courses required: (1) no more than two may be in additional language study (AS.210.xxx), (2) two must be taken outside of the Modern Languages and Literatures Department, and (3) four courses must be at the 300-400 level. All courses must be taken for a letter grade and be completed with a grade of C- or better.

Code	Title	Credits
Language Proficiency Requirement:		
Language Proficiency in Spanish or Portuguese through the intermediate level *		0-14
Six Latin American Studies Courses:		
Two Latin American Studies courses at any level (100-400) **		6
Four Latin American Studies courses at the 300 or 400 level		12
Total Credits		**18-32**

* Language requirements can be waived for those who demonstrate suitable proficiency (via placement exam) in either Spanish or

Portuguese, or in an Amerindian language such as Quechua or Guarani.

** 3-credit intersession courses offered by JHU may be used to fulfill this requirement. All courses should be at least three credits and either be AS.361.xxx courses or cross-listed with the Program in Latin American Studies.

Psychological and Brain Sciences

http://pbs.jhu.edu/

The psychological and brain sciences are concerned with understanding the biological and psychological processes underlying animal and human behavior at all stages of development.

The undergraduate program leading to the baccalaureate degree is intended to provide students with a sound background in psychological and brain sciences and, at the same time, to prepare them for advanced study.

The program for doctoral students in psychological and brain sciences has a strong empirical focus and emphasizes research methodology. The broad aim of the graduate program is to train students to become scientists rather than practitioners.

Facilities

Members of the department have access to MARCC (https://www.marcc.jhu.edu/) high-performance computing systems for computational studies, simulations and data analysis.

The cognitive psychology and cognitive neuroscience laboratories contain a wide range of computer equipment and special-purpose research equipment, including image-processing and large-format graphics systems, eye-movement monitors, speech recognition and analysis systems, stereoscopic graphic systems, video equipment, EEG, Transcranial Magnetic Stimulation, and other stimulus-presentation and response-collection devices.

The biopsychology laboratories have a host of facilities necessary to conduct modern behavioral neuroscience research, including equipment for behavioral and operant testing, elctrophysiology, calcium imaging (2p and endoscopic), opto- and chemogenetics, histology, surgery, neurochemistry, and systems for the analysis of behavioral gestures as well as neural data.

Psychological and Brain Science faculty conduct anatomical and functional MRI studies on human physiology and cognition at the F.M. Kirby Research Center for Functional Brain Imaging at Kennedy Krieger Institute (https://www.kennedykrieger.org/kirby-research-center (https://www.kennedykrieger.org/kirby-research-center/)).

Programs

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.200.101. Introduction To Psychology. 3 Credits.
Do we all see colors the same way? How did so many 'good' people support the Nazi party? Do crossword puzzles really stave off Alzheimer's Disease? This course tries to answer these questions and many others, providing a comprehensive overview of the scientific study of the mind. We'll explore topics such as perception, language, memory, decision-making, creativity, love, sex, art, politics, religion, dreams, drugs, brain damage and mental illness, grappling with deep and long-standing controversies along the way: differences between the sexes, the relationship between mind and brain, causes and consequences of racism, human uniqueness (or not) within the animal kingdom, nature vs. nurture, good and evil, consciousness. Appropriate for anyone wanting to know who and what we are as human beings (or who noticed that psychology is now on the MCAT).

AS.200.110. Introduction to Cognitive Psychology. 3 Credits.
Introductory survey of current research and theory on topics in cognitive psychology. The course will cover a range of topics in perception, attention, learning, reasoning, and memory, emphasizing relationships among mind, brain, and behavior.

AS.200.132. Introduction to Developmental Psychology. 3 Credits.
An introductory survey of human development from the prenatal period through adolescence. The developing child is examined in terms of cognitive, social, emotional, motor, and language development.

AS.200.133. Introduction to Social Psychology. 3 Credits.
An introductory survey of social psychology. Topics include social perception, social cognition, attitudes, prejudice, attraction, social influence, altruism, aggression, and group behavior.

AS.200.141. Foundations of Brain, Behavior and Cognition. 3 Credits.
A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.

AS.200.162. Childhood Disorders & Treatments. 3 Credits.
This course examines the psychological disorders that are usually first diagnosed prior to adulthood. Some of the specific disorders that will be discussed are Attention-Deficit and Disruptive Behavior Disorders, Neurodevelopmental Disorders, Learning Disorders and Intellectual Disability.Students will become familiar with various diagnoses, etiologies, and methods of treatment. Note: This course does not count toward the Psychology Major

AS.200.199. Psychopathology and Its Development. 1 Credit.
Examine an overview of abnormal psychology (i.e., psychopathology), including its development, etiological/theoretical perspectives, diagnosis, and treatment. Broadly cover the DSM categories, with a focus on understanding the major features of the common disorders and the evidence-based treatment of these conditions.

AS.200.200. Research Methods in Psychology. 4 Credits.
The goal of this course is to introduce how psychological scientists develop and test research questions about the mind and behavior. We will explore how empirical investigation differs from other ways of making discoveries and learning about the world, and how psychologists employ various methodologies to tackle their phenomena of interest. We will examine the relationships between research questions and research designs, the benefits and drawbacks of differing measurement and sampling approaches, the ethical implications of various research paradigms, and best practices in communicating research findings clearly and engagingly. You will have the opportunity to engage "hands-on" with the research process through interactive labs and demonstrations. Over the course of the semester, you will develop and receive feedback on a research proposal, which will serve as a foundation for the spring course "Design and Analysis for Experimental Psychology".
Area: Writing Intensive

AS.200.201. Design & Statistical Analysis for Psychology. 4 Credits.
The goal of this course is to expose you to the processes of data collection, analysis, and dissemination in psychology. This course is the follow-up to "Research Methods in Experimental Psychology," and therefore will draw on the methodological principles and practices covered in the Fall semester. This course will cover a wide array of analytical techniques (i.e., statistics) that you will apply to data collected as part of a semester-long group research project. The course will also include extensive coverage of the R programming language for use in data management, analysis, and visualization. With your group members, you will collect primary research data, carry out appropriate statistical tests, compose individual research manuscripts, and collectively present a poster at an on-campus research symposium. In combination with the Fall course, this class will serve as strong preparation for those considering honors theses, joining research labs at Homewood and/or JHMI, conducting independent research projects, and ultimately pursuing careers/graduate work in experimental psychology.
Area: Writing Intensive
AS.200.200 (was AS.200.207)

AS.200.202. Forensic Psychology. 3 Credits.
The field of forensic psychology is focused on answering legal questions about the causes of human behavior. This survey course will explore the work that forensic psychologists do; their research, assessment, and clinical methods; and how their work influences lawyers, judges, and other legal practitioners. Specific topics will include mental capacity assessment, psychopathy, claims of mental distress, child custody evaluations, juvenile delinquency, forensic treatment, and forensic neuropsychological assessments.
Students can only receive credit for AS.200.202 or AS.200.325, not both.

AS.200.205. Psychological Profiling. 1 Credit.
"Psychological Profiling" focuses on strengths and limitations of psychological methods employed by forensic professionals who assist police in criminal investigations. Clinical cases of serial offenders, spree killers, disgruntled employees, police profiling, and terrorists will be studied. Legal and ethical issues will be explored, especially racial profiling controversies. We anticipate visits to the FBI Behavioral Sciences Unit at Quantico, Virginia; Baltimore County Forensic Crime Lab (with emphasis on crime scene analysis), and the Baltimore Police Profiling Program.This course does not count towards the psychology major.

AS.200.208. Animal Behavior. 3 Credits.
This course examines how and why animal behaviors are produced across the animal kingdom. Neurobiological, hormonal and developmental mechanisms and adaptive function of behaviors are examined in an evolutionary context. Behaviors include survival, acquiring food, reproduction, communication, parental care, and cooperation. Students will also learn how to develop hypotheses and predictions for scientific questions and interpret graphical results.
AS.200.141 OR Permission of Instructor.

AS.200.209. Personality. 3 Credits.
This is a survey course focused on theory and research on human personality. Topics include personality traits, motivation, unconscious processes, self-regulation, cognitive and behavioral aspects of personality, biological and evolutionary influences on personality, and dysfunctional manifestations of personality.

AS.200.211. Sensation & Perception. 3 Credits.
This course surveys how stimuli from the environment are transformed into neural signals, and how the brain processes those signals to interpret the objects and events in the world. A primary focus will be on the visual system, with additional coverage of hearing, touch, taste, and smell.

AS.200.212. Abnormal Psychology. 3 Credits.
A survey of the major syndromes of psychological disorders. Research and theory about the mechanisms, development, and diagnosis of psychopathology are emphasized.

AS.200.222. Positive Psychology. 3 Credits.
The course will review the growing field of positive psychology and will review the research on positive human attributes such as optimism, happiness, hope, resiliency, self-esteem, altruism, empathy, and forgiveness. This course will explore the research on how such positive attributes are developed and how they relate to psychological and physical well-being.

AS.200.240. Industrial and Organizational Psychology. 3 Credits.
This course provides a survey of the field of Industrial and Organizational Psychology, a scientific discipline that studies human behavior in the workplace. The course focuses on understanding the psychological bases of work behaviors, cognitions, and emotions and practices that can be implemented to create a good fit between employees' characteristics and work demands. A number of topics are addressed in the scientist-practitioner model, including the structure/characteristics of jobs, techniques for assessing and supporting employee performance, selecting and training a workforce, and the various mechanisms that influence employee motivation and attitudes, among other topics. Real-world applications and research are emphasized throughout the course.

AS.200.250. Behavioral Neuroscience. 3 Credits.
Behavioral neuroscience is the study of the neural basis of behavior of animals, including humans. This course will introduce the student to this field using a traditional lecture format. We will cover fundamental properties of brain structure and function, mechanisms of psychoactive drug action, and brain mechanisms of perception, homeostatic drives, learning and memory, and cognition. Along the way, we will touch on the biological bases for social interactions, as well as for behavioral and mental illnesses, such as addiction, depression and schizophrenia. A key focus will be understanding how behavioral neuroscientific research, past and present, leads to knowledge in this area.

AS.200.301. History Of Psychology. 3 Credits.
A survey of leading figures, schools, and systems in the history of psychology. The course will emphasize the development of experimental psychology in late 19th century Germany and its establishment in America at Johns Hopkins, Harvard, Chicago, and Columbia. Special topics will include the development of clinical and applied psychology and psychological testing. Enrollment limited to Juniors and Seniors only. Sophomores with instructor approval. Recommended Course Background: two prior Psychology courses.

AS.200.304. Neuroscience of Decision Making. 3 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience.
AS.080.305 AND AS.080.306 or instructor permission

AS.200.305. Advanced Seminar in Forensic Psychology. 3 Credits.
Forensic psychologists determine clinical diagnoses and offer expert opinions to assist court decision makers who must employ legal tests to make case determinations. This course will explore how forensic psychologists communicate with the courts via consultation, report writing, and expert testimony. Students will write forensic analyses on a variety of controversial, cutting edge forensic topics (e.g., for competence to stand trial, child abuse, civil commitment, compensation for mental injuries, sex offender commitment, insanity, fitness for duty, child custody). Prerequisites: AS.200.202 OR AS.200.212
Area: Writing Intensive
AS.200.202 OR AS.200.212

AS.200.307. Medical Psychology. 3 Credits.
Medical Psychology is a specialization within clinical psychology that focuses on the application of psychological theories, research, and techniques to physical health problems and health promotion. Students will learn about the consultation process and interventions used in medical psychology practice to improve the physical and psychological health of medical patients, including those with chronic conditions (e.g., chronic pain, heart disease) and those with acute illnesses and injuries. Enrollment limited to Junior & Senior Psychology Majors & Minors or with instructor approval. Prerequisite: AS.200.212
AS.200.212

AS.200.311. Sensory Representations in the Brain: Maps, Modules, & Distributed Coding. 3 Credits.
In this course we will explore the ways in which information from vision, hearing, touch, smell, and taste is encoded in the brain. We will compare and contrast different representation schemes and their computational advantages in order to uncover some overarching organizing principles of sensory processing in the brain. Class meetings will consist of lectures plus group discussions of classic papers in cognitive neuroscience, computational modeling, and neurophysiology. Enrollment limited to Juniors & Seniors.
AS.200.211 OR AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.020.312

AS.200.312. Substance Use and Mental Health. 3 Credits.
This course focuses on the intersection of substance use and mental health. Topics will include substance use disorders, the co-morbidity of substance use disorders and other mental health diagnoses, and substance use as a form of self-medication for mental health symptoms. We will explore abuse of substances including synthetic drugs, "street" drugs, and commonly abused prescription medications. We will review etiological factors, including psychological, neurobiological, genetic, and trauma-related factors, as well as evidenced-based treatments. We will also explore controversies about the diagnosis and conceptual models of substance use disorders and addiction and controversial treatments, such as methadone and suboxone. Psychology majors & minors or by permission of the instructor. Pre-requisite: AS.200.212 Abnormal Psychology, or by instructor permission.
AS.200.212

AS.200.313. Models of Mind and Brain. 3 Credits.
This is a seminar surveying computational approaches to understanding mental and neural processes, including sensory and conceptual representation, categorization, learning and memory. The course will also develop familiarity with computational tools such as numerical simulation, linear transformation and data visualization. Recommended Course Background: AS.110.106 / Calculus I OR AS.110.108 Calculus I, AS.050.101 / Cognition OR AS.200.211 / Sensation & Perception OR AS.080.105 / Introduction to Neuroscience OR other introductory coursework in cognitive & neural sciences. Experience with at least one programming language is strongly recommended.

AS.200.317. Interpersonal Relations. 3 Credits.
This course will investigate interpersonal processes ranging from attraction and courtship to relationship functioning and distress. Enrollment limited to Psychology majors and Psychology minors.
AS.200.133

AS.200.321. Child and Adolescent Psychopathology. 3 Credits.
This course focuses on mental disorders in children and adolescents. The course begins with an exploration of the general models and theories for why psychopathology occurs in childhood. The second portion of the course provides a systematic review of the symptoms, course, risk factors, theories, and treatments for specific disorders, including mood disorders, anxiety disorders, autism, ADHD, feeding disorders, and behavioral disorders. Restricted to Junior & Senior Psychology Majors & Minors, or permission of the instructor.
AS.200.212

AS.200.322. Clinical Neuropsychology. 3 Credits.
Clinical Neuropsychology is a clinical psychology specialty focused on assessment and treatment of acquired or developmental disorders of the nervous system, including dementia, neurodegenerative disorders, traumatic brain injury, learning disabilities, and neurodevelopment disorders. This course will focus on research findings and techniques used by psychologists in the assessment, treatment, and rehabilitation processes. Recommended Course Background: AS.200.141 / Foundations of Brain Behavior Cognition.
AS.200.141

AS.200.323. Psychology and Social Media. 3 Credits.
This course explores modern-day social media use (e.g., Facebook, Match.com) through multiple theoretical lenses within psychology. Through weekly student-led discussions and readings, it will accomplish 3 aims: 1) applying psychology of identity, motivation, and communication to social media (e.g., self-presentation, intergroup dynamics), 2) investigating clinical/health implications of social media use (e.g., addiction, loneliness), and 3) exploring social media as data-gathering environments (e.g., user experience research from already committed guest-speakers who work in social media industries). Recommended Course Background: at least 1 course in introductory psychology, developmental psychology, social psychology and/or clinical psychology.

AS.200.326. Law, Psychology and Public Policy. 3 Credits.
An introduction to applications of psychological research in policy analysis. Special emphasis is given to the use and misuse of psychology in Supreme Court advocacy and decision making in the areas of children's rights, adult sexuality, and educational and employment opportunity. Recommended Course Background: Statistics & Regression Analysis

AS.200.329. Real World Human Data: Analysis & Visualization. 3 Credits.
Experiments in human cognition typically involve careful manipulation and control of variables in order to answer specific questions about the mind or brain. However, digital devices now provide an ocean of incidental human data: information collected continuously about our behavior and physiological states as we go about our lives. These incidental datasets are often large and noisy, and pose different analysis and visualization challenges from more traditional manipulated experiments. In this course students will learn computational tools and qualitative approaches for exploring, visualizing and interpreting large human data. The course emphasizes computer-based analysis of open-source human behavioral and neuroimaging datasets. Analyses will be conducted in MATLAB. Instructor will grant approval as long as you have previous programming experience (roughly equivalent to material covered in an introductory-level programming course). Self-taught or real-world experience can be applicable in lieu of previous formal classroom instruction.

AS.200.330. Human and Machine Intelligence. 3 Credits.
Description: The class will discuss original papers in a variety of papers and book chapters on the following topics.1. What is intelligence?2. Origin and evolution of intelligence?3. Human brain and intelligence4. Machine intelligence5. Neural networkRecommended course background: neurobiology.

AS.200.332. Seminar in Theoretical Neuroscience. 3 Credits.
This course develops a theoretical understanding of the large-scale anatomical and functional organization of the cerebral cortex. We will discuss, present, and write about primary literature in the area of theoretical neuroscience. The principles to be explored will include: hierarchy; normalization; pattern completion; prediction; gradient-based learning; and conjunctive representation. We will consider the broader motivation for each of these computational principles, and we will ask how successfully they organize the empirical data about our brains. Specific questions include: What are the functional benefits of a hierarchical anatomical organization of the cerebral cortex? Do neocortical circuits generically implement a normalization operation? How and why is pattern completion implemented in the neocortex and the hippocampus? Can gradient-based representational learning occur in the cerebral cortex without supervision or reinforcement signals? How is the flow of information between brain regions regulated? How can distinct cortical representations be "bound" into joint representations? Calculus 1 or equivalent is required. Higher-level mathematics and programming experience are not required, but students should be willing to engage with computational concepts. Recommended Course Background: AS.200.110 OR AS.050.203 OR AS.200.211 OR AS.080.105 OR other introductory coursework in cognitive & neural sciences.
AS.110.106 OR AS.110.108

AS.200.333. Advanced Social Psychology. 3 Credits.
The class is designed as a seminar including discussion of primary readings of social psychology articles ranging in topics from interpersonal relationship to behavior in large groups. Rising junior & senior Psychology majors only.
AS.200.133

AS.200.334. Human Memory Psychology. 3 Credits.
This class will survey the behavioral and biological science of human memory. Historical perspectives as well as modern controversies will be discussed. Intersections with other fields such as law, education, medicine, and technology will be highlighted. The course will be a mixture of lectures and group discussions.

AS.200.337. Origins of the Social Mind. 3 Credits.
Humans possess remarkable capacities for morality, politics, and culture. But where do these capacities come from and what cognitive mechanisms support them? In this seminar, we will take comparative and developmental perspectives to understand the origins of the social mind. We'll explore how nonhuman animals, especially primates, represent and navigate their social worlds, and what makes the human mind unique. We'll also explore the earliest manifestations of social intelligence that are present in human infancy, allowing babies to richly experience the social world long before they develop language. We'll cover a range of topics, such as the abilities to remember other individuals and keep track of their social relationships and social groups, theory of mind, self-awareness, precursors of politics and morality, and the question of whether animals have culture. Enrollment limited to Junior & Senior Psychology, Neuroscience or Behavioral Biology majors/minors. Prerequisite: 200.132 Intro to Dev. Psych OR 200.133 Intro Social Psych OR 200.110 Intro Cog. Psych OR 200.141 Foundations of BBC OR instructor approval
AS.200.132 OR AS.200.133 OR AS.200.110 OR AS.200.141

AS.200.340. Diversity in Psychology. 3 Credits.
This course presents an overview of the nature of human diversity in psychology and fosters the critical examination of major diversity issues in psychology. Conceptual, historical, philosophical, and theoretical issues and empirical research are reviewed. Students develop sensitivity and critical thinking regarding issues in psychology research and professional practice that may be influenced by factors such as age, generational influence, ethnicity, race, religion and spirituality, gender, socioeconomic class, sexual orientation, national origin, disability and other cultural diversity topics. Current issues will be highlighted. Students will also be introduced to public health paradigms regarding the changing roles of psychology researchers and practitioners. This course is limited to Senior Psychology Majors and Minors. Junior Psychology Majors and Minors can request to enroll by instructor permission.

AS.200.344. Behavioral Endocrinology. 3 Credits.
This course examines both the evolution and mechanisms of hormonal effects on behavior across animals, including humans. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, stress and social behavior. Additionally, this course emphasizes developing skills in hypothesis testing and critically assessing the scientific literature. Cross-listed with Behvioral Biology and Neuroscience.
(AS.200.141 OR AS.080.306) OR (AS.020.151 AND AS.020.152) or instructor's permission

AS.200.350. Why is thinking hard?. 3 Credits.
In what ways and why is human cognition limited? This seminar will focus on understanding and explaining the limitations and capabilities of human cognition through deep dives into a number of subtopics. Possible topics include: What is 'intelligence,' does it have quantifiable units and/or a substance-like underpinning. Why does thinking feel hard, why and how do we experience mental effort? What limits visual attention and working memory? Where does insight come from? Why do we forget things? What is creativity? What makes some concepts hard to learn? Why do we misunderstand science? How do we evaluate our own knowledge and understanding?
AS.200.110

AS.200.357. Advanced Statistical Methods. 3 Credits.
Topics in applied probability and statistical inference; analysis of variance; experimental design. Recommended Course Background: one statistics course.

AS.200.358. Advanced Research Design and Analysis. 3 Credits.
Second half of statistics sequence, covering complex research design and analysis. Recommended Course Background: AS.200.357. Enrollment limited to seniors by instructor approval.
AS.200.357

AS.200.361. Tests & Measurements. 3 Credits.
Psychological tests and measures are used in several settings including research, clinical, business, forensic, school and other applied settings. This course will consider the methodological and practical issues involved in test construction, the evaluation of instruments, and the uses of psychological tests across settings and for different purposes. Examples of assessments that may be discussed are aptitude and achievement tests; personality and behavioral inventories; neuropsychological tests, observations and interviews; and tests for employment and forensic use. Enrollment limited to Junior & Senior Cognitive Science & Psychology Majors, or instructor approval.
AS.200.201

AS.200.369. Neuroscience of Motivation & Reward. 3 Credits.
This course will explore the neurobiological bases of motivated behavior, including eating, drinking, and reproduction, tracing the history of our understanding from early neuroscientific studies to the modern day, with a focus on mammalian model systems. We will discuss innate motivated behaviors, and well as how learning can guide the expression of these behaviors. Neural mediation of processes such as reward and aversion will be considered in depth, as will applications of these findings to the understanding of addiction and other behavioral disorders. The course will be a mixed lecture/seminar format; we will read original research articles and scholarly reviews.
Students may not have taken AS.200.366.;AS.080.305;AS.080.306 (students may enroll concurrently)

AS.200.370. Functional Human Neuroanatomy. 3 Credits.
This course examines the general organizing principles of the anatomy of the human central nervous system and how this anatomical organization relates to function, from the level of neural circuits, to systems, to behavior. Students will learn to identify neuroanatomical structures and pathways in dissections and MRI images through computerized exercises. Readings and lectures will emphasize general structure-function relationships and an understanding of the functional roles of particular structures in sensory, motor, and cognitive systems. Recommended Course Background in addition to pre-requisite AS.080.305: AS.080.306 OR AS.050.203 OR AS.080.250
AS.080.305

AS.200.374. Happiness and Psychological Well-Being. 3 Credits.
This course will cover advances in the field of research on positive psychology, happiness, and well-being, including perspectives on motivational and emotional wellness, cognitive processes, social-interpersonal dynamics, and sociocultural variables. We will explore topics including hobbies and leisure, mindfulness and meditation, money/income, ethics and religion, social media, marriage, friendship, economic institutions, school, the workplace, and more. Coursework includes reflection exercises, discussions, research proposals, fact-checking analyses, and presentations. Restricted to Senior & Junior Psychology majors & minors. Prerequisite: (AS.200.133 OR AS.200.101) AND (AS.200.212 OR 200.382) AND 200.222 or by instructor permission.
(AS.200.133 OR AS.200.101) AND (AS.200.212 OR AS.200.382) AND AS.200.222

AS.200.376. Neuropsychopharmacology. 3 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on biological concepts underlying structures and functions of the brain that relate to mental disorders. An introduction to neurobiology and brain function is presented as it applies to the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience. Enrollment limited to juniors and seniors.
(AS.080.305 AND AS.080.306) OR AS.020.306 AND AS.020.312) OR (AS.200.141 AND AS.020.306)

AS.200.377. Neuroethology. 3 Credits.
A comparative and evolutionary approach to understanding the neural underpinnings of biologically relevant behaviors in vertebrate and invertebrate animals. Enrollment limited to Sophomores, Juniors, Seniors or by instructor approval. Recommended Course Background: AS.200.141

AS.200.380. Neurobiology of Human Cognition. 3 Credits.
The complexity of human behavior surpasses even our closest primate relatives. Only humans communicate through language, build complex technology, devise legal system and wage war. What neurobiological capacities set humans apart from other animals? This course will explore the neurobiology of cognition, focusing on cognitive domains that are particularly developed in the human species: language, social cognition, number, executive function and concepts. The course format will consist of lectures and in class workshops.
AS.200.141 OR AS.200.312 OR AS.080.105 OR AS.080.203 OR AS.050.203 OR AS.050.312

AS.200.382. Models of Psychotherapy. 3 Credits.
This course reviews the major models of psychotherapy, including psychodynamic, cognitive, behavioral, interpersonal, and family therapy, with a focus on modern and empirically supported treatments. The application of the models through the analysis of clinical case studies is emphasized. Restricted to Junior & Senior Psychology Majors. Instructor permission required to enroll.
Area: Writing Intensive
AS.200.212

AS.200.385. Mind, Brain & Experience. 3 Credits.
How do nature and nurture shape the human mind? How does experience contribute to the development of visual perception, language and social reasoning? This course explores insights into these age-old questions from neuroscience and psychology. Studies of infant behavior reveal rich knowledge about objects and people in the first months of life. At the same time, experience has profound effects on behavior and neurobiology. For example, temporary absence of vision (i.e. blindness) during development permanently alters visual perception and the visual cortex. Key evidence also comes from studies of naturally occurring variation in human experience (e.g. blindness, deafness, socioeconomic and cultural differences). We will discuss what such studies of cognitive and neural function tell us about the origins of human cognition. This is a writing intensive course with weekly lectures and seminar style discussion of primary sources. Students will be required to write weekly responses to readings and a term paper.
Area: Writing Intensive
AS.200.141 OR AS.050.105 OR AS.080.105 OR AS.050.203 OR (AS.080.305 AND AS.080.306) OR AS.080.203

AS.200.388. Occupational Health Psychology. 3 Credits.
Occupational Health Psychology (OHP) concerns the application of psychology to improving the quality of work life, and to protecting and promoting the safety, satisfaction, health, and well-being of workers. This course will consider a broad range of topics in OHP including the role of work on well-being, job stress and burnout, diversity and work, safety climate, work-family balance, conflict, and counterproductive work behaviors. The emphasis will be on drawing connections between OHP theory and OHP practice and at the relationship between individual and organizational health and well-being. This class should be of interest to students interested in industrial/organizational psychology, social psychology, health psychology, clinical psychology, human factors, public health, preventive medicine, and industrial engineering.
AS.200.240 or instructor permission

AS.200.401. Careers in Psychology - Freshmen. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.

AS.200.402. Careers in Psychology - Sophomore. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.

AS.200.403. Careers in Psychology - Juniors & Seniors. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.

AS.200.404. Careers in Psychology - Seniors. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.

AS.200.431. Neural Systems & Behavior. 1 Credit.
Discussion of research activities in the Neural Systems and Behavior Lab. Discussion of research activities in the Neural Systems and Behavior Lab. This course is only available for undergraduate students currently working on research projects in the Moss Lab.

AS.200.450. Undergraduate Teaching Assistant in Psychology. 1 - 3 Credits.
Qualified students can serve as undergraduate Teaching Assistants for psychology courses they have already taken at Hopkins (by faculty instructor invitation only). Each individual faculty instructor will determine TA responsibilities based upon departmental policy. Upon invitation, potential Teaching Assistants should forward the instructor invitation to the co-Director of Undergraduate Studies (Dr. Drigotas) and make a request in SIS to add the course using the instructor's section number (e.g., 200.450 section 2). Dr. Drigotas will be approving requests in SIS.

AS.200.515. Psychological Research. 1 - 3 Credits.
The student chooses a research problem with the advice and approval of a faculty member. S/U grading only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.200.525. Psychology Internship. 1 - 3 Credits.
S/U grading only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.200.530. Independent Study in Psychology. 1 - 3 Credits.
S/U grading only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.200.545. Psychological Readings. 1 - 3 Credits.
Psychological Readings represents an in-depth analysis of a psychological subject area not typically covered in departmental course offerings. Students must have the support of a full time faculty sponsor and work with them to plan a curated set of readings and activities for the semester.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.200.613. Fundamentals of Biopsychology.
This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in neurobiology and cognitive neuroscience.

AS.200.617. Fundamentals of Cognitive Psychology.
This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in cognition.

AS.200.650. Why is thinking hard?.
In what ways and why is human cognition limited? This seminar will focus on understanding and explaining the limitations and capabilities of human cognition through deep dives into a number of subtopics. Possible topics include: What is 'intelligence,' does it have quantifiable units and/or a substance-like underpinning. Why does thinking feel hard, why and how do we experience mental effort? What limits visual attention and working memory? Where does insight come from? Why do we forget things? What is creativity? What makes some concepts hard to learn? Why do we misunderstand science? How do we evaluate our own knowledge and understanding?

AS.200.654. Psychological & Brain Sciences Core Topics A.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate students in Psychological and Brain Sciences.

AS.200.655. Psychological & Brain Sciences Core Topics B.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate Students in Psychological & Brain Sciences.

AS.200.657. Advanced Statistical Methods.
Topics in applied probability and statistical inference; analysis of variance; experimental design. Intended for graduate students. Recommended Course Background: one statistics course.
Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.280.345 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348

AS.200.658. Advanced Research Design and Analysis.
Second half of graduate statistics sequence, covering complex research design and analysis. Recommended Course Background: AS.200.657. Enrollment limited to seniors by instructor approval and graduate students.

AS.200.659. Quantitative Methods for Brain Sciences.
Focuses on frequently used quantitative methods in the study of brain sciences. Course goals include gaining conceptual understanding of analysis techniques, application of techniques to datasets, and learning the use of MATLAB. Topics will include dimensionality reduction, information theory, clustering and classification, optimization and model selection, and frequency domain methods. Enrollment is limited to graduate students and undergraduate seniors; seniors must receive permission from the instructor to enroll. Recommended (but not required) Course Background: Probability & Statistics, Linear Algebra, MATLAB programming.

AS.200.661. Topics in Psychological & Brain Sciences.
An introduction to postdoctoral activities (e.g., grant applications, journal article submission, meeting presentations, the politics of psychology and American science) for Ph.D. candidates in psychology.

AS.200.662. Psychological and Brain Sciences: Career Development.

AS.200.670. Advanced Seminar in Vision.
This seminar will cover advanced topics in vision from the perspectives of several disciplines.Topics include human visual psychophysics, perception and cognition, and computational vision. Graduate students only.

AS.200.680. Psychological & Brain Sciences Seminar.

AS.200.800. Psychology Research - Summer.

AS.200.808. Readings: Current Research in Cognitive Aging.
Guided independent readings. The class is designed as a seminar including discussion of primary research articles of cognitive aging. Specific topics include human imaging and animal models of memory, aging, and neurodegenerative disease.

AS.200.810. Research In Psychology.
Students plan and execute original research under guidance of advisers. Results are usually prepared in a form suitable for publication. Graduate students only.

AS.200.817. Cognitive Seminar.

AS.200.825. Biopsychology Seminar.
Graduate students only.

AS.200.830. Research Seminar in Psychological & Brain Sciences.
TBA

AS.200.848. Current Advances in Psychological and Brain Sciences.
Introduces advanced research topics to graduate students (as well as faculty) through a series of speakers and discussions.

AS.200.849. Teaching Practicum.
All candidates are required to obtain special experience in various aspects of undergraduate teaching. Graduate students only.

AS.200.850. Advanced Teaching Practicum.

AS.200.860. Dissertation Preparation.
TBA

Cross Listed Courses

Behavioral Biology

AS.290.400. Comparative Neural Systems and Behavior Research Discussions. 0.5 Credits.
This course is required concurrently with research in the Comparative Neural Systems Research and Behavior lab. During the scheduled meetings we will discuss scientific papers, policies and procedures, research ethics and other information related to activities in the lab. At the end of the semester, students will present their research in groups. This course is only open to students doing research in the Neural Systems and Behavior Lab.

Cognitive Science

AS.050.339. Cognitive Development. 3 Credits.
This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.

AS.050.358. Language & Thought. 3 Credits.
Have you ever wondered about the relationships between language and thought? Philosophers, linguists, psychologists, evolutionary theorists and cognitive scientists have too and this course will survey the current thinking on this matter. Classical papers such as those by Whorf and Sapir, more recent philosophical papers by people such as Fodor and Dennett, and recent empirical work by linguists and psycholingists on the relationship between language and thinking in development and in adults will be covered. Discussions will focus on the theoretically possible relationships between language and thought and the empirical data that speak to these. Juniors and seniors only. Freshmen and sophomores by permission of instructor only.
AS.050.102 OR AS.050.320 OR AS.050.325 or instructor permission.

AS.050.375. Probabilistic Models of the Visual Cortex. 3 Credits.
The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modeling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks.Required Background: Calculus I and experience in a programming language (Python preferred).
AS.110.106 OR AS.110.108

AS.050.675. Probabilistic Models of the Visual Cortex.
The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modelling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks.Also offered as AS.050.375.

First Year Seminars

AS.001.109. FYS: Why'd Your Brain Sign You up for This?. 3 Credits.
This First-Year Seminar will explore the neuroscience of choice. In addition to exploring the neurobiology of choice, we will dabble with philosophical ideas of free will and determinism. We will also touch on questions related to culpability. For example, are people who break the law but suffer from brain damage responsible for their actions? Sound interesting? Well, why stop there? Let’s sit back, eat some popcorn and take a look at how popular culture depicts the neuroscience of choice in the movies. Yes, with your help, we can do it all – but will you choose to???

AS.001.115. FYS: Illusions, Delusions, and Other Confusions. 3 Credits.
Most people think the strongest kind of evidence in a criminal case is a confident eyewitness. Most students think re-reading textbook materials or class notes is the best way to prepare for an exam. And all too many people think that measles vaccines cause autism. All three of these ideas are wrong. In this First-Year Seminar, we will explore what modern psychology has uncovered about how our intuitions concerning human nature deceive us, and lead to incorrect ideas such as the ones just mentioned. We will discuss a wide variety of topics including “the attention economy,” groupthink, and subliminal perception.

AS.001.130. FYS: Evolutionary Psychology. 1 Credit.
In this unique, 1-credit First-Year Seminar, we discuss evolutionary psychology—the idea that the mind can be understood as an adaptation to our ancestral environment by means of natural selection. Topics range from nature vs. nurture and freewill vs. determinism to the exploration of how evolutionary principles speak to broad social issues such sexuality, gender, social class, and violence.

AS.001.165. FYS: Biology in Deep Time. 3 Credits.
This First-Year Seminar will explore seminal ideas in macroevolutionary theory through both classic and cutting-edge studies. Topics would include the relationship between evolution and development, how fossils shape our understanding of biological systems, and the logical basis of evolutionary inference. Students will also gain an appreciation for the historical development of these ideas and their application in modern science and beyond.

AS.001.168. FYS: The Psychology of Mass Politics in the U.S.. 3 Credits.
Taught during the election season of 2022, this First-Year Seminar looks at the deeper psychological motivations of the American electorate. We begin by discussing the meaning of democracy and establishing a common understanding of American democracy specifically, placing the current moment into historical and international context. We then gradually dismantle the "folk theory" of democracy that assumes all voters are rational and economically-minded. Instead, we apply theories from social psychology to understand some essential questions about voter behavior. Why do people vote? How do they understand politics? How are their feelings and judgments affected by their own identities, biases, information sources, and by the messages they hear from leaders? Why have Americans grown so polarized? What role do racial and gender-based prejudice play? Is American politics headed toward a more violent future? We use evidence-based research from political science, sociology, and psychology to answer these questions.

History of Science, Medicine, and Technology

AS.140.336. History of Mental Healthcare in the United States. 3 Credits.
In recent decades, much has been done in the United States to destigmatize mental illness and incorporate psychiatric services into broader systems of healthcare and welfare. As clinicians, policy makers, social scientists, activists, and other stakeholders have collaborated to promote mental health and reintegrate people with behavioral disorders into society, they have often contrasted their efforts with those made in the past, portraying community-based approaches as more efficacious and humane. Narratives like these, however, deemphasize many important continuities in the history of American psychiatry. In this discussion-based course, students will explore how concerns about citizenship and social control have shaped the organization and provision of mental healthcare in the United States from the early nineteenth century to the present day. They will also complete various assignments designed to hone their ability to evaluate historical arguments, conduct independent and collaborative research on primary sources, and communicate the results of their scholarship to professional and lay audiences.

Neuroscience

AS.080.304. Neuroscience Learning and Memory. 3 Credits.
This course is an advanced survey of the scientific study of learning and memory. Different perspectives will be used to review the science of learning and memory including the cellular-molecular basis of synaptic plasticity, the functional circuitry involved in learning and memory and memory systems in the brain. The course is designed to provide a deep understanding of the issues and current debates in learning and memory research and focuses specifically on animal models of memory and memory impairment. This is an interactive lecture course with a strong emphasis on student participation.
AS.200.141 OR (AS.080.305 AND AS.080.306) OR (AS.020.312 AND AS.020.306) or instructor permission.

AS.080.308. Neuroeconomics. 3 Credits.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience.
AS.080.306 OR AS.200.141 OR AS.020.312

For current faculty and contact information go to http://krieger.jhu.edu/publichealth/people/

Psychology, Bachelor of Arts

Psychology Major Requirements

(Also see Requirements for a Bachelor's Degree. (p. 1587))

The courses in Psychological and Brain Sciences have four purposes:

1. to acquaint all interested students with a sampling of topics through a variety of introductory and advanced courses;
2. to prepare majors for graduate work in psychology and related disciplines through a program that meets the admission requirements of the outstanding graduate departments in the United States;
3. to offer a distribution of foundational courses in psychology as well as advanced studies representing areas in the social, behavioral, and brain sciences; and
4. to provide an honors track designed for exceptional students who want training beyond that provided by the standard undergraduate curriculum.

General Requirement

All classes taken for the major (including those for NQE credit & Honors) must be taken for a grade and be completed with a C- or better. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the major without permission of the Director of Undergraduate Studies.

Specific Requirements

- **Intro Level Course Requirement:** Three 100-level psychology courses from an approved list. These are typically taken during Year 1 and Year 2.
- **Experimental Methods, Design & Analysis:** AS.200.200 Research Methods in Psychology and AS.200.201 Design & Statistical Analysis for Psychology should be taken as a two-course sequence in Fall and Spring of Year 2.
- **Upper Level Course Requirement:** Five upper level psychology courses (200- or 300-level), three of which must be at the 300-level. These are typically dispersed through Years 2-4. Courses must be at least 3 credits.
- **Small Group Experience:** 3 credits of either research, internship, independent study or an additional 300-level psychology course with an enrollment cap of 19 students or less. Students who are interested in graduate work in psychology are encouraged to get involved in research/internship activity starting in Year 2 and to continue throughout their time at Hopkins.
- **9 NQE Credits:** Students must complete 9 additional NQE credits using courses not taught within the psychology department (AS.200.XXX) and not counting otherwise toward the psychology major.

Please note that not all courses offered by the Department of Psychological & Brain Sciences (AS.200.XXX) will fulfill the requirements of the Psychology major/minor (ex. AS.200.162 Childhood Disorders & Treatments). Consult with Academic Advising and your psychology major advisor to ensure appropriate progress toward degree completion.

Required Courses Outside the Department

Code	Title	Credits
Nine credits of additional N, Q, or E courses [1]		9

[1] Courses instructed within the psychology department (AS.200.XXX) or counting toward the Psychology major may not be used for this requirement.

Required Courses Within the Department

Code	Title	Credits
AS.200.200	Research Methods in Psychology	4
AS.200.201	Design & Statistical Analysis for Psychology	4
Select three of the following:		9
AS.200.101	Introduction To Psychology	
AS.200.110	Introduction to Cognitive Psychology	
AS.200.132	Introduction to Developmental Psychology	
AS.200.133	Introduction to Social Psychology	
AS.200.141	Foundations of Brain, Behavior and Cognition	
Research, internship, independent study, or a designated seminar course [1]		3
Five additional psychology courses distributed as follows: [2]		15
Two additional courses at the 200-400 level		
Three additional courses at the 300-400 level		
Total Credits		**35**

[1] The 300-level seminar course must have a maximum enrollment of 19 students. Courses used to fulfill the five upper-level course requirements may not be used to satisfy this requirement. Students may take 1-3 credits in any given semester to fulfill this requirement. All students are required to discuss their plans with their faculty advisor before Pre-Graduation Check.

[2] One upper level course in Cognitive Science may be used to satisfy these course credits with the approval of the Director of Undergraduate Studies. Research, independent study, and internships may not be used to satisfy these course requirements.

Sample Program of Study

Course	Title	Credits
First Year		
First Semester		
Required 100-level Psychology course		3
NQE elective required for major		3
	Credits	**6**
Second Semester		
Two Required 100-level Psychology course		6
	Credits	**6**
Second Year		
First Semester		
AS.200.200	Research Methods in Psychology	4
200- through 400-level Psychology course		3
	Credits	**7**
Second Semester		
AS.200.201	Design & Statistical Analysis for Psychology	4
200- through 400-level Psychology course		3
	Credits	**7**
Third Year		
First Semester		
300- through 400-level Psychology course		3
Small Group Experience or Independent Academic Work		3
	Credits	**6**
Second Semester		
300- through 400-level Psychology course		3
NQE elective required for major		3
	Credits	**6**
Fourth Year		
First Semester		
300- or 400-level Psychology course		3
	Credits	**3**
Second Semester		
NQE elective required for major		3
	Credits	**3**
	Total Credits	**44**

Restrictions

No courses through the School of Education and the Carey Business School may be counted toward the requirements for the major in Psychological and Brain Sciences (although a limited number of such courses may be counted toward the 120 credits required for graduation). As most Intersession courses are graded S/U or are less than 3 credits, they do not apply towards major requirements. Some courses offered by Psychological & Brain Sciences taught in the summer at Hopkins do not count toward the Psychology major or minor as they do not fit into the requirements of the major. You may make an appointment with Dr. Stephen Drigotas (drigotas@jhu.edu), Director of Undergraduate Advising for Psychological & Brain Sciences, to ensure that your enrollments will be considered toward your academic progress in the manner you intend.

Preparation for Graduate Work in Psychology

The Department of Psychological and Brain Sciences provides preparation for graduate training in all areas of psychology, including clinical and counseling. Virtually all psychology graduate programs, including those that provide training in clinical or counseling psychology, expect students to have a strong background in scientific psychology, including statistics. The department encourages students to obtain additional practical experiences outside the classroom, including research in a laboratory and/or an internship in a mental health care setting. These additional experiences are particularly salient to graduate school admission committees.

Honors Program in Psychology

The B.A. degree with honors provides recognition for outstanding achievement in formal course work and research. Students considering applying for honors should begin discussing possible research topics with a faculty sponsor (and research mentor, if different from the sponsor) in the fall semester of their junior year. The requirements for a degree with honors include those for the regular B.A. degree, plus the following:

- A minimum grade point average of 3.5 or better in psychology (200.XXX) courses through the semester before the student graduates.
- A public presentation (poster or talk) at a recognized student research or professional conference either on campus (e.g., DREAMS, Woodrow Wilson, ASPIRE, PURA) or off campus (e.g., APA, APS, VSS, SPSP). The presentation must be on the research conducted specifically for honors (e.g., research for 200.200 or 200.201 does not count).
- The support of a sponsor for honors research. The sponsor must have a full-time faculty appointment at Johns Hopkins and either a primary or a joint appointment in the Department of Psychological and Brain Sciences. Sponsors can sponsor research conducted under the direct supervision of another principal investigator (e.g., a faculty member in the School of Medicine).
- Completion of two 300- or 600-level psychology courses, in addition to those required for the Psychology major. These courses cannot be an independent study, research or internship credits, or a readings course. These additional courses can count toward the 120 credits required for graduation.
- Completion of six credits of research beyond research credits counting toward the major.

Please see the Department of Psychological and Brain Sciences (https://pbs.jhu.edu/) website for the application process details.

Undergraduate Academic Awards

The Department of Psychological and Brain Sciences offers two undergraduate academic awards.

- G. Stanley Hall Prize is awarded for outstanding achievement by an undergraduate in psychology.
- Julian C. Stanley Award is given to the psychology major who most closely approximates Dr. Stanley's personal and professional standards of excellence.

Psychology, Minor

Psychology Minor Requirements

A minor in psychology is available to undergraduates majoring in any department. Students electing to minor in psychology should declare their intention directly to the Director of Undergraduate Studies in the Department of Psychological and Brain Sciences by the end of junior year. All classes taken for the minor must be taken for a grade and be completed with a C- or better. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies.

The minor requires successful completion of the following:

Code	Title	Credits
Select three of the following:		9
AS.200.101	Introduction To Psychology	
AS.200.110	Introduction to Cognitive Psychology	
AS.200.132	Introduction to Developmental Psychology	
AS.200.133	Introduction to Social Psychology	
AS.200.141	Foundations of Brain, Behavior and Cognition	
One psychology course at any level		3
Two psychology courses at the 300 or 600 level [1]		6
Total Credits		**18**

[1] No course from the Carey Business School or School of Education may count toward the minor.

Psychology, PhD

Program Requirements

The Department of Psychological and Brain Sciences (https://pbs.jhu.edu/graduate/requirements/) emphasizes training and experience in the research methods essential to the development of new knowledge in the various sub-fields of psychology. Our core program for doctoral students emphasizes scientific methodology and provides rigorous research training. Each doctoral candidate is expected to become familiar with both a relatively narrowly defined area and a broad spectrum of knowledge related to the student's topic of specialization.

In addition to general university requirements, the Department of Psychological and Brain Sciences has the following regulations:

Statistics

A thorough understanding of statistics is useful in virtually all research settings. Two statistics courses are required during the first year of graduate training. The normal sequence is AS.200.657 Advanced Statistical Methods during the first semester and AS.200.658 Advanced Research Design and Analysis during the second semester. Students with exceptional statistical training should take two more advanced courses by arrangement with the Director of Graduate Studies. Students are encouraged to take more statistics, as appropriate.

Fundamentals and Core Topics in PBS

AS.200.613 Fundamentals of Biopsychology, AS.200.617 Fundamentals of Cognitive Psychology, AS.200.654 Psychological & Brain Sciences Core Topics A, and AS.200.655 Psychological & Brain Sciences Core Topics B offer an introduction to the fundamental principles and methods of the psychological & brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. In addition, students become versed in the careful consideration of data and in formulating written and oral arguments.

First-Year Research Report

During the first year, the student, together with the faculty advisor, identifies a research project that will provide extended research experience. Normally, the student designs a study as part of a larger ongoing project. A project proposal must be submitted by April 15 of the first year; this proposal introduces the nature of the scientific problem, reviews the relevant literature, and describes the proposed study in detail, together with the anticipated data, means of analysis, and interpretations. A final written version of this report must be submitted by December 15 of the student's second year; ideally, this "first year project" report includes all the information that would be appropriate for submission to a scientific journal.

Advanced Examination

The Advanced Examination is designed to assess expertise in the student's area of concentration. This examination, which includes both a written and oral part, is graded by a committee of at least two faculty members. The written and oral portions of the advanced examination offer the student an opportunity to demonstrate both in-depth, focused knowledge in their specialty area of study, and also a breadth of knowledge outside of their area of expertise. The student must pass the advanced examination by the beginning of the third year of study.

Advanced Seminars

Advanced seminars are more specialized in content than a Core Topics course, but are still geared to students with interests both inside and outside the area. Students are required to complete one advanced seminar outside their concentration area. Completion of an additional advanced seminar is strongly recommended.

Topical Seminars

The Department of Psychological and Brain Sciences offers topical seminars in which one or more faculty members leads seminars on topics of special interest, such as cognitive processes, developmental psycholinguistics, neuro-physiological aspects of behavior, mathematical psychology, and information processing. Through participation in these seminars, students are exposed to findings in subfields of psychology. Topics vary from semester to semester and are determined by the interests of both faculty and graduate students. The format of the seminar is optional, and the course may or may not require formal tests of knowledge. Students are urged to complete topical seminars as appropriate.

Research Seminars

Students and faculty engaged or interested in research in particular areas organize these seminars. Participants discuss their own research and other current research in the area.

Teaching Assistantships

Teaching requirements are fulfilled by graduate students serving as teaching assistants to members of the department's faculty, in courses taught in the School of Arts and Sciences. All graduate students are expected to TA a total of four semesters, beginning in the first semester of their second year, continuing consecutively through the second semester of the third year. The Department Chair, Director of Graduate Studies, Department Administrator, and Academic Program Coordinator collaborate to assess the instructional support needs of the department and assign these teaching duties.

Advanced students may apply for a Dean's Teaching Fellowship (https://krieger.jhu.edu/research/deans-teaching-fellowship/). This prestigious fellowship provides graduate students an opportunity to grow both as educators and scholars by allowing them to propose, design, and offer an undergraduate seminar course.

Literature Review

Students complete a written literature review in preparation of the completion of their dissertation. The literature review is modeled on articles appearing in professional journals, and it should be suitable for publication in such a journal. Typically, the review provides a background for the thesis plan, but for some students it may be prepared on a topic other than the one selected for the thesis. The literature review is evaluated by the same committee that will evaluate the thesis plan.

Thesis Plan

At least one calendar year before receiving the Ph.D. degree, each doctoral candidate must develop a plan for the dissertation research and present the plan before a departmental committee. The thesis plan is a detailed document stating the issue the student wishes to address in a dissertation, the experimental design to be used, and the way the student will interpret the various possible results. In essence, it is a proposal for a research project with predictions and preliminary data, rather than results. The outline of the experiments should be sufficiently clear that the readers will fully understand the procedures; the plan should also include a timeline.

This plan should be completed as soon as possible, but no later than the end of the fourth year. Dissertation research cannot proceed until the Thesis Plan has formally been approved. With the committee's approval, the student then prepares a dissertation.

Dissertation

The dissertation represents the student's culminating piece of scholarly work. It establishes the start of a research career and the basis for postgraduate employment. The Graduate Board of the University administers the final oral examination, a defense of the thesis. The doctoral dissertation must be in a form suitable for and worthy of publication.

Financial Support

Support for graduate students comes from many different sources. Domestic and international students in good standing can expect to receive tuition remission and a stipend.

Stipend support is competitive with that at other institutions and provides sufficient funds to live modestly. Stipends may come from research grants held by faculty members, allowing students to collaborate and be paid as research assistants. The university also provides funds for teaching assistants, as well as special fellowships.

All students are encouraged to apply for national awards, fellowships, and scholarships (e.g., NSF Graduate Fellowships). Our students have been remarkably successful at winning these honors.

The Department of Psychological and Brain Sciences is also affiliated with two diverse training programs (http://krieger.jhu.edu/pbs/graduate/training-programs-and-grants/) supported by the National Eye Institute and the National Institute on Aging, including the NIA-supported training grant titled "Research Training in Age-Related Cognitive Disorders." Qualified graduate students are encouraged to discuss relevant and appropriate training grant applications with their advisors. Stipend and tuition remission may be provided to accepted applicants through these and other training programs.

For further information on graduate study in psychology, contact the Academic Program Coordinator *(*ezurbuc1@jhu.edu*) for the* Department of Psychological and Brain Sciences *(*https://pbs.jhu.edu/*).*

Master of Arts in Psychology

A student who has been admitted into the Ph.D. program can earn a Master of Arts degree in partial fulfillment of the requirements for the Ph.D. degree. Normally, candidates for the Ph.D. degree in psychology will qualify for the M.A. degree at the end of their second year, after having completed two area seminars and at least two courses in psychological research design and/or advanced statistics, provided that their performance is of the quality judged satisfactory for the M.A. level. There is no terminal master's program.

Public Health Studies

http://krieger.jhu.edu/publichealth/

Public health combines a prevention orientation with a population perspective in pursuit of better health for all members of society. Public health professionals deal with critical large-scale issues such as access to health care; chronic disease control; mapping, predicting, and containing outbreaks of infectious disease; as well as researching factors such as gender, poverty, and education that contribute to health outcomes. Public health has close ties with medicine through clinical and biomedical research and healthcare policy.

The Public Health Studies Program offers undergraduates a major that links them to the world of public health through core courses taken on the Homewood campus, as well as electives taken at the Johns Hopkins Bloomberg School of Public Health (JHSPH).

Core coursework at Homewood includes Introduction to Public Health, Research Methods in Public Health, Fundamentals of Epidemiology, Environment and Your Health, Fundamentals of Health Policy and Management, Biostatistics, and a course in Social and Behavioral Health. Students also take coursework in Social Sciences, Biology and Calculus. Students will select additional public health coursework from a range of options that include the global health, demography, health economics, medical sociology, history, and politics. The major is flexible and easily adapted to further course work in the natural and social sciences. About two-thirds of Public Health Studies majors complete the premedical core curriculum.

Public Health Studies majors also complete the Public Health Applied Experience as part of their undergraduate degree requirements. This involves a supervised, hands-on experience working with public health professionals. The goal of the applied experience requirement is to ensure that students have practical public health exposure in a research or community setting. Find more information at http://krieger.jhu.edu/publichealth/applied-experience/

The Johns Hopkins Bloomberg School of Public Health is the oldest and largest school of public health in the United States. Although its primary function is as a graduate school, seniors majoring in public health studies take a semester's worth of courses there in fulfilling their B.A. degree requirements. Undergraduates may take classes in any of the 10 departments at JHSPH. Many students also get involved in ongoing research projects at JHSPH.

Available coursework at JHSPH includes the following areas: health education, environmental health sciences, epidemiology, health finance and management, health policy, human genetics, immunology and infectious diseases, international health, maternal and child health, mental health, nutrition, occupational medicine/health protection and practice, population studies, toxicology, and tropical medicine, among others.

An honors option is available to Public Health Studies seniors with a major GPA of at least 3.5. Public Health Honors students complete an independent research project under the supervision of a JHU faculty member and with the guidance of the Honors seminar instructor. Students register for AS.280.495 Honors In Public Health - Seminar in the fall and AS.280.499 Honors in Public Health in the spring. Interested students should discuss their plans with their PHS advisor no later than the spring of their junior year.

Many Public Health Studies students have pursued international public health internships and study abroad opportunities both during the academic year and over the summer. In addition to a wide array of general options available through the JHU Office of Study Abroad, the PHS program runs a public-health specific program during Intersession (3 weeks) in Uganda, which includes both academic and applied components and allows students to earn graded JHU credits which can be used toward the Public Health Studies major. The Uganda program compares health issues in urban and rural settings. For more information, go to krieger.jhu.edu/publichealth/academics/study-abroad/ (http://krieger.jhu.edu/publichealth/academics/study-abroad/).

The Public Health Studies office is located in the 3505 North Charles Building, adjacent to the Homewood campus. Public Health Studies advisors may be consulted about the various courses, careers, and graduate programs in public health on a walk-in basis or by appointment. Student can make an appointment via the PHSCal scheduling system (http://apps.krieger.jhu.edu/phscal). (http://apps.krieger.jhu.edu/phscal/) Information can also be obtained by emailing phstudies@jhu.edu or at https://krieger.jhu.edu/publichealth/.

Bachelor of Arts/Masters Program

The Bachelor of Arts/Master of Health Sciences (BA/MHS) and Bachelor of Arts/Master of Sciences in Public Health (BA/MSPH) programs are a coordinated academic collaboration between the Krieger School of Arts and Sciences and the Johns Hopkins Bloomberg School of Public Health. It enables talented and committed Public Health Studies majors to complete a BA from KSAS and master's degree from the JHSPH in five to six years.

The Department of Environmental Health Sciences, Department of Epidemiology, Department of Mental Health and Department of International Health will consider JHU undergraduates majoring in Public Health Studies for admission to the BA/MHS program. The Department of Environmental Health Sciences also offers a BA/MSPH in Occupational and Environmental Hygiene. The Department of Health Policy and Management offers a BA/MSPH in Health Policy. The Department of Population, Family and Reproductive Health offers two BA/MSPH programs, one in Adolescent Health, and the second in Sexual and Reproductive Health.

Public Health Studies students apply for early admission during their junior year. Admitted students must complete the BA degree before formally enrolling in the graduate school, but up to 16 of the public health credits earned inter-divisionally toward the BA may also apply toward the MHS or MSPH degree. In addition, students in this program will receive co-advising from both schools to optimize their academic experience. Find more information at http://krieger.jhu.edu/publichealth/academics/.

Programs

- Public Health Studies, Bachelor of Arts (p. 2141)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.280.101. Introduction to Public Health. 3 Credits.
This course provides an overview of the field of public health. Topics include the major causes of morbidity and mortality; the socioeconomic, behavioral, and environmental factors that affect health; the analytical methods used in the field; the role of government in protecting the public's health; key features of the U.S. health care system; and current challenges in the field. The course also introduces students to the basic conceptual models and approaches that are central to public health practice. This course is restricted to freshmen. Your enrollment may be withdrawn at the discretion of the instructor if you don't meet one of those criteria.

AS.280.120. Lectures on Public Health and Wellbeing in Baltimore. 1 Credit.
An introduction to Urban Health with Baltimore as a case study: wellbeing, nutrition, education, violence and city-wide geographic variation. Lectures by JH Faculty, local government/service providers and advocates.

AS.280.161. Applications of Biological Concepts in Public Health. 3 Credits.
This course explores the basic biology concepts relevant to public health. Case studies will be used to examine key scientific principles and their application. This course is designed for public health students who are not intending to pursue a career in natural sciences or medicine. This course satisfies the Public Health Studies Biology requirement, but does not satisfy Pre-Med requirement.All freshman must have taken or be currently enrolled in AS.280.101 to register.Department Approval Required.
Area: Writing Intensive
AS.020.151

AS.280.225. Population, Health and Development. 3 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS and Covid.

AS.280.240. Research Methods in Public Health. 4 Credits.
This course examines the research process, with an emphasis on formulating research questions, critically evaluating published research, and drawing objective conclusions from a body of scientific literature. Students conduct a systematic review of the scientific literature related to a public health issue. Labs focus on developing and documenting a sound review methodology and communicating the review findings effectively in writing.
Area: Writing Intensive
AS.280.101 AND (AS.280.345 OR AS.200.314 OR EN.553.230 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.553.430 OR EN.560.348 OR EN.553.211 OR AS.200.201) OR (EN.550.111 AND EN.550.112)

AS.280.312. Media, Politics, and Evidence in the History of Public Health. 3 Credits.
This writing intensive course will encourage students to consider what counts as evidence among public health professionals as well as popular audiences. Using case studies from the field of epidemiology, now emblematic of the field, students will learn about historical changes in theories of population health and disease. Through a series of writing assignments, students will interrogate the formal structure of scientific arguments and gain practice in synthesizing and communicating complex ideas to a lay audience. Juniors/Seniors Only
Area: Writing Intensive
AS.280.350

AS.280.320. Seminar on Public Health and Well-being in Baltimore. 3 Credits.
Seminar combines lectures from AS.280.120 with additional readings and discussion to more deeply address urban health issues. The course will revolve around student projects that can impact health and wellbeing in Baltimore. If you are accepted for this course do NOT register for AS.280.120. Course registration is by instructor permission only. You will be asked to provide a brief description of a project in order to determine your potential linkage with this course.This course is utilizing the online active approval process. Permission requests should be submitted via SIS Self-Service upon the opening of your registration period. The instructor will review requests and approve registrations using SIS Self-Service for Faculty. Please note, a request does not guarantee registration into the course. Status inquiries should be address to the instructor or departmental administrator.

AS.280.330. Mind-Body Practices and Public Health. 3 Credits.
This course will focus on mind-body practices and their place in public health. We will learn about different mind-body practices and talk about if/how mind-body practices can help amerliorate the national burden of disease. We will also learn how to identify evidence based practices (EBPs) in public health and learn the core components of designing EBPs. We will then combine what we learned about mind-body practices and designing EBPs to create programs that lessen the burden of disease. The mind-body portion of this course is experiential and will include the practice of meditation, yoga, other mindfulness exercises. You will also be asked to reflect on these practices through journaling.
AS.280.101

AS.280.335. The Environment and Your Health. 3 Credits.
This course surveys the basic concepts underlying environmental health sciences (toxicology, exposure assessment, risk assessment), current public health issues (air, water- and food-borne diseases) and global health threats (climate change, designing healthy communities, and environmental justice).
AS.280.101 OR AS.270.103

AS.280.340. Fundamentals of Health Policy & Management. 3 Credits.
Through lectures and small group discussions, students will develop a framework for analyzing health care policy problems and gain familiarity with current issues including managed care, Medicare and the uninsured.Public Health Studies majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the PHS program if you are not a PHS major.
AS.280.101

AS.280.345. Public Health Biostatistics. 4 Credits.
Using problem-based learning focusing on public health topics, students learn to describe & summarize data, make inferences regarding population parameters, & test hypotheses. Recommended Course Background: Four years of high school math.
Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.200.314 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348

AS.280.346. Introduction to R Programming for Public Health. 1 Credit.
Formerly known as Advanced Biostatistics Laboratory, a complementary course to 280.345, Public Health Biostatistics, this course teaches R programming skills necessary for conducting independent data analyses, beyond those presented in the main course. No programming experience is necessary, but a willingness to learn independently and work with other students is indispensable.
AS.280.345

AS.280.347. Health Data Analysis Practicum. 3 Credits.
Students will learn to formulate precise scientific and policy questions, design exploratory and confirmatory statistical analyses to address the questions, conduct appropriate analyses using the statistical package R, and communicate their findings through graphical and tabular displays that are presented in writing and in person. The course will be run seminar style in which students conduct data analysis to present to one another in one meeting per week. Evaluation will be through class participation and a final project in which students will analyze their own data set to address a question of their choice. Students need to have taken an introductory statistics course at the level of AS.280.345 (Public Health Biostatistics) and must have some experience using the statistical software R to perform basic analyses.

AS.280.349. Making Work Safer. 3 Credits.
This course explores major health and safety issues that affect workers in the United States, with an emphasis on developing and selecting interventions to prevent occupational injuries. In this course, students will examine the morbidity, mortality, and economic costs associated with work-related injuries; interact with key surveillance systems and other data sources used for tracking such injuries; and apply principles of injury prevention and decision-making through a basic policy analysis process.
AS.280.340

AS.280.350. Fundamentals of Epidemiology. 4 Credits.
A practical introduction to epidemiology focusing on the principles and methods of examining the distribution and determinants of disease morbidity and mortality in human populations. This course is restricted to Public Health Studies only. Any remaining open seats at the start of the semester will open up to all other majors.

AS.280.355. Introduction to Social and Behavioral Determinants of Health. 3 Credits.
Introduces students to a social ecological perspective of population health; Explains key theories and models of health behavior; Describes social and behavioral factors affecting health outcomes; Illustrates the role of factors such as racism, income inequality, social norms, culture, communication and psychological constructs in health outcomes; Demonstrates applications of these theories and models in health behavior research and intervention.
Area: Writing Intensive
AS.280.101

AS.280.360. Clinical & Public Health Behavior Change. 3 Credits.
This course explores the theory and practice of changing the health behaviors of individuals, and the public health and medical impact of doing so. Theoretical concepts are integrated with practical clinical applications, especially in the areas of diet and fitness. Skill building in persuasive, health-related communication will be included in smaller group discussions.

AS.280.365. Public Policy, Politics and Public Health. 3 Credits.
This course is composed of lectures on public policy and political issues that impact the arena of public health. With real-life examples of public health practice in Baltimore and around the country, this course will also expose students to the wide array of opportunities available to those pursuing a career in public health. Throughout the course a major effort will be made to expose students to the wide array of opportunities that are available to those pursuing a career in public health.
AS.280.101

AS.280.380. Global Health Principles and Practices. 3 Credits.
Global health addresses the staggering global disparities in health status, drawing on epidemiology, demography, anthropology, economics, international relations and other disciplines. We review patterns of mortality, morbidity and disability in low and middle income countries, starting with malnutrition, infectious diseases and reproductive health, and continuing to an emerging agenda including mental health, injury prevention, surgical care, chronic diseases, and health impacts of climate change. Gender, health systems and health workforce challenges, and career trajectories in global health are also discussed. Recommended course background: Minimum of one prior course in Public Health.

AS.280.399. Community Based Learning - Practicum Community Health Care. 3 Credits.
This course introduces students to a social structural, justice orientation to public health, with an emphasis on service learning in Baltimore City. Through lectures, class discussions, reflection practices and experiential learning, students will gain an understanding of education, healthcare, housing and other sectors as social determinants of health. The course draws on a social ecological framework and highlights the role of relationships and policies in impacting community resources foundational to health and well-being. Students will choose a community-based organization according to their interests and schedule and, working in teams, complete 45 hours of service-based learning. Grades are based on class participation, completion of a service learning project, group presentation, and papers. Open to Junior Public Health Studies majors and, space permitting, to others upon permission of instructor. This course qualifies as a PHS upper elective; however, it does not satisfy the PHS Applied Experience requirement.

AS.280.438. Reproductive Health in Crisis: Issues in Meeting the Needs of Vulnerable Populations. 3 Credits.
Introduces students to the reproductive health needs of over 65 million people affected by humanitarian, economic, and environmental crises globally. Presents an overview of health care delivery systems in a variety of contexts, and examines the reproductive health consequences of disruptions in service provision during times of crisis. Examines the impact of policies and programs targeting affected groups. Discusses international standards in humanitarian response. Includes discussion of maternal and newborn health, family planning, abortion, and gender based violence. Students develop competency to conduct reproductive health service needs assessments and design an emergency preparedness plan that ensures provision of essential care. For the final project, students apply their skills to plan a response program to meet the reproductive health needs of a specific crisis-affected population. This is a Gordis Teaching Fellowship course.
Area: Writing Intensive

AS.280.439. Ecological Change and Infectious Disease. 3 Credits.
This course will introduce students to key concepts in infectious disease ecology and epidemiology. Students will also learn how key ecological changes are influencing infectious disease dynamics. Ecological changes explored in the course include climate change, water management, deforestation, agriculture, and urbanization. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.335;AS.280.350 can be taken concurrently

AS.280.440. Introduction to Harm Reduction: Principles and Examples in Public Health. 3 Credits.
Harm reduction is an increasingly popular paradigm in public health research and practice. This course introduces students to the principles of and current research in harm reduction. The class will focus on a) history and principles of harm reduction, and appropriate research methods; b) harm reduction & substance abuse and policy; c) harm reduction & sexual health and sex work; d) ethical considerations in harm reduction. This seminar-format course uses journal clubs, small group discussions, and interactive debates. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.345 OR EN.553.112 OR EN.550.112 OR EN.553.211 OR EN.550.211

AS.280.441. Social Media and Public Health. 3 Credits.
This upper-level undergraduate research methods design course explores the growing role of social media in public health research. The course first introduces the current social media landscape, tying in different public health and health communication theories of importance to social media research. This is followed by a discussion of qualitative and quantitative research methods that have been used to conduct social media research, as well as the unique ethical considerations presented by this novel field. The course will then delve into each type of social media platform in depth, discussing how public health research has been conducted and how this ever-changing field continues to move forward. By the end of the course, students will have given explicit consideration to the strengths and challenges posed by conducting social media research in public health, and will be able to apply social media research methods to a public health issue of their interest. Some background in research methods is preferred but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.442. Genetics and Public Health. 3 Credits.
DNA is the code of life and variability in this code can be critical in determining human health outcomes. In a post-genomic era with increasingly advanced genetic tools and data it is critical for future public health professionals to understand the role that genetics plays in disease on the individual and population level. More and more, genetics is instructing public health interventions by informing individuals of their risk of acquiring certain diseases, explaining disease etiology, guiding treatment options in the wake of personalized medicine, and may dictate the future of genetic-based disease treatment in the form of gene therapy. The goal of this semester long course is to expand upon basic genetic concepts and apply them to understanding how variation in the human genome can impact health outcomes and inform treatment. We will look at how genetic diseases are inherited, the various ways in which they can manifest as pathology, and how they are discovered and diagnosed. We will also learn how to interpret genome wide association studies and genetic test results and explore the field of genetic counseling. We will finish by looking at the future of genetic medicine by looking at personalized medicine, gene therapy, and gene drive technologies and the potential ethical implications of these interventions. Prior genetics coursework is useful, but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.020.151 AND AS.020.152

AS.280.443. Health-Related Stigma: Concepts, Considerations, and Interventions. 3 Credits.
Health-related stigma plays an important role in health and social outcomes, however its impact on individuals and populations varies according to context. Through readings, discussions, and assignments, students acquire the framework and skills to conceptualize and assess stigma across a range of health domains. To develop their understanding and analytical approach, students examine examples of HIV/AIDS, smoking, obesity, addiction, and mental health stigma. In each case, students consider key questions including: What are the forms and consequences of stigma? What theories apply? What ethical issues exist? How might interventions minimize or leverage stigma for health promotion? Throughout the semester, students also consider broader questions including: When should interventions target stigma? What are the ethical considerations in health-related stigma research? Is stigma always a threat to health? As the course places a strong emphasis on reading, critiquing, and applying health and social scientific literature, knowledge of or experience with psychology, sociology, ethics, and/or statistics is recommended but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted registration as space allows.

AS.280.445. Mental Health and the Gut. 3 Credits.
Explores the strong, bidirectional communication between the gastrointestinal tract and the brain. Reviews the role of the microbiome in shaping brain health, the link between gastrointestinal symptoms and mental health, and new and seminal research on the brain-gut connection in specific psychiatric disorders, including neurodevelopmental disorders, sleep disorders, depression and anxiety, bipolar disorder, schizophrenia and other psychotic disorders, dementia, and Parkinson's/other movement disorders. Develops students' skills in reading and critiquing literature as well as designing and analyzing studies on the microbiome and mental health. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.345 OR (EN.553.211 (EN.550.211) OR EN.553.112);Students who have taken AS.280.236 are not permitted to take AS.280.445.

AS.280.446. Quality of Life: Concepts and Challenges in Assessing Wellbeing. 3 Credits.
Quality of life means something different to nearly everyone. While public health and regulatory professionals agree that quality of life matters, developing tools that appropriately conceptualize and evaluate quality of life across varying populations remains a challenge. This course will explore the role of quality of life and other health status and functional outcomes in public health. The course is structured in three segments: 1) Conceptualizing quality of life, 2) Measuring quality of life, 3) Valuing quality of life. The class challenges students to assess the existing landscape in qualityof life research and critically evaluate how diverse literature bases (including psychology, medicine, economics, & regulatory science) have influenced public health research, policy,and practice. Students will also gain experience in analyzing and drawing meaningful research and regulatory conclusions from experience data such as patient reported outcomes and patient preference information. This course will be structured as a seminar featuring lectures, in-class journal clubs, guest speakers, and small-group lab activities. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.345 OR (EN.553.211 (EN.550.211) OR EN.553.112)

AS.280.447. Ethical Considerations When Working With Marginalized Populations- A Public Health Perspective. 3 Credits.
Interested in developing best practices to work with marginalized people in public health? This course is for you! We will use a combination of lectures and discussions to critically analyze public health research methodologies at the intersection of ethics, justice, and human rights when working with marginalized populations. The first part of the course is an introduction to theory to equip students with a shared language to understand how marginalization, justice, and ethics are conceptualized in public health. In the second part of the course, students will delve deeper into various public health research methodologies and apply ethical guidelines to a variety of public health cases in the U.S. and internationally. The course will culminate with students designing case studies to present and provide feedback on based on ethical considerations. Gordis Teaching Fellowship course. Priority registration given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.448. Vaccine Development, Epidemiology, and Hesitancy in the Modern World. 3 Credits.
Immunization is one of the most cost-effective and successful public health measures available, but loss of public confidence in vaccines has resulted in the resurgence of vaccine-preventable diseases. This course will review the process of vaccine development and students will understand the use and utility of immunizations for disease prevention. Students will gain an in-depth understanding of the vaccines that have been successfully introduced into routine immunization schedules. This course will discuss post-licensure vaccine surveillance as well as current domestic and international policy issues in vaccine development, supply, delivery and utilization. We will also examine the origins of vaccine hesitancy and discuss the impact of "anti-vaxxers" on immunization coverage and the subsequent return of vaccine-preventable diseases. Students will have the opportunity to work in teams to critically evaluate multi-level interventions to target vaccine hesitancy and improve immunization coverage, and propose a recommendation that will reduce the morbidity and mortality of a specified vaccine-preventable disease. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.350

AS.280.449. Corporate Influence on Public Health. 3 Credits.
Corporate practices are an often under-recognized social determinant of health. Corporate-induced disease contributes to morbidity and mortality worldwide, and a better understanding of the mechanisms underlying corporate-induced diseases illuminates pathways by which social and environmental factors influence health. This course will investigate the influence of industry using tobacco, alcohol, sugar-sweetened beverage, food, and pharmaceutical industries as examples, emphasizing ecological models. Students will evaluate the historical and current role of each industry as they effect health outcomes, research, public health policy, and public perceptions and behaviors. Students will use case studies from around the globe that exemplify instances of influence and interference and critically consider the power and activity of multibillion-dollar multinational companies. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.450. The Dreaded R-Word: The Ethics of Rationing and Resource Allocation in Health Care. 3 Credits.
Uwe Reinhardt, the renowned Princeton health economist, once labeled rationing as "the dreaded 'R-word.'" Sarah Palin infamously criticized the Affordable Care Act for, in her view, setting up rationing "death panels." Many others recoil from the idea of rationing, considering it a "heartless, mechanistic withholding of desirable goods or services by faceless bureaucrats." In contrast, "resource allocation" does not typically inspire the same response. Why does the idea of rationing in health care generate such a negative emotional response? Is this response justified? Does rationing differ from resource allocation as a means of setting priorities for health care? Who has the authority to set priorities for health care? On what basis should priorities be set? Why must priorities be set at all? This class addresses questions like these and offers a broad introduction to the ethics of priority-setting in health care. The class will devote significant time to understanding both the conceptual and normative foundations of priority-setting as well as specific proposals for how to set priorities. We will explore priority-setting in health care at both the individual and population level through various case studies including organ transplants and flu pandemic preparation. We will discuss priority-setting in the context of public health and universal health coverage and explore the role of global organizations like the World Health Organization and World Bank in setting priorities for health care. We will also consider whether priority-setting is compatible with the pursuit of social justice. Gordis Teaching Fellowship course.

AS.280.451. Born a Girl: Issues in Women's Health From a Life Course Perspective. 3 Credits.
The discussion surrounding women's health has often remained limited to understanding women's reproductive health needs. This course seeks to move beyond this topic to explore the key issues affecting women's health, utilizing a life course perspective. This undergraduate course will focus on a select number of themes including: a) understanding the history of women's health; b) sexual and reproductive health; c) maternal health; d) violence against women and girls; e) the needs of younger girls and aging women; and f) how mental health and stigma affect women. The course brings both U.S. and global perspectives to enhance the understanding of how the field of women's health has evolved over time. It will also address some of the challenges public health professionals continue to face in addressing the health and wellbeing of women today. This seminar-style course combines class presentations with journal clubs and small group discussions. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.350

AS.280.452. Policy, Politics, and Power in Health Equity. 3 Credits.
Health disparities are avoidable, unjust differences in health opportunities and outcomes related to factors such as race and ethnicity, education, class, citizenship, disability, sex and gender identity, and sexual orientation. These disparities reflect the systems that distribute resources, privileges, and power across society and mediate exposure to physical and mental health hazards such as economic deprivation, discrimination, violence, unhealthy environments, uninsurance, and inadequate medical care. Health equity, which is often referred to as social justice in health, is an ethical value that drives efforts to eliminate these disparities. As the National Academy of Medicine asserts in each of its reports, "Knowing is not enough; we must apply. Willing is not enough; we must do." The purpose of this course is to introduce students to essential concepts, literature, and policy issues related to health disparities and to prepare them to use their knowledge to build effective policy strategies in support of health equity. Gordis Teaching Fellowship course. Completion of AS.280.340/ Fundamental of Health Policy Management is recommended, but not required.Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.453. Contemporary Social Movements in Public Health. 3 Credits.
Health social movements attempt to alter power structures in order to achieve greater health equity, promote access to resources, and change perceptions of disease. But what distinguishes a moment from a movement? Under what conditions can health social movements lead to lasting policy and social change? Together we will explore a wide range of contemporary health social movements such as Black Lives Matter, MeToo, gun reform, US healthcare reform, environmental movements, and others. We will analyze the types of goals, resources, and tactics used in these movements and consider their contributions to the shaping of health-related policies and practices. Students will demonstrate their understanding of course themes through quizzes, written assignments, class discussions, and brief presentations. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.454. What is the Link Between Oppression and Mental Health? Combining Theory, Concepts, and Empirical Science to Explain Minority Mental Health. 3 Credits.
In this three-module course, students will first gain knowledge on the theoretical orientations that inform the social determinants of health, in combination with conceptual approaches in the field of trauma and violence research, in order to formulate a theoretical, conceptual, and empirical understanding of minority mental health. In the final module, students will study select mental health concerns (e.g., trauma, depression, anxiety, suicide) that affect specific minority populations, including discussions around the lived experiences of minority mental health. This culminates in a final group presentation on empirical research from an approved minority mental health topic of their choice that will be delivered as a TED-style talk. The course will run with graduate-level expectations. Students should anticipate weekly reading assignments to inform group lab presentations and discussions. There will be three brief individual writing assignments of 5 pages or less that critically analyze current minority mental health research. Upon completion of the course, students will be able to discuss minority mental health research with the necessary contexts of theory, research, and life stories that inform current public mental health approaches. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Students cannot take this course is they are taking AS.194.301.

AS.280.455. Understanding and Engaging Adolescents in Public Health Context. 3 Credits.
Adolescent health is an increasingly important component of the public health agenda. As adolescence is a unique and pivotal stage of life, a rich understanding of this population is important for successful public health engagement. This seminar-style course seeks to provide a foundation for those interested in adolescent health and support effective engagement with adolescent populations. The first half of the course offers theoretical and contextual insights on adolescents—ranging from discussing public health significance, to developmental and life course perspectives, to influences across socioecological levels. The course then delves into practical and methodological considerations for working with this population including ethical matters, insights on reaching adolescents, and approaches to collecting information. This course culminates with deliberations of successful examples of engaging adolescents in public health as well as the future of the adolescent health field. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.456. Introduction to Vaccinology. 3 Credits.
Over the past century, vaccines have a made a tremendous impact on human health, averting an estimated 2-3 million deaths each year. This course aims to introduce students to the interdisciplinary field of vaccinology by building the vocabulary and skills necessary to critically evaluate existing and future vaccines and vaccine programs. Topics include the parameters used to characterize vaccines, the vaccine development pathway, vaccine policy and emerging topics in vaccinology. Although the primary focus of the course will be on the public health aspects of vaccinology, we will also cover key biological principles. At least one semester of biology is strongly recommended as a pre-requisite for this course. Gordis Teaching Fellowship course. Priority registration will be give to Public Health Studies majors.
AS.280.101 AND AS.280.240

AS.280.457. Cohorts and Trials: Interpreting Evidence in Epidemiology. 3 Credits.
How do we know smoking is a risk factor for heart attacks? Why did the NIH invest millions of dollars into the Atherosclerosis Risk in Communities (ARIC) Study or the Systolic Blood Pressure Intervention Trial (SPRINT)? When does the FDA accept a vaccine or drug as safe for use? Why do studies disagree about whether coffee is good or bad for health? This course delves into how two major study designs—cohorts and clinical trials—are used to build and interpret a body of epidemiologic evidence, including the practical context of how cohorts and trials are devised, proceduralized, and funded within the larger scientific enterprise. This is a discussion-based class; active sessions modeled after research journal clubs and consortium workgroups drives peer-to- peer learning along with literature-based lecture. Gordis Teaching Fellowship course. Priority registration will be give to Public Health Studies majors.
AS.280.350

AS.280.458. Monitoring, Evaluating, and Learning to Improve Public Health Programs. 3 Credits.
This course introduces basic principles and methods for monitoring and evaluating public health programs. The course will familiarize students with different types of program evaluation, including formative and summative evaluations, and with approaches to monitor and improve program performance. Students will apply their knowledge to design a logic model, formulate evaluation questions, and identify appropriate quantitative and qualitative methods to answer those questions.Additionally, students will reflect on the importance of conducting evaluations that meet the needs of stakeholders and strategies for integrating an equity focus into the design of evaluations. The goal of the course is to help students to think critically and provide them with the practical skills to monitor, evaluate, and learn from data to improve program implementation and public health impact. Gordis Teaching Fellowship course. Priority registration will be given to Public Health Studies majors.
AS.280.350

AS.280.459. Statistics for Humans: Failures, Values, and Conflicts in Data Science. 3 Credits.
Data does not speak for itself, and the way we use data is a matter of choice. This course will explore the human element of statistics: how statistics drive decision-making, how people can be deceived by statistics, what problems data science poses for the 21st century, and other topics. Case studies in public health will be emphasized. A previous course is statistics is recommended. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

AS.280.460. Urban Health: Global Perspectives for Sustainable Development. 3 Credits.
Urban health is a growing area of public health focus around the world. The interdisciplinary nature of this field of study presents a unique challenge for researchers and policy makers, but also a critical opportunity to share and integrate knowledge using a systems thinking framework.The seminar style course will consist of a brief introduction to the goals and frameworks of urban health planning, followed by four urban case studies represented by four cities around the world at varying stages of industrialization. Material will be guided by discussions and debates about pressing urban health topics. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.101 AND AS.280.335

AS.280.461. Exploring Food Insecurity Through a Racial Equity Lens. 3 Credits.
This course will apply a racial equity lens to explore the issue of food insecurity in the US, including the history, measurement, and current strategies to reduce food insecurity at the national, regional, and local levels. Students in the course will explore how they can take individual action to contribute to dismantling racism and fighting against the root causes of food insecurity. This course will require students to critically reflect on readings and discussions that explore the connection between systems of oppression and food insecurity. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.350

AS.280.462. Practicing Equity in the American Healthcare System. 3 Credits.
This course provides a broad orientation to key structures within the American healthcare system and their role in promoting health equity. These structures include providers, payers, local health departments, evidence development, health information technology and innovative policy. This course will emphasize practical experience with these structures in the context of health equity through case studies within the class and an integrative project in which students will plan and execute their own project. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.340

AS.280.463. International Nutrition in the Time of the COVID-19 Pandemic. 3 Credits.
Malnutrition remains one of the largest public health issues in low and middle income countries (LMICs); it has been estimated that 1 in 9 individuals globally remain hungry, and malnutrition related factors contribute to 45% of deaths in children under 5 years old. While global progress has reduced the burden of malnutrition in the past two decades, much of the progress could be undone by the impacts of COVID-19. This course will review the causes and the burden of malnutrition in LMICs and will provide students with the understanding of the various types of malnutrition. This course will discuss the multi-sectoral nature of malnutrition and the role each sector has in addressing malnutrition. In light of recent events, many of these sector's normal operations have been disrupted by the COVID-19 pandemic and disease transmission mitigation strategies. We will examine how the COVID-19 pandemic has influenced these sectors and the anticipated effects on malnutrition. This is a Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.350

AS.280.464. Risk, Resilience, and Public Health Engagement with Marginalized Communities. 3 Credits.
In public health research and practice, marginalized populations are frequently labeled as "at risk" for negative health outcomes and as being more likely to engage in "high risk" behaviors. All too often, risk assessments and behavior change efforts target individuals without adequate consideration of social and environmental factors contributing to risk and vulnerability. The concepts of resilience and protective factors have gained attention in public health for their focus on supporting positive mental and behavioral health in the face of adversity. This seminar-style course will explore the core concepts of risk and resilience from the perspective of multiple disciplines (e.g. anthropology, epidemiology, and more), delving into each construct's underlying conceptual frameworks, methods of assessment, contributing factors on multiple levels, and evidence-based interventions to support resilience and mitigate risk. Students will then use these core concepts to reflect on meaningful engagement with marginalized populations when assessing and addressing risk and resilience, explore the meaning and consequence of categorizing people based on their risk behavior, and become familiar with cross cultural perspectives on these topics. The course will conclude with a deliberation of future directions risk and resilience examined through a public health equity lens. Students are expected to actively engage with assigned readings and in-class discussions, and will have the opportunity to pursue topics of interest through individual assignments. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration will be given to Public Health Studies majors; other students will be permitted as space allows.
AS.280.101 AND AS.280.240

AS.280.465. Beyond the Peer-Reviewed Article: Embodying Public Health Data for Human Consumption. 3 Credits.
As public health researchers and practitioners, one of the most important and in-demand skills is the ability to communicate data to effect population-level change. This course will explore concepts and case studies in data visualization, ethical data dissemination, and evidence-based advocacy. This course will cover strategies for presenting data that are approachable for lay audiences. Students will gain familiarity with key tools, media, and software to support data visualization and dissemination through lectures, case studies and course assignments. The course will culminate with an applied assignment which calls upon students to collaborate with Bloomberg School of Public Health faculty to utilize data from current research to effectively communicate key messages to non-specialist audiences. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.350;AS.280.345 OR EN.553.211 OR EN.553.230 OR AS.200.314 OR AS.200.315 OR EN.553.310 OR EN.553.311 OR EN.560.435 OR EN.553.420 OR EN.553.430 OR EN.560.348 OR AS.200.201

AS.280.466. Rethinking Prevention: Emerging and Novel Approaches to Addressing Adolescent Drug Use. 3 Credits.
Students in this upper-level course will be introduced to the unique needs and public health considerations when working with adolescent populations, specifically in preventing substance use and substance use disorders. Students will explore the etiology and epidemiology of substance use and substance use disorders in young people, as well as the history of substance use prevention while tackling topics of racism, stigma and oppression of those who use drugs. Progressing through the course, students will be introduced to novel and emerging ways the field is rethinking drug prevention, including the use of social media platforms, mindfulness in schools and phone apps. New tools for epidemiologic surveillance of populations will also be considered, such as machine learning and ecological momentary assessment. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.101;AS.280.355 OR AS.230.341

AS.280.467. Adverse Childhood Experiences: A Public Health Perspective. 3 Credits.
This seminar explores the scientific evidence underlying the impact of Adverse Childhood Experiences (ACEs) on various health outcomes. It first describes the prevalence of ACEs, which include abuse, neglect, and household challenges such as parental substance abuse, mental illness, separation or divorce, and incarceration. The course will then discuss mechanisms and risk and protective factors of negative health outcomes following ACE exposure across levels of a socioecological model. These discussions will directly inform the next part of the seminar, which presents evidence-based interventions for ACEs. Throughout the seminar, students will be active participants and will have the opportunity to explore their topics of interest. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.240

AS.280.468. Food Security in America. 3 Credits.
As of July 2021, 1 in 6 households reported experiencing food insecurity in the United States, with Black, Indigenous, and People of Color (BIPOC) populations disproportionally affected. Food insecurity has been a public health issue in America for decades, with COVID-19 exacerbating existing hardships and disparities resulting from inequitable policies and distribution of resources in communities. This course seeks to provide a critical understanding of the issue of food insecurity in America through describing and evaluating the existing policies, programs, and practices in the United States that aim to promote food security. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration will be given to Public Health Studies majors; other students will be permitted as space allows.
AS.280.101 AND AS.280.340

AS.280.469. How Inequity Persists in Statistics: Lessons Learned and Future Challenges. 3 Credits.
The course will examine the past, present, and future of statistics' impact on equity. We will discuss how early statistical thinking was used to defend racist narratives and how inequitypersists in statistics to this day. We will explore current and future challenges using examples from artificial intelligence. Students will learn how to implement common artificial intelligencemethods and communicate their results. This is a Gordis Teaching Fellowship course open to juniors and seniors. Priority registration will be given to Public Health Studies majors; other students will be permitted as space allows.
AS.280.101 AND (AS.280.345 OR (EN.553.211 OR AS.200.314 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.553.430 OR EN.560.348 OR AS.200.201))

AS.280.495. Honors In Public Health - Seminar. 3 Credits.
Using lectures, oral presentations, and writing assignments, this seminar is designed to assist Public Health Studies majors in writing a senior thesis. Students will formulate their topics, develop research skills, and address issues of professional ethics. Participating in this seminar is required for students pursuing honors in Public Health Studies. Permission Required. Classes will be held at Bloomberg School of Public Health.
Area: Writing Intensive

AS.280.499. Honors in Public Health. 3 Credits.
A research methods seminar to prepare students doing honors in Public Health Studies. Permission Required.
Area: Writing Intensive

AS.280.500. Applied Experience-Public Health. 1 Credit.
Perm. Req'd, Public Health Majors Only. This is a supervised, hands-on experience working with public health professionals. Students will complete 80 hours of applied work and will submit a synthesizing assignment at the end of the term. Students completing their AE in the current semester will be enrolled in Section 2. Students whose time will roll over to an additional grading period will be enrolled in Section 1. Please contact your PHS Advisor for complete details.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.501. Internship-Public Health. 1 Credit.
Permission Required. Public Health majors only
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.502. Internship-Public Health. 1 Credit.
Permission Required. S/U only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.505. Research in Public Health. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.506. Research in Public Health. 1 - 3 Credits.
Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.511. Research for Juniors/Seniors in Public Health. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.512. Research for Juniors/Seniors in Public Health. 0 - 3 Credits.
Restricted to public health studies majors. Consult the public health studies adviser for procedure. Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.590. Internship - Summer. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.595. Special Studies in Public Health. 1 Credit.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.280.597. Research in Public Health. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

Cross Listed Courses

Agora Institute

AS.196.302. Science and Democracy. 3 Credits.
What role does scientific expertise play (or not play) in American democracy? What role should scientific expertise play (or not play) in American democracy? These are the key questions we'll address in this class, focusing on a wide range of examples such as government responses to public health crises, environmental crises, and war. We'll tackle these questions from multiple angles, drawing on ideas from across the social sciences, including political science, psychology, sociology, economics, history, and communication. We'll focus largely on the United States, though in some cases compare the US experience with other democracies to understand how unique aspects of our democratic institutions influence the link between science and democracy.

Behavioral Biology

AS.290.420. Human Sexual Orientation. 3 Credits.
This course will examine the historical and current theories of sexual orientation and sexual variation development by examining the biological, psychological and social contributing factors that influence the development of sexual orientations and variations along with treatment and modification of problematic sexual behaviors. Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester. Priority given to Behavioral Biology majors. Note: For credit towards a Psychology major, students should register for AS.200.204 Human Sexuality, rather than this course.
Prerequisite(s): Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Students may receive credit for either AS.200.204 or AS.290.420, but not both.

Earth & Planetary Sciences

AS.271.107. Introduction to Sustainability. 3 Credits.
Humans are having such a massive impact on Earth systems that some call this the Anthropocene epoch. Should we consider this state of affairs progress or catastrophe? How to we find a sustainable path to the future? This course provides an interdisciplinary introduction to the principles and practice of sustainability, exploring such issues as population, pollution, energy and natural resources, biodiversity, food, justice, and climate change through the lens of systems thinking. Course open to freshmen, sophomores, and juniors. Seniors by instructor permission only.

AS.271.360. Climate Change: Science & Policy. 3 Credits.
Prereq: 270.103 or permission of instructor.This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.

Economics

AS.180.289. Economics Of Health. 3 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
AS.180.102

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Benefits of good health and its costs. Health demand and supply in poor countries. Welfare economics of Public Health. This is a writing seminar. There are some lectures on how to write a paper and on the substance of the economics of international health but the focus and only assignment is a 40-page paper by each student under the supervision of the instructor.
Area: Writing Intensive
AS.180.301 or AS.180.401;Students may not take AS.180.390 if they took AS.180.391.

Environmental Health and Engineering

EN.570.108. Introduction to Environmental Engineering and Design. 3 Credits.
Overview of environmental engineering including water/air quality issues, water supply/ wastewater treatment, hazardous/solid waste management, pollution prevention, global environmental issues, public health considerations/environmental laws, regulations and ethics.Cross-listed with Public Health Studies.

First Year Seminars

AS.001.187. FYS: Gender x Aging x Health in America. 3 Credits.
In this First-Year Seminar students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the ntersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.

History of Science, Medicine, and Technology

AS.140.105. History of Medicine. 3 Credits.
Course provides an introduction to health and healing in the ancient world, the Middle Ages, and the Renaissance. Topics include religion and medicine; medicine in the Islamicate world; women and healing; patients and practitioners.

AS.140.106. History of Modern Medicine. 3 Credits.
The history of medicine and public health from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.

AS.140.227. Race, Racism and Medicine. 3 Credits.
How can we think about the interconnections between racism, theories of race and the practice of medicine? Living at a moment when racial disparities in health outcomes in the United States are still very stark, this course will provide a historically grounded approach to thinking about the roles that race and racism have played in healthcare, the production of health disparities as well as the role of medicine in the development of racist thought. While much of this course will focus geographically within the United States, this class will also explore global histories of medicine, encountering questions of race and medicine in Africa, the South Pacific and Asia. In addition to the analysis of primary source documents and historical texts, students will also be introduced to theoretical approaches to the study of race and racism from W.E.B. Dubois, Sylvia Wynter, Frantz Fanon and others.
Area: Writing Intensive

Medicine, Science and the Humanities

AS.145.202. Health Care Activism in Baltimore and Beyond. 3 Credits.
National struggles over the right to health care, and over the health needs of marginalized groups, have taken distinctive forms in Baltimore City during the past century. The renowned Johns Hopkins University came to symbolize, for many residents, the power of medicine both to heal and to harm – and the need for community action. This course delves into the archives of local institutions to understand the work of activists and advocates who connected health, medicine, and social justice. We focus on specific sites, from the segregated wards of Johns Hopkins to the People's Free Medical Clinic on Greenmount Avenue, where demands for equity changed the city's health care landscape. Through interdisciplinary readings and conversations with local organizers, we consider how historical memory can serve as a creative resource for the art and politics of the present.
Area: Writing Intensive

Philosophy

AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Area: Writing Intensive

Political Science

AS.190.405. Food Politics. 3 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies. A student who takes AS.190.223 (Understanding the Food System) in Summer 2021 cannot also enroll in this course.
Area: Writing Intensive
A student who takes AS.190.223 (Understanding the Food System) cannot also enroll in this course.

Sociology

AS.230.150. Issues in International Development. 3 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.

AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Writing Intensive

AS.230.335. Medical Humanitarianism. 3 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.

AS.230.341. Sociology of Health and Illness. 3 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.

AS.230.358. The Politics of Mental Health. 3 Credits.
This course examines how the psy disciplines – psychology, psychiatry, psychotherapy and related fields – create knowledge about the mind, and how these fields have in turn shaped political and social life since early 20th century. We will explore how the psy disciplines have proven useful to projects of state building by reconstructing the human mind as a calculable, quantifiable entity, one that can be measured and governed across diverse educational, military, and healthcare settings. We will then ask how psychiatric categories such as bipolar disorder and PTSD (post-traumatic stress disorder) were created, and consider their impact on both the legal/medical management of illness and on lay and expert notions of sanity and normality. Finally, we will examine the rising influence of humanitarian mental health interventions, and immerse ourselves in the debates they have engendered concerning the use of psychotherapy to alleviate suffering in war and disaster zones.
Area: Writing Intensive

AS.230.393. Global Health and Human Rights. 3 Credits.
Is access to healthcare a fundamental human right? If so, then which global actors are obligated to provide healthcare to whom, and for how long? How do meanings of health and illness vary across time and place? And finally, how are human rights principles translated into frontline practice in order to promote well-being? This course takes a critical interdisciplinary approach to these questions through a series of global case studies ranging from humanitarian aid in post-tsunami Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana. How do international NGOs, UN bodies, and governments collaborate (or compete) to distribute healthcare in places beset by dire resource shortages? Do human rights principles carry legal weight across borders, and if so, could access to healthcare services and essential medicines be litigated in order to compel governments to provide it? And finally, what cultural assumptions do human rights discourses carry with them, and what happens if rights-based approaches are poorly received by recipient populations? Moving beyond the basic principle of healthcare as a human right, this course aims to bring this idea's history and politics into focus by offering an in-depth exploration of its ethics and implementation.
Area: Writing Intensive

Public Health Studies, Bachelor of Arts

Public Health Studies Major Requirements

(Also see General Requirements for a Bachelor's Degree (p. 1587).)

All courses must be taken for a letter grade and not S/U, unless the course is not offered as a graded course. You must earn a C- or higher to count courses toward your Public Health Studies Degree. Hyperlinks are included to view all course descriptions and requirements. Major requirements are as follows:

Code	Title	Credits
Foundation Courses		
Quantitative		
AS.110.106	Calculus I (Biology and Social Sciences)	4
or AS.110.108	Calculus I (Physical Sciences & Engineering)	
Natural Science		
Select two Biology Lecture Courses of the following: [1]		6-8
AS.020.151	General Biology I	
AS.020.152	General Biology II	
AS.020.303	Genetics	
AS.020.305	Biochemistry	
AS.020.306	Cell Biology	
AS.020.374	Comparative Physiology	
AS.280.161	Applications of Biological Concepts in Public Health	
Select one Biology Lab Course of the following:		1-4
AS.020.153	General Biology Laboratory I	
AS.020.154	General Biology Lab II	
AS.020.315	Biochemistry Project lab	
AS.020.316	Cell Biology Lab	
AS.020.340	Developmental Genetics Lab	
AS.020.377	Comparative Physiology Lab	
AS.250.253	Protein Engineering and Biochemistry Lab	
AS.250.254	Protein Biochemistry and Engineering Laboratory	
Social Science		
Select two introductory social science courses from Table 1. Other courses may apply with advisor approval. These courses must be from two different departments.		6
Public Health Studies Core Courses		
AS.280.101	Introduction to Public Health (Fall & Spring)	3
AS.280.240	Research Methods in Public Health (Fall & Spring)	4
AS.280.335	The Environment and Your Health (Fall & Spring)	3
AS.280.340	Fundamentals of Health Policy & Management (Spring)	3
AS.280.345	Public Health Biostatistics (Fall) [2]	4
AS.280.350	Fundamentals of Epidemiology (Fall & Spring)	4
Intermediate Public Health Courses at Homewood		
One course at the 200-400 level focusing on social and behavioral aspects of public health from the list below. Please see your PHS advisor for a list of current courses that will satisfy the requirement.		3
AS.230.341	Sociology of Health and Illness (other options may be approved by your advisor)	3
AS.280.355	Introduction to Social and Behavioral Determinants of Health	3
Three additional Public Health courses at the 200-400 level. [3]		9
Applied Experience		
AS.280.500	Applied Experience-Public Health [4]	1
Courses at Johns Hopkins Bloomberg School of Public Health (JHSPH) [5]		
Bloomberg School of Public Health Courses		10
Total Credits		**67-72**

1. Or Equivalent
2. Other statistics courses may apply with advisor approval.
3. All courses must be at least 3 credits and only 2 Gordis Teaching Fellowship (GTF) courses may apply (AS.280.4xx courses).
4. The Applied Experience (AE) is a required experiential learning component of the Public Health Studies curriculum. The purpose of the AE is to provide students with supervised, hands-on experience in a professional public health setting. The Applied Experience gives students an opportunity to explore an area of interest within the field of public health by actively engaging in and directly contributing to a

public health project or program. The AE must be at least 80 hours and 4 weeks long under the supervision of a public health profession.

5 Courses are taken at the Johns Hopkins Bloomberg School of Public Health in the student's final year. Students take 15 JHSPH credits, which is the equivalent of 10 Homewood credits. Blended courses may count for this requirement, Independent Research and Special Studies will not. Online courses will count toward you total number of credits needed to graduate, but will not count toward the 15 credits needed to fulfill this specific requirement. Within the 15 credits, students must create an 8 credits focus in one particular area, topic, or department.

Sample Program of Study

While there are many paths through the requirements, a typical program might include the following sequence of Public Health Studies requirements. Your personal sequence of courses may look very different. Work with your PHS advisor to ensure you are satisfying all program requirements.

Course	Title	Credits
First Year		
First Semester		
AS.280.101	Introduction to Public Health	3
AS.020.151	General Biology I	3
AS.020.153	General Biology Laboratory I	1
AS.110.106 or AS.110.108	Calculus I (Biology and Social Sciences) or Calculus I (Physical Sciences & Engineering)	4
Introductory Level Social Science from Table 1		3
	Credits	**14**
Second Semester		
AS.020.152	General Biology II	3
Introductory Level Social Science from Table 1		3
	Credits	**6**
Second Year		
First Semester		
AS.280.345	Public Health Biostatistics	4
AS.280.335	The Environment and Your Health	3
	Credits	**7**
Second Semester		
AS.280.240	Research Methods in Public Health	4
AS.280.350	Fundamentals of Epidemiology	4
AS.280.340	Fundamentals of Health Policy & Management	3
	Credits	**11**
Third Year		
First Semester		
Social/Behavioral Aspects of Public Health Course		3
	Credits	**3**
Second Semester		
AS.280.500	Applied Experience-Public Health (if not taken First Semester)	1
Upper Level Public Health Elective (200-400 level)		3
	Credits	**4**
Fourth Year		
First Semester		
Bloomberg School of Public Health Courses		4-6
Upper Level Public Health Elective (200-400 level)		3
	Credits	**7-9**
Second Semester		
Bloomberg School of Public Health Courses		4-6
Upper Level Public Health Elective (200-400 level)		3
	Credits	**7-9**
	Total Credits	**59-63**

Table 1

Approved Introductory Level Social Science Courses. Students matriculating after 2017 or later must take these from two different departments:

Code	Title	Credits
AS.070.132	Invitation to Anthropology	3
AS.140.105	History of Medicine	3
AS.140.106	History of Modern Medicine	3
AS.150.219	Introduction to Bioethics	3
AS.180.101	Elements of Macroeconomics	3
AS.180.102	Elements of Microeconomics	3
AS.190.220	Global Security Politics	3
AS.190.284	Classics of Political Theory: Political Freedom	3
AS.200.101	Introduction To Psychology	3
AS.200.110	Introduction to Cognitive Psychology	3
AS.200.132	Introduction to Developmental Psychology	3
AS.200.133	Introduction to Social Psychology	3
AS.200.209	Personality	3
AS.200.212	Abnormal Psychology	3
AS.200.222	Positive Psychology	3
AS.230.101	Introduction to Sociology	3
AS.230.150	Issues in International Development	3
AS.271.107	Introduction to Sustainability	3
AS.360.247	Introduction to Social Policy and Inequality: Baltimore and Beyond	3
EN.570.108	Introduction to Environmental Engineering and Design	3
EN.570.110	Introduction to Engineering for Sustainable Development	3

Honors in Public Health Studies

An honors option is available to Public Health Studies students in their final year with a major GPA of 3.5. Public Health Honors students complete a year long independent research project under the supervision of a JHU faculty member and the guidance of the Honors seminar instructor. Students must register for both AS.280.495 Honors In Public Health - Seminar in the fall and AS.280.499 Honors in Public Health in the spring. Interested students should discuss their plans with their PHS advisor no later than the spring of their junior year. Students may not count the honors courses towards any other requirement of the major; they are in addition to major requirements.

Social Policy

http://krieger.jhu.edu/fields/social-policy/

Social policy is the study of policy solutions to the problems of education, inequality, poverty, crime, and other issues faced by society's families and children. It is an interdisciplinary field to which the disciplines of economics, sociology, and political science contribute in equal measure. It is a basic-science field with a strong applied-research focus that can prepare students for careers in government, nonprofits, and the private sector. Students who undertake the social policy minor will work with faculty who are experts in the study of poverty, the labor market, social demography, family structure, educational inequality, political participation, organizational dynamics, and health and welfare policy. They will be strongly grounded in social science training and will apply that training to real-world applications and policies. In the minor, students will be motivated to think about how knowledge translates into policy solutions, making this an appropriate specialization for young people who plan to attend law school, programs in public health, or graduate school in the constituent social science field.

Programs

Social Policy, Minor

Social Policy Minor Requirements

Social Policy Minor Program is not offered in the 2022-2023 Academic Year

A Social Policy minor is offered jointly by the Departments of Economics, Political Science, and Sociology. To complete the minor, students must take an introductory course, Introduction to Social Policy and Inequality: Baltimore and Beyond; a 300-level social policy elective in one of the three departments; the Baltimore Policy Fellowship; and a capstone course to be taken after the semester is completed. The preferred sequence is for students to take the introductory course in their freshman or sophomore years, the elective in the fall of their junior year, the Baltimore Policy Fellowship semester in the spring of their junior year, and the capstone course in their senior year. However, modifications in the sequence will be considered. The Fellowship semester will involve course work focusing on urban and national social policy problems coupled with an internship in Baltimore or Washington in a governmental agency or non-governmental organization that is involved with some aspect of social policy, or as a research assistant to a faculty member conducting research on social policy. The capstone course will involve discussion and research among students who have completed the Fellowship semester and is intended to build upon experiences in that semester.

Enrollment in the Fellowship semester will be limited to 15 and requires application and admission. The Social Policy Minor is grounded in the three disciplines and priority will be given to students who are majoring in Economics, Political Science, or Sociology, but students with other majors will be considered.

A list of electives to be used to fulfill the 300-level social policy elective is available on the Social Policy Program website (http://krieger.jhu.edu/socialpolicy/). Students can identify these courses in the schedule of classes as they will have a POS-Tag of SPOL-UL.

Students interested in the minor should contact the Director of the Social Policy Program, by sending a message to socialpolicy@jhu.edu.

All courses must be taken for a letter grade and a grade of C- or better must be earned in all minor requirements.

Program Requirements

Code	Title	Credits
AS.360.247	Introduction to Social Policy and Inequality: Baltimore and Beyond	3
AS.360.401	Social Policy Seminar	3
One 300- or 400-level approved social policy elective course from the Economics, Sociology, or Political Science Department		3
Baltimore Policy Fellowship semester		
AS.190.380	The American Welfare State	3
AS.230.357	Baltimore and Beyond	3
AS.360.308	Policy and Practice in Human Services	3
AS.360.331	Methods for Policy Research	3
AS.360.366	Public Policy Writing Workshop	3
Total Credits		**24**

Sociology

http://soc.jhu.edu/

The Department of Sociology concentrates on two broad areas at the graduate and undergraduate levels: Global social change, which focuses on cross-national, comparative research; and social inequality, which primarily focuses on family, education, work, race, gender, policy, and immigration.

These concentrations trace back to the department's founding in 1959 by renowned American sociologist James Coleman. The department has since earned a reputation as one of most selective, personalized sociology departments in the U.S. Currently home to 19 faculty members including 2 Bloomberg Distinguished Professors, 36 graduate students, and roughly 60 undergraduates, the department offers a uniquely intimate scholarly atmosphere in which faculty and students interact and collaborate frequently.

Scholars in the department share a wide variety of interests and interdisciplinary partnerships. Students are given flexible parameters for their study, and several faculty members have been honored with joint appointments in other Johns Hopkins University schools and divisions. The department shares a unique relationship with the Bloomberg School of Public Health, which offers faculty and students access to first-rate collaborations in fields such as population and demography, mental health and mental hygiene, and healthcare organization. The department is also proudly partnered with the Department of Applied Mathematics and Statistics and is committed to building and maintaining strong foundations in quantitative research methods.

Alpha Kappa Delta (AKD) Honor Society

In spring 2006, the Sociology department was awarded a chapter of the AKD sociology honor society. The chapter welcomed eleven new initiates that year, two faculty members, two new graduate students, and seven undergraduates. We now have over 100 members.

AKD is an open, democratic, international society of scholars dedicated to the ideal of Athropon Katamanthanein Diakonesein or "to investigate humanity for the purpose of service." AKD seeks to acknowledge and promote excellence in scholarship in the study of sociology, the research of social problems, and other social and intellectual activities that will lead to improvement of the human condition. AKD was founded at the University of Southern California in 1920 and affiliated with the Association of College Honor Societies in 1967. There are more than 97,000 lifetime members and over 600 chapters of the Society. These are persons with academic records showing excellence in sociology.

Initiates receive a chapter pin, a certificate of membership, and a membership activation form. Members who submit completed activation forms receive a one-year subscription to Sociological Inquiry, the official journal of the Society, the Alpha Kappa Delta Newsletter, election materials, and other services. In addition, the Society sponsors student paper contests, provides honoraria for initiation speakers, provides funds for student travel to regional sociological meetings, funds research symposia, sponsors a distinguished lecture series at the Annual Meeting of the American Sociological Association, and contributes annually to the ASA Minority Scholarship Fund. AKD members wear AKD honor cords at graduation ceremonies. AKD chapters are important in the academic, professional, and social lives of student and faculty members. They provide opportunities for initiating and sharing activities in keeping with the purposes of the Society.

To be eligible for membership, majors must have at least junior year standing, an overall GPA of at least 3.0, a sociology GPA of at least 3.5, and have taken at least four courses in sociology.

Election to Alpha Kappa Delta is without regard to race, creed, or national origin. For more information, interested students should contact the AKD Faculty Chapter Representatives.

James S. Coleman Award

This award was established by the Department of Sociology in 1994 in honor of Dr. James S. Coleman, first chair of the department. The award is for outstanding academic achievement by a senior majoring in sociology.

Facilities

Each resident graduate student is provided office or desk space to conduct their studies and research. In addition, the department has a computer lab with a network of computers and printers for graduate student use. Close working relationships exist with other JHU Centers & Programs which provide excellent opportunities for research training.

Financial Aid

The department strives to provide five years of financial aid for all students who are in good academic standing. Eligibility for financial aid in the fifth year ordinarily requires successful oral defense of the dissertation proposal by May 31, following their fourth year in the Ph.D. program.

The department has a number of assistantships that are awarded each year to graduate students in the Ph.D. program. Opportunities are also available for graduate students to work as salaried research assistants with members of the Sociology faculty and staff at associated research centers.

Programs

- Sociology, Bachelor of Arts (p. 2157)
- Sociology, PhD (p. 2158)
- Sociology, PhD/Applied Mathematics and Statistics, MSE Joint Program (p. 2160)

Courses

AS.230.101. Introduction to Sociology. 3 Credits.
Introduces students to basic sociological concepts and perspectives, and applies them to a variety of topics including family, work, and the dynamics of class, gender, and racial/ethnic inequalities in the United States and globally.

AS.230.150. Issues in International Development. 3 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.

AS.230.175. Chinese Revolutions. 3 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China's transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Area: Writing Intensive

AS.230.195. Exploring Baltimore: An Introduction to Urban Studies. 3 Credits.
This course will introduce students to the field of urban studies and Baltimore itself. Students will learn data collection and analysis methods used in the social sciences. Students will discuss relevant research published in urban studies by Johns Hopkins faculty and other experts in the field. Students will also gain an introduction to their adopted home, Baltimore, by collecting data and conducting field observations in different neighborhoods.
Area: Writing Intensive

AS.230.202. Research Methods for the Social Sciences. 3 Credits.
The purpose of this course is to provide a sound introduction to the overall process of research and the specific research methods most frequently used by sociologists and other social scientists. Required for Sociology majors and IS GSCD track students.

AS.230.205. Introduction to Social Statistics. 4 Credits.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research. Special Note: Required for IS GSCD track students.
Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR EN.550.310 OR EN.550.311 OR EN.550.413 OR EN.550.420 OR EN.550.420 OR EN.550.420 OR EN.560.435 OR AS.280.345 OR AS.200.314 OR AS.200.315 OR EN.560.348;Statistics Sequence Restriction: Students who have completed EN.550.111 OR EN.550.113 may not enroll.

AS.230.213. Social Theory. 3 Credits.
This course will focus on four classical social theorists whose ideas have greatly influenced how we study and understand society: Karl Marx, Emile Durkheim, Max Weber and W.E.B. DuBois. Students will gain an in-depth understanding of how each theorist answered three major questions: 1) what is the origin, structure and historical dynamic of modern society?; 2) how do we gain an accurate knowledge of society?; 3) what are the conditions of possibility for freedom in modern society? In comparing, applying and critiquing their respective theories, students will advance their own theory of society.
Area: Writing Intensive

AS.230.216. Disability and Society. 3 Credits.
Objectives of this course are to achieve an understanding of the social context of disability from the population level to the individual disability experience. Topics will include social versus medical models of disability; the spectrum of ability; the history of disability; civil rights perspectives; life course and aging aspects of disability; and the role of the environment. Attention will be paid both to theoretical understandings of disability and the role of policies.

AS.230.219. Land, Labor and Environmental Movements in Contemporary Africa. 3 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor, and environmental movements.Attention will be placed on the early 21st century.

AS.230.221. Global Social Change. 3 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g. WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis and global pandemics, among others. Lectures will be aided by documentary films and other multi-media materials. Special Note: Fulfills Economics requirement for IS GSCD track students only. Formerly offered as AS 230.353. Students who took AS.230.353 cannot take AS.230.221.
Area: Writing Intensive

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3 Credits.
This course surveys the impacts of colonialism in East and Southeast Asia. Special attention will be paid to the social and economic development in British Singapore and Hong Kong as well as Japanese Korea and Taiwan. Topics include free-trade imperialism, colonial modernity, anticolonial movements, pan-Asianism, and post-war U.S. hegemony.

AS.230.233. Inequality and Social Change in Contemporary China. 3 Credits.
This course examines the trajectory of economic development in China since the beginning of market reforms in the late 1970s, with a special focus on social inequality and forms of resistance that have emerged in response to the expansion of the market economy. The first part of the course focuses on understanding the academic debates around China's economic miracle and introduces students to theories about the relationship between market expansion and social resistance. The second part focuses on key thematic topics including the rural/urban divide, rural protest, urban inequality and labor unrest, gender and sexuality in social movements, environmental protests, and the politics of ethnic relations.

AS.230.236. The Sociology of Intimate Partnerships: Dating, Mating, Marriage, and Divorce. 3 Credits.
How do we define an intimate partnership and what role does it play in society? At the turn of the 20th Century socially sanctioned intimate partnerships existed primarily in the context of marriage between a man and a woman. These partnerships formed the center of family units and provided a foundation of social stability for the individuals that entered them. Since then, additional forms of intimate partnerships have become more widely accepted through dating and cohabitation, while marriage has become less stable. In this course, we will explore the evolution of marriage as the dominant type of intimate partnership in society and the concurrent rise of dating, cohabitation, and divorce. Using the context of how these intimate partnerships have changed in recent decades, students will explore and define the role these different types of partnerships serve in society today.
Area: Writing Intensive

AS.230.238. Beyond the Wall: The Political Economy of the US and Mexico. 3 Credits.
Examining the exchange of culture, people, and commodities between the United States and Mexico since the 19th century, this course asks not just how US practices and policies have shaped Mexican society, but how, in turn, Mexico has shaped the United States. We will examine the social, political, and economic forces that have long pulled these two societies together – and pushed them apart.

AS.230.239. Coffee, Tea and Empires. 3 Credits.
The course introduces the transformation of the coffee and tea industries in the long nineteenth century against the backdrop of European and Japanese colonial expansion. It surveys the social changes in the colonial world under the development of the cash crop economy. It also analyzes how the consumption of such caffeinated beverages became sources of heritage makings both in the metropoles and colonies and the latter's postcolonial reconstructions.

AS.230.242. Race and Racism. 3 Credits.
Race has been important in social classifications and producing inequalities. This course is designed to provide you with a global understanding of how racial categories are created and maintained, how they change over time, and how they vary from place to place. It is organized in four parts. The first part introduces the concepts and analytical tools used by social scientists to study race. Of particular concern is power and the social construction rather than "natural" categories of race, as well as the general social processes involved in the maintenance and reproduction of these boundaries. In the second part, we will study the theories and dynamics racial category formation in the United States with attention to forms and processes of racial exclusion and oppression, and evidence of socio-economic inequalities based on race. In the third part of the course, we will compare these processes in the U.S. to those occurring in other countries. The fourth and final part of the course examines how race and racism shape political struggles and resistance movements.

AS.230.244. Race and Ethnicity in American Society. 3 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.

AS.230.250. Knowledge, Evidence, and Democracy. 3 Credits.
Fake news. Alternative facts. Follow the science. Misinformation. Disinformation. How can we understand the role of information, evidence, and scientific inquiry in politics? Where does information come from? How is it used? How can evidence, argument, and listening improve public conversations? This seminar will examine the connections between information, knowledge, evidence, and democracy, focusing mostly on the United States but with global examples as well.
Area: Writing Intensive

AS.230.265. Research Tools for Global Sociology and Development. 3 Credits.
This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students.Course previously titled "Research Tools and Technologies for the Social Sciences"

AS.230.304. (Making Space For) Black Thought. 3 Credits.
How do we think about the power relations at work in the scholarship we read and in the important texts we consider essential to our educational experience? This course will critically investigate the role that concepts of race and racism have played in formulating dominant perceptions of who can be the producers of knowledge and what constitutes authoritative knowledge itself. We will consider how and why thinkers and scholarship produced outside of Europe and North America are too often ignored for their scholarly contributions and the dynamics that lead to this situation. We will also explore how and why new and important perspectives emerge from engaging and centering voices from beyond traditional canonical works. With a particular focus on the forms of knowledge arising from European Enlightenment approaches to concepts of thought reason and objective knowledge, this course will critically engage students with a wide range of thinkers such asGWF Hegel, W.E.B. Du Bois, Angela Davis, Ralph Trouillot, Sadiya Hartman, Walter Rodney, Derek Walcott, Sylvia Wynter and Frantz Fanon. This course will focus largely on thinkers engaging within the Black Atlantic and black diaspora traditions to question how we might consider voices and thought from beyond Eurocentric positions in our own scholarly practice.

AS.230.306. Plagues, Power, and Social Control. 3 Credits.
While developments in biomedicine and health care have led to the eradication, cure and management of many human health problems, disease, illness and health have also been the focus for aggressive social controls and population management. The technologies and practices of disease control and health management have been foundational to some of the most aggressive structures of oppression in recent history such as the Jewish Ghetto, the Concentration Camp, the South African Township and techniques of segregation. This course seeks to explore how epidemics and disease control are linked to larger questions of power, state craft and international dynamics. This course asks how have outbreaks of infectious disease shaped social and political action? How do societies respond to outbreaks and why? What do epidemic moments tell us about global structures of power and the dynamics of control? Drawing on historical cases including plague during the European Renaissance and before, the HIV/AIDS Pandemic and the West African Ebola Outbreak of 2013-2016, this course will introduce students to the history and practices of disease control as well as important theoretical perspectives by which to understand the sociological and historical effects of disease and the responses to them. Students will engage sociological concepts such as biopolitics, social construction of disease and illness and biosecurity and produce a final research paper examining the outcomes and responses to an epidemic event to show mastery of the topics covered in the course.
Area: Writing Intensive

AS.230.312. Education & Society. 3 Credits.
This course analyzes educational systems as social institutions and organizations. It gives particular attention to the often taken-for-granted ways that we structure learning in schools and their consequences for social inequality. To these ends, the course will examine classical institutional and organizational theory in sociology and evaluate these theories in their application to historical process of educational formation and the contemporary organization of K-12 schooling in the US.
Area: Writing Intensive

AS.230.313. Space, Place, Poverty & Race: Sociological Perspectives on Neighborhoods & Public Housing. 3 Credits.
Recent national conversations about racial segregation, inequality and the affordable housing crisis raise many important questions—this course focuses on several of these questions, through the lens of urban sociology and housing policy. There are three main areas we will focus on in the course: 1) Understanding the role of racial segregation, neighborhood and housing effects on children and family life; 2) Research methods for studying urban poverty and neighborhoods; and 3) Programs, policies and initiatives designed to house the poor, alleviate concentrated spatial poverty, and increase residential choice. We will primarily focus on issues related to urban poverty in large cities, comparing the patterns of residential mobility and neighborhood characteristics for white and Black Americans. We will utilize archival data, qualitative interviews, census data, and quasi/experimental data to gather evidence about neighborhoods, housing, and policies, as well as their impacts. We will also explore interactive online applications that facilitate the study of neighborhoods (e.g. American Community Survey, GIS with Social Explorer). A statistics/public policy background is helpful, but not required.
Area: Writing Intensive

AS.230.315. Advanced Topics in International Development. 3 Credits.
This class offers an advanced engagement of various topics in international development. The course begins with an historical examination of the actors and global events, as well as the intellectual debates, that birthed the field of international development as a discrete area of study and practice. We will then analyze the evolving theories that dominated the first five decades of the international development effort. The final part of the course will examine more recent perspectives that have attempted to fill the intellectual void left by the demise of the traditional development paradigm. Here we will cover topics that span the global North and South, including issues of race/caste/ethnicity, migration, gender, and right-wing nationalism. Some prior knowledge of international development is recommended
Area: Writing Intensive

AS.230.316. African American Family. 3 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.

AS.230.317. Sociology of Immigration. 3 Credits.
This course surveys sociological theories and research on immigration to the U.S. Theoretical approaches include theories of international migration, economic sociology, immigration, and assimilation. Research topics include the impact of U.S. immigration laws and policies on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population and the U.S. labor market and economy, and the adaptation of the first and second generations.
Area: Writing Intensive

AS.230.318. The Political Economy of Modern India. 3 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Area: Writing Intensive

AS.230.320. Education & Inequality: Individual, Contextual, and Policy Perspectives. 3 Credits.
Area: Writing Intensive

AS.230.322. Quantitative Research Practicum. 3 Credits.
This course provides “hands on” research experience applying sociological research tools and a sociological perspective to problems of substance. Quantitative methods will be emphasized, including how to access publicly available survey data, data management, and the presentation of results. Each student will design and carry out a research project and write a research report. Juniors and seniors only. Sophomores require instructor’s permission.
Area: Writing Intensive

AS.230.323. Qualitative Research Practicum. 3 Credits.
This course provides "hands on" research experience applying sociological research tools and a sociological perspective to problems of substance. Qualitative observational and/or interviewing methods will be emphasized. Students will design and carry out a research project and write a research report. This course fulfills the "research practicum" requirement for the Sociology major.
Area: Writing Intensive

AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Writing Intensive

AS.230.325. Global Social Change and Development Practicum. 3 Credits.
This course provides "hands on" research experience in the field of global social change and development. The course fulfills the "research practicum" requirement for Sociology majors and is required for the GSCD track.

AS.230.327. Sociology of Revolution and Counterrevolution. 3 Credits.
In this course, students will learn about analyzing revolutionary and counterrevolutionary movements, with a focus on their strategic dimensions. Contributions from the military, counterinsurgency, sociology of revolution, historical materialist, world-system, and critical realist literature will provide different visions of strategy and tactics. The cases of Guatemala and Chile in the early 1980s and 1970s, respectively, will provide historical and empirical roots to class discussions about these different approaches and the possibilities of synthesizing them.
Area: Writing Intensive

AS.230.335. Medical Humanitarianism. 3 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.

AS.230.337. Global Crises: Past and Present. 3 Credits.
This course will compare the current global crisis with previous major crises of historical capitalism through a combination of theoretical and historical readings. Throughout, we will ask: What can a study of past crises tell us about the nature and future trajectory of the current global crisis? Special emphasis will be placed on (1) “the late-nineteenth century great depression”, (2) the Great Depression of the 1930s, and (3) the period of crisis and stagflation in the 1970s. We will be particularly concerned to understand the differential social and geopolitical impact of the crises. Which social classes bore the brunt of the disruptions in economic activity in each crisis? Which geographical areas or geopolitical groupings lost out (or benefited) from the crisis? How have environmental and ecological challenges resurfaced in each crisis including today?

AS.230.339. The Geography of Opportunity. 3 Credits.
The schools that children attend and the neighborhoods in which they live are critically important sites of mental and physical development, socialization, and academic achievement. These contexts in which children live and learn are also highly segregated by race and class, resulting in spatially stratified opportunities for social mobility – what social scientists call “the geography of opportunity.” This course explores social inequality through the lens of space, place, and geography, with a particular focus on how these dynamics shape educational inequality in the United States. Drawing on readings from sociology, demography, psychology, history, economics, urban planning, and public health, this course will teach students to think critically about how individual choices and public policies interact with dynamics of space and place to create and maintain social inequality.
Area: Writing Intensive

AS.230.341. Sociology of Health and Illness. 3 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.

AS.230.342. Resistance, Rebellion, and Revolution in Latin America. 3 Credits.
This course will examine the dynamics of transformative social change in Latin America and the Caribbean through analyses of resistance, rebellion, and revolution. Because revolutionary change is at once the most transformative and the most rare, this course will cover the exemplary cases of the Haitian, Mexican, and Cuban revolutions, but then also ask how theorists have understood the dynamics of both open rebellion and of everyday resistance in societies deeply structured by racial, gender, and class power, situated within an unequal world system. Attending to both local and global dynamics, this course will ask how Latin American dynamics have both conformed to and challenged universalist theories of social change.

AS.230.348. Climate Change and Society. 3 Credits.
This course will focus on the social dimensions of climate change. Drawing on global and multi-disciplinary scholarship, we will address such issues as: the history of fossil capitalism; the relationship between social inequality and “vulnerability” to climate change (including heat waves, drought, rising seas, and extreme weather); climate migration and the political economy of “adaptation”; the merits of various mitigation strategies, including the Green New Deal, conservation offsets, and geo-engineering; the roots of climate denialism; and climate justice movements. Students will write a final research paper on a sociological aspect of climate change.
Area: Writing Intensive

AS.230.349. Class, Race, and Political Struggle in Capitalist Societies. 3 Credits.
Does capitalism promote democracy and stability, or repression, racial conflict, and social unrest? Following the 2008 financial crisis, countries around the world have experienced severe economic and political crises, giving rise to explosive movements that have challenged the viability of capitalism and democracy as durable systems. By considering these developments, this course examines the core political dimensions of capitalist societies. We will define and discuss key terms, like capitalism, racial capitalism, the capitalist state, democracy, social movements, and more. We will pay special attention to the ways in which the economic, political, and ideological structures of capitalist societies shape and are shaped by social movements and political parties. The course is global in perspective, drawing on developments in many countries, with a special focus on the United States.
Area: Writing Intensive

AS.230.350. Capitalism, Dependency, and Development in Latin America. 3 Credits.
This course examines Latin American insertion into the global capitalist economy from the colonial period to the present. Examining various historical, sociological, and political-economic theories, this course will ask not only how Latin American economies and societies have developed their particular characteristics, but also how theorists within and outside the region have understood Latin American development over time.development over time.

AS.230.352. Chinese Diaspora: Networks and Identity. 3 Credits.
This course combines lecture and class discussion. It examines the history and historiography of Chinese overseas migration. Major issues include overseas Chinese as “merchants without empire,” Chinese exclusion acts in the age of mass migration, the “Chinese question” in postcolonial Southeast Asia, as well as the making and unmaking of Chinese identity in the current wave of globalization.
Students may not have completed AS.230.217 previously.

AS.230.354. The City After Civil Rights. 3 Credits.
This course examines how American cities have evolved since the United States ratified the radically new vision of race promoted by the Civil Rights Movement in the 1960s. We will study the changing geography of race and class in American cities and their surrounding suburbs and what that evolution has meant for inequality. We will also consider how this shifting geography of race and class affects current debates in metropolitan policies like gentrification and tax policy. We will look to the future to examine what issues might come about in the coming decades and how we might avoid similar problems to those in history.

AS.230.356. Power, Privilege, and Inequality. 3 Credits.
Race, class and gender are among key factors in systematic patterns of inequality in the United States (and globally). In this course, we examine the manner in which social inequality comes about and is maintained through a range of social institutions and daily social interactions. This class will examine how social institutions and daily social interactions structure the decisions individuals make and, in turn, how the decisions that individuals make serve to perpetuate or challenge existing social institutions and interactions. We will explore how the intersection of different forms of inequality, for example race and class or class and gender challenge traditional conceptions of inequality and provide insight into the processes that perpetuate inequality. We will use these sociological tools to develop what sociologist C. Wright Mills calls the "sociological imagination" and apply this imagination to contemporary debates in American society. We will discuss how the sociological imagination differs from the approach other disciplines in social science might take to study inequality.

AS.230.357. Baltimore and Beyond. 3 Credits.
This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore's history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City's programs and policy approaches to addressing the city's most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only.
Area: Writing Intensive
Students that took AS.360.357 may not take AS.230.357

AS.230.358. The Politics of Mental Health. 3 Credits.
This course examines how the psy disciplines – psychology, psychiatry, psychotherapy and related fields – create knowledge about the mind, and how these fields have in turn shaped political and social life since early 20th century. We will explore how the psy disciplines have proven useful to projects of state building by reconstructing the human mind as a calculable, quantifiable entity, one that can be measured and governed across diverse educational, military, and healthcare settings. We will then ask how psychiatric categories such as bipolar disorder and PTSD (post-traumatic stress disorder) were created, and consider their impact on both the legal/medical management of illness and on lay and expert notions of sanity and normality. Finally, we will examine the rising influence of humanitarian mental health interventions, and immerse ourselves in the debates they have engendered concerning the use of psychotherapy to alleviate suffering in war and disaster zones.
Area: Writing Intensive

AS.230.363. Sociology of Dispossession. 3 Credits.
The "grabbing" of land and natural resources has, in recent years, generated widespread political conflict across the world and put dispossession on the agenda of academics and policy-makers. Nevertheless, compared to other social relations of power, land dispossession has not been central to scholarly or public understandings of capitalism, the state, development, or politics. In this class, we will collectively explore the nascent field that we might call the sociology of dispossession. We will examine existing theories of dispossession, and proceed to challenge, reconstruct or supplant those theories as we consider a wide range of historical examples of dispossession from the English Enclosures and colonial plunder to contemporary urban redevelopment and rural land grabs. This is a reading- and writing-intensive seminar.
Area: Writing Intensive

AS.230.366. Black Social Thought and Social Movements. 3 Credits.
This course will examine the reciprocal relationship between Black social thought and social movements. How have social movements informed thinkers who grapple with questions of freedom and liberation in racially and economically stratified societies, and how have their ideas affected movement tactics? This course will look at 20th century movements and investigate connections between theory and practice through concepts like civil disobedience, internal colonialism, Black feminism, Black internationalism, and others.
Area: Writing Intensive

AS.230.367. Islamic Finance. 3 Credits.
Today, Islamic finance is a global industry comprising nearly $3 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called "Islamic finance" existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on usury in Islam and other religious and philosophical traditions, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.

AS.230.369. Sociology in Economic Life. 3 Credits.
This course discusses how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor.

AS.230.370. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Students may not have previously taken AS.230.223.

AS.230.378. Refugees, Human Rights, and Sovereignty. 3 Credits.
What is a refugee? Since World War II, states that have pledged to offer protection to refugees have frequently been drawn instead to the dictates of nationalism and communitarianism, which prioritize concern for their own citizens, rather than to the needs of forced migrants. As a result, even those migrants that have been formally recognized as refugees according to the 1951 UN Refugee Convention have not been assured of protection, and other migrants have been even less assured. In this course, we will locate the reasons for this reality in the legal, political, and historical underpinnings of political asylum. What is the difference between an asylum seeker and a refugee? How has the refugee category been redefined and contested by international bodies since 1951? How are the ambiguities of real-life violence and persecution simplified in asylum adjudication interviews that require clear, factual narratives? What kinds of protections are offered to asylum seekers, whether by UN bodies, NGOs, or host governments, and how have such protections varied geographically and historically? Finally, what protections, if any, are afforded to those migrants who are fleeing not persecution but rather “merely” endemic poverty or climate-induced displacement? The course draws on literature from sociology, history, anthropology, and international refugee law in order to understand the capacity (or lack thereof) of human rights discourses and declarations to contravene state sovereignty in the name of protecting the rightless.

AS.230.385. Schooling, Racial Inequality and Public Policy in America. 3 Credits.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual’s family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement as well as the development and later evaluation of school desegregation policies. The course also considers case studies of current policy debates in the US, such as housing segregation and school resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.
Area: Writing Intensive

AS.230.386. The Making of the Asian Races Across the Pacific in the Long 20th Century. 3 Credits.
Focusing on the race-makings of the Asians across the Pacific in the long twentieth century, the course employs the reading materials that elucidate the constructions about the demographic categories of the Asian "races." We use prewar Japanese materials and Chinese nationalist thoughts to elaborate on the following themes: the internal distinction among the peoples grouped under the racial category of the Asians; the overall presentation about the generic category of the "Asian" peoplehood, as well as their alleged shared civilization and interests. The theoretical framework include concepts of capitalist reconfiguration of social boundaries through racism and the question of power behind the reproduction of racial hierarchy.

AS.230.388. Sociology of the Family. 3 Credits.
Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children’s wellbeing, balancing work and family responsibilities, domestic violence, and government policy toward families.

AS.230.389. The Value of Life: Racism, Capitalism and Health. 3 Credits.
We are generally told that you can’t put a price on life or a price on our health but lives are quantified, valued and priced every day. In this class we will explore the ways in which life is valued in the modern world, its effects and the outcomes from it. We will also examine how forms of quantification and valuation have been employed to dehumanize and subjugate peoples, especially those racialized as different. Beginning with an exploration of human pricing during the trans-Atlantic Slave trade and continuing through to contemporary health care and health insurance practices, this course will examine how we value (monetarily) human existence in modernity. This course will introduce students to ideas emerging out of the Black Marxist Tradition, postcolonial thought, and critical feminist approaches to historical research. From the examination of insurance under slavery to the use of race corrections in medical algorithms, this class will confront students with the question- "how can we put a price on life?" and most importantly "Should we?".
Area: Writing Intensive

AS.230.393. Global Health and Human Rights. 3 Credits.
Is access to healthcare a fundamental human right? If so, then which global actors are obligated to provide healthcare to whom, and for how long? How do meanings of health and illness vary across time and place? And finally, how are human rights principles translated into frontline practice in order to promote well-being? This course takes a critical interdisciplinary approach to these questions through a series of global case studies ranging from humanitarian aid in post-tsunami Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana. How do international NGOs, UN bodies, and governments collaborate (or compete) to distribute healthcare in places beset by dire resource shortages? Do human rights principles carry legal weight across borders, and if so, could access to healthcare services and essential medicines be litigated in order to compel governments to provide it? And finally, what cultural assumptions do human rights discourses carry with them, and what happens if rights-based approaches are poorly received by recipient populations? Moving beyond the basic principle of healthcare as a human right, this course aims to bring this idea’s history and politics into focus by offering an in-depth exploration of its ethics and implementation.
Area: Writing Intensive

AS.230.394. Social Statistics. 4 Credits.
The application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.

AS.230.395. Contemporary Social Theory. 3 Credits.
What is the structure of society, how does it change, and how is it reproduced? What is the relation between social structures and our ideas about them? What are the conditions of possibility for human freedom? This course will examine how major social theorists of the 20th century advanced novel answers to these questions as they grappled with the historical events and social concerns of the 20thcentury—the Russian revolution and its degeneration into Stalinism, the failure of communist movements in the West, the rise and fall of fascism and Nazism, the consolidation of capitalist democracies and welfare states, the emergence of anti-colonial movements in the "Third World," and the persistence of race, gender and sexuality as forms of domination. In addition to understanding and comparing theories, we will assess their usefulness for understanding the present. This is a reading and writing-intensive seminar.
Area: Writing Intensive

AS.230.396. Politics and Society. 3 Credits.
This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, sources of authority, the relationship between political and economic power, the nation-state and nationalism, states and war, ideology and political contention, collective identity, social movements, and social revolutions. Fulfills Comparative Politics for International Studies.
Area: Writing Intensive

AS.230.397. The Political Economy of Drugs and Drug Wars. 3 Credits.
In the United States, we spend more than $100 billion annually on illegal drugs—and the government spends more than $50 billion a year to combat their sale and use. These statistics raise important and complicated social questions. This course will examine the production, sale, use, and control of illegal drugs from a historical and sociological perspective. We will have three objectives: to understand the social construction of drug use and illegality in the United States and other rich countries; to uncover the political and economic consequences of drug trafficking in those countries that produce drugs, particularly in Latin America; and to examine the political economy of drug control through the so-called War on Drugs, both domestically and internationally.

AS.230.405. Neoliberalism. 3 Credits.
Neoliberalism, a political project that seeks to subject all aspects of social life to free market force, has ascended to orthodoxy in developed and developing countries alike over the last four decades. This course is a reading seminar focused on some of the key classic and cutting-edge original texts that critically examine and debate the origins, socio-political impacts, and crisis of the neoliberal project. It will cover such topics as the genealogy of the neoliberal idea, neoliberal state, informalization of works, neoliberal cities, rise of the one percent, and global governance. Class will be a mix of lecture and seminar-style discussions. Requirements include reading memo, class presentation, and a term paper.
Area: Writing Intensive

AS.230.415. Social Problems in Contemporary China. 3 Credits.
In this course we will examine contemporary Chinese society, looking at economic development, rural transformation, urbanization and migration, labor relations, changes in class structure and family organization, health care, environmental problems, governance, and popular protest. The course is designed for both graduate and undergraduate students. Undergraduates must have already completed a course about China at Hopkins. Cross-listed with East Asian Studies.
Area: Writing Intensive

AS.230.418. Racial Capitalism: A Sociological Perspective. 3 Credits.
This course provides theoretical and historical approaches to examining the centrality of racism, imperialism, and colonialism to the origins and ongoing functioning of capitalism and the global political economy. We begin with the dominant theoretical frameworks used to study capitalism and carefully juxtapose these with theory and empirical analyses foregrounding capitalism's connections to racial slavery/racialized labor exploitation, imperialism, colonialism, and gendered exploitation. Following this, we examine the unfolding of capitalism in the post-emancipation, post-independence, and neoliberal periods, paying close attention to inequalities produced within and between nations. We end by examining resistance to racial capitalism, as well as imagining alternative futures.
Area: Writing Intensive

AS.230.420. Class, Capitalism, Colonialism: Evaluating the work of Walter Rodney. 1 Credit.
This course will focus on key writings of Guyanese scholar and intellectual, Walter Rodney (1942-1980) with an emphasis on evaluating his legacy and the relevance of his work for the 21st century, globally and locally. The main course readings are Rodney's three major books—(1) How Europe Underdeveloped Africa; (2) History of the Guyanese Working People; and (3) Groundings with my Brothers. The course will provide students with the background necessary to participate in the January 31, 2020 workshop on the legacy of Walter Rodney organized by the JHU Arrighi Center for Global Studies.

AS.230.430. Sociology of Policing and Resistance in Race-Class Subjugated Communities. 3 Credits.
Policing has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities, and has been a site of resistance and freedom struggles since the first Reconstruction. In this undergraduate seminar, we will survey key debates around policing and social movements, with a particular focus on research that takes institutional development, history, and racial orders seriously. A core preoccupation of this course will be to understand the ways in which policing "makes race" and how debates about crime, surveillance, and safety were often debates about black inclusion and equality. We will explore changes in the racial logics of policing over time, debates over how policing helped construct the racial order, and the consequences of several shifts in policing for communities. From broken windows policing in New York to the emergence of the new vagrancy-style banishment laws in urban Seattle to the men who live under constant surveillance in Philadelphia and to the large share of blacks in Ferguson with outstanding warrants for 'failure to appear", these policies and policing regimes have helped remake the government in the eyes of the urban poor. How does exposure to criminal justice interventions shape political learning, racial lifeworlds, and community social capital? The course will include a range of methods (ethnography, historical analysis, quantitative and qualitative).
Area: Writing Intensive

AS.230.440. Port Cities and Historical Capitalism in Maritime Asia. 3 Credits.
The goal of the seminar is to examine the prospects and limits of understanding the incorporation of Asia in the capitalist world-system from the prism of oceanic connections. The theoretical thrust of this course is to develop but also to adapt Janet Abu-Lughod emphasis on the connections across port cities and littoral in the Afro-Eurasian continents before the long sixteenth century in her Before European Hegemony. But instead of looking at a port city as its adjacent hinterland polity's gateway to global trade in the premodern era, the course examines the multifarious coast-hinterland relationships. The readings are organized by a chronological order, which begins with the historical maritime silk road between the third and thirteenth centuries, and will be followed by Asian port cities in the European age of empire and postwar American-led Cold War Structure, as well as the present-day Chinese New Silk Road Diplomacy. Students are expected to select an issue of regional tensions and to analyze its historical root.

AS.230.445. Sociology of Religion. 3 Credits.
This seminar tackles major issues in the classical and contemporary sociology of religion. We begin with Ibn Khaldun, Friedrich Nietzsche, Karl Marx, Max Weber, Émile Durkheim, and Mary Douglas, asking basic questions: What are religion and the sacred? Why do they exist? What is the relationship between religion and social structure? And what role does religion play in morality, solidarity, boundaries, exploitation, patriarchy, and macrohistorical transformations such as the rise of capitalism? Keeping this theoretical grounding (and its flaws and biases) in mind, we continue to probe the problem of religion in modernity through more-recent writings. Topics include the secularization debate (Are modernity and religion antithetical?); "religious markets" and rational-choice theories of religion; religious revivalism, evangelicalism, fundamentalism, and proselytizing movements; feminist and queer sociologies of religion; civil religion (Is standing for the national anthem a religious act?); embodiment and prayer; Orientalism and postcolonial interrogations of the secular; religious violence and nationalism; the intersectionality of religion with race, class, and caste; and religion and neoliberalism. Although dominant sociologies of religion have focused on Christianity in Western Europe and North America, this course applies a global lens, training significant focus on non-Western and non-Christian contexts.
Area: Writing Intensive

AS.230.465. Labor in the World System. 3 Credits.
This is an intensive reading seminar on working class formation from a comparative, historical and global perspective, including theoretical and empirical (case study) readings on changes over time in labor process, labor markets, and labor movements. We will build on a range of local case studies to establish spatial and temporal patterns, and discuss the connections between these global patterns and the dynamics of historical capitalism.
Area: Writing Intensive

AS.230.500. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.230.501. Research Assistantship. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.230.507. Internship. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.230.511. Honors Research Seminar. 3 Credits.
This seminar is a workshop for Sociology majors writing senior honor theses. It is part of the two-semester Senior Honors Program. Students must complete an application to enroll in the Honors Program [https://soc.jhu.edu/wp-content/uploads/sites/28/2021/04/Sociology-Honors-ThesisApplication.pdf] before registering for this seminar. Typically, students first take the seminar and then enroll for the Honors Independent Study (230.512) with their thesis advisor in the second semester of the Program. The seminar is designed to assist students in the early phase of their honors thesis research and to provide a community of peers who are writing theses.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.230.512. Honors Independent Study. 3 Credits.
TBA
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.230.598. Summer Internship. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.230.600. Introduction to Social Statistics.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.

AS.230.602. Theories of Society.
This course will examine how important schools of social theory challenged and reconstructed the "classical" theories of Marx, Weber, and Durkheim as they grappled with the historical developments and social concerns of the 20th century.

AS.230.603. Contemporary Social Theory.
This course will examine how important schools of social theory challenged and reconstructed the "classical" theories of Marx, Weber, and Durkheim as they grappled with the historical developments and social concerns of the 20th century.

AS.230.604. Linear Models for the Social Sciences.
This course provides an accessible but in-depth coverage of multiple regression with a focus on sociological problems and software applications. We begin with the basics of linear regression, including estimation, statistical inference, and model assumptions. We then review several tools for diagnosing violations of statistical assumptions and what to do when things go wrong, including dealing with outliers, missing data, omitted variables, and weights. Graduate students should have completed AS.230.600 or equivalent. Undergraduates admitted with instructor's permission and AS.230.205 or equivalent.

AS.230.605. Categorical Data Analysis.
This course provides the students with a set of statistical tools to understand and interpret social science research dealing with categorical dependent variables and to prepare students to apply these models in their own research. The models covered in the course include logit, probit, Poisson, and log-linear models, as well as multi-level models of categorical dependent variables.

AS.230.608. Proseminar In Sociology.
Individual one-hour presentations by faculty members will introduce students to the faculty's substantive interests and research styles.

AS.230.609. Dissertation Seminar.
Advanced seminar for PhD students who are preparing their dissertation proposals or writing their dissertations. Sociology graduate students only.

AS.230.611. Seminar on Comparative & World-Historical Sociology.
In this seminar we will read key texts in comparative sociology. The topics covered are cross-national sociology, comparative national development, comparing world-systems, the modern world-system, globalization, and social movements.

AS.230.612. Seminar on Social Inequality.
This course covers the sources of inequality in contemporary metropolitan areas. It will investigate traditional and contemporary theories that explain the sociological processes that lead to inequality and the methods used to provide empirical evidence.

AS.230.614. Seminar On The Family.
A discussion-oriented seminar focused on major recent writings on the family, in both the developed and developing nations.

AS.230.615. Sem:Panel Data Analysis.

AS.230.617. Seminar on Immigration.
In-depth reading and discussion of theories and research on immigration to the U.S. theoretical issues include international migration, immigration, and assimilation. Research topics include: the impact of U.S. immigration laws on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population, and the adaptation of the first and second generations. The course focuses on immigration since 1965 and its related controversies and debates.

AS.230.618. Introduction to Computational Social Science.
Computational social science is an interdisciplinary field combining social science and data science. Today's digital age presents both opportunities and risks to social scientists with the availability of increasingly big and complex data that depart from traditional data in remarkable ways. This course offers a foundational basis for social science students to embark upon the field. The weekly 2-hour seminar introduces the topics of big data ethics; research designs for the collection and use of digital trace data, automated texts, government administrative data, and large-scale social network data; new forms of surveys and experiments; and mass data collaborations. Research publications are used to illustrate each topic. The weekly 1-hour labs are for group activities on the weekly topic. There are no social science or data science prerequisites.

AS.230.643. Sociological Analysis.
An intensive analysis of a wide range of sociological studies, designed to acquaint the student with how sociologists deal with important theoretical issues, using a variety of methods and sources of data. Particular attention will be paid to the logical coherence of the studies and to the fit between data and interpretation.

AS.230.646. Race and Ethnicity in American Society.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.

AS.230.649. Qualitative Research Methods: Domestic and International Fieldwork.
The emphasis of this course will be on participant observation and interviews in a fieldwork context (that is, research that takes place in the space and time of "subjects" rather than the observer). While the best way to learn a method is by doing, the pandemic is likely to make a practicum impossible this semester. Therefore, the course will be structured around reading classic or illustrative monographs and articles based on qualitative fieldwork, in both a US and global context. This will be supplemented with a smaller number of methodological texts to introduce different conceptions of science used or assumed by qualitative sociologists. We will also address practical skills like taking ethnographic fieldnotes.

AS.230.650. Macro-Comparative Research.
The course examines methods of studying long-term, large-scale social change. Both qualitative and quantitative methods are covered.

AS.230.651. Political Sociology.
This seminar surveys key problems of political sociology including the rise of the modern state, the relationship between political and economic power, the origins and nature of liberal democracy, the nation-state and nationalism, states and war, sources of authority, identity and political contention, social movements, and social revolutions. This is a graduate level class that will meet together with "Politics and Society", an advanced undergraduate class.

AS.230.675. Arrighi General Seminar.

AS.230.680. Confronting Epistemological Silences in Social Theory.
How do we think about the power relations at work in the scholarship we read and in the important texts we consider essential to our educational experience? This course will critically investigate the role that concepts of race and racism have played in formulating dominant perceptions of who can be the producers of knowledge and what constitutes authoritative knowledge itself. We will consider how and why thinkers and scholarship produced outside of Europe and North America are too often ignored for their scholarly contributions and the dynamics that lead to this situation. We will also explore how and why new and important perspectives emerge from engaging and centering voices from beyond traditional canonical works. With a particular focus on the forms of knowledge arising from European Enlightenment approaches to concepts of thought reason and objective knowledge, this course will critically engage students with a wide range of thinkers such asGWF Hegel, W.E.B. Du Bois, Angela Davis, Ralph Trouillot, bell hooks, Walter Rodney, Gayatri Spivak, Sylvia Wynter and Frantz Fanon. This course will focus largely on thinkers engaging within the Black Atlantic and black diaspora traditions to question how we might consider voices and thought from beyond Eurocentric positions in our own scholarly practice.

AS.230.685. TRP Seminar I.
This seminar includes all members of the second year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students develop proposals for their Trial Research Papers. The course will also include a series of professional developments seminars. For Sociology PhD students only.

AS.230.690. TRP Seminar II.
This seminar includes all members of the third year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students revise the final drafts of their Trial Research Papers. For Sociology PhD students only.

AS.230.800. Independent Study.

AS.230.801. Research Assistantship.

AS.230.802. Dissertation Research.

AS.230.804. Research Apprenticeship.

AS.230.810. Dissertation Fellowship Semester.

AS.230.811. Teaching Assistantship.

AS.230.815. Trial Research Paper I.

AS.230.816. Trial Research Paper II.

AS.230.817. Trial Research Paper III.

AS.230.825. Summer Research.

Cross Listed Courses

Center for Africana Studies

AS.362.115. Introduction to Police and Prisons. 3 Credits.
This introductory course will examine policing and prisons in the United States and beyond, with a focus on racial inequality. It will consist of three parts. First, we will define key concepts in police and prison studies. Then, we will explore the contemporary state of prisons and policing in the United States and look at debates around the rise of “mass incarceration” and aggressive forms of policing in the final third of the 20th century. Third, we will explore policing and prison in other parts of the globe in the contemporary moment, highlighting similarities and differences from the U.S. case. What can studying the instruments of social control in other societies reveal about our own? Students will develop an understanding of major trends, keywords, and debates in the literature on policing and prisons, with particular reference to race and racism.

AS.362.118. Cutting Through the Gaze: An Introduction to Social Justice Cinema. 2 Credits.
This course will introduce students to the fundamentals of community-engaged documentary filmmaking with a focus on both theory and practice. It will examine documentary filmmaking as an educational tool for raising social- and racial- justice issues from an African diasporic and global perspective. The course is taught by award-winning professional documentary filmmakers. Students will produce their own 3-5 minute film or audio podcast. Students will select their documentary film topic, conduct their own research, and move from pre-production into production. No prior experience in filmmaking is required for this course.

AS.362.160. Land, Labour and Environmental Rights and Struggles in Contemporary Africa. 3 Credits.
‘Africa rising’ has become an influential, albeit contested, narrative used by institutions like the International Monetary Fund and World Economic Forum to describe the rapid economic growth in 21st century Africa. This rapid ‘economic growth has been accompanied by another type of ‘Africa Rising’ – a mushrooming of social protest and popular uprisings across the continent. The course will introduce important theoretical perspectives, debates, and examples to equip students to critically examine contemporary social dynamics through the interconnected themes of land, labor and environmental rights and struggles that have gripped the African continent. What has given rise to these awakenings? Who are the actors involved in these actions? What are their demands and strategies? What lessons does it hold for social movement theory and development more broadly? The first section focuses on land reclamation movements, the new wave of ‘land grabs’ and responses from below. The second section presents the role of labour movements and its intersection with popular uprisings. The third section considers responses from communities and movements to the ecological destruction and climate change.

AS.362.315. Black Against Empire. 3 Credits.
This course will examine the confrontation of Black social movements with imperialism in the twentieth century. How, we will ask, have key Black internationalist thinkers conceptualized and defined diaspora, capitalism, imperialism, war, and the global? What have been the effects of war and repression, as well as economic growth and globalization, on Black internationalism? Readings may include texts by W.E.B. Du Bois, Angela Y. Davis, Frantz Fanon, Ashley Farmer, Claudia Jones, Robin D.G. Kelley, Claude McKay, Huey P. Newton, Walter Rodney, Malcolm X, etc. Students will complete a research paper on a topic of their own choosing related to Black internationalism in the twentieth century.
Area: Writing Intensive

AS.362.402. Arts and Social Justice Practicum. 3 Credits.
This course provides students with an opportunity to explore art and social justice and its history in Baltimore and the Black Arts Movement through the creation of student-led artistic projects. Students will examine their creative practices and how they can be used to advocate for change. Local artist and scholars will share their expertise providing lived experiences of using art as a call to action. At the end of the semester, students will present their projects in a public showcase of student work through film, poetry, photography, painting and other visual media. (No prior artistic training necessary.)

East Asian Studies

AS.310.210. Documentary Photography in a Changing China. 3 Credits.
This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP).

AS.310.230. Chinese Politics and Society. 3 Credits.
This introductory course will familiarize students with the major dynamics of political and social change in contemporary China since 1949. The course will be divided chronologically into four main topics: 1. The contested processes of nation-state making in modern China before 1949; 2. The making of the socialist system during the Mao Years and its dismantling since 1978; 3. The Reform Era transformation to a market economy with Chinese characteristics; 4. The dynamic relationships among the state, market and society since the new millennium. Students will explore how scholars have explained major political and social changes with reference to individual and collective rationalities, specific organizational and institutional arrangements, and specific strategic and cultural mechanisms of Chinese political and social habits.

AS.310.326. Labor Politics in China. 3 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Area: Writing Intensive

AS.310.340. Development and Social Change in Rural China. 3 Credits.
This course will survey the major issues of development and social change in rural China since 1950s. These issues will be addressed in chronological order. They include land ownership and land grabbing, organization of rural economic, political, and social life, rural elections and village governance, development strategies, urban-rural relationship in resource allocation, rural modernization strategies in regard to irrigation, clean drinking water, electricity supply, hard paved road, education and rural medical service, women's rights and family life, rural consumption, and etc. This course will prepare students, both empirically and analytically, to understand what happened in rural China from 1949 to the present, and how we can engage in policy and theoretical discussions based on what we learn.

First Year Seminars

AS.001.127. FYS: Public Opinion and Democracy. 3 Credits.
How does public opinion shape electoral behavior and the contours of democracy in the United States, and how have these relationships changed as techniques for measuring public opinion have evolved since the early twentieth century? To consider this question, the course introduces alternative perspectives on the features of a healthy democracy, including both historical perspectives and current arguments. Interweaved with this material, the course examines how public opinion is measured and interpreted by private pollsters, survey researchers, and data journalists. Emphasis is placed on the alternative claims that opposing analysts adopt, as well as how the technologies of data collection and analysis shape the permissibility of conclusions. Students will learn to interpret public opinion patterns, which requires a brief presentation of basic concepts from survey sampling, including what to make of the polling industry's most boring concept: margin of error.

AS.001.136. FYS: Cults, Communes, and Conspiracies. 3 Credits.
Cults, communes, and conspiracies are unusual social and ideological organizations. How should we understand their origins, structure, and functioning? In our First-Year Seminar, we will assess the value of alternative explanatory concepts from the social sciences, such as charismatic leadership, organizational ecology, network structure, status competition, social influence, and belief propagation. We will then interpret cases in comparative perspective, asking, for example, how cults differ from religious sects, how communes differ from political movements, and how organized crime groups differ from legal businesses.

AS.001.151. FYS: Citizenship and Society in the United States. 3 Credits.
Popular sovereignty — the idea that the people rule themselves — has been heralded as one of the preeminent innovations of the modern world. And over the course of the last two hundred or so years, a rising tide of nations committed themselves to the principles of popular sovereignty. Yet in recent years, the inevitability, soundness, and very viability of "rule by the people" has come into question. On the one hand, popular uprisings around the globe have rejected the decisions and practices of governing elites on the grounds that they are out of touch with the people's needs. On the other hand, these uprisings have resurrected and strengthened authoritarian practices and have facilitated the erosion of liberal rights long considered instrumental to preserving democracy. The result — turmoil, unrest, and uncertainty about what the future holds — is evident from Venezuela to England, Turkey to the United States. Can popular sovereignty survive? In what form will the people rule, and at what cost?This First-Year Seminar is an investigation into the idea and practice of popular sovereignty in the contemporary United States. We will explore this topic by actively consulting theory and empirical research in the social sciences. We will supplement this with our own research on the 2022 election, media coverage of issues, popular attitudes about democracy, and popular representation in government and by interest/advocacy groups.Additionally, this class is organized as a collaboration between two first-year seminars: one at Johns Hopkins, the other at Williams College. Over the course of the semester, the two seminars will meet frequently via videoconference to share research and discuss readings and ideas. This is intended to broaden the perspectives brought to bear on our investigation generally and, specifically, to allow each group to share real time research on the politics of the region in which their respective institutions are located.

AS.001.168. FYS: The Psychology of Mass Politics in the U.S.. 3 Credits.
Taught during the election season of 2022, this First-Year Seminar looks at the deeper psychological motivations of the American electorate. We begin by discussing the meaning of democracy and establishing a common understanding of American democracy specifically, placing the current moment into historical and international context. We then gradually dismantle the "folk theory" of democracy that assumes all voters are rational and economically-minded. Instead, we apply theories from social psychology to understand some essential questions about voter behavior. Why do people vote? How do they understand politics? How are their feelings and judgments affected by their own identities, biases, information sources, and by the messages they hear from leaders? Why have Americans grown so polarized? What role do racial and gender-based prejudice play? Is American politics headed toward a more violent future? We use evidence-based research from political science, sociology, and psychology to answer these questions.

AS.001.187. FYS: Gender x Aging x Health in America. 3 Credits.
In this First-Year Seminar students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the ntersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.

Interdepartmental

AS.360.247. Introduction to Social Policy and Inequality: Baltimore and Beyond. 3 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Area: Writing Intensive

AS.360.401. Social Policy Seminar. 3 Credits.
This course is designed for students who have completed either the Baltimore intensive semester of the Social Policy Minor. The students will make presentations and pursue joint projects based on what they have learned during the intensive semesters concerning key social policy issues.

AS.360.626. Latin America in a Globalizing World II.
The second in a two-semester graduate sequence, this course will be for graduate students and faculty to collaboratively workshop their own research and writing on topics related to Latin American studies.

Political Science

AS.190.300. Racial Inequality, Policy and Politics in the US. 3 Credits.
While policies were passed to ensure equal opportunity for racially subjugated Americans, the United States witnessed increasing stratification of wealth and income and deepening concentration of poverty, stagnation in closing racial gaps, and new forms of inequality posed by the striking upsurge in contact with the criminal justice system at the bottom of the skills ladder and concentration of wealth at the top. At the same time, the welfare state came under attack and faced challenges posed by an aging population, women entering the labor force, deindustrialization, and international pressures of globalization. Social spending withered in some areas while spending on citizens was increasingly likely to happen through tax expenditures and private means. This course investigates the politics around these developments and competing perspectives in debates over redistributive policies in the United States and their impact on inequality, particularly race and gender inequality. We will examine the contours of inequality and explanations for why it has expanded over the past several decades. We explore why the US is exceptional in both the level of inequality it tolerates and the generosity and types of remedies to alleviate poverty in comparison to its European counterparts and debate the role of race, unions, electoral politics and institutions. We investigate several specific cases of persistent racial inequality – concentrated poverty, segregation, and incarceration. We investigate both how policies have reinforced racial and gender divisions from a top-down perspective as well as examining under what conditions the disadvantaged contest inequality, exploring how political struggle shapes policy from the bottom-up. The last part of the course examines the consequences of inequality and social policy for representation and citizenship and how economic inequality affects political representation and responsiveness of elites to masses.

AS.190.433. Race and the Politics of Punishment in the US. 3 Credits.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold for citizenship. In this advanced undergraduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history and racial orders seriously. Why did the carceral state expand in "fits and starts" and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system "makes race" and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields - history, sociology, law and criminology - and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad's Condemnation of Blackness: race, Crime, and the Making of Modern Urban America, Elizabeth Hinton's From the War on Poverty to the War on Crime, David Oshinsky's Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western's Punishment and Inequality in America, and Michael Fortner's Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Area: Writing Intensive

AS.190.437. Race and Ethnic Politics in the United States. 3 Credits.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the "struggle with difference" within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Writing Intensive

AS.191.303. Critical Race Theory, Law, and Criminal Justice. 3 Credits.
In this course, students will gain a foundational understanding of critical race theory, including its genesis in legal theory. The course will examine its relationship and importance to social movements, including through key concepts like intersectionality. The course will also use critical race theory to grapple with law, racial segregation, and the criminal justice system in the United States.
Area: Writing Intensive

Sociology, Bachelor of Arts

Sociology Major Requirements

(Also see Requirements for a Bachelor's Degree (p. 1587).)

A major in sociology offers undergraduates a variety of post-graduation opportunities. Graduates from the department have found positions in financial institutions, education, non-governmental organizations focusing on international development, research departments of major corporations, and local government social service agencies. Others continue to graduate school in sociology, public health, law, urban planning, and education. A major in sociology can also be combined with the pre-medical course sequence, resulting in a medical school candidate who is well versed in the hard science of the human body and the social science of the human experience. For more details, please visit http://soc.jhu.edu/undergraduate/.

The required courses for a major in sociology provide students with a fundamental understanding of sociological theory, methods, and social statistics. Beyond these core requirements, elective courses are offered on a range of important sociological themes, including gender and family, social structure and personality, education, race and ethnicity, immigration, political sociology, international development, and the evolution of a world social system. All courses must be taken for a letter grade and a grade of C or better is required. At least nine of the eleven required Sociology classes must be taken at JHU. Foreign language study is not required, but it is strongly encouraged, especially for students considering graduate or professional study.

Code	Title	Credits
Core Courses		
AS.230.101	Introduction to Sociology	3
AS.230.202	Research Methods for the Social Sciences	3
AS.230.205	Introduction to Social Statistics (or alternate statistics course and additional Sociology course at least 3 credits) [1]	4
AS.230.213	Social Theory	3
AS.230.322	Quantitative Research Practicum	3
or AS.230.323	Qualitative Research Practicum	
or AS.230.325	Global Social Change and Development Practicum	
Sociology Electives [2]		
Six elective courses in sociology, at least four must be non-introductory courses (at the 200-level or above).		18
Additional Social Science Electives		
Three non-sociology courses at any level carrying an "S" area designator in at least two other departments or programs. These may be at any level.		9
Total Credits		**43**

1 Alternative statistics courses typically offered include: EN.553.111 Statistical Analysis I, EN.553.211 Probability and Statistics for the Life Sciences, EN.553.310 Probability & Statistics for the Physical Sciences & Engineering, EN.553.311 Probability and Statistics for the Biological Sciences and Engineering, and AS.280.345 Public Health Biostatistics. If a student completes one of these alternate statistics courses, then an additional Sociology elective course (AS.230.1xx-AS.230.4xx) at least 3 credits is required.

2 Six elective courses within the department and three elective social science courses in other departments enable students to customize their program of study. Depending on a student's interests and objectives, these courses may focus on a single theme, concentrate on a small set of themes, or sample the specific interests of the department's faculty. Whichever approach is taken, the goal is to craft an individualized program of study that will be a fulfilling intellectual experience. Constructing a personally satisfying roadmap through the major is ultimately the student's responsibility, but the student's faculty advisor stands ready to assist as a willing and eager partner in the process. Students wishing to propose an independent study or research experience to fulfill an elective should refer to the department handbook for guidelines to receive an exception.

Sample Program of Study

A typical program might include the following sequence of courses:

Course	Title	Credits
First Year		
First Semester		
AS.230.101	Introduction to Sociology	3
	Credits	**3**
Second Semester		
Lower-level sociology elective		3
Lower-level sociology elective		3
	Credits	**6**
Second Year		
First Semester		
AS.230.205	Introduction to Social Statistics	4
Upper-level sociology elective		3
	Credits	**7**

Second Semester		
AS.230.202	Research Methods for the Social Sciences	3
"S" credit from non-sociology elective		3
	Credits	**6**
Third Year		
First Semester		
AS.230.213	Social Theory	3
Upper-level sociology elective		3
	Credits	**6**
Second Semester		
AS.230.322	Quantitative Research Practicum	3
"S" credit from non-sociology elective		3
	Credits	**6**
Fourth Year		
First Semester		
Upper-level sociology elective		3
"S" credit from non-sociology elective		3
	Credits	**6**
Second Semester		
Upper-level sociology elective		3
Upper-level sociology elective		3
	Credits	**6**
	Total Credits	**46**

Senior Honors Program

Eligibility for the Sociology Honors Program requires completion of at least four of the five sociology core curriculum courses and at least two 300 level elective courses in sociology by the end of the junior year, with a Sociology GPA of 3.5 or higher. Additionally, by the time of graduation, all students must complete all remaining core curriculum and elective course requirements. Students interested in pursuing the Senior Honors Program must spend a total of TWO SEMESTERS registered for the Program. The Honors Program involves securing a faculty thesis advisor from the Sociology Department prior to the start of those two semesters, completing 1 semester of the Honors Research Seminar (230.511) in their first semester of the Honors program, enrolling in 1 semester of the Honors Independent Study (230.512) with their thesis advisor in their second semester of the Honors Program, and submitting a sole-authored Honors thesis. Students will earn a total of 6 credits for the Honors program. The Honors Research Seminar (230.511) is required in the first semester of the Honors program, because it is designed to assist students in the early phase of their Thesis and to provide a community of peers in the Honors Program. Note that the Honors Research Seminar is graded only S/U. The Honor Independent Study is taken for a letter grade. Both honors courses, AS.230.511 Honors Research Seminar or AS.230.512 Honors Independent Study, may not count towards the required Sociology elective courses. The thesis paper submitted for Honors in Sociology may not be used fulfill an honors thesis requirement in another major.

In order to enroll in the Sociology Honors Program, a student must complete an application: [Honors-Thesis-Application (https://e-catalogue.jhu.edu/arts-sciences/full-time-residential-programs/degree-programs/sociology/sociology-bachelor-arts/Sociology-Honors-Thesis-Application_2022.pdf)] BEFORE registration for the two semester program begins. Therefore, those graduating in the spring of their senior year, must submit their application during the spring of their junior year. Those graduating earlier, must submit their application earlier (for example, by the end of the fall semester of their junior year, for those graduating in the fall of senior year). This application includes a provisional thesis title, 3-5-page description of the project, and a calendar of deadlines agreed upon between the thesis advisor and student (these deadlines are also important because they allow the DUS to submit honors candidates to the university for the graduation program in April). Students must email their completed Honors application (signed by their faculty advisor) to sociology@jhu.edu.

For more information on the Senior Honors Program, contact your faculty advisor.

Global Social Change and Development Track

The Global Social Change and Development (GSCD) Track (http://krieger.jhu.edu/arrighi/undergraduate/gscd/) is geared towards students interested in understanding critical issues surrounding contemporary processes of globalization and international development. The track provides students with a sophisticated set of research and critical-thinking skills, prepares students for twenty-first century professions and helps them to become thoughtful global citizens. Ultimately, students pursuing the Global Social Change and Development track will receive a double major in both International Studies and Sociology.

Sociology, PhD

The department's primary educational goal is to train first-class sociology Ph.D. students. The sociology graduate experience at Johns Hopkins University is best characterized as a research apprenticeship – a careful blend of formal instruction, faculty-directed individual study, and supervised as well as self-initiated research. The department's small size and specific focus areas yield a personalized course of study and close relationships with faculty members and fellow graduate students. The social climate is informal, and the mix of students and faculty, drawn from a wide variety of geographic and social backgrounds, constitutes a rewarding intellectual community. For more details, please visit http://soc.jhu.edu/graduate/.

Admission Requirements

Applicants must submit an application fee, personal statement, all college transcripts, at least two (preferably three) letters of recommendation, and a sample of written work. International applicants must also submit a TOEFL score and a financial statement (FS-1G Form: Graduate International Student Notification [F-1/J-1]). GRE scores are optional. Applicants should have a broad background in social science, especially sociology, economics, and psychology. Training in mathematics is encouraged. The department gives greatest weight to an applicant's demonstrated ability and past performance. For more details, please visit http://soc.jhu.edu/graduate/admissions/.

Program Requirements

Code	Title	Credits
Core Curriculum		
AS.230.600	Introduction to Social Statistics	
AS.230.602	Theories of Society	
AS.230.603	Contemporary Social Theory	
AS.230.604	Linear Models for the Social Sciences	
AS.230.608	Proseminar In Sociology [1]	
AS.230.643	Sociological Analysis	

AS.230.649	Qualitative Research Methods: Domestic and International Fieldwork
or AS.230.605	Categorical Data Analysis
or AS.230.615	Sem:Panel Data Analysis
or AS.230.650	Macro-Comparative Research

[1] This fall semester course is taken during the first year. Faculty presentations introduce students to the substantive interests, research and professional background of the sociology faculty. It is graded pass/fail.

To count toward degree requirements, core curriculum courses other than the Trial Paper Research series of courses must be passed with a grade of B- or higher. After the core course requirement is satisfied, additional methods courses from the list above may be used to fulfill the seven-elective course requirement.

Electives

In addition to the core curriculum, graduate students must enroll in seven additional graduate-level courses. At least four of the seven electives must be JHU Sociology department courses. Up to four of the seven electives may be fulfilled by a combination of:

1. credit awarded for previous graduate coursework that predates matriculation at JHU;
2. courses taken outside the department that are permissible under the Handbook rules and with the Departmental advisor's approval;
3. and one directed research and independent study courses within the Department.

All must be passed with a grade of B- or higher. While students are free to select these courses, the department strongly recommends that they be taken from diverse fields of specializations so as to maximize the breadth of exposure to core areas of sociology and other disciplines.

Teaching Assistantships

As part of their preparation for future academic work, graduate students are required to register for AS.230.811 Teaching Assistantship and serve as a teaching assistant for at least one semester.

Foreign Language

The Sociology Department no longer requires certification of fluency in a foreign language as part of the Ph.D. requirements. Students should be proactive in gaining the language skills necessary to conduct their TRP and dissertation research, and should work closely with their advisor to determine whether additional language education is needed.

Residence

A minimum of two consecutive semesters of full-time residence is mandatory for all degrees. However, at least six semesters of full-time residence is recommended by the department for completion of the core curriculum, electives, and completion of a research apprenticeship and a trial research paper. By the end of the fourth year in the program, the student is expected to have written a dissertation proposal and have defended it successfully before the appropriate examining committees.

Research Assistantship/Apprenticeship

AS.230.801 Research Assistantship and AS.230.804 Research Apprenticeship

Students are required to develop practical research expertise through professional-level participation (data analysis, literature searches/reviews, non-routine data processing or coding, preparation and refinement of research instruments, and data/file management). This requirement is fulfilled by satisfactorily completing a Research Apprenticeship, which is required during the student's first year of full-time graduate study in the department. The standard for certification is substantial research accomplishment as judged by the faculty supervisor.

Trial Research Paper

(AS.230.685 TRP Seminar I, AS.230.690 TRP Seminar II, AS.230.815 Trial Research Paper I, AS.230.816 Trial Research Paper II, AS.230.817 Trial Research Paper III)

Students begin working on a Trial Research Paper (TRP) no later than the spring semester of their second year. The TRP affords students the experience of planning and executing a research project that leads to a publishable quality paper. The TRP is expected to be a serious, complete work of scholarship, suitable for conference presentation or journal submission. Whether or not the topic of the TRP is similar to that of the eventual dissertation, we believe all students will benefit from going through this exercise before planning for the dissertation.

By the end of the fall semester of their second year, students should invite a faculty TRP advisor to supervise the design and execution of the TRP project. Regular or adjunct faculty members whose positions entitle them to serve as dissertation advisors are eligible to serve as faculty TRP advisors. Work on the TRP generally will be done over three semesters. In order to facilitate progress on the TRP, students register for courses that are meant to consist of one-on-one meetings with their TRP advisor (TRP I, AS.230.815 Trial Research Paper I in the spring of your second year, TRP II, AS.230.816 Trial Research Paper II in the fall of your third year, and TRP III, AS.230.817 Trial Research Paper III in the spring of your third year.)

In order to facilitate student progress on the TRP, the department has also introduced two required TRP seminars, for which all students register in the spring of their second and third year. These are: AS.230.685 TRP Seminar I (spring of second year) & AS.230.690 TRP Seminar II (spring of third year). These courses will be graded pass/fail and will not count toward the fulfillment of the elective courses required for the Ph.D.

A TRP proposal must be approved by the faculty TRP advisor by the end of the spring semester of the second year. By the end of the fall semester of the third year, the TRP advisor must approve a draft of the paper which will then be reviewed by another department faculty member. The TRP advisor, at their discretion, may extend this deadline to the end of the intersession period following the fall semester. The faculty reviewer will evaluate the paper and, if necessary, recommend revisions that should be made before the paper is certified. The TRP advisor will determine required revisions and must certify a final TRP by the end of the spring semester of the third year.

Dissertation

The student must propose and conduct original research presented in a dissertation suitable for publication. The department administers an oral examination which must be passed before the student is allowed to defend before a university board. The dissertation must then be defended either at a Graduate Board preliminary oral examination, based on the dissertation proposal, or at a Graduate Board final oral examination, based on the completed dissertation.

Special Programs

The department offers two special programs that coordinate activities in its two focus areas. Doctoral students may affiliate with one or both of these programs at their discretion. These programs function as fields of doctoral specialization within the Department of Sociology.

Program on Global Social Change (PGSC)

This focus area of graduate study focuses on cross-national, comparative research and long-term, world-scale social change. The goal of the program is to give students knowledge of the various theoretical perspectives in these areas, experience in data collection and analysis, and expertise in one or more substantive fields.

The program does not focus on a particular geographic area, although faculty members have conducted extensive research on Latin America, Africa, Asia, the Middle East, and Eastern and Southeastern Europe. Instead of a geographical approach, the emphasis is on issues of development and social change that cut across different countries and world regions. Examples are globalization and regionalization, labor and development, city systems and urban primacy, social movements and revolutions, state violence, migration and labor force formation, family structure and change, social structure and personality, and national and international stratification. Students enroll in a sequence of courses and seminars and participate actively in ongoing faculty projects dealing with one or more of the above issues.

In addition, the interdisciplinary character of graduate education at Johns Hopkins University offers students ample opportunity to enroll in courses or collaborate in research of faculty in other departments. Faculty associates of the program include distinguished scholars in anthropology, economics, geography, history, political science, and public health.

A graduate focus area is not required of Ph.D. students.

Program on Social Inequality (PSI)

This focus area of graduate study focuses on the causes and consequences of social inequality, the social processes that sustain it, and how social policies can reduce it. These questions are addressed in terms of class, gender, race, ethnicity, and immigration status/citizenship.

The program is designed to train students in the sociological analysis of social inequality among individuals and groups. This training includes course work in areas such as social stratification, the sociology of the family, the sociology of education, sociology of immigration, social structure and personality, social policy, and research design and methods. Students in the PSI program enroll in a sequence of courses and seminars and participate actively in ongoing faculty projects dealing with one or more of the above issues.

In addition, the interdisciplinary character of graduate education at Johns Hopkins University offers students ample opportunity to enroll in courses or collaborate in research with faculty in other departments. Faculty associates of the program include distinguished scholars in anthropology, economics, geography, history, political science, and public health.

A graduate focus area is not required of Ph.D. students.

Sociology, PhD/Applied Mathematics and Statistics, MSE Joint Program

The Department of Sociology, Krieger School of Arts and Sciences, and the Department of Applied Mathematics and Statistics, Whiting School of Engineering, announce a joint program leading to a Ph.D. in Sociology and an M.A. or M.S.E. in Applied Mathematics and Statistics. The purpose of the joint program is to offer Sociology doctoral students an opportunity to acquire advanced statistical knowledge and applied research skills.

For more information, please visit department of Sociology (https://soc.jhu.edu/graduate/joint-program/).

Program Requirements

The joint program requirements include all the Ph.D. requirements in Sociology and the specially designed requirements for an M.A. or M.S.E. in Applied Mathematics and Statistics. For Sociology Ph.D. requirements, see the Sociology Ph.D. Students Handbook. Applied Mathematics and Statistics courses may substitute for AS.230.600 Introduction to Social Statistics and AS.230.604 Linear Models for the Social Sciences. Two options for fulfilling the requirements are available for an M.A. or M.S.E. in Applied Mathematics and Statistics. For both options, students are required to meet the Applied Mathematics and Statistics department’s computing requirement (fulfilled through EN.553.413 Applied Statistics and Data Analysis), the purpose of which is to ensure that students are able to effectively use computers to solve mathematical problems.

Note: All Joint Program students are required to complete Responsible Conduct of Research (RCR) training, which is in addition to the HIPPA training required for the sociology Ph.D.

Space Science and Engineering

This minor is open to all students in the Whiting School of Engineering and the Krieger School of Arts and Sciences who have the prerequisites for the required courses. The objective of the Minor is to prepare students for a career in Space Science and Space Engineering, either directly as an entering professional in industry, government laboratories and other organizations or as a student in a graduate program. The educational goal of the Minor is to enable students to:

- Apply their understanding and mastery of the fundamental scientific, engineering, and mathematical principles obtained through their major subject of study to space science and space engineering.
- Develop an understanding and capacity for interdisciplinary approaches to technical activities.
- Improve their ability to work in multidisciplinary teams, which are typical in space and other complex technical activities, through interdisciplinary education and internship(s) or equivalent experience(s).

Programs

- Space Science and Engineering, Minor (p. 1401)

Space Science and Engineering, Minor

Space Science and Engineering Minor Requirements

- A Proposal and Course Plan, which must be approved by your advisor for the minor (hereafter referred to as the "Advisor"). The proposal must discuss a theme that unites the individual elements of the program (courses and internship(s)) into an intellectual whole.
- Five courses in Science and Engineering. One course is specified (AS.171.321 Introduction to Space, Science, and Technology) and the remaining four are chosen through your Proposal and Course Plan, which must be approved prior to taking the courses by the Advisor. All courses must be taken for a grade rather than satisfactory/ unsatisfactory. A grade of C- or better is required. Courses that are named as requirements for the student's major may not be used. However, courses that are not named, but satisfy an elective requirement for the major, may be used.
- An internship or equivalent experience in the field of space science and engineering is required. This must have prior approval from the Advisor.
- A brief report on the internship or equivalent experience to the Advisor.

Course Requirements
Specified Course:

The specified course is 171.321 Introduction to Space Science and Technology. The prerequisites are Physics 171.101-102 or a similar engineering course and Calculus 110.108-109. The course carries 3 credits. The course is co-listed by the Departments of Earth and Planetary Sciences, Materials Science, and Engineering and Mechanical Engineering.

Proposal and Course Plan for the Four Courses:

To ensure that the program is a coherent intellectual activity, you are required to submit a Proposal and Course Plan to your Advisor early in their program, prior to taking the courses. The Proposal and Course Plan will identify a theme that describes the educational goal that you will pursue through your course of study and a list of courses, including alternates, to achieve your goal. Examples of such themes could be "Remote observations of the earth and planets from space vehicles" or "Spacecraft design for astronomy missions." Examples of potential course programs are listed in Section 5 below. A list of suggested candidate courses is listed in Section 6 below. If consistent with the Proposal and Course Plan theme, you may use other courses with the permission of your Advisor. The Course Plan should contain alternative courses in recognition that every course may not be taught every year.

The Proposal should also include ideas for completing the internship requirement discussed below.

Additional Requirements on the Four Courses

- One of the four courses may be at the 200 level, but at least three must be at the 300 level or higher.
- The total credits associated with the courses must be 12 or more.
- At least three of the courses must be in departments other than the department or program of your major.
- Courses cannot be "named" requirements of the major; however, elective courses for the major may be used.

Internship or Equivalent Experience
Practical experience in space science and space engineering can be obtained through an academic internship, non-academic internship or an equivalent experience. This practical experience can be acquired by at least six weeks of full-time effort or the equivalent effort spread over a longer period. This can take place during a summer or during the academic year.

Academic Internships

The Undergraduate Student Handbook describes the regulations governing academic internships. You may find the following quoted material from the Handbook helpful:

- "Academic internships are practical work experiences which have an academic component as certified by a member of the faculty."
- "Academic credit for independent academic work must be sponsored by a full-time member of the Homewood faculty. This is the case whether the work is done on campus or not. The work supervisor and the faculty sponsor may be the same individual. If the faculty sponsor is not the work supervisor, the work supervisor must provide the faculty sponsor with a report on the student's achievements while doing the independent project."
- "Only one credit may be earned for an academic internship during one semester or summer."
- "The grading method is Satisfactory/Unsatisfactory only."
- "Independent work done for academic credit must be unpaid."
- "The use of credit for independent academic work to satisfy the requirements of a major or minor is subject to prior written approval by the appropriate department or program."

Non-academic Internships

These internships are offered by non-academic organizations such as the Space Telescope Science Institute, the Applied Physics Laboratory, and a number of NASA laboratories to provide undergraduate students practical work experience in space science and space engineering. These internships often carry a stipend and are not eligible for academic credit.

Opportunities within the university include the Applied Physics Laboratory, the Center for Astrophysical Sciences, the Space Telescope Science Institute, as well as individual professors and research staff. In addition, local laboratories and companies, such as NASA Goddard Space Flight Center, Lockheed Martin, Northrop Grumman, Orbital Sciences, and other private corporations offer excellent opportunities for internships and summer work experiences.

- Applied Physics Laboratory program for JHU students (https://www.jhuapl.edu/Education/JohnsHopkinsConnection/) – Students should indicate their interest in the Space Department of the JHU APL.
- Space Telescope Science Institute intern program (https://www.stsci.edu/institute/smo/students/)
- NASA (https://www.nasa.gov/centers/goddard/education/internships.html)

Equivalent Experiences

Other activities that meet the spirit of the requirement may be accepted. For example, employment opportunities, often in the summer, can provide practical experience in space science and space engineering.

Prior Approval Required

The student is responsible for identifying and arranging the internship or equivalent experience. However, in order to count toward the Minor, it must be approved in advance by the Advisor. In general, the Advisor will require that the mentor or supervisor be either a space scientist or space engineer.

Required Report on the Internship or Work Experience

In order to have it count toward the Minor, the student must provide a brief report (typically one page) describing the internship or equivalent experience to the Advisor at the beginning of the semester immediately following the activity. The report should give the name of the organization or laboratory (e.g., STScI, JHU-APL, NASA-GSFC), the start date and duration, and the name, position, and email address of the mentor/supervisor. It should include a brief summary describing the activity, a description of new knowledge and skills learned, and information about the overall experience.

For a detailed explanation of the minor and its requirements, including sample programs of study, please visit the Student Handbook for the Minor in Space Science and Engineering (http://spacestudies.jhu.edu/space-minor/).

Study of Women, Gender, and Sexuality

https://krieger.jhu.edu/wgs/

The Program for the Study of Women, Gender, and Sexuality works to catalyze intellectual discussions—at Johns Hopkins, in Baltimore, and beyond—in which gender and sexuality concerns play important roles.

We are a forum that brings together undergraduates, graduate students, and faculty from different departments who share an interest and a need to address and interrogate their research fields from a queer, feminist, or otherwise gender- and sexuality-inflected perspective.

The activities of the program integrate teaching and research on all levels. Most importantly, the program encourages and supports initiatives for research projects, events, and curriculum developments emerging from all parts of the JHU campus—undergraduate students, graduate students, and faculty alike.

WGS brings new scholarship into conversation on campus in three main ways. First, the program sponsors a seminar series that brings speakers from academia and the broader community to Johns Hopkins University. Second, we organize workshops each semester around multiyear themes, such as “Affect and Emotion” and “Medical Humanities.” Finally, we bring renowned scholars and public figures to the Homewood campus through our annual Visiting Distinguished Professorship. Recent visiting professors have included Karen Barad (University of California-Santa Cruz), Joan Wallach Scott (Institute for Advanced Studies), Trinh-Minh Ha (University of California-Berkeley), and Michael Warner (Yale University).

WGS offers an undergraduate minor that enables students to devote a portion of their education to the study of women, gender, sexuality, and related issues. WGS also offers research fellowships for undergraduate and graduate students. Graduate students also have the opportunity to design and teach a course.

Through both interdisciplinary and specialized courses, students are encouraged to develop critical and comparative approaches to the study of gender and sexuality—often in interaction with related issues such as race, class, global health, and violence. Courses in the program are taught by prominent faculty members from across the disciplines and are cross-listed through a variety of departments. New courses are added frequently.

WGS also offers an undergraduate Seminar/Practicum, where students combine volunteer work in a local social service agency with a seminar that explores the connections between social justice and academic inquiry.

Programs

- Women, Gender, and Sexuality, Minor (p. 2173)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.363.201. Introduction to the Study of Women, Gender, and Sexuality. 3 Credits.
This course will serve as an intensive introduction to contemporary approaches to theories of gender and sexuality, and their relationship to cultural production and politics. Students will develop a historically situated knowledge of the development of feminist and queer scholarship in the 20th and 21st centuries, and consider the multiply intersecting forces which shape understandings of sexual and gender identity. We will consider both foundational questions (What is gender? Who is the subject of feminism? What defines queerness?) and questions of aesthetic and political strategy, and spend substantial time engaging with feminist and queer scholarship in comparative contexts. Students will be introduced to debates in Black feminism, intersectionality theory, third world feminism, socialist feminism, queer of colour critique, and trans* theory. We will read both canonical texts and recent works of scholarship, and the final weeks of the course will be devoted to thinking with our theoretical and historical readings against a selection of feminist and queer literature and cinema. No prior familiarity with the study of gender and sexuality is necessary.

AS.363.226. Women writers and the sonnet from the European Renaissance to the Harlem Renaissance. 3 Credits.
Shakespeare's description of his lover's eyes as 'nothing like the sun' is both an homage and a sendup of the 300-year-old Petrarchan tradition in which the male poetic persona remains forever enraptured by an unattainable female beloved, who never speaks. Beginning with a review of Shakespeare’s sonnet sequence and selections from Petrarch’s sonnets to an elusive Laura, we will read a series of fifteenth-and sixteenth-century women writers who inserted their own voices into this evolving tradition by allowing “Laura” to talk back. These include Vittoria Colonna (and her interactive sonnets with Michelangelo), Veronica Gambara, and Gaspara Stampa; dueling personas in sonnets by French poets Pernette du Guillet and Maurice Scéve, and sonnets by more familiar Shakespearean contemporaries Lady Mary Wroth and Sir Philip Sidney (both of whom reflect back on Petrarch but from quite different viewpoints). In the final section of the course we will apply our newly acquired historical perspective to selections from a more recently available corpus of female-authored sonnets from the Harlem Renaissance. All continental works will be read in translation; no previous familiarity with the topic is required.
Area: Writing Intensive

AS.363.301. Feminist and Queer Theory. 3 Credits.
This course will encourage encounters with a number of concepts from a critical gendered perspective, including: sameness/difference, identity politics, race/gender, loyalty, security, queer ethics, and queerness in media.
Area: Writing Intensive

AS.363.302. Feminist and Queer Theory: Women in Western Thought an Introduction. 3 Credits.
Women in Western Thought is an introduction to (the history of) Western thought from the margins of the canon. The class introduces you to some key philosophical question, focusing on some highlights of women's thought in Western thought, most of which are commonly and unjustly neglected. The seminar will be organized around a number of paradigmatic cases, such as the mind/body question in Early Modern Europe, the declaration of the rights of (wo)men during the French revolution, the impact of slavery on philosophical thought, the MeToo debate and others. By doing so, the course will cover a range of issues, such as the nature of God, contract theory, slavery, standpoint epistemology, and queer feminist politics. Students will engage with questions about what a canon is, and who has a say in that. In this sense, Women in Western Thought introduces you to some crucial philosophical and political problems and makes you acquainted with some women in the field. The long term objective of a class on women in Western thought must be to empower, to inspire independence, and to resist the sanctioned ignorance often times masked as universal knowledge and universal history. People of all genders tend to suffer from misinformation regarding the role of women and the gender of thought more generally. By introducing you to women who took it upon themselves to resist the obstacles of their time, I am hoping to provide role models for your individual intellectual and political development. By introducing you to the historical conditions of the exclusion and oppression of women (including trans and queer women as well as black women and women of color), I hope to enable you to generate the sensitivities that are required to navigate the particular social relations of the diverse world you currently inhabit. By introducing philosophical topics in this way, I hope to enable you to have a positive, diversifying influence on you future endeavours.
Area: Writing Intensive

AS.363.306. Feminist and Queer Theory: Race, Class, Gender, Sexuality-Intersectional Feminist Theory. 3 Credits.
In this course, we will get to know intersectional feminist philosophy through the lens of a Black feminist epistemology. What does this mean? That means that we will focus on how the contributions of Black feminist authors can bring out the specific political and philosophical nature of an intersectional theoretical framework.

AS.363.307. Feminist and Queer Theory: Family Matters: Queer and Feminist Responses to Family Life. 3 Credits.
This course examines the historical development of feminist and queer critique, focusing on how the concept of family life has been understood by generations of writers, activists, and theorists. We will read important early works on western forms of kinship and family structure, and investigate how contemporary developments in reproductive technology, queer marriage, and workplace integration have produced new imaginings of familial belonging and its alternatives.

AS.363.329. Gender and Sexuality Beyond the Global West: Gender and Sexuality in Contemporary Art in North Africa and the Middle East. 3 Credits.
This course aims to explore how gender and sexuality is situated in contemporary artistic practices in the geographical Middle East, through concepts of religion, war, revolution, resistance, nation-state, post-colonialism, and neoliberalism, especially as written and observed first-hand by artists, curators and scholars from the Middle East and North Africa region and their diasporas. Every week, under an overarching topic, notions of gender and sexuality will be questioned through works of selected artists across the region, as well as texts that provide the historical, theoretical, sociological and political background.
Area: Writing Intensive

AS.363.330. Ecofeminist Debates: Gender and Sexuality Beyond the Global West. 3 Credits.
This course develops an interdisciplinary and comparative approach to introduce students to ecofeminism through a special focus on its inflections in non-western contexts. Through class discussions and sustained writing engagement, we will develop an understanding of the history of ecofeminism, including theoretical debates linking gender perspectives with political mobilization, as well as ecofeminism's enduring influence on new intellectual and political movements.

AS.363.331. Gender and Sexuality beyond the Global West. 3 Credits.
Gender and Sexuality in the Global West. Topics change each semester. See class search for specific topic being taught each term.

AS.363.333. Poetics and Politics: Eros & Literature. 3 Credits.
What does it mean to love? From Antiquity to now, from Plato to Jeanette Winterson, writers have staged conversations on love and sex. In this way, they provide us with a "science of sex" (to use Foucault's notion) that, though fully attuned to the power differentials that inhabit our most intimate physical experiences, gives free range to the imagination of desires. With Plato, the legend of Tristan and Isolde, and the study a few Renaissance love lyrics as a backdrop, we will delve into stories of desire that chart new configurations and break away from "normative heterosexuality." Readings involve novellas by Balzac, George Sand, Colette; stories by Woolf, by Proust, and selected from Gender Outlaws as well as two films M. Butterfly and Call Me by Your Name. Meshing such stories with fundamental concepts in gender theory will enable us to chart ever changing configurations of desire from the double perspective of queerness and of sexual politics.
Area: Writing Intensive

AS.363.335. Gender Justice: From Conflict to Resolution. 3 Credits.
This course focuses on the potential and limitations of the recent efforts of the international community to introduce a "gendered approach" to conflict resolution, peacebuilding and transitional justice. It examines the fundamental theoretical issues that underlie the "gendered approach" to transitional justice by following the evolution of the gendered approach to peacebuilding in three phases through case studies: The gender-blind phase (Human Rights Trials in Argentina), the gender-neutral phase (Truth and Reconciliation Commission in South Africa) and the gender-sensitive phase (Disarmament, Demobilization and Reintegration of female combatants in Colombia). The limitations of the gendered approach in practice is explored through cases. For example, we examine the identification of gender-based crimes with sexual crimes in ICTY and ICTR. The LGBTI communities' inclusion to transitional justice as well as gender based harms that are not related to sexual violence are examined through the Colombia Peace Process. Ultimately, the course aims to address the prevailing question in the fields of peacebuilding and transitional justice today through the lens of "gender": Should transitional justice simply redress harms or should it aim to be transformative for the post conflict community? Should response mechanisms aim to restore relationships or should they aim to transform gender relations in communities? The final weeks of the class will be dedicated to the discussion of moral and practical implications of these questions for transitional justice.

AS.363.337. The Poetics & Politics of Sex: Struck From the Record: Reclaiming Women's Contribution to the Global March Towards Modernity. 3 Credits.
The course examines claims that present women's historic role as limited to confinement in the home, and bearing children. Students will gain an understanding of the complexity the world's path to modernity and the important, and?until recently, silent?roles that women have played.
Area: Writing Intensive

AS.363.338. The Poetics and Politics of Sex: Feminist Utopia in Theory and Fiction. 3 Credits.
This course examines the historical development of feminist utopia in theory and fiction. Readings will center Indigenous, Black, postcolonial, diasporic, and transnational perspectives that engage the topic of feminist utopia.
Area: Writing Intensive

AS.363.345. Zora Neale Hurston: Ethnography as Method. 3 Credits.
While many recognize Zora Neale Hurston's creative literary work, her methodological innovations are often overshadowed. This course will examine Hurston's contributions to theorizing the African diaspora and creative use of ethnography.Dr. Amarilys Estrella, the 2020-2021 ACLS Emerging Voices Postdoc, will teach this course. For more info on Dr. Estrella, see https://history.jhu.edu/directory/amarilys-estrella/

AS.363.415. WGS Internship Practicum: The Carceral State, Gender, and the Family. 3 Credits.
This class will examine the U.S. government's use of incarceration, parole, and house-arrest as default forms of social management, in lieu of social welfare policy. We will explore the origins of the "carceral state" and its impact on targeted communities. The class will focus on often neglected aspects of the ongoing crisis of mass-incarceration in the U.S., in particular its debilitating effects on single-mother households, children who grow up with incarcerated family members, and the extreme violence and deprivation of basic medical needs faced by incarcerated women and LGBTQI individuals. Topics will include black-feminism and "black matriarchy," the relationship between domestic violence and mass-incarceration in communities of color, women and non-gender conforming prisoners, the "school-to-prison pipeline," the psychological effects of policing on targeted communities, and the fiscal interests served by mass-incarceration. We will engage sociological, historical, and philosophical materials, as well as literature, film, and past and present social movements.
Area: Writing Intensive

AS.363.416. WGS Internship/Practicum: Feminist Animals: Sex, Nature, and Nonhumans. 3 Credits.
Introducing feminist approaches to ecology and nonhumans, this course considers the interconnections between heteropatriarchal domination and the domination of nonhuman animals and ecologies. What different sensibilities and ways of seeing sex and gender open up when attention shifts to nonhumans? What tensions within and between feminism, animal liberation, and ecological concern come to the fore when each approach is alongside the others? How does the study of nonhumans extend the promise of feminism, and vice versa? In responding to these questions, we will see the real breadth of issues that the theory and practice of feminism can address.
Area: Writing Intensive

AS.363.445. Reading Judith Shakespeare: Women and Gender in Elizabethan England. 3 Credits.
If Shakespeare had a sister who went to London to be a writer, what would she write? Virginia Woolf's account of the thwarted career of Shakespeare's hypothetical sister, Judith, in A Room of One's Own frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, and Mary Wroth. Working within a selected historical context, students will create fictional biographies of "Judith Shakespeare," including her perspective on our identified authors and a sample or description of Judith's own literary accomplishments. Secondary course readings will reflect contemporary economic, political, and religious contexts.
Area: Writing Intensive

AS.363.601. WGS Graduate Colloquium.
Presenting new scholarship and art, the WGS Graduate Colloquium will catalyze intellectual discussions in which gender and sexuality concerns play important roles. The seminar includes lectures by invited speakers and a film series. Graduate students are encouraged to develop critical and comparative approaches to the study of gender and sexuality—often in interaction with related issues such as race, class, violence, law, medicine, art, and emotionality. This seminar can be taken for credit or audit.

Cross Listed Courses

Behavioral Biology

AS.290.420. Human Sexual Orientation. 3 Credits.

This course will examine the historical and current theories of sexual orientation and sexual variation development by examining the biological, psychological and social contributing factors that influence the development of sexual orientations and variations along with treatment and modification of problematic sexual behaviors. Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester. Priority given to Behavioral Biology majors. Note: For credit towards a Psychology major, students should register for AS.200.204 Human Sexuality, rather than this course.

Prerequisite(s): Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Students may receive credit for either AS.200.204 or AS.290.420, but not both.

Biophysics

AS.250.351. Reproductive Physiology. 2 Credits.

Focuses on reproductive physiology and biochemical and molecular regulation of the female and male reproductive tracts. Topics include the hypothalamus and pituitary, peptide and steroid hormone action, epididymis and male accessory sex organs, female reproductive tract, menstrual cycle, ovulation and gamete transport, fertilization and fertility enhancement, sexually transmitted diseases, and male and female contraceptive methods. Introductory lectures on each topic followed by research-oriented lectures and readings from current literature.

Center for Africana Studies

AS.362.301. Black Women Writers. 3 Credits.

This course will introduce students to a variety of works written by black women of the Diaspora with a focus on the U.S. We will consider how women have theorized power, engaged history, and creatively imagined both the past and the present.
Area: Writing Intensive

Classics

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.

Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.

Comparative Thought and Literature

AS.300.301. Women and Work in the US. 3 Credits.

This course offers an introduction to the political forces, cultural values, and social factors which have shaped the history of women's labor in the US. This course will ask question such as: Why do we place a higher value on work which takes place in the public sphere than work in the home? How do representations of work in literature and popular movies reinforce or subvert gender roles? How have women negotiated gendered and racial boundaries through political action or writing? Focusing on racialized labor, domestic labor, sex work, and factory work, the course will provide an interdisciplinary cultural study of women's work relevant to our current historical moment. Authors discussed include Saidiya Hartman, Harriet Beecher Stowe, Emma Goldman, and Kathi Weeks.
Area: Writing Intensive

AS.300.312. Imagining Revolution and Utopia. 3 Credits.

What form should revolution take, and what should society look like after the revolution? What would happen to the state, family, home, status of women, human interrelations, and everyday life? These questions consumed radicals in 19th century Russia and Europe, and their answers helped to shape the political culture of the 20th century. This course examines theories of revolution and utopia and responses to them in literature, art and film. Primary case study is Russia and the Soviet Union, with a comparative look at influential European works.
Area: Writing Intensive

AS.300.317. The Russian Novel. 3 Credits.

This course introduces students to the nineteenth century Russian novel and considers its lasting impact on world culture. We will read classic masterpieces of the psychological and philosophical novel, and their experimental forerunners. Short lectures on historical and cultural context and on methods of literary analysis will be combined with intensive group discussion. Novels include Anna Karenina, Crime and Punishment, Eugene Onegin, Dead Souls, and Hero of our Time.
Area: Writing Intensive

AS.300.324. Cinema of the 1930s: Communist and Capitalist Fantasies. 3 Credits.

Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender.

AS.300.334. Love and its maladies. 3 Credits.

Much of what we know about love and desire we owe to fiction's ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like this lover. Just as nowadays film and television represent, as well as mold our conceptions of love, love-stories from the eighteenth-century onwards have given shape to gendered subjectivities in ways that still matter now. As, intriguingly, illness is a recurrent theme in many modern love stories, we will be prompted to decipher signs and symptoms in the bodies of mind of our protagonists. Why is it that in Western cultures, passion is tightly interwoven with a landscape of pain, suffering, and disease? In studying texts that represent major aspects of a romantic sensibility, we are indeed invited to trace the steps of a history of the body increasingly defined by gender and by medical knowledge. The readings for this class (all available in English) include: Austen, Persuasion; Balzac, The Unknown Masterpiece; Barthes, Lover's Discourse; Goethe; The Sorrows of Young Werther; Mann, Death in Venice; Winterson, Written on the Body.

AS.300.367. Seeing Like a Woman. 3 Credits.

What does it mean to "see," think, desire, feel, speak, act, or write "like a woman"? Gendered notions of seeing have had an impact on politics and society long before the #metoo movement and far beyond debates about women's rights in isolation. This seminar examines the issues of female desire, subjectivity, spectatorship and performance in fiction, poetry, memoir and film from a variety of cultures and theoretical perspectives. This is not a course on "the image of the woman" in literature, film or politics, but a course in which we examine the ways in which both male and female theorists, novelists, poets, and filmmakers have imagined how women "see," feel, think and behave.
Area: Writing Intensive

AS.300.439. Stories of hysteria. 3 Credits.
Many are the stories that recount episodes of hysteria, and we owe them not only to medicine. To the modern observer, they are a puzzle, involving strange beliefs about wandering wombs, demonic possession, and female virtue (or lack thereof). Closer to our time, contemporary media, as well as accounts in the social and clinical sciences have evoked cases of “mass hysteria” in America and across the globe. Marriage, it was thought for a long time, might be the best cure, which might be the reason case-studies of this illness can be as intriguing and troubling as novels. Against a backdrop of medical and historical materials, we will examine a selection of stories, from the 17th century onward, that evoke aspects of hysteria. They serve as our case-studies and as prompts to study an illness born at the convergence of histories and myths, of medical science, and of cultural and gender assumptions. Among the notions we will explore: The birth of psychoanalysis, trauma and PTSD, the concept of repression, the visual aspects of an illness and its spread in the arts, including cinema.

East Asian Studies

AS.310.319. Gender & Sexuality in Korea and Asia. 3 Credits.
Utilizing an interdisciplinary approach, this course examines the role that gender and sexuality play within primarily the South Korean polity and in Asia. Drawing on queer studies, feminist studies, and critical Asian studies, the class will offer a foundational framework from which to analyze how social constructs around gender and sexuality play a major part in the marginalization of communities and their access to rights and representation. We will explore questions of kinship, family, love, and intimacy as they pertain to the larger thematics of the course.
Area: Writing Intensive

AS.310.324. Belonging and Difference in Modern Korea. 3 Credits.
Drawing on critical race theory, and gender and sexuality studies, this course provides the analytical framework necessary to grapple with how belonging and difference are produced, manifested, and challenged within Korea’s citizenry. Students will gain knowledge on modern Korea and its diasporas and examine its construction as one rooted in a history of empire, nationalism, militarism, and neoliberalism.
Area: Writing Intensive

Economics

AS.180.252. Economics of Discrimination. 3 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Area: Writing Intensive
AS.180.102

English

AS.060.320. Icons of Feminism. 3 Credits.
This course looks at four crucial figures who have haunted feminist thought and responses to feminism over the centuries. Sappho, known as the first female poet, remains an enigmatic icon of feminine desire and creativity; Antigone, the daughter of Oedipus and the heroine of Sophocles’s play Antigone, still inspires feminist analyses of women’s relationship to law, the state and civil society; and Joan of Arc, the militant maid of Orleans, troubles thinking about women and violence as well as women, religion and spirituality. The last figure is Mary Wollstonecraft, often cited as the first modern feminist. The course will examine literary works written about these iconic figures, as well as contemporary feminist writing about their influence and viability as models for the future of feminism.
Area: Writing Intensive

AS.060.348. Virginia Woolf and Bloomsbury. 3 Credits.
An exploration of the achievements and investments of one of the most influential coteries in the history of Britain. In addition to delving into key fictions by Virginia Woolf, we will examine novels by Leonard Woolf and E. M. Forster, art criticism by Roger Fry and Clive Bell, biographical essays by Lytton Strachey, economic writings by John Maynard Keynes, and poetry by T. S. Eliot.
Area: Writing Intensive

AS.060.353. Margaret Atwood: Imagining Catastrophe. 3 Credits.
This is the moment for a course on the Canadian climate activist, poet, and novelist Margaret Atwood. Best known for her dystopian The Handmaid’s Tale (1985), Atwood’s monitory visions in poetry, short stories, non-fiction and novels attend to themes of malevolence, metamorphosis, memory, genetic mutation, totalitarianism, corporate control, feminism, and climate disaster, while rooted in traditions of folktale, myth, and ironic detachment. Among other works, including poetry and non-fiction, we will read novels The Handmaid’s Tale, The Testaments, The Blind Assassin, Oryx and Crake, The Year of the Flood, and MaddAddam, exploring Atwood’s "writing with intent." Seminar discussion; midterm; class presentations; two short papers and one final project.
Area: Writing Intensive

AS.060.388. Old World/New World Women. 3 Credits.
The course considers the transatlantic writing of three women in the early modern period, Anne Bradstreet, Aphra Behn, and Phillis Wheatley. We will consider issues of identity, spatiality, religion, commerce, enforced labor, sexuality, race, and gender, along with literary tradition, formal analysis and poetics. We will read a good deal of these early women writers. Foremost in our mind will be the question of how perceptions of space and time are mediated through the global experiences of early modernity.
Area: Writing Intensive

AS.060.389. Emily Dickinson. 3 Credits.
Dickinson’s poetry, more than most, has seemed to prompt creativity in others. In the past two decades, especially, poets, writers, critics, and filmmakers have found their own voices in response to hers. We will focus on the formal, aesthetic, historical and gendered aspects of her poetry as we try to understand, and benefit from, this power to elicit response. Exams are unlikely. Instead, expect close attention to your own writing, as we pay close attention to hers.
Area: Writing Intensive

AS.060.620. Thinking with Scale: Frameworks in Early Modernity.
Concepts include expansion, crowding, data collection, the miniscule, temporality, the planetary and the cosmic in the first age of European mercantile activity and colonial expansion. With readings from world-systems theory and theories of the anthropocene, our case studies will comprise pre-modern English literary texts, including Milton, Paradise Lost, Anne Bradstreet, The Four Monarchies, early modern science (Hooke, Newton), Defoe, The Storm, and early British and colonial American holdings in the Garrett Library. The class will be hands-on, working with material from Special Collections, and will include working towards a digital project (no digital project background necessary).
Area: Writing Intensive

Film and Media Studies

AS.061.248. Women Making Films About Women. 3 Credits.
This course will examine films (features and shorts) throughout the history of cinema beginning with Alice Guy-Blaché . We will look at how form reveals content, thematic issues and how films relate to the culture and politics of the filmmaker. Filmmakers include Germaine Dulac, Nelly Kaplan, Marguerite Duras, Chantal Ackerman, Barbara Hammer and Nina Menkes. Readings include critical essays, texts by the filmmakers and fiction. Assignments consist of weekly papers on the films.

AS.061.323. Masculinities. 3 Credits.
From tap dancer to gangster, assassin to anguished teen, versions of the male in film from the silent era to the present. Cross-listed with Studies of Women, Gender, and Sexuality. One core course in Film and Media Studies is preferred but not required.

AS.061.366. Labyrinths of Passion: The Films of Pedro Almodóvar. 3 Credits.
This course will explore a range of Almodóvar's work, from the early films emerging out of La Movida Madrileña up to and including The Human Voice and Parallel Mothers, with particular emphasis on All About My Mother, Talk to Her, Bad Education, Volver, and Pain and Glory. We will examine the director's influences and antecedents—Bunuel, Hitchcock, Sirk, Cassavetes, among others—against the backdrop of Spain's dramatic political and cultural transformation after the death of Franco. And we will closely analyze the characteristics that define Almodóvar's status as an auteur: his groundbreaking approach to sexuality, queer politics and gender transformation; his innovative use of melodrama; and his dazzlingly eclectic visual style.

AS.061.391. Love and Film. 3 Credits.
In this course, we explore different understandings of "love" and the way that film has dealt with the concept as a medium. We explore a variety of approaches to the question of "love" - from the agapic to the familial to the romantic - through a series of interdisciplinary readings ranging from philosophy to anthropology. We will also equally explore the question of how film has engaged with the question of love as a concept, and what depictions of human affection - from the general to the personal - it has offered us. Screenings are required for this course. Lab fee: $50
Area: Writing Intensive
AS.061.140 OR AS.061.141 OR AS.061.226

AS.061.397. French Masculinities. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.

First Year Seminars

AS.001.114. FYS: The Politics of Reproduction. 3 Credits.
The idea that the "personal" is "political" finds no greater example than in the politics of reproduction. From inheritance laws, the rights of the offspring of enslaved peoples, or policies to reduce (or increase) fertility, the modern nation state has had a great deal to say about the use and produce of human bodies. In this First-Year Seminar, we will examine how formal and informal institutions have governed reproductive practices over the past 200 years. We will look at how family structures and economic development map onto fertility, and at how technological innovations in fertility control (including birth control and IVF) have influenced women's economic and political participation. We will also consider whether reproductive policies have differential impacts for LGBTQ households. Finally, we examine the "dark side" of reproductive policies -- not only sterilization campaigns but also the treatment of sex workers and sex-selective abortion -- to understand how state policies have divided households based on race, class, and occupation.

AS.001.187. FYS: Gender x Aging x Health in America. 3 Credits.
In this First-Year Seminar students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the ntersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.

History

AS.100.283. Making and Unmaking Queer Histories, 1800-Present. 3 Credits.
Making and Unmaking Queer Histories introduces students to the major themes and historical developments which shape contemporary understandings of LGBTQ+-identified subjects and communities in the US and Western Europe.
Area: Writing Intensive

AS.100.304. Ecstasy: Mystical, Visionary, and Holy Women and their Writings in Medieval Europe, ca. 1000-1400. 3 Credits.
This course uses the writings of medieval women to explore their social and religious worlds and orients visionary writing within the broader narrative of religious movements from the 12th-14th centuries.
Area: Writing Intensive

AS.100.319. History of American Reproductive Politics. 3 Credits.
This course examines reproductive politics in the United States from the colonial era to the present. Topics include contraception, abortion, and sterilization, emphasizing the impact of gender, class, and race.
Area: Writing Intensive

AS.100.323. America in the 1960s. 3 Credits.
The years between 1959, when the course begins, and 1971, when it ends, were tumultuous and divisive. This course explores the political, racial, and cultural struggles of a half century ago.
Area: Writing Intensive

AS.100.340. Asian American Art and Activism: Third World, Feminist, and Queer Solidarities. 3 Credits.
This interdisciplinary course surveys critical themes related to Asian American art and activism including perspectives from history, art and visual culture, literature and gender and sexuality studies.
Area: Writing Intensive

AS.100.355. Sex and Society in Early Modern Europe. 3 Credits.
This course will examine how early modern views on the body, gender, and sexuality shaped beliefs about the abilities and rights of women and men.
Area: Writing Intensive

AS.100.393. Think Globally, Research Locally: Early Maryland and the World. 3 Credits.
A research-intensive seminar, this course uses the rich history of Maryland to approach broader themes in early modern American and global history including colonialism, slavery, revolution, race, gender, and sex.

AS.100.396. The Gender Binary and American Empire. 3 Credits.
This discussion-based seminar will explore some of the ways that the sex and gender binary was produced out of American statecraft in the late nineteenth and twentieth centuries. Particular attention will be paid to US imperialism, both domestically in its settler form, as well as in Hawaii, the Caribbean, and the Pacific. What happens to the study of the modern gender binary if it is treated as a transnational artefact of US imperialism's encounter with a multitude of cultures and nations?
Area: Writing Intensive

AS.100.408. Theorizing the Age of Enormity: Social Theory and the History of the 20th Century. 3 Credits.
We will read and analyze key works of social and critical theory produced in relation to 20th and 21st century problems of state and society, nationalism, empire, totalitarianism, genocide, capitalism, political order, gender, race, sexuality, secularism, religion, environmental catastrophe. Possible readings include Weber, Du Bois, Adorno, Arendt, Foucault, Balibar, Beckamong others.
Area: Writing Intensive

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, "virgins" in paradise, the sexual slavery of Yazidi women.... This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Writing Intensive

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas.
Area: Writing Intensive

AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Area: Writing Intensive

AS.100.430. Gender and Sexuality in African History. 3 Credits.
An upper-level history reading seminar with a focus on histories of gender and sexuality in colonial and postcolonial Africa.

AS.100.713. Black Womanhood.
What does a usable history of black womanhood (black queer and trans womanhood inclusive) look like? How do we imagine, create, and narrate black women's stories? Black women's history across time and space.

AS.100.722. The History of Trans Femininity.
This seminar will offer training in feminist, queer, transgender and postcolonial approaches to the history of sexuality by exploring what methods are adequate to writing the history of trans femininity as a specifically nineteenth and twentieth century phenomenon. Areas of emphasis will include histories of sexology, sex work, social movements, and trans feminism and its opponents. The primary geographic focus will be the US, but through a transnational lens that connects to Western Europe, South Asia, and Latin America.

AS.100.725. Sex and Slavery II.
Research and methods in the field of sexuality and slavery studies. Part 2: Caribbean & African Continent.

AS.100.765. Problems in Women and Gender Studies.
An exploration of recent work in women's and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, difference, and civic orders.

History of Art

AS.010.255. Contemporary Performance Art. 3 Credits.
Performance art is provocative and often controversial because it troubles, without dissolving, the distinction between art and life. Not just a matter of activating bodies, engaging viewers, or spurring participation, performance art asks what it means to perform, and what kinds of actions count, in contemporary culture. As such, performance art allows us to rethink established art historical concerns with form, perspective, and materiality, while offering critical insight into everyday life. We will explore how performance art addresses ingrained assumptions about action and passivity, success and failure, embodiment and mediation, "good" and "bad" feelings, emancipation and dependency.The study of performance art invites transdisciplinary approaches. Students from across the university are welcome. Our attention to a diverse array of artists and practices will be supplemented by readings in art history and criticism, as well as in feminist and queer theory, critical race theory, and political thought.

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.

AS.010.338. Art and the Harem: Women's Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem —as an institution, a physical space, and a community of women— from various art-historical perspectives, considering such topics as the harem's architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem's visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.

AS.010.339. Sex, Death, and Gender: The Body in Premodern Art, Medicine, and Culture, c. 1300-1600. 3 Credits.
To what extent was the body and its depiction a site of contestation, identification, or desire in the Middle Ages and Renaissance? If the body in the West since the 1800s is seen to have been shaped by the rise of photography and film, the institutionalization of biomedicine, and the establishment of techniques of surveyance and mechanization, then how was the body represented, disciplined, and experienced in the preceding centuries? In an age of unprecedented encounter with non-European bodies, what did it mean to describe and categorize bodies by race, region, or religion? These are some of the major questions this class seeks to answer, which is fundamentally interdisciplinary as it draws upon insights and methods from anthropology and the history of medicine and history of science to investigate how the body has been represented and imagined in the visual arts. The bodies of the suffering Christ, the female mystic, the dissected cadaver, the punished criminal, and the non-European 'Other' will loom large as we work to problematize notions of a normative body, whether in the premodern world or in the contemporary one. While most readings and lectures will concern the body and its representation in the Christian West during the later Middle Ages and Renaissance, students are encouraged to work on a topic of their choosing from any geographical area 1000-1800 CE for their research papers.
Area: Writing Intensive

AS.010.352. Modern and Contemporary Art: Middle East and South Asia. 3 Credits.
This course will explore modern and contemporary art in colonial and postcolonial contexts from Bangladesh to northern Africa. How do artists negotiate demands to support their national and local identities while participating in modernism across borders? What role do secularism and spirituality have in modern art? How do anticolonial, Marxist, and feminist politics shape art in these regions? How do global economic forces and the rise of powerful collectors, private museums, and international art fairs shape art and artists working across this geographic area? We will foreground the role of women as artists, collectors, patrons, and scholars throughout.
Area: Writing Intensive

AS.010.413. Historical and Conceptual Bases of Art History. 3 Credits.
This course introduces students to the principal methods and theories of art history. Students will work through readings foundational for the discipline, texts that define key methodological consolidations in the twentieth century, and more recent (e.g. feminist, visual studies, global, post-colonial, and/or ecological) critiques and rethinking. Specific texts will vary by instructor, but the course seeks—in any instantiation—to include a plurality of perspectives.

History of Science, Medicine, and Technology

AS.140.329. Women, Health, and Medicine in Colonial and Antebellum America. 3 Credits.
This class will examine the history of women's health and medicine in America from the 17th century to the mid-19th century, a period in which settler colonialism and the trans-Atlantic slave trade mixed European, Indigenous American, and African people and belief systems, resulting in diverse healing practices and understandings of the body and gender. Major themes addressed in the course include reproductive health, domestic and "alternative" medicine, as well as enslavement, racialized medicine, poverty, disability, and sexuality.
Area: Writing Intensive

AS.140.685. Histories of Reproduction.
While there is a vast literature on reproduction in a global context, this course will focus on the arc of what we might call decolonial histories of reproduction—those that center issues of justice, freedom, intimacy, and agency, as well as cultural negotiation, conflict, and change. Students will write critical histories of reproduction, with attention to the ways in which reproductive politics interface with institutions that exert hegemonic, racialized, gendered, and ableist forms of state power and colonial power. We will also appreciate the ways in which reproduction interacts with other—non geographically-bound, non-institutionalized, and non-state mediated—forms of biopolitical power. We will analyze how the historiography has evolved over time and discuss future directions in the field.

Medicine, Science and the Humanities

AS.145.220. Health, Medicine, Gender, and Sexuality. 3 Credits.
This course invites students to take the perspective of gender and sexuality on health and medicine. In this course, we do not see gender and sexuality as a separate domain of health. Instead, we will learn how a gender perspective is in fact crucial for critically exposing the ways in which medicine is interpenetrated by social life and by law. For example, what technologies and discourses constitute "the normal"? How is sexuality braided into disease surveillance? How do we understand the lawfare on the terrain of reproductive rights? What aspects of disease are suppressed in dominant forms of knowledge production, due to the undervaluation of gendered forms of experience? We will take cases involving HIV/AIDS; reproductive justice and rights; poverty, marginality and queer kinship; and household patterns of care.

Modern Languages and Literatures

AS.211.374. Gendered Voices. 3 Credits.
The course will explore the notion of 'voice' in order to show how poetry, literature, philosophy, and music have been dealing with it throughout the ages. In particular, by focusing on classical figures such as the Sirens, Circe and Echo, as well as by considering the seminal discussions of the 'voice' in Plato and Aristotle, the course will address the gendered nature of the voice as a tool to seduce and manipulate the human mind. More specifically, the course will discuss the ways in which male, female, queer, gendered and un-gendered voices embody different functions. Course materials include classical, medieval and early modern sources as well as later rewritings of myths concerned with the voice by authors such as Jules Verne, Karen Blixen, Giuseppe Tomasi di Lampedusa, and Italo Calvino. A selection of theoretical works (e.g. Cavarero, Silverman, Dollar, Butler) will also be discussed. The course is taught in English and all materials will be available in English translation; Italian majors and minors should enroll in section 2.
Area: Writing Intensive

AS.211.722. Global Feminist Filmmaking: a Theory in Practice Seminar.
This seminar examines recent emerging narrative and documentary global feminist filmmakers, applying feminist theory, intersectional theory, cine´ma ve´rite´, theory of nonviolence, and intersubjectivity to understand their work. Each week, we will examine one filmmaker's approach to their own personal practice of feminist filmmaking, and either interview them during our class or screen a pre-recorded zoom interview. In this seminar students will go beyond a theoretical feminist film criticism to one introduced into a lived and living feminist film practice. The filmmakers in question are Marialy Rivas (Chile), Elisabeth Scharang (Austria), Habiba Djahine (Algeria), Patricia Ortega (Venezuela and Argentina), Wanuri Kahiu (Kenya), Naomi Kawase (Japan), Sandra Kogut (Brazil), Kirsten Johnson (USA), TT the Artist (USA), Patricia Ramos (Cuba), Susana de Sousa Dias (Portugal), Claudia Llosa (Peru), Alina Marazzi (Italy), Rosine Mfetko Mbakam (Cameroun and Belgium).

AS.212.318. Women in French Literature of the 17th and 18th Centuries. 3 Credits.
This course will examine the changes in the relationship of women to literature in France before the French Revolution from several points of view: (1) What were the social and intellectual contexts of gender distinctions? (2) How did men writing about women differ from women writing about women? (3) How were these questions affected by the changing norms of literary productions? Texts by Mme. de Sévigné, Molière, Mme. de Lafayette, Prévost, Diderot, Rousseau, Laclos, and Beaumarchais.
Area: Writing Intensive

AS.212.436. Cultures of Love. 3 Credits.
From the time of its invention, as a kind of counterfeit religion, in the Hispano-Arabic world, love has been an unsettling, paradoxical, transgressive phenomenon: mystical, adulterous, con game, parlor game, poison, illness. Taking a literary, sociological and anthropological approach, this course will try to grasp some of the challenges posed by love's protean discourse: from the fin'amor born in women-ruled Medieval courts, to the language of 17th-century women mystics, to libertinage, to the cold intimacies of today's emotional capitalism. Taught in French.
Area: Writing Intensive
AS.210.301

AS.213.321. Bodies and Pleasures. 3 Credits.
This course traces a literary history of sexuality from the Middle Ages to contemporary women's writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures.

AS.213.373. Sex und Macht. 3 Credits.
We will discuss postwar and contemporary literature and films that grapple with the effect of unequal power structures on sexual relations. Taught in German.

AS.213.668. Kleist im Kontext.
This seminar will explore the narrative, dramatic, and quasi-journalistic work of Heinrich von Kleist in its philosophical and literary environment. We will examine how Kleist comments on and parodies the positions of the enlightenment, German Idealism, Weimar classicism, and the theater establishment. We will pay particular attention to the way he combines the verbal and the visual in his performative, narrative, and syntactic strategies, and analyze how this contributes to a specifically Kleistian sense of humor.Grading: P/F

AS.213.763. Contemporary Theater: Gender/Violence.
The course explores 21st-century German theater in its diverse aesthetic and textual forms. Due to comparatively generous funding, German non-commercial theater has over the last decades been able to develop, adapt, and maintain a great variety of at one point "experimental" artistic styles, including frequently stark depiction of gender and violence. We will focus on the ways in which the productions take up, amplify, displace, disrupt, and/or reinforce cultural codes and images of gender and violence both in their symbolic and physical dimension. Topics include the "directors' theater," political theater, "pop-theater," "discourse-theater," "new documentary theater," "post-migratory theater," postcolonial theater and live art. The readings may include Nobel laureate Elfriede Jelinek, Dea Loher, René Pollesch, Milo Rau, Falk Richter, Sasha Marianna Salzmann and various works of shared authorship such as She She Pop, Rimini Protokoll, Gintersdorfer/Klaßen, and Yael Ronen. The Tuesday sessions will be used for the joint viewing of production recordings. Taught in English. Course material in German. No sessions after March 27th.

AS.214.304. Founding Mothers: Female Genealogies in Medieval and Renaissance Italian Literature. 3 Credits.
In this course we will explore the problem of the relationship of women to dynastic power in the literature and culture of late medieval and Renaissance in Italy. Beginning from Giovanni Boccaccio's famously ambivalent portraits of women in the Decameron and his treatise On Famous Women, we will locate women within an early modern system of inherited power and literary representations. We will then move to study a series of genealogically motivated chivalric poems (such as Orlando innamorato, Orlando furioso, Floridoro, Gerusalemme liberata) which propose a number of roles for women: warriors, queens, saints, monsters, saviors, poets, founders. These texts return again and again to the key role of women in establishing and maintaining dynastic continuity within noble families, but also to the dangers they pose to dynastic stability. We will try to understand how these literary texts work within the social and political context of the Italian city- states of this period. We will also study the involvement of women in the production and circulation of literary texts, focussing on notable patrons of the arts like Isabella d'Este and Lucrezia Borgia, and on important poets like Vittoria Colonna.

AS.214.363. Italian Journeys: An Other Story. 3 Credits.
What does it mean to be "other," and how can reading about experiences of otherness affect our understanding of historical moments? In this interdisciplinary survey of contemporary Italian literature, students will read through the lens of "the other" in order to highlight both the milieu of lived experiences (often lived by the authors themselves) outside of sociocultural ideals, and the role they play within modern Italian canon. Combining gender studies, animal studies, posthumanism, and other theoretical frameworks, students will examine works from authors such as Sibilla Aleramo, Carlo Levi, Elena Ferrante, Igiaba Scego, and directors Vittorio De Sica, and Alice Rohrwacher. Taught in English—students wishing to do coursework in Italian should register for AS.214.363 (02).

AS.214.434. Elena Ferrante and her Brilliant Friends: Contemporary Italian Women Writers. 3 Credits.
Elena Ferrante is Italy's most acclaimed contemporary novelist, although her true identity remains unconfirmed. Having been translated into and published in 45 languages, with over 15 million copies sold worldwide, her 'Neapolitan Quartet' triggered what has been called 'Ferrante Fever.' Through reading and discussion of Ferrante's works (novels, letters, and a fairytale) and their screen adaptations— the HBO TV series My Brilliant Friend and Maggie Gyllenhaal's The Lost Daughter (2022) —we shall discover the reasons behind this global, literary phenomenon while exploring themes such as gender, memory, trauma, women's participation in, or exclusion from, history, and the internal violence of a rapidly changing society. In addition to Ferrante's works, we shall also read Anna Maria Ortese, Elsa Morante, and Fabrizia Ramondino to understand the influence of women writers from previous generations on Ferrante's work. This class is taught in English. Additional discussion sessions in Italian will be offered.

AS.215.407. Power And Gender In Hispanic American Novels And Films. 3 Credits.
We will analyze and discuss four novels and three films impacted by gender violence and political idolatry under shattering stress. Oficio de tinieblas or The Book of Lamentations (1962) by Rosario Castellanos (Mexico). Zama (1956) by Antonio di Benedetto (Argentina). Delirio or Delirium (2004) by Laura Restrepo (Colombia). El ruido de las cosas al caer or The Noise of Things Falling (2011) by Juan Gabriel Vásquez (Colombia). In addition, we will examine in depth films by Lucrecia Martel (Argentina): the short Rey muerto (1995), La ciénaga (2001), and her own version of Zama (2017). Course taught in Spanish.
AS.210.312

AS.217.427. Radical Women: Brazilian Literature, Art, and Culture. 3 Credits.
The vast body of work produced women artists and writers in Brazil has been marginalized by canonical cultural narratives, which are now being contested by a spate of scholarly and artistic projects. This course spotlights the production of women from the early twentieth century to the present, including renowned and lesser-known works. We'll discuss art, literature, and film alongside feminist theory, exploring radicality as it relates to aesthetics and politics. How do women's art, literature, and thought engage with and transform Brazilian cultural production? What are their contributions to global discussions about gender and sexuality? How do these works respond to historical events? Among the topics addressed are the body, feminism, race, indigeneity, and politics. We'll study Clarice Lispector's acclaimed stories, the first Brazilian proletarian novel written by modernist icon Patricia Galvão, known as Pagu, the diaries of Carolina Maria de Jesus, the emblematic paintings of Tarsila do Amaral, and Lygia Clark's artwork, as well as the booming scene of contemporary cinema and poetry. The course is taught in English, but those interested in doing the coursework in Portuguese (4 credits) should register for section 02.

Music

AS.376.344. Powerful Women in Opera. 3 Credits.
Many opera scholars have noted that opera abuses its female characters. Many operatic heroines die, whether from violent acts or chronic diseases. However, women in opera also wield great power through their voices as ambitious queens, cunning servants, magical beings, and femmes fatales. In this course we will examine how these female characters operate through explorations of the operas' historical context, their texts and scores, and modern performance practice. Spanning from the 17th to 21st centuries, the repertoire studied in this class will provide an introduction to opera history. At the same time, we will delve deeply into different ways to do close analyses of opera through the lens of gender, reading the work of such thinkers as Carolyn Abbate, Naomi Andre, Adriana Caverero, Catherine Clément, and Wayne Koestenbaum.

Near Eastern Studies

AS.130.245. The Archaeology of Gender in the Ancient Eastern Mediterranean. 3 Credits.
How do art historians and archaeologists recover and study genders and sexualities of ancient people? This writing-intensive seminar looks at texts and objects from ancient Egypt, Assyria, and Greece through the lens of gender and sexuality studies. Beyond exploring concepts of gender in the ancient Eastern Mediterranean, students will also consider how modern scholars have approached, recovered, and written about ancient gender identities. There are no prerequisites for this course.
Area: Writing Intensive

AS.130.249. Everything She Says is Done for Her: Exploring the Spheres of Influence of Women in Ancient Egypt. 3 Credits.
How did women move within their gendered spheres of influence in ancient Egyptian society? How do scholars discuss women in the ancient world and what are the spheres influence often allotted to women? How can we investigate the lives of women through the material record? What methodologies are applied by scholars to study women in antiquity? This course seeks to explore these questions and much more. The course will utilize textual and material evidence to examine and deconstruct the economic, social, religious, and political roles of women in ancient Egypt.

Philosophy

AS.150.400. Simone de Beauvoir. 3 Credits.
Seminar on Beauvoir's moral philosophy, covering the major works of the 1940s. Readings will include selections from The Blood of Others, Pyrrhus and Cineas, All Men are Mortal, The Ethics of Ambiguity, and The Second Sex. Open to graduate students and advanced undergraduates. (Beginning undergraduates should contact Professor Kosch.) No prerequisites.
Area: Writing Intensive

AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations

AS.150.436. Philosophy of Gender. 3 Credits.
In this class we will examine philosophical questions about gender, and about the intersections between gender and other social categories including race, class and sexuality. We will focus specifically on questions about the metaphysics of gender and other social categories.

Program in Museums and Society

AS.389.220. Queer Sixties. 3 Credits.
Introduction to queer & trans politics and culture in the period immediately preceding the gay liberation movement, from the early to late 1960s, focusing on intersections of race, sexuality, and gender. Course examines how we have come to narrate queer & trans history and investigates the ways archival practices shape conceptions of queer & trans life. Students learn research methods as they draw on and contribute to the university's digitized archival collections.

AS.389.230. Queer & Trans Public History. 3 Credits.
This course introduces students to a blend of public history, queer studies and transgender studies. Students learn oral history and archival research methods as they draw on and contribute to the university's archival, museum, and library collections.

AS.389.280. Of and For Everyone: Diversity, Equity, Inclusion and Access in the Museum. 3 Credits.
How are museums responding to the pressures to be more equitable, inclusive, and accessible towards public audiences and their staff? Students go behind the scenes of the Smithsonian, Baltimore Museum of Industry and Baltimore Museum of Art to meet with working groups and staff charged with transforming their institutions. Includes site visits, hands-on experiences and research on best practices.

AS.389.325. Women of the Book: Female Miracle Workers, Mystics, and Material Culture, 1450-1800. 3 Credits.
From psycho-spiritual autobiographers to mystical bi-locating nuns, convent crèche-keepers to choristers of sacred music, from rock-star-status mystics to the hidden careers of women printers, engravers, and miracle-makers, this course will explore the remarkable intellectual, cultural, and imaginative contributions of women who found refuge, agency, and power within alternative lives.
Area: Writing Intensive

AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.
Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.

AS.389.348. Queer Oral History. 3 Credits.
Students learn to conduct, analyze, and interpret their own oral histories as they contribute to a wide-ranging project documenting queer worldmaking in the Baltimore-Washington D.C. region. We engage with scholarship from performance studies, queer of color critique, LGBTQ history, and public humanities to consider the politics of storytelling and the promises of public-facing oral history projects. Students have the option of developing podcasts, multimedia projects, and public humanities proposals as their final assignment.

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Writing Intensive

Public Health Studies

AS.280.225. Population, Health and Development. 3 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS and Covid.

AS.280.451. Born a Girl: Issues in Women's Health From a Life Course Perspective. 3 Credits.
The discussion surrounding women's health has often remained limited to understanding women's reproductive health needs. This course seeks to move beyond this topic to explore the key issues affecting women's health, utilizing a life course perspective. This undergraduate course will focus on a select number of themes including: a) understanding the history of women's health; b) sexual and reproductive health; c) maternal health; d) violence against women and girls; e) the needs of younger girls and aging women; and f) how mental health and stigma affect women. The course brings both U.S. and global perspectives to enhance the understanding of how the field of women's health has evolved over time. It will also address some of the challenges public health professionals continue to face in addressing the health and wellbeing of women today. This seminar-style course combines class presentations with journal clubs and small group discussions. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
AS.280.350

Sociology

AS.230.304. (Making Space For) Black Thought. 3 Credits.
How do we think about the power relations at work in the scholarship we read and in the important texts we consider essential to our educational experience? This course will critically investigate the role that concepts of race and racism have played in formulating dominant perceptions of who can be the producers of knowledge and what constitutes authoritative knowledge itself. We will consider how and why thinkers and scholarship produced outside of Europe and North America are too often ignored for their scholarly contributions and the dynamics that lead to this situation. We will also explore how and why new and important perspectives emerge from engaging and centering voices from beyond traditional canonical works. With a particular focus on the forms of knowledge arising from European Enlightenment approaches to concepts of thought reason and objective knowledge, this course will critically engage students with a wide range of thinkers such asGWF Hegel, W.E.B. Du Bois, Angela Davis, Ralph Trouillot, Sadiya Hartman, Walter Rodney, Derek Walcott, Sylvia Wynter and Frantz Fanon. This course will focus largely on thinkers engaging within the Black Atlantic and black diaspora traditions to question how we might consider voices and thought from beyond Eurocentric positions in our own scholarly practice.

AS.230.316. African American Family. 3 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.

AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Area: Writing Intensive

AS.230.370. Housing and Homelessness in the United States. 3 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Students may not have previously taken AS.230.223.

AS.230.388. Sociology of the Family. 3 Credits.
Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children's wellbeing, balancing work and family responsibilities, domestic violence, and government policy toward families.

Theatre Arts & Studies

AS.225.218. ANGELS IN AMERICA (The Play) The Millennium Shift in American Culture and Politics. 3 Credits.
Tony Kushner's epoch-making play weaves together astonishingly diverse sides of America in a broad tapestry; a modern work that emerged at the end of the 20th Century, now being revived world wide: it provides keys to understanding the American zeitgeist and the coming transformations of the culture. In one pivotal work we find the emergence of LGBT rights, the Mormon Church, the AIDS epidemic, the new "spirituality," the Reagan-era transformation of both government and business, and the looming figure of Roy Cohn whose influence in American politics "behind the scenes" ranged from the Rosenberg trial to his work as counsel for the McCarthy Committee in the 1950s: and even his legacy in the 2016 as primary political and business mentor of the current President of the United States.

AS.225.318. 21st Century Female Playwrights. 3 Credits.
This is a writing intensive class exploring the current wealth of women playwrights, including Pulitzer Prize winners: Wendy Wasserstein, Paula Vogel, Lynn Nottage, and Jackie Sibblies Drury (2019 Prize for FAIRVIEW). We will discuss Script Analysis and read (and see) plays by numerous writers including Claire Barron, Kia Corthron, Theresa Rebeck, Sarah Ruhl, Danai Gurira, Caleen Sinnette Jennings, and Hansol Jung. This class will include a mid-term and a Final Paper.
Area: Writing Intensive

Women, Gender, and Sexuality, Minor

Women, Gender, and Sexuality Minor Requirements

Students can receive a minor in women, gender, and sexuality by completing six one-semester courses. The following courses are examples of the WGS core curriculum (363 prefix):

- Introduction to the Study of Women, Gender, and Sexuality
- Feminist and Queer Theory
- Gender and Sexuality Beyond the Global West
- Health, Medicine, Gender, and Sexuality
- Internship/Practicum (offered in collaboration with the JHU Center for Social Concern, the internship-practicum combines academic work with volunteer experience)

Students are asked to complete at least two courses from the core WGS curriculum and may choose among the courses cross-listed with other departments for the remaining four. At least four 300- or 400-level courses are required for the minor; no more than two courses can be at the 100- or 200-level. Students must earn a C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

Please direct inquiries about the undergraduate minor to Katrin Pahl (kpahl@jhu.edu).

Theatre Arts and Studies

http://krieger.jhu.edu/theatre-arts (http://krieger.jhu.edu/theatre-arts/)

The program offers a comprehensive approach to the arts of acting, directing, playwriting, and theatre history, along with the fundamentals of technical direction, play production, play analysis, and theatre management.

For those students who intend to prepare for a career in the theatre, the courses offered are taught exclusively by established professionals with experience on Broadway, in the best of regional theatres, and in many countries of the world.

For those students not focused on a career in theatre arts, the courses offer a broader perspective, an understanding of societal traditions and culture, and an appreciation for the arts, whether theatrical, literary, musical, or visual. Students pursuing careers in medicine, engineering, law, international relations, science, and others have been challenged and enriched by the school's courses in theatre arts.

For those who seek careers in the arts, the acting and directing workshops, playwriting courses, and independent study opportunities provide rigorous training in acting and other theatre crafts, as well as an appreciation for and an understanding of the history of dramatic arts, its cultural significance, and the industries it has produced.

Located in the program's home, the historic Merrick Barn, The Johns Hopkins University Theatre provides a vehicle for the fulfillment of student lab requirements. The University Theatre produces several plays each year in the John Astin Theatre and occasionally in the Meyerhoff Auditorium at the Baltimore Museum of Art, which adjoins the Homewood campus. Classes are also held in the Barn.

Programs

- Theatre Arts and Studies, Minor (p. 2176)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.225.100. Introduction to Theatre. 3 Credits.
An introduction to the drama: how and why the theatre came into being; its role in human history; and how changing social structures in different regions and epochs have shaped different kinds of theatre, plays and performance. Also: how theatre "works" for us and on us, and the major plays of world drama.

AS.225.101. Acting I. 3 Credits.
An introduction to the fundamentals of acting through exercises and improvisations based on the teachings of Stanislavsky and Sanford Meisner. This course also includes a brief survey of major modern American playwrights. Plays will be read and employed in scene work.

AS.225.201. Acting II. 3 Credits.
As in Workshop I, the principal classroom activities will consist of scene work, exercises, lectures, and discussion. Some rehearsal will also take place during school hours. It is expected that substantial out-of- class time be spent on rehearsals and exercises. Recommended Course Background: AS.225.301

AS.225.212. Voice and Speech for the Actor. 3 Credits.
It has been said that 90% of what an actor does onstage is dependent on being effortlessly heard and understood by their audiences. This course is designed to establish the tools for the actor to begin to create this foundation. Using a combination of both the benchmark texts by Edith Skinner and Kristin Linklater, along with in-class exercises and monologues, we will begin the process of exploring both vocal power through breathing and breath control, and the fundamental tools of clarity in the speaking of a dramatic text onstage.

AS.225.215. Performing Musical Theatre. 3 Credits.
Effective performance in musical theatre demands a committed analysis of the musical and dramatic values of the song and the libretto from which it springs, in order to develop a fresh, organic interpretation. This course will provide you with the training to both analyze and interpret musical theatre scenes and songs and to make the most of them in performance.Instructor Permission Only.

AS.225.218. ANGELS IN AMERICA (The Play) The Millennium Shift in American Culture and Politics. 3 Credits.
Tony Kushner's epoch-making play weaves together astonishingly diverse sides of America in a broad tapestry; a modern work that emerged at the end of the 20th Century, now being revived world wide: it provides keys to understanding the American zeitgeist and the coming transformations of the culture. In one pivotal work we find the emergence of LGBT rights, the Mormon Church, the AIDS epidemic, the new "spirituality," the Reagan-era transformation of both government and business, and the looming figure of Roy Cohn whose influence in American politics "behind the scenes" ranged from the Rosenberg trial to his work as counsel for the McCarthy Committee in the 1950s: and even his legacy in the 2016 as primary political and business mentor of the current President of the United States.

AS.225.300. Contemporary Theatre & Film. 3 Credits.
An introduction to the performing arts, including an overview of theatre history, acting styles and the interaction of art and society. A personal view from inside.

AS.225.303. Acting III. 3 Credits.
Special attention is given to the development of spontaneity and emotional freedom using the principles of Workshops I and II. Hands on work with John Astin's "The Process" and the second Silverberg workbook are employed, along with the Uta Hagen text. Boleslavsky and Michael Chekhov are introduced. The Clurman, Meisner, Stanislavsky and Strasberg approaches are included. Substantial out of class time is required. Recommended Course Background: Two acting courses.

AS.225.305. A History of Black Performance and Drama. 3 Credits.
A survey of the history of the Black Performer and Performance. In exploring the art of storytelling from ancient African civilizations, students will critically engage and discuss the origins, aesthetics, characteristics, and practices of Black performers, and their often-unacknowledged contributions and influence upon mainstream performance throughout the history of the world.

AS.225.308. Shakespeare in Performance. 3 Credits.
Students will work with a selection of Shakespeare's plays --- CYMBELINE, RICHARD III, CORIOLANUS--- in exploring specific ways in which the power of the lines can be translated dynamically and immediately into vocal and physical performance. This course can be repeated for credit, because it covers different topics. (Some background in the acting sequence is encouraged).

AS.225.310. Stagecraft. 3 Credits.
A hands-on approach to the technical and theoretical elements of production. Meets in the Merrick Barn Scene Shop. Permission Required.

AS.225.311. Scene Study. 3 Credits.
An introduction to the principles of analyzing text in a playscript and using the intrinsic demands of language to create character in a scene. Gradually, the student learns to define an ACTION through given circumstances and develop the arc of performance in a particular setting.

AS.225.314. Theatre: Tech Direction. 3 Credits.
An introduction to Technical Direction including pre-production and production with an overview of materials, tools, rigging and safety, together with design and its implementation.

AS.225.315. Scene Study 2. 3 Credits.
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.

AS.225.318. 21st Century Female Playwrights. 3 Credits.
This is a writing intensive class exploring the current wealth of women playwrights, including Pulitzer Prize winners: Wendy Wasserstein, Paula Vogel, Lynn Nottage, and Jackie Sibblies Drury (2019 Prize for FAIRVIEW). We will discuss Script Analysis and read (and see) plays by numerous writers including Claire Barron, Kia Corthron, Theresa Rebeck, Sarah Ruhl, Danai Gurira, Caleen Sinnette Jennings, and Hansol Jung. This class will include a mid-term and a Final Paper.
Area: Writing Intensive

AS.225.320. Performance. 3 Credits.
The student is given specific acting assignments, and develops them as special projects for public performance under the direct supervision of the instructor. A professional level performance is the goal. Audition Required. Out of class rehearsal time required. Permission only, signature required.

AS.225.321. The Lab - The Actor/Director/Playwright Lab. 3 Credits.
Student actors, directors, and playwrights will explore their respective crafts with emphasis on process and individual artistic growth. Participants in the class will also collaborate on the creation of new material for the stage. Recommended Course Background: one course in Acting, Directing, or Playwriting.

AS.225.323. Design for the Stage. 3 Credits.
The fundamentals of stage design, with an emphasis on process, including script analysis, research, conceptualization, and implementation, from the first reading of the play to opening night, along with an overview of theatre architecture from the Greeks to the current day and into our imagined future.

AS.225.324. Adaptation for the Stage. 3 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Area: Writing Intensive

AS.225.328. The Existential Drama: Philosophy and Theatre of the Absurd. 3 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietszche, Camus and Sartre -- and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürrenmatt, Frisch, Havel, Witkiewicz, and Mrozek.
Area: Writing Intensive

AS.225.330. Playwriting Strategies. 3 Credits.
A seminar and workshop in playwriting with Dr. Joe Martin, playwright and dramaturge. Student writers, developing their plays, will learn how to open up to the creative process, "brainstorm," refine their work, and shape it toward an act of artistic communication. Writer's techniques, such as attending to plot or "story," delineation of character, creating effective "dialog," even overcoming "writer's block," will be addressed. This course is designed to be complementary to – not a replacement for – playwriting classes in the Writing Seminars.
Area: Writing Intensive

AS.225.333. Scene Study 3. 3 Credits.
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.

AS.225.345. History of Modern Theatre & Drama. 3 Credits.
Designed to impart a deepened appreciation and understanding of today's theatre by surveying the major playwrights, historical movements, and theatre practices of the 20th century. The course also seeks to help students understand theatre's relationship to the societal and political power structure of each era and to introduce students to great dynamic literature in its intended form, which is performance.
Area: Writing Intensive

AS.225.346. Creative Improvisation: For Theatre and for Life. 3 Credits.
An exploration of the imagination and the senses using basic techniques of improvisation: exercises, conflict resolution, ensemble building, and theatre games. Texts: Spolin, Johnstone, LaBan and Feldencreis. Open to all students.

AS.225.374. Acting IV. 3 Credits.
Work is tailored to individual students, using the principles of Workshops I and II and other previous experience. Students work with John Astin's "The Process", along with the texts of Uta Hagen, Boleslavsky and Michael Chekhov. The Clurman, Meisner, Stanislavsky and Strasberg approaches are further explored. Substantial out of class time is required. Recommended Course Background: Two acting courses. Permission Required.

AS.225.501. Independent Study. 1 - 3 Credits.
Permission only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.225.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

Cross Listed Courses

Center for Africana Studies

AS.362.309. Performing the Archive 2022: 200 Years of US-Liberia Migration. 3 Credits.
This seminar will explore some of the pivotal historical and contemporary connections between the US and Liberia since the first Black American settlers arrived in West Africa with the American Colonization Society in 1822. This course asks: What are implications of these stories of migration and reception for how we make sense of global anti-Blackness in the contemporary moment? How does performance provoke new questions about shared histories of those impacted by colonialism and the transatlantic slave trade? Why is a more in-depth understanding of 19th century Black political thought and the precolonial West African indigenous category necessary for developing theory on the political economy of race today? Through the lens of performance studies, students will analyze the documents in the American Colonization Society archive, to reimagine these early encounters as informed by historical documentation including folklore and pan-Africanist theory. Through exploring a range of historical and contemporary materials that center the problematic "indigenous/settler" binary, students will engage in a dramaturgical process which presents powerful possibilities for unlearning historical misrepresentations. In particular, students will develop theater-based projects that interrogate the spatio-temporal connections between the stories of both, free Blacks and those who were enslaved in Maryland and manumitted to go to Liberia, and the contemporary politics of Liberia-US migration.

First Year Seminars

AS.001.162. FYS: From Shakespeare to Baltimore. 3 Credits.
This First-Year Seminar is designed around what is on stage in Baltimore this fall. We will attend several plays, both professional productions at theatres in the city and student productions at JHU. We will pay attention to the interpretation of plays on the page, and to the ways that scripts materialize as performances on the stage. We will place these performances in the context of larger theatre histories, studying great plays from the age of Shakespeare to contemporary American theatre. No acting required – just the desire to explore the theatre of today.

Modern Languages and Literatures

AS.210.308. Acting French: learning about French language and culture through theater. 3 Credits.
This course proposes to enhance students' verbal (pronunciation, intonation, syntax, vocabulary) and nonverbal skills (body language, vocal projection, spatial awareness) by performing excerpts from French and Francophone plays ranging from the Middle Ages to the 21st century. A closer analysis of these excerpts will lead us to consider how theater uses the physicality and immediacy of human experience to create a more universal form of connectivity with the world.Recommended course background: AS.210.301.

AS.213.763. Contemporary Theater: Gender/Violence.
The course explores 21st-century German theater in its diverse aesthetic and textual forms. Due to comparatively generous funding, German non-commercial theater has over the last decades been able to develop, adapt, and maintain a great variety of at one point “experimental” artistic styles, including frequently stark depiction of gender and violence. We will focus on the ways in which the productions take up, amplify, displace, disrupt, and/or reinforce cultural codes and images of gender and violence both in their symbolic and physical dimension. Topics include the “directors’ theater,” political theater, “pop-theater,” “discourse-theater,” “new documentary theater,” “post-migratory theater,” postcolonial theater and live art. The readings may include Nobel laureate Elfriede Jelinek, Dea Loher, René Pollesch, Milo Rau, Falk Richter, Sasha Marianna Salzmann and various works of shared authorship such as She She Pop, Rimini Protokoll, Gintersdorfer/Klaßen, and Yael Ronen. The Tuesday sessions will be used for the joint viewing of production recordings. Taught in English. Course material in German. No sessions after March 27th.

For current faculty and contact information go to http://krieger.jhu.edu/theatre-arts/people/

Theatre Arts and Studies, Minor

Theatre Arts and Studies Minor Requirements

All courses for the minor here must be taken for letter grades and receive a grade of C- or higher. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the minor without permission of the Director of Undergraduate Studies.

Code	Title	Credits
AS.225.100	Introduction to Theatre	3
or AS.225.300	Contemporary Theatre & Film	
AS.225.101	Acting I	3
AS.225.201	Acting II	3
AS.220.105	Introduction to Fiction & Poetry I	3
One theatre history course [3]		3
One drama course in other program [1]		3
One additional theatre course [2]		3
Total Credits		**21**

1. Courses are identified by the POS-Tag THEA-DRAMA. Alternatively, another theatre history course from within the program (not counted towards another requirement) may apply towards this requirement with permission of the director of undergraduate studies.
2. This course may be an acting, theatre production, playwriting, or theatre history course (AS.225-3xx-4xx). Students may speak to the director of undergraduate studies for additional guidance in selecting this course.
3. Current options include: AS.225.328 The Existential Drama: Philosophy and Theatre of the Absurd and AS.225.345 History of Modern Theatre & Drama. Students may speak to the director of undergraduate studies about other options.

Visual Arts

http://krieger.jhu.edu/visualarts/

The Center for Visual Arts engages and challenges students in the study and practice of the visual arts to encourage innovative making and thinking, risk taking and creative problem solving that is applicable to research across disciplines.

Visual arts courses examine contemporary and historical perspectives in art while providing an inclusive environment where ideas are shared and acted upon.

Central to this mission of challenging students and advancing their knowledge and skills in the arts are classes that offer faculty led cross-disciplinary collaboration within diverse academic programs at JHU and the greater Baltimore community. CVA faculty are accomplished artists, photographers, designers, and illustrators.

Students can minor in art or take general elective classes from a diverse curriculum that includes drawing, painting, printmaking, digital photography, visual communication, fiber art and a range of special topics courses. Through Johns Hopkins’ cooperative programs with MICA (Maryland Institute College of Art) and other colleges in the Baltimore area, students can take courses not offered at the Center for Visual Arts.

The CVA hosts an annual fall faculty show to highlight the creative work of current faculty.

Each spring, the Johns Hopkins community is invited to attend an exhibition of the year’s best work by CVA students. Additionally, a variety of temporary exhibits are hosted in the department throughout the year.

The CVA invites award winning artists to campus every semester to work with students and give a public presentation about their art practice. News and events can be found on our social media pages:

The photography, painting and drawing departments offer a summer study abroad program at Burren College of Art in Ballyvaughan, Ireland. More information can be found on the Study Abroad website (http://jhu-sa.terradotta.com/).

Programs

- Visual Arts, Minor (p. 2190)

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.371.126. Fiber Art and the String Revolution. 3 Credits.
This course presents students with technical, historical and cultural understanding of the fiber medium. Students learn the basics of textile processes, including dyeing, felting, knitting, weaving, sewing, and lacemaking. Technical demonstrations and samples will be covered in class while students are encouraged to expand upon covered material through long-term personal projects. Technical demonstrations will be supported with slide lectures demonstrating the historical context of fiber processes and their contemporary applications. Attendance in 1st class is mandatory.

AS.371.129. Botanical Painting in Watercolor and Gouache. 3 Credits.
This introductory painting class is an exploration of the ways watercolor and designer gouache are used together to paint organic materials representationally. We'll study the difference between botanical painting and illustration and trace how women specifically have shaped this genre of art through history. Students will learn techniques from both observation and invention and artwork will be assessed in weekly group critiques. Course includes demonstrations, short readings and a research paper about a botanical artist.

AS.371.131. Foundation Drawing. 3 Credits.
This course is designed as an introduction to the tools, techniques and concepts of basic drawing for students with little or no previous experience. Studio assignments focus on developing strong observation and rendering skills while experimenting with traditional and contemporary practices in drawing. Wet and dry media will be used. Attendance at 1st class is mandatory.

AS.371.133. Oil Painting I. 3 Credits.
This course is designed as an introduction to the tools, techniques and concepts of basic painting for the serious student with little or no previous experience. Studio assignments focus on developing strong observation and rendering skills focusing on issues of light, color and composition while experimenting with traditional and contemporary practices in painting. Lectures and a museum trip give students an art historical context in which to place their own discoveries as beginning painters. Oil paint will be used. Attendance at 1st class is mandatory.

AS.371.147. Art of Architecture: Homewood, Baltimore and Beyond. 3 Credits.
In this course, students will learn to design, draw, and see like an architect. A series of progressive design exercises will teach the practical capacities and habits of mind that lead not merely to competence but success and advancement in the field. We will look at what architecture has been, discuss what it is becoming, and explore both formal and narrative methodologies for design. The class will use the built environment of the city - and the Homewood campus - as a classroom and a site for interpretive drawing and creative design work. Essential in the architect's education is the sketchbook, which functions not merely as a place to 'store' what has been witnessed, but a place to interpret and explore implications of design in the world, whether close to home or traveling in exotic locales.

AS.371.151. Photoshop/Digital Darkroom. 3 Credits.
Photoshop is not only the digital darkroom for processing images created with digital cameras;it is also a creative application for making original artwork. In this course, students use Photoshop software as a tool to produce images from a fine art perspective, working on projectsthat demand creative thinking while gaining technical expertise. Students will make archivalprints, have regular critiques, and attend lectures on the history of the manipulated imageand its place in culture. We will look at art movements which inspire digital artists,including 19th-century collage, dada, surrealism, and the zeitgeist of Hollywood films. Studentsmust have a digital SLR camera. Prior knowledge of Photoshop is not required.Attendance at first class is mandatory. Approval for this course will be considered afterenrollment on SIS; no need to email.

AS.371.152. Introduction to Digital Photography. 3 Credits.
In this course students are introduced to the technical and creative study of digital photography. Students will learn the basic operation of the DSLR camera while receiving instruction in Photoshop, Lightroom, Nik software, file handling and color editing processes. Through in class demonstrations and in the field practice, students learn to use the camera's manual settings to make accurate exposures. Lectures and discussions of historical and contemporary photographs will be introduced to give students guidance and inspiration for their own image making. The semester culminates with students creating a final portfolio of prints. Attendance in first class is mandatory.

AS.371.153. Introduction to Visual Communication- Graphic Design. 3 Credits.
The digital design course explores two-dimensional graphics as visual communication. Students will be introduced to basic design principles and elements, learn graphics tools used in the designindustry, and develop and apply creative strategies to solve design problems in their everyday lives. This unique course will address the students' direct needs through real-life design problems they face. Students will be asked to bring design challenges and tackle the issue both independently and collaboratively. Design challenges may include building print and web visual presentations, producing information brochure and posters, developing off and online portfolios, creating a resume to business cards. The course will offer both analog and digital design processes, graphics software tutorials and techniques, and basic introduction to design history, vocabulary and concepts.

AS.371.154. Introduction to Watercolor. 3 Credits.
Watercolor is simultaneously the most accessible of all painting media and the most misunderstood. This course provides experience and instruction in observational and expressive watercolor techniques, materials, concepts, and vocabulary. Topics to be reviewed include line, perspective, value, texture, composition, color, and pictorial space. There will be an introduction to contemporary practices in watercolor, as well as experimental and abstract exercises, collage, and conceptual work.

AS.371.155. Introduction to Sculpture. 2 Credits.
A studio course introducing students to sculptural concepts and methods. Emphasis is on the process of creating. Even the simplest materials can effectively activate space, convey meaning, and elicit emotion when used thoughtfully and imaginatively. Students will learn different methods including additive and reductive techniques, construction, modeling, and mold-making. No prerequisites except a willingness to experiment, make mistakes... and clean up when you are done. Approval in this course will be considered after enrollment in SIS. Attendance in 1st class is mandatory.

AS.371.162. Black and White: Digital Darkroom. 3 Credits.
In this digital photography course, students explore the beauty and drama of the black- and-white aesthetic. Students learn the elements of composition, style and content through discussions of historic and contemporary imagery. They gain proficiency in Photoshop, Lightroom, and NIK software. Projects enhance students' artistic vision and include the Evocative Landscape, Surrealism, and a DADA collage. Students work on a final project of their choice. Digital SLRs are provided. Attendance at 1st class is mandatory. Camera experience is a plus but not a requirement. Approval for this course will be considered after enrollment on SIS.

AS.371.164. Introduction to Printmaking. 2 Credits.
Working with non-toxic/water based inks and both an engraving press and hand tools, students will explore several types of printmaking. Methods will include intaglio, collograph and both simple and multi-plate relief. As they develop their prints, students can then observe and exploit the strengths that each method has to offer. Drawing and Photoshop skills are helpful but not required.

AS.371.165. Location Photography. 3 Credits.
Working in the studio and in various locations, students will learn the fundamentals of lighting interiors and strategies for working in almost any environment. Field trips will include the National Aquarium, Evergreen Museum & Library, a Howard County horse farm, a Tiffany-designed church and a photo studio. Students will also concentrate on the fine art of printing in our digital lab. They will develop a final portfolio of 10 photographs which express a personal vision about a location of their choice. A basic knowledge of digital photography is helpful, but not required. Approval for this course will be considered after enrollment on SIS. First class is mandatory

AS.371.166. Landscape Photography. 3 Credits.
Class begins: Wednesday, July 6th. In this course students will experience the drama and beauty of the urban and rural landscape. On numerous field trips they will hone their camera technique as well as learn elements of composition and develop a personal style. Students will learn the fundamentals of Photoshop and they will also be introduced to the beauty of black and white in Silver Efex software. Digital SLR cameras will be provided.

AS.371.180. Exploring Line. 2 Credits.
This challenging yet creatively playful course presents abstract, perceptual and conceptual concepts in art to understand line, one of the elements of art, from multiple perspectives, materials and practices. Be prepared to collaborate and experiment! Through an intense exploration of line, students will create artworks exploring line as marks on a flat surface (drawing), lines that communicate data (design), lines that build form (sculpture) and lines that embody movement (performance and video). Possible assignments will include projects with drawing, printmaking, fiber, cell phone video, installation, unconventional or recycled materials and collaboration. • This is not a drawing class but a multimedia course on one of the elements of art.Instructor approval and attendance at first class is mandatory.

AS.371.185. Printmaking: Multiples and Variations. 3 Credits.
In this course students learn to create marks, textures and imagery using a variety of printmaking techniques. Students create relief and intaglio printing matrices and practice printing by hand and with a press to reproduce their images. The class culminates with explorations of layered printing, monoprinting, and mixed media approaches to create unique 2-dimensional and 3-dimensional works. Attendance in first class is mandatory. No prior experience is needed.

AS.371.186. Fundamentals of Design Drawing and 3-D Visualization. 2 Credits.
This course introduces the tools, techniques, and technologies of design representation in a project-based setting. Students will build drawing skills, learn the principles of perspective, and explore theories and applications of design media and emerging digital technologies. Designing projects at various scales from the hand-held object to the public realm, we will develop creative problem solving, design thinking, and iterative design methodologies, leaving the course with the ability to apply the foundations of design to any discipline. Special note: This spring our course will be geared toward collaborative and site-based practices. Class meetings will begin with remote instruction and collaboration, and expand to include site visits as the season progresses. This course will satisfy the foundation drawing class for the art minor.

AS.371.187. Intermediate Drawing, A Contemporary Approach. 2 Credits.
This is an intermediate drawing class that builds on the concepts and skills in Studio Drawing 1. Students will explore contemporary and conceptual approaches to drawing while further developing their skills in various graphic mediums. Risk taking and experimentation will be encouraged while learning about comtemporary practices in the medium. The course will conclude with students creating an individual series of drawings of their choice.
AS.371.131 OR AS.371.186

AS.371.210. Drawing: Who's Telling the Story?. 2 Credits.
What makes an image truthful?Students will create drawings utilizing both traditional and unconventional processes through the lens of historical and political illustrations, propaganda graphics and misinformation, and current events. The course is anchored in, but not limited to, the art practices of Kara Walker's slavery narrative, George Grosz's political caricatures of First War Germany, historical war posters, Hugo Crosthwaite's depiction of the US/MX border to Coronavirus "beauty shot." Projects may include revising a historical artwork, manipulating propaganda graphics of the past and the present, redrawing a visual data, and designing a personal narrative drawing project. Field trips, technical demos, discussions, and lectures will provide context and support for students to become image-makers of their own narrative and history. Attendance in first class is mandatory. Recommended but not required: AS.371.131

AS.371.211. Artist Books: Draft, Print, Stitch. 3 Credits.
In this studio art class students will create three artist books taught by three different CVA faculty. The first four weeks will investigate the book as a technological and cultural artifact, exploring historically what the book is and does, and as a cognitive aid and engine for ideation. Students will create a blank book that they use for their creative explorations.The second section will use printmaking techniques such as paper lithography, xerox transfers, and relief printmaking combined with quick and ephemeral folding structures in an effort to understand both printmaking and bookmaking's rich history in dissemination of ideas, democracy, and social change. This section will participate in a class zine exchange. The third section of the course will explore embroidery and weaving to navigate language and mark making. Students will explore the relationship between poetry, storytelling, and fiber processes to create a narrative textile.

AS.371.215. Hybrid Photography; Analog and Digital Experimentation. 3 Credits.
This course will introduce students to the basic use of the digital camera, Adobe photoshop post processing, basic darkroom printing and a variety of techniques for making images using analog and digital techniques. Students will learn a variety of alternative processes such as Photograms in contemporary practices, Chemigrams, and nature printing techniques such as Lumen Prints, Chlorophyll prints and Anthotypes. Through lectures, demos and hands on experimentation, students will learn how to creatively combine two worlds of technology, digital and analog, to make unique images.

AS.371.226. Sculptural Fibers. 3 Credits.
The fabric of the universe, a wrinkle in time and space: our physical universe is frequently described through fiber metaphors. Fiber processes are algorithmic. They grow exponentially, they fold, they tear, they wrinkle. These processes function as a pliable plane that can be bent, stretched, and turned inside out. This course offers students an opportunity to explore fiber processes through this sculptural lens. Topics include knitting, crochet, basketry, and lace as they come together to form sculptural armatures and objects. Together we will explore the physical properties of fiber and textiles, how they take up space and function in our world. Attendance in first class is mandatory. Recommended but not required: AS.371.126 Fiber Art and the String Revolution.

AS.371.228. Investigations in Still Life Photography. 3 Credits.
Students will learn approaches to taking still life photographs and expressing their relationships to the objects surrounding their daily lives. Still life will be defined as the objects we purchase, own, consume, observe and arrange. Investigations into the still life will be focused on table top, food, found objects, and product photography.Technical explorations include the exposure triangle, depth of field, basic lighting control, framing, and visual design. Class will consist of live-demonstrations, independent studio work, discussions, and photography critiques. Students will complete a portfolio of printed images by the end of the class. A digital camera with manual control, tripod, Lightroom, and Adobe Photoshop will be supplied for this course. Students will be approved into the course after enrollment in SIS. Attendance in first class is mandatory.

AS.371.230. Portrait Photography. 3 Credits.
In this course students will gain insight into the art of portraiture with projects such as the self-portrait, collaborative portraiture, portrait of a place, and image and text. In representing people, we'll explore developing an understanding of people in relation to power and representation, the body, environments and society. Lectures on the history of the portrait and its practitioners, new directions in portraiture as well as empathy and the gaze will inspire students to bring greater depth to their image making. Camera experience is a plus but not a requirement. Cameras will be provided for the semester. First class is mandatory.

AS.371.233. Environmental Photography. 3 Credits.
Environmental cognition, consciousness and communication are formed, deciphered and internalized with the support of visual representations and, in particular, photography. Images increasingly structure our experience of nature, environmental problems, human-environmental relations, and ecological awareness. Students will engage with the local community, identify and investigate environmental issues affecting Baltimore, participate in photographic critiques, and develop a final, in-depth environmental photo-documentary project. This studio/seminar course is designed with an emphasis on individual research and practice.Attendance in first class is mandatory.

AS.371.234. Oil Painting II. 3 Credits.
Students who have mastered basic painting skills undertake sustained projects, including portrait and plein air landscape work. Slide lectures and handouts deepen students' appreciation of representational traditions. Advanced techniques, materials, and compositional issues are also investigated. Recommended Course Background: AS.371.133 or equivalent.
AS.371.131 OR AS.371.133 or instructor's permission.

AS.371.240. Intermediate Digital Photography: Photographic Concepts. 3 Credits.
This studio art course will introduce students to conceptual techniques and applications of digital photography. In this course, we will foster creative exploration and uses of technology through advanced digital capture, image construction and manipulation, substrate choices, and methods of digital output. We will have an in-depth look at historic and contemporary photography as it relates to culture, current trends, and classroom assignments. Students will also engage in conversation and classroom critique throughout the semester to aid their dialogue and understanding of contemporary art. Attendance in first class is mandatory. Completion of AS.371.152 is suggested.

AS.371.250. Life Drawing. 3 Credits.
An intermediate drawing course focusing on drawing the human form and studying anatomy for artists. Working from live models, students will draw the clothed and nude figure, portrait drawing, gesture drawing and anatomy tracings of the skeleton and muscles. Students will use drawing skills learned in Drawing I to explore the human form using wet and dry material, collage and color. The class will study the figure drawings and paintings from Renaissance to contemporary artists. Attendance in 1st class is mandatory.
AS.371.131 or AS.371.187 or permission of Instructor.

AS.371.302. Photographic Portfolio. 3 Credits.
In this upper level course, students will work on a semester-long project. They will develop their ideas within a seminar style format that allows for conversation and debate and provides a forum for the evolution their work. Students will learn advanced techniques in Photoshop, Nik software and Lightroom to enhance content and develop a personal style. Through a combination of critique, lecture, and lab, students will complete a portfolio of ten printed images that work together in a series. Approval for this course will be considered after enrollment on SIS. Attendance in 1st class is mandatory.

AS.371.303. Documentary Photography. 3 Credits.
In this course, we will explore different genres and approaches to documentary photography and the questions inherent to this mode of image-making like representation, storytelling, records and archives, journalism, community engagement, research and personal perspective. Baltimore neighborhoods and contemporary issues will provide inspiration for student work. Students will learn camera operation, photo editing and produce a final documentary project on a subject of their choice as the culmination of their semester's work. Digital SLRs are available on loan for the semester. Attendance at first class is mandatory.

AS.371.307. The Photographer's Book. 3 Credits.
Students create a handmade book of photographs that illustrate a favorite piece of text. They may work with poetry, song lyrics, a play, a narrative, a blog, a diary, any writing (including their own). Students may look at historical texts such as medieval manuscripts or even scientific treatises. The possibilities are endless. We will take fieldtrips to book collections at the George Peabody Library, Evergreen Museum and Library and the Betty and Edgar Sweren Collection.This course will be taught by a photographer and an artist book designer. A previous photography class is a plus, but not a requirement. Students who would like to combine their painting and drawing skills with their photographs are welcome to do so. Attendance in first class is mandatory. Students will have an exhibition of their artist books in the Special Collections Rare Books room of the MSE library.Approval for this course will be considered after enrollment in SIS.

AS.371.330. Evergreen as Muse: A Photographic Exploration. 3 Credits.
In this course taught by an historian and a fine art photographer, students are introduced to the delights of the Evergreen Museum and Library of the Johns Hopkins University. The history of Evergreen, its inhabitants including family members and servants, the world-famous library, art collection and grounds, all serve to inspire students to produce a portfolio of photographs. There will be an exhibition showcasing student work at the museum as the culmination of their semester's work.
AS.371.152 OR AS.371.162 OR AS.371.303

AS.371.381. Advanced Projects in Visual Art. 3 Credits.
In this studio course students will create artwork based on their individual research and concerns in art. Through artist presentations, readings, discussions and museum and gallery visits the students will advance their skills and understanding of contemporary art and theory. This class is open to studio and digital photography students who want to engage with other serious art students and advance their art practice and research.
AS.371.131 OR AS.371.133 OR AS.371.152

AS.371.501. Independent Study. 2 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.371.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.371.590. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

Cross Listed Courses

Anthropology

AS.070.379. Social Ecology Studio. 3 Credits.
This course will grapple with the social and cultural dimensions of contemporary ecological problems through a local, project-based approach. Coursework will be organized on a studio basis in partnership with a local environmental organization, Friends of Stony Run. Continuing a collaborative project initiated in the fall of 2019, we will work together to develop interpretive materials for the Stony Run stream and urban watershed adjoining our campus.

Applied and Computational Mathematics

EN.625.638. Neural Networks. 3 Credits.
This course provides an introduction to concepts in neural networks and connectionist models. Topics include parallel distributed processing, learning algorithms, and applications. Specific networks discussed include Hopfield networks, bidirectional associative memories, perceptrons, feedforward networks with back propagation, and competitive learning networks, including self-organizing and Grossberg networks. Software for some networks is provided. Prerequisite(s): Multivariate calculus and linear algebra. Course Note(s): This course is the same as EN.605.647 Neural Networks.

Center for Africana Studies

AS.362.309. Performing the Archive 2022: 200 Years of US-Liberia Migration. 3 Credits.
This seminar will explore some of the pivotal historical and contemporary connections between the US and Liberia since the first Black American settlers arrived in West Africa with the American Colonization Society in 1822. This course asks: What are implications of these stories of migration and reception for how we make sense of global anti-Blackness in the contemporary moment? How does performance provoke new questions about shared histories of those impacted by colonialism and the transatlantic slave trade? Why is a more in-depth understanding of 19th century Black political thought and the precolonial West African indigenous category necessary for developing theory on the political economy of race today? Through the lens of performance studies, students will analyze the documents in the American Colonization Society archive, to reimagine these early encounters as informed by historical documentation including folklore and pan-Africanist theory. Through exploring a range of historical and contemporary materials that center the problematic “indigenous/settler” binary, students will engage in a dramaturgical process which presents powerful possibilities for unlearning historical misrepresentations. In particular, students will develop theater-based projects that interrogate the spatio-temporal connections between the stories of both, free Blacks and those who were enslaved in Maryland and manumitted to go to Liberia, and the contemporary politics of Liberia-US migration.

Classics

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.

Computer Science

EN.605.613. Introduction to Robotics. 3 Credits.
This course introduces the fundamentals of robot design and development with an emphasis on autonomy. Robot design, navigation, obstacle avoidance, and artificial intelligence will be discussed. Topics covered in robot design include robot structure, kinematics and dynamics, the mathematics of robot control (multiple coordinate systems and transformations), and designing for autonomy. Navigation topics include path planning, position estimation, sensors (e.g., vision, ultrasonics, and lasers), and sensor fusion. Obstacle avoidance topics include obstacle characterization, object detection, sensors and sensor fusion. Topics to be discussed in artificial intelligence include learning, reasoning, and decision making. Students will deepen their understanding through several assignments and the term-long robot development project.

EN.605.617. Introduction to GPU Programming. 3 Credits.
This course will teach the fundamentals needed to utilize the ever-increasing power of the GPUs housed in the video cards attached to our computers. For years, this capability was limited to the processing of graphics data for presentation to the user. With the CUDA and OpenCL frameworks, programmers can develop applications that harness this power directly to search, modify, and quickly analyze large amounts of various types of data. Students will be introduced to core concurrent programming principles, along with the specific hardware and software considerations of these frameworks. In addition, students will learn canonical algorithms used to perform high-precision mathematics and data transformations. Class time will be split between lectures and hands-on exercises. There will be two individual projects in both CUDA and OpenCL programming, which will allow students to independently choose demonstrable goals, develop software to achieve those goals, and present the results of their efforts.

EN.605.621. Foundations of Algorithms. 3 Credits.
This follow-on course to data structures (e.g., 605.202) provides a survey of computer algorithms, examines fundamental techniques in algorithm design and analysis, and develops problem-solving skills required in all programs of study involving computer science. Topics include advanced data structures (red-black and 2-3-4 trees, union-find), recursion and mathematical induction, algorithm analysis and computational complexity (recurrence relations, big-O notation, NP-completeness), sorting and searching, design paradigms (divide and conquer, greedy heuristic, dynamic programming, amortized analysis), and graph algorithms (depth-first and breadth-first search, connectivity, minimum spanning trees, network flow). Advanced topics are selected from among the following: randomized algorithms, information retrieval, string and pattern matching, and computational geometry. Prerequisite(s): EN.605.202 Data Structures or equivalent. EN.605.203 Discrete Mathematics or equivalent is recommended. Course Note(s): The required foundation courses may be taken in any order but must be taken before other courses in the degree. Students can only earn credit for one of EN.605.620, EN.605.621, or EN.685.621.

EN.605.624. Logic: Systems, Semantics, and Models. 3 Credits.
Traditionally, logic is the study of correct reasoning. In the last few decades, logic has become increasingly important to knowledge representation -- a subfield of artificial intelligence concerned with developing representations of the world (often called ontologies) that aid computers in understanding and making sense of data. This course will promote both a theoretical and practical understanding of logic as a stepping stone for working in contemporary knowledge representation. We will begin with a review of categorical, propositional, and predicate logic. We will then survey modal logics, which include systems that represent necessity and probability, as well as other systems that represent time, and moral notions such as obligation and permissibility. The second half of the course will then introduce the semantic web and ontology engineering. Students will explore the top-level ontology Basic Formal Ontology (BFO) and gain familiarity using mereological and temporal relations. In addition, students will create ontologies in the web ontology language (OWL2) and use the language SPARQL to query knowledge graphs. Students will have the option of writing either a research paper or creating an ontology in OWL with slides as part of a final project.

EN.605.635. Cloud Computing. 3 Credits.
Cloud computing helps organizations realize cost savings and efficiencies without spending capital resources up front, while modernizing and expanding their IT capabilities. Cloud-based infrastructure is rapidly scalable, secure, and accessible over the Internet —you pay only for what you use. So, enterprises worldwide, big and small, are moving toward cloud-computing solutions for meeting their computing needs, including the use of Infrastructure as a Service (IaaS) and Platform as a Service (PaaS). We have also seen a fundamental shift from shrinkwrapped software to Software as a Service (SaaS) in data centers across the globe. Moreover, providers such as Amazon, Google, and Microsoft have opened their datacenters to third parties by providing low-level services such as storage, computation, and bandwidth. This trend is creating the need for a new kind of enterprise architect, developer, QA, and operational professional—someone who understands and can effectively use cloud-computing technologies and solutions. In this course, we discuss critical cloud topics such as cloud service models (IaaS, PaaS, SaaS); virtualization and how it relates to cloud; elastic computing; cloud storage; cloud networking; cloud databases; cloud security; and architecting, developing, and deploying apps in the cloud. The format of this course will be a mix of lectures, and hands-on demos. Upon completing this course, students will have a deeper understanding of what cloud computing is and the various technologies that make up cloud computing, along with hands-on experience working with a major cloud provider. Prerequisite(s): 605.202 Data Structures.

EN.605.646. Natural Language Processing. 3 Credits.
This course surveys the principal difficulties of working with written language data, the fundamental techniques that are used in processing natural language, and the core applications of NLP technology. Topics covered in the course include language modeling, text classification, labeling sequential data (tagging), parsing, information extraction, question answering, machine translation, and semantics. The dominant paradigm in contemporary NLP uses supervised machine learning to train models based on either probability theory or deep neural networks. Both formalisms will be covered. A practical approach is emphasized in the course, and students will write programs and use open source toolkits to solve a variety of problems.Course prerequisite(s): There are no formal prerequisite courses, although having taken any of 605.649 Introduction to Machine Learning, 605.744 Information Retrieval, or 605.645 Artificial Intelligence is helpful.Course note(s): A working knowledge of Python is assumed. While some of the assigned exercises can be done in any programming language, we will sometimes provide example code in Python, and many of the labs are best solved in Python.

EN.605.647. Neural Networks. 3 Credits.
This course provides an introduction to concepts in neural networks and connectionist models. Topics include parallel distributed processing, learning algorithms, and applications. Specific networks discussed include Hopfield networks, bidirectional associative memories, perceptrons, feedforward networks with back propagation, and competitive learning networks, including self-organizing and Grossberg networks. Software for some networks is provided. Prerequisite(s): Multivariate calculus and linear algebra. Course Note(s): This course is the same as 625.638 Neural Networks.

EN.605.649. Introduction to Machine Learning. 3 Credits.
EN.605.649 - Introduction to Machine LearningAnalyzing large data sets ("Big Data"), is an increasingly important skill set. One of the disciplines being relied upon for such analysis is machine learning. In this course, we will approach machine learning from a practitioner's perspective. We will examine the issues that impact our ability to learn good models (e.g., inductive bias, the curse of dimensionality, the bias-variance dilemma, and no free lunch). We will then examine a variety of approaches to learning models, covering the spectrum from unsupervised to supervised learning, as well as parametric versus non-parametric methods. Students will explore and implement several learning algorithms, including logistic regression, nearest neighbor, decision trees, and feed-forward neural networks, and will incorporate strategies for addressing the issues impacting performance (e.g., regularization, clustering, and dimensionality reduction). In addition, students will engage in online discussions, focusing on the key questions in developing learning systems. At the end of this course, students will be able to implement and apply a variety of machine learning methods to real-world problems, as well as be able to assess the performance of these algorithms on different types of data sets. Prerequisite(s): EN.605.202 – Data Structures or equivalent.

EN.605.662. Data Visualization. 3 Credits.
This course explores the underlying theory and practical concepts in creating visual representations of large amounts of data. It covers the core topics in data visualization: data representation, visualization toolkits, scientific visualization, medical visualization, information visualization, flow visualization, and volume rendering techniques. The related topics of applied human perception and advanced display devices are also introduced. Prerequisite(s): Experience with data collection/analysis in data-intensive fields or background in computer graphics (e.g., 605.667 Computer Graphics) is recommended.

EN.605.743. Advanced Artificial Intelligence. 3 Credits.
Many advanced artificial intelligence systems are using both Machine Learning and Symbolic AI to solve subproblems. This course builds on the foundations of EN.605.645 Artificial Intelligence by delving more deeply into those AI algorithms and approaches that go under the name of Good Old Fashioned AI or Symbolic AI. In this course, we will cover logic programming, expert systems and business rules, fuzzy logic, case based reasoning, and knowledge graphs. We will also explore more advanced versions of planning and reinforcement learning algorithms. The instructor may add additional topics as warranted. Prerequisite(s): EN.605.645 Artificial Intelligence or permission of instructor.
EN.605.645 Artificial Intelligence

EN.605.745. Reasoning Under Uncertainty. 3 Credits.
This course is concerned with the problems of inference and decision making under uncertainty. It develops the theoretical basis for a number of different approaches and explores sample applications. The course discusses foundational issues in probability and statistics, including the meaning of probability statement, and the necessity of a rational agent acting in accord with probability theory. We will look at possible generalizations of Bayesian probability, including Dempster-Shafer theory. Next, we will develop algorithms for Bayesian networks—graphical probabilistic models—for exact and approximate inference and consider several application areas. Finally, the course will examine the problem of making optimal decisions under uncertainty. We will explore the conceptual foundations of decision theory and then consider influence diagrams, which are graphical models extending Bayesian networks to the domain of decision analysis. As time permits, we will also look at Bayesian games and Markov decision processes. Pertinent background in probability and theoretical computer science is developed as needed in the course.

EN.605.746. Advanced Machine Learning. 3 Credits.
This course focuses on recent advances in machine learning and on developing skills for performing research to advance the state of knowledge in machine learning. The material integrates multiple ideas from basic machine learning and assumes familiarity with concepts such as inductive bias, the bias-variance trade-off, the curse of dimensionality, and no free lunch. Topics range from determining appropriate data representations and models for learning, understanding different algorithms for knowledge and model discovery, and using sound theoretical and experimental techniques in assessing learning performance. Specific approaches discussed cover nonparametric and parametric learning; supervised, unsupervised, and semi-supervised learning; graphical models; ensemble methods; and reinforcement learning. Topics will be discussed in the context of research reported in the literature within the previous two years. Students will participate in seminar discussions and will present the results of a semester-long research project of their own choosing.
EN.605.649 Introduction to Machine Learning; multivariate calculus;Students cannot receive credit for both EN.605.746 and EN.625.742

EN.605.747. Evolutionary and Swarm Intelligence. 3 Credits.
Recently, principles from the biological sciences have motivated the study of alternative computational models and meta-heuristic approaches to problem solving. Proceeding from a machine learning perspective, this course explores how principles from theories of evolution, natural selection, and swarming behavior can be used to construct machines that exhibit nontrivial behavior. In particular, the course covers techniques from evolutionary computation and swarm intelligence for developing software agents capable of solving problems as members of a larger population of agents. Specific topics addressed include representation and schemata; selection, reproduction, and recombination; theoretical models of computational intelligence; optimal allocation of trials (i.e., bandit problems); search, optimization, and machine learning; evolution of programs; population and swarm dynamics; and emergent behavior. Students will participate in seminar discussions and will complete and present the results of an individual project.
EN.605.649 Introduction to Machine Learning; multivariate calculus.

Cybersecurity

EN.695.637. Introduction to Assured AI and Autonomy. 3 Credits.

In order to drive a future where artificial intelligence (AI) enabled autonomous systems are trustworthy contributors to society, these capabilities must be designed and verified for safe and reliable operation and they must be secure and resilient to adversarial attacks. Further, these AI enabled autonomous systems must be predictable, explainable and fair while seamlessly integrated into complex ecosystems alongside humans and technology where the dynamics of human-machine teaming are considered in the design of the intelligent system to enable assured decision-making. In this course, students are first introduced to the field of AI, covering fundamental concepts, theory, and solution techniques for intelligent agents to perceive, reason, plan, learn, infer, decide and act over time within an environment often under conditions of uncertainty. Subsequently, students will be introduced to the assurance of AI enabled autonomous systems, including the areas of AI and autonomy security, resilience, robustness, fairness, bias, explainability, safety, reliability and ethics. This course concludes by introducing the concept of human-machine teaming. Students develop a contextual understanding of the fundamental concepts, theory, problem domains, applications, methods, tools, and modeling approaches for assuring AI enabled autonomous systems. Students will implement the latest state-of-the-art algorithms, as well as discuss emerging research findings in AI assurance.

Data Analytics

SA.100.501. Statistics for Data Analysis. 4 Credits.

Covers basic statistical tools for data analysis. Emphasizes facility in problem-solving in statistical inference and two-variable regression and correlation analysis. Presents descriptive statistics, probability and probability distributions and their use in hypothesis testing. Uses computer to solve problems and to reinforce statistical concepts. Students may not register for this class if they have already received credit for SA.340.709[C]

Data Science

EN.685.621. Algorithms for Data Science. 3 Credits.

This course provides a survey of computer algorithms, examines fundamental techniques in algorithm design and analysis, and develops problem-solving skills required in all programs of study involving data science. Topics include advanced data structures for data science (tree structures, disjoint set data structures), algorithm analysis and computational complexity (recurrence relations, big-O notation, introduction to complexity classes (P, NP and NP-completeness)), data transformations (FFTs, principal component analysis), design paradigms (divide and conquer, greedy heuristic, dynamic programming), and graph algorithms (depth-first and breadth-first search, ordered and unordered trees). Advanced topics are selected from among the following: approximation algorithms, computational geometry, data preprocessing methods, data analysis, linear programming, multi-threaded algorithms, matrix operations, and statistical learning methods. The course will draw on applications from Data Science. Course Prerequisite(s): EN.605.201 Introduction to Programming Using Java or equivalent. EN.605.203 Discrete Mathematics or equivalent is recommended. Course Note(s): This required foundation course must be taken before other 605.xxx courses in the degree. This course does not satisfy the foundation course requirement for Bioinformatics, Computer Science, or Cybersecurity. Students can only earn credit for one of EN.605.620, EN.605.621, or EN.685.621.

Development, Climate, and Sustainability

SA.500.134. Global Energy and Climate Policy. 4 Credits.

.... forthcoming.

SA.500.135. Economic Development in Latin America. 4 Credits.

This course examines the economics of Latin America in contemporary comparative perspective. Starting with an overview of long term trends in growth and structural transformation, the course moves on to consider the theoretical approaches which economists have adopted to understand development processes in the region. The introductory phase of the course completed, the next three lectures survey the key macroeconomic themes of fiscal policy, monetary policy and the external balance. The difficulties countries in the region have faced in maintaining macroeconomic stability is an important theme of the course and is referred back to again and again in subsequent sessions. An equally important topic, that of poverty and inequality, forms the basis for the next section of the course. The remainder of the course deals with the challenge Latin America now faces as it struggles to compete in the global economy. The course will entail formal lectures and student presentations/group discussions. Each student (in conjunction with one or two colleagues) will be expected to prepare and present one 20 minute presentation at some point during the course. The presentations will be followed by group discussions led by the course lecturer. Broad indications of themes for the talks provided in this outline. More precise details of the talk topics – along with guidance on sources and formats – will be given in week one of the course.

SA.500.136. Agricultural Development, Poverty Reduction and Food Security. 4 Credits.

...forthcoming

Electrical and Computer Engineering

EN.525.661. UAV Systems and Control. 3 Credits.

This hardware-supplemented course covers the guidance, navigation- and control principles common to many small fixed-wing and multirotor unmanned aerial vehicles (UAVs). Building on classical control systems and modeling theory, students will learn how to mathematically model UAV flight characteristics and sensors, develop and tune feedback control autopilot algorithms to enable stable flight control, and fuse sensor measurements using extended Kalman filter techniques to estimate the UAV position and orientation. Students will realize these concepts through both simulation and interaction with actual UAV hardware. Throughout the course, students will build a full 6-degree-of-freedom simulation of controlled UAV flight using MATLAB and Simulink. Furthermore, students will reinforce their UAV flight control knowledge by experimenting with tuning and flying actual open-source quadrotor UAVs. Prerequisite(s): Background in control systems (e.g., EN.525.609 Continuous Control Systems) and matrix theory along with a working knowledge of MATLAB. Experience using Simulink is desired. Existing familiarity with C programming language, electronics, and microcontrollers will be helpful but is not required.

EN.525.670. Machine Learning for Signal Processing. 3 Credits.

This course will focus on the use of machine learning theory and algorithms to model, classify, and retrieve information from different kinds of real world signals such as audio, speech, image, and video. EN.525.627 Digital Signal Processing and EN.525.614 Probability and Stochastic Processes for Engineers

EN.525.724. Introduction to Pattern Recognition. 3 Credits.
This course focuses on the underlying principles of pattern recognition and on the methods of machine intelligence used to develop and deploy pattern recognition applications in the real world. Emphasis is placed on the pattern recognition application development process, which includes problem identification, concept development, algorithm selection, system integration, and test and validation. Machine intelligence algorithms to be presented include feature extraction and selection, parametric and non-parametric pattern detection and classification, clustering, artificial neural networks, support vector machines, rule-based algorithms, fuzzy logic, genetic algorithms, and others. Case studies drawn from actual machine intelligence applications will be used to illustrate how methods such as pattern detection and classification, signal taxonomy, machine vision, anomaly detection, data mining, and data fusion are applied in realistic problem environments. Students will use the MATLAB programming language and the data from these case studies to build and test their own prototype solutions.
EN.525.614 Probability and Stochastic Processes for Engineers or equivalent. A course in digital signal or imageprocessing is recommended, such as EN.525.627 Digital Signal Processing, EN.525.619 Introduction to Digital Image and Video Processing, 525.643 Real-Time Computer Vision, or 525.746 Image Engineering.

EN.525.733. Deep Learning for Computer Vision. 3 Credits.
Recent technological advances coupled with increased data availability have opened the door for a wave of revolutionary research in the field of Deep Learning. In particular, Deep Neural Networks (DNNs) continue to improve on state-of-the-art performance in many standard computer vision tasks including image classification, segmentation, object recognition, object localization, and scene recognition. With an emphasis on computer vision, this course will explore deep learning methods and applications in depth as well as evaluation and testing methods. Topics discussed will include network architectures and design, training methods, and regularization strategies in the context of computer vision applications. Following a seminar format, students will be expected to read, understand, and present recent publications describing the current state-ofthe-art deep learning methods. Additionally, team projects will give students an opportunity to apply deep learning methods to real world problems.Prerequisite(s): Students should have taken courses in computer vision and machine learning/pattern recognition, have basic familiarity with OpenCV, Python and C++, as well as prior class instruction in neural networks.

EN.525.770. Intelligent Algorithms. 3 Credits.
Intelligent algorithms are, in many cases, practical alternative techniques for tackling and solving a variety of challenging engineering problems. For example, fuzzy control techniques can be used to construct nonlinear controllers via the use of heuristic information when information on the physical system is limited. Such heuristic information may come, for instance, from an operator who has acted as a “human-inthe-loop” controller for the process. This course investigates a number of concepts and techniques commonly referred to as intelligent algorithms; discusses the underlying theory of these methodologies when appropriate; and takes an engineering perspective and approach to the design, analysis, evaluation, and implementation of intelligent systems. Fuzzy systems, genetic algorithms, particle swarm and ant colony optimization techniques, and neural networks are the primary concepts discussed in this course, and several engineering applications are presented along the way. Expert (rule-based) systems are also discussed within the context of fuzzy systems. An intelligent algorithms research paper must be selected from the existing literature, implemented by the student, and presented as a final project. Prerequisite(s): Student familiarity of system-theoretic concepts is desirable.

EN.525.786. Human Robotics Interaction. 3 Credits.
This course provides an investigation of human-robot interaction and prosthetic control, with a focus on advanced man-machine interfaces including neural signal processing, electromyography, and motion tracking interfaces for controlling and receiving feedback from robotic devices. The course will also cover human physiology and anatomy, signal processing, intent determination, communications between the human and the device, haptic feedback, and telepresence. It is designed to be a hands-on course with class time spent in the dedicated robotics lab designing interfaces and performing experiments in a Virtual Integration Environment (VIE) and with robotic devices. Additional time in the lab, outside of class time, may be required to complete the course project. Programming for the class will be in MATLAB and Simulink.Prerequisite(s): Linear algebra, ordinary differential equations, and programming experience with Python or MATLAB

Energy, Resources & Environment

SA.680.680. Introduction to Energy, Resources & Environment. 4 Credits.
This course introduces students to the fundamentals of energy, resources and environment. It covers a wide range of topics from the functioning of electricity markets to the challenge of climate policy and the management of air pollution. It also introduces a host of key concepts and analytical frameworks that underpin policy analysis in the field, such as notions of collective action and the role of regulatory agencies in monopolistic markets. The course pays particular attention to the energy-environment nexus, including the challenge of low-carbon development in an era of climate change. The course lays the foundation for other courses in the program.

First Year Seminars

AS.001.129. FYS: Environmental Poisons. 1 Credit.
An exploration of the occurrence and potential effects of poisons in the environment, from naturally occurring ones such as arsenic to those that may be introduced by mankind such as nuclear waste.

AS.001.157. FYS: Leonardo da Vinci - Art, Science, and Medicine. 3 Credits.
How does a notary’s son trained as a painter gain expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? How did an artist/engineer who brought few projects to completion come to have such a huge impact on later generations? This First-Year Seminar will focus critically on the myth of Leonardo’s singularity while showing his achievements to be characteristic of the artisanal culture of his time.

AS.001.162. FYS: From Shakespeare to Baltimore. 3 Credits.
This First-Year Seminar is designed around what is on stage in Baltimore this fall. We will attend several plays, both professional productions at theatres in the city and student productions at JHU. We will pay attention to the interpretation of plays on the page, and to the ways that scripts materialize as performances on the stage. We will place these performances in the context of larger theatre histories, studying great plays from the age of Shakespeare to contemporary American theatre. No acting required – just the desire to explore the theatre of today.

AS.001.167. FYS: The Natural History of the Homewood Campus. 3 Credits.
Johns Hopkins University Homewood campus and its surroundings is a wonderful green space in the middle of Baltimore City. This First-Year Seminar will introduce students to both the visible and cryptic organisms living above- and belowground. A combination of observational and sampling techniques will be used to demonstrate how ecologists collect data about plants, insects, and other organisms. In the classroom, these field observations, combined with reading material will be used to discuss environmental issues including global biodiversity decline, invasive species, and the effects of human activities on local and global biodiversity patterns. By the end of the course students will be able to generate research questions based upon field observations and appreciate the diverse life forms on Earth and in our own backyard.

Health Policy and Management

PH.552.601. Foundational Principles of Public Health. 0.5 Credits.
Provides a broad systematic understanding of the executive practice of public health from its inception to modern day. Uses case studies, as well as ethical and public heath practice frameworks to provide students with a grounding in “what is public health practice,” why it is important, and why it is contested.
Course location and modality is found on the JHSPH website (https://www.jhsph.edu/courses/).

History

AS.100.340. Asian American Art and Activism: Third World, Feminist, and Queer Solidarities. 3 Credits.
This interdisciplinary course surveys critical themes related to Asian American art and activism including perspectives from history, art and visual culture, literature and gender and sexuality studies.
Area: Writing Intensive

AS.100.410. Decolonizing The Museum: Case Studies. 3 Credits.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world’s fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

AS.100.601. Decolonizing The Museum: Case Studies.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world’s fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

Interdepartmental

AS.360.339. Planets, Life and the Universe. 3 Credits.
This multidisciplinary course explores the origins of life, planet formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level (300+) courses in sciences (Biophysics, Biology, Chemistry, Physics, Astronomy, Math, or Computer Science)
Students may not register for this class if they have already received credit for AS.020.334 OR AS.020.616 OR AS.171.333 OR AS.171.699 OR AS 270.335 OR AS.360.671

AS.360.408. Experiential Research Lab: “Holy” Conquest: Religion and Colonization in Sixteenth-Century Mexico. 3 Credits.
"When the Spanish unleashed their regime of colonization of what is present-day Mexico, their primary justification was the religious salvation of Indigenous people. Spaniards, along with other Europeans, arrived by the boatload to impose colonial order, taking up bureaucratic and ecclesiastical positions. The result was far from smooth—the sixteenth-century saw widespread disease, missionary violence on behalf of salvation, crop destruction and the recultivation of land, urban plans that radically altered the environment, the resettlement of entire populations, among other dramatic social and environmental events. This course investigates the complex and dynamic elements of colonial New Spain (as Mexico was called) from an interdisciplinary perspective. It tries to make sense of the chaotic landscape of the first century of Spanish colonial rule in New Spain. It is a research and writing intensive course that serves as an introduction to both the history and art history of this place and moment. Our meetings will act as a springboard for a group trip to Mexico during the January intersession to study objects and spaces in situ. Final projects will relate to materials viewed in person in Mexico. The costs for this trip are included for all students, no fees required. Knowledge of Spanish preferred but not required.
Area: Writing Intensive

AS.360.671. Planets, Life and the Universe.
Replace description with the following--"This multidisciplinary course explores the origins of life, planet formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions, and planetary protection. Recommended Course Background: Three upper level (300+) courses in sciences (Biophysics, Biology, Chemistry, Physics, Astronomy, Math, or Computer Science)
Students may not register for this class if they have already received credit for AS.020.616 OR AS.020.334 OR AS.171.333 OR AS.171.699 OR AS.270.335 OR AS.360.339.

International Economics and Finance

SA.510.115. Public Sector Economics. 4 Credits.
The course analyzes both the role of the state in the economy, including its manifestation as a Welfare State, and the role played in the public sphere by civil society organizations. The first part deals with the theory of market failures and government failures, the theory of collective economic action, the economic theory of democracy, the analysis of tax systems. The second part of the course uses the concepts developed in the first part to analyze specific governmentalinstitutions, expenditure programs and taxes in a comparative international perspective. These include health care (special attention will be devoted to the Covid-19 pandemic), social insurance, redistribution programs, education, the politics of institutional choice, government decentralization (federalism), political capitalism, the digital revolution and the labor market.

SA.510.116. Evolution of the World Economy. 4 Credits.
forthcoming...

SA.510.117. Asian Economic Development. 4 Credits.
This course gives a survey of the Asian economic development experience over the past half-century, with a focus on its international dimensions. In addition to evaluating the source of the remarkable growth and development of the region, the course considers the many challenges that the region has and will continue to face, from the Asian Financial Crisis in 1997-98 to the Covid-19 pandemic shock. It also looks at conflict and cooperation in the region in the 21st century.

Modern Languages and Literatures

AS.210.308. Acting French: learning about French language and culture through theater. 3 Credits.

This course proposes to enhance students' verbal (pronunciation, intonation, syntax, vocabulary) and nonverbal skills (body language, vocal projection, spatial awareness) by performing excerpts from French and Francophone plays ranging from the Middle Ages to the 21st century. A closer analysis of these excerpts will lead us to consider how theater uses the physicality and immediacy of human experience to create a more universal form of connectivity with the world.Recommended course background: AS.210.301.

AS.211.231. Planet Amazonia: Culture, History, and the Environment. 3 Credits.

Without Amazonia, global warming could reach levels that threaten life on the planet. Yet, in an era of deforestation and climate change, Amazonia itself might be on the verge of disappearance, with disastrous consequences for the world. This course proposes interdisciplinary perspectives on Amazonia through a range of works drawn from history, anthropology, archeology, environmental studies, literature, and the arts. We'll look at texts by European travelers and missionaries who contributed to the paradoxical image of Amazonia as a "virgin paradise" or a "green hell"; scientific studies and artists' depictions of the region's flora and fauna; the often-overlooked history of human occupation of the region; and projects to colonize, develop, or conserve the world's largest tropical forest. What importance does Amazonia hold for Latin American and global geopolitics? How do art and literature, including indigenous writings, create, reinforce, or deconstruct clichés about the region? What alternative futures for our planet can Amazonia help us to imagine?

AS.211.327. Ecocinema: Framing Italy's Environmental Crises. 3 Credits.

Over the past decade, growing numbers of filmmakers in Italy have addressed ecological crises in their work. This class takes an eco-critical approach to contemporary Italian cinema, examining a body of compelling place-centered stories that deal with local and global issues. Defining the scope of eco-cinema and the ways we can interrogate films as ecological texts, we shall screen earth-centered films that raise consciousness about the consequences of human manipulation of the natural world; the complicity of industry, government, and organized crime in creating environmental crises; and the effects of economic and social malaise. Screenings include iconic films such as Michelangelo Antonioni's Red Desert (1963), more recent, critically acclaimed films such as Matteo Garrone's Gomorrah (2008), Alice Rohrwacher's Happy as Lazzaro (2018), and many others.

AS.211.329. Museums and Identity. 3 Credits.

The museum boom of the last half-century has centered largely around museums dedicated to the culture and history of identity groups, including national, ethnic, religious, and minority groups. In this course we will examine such museums and consider their long history through a comparison of the theory and practice of Jewish museums with other identity museums. We will study the various museological traditions that engage identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, heritage museums, art museums, and other museums of culture. Some of the questions we will ask include: what are museums for and who are they for? how do museums shape identity? and how do the various types of museums relate to one another? Our primary work will be to examine a variety of contemporary examples around the world with visits to local museums including the Jewish Museum of Maryland, the National Museum of African American History and Culture and the National Museum of the American Indian.

AS.211.424. Climate Change Narratives: Human and Non-Human Transformative Storytelling. 3 Credits.

In The Great Derangement Indian novelist Amitav Ghosh writes that "the climate crisis is also a crisis of culture, and thus of imagination." Worldwide, climate and environmental change is stirring the imaginary of novelists, filmmakers, and artists who are finding ways to frame, emplot, or even perform, an unmanageable phenomenon like climate change. How is climate change shaping new modes of storytelling and aesthetics? How do film, literature, and environmentally conscious art transform our perception of the world we inhabit and its unpredictable changes? Can climate change narratives help us to imagine futures of possibilities, maybe dystopian, uncertain, or even happy, but futures nonetheless? This multimedia course explores, through a transnational perspective, a variety of contemporary novels, films, and other media that attempt answer these questions.

AS.213.763. Contemporary Theater: Gender/Violence.

The course explores 21st-century German theater in its diverse aesthetic and textual forms. Due to comparatively generous funding, German non-commercial theater has over the last decades been able to develop, adapt, and maintain a great variety of at one point "experimental" artistic styles, including frequently stark depiction of gender and violence. We will focus on the ways in which the productions take up, amplify, displace, disrupt, and/or reinforce cultural codes and images of gender and violence both in their symbolic and physical dimension. Topics include the "directors' theater," political theater, "pop-theater," "discourse-theater," "new documentary theater," "post-migratory theater," postcolonial theater and live art. The readings may include Nobel laureate Elfriede Jelinek, Dea Loher, René Pollesch, Milo Rau, Falk Richter, Sasha Marianna Salzmann and various works of shared authorship such as She She Pop, Rimini Protokoll, Gintersdorfer/Klaßen, and Yael Ronen. The Tuesday sessions will be used for the joint viewing of production recordings. Taught in English. Course material in German. No sessions after March 27th.

AS.217.425. Latin American Ecocriticism. 3 Credits.

Increased awareness of climate change has led to a shift in the way we address and intervene in environmental issues in the new millennium. Yet the interest in making sense of the environment has a long history in literature and the arts. How have Latin American writers and artists understood and depicted their environments and environmental questions? How do the form and content of texts and cultural artifacts influence our understanding of the non-human world? Can works of fiction shape ecological transformations? In this course we will discuss texts from the early colonial period to the present, including the literary works of Graciliano Ramos, Horacio Quiroga, and Clarice Lispector; political ecology; film; Ana Mendieta's earth-body art; contemporary experiments in bio-art; postcolonial theory; and the intersection of environmental justice with such topics as nationalism and human rights. Going beyond ecocriticism's original focus on the Anglo-American world, we will engage recent scholarship on Latin America that sheds light on the region's cultural and geopolitical importance to the global climate, with particular attention to Brazil. This course aims to introduce students to current debates in Latin American Ecocriticism and the Anthropocene and thus contribute to an incipient but expanding field.

Near Eastern Studies

AS.130.153. A (Virtual) Visit to the Louvre Museum: Introduction to the Material Culture of Ancient Egypt. 3 Credits.
This course will present the Egyptological collections of the musée du Louvre in Paris, room by room, as in a real visit. The experience will be enhanced by the study of objects that are not shown to the public but are kept in the reserves of the museum. From the 4th millennium BC to Roman time, the iconic “masterpieces” of this world-renowned art museum, as well as its little-known artifacts, will allow us to explore the history and material culture of ancient Egypt. We will also learn to observe, describe and analyze archaeological objects, in a global manner and without establishing a hierarchy between them, while questioning their place in the museum and its particular language. The objective will be to go beyond the objects themselves and answer, in fine, the following questions: What do these objects tell us about the men and women who produced them, exchanged them, used them, and lived among them in antiquity? What do they also reveal about those who discovered them in Egypt, several millennia later, about those who collected them and sometimes traded them, and what does this say about the relations between Egypt and the Western countries over time? The courses will be complemented by visits to the rich Egyptian collections in Baltimore.

AS.130.245. The Archaeology of Gender in the Ancient Eastern Mediterranean. 3 Credits.
How do art historians and archaeologists recover and study genders and sexualities of ancient people? This writing-intensive seminar looks at texts and objects from ancient Egypt, Assyria, and Greece through the lens of gender and sexuality studies. Beyond exploring concepts of gender in the ancient Eastern Mediterranean, students will also consider how modern scholars have approached, recovered, and written about ancient gender identities. There are no prerequisites for this course.
Area: Writing Intensive

AS.130.378. Geoarchaeology: Applications of Earth Science to Archaeology. 3 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.

AS.130.420. Seminar in Research Methods in Near Eastern Studies. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Writing Intensive

AS.131.678. Geoarchaeology: Applications of Earth Science to Archaeology.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.

AS.132.609. Seminar in Research Methods in Near Eastern Studies.
Area: Writing Intensive

Program in Museums and Society

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Crosslisted with Archaeology, History, History of Art, International Studies and Medicine, Science & Humanities.

AS.389.260. Cultural Heritage in Crisis. 3 Credits.
We explore the possible futures of cultural heritage and museums in times of accelerating climate change, pandemics, armed conflict and political and social turmoil by examining past and contemporary events.

AS.389.303. World of Things. 3 Credits.
The course introduces and applies new concepts about materials, and materiality to museum objects. It treats the museum as a site for investigating the relationship between people and things.

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum

AS.389.322. Tigers to Teapots: Collecting, Cataloging, and Hoarding in America. 3 Credits.
Course will examine the collecting behavior of Americans. Students will explore how collectors have defined the holdings of the nation’s museums, galleries, and libraries and used objects to shape taste and status in the U.S.

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology

AS.389.373. Encountering American Art. 4 Credits.
Students investigate the Baltimore Museum of Art’s American art collection and its presentation to the public alongside current scholarship on American art to develop strategies for a new permanent collection display that aligns with the museum’s commitment to artistic excellence and social equity. M&S Practicum. Co-taught with BMA curator Virginia Anderson.

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revisualise and offer alternative stories. Class meets at the museum every other week.

AS.389.405. Visualizing Africa. 3 Credits.
Examines the history of African art in the Euro-American world, focusing on the ways that Western institutions have used African artworks to construct narratives about Africa and its billion residents.
Area: Writing Intensive

AS.389.420. Curatorial Seminar. 4 Credits.
In collaboration with a local museum, conceptualize and develop an exhibition, potentially including but not limited to: checklists, exhibition texts, interpretive strategies, and programming. Exhibition theme varies year to year. Concepts, ethics and practicalities of curation are key concerns. Research visits to regional museums and private collections as relevant.
Area: Writing Intensive

Research Methods

SA.100.412. Quantitative Research Methods. 4 Credits.
….forthcoming!

Security, Strategy, and Statecraft

SA.500.502. Genocide and Mass Violence. 2 Credits.
Genocide is often described as the worst of crimes, the nadir of human behavior, and the world's most "odious scourge." The goal of this course is to examine the origins and causes of genocide and to introduce students to the key works and major debates in the growing field of genocide and mass violence research. This course is divided into three parts. First, we will discuss how genocide is conceptualized and defined, explore the theories that try to explain whygenocides occur, and discuss why people may participate in genocidal killing. In the second part we will examine several key case studies of genocide and mass violence. Third, we will complete the course by debating policy approaches to genocide and mass violence including prevention, intervention, post-genocide justice, reconciliation and memory.

SA.502.126. Strategy And Policy. 4 Credits.
Provides an overview of strategic studies, which deals with the preparation and use of military power to serve the ends of politics. Discusses the development of warfare from the mid-19th century through the present and addresses major theoretical concepts, including those found in Carl von Clausewitz's On War.
Students may not register for this class if they have already received credit for SA.660.740[C]

SA.502.145. Genocide and Mass Violence. 4 Credits.
Genocide is often described as the worst of crimes, the nadir of human behavior, and the world's most "odious scourge." The goal of this course is to examine the origins and causes of genocide and to introduce students to the key works and major debates in the growing field of genocide and mass violence research. This course is divided into three parts. First, we will discuss how genocide is conceptualized and defined, explore the theories that try to explain whygenocides occur, and discuss why people may participate in genocidal killing. In the second part we will examine several key case studies of genocide and mass violence. Third, we will complete the course by debating policy approaches to genocide and mass violence including prevention, intervention, post-genocide justice, reconciliation and memory.

SA.502.148. History of European Integration. 4 Credits.
This course is concerned with the historical process by which European nation-states have constructed the institution known as the European Union (EU). It dealsprimarily with political, diplomatic, and economic history, not legal history or the history of European public policy. By the end of the course, students will have aclear picture of principal forces that have driven European integration at the various stages in the 'European Project's' development.

SA.502.149. The Indo-Pacific: cooperation & contestation. 4 Credits.
The Indo-Pacific has developed into a new framework for regional co-operation and contestation between the major powers, replacing the earlier notion of the Asia-Pacific. It reflects the rise of China and its Belt and Road Initiative, which aspires to weld together the Eurasianlandmass and its adjacent areas in a two-pronged, transcontinental and maritime drive. This course explores the material foundations, the perspectives and strategies of the major players in this huge maritime area, the patterns of co-operation and conflict in their interactions andthe arrangements - and their deficiencies - for transregional international order.

SA.502.150. Transatlantic Security. 4 Credits.
… forthcoming!

States, Markets, and Institutions

SA.503.110. Soft Power and Global Politics. 4 Credits.
As the use of military force to resolve disputes between nations becomes less plausible in most regions of the world,the struggle for influence intensies. Among the results has been the rise to global fame of the concept of 'Soft Power', in theory a means to turn a country's attributes and achievements into a lever for gaining advantage in international competitions of all sorts. Google lists 176m references to the term (11/1/13), China has invested in it heavily and consciously. Even nations such as Russia and Iran are using soft power language and tools. During the Syrian crisis, the term was everywhere. But the course will suggest that the land which gave birth to the term – the US – is still the one which enjoys the greatest advantages in this contest, since the most significant form of soft power leverage over time is the one which most successfully proposes models of modernity. No matter how much weaker the appeal of America's military, its banks, its politics compared to their heyday, America's products, icons, technologies, universities,media industries, personalities, etc. can still produce forms of presence and innovation which the rest of the world must reckon with. The course offers an historical perspective on this dynamic. Specifically it focuses on the great variety of models of modernity the US has produced over time and still can, and how the world has come to terms with them (including militant rejection). The course in its early stages is European in focus. Soon it opens out to other regions of the globe, especially Asia. So often the imperative of innovation that the US brings has encountered waves of anxiety about relations between the state and its citizens, between national communities and the market, between generations, genders, ethnic groups and religions. Efforts to understand 'soft power' and the outcomes of the world's encounter with the American version: these are the central issues of the course.

SA.503.111. Political Systems of the Developing World. 4 Credits.
The course is meant to prepare the students to deal with the most important theoretical and substantive issues affecting the nature, functioning and transformation of the political systems of the developing world. It will be focused on the analysis of the most relevant regime-types: authoritarian, military, theocratic, and democratic, and of major political processes such as political development and social modernization, state-building and state failures, politicaltransitions and democratic consolidations. It will draw from a wide range of cross-national and cross-regional cases. Class time will be divided between lectures and discussion. Each topic will be introduced by the instructor. The readings constitute the background for each lecture, but we will build upon them and go well beyond. Occasionally, timely articles on especially significant events will be analyzed in depth. Hopefully, fertile discussions will follow on the assumption thatall students have done their reading. The course will end with a take-home exam.

SA.503.112. After Afghanistan - Any Fuure for Pace Operations, Peacekeeping & Peacebuilding. 4 Credits.
In August 2021 the international media and most politicians reacted with much surprise to the dramatic events at Kabul airport. Thousands of Afghanis, desperate to flee the Taliban rule,were struggling to get on the last planes leaving the country. It did not take long before prominent Western commentators proclaimed that the failure in Afghanistan would be the end oflongstanding, Western inspired conflict management strategies to end violent conflict in failing states by deploying peace operations and getting involved in long term peace- andnation building processes. Indeed, “peace operations”, conducted by a variety of international actors like the UN, EU, NATO, AU, are a strategic pillar of international peace and securitypolicy since the end of the Cold War. In average, more than 150.000 international military, police, and civilians are annually deployed worldwide. No doubt, a number of these missionsare struggling with difficulties similar to those in Afghanistan. But does the failure in Afghanistan really imply that there is no future for peace operations and peacebuilding and thatmissions like those in Mali, Somalia, DR Congo etc. will suffer a fate similar to that in Afghanistan? This is what we want to explore in the class by having a thorough, field based lookat the history, concepts, development and unsolved problems of UN-lead peace operations and peacebuilding.

SA.503.113. Civil Wars and Interventions. 4 Credits.
The course aims to discuss key concepts and analytical framework for analyzing the various phases and facets of intra-state wars, and to show how international interventions can affect the course of these conflict and peace processes. In order to do so, the course first analyzes thecauses of civil wars and other major episodes of collective violence, the dynamics of violence in these conflicts, and early warnings measures that allow to “predict” the onset of conflict. It then examines the different ways in which external/international actors can intervene in domesticconflict, management techniques that may be introduced at various stages of conflict to halt escalation, minimize violence, and to move conflicts toward a sustainable peaceful settlement. This includes an analysis of peacekeeping, peacebuilding and state-building practices, and transitional justice. The course provides students with an advanced understanding of the thriving literature on civil wars and interventions, looking at both qualitative and quantitative scholarship, and offers students the possibility to engage with case studies to explore the real-world conflicts from their origin to their solution. In particular, the course offers detailed treatment of conflicts across continents, such as the wars in Bosnia, Colombia, Sahel region and Syria. Each case study will cover different aspects of the conflict, from their onset to evolution and the role of external actors. The expected outcome is that students will be able to engages with both academic and policy relevant literature in their quest for gaining a better understanding of the conflict cycle.

SA.503.114. Constitutional Development and Democratization. 4 Credits.
The spread of human rights and constitutional, representative government based on the rule of law, as either spurs for development or desirable outcomes of development, seems both possible and urgently necessary and yet we appear to be in a phase where many countries are undergoing a democratic retrogression. This course examines the nature, fate and prospects for constitutional development and democratisation across the globe. Employing both the diachronicand synchronic methods of analysis typical of comparative constitutional law, the course addresses topics such as constitution-making and constitutional amendment; forms of state and forms of government as well as the role and functions of constitutional and supreme courts with the aim of understanding how a given institutional framework may facilitate or obstruct transitions to democracy. The experience of so-called ‘consolidated’ democracies will often be used to examine the transition to democracy of other countries.

SA.503.116. Law and Institutions of the European Union. 4 Credits.
The spread of human rights and constitutional, representative government based on the rule of law, as either spurs for development or desirable outcomes of development, seems both possible and urgently necessary and yet we appear to be in a phase where many countries are undergoing a democratic retrogression. This course examines the nature, fate and prospects for constitutional development and democratisation across the globe. SA.503.117. Great Powers. 4 Credits.
forthcoming

Systems Engineering

EN.645.651. Integrating Humans and Technology. 3 Credits.
This class provides a hands-on introduction to human and cognitive systems engineering. Students will learn and apply user-centered research and innovation methods that are used to discover, document and integrate human capabilities, limitations and needs into the systems engineering process, improving the likelihood that the resulting systems are intuitive, efficient, effective and useful. Topics include needs elicitation, workflow analysis, functional allocation, decision making, prototyping, and performance measurement.
EN.645.662 Introduction to Systems Engineering OR EN.655.662 Introduction to Healthcare Systems Engineering OR EN.675.600 Systems Engineering for Space

Technology and Culture

SA.501.102. Transnational Advocacy. 4 Credits.
The class will examine theories and practices of international advocacy. Students will examine different types of advocacy: from insider lobbying to people powered campaigns, from agenda-setting to rapid response and digital campaigning. They will read academic scholarship on advocacy alongside texts produced by and/or for practitioners. The first half of the course will focus on theoretical dimensions of advocacy – who drives norm change and who resists it? When is advocacy effective? The second half of the class will focus more on advocacy for refugee and migrant rights. Students will evaluate a campaign for refugee and/or migrant rights and develop their own campaign recommendations. Learning Objectives: critically assess theories of international advocacy; identify and compare different types of advocacy organizations, strategies and tactics; develop practical skills in designing and evaluating campaigns.

SA.501.103. Multiculturalism & the Human Rights of Women. 4 Credits.
...forthcoming

The Middle East

SA.555.104. Political Leadership in the Middle East. 4 Credits.
Change in the Middle East has often been attributed to charismatic and powerful leaders, whose influence has been magnified by crisis, wars, and authoritarian traditions. This course combines biography with politics to ask whether, how, and in which circumstances, individual leaders havechanged the course of modern Middle Eastern history. Special attention is paid to the interaction of leaders and mass movements, and leadership dynamics in the unfolding “Arab Spring.”

SA.555.105. History and Politics of the Middle East & North Africa. 4 Credits.
The course aims at introducing students to the history and politics of the Middle East and North Africa (MENA), with a focus on the Mediterranean Middle East/Mashreq and Maghreb. Starting with the exploration of the emergence of the modern state system in the region, the course willexamine the post-colonial politics of MENA countries and the current state of affairs. In this context, a number of key issues will be addressed, such as state-society relations, authoritarianism and reform, the role of the military, regional dynamics, conflicts, the strategic importance of the region, political Islam, and democracy and human rights. The course will conclude with a discussion of the Arab uprisings and their outcome, along with the implications for the politics and international relations of the MENA region.

Visual Arts, Minor

Visual Arts Minor Requirements

Art minors have the option to combine studio art and photography courses to complete the minor requirements or focus on one of the two disciplines:

1. Studio Art
2. Digital Photography

A minimum range of 15 to 18 credits, including:

Code	Title	Credits
Core Course		
AS.371.131	Foundation Drawing	3
or AS.371.152	Introduction to Digital Photography	
Art History Course		
One course at any level in history of art		3-4
Visual Arts Electives		
Four additional visual arts courses		10-12
Total Credits		**16-19**

Additional details:

- All courses must be taken for a letter grade and students must receive a grade of C- or better to apply the course towards the minor.
- One independent study course (at least 2 credits) in the visual arts may be counted toward the minor.
- Advising will be done by the Director (Studio) and the Photography Coordinator (Digital).
- At least three of the required courses for the minor must be taken through the Center for Visual Arts program at Hopkins.

Writing Seminars

http://writingseminars.jhu.edu/

The Writing Seminars exists to help students combine imaginative writing with scholarship in the general context of the humanities.

Programs

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.220.105. Introduction to Fiction & Poetry I. 3 Credits.
An introduction to basic strategies in the writing of poetry and fiction, with readings by Joyce, Woolf, Baldwin, Munro, Garcia Marquez, Donne, Bishop, Yeats, Komunyakaa, Tretheway, and others. Students will learn the elements of the short story and try their hand at a variety of forms: realist, fantastical, experimental. They'll also study the basic poetic forms and meters, from the ballad to the sonnet, iambic pentameter to free verse. Students will compose short stories and poems and workshop them in class. This course is a prerequisite for most upper level courses. This course is part one of the year-long Introduction to Fiction and Poetry, and must be taken before AS.220.106.
Area: Writing Intensive

AS.220.106. Introduction to Fiction & Poetry II. 3 Credits.
The second half of IFP, this course delves deeper into the finer points of fiction writing, including tone, description, and point of view; students will also enrich their knowledge of poetic forms and devices, such as figurative language, verse rhythm, and the poetic line. Readings include work by Paley, Mahfouz, Calvino, Lessing, Richard Wright, Plath, Rich, Auden, Li-Young Lee, and others. Students will write and workshop their own stories and poems, and complete a final portfolio. This course is a prerequisite for most upper level courses.
Area: Writing Intensive
AS.220.105 or AS.220.108

AS.220.108. Introduction to Fiction & Nonfiction. 3 Credits.
A course in realist fiction and nonfiction, with readings by Eudora Welty, Vladimir Nabokov, Henry James; George Orwell, Beryl Markham and Truman Capote. Students compose short stories and essays with attention to literary models. AS.220.108 can be substituted for AS.220.105.
Area: Writing Intensive

AS.220.138. Creative Writing. 1 Credit.
Enjoy the opportunity to develop your creative writing skills. You will work in both fiction and poetry. Through a combination of robust discussion, writing exercises, and substantial feedback, you will learn about imagery, voice, narrative structure, and other aspects of the writer's craft. The reading list will include a diverse range of contemporary authors. There will be a strong emphasis on collaborative workshopping, during which you will discuss one another's works in progress.

AS.220.200. The Craft of Fiction. 3 Credits.
Area: Writing Intensive
(AS.220.105 OR AS.220.108) AND AS.220.106

AS.220.201. The Craft of Poetry. 3 Credits.
A study of the fundamentals and strategies of poetry writing. This course combines analysis and discussion of traditional models of poetry with workshop critiques of student poems and student conferences with the instructor.
Area: Writing Intensive
(AS.220.105 OR AS.220.108) AND AS.220.106.

AS.220.206. Writing about Science I: Daily News Journalism. 3 Credits.
This course is designed to teach students the skills of daily news reporting, with a focus on covering science news. Students will learn how turn scientific discoveries into lively and engaging prose for the general public, interview sources, and pitch stories to news organizations. The skills taught are applicable to all areas of journalism, not just science journalism.
Area: Writing Intensive

AS.220.207. Writing the Unreal. 3 Credits.
"We left what we felt at what we saw," the poet Wallace Stevens once wrote, suggesting writing involves a direct response to our experiences of reality. In this class, we'll look exclusively at writing which takes on what hasn't been seen, and hasn't been felt. Through reading works of science fiction, magical realism, gothic literature, and speculative fiction, students will investigate how the unreal can still speak to our experiences and perceptions of the real. Additionally, students will get the chance to craft their own fantastical worlds through regular writing assignments. Tales of time travelers, haunted houses, unreal languages, and reimagined cities will be covered. Readings will include selections from Paul Beatty, Octavia Butler, Italo Calvino, Ursula K. Le Guin, Yoko Ogawa, and Mary Shelley.
Area: Writing Intensive

AS.220.212. Line and Lineage: A Survey of Poetry Writing. 3 Credits.
This course will be a chronological exploration of English-language poetry, beginning in the medieval era and continuing to the present day. We will examine not only the literature of the past, but also the ways in which a diverse range of contemporary writers have extended, challenged, and reimagined literary tradition. Throughout the semester we will pay especially close attention to the question of how a writer's management of the poetic line can shape a poem's structure, context, and meaning. Although this is a lecture-based class, not a workshop, participants will have many opportunities to respond artistically to the course readings.
Area: Writing Intensive
(AS.220.105 OR AS.220.108) AND AS.220.106

AS.220.213. Fiction Survey: Once Upon a Time. 3 Credits.
A review of the origins and development of the realist short story from fable, fairy tale, saint's life, Bible story, through versions created in the Renaissance and classic (19th and 20th century) periods, to modern narratives. Writing Seminars majors only.
AS.220.105 AND AS.220.106

AS.220.218. Writers on Film. 3 Credits.
An interdisciplinary course focusing on the film writings of poets, novelists, critics, and essayists such as Virginia Woolf, H.D., James Agee, James Baldwin, and Pauline Kael; and films showing the intertitle and screenplay work of writers such as Anita Loos, F. Scott Fitzgerald, William Faulkner, and Jean Cocteau. Participants will write weekly assignments on film from a critical perspective.
Area: Writing Intensive

AS.220.219. Readings in Fiction and Literary Nonfiction. 3 Credits.
This course offers an in-depth exploration of content, style, and crossover literary techniques among authors who write both fiction and nonfiction, including Jamaica Kincaid's memoir My Brother and "Girl." Students will evaluate why each genre was chosen to narrate, for example, such quandaries as ethics in surgery: Abraham Verghese's novel Cutting for Stone and Richard Selzer's essay, "The Knife," as well as the reportage and novels of Ernest Hemingway and others. Also explored: topics of social import and questions of identity in James Baldwin's essays ("Notes of a Native Son") and stories ("Sonny's Blues"), and other works; The course builds on literary writing and reading techniques established in Intro to Fiction & Nonfiction (IFN) and Intro to Fiction & Poetry (IFP). Either course is a prerequisite, with IFN preferred.
Area: Writing Intensive
AS.220.105 OR AS.220.108

AS.220.220. Reading Korean Literature in Translation: A Survey. 3 Credits.
An introduction for students unfamiliar with the Korean language but interested in Korean culture / literature. Students will read a variety of translated texts, especially of works written in the 20th and early 21st centuries by authors including Kim Tong-in, Hwang Sun-won, Pak Wanso, Hwang Sok-yong and Han Kang; there will also be classes on traditional sijo poetry. Students will become familiar with Korean literary genres and formal features, and develop a broad understanding of the historical and sociocultural context of Korean literature.
Area: Writing Intensive

AS.220.221. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between modernist literature and cinema in response to the social and technological changes of the twentieth century. Prominent figures include Charlie Chaplin, Ezra Pound, T. S. Eliot, Virginia Woolf, Franz Kafka, Sergei Eisenstein, Jean Epstein, John Dos Passos, Zora Neale Hurston, Paul Strand, and Gertrude Stein. Participants will write weekly assignments on films and readings from a critical perspective.
Area: Writing Intensive

AS.220.230. Reading Contemporary Korean Fiction in Translation. 3 Credits.
This course examines a range of contemporary Korean fiction produced since political liberalization of Korea in the 1990s. Students will see the many different ways in which individual selves relate to the world, question the value systems of a globalized society, and celebrate the instinct to survive and thrive. While exploring these things, students will develop their analytical skills and identify the central components of new Korean narratives.

AS.220.231. Art of the Personal Essay. 3 Credits.
This course explores the art and craft of the personal essay from Seneca to Soyinka, Montaigne to Adichie. Deriving from the French essai, to attempt, students bring a sense of investigation, as natural philosophers proposed, to the characteristics, presence, or quality of an idea. Through personal narrative exploration, essayists write on universal themes -- family, loss, social justice -- through various nonfiction essay forms, such as the braided essay, lyric essay, science essay, or humor essay. Students will employ research, convey personal experience, and develop their own voice and style. Course builds on material covered in Introduction to Fiction & Poetry courses and/or Introduction to Fiction & Nonfiction, and will prepare students for Advanced study. This readings-based course is also writing-intensive, including exercises, essay drafts, and revisions. Course features additional diverse authors such as Sei Shonagon, Sara Suleri, James Baldwin, Richard Rodriguez, Brian Doyle, and Ta-Nehisi Coates.
Area: Writing Intensive
AS.220.105 OR AS.220.108

AS.220.311. Intermediate Fiction: Point of View. 3 Credits.
This intermediate workshop will focus on rendering point of view. In addition to exploring questions of psychic distance and reliability, we will examine how point of view comes to bear on voice, character, the management of sympathy, and narrative structure. Students will write and workshop stories and discuss published fiction. Diverse and contemporary readings to include work by Yiyun Li, Carmen Maria Machado, Lorrie Moore, and Alice Munro.
Area: Writing Intensive
AS.220.200

AS.220.312. Intermediate Fiction: Detail and Description. 3 Credits.
An intermediate workshop focusing on the question of how to make fictional worlds feel real. We'll read 19th, 20th, and 21st century short fiction by authors such as Anton Chekhov, Jhumpa Lahiri, Junot Diaz, and Alice Munro, focusing particularly on how authors make the lives on the page feel three-dimensional. Students will write stories and exercises, including exercises that involve exploring Baltimore in order to observe and write about the city in which we live. Recommend Course Background: Students need to have completed a 200-level Writing Seminars course.
AS.220.105 AND AS.220.106

AS.220.317. Writing about Science II: Feature Writing Journalism. 3 Credits.
This course is designed to teach students the skills of long-form narrative journalism, with a focus on covering science news. Skills taught will include how to compose scenes, create three-dimensional characters, create narrative tension, and conduct on-site reporting. Class speakers will include award-winning science journalists from New York to DC, who will share the secrets of their craft. The primary writing assignment will be a 3,000-word feature piece that is pitched, reported, and workshopped throughout the course of the class. "Writing About Science I" is recommended as a prerequisite for this course. If you have not taken this, please contact instructor (dgrimm5@jhu.edu) to enroll.
Area: Writing Intensive

AS.220.319. Intermediate Fiction: Crafting Memorable Voices. 3 Credits.
When we recall our favorite works of fiction, it is often their voice that first comes to mind. This course will explore how narrators enchant us with their voice, focusing on such matters as perspective, syntax, word choice and how even deceptively impartial omniscience takes on a unique and memorable voice. Fiction readings to include: Paul Bowles, Toni Cade Bambara and Ismail Kadare. Craft readings to include: Christopher Castellani and John Gardner. Writing assignments will be both expository and creative.
Area: Writing Intensive
AS.220.200

AS.220.321. Intermediate Fiction: Finishing Touches: How Stories End. 3 Credits.
Typically, stories are easy to start and difficult to conclude. This course will look at various ways in which stories end rewardingly. Close attention will be paid to final paragraphs. We will ask questions like: Do satisfying endings fall into categories? Can we generalize about how stories ought to end? Do some writers have a gift for endings? Readings to include: Sylvia Townsend Warner, Muriel Spark, Alice Munro. Assignments will include both expository and creative writing.
Area: Writing Intensive
AS.220.200

AS.220.327. Intermediate Fiction: Characters. 3 Credits.
How do fiction writers create believable people? A study of Characters. Readings to include E. M. Forster's Aspects of the Novel and A Room with a View, James Baldwin's Giovanni's Room, and various short stories.
Area: Writing Intensive
AS.220.200

AS.220.331. Intermediate Fiction: Forms of Fiction. 3 Credits.
A workshop in the formative genres of fiction: romance, confession, anatomy, and novel. Readings include Flaubert, Stevenson, Camus, and Stephen Dixon. Frequent sketches and two stories.
AS.220.200[C]

AS.220.332. Intermediate Fiction and Poetry: Poet-Novelists. 3 Credits.
We will look at writers in English who excelled at both fiction and poetry. We will ask: How does a talent in one genre show itself in another? Novels will include: Thomas Hardy's Return of the Native, Sylvia Townsend Warner's Lolly Willowes, Vladimir Nabokov's Lolita, John Updike's, Rabbit, Run. Other writers who may be included: Rudyard Kipling, D. H. Lawrence, Malcolm Lowry, Richard Wright, Muriel Spark.
AS.220.200 AND AS.220.201

AS.220.333. Intermediate Fiction: Plot and Narrative Structure. 3 Credits.
This class is primarily a workshop. Students will write two 10-20 page short stories to present for discussion and critique. The craft focus of the class is plot and narrative structure. Through the assigned reading and a few short writing exercises, we will think about storytelling and the elements (character, conflict, desire, causality, consequence) that make a question a plot or narrative question, and how stories are shaped and structured by these questions. The course reading will begin with a variety of short stories. Later in the semester, we will discuss braided narratives and read novels by Virginia Woolf, Rebecca Makkai and Valeria Luiselli.
AS.220.200

AS.220.338. Intermediate Fiction: Developing Subtext. 3 Credits.
In this course, students will write and workshop two original stories. Additional generative writing exercises will explore the ways a writer can develop subtext in their work. How can character details work in parallel with elements of setting? How can a setting be instrumental in advancing a plot? How can finely tuned, sentence-level details, parallel images, foreshadowing, and figurative language give a story a cohesive sensibility and rich subtext? We'll read stories by writers including Stephanie Vaughn, Laura van den Berg, Rickey Fayne, Haruki Murakami, and craft essays by Matthew Salesses, Charles Baxter, and more.
Area: Writing Intensive
AS.220.200

AS.220.346. Line and Lineage: Poems in Time. 3 Credits.
A poem exists in time—both in the historical moment in which it is written, and in its movement from line to line. In this seminar, students will build their knowledge of the history of the poetic line in English, up to the present day. Assignments will include both short critical essays and creative exercises.
Area: Writing Intensive

AS.220.348. Creative Nonfiction Workshop: The Personal and the Public. 3 Credits.
In this workshop, students will study a variety of creative nonfiction essays and articles by a diverse group of writers including Ta-Nehisi Coates, Maggie Nelson, Roxane Gay, Alice Wong, D. Watkins, and Esmé Weijun Wang. Using the expository methods and research practices of journalists and the narrative strategies of memoirists, students will write and workshop their own creative nonfiction as we attempt to understand how the subject of an essay can be meaningfully augmented by acknowledging and even centering the author's identity and experience.
Area: Writing Intensive

AS.220.356. Intermediate Fiction: A Story's Beginnings. 3 Credits.
Where does a story best begin? How does it successfully launch itself? We will look closely at a great many opening paragraphs and pages, analyzing the various strategies by which writers grab and hold a reader's interest. Most of the reading will be short fiction, drawn from various countries and languages.
Area: Writing Intensive

AS.220.363. Intermediate Fiction: Writing about Adolescence. 3 Credits.
Only fairly recently has adolescence been recognized as a developmental period distinct from childhood or adulthood. In this course, we'll read a range of classic and contemporary literature that takes on the challenge of writing about this complicated and fraught stage of life. Readings may include work by Shakespeare, Louisa May Alcott, Colson Whitehead, Louise Erdrich, and others. Students will write and workshop their own stories or novel chapters.
Area: Writing Intensive
AS.220.200

AS.220.372. Intermediate Fiction: Style and Voice. 3 Credits.
In this course, we'll focus on the writing and workshopping of student fiction, with special attention to style and voice. What distinguishes a good sentence from a bad one? How does one develop a style that feels both natural and distinctive at the same time? What do we even mean by "voice," and how on earth is a writer supposed to find one? In addition to each other's work, we'll read stories by authors with particularly unique voices, focusing on what makes their sentences sing.

AS.220.377. Intermediate Poetry: Poetic Forms. 3 Credits.
Poetic Forms I fulfills one of the Intermediate requirements for The Writing Seminars Major. It deals with rhyme, meter, traditional forms, and ad hoc forms of students' own making. Whether you are a poet, novelist, song writer, science writer, or dramatist, this course will help you master lines and sentences even better.
Area: Writing Intensive
AS.220.201

AS.220.378. Contemporary Poetic Forms. 3 Credits.
In Contemporary Poetic Forms, we will look at exciting, mostly younger poets writing in a wide array of metrical forms. From Anthony Hecht to Erica Dawson, you will read a book a week and write eleven poems, and the assignments will be keyed but not beholden to those challenging authors.
Area: Writing Intensive
AS.220.201[C]

AS.220.391. Performing Poetry & Fiction: An Acting Workshop for Writers. 3 Credits.
This hands-on performance workshop, combining literary and theatrical practice, will look closely at what makes a performance or reading compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion, students will create a pliant and powerful reading style to best serve their work. The course includes regular writing assignments in poetry and fiction and weekly performance and group discussion.
Area: Writing Intensive

AS.220.394. Intermediate Fiction: Place, Setting, and Landscape. 3 Credits.
This course is primarily a workshop; students will each write and workshop two short stories. Additional shorter writing assignments will focus on writing about places, both real and imagined. We will think about the work of description at the sentence level, but also about the relationship between place, character and memory. We'll read work by writers who are known for their ability to evoke or capture in detail a particular setting, potentially including work by Edward P. Jones, Zadie Smith, Eudora Welty, Annie Dillard, Grace Paley, Victor Lavalle, Viet Than Nguyen, and Joan Didion.
Area: Writing Intensive

AS.220.395. Intermediate Fiction: Plots and Subplots. 3 Credits.
How can a subplot inform a reader's understanding of a story's protagonist? How can a story with multiple protagonists and plotlines reveal theme? This intermediate fiction writing class will focus on student writing and on published stories that are interestingly or intricately plotted. Parallel texts by Andrea Barrett, Edward P. Jones, Alice Munro, Amy Hempel, Barret Swanson, Dantiel W. Moniz, and others will give students the opportunity to examine concrete examples of intricately plotted stories while also putting some plotting techniques to the test in their own short fiction.
Area: Writing Intensive
AS.220.200

AS.220.398. Intermediate Fiction: Fictional Frames. 3 Credits.
In this course, we'll focus on writing and workshopping student fiction while reading contemporary parallel texts representing a variety of styles, subgenres, and forms. We'll look at exceptionally short works, stories of intermediate lengths, and longer, novella-length works in an effort to understand what kinds of stories lend themselves to particular lengths and styles. How do you know whether your story should be a work of flash fiction or a novel? What kinds of stories can you tell in each form? We'll read work by Lydia Davis, Kirstin Valdez Quade, Jenny Zhang, Bret Anthony Johnston, Paul Yoon, Lauren Groff, Bryan Washington, and more.
AS.220.200

AS.220.400. Advanced Poetry Workshop. 3 Credits.
In this course we'll explore poetic responses to myth and legend, looking at how poets from different cultures and eras have responded imaginatively to established stories about gods, heroes, and the supernatural, whether for the sake of aligning themselves with tradition, or for the sake of challenging it. Our discussions will take place in the context of a rigorous poetry workshop, where students will experiment with figurative language, management of the line, narrative organization, and the control of rhythm in both form and free verse. At the end of the semester students will turn in a final portfolio of revised poems, accompanied by a reflective letter that demonstrates a mature understanding of verse technique.
Area: Writing Intensive
AS.220.201

AS.220.401. Advanced Fiction Workshop. 3 Credits.
Topics in Advanced Fiction
Area: Writing Intensive
AS.220.200

AS.220.403. Readings In Poetry: Dramatic Verse. 3 Credits.
Why and how do playwrights make their characters speak in verse? What can we learn about writing—and speaking—“naturally” but with artifice? Blank verse is the most important model we have in English dramatic poetry, but not the only one. Readings in this course will range from Shakespeare's King Lear to modern verse plays by Caryll Churchill, Derek Walcott, and David Hirson. Students will write their own one-act verse play.
Area: Writing Intensive
AS.220.201

AS.220.406. Readings in Fiction: Italian war-time and post-war fiction: Italo Calvino, Primo Levi, and Natalia Ginzburg. 3 Credits.
We'll read these three masterly fiction writers who found new ways to write about hard times.
Area: Writing Intensive
AS.220.200

AS.220.408. Readings in Poetry: War Poetry From Troy to Afghanistan. 3 Credits.
The course will follow a chronological line from Homer through to American and British poets of the current war in Afghanistan. This means we will be looking at (among other things) Beowulf, poems of the English Civil War, poems of the American Civil War, poems of the First and Second World Wars, and poems about the conflicts in Iraq and Syria as well as Afghanistan. Each class will be divided into two sections of equal length. In the first half we will study poems written by our predecessors - poems by women as well as men, poems written in the front line as well as behind the lines in hospitals and 'at home', and poems written in a variety of forms - ranging from pure lyric to prose-poetry; in the second half we will discuss poems written by members of the class in response to conflict, and/or in response to the poems we are discussing in any given week.
AS.220.201

AS.220.411. Community-Based Learning: Nonfiction and Social Engagement. 3 Credits.
In this Community-Based Learning course, students will read and write memoir and discuss issues of social concern with high-school age writers from Baltimore public schools in partnership with the organization Writers in Baltimore Schools Please note that this class is not a traditional workshop focusing on critique, but will instead explore how writing can build connection and foster conversation. Participation in some events outside of class time may be required.
Area: Writing Intensive

AS.220.415. Community-Based Learning: Teaching Creative Writing in Baltimore Schools. 3 Credits.
In this course, students will work alongside writing teachers from the non-profit organization Writers in Baltimore Schools (WBS) to lead creative writing workshops in local public elementary and middle schools. Students and WBS teachers will also meet as a group once a week to plan classes, discuss pedagogy, and share ideas. Students will write weekly responses to reading assignments, write reflections on the volunteer experience, and help to assemble a final project at their worksite. Upon completion of the class, students will have the opportunity to apply to become instructors with Writers in Baltimore Schools. Please note that the weekly writing group you will co-lead will occur outside of class. Groups meet either during the school day or after school. We will work with you to find a group that fits your schedule.
Area: Writing Intensive

AS.220.420. Readings in Fiction: Optimistic Apocalypse. 3 Credits.
Contemporary literary depictions of apocalypse often offer up a world that's been transformed (rather than annihilated) by climate change, disease, and war. In this course, students will explore comparatively optimistic literary dystopias with an eye toward understanding how writers observe and extrapolate real dangers to inform their novels and stories. We'll read one classic dystopian work alongside newer stories and novels by Kazuo Ishiguro, Lauren Groff, Colson Whitehead, Rumaan Alam, Emily St. John Mandel, Ted Chiang, Ling Ma, Laura van den Berg, and more. Students will write short creative and critical responses to our readings as well as a final comparative paper.
Area: Writing Intensive
AS.220.200

AS.220.422. Readings in Fiction: Race, Passing, and Performance. 3 Credits.
This course will explore the context and craft of racial passing texts in the U.S, asking students to think critically about literal passing narratives and their persistence over time, and more broadly about how we write about cultural passing, codeswitching, and identity as conscious performance. We'll start with texts that ground us in the genre—Chopin, Larsen, Fauset, Ellison, and Morrison—and read our way into contemporary texts, potentially including work by Danzy Senna, Mat Johnson, Brit Bennett, Min Jin Lee, and Marcelo Hernandez Castillo. Students will write a critical paper, a craft paper, and a short story or novella.
Area: Writing Intensive
AS.220.200

AS.220.424. Science as Narrative. 3 Credits.
Class reads the writings of scientists to explore what their words would have meant to them and their readers. Discussion will focus on the shifting scientific/cultural context throughout history. Authors include Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein, Heisenberg, Bohr, Crick and Watson.
Area: Writing Intensive

AS.220.427. Readings in Fiction: The Novella. 3 Credits.
A study of the novella as a literary form. Authors may include Melville, Turgenev, Tolstoy, Chekhov, Kafka, James, Wharton, Baldwin, Porter, Rulfo, Smiley, and others.
Area: Writing Intensive
AS.220.200

AS.220.437. Creating the Poetry Chapbook. 3 Credits.
Students will build on previous work in the major by completing a project of sustained length, depth, and cohesion (15 - 25 pages) in their final semester. Application only; Advanced Poetry prerequisite.
Area: Writing Intensive

AS.220.441. Readings in Poetry: Shakespeare and Company. 3 Credits.
A study of three of Shakespeare's plays, and of some of the most important creative responses to these plays by modern writers, such as Auden and Stoppard. Students will familiarize themselves with Shakespeare's continuing place in contemporary culture, and write short critical responses; they will also write a longer creative work that in some way transforms one of Shakespeare's plays.
AS.220.201[C]

AS.220.443. Readings in Poetry: International Voices. 3 Credits.
International voices will combine the workshopping of poems by students with a study of contemporary poems written by black British writers and British writers in dialect, African-American writers, Caribbean writers, and Indian and South African poets who are writing in English. The study of broad themes and subjects will be combined with a particular appreciation of linguistic and acoustic matters - which means among other things that time will be spent listening to and evaluating recordings of the poets concerned.Writing Seminars Majors Only
Area: Writing Intensive
AS.220.201

AS.220.452. Reading Proust. 3 Credits.
An excursion through the 3,000 page, seven-volume masterpiece, *In Search of Lost Time.* We will closely read *Swann's Way* and *Within a Budding Grove*; we will cover, in a less intensive way, *Guermantes Way*, and *Time Regained*.
AS.220.200

AS.220.453. Border Crossings: Contemporary Writing from Canada. 3 Credits.
A survey of contemporary Canadian poetry and fiction. Course readings will include work by Margaret Atwood, Christian Bök, Anne Carson, Anne Michaels, Alice Munro, Michael Ondaatje, Madeleine Thien, and others. Students will have the opportunity to respond artistically as well as analytically to the course readings.
AS.220.105 AND AS.220.106 AND AS.220.201

AS.220.454. Community-Based Learning. 3 Credits.
In this Community-Based Learning course, students will explore poetry of social and political concern in partnership with high-school age writers from Baltimore public schools. Students will put learning into practice by engaging in community conversation and collaboration. Participation in some events outside of class time will be required.
Area: Writing Intensive

AS.220.455. Readings in Fiction: Low, High, and Back Again: Experiments in Genre. 3 Credits.
In this course, we'll take a look at the increasingly obsolete notion of "genre fiction" and the way that many contemporary writers are borrowing the conventions of once-frowned-upon genres, from sci-fi to horror to crime, and imbuing them with the concerns of the "literary novel" (character, language, social critique, etc.). The course will pair classics of genre fiction with more contemporary works that take the genre in surprising directions. We'll also do a fair bit of writing ourselves, experimenting with various genres. Authors might include Mary Shelley, Colson Whitehead, Philip K. Dick, Kazuo Ishiguro, Edgar Allen Poe, Carmen Machado, Raymond Chandler, Joan Didion, Zane Grey, and Charles Portis.
Area: Writing Intensive

AS.220.456. The Long Work. 3 Credits.
A course in the composition of a novella or short-story collection. Students will write and revise a thesis of 50 to 60 pages of fiction.Open to seniors by invitation.
Area: Writing Intensive

AS.220.457. Readings in Fiction: 21st Century Fiction: The American Short Story in the Last Twenty Years. 3 Credits.
With the 21st century 22 years old, it seems like a good time to ask ourselves what's going on with the American short story. What can it tell us about our various identities, individual and collective? Is it reflecting our current reality, transforming it, or both? Is it undergoing formal changes to better engage with our transformative times, and if not, should it be? Is contemporary fiction as diverse as our nation itself, and if not, what might account for such shortfalls in representation, and what might be the effects? Our reading list is likely to include such authors as Carmen Maria Machado, Yoon Choi, Bennett Sims, Charles Yu, Jamel Brinkley, ZZ Packer, Kali Fajardo-Anstine, Nana Kwame Adjei-Brenyeh, Dantiel W. Moniz, Claire Vaye Watkins, Kimberly King Parsons, Kirsten Valdez Quade, Ted Chiang, Danielle Evans, Karen Russell, George Saunders, and Bryan Washington. Students will write short critical and creative responses throughout the term, as well as a final longer creative piece.
Area: Writing Intensive
AS.220.200

AS.220.458. Readings in Poetry: Divergencies: British Poetry Since 1945. 3 Credits.
The course will workshop the original work of participants, while also looking at the major figures of immediately post-war British Poetry (Philip Larkin, Ted Hughes) and the diversification of writing that has appeared in more recent years. Among the writers to be discussed are : Simon Armitage, Mary Jean Chan, Imtiaz Dharker, Carol Ann Duffy, Sarah Howe, Linton Kwesi Johnson, Jackie Kay, Grace Nichols, Alice Oswald, Hannah Sullivan and Roger Robinson.
Area: Writing Intensive

AS.220.459. Readings in Poetry: Dramatic Poetry, Poetic Drama. 3 Credits.
This course will explore the intersection of poetry and drama, from Euripides, Shakespeare, and Moliere to modern verse plays by Derek Walcott and Caryl Churchill. We'll also look at some modern plays about poets and poetry—such as Tom Stoppard's Arcadia and The Invention of Love and Sarah Ruhl's Euridice. Finally, we'll examine the poetry of prose speech in such playwrights as David Mamet and August Wilson. Students will write their own scenes in poetic drama.
Area: Writing Intensive

AS.220.460. Community-Based Learning: Nonfiction and Social Engagement. 3 Credits.
In this Community-Based Learning course, students will read and write memoir and discuss issues of social concern with high-school age writers from Baltimore public schools in partnership with the organization Writers in Baltimore Schools Please note that this class is not a traditional workshop focusing on critique, but will instead explore how writing can build connection, foster conversation, and bring together writers from diverse communities.
Area: Writing Intensive

AS.220.501. Independent Study. 3 Credits.
Ordinarily no more than one independent study course may be counted among the eight Writing Seminars courses presented for graduation.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.220.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.220.509. Professional Internship. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.220.510. The Hopkins Review Professional Internship. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.220.513. Teaching Writing. 3 Credits.
Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.220.594. Professional Internship. 1 Credit.
The Professional Internship is a one-credit independent course created to document internships in journalism, publishing, the arts, or other writing-related fields. Internships require a minimum of 120 work hours and a short final paper. Permission required. Satisfactory/ Unsatisfactory only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.220.598. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.220.604. Readings in Fiction: Personal Touchstones.
The course explores the notion of one's own personal anthology--the books that mean the most to one over the decades, the books one keeps returning to. In addition to the assigned reading, each student will be asked to come up with a list of books (not read in this class) of great personal significance and to analyze in class the things one's personal touchstones have in common. Assigned readings will be drawn from two genres: the epic (Derek Walcott's Omeros, Halldor Laxness's Independent People) and the comic or light novel (Jane Austen's Persuasion, E. M. Forster's Room with a View, Laxness's The Fish Can Sing, Evelyn Waugh's A Handful of Dust, Muriel Spark's The Prime of Miss Jean Brodie, Kingsley Amis's Ending Up, Mark O'Donnell's Getting Over Homer).

AS.220.607. Readings in Fiction: The Laws, License, and Liability of First-Person Narration.
Study of classic/modernist novels written by the "I": Christopher Isherwood, Gertrude Stein, Albert Camus, Ford Madox Ford, and other practitioners. Mostly close study of texts, but some writing practice, too.

AS.220.608. Readings in Poetry: Sonnet and Sequence.
This course will use the sonnet form as a through line to consider both aesthetic shifts and the enduring lyric impulse across centuries of poetry in English, with a particular focus on how contemporary poets are working with the form through individual poems, sequences, and book-length works. Coursework will include reading, critical writing and presentation, discussion, and completion of an original lyric sequence.

AS.220.609. Readings in Fiction: The Novelist as Poet.
An examination of some half-dozen English-language novelists who were also significant poets. Readings will include both novels and poems. The course seeks to bridge the gap between the two genres.

AS.220.611. Readings in Fiction: Shape, Story, and Experiments in Structure.
How is our experience of a novel's story affected by its form? We'll discuss some traditional structures, including mystery plots and the three-act structure, before moving on to works whose forms bend or break various storytelling conventions. Authors may include Vladimir Nabokov, Susan Choi, Zadie Smith, Tommy Orange, Lorrie Moore, Edward P. Jones, Carol Shields and others.

AS.220.612. Readings in Poetry: The Long Poem.
This course will be an artistic exploration of the long poem. Throughout the semester we'll read a diverse range of work by both contemporary and non-contemporary writers, paying particular attention to the question of how a poem's dramatic intensity or lyric charge can be maintained when a poet is writing at length. Instead of submitting individual poems to a weekly workshop, students in this class will submit successive drafts of a long poem, which they will continue developing over the course of the entire semester.

AS.220.619. Graduate Poetic Forms I.
We will read and write a variety of traditional and less traditional poetic forms with a keen ear toward meter, rhyme, and other prosodic curiosities.

AS.220.623. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A. program.

AS.220.624. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the MFA program. Some assignments possible.

AS.220.625. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the M.F.A. program. Some assignments possible.

AS.220.626. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the MFA program. Some assignments possible.

AS.220.633. Readings in Poetry: Walcott, Heaney, and Brodsky.
A study of three major poets--Caribbean, Irish, and Russian--who self-identified with at least two cultures. We'll examine these poets' literary friendship and their shared engagement with subjects such as tyranny, empire, home, exile, and the English language. Exploration of these poets' shared debt to a predecessor, Robert Frost, and the debt owed to them by younger poets, will lead to students' own original projects in poetry and prose.

AS.220.646. Readings in Pedagogy: Teaching Fiction and Poetry.
A graduate course designed to develop both close reading and genre study, and to support the teaching of Introduction to Fiction and Poetry (IFP) I and II. Readings in selected works of American, English, and European poetry and short fiction. Course required by all graduate students in fiction and poetry.

AS.220.653. Readings in Fiction: The Writer's Bookshelf: Unsung Novels That Writers Love.
Which books do writers often foist on other writers, telling them "You have to read this"? In this course, we'll look at books that have yet to find much popular appeal, but which writers often speak about in reverential tones. Authors may include James Salter, Paula Fox, Dezso Kosztolanyi, J.L. Carr, Juan Rulfo, Tom Drury, Christina Stead, Evan S. Connell, Leonard Gardner, Joy Williams, and Penelope Fitzgerald.

AS.220.654. Readings in Fiction: Rediscovered Masters.
Readings from modern novels and collections of short fiction which, however well received at time of publication, fell into subsequent eclipse before undergoing something of a revival. Many of the titles will be drawn from the series of New York Review of Books Classics.

AS.220.655. Readings in Poetry: Line, Sentence, Syntax.
A study of the interplay of the line and the sentence in poetry, with an emphasis on syntax. Some prose works will also be used for context. Poets employing syntax with great verve and precision, whether they obey or disrupt the rules, will be read in order to inform students' own stylistic choices.

AS.220.659. Readings in Fiction: The Short Novel.
Class will read nine short novels and begin to write one.

AS.220.660. Readings in Poetry: Performing Poetry.
This hands-on performance workshop, combining literary and theatrical practice, looks closely at what makes poetry performance compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion and critique, students will create a pliant and powerful reading style, as an integral part of their work.

AS.220.662. Readings in Poetry: Poetry in Translation: From the Iliad to the Present Day.
The course will begin by looking at theories of translation, and thereafter spend half of each class looking at examples of poems in translation before moving on in the second half to look at poems by members of the group - translated poems where people have been able to write them, otherwise at original pieces. I'll be providing texts for study each week.

AS.220.664. Readings in Fiction: Point of View: Collage, Polyphony, Shapeshifting, and Omniscience.
Some of the most interesting moments in fiction are those when characters experience the same event or situation in profoundly different ways. In this course we will look at writing that explores those moments of intersection and collision and think about how point of view can work to achieve both strong characterization and an illuminating sense of larger context. We'll consider what makes a story where the narrative lens or voice can shift feel cohesive and intentional. The reading list will include work by Colson Whitehead, Theodore Dreiser, Virginia Woolf, Gwendolyn Brooks, E.L Doctorow, Mieko Kawakami, Caitlin Horrocks, Dawnie Walton, Zadie Smith, and Rebecca Makkai.

AS.220.665. Readings in Poetry: Personal Anthologies.
Who are the poets who made us who we are? Over years of practice, poets become increasingly aware of their special debts to predecessors whose music compels them and whose themes seem both urgent and enduring. Readings will include some of the instructor's own touchstones, including Herbert, Milton, Dickinson, Auden, Larkin, Bishop, Walcott. Students will write poems inspired by certain models, and also present orally and in a final written project a personal anthology of poets who mean the most to them.

Cross Listed Courses

Comparative Thought and Literature

AS.300.311. Introduction to Intellectual History. 3 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.

AS.300.323. Shakespeare and Ibsen. 3 Credits.
William Shakespeare and Henrik Ibsen are the two most frequently performed playwrights in history, and both have been credited with reinventing drama: Shakespeare for the Elizabethan stage and Ibsen for the modern. In this course we will pair together plays by each author – those that stand in an explicit relation of influence as well as those that share a significant set of concerns – in order to investigate how each takes up and transform key problems in the literary, political, and philosophical tradition for their own historical moment. Plays to be studied: by Shakespeare, A Midsummer Night's Dream, Hamlet, Othello, King Lear, The Tempest, A Winter's Tale; by Ibsen, St. John's Night, Hedda Gabler, Rosmersholm, The Wild Duck, The Master Builder, When We Dead Awaken.

AS.300.331. The Authoritarian Image: Russian Cinema from Stalin to Putin. 3 Credits.
Vladimir Putin's charismatic authority has a deep history in Russian culture. We'll investigate that history through cinema, which Lenin called "the most important of the arts." While Soviet cinema often served as immersive propaganda, directors also found ways to question authority and power. Films to be screened range from Sergei Eisenstein's Ivan the Terrible (1944) to the 2013 documentary Pussy Riot: A Punk Prayer. This course will combine study of Russian and Soviet culture from the end of World War II to the present with study of film history, style, and technique.
Area: Writing Intensive

AS.300.337. The Tragic Tradition. 3 Credits.
This course offers a broad survey of tragic drama in the Western tradition, from its origins in ancient Greece to the twentieth century. In weekly lectures and discussion sections, we will study the specific literary features and historical contexts of a range of different works, and trace the continuities and transformations that shape them into a unified tradition. Key questions and themes throughout the semester will include what counts as tragic, the tragedy of social and political conflict, the bearing of tragedy on the meaning and value of life, the antagonistic relation between world and humans, the promises and dangers of tragedy for contemporary culture. Authors to be studied: Sophocles, Euripides, Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht, Pirandello, and Beckett.

AS.300.339. Introduction to Comparative Literature. 3 Credits.
This course offers an introduction to the history, theory, and praxis of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.

Film and Media Studies

AS.061.147. Visual Storytelling. 3 Credits.
This primer to screenwriting will emphasize the power of the image to deliver character, situation, and theme, and to advance even complex plots. Students will analyze narrative films, compose their own still and moving images with cellphone cameras, and write several short dramatic pieces to be read and workshopped by the group. They'll learn the basics of scene design and of screenplay format. For FMS majors in the screenwriting track, this course fulfills the Media and Narrative requirement . $50 lab fee.
Area: Writing Intensive

AS.061.148. Storytelling for Film and Fiction. 3 Credits.
Through the analysis of narrative films, short fiction, myths, fairy tales, and ghost stories, and through the workshopping of their own creative writing, students will explore the art and science of "a good story well told." The course will offer an introduction to dramatic and visual storytelling, and is an essential primer for upper-level screenwriting. Lab fee $50.
Area: Writing Intensive

AS.061.205. Introduction to Screenwriting. 3 Credits.
In this course we will explore the basic principles of visual storytelling in narrative film as they apply to the design, creation, and revision of the screenplay. Specifically, we will focus on learning the craft of screenwriting — strategies, processes, and philosophies that writers can develop, practice, and rely upon as they progress through a series of screenwriting exercises and write a 12-page screenplay, which will be critiqued in-class during weekly table reads and with the Instructor (one-on-one) during office hours. Select professional screenplays will be read and analyzed — and clips from select films viewed — to further explore what works well on the page, and how it translates to working well onscreen. (Scripts and clips often selected from American films spanning the 60s through the 2000s.) Final Draft screenwriting software is required; a FREE 18-week trial will be made available for all students who don't already have Final Draft.
Area: Writing Intensive

AS.061.218. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between literary modernism and modernist cinema: how Virginia Woolf's writings on the cinema connect with her use of shifting points-of-view as literary devices, how James Joyce influenced the Soviet filmmaker Sergei Eisenstein and how Eisenstein in turn influenced the American novelist John Dos Passos, how Franz Kafka's frequent trips to the movies reflect in his fiction, and how artists ventured broadly to develop experimental languages for expressing the new speeds and scales of modern life. Additional texts will be drawn from novels, essays, poems, and films from Ezra Pound, T. S. Eliot, Charlie Chaplin, Claude McKay, Zora Neale Hurston, Anita Loos, Andrei Bely, Dziga Vertov, Gertrude Stein, Louis Aragon, and René Clair. The course fulfills the writing intensive requirement and involves a series of essays on literature and cinema from a critical perspective.
Area: Writing Intensive

AS.061.271. Intermediality: Between Word, Image, and Sound. 3 Credits.
This course explores film adaptation by considering how words, images, and sounds offer different affordances and constraints for creative expression. A central goal is to conceive of adaptation outside of typical discussions of fidelity to a source work and instead consider how different artistic media open up unique opportunities for storytelling. To this end, we will draw on a number of different intermedial translations, which may include from novel to film (The Night of the Hunter, from Davis Grubb's book to James Agee's screenplay to Charles Laughton's film), from short story to film (The Turin Horse), from graphic novel to film (Ghost World) or television series (HBO's Watchmen), from personal essay to documentary film (James Baldwin's The Devil Finds Work and I Am Not Your Negro), from poetry to film (O Brother, Where Art Thou), from play to film (A Raisin in the Sun and My Own Private Idaho), from radio drama to film (Sorry, Wrong Number), and film-to-film homage (Far From Heaven and All That Heaven Allows). We will also delve into the vagaries of film-to-book novelizations and the curious case of concurrently writing film and book, as in Stanley Kubrick and Arthur C. Clark's collaboration on the film and novel 2001: A Space Odyssey (both adapted from a short story).
Area: Writing Intensive

AS.061.312. The Fallen World: Morally Complex Storytelling. 3 Credits.
A workshop devoted to creating complex characters in challenging moral landscapes. Students will view and discuss a wide range of films; and creative assignments may include profiles, short fiction, monologues, and dramatic scenes for the screen. Short critical and creative written exercises, and a longer, creative final project.
Area: Writing Intensive
AS.061.148 OR AS.061.205 OR AS.061.315 OR AS.061.316 OR Instructor Permission

AS.061.313. Personal Storytelling for the Screen. 3 Credits.
A workshop devoted to creating compelling short scripts based on personal experience. Analysis of screened films and collaborative development of student work will emphasize how unique worlds and world views can reflect a larger shared humanity. Short critical and creative written exercises, and a longer, creative final project.
Area: Writing Intensive
AS.061.148 OR AS.061.205 OR AS.061.315 OR AS.061.316 or Instructor permission.

AS.061.316. Characters for the Screenplay. 3 Credits.
A workshop devoted to creating complex characters for the screen. Students will examine memorable film characters from the silent era to the present, with attention to how these characters are revealed through both the drama and the mise en scene. Weekly screenings. Short critical and creative written exercises and a longer, creative final project.Recommended Course Background: AS.061.148 OR AS.061.205 OR AS.061.265
Area: Writing Intensive

AS.061.373. Intermediate Screenwriting. 3 Credits.
This course will explore strategy and process for developing a short screenplay from pre-existing literary or journalistic source material (short story, news/feature article, etc.). By exploring several “case studies” — feature films and the source material that inspired them — students will identify the practical strategies employed by professional screenwriters with the goal of employing such strategies with their own screenplay adaptations. Bulk of class will focus on designing, writing, and rewriting a 20-30 page screenplay, and sharing multiple drafts with the class (and with the professor one-on-one) for critique over the course of the semester. Each student should have 2-3 pieces of material under consideration for possible adaptation by the start of class. Discussions from time to time will also touch on the business of screenwriting. (Scripts and clips often selected from American films spanning the 60s through the 2000s.) Students will be required to purchase a license for Final Draft screenwriting software for $99. Students are expected to have previously completed AS.061.205 or another lower level screenwriting class.
Area: Writing Intensive

AS.061.404. Advanced Screenwriting. 3 Credits.
Intensive workshop course where students will write a first draft of a feature-length screenplay. Classes will focus on the specific challenges of the students’ works-in-progress, with an emphasis on developing a story idea that is suitable for a feature, and the craft to see it through to completion. Particular emphasis will be placed on the feature screenwriter’s central challenge: creating enough of a structure in the early writing stages to keep the screenplay on track, while remaining open to new ideas for scenes and sequences that inevitably arise as the characters come to life. Select professional screenplays will be read and analyzed — and clips from select films viewed—to explore what works well on the page, and how it translates to working well onscreen. Students will aim to have a solid and workable first draft at the end of the semester, at which point avenues for further revision may be discussed. Throughout the course, Instructor will also devote a portion of class time to discuss the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99.
Area: Writing Intensive

First Year Seminars

AS.001.113. FYS: The Poetry of Music - Lyrics and the Art of Songwriting. 3 Credits.
In this First-Year Seminar we will examine the poetic artistry of American song, from Tin-Pan Alley and Broadway tunes to Folk songs, Billboard’s Top 40, and Hip Hop. Our focus will be on the linguistic art of song – the meaning(s), rhythm, timbre, and pitch found in words alone. Taught in a workshop format, the course will encourage students to read lyrics as poetry and then write their own.

Interdepartmental

AS.360.133. Freshman Seminar: Great Books at Hopkins. 3 Credits.
Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University's rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2020 include Homer, Plato, Dante, John Donne, George Herbert, Christina Rosetti, Mary Shelley, Friederick Nietzsche, Isaac Bashevis Singer, Frederick Douglass.
Area: Writing Intensive

Modern Languages and Literatures

AS.211.203. Propaganda: From Blut und Boden to Post-Fact. 3 Credits.
This course taught by Writing Seminars professor Wayne Biddle and Media Studies professor Bernadette Wegenstein covers the 20th-century history of propaganda with special focus on its visual techniques, on censorship, and how media serve as sites of both control and resistance to power. We will pay particular attention to the influence of misinformation abetted by the new media revolution, and both the rise of the political rhetoric of “fake news” and the massive dissemination of actual fake news since the 2016 election. Students will write papers pegged to current issues and events using the critical framework developed in class. Cap 30 students. Reader: Jason Stanley: How Propaganda Works, Princeton University Press, 2015.
Area: Writing Intensive

AS.211.444. The Apocalypse in Literature and Film. 3 Credits.
“Everything which we loved is lost! We are in a desert” – this emotional assertion was the reaction to Kazimir Malevich’s 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.
Area: Writing Intensive

AS.211.479. Dante’s Journey through the Afterlife. 3 Credits.
Dante’s Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante’s own time, and in terms of its relevance to our own societal and cultural concerns.
Area: Writing Intensive
AS.214.479

AS.214.479. Dante Visits the Afterlife. 3 Credits.
One of the greatest works of literature of all times, the Divine Comedy leads us down into the torture-pits of Hell, up the steep mountain terrain of Purgatory, through the “virtual” space of Paradise, and then back to where we began: our own earthly lives. We accompany Dante on his journey, building along the way knowledge of medieval Italian history, literature, philosophy, politics, and religion. The course also focuses on the arts of reading deeply, asking questions of a text, and interpreting literary and scholarly works through discussion and critical writing. Conducted in English.
Area: Writing Intensive

AS.215.463. Borges: His Fiction and Critical Essays. 3 Credits.
This course will deal with close readings of Borges ficciones and critical essays in order to determine how his thinking on the problem of writing and thinking is fictionalized in his stories.
Area: Writing Intensive

AS.216.300. Contemporary Israeli Poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, Dalia Rabikovitch, Erez Biton, Roni Somek, Dan Pagis, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Against the background of the poetry of these famous poets we will study recent developments and trends in Israeli poetry, including less known figures such as Mois Benarroch, Shva Salhoov and Almog Behar. Through close reading of the poems, the course will trace the unique style and aesthetic of each poet, and will aim at presenting a wide picture of contemporary Hebrew poetry.

AS.216.342. The Holocaust in Israeli Society and Culture. 3 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse on the Holocaust in Israel and its development throughout the years. Through focusing on scholarly, literary, artistic, and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its society, politics, and collective self. The course is divided to three general categories: Historical and Sociological Perspective, Literary Perspective, and Cinematic Perspective. However, we will study the crossroad between these three categories, and will explore them in relation to one another.

AS.216.373. War in Israeli Arts and Culture. 3 Credits.
In this course we will study the various representations of what functions as one of Israel’s most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.

Political Science

AS.191.415. Fear and Loathing: Writing About Contemporary American Politics. 3 Credits.
This course is focused on reading, analyzing, and, most importantly, producing writing about the American political experience and contemporary events in American politics. We will use scholarly, print, and new media sources from different sides of the political spectrum, drawing on political and literary theory to inform our discussions. We will then try to do better: Students will write and workshop a variety of pieces of different lengths and styles, spending in-class time on peer critique, presentations, and writing exercises, which they will compile into a writing portfolio. We will discuss and write op-eds, memoirs, long-form book reviews, commentary essays, and satire. Throughout, we will devote considerable class time to critique and discussion of students’ writing. Readings will include works by James Baldwin, William F. Buckley, Claudia Rankine, Hunter S. Thompson, Ta-Nehisi Coates, Alexander Chee, Angela Nagle, and Omar el Akkad. We will draw on political commentary from sources ranging from The Washington Post to Jacobin to The Onion, through to Facebook and Twitter. Throughout, we will consider a wide range of topics pertinent to writing about politics, including questions of the make-up of the public sphere and diverse audiences, the use of voice and language, the deployment of facts and rhetoric, the place of fiction and humor in political critique, and the rise of fake news and trolling.
Area: Writing Intensive

Program in Museums and Society

AS.389.311. From Treasure House to Production House: Exploring New Roles for the Museum in the 21st Century. 3 Credits.
Students work with the Director of, the Peale Center for Baltimore History and Architecture as it reinvents itself as a museum for the twenty-first century. Involves working with community story-tellers in residence. Extra time is to allow for field trip travel - most days class runs 1:30-3:50.

AS.389.329. Author/Canon/Archive. 3 Credits.
Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works “lost” and some “rediscovered,” while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literary culture, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you’ve never heard of, in terms of the relationship between authorship, stewardship, and status.

AS.389.346. Scribbling Women in the Literary Archive. 3 Credits.
Students examine select texts and archival materials related to Emily Dickinson, Frances Ellen Watkins Harper, Edith Wharton, Ida B. Wells, Charlotte Perkins Gilman, Sui Sin Far, Alice Duer Miller, and Zora Neale Hurston. Students interrogate how these writers navigated the constraints of gender, as informed by race and class, in the decades before and after the 19th Amendment and consider literary collecting in relation to gendered cultural politics.

Study of Women, Gender, & Sexuality

AS.363.445. Reading Judith Shakespeare: Women and Gender in Elizabethan England. 3 Credits.
If Shakespeare had a sister who went to London to be a writer, what would she write? Virginia Woolf's account of the thwarted career of Shakespeare's hypothetical sister, Judith, in A Room of One's Own frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, and Mary Wroth. Working within a selected historical context, students will create fictional biographies of "Judith Shakespeare," including her perspective on our identified authors and a sample or description of Judith's own literary accomplishments. Secondary course readings will reflect contemporary economic, political, and religious contexts.
Area: Writing Intensive

Theatre Arts & Studies

AS.225.318. 21st Century Female Playwrights. 3 Credits.
This is a writing intensive class exploring the current wealth of women playwrights, including Pulitzer Prize winners: Wendy Wasserstein, Paula Vogel, Lynn Nottage, and Jackie Sibblies Drury (2019 Prize for FAIRVIEW). We will discuss Script Analysis and read (and see) plays by numerous writers including Claire Barron, Kia Corthron, Theresa Rebeck, Sarah Ruhl, Danai Gurira, Caleen Sinnette Jennings, and Hansol Jung. This class will include a mid-term and a Final Paper.
Area: Writing Intensive

AS.225.324. Adaptation for the Stage. 3 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Area: Writing Intensive

AS.225.330. Playwriting Strategies. 3 Credits.
A seminar and workshop in playwriting with Dr. Joe Martin, playwright and dramaturge. Student writers, developing their plays, will learn how to open up to the creative process, "brainstorm," refine their work, and shape it toward an act of artistic communication. Writer's techniques, such as attending to plot or "story," delineation of character, creating effective "dialog," even overcoming "writer's block," will be addressed. This course is designed to be complementary to – not a replacement for – playwriting classes in the Writing Seminars.
Area: Writing Intensive

For current faculty and contact information go to http://writingseminars.jhu.edu/people/

Writing Seminars, Minor

Writing Seminars Minor Requirements

Students who wish to graduate with a minor in Writing Seminars must take AS.220.105 Introduction to Fiction & Poetry I or AS.220.108 Introduction to Fiction & Nonfiction, and AS.220.106 Introduction to Fiction & Poetry II, Students also need to take AS.220.200 The Craft of Fiction and AS.220.201 The Craft of Poetry, as well as three additional Writing Seminars courses at the 200-400 level. One course outside of the Writing Seminars Department may count towards the minor with approval from the DUS; approval is given for courses with a strong creative writing component (e.g. AS.061.205 Introduction to Screenwriting). Students must earn a grade of C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

Code	Title	Credits
AS.220.105	Introduction to Fiction & Poetry I	3
or AS.220.108	Introduction to Fiction & Nonfiction	
AS.220.106	Introduction to Fiction & Poetry II	3
AS.220.200	The Craft of Fiction	3
AS.220.201	The Craft of Poetry	3
Three additional 200-400 level Writing Seminars courses (AS.220.2xx-4xx) [1]		9
Total Credits		21

1 Any Writing Seminars course numbered above "The Craft of Fiction" (220.200) or "The Craft of Poetry" (220.201) may be used to fulfill this requirement.

Writing Seminars, Bachelor of Arts

Writing Seminars Major Requirements

(Also see Requirements for a Bachelor's Degree (p. 1587))

AS.220.105 Introduction to Fiction & Poetry I and AS.220.106 Introduction to Fiction & Poetry II are prerequisite courses required for all majors and others who want to take advanced courses in writing. Majors must receive a grade of C- or better in all courses required for the major and no major requirements may be taken satisfactory/unsatisfactory. Courses taken at another institution that are not directly equivalent to a JHU course may not apply towards the ten Writing Seminar Department courses (AS.220.xxx) required of the major without permission of the Director of Undergraduate Studies.

Code	Title	Credits
AS.220.105	Introduction to Fiction & Poetry I	3
AS.220.106	Introduction to Fiction & Poetry II	3
Four courses of English literature [1]		12
Two courses in philosophy (AS.150.xxx or cross-listed with Philosophy)		6
Two courses in history (AS.100.xxx or cross-listed with history), history of art (AS.010.xxx), or history of science and technology (AS.140.xxx)		6
AS.220.200	The Craft of Fiction	3
AS.220.201	The Craft of Poetry	3
One fiction course at the 300-400 level (with POS-Tag WRIT-FICT)		3
One poetry course at the 300-400 level (with WRIT-POET)		3

One advanced writing workshop	3
Three elective courses at the 200-400 level within the department (AS.220.2xx-4xx). [3]	9
Foreign language proficiency through the second semester of the intermediate level is required	14
Total Credits	**68**

[1] Four semesters of literature at the 100-400 level, in the Department of English (060) or cross listed in English (with the exception of Expository Writing). Courses in literature offered in departments other than English, whether in the original language or in translation, also fulfill this requirement when the department is numbered AS.212-216 (German and Romance Languages and Literatures) and AS.300 (Contemporary Thought and Literature).

[2] Courses cross-listed with The Writing Seminars may count toward history, philosophy, or literature requirements in the major as appropriate.

[3] Any Writing Seminars course numbered above "The Craft of Fiction" (220.200) or "The Craft of Poetry" (220.201) may be used to fulfill this requirement.

Honors

A GPA of 3.5 or better in all major requirements is required to earn honors in the major.

Writing Seminars, Master of Fine Arts

The Writing Seminars offers a Master of Fine Arts (M.F.A.) in fiction and poetry. Students admitted to the M.F.A. program enroll in two years of course work and produce a substantial manuscript in the form of a novel or collection of fiction or poetry. M.F.A. candidates are chosen on the basis of a manuscript, college transcripts, and appropriate letters of recommendation that testify to the student's ability and willingness to undertake serious study in the literary arts. Since all students receive financial aid in the form of full tuition and a teaching assistantship, applicants must be able to demonstrate aptitude for college teaching.

The program requires two full years of residency in Baltimore. Students enroll each semester in two courses: a writing workshop in poetry or fiction and a second course in craft or literature taught within the department. At the end of the first year, students present a portfolio of revised work for faculty review. Successful completion of this work is a requirement for continuation in the second year.

The M.F.A. degree in The Writing Seminars is designed for students committed to the study and practice of literary writing at the highest level of accomplishment. Approximately four poets and four fiction writers will be admitted annually. Our pedagogy emphasizes genre-informed discussions, faculty conferences, independent readings, and interactions with visiting writers. Culminating in a book-length thesis, this immersion in literary study is designed to inculcate the habits and skills necessary for a productive writer's life.

Students applying to the M.F.A. program should have a bachelor's degree. All must demonstrate competence in a foreign language at the college level.

Multi-School Programs of Study

At Johns Hopkins University, some programs are offered through a partnership between two or more of the University's nine schools.

- Business Minor (p. 681)
- Peabody Double Degree Program (p. 808)

- Space Science and Engineering Minor (p. 1401)
- Energy Minor (p. 1767)

Business, Minor

Please note that after the Spring 2021 semester, all business minor questions and advising will be through the Carey Business School & the Business minor requirements will change. For questions, contact Michael Tyler at Carey_BusinessMinor@jhu.edu

The Carey Business minor offers Johns Hopkins undergraduates a focused, quantitative minor that will prepare them for careers in small companies, major corporations, consultancies, as well as acceptance into graduate business programs.

- The primary objective for the minor is to help students position themselves as leaders among their peers in the private sector, government, the non-profit sector, and the world of social enterprises. At the conclusion of their program, successful students will be able to:
- Enter a variety of careers such as finance, management, real estate, marketing, accounting, and consulting.
- Create, analyze, and implement value propositions about projects and products for the benefit of various audiences, from shareholders to local communities.
- Establish and manage brands and products and also institutions and organizations.
- Build, manage and grow valuable and lasting relationships with clients, customers, shareholders, creditors, and local communities.
- Recognize, understand, capitalize on, and generate changing trends in local and global economies.
- Be responsible business leaders who are engaged citizens of their communities, cities, and countries.

The minor offers an instructional program that combines critical analysis and theoretical grounding in a broad set of required courses and hands-on experience through an experiential capstone course.

The new requirements for the business minor will only apply to students who declare the minor starting in the fall 2021 semester. Students who declared the minor prior to fall 2021, can find the previous minor requirements here: https://engineering.jhu.edu/cle/business-minor/

PROGRAM REQUIREMENTS

- Seven required courses
- One capstone course

COURSE AND CREDIT REQUIREMENT

The Business minor requires a minimum of 24 credits. Business courses are open to all Johns Hopkins Arts & Sciences and Engineering students.

BUSINESS MINOR REQUIRED COURSES

Code	Title	Credits
BU.667.310	Business Analytics and Statistics	3
BU.667.311	Economics for Decision Making	3

Peabody-Homewood Double Degree Program

Peabody and the Homewood schools of Johns Hopkins University offer the opportunity for a select group academically and musically advanced students to simultaneously pursue a Bachelor of Music degree and either a Bachelor of Arts degree from the Krieger School of Arts and Sciences or a Bachelor of Science degree from the Whiting School of Engineering. Students must be admitted independently to Peabody and one of the Homewood schools and be invited to participate in the double degree program. Students who have begun their junior year of study are not eligible to enter the double degree program nor may students transfer into the program midyear. The double degree program is designed as a five year program, and students must comply with the credit limit of 25 credits per semester.

Students in the double degree program must maintain full-time enrollment in each semester of study, including lessons at Peabody and at least one class at Homewood. Administrative services such as registration, financial aid, and student accounts are provided to double degree students by the Homewood schools. Consequently, students in the double degree program do not receive Peabody merit scholarships or any other form of financial aid from Peabody. Double degree students must enroll in private lessons, at a minimum, and, for instrumental majors, large ensembles to maintain their status as Peabody degree candidates in the double degree program.

Student Status
Students in the double degree program are responsible for meeting the requirements of both degree curricula within the published guidelines of the relevant programs. Students' principal affiliation is with the Krieger School of Arts and Science or the Whiting School of Engineering. All official procedures of registration and records are managed through the Homewood Office of the Registrar. The official transcript for a double degree student, including all courses at both Peabody and Homewood, is maintained by the Homewood Office of the Registrar.

Enrollment Requirements and Limits
Double Degree students must enroll in private lessons each semester. Instrumental majors are required to enroll each semester for large ensembles and private lessons to maintain their status as Peabody degree candidates in the Double Degree Program. Double Degree students must register for no less than one course at Homewood each semester. Peabody Double Degree students are permitted to enroll in a maximum of 25 credits per semester.

Residency Requirement for Peabody Double Degree Students
Peabody Double Degree students must complete at least 48 credits on the Homewood campus, in the Krieger School of Arts & Sciences and/or the Whiting School of Engineering.

Course Changes and Withdrawals from Peabody Courses
Students must follow the deadlines for adding, dropping, or withdrawing from Peabody courses which are published on the Peabody Academic Affairs website at https://peabody.jhu.edu/academics/academic-calendar-resources/.

Course Changes and Withdrawals from Arts and Sciences and Engineering Courses
Students must follow the deadlines and processes for adding, dropping or withdrawing from Arts & Sciences and/or Engineering courses which are published on the Homewood Registrar's Office website (https://peabody.jhu.edu/academics/academic-calendar-resources/registrar/).

Leave of Absence
Double Degree students may request a Leave of Absence (LOA) from the entire program, however, they cannot be granted leave from only one portion of the program. A LOA for Double Degree students is subject to the guidelines of the student's respective academic advising office on the Homewood campus.

Graduation Policies
Double Degree students must petition to graduate from the Peabody Conservatory in accordance with information located at https://peabody.jhu.edu/academics/academic-calendar-resources/registrar/, and also adhere to the policies and procedures for applying to graduate from their Homewood school, Arts and Sciences or Engineering as indicated at ASEN Undergraduate Graduation Policy (p. 1616). Both degrees are awarded simultaneously, and degree conferral is available in May and December of each academic year.

Graduation Closes the Undergraduate Record
Upon graduation, the undergraduate record is closed. The only permitted changes are the resolution of incomplete grades, missing grades, and grade errors. These changes must be resolved by the first Monday after 30 days have lapsed since the degree conferral date. Students wishing to take additional courses at JHU after graduation should refer to Alumni Enrollment policies.

Space Science and Engineering

This minor is open to all students in the Whiting School of Engineering and the Krieger School of Arts and Sciences who have the prerequisites for the required courses. The objective of the Minor is to prepare students for a career in Space Science and Space Engineering, either directly as an entering professional in industry, government laboratories and other organizations or as a student in a graduate program. The educational goal of the Minor is to enable students to:

- Apply their understanding and mastery of the fundamental scientific, engineering, and mathematical principles obtained through their major subject of study to space science and space engineering.
- Develop an understanding and capacity for interdisciplinary approaches to technical activities.
- Improve their ability to work in multidisciplinary teams, which are typical in space and other complex technical activities, through interdisciplinary education and internship(s) or equivalent experience(s).

Programs

- Space Science and Engineering, Minor (p. 1401)

Space Science and Engineering, Minor

Space Science and Engineering Minor Requirements

- A Proposal and Course Plan, which must be approved by your advisor for the minor (hereafter referred to as the "Advisor"). The proposal must discuss a theme that unites the individual elements of the program (courses and internship(s)) into an intellectual whole.
- Five courses in Science and Engineering. One course is specified (AS.171.321 Introduction to Space, Science, and Technology) and the remaining four are chosen through your Proposal and Course Plan, which must be approved prior to taking the courses by the Advisor. All courses must be taken for a grade rather than satisfactory/unsatisfactory. A grade of C- or better is required. Courses that are named as requirements for the student's major may not be used. However, courses that are not named, but satisfy an elective requirement for the major, may be used.
- An internship or equivalent experience in the field of space science and engineering is required. This must have prior approval from the Advisor.
- A brief report on the internship or equivalent experience to the Advisor.

Course Requirements
Specified Course:

The specified course is 171.321 Introduction to Space Science and Technology. The prerequisites are Physics 171.101-102 or a similar engineering course and Calculus 110.108-109. The course carries 3 credits. The course is co-listed by the Departments of Earth and Planetary Sciences, Materials Science, and Engineering and Mechanical Engineering.

Proposal and Course Plan for the Four Courses:

To ensure that the program is a coherent intellectual activity, you are required to submit a Proposal and Course Plan to your Advisor early in their program, prior to taking the courses. The Proposal and Course Plan will identify a theme that describes the educational goal that you will pursue through your course of study and a list of courses, including alternates, to achieve your goal. Examples of such themes could be "Remote observations of the earth and planets from space vehicles" or "Spacecraft design for astronomy missions." Examples of potential course programs are listed in Section 5 below. A list of suggested candidate courses is listed in Section 6 below. If consistent with the Proposal and Course Plan theme, you may use other courses with the permission of your Advisor. The Course Plan should contain alternative courses in recognition that every course may not be taught every year.

The Proposal should also include ideas for completing the internship requirement discussed below.

Additional Requirements on the Four Courses

- One of the four courses may be at the 200 level, but at least three must be at the 300 level or higher.
- The total credits associated with the courses must be 12 or more.
- At least three of the courses must be in departments other than the department or program of your major.
- Courses cannot be "named" requirements of the major; however, elective courses for the major may be used.

Internship or Equivalent Experience
Practical experience in space science and space engineering can be obtained through an academic internship, non-academic internship or an equivalent experience. This practical experience can be acquired by at least six weeks of full-time effort or the equivalent effort spread

over a longer period. This can take place during a summer or during the academic year.

Academic Internships

The Undergraduate Student Handbook describes the regulations governing academic internships. You may find the following quoted material from the Handbook helpful:

- “Academic internships are practical work experiences which have an academic component as certified by a member of the faculty.”
- “Academic credit for independent academic work must be sponsored by a full-time member of the Homewood faculty. This is the case whether the work is done on campus or not. The work supervisor and the faculty sponsor may be the same individual. If the faculty sponsor is not the work supervisor, the work supervisor must provide the faculty sponsor with a report on the student’s achievements while doing the independent project.”
- “Only one credit may be earned for an academic internship during one semester or summer.”
- “The grading method is Satisfactory/Unsatisfactory only.”
- “Independent work done for academic credit must be unpaid.”
- “The use of credit for independent academic work to satisfy the requirements of a major or minor is subject to prior written approval by the appropriate department or program.”

Non-academic Internships

These internships are offered by non-academic organizations such as the Space Telescope Science Institute, the Applied Physics Laboratory, and a number of NASA laboratories to provide undergraduate students practical work experience in space science and space engineering. These internships often carry a stipend and are not eligible for academic credit.

Opportunities within the university include the Applied Physics Laboratory, the Center for Astrophysical Sciences, the Space Telescope Science Institute, as well as individual professors and research staff. In addition, local laboratories and companies, such as NASA Goddard Space Flight Center, Lockheed Martin, Northrop Grumman, Orbital Sciences, and other private corporations offer excellent opportunities for internships and summer work experiences.

- Applied Physics Laboratory program for JHU students (https://www.jhuapl.edu/Education/JohnsHopkinsConnection/) – Students should indicate their interest in the Space Department of the JHU APL.
- Space Telescope Science Institute intern program (https://www.stsci.edu/institute/smo/students/)
- NASA (https://www.nasa.gov/centers/goddard/education/internships.html)

Equivalent Experiences

Other activities that meet the spirit of the requirement may be accepted. For example, employment opportunities, often in the summer, can provide practical experience in space science and space engineering.

Prior Approval Required

The student is responsible for identifying and arranging the internship or equivalent experience. However, in order to count toward the Minor, it must be approved in advance by the Advisor. In general, the Advisor will require that the mentor or supervisor be either a space scientist or space engineer.

Required Report on the Internship or Work Experience

In order to have it count toward the Minor, the student must provide a brief report (typically one page) describing the internship or equivalent experience to the Advisor at the beginning of the semester immediately following the activity. The report should give the name of the organization or laboratory (e.g., STScI, JHU-APL, NASA-GSFC), the start date and duration, and the name, position, and email address of the mentor/supervisor. It should include a brief summary describing the activity, a description of new knowledge and skills learned, and information about the overall experience.

For a detailed explanation of the minor and its requirements, including sample programs of study, please visit the Student Handbook for the Minor in Space Science and Engineering (http://spacestudies.jhu.edu/space-minor/).

Graduate and Professional Programs (Advanced Academic Programs)

Academic Catalogue 2022-2023

The University reserves the right to change without prior notice any programs, tuition and fees, requirements, or regulations published in this catalogue. This catalogue is not to be regarded as a contract. Multiple means of communication may be used by the University for announcing changes of this nature including, but not exclusive to, email and/or paper notice. Students are provided an email account from Johns Hopkins University (JHU). The JHU email account will be used by the university for general and official notice/business. To establish an email account, visit my.jh.edu (https://my.jh.edu/portal/web/jhupub/).

About Krieger School of Arts and Sciences

The Krieger School of Arts and Sciences is at the heart of a leading, diverse, global coeducational university. Privately endowed, the Johns Hopkins University was founded in 1876 as the first true American university on the European model: a graduate institution with an associated preparatory college, a place where knowledge would be created and assembled, as well as taught.

Today, the Krieger School of Arts and Sciences is the core institution of the Johns Hopkins complex of schools, centers, and institutes. Its home is the park-like Homewood campus in the residential Charles Village section of northern Baltimore City.

Advanced Academic Programs

The School of Arts and Sciences recognizes the intellectual strength and educational requirements of working adults. Through Advanced Academic Programs, it offers a Johns Hopkins education to those wishing to attend graduate school. Courses leading to master's degrees are held in the evening and on weekends at the Homewood campus in Baltimore; the Washington, DC Center near Dupont Circle; and online.

Drawing upon over a century of research and teaching expertise, the programs offer advanced instruction in scientific fields of current interest and innovative graduate study in the humanities and social sciences. While based on the latest scientific and scholarly knowledge, course work emphasizes the application of such knowledge to practical problems. Classes are designed to provide individual attention and to encourage student contribution.

Degree-Granting Divisions of the Johns Hopkins University

- Bloomberg School of Public Health
- Carey Business School
- Krieger School of Arts and Sciences
- Paul H. Nitze School of Advanced International Studies
- The Peabody Institute
- School of Education
- School of Medicine
- School of Nursing
- Whiting School of Engineering

The Johns Hopkins University is privately endowed and accredited by the

Middle States Commission on Higher Education
3624 Market St.
Philadelphia, PA 19104-2680
267-284-5000

Since the university's first president, Daniel Coit Gilman, assembled the first faculty in 1876, education in the arts and sciences at Johns Hopkins has been carried out in a research environment, with international distinction, under the supervision of active researchers. The belief in the inseparability of education and research still guides the academic programs of today's School of Arts and Sciences. Distinguished scholars and scientists share and exchange ideas and knowledge with undergraduates and graduates, encouraging creative thinking and independent research. Residential students take courses from anthropology to writing seminars, offered by 24 degree-granting departments that confer the Bachelor of Arts, the Bachelor of Science, the Master of Arts, the Master of Fine Arts, the Master of Science, and the Doctor of Philosophy. Information regarding full-time education can be found in the Arts and Sciences/Engineering Undergraduate and Graduate Programs catalogue.

Johns Hopkins Bernstein/Offit Building
1717 Massachusetts Ave. NW, Suite 101
Washington, DC 20036-2001

Academic Regulations for Online Courses

Academic Regulations for Online Courses

Online Orientation for Online Students

All students taking their first fully online AAP course should participate in the Learning Management System orientation course before the term starts. Students will learn how to navigate, collaborate, and communicate in a fully online course. The orientation provides valuable hands-on experience with the course management system. Important information regarding the technical requirements and support resources available will be given in the orientation. Students should expect to devote one to four hours to the orientation, but it may be spread out over several days. Information about where and how to take the orientation course will be provided to students by email.

Returning students are welcome to participate and review techniques and tools. All students are encouraged to revisit the orientation to test for access to online library resources in the Library Module.

Online Library Access

AAP provides online library resources to all students. New online students are required to obtain access as part of the Learning Management System (LMS) orientation and are supported in this process. The JHED ID and password are needed to access most resources. For a list of resources, visit the library homepage at library.jhu.edu (https://www.library.jhu.edu).

Online Class Structure

AAP online courses are asynchronous, though they may have some optional synchronous components. Students access course materials and discussions at individually desired times. Students share learning actively through the Web-based course site with readings, assignments, group activities, and threaded discussions as guided by their instructor. Course format and structure promote active and interactive learning.

Online Bookstore

AAP has partnered with an online bookstore, MBS Direct, to service online students and students enrolled in on-site courses. MBS Direct offers competitive pricing, new and used books, and buybacks from its large distribution center. Students can access the bookstore at mbsdirect.net (https://bncvirtual.com/jhu-aap/) approximately four weeks prior to the start of each semester to purchase their texts. Questions about MBS Direct or its services can be directed to the customer service center at 800-325-3252 or vb@mbsDirect.net.

Residency Requirement

Some programs are offered fully online, and some have on-ground courses. Other programs have an on-ground residency requirement in addition to courses offered online. Each program has specific requirements, and it is the student's responsibility to check with their program advisor to ascertain the requirements pertaining to their program.

AAP Online Course Access Policy

According to AAP policy, students have one full semester after the end of the semester in which they take an online course to retrieve their student-generated work and access course materials. The University's policy on the use of intellectual property applies in all cases where students access online classes after a semester has already ended. Additionally, individual instructors or University administration have the option to make courses available for longer or shorter periods.

Academic Structure

Academic Structure

Advisors / Terms

Each student accepted into a degree program or certificate is assigned an academic advisor, who is available for consultation regarding the student's program of study. A student advisor's name and email address are provided on the admissions decision letter. Advising is available year-round. Consultation takes place by phone, email, Internet, or in person by appointment. Please see the program sections in this catalogue for specific program advisor information.

Courses in all programs are offered in the summer, fall, and spring terms. The summer term formats:

- one full semester (12 weeks) and
- two accelerated six-week formats.

The fall and spring term formats:

- one full semester (15 weeks).

The spring semester includes a three-week intersession. Courses run from the beginning of January to the end of the month. The intensive semester format allows students to complete special-interest courses, such as travel courses, as well as regular courses offered in a compressed format.

Course Numbering System

Advanced Academic Programs courses are numbered in the following form:

420.601.51 (Example)

- 420 indicates the program—in this case, Environmental Sciences and Policy;
- 601 indicates the course number—in this example, Geological Foundations of Environmental Science; and
- 51 indicates the section number and location where the course is offered—i.e.,
  - sections 01 to 09 are offered at the Homewood campus in Baltimore;
  - sections 51 to 59 are offered at the Washington, DC Center;
  - sections 81 to 89 are offered online; and
  - section 91/92 indicates an international or off-site course.

Course Credit

Effective summer 2016, all Advanced Academic Programs graduate-level courses are assigned credits. In addition, graduate-level students may receive letter grades (A, B, etc.) or P (passing). Prior to May 2016, credit hours were not assigned to graduate-level courses unless taken by an undergraduate student. No GPA is calculated. A transcript guide is available upon request that features grade points needed to calculate grade-point averages. The AAP Registration Office will not calculate grade-point averages for students or third parties.

Course Cancellations

The University reserves the right, in its sole discretion, to change instructors or cancel courses with insufficient enrollment.

Enrollment/Degree Verification

Enrollment verification provides proof of enrollment for a student's financial lender, insurance company, sponsor, etc. Enrollment verification can be obtained through SIS. Verification may also be placed through the National Student Clearinghouse.

Transcripts

The transcript is part of the student's permanent record at the University. No grade may be changed except to correct an error or to replace an incomplete with a grade. Active students can request a transcript through SIS.

Second Master's Degree

After receiving a master's degree from Advanced Academic Programs, students may continue in a second program if prerequisites for that program are fulfilled. To receive a second master's degree from Advanced Academic Programs, all course requirements for the second program must be satisfied. The student may count up to three courses taken as part of the first degree toward requirements of the second degree. However, the relevant program committee must approve the course(s) as appropriate to the plan of study, and the course(s) must satisfy the requirements of the second degree. The course(s) also must fall within the five-year limit for the second degree (i.e., the second degree must be completed within five years, counting from the beginning of the first course accepted toward the second degree).

To apply for a second master's degree, the student must submit a new Advanced Academic Programs application form, an application fee (waived if previous master's degree was earned within the past year), and any additional admissions materials required by the second degree program.

Admission

Admissions

Admissions Process

Applicants may apply throughout the year and begin study during any of the three semesters (summer, fall, spring). While applications are accepted year-round for all programs, all applicants are strongly encouraged to apply and complete the application process four to six weeks before the start of the desired semester. International applicants seeking a visa should submit all application materials three months prior to the start of the intended semester of study. However, the Admissions Office requires no deadlines by which an applicant needs to submit an application.

Applications are accepted up to one year in advance of the intended semester of study. An incomplete application (including application fee) is valid for one year from the date submitted. Applicants who fail to submit required supporting materials within this period and who wish to be considered for admission are required to submit a new application, fee, and all required supporting documents.

Review Process

Once the Admissions Office has received all required materials, the completed application is sent to the Admissions Committee. The Admissions Committee for the chosen program assesses the application and its supporting documents. All materials must be received prior to the Admissions Committee review. Academic background; personal, professional, and field-related experience and achievements; and any program-specific criteria are all considered in this review. Review times for completed applications range from approximately three to four weeks. If a decision is not reached by the Admissions Committee in time for the upcoming semester, the program will automatically consider the applicant for the following semester. The **Admissions Committee reserves the right to require that more than the minimum standards** be met for admission to any academic program and may require additional materials of the applicant, if deemed necessary to make an admission decision.

Admissions Requirements for Degree or Certificate Seeking Applicants

- **Bachelor's degree from a U.S. college or university** (or current enrollment in final semester of undergraduate studies). Applicants who receive their bachelor's degree in a country other than the U.S must have the U.S. equivalency of a bachelor's degree. AAP's Post-Master's certificates also require the completion of a master's degree or equivalent (example: Post-Master's Certificate in Sequence Analysis and Genomics).
- **Minimum GPA of 3.0 on a 4.0 scale.** Meeting the minimum GPA requirement does not guarantee admission, and may vary by program when combined with relevant work and industry experience. Admissions are subject to Program Director and Admissions Committee approval.
- AAP **online application**.
- Nonrefundable **application fee of $75**.
- Applicants who have completed their undergraduate degree must ensure that an **official transcript** confirming degree conferral is submitted to AAP Admissions by the application due date and in accordance with the instructions below.
- AAP may admit applicants with an official transcript on a conditional basis pending degree conferral if, at the time of application, the individual is completing the last semester of their undergraduate degree. If a student is currently finishing their degree, they must ensure that an official transcript that includes the current semester is submitted to AAP Admissions by the application due date in accordance with the instructions below for submitting official transcripts. If a student is admitted, that admission is conditional until AAP receives a second official transcript that confirms degree conferral. Students admitted on a conditional basis will have until the course Withdraw/Audit deadline for the first semester in which they are enrolled at AAP to ensure the final, official transcript that confirms degree conferral is submitted to AAP Admissions in accordance with the instructions below.
- All applicants admitted on a conditional basis are responsible for ensuring that their official transcript confirming degree conferral is submitted to AAP Admissions by the course Withdrawal/Audit deadline in accordance with the instructions below. AAP will automatically dismiss, without a refund, a student who does not ensure their final official transcript confirming degree conferral is submitted to AAP Admissions by the course Withdrawal/Audit deadline in accordance with the instructions below.

Instructions for Submitting an Official Transcript

- To send an official transcript and avoid delays, students graduating from a domestic institution are highly encouraged to use one of the providers listed here (https://advanced.jhu.edu/admissions-aid/how-to-apply/).
  Please list aapadmissions@jhu.edu as the recipient address.
- Unless the official transcript is being sent directly from the institution to JHU AAP, students graduating from an institution outside the United States must submit official transcripts to JHU AAP through: World Education Services (WES) (https://www.wes.org/) or one of the credential evaluation services listed here (https://advanced.jhu.edu/admissions-aid/how-to-apply/).
- JHU AAP also accepts official transcripts that are sent directly from the institution:
  If via email: aapadmissions@jhu.edu.
  If via regular mail:
  Johns Hopkins University AAP Admissions Office
  1717 Massachusetts Avenue, NW, Suite 101
  Washington, DC 20036
- Regardless which of the above methods are used to submit official transcripts, applicants are responsible for ensuring their transcripts are received by JHU by the stated deadlines. It takes time for an institution, approved provider, or credential evaluation service to process and send official transcripts – in some cases at least 4 to 6 weeks. Therefore, applicants should allow sufficient time for their transcripts to be processed and transmitted to JHU.
- **Official TOEFL, IELTS, or PTE score** report is required for international applicants who do not meet the criteria. See section titled "English as a Second Language (p. 2213)" for details.

- **Additional materials** required by the chosen program as listed in that program's section of this catalogue.

Note: All application materials submitted to Advanced Academic Programs become the property of Johns Hopkins University and will not be returned to applicants under any circumstance. Any misrepresentation or omission of information included as part of an application will constitute cause for cancellation of the application prior to admission, reversal of acceptance, dismissal, or initiation of disciplinary action. In the event new information is provided/discovered after a final decision has been made, the Admissions Committee has the right to re-evaluate the application.

Graduate Record Examination

Most of AAP's programs do not require GRE scores. Applicants should check program to determine if they must submit a GRE score. Do not send in the GRE score unless it is required by the program or the committee. If required, applicants must send scores to AAP. Our institutional code is listed under the District of Columbia: 8747 (Johns Hopkins Adv.Acad.Programs).

Acceptance of Admission

Newly accepted students are directed to an Enrollment Decision form, available through the electronic version of their official admissions decision letter. Students who accept the offer of admissions but later decide to defer their enrollment to a future term must contact the Admissions Office immediately with their intent to defer. Not contacting the Admissions Office may result in a temporary delay in a student's ability to enroll in a future term. Applicants can pursue only one program at a time, unless they are applying to an approved dual or combined program in AAP.

Degree/Certificate Candidates

Qualified applicants are admitted as degree or certificate candidates by the committee after the Admissions Committee for that program reviews the completed application and determines eligibility.

Provisional Student

Provisional students are admitted to this status because, in the view of the Admissions Committee, they do not fulfill academic requirements for admission as a degree candidate at the time of the application. A provisional student may also be admitted conditionally, if Admissions determines eligibility. (See Conditional Status below.)

Provisional students are required to take specific prerequisite courses and/or program courses, identified in their admissions letter (additional criteria may be listed). Those with provisional status are held to grading criteria stricter than those required of degree candidates. **Provisional students must receive a grade of B or better** in **all courses taken while under provisional status**. Failure to meet the provisional grade requirement will result in dismissal from the program. When the provision is met, the student must submit a "change of student status request" form to change from provisional to degree candidate.

Note: Provisional Students may not qualify for financial aid.

For eligibility for provisional students, contact the Office of Financial Aid (https://finaid.jhu.edu/contact/) for specifics.

Conditional Student

Applicants who have completed their undergraduate degree must ensure that an official transcript confirming degree conferral is submitted to AAP Admissions by the application due date and in accordance with the instructions below.

AAP may admit applicants with an official transcript on a conditional basis pending degree conferral if at the time of application the individual is completing the last semester of their undergraduate degree. If you are currently finishing your degree, you must ensure that an official transcript that includes the current semester is submitted to AAP Admissions by the application due date in accordance with the instructions below for submitting official transcripts. If you are admitted, your admission is conditional until AAP receives a second official transcript that confirms degree conferral. Students admitted on a conditional basis will have until the course Withdraw/Audit deadline for the first semester in which they are enrolled at AAP to ensure the final, official transcript that confirms degree conferral is submitted to AAP Admissions in accordance with the instructions below.

All applicants admitted on a conditional basis are responsible for ensuring that their official transcript confirming degree conferral is submitted to AAP Admissions by the course Withdrawal/Audit deadline in accordance with the instructions below. AAP will automatically dismiss without a refund a student who does not ensure their final official transcript confirming degree conferral is submitted to AAP Admissions by the course Withdrawal/Audit deadline in accordance with the instructions below.

Instructions for Submitting an Official Transcript

To send an official transcript, and to avoid delays, students graduating from a domestic institution are highly encouraged to use one of the providers listed here (https://advanced.jhu.edu/prospective-students/admissions-requirements/electronic-transcript-organizations/). Please use aapadmissions@jhu.edu as the recipient address.

Unless the official transcript is being sent directly from the institution to JHU AAP, students graduating from an institution outside the United States must submit official transcripts to JHU AAP through World Education Services (WES) (https://nam02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.wes.org%2F&data=04%7C01%7Cdbrant%40jhu.edu%7C77892121b8be47cb24f908d887238be2%7C9fa4f438b1e6473b803f86f8aedf0de
%7C0%7C0%7C637407934021323346%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiLC
%7C1000&sdata=ADHlbmQzaJMsB8fn7K%2B%2BnKt7L2XU1cwsS5%2F9MWoekrc%3D&reserved=0) or one of the credential evaluation services listed here (https://advanced.jhu.edu/wp-content/uploads/2018/12/authorizedTranscriptVerificationOrganizations.pdf).

JHU AAP also accepts official transcripts that are sent directly from the institution:

- If via email to: aapadmissions@jhu.edu.
- If via regular mail, to:

851 Trafalgar Court
Suite 420 West
Maitland, FL 32751

Regardless which of the above methods are used to submit official transcripts, applicants are responsible for ensuring their transcripts are received by JHU by the stated deadlines. It takes time for an institution, approved provider, or credential evaluation service to process and send official transcripts – in some cases at least 4 to 6 weeks. Therefore, applicants should allow sufficient time for their transcripts to be processed and transmitted to JHU.

Deferral of Admission

Admitted students may defer the start of their studies for up to one year from the term of admission (example: a fall admit can defer until next fall; a spring admit can defer until next spring). Applicants need to complete the Enrollment Decision form, which is available through the electronic version of their official admissions decision letter. Students who accept the offer of admissions but later decide to defer their enrollment to a future term must contact the Admissions Office immediately with their intent to defer. Not contacting the Admissions Office may result in a temporary delay in a student's ability to enroll in a future term. If an admitted student wishes to enroll beyond the year of admission, he/she will need to reapply to the program by submitting a new application, application fee, and any additional supporting documents. A student who reapplies must satisfy admission and program requirements in effect at the time of reapplication.

Denial of Admission

All admission decisions are final. The Admissions Office cannot discuss the committee decision. In the case of denied admission, applicants must take at least one year to attempt to improve their qualifications before reapplying to the same degree or certificate program. Improvements can include but are not limited to taking the GRE, submitting a new writing sample, or taking additional courses in a related field at a regionally accredited college or university. Please note that an improvement to the application or reapplication does not guarantee admission into the program. The applicant will need to reapply to the program by submitting a new application, application fee, and any additional supporting documents. All application material is shredded immediately following denial of admission.

International Applicants

Collegiate-Level Course Work Earned Outside of the U.S.

Applicants who have earned their post-secondary degree(s) or course work in a country other than the United States are required to have a "course-by-course" credential evaluation with GPA performed by an outside evaluation service. Evaluations are waived only if the student received their undergraduate degree from a U.S. institution and the undergraduate course work taken internationally was transferred to that institution. However, the official transcript, in English, is still required of the international school. Please see ed.gov/accreditation (https://www.ed.gov/accreditation/).

Evaluations must be completed by a current National Association of Credential Evaluation Services member such as the World Education Services (WES). The most up-to-date list of current members can be found at the following website (https://advanced.jhu.edu/admissions-aid/how-to-apply/international-students/).

English as a Second Language

International applicants must demonstrate English proficiency by meeting at least one of the following requirements:

- The applicant submits official TOEFL, IELTS, or PTE scores.
- The applicant holds a post-secondary degree from an accredited U.S. institution.
- English is both the official language and the only language of instruction in the applicant's native country.

- **TOEFL:** Official TOEFL score reports must be sent to AAP in the mail. Photocopies or electronic TOEFL score reports will not be accepted. AAP requires a minimum score of 600 on the paper test, 250 on the computer-based test, and 100 on the Internet-based test. However, scores requirements may vary by program. Our institutional code is listed under the District of Columbia: 8747 (Johns Hopkins Adv.Acad.Programs).
- **IELTS:** Applicants should contact the test center where they took the test directly and request that test scores be sent electronically using the IELTS system. Please be sure to select "Krieger School of Arts and Sciences Advanced Academic Programs." All IELTS test centers worldwide are able to send scores electronically. AAP requires a band score of 7.0. However, scores requirements may vary by program.
- **PTE:** Official PTE Academic results must be sent to AAP in the mail or electronically. Photocopies of PTE Academic score reports will not be accepted. AAP requires a minimum score of 68. However, scores requirements may vary by program. Our institutional code is: Krieger School of Arts and Sciences –Advanced Academic Programs.

Student Visas

Applicants seeking admission to enroll in on-site courses in the U.S., taking at least three courses per semester, may request certification for an F-1 visa by indicating "yes" for the "Do you plan to initiate the F-1/J-1 visa process through Johns Hopkins University?" question on their admissions application.

AAP international students on F-1 visas usually begin their program in the fall or spring semester. In order to maintain status on an F-1 visa, students in AAP must be enrolled in a minimum of three courses per semester, one of which can be an online course. Students must complete their certification process with the Office of International Services (https://ois.jhu.edu/).

Dual or Combined Program Admissions

A limited grouping of programs is considered dual (two Master's degrees) or combined (Master's degree + Certificate). Programs combined with those from other Johns Hopkins Schools will have separate admissions requirements and will require a different application, fee, etc. Please see each program's admissions requirements for more information.

Special Student/Non-Degree Applicants

A non-degree seeking or special student is one who would be eligible for admission as a degree or certificate candidate to the chosen program, but who is not interested in pursuing the credential. Admitted students with non-degree seeking/special status are:

- Permitted to enroll in courses for which they satisfy the prerequisites;
- Permitted to take up to four courses;
- Not qualified to receive financial aid;
- Not eligible for graduation; and
- Required to reapply to become degree-seeking (Acceptance not guaranteed).

To be considered for **special student or non-degree admission** to any Advanced Academic Programs course, applicants must do the following:

- Submit a completed online application;
- Indicate non-degree seeking under the AAP Program tab in the application;
- Upload unofficial transcripts (preferred) or copy of diploma;

    - Submit official transcript for the highest degree attained
- Submit a Statement of Purpose;
- Submit a resume;
- Submit a writing sample (Writing, Science Writing, and Teaching Writing applicants only); and
- Submit two Recommendation Letters (see program admissions requirements for more information).

Admission to Other Divisions or Programs of the University

An admitted student in Advanced Academic Programs who wishes to transfer to another school in the University or to a full-time program in the School of Arts and Sciences must apply to the appropriate school or the School of Arts and Sciences' full-time programs. Admission to Advanced Academic Programs establishes no claim or priority for admission to other divisions or programs of the University.

Accelerated Status for Recent Hopkins Undergraduate Students

Recent Johns Hopkins graduates may be allowed to accelerate their time to complete an AAP Master's degree. Academically strong and eligible candidates from JHU's undergraduate programs may be considered for the accelerated option at the time of application. Students who start an AAP Master's Degree program within 5 semesters (including summer) following their graduation from their first Bachelor's degree may have up to two upper-level courses applied through advanced standing toward the Master's degree. Coursework will be approved at the sole discretion of the program director. This evaluation is final and not eligible for appeal.

AAP Course Opportunities for Current Hopkins Undergraduate Students

Eligible upper-level JHU students may be allowed to begin taking a limited number of courses in AAP programs on a space-available basis prior to the completion of their undergraduate degrees. Students must contact the appropriate AAP program director/advisor for further details, specific program requirements, and approval.

Advanced Standing

Advanced Standing signifies a student receiving credit for academic coursework that was achieved prior to applying to their current program. This coursework comes from programs outside of any JHU division and must have been completed within seven years from the date of application. Advanced Standing will only be considered when the relevancy and currency of the prior course content clearly contributes meaningfully to the graduate degree.

The following restrictions apply for coursework being considered for Advanced Standing:

- Advanced Standing can only be granted for those courses that have 75% or higher alignment with course objectives within the AAP program.
- Coursework must have received the minimum grade of B- to be considered; however, individual AAP programs may require a higher grade. Please contact the Program Director for guidelines.
- No more than two courses may qualify for Advanced Standing.
- Courses being considered for Advanced Standing must not have been part of a completed degree or certificate program.
- Advanced Standing will only be considered for Master's degree programs. No advanced standing at the Certificate level will be considered.
- Students admitted with provisional status will not be considered for Advanced Standing

To be considered for Advanced Standing applicants must:

- Request Advanced Standing at the time of application. Advanced Standing cannot be granted or requested once a student is admitted to a program.
- Submit course syllabi for those credits they are seeking to transfer into the program. Advanced Standing requests without syllabi will not be reviewed.

Waived and Replaced Courses

In some programs, the Admissions Committee may allow up to two core courses to be waived. All waived courses must be replaced by electives to satisfy the required number of courses to complete the degree. Students should consult with their Program Director to determine if their program waives and replaces courses.

Some programs waive and replace based on previously completed graduate coursework. Supporting documentation, such as copies of syllabi and course descriptions, may be requested by the committee to assist with its decision. Students are granted this type of waiver at the time of admission.

Some programs waive and replace based on an assessment of specialized knowledge: these assessments must be requested and completed no later than the end of their first enrolled semester at AAP.

New Student Orientation

Once admitted to Advanced Academic Programs, all students are encouraged to complete a Web-based new student orientation (https://advanced.jhu.edu/current-students/new-student-checklist/). This orientation provides guidance for all AAP students, regardless of modality, to understand administrative processes at Advanced Academic Programs and to learn about available resources. New student orientation is separate from "Learning Management System (LMS) orientation," which is available to all students enrolled in online courses and required by certain academic programs. The LMS orientation provides specific information regarding the use of LMS and enrollment in online courses.

Alumni Benefits

Alumni Benefits

Johns Hopkins University alumni are welcome to return for courses in AAP. Having alumni in courses boosts academic rigor, knowledge, and experience in the classroom. To promote this interaction and to provide opportunities for alumni to take courses they missed or that will help them remain current in their fields, AAP offers the Alumni Tuition Benefit Program.

Alumni may be eligible for admission as degree or certificate candidates to the chosen program but may not necessarily be interested in pursuing the credential. These alumni are permitted to enroll in any courses for which they satisfy the stated prerequisites. As long as alumni do not interrupt their studies for more than one year and remain in good academic standing, they can take up to four courses in an individual program under the Alumni Benefit. The program director for the selected program must sign off on each course for which alumni want to register through the Alumni Benefit. Alumni may not register in more than one program at the same time and must reapply for the Alumni Benefit to take courses in additional programs. Alumni who do not remain in good academic standing may be dismissed from AAP. If more than one year lapses between registrations, alumni are required to reapply for the Alumni Benefit.

Alumni are welcome to apply to be accepted as new degree candidates at any time during their studies. The program's Admissions Committee will determine if any credit-bearing courses completed at the time of application will count toward the degree. Program requirements and time limitations in effect when applying will guide the admission decision.

To apply for the AAP Alumni Benefit, alumni must complete the standard AAP online application (https://applygrad.jhu.edu/apply/?sr=2816e1e1-979b-49e1-9502-a48cc8b682e6), checking the appropriate box to indicate alumni status. The application fee will be waived for alumni applying for the Alumni Benefit.

Qualification Required: In all cases above, alumni can enroll only in courses for which they qualify. A program may elect to limit the courses open to alumni or may reserve a certain number of slots for current students.

Full-Tuition Option (with credit): Alumni who have applied for the AAP Alumni Benefit through the online application will be able to register for an approved course. Their registration will be processed promptly during regular registration or late registration. In most instances, they will compete for seats along with current students (first come, first served). Students should contact the program director for more detailed information. The course will appear with a grade on the transcript.

Space-Available Tuition Benefit (noncredit, audit): Alumni interested in this option will be eligible for a reduction in tuition, paying 1/3 of the normal tuition in any course for which they qualify, on a space-available system. The reduction does not apply to fees, which must be paid at the standard student rate. The course will appear with an "AU" to indicate the audit status on the transcript. Courses taken as noncredit or audit cannot be applied toward the completion of a degree or graduate certificate.

Grades / Performance / Conduct

Grades / Performance / Conduct

Grading System

The grading scale for students enrolled for credit is A, A-, B+, B, B-, C, and F. Grades F and C are not removed from a student's transcript even if a course is repeated.

Students are graded under the following system:

Grade	Meaning	Equivalent
A		4.00
A-		3.70
B+		3.30
B		3.00
B-		2.70
C		2.00
F	Failure	0.00
P	Pass	
I	Incomplete	
IP	In Progress	
W	Withdrawal	
AU	Audit	
NG	No Grade	

Performance Standards

If a degree candidate receives a grade of C or below in a core course, the student must repeat that course. Even if the course is repeated, the original grade will remain on the student's transcript, and the student may not receive another grade of C or below. For specific guidelines on what courses are considered core, please review the curriculum requirements listed for the corresponding program in this catalogue.

Special students—those who satisfy all requirements for admission to degree candidacy but who choose not to seek a degree—are held to the same performance standards as degree candidates. Provisional students cannot continue in a program if they earn a grade of B-or below in any course taken while they are in provisional admissions status.

Probation and Dismissal

Degree candidates who receive a grade of C or below are on placed on academic probation and will maintain that status. When a course is repeated, both the original grade and repeated grade appear on the transcript. The degree candidate receives credit only once for the course; however, the original grade of C (or below) places the student on probation. If a degree candidate receives a grade of C in an elective course, the course need not be repeated, and the course can be counted toward degree requirements. Degree candidates who receive a second grade of C or below in either a repeated core course or any course taken in the program will be dismissed from the program. Special students are held to the same performance standards as degree candidates. Provisional students who receive a grade of B- or below in any course cannot repeat the course and are dismissed from the program.

Students who are dismissed may apply immediately to another program in Advanced Academic Programs. Admission is not guaranteed. A dismissed student must wait one year from the date of dismissal before reapplying for admission to the program from which they have been dismissed. Readmission is not guaranteed.

Incomplete Grades

Students who experience extenuating circumstances that prevent them from completing coursework within a given term may request an Incomplete (I) grade from their instructor. An approval of an incomplete grade request is neither automatic nor guaranteed.

To receive an "I" in a course, the student must at the minimum have a passing grade in the coursework completed at the time of the request and receive instructor approval.

A student must request an Incomplete grade from the instructor in writing on or before the last day of the semester. An Incomplete grade can't be formally granted until after the Withdraw/Audit deadline. Requests must include an explanation of the extenuating circumstances. The Instructor has the right to ask for documentation. All documentation must be submitted to the Office of Student Affairs for evaluation to safeguard student privacy, not directly to the instructor.

If the instructor, after consultation with the Program Director (or designee), determines that circumstances warrant an Incomplete grade, the Instructor and the student will complete the Request for Incomplete Grade form. This form outlines the reason for the Incomplete, the remaining work to be done, and the deadline. The instructor also indicates the grade the student will earn if they fail to complete the outstanding assignments.

The instructor establishes the conditions for resolving the missing work. It is the student's responsibility to submit all work at the agreed-upon time. If a student does not complete the missing course work within 60 days from the last day of the term, the "I" will automatically convert to the grade indicated by the instructor on the Request for Incomplete Grade form.

Students with incomplete grades in required courses for degree completion at the date of degree conferral will not graduate. Students with incomplete grades in courses that are not required for degree completion may still graduate. However, the deadline for completion is abbreviated; students must resolve incomplete grades within 30 days after the date of degree conferral, which is when the university closes their graduate record.

Withdrawal

The W (withdrawal) grade signifies an official withdrawal from a course that has been approved by the Advanced Academic Programs Registration Office. The student initiates the withdrawal by completing an online add/drop form (https://advanced.jhu.edu/forms/online-add-drop-form/). A 'W' cannot be assigned by the instructor. Students who register for a course but never attend or stop attending, and later drop, are subject to the refund schedule at the time of their drop. All registered students are subject to the refund schedule, regardless of attendance.

Academic Standing and Conduct

The University reserves the right to dismiss at any time a student whose academic standing or general conduct is deemed unsatisfactory.

Academic Integrity

Graduate students at Johns Hopkins are expected to understand the ethical standards of the University, hold the highest standard of integrity for their work, and avoid academic dishonesty in all forms. Ignorance of ethical rules is no excuse for cheating. It is the further responsibility of every student to report to the instructor or their program's director any suspected violations of academic ethics by peers. Enforcement of our code of conduct is a shared responsibility and should not depend on the University alone. We all celebrate the rigor of a Johns Hopkins education, but that rigor loses its meaning if students cheat. Students who violate this code of conduct face a range of penalties, including failure of a course, permanent university transcript notation of an ethics violation, loss of a degree, or expulsion from the University. Please see the Student Code of Conduct (https://studentaffairs.jhu.edu/policies-guidelines/student-code/)for procedures and responsibilities. Ethics violations of any kind are taken seriously and may result in dismissal from AAP's programs.

Grade Appeals

Grade appeals can only occur after a student has been granted a final grade for the course and appeals in a timely manner including all appropriate documentation. The appeal and supporting documentation must be submitted within 30 calendar days after the student's final course grade has been posted.

Grade appeals on the basis of discrimination are not within the purview of this policy. Students should send concerns regarding discrimination directly to the Office of Institutional Equity (OIE) (https://forms.jh.edu/view.php?id=164822).

Grades are awarded for an individual student's academic work during each semester based on that individual's mastery of the course content. Grades are determined by faculty, and AAP will not override an instructor's considered academic judgment when it comes to grade award decisions. Unhappiness with the grade is not sufficient basis for a grade appeal.

Grade Appeal Process

Facts considered during a grade appeal include but are not limited to: (1) verification that there was not an error in recording the grade or (2) whether the grade was a result of a faculty member's failure to follow the syllabus, assignment guidelines, or other instructions provided by the instructor for assigning grades.

Prior to submitting the appeal, the student must first contact the instructor to attempt to resolve the disputed grade. If the instructor and the student are unable to reach an agreement, or if the instructor does not respond to the student's attempt to contact them, the student may submit a formal appeal to the AAP Grade Appeal Committee AAPgradeappeals@jhu.edu. The student should work with their advisor to prepare necessary documentation for submission, which include a student's statement justifying the grade appeal along with all related supporting documentation. [*Note: In the event that the course instructor is also the student's faculty advisor, an alternative mediator will be identified by the Program Director and/or the Faculty and Academic Affairs Officer*.]

Once the formal appeal has been submitted, the AAP Grade Appeal Committee has 10 business days to verify that the appeal meets the above criteria and all documentation has been submitted. Once the appeal is verified as complete, the AAP Grade Appeal Committee will reach out to the instructor for clarification of the grade; the instructor has 7 business days to respond. The AAP Grade Appeal Committee then has 14 business days from the time of the instructor's response to determine whether the disputed grade should be changed or retained and inform the student and the instructor of its decision. If the committee supports the appeal, the instructor has 10 business days to complete any work directed by the committee and update the grade.

The committee's decision is final. Limited appeals to the Associate Dean following a committee decision are possible only if (1) the timeline or process for the grade appeal was not followed, (2) the instructor did not follow the guidelines set forth in the appeal decision, or (3) if new evidence is made available after the AAP Grade Appeal Committee decision. A student submitting a limited appeal of the Committee decision must submit a statement and supporting documentation to the aapgradeappeals@jhu.edu mailbox. This appeal must be made within 10 business days of the receipt of the AAP Grade Appeal Committee's decision to deny the appeal or of the resubmission of the student's grade.

Time Limitation

Students must complete all academic work in a master's degree or certificate program within five years, calculated from the start of the first course that counts toward the degree. This time limit includes any courses taken at another Johns Hopkins school/division that have been approved to count toward the degree or certificate.

If necessary, students may request from their program committee an extension of time to complete their program beyond the five-year limitation.

If an extension is granted, it will be communicated in a letter, and the five-year limit increased by the time included in the extension. An extension may be granted for a semester up to a full year, and in rare circumstances, for two years. In some instances, students may appeal the time limitation policy (https://advanced.jhu.edu/forms/time-limitation-exemption-appeal-application/) regarding previously completed AAP courses.

Graduation Requirements

Application for Graduation

Students planning to complete their degree requirements at the end of the semester for which they are registering must notify the AAP Registration Office of their intentions by completing the online graduation application form found in SIS. This form should be completed when registering for the last course(s) needed to complete the degree; it initiates the graduation review process that students must undergo to be cleared for graduation. The AAP Registration Office will periodically correspond with the student using the JHU email account address provided to all students in order to provide important information about administrative details, events, and deadlines. A paid $100 graduation fee is required at the time of application for graduation. This fee must be paid for every degree earned.

The application for graduation form is valid for only one semester. If students do not complete their degree requirements during the semester expected, they must resubmit the application form while registering for the next semester. Students who paid the $100 graduation fee (a one-time payment) are not required to submit another graduation fee.

Completion of Degree Requirements

The Johns Hopkins University confers degrees three times a year (August, December, and May) to all students who have completed requirements during the summer, fall, or spring semesters. The University-wide commencement ceremony and the master's degree ceremony take place once a year in May. Diplomas are mailed to graduates at the address provided on the graduate application found online in SIS. The conferral date is the date that will appear on a graduating student's transcript.

Registration

Registration

Student Information System (SIS)

The Student Information System (SIS) provides students access to financial aid, billing, and enrollment records in one location with the same interface. Strong authentication security assures confidential access to information by students using any popular Web browser and their JHED login ID and password.

Proof of Immunization Prior to First Registration

The District of Columbia requires all students under the age of 26 to submit an immunization form (https://advanced.jhu.edu/forms/). This requirement may be waived for students if they meet both of the following criteria:

1. The student is in a fully online program that does not have optional or mandated residency requirements, classes, or activities that may be taken in D.C.
2. The student does not currently live in D.C., nor do they plan to move to D.C., or any contiguous state, including Maryland, Virginia, Delaware, Pennsylvania, or West Virginia. If they move to D.C. or one of the states mentioned above, it is the student's responsibility to complete the immunization form (https://advanced.jhu.edu/forms/) and conform to the immunization requirement prior to the move.

Course Enrollment Limits

All AAP courses have enrollment limits. It is not always possible to offer additional sections of oversubscribed courses. A waiting list option is available in SIS during the registration period for most courses with full enrollment. Enrollment is not guaranteed.

Effective Spring 2019, SIS will limit students from registering for more than two waitlists at a time. If a course's waitlist opens, the student will be notified and have 48 hours to add the class. Once a student removes themselves from a waitlist, they will be able to register for an additional waitlist, up to a total of two waitlists at any given time.

Completion of Prerequisites

The prerequisites for each course can be found in the program sections of this catalogue. It is the student's responsibility to check the prerequisites for each course and register appropriately. A student may be administratively dropped from a course if they have not met the stated prerequisite. Students are encouraged to consult with their academic advisors.

Course Load

Full-time course load for a graduate student is nine credit hours per semester.

Students expecting to take three or more courses should consult with their Program Director. Some programs require permission from the academic advisor before enrolling in more than three courses per term.

Ways to Register

- Online at sis.jhu.edu (https://sis.jhu.edu/)
- Online add/drop form
- Hand-deliver paper registration form to AAP at any of the three locations
- Submit via the SEAM online form (https://support.sis.jhu.edu/case/)

Each semester, the course schedule (https://sis.jhu.edu/classes/) is posted. The course schedule is available only online, and students are encouraged to enroll early for best selection.

Registering for Courses in Other JHU Programs

With advisor approval, AAP students may take up to two comparable courses and apply these courses from other JHU programs toward their master's degree or certificate.

Interprogram Courses

AAP students wishing to count a course outside their program toward their degree need to obtain advisor permission, unless the course is cross-listed in the course schedule or otherwise listed as part of shared concentrations. To obtain advisor approval, students must forward to their advisor a written request that includes documentation of course description and any other information that may be helpful in assessing the course's applicability to a student's program. The student's advisor or academic program director then determines if the requested course is appropriate and whether the student is eligible to take it.

Interdivisional Registration for AAP Students

AAP students who wish to take a course at another Johns Hopkins school/division must submit a request to the AAP Registration Office using the online add/drop form or a paper add/drop form. To ensure that there is time for review and approval from other divisions within Johns Hopkins, the request must be received in the AAP Registration Office no later than two weeks before the first day of class. Advisor approval is required to allow non-AAP courses to count toward the AAP degree (excluding curricula that require courses from other JHU divisions). To obtain advisor approval, students must forward to their advisor a written request that includes documentation of the course description, number of credits, and any other information that may be helpful in assessing the course's applicability to a student's program. The student's advisor then determines if the requested course is appropriate and whether the student is eligible to take it.

Interdivisional Registration for Non-AAP Students

Non-AAP students in other divisions of Johns Hopkins may take up to two courses in AAP, if permitted by their home division, and with permission of the AAP program director or Associate Dean. Non-AAP students must complete the necessary paperwork and/or procedures required by their home school/division. Interdivisional requests are processed by the AAP Registration Office during late registration on a space-available basis, to allow AAP students first eligibility into courses. Interdivisional registration is not guaranteed. School of Medicine students should contact the AAP registration manager for assistance with interdivisional registration.

International and Off-Site Courses

Some AAP programs may offer courses at an international location or at a site that is not on the Johns Hopkins University premises. These courses may have different registration deadline requirements and refund schedules, as well as additional registration paperwork and fees. Students should check the website and SIS messaging carefully for these differences.

Late Registration

Registration is open for approximately two months prior to the start of a semester/term. The Late Registration period is defined as the seven days prior to the start of classes and requires a $150 fee. Late registration does not apply for new students who were accepted for that term. Check the Academic and Registration Calendar for late registration deadlines. Students registering late should check the refund schedule.

Add / Drop

Students wishing to add or drop a course can use the online add/drop form (https://advanced.jhu.edu/forms/). Deadlines for completing this process are featured in the academic calendar.

Faculty members cannot initiate, complete, or process add/ drop changes.

Auditing a Course

Auditors receive no credit for the course, and a grade of "AU" is placed on their official transcript. There is no reduction in fees or tuition when auditing a course. Prior to registering as auditors, students must document with the instructor what tasks are required to earn the audit. Note that not all courses are suitable for audit and requests to audit may not be approved. Students may request an audit by consulting with their instructor and advisor and receiving subsequent approval from the instructor. Students can only change from credit to audit in a course prior to the withdrawal deadline, and if they do not uphold the agreed-upon tasks associated with the audit, the course should revert to a withdrawal on the student's transcript.

Auditors cannot change their status to credit-seeking after the start of the semester. Degree-seeking students should note that choosing to audit a course may have ramifications on other aspects of enrollment, including, but not limited to, financial aid, immigration status, and the maximum number of courses toward degree.

Change of Program

Students who wish to change to another degree program within Advanced Academic Programs must fill out a change of program (COP) request form. Documents required by the new program but not submitted previously must be included with the COP form. Students are not automatically admitted to a new program; their request is reviewed by the appropriate Admissions Committee according to the stipulations of the new program. Any courses taken in one AAP program that are the exact courses in another AAP program will be counted toward the new degree when a student changes programs, provided that the new program's requirements for core and elective are met. There is no charge for change of program. Tuition rates in AAP vary with each academic discipline/program; therefore, changing programs may result in different tuition rates. COP applications may be submitted at any time, but if approved, the student's program information will not be updated until the end of the current semester. Please note: Taking courses outside the program to which you are admitted does not guarantee admission to another program. Average processing times for COP range from six to eight weeks from the date received.

Tuition Payment

In order to complete a registration, a verification of payment method of all tuition and fees is required for each semester at the time of registration. Students will not be not dropped from their courses if payments are not made in full. Subsequently, students remain financially responsible for the tuition and fees associated with each course.

AAP students can make payments by check, credit card, employer contract (employer authorization), tuition remission, or financial aid. In all cases, students are not permitted to register if there is a balance due on their account from a previous semester.

Financial Aid

Students who plan to request financial aid (https://finaid.jhu.edu/graduate-aid/)to cover their tuition should submit the appropriate paperwork in ample time before registering. Students must take a minimum of two courses required for their program to be eligible for federal financial aid. Students may also look at alternative loans for single course registration.

The JHU Policy for Satisfactory Academic Progress requires all students to advance in their program with appropriate grades and within the appropriate timeline to continue receiving financial aid. The financial aid code for JHU/AAP is Eoo473. The Financial Aid section in the catalogue provides details regarding satisfactory academic progress required for compliance for financial aid.

Employer Contract

Students whose tuition is paid by employer billing authorization (employer contract) should begin processing requests with their employers well before the start of registration, and send a copy of the employer contract via the SEAM online form (https://support.sis.jhu.edu/case/). Students using an employer contract are financially responsible for any tuition and fees not paid by the employer.

Employer Reimbursement

Students who are requesting employer tuition reimbursement must pay for the course upon receipt of a bill (through SIS) from the Student Accounts Office with their own funds and request reimbursement from the employer at the appropriate time.

JHU Tuition Remission

Students receiving tuition remission benefits from Johns Hopkins University should read the contract carefully. Call the Center for Training and Education at 443-997-6800 to address any questions. Please note that students are financially responsible for dropped courses paid for with tuition remission and any associated fees, if applicable.

Leave of Absence

Students who anticipate that they will not enroll in classes for one semester or more but intend to resume their studies must notify their program of their intention to do so.

Leave of Absence (LOA) is an approved absence from the University during which time students are not charged tuition nor are they required to register for courses. Time spent on LOA is regarded as an approved break in study and is not counted toward the total time-to-degree. Students on LOA will have access to limited advising and career services. Please note, LOA will not be granted to a student who is currently in a required culminating experience (thesis, capstone, independent research project) course or in a culminating course continuation.

If a LOA is granted for a current semester, the current course/s will be automatically withdrawn and will be subject to the refund policy and refund schedule. LOA requests for a current semester must be made prior to the audit / withdrawal deadline.

LOA may impact health benefits, F1 status, and financial supports. F1 students must contact OIS before applying for LOA.

To apply for LOA, students complete a Request for Leave of Absence form if granted LOA, students automatically receive an extension in their time to complete their degree for the same period of time as their leave. All other criteria listed in the Time Limitation Policy remain in place. Students are limited to two years for LOA, taken at one time or in combination during the student's academic career with AAP.

Students who are granted LOA must notify AAP via the SEAM online form before resuming their studies at the end of the allotted leave time. AAP will withdraw students from their programs if they do not resume their studies after a LOA has expired (refer to the Inactive Status Policy for more information).

Inactive Status

Except for those on a leave of absence, students who do not enroll for two semesters will lose their active status. The student is considered to have withdrawn from the program. To resume taking courses in Advanced Academic Programs, students must reapply by submitting a new application form, application fee, and any new application materials required. Reapplying students are subject to the admissions and program requirements in effect at the time of the new application. Acceptance for inactive students is not guaranteed, and courses taken prior to the interruption of studies may not count toward degree requirements. Time limitation still applies; see the Time Limitation policy.

Maximum Number of Courses Beyond Program Degree Requirements

With advisor approval, AAP students may take up to two courses beyond their degree program requirements. To obtain advisor approval, students must forward a written request that includes documentation of the course description and a rationale for taking the course(s). Students are advised that Financial Aid may not cover courses that don't contribute to the completion of a program and should consult with a Financial Aid advisor prior to enrolling in courses beyond program degree requirements. In addition, students should note that the policies on Probation and Dismissal and on Academic Standing and Conduct apply to all courses, including those taken beyond program degree requirements. Students who are interested in taking additional AAP courses after completing their degrees may do so under the Alumni Benefits Policy or may register as a Special Student/Non-Degree Applicant.

Tuition and Fees

Tuition and Fees

Payment

Full course tuition is due upon receipt of a bill (through SIS) from the Student Accounts Office. All fees are nonrefundable. Tuition is refundable only according to the refund schedule. If a student registers for a course but does not attend **or** officially drops/withdraws from a class, the student remains financially responsible for the tuition and fees associated with the course.

Application Fee

The application fee is $75 for all programs. The application fee must be submitted with the application and is not refundable under any circumstances. Johns Hopkins University alumni from any academic program will have their application fee waived. Please contact the Admissions Office to waive your fee.

Tuition

All tuition in the Advanced Academic Programs is determined according to the academic program of study and varies across AAP disciplines. Students will be charged tuition based upon individual courses within the program of study in which they have been admitted. If courses are taken outside of a student's program of study, the student will pay the tuition rate in effect for the program in which the course is taken. Restrictions apply for how many courses may be taken outside of a student's academic program and applied toward the degree (see section regarding registering for courses in other programs in AAP and outside of AAP).

Course Fees

In addition to tuition, some courses require field trip, laboratory, technology, material, or other related fees. These fees, specified in the course schedule (https://sis.jhu.edu/classes/) for each term, are payable at the same time as the regular tuition charges and are nonrefundable.

Technology Fee

All fully online and blended courses in AAP require an additional technology fee. This fee applies to all students registered in online classes, and it is not refundable.

Withdrawal from Academic Program

Students who elect to discontinue their program of study must formally withdraw from the program in writing by submitting the document via the SEAM online form (https://support.sis.jhu.edu/case/). Once students formally withdraw from their program, they are no longer considered students at AAP and can no longer receive services including, but not limited to, library access, health insurance coverage, or career services. Inactive students are considered Withdrawn.

Continuation Courses

Students who are in a required thesis/capstone/graduate project/culminating experience course and do not finish in the semester in which they enrolled for it must pay a continuation fee of $500 for each subsequent term (including summer) until a final grade has been submitted. The continuation course is relevant only for students currently in the process of completing a required thesis/capstone/graduate project/culminating experience and who need more time to finish and are not eligible for an Incomplete. The continuation has a course number in the AAP schedule of classes and must be registered for through SIS. A continuation course is a non-credit extension of an existing course and does not count toward the total number of courses a student may take in their program. A student registered in a continuation course will receive an "in progress" (IP) grade in their original course. Changing an IP grade to a final grade (A through F, Pass) is acceptable at any time before the student's departure from the university, and requires the instructor's approval. Once the IP is resolved for the original course, the continuation course will be listed as "no grade" (NG) on the student's transcript. Students in continuation are subject to the Time Limitation policy. Students may register for continuation for up to two consecutive semesters. Students may submit an appeal for one additional semester of continuation in exceptional circumstances. If the student has not enrolled in the continuation course on or before the add/drop deadline in the subsequent semester, they will be automatically dismissed from the program.

Graduation Fee

The graduation fee is $100, payable upon receipt of a bill (through your JHU email account) from the Student Accounts Office. Student Accounts sends this bill upon submission of the application to graduate. Billing schedule is subject to change without advanced notice. However, any student who graduates must pay the $100 graduation fee.

Refund Policy

Refunds are made in accordance with the refund schedule. The refund schedule is updated on the website for each semester/term. All registered students are subject to the refund schedule, regardless of attendance. Refunds will be based on the date the request to drop the course is received by the Advanced Academic Programs Registration Office. Refunds are not granted to students suspended or dismissed for disciplinary reasons. On-site courses (e.g., international or regional) may be subject to a separate refund policy. Courses offered by other JHU divisions are subject to that division's refund schedule.

Appeal Process

In the case of rare or exceptional personal medical situations or personal military requirements, a student may request to appeal the standard AAP refund schedule/policy. Refund policy appeals must be submitted in writing (and received) by the Advanced Academic Programs Registration Office no later than the last day of classes of the next semester/term. All supporting documentation and/or a thorough written explanation for the appeal must be included. In cases of rare or exceptional medical situations, supporting documentation should be limited to a letter from the appropriate medical professional, detailing the dates of care and the fitness for the student to attend class during that time. The appeal will be reviewed by the associate dean of AAP. Review times may vary depending upon the complexity of the appeal. Average review times for appeals range from four to six weeks from the date received. All decisions are final.

Refund Schedule

Drop Date	Refund
Prior to the first day of class	dropped at 100 percent
First week of class and prior to the second week of class	dropped at 90 percent
Second week of class and prior to the third week of class	dropped at 75 percent
Third week of class and prior to the fourth week of class	dropped at 50 percent
Beginning the fourth week of classes, courses will be withdrawn (W appears on transcript)	no refund

Some AAP programs may offer courses at an international location or at a site that is not on the Johns Hopkins University premises. These courses may have different registration deadline requirements and refund schedules, as well as additional registration paperwork and fees. Students should check the website and SIS messaging carefully for these differences.

Programs

Applied Economics, Master of Science

MS in Applied Economics

applied-economics.jhu.edu (https://advanced.jhu.edu/academics/graduate/ms-applied-economics/)

Economic analysis is no longer relegated to academicians and a small number of PhD-trained specialists. Instead, economics has become an increasingly ubiquitous and rapidly changing line of inquiry that requires people who are skilled in analyzing and interpreting economic data, and then using it to effect decisions about national and global markets and policy involving everything from health care to fiscal policy, from foreign aid to the environment, and from financial risk to real risk.

The Master of Science in Applied Economics develops skills in economic reasoning and in constructing and estimating economic models through the use of econometrics and other quantitative techniques. This is accomplished by a rigorous and demanding curriculum and a talented and dedicated staff of instructors. This is a 10-course degree program, with classes offered in the evenings at the Washington, DC Center of the Johns Hopkins University (near Dupont Circle) and online. The degree can be pursued at a part-time or a full-time pace, on-site or online, or in both modes. All undergraduate majors are welcome.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

In addition to the materials and credentials required for all programs, the Master of Science in Applied Economics also requires:

- One semester of introductory microeconomics, passed with at least a B
- One semester of introductory macroeconomics, passed with at least a B
- One semester of undergraduate calculus or equivalent, passed with at least a B
- A grade in a higher level course trumps a grade in a lower level course. A B grade or higher upon repeat is not acceptable.

Prerequisite Math Requirement

Those entering with only a single calculus course must take in their first semester AS.440.304 Math Methods for Economists, a three undergraduate credit, full-length course, at half tuition. The course does not count toward the degree. In order to waive the Math Methods for Economists course, evidence of multivariable calculus is required.

Program Requirements

Ten courses are required to complete the Master of Science in Applied Economics: four core required courses, one core customizable, and five additional elective courses.

Code	Title	Credits
Core Courses - Required:		
All four courses are required		12
AS.440.601	Microeconomic Theory	
AS.440.602	Macroeconomic Theory	
AS.440.605	Statistics	
AS.440.606	Econometrics	
Core Courses - Customizable:		
Select one of the following:		3
AS.440.614	Macroeconometrics [Time-Series Analysis]	
AS.440.615	Macroeconomic Forecasting [Time Series Analysis]	
AS.440.617	Financial Econometrics [Time-Series Analysis]	
AS.440.618	Microeconometrics [Cross-Section and Panel Analysis]	
Electives		
Select five of the following:		15
AS.440.614	Macroeconometrics [Time-Series Analysis]	
AS.440.615	Macroeconomic Forecasting [Time Series Analysis]	
AS.440.616	Bayesian Econometrics	
AS.440.617	Financial Econometrics [Time-Series Analysis]	
AS.440.618	Microeconometrics [Cross-Section and Panel Analysis]	
AS.440.622	Cost-Benefit Analysis	
AS.440.624	Computable General Equilibrium Modeling	
AS.440.625	Machine Learning in Statistics	
AS.440.629	Survey Research Methods	
AS.440.630	Monetary Economics	
AS.440.631	Finance and the Macroeconomy	
AS.440.632	Topics in Macroeconomics and Finance	
AS.440.634	Economic Growth	
AS.440.639	International Finance (Open Economy Macro)	
AS.440.640	Financial Economics	
AS.440.641	Financial Intermediation & Financial Markets	
AS.440.643	Economics of Investments and Financial Management	
AS.440.645	Behavioral Economics & Finance	
AS.440.646	Economics of Derivatives	
AS.440.650	Environmental & Resource Economics	
AS.440.653	Economics of the Labor Market	
AS.440.656	Political Economy	
AS.440.658	Industrial Organization	
AS.440.659	Law and Economics	
AS.440.661	Public Economics	
AS.440.663	Development Microeconomics	
AS.440.665	International Trade (Open Economy Micro)	
AS.440.666	Regional Economics	
AS.440.667	Urban Economics	
AS.440.672	Economics of Health Care	
AS.440.684	Game Theory	
Total Credits		**30**

Concentration in Financial Economics

You may choose to declare a formal concentration in Financial Economics as part of your MS in Applied Economics degree program. Successful completion of the requirements outlined below will allow this concentration to be noted on your transcript.

Code	Title	Credits
Core Courses - Required:		
All five courses are required		15
AS.440.601	Microeconomic Theory	
AS.440.602	Macroeconomic Theory	
AS.440.605	Statistics	
AS.440.606	Econometrics	
AS.440.640	Financial Economics	
Core Courses - Customizable:		
Select one of the following:		3
AS.440.614	Macroeconometrics [Time-Series Analysis]	
AS.440.615	Macroeconomic Forecasting [Time Series Analysis]	
AS.440.617	Financial Econometrics [Time-Series Analysis]	
Electives		12
Select four of the following:		
Financial Economics Electives		
Select between two and four courses to fulfill this requirement.		
*If you chose "Financial Econometrics" as your Advanced Time-Series Econometrics Course, you may not double-count "Financial Econometrics" as one of your elective courses, but need only select between one and four courses to fulfill this requirement.		
AS.440.617	Financial Econometrics [Time-Series Analysis]	
AS.440.641	Financial Intermediation & Financial Markets	
AS.440.643	Economics of Investments and Financial Management	
AS.440.645	Behavioral Economics & Finance	
AS.440.646	Economics of Derivatives	
Complementary Macro and Quantitative Electives		
Choose no more than two of these courses to satisfy this concentration's requirements. Please note, you may not double-count your selected Advanced Time-Series Econometrics Course as one of your elective courses.		
*If you chose "Financial Econometrics" as your Advanced Time-Series Econometrics Course, you may choose up to three courses to satisfy this concentration's requirements.		
AS.440.614	Macroeconometrics [Time-Series Analysis]	
AS.440.615	Macroeconomic Forecasting [Time Series Analysis]	
AS.440.616	Bayesian Econometrics	
AS.440.618	Microeconometrics [Cross-Section and Panel Analysis]	
AS.440.625	Machine Learning in Statistics	
AS.440.630	Monetary Economics	
AS.440.631	Finance and the Macroeconomy	
AS.440.632	Topics in Macroeconomics and Finance	
AS.440.634	Economic Growth	
AS.440.639	International Finance (Open Economy Macro)	
AS.440.653	Economics of the Labor Market	
Other Electives		
Choose no more than one of these courses to satisfy this concentration's requirements.		
AS.440.622	Cost-Benefit Analysis	
AS.440.624	Computable General Equilibrium Modeling	
AS.440.629	Survey Research Methods	
AS.440.650	Environmental & Resource Economics	
AS.440.656	Political Economy	
AS.440.658	Industrial Organization	
AS.440.659	Law and Economics	
AS.440.661	Public Economics	
AS.440.663	Development Microeconomics	
AS.440.665	International Trade (Open Economy Micro)	
AS.440.666	Regional Economics	
AS.440.667	Urban Economics	
AS.440.672	Economics of Health Care	
AS.440.684	Game Theory	
Total Credits		**30**

Optional Thesis (AS.440.692)

Students may undertake their own research project as an 11th program course for three additional credits at full tuition. Prior to proposing a project, interested students must have clearly identified a research topic, and submit a formal proposal for review and approval to the Thesis Research Committee, to be received no later than two months prior to the beginning of the term in which the student plans to enroll in the course. The proposal must follow the Applied Economics Thesis Guidelines, which can be obtained by contacting the Program Director.

The committee will help identify a mentor who is familiar with their prospective inquiry, and is willing to provide guidance and oversee the project. The mentor must be faculty teaching at the Johns Hopkins University, but the availability of a mentor cannot be guaranteed. Students must meet with the mentor periodically for discussion of the project's progress, on-site or on-line, and must complete a research paper, to be approved by the mentor and the Committee.

Enrollment of the student is undertaken by the Program Director.

Prerequisites: All four Core courses and Microeconometrics or Macroeconometrics, and one or more Applied Economics courses in the substantive area of the proposed research, plus a strong academic record (at least B+ average) in at least eight program courses, are absolute minima.

Applied Economics, MS/ Investment Certificate

MS in Applied Economics and Certificate in Investments

To allow students to better exploit the strong complementary nature between finance and economics, Carey Business School and the Applied Economics Program have eliminated the overlap between the MS in Applied Economics and the Graduate Certificate in Investments. This enables students to earn both the MS degree and a graduate certificate for a total of 15 courses, eight at Applied Economics and seven at Carey.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Science in Applied Economics also requires:

- One semester of introductory microeconomics, passed with at least a B
- One semester of introductory macroeconomics, passed with at least a B
- One semester of undergraduate calculus or equivalent, passed with at least a B
- A grade in a higher level course trumps a grade in a lower level course. A B grade or higher upon repeat is not acceptable.

PREREQUISITE MATH REQUIREMENT

Those entering with only a single calculus course must take in their first semester AS.440.304 Math Methods for Economists, a three undergraduate credit, full-length course, at half tuition. The course does not count toward the degree. In order to waive the Math Methods for Economists course, evidence of multivariable calculus is required.

Program Requirements

15 courses are required - 8 Applied Economics courses and 7 courses for the Certificate.

Center for Advanced Governmental Studies

Center for Advanced Governmental Studies

advanced.jhu.edu/govstudies (https://advanced.jhu.edu/academics/centers/center-for-advanced-governmental-studies/)

The Johns Hopkins University Center for Advanced Governmental Studies (CAGS) encompasses a set of graduate programs designed to build knowledge and skills to prepare our students to be leaders in the government, including security and intelligence, and in the nonprofit or private sectors as well. In addition, CAGS is involved in a number of government and private sector partnerships. The overall mission of all the Center's programs and initiatives is to provide a strong foundation of knowledge upon which innovative policy programs and promising leaders can develop.

Based at the Johns Hopkins University Washington, DC center in Dupont Circle, CAGS is a vibrant learning environment both for our onsite and online graduate programs and also as a forum for policy discussions which are usually offered onsite and virtually as well. The Center provides a venue for unbiased, nonpartisan efforts to expand knowledge of the U.S. government and the policymaking process and apply analytical tools to assess the impacts of governmental action. Both training in and assessment of the best management practices in the nonprofit and private sectors as well as in the government are also a focus of CAGS programs.

Graduate Degrees and Certificates

The graduate degree programs of the Center bring together theory and practice in the study of government and its impacts domestically and abroad while preparing individuals for leadership positions in the public and private sectors. At CAGS, students use their graduate education to better inform their professional work and find that their practical work experience often augments their graduate studies. While our degree programs are designed as part-time studies, students have the option of accelerating their course of study by attending at a full-time pace.

The Center is comprised of seven (7) master's degrees and three (3) certificate programs. These are: MS in Data Analytics and Policy, MS in Geospatial Intelligence, MA in Global Security Studies, MA in Government, MS in Intelligence Analysis, MA in Non-Profit Management, and MA in Public Management; and Certificate in Data Analytics and Policy, Certificate in Intelligence, and Certificate in Nonprofit Management.

In addition, students have various options for combining our master's degrees with our certificates in intelligence, nonprofit management, or government analytics, allowing them to graduate with two credentials after pursuing a concentrated and efficient course of study. These dual degrees and combined programs are: MA in Global Security Studies/Certificate in Intelligence, MA in Government/Certificate in Intelligence, MA in Government/MBA, MS in Government Analytics/Certificate in Intelligence, MA in Public Management/Certificate in Data Analytics and Policy, MA in Public Management/Certificate in Intelligence, and MA in Public Management/Certificate in Nonprofit Management.

Partnerships, Events, and Publications

The Hopkins Center for Advanced Governmental Studies is involved in a number of government and private sector partnerships. We welcome opportunities for collaborations and initiatives that fit within the Center's goals of educational exchange and workshop/training efforts that further the understanding of the roles and functions of government.

CAGS has developed and instituted ongoing leadership exchange programs between U.S. federal executives and their counterparts in China, Germany, and other countries. In addition, the Center frequently hosts special events, policy workshops, and summits with embassies, government agencies, Washington think tanks, and other organizations. Periodically, white papers are published by the Center on topics that can help inform current policy debates. CAGS full-time faculty are actively engaged in their academic fields, as are the practitioner-scholars who comprise our adjunct faculty, and each year collectively publish numerous books, articles, and other works.

International Study

The Center offers degree-seeking students frequent opportunities for intensive international study. The basic format is several intensive course meetings and readings with JHU professors before the students leave; spending one week to 10 days abroad with classes about 4.5 hours a day and field trips, site visits, or other exercises, and a research project or major paper due after students return. Past courses have included The Birth of Modern Democracy" (Scotland and France), "China's Place in the 21st Century," "Command and Leadership in Modern War: Operation Overlord," (United Kingdom and France); Politics, Security and Culture in Israel; Politics, Security and Culture in India; Environmental Governance, Climate Change and Energy Security in Europe and America (Belgium and Germany); Policymaking in the U.S. and Latin America: Perceptions and Misconceptions (Mexico); and Sustainable Cities in France and Germany: Lessons for the United States (Germany and France); European Security: Russian Challenge, Western Response (Belgium, Ukraine, and Estonia); and Nature Conservation and Sustainability in Cuba.

Data Analytics and Policy, Master of Science

MS in Data Analytics and Policy

advanced.jhu.edu/dataanalyticsandpolicy (https://advanced.jhu.edu/academics/graduate/ms-data-analytics-policy/)

The Master of Science in Data Analytics and Policy prepares students to use analytics to tackle policy challenges in the public and private sectors. Students graduate with expertise in cutting-edge analytical methods relied upon by government agencies, research institutes, private companies, and non-profit organizations. The program emphasizes the application of analytics to substantive issues to develop students into data-driven leaders.

The schedule for completing this 12-course degree program is flexible. Many students work full-time while attending the program on a part-time basis and complete their degree in two years. Full-time students can complete the degree in one year. The MS in Data Analytics and Policy is offered primarily online, though some electives are offered at the Johns Hopkins Washington, DC Center each term.

Students may choose to earn a concentration within one of the following specialized areas: political behavior and policy analysis, geospatial analysis, statistical analysis, or public management. The electives cover a wide range of analytical methods, including machine learning, predictive analysis, text analysis, database management systems, computational modeling, civic technology, economic analysis, survey methodology, risk analysis, and data privacy.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Science in Data Analytics and Policy requires:

- Statement of purpose (two pages double-spaced): Explain your reasons for seeking admission and how you will use the degree to advance your career. Your statement should also address your ability or potential to perform quantitative analyses.
- Writing sample (5-7 pages double-spaced). The writing sample should demonstrate your ability to make and support an argument. It does not need to be quantitative.

Program Requirements

- Five required core courses
- Seven elective courses

Code	Title	Credits
Core Courses - Required		
AS.470.681	Probability and Statistics	3
AS.470.768	Programming and Data Management	3
AS.470.709	Quantitative Methods	3
AS.470.673	Data Visualization	3
AS.470.862	Capstone for Data Analytics and Policy	3
Electives		**21**
Total Credits		**36**

Concentrations

There are four concentrations offered through the MS in Data Analytics and Policy. Pursuing a concentration is optional. To earn a concentration, four of the student's electives must be in the concentration area.

Concentration in Statistical Analysis

Code	Title	Credits
AS.470.624	Healthcare Analytics and Policy	3
AS.470.643	Text as Data	3
AS.470.667	Machine Learning and Neural Networks	3
AS.470.699	Applied Performance Analytics	3
AS.470.700	Cloud Computing in the Public Sector	3
AS.470.703	Urban Data Analytics	3
AS.470.708	Unleashing Open Data with Python	3
AS.470.731	Privacy in a Data-driven Society	3
AS.470.743	Data Mining and Predictive Analytics	3
AS.470.758	Data-Driven Campaigns and Elections	3
AS.470.763	Database Management Systems	3
AS.470.764	Survey Methodology	3
AS.470.769	Data Science for Public Policy	3
AS.470.772	Practical Applications of Artificial Intelligence	3
AS.470.779	Computational Modeling for Policy and Security Analysis	3
AS.470.835	DC Lab: Politics, Policy, and Analytics	3
AS.420.677	Spatial Statistics (Not available as a general elective outside of the concentration)	3

Concentration in Public Management

Code	Title	Credits
AS.470.605	Global Political Economy	3
AS.470.608	Public Policy Evaluation & the Policy Process	3
AS.470.627	Financial Management & Analysis in the Public Sector	3
AS.470.631	Economics for Public Decision-Making	3
AS.470.645	The Budgetary Process	3
AS.470.671	Risk Management Analytics	3
AS.470.694	Big Data Management Systems	3
AS.470.731	Privacy in a Data-driven Society	3
AS.470.763	Database Management Systems	3
AS.470.798	Financial Management and Analysis in Nonprofits	3

Concentration in political Behavior and Policy Analysis

Code	Title	Credits
AS.470.608	Public Policy Evaluation & the Policy Process	3
AS.470.620	Race, Politics, and Policy (Not available as a general elective outside of the concentration)	3
AS.470.624	Healthcare Analytics and Policy	3
AS.470.636	Cognitive and Behavioral Foundations for Artificial Intelligence	3
AS.470.688	Political Institutions and the Policy Process (Not available as a general elective outside of the concentration)	3
AS.470.699	Applied Performance Analytics	3
AS.470.703	Urban Data Analytics	3
AS.470.733	Origins and Influence of Public Opinion on American Democracy and Elections	3
AS.470.736	Methods of Policy Analytics	3
AS.470.745	Terrorist Financing Analysis and Counterterrorist Finance Techniques	3
AS.470.758	Data-Driven Campaigns and Elections	3
AS.470.769	Data Science for Public Policy	3
AS.470.779	Computational Modeling for Policy and Security Analysis	3
AS.470.835	DC Lab: Politics, Policy, and Analytics	3
AS.473.602	Intelligence Analysis	3

Concentration in Geospatial Analysis

Code	Title	Credits
AS.472.611	Analyzing Social Media and Geospatial Information	3
AS.472.612	Geospatial Analysis: Communicating with Multiple Audiences	3
AS.430.600	Web GIS	4
AS.430.601	Geographic Information Systems (GIS)	4
AS.430.603	Geospatial Statistics	4
AS.430.604	Spatial Analytics	4
AS.430.606	Programming in GIS	4
AS.430.602	Remote Sensing: Systems and Applications (Not available as a general elective outside of the concentration)	4
AS.430.605	Development and Management of GIS Projects (Not available as a general elective outside of the concentration)	4
AS.430.607	Spatial Databases and Data Interoperability (Not available as a general elective outside of the concentration)	4
AS.430.608	GIS and Spatial Decision Support Systems (Not available as a general elective outside of the concentration)	4
AS.430.609	Spatial Data Management: Quality and Control (Not available as a general elective outside of the concentration)	4
AS.430.610	GIS for Infrastructure Management (Not available as a general elective outside of the concentration)	4
AS.430.611	Geospatial Ontologies and Semantics (Not available as a general elective outside of the concentration)	4
AS.430.612	Cartographic Design and Visualization (Not available as a general elective outside of the concentration)	4
AS.430.613	Advanced Topics in Remote Sensing (Not available as a general elective outside of the concentration)	4
AS.430.615	Big Data Analytics: Tools and Techniques (Not available as a general elective outside of the concentration)	4
AS.430.617	Census Data Mining: Visualization and Analytics (Not available as a general elective outside of the concentration)	4
AS.430.618	Advanced Python Scripting for GIS (Not available as a general elective outside of the concentration)	4
AS.430.619	Web Application Development (Not available as a general elective outside of the concentration)	4
AS.430.621	GIS for Emergency Management (Not available as a general elective outside of the concentration)	4
AS.430.623	Geo Apps (Not available as a general elective outside of the concentration)	4
AS.430.625	System Architecture for Enterprise GIS (Not available as a general elective outside of the concentration)	4
AS.430.627	Artificial Intelligence and Machine Learning in Geospatial Technology (Not available as a general elective outside of the concentration)	4
AS.430.629	Drones in Geospatial Decision Making (Not available as a general elective outside of the concentration)	4
AS.430.631	Spatial Algorithms and Data Structures (Not available as a general elective outside of the concentration)	4
AS.430.633	Advanced Spatio-Temporal Statistics (Not available as a general elective outside of the concentration)	4
AS.430.635	Urban Analytics (Not available as a general elective outside of the concentration)	4

Data Analytics and Policy, MS/ Intelligence, Certificate

Students pursuing an MS in Data Analytics and Policy may obtain an additional credential by completing courses that lead to the Certificate in Intelligence. This combined credential prepares graduates for careers in the U.S. Intelligence Community and in those parts of the government and private sector that use intelligence or work with the Intelligence Community, as well as other parts of the national security community. Students can complete the program with 15 courses.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

In addition to the materials and credentials required for all programs, the Master of Science in Data Analytics and Policy requires:

- Statement of purpose (two pages double-spaced): Explain your reasons for seeking admission and how you will use the degree to advance your career. Your statement should also address your ability or potential to perform quantitative analyses.
- Writing sample (5-7 pages double-spaced). The writing sample should demonstrate your ability to make and support an argument. It does not need to be quantitative.
- Current resume.

Program Requirements

Students pursuing an MS in Data Analytics and Policy may obtain an additional credential by completing a sequence of courses offered by the Certificate in Intelligence. This combined credential requires students to complete 15 courses (in lieu of 17 to complete both degrees separately). Students are required to take the following courses:

Data Analytics and Policy Courses

Code	Title	Credits
Core Course - Required:		
AS.470.681	Probability and Statistics	3
AS.470.768	Programming and Data Management	3
AS.470.709	Quantitative Methods	3
AS.470.673	Data Visualization	3
AS.470.862	Capstone for Data Analytics and Policy	3

Five Elective Data Analytics and Policy Courses

Students will complete five elective courses for the MS in Data Analytics and Policy.

Concentrations

There are four concentrations offered through the MS in Data Analytics and Policy. Pursuing a concentration is optional. To earn a concentration, four of the student's electives must be in the concentration area.

All concentration electives can qualify as a general elective unless otherwise noted.

Concentration in Statistical Analysis

Code	Title	Credits

Data Analytics and Policy, Certificate

advanced.jhu.edu/dataanalyticsandpolicycert (https://advanced.jhu.edu/academics/certificates/data-analytics-and-policy/)

The Certificate in Data Analytics and Policy provides students with the knowledge and skill set needed to perform a sophisticated data analysis, draw substantive conclusions, and communicate results for the purpose of improving policy-making and governance. Through the use of cutting-edge tools and skills, students will be able to address contemporary policy challenges in both the public and private sector.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

In addition to the materials and credentials required for all programs, the Certificate in Data Analytics and Policy requires:

- Statement of purpose (two pages double-spaced): Explain your reasons for seeking admission and how you will use the certificate to advance your career. Your statement should also address your ability or potential to perform a quantitative analysis.

Geospatial Intelligence, Master of Science

MS in Geospatial Intelligence

advanced.jhu.edu/geospatialintelligence/ (https://advanced.jhu.edu/academics/graduate/ms-geospatial-intelligence/)

Geospatial intelligence informs and influences policy, military, diplomatic, environmental and disaster relief and recovery decisions, and operations by governments at every level. Increasingly, in non-governmental sectors, it is informing and influencing public health, business, infrastructure, energy, regulatory, and advocacy decisions.

The Geospatial Intelligence Program unites three fields of study: the history of geospatial intelligence; the science and mathematics of digital geography and its related databases; and the art of converting geospatial data into written, spoken, and visual intelligence. Students analyze historical intelligence examples to understand the development of the concepts and practices behind collection, analysis, reporting, and technology. They also will focus on current challenges in the profession, among them the analytics and technology needed for the volume of current and future collection, the challenges of new sensors, and the development of new non-governmental geospatial communities.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Science in Geospatial Intelligence requires:

A four-year degree in a related discipline, such as Geography, GIS, Social Sciences (Political Science, International Relations, Area Studies). For those holding degrees in other disciplines, attention will be given to overall GPA and demonstrated writing ability. The program requires proficiency in mathematical statistics and probability.

A sample of geospatial intelligence

Please compare and contrast the 1860 photograph to a modern Google earth image of the same geography.

Both images show the north end of Boston, Massachusetts. A common reference point is the Old South Church, now called Old South Meeting House which is very near the left hand side at the center of the 1860 balloon view of Boston.

Description and analysis:

Examine the map and the Google earth image to identify and analyze what visibly remains on the Google earth image from the 1860 image. From the two images, point out what you think are the most significant changes and why you think they are significant.

Write up your findings in 2 to 3 pages. Please indicate how you decided what was significant about the changes and similarities you have noted. In the last paragraph, please indicate the next steps you would take if you wanted to learn more about these two images.

Record two measurements, either as you are working or after you are done. Submit the two measurements with your analysis.

How long did you spend examining the images (looking and thinking)

How long did you spend writing up the results (writing and thinking)

The measurements will not be used for any individual performance measurement, only to illustrate an enduring challenge for all geospatial analysis that will be covered throughout the introductory course and the entire program.

PROGRAM REQUIREMENTS

Students complete 12 courses to earn their degree:

- Eight required core courses
- One customizable core course
- Three elective courses

Code	Title	Credits
Core Courses - Required:		
AS.472.600	Introduction to Geospatial Intelligence	3
AS.430.601	Geographic Information Systems (GIS)	4
AS.430.603	Geospatial Statistics	4
AS.430.604	Spatial Analytics	4
AS.473.600	The Art & Practice of Intelligence	3
AS.473.604	Applied Critical Thinking and Analysis	3
AS.430.612	Cartographic Design and Visualization	4
AS.472.613	Geospatial Law and Ethics	3
AS.472.800	Capstone in Geospatial Intelligence	3
Core Courses - Customizable:		**3-4**
Select one of the following:		
AS.473.644	Technical Collection of Intelligence	

AS.430.602	Remote Sensing: Systems and Applications	
Electives		**9-12**
Select three of the following:		
AS.430.600	Web GIS	
AS.430.606	Programming in GIS	
AS.430.608	GIS and Spatial Decision Support Systems	
AS.430.609	Spatial Data Management: Quality and Control	
AS.430.611	Geospatial Ontologies and Semantics	
AS.430.613	Advanced Topics in Remote Sensing	
AS.430.615	Big Data Analytics: Tools and Techniques	
AS.430.618	Advanced Python Scripting for GIS	
AS.430.619	Web Application Development	
AS.430.627	Artificial Intelligence and Machine Learning in Geospatial Technology	
AS.430.629	Drones in Geospatial Decision Making	
AS.430.621	GIS for Emergency Management	
AS.470.601	Climate Change and National Security	
AS.470.667	Machine Learning and Neural Networks	
AS.470.657	Energy, Security, and Defense	
AS.470.752	Intelligence Analysis	
AS.470.697	Intelligence and Counterterrorism	
AS.470.792	Social Science in National Security and Intelligence	
AS.472.610	Commercial Imagery and the Impact of Small Satellites	
AS.472.611	Analyzing Social Media and Geospatial Information	
AS.472.612	Geospatial Analysis: Communicating with Multiple Audiences	
AS.473.601	Intelligence: From Secrets to Policy	
AS.473.607	Intelligence Ethics	

Learning Outcomes

The MS in Geospatial Intelligence weaves the history, science, mathematics, and art of geospatial analysis into a program that will enable its graduates to lead and shape this rapidly-growing intelligence discipline. The program combines recognized faculty with extensive geospatial experience and publications, an interactive and online curriculum, and the research resources, tools, and opportunities for its students to:

- Understand the history and evolution of geospatial intelligence and its enduring challenges.
- Develop the habits of mind and the conceptual framework to thrive as analysts, researchers, program leaders, and managers in the geospatial communities.
- Employ the appropriate mathematical models and scientific sensor knowledge necessary to design advanced commercial geospatial collection management for big data and small data problems, and to design geospatial databases for complex issues,
- Develop analytic processes and products as well as demonstrate the ability to communicate geospatial information and analysis accurately and persuasively in writing and briefing.
- Produce original research on the history and methodologies of geospatial intelligence.

Global Security Studies, Master of Arts

MA in Global Security Studies

globalsecurity.jhu.edu (http://globalsecurity.jhu.edu)

The curriculum of the JHU Master of Arts in Global Security Studies is designed for students who are looking to develop or expand their expertise regarding the security challenges of the 21st century. Students confront the complexities of today's security environment with the latest policy and theoretical tools for analysis and action. Particular strengths of the program are energy and environmental security; irregular warfare; intelligence; cyber and space strategy; and the economic aspects of war.

Courses draw from the best in academia and policy making in order to offer students the cutting edge in intellectual preparedness for career advancement. Classes are designed to maximize individual attention, encourage student contribution, build analytical skills, and provide the tools for engaging in original research.

This is a 12-course program, with classes offered in the evenings at the Washington, DC Center of the Johns Hopkins University (near Dupont Circle) and online. The degree can be pursued at a part-time or a full-time pace, on-site or online, or in both modes. All undergraduate majors are welcome.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

A 5-page, double-spaced essay on the following question:

"*America does not go abroad in search of monsters to destroy. She is the well-wisher to Freedom and independence of all.*" — John Quincy Adams

This quote reflects the trends in American national security for much of the nation's history. Are the implications that can be drawn from the statement consistent with the demands of American national security in the 21st century? Discuss this problem with regard to some recent policy issues or political events, citing at least three references.

PROGRAM REQUIREMENTS

- Five required core courses
- Two customizable core courses
- Five elective courses

Code	Title	Credits
Core Courses - Required:		
AS.470.603	Introduction to Global Security Studies [1]	3
AS.470.605	Global Political Economy	3
AS.470.692	Military Strategy & National Policy	3
AS.470.851	Qualitative Methods in Social Science	3
AS.470.855	Research Study Seminar	3
Core Courses - Customizable		
Select one of the following:		3
AS.470.773	Energy and Environmental Security	
AS.470.601	Climate Change and National Security	

AS.470.657	Energy, Security, and Defense	
Total Credits		**18**

[1] This class should be taken in your first semester.

Research Study Courses

This program does not require a thesis. However, it does require the completion of a rigorous research study of journal article length. The research study should make use of the techniques learned in the courses in the methods sequence below.

Code	Title	Credits
Core Courses - Customizable		
Select one the following:		3
AS.470.854	Fundamentals of Quantitative Methods	
AS.470.709	Quantitative Methods	
AS.470.853	Historical Methods	
Total Credits		**3**

Strategic Studies Concentration

Code	Title	Credits
AS.470.606	U.S. Security in a Disordered World	3

Global Security Studies, MA/ Intelligence, Certificate

MA in Global Security Studies/ Certificate in Intelligence

Students pursuing an MA in Global Security Studies may obtain an additional credential by completing courses that lead to the Certificate in Intelligence. This combined credential will prepare its graduates for careers in the U.S. Intelligence Community and in those parts of the government and private sector that use intelligence or work with the Intelligence Community. Students can complete this program with only 15 courses.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

5-page, double-spaced essay on the following question:

"*America does not go abroad in search of monsters to destroy. She is the well-wisher to Freedom and independence of all.*" — John Quincy Adams

This quote reflects the trends in American national security for much of the nation's history. Are the implications that can be drawn from the statement consistent with the demands of American national security in the 21st century? Discuss this problem in reference to some recent policy issues or political events, citing at least three references.

Program Requirements

Students pursuing a Master of Arts in Global Security Studies may obtain an additional credential by completing a sequence of courses offered by the Certificate in Intelligence. This combined credential will require students to complete 15 courses (in lieu of 17 to complete both degrees separately).

Government, MA/MBA

MA in Government/MBA Dual Degree

advanced.jhu.edu/govmba (https://advanced.jhu.edu/academics/graduate/ma-government/ma-government-mba-dual-degree/)

Management education typically addresses the public and private sectors separately. Universities typically offer the MBA degree for business leadership and the MA, MPP, or MPA for public-sector management. The assumption is that managers working in the public and private sectors are involved with completely different sets of issues and problems. The reality is that both face similar challenges, and managers frequently move from the public sector to the private sector and vice versa.

The MA in Government/MBA uniquely prepares individuals for the combination of public-and-private sector responsibilities they are likely to face during their careers. This program enables those working in government to expand their knowledge and skills in business and management, preparing them to take on leadership roles in nonprofit, public sector, or commercial enterprises. Students in these degrees complete both the professional managerial education requirements of the MBA and the advanced disciplinary requirements of a specialized MA in Government. Graduates of the Johns Hopkins University MA in Government/MBA are capable of integrating rigorous scholarship with business acumen in bringing both intellectual and strategic leadership to the complex challenges of management in government and business in today's global economy.

The MA in Government/MBA is designed with class schedules to accommodate working adults and may be taken onsite at the at the JHU Washington, DC Center (near Dupont Circle) or online. Students who pursue the dual degree will take classes in the government program at the School of Arts and Sciences and in the MBA program at the Carey Business School. They are assigned an advisor from each school who will oversee their coursework. To earn the MA in Government/MBA, students must take 10 classes in the government program and 21 classes in the Carey Business School. Dual degree recipients receive both diplomas upon completion of both programs.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

- GRE or GMAT exam
- At least two years of progressive, full-time, professional experience after the completion of undergraduate studies for the MBA.
- A writing sample of five to seven pages that is research-focused. The purpose of the writing sample is to demonstrate your ability to make and support an argument.

If you do not have an existing research paper that you wish to submit, you may write a five-page paper on the following question:

"If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing a government which is to be administered by men over men, the great difficulty lies in this: you must first enable the government to control the governed; and in the next place oblige it to control itself."

– James Madison, Federalist 51

In this well-known quote, Madison points towards the age-old problem of reconciling democracy and political power. Discuss this problem in reference to some recent policy issues or political events, citing at least three references.

A waiver from these exams may be approved if a candidate has:

- Completed a graduate degree and can demonstrate quantitative ability through coursework of B or better in statistics, corporate finance, or microeconomics.
- Completed an undergraduate degree and has at least five years of professional experience. Applicant has also taken at least one course in statistics, corporate finance, and microeconomics, earned a B or better, and earned an overall GPA of 3.0 or better.
- A professional designation, such as CPA or CFA

Program Requirements

MA in Government Courses

Code	Title	Credits
Core Course - Required:		
AS.470.602	Government & Politics	3
AS.470.695	Proseminar: Essentials of Public and Private Management	3
Electives (Eight courses)		**24**
Total Credits		**30**

Although not required, the following courses are recommended electives for students in the dual degree program:

Code	Title	Credits
Electives		
AS.470.609	Leadership Skills in the 21st Century	
AS.470.616	Political Ideas, Strategy, and Policy Implementation	
AS.470.622	Money and Politics	
AS.470.630	Congress and the Making of Foreign Policy	
AS.470.638	Negotiating as a Leadership Skill	
AS.470.641	Introduction to Advocacy and Lobbying	
AS.470.645	The Budgetary Process	
AS.470.688	Political Institutions and the Policy Process	
AS.470.721	Comparative Federalism: The United States and the European Union	
AS.470.728	Fundamentals of Nonprofits and Nonprofit Management	
AS.470.736	Methods of Policy Analytics	
AS.470.744	Trade and Security	

Students wishing to earn a concentration must complete four of their electives in the concentration area. Concentrations are offered in Political

Communication, Security Studies, and Democracy and Governance Studies. For MA/MBA students, the thesis requirement is optional. If you wish to write a thesis, you must take:

Code	Title	Credits
AS.470.850	Research and Thesis I: MA in Government	
AS.470.852	Research and Thesis II: MA in Government	
AS.470.800	Research & Thesis III: Government	

These three classes would count toward the eight government electives you must take to complete the MA/MBA. MA/MBA students who successfully complete and defend their thesis will be awarded honors at graduation.

MBA Courses

All dual-degree students are required to complete the following MBA courses. Dual degree recipients receive both diplomas upon completion of both programs.

Code	Title	Credits
Core Course - Required:		
BU.210.620	Accounting and Financial Reporting	2
BU.520.601	Business Analytics	2
BU.120.601	Business Communication	2
BU.220.620	Business Microeconomics	2
BU.231.620	Corporate Finance	2
BU.142.601	Leadership and Organizational Behavior	2
BU.410.620	Marketing Management	2
BU.680.620	Operations Management	2
BU.510.601	Statistical Analysis	2
BU.150.620	Strategic Management	2
Electives (11 courses)		**22**
Select 11 two-credit courses. Students may fulfill this requirement with any Carey courses for which they meet the pre-requisites and enrollment criteria.		
Total Credits		**42**

Government, Master of Arts

MA in Government

government.jhu.edu (https://advanced.jhu.edu/academics/graduate/ma-government/)

The curriculum of the Master of Arts in Government program is designed for working adult students who have specialized skills in a particular field and desire the broader perspective necessary for leadership in politics and administration. The courses are based on the latest scholarly and scientific knowledge but emphasize the application of such knowledge to practical governmental, political, and policymaking problems of today.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Government requires:

- A writing sample of five to 10 pages that is research-focused. The purpose of the writing sample is to demonstrate the applicant's ability to make and support an argument.

If the applicant does not have an existing research-focused writing sample that they wish to submit, the applicant may write a five-page paper responding to the following:

"If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing government which is to be administered by men over men, the great difficulty lies in this: You must first enable the government to control the governed; and in the next place oblige it to control itself." — James Madison, Federalist 51

In this well-known quote, Madison points toward the age-old problem of reconciling democracy and political power. Discuss this problem in reference to some recent policy issues or political events, citing at least three references.

PROGRAM REQUIREMENTS

- Four required core courses
- Eight elective courses (p. 2616)

Total Credits		**12**

Government, MA/Intelligence, Certificate

MA in Government/ Certificate in Intelligence

Students pursuing an MA in Government may obtain an additional credential by completing courses that lead to the Certificate in Intelligence. This combined credential prepares graduates for careers in the U.S. Intelligence Community and in those parts of the government and private sector that use intelligence or work with the Intelligence Community, as well as other parts of the national security community. Students can complete the program with 15 courses.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Interested applicants must complete all admission requirements for both the Master of Arts in Government and the Certificate in Intelligence.

In addition to the materials and credentials required for all programs, the Master of Arts in Government also requires:

- A writing sample of five to 10 pages that is research-focused. The purpose of the writing sample is to demonstrate the applicant's ability to make and support an argument.

If the applicant does not have an existing research-focused writing sample that they wish to submit, the applicant may write a five-page paper responding to the following:

"If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing government which is to be administered by men over men, the great difficulty lies in this: You must first enable the government to control the governed; and in the next place oblige it to control itself." — James Madison, Federalist 51

In this well-known quote, Madison points toward the age-old problem of reconciling democracy and political power. Discuss this problem in reference to some recent policy issues or political events, citing at least three references.

PROGRAM REQUIREMENTS

Students pursuing an MA in Government may obtain an additional credential by completing a sequence of courses offered by the Certificate in Intelligence. This combined credential will require students to complete 15 courses (in lieu of 17 to complete both degrees separately). Students are required to take the following courses:

Intelligence Analysis, Master of Science

MS in Intelligence Analysis

advanced.jhu.edu/intelligenceanalysis (https://advanced.jhu.edu/academics/graduate/ms-intelligence-analysis/)

The Master of Science in Intelligence Analysis (MSIA) provides students interested in launching or advancing their career in intelligence analysis with the core competencies needed to succeed in an array of intelligence analysis roles. The program provides a theoretical grounding in the discipline, as well as mastery of the core skills required to succeed as an intelligence analyst in the public and private sectors. JHU's MSIA degree emphasizes the critical thinking and analytical skills necessary to identify actionable insights from diverse and complex intelligence sources, and persuasively communicate those findings to decision-makers. Courses are taught by leading practitioners in the intelligence community with significant opportunities for students to engage with both faculty and their peers. Graduates of the program will be highly qualified for key roles within public and private sector intelligence agencies.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program-Specific Requirements

In addition to the general admissions criteria for all Advanced Academic Programs, applicants should submit:

- **A 1-2 page Statement of Purpose.** The Statement of Purpose explains the applicant's reasons for seeking admission and includes a plan of study addressing the applicant's analytical abilities and interest in studying the theory and practice of intelligence analysis.
- **A writing sample.** Identify an emerging trend that is likely to influence the profession of intelligence analysis. Drawing on at least three sources, detail the implications of the trend for the future of U.S. private and/or public intelligence operations and present your findings in a 1 to 2 page executive brief to a senior decision-maker.

PROGRAM REQUIREMENTS

- Ten required core courses
- Two elective courses

AS.473.668	Intelligence to Secure the Homeland and Hometown	
Total Credits		**36**

MSIA Learning Outcomes

Graduates of the Master of Science in Intelligence Analysis (MSIA) are expected to master the following key learning outcomes:

- Discern, extract, and synthesize relevant information from diffuse and extensive intelligence sources in response to current policy and security challenges.
- Employ time-sensitive critical analysis in an environment of ambiguity.
- Inform and persuade diverse audiences using oral, written, and visual media to inform decision-making.
- Evaluate ethical and legal principles in the field of intelligence analysis.
- Analyze and apply effective leadership and management skills for resourcing intelligence operations and organizations.
- Create an inclusive approach to decision-making that fosters awareness of regional and global contexts.

Intelligence, Certificate

Certificate in Intelligence

advanced.jhu.edu/academics/certificates/intelligence/ (https://advanced.jhu.edu/academics/certificates/intelligence/)

The Certificate in Intelligence at JHU is designed for students who are interested in pursuing or advancing careers in intelligence, be it in analysis, human or technical collection, or counterintelligence. It is also useful for professionals in the policy and operational world whose careers involve consuming intelligence.

The certificate can stand on its own as a credential, or students can pair it with the MA in Global Security Studies, MA in Government, MS in Data Analytics and Policy, or MA in Public Management for a combined credential. Students availing themselves of one of these options can count two of their intelligence studies courses toward their Master's degree elective requirements.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

In addition to the materials and credentials required for all programs, the Certificate in Intelligence requires:

- 500-word statement of purpose in pursuing intelligence studies. Explain your reasons for seeking admission and how you will use the degree to advance your career.
- Resume or Curriculum Vitae

PROGRAM REQUIREMENTS

Students must pass one course from each of five categories.

Code	Title	Credits
Core Courses - Customizable		**3**
AS.473.600	The Art & Practice of Intelligence	
Select one of the following:		*3*

Non-Governmental Organization (NGO) Management, Master of Arts

MA in Non-Governmental Organization (NGO) Management

advanced.jhu.edu/ngo (https://advanced.jhu.edu/academics/graduate-degree-programs/non-governmental-organization-management/)

Students are no longer being admitted to the Non-Governmental Organization Management (NGO), Master of Arts. Students interested in this area of study please see the Non-Profit Management, Master of Arts. (p. 2241)

Johns Hopkins' online Master of Arts in Non-Governmental Organization (NGO) Management provides students with the leadership, management, and organizational skills needed to succeed in the nonprofit sector, both domestically or abroad. The MA in NGO Management is made up of ten asynchronous online courses (7 core courses and 3 electives). Courses focus on nonprofit leadership, grant writing, strategic planning, project management, monitoring and evaluation, resource development, social enterprise, and international mission-based work. Students complete their studies with the Capstone Seminar where they may select one of the following options a) research project/deeper dive on a relevant aspect of non-governmental/nonprofit management; b) a project that will contribute to the social sector in some capacity; or c) a remote immersive experience working with a nonprofit/non-governmental organization. With the MA in NGO Management students and alumni may work for nonprofits, non-governmental and international agencies, foundations, think tanks, educational institutions, museums, environmental organizations, human rights and animal rights organizations, or religious institutions, among others.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in NGO Management also requires:

- Statement of Purpose: This 750-word statement should describe how your academic and/or professional experiences have led to your interest in the field of nonprofit or non-governmental management.

Program Requirements

- Seven required core courses
- Three elective courses

Code	Title	Credits
Core Courses - Required:		
AS.470.728	Fundamentals of Nonprofits and Nonprofit Management	3
AS.470.798	Financial Management and Analysis in Nonprofits	3
AS.470.625	Resource Development and Marketing in Nonprofits	3
AS.470.666	Institutional Fundraising: Raising Maximum Dollars from Government Agencies, Corporations and Foundations	3
AS.470.774	Nonprofit Governance & Executive Leadership	3
AS.470.734	Organizational Leadership and Ethics in NGO Management	3
AS.470.864	NGO Management Capstone Seminar	3

Nonprofit Management, Master of Arts

MA in Nonprofit Management

advanced.jhu.edu/Nonprofit (https://advanced.jhu.edu/academics/graduate/ma-nonprofit-management/)

Johns Hopkins' online Master of Arts in Nonprofit Management provides students with the leadership, management, and organizational skills needed to succeed in the nonprofit sector, both domestically or abroad. The MA in Nonprofit Management is made up of ten asynchronous online courses (7 core courses and 3 electives). Courses focus on nonprofit leadership, grant writing, strategic planning, project management, monitoring and evaluation, resource development, social enterprise, and international mission-based work. Students complete their studies with the Capstone Seminar where they may select one of the following options a) research project/deeper dive on a relevant aspect of nonprofit management; b) a project that will contribute to the social sector in some capacity; or c) an immersive professional experience working with a nonprofit or non-governmental organization. All capstones require a 30-60 page final paper. With the MA in Nonprofit Management students and alumni may work for nonprofits, non-governmental and international agencies, foundations, think tanks, educational institutions, museums, environmental organizations, human rights and animal rights organizations, or religious institutions, among others. Students are also eligible to work with select federal agencies, international organizations, and financial development institutions.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Nonprofit Management also requires:

- Applicants must hold a baccalaureate degree in study areas relevant to the curriculum. Applicants are accepted to the program on the understanding that they have sufficient background in a relevant field, either through their previous degree, or through relevant professional experience, to be able to complete the program.
- Statement of Purpose: This 750-word statement should describe how your academic and/or professional experiences have led to your interest in the field of nonprofit or non-governmental management and what your ambitions are for the degree. Your statement will be reviewed for content, organization, and writing style.
- Two letters of recommendation that verify professional and/or academic accomplishment. Under "Recommendations," include the contact information for two recommenders. They will be automatically emailed access information to the system. They can then complete and upload their recommendation form.

Program Requirements

- Seven required core courses
- Three elective courses

AS.470.789	International/Non-Governmental Organizations and Civil Society in Conflict Zones	
Total Credits		**30**

- Apply history, facts, data, trends and lessons learned to interpret situations that arise every day for nonprofit and non-governmental organizations including the various roles that international and national non-governmental organizations (NGOs) and civil society organizations (CSOs) play in local, national and international development, humanitarian action, and policy processes.
- Demonstrate leadership skills that are critical to effective decision-making to lead, manage, and/or oversee mission-driven organizations on issues related to a) strategic planning and theory of change, b) board management, c) strategic partnership, d) program development, e) monitoring and evaluation, f) marketing, g) fundraising and development, and others.
- Use oral and written communication skills that will enhance effective non-profit leadership from both academic and practitioner-based sources.
- Demonstrate ethical management and leadership decision-making skills specific to the needs of nonprofits and non-governmental organizations.
- Evaluate emerging trends and best practices in charitable, philanthropic, and/or advocacy organizations.

Nonprofit Management, Certificate

Certificate in Nonprofit Management

nonprofit.jhu.edu (https://advanced.jhu.edu/academics/certificates/nonprofit-management/)

The online Certificate in Nonprofit Management offers a specialized curriculum for current or aspiring nonprofit practitioners to prepare them with the leadership skills needed to advance their professional careers. Students take six electives, each designed to strengthen the skills needed by those in management or executive leadership roles in a variety of nonprofit fields. Courses help students to problem solve through specific challenges and identify unique opportunities, relevant to the social sector. Electives focus on organizational leadership, fundraising, grant writing, strategic planning, project management, social enterprise, marketing, monitoring and evaluation, among others. The certificate is relevant for students pursuing careers in nonprofits, private or public foundations, thinktanks, government, multilateral institutions, or other agencies that require extensive interaction and/or collaboration with nonprofit/ non-governmental organizations. Students are able to take courses at a full- or part-time pace. The curriculum is designed for working professionals in the social sector who are looking to expand their expertise in nonprofit management with the latest skills and approaches taught by expert faculty. The certificate in Nonprofit Management may also be combined with a Masters in Public Management, Communications, Cultural Heritage Management, or Museum Studies.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

- Applicants must hold a baccalaureate degree, or have earned one prior to enrollment.
- Statement of Purpose: This 750-word statement should describe how your academic and/or professional experiences have led to your decision to pursue an advanced credential in the field of nonprofit management, and what your ambitions are for the degree. Your statement will be reviewed for content, organization, and writing style.
- Two letters of recommendation that verify professional and/or academic accomplishment.

Public Management, Master of Arts

MA in Public Management

publicmanagement.jhu.edu (https://advanced.jhu.edu/academics/graduate/ma-public-management/)

At a time when governments are faced with an array of unprecedented challenges, good management is essential. The Johns Hopkins MA in Public Management will empower you to be strategic by teaching students the fundamentals of public management: policy analysis and evaluation, financial management, economics and fiscal policy, and public policy and administration. This innovative degree prepares emerging leaders to tackle complex public policy and management problems at all levels of government.

The schedule for completing this 12-course degree program is flexible. Many students work full-time while attending the program on a part-time basis and complete their degree in two years. The MA in Public Management is offered both online or onsite at our campus in Washington, DC.

Electives are organized into three Focus Areas:

- Public Administration and Leadership
- Public Policy Evaluation
- Public Financial Management and Budgeting

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Public Management requires:

- A writing sample of two to five pages that is policy oriented. If the applicant does not have a policy-oriented paper that they wish to submit, the applicant may write a three page, double-spaced essay on the following question:

  "A memorandum is not written to inform the reader, but to protect the writer." —Former Secretary of State Dean Acheson

  Please discuss whether you think the quote from former Secretary Acheson is accurate or not and why?

PROGRAM REQUIREMENTS

- Six required core courses
- Six elective courses

AS.470.798	Financial Management and Analysis in Nonprofits	3
AS.470.799	State Politics: A Year in the Life	3

LEARNING OUTCOMES

The MA in Public Management weaves the study of public administration, public policy, economics, quantitative and qualitative analysis, and financial management into a curriculum that enable its graduates to lead and shape this rapidly growing field. Upon completion of the program graduates will be able to:

1. Utilize analytical skills—including quantitative and qualitative tools—to assess policies and program effectiveness.

2. Appraise and compare management and organization systems utilized in public sector for the purpose of maximizing efficiency and effectiveness.

3. Design, evaluate, and experiment with specific policies with regard to their ability to meet public priorities.

4. Formulate and construct budgets and financial systems used in the public sector.

Public Management, MA/Data Analytics and Policy, Certificate

MA in Public Management / Certificate in Data Analytics and Policy

Students pursuing a MA in Public Management may obtain an additional credential by completing a sequence of courses offered by the Certificate in Data Analytics and Policy. This combined credential will require students to complete 15 courses (in lieu of 17 to complete both degrees separately).

At a time when governments are faced with an array of unprecedented challenges, good management and the ability to analyze and apply data is essential. The Johns Hopkins MA in Public Management/Certificate in Data Analytics and Policy trains students in the fundamentals of public management (policy analysis, financial management, economics and public administration) along with the ability to develop actionable insights from diverse sets of data, as well as the communication skills needed to share findings with decision makers and the public.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

In addition to the materials and credentials required for all programs, the MA in Public Management requires:

- A writing sample of two to five pages that is policy oriented. If the applicant does not have a policy-oriented paper that they wish to submit, the applicant may write a three page, double-spaced essay on the following question:

"A memorandum is not written to inform the reader, but to protect the writer." —Former Secretary of State Dean Acheson

Please discuss whether you think the quote from former Secretary Acheson is accurate or not and why?

and the Certificate in Data Analytics and Policy requires:

- Statement of purpose (two pages double-spaced): Explain your reasons for seeking admission and how you will use the certificate to advance your career. Your statement should also address your ability or potential to perform a quantitative analysis.

Total Credits		**45**

Public Management, MA/Intelligence, Certificate

MA in Public Management / Certificate in Intelligence

Students pursuing a MA in Public Management may obtain an additional credential by completing a sequence of courses offered by the Certificate in Intelligence. This combined credential will require students to complete 15 courses (in lieu of 17 to complete both degrees separately).

At a time when governments are faced with an array of unprecedented challenges, good management critical thinking, and analytical skills are essential. The Johns Hopkins MA in Public Management/Certificate in Intelligence trains students in the fundamentals of public management (policy analysis, financial management, economics and public administration) and the core skills required to succeed as an intelligence analyst in the public and private sectors.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

In addition to meeting the admissions criteria for all Advanced Academic Programs student interested in applying for the combined program need to meet the standards for both the MA in Public Management and the Certificate in Intelligence.

In addition to the materials and credentials required for all programs, the MA in Public Management requires:

- A writing sample of two to five pages that is policy oriented. If the applicant does not have a policy-oriented paper that they wish to submit, the applicant may write a three page, double-spaced essay on the following question:

  "A memorandum is not written to inform the reader, but to protect the writer." —Former Secretary of State Dean Acheson

  Please discuss whether you think the quote from former Secretary Acheson is accurate or not and why?

Public Management, MA/Nonprofit Management, Certificate

Students pursuing an MA in Public Management may obtain an additional credential by completing a sequence of courses offered by the Certificate in Nonprofit Management. This combined credential recognizes the interdependence of the governmental and nonprofit sectors and their common ground in mission-driven performance. Students who complete the combined degree will be prepared to move among the public, private, and nonprofit sectors or work for agencies that span them. This combined credential requires students to complete 16 courses (in lieu of 18 to complete both degrees separately).

Admissions Criteria for all Advanced Academic Programs (p. 2210)

In addition to the materials and credentials required for all programs, the Combined MA in Public Management/Certificate in Nonprofit Management also requires:

- Applicants must hold a baccalaureate degree in study areas relevant to the curriculum. Applicants are accepted to the program on the understanding that they have sufficient background in a relevant field, either through their previous degree, or through relevant professional experience, to be able to complete the program.
- Statement of Purpose: This 750-word statement should describe how your academic and/or professional experiences have led to your interest in the field of public management, nonprofit or non-governmental management, and what your ambitions are for the degree. Your statement will be reviewed for content, organization, and writing style.
- Two letters of recommendation that verify professional and/or academic accomplishment. Under “Recommendations,” include the contact information for two recommenders. They will be automatically emailed access information to the system. They can then complete and upload their recommendation form.

Program Requirements

Combined degree students of the MA in Public Management/Certificate in Nonprofit Management must take 16 courses in total before they are eligible to graduate. Students must take 10 Public Management courses (5 cores, 4 electives, 1 capstone) and six electives from the Certificate in Nonprofit Management degree. See below for course descriptions.

Center for Biotechnology Education

Center for Biotechnology Education

biotechnology.jhu.edu (https://advanced.jhu.edu/academics/centers/center-for-biotechnology-education/)

The Center for Biotechnology Education, established in 2010, expands the scope of biotechnology education at home and abroad to build a pipeline of students and professionals ready to succeed in graduate school, K-12 education, and the work environment in the fields of biotechnology, bioinformatics, regulatory science, and bioscience business and leadership. The mission of the Center for Biotechnology Education is to increase public awareness and understanding of biotechnology, inform educators of the resources and programs available locally and nationally, become a resource center for biotechnology information, coordinate training workshops for students and professionals, and secure funds in support of biotechnology training and education locally, nationally, and internationally. The goals of the center are to develop partnerships with industry and government organizations to provide community outreach, professional development educational opportunities, workshops, research symposia, and lecture series for academia, industry, and the general public.

Biotechnology, the application of biological systems to solve problems or make useful products, continues to expand with discoveries and lifesaving products at a breathtaking pace. The biotechnology industry harnesses advances in microbiology, cell biology, molecular biology, immunology, genomics, and proteomics to move discoveries and ideas out of the laboratory and into the product development pipeline. This dynamic field demands a multidisciplinary workforce skilled in basic research, drug discovery technologies, bioinformatics, regulatory affairs, and product commercialization.

Johns Hopkins University offers students the ability to learn, advance, and succeed in this exciting field, with a variety of learning opportunities designed to meet the needs of working adults.

Bioinformatics, Master of Science

MS in Bioinformatics

Joint Offering with the Whiting School of Engineering for Professionals

bioinformatics.jhu.edu (https://bioinformatics.jhu.edu)

Johns Hopkins University offers an innovative graduate program that prepares professionals for success in bioinformatics. Drawing from the strengths of the Krieger School of Arts and Sciences and the Whiting School of Engineering, this program fully integrates the computer science, bioscience, and bioinformatics needed to pursue a career in this dynamic field.

The MS in Bioinformatics is designed for working adults, but can be completed full-time. All classes are offered in the evening, on Saturdays, or online. Please note that not every course is available at all on-site locations. The degree can be completed online.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

Bachelor's degree from an accredited college or university in the biological sciences or in engineering. Programs require a minimum GPA of 3.0 on a 4.0 scale. Meeting the minimum GPA requirement does not guarantee admission.

- All the prerequisites listed below can be taken from the existing Master of Science in Computer Science or the Master of Science in Biotechnology program. Students who have not completed all the prerequisites may be admitted provisionally to complete the admission requirements.
  - Two semesters of organic chemistry (or AS.410.302 Bio-Organic Chemistry)
  - One semester of biochemistry (or AS.410.601 Biochemistry)
  - Introduction to programming using Java, C++, C or Python (or EN.605.201 Introduction to Programming Using Java or EN.605.206 Introduction to Programming Using Python Introduction to Programming Using Python)
  - Data structures (or EN.605.202 Data Structures)
  - One course in probability and statistics (or AS.410.645 Biostatistics)
  - Calculus
- The Admissions Committee reserves the right to request additional information from applicants, such as GRE or letters of recommendation, if needed, to assess their candidacy for admission.

Program Requirements

Students take 11 courses to complete the degree—two core required courses, seven core customizable courses, an elective from bioscience, and an elective from computer science. After completion, students may choose an independent study project (optional).

Code	Title	Credits
Core Courses - Required:		
AS.410.602	Molecular Biology	4
AS.410.610	Epigenetics, Gene Organization & Expression	4
Core Courses - Customizable		
AS.410.633	Introduction to Bioinformatics	4
or EN.605.652	Biological Databases and Database Tools	
AS.410.634	Practical Computer Concepts for Bioinformatics	4
or EN.605.641	Principles of Database Systems	
EN.605.620	Algorithms for Bioinformatics	3

MS in Bioinformatics with Thesis Option

Students interested in pursuing the MS in Bioinformatics with the thesis are required to take 12 courses. The thesis requires a two-semester research project. Students complete AS.410.800 Independent Research in Biotechnology first and AS.410.801 Biotechnology Thesis the following semester. Students interested in this option should consult with the program advisor.

Biotechnology Education, Certificate

advanced.jhu.edu/biotecheducation (https://advanced.jhu.edu/academics/certificates/biotechnology-education/)

The Certificate in Biotechnology Education incorporates the fundamental and emerging ideas in biology and biotechnology, as well as issues related to teaching and learning of bioscience at the middle and high school levels.

Middle and secondary teachers, as well as curriculum and instructional leaders, will strengthen their content knowledge and pedagogic techniques in bioscience, and develop ways to teach bioscience effectively in their classrooms.

This Certificate consists of five graduate-level courses. The Independent Research Project course will emphasize inquiry-oriented approaches and integrating technology in bioscience education.

Moreover, teachers will analyze recent research on bioscience education, reflect on their learning and practice, and develop teaching tools and assessment strategies to engage students in bioscience-related problems and inquiries.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Requirements

Code	Title	Credits
Core Courses - Required:		
AS.410.303	Foundations in Bioscience	4
AS.410.601	Biochemistry	4
AS.410.602	Molecular Biology	4
AS.410.800	Independent Research in Biotechnology	4
Core Courses - Customizable		
Select at least one of the following: [1]		4
AS.410.652	Cell Culture Techniques	
AS.410.656	Recombinant DNA Laboratory	
AS.410.658	Biodefense & Infectious Disease Laboratory Methods	
AS.410.660	Immunological Techniques in Biotechnology	
Total Credits		**20**

[1] Students must enroll in one laboratory courses offered at the Homewood campus. Laboratory courses are not offered online.

See course descriptions in the Center for Biotechnology Education (p. 2550).

Biotechnology Enterprise, Certificate

advanced.jhu.edu/biotechenterprise (https://advanced.jhu.edu/academics/certificates/biotechnology-enterprise/)

The Certificate in Biotechnology Enterprise is designed to complement students' pre-existing scientific knowledge to help them bring scientific discoveries to the wider public. Students will gain a solid understanding of the enterprise and entrepreneurial skills needed in a successful biotechnology enterprise.

This certificate consists of five graduate-level courses and is a flexible option for working professionals looking to enhance their skill set.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

- Bachelor's degree from an accredited US college or university. A bachelor's degree in the life sciences is recommended.
- Minimum GPA of 3.0 on a 4.0 scale. Meeting the minimum GPA requirement does not guarantee admission.

Program Requirements

Code	Title	Credits
Core Courses - Customizable

See course requirements in the Center for Biotechnology Education (p. 2550).

Biotechnology, Master of Science

MS in Biotechnology

advanced.jhu.edu/msbiotech (http://biotechnology.jhu.edu)

The MS in Biotechnology program offers a comprehensive exploration of basic science, applied science, and lab science, with a biotechnology focus. The program gives students a solid grounding in biochemistry, molecular biology, cell biology, genomics, and proteomics, and the flexibility for students to tailor elective coursework to meet their individual career goals. In addition to the general degree, the program offers six different concentrations:

- Biodefense
- Bioinformatics
- Biotechnology Enterprise
- Molecular Target and Drug Discovery Technologies
- Regulatory Affairs
- Regenerative and Stem Cell Technologies

Thus, students can choose to solely focus on strengthening their science knowledge and research skills, or to also develop the skills to lead lab teams, make development and planning decisions, create and apply research modalities to large projects, and take the reins of management and marketing decisions.

This 10-course degree program is thesis-optional, part-time or full-time, and can be completed fully on-site, online, or through a combination of on-site and online courses.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

In addition to the materials and credentials required for all programs, the Master of Science in Biotechnology requires:

An undergraduate degree in the natural sciences or engineering with at least a 3.0 on a 4.0 scale in undergraduate studies (relevant work experiences are also considered); applicants with degrees in other disciplines may be able to enroll if their undergraduate work included the prerequisite courses that follow:

- Two semesters of biology.
- Two semesters of college chemistry, preferably with laboratories.
- Two semesters of organic chemistry, preferably with laboratories. Students without adequate organic chemistry may be admitted provisionally to take AS.410.302 Bio-Organic Chemistry.

The Admissions Committee reserves the right to request additional information, such as a GRE score or letters of recommendation, to assess the applicant's candidacy for admission.

Program Requirements

Core Courses - Required:		
AS.410.601	Biochemistry	4
AS.410.602	Molecular Biology	4
AS.410.603	Advanced Cell Biology ("Advanced Cell Biology" starting Fall 2022)	4
AS.410.604	Cellular Signal Transduction ("Cellular Signal Transduction" starting Fall 2022)	4
Electives		
Select six elective courses [1]		24
Total Credits		**40**

[1] See course listings page (p. 2550); at least two must be science electives.

Course requirements differ for the certificate and concentration programs.

Please note: Many of the elective courses require prior completion of core courses. The core courses introduce the foundational information required for these courses.

MS in Biotechnology with Thesis Option

Students interested in pursuing the MS in Biotechnology with the thesis are required to take 11 courses. The thesis requires a two-semester research project. Students complete AS.410.800 Independent Research in Biotechnology, and then AS.410.801 Biotechnology Thesis the following semester. Students interested in this option should consult with the program advisor.

MS in Biotechnology Concentrations (Optional)

Students wishing to focus on a specialized discipline within the MS in Biotechnology program may enroll in one of seven concentrations:

- Biodefense
- Bioinformatics
- Biotechnology Enterprise
- Molecular Targets and Drug Discovery
- Regulatory Affairs
- Regenerative and Stem Cell Technologies Concentration

Concentration in Biodefense

The biodefense concentration integrates basic and translational science to train the next generation of professionals for employment in academia, industry, and government. The curriculum provides students with a solid foundation in basic science, and investigates the various applications of medical science and biotechnology for detection, identification, and response to bio threats.

Specific disciplines of study include molecular biology, infectious diseases, bioinformatics, immunology, epidemiology, molecular diagnostics, and policy.

AS.410.696	Bioassay Development	
AS.410.731	Bioprocessing and Scale-up Laboratory	
AS.410.752	High Throughput Screening & Automation Lab	
AS.410.780	Stem Cell Culture Laboratory Methods	
Total Credits		**40**

Concentration in Bioinformatics

Given the vast amount of information generated from studies on humans and other organisms, and the need for scientists and researchers to access and manipulate these data, the biotechnology program offers courses that can either be sampled individually or taken together to complete a concentration in bioinformatics.

In addition to the four core courses (Biochemistry, Molecular Biology, Advanced Cell Biology I, and Advanced Cell Biology II) and the two science electives, degree candidates must complete any four of these courses to satisfy the bioinformatics concentration requirements:

Code	Title	Credits
Bioinformatics Courses		
AS.410.633	Introduction to Bioinformatics	
AS.410.634	Practical Computer Concepts for Bioinformatics	
AS.410.635	Bioinformatics: Tools for Genome Analysis	
AS.410.639	Protein Bioinformatics	
AS.410.640	Molecular Phylogenetic Techniques	
AS.410.645	Biostatistics	
AS.410.666	Next Generation DNA Sequencing and Analysis	
AS.410.671	Gene Expression Data Analysis and Visualization	
AS.410.698	Bioperl	
AS.410.709	Cancer Genomics	
AS.410.712	Advanced Practical Computer Concepts for Bioinformatics	
AS.410.713	Advanced Genomics and Genetics Analyses	

AS.410.736	Genomic and Personalized Medicine	
AS.410.734	Practical Introduction to Metagenomics	

Concentration in Biotechnology Enterprise

For research discoveries to reach the public, an understanding of the overall enterprise of biotechnology is essential. Success in this industry requires two distinct sets of skills and perspectives: understanding the science and understanding the business. Students in this concentration must complete four core science courses, four core enterprise courses, and two science electives.

Code	Title	Credits
Biotechnology Enterprise Concentration Courses		
Select four of the following:		16
AS.410.607	Proseminar in Biotechnology	
AS.410.627	Translational Biotechnology: From Intellectual Property to Licensing [1]	
AS.410.637	Bioethics	
AS.410.638	Cancer Biology	
AS.410.642	Economic Dynamics of Change in Biotechnology	
AS.410.643	Managing and Leading Biotechnology Professionals	
AS.410.644	Marketing Aspects of Biotechnology	
AS.410.645	Biostatistics [1]	
AS.410.646	Creating a Biotechnology Enterprise	
AS.410.647	Research Ethics	
AS.410.649	Introduction to Regulatory Affairs	
AS.410.650	Legal Aspects of Biotechnology	
AS.410.651	Clinical Development of Drugs and Biologics [1]	
AS.410.665	Bioscience Communication	
AS.410.680	Finance for Biotechnology	
AS.410.684	Technology Transfer & Commercialization	
AS.410.685	Emerging Issues in Biotechnology	
AS.410.687	Ethical,Legal & Regulatory Aspects of the Biotechnology Enterprise	
AS.410.688	Project Management in Biotechnology	
AS.410.689	Leading Change in Biotechnology

Total Credits		**24**

1 The following is a list of recommended electives for the MTDDT concentration.

Concentration in Regulatory Affairs

Developed in consultation with representatives from the Food and Drug Administration, the Regulatory Affairs Professional Society, and the biotechnology industry, this concentration in the Master of Science in Biotechnology provides students with the knowledge and understanding required for companies and organizations to comply with federal and state regulatory statutes for the development, approval, and commercialization of drugs, biologics, foods, and medical devices.

Students in this concentration must complete four core science courses, four core regulatory affairs courses, and two science electives.

Code	Title	Credits
Regulatory Affairs Concentration Courses		
Select four of the following:		16
AS.410.627	Translational Biotechnology: From Intellectual Property to Licensing	
AS.410.648	Clinical Trial Design and Conduct	
AS.410.649	Introduction to Regulatory Affairs	
AS.410.651	Clinical Development of Drugs and Biologics	
AS.410.673	Biological Processes in Regulatory Affairs	
AS.410.675	International Regulatory Affairs	
AS.410.676	Food And Drug Law	
AS.410.682	Validation in Biotechnology	
AS.410.683	Introduction to cGMP Compliance	
AS.410.686	Regulation of Good Food Production Practices	
AS.410.687	Ethical,Legal & Regulatory Aspects of the Biotechnology Enterprise	
AS.410.690	International Food Regulations	
AS.410.701	Intro to Food Safety Regulation	

AS.410.702	Biomedical Software Regulation	
AS.410.715	Medical Device Regulation	
AS.410.727	Regulatory Strategies in Biopharmaceuticals	
AS.410.802	Independent Studies in Regulatory Science	
AS.410.803	Regulatory Science Thesis	
Total Credits		**16**

Students may choose any two science electives for which they have met the prerequisites.

Concentration in Regenerative and Stem Cell Technologies

Within the biotechnology industry, there is increasingly a need for highly skilled professionals in the area of regenerative technologies, who possess an in-depth understanding of stem cells, gene therapy, regenerative medicine, and the laboratory skills necessary to advance this rapidly expanding field of research and clinical development. Graduates of this concentration will fill key positions in clinical, industry, and research laboratories which are using cell therapies for treatment of diseases.

In addition to the four core courses (Biochemistry, Molecular Biology, Advanced Cell Biology I and Advanced Cell Biology II), students must complete the four concentration courses and any two electives.

Code	Title	Credits
Concentration Courses		
AS.410.630	Gene Therapy	4

Biotechnology, Master of Science/ MBA

MS in Biotechnology / MBA

advanced.jhu.edu/biomba (https://advanced.jhu.edu/academics/graduate/ms-biotechnology/ms-biotechnology-mba-dual-degree/)

Johns Hopkins University offers a dual degree graduate program that prepares bioscience professionals for success in both the science and business of biotechnology. Drawing from the strengths of the Krieger School of Arts and Sciences and the Carey Business School, this innovative program allows students to earn two advanced degrees in less time than it takes to earn them separately. Dual degree recipients receive both diplomas upon completion of both programs: one from the Krieger School of Arts and Sciences, and one from the Carey Business School.

Program Features

- Complete simultaneously or sequentially
- Receive two degrees
- Students may count 3 courses from their MS program toward the Carey 54-credit Professional MBA program and, as a result, complete the MBA with 42 credits of Carey courses
- Although not required, choose from eight in-demand specializations including business analytics and risk management; entrepreneurship, innovation, and technology; financial management; health care management, innovation, and technology; investments; digital marketing; entrepreneurial marketing; and public and private sector leadership.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

MS in Biotechnology Admissions Requirements

In addition to the materials and credentials required for all programs, the Master of Science in Biotechnology requires:

An undergraduate degree in the natural sciences or engineering with at least a 3.0 on a 4.0 scale in undergraduate studies (relevant work experiences are also considered); applicants with degrees in other disciplines may be able to enroll if their undergraduate work included the prerequisite courses that follow:

- Two semesters of biology. Students without adequate biology may be admitted provisionally to take AS.410.303 Foundations in Bioscience.
- Two semesters of college chemistry, preferably with laboratories.
- Two semesters of organic chemistry, preferably with laboratories. Students without adequate organic chemistry may be admitted provisionally to take AS.410.302 Bio-Organic Chemistry.

Additional Requirements

For the MS in Biotechnology and MBA Dual Degree, **two letters of recommendation are required**.

The Admissions Committee reserves the right to request additional information, such as a GRE score, to assess the applicant's candidacy for admission.

MBA Admissions Requirements

- GRE or GMAT exam
- At least two years of progressive, full-time, professional experience after the completion of undergraduate studies for the MBA.

A waiver of the GRE or GMAT exam may be approved if a candidate has:

- Completed a graduate degree and can demonstrate quantitative ability through coursework of B or better in statistics, corporate finance, or microeconomics.
- Completed an undergraduate degree and has at least five years of professional experience. Applicant has also taken at least one course in statistics, corporate finance, and microeconomics, earned a B or better, and earned an overall GPA of 3.0 or better.
- A professional designation, such as CPA or CFA

Program Requirements

The program requires 82 credits, 42 credits (20 credits Flex MBA Business Foundation and 22 credits of electives) for the MBA and 40 credits in Biotechnology. The 42 MBA credits must be completed with "BU" courses from the Carey Business School. Dual degree recipients receive both diplomas upon completion of both programs.

Biotechnology Requirements

Code	Title	Credits
Core Courses - Required:		
AS.410.601	Biochemistry	4
AS.410.602	Molecular Biology	4

AS.410.603	Advanced Cell Biology	4
AS.410.604	Cellular Signal Transduction	4
Electives (Six courses)		**24**
AS.410.645	Biostatistics (students who take Biostatistics may take one additional Carey Business School elective in place of BU.510.601 Statistical Analysis)	
Total Credits		**40**

MBA Requirements

Code	Title	Credits
Core Courses - Required:		
BU.210.620	Accounting and Financial Reporting	2
BU.520.601	Business Analytics	2
BU.120.601	Business Communication	2
BU.220.620	Business Microeconomics	2
BU.231.620	Corporate Finance	2
BU.142.601	Leadership and Organizational Behavior	2
BU.410.620	Marketing Management	2
BU.680.620	Operations Management	2
BU.510.601	Statistical Analysis (Students who complete AS.410.645 Biostatistics may take an additional Carey Business Elective in place of BU.510.601 Statistical Analysis.)	2
BU.150.620	Strategic Management	2
Electives (22 credits)		**22**
Select 11 two-credit courses. Students may fulfill this requirement with any Carey courses for which they meet the pre-requisites and enrollment criteria.		
Total Credits		**42**

Food Safety Regulation, Master of Science

MS in Food Safety Regulation

advanced.jhu.edu/foodsafety (https://advanced.jhu.edu/academics/graduate/ms-food-safety-regulation/)

The Master of Science in Food Safety Regulation is designed to provide students with an understanding of the legal and regulatory complexities of food production, labeling, and distribution. The program helps prepare students to assist companies and organizations that grow, process, distribute, or sell foods and beverages to maintain compliance with federal and state regulatory statutes for the production, distribution, and commercialization of food products.

This 10-course degree program can be completed part- or full-time either online or through a combination of on-site and online courses. The curriculum offers hands-on, real-life food safety regulatory experience through case studies and other assignments taught by professionals in the field of food safety.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

In addition to the materials and credentials required for all programs, the Master of Science in Food Safety Regulation requires:

- One semester of biochemistry at the undergraduate or graduate level
- One semester of organic chemistry at the undergraduate or graduate level, or AS.410.302 Bio-Organic Chemistry (available to students admitted provisionally only)
- An undergraduate degree in the life sciences or engineering from a four-year college with at least a 3.0 on a 4.0 scale. Meeting the minimum GPA requirement does not guarantee admission.
- If a candidate does not have the necessary science prerequisites but meets all the other requirements, this candidate may be admitted provisionally. A provisional student is required to take AS.410.303 Foundations in Bioscience.

The Admissions Committee reserves the right to request additional information from applicants, if needed, to assess their candidacy for admission.

Program Requirements

Code	Title	Credits
Core Courses - Required:		
AS.410.674	Food Microbiology	4
AS.410.686	Regulation of Good Food Production Practices	4
AS.410.700	Food Labeling and Packaging Regulations	4
AS.410.701	Intro to Food Safety Regulation	4
AS.410.716	Food Toxicology	4
AS.410.717	Risk Assessment and Management	4
AS.410.718	Food Safety Audits and Surveillance	4
Electives		
Select three electives. The three electives can be chosen from any of the Center for Biotechnology Education program courses for which a student has met the prerequisites.		12
Total Credits		**40**

- Interpret existing food regulations from the FDA and USDA
- Apply existing food regulations to real-world scenarios
- Assess risk based on known/ anticipated assumptions
- Distinguish the methods to detect, quantify, and control microbial growth
- Analyze the requirements of Good Manufacturing Practices regulations in the United States
- Demonstrate ability to communicate scientifically both orally and in writing.
- Demonstrate the ability to collaborate in a diverse group to achieve an objective

Individualized Genomics and Health, Master of Science

MS in Individualized Genomics and Health

advanced.jhu.edu/igh (https://advanced.jhu.edu/academics/graduate/ms-individualized-genomics-health/)

Individualized genomics and health is a rapidly growing area of research and applied science. The growth is due in large part to the increasing dependence on DNA and RNA sequence analysis of human and microbial genomes for diagnosis and treatment of disease. This emerging field requires a workforce with multi-disciplinary skills in bioinformatics, bioscience, regulatory science, policy, and ethics. The goal of this degree program is to produce a highly skilled workforce with the theoretical knowledge and practical skills to meet the demands of the academic, research, and business communities.

As the field of individualized genomics and health requires practitioners to have multiple competencies, the core of the Master's degree will include foundation courses in epigenetics, human molecular genetics, ethical, legal and regulatory aspects of individualized genomics, bioinformatics, and individual genome analysis. After completion of the core requirements, students may choose to concentrate in Laboratory Diagnostics, Genomics, Regulatory Science or Policy, or choose a general concentration.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Science in Individualized Genomics and Health requires:

- A 4-year bachelor's degree in the life sciences or engineering with a grade-point average of at least 3.0 on a 4.0
- Organic chemistry or AS.410.302 Bio-Organic Chemistry
- Biochemistry or AS.410.601 Biochemistry
- Advanced cell biology I, or AS.410.603 Advanced Cell Biology
- Molecular biology, or AS.410.602 Molecular Biology
- Biostatistics or AS.410.645 Biostatistics

The Admissions Committee reserves the right to request additional information, such as a GRE score or letters of recommendation, from applicants to assess their candidacy for admission.

PROGRAM REQUIREMENTS

- Six required core courses
- Four electives

Code	Title	Credits
Core Courses - Required:		
AS.410.610	Epigenetics, Gene Organization & Expression	4
AS.410.612	Human Molecular Genetics	4
AS.410.629	Genes & Disease	4
AS.410.633	Introduction to Bioinformatics	4
AS.410.687	Ethical,Legal & Regulatory Aspects of the Biotechnology Enterprise	4
AS.410.736	Genomic and Personalized Medicine	4
Electives (Four required)		**16**
Total Credits		**40**

Electives

Choose any graduate level course from the Biotechnology Center. (p. 2550)

Concentrations

LabOratory Diagnostics

Code	Title	Credits
Electives		
Select three of the following:		12
AS.410.641	Clinical & Molecular Diagnostics	
AS.410.656	Recombinant DNA Laboratory	
AS.410.659	Advanced Recombinant DNA Lab	
AS.410.666	Next Generation DNA Sequencing and Analysis	
AS.410.671	Gene Expression Data Analysis and Visualization	
Total Credits		**12**

Genomics

Code	Title	Credits
Electives		
Select three of the following:		12
AS.410.634	Practical Computer Concepts for Bioinformatics	
AS.410.635	Bioinformatics: Tools for Genome Analysis	
AS.410.666	Next Generation DNA Sequencing and Analysis	
AS.410.671	Gene Expression Data Analysis and Visualization	
AS.410.709	Cancer Genomics	
AS.410.734	Practical Introduction to Metagenomics	
Total Credits		**12**

Regulatory

Code	Title	Credits
Electives		
Select three of the following:		
AS.410.676	Food And Drug Law	4
AS.410.702	Biomedical Software Regulation	4
AS.410.721	In Vitro Diagnostic Regulation	4
Total Credits		**12**

Policy

Code	Title	Credits
Electives		
Select three of the following:		12
AS.410.708	Medical Product Reimbursement	
AS.410.721	In Vitro Diagnostic Regulation	
Additional courses being developed		
Total Credits		**12**

MS in Individualized Genomics and Health with Thesis Option

Students interested in pursuing the MS in Individualized Genomics and Health with the thesis are required to take 11 courses. The thesis requires a two-semester research project. Students complete AS.410.800 Independent Research in Biotechnology, and then AS.410.801 Biotechnology Thesis the following semester. Students interested in this option should consult with the program adviser.

LEARNING OUTCOMES

Students will be able to:

- Explain the molecular and genetic basis for human disease including the role of epigenetic.
- Analyze interaction between Inherited, symbiotic, disease, and environmental inputs to health.
- Apply bioinformatics tools to the analysis of human DNA sequences.
- Explain the ethical, legal and regulatory aspects of individualized genomics and health.
- Discuss the laboratory methods required to identifying genes responsible for disease.

Master of Biotechnology Enterprise and Entrepreneurship

Master of Biotechnology Enterprise and Entrepreneurship

advanced.jhu.edu/mbee (https://advanced.jhu.edu/academics/graduate-degree-programs/biotechnology-enterprise-and-entrepreneurship/)

For a biotechnology enterprise to be successful, it requires trained professionals with rigorous training in science as well as being skilled in the complexities of biotechnology commercialization. This program combines both to help build the biotechnology workforce of tomorrow. It is intended for biotechnology professionals who seek a career beyond the lab bench in an existing private enterprise or government organization or for those who seek to start a new biotechnology enterprise.

This program is designed for full-time working adults, primarily delivered in an online format, and taught by faculty that work in the industry (both private enterprise and government). The curriculum is designed to prepare the next generation of interdisciplinary professionals to address current and future challenges in the biotechnology industry.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

In addition to the materials and credentials required for all programs, the Master of Science in Biotechnology Enterprise and Entrepreneurship requires:

- One semester of biochemistry and cell biology at the undergraduate or graduate level. Those that do not but have a strong background will be considered but might be asked to take AS.410.303 Foundations in Bioscience
- An undergraduate degree in the life sciences or engineering from a four-year college with at least a 3.0 on a 4.0 scale. Meeting the minimum GPA requirement does not guarantee admission.

The Admissions Committee reserves the right to request additional information from applicants, if needed, to assess their candidacy for admission.

Program Requirements

- Six required core courses
- One customizable core course
- Three electives

Code	Title	Credits
Core Courses - Required:		
AS.410.607	Proseminar in Biotechnology	4
AS.410.627	Translational Biotechnology: From Intellectual Property to Licensing	4
AS.410.644	Marketing Aspects of Biotechnology	4
AS.410.680	Finance for Biotechnology	4
AS.410.687	Ethical,Legal & Regulatory Aspects of the Biotechnology Enterprise	4
AS.410.804	Practicum in Biotechnology Enterprise & Entrepreneurship	4
Core Course - Customizable		**4**
Select one of the following:		
AS.410.643	Managing and Leading Biotechnology Professionals	
AS.410.689	Leading Change in Biotechnology	
Electives (three required)		**12**
Total Credits		**40**

Master of Biotechnology Enterprise and Entrepreneurship Concentration (Optional)

Students wishing to focus on a specialized discipline within the Master of Biotechnology Enterprise and Entrepreneurship program may enroll in a concentration in Biotechnology Legal/Regulatory.

In addition to the seven core courses, degree candidates must complete any three of these courses to satisfy the Biotechnology Legal/Regulatory concentration requirements:

Code	Title	Credits
Electives		
Select three of the following:		12
AS.410.648	Clinical Trial Design and Conduct	
AS.410.650	Legal Aspects of Biotechnology	
AS.410.651	Clinical Development of Drugs and Biologics	
AS.410.673	Biological Processes in Regulatory Affairs	
AS.410.676	Food And Drug Law	
AS.410.683	Introduction to cGMP Compliance	
AS.410.684	Technology Transfer & Commercialization	
Total Credits		**12**

See list of courses in the Center for Biotechnology Education (p. 2550).

- Apply leadership strategies that leverage the interdisciplinary nature of the biotechnology industry in the areas of business, science, and regulation
- Construct business plans incorporating business, science, and regulatory components to assess innovative life science technologies
- Apply specialized financial acumen to create sound financial funding strategies for the life science industry
- Defend a business strategy for a company in the life science industry
- Demonstrate ability to communicate scientifically both orally and in writing.
- Demonstrate the ability to collaborate in a diverse group to achieve an objective

Regulatory Science, Master of Science

MS in Regulatory Science

regulatory.jhu.edu (https://advanced.jhu.edu/academics/graduate/ms-regulatory-science/)

There are thousands of potential medical products (drugs, biologics, devices) currently in the development pipelines of pharmaceutical and biotechnology companies - not to mention those that have already been granted marketing authorization across the globe. All of these require regulatory professionals to ensure compliance with U.S. Food and Drug Administration rules and regulations and/or their equivalents in other countries. This program prepares students to become leaders in the regulatory field by helping them to become fluent in the regulation of medical products both in the U.S and overseas.

The program is designed for full-time working adults, primarily delivered in an online format, and taught by faculty that work in the industry (both private enterprise and government).

The curriculum is designed to prepare the next generation of interdisciplinary professionals to address current and future challenges in the industry.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Science in Regulatory Sciences requires:

- Bachelor's degree from an accredited US college or university in the life sciences or in engineering.
- One semester of biochemistry and one semester of cell biology at the undergraduate or graduate level

The Admissions Committee reserves the right to request additional information from applicants, if needed, to assess their candidacy for admission.

PROGRAM REQUIREMENTS

- Seven core courses
- Three electives

The three electives can be chosen from any of the Center for Biotechnology Education courses (p. 2550) for which a student has met the prerequisites.

Code	Title	Credits
Core Course - Required:		
AS.410.627	Translational Biotechnology: From Intellectual Property to Licensing	4
AS.410.649	Introduction to Regulatory Affairs	4
AS.410.651	Clinical Development of Drugs and Biologics	4
AS.410.673	Biological Processes in Regulatory Affairs	4
AS.410.676	Food And Drug Law	4
AS.410.683	Introduction to cGMP Compliance	4
AS.410.679	Practicum in Regulatory Science	4
Electives:		
Select three electives		12
Total Credits		**40**

- Justify recommendations to pursue a particular regulatory/clinical path from a legal and scientific point of view
- Identify the relationships between clinical trials, the approval process for medical products, and the impact of labeling
- Demonstrate ability to apply guidances and evaluate all aspects of clinical trials.
- Develop a regulatory strategy document for a medical product
- Analyze the requirements of Good Manufacturing Practices regulations for medical products
- Examine the relationships between medical product development and underlying scientific principles
- Identify the legal and regulatory requirements for all stages of medical products
- Demonstrate ability to communicate scientifically both orally and in writing.
- Demonstrate the ability to collaborate in a diverse group to achieve an objective

Sequence Analysis and Genomics, Post-Master's Certificate

advanced.jhu.edu/sequence (https://advanced.jhu.edu/academics/certificates/sequence-analysis-genomics/)

The field of bioinformatics is continually expanding and challenging our ability to bridge the gap between molecular biology and computer technology. Specifically, the revolution in sequencing technology has resulted in vast quantities of data that require storage and analysis. The analysis of nucleic acid and protein data requires specialized bioinformatics tools and an understanding of genomics. The emerging sequencing technologies and accompanying bioinformatics tools will advance personalized medicine, pharmacogenomics, and molecular diagnostics methods. The advancement of these tools will open new avenues of research on many fronts.

This certificate is targeted at scientists who already have grounding in biochemistry, molecular biology, and cell biology, and do not need advanced computer skills; thus, they do not require all the core requirements of the other two master's programs. It introduces students to the foundations of bioinformatics through the core bioinformatics courses, and then the students take upper-level courses that are required for understanding and performing sequence and genomic analysis. The program is offered both online and on-site.

Admission Requirements

- Master's or doctoral degree in the biological sciences or engineering from an accredited institution
- One semester of biochemistry or equivalent, or AS.410.601 Biochemistry
- One semester of molecular biology or equivalent or AS.410.602 Molecular Biology

Code	Title	Credits
Core Courses - Required:		
AS.410.633	Introduction to Bioinformatics	4
AS.410.634	Practical Computer Concepts for Bioinformatics	4
AS.410.635	Bioinformatics: Tools for Genome Analysis	4
or AS.410.666	Next Generation DNA Sequencing and Analysis	
Elective Courses		
Select two of the following:		8
AS.410.635	Bioinformatics: Tools for Genome Analysis	
AS.410.639	Protein Bioinformatics	
AS.410.640	Molecular Phylogenetic Techniques	
AS.410.645	Biostatistics	
AS.410.666	Next Generation DNA Sequencing and Analysis	
AS.410.671	Gene Expression Data Analysis and Visualization	
AS.410.709	Cancer Genomics	

AS.410.712	Advanced Practical Computer Concepts for Bioinformatics	
AS.410.713	Advanced Genomics and Genetics Analyses	
AS.410.734	Practical Introduction to Metagenomics	
AS.410.736	Genomic and Personalized Medicine	
Total Credits		**20**

See course requirements in the Center for Biotechnology Education (p. 2550).

Communication, Master of Arts

MA in Communication

communication.jhu.edu (https://advanced.jhu.edu/academics/graduate/ma-communication/)

The Master of Arts in Communication program helps professionals advance or switch their careers. Although our diverse group of students is already working in the field of communication and looking for additional training to advance, some are transitioning from another field. Regardless, the majority of our graduates testify that the master's degree helps with getting a new position. Our alumni are managers, directors, vice presidents, presidents, and other leaders in various organizations, such as government agencies, associations, nonprofits, and corporations. Students and alumni have access to our exclusive job opportunities network and career services center. This degree provides a great opportunity to hone or perfect your communication skills, learning from leaders in the field. It is not necessarily a path to a PhD program in that it is geared toward providing practical, leading-edge skills that will prepare students to be leaders in the field.

Learning Outcomes

The curriculum of the Master of Arts in Communication program aims for the following learning outcomes for students:

1. Critically interpret social science communication theories and their role in developing effective messaging
2. Evaluate and summarize scientific communication research
3. Assess the effectiveness of communication messaging in diverse settings
4. Develop effective content that mirrors real-world communication needs

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

- Statement of purpose: Explain why you are interested in earning the Master of Arts in Communication and how it will help your career or other goals. Double space your essay and limit it to 500 words or less (place the word count at the end of the document).
- Writing sample: Please go to the online application to download instructions for your writing sample.

Program Requirements

Code	Title	Credits
Core Course - Required:		
AS.480.600	Research & Writing Methods	3
Core Courses - Customizable		
Select three of the following:		9
AS.480.601	Foundations of Digital Media	
AS.480.602	Changing Behavior through Communication	
AS.480.604	Theory of Mass Communication Practices	
AS.480.606	Persuasion	
AS.480.804	Practicum	
Electives (select six electives)		**18**
Total Credits		**30**

Concentrations

Students are not required to specify a concentration. Students who want a concentration may identify one, or occasionally two, of the fields listed below. A single course cannot count toward two concentrations. Students may take electives in any area regardless of concentration. To earn a concentration, students may have to take in-person and online courses. Although it is possible for online students to earn a concentration, there is no guarantee enough courses will be available online for all concentrations. Concentrations appear on transcripts but not diplomas.

Public and Media Relations

The concentration in public relations and media covers everything from pitching and planning, to budgeting and executing a comprehensive communication campaign. Private companies, nonprofit organizations, and federal agencies all employ communication strategies and need employees knowledgeable in theory and practice. Students must complete at least three of the following electives:

Code	Title	Credits
AS.480.603	Communication in Practice	3
AS.480.613	Communication Ethics in Action	3
AS.480.622	Branding by Motion Picture	3
AS.480.629	Public Relations in the Age of Digital Influence	3
AS.480.634	Journalism & Publishing in the Digital Age	3
AS.480.635	Communication.org:Not-for-Profits in the Digital Age	3
AS.480.637	Using Social and Digital Media	3
AS.480.638	Utilizing Images: Media Literacy In Practice	3
AS.480.642	Corporate Social Responsibility Campaigns	3
AS.480.643	Branding and Advertising	3
AS.480.645	Health Literacy, Language and Culture	3
AS.480.653	Communicating for Social Change	3
AS.480.654	Strategic Communication Program Management	3
AS.480.657	Introduction to Public Relations	3
AS.480.658	Public Relations Writing	3
AS.480.659	Risk and Crisis Communication	3
AS.480.660	Media Relations	3
AS.480.661	International Public Relations and Public Diplomacy	3
AS.480.662	Opinion Writing	3
AS.480.663	Integrated Marketing Communication	3
AS.480.665	Speech Writing	3
AS.480.668	Understanding Markets and Audiences	3
AS.480.678	Spokesperson Development & Training	3

AS.480.681	Communication Evaluation	3
AS.480.685	Argument & Public Address	3

Political Communication

The concentration in political communication addresses issues from campaign strategies to running a press office to influencing public policy. Whether people are governing, running for office, or pushing for policy change, communication lies at the heart of politics.

Students must complete at least three of the following electives:

Code	Title	Credits
AS.480.603	Communication in Practice	3
AS.480.613	Communication Ethics in Action	3
AS.480.622	Branding by Motion Picture	3
AS.480.632	Digital Political Strategy	3
AS.480.637	Using Social and Digital Media	3
AS.480.638	Utilizing Images: Media Literacy In Practice	3
AS.480.645	Health Literacy, Language and Culture	3
AS.480.658	Public Relations Writing	3
AS.480.659	Risk and Crisis Communication	3
AS.480.661	International Public Relations and Public Diplomacy	3
AS.480.662	Opinion Writing	3
AS.480.665	Speech Writing	3
AS.480.668	Understanding Markets and Audiences	3
AS.480.675	Public Policy Management & Advocacy	3
AS.480.678	Spokesperson Development & Training	3
AS.480.685	Argument & Public Address	3

Health Communication

The concentration in health communication covers how to develop and evaluate effective public information campaigns, how to manage the demands placed on communication specialists during a crisis, and how to incorporate behavior change messages into a variety of channels and genres, such as entertainment. Health communication professionals must develop, deliver, and evaluate modern health communication programs. This concentration explores what has been done, what works, and why.

Students must complete at least three of the following electives:

Code	Title	Credits
AS.480.603	Communication in Practice	3
AS.480.613	Communication Ethics in Action	3
AS.480.622	Branding by Motion Picture	3
AS.480.638	Utilizing Images: Media Literacy In Practice	3
AS.480.640	Health Communication	3
AS.480.645	Health Literacy, Language and Culture	3
AS.480.653	Communicating for Social Change	3
AS.480.654	Strategic Communication Program Management	3
AS.480.659	Risk and Crisis Communication	3
AS.480.668	Understanding Markets and Audiences	3
AS.480.681	Communication Evaluation	3
AS.480.682	Health Psychology & Behavior Change	3
AS.480.686	Behavior Change and Education through Entertainment	3
AS.480.687	Intercultural Communication	3

Digital Communication

The concentration in digital communication examines the strategic use of digital technologies for communication professionals. This concentration addresses how to use the Web and social media to reach out to diverse public groups and how to incorporate digital with traditional communication campaigns. Digital communication tools are an important part of the modern communication workplace.

Students must complete at least three of the following electives:

Code	Title	Credits
AS.480.603	Communication in Practice	3
AS.480.622	Branding by Motion Picture	3
AS.480.629	Public Relations in the Age of Digital Influence	3
AS.480.632	Digital Political Strategy	3
AS.480.633	Interactive Marketing and Advertising	3
AS.480.634	Journalism & Publishing in the Digital Age	3
AS.480.635	Communication.org:Not-for-Profits in the Digital Age	3
AS.480.636	Web Writing and Content Strategy	3
AS.480.637	Using Social and Digital Media	3
AS.480.638	Utilizing Images: Media Literacy In Practice	3
AS.480.639	Advanced Social Media Management	3
AS.480.645	Health Literacy, Language and Culture	3
AS.480.668	Understanding Markets and Audiences	3

Corporate and Nonprofit Communication

The concentration in corporate and nonprofit communication examines all of the important components of communication in an organizational context. Students study how managers communicate with staff members effectively across the organization, how businesses and nonprofits communicate with the media, and how advertisers and marketers persuade potential consumers and donors. Successful organizations have solid internal and external communication strategies. Students must complete at least three of the following electives:

Code	Title	Credits
AS.480.603	Communication in Practice	3
AS.480.605	Organizational Communication	3
AS.480.613	Communication Ethics in Action	3
AS.480.622	Branding by Motion Picture	3
AS.480.633	Interactive Marketing and Advertising	3
AS.480.635	Communication.org:Not-for-Profits in the Digital Age	3
AS.480.637	Using Social and Digital Media	3
AS.480.638	Utilizing Images: Media Literacy In Practice	3
AS.480.642	Corporate Social Responsibility Campaigns	3
AS.480.643	Branding and Advertising	3
AS.480.645	Health Literacy, Language and Culture	3
AS.480.646	Managerial Communication	3
AS.480.653	Communicating for Social Change	3
AS.480.654	Strategic Communication Program Management	3
AS.480.657	Introduction to Public Relations	3

AS.480.659	Risk and Crisis Communication	3
AS.480.660	Media Relations	3
AS.480.663	Integrated Marketing Communication	3
AS.480.665	Speech Writing	3
AS.480.668	Understanding Markets and Audiences	3
AS.480.675	Public Policy Management & Advocacy	3
AS.480.681	Communication Evaluation	3
AS.480.687	Intercultural Communication	3

Applied Research in COMMUNICATION

Applied Research in Communication The concentration in applied research prepares students to assess the research needs of a communication effort; design theory-based formative, process, and summative evaluation studies; execute quantitative and qualitative methods; analyze data using thematic, descriptive, and inferential approaches; and use results to plan and refine communication efforts. Students must complete at least three of the following electives:

Code	Title	Credits
AS.480.608	Analytic Techniques in Communication Research	
AS.480.609	Applied Qualitative Research	
AS.480.681	Communication Evaluation	
AS.480.804	Practicum	
AS.480.800	Thesis	

Communication, Master of Arts/MBA

MA in Communication / MBA

Dual Degree Program with the Carey Business School

advanced.jhu.edu/commba (https://advanced.jhu.edu/academics/graduate/ma-communication/ma-communication-mba-dual-degree/)

The university allows students to simultaneously pursue a Master of Arts in Communication in the School of Arts and Sciences and a Master of Business Administration at the Carey Business School. To pursue these dual degrees, students must apply and be accepted to both programs. Students who successfully complete the requirements for both degrees will receive two separate degrees. Students may complete one degree first and be awarded the diploma before continuing with the second degree, or strive toward both degrees concurrently. Pending graduates must complete the graduation application for each school. Dual-degree students may participate in both commencement exercises.

Leaders in business and industry recognize the importance of communication, but few MBA programs offer communication courses. At the same time, communication professionals recognize the importance of good business practices, but programs rarely offer courses in business. The Master of Arts in Communication/Master of Business Administration dual degree program was developed to fill that need. It helps advance the careers of managers in public and media relations, advertising, crisis communication, organizational development, and risk communication. Students and alumni have access to our exclusive job opportunities network and career services center.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

Individuals who wish to apply for the dual MA in Communication/MBA program must apply through Advanced Academic Programs. They can apply to both programs concurrently, or they can start with one program and then apply for the dual degree by submitting an application to the second program through the AAP Admissions Office. The MA in Communication program will consider applicants for the MA in Communication portion of the degree, while the MBA program will consider applicants for the MBA portion of the degree. An individual can be accepted by one rather than both programs; in this case, that person can decide whether to enroll in the single program. (The Admissions Committees reserve the right to request additional information from applicants, if needed, to assess their candidacy for admission. All application materials submitted to Advanced Academic Programs become the property of the Johns Hopkins University and will not be returned to applicants under any circumstances.)

- The MA in Communication and MBA programs have different requirements for GRE or GMAT scores:
  The MA in Communication program may require GRE scores. The program waives this requirement for applicants who have (a) a cumulative undergraduate GPA of 3.0 or higher or (b) five or more years of full-time work experience after earning an undergraduate degree. Submit results directly to the Advanced Academic Programs Office of Admissions, using the code 8747. Photocopies will not be accepted.
  The MBA program may require the GMAT or GRE scores. A waiver from these exams may be approved if a candidate has:
  - Completed a graduate degree and can demonstrate quantitative ability through coursework of B or better in statistics, corporate finance, or microeconomics.
  - Completed an undergraduate degree and has at least five years of professional experience. Applicant has also taken at least one course in statistics, corporate finance, and microeconomics, and earned a B or better and earned an overall GPA of 3.0 or better.
  - Holds a professional designation, such as CPA or CFA.
- Statement of purpose: Explain why you are interested in earning the dual MA in Communication/MBA and how it will help your career. Double space your essay and limit it to 500 words or less (place the word count at the end of the document).
- Writing sample: Please go to the online application to download instructions for your writing sample.

Total Credits		**42**

Communication, Master of Arts/ Nonprofit Management, Certificate

Combined Master of Arts in Communication/Certificate in Nonprofit Management

The university allows students to simultaneously pursue a Master of Arts in Communication and Certificate in Nonprofit Management in the School of Arts and Sciences. To enroll in both programs, students must apply and be accepted to both programs. Students who successfully complete the requirements in both programs will receive two separate documents —a communication diploma and nonprofit certificate. Students may complete one program first before continuing with the second program or be in both programs concurrently. Pending graduates must complete the graduation application for each school. Students who finish the combined program participate in a single commencement ceremony.

Professionals with sharpened skills in the social science of communication will be able to apply those skills to mission-driven nonprofit organizations. Upon graduating from the combined program, individuals will be well prepared to lead their nonprofit employers in designing and implementing communication campaigns that promote reforms in public policy, mobilize constituencies to lobby their elected officials, advance their goals through public and media relations, or change behaviors in ways that improve the health, well-being, and public safety of all. Even if students pursue careers in the corporate or public sectors, they are highly likely to interact with nonprofit or nongovernmental organizations, or serve on nonprofit boards of directors. All of these roles require an understanding of the impact of nonprofits in the U.S. and other countries, and the principles and challenges of managing them, including what it means to supervise a volunteer workforce and raise money through the generosity of others.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

Individuals who wish to apply for the combined MA in Communication/ Certificate in Nonprofit Management program must apply through Advanced Academic Programs. They can apply to both programs concurrently, or they can start with one program and then apply for the combined program by submitting an application to the second program through the AAP Admissions Office. The MA in Communication program will consider applicants for the MA in Communication portion, while the Certificate in Nonprofit Management program will consider applicants for the Certificate in Nonprofit Management portion. An individual can be accepted by one rather than both programs; in this case, that person can decide whether to enroll in the single program. (The Admissions Committees reserve the right to request additional information from applicants, if needed, to assess their candidacy for admission. All application materials submitted to the Advanced Academic Programs become the property of the Johns Hopkins University and will not be returned to applicants under any circumstances.)

- Statement of Purpose: Explain why you are interested in entering the MA in Communication and Certificate in Nonprofit Management combined program, and how it will help your career or other goals. Double space your essay and limit it to 500 words or fewer (place the word count at the end of the document).
- Writing Sample: Effective for summer 2015 and beyond, applicants to the MA in Communication program must submit a writing sample. Please click here to download the instructions and article for your writing sample. This exercise asks you to write a single, brief paragraph. It should not take the form of a larger document, such as a letter, an email, a report, or a plan. Submit one paragraph with no more than 250 words.
- GRE scores: The MA in Communication and Certificate in Nonprofit Management programs have different requirements for GRE scores:
  - The MA in Communication program may require GRE scores. The program waives this requirement for applicants who have a cumulative undergraduate GPA of 3.0 and higher or at least five years of full-time work experience after completing college. Submit results directly to the Advanced Academic Programs Office of Admissions, using the code 8747. Photocopies will not be accepted.
  - The Certificate in Nonprofit Management program does not require GRE scores.

Program Requirements

Communication Program Curriculum

The combined MA in Communication/Certificate in Nonprofit Management program enables students to reduce their course load. If students were to complete the two programs separately, they would complete a total of 16 courses. Yet students in the combined program take a total of 14 courses. Please note that students must complete all 14 courses before they are eligible to apply for graduation. Students must take the following courses from the MA in Communication program:

Code	Title	Credits
Core Courses - Required:		
AS.480.600	Research & Writing Methods	3

AS.480.602	Changing Behavior through Communication	3
Core Courses - Customizable		
Select two of the following:		*6*
AS.480.601	Foundations of Digital Media	
AS.480.604	Theory of Mass Communication Practices	
AS.480.606	Persuasion	
AS.480.804	Practicum	
Select at least one of the following:		*3*
AS.480.635	Communication.org:Not-for-Profits in the Digital Age	
AS.480.653	Communicating for Social Change	
AS.480.654	Strategic Communication Program Management	
AS.480.675	Public Policy Management & Advocacy	
Select five electives		**15**
Total Credits		**30**

Certificate in Nonprofit Management Curriculum

```
Students must complete four courses under the Nonprofit Management
 program.
```

Code	Title	Credits
Select four of the following:		12
AS.470.625	Resource Development and Marketing in Nonprofits	
AS.470.666	Institutional Fundraising: Raising Maximum Dollars from Government Agencies, Corporations and Foundations	
AS.470.682	Mission Meets Profit: Building a Social Enterprise	
AS.470.689	NGOs in Development and Global Policy-Making	
AS.470.728	Fundamentals of Nonprofits and Nonprofit Management	
AS.470.774	Nonprofit Governance & Executive Leadership	
AS.470.789	International/Non-Governmental Organizations and Civil Society in Conflict Zones	
AS.470.798	Financial Management and Analysis in Nonprofits	
Total Credits		**12**

Cultural Heritage Management, Master of Arts

MA in Cultural Heritage Management

advanced.jhu.edu/heritage (https://advanced.jhu.edu/academics/graduate/ma-cultural-heritage-management/)

The challenges of the 21st century and the expansion of heritage tourism worldwide have increased the need for forward-thinking management and preservation strategies. With a focus on emergent technology and its impact on conservation, preservation, and engagement; together with integrated approaches to management, and community and stakeholder partnerships, Johns Hopkins University offers an innovative, online graduate degree in Cultural Heritage Management. This degree program immerses students in a broad context of cultural heritage issues, including social, environmental, and economic trends, and provides them with the qualifications needed to assume leadership and management roles in the cultural heritage sector.

We train leaders in the field that embrace our shared humanity and heritage in order to advance its interpretation, documentation, preservation, and management for the betterment of a global society.

Our program is built around several guiding principles:

- We incorporate an inclusive definition of heritage beyond sites, monuments, and artifacts, to include full landscapes, environments, and intangible heritage.
- We recognize grassroots efforts and community buy-in as critical to successful management strategies.
- We support an integrated approach to management and a wide understanding of its ties to sustainability, development, and community.
- We take full advantage of our online medium by focusing on emergent technologies related to the field and their impact on preservation, engagement, documentation, and asset management.
- In addition to a sustained focus on digital technologies, the program is framed through a global lens, situating the local, regional, and national within a global context.

We welcome students from around the world interested in cultural heritage management. The interdisciplinary nature and international focus and concern of cultural heritage are supported well in the online format where domestic and international students have the opportunity to learn together.

The MA in Cultural Heritage Management faculty is made up of highly regarded experts in the heritage field and academia from diverse geographic locations. The faculty is primarily heritage practitioners who are active members of the global heritage community. They are passionate about training the next generation of heritage leaders and professionals and enthusiastic about the online course format.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

Applicants must hold a baccalaureate degree in study areas relevant to the curriculum (Anthropology, Archaeology, Architecture, Preservation, Art History, Conservation, Environmental Sciences, Geography, Preservation, Cultural Management or Tourism, Public History, or related field).

Applicants are accepted to the program on the understanding that they have sufficient background in a relevant field, either through their previous degree or through relevant professional experience, to be able to complete the program.

- A statement of purpose (approximately 750 words): This statement should address how your academic and professional experiences have led to your decision to apply to this program. It should demonstrate an understanding of the cultural heritage sector and describe your academic and career goals, highlighting how this program will serve those goals. If you have worked in the heritage sector in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.

Program Requirements

Students must take a total of 10 courses:

- Three required core courses
- Three customizable core courses
- Four elective courses

Code	Title	Credits
Core Courses - Required:		**9**
AS.465.702	Studies in World Heritage	
AS.465.704	Cultural Heritage Management/Leadership	
AS.465.708	Two-Week Onsite Cultural Heritage Management Seminar [1]	
Core Courses - Customizable:		**9**
Select three of the following:		
AS.465.707	Reading the Landscape: Cultural Heritage at Scale	
AS.465.710	The Protection of Global Cultural Heritage: Laws, Policies, Politics, and Advocacy	
AS.465.730	Heritage Interpretation	
AS.465.732	Engaging Communities in Heritage	
AS.465.740	Cultural Heritage in the Digital Age	
Electives		**12**
Select four of the following:		
AS.465.706	Research/Capstone in Heritage Studies	
AS.465.712	Managing Cultural Heritage Resources	
AS.465.714	Culture as Catalyst for Sustainable Development	
AS.465.716	Cultural Heritage Risk Management and Security	
AS.465.720	Issues in Intangible Cultural Heritage	
AS.465.734	Heritage Tourism	
AS.465.736	NAGPRA: Repatriation as Compliance or Ethical Practice	
AS.465.780	Internship	
Total Credits		**30**

1 **Waiver option:** Students who are unable to travel to an onsite seminar location due to accommodation needs, financial hardship, or family challenges may apply to the program director for an exemption to the seminar (AS.465.608). If a waiver is granted, the student must enroll in the internship option (AS.465.780) to fulfill the on-site component of the degree requirement.

Learning Outcomes

The curriculum of the Master of Arts in Cultural Heritage Management program aims for the following learning outcomes for students:

- Analyze changes in the heritage field through an assessment of their theoretical and practical impacts.
- Build leadership capacities that contribute to the growth, development, and sustainability of the heritage field.
- Examine the role of new methods and techniques (including digital technology) in the field of heritage.
- Articulate the roles of policy and advocacy in the broader heritage field.
- Evaluate the impact of heritage designation at various scales from the local to the global.
- Explore the roles of multiple constituencies in heritage management.
- Create strategies for heritage management.
- Integrate academic knowledge with applied experience unique to the field of heritage.

Cultural Heritage Management, MA/ Digital Curation, Certificate

MA in Cultural Heritage Management / Certificate in Digital Curation

Students who are interested in pursuing an MA in Cultural Heritage Management and are also interested in the preservation and management of cultural heritage digital assets may enroll in this dual program. Cultural Heritage Management students may earn both the MA degree and the Certificate in Digital Curation with a total of 14 courses.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Applicants must hold a baccalaureate degree in study areas relevant to the curriculum (Anthropology, Archaeology, Architecture, Preservation, Art History, Conservation, Environmental Sciences, Geography, Preservation, Cultural Management or Tourism, Public History, or related field).

Applicants are accepted to the program on the understanding that they have sufficient background in a relevant field, either through their previous degree, or through relevant professional experience, to be able to complete the program.

- A 750-word statement of intent, that addresses your preparation and experience leading to your application to this program. It should describe how your academic and professional experiences have led to your decision to pursue a career in the heritage field with an emphasis in digital curation and how this combined degree will help you succeed in your goals. If you have worked in the heritage field in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.

Program Requirements

Courses From the MA in Cultural Heritage Management

Students in the Cultural Heritage Management (CHM) program who are pursuing a Certificate in Digital Curation must take the following courses. Students should begin the Certificate in Digital Curation with the course AS.465.740 Cultural Heritage in the Digital Age.

Code	Title	Credits
MA in Cultural Heritage Management Courses		
Core Courses - Required:		*15*
AS.465.702	Studies in World Heritage	
AS.465.704	Cultural Heritage Management/Leadership	
AS.465.708	Two-Week Onsite Cultural Heritage Management Seminar	
AS.460.670	Digital Preservation	
AS.465.740	Cultural Heritage in the Digital Age	
Core Courses - Customizable		*6*
Select two of the following:		
AS.465.707	Reading the Landscape: Cultural Heritage at Scale	

AS.465.710	The Protection of Global Cultural Heritage: Laws, Policies, Politics, and Advocacy	
AS.465.730	Heritage Interpretation	
AS.465.732	Engaging Communities in Heritage	
Electives		**9**
Select three of the following:		
AS.465.706	Research/Capstone in Heritage Studies	
AS.465.712	Managing Cultural Heritage Resources	
AS.465.714	Culture as Catalyst for Sustainable Development	
AS.465.716	Cultural Heritage Risk Management and Security	
AS.465.720	Issues in Intangible Cultural Heritage	
AS.465.734	Heritage Tourism	
AS.465.736	NAGPRA: Repatriation as Compliance or Ethical Practice	
AS.465.780	Internship	
Digital Curation Certificate Courses		**12**
Core Courses - Required:		
AS.460.671	Foundations of Digital Curation	
AS.460.672	Managing Digital Information in Museums and Archives	
AS.460.673	Digital Curation Certificate Internship	
AS.460.674	Digital Curation Research Paper	
Total Credits		**42**

Cultural Heritage Management, MA/ Nonprofit Management, Certificate

MA in Cultural Heritage Management / Certificate in Nonprofit Management

Students pursuing an MA in Cultural Heritage Management, who are interested in furthering their nonprofit education, may enroll in the combined degree program offered with the Certificate in Nonprofit Management. Students may earn the combined degree by taking four of the six courses in the Certificate in Nonprofit Management. This enables students to earn both the MA degree and a Graduate Certificate for a total of 14 courses, 10 in Cultural Heritage Management and four in Nonprofit Management. The Combined degree of MA in Cultural Heritage Management/Certificate in Nonprofit Management allows students to acquire the technical skills needed to thrive in the workplace of both nonprofit and cultural heritage institutions.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Applicants must hold a baccalaureate degree in study areas relevant to the curriculum (Anthropology, Archaeology, Architecture, Preservation, Art History, Conservation, Environmental Sciences, Geography, Preservation, Cultural Management or Tourism, Public History, or related field).

Applicants are accepted to the program on the understanding that they have sufficient background in a relevant field, either through their previous degree, or through relevant professional experience, to be able to complete the program.

- A 750-word statement of intent, that addresses your preparation and experience leading to your application to this program. It should describe how your academic and professional experiences have led to your decision to pursue a career in the heritage field with an emphasis in nonprofit management and how this combined degree will help you succeed in your goals. If you have worked in the heritage or nonprofit fields in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.

Program Requirements

Combined degree students of the MA in Cultural Heritage Management/ Certificate in Nonprofit Management must complete 14 courses in total. Please note that students must complete all 14 courses before they are eligible to apply for graduation.

Code	Title	Credits

Digital Curation, Certificate

Certificate in Digital Curation

advanced.jhu.edu/digitalcuration (https://advanced.jhu.edu/academics/certificate-programs/digital-curation-certificate/)

Digital curation is an emerging field that encompasses the planning and management of digital assets over their full lifetime, from conceptualization through active use and presentation to long-term preservation in a repository for future reuse.

Museums and cultural heritage collections worldwide are now routinely digitizing all collection objects as they are acquired and loaned, not only for access but as documentation in the event of loss, damage, or theft, and to support research on collections and objects. They are also digitizing significant portions or even all of their holdings in order to create the robust websites that the public now expects. In addition, they are acquiring and creating born-digital content, such as digital media art, documentation of heritage sites, historical data in digital formats, administrative records, and scientific research data. The creation and acquisition of valuable digital assets continues at a rapid pace, and cultural heritage institutions now have a critical need for professionals in the field to manage and preserve all types of digital assets to ensure their long-term availability for researchers, educators, internal users, and the public, and to participate in the development and promotion of standards and best practices for digital curation in the scientific and cultural heritage sector.

The Johns Hopkins University Certificate in Digital Curation, offered through the graduate program in museum studies, advances the education and training of museum and other cultural heritage professionals worldwide in this emerging field. The certificate program offers a specialized curriculum that prepares current and aspiring professionals to work with digital collections, exhibitions, and research data to ensure the effective stewardship of our global cultural heritage in all types of museums, from art museums to zoos, and related scientific and cultural heritage organizations. Students in this program will also contribute to the critically needed professional literature in the field.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

Applications to the Certificate in Digital Curation will be accepted from:

- Individuals with a bachelor’s degree and at least 3 years of experience working in a museum, library, archive, or related cultural heritage field.
- Individuals with a master’s degree in museum studies or other relevant fields.

In addition to the materials and credentials required for all programs, the Certificate in Digital Curation also requires:

- Statement of Purpose: A 500-word statement describing how your academic and professional experiences have led to your decision to pursue the Certificate in Digital Curation and how this credential will help you succeed in your career goals. Your statement will be reviewed for content, organization, and writing style.
- Recommendations: Two letters of recommendation that verify professional and/or academic accomplishment.

Curriculum

Students must take a total of six courses to complete the Graduate Certificate requirements: five required core courses and one elective. All courses are three credits.

PROGRAM REQUIREMENTS

Code	Title	Credits
Core Courses - Required:		
AS.460.670	Digital Preservation	3
AS.460.671	Foundations of Digital Curation	3
AS.460.672	Managing Digital Information in Museums and Archives	3
AS.460.673	Digital Curation Certificate Internship	3
AS.460.674	Digital Curation Research Paper	3
Elective Course		**3**
Select one elective from the museum studies curriculum; Collection Management is recommended but another course may be substituted with approval.		
Total Credits		**18**

LEARNING OUTCOMES

The program prepares students to become leaders in the museum, cultural heritage, and digital curation communities upon successful completion of the program.

By the end of the program, students will be able to:

- Analyze digital curation practices in museums and cultural heritage environments from theoretical, legal, ethical, and practical perspectives.
- Develop digital preservation plans and strategies for the long-term management of digital assets.
- Apply digital curation principles to the management of digital objects and collections.
- Evaluate tools and technologies for the creation, use, and management of digital assets in museums and cultural heritage environments.
- Apply knowledge and skills through applied research in the field.

Energy Policy and Climate, Master of Science

MS in Energy Policy and Climate

energy.jhu.edu (https://advanced.jhu.edu/academics/graduate/ms-energy-policy-climate/)

The MS in Energy Policy and Climate program will prepare the next generation of interdisciplinary professionals to address the challenges of climate change and a global transition to energy systems.

Graduates will be able to demonstrate an understanding of the science related to a changing climate, the impacts of current and future climate change on natural and human systems, the vulnerabilities of these systems to predicted changes, and a variety of possible legal, policy, and technological strategies for mitigation and adaptation. Graduates will also develop a comprehension of energy production, delivery, and consumption for both traditional systems and sustainable/renewable energy alternatives, and the implications of our energy choices for averting dangerous levels of climate change.

The program was originally designed by members of JHU's Department of Earth and Planetary Sciences in the Krieger School of Arts and Sciences and by industry and policy specialists. Courses are taught by distinguished instructors with valuable experience in the academic, public, corporate, and nonprofit sectors. The program seeks to build in students the technical and management skills needed to become highly competent and ethical professionals capable of leading societal responses to the challenges of a changing climate and the quest for a revolution in energy production. The curriculum is designed to help students develop an understanding of policy strategies employed at all levels, from the local to the international level, in response to these challenges. Graduates of the program will have an understanding of the current state of the U.S. response to climate change, as well as a familiarity with multilateral agreements and non-U.S.-based approaches to both mitigation of and adaptation to climate change. Additionally, students will develop expertise in energy production and policymaking.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

The Master of Science in Energy Policy and Climate program requires:

- One semester of undergraduate calculus
- One semester of undergraduate statistics
- One semester of undergraduate chemistry or equivalent thereof

Program Requirements

- Three required core courses
- Two customizable core courses
- Five electives

Code	Title	Credits
Core Courses - Required:		
AS.425.601	Principles and Applications of Energy Technology	3
AS.425.602	Science of Climate Change and its Impact	3
AS.425.800	Research Design for Capstone Projects in Energy and Environmental Sciences	3
Core Courses - Customizable:		**6**
Select two of the following:		
AS.425.603	Climate Change Policy Analysis	
AS.425.604	Energy & Climate Finance	
AS.425.605	Introduction to Energy Law & Policy	
Electives		**15**
Total Credits		**30**

MS in Energy Policy and Climate Focus Areas

Students wishing to further customize their degree can focus on one of the following areas or combine them. These are suggested elective courses to illustrate how degree customization can take place. Students should consult with their advisor for further recommendations appropriate to their career and academic goals.

- Climate Change Focus Area
- Energy Focus Area
- Policy Focus Area
- Social Perspectives in Climate and Energy Focus Area
- Modeling Focus Area

CLIMATE change Focus Area

Code	Title	Credits

AS.425.634	Climate Change and Health	3
AS.425.636	Emerging Energy Technologies and Applications	3
AS.425.637	International Climate Change Policy	3
AS.425.638	Adaptation to Climate Change	3
AS.425.639	Energy Markets and Strategy from Europe to Asia	3
AS.425.644	Principles & Applications of Energy Technology II	3
AS.425.645	Global Energy Policy	3
AS.425.646	US Offshore Energy: Policy, Science and Technology	3
AS.425.647	Energy and Water Security in South Asia	3
AS.425.651	The Electric Grid: Technology and Policy	3
AS.425.652	Nuclear Energy: Technology, Policy, and Regulations	3
AS.425.689	Energy and Environmental Graduate Seminar	3

Learning Outcomes

Graduates will be able to:

- Analyze Energy Policy and Climate (EPC) concepts and topics such as energy technology (fossil-fuel based or renewables), energy law and policy, climate change and its societal and environmental impacts (adaptation and mitigation), national and international climate change policy, energy and climate finance through technical policy developing assessments.
- Critically evaluate existing and proposed models, strategies, and policies, from a variety of sources, both academic and nonacademic.
- Develop excellent oral and written communication skills that will enhance career objectives in public sector, non-profit and/or private organizations.
- Demonstrate proficiency in use of qualitative or quantitative research methodologies and the communication of findings for relevant academic or public policy areas.

Environmental Sciences and Policy, Master of Science

MS in Environmental Science and Policy

environment.jhu.edu (https://advanced.jhu.edu/academics/graduate/ms-environmental-sciences-policy/)

Climate change, population growth, energy consumption, habitat loss, water depletion and degradation, air pollution, and species extinction have increasingly come to the fore in minds of citizens around the world. To manage the Earth's environment effectively, there is a need to understand the processes that shape the planet's surface, control the chemistry of its air and water, and generate the natural resources on which humans depend. Our unique program is distinct in its focus on the interplay between science and policy. This program is founded on the premise that rational solutions to complex, twenty-first century environmental challenges require an in-depth understanding of applicable scientific principles and an appreciation for relevant political, ethical, economic, legal, and historical contexts. Graduates of the program develop combined expertise in science and policy that empowers them to become change agents and leaders in public and private organizations responsible for safeguarding our environment. Many of the program's students are currently employed in environmental fields but wish to enhance their knowledge or move in new directions. Others seek to transition into the arena of environmental science and policy.

The program offers a flexible curriculum that allows students to customize their academic experience to suit their personal needs and interests. Courses are focused on wide-ranging issues such as imperiled global ecosystems, natural resources economics, and multinational environmental trusts and laws. The program is open to students with limited scientific background as well as those that already have a background in the environmental sciences. Core course work includes geology, hydrology, oceanography, meteorology, ecology, geographic information systems (GIS), and policymaking. Electives range across a spectrum from courses strongly oriented toward policy to ones focused more heavily on science. Electives are selected by students under the guidance of advisors.

The program was originally designed by members of the Department of Earth and Planetary Sciences at Johns Hopkins, in conjunction with experts in applied science at regional and federal institutes and agencies. Students and faculty continue to collaborate in our accelerated BS/MS degree. Courses are taught by distinguished instructors with valuable experience in the academic, public, and corporate sectors. Many of the program's alumni are highly successful professionals. Taking a holistic approach, curricula in the Environmental Sciences and Policy (ESP) program positions students to join and contribute to the global science community.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

- One semester of undergraduate calculus, statistics, and general chemistry

Students who do not have the necessary undergraduate training in calculus, statistics or chemistry may be offered provisional admission if their other credentials are strong.

B.A./M.S. Option for Johns Hopkins E&PS and ENVS Majors

Undergraduates in Earth and Planetary Sciences majoring in Environmental Science or Environmental Studies (ENVS) may apply for accelerated status toward an M.S. in Environmental Science and Policy (ESP) or Geographic Information Systems (GIS) through the JHU Krieger School of Arts & Sciences' Advanced Academic Programs. Interested students should speak with their advisor and the Director of the ESP and GIS Program, in their senior year. ENVS students may apply up to two courses (a third upon Director approval) toward the M.S. thereby leaving only eight more courses to complete the M.S. following receipt of their bachelor's degree. ENVS students will receive two separate degrees, so the requirements of both degrees must be fulfilled. Students cannot earn the M.S. degree without completion of the B.A. or B.S., however, students who do not complete the M.S. retain their B.A. or B.S.

Admission Requirements

ENVS students may apply for the B.A./M.S. anytime during the senior year or after conferral of their undergraduate degree. The application procedure is the same as that for other AAP applicants. Students admitted to the B.A./M.S. program will be assigned a graduate advisor but will also continue to be advised by their ENVS advisor for all matters concerning the bachelor's degree.

Program Requirements

- Five customizable core courses
- Five electives

Code	Title	Credits

AS.420.608	Oceanic & Atmospheric Processes	3
AS.420.611	Principles & Methods of Ecology	3
AS.420.614	Environmental Policymaking and Policy Analysis	3

Focus Areas

Students in the Master of Science in ESP program could choose to follow a focus area. The focus areas are general recommendations of logical course groupings that could be pursued. Our goal is to maintain flexibility of the ESP program, and allow students to choose courses that best fulfill their interests.

- Conservation Biology
- International Environmental Policy
- Sustainability
- Climate and Energy
- Remediation, Compliance and Assessment
- Science Writing
- Environmental Justice and Equity

The same five out of six core courses would be required, with electives chosen to support the desired focus area.

Conservation Biology Focus Area

Code	Title	Credits
AS.420.613	Forest Ecosystems	3
AS.420.623	Freshwater Ecology & Restoration of Aquatic Ecosystems	3
AS.420.625	Ecology and Ecosystem Management in Coastal and Estuarine Systems	3
AS.420.628	Ecology and Management of Wetlands	3
AS.420.637	Conservation Biology	3
AS.420.639	Landscape Ecology	3
AS.420.640	Urban Wildlife Ecology	3
AS.420.667	Analysis of Environmental & Ecological Data	3
AS.420.671	Global Land Use Change	3
AS.420.673	Ecology and Evolution of the Galapagos	3
AS.420.703	Open Source GIScience for Environmental Research	3

International Environmental Policy Focus Area

Code	Title	Credits
AS.420.605	Maritime Law and the Environment	3
AS.420.638	Coastal Zone Processes and Policy	3
AS.420.641	Natural Resources Law and Policy	3
AS.420.643	U.S. Environmental History	3
AS.420.645	Environmental and Natural Resource Security	3
AS.420.650	International Environmental Policy	3
AS.420.671	Global Land Use Change	3
AS.420.676	Global Scarcity in Freshwater Systems: Crisis and Solutions	3
AS.420.677	Spatial Statistics	3
AS.420.679	International Water: Issues and Policies	3
AS.420.687	Science Communication and Policy Engagement	3

Sustainability Focus Area

Code	Title	Credits
AS.420.609	Agroecology	3
AS.420.610	Sustainable Business	3
AS.420.612	Sustainability Science: Concepts and Challenges	3
AS.420.617	Managing Responsible Organizations for the Ecosystem	3
AS.420.624	Ocean Stewardship and Sustainability	3
AS.420.644	Sustainable Cities	3
AS.420.646	Transportation Policy and Smart Growth	3
AS.420.654	Environmental & Natural Resource Economics	3
AS.420.668	Sustainable Food Systems	3
AS.420.669	Applied Sustainability	3

AS.420.670	Sustainability Leadership	3
EN.575.734	Smart Growth Strategies for Sustainable Cities	3

Climate and Energy Focus Area

Code	Title	Credits
AS.420.603	Environmental Applications of GIS	3
AS.425.603	Climate Change Policy Analysis	3
AS.425.615	Understanding Public Attitudes for the Communication of Climate and Energy Policy	3
AS.420.616	Environmental Consequences of Conventional Energy Generation	3
AS.420.619	Climate Dynamics	3
AS.420.632	Air Quality Management and Policy	3
AS.425.651	The Electric Grid: Technology and Policy	3
AS.420.674	Applied Energy Policy in the 21st Century	3
AS.420.704	Practical Engineering Approaches to Climate Adaptation	3
EN.575.735	Energy Policy and Planning Modeling	3

Remediation, Compliance, and Assessment Focus Area

Code	Title	Credits
AS.420.615	Environmental Restoration	3
AS.420.622	Ecotoxicology	3
AS.420.629	Drinking Water,Sanitation & Health	3
EN.575.629	Modeling Contaminant Migration through Multimedia Systems	3
AS.420.631	Field Methods in Stream & Water Quality Assessment	3
AS.420.634	Bioremediation & Biofuels for Environmental Restoration	3
EN.575.643	Chemistry of Aqueous Systems	3
AS.420.651	Environmental Risk in Decision Making	3
AS.420.656	Environmental Impact Assessment & Decision Methods	3
EN.575.658	Natural Disaster Risk Modeling	3
AS.420.659	Management for Environmental Results with Performance-based Measurement	3
AS.420.660	Strategies in Watershed Management	3
AS.420.677	Spatial Statistics	3

Science Writing Focus Area

Code	Title	Credits
AS.491.658	Techniques of Science and Medical Writing	4
AS.491.750	Contemporary Science and Medical Writing: Creative and Professional Forms	4
AS.491.787	In the Field: Writing about How Science Can Save Our Wild Lands	4
AS.491.696	The Nature of Nature	4
AS.491.701	Communicating Climate Change	4

Environmental Justice and Equity

Code	Title	Credits
AS.420.606	Climate Justice	3
AS.425.626	Climate Anthropology and Changing Communities	3
AS.420.642	Public Lands-Private Interests:The Struggle for Common Ground	3
AS.420.647	Environmental Racism and Inequality	3
AS.420.665	Climate Change on the Front Lines: The Study of Adaptation in Developing Countries	3
AS.420.666	Community Development and Sustainability in developing countries	3
AS.420.672	Environmental Ethics	3
AS.420.690	Environmental Health	3

Electives

Code	Title	Credits
Select five of the following:		15
AS.420.605	Maritime Law and the Environment	3
AS.420.606	Climate Justice	3
AS.420.609	Agroecology	3
AS.420.610	Sustainable Business	3
AS.420.612	Sustainability Science: Concepts and Challenges	3
AS.420.613	Forest Ecosystems	3
AS.420.615	Environmental Restoration	3
AS.420.616	Environmental Consequences of Conventional Energy Generation	3
AS.420.617	Managing Responsible Organizations for the Ecosystem	3
AS.420.618	Terrestrial and Marine Conservation Biology	3
AS.420.619	Climate Dynamics	3
AS.420.621	The Intersections Between Science and Society: Investigating Watershed Ecosystems in the Cascades	3
AS.420.622	Ecotoxicology	3
AS.420.623	Freshwater Ecology & Restoration of Aquatic Ecosystems	3
AS.420.625	Ecology and Ecosystem Management in Coastal and Estuarine Systems	3
AS.420.627	Great Lakes Ecology and Management	3
AS.420.628	Ecology and Management of Wetlands	3
AS.420.629	Drinking Water,Sanitation & Health	3
AS.420.630	Tropical Ecology and Conservation of African Wildlife	4
AS.420.631	Field Methods in Stream & Water Quality Assessment	3
AS.420.632	Air Quality Management and Policy	3
AS.420.637	Conservation Biology	3
AS.420.638	Coastal Zone Processes and Policy	3
AS.420.639	Landscape Ecology	3
AS.420.641	Natural Resources Law and Policy	3
AS.420.642	Public Lands-Private Interests:The Struggle for Common Ground	3
AS.420.643	U.S. Environmental History	3
AS.420.644	Sustainable Cities	3
AS.420.646	Transportation Policy and Smart Growth	3
AS.420.650	International Environmental Policy	3
AS.420.651	Environmental Risk in Decision Making	3
AS.420.654	Environmental & Natural Resource Economics	3

AS.420.656	Environmental Impact Assessment & Decision Methods	3
AS.420.659	Management for Environmental Results with Performance-based Measurement	3
AS.420.660	Strategies in Watershed Management	3
AS.420.665	Climate Change on the Front Lines: The Study of Adaptation in Developing Countries	3
AS.420.666	Community Development and Sustainability in developing countries	3
AS.420.667	Analysis of Environmental & Ecological Data	3
AS.420.668	Sustainable Food Systems	3
AS.420.669	Applied Sustainability	3
AS.420.670	Sustainability Leadership	3
AS.420.671	Global Land Use Change	3
AS.420.672	Environmental Ethics	3
AS.420.673	Ecology and Evolution of the Galapagos	3
AS.420.674	Applied Energy Policy in the 21st Century	3
AS.420.675	Geology and Tropical Ecology of Hawai'i	3
AS.420.676	Global Scarcity in Freshwater Systems: Crisis and Solutions	3
AS.420.677	Spatial Statistics	3
AS.420.678	Nature Conservation and Sustainability in Cuba	3
AS.420.679	International Water: Issues and Policies	3
AS.420.681	Climate Change Adaptation and Development in Nepal	3
AS.420.687	Science Communication and Policy Engagement	3
AS.420.703	Open Source GIScience for Environmental Research	3
AS.420.704	Practical Engineering Approaches to Climate Adaptation	3
AS.420.738	Newfoundland and Labrador: A Journey Through Time	3
AS.420.800	Independent Research Project in Environmental Sciences and Policy	3

Culminating Experience

Code	Title	Credits
AS.420.800	Independent Research Project in Environmental Sciences and Policy	3
AS.420.805	Internship and Capstone Thesis	3
AS.425.800	Research Design for Capstone Projects in Energy and Environmental Sciences	3

Field Study Electives

Several ESP courses are offered as intensive study field courses. These courses meet the residency requirement and occur in a compressed format during the summer, winter, or over spring break. Each intensive study course has an additional field trip fee. Students are responsible for travel to the location of their residency course.

Code	Title	Credits
AS.425.617	Energy, Eutrophication, and Inundation in Coastal Louisiana	3
AS.420.618	Terrestrial and Marine Conservation Biology (Maine)	3
AS.420.623	Freshwater Ecology & Restoration of Aquatic Ecosystems (Maryland)	3
AS.420.627	Great Lakes Ecology and Management	3
AS.430.629	Drones in Geospatial Decision Making	4
AS.420.630	Tropical Ecology and Conservation of African Wildlife	4
AS.420.637	Conservation Biology (Montana)	3
AS.420.669	Applied Sustainability (Maryland)	3
AS.420.670	Sustainability Leadership (Costa Rica)	3
AS.420.673	Ecology and Evolution of the Galapagos	3
AS.420.675	Geology and Tropical Ecology of Hawai'i	3
AS.420.678	Nature Conservation and Sustainability in Cuba	3
AS.420.681	Climate Change Adaptation and Development in Nepal	3
AS.420.673	Ecology and Evolution of the Galapagos	3
AS.420.678	Nature Conservation and Sustainability in Cuba	3
AS.420.705	Natural Resources Sustainability: Field Study in Alaska	3
AS.420.738	Newfoundland and Labrador: A Journey Through Time	3

Residency Requirement

Many courses are offered online, but at least one ESP course must be taken as a full term on-site classroom course or as an in-person field course to fulfill the requirements of the degree. The Capstone course (AS.425.800) does not count towards the residency requirement. Students may choose to come to our campus in Baltimore or Washington DC for a whole semester, during intersession, or opt for an intensive field course. These are offered throughout the year, but the majority are scheduled during the summer or in January. Compressed field courses require an additional fee and often include lodging, course transportation, and some food (this is variable). Students are responsible for travel to the location of their residency course. Note: The University does not have lodging facilities in Washington DC.

Program Educational Objectives

Our overall programmatic goals at ESP have several objectives and we will hit upon all of these as we read, discuss and proceed through course. Among our learning goals, we want to identify root and structural causes and the systemic nature of environmental issue (such as invasive species), critical interpretation of environmental information (e.g. examining forest carbon sequestration trends), synthesizing scientific studies (e.g. the impacts of land use change on forests), integrating basic principles derived from your core courses (e.g. geology and ecology) and finally we want to frame our science discussions around sound policy decisions (e.g. National Park mining exploration and fire policy).

When you successfully complete the program requirements, you would achieve the following goals: (Number Objectives)

1. Interpret environmental policy making processes, institutions, and organizations to be able to identify root and structural causes and the systemic nature of environmental problems.
2. Research and recommend methods for collection, analysis, presentation and critical interpretation of environmental information using appropriate statistical and quantitative tools.
3. Utilize the practical and theoretical components of environmental science and policy to develop local and global environmental strategies, while developing competency in evaluating and

synthesizing scientific studies to guide environmental decision making, policy making, and advocacy.

4. Analyze environmental problems by applying or integrating basic principles derived from natural and social science, legal, and economic frameworks. Additionally, to conceptualize, develop and devise bridges between the realms of policy and science on critical environmental issues.
5. Evaluate effective strategies, technologies, and methods for sustainable management of environmental systems at and for the remediation or restoration of degraded environments in conjunction with evidence-based, science-informed environmental policy analysis.

MS in Environmental Sciences and Policy/Geographic Information Systems, Certificate

MS in Environmental Sciences and Policy / Certificate in Geographic Information Systems

The use of geographic information systems (GIS) has become standard for many professionals and is one of the most powerful and versatile tools for solving today's environmental and sustainability issues. To enable students to exploit the complementary nature of the fields, we have eliminated the overlap between the MS in Environmental Science and Policy and the graduate certificate in GIS. This enables students to earn both the MS degree and the Graduate Certificate by completion of a total of 13 courses rather than the 15 courses that would be required to complete the programs separately. At least one course must satisfy the residency requirement. Interested students, including those already enrolled in either program, should apply to both the MS in ESP and the Graduate Certificate in GIS program concurrently.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

- One semester of undergraduate level calculus, statistics and chemistry.
- For the GIS certificate component quantitative background or technology oriented experience is required.

Program Requirements

Code	Title	Credits
Core Courses - Customizable		
At least one course must be in residence.		
Select five of the following:		
AS.420.601	Geological Foundations of Environmental Science	
AS.420.603	Environmental Applications of GIS	
AS.420.604	Hydrology & Water Resources	
AS.420.608	Oceanic & Atmospheric Processes	
AS.420.611	Principles & Methods of Ecology	
AS.420.614	Environmental Policymaking and Policy Analysis	
Electives		
Select any three ESP electives as listed below:		
AS.420.605	Maritime Law and the Environment	
AS.420.606	Climate Justice	
AS.420.609	Agroecology	
AS.420.610	Sustainable Business	
AS.420.612	Sustainability Science: Concepts and Challenges	
AS.420.613	Forest Ecosystems	
AS.420.615	Environmental Restoration	
AS.420.616	Environmental Consequences of Conventional Energy Generation	
AS.420.617	Managing Responsible Organizations for the Ecosystem	
AS.420.618	Terrestrial and Marine Conservation Biology	
AS.420.619	Climate Dynamics	
AS.420.622	Ecotoxicology	
AS.420.623	Freshwater Ecology & Restoration of Aquatic Ecosystems	
AS.420.624	Ocean Stewardship and Sustainability	
AS.420.625	Ecology and Ecosystem Management in Coastal and Estuarine Systems	
AS.420.627	Great Lakes Ecology and Management	
AS.420.628	Ecology and Management of Wetlands	
AS.420.629	Drinking Water,Sanitation & Health	
AS.420.630	Tropical Ecology and Conservation of African Wildlife	
AS.420.631	Field Methods in Stream & Water Quality Assessment	
AS.420.632	Air Quality Management and Policy	
AS.420.637	Conservation Biology	
AS.420.638	Coastal Zone Processes and Policy	
AS.420.639	Landscape Ecology	
AS.420.641	Natural Resources Law and Policy	
AS.420.642	Public Lands-Private Interests:The Struggle for Common Ground	
AS.420.643	U.S. Environmental History	
AS.420.644	Sustainable Cities	
AS.420.646	Transportation Policy and Smart Growth	
AS.420.650	International Environmental Policy	
AS.420.651	Environmental Risk in Decision Making	
AS.420.654	Environmental & Natural Resource Economics	
AS.420.656	Environmental Impact Assessment & Decision Methods	
AS.420.659	Management for Environmental Results with Performance-based Measurement	
AS.420.660	Strategies in Watershed Management	
AS.420.665	Climate Change on the Front Lines: The Study of Adaptation in Developing Countries	
AS.420.666	Community Development and Sustainability in developing countries	
AS.420.667	Analysis of Environmental & Ecological Data	
AS.420.668	Sustainable Food Systems	
AS.420.669	Applied Sustainability	
AS.420.670	Sustainability Leadership	
AS.420.671	Global Land Use Change	
AS.420.672	Environmental Ethics	

AS.420.673	Ecology and Evolution of the Galapagos
AS.420.674	Applied Energy Policy in the 21st Century
AS.420.675	Geology and Tropical Ecology of Hawai'i
AS.420.676	Global Scarcity in Freshwater Systems: Crisis and Solutions
AS.420.677	Spatial Statistics
AS.420.678	Nature Conservation and Sustainability in Cuba
AS.420.679	International Water: Issues and Policies
AS.420.681	Climate Change Adaptation and Development in Nepal
AS.420.687	Science Communication and Policy Engagement
AS.420.690	Environmental Health
AS.420.703	Open Source GIScience for Environmental Research
AS.420.704	Practical Engineering Approaches to Climate Adaptation
AS.420.705	Natural Resources Sustainability: Field Study in Alaska
AS.420.738	Newfoundland and Labrador: A Journey Through Time
AS.420.800	Independent Research Project in Environmental Sciences and Policy
AS.420.805	Internship and Capstone Thesis
GIS Certificate (any 5 of the following)	
AS.430.600	Web GIS
AS.430.601	Geographic Information Systems (GIS)
AS.430.603	Geospatial Statistics
AS.430.604	Spatial Analytics
AS.430.606	Programming in GIS
AS.430.629	Drones in Geospatial Decision Making

Film and Media, Master of Arts

MA in Film and Media

advanced.jhu.edu/filmandmedia (https://advanced.jhu.edu/academics/graduate/ma-film-media/)

The Master of Arts in Film and Media provides an in-depth curriculum designed to develop skill sets required to succeed in the film, television, and media industries. Students are exposed to the latest technology, taught the most current financial and distribution strategies, and explore a range of storytelling techniques. The program emphasizes experiential learning and focuses on the latest trends and advances in the entertainment industry. All courses balance practice with theory and are taught by successful creators and executives in the film, television, and media world. The program has been specifically designed to keep up with constant advances in technology, ideas, and trends, both practical and aesthetic.

Courses and workshops feature current case studies that help expose students to the latest tools, equipment, and resources in specific fields. The Johns Hopkins MA in Film and Media brings the industry to Baltimore, as our students grow their professional network while creating a two-way bridge between the local burgeoning film scene and the industry hubs in Los Angeles, New York, and abroad. Courses are held at the JHU/MICA Film Center, Baltimore's film studio and recording center in the Station North Arts and Entertainment District.

Students must choose two concentrations from the fields of Business of Film, Sound Design, Writing, and Immersive Storytelling & Emerging Technology. While they specialize in two of these tracks, students acquire hands-on experience in developing, shooting, editing, and marketing original film, television, and digital short-form content in the Graduate Filmmaking Studio.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM REQUIREMENTS

- Three required core courses
- Select two concentrations and complete four courses under each grouping

Code	Title	Credits
Core Courses - Required:		
AS.455.640	Graduate Filmmaking Studio I	3
AS.455.641	Graduate Filmmaking Studio II	3
AS.455.800	Capstone for Film & Media	3
Concentration: Immersive Storytelling and Emerging Technologies		
Core Courses - Customizable		
Select four of the following:		
AS.455.610	Foundations of Immersive Storytelling: Theory & Practice	3
AS.455.643	The Future of Cinematic Gaming	3
AS.455.647	Virtual Production: A New Era of Filmmaking	3
AS.455.645	Production for Creative Technology	3
AS.455.638	Technology and the Future of Humanity	3
Concentration: Writing		
Core Courses - Customizable		
Select four of the following:		
AS.455.615	Episodic Writing Workshop 1 – The Pilot	3
AS.455.616	Episodic Writing Workshop 2 – Comedy	3
AS.455.618	Episodic Writing Workshop II - The Writers' Room	3
AS.455.637	Comedy Writing - TV Spec Script	3
AS.455.624	Social Impact Documentary Filmmaking	3
Concentration: The Business of Film		
Core Courses - Customizable		
Select four of the following:		
AS.455.620	Fundamentals of Business 1	3
AS.455.619	Business of Non Fiction Film & TV	3
AS.455.635	Sales, Acquisitions and Marketing	3
AS.455.625	Creative Producing & Line Producing	3
AS.455.644	Podcasting Fundamentals	3
AS.455.650	Script to Screen	3
AS.455.651	Film Financing	3
AS.455.652	Digital Media: Storytelling & Strategy	3
Concentration: Sound Design		
Core Courses - Customizable		
Select four of the following:		
AS.455.626	Mixing Sound for Picture	3
AS.455.634	Designing Sound for Film and Media	3
AS.455.630	Recording Sound for Film	3

AS.455.632	Sound on Film I	3
PY.550.524	Sound Design/Video Games	3

Geographic Information Systems, Master of Science

MS in Geographic Information Systems

gis.jhu.edu (https://advanced.jhu.edu/academics/graduate/ms-geographic-information-systems/)

Geographic Information Systems (GIS) is a dynamic and versatile technology that enables visualization, analytics, and data management capabilities for an increasingly wide spectrum of industries. It has come to play a key role in empowering decision-makers, helping them understand various processes and make well-informed decisions. It is used in diverse fields, such as environmental planning, law enforcement, defense and intelligence, business, utilities, telecommunications, economic development, transportation, public health, and many others. It is this dynamism that the Johns Hopkins University GIS programs encompass in their offerings, the Master of Science in GIS and the Certificate in GIS.

These two programs are fully online and provide a strong foundational education that delves into the principles and real-world applications of geospatial technology, allowing students to build their credentials and capitalize on a marketplace that continues to grow in its demand for skilled employees. The Master of Science in GIS is designed to prepare the next generation of geospatial professionals and data scientists, skilled in all facets of geospatial technology, including programming and application development, geospatial data science, spatial and predictive analytics, visualization, big data technologies, enterprise GIS administration, and project management.

Both programs are designed for students who have little or no knowledge of the GIS field, as well as students with prior experience. Students entering either program will be introduced to the most widely used commercial software, as well as open-source software, often utilizing cloud computing infrastructure. Hands-on experience is emphasized and students in the program can expect to work on real-world geospatial scenarios.

Students in the Master of Science program could choose to follow one of two focus areas or customize the degree to suit career goals. The focus areas are general recommendations of logical course groupings that could be pursued. The goal is to maintain flexibility for the GIS program and allow students to choose courses that best fulfill their own interests.

- Advanced Geospatial Technology
- GIS Programming and Application Development
- Geospatial Data Science and Predictive Analytics

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

In addition to the materials and credentials required for all programs, Post-Baccalaureate Certificate in Geographic Information Systems program requires:

- A semester of statistics, quantitative methods, or technology-oriented experience.

Students who do not have the necessary quantitative background may be offered provisional admission if their other credentials are strong.

PROGRAM REQUIREMENTS

1. One required core course
2. Three customizable core courses
3. Six electives

Code	Title	Credits
Core Courses - Required:		
AS.430.800	Capstone for Geographic Information Systems	
Core Courses - Customizable		
Select three of the following:		
AS.430.600	Web GIS	
AS.430.601	Geographic Information Systems (GIS)	
AS.430.603	Geospatial Statistics	
AS.430.604	Spatial Analytics	
AS.430.606	Programming in GIS	
Electives		
Select six of the following:		
AS.430.602	Remote Sensing: Systems and Applications	
AS.430.605	Development and Management of GIS Projects	
AS.430.607	Spatial Databases and Data Interoperability	
AS.430.608	GIS and Spatial Decision Support Systems	
AS.430.609	Spatial Data Management: Quality and Control	
AS.430.611	Geospatial Ontologies and Semantics	
AS.430.612	Cartographic Design and Visualization	
AS.430.613	Advanced Topics in Remote Sensing	
AS.430.615	Big Data Analytics: Tools and Techniques	
AS.430.617	Census Data Mining: Visualization and Analytics	
AS.430.618	Advanced Python Scripting for GIS	
AS.430.619	Web Application Development	
AS.430.621	GIS for Emergency Management	
AS.430.623	Geo Apps	
AS.430.625	System Architecture for Enterprise GIS	
AS.430.627	Artificial Intelligence and Machine Learning in Geospatial Technology	
AS.430.631	Spatial Algorithms and Data Structures	
AS.430.633	Advanced Spatio-Temporal Statistics	
AS.430.635	Urban Analytics	

Geographic Information Systems, Certificate

Certificate in Geographic Information Systems

advanced.jhu.edu/giscert (https://advanced.jhu.edu/academics/certificates/geographic-information-systems/)

The Certificate in Geographic Information Systems equips students with the knowledge they need to pursue new opportunities created by the expanding demand for geospatial professionals and data analytics experts. The five-course certificate program explores the principles and real-world applications of geospatial technology and data science in a convenient, fully online course format.

The Certificate offers you a foundation in the fascinating fields of Web GIS, geospatial data science, spatial and predictive analytics, programming and application development. You will gain invaluable experience in geospatial technology, utilizing web-based platforms and cloud computing environments, to further your understanding of the digital transformation that is revolutionizing business, government, industries, and social organizations.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Certificate in Geographic Information Systems program requires:

- Quantitative Background – a semester of statistics, quantitative methods or technology oriented experience.

Applicants who do not have the necessary quantitative background may be offered provisional admission if their other credentials are strong. Applicants who are admitted provisionally due to lack of quantitative skills have the option to:

- Take appropriate courses at an accredited college/university.
- Take AS.420.301 Quantitative Methods.

PROGRAM REQUIREMENTS

Code	Title	Credits
Core Course - Required:		
AS.430.600	Web GIS	4
AS.430.601	Geographic Information Systems (GIS)	4
AS.430.603	Geospatial Statistics	4
AS.430.604	Spatial Analytics	4
AS.430.606	Programming in GIS	4
Total Credits		**20**

Master of Liberal Arts

Master of Liberal Arts

mla.jhu.edu (https://advanced.jhu.edu/academics/graduate/master-of-liberal-arts/)

For self-motivated learners with inquisitive minds and an interest in thinking across disciplinary boundaries, the Master of Liberal Arts (MLA) Program is a graduate liberal arts program that offers a diverse range of interdisciplinary courses designed and taught by MLA Program faculty that build upon a foundation in the history of ideas while also incorporating contemporary topics, sources, and approaches to research, analysis, and discourse.

Established in 1962, the Johns Hopkins MLA Program has gained national recognition for the quality of its teaching and for its rigorous interdisciplinary liberal arts education. The program is designed to serve independent thinkers from a variety of academic, professional, and personal backgrounds. Our program thrives on the curiosity, passion, and diversity of its students. The MLA is a unique non-traditional graduate degree. Whereas most graduate programs ask you to become more and more specialized, the MLA expects you to both broaden and deepen your educational experience. MLA students interact with professors and one another in a stimulating learning environment, both on the ground at the Homewood campus and online in an asynchronous format compatible with all work schedules and time zones.

In consultation with their academic advisor, candidates for the MLA degree enroll in topic-based interdisciplinary courses that draw from a wide range of subjects, including history, philosophy, religion, literature, music, art history, African-American studies, environmental studies, digital humanities, critical theory, psychology, and sociology. Given the breadth and flexibility of our program, the MLA is able to meet the different goals and expectations of our students. Our students represent the full range of working professions and are at all stages of their careers.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

The Admissions Committee reserves the right to request additional information from applicants to assess their candidacy for admission.

Instructions for the Statement of Purpose

In addition to the standard required application materials, MLA applicants must submit a 2-3 page statement of purpose that allows assessment of the applicant's academic, professional, and personal goals. Here are three ideas for how applicants may frame the essay:

- Rather than having students concentrate their studies in a specific discipline, the MLA program offers courses in which students analyze complex topics from interdisciplinary perspectives. Please explain how that approach to studying the liberal arts coincides with your own academic, professional, and/or personal goals.
- Through their coursework and capstone projects, students in the MLA program are given multiple opportunities to conduct independent research that engages scholarship across several fields of study. Please describe an academic research project you have completed in the past and how that experience will inform your future research efforts.
- Many courses within the MLA program ask students to consider issues of social justice and explore their ethical implications for us individually and collectively. Please share an example of an issue of social justice you have studied in the past, explain why that issue captured your interest, and discuss how that work informs your current academic, professional, and/or personal goals.

PROGRAM REQUIREMENTS

- One customizable core course
- Eight electives
- One core culminating experience course

Code	Title	Credits
Core Courses - Customizable		
Choose at least one of the following:		
AS.450.600	MLA Core: Interdisciplinary Graduate Research Methods	
AS.450.627	MLA Core: Critical Theory	
AS.450.638	MLA Core: What is History?

AS.450.766	Deconstructing Capitalism
AS.450.767	American Civil War and Reconstruction
AS.450.771	Black Queer History
AS.450.774	Existentialism: Philosophy and Social Critique
AS.450.781	The Global Cold War
AS.450.790	Six Degrees of Miles Davis

Learning Outcomes

Graduates who earn the MLA degree should achieve mastery of the following outcomes:

- **Situate** different methods of inquiry within the liberal arts, building upon a foundation in the history of ideas and enduring humanistic questions.
- **Analyze** complex topics from interdisciplinary perspectives.
- **Conduct** original research that is creative, critical, and well-informed.
- **Raise** vital questions in response to social and ethical issues, interrogating dominant narratives and systems of power.
- **Communicate** ideas in ways that are accessible to diverse audiences and contexts.
- **Articulate** how their MLA studies have enhanced, extended, or challenged their knowledge and skills and will inform their future endeavors.

Museum Studies, Master of Arts

MA in Museum Studies

museum-studies.jhu.edu (https://advanced.jhu.edu/academics/graduate/ma-museum-studies/)

To prepare current and future museum professionals to be the visionary leaders of museums in contemporary society, Johns Hopkins University offers an innovative Master of Arts in Museum Studies. The format of the program itself—an almost fully online program—looks to the future. As an online program, we can offer the expertise of highly regarded professors and museum professionals from around the world, innovative virtual field trips, and global resources from a wide array of museums brought together in new and exciting ways. An international student body provides diverse perspectives and experiences in a dynamic online learning environment.

Museums are more relevant today than ever before. They are responsible for cultural stewardship and serve as a gathering place for communities; a space for reflection, interaction, participation, and learning (onsite and online); and act as an agent of social change. New demands and challenges are emerging in every aspect of the museum landscape. Innovations in information and communication technologies are being integrated into the core strategies of the museum. Museums are increasing in number, expanding in size, and attracting more diverse audiences every day. The museums of the 21st century need leaders with the knowledge and skills to face these challenges and who possess a vision for the future.

This program aims to provide a perspective on the theory and practice of museums in a changing technological, social, and political environment for current and future museum professionals. It emphasizes the role of technology as a pervasive aspect in today's museum; examines new models of education, exhibition, and business strategies; and explores the role of the museum in a global society and as an agent of social change.

We welcome students interested in all types of museums, including history, technology, science, art, special topic or themed museums, historic sites, national parks, and zoos, and those interested in collections and exhibitions for corporations, government agencies, and private organizations.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

In addition to the materials and credentials required for all programs, the Master of Arts in Museum Studies also requires:

- Statement of Purpose: This 750-word statement should describe how your academic and professional experiences have led to your decision to pursue a career in the museum field and how this museum studies degree will help you succeed in your goals in the museum profession. If you have worked for a museum in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.
- Recommendations: Two letters of recommendation that verify professional and/or academic accomplishment.

PROGRAM REQUIREMENTS

Students must take a total of 10 courses

- One required core course
- Four customizable core courses
- Five elective courses

AS.460.755	Museum Projects	
Total Credits		**30**

Waiver option: Students who are unable to travel to an on-site seminar location due to accommodation needs, financial hardship, or family challenges may apply to the program director for an exemption to the two-week seminar (AS.460.610). If a waiver is granted, the student must enroll in the virtual seminar option (AS.460.752 Museums in a Changing Time: Virtual Seminar) to fulfill the on-site component of the degree requirement.

Learning Outcomes

The curriculum of the Master of Arts in Museum Studies program aims for the following learning outcomes for students:

- Examine the roles and responsibilities of museum practitioners in changing times.
- Develop practical skills in museum work, including collaboration and strategic planning, through real-world projects and experiences.
- Generate solutions to current challenges facing museums.
- Examine the purpose and function of museums in a global context.
- Analyze museum practices, theories, and methodologies through the lens of diversity, equity, accessibility, and inclusion.
- Evaluate the impact of technology on museum practice.

Museum Studies, MA/Digital Curation, Certificate

MA in Museum Studies / Certificate in Digital Curation

Students who are interested in pursuing an MA in Museum Studies and are also interested in the creation, management, and preservation of digital assets in museums may enroll in this combined program. This enables students to earn both the MA degree and the certificate for a total of 14 courses.

Combined degree students must complete all fourteen courses prior to being eligible to graduate.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the combined program of the Master of Arts in Museum Studies and the Certificate in Digital Curation also requires:

- Statement of Purpose: This 750-word statement should describe how your academic and professional experiences have led to your decision to pursue a career in the museum field with a focus on digital curation and how this combined degree will help you succeed in your future goals. If you have worked for a museum in any capacity and have any experience working with digital assets, please incorporate this into your statement. Your statement will be reviewed for content, organization, and writing style.
- Recommendations: Two letters of recommendation that verify professional and/or academic accomplishment.

Program Requirements

MA in Museum Studies students pursuing the Digital Curation Certificate must take 9 courses from the Museum Studies course list, per the degree requirements, and 5 Digital Curation courses listed below. Two approved courses (i.e., 460.670 - Digital Preservation and 460.666 - Collection Management) may be applied to both the MA and the certificate for a total of 14 courses.

Courses From the MA in Museum Studies

Museum Studies, MA/Nonprofit Management, Certificate

Students pursuing an MA in Museum Studies have the option of strengthening their leadership skills by enrolling in the combined degree program offered with the Certificate in Nonprofit Management. Students are provided an overview of the nonprofit sector, as well as the technical skills needed to thrive in nonprofit museums and arts philanthropy. Students may earn the combined degree by taking 10 Museum Studies courses, per the masters degree requirements, and 4 Nonprofit Management courses for a total of 14 courses. Two specific Museum Studies courses can be applied to both the masters and the certificate and these courses are listed under the Requirements tab.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

Program Specific Requirements

In addition to the materials and credentials required for all programs, the Master of Arts in Museum Studies also requires:

- Statement of Purpose: This 750-word statement should describe how your academic and professional experiences have led to your decision to pursue a career in the museum field with an emphasis in nonprofit management and how this combined degree will help you succeed in your goals in the museum profession. If you have worked for a museum in any capacity, please incorporate your experience into your statement. Your statement will be reviewed for content, organization, and writing style.

PROGRAM REQUIREMENTS

MA in Museum Studies students pursuing the Certificate in Nonprofit Management must take the 10 Museum Studies courses, per the degree requirements, and 4 Nonprofit Management courses for a total of 14 courses. Two specific Museum Studies courses can be applied to both the masters and the certificate and these courses are listed at the bottom of this page. Students must complete all 14 courses prior to being eligible for graduation.

Organizational Leadership, Master of Science

MS in Organizational Leadership

advanced.jhu.edu/organizationalleadership (https://advanced.jhu.edu/academics/graduate/ms-organizational-leadership/)

Master of Science in Organizational Leadership students develop core competencies in leadership methodologies and frameworks; theories relevant to critical thinking and analytic techniques; application of analytic techniques and theories to problem sets; and visualization techniques for producing reports, briefs, and infographics.

Students demonstrate these core competencies by achieving six learning outcomes: (1) applying research and analytical skills to solve complex problems; (2) incorporating creativity and strategy into implementable leadership practices; (3) developing and applying ethical principles; (4) evaluating professional frameworks; (5) designing, developing, and communicating strategic plans; and (6) comparing and contrasting industry standards and techniques.

Quantitative Methods in Applied Economics, Post-Master's Certificate

advanced.jhu.edu/quantmethods (https://advanced.jhu.edu/academics/certificates/quantitative-methods-applied-economics/)

The four-course Post-Master's Certificate in Quantitative Methods in Applied Economics is intended for those who already hold a master's degree in economics or statistics, and who wish to expand or update their knowledge. All courses are offered on-site in the evenings at the Washington, DC Center of the Johns Hopkins University (near Dupont Circle) and online.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

In addition to the materials and credentials required for all programs, the Master of Science in Applied Economics also requires:

- One semester of introductory microeconomics, passed with at least a B
- One semester of introductory macroeconomics, passed with at least a B
- One semester of undergraduate calculus or equivalent, passed with at least a B
- A grade in a higher level course trumps a grade in a lower level course. A B grade or higher upon repeat is not acceptable.

PREREQUISITE MATH REQUIREMENT

Those entering with only a single calculus course must take in their first semester AS.440.304 Math Methods for Economists, a three undergraduate credit, full-length course, at half tuition. The course does not count toward the degree. In order to waive the Math Methods for Economists course, evidence of multivariable calculus is required.

Regenerative and Stem Cell Technologies, Master of Science

MS in Regenerative and Stem Cell Technologies

https://advanced.jhu.edu/academics/graduate/ms-regenerative-stem-cell-technologies/

Regenerative and stem cell technologies have the potential to revolutionize treatments for numerous diseases and health conditions. Students develop the expertise needed to advance in this rapidly growing field with the MS in Regenerative and Stem Cell Technologies program. The program also provides students a chance to collaborate with JHU's research faculty during a brief lab residency that offers hands-on experience.

The program can be tailored for numerous career goals with electives that span an array of specializations:

- Bioinformatics
- Epigenetics
- Human molecular genetics
- Immunology
- Personalized medicine
- Pharmacology
- Recombinant DNA

This 10-course degree program is thesis-optional, part-time or full-time, and can be completed 95% online. With a one-week lab residency, students find the flexibility needed to meet work and life commitments while preparing to advance in this emerging field.
  ```

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

To begin this program, you will need a bachelor's degree from an accredited college or university. The GPA minimum is 3.0 on a 4.0 scale. You must also complete these prerequisites at JHU or another accredited university, earning at least a B in each course. Students who have not completed all the prerequisites may be admitted provisionally to complete the admission requirements.

- Organic Chemistry or 410.302 Bio-Organic Chemistry
- Biochemistry or 410.601 Biochemistry
- Molecular Biology or 410.602 Molecular Biology
- Cell Biology or 410.603 Advanced Cell Biology

The Admissions Committee reserves the right to request additional information from applicants, such as GRE or letters of recommendation, if needed, to assess their candidacy for admission.

Program Requirements

- Six required core courses
- Four elective courses

Code	Title	Credits
Core Courses - Required:		*24*
AS.410.609	Developmental Biology	
AS.410.630	Gene Therapy	
AS.410.653	Regenerative Medicine: from Bench to Bedside	
AS.410.753	Stem Cell Biology	
AS.410.780	Stem Cell Culture Laboratory Methods	
Electives (Select four of the following:)		*16*
AS.410.604	Cellular Signal Transduction	
AS.410.610	Epigenetics, Gene Organization & Expression	
AS.410.612	Human Molecular Genetics	
AS.410.613	Principles of Immunology	
AS.410.622	Molecular Basis of Pharmacology	
AS.410.633	Introduction to Bioinformatics	
AS.410.635	Bioinformatics: Tools for Genome Analysis	
AS.410.641	Clinical & Molecular Diagnostics	
AS.410.645	Biostatistics	
AS.410.652	Cell Culture Techniques	
AS.410.659	Advanced Recombinant DNA Lab	
AS.410.709	Cancer Genomics	
AS.410.736	Genomic and Personalized Medicine	
Total Credits		**40**

Research Administration, Master of Science

MS in Research Administration

advanced.jhu.edu/researchadmin (http://advanced.jhu.edu/researchadmin/)

The MS in Research Administration is designed to accommodate both career practitioners and those who seek a career in research administration. The program requires that students complete a core curriculum of four courses, and a minimum of two focus areas. As part of the core curriculum, students must either write a thesis or engage in an approved capstone project. In all, the total number of courses taken must be 12 courses or higher, regardless if it is a three-credit or four credit course. Courses within the focus areas are grouped in areas of interest to benefit students who work or want to work in various areas of research administration, or who may have varying levels of experience or special needs.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM REQUIREMENTS

- Three required core courses
- One culminating experience course
- Select two focus areas or a focus area and a concentration
- Electives

Code	Title	Credits
Core Courses - Required:		
AS.475.601	Introduction to Research Administration	3
AS.475.602	Organization and Leadership for Research Administration	3
AS.475.604	Introduction to Legal, Ethical, Regulatory, and Compliance Issues	3
Core Course - Culminating Experience:		
AS.475.800	Capstone Project in Research Administration	3
or AS.475.801	Research and Thesis in Research Administration	
Concentration / Focus Area		
Select two of the following:		18-21
Concentration in International Research Administration Management		
Program Administration and Facilitation (Focus Area)		
Financial Management of Sponsored Programs (Focus Area)		
Compliance, Legal, and Regulatory Issues (Focus Area)

Select three of the following:		9
AS.475.615	Research Contracts & Industrial Agreements: Domestic and International	
AS.475.616	Domestic and International Special Issues in Research, Legal and Regulatory Affairs	
AS.475.619	International Funding and Grantsmanship: Proposal Development, Submission and Management	
AS.475.621	International Research Regulatory, Ethical and Compliance Issues in Research Management	
AS.475.624	The Role and Importance of Culture and Communication in International Research Collaborations	
Total Credits		**12**

Science Writing, Master of Arts

MA in Science Writing

sciencewriting.jhu.edu (https://advanced.jhu.edu/academics/graduate/ma-science-writing/)

Science writing explores and explains how our world works. The best science writing inspires a deeper understanding, a sense of wonder, or a need to act. The online/low-residency Science Writing program at Johns Hopkins strives to guide the next generation of writers and editors who will help the public comprehend the increasingly complex issues of science, medicine, and technology that affect their lives. Students in the Science Writing program do not focus on creating scientific research reports, journal articles for peer review, or other scholarly/academic works, nor do we teach technical writing for instruction manuals or regulatory documents. Instead, our students develop the craft of translating complicated information about science, medicine, and technology into clear, perceptive prose for a broad audience.

The program recognizes that contemporary science writing involves journalism, communication, multimedia, and the literary arts. Our typical student hones journalistic and creative writing techniques to craft enticing, understandable prose for digital or print venues, from magazines and books to social media and websites, for news outlets, companies, research agencies, and universities. Along the way, students acquire communication skills to promote viewpoints and develop expertise to thrive in the digital universe. Our writers and editors are also challenged to monitor science itself, to disclose how research can falter or be misused.

A brief residency course, required for the degree, provides intensive face-to-face study to complement the group and personal interaction of online courses. During residencies, students have visited a field research site on a Maine island, control rooms at NASA, environmental monitoring projects on the Irish coast, and world-famous genetics and biotech labs in Washington and Baltimore. They have observed surgeons in the operating room, sailed with biologists on the Chesapeake Bay, heard from Nobel and Pulitzer Prize winners, and met with science writers from The Washington Post, The New York Times, National Public Radio, National Geographic, Discover, Science, Nature, and other journalism outlets. From space and the oceans to nanotechnology and climate change, from artificial intelligence and robotics to fitness and genetics, the ever-changing topics chosen by our science writers are essential to an enlightened citizenry of the 21st century.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Science Writing requires:

- Statement of Purpose - The statement should be one to three typewritten pages, single- or double-spaced, and describe the applicant's education, experience, and interest in writing about science, medicine or technology. Statements of Purpose are reviewed for creativity, content, and the level of interest in the field, so we appreciate originality and professional or personal reflection. The statement should also describe the applicant's recent reading (books, periodicals, digital sites, or other works).
- Writing samples - The samples should total 10 to 20 typewritten, double-spaced pages (about 2,500 to 5,000 words), and should include some pieces about science, medicine, or technology. A combination of several shorter pieces rather than a single, lengthy piece is recommended. Any factual form is permitted, including news or feature article, commentary/blog, memoir, travel, essay, review, profile, book chapter, and creative nonfiction. Applicants may submit published or unpublished works. Digital writing samples should be submitted in their entirety, not as links. The majority of an applicant's samples should be no more than five years old. Academic papers, peer-reviewed research reports, technical writing, or government documents are not recommended as writing samples; the samples should be journalism, communication writing, creative writing, blogging, etc.

Teaching Writing, Master of Arts

MA in Teaching Writing

advanced.jhu.edu/teachingwriting (https://advanced.jhu.edu/academics/graduate/ma-teaching-writing/)

The Master of Arts in Teaching Writing Program helps teachers at all levels, K-University, in all disciplines, learn to become master teachers of writing, acquiring new and innovative ways to teach writing to their students, studying theories and best practices on the teaching of writing that they can share with their colleagues, and pursuing their own writing in an exciting and supportive online community of teachers and writers. The Teaching Writing Program allows participants to address individual situations, needs, and interests while learning within a diverse community. By offering flexible, interactive, and customized learning, the program provides a model for teaching writing and a forum where all teachers can learn and grow together as teachers of writing, and as writers too.

The Program is built around five core principles:

1. The best teachers of writing also write. Every course devotes some time and attention to having teachers explore their own writing, in whatever form or forms that course is built around.
2. Teachers can learn from studying theories and best practices in the teaching of writing. Some readings and discussions about both accepted practices and the theories behind those practices are included in every course.

3. Teachers can learn from and share with each other. Participants in the program will have experience and expertise in teaching and writing. Every course provides opportunities for participants to share that knowledge with their classmates, and to learn from each other.
4. Teachers must have the freedom and encouragement to apply what they learn to meet their own specific needs and situations. The makeup of every class includes teachers teaching at different grade levels and in different disciplines. Every course encourages teachers to reflect on what they are learning and adapt that material to suit their individual needs.
5. Teachers learn best in an interactive classroom (even a virtual one). Every course seeks to establish a sense of community.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Teaching Writing requires:

- Writing sample. The writing sample may be in any form or genre, on any subject, and should not exceed 10 typed, double-spaced pages.

PROGRAM REQUIREMENTS

Nine courses required:

- Three required core courses
- Two customizable core courses
- Four electives

Writing, Master of Arts

MA in Writing

writing.jhu.edu (https://advanced.jhu.edu/academics/graduate-degree-programs/writing/)

The MA in Writing Program offers students the option of a fiction or nonfiction concentration to study the practice of writing in a series of workshops and reading courses. Students on the fiction track work on short stories, novellas, or novels. Students on the nonfiction track pursue long-form, literary journalism or personal essays, and memoir.

Students in the MA in Writing program learn primarily through the practice of writing and the study of reading with a focus on craft. Depending on student goals, the program offers a broad foundation in fine arts/creative writing, in journalism or in both fields. Some students cultivate skills to prepare for a career; others are seasoned writers who want to change focus; still others favor artistic exploration over professional ambition. Within the realm of literary writing, students have the flexibility to develop individual styles and pursue specialized subjects. The program's goal is to create a nurturing yet demanding environment where writers work toward publication at the highest artistic and professional levels.

Admissions Criteria for all Advanced Academic Programs (p. 2210)

PROGRAM SPECIFIC REQUIREMENTS

In addition to the materials and credentials required for all programs, the Master of Arts in Writing requires:

- Familiarity with writing in the applicant's chosen concentration. Applicants to the Fiction concentration should have read in their area of interest and explored their writing voice. Applicants to the Nonfiction concentration should have read in their field. For Nonfiction applicants, some exposure to journalistic fundamentals is helpful but not necessary.
- Writing samples. The samples should be up to 15 typewritten, double-spaced pages, or about 3,500 to 4,500 words, in the concentration of interest. Samples do NOT have to be a single, lengthy piece of writing.
- The program's admissions committees offer the following additional suggestions for writing samples for each concentration:

  Fiction: Short stories or novel chapters in prose fiction, demonstrating literary content or themes. Any style, vision, or approach is permitted--traditional, experimental, hybrid, etc.

  Nonfiction: Up to five separate works of prose nonfiction about any subject. Any nonfiction form or combination of forms, including feature article, commentary/blogs, memoir, travel, essay, profile, biography, book chapters and creative nonfiction, is permitted. Academic assignments, term papers, government reports, or scholarly criticism are not acceptable nonfiction writing samples.

Dual-Concentration Applicants

Applicants may seek formal degree candidacy in both Fiction and Nonfiction by submitting full writing samples in each proposed area. Such applicants should explain their multiple interest and reading in a single statement of purpose. The program makes individual admission decisions for each concentration in a dual-concentration application. Dual-concentration students must complete two to four more courses than the 10 required for a single-concentration degree.

PROGRAM REQUIREMENTS

Ten Courses:

- Two required core courses
- One required concentration core course
- Three customizable core courses from the declared concentration
- Electives to ensure the 10-course requirement is met

Office of Summer and Intersession Programs

summer.jhu.edu (https://summer.jhu.edu)

The Office of Summer and Intersession Programs (OSIP), a division of the Advanced Academic Programs in the Krieger School of Arts and Sciences, offers rigorous credit and non-credit courses and programs in the summer and intersession terms various modalities. The programs have a broad audience, reaching 58 countries for the undergraduate program and 78 countries for the pre-college program. Our programs and courses are distinguished by academic excellence, personal attention by top faculty, opportunities to participate in hands-on activities, and a close-knit community. During intersession and summer terms, OSIP works with academic departments to sponsor courses, providing identical academic rigor as found in the university's fall and spring terms.

JHU undergraduates, postbaccalaureate, and visiting undergraduate students can put credit earned in person or online course to work right away in their degrees. Qualified pre-college students can start college early by earning credit in the summer before college for potential transfer later at the university they attend. Adult students looking to advance in their career, test the waters after a period away from the classroom, or just looking for intellectual engagement can also enroll in a summer online course and make the most of their summer.

Pre-College students can accelerate their entry into college life in a fast-paced environment while earning academic credit from a top university. The Summer pre-college program is offered in multiple modalities. Interactive and flexibly designed to meet today's needs, students can select any combination of these programs, each available over three sessions in the summer. While students are welcome to select more than one online program per session, each is designed so that students committing about 15-18 hours per week can complete that program. In addition to earning college credit, students experience academic life at Hopkins while living on campus or participating online and engaging in a wide variety of academic and social activities.

Each January, academic departments representing the Krieger School of Arts and Sciences and the Whiting School of Engineering sponsor a diverse set of 1, 2, or 3-week undergraduate courses that are not typically offered during the academic year. In addition, students may take one or two intersession courses, which are graded Satisfactory/Unsatisfactory.

There is no additional tuition for current degree-seeking JHU undergraduates registered full-time for the preceding Fall semester. Students who do not meet these criteria are charged tuition on a per-credit basis.

COURSE DESCRIPTIONS

A

B

E

M

N

P

S

AS.010 (History of Art)

AS.010.101. Introduction to Art History I. 4 Credits.
This introductory course explores and compares major developments in world art and architecture from the dawn of history, through several ancient and medieval civilizations, down to the era of the Black Death in Europe (mid-14th century). We will focus primarily on Egypt and the ancient Levant, the Mediterranean world of Greece and Rome, medieval Europe, the Islamic Middle East and Spain, and selected aspects of the arts of India, China, and Japan.
Area: Writing Intensive

AS.010.102. Introduction to Art History II. 4 Credits.
This introductory course explores and compares major developments in the arts primarily in Asia, Europe, North Africa, and North America from the fourteenth century to the present day, looking in particular at architecture, painting, sculpture, the arts of the object (ceramics, metalwork, etc.), printmaking, photography, and, starting in the twentieth century, new media. Throughout the semester, we will explore how the artistic practices and theories under consideration relate to their specific historical, intellectual, social, political, and geographical contexts, and we will also consider the roles that works of art and artists played in shaping many of those very same contexts

AS.010.103. Introduction to the Art of Asia. 3 Credits.
A survey of the art and architecture of Asia, from the ancient world to the present and including the Indian subcontinent, China, Japan, Korea, and Southeast Asia.

AS.010.110. Art of the Islamic World. 4 Credits.
This course is an introduction to the art of the Islamic world, covering a geography that stretches from Spain to India and a chronology that extends from the seventh century into our own time. Within this rich and varied continuum, we will look at a range of art forms—including architecture, painting, sculpture, ceramics, and calligraphy—in relation to such themes as patronage, production, function, and audience. A number of the artworks will be viewed firsthand in local collections. We will also explore the intersection of Islamic art with today's political realities.

AS.010.204. Italian Art in the Middle Ages. 3 Credits.
This course explores key monuments of medieval art and architecture in Italy from c. 400 until 1350. We will concentrate on historical, functional, and aesthetical aspects that lead to the creation of single monuments and art works. Emphasis is given to the analysis of "sacred space" by means of architecture, painted, and sculptural decoration, as well as ritual performances. Another focus is laid on the emergence on the political dimension of art for the creation of civic identity as well as in the context of the late medieval courts. We raise questions about the importance of materiality and science for the creation of medieval art works.
Area: Writing Intensive

AS.010.205. Art of Mesoamerica. 3 Credits.
This course provides a basis for the study of Mesoamerican visual cultures and urban settings. We will explore the artistic production of the Olmec, Maya, and Aztec as well as works created by the artists of Teotihuacan, Monte Albán, and West Mexico. With a focus on aesthetics and cultural function, case studies range from stone sculpture, painted ceramics, and screenfold codices, to architectural complexes from Mexico and Central America. Themes to be discussed include: representations of humans and deities, monumentality and rulership, mutilation and destruction of monuments, and ritual and political significance of materials.

AS.010.208. Leonardo da Vinci: The Renaissance Workshop in the Formation of Scientific Knowledge. 3 Credits.
How does a notary's son trained as a painter come to claim expertise in the construction of machines and acquire knowledge of the principles of optics, human anatomy, the flight of birds, the dynamics of air and water? The course will focus critically on the myth of Leonardo's singularity and explore his achievements with regard to the artisanal culture of his time, as well as the problems of authority in the recognition of artisanal knowledge as scientific discovery.

AS.010.210. The Art of Colonial Latin America. 3 Credits.
This course offers a broad introduction to the arts of colonial Latin America: students will become familiar with the artistic production in the areas of Latin America invaded and controlled by the Spanish Crown from the time of the conquests in the sixteenth century to independence movements in the early nineteenth century. We will explore a wide range of materials from maps to featherwork, paintings to urban grids, cathedrals to mummy bundles. The course is thematically organized, such that students will not only become familiar with the art of Latin America, but will come to understand critical topics related to the study of early modern colonialism: conquest, race, missionary control, literacy, extraction, and indigenous and imperial systems of governance.

AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez. 3 Credits.
Explores the different ways Early Modern painters and printmakers incorporated mirrors and optical reflections into their works for the sake of illusion and metaphor, deception and desire, reflexivity and truth-telling. Connecting sense perception and ethical knowledge, embedded mirror images often made claims about the nature of the self, the powers of art, and the superiority of painting in particular.

AS.010.214. Ancient Americas in Motion. 3 Credits.
This course critically examines the visual arts through the medium of documentary, historical, and Hollywood film. Coverage is mostly North America and Mesoamerica.

AS.010.232. Art and Architecture of the Global Medieval Mediterranean World. 3 Credits.
This course serves as an introduction to the art and architecture of the Mediterranean region between the early Christian period and the Second Crusade (c. 250-1150). We will analyze the interactions between WesternEuropean, Byzantine, and Islamic cultures through the development of religious art and architecture, asking specifically how these interactions were mediated by culturally distinct representational practices. The course will cover the broad Mediterranean region by focusing on specific sites of interaction around the Sea (i.e. Islamic Spain, Norman Sicily, Byzantine North Africa, Venice and the Adriatic Coast, and Crusader Palestine). Select topics will include: the rise of religious image theory and its effect on the visual cultures of the Mediterranean region; the trans-regional movement of artists, crafted objects, and artistic technologies; the history of urbanism and the production of artistic objects in port cities and centers of trade; and the concept of the Mediterranean as "Premodern Globalism." Readings will include both primary and secondary sources, and we will investigate a variety of methods and approaches to the interpretation of art objects.

AS.010.233. Asian Art Since 1945. 3 Credits.
This course examines the art and architecture of East, South, and Southeast Asia produced since the mid-twentieth century. We will engage with theoretical, visual, and political developments in the recent art of this region, reading statements by artists and architects, discussing the rising commercial and international profile of contemporary Asian art, and exploring established and emerging art histories of this period.Cross-list with East Asian Studies

AS.010.235. Art, Medicine, and the Body: Middle Ages to Modernity. 3 Credits.
This course explores seven centuries of fruitful collaboration between physicians and artists, uncovering the shared discourses, diagnostic techniques and therapeutic agendas that united the art of picture-making with the art of healing. Topics include the origin and development of medical illustration; the long, cross-cultural history of the therapeutic artefact; the anatomical investigations of Renaissance artists such as Leonardo and Michelangelo; depictions of bodily pain and disease in the art of Matthias Grünewald and psychosomatic syndromes like melancholy in the work of Albrecht Dürer; the spectacularization of the body in Enlightenment science and the ethics of medical specimen display today -- all in order to bring the complex intersections of the history of medicine and the history of art into view.

AS.010.240. Art and the Environment in the Ancient Eastern Mediterranean. 3 Credits.
What is the relationship between art and the environment? What are "geoaesthetics?" This course explores the interrelationships between ecosystem and creative responses and practices in the ancient Eastern Mediterranean. Specifically, the class will examine the intersections between artistic and architectural practices and the natural environment during the New Kingdom in ancient Egypt, the Neo-Assyrian period in ancient Mesopotamia, and the Minoan Bronze Age in the ancient Aegean.

AS.010.252. Sculpture and Ideology in the Middle Ages. 3 Credits.
This lecture course will offer a selective, thematic exploration of the art of sculpture as practiced in the Middle Ages, from the fall of the Roman empire in the 4th century CE to height of the Gothic era. The primary concern will be to analyze sculpture in all of its forms – monumental free-standing, architectural, liturgical, and commemorative – as the primary medium utilized by patrons, both private and corporate, to display political messages to an ever growing public.

AS.010.255. Contemporary Performance Art. 3 Credits.
Performance art is provocative and often controversial because it troubles, without dissolving, the distinction between art and life. Not just a matter of activating bodies, engaging viewers, or spurring participation, performance art asks what it means to perform, and what kinds of actions count, in contemporary culture. As such, performance art allows us to rethink established art historical concerns with form, perspective, and materiality, while offering critical insight into everyday life. We will explore how performance art addresses ingrained assumptions about action and passivity, success and failure, embodiment and mediation, "good" and "bad" feelings, emancipation and dependency.The study of performance art invites transdisciplinary approaches. Students from across the university are welcome. Our attention to a diverse array of artists and practices will be supplemented by readings in art history and criticism, as well as in feminist and queer theory, critical race theory, and political thought.

AS.010.265. Early Modern Dutch and Flemish Painting. 3 Credits.
Explores the major painters and printmakers working in the Netherlands during the sixteenth and early seventeenth centuries, the period that saw the outbreak of the Reformation, the revolt against Spanish rule, iconoclasm, the birth of the Dutch Republic, and the establishment of a Dutch colonial empire. Featured artists include Jan Gossaert, Pieter Aertsen, Pieter Bruegel the Elder, Jan Brueghel, Rembrandt van Rijn, Peter Paul Rubens, Jan Steen, Jan Vermeer, and others.

AS.010.301. Michelangelo: Religion, Sexuality, and the Crisis of Renaissance Art. 3 Credits.
The course will focus on the controversies surrounding the representation of the body in the writings and figurative art of Michelangelo and his contemporaries, the historical circumstances under which the most admired artist in Europe was attacked as a blasphemer and an idolator, and the effect of widespread calls for censorship on his later production. The writings of Michelangelo, Pietro Aretino, Benvenuto Cellini and own writings will be considered with a focus on their staging of an ambivalent and transgressive eroticism.

AS.010.303. Transformations of an Empire: Power, Religion, and the Arts in Medieval Rome. 3 Credits.
This course investigates the impact of political, religious, and social change for the making of art and architecture in the city of Rome from Constantine the Great (ca. 274-337 CE) until 1308, when the papal court moved to Avignon. From being a thriving metropolis and the political center of an empire in a pagan, multi-ethnical society, Rome became a small town of a few thousand inhabitants dwelling in the ancient ruins under the spiritual leadership of a powerless Christian bishop and unprotected from the invasions of the migrating peoples from Eastern Europe and Central Asia. Later transformations concern the rise to political power of the popes, achieved by the military alliance with the Frankish dynasty of Charlemagne around 800, and the controversy over the superiority of power between the German emperors and the Roman popes. How did the transformation from worldly to religious power affect the architecture of public buildings in the city? What strategies were developed to visually promote the new religious leaders of the city, the popes, and the new Christian God? How did the new status of Rome as one of the most important Christian pilgrim sites with its countless bodies of Early Christian martyrs in the catacombs outside the city influence urban development? And finally, what impact did the economical ups and downs in these periods of transition have for the arts? As we try to reconstruct the 'image' and the appearance of medieval Rome, this course discusses ideas and concepts behind different forms of leadership, both political and religious, as they intersect with the power of the arts and the self-referential character of a city that is obsessed with its own past.
Area: Writing Intensive

AS.010.305. The Ethiopia at the Crossroads. 3 Credits.
Ethiopia played a foundational role in modern-day civilization and culture: as the find site of Lucy, the earliest bipedal hominid, the seat of the Queen of Sheba's kingdom, the second country in the world to adopt Christianity in the early 4th century CE, and the nexus of exchange between Africa, Europe, and Asia. In fall 2023, The Walters Art Museum will mount the exhibition tentatively titled, Ethiopia at the Crossroads, which addresses Ethiopia's relationship and artistic exchange with its surrounding cultures, including South Arabia, Nubia, Egypt, Byzantium, Armenia, Italy, and India. It also discusses the impact of Ethiopian art beyond its borders, bringing works of Ethiopian contemporary art into dialogue with the historical Ethiopian art that these artists draw upon in their work. The exhibition covers approximately 1,750 years of Ethiopian history with a special focus on the art of the medieval period, broadly conceived. The course will also offer insights into how a museum exhibition is developed from the initial concept to the physical presentation in the galleries.

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.

AS.010.309. The Idea of Athens. 3 Credits.
This thematic course will explore the art, architecture, material culture, and textual evidence from the ancient city of Athens, the many cultures and social positions that made up the ancient city, and the idea of the city as something far beyond its reality. We will take a number of field trips to museums in the area and some of your assignments will be based in local museums.

AS.010.315. Art of the Assyrian Empire, 1000-600 BCE. 3 Credits.
From 900 to 609 BCE, the Assyrian Empire dominated the ancient Near Eastern world, stretching from western Iran to the Mediterranean and Egypt. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This course provides an integrated picture of the imperial arts of this first world empire, situating it within the broader social and political contexts of the first millennium BCE. In its conquest of foreign lands, this powerful state came in contact with and appropriated a diversity of cultures, such as Phoenicia, Egypt, and Greece, which we will also study.

AS.010.316. Venice: Art, Architecture and Ecology from the Late Middle Ages to the Present. 3 Credits.
This course is an investigation into the fashioning of Venetian identity in architecture and the visual arts, with a particular address to the encounter with Byzantine and Islamic traditions and exchanges with other centers of the Italian peninsula.

AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
The course focuses on art and architecture in the political and religious contexts of the Middle East, from the 4th to the 14th c. The three monotheistic religions all claimed specific territories -- in particular the city of Jerusalem -- for cult practices. This situation resulted in military conflicts that had an impact of Jewish, Medieval, Byzantine, and Islamic art in the Holy Land. The political conflicts, which still plague the region today, are rooted in the complex situation of the medieval period. The Roman, Arab, Byzantine, and crusader invasions resulted however in exciting eclectic styles that characterize the art and architecture of the region. We will discuss concepts behind political and religious leadership, as they intersect with the power of the arts.
Area: Writing Intensive

AS.010.320. Art of Colonial Peru. 3 Credits.
Viewed within the dynamic historical context of colonial society, we consider the pictorial, sculptural, and architectural programs that ensued in viceregal Peru (1532-1825). We examine the role of religious orders, art schools, artisan guilds and cofradía, and consider the social and political implications of art patronage.

AS.010.322. Knowledge, Holiness, and Pleasure: The Illustrated Book in the Medieval World. 3 Credits.
The book was the primary source for the collection of knowledge in the Middle Ages. It was also the medium for the preservation and proliferation of the texts that underlay the three monotheistic religions (Judaism, Christianity, Islam). Finally, the book served as a source for elite entertainment, perhaps most importantly in Late Antiquity and the later Middle Ages. This course investigates the role of the illustrated book within the political, religious, and artistic developments that took place after the rise of Christianity from the end of the Roman Empire until the early modern period in the medieval West and in Byzantium, permeating Jewish and Islamic traditions. We will examine how the different types of books, such as horizontal and vertical scrolls, large and miniature size codices influenced the placement, conception, and style of the illustrations. The course also addresses processes of manufacture, issues of materiality (i.e. precious multi-media book covers, papyrus, parchment, paper), and the relationship between text and image. A major aspect of the seminar focuses on the performative aspect of the book in its wide range of functions: secular and liturgical, public and private. Students will be able to work first hand with manuscripts and facsimiles from the rare book collection of Eisenhower Library and the Walters Art Museum.

AS.010.325. Blood, Gold, and Souls: The Arts of the Spanish Empire. 3 Credits.
From the sixteenth through the eighteenth centuries, visual forms and practices linked such far-flung places as Mexico City and Naples, Manila and Lima, Cuzco and Antwerp, Quito and Madrid: all cities in the Spanish Empire. This course is conceived as a voyage, moving city by city to explore objects that connected Spain's vast holdings. We will investigate how the Spanish Crown and the Catholic Church used visual strategies to consolidate political power and instill religious faith across the world; and, alternatively, we will consider how local conditions, concerns, and resistance reshaped those efforts. This course surveys a diverse range of artistic production: religious paintings and sculptures; maps used for imperial surveillance; luxury goods crafted from shimmering feathers, ceramics, ivory, and precious metals; urban design and architecture from the ports of Europe to the highland outposts of the Andes; ephemeral cityscapes for civic performances. In examining such materials, students will be introduced to the art historical methods and theoretical concerns used to study a wide diversity of objects within an imperial frame.

AS.010.327. Asia America: Art and Architecture. 3 Credits.
This course examines a set of case studies spanning the last century that will enable us to explore the shifting landscape of Asian transnational art and architecture. Each week will focus on a different artist, group, exhibition, architect, urban space, or site to unpack artists' and architects' engagements with the changing landscape of immigration policies, movements to build solidarity with other artists of color, and campaigns for gender and sexual equality. The course will situate these artists within American art, and build an expansive idea of Asia America to include the discussion of artists whose work directly addresses the fluidity of location and the transnational studio practice.
Area: Writing Intensive

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire's formative centuries, when three successive capital — Bursa, Edirne, and Istanbul — served to visualize the sultans' growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.

AS.010.337. Global Amsterdam: The Golden Age of a Small but Mighty Metropolis. 3 Credits.
This course examines the visual and material culture of the Dutch Golden Age as the product of global forces. The young Dutch Republic quickly achieved a global reach in the seventeenth century. And Amsterdam served as its commercial capital, which by 1630 could be counted as one of the most important port cities in the world and home to the Dutch East India Company (VOC), the world's first multinational corporation. Moving an incredible quantity of goods (spices, silks, porcelain, coffee, precious stones, "exotic" arts, and slaves) generated not only the economic riches, but also the cultural touchpoints that would give rise to art produced by the likes of Rembrandt, Vermeer, Hals, and the many exceptional craftsmen that have left us some of the most enduring masterpieces of the seventeenth century. This course situates that art, and the city of Amsterdam itself, within networks that connected it to such far flung places as Japan, Jakarta, Surinam, Curacao, Brazil, and the Indian Subcontinent.
Area: Writing Intensive

AS.010.338. Art and the Harem: Women's Spaces, Patronage, and (Self-)Representation in Islamic Empires. 3 Credits.
Long characterized in the Western imagination as exotic realms of fantasy, harems in Islamic tradition served as private domestic quarters for the women of elite households. This course explores the harem —as an institution, a physical space, and a community of women— from various art-historical perspectives, considering such topics as the harem's architecture, the agency of its inhabitants as patrons and collectors, the mediating role of eunuchs in the harem's visual and material culture, and the ability of harem women to make their mark through public artistic commissions. Our case studies will address a range of Islamic geographical and chronological contexts, though we will focus on the empires of the early modern period and, above all, the famous harem of the Ottoman sultans at the Topkapi Palace in Istanbul. In challenging popular misconceptions, the course will also look at the wealth of exoticizing imagery that the harem inspired in Western art, which we will consider through Orientalist paintings at the Walters Art Museum and illustrated rare books at Hopkins itself.

AS.010.339. Sex, Death, and Gender: The Body in Premodern Art, Medicine, and Culture, c. 1300-1600. 3 Credits.
To what extent was the body and its depiction a site of contestation, identification, or desire in the Middle Ages and Renaissance? If the body in the West since the 1800s is seen to have been shaped by the rise of photography and film, the institutionalization of biomedicine, and the establishment of techniques of surveyance and mechanization, then how was the body represented, disciplined, and experienced in the preceding centuries? In an age of unprecedented encounter with non-European bodies, what did it mean to describe and categorize bodies by race, region, or religion? These are some of the major questions this class seeks to answer, which is fundamentally interdisciplinary as it draws upon insights and methods from anthropology and the history of medicine and history of science to investigate how the body has been represented and imagined in the visual arts. The bodies of the suffering Christ, the female mystic, the dissected cadaver, the punished criminal, and the non-European 'Other' will loom large as we work to problematize notions of a normative body, whether in the premodern world or in the contemporary one. While most readings and lectures will concern the body and its representation in the Christian West during the later Middle Ages and Renaissance, students are encouraged to work on a topic of their choosing from any geographical area 1000-1800 CE for their research papers.
Area: Writing Intensive

AS.010.346. Art of the Cold War Era. 3 Credits.
The Cold War years bore witness to some of the most radical developments in modern art. An abiding question for artists, writers, and political figures too during this period was what role—if any—could art perform in social and political life, and in the struggle between capitalism and communism in particular. This course examines the political viability of art as this concern was taken up by groups and individuals throughout the world in response to rapidly shifting geopolitical circumstances. Beginning with the visual cultures of the United States and Soviet Union, the course will also examine artistic responses to the conditions of Cold War existence in and beyond countries of NATO and the Warsaw Pact. Proceeding roughly chronologically, the course is divided into twelve units following the art of the US, USSR, Western and Eastern Europe, China, and Japan, among others. It treats a wide variety of media as painting and sculpture, canonically privileged in the history of Western art, ceded ground to new forms of practice such as performance, film, and a deep, critical engagement with mass culture. In so doing, this course provides at once a global history of modern art and visual culture and a critical interrogation of their relationships to social change and political life during the 20th century and beyond.
Area: Writing Intensive

AS.010.349. Art and Interactions in the Eastern Mediterranean from 2000 to 500 BCE. 3 Credits.
The arts of Egypt, Greece and the Near East are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. From 2000 to 500 BCE (the Middle/Late Bronze and Iron Ages), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Egyptians, Near Easterners, Greeks and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war, imperialism, and colonization.
AS.010.301 - Titled "Art and Interactions in the Eastern Mediterranean from 2000 to 500 BCE" - Students who have taken that course in 2014 or prior are not permitted to take this course.

AS.010.350. Body and Soul: Medicine in the Ancient Americas. 3 Credits.
This course examines curative medicine in the Americas through its visual culture and oral histories. Philosophies about the body, health, and causes of illness are considered, as are representations of practitioners and their pharmacology. Case studies are drawn from cross the Americas (Aztec, Moche, Aymara, Paracas, American SW). Collections study in museums, Special Collections.

AS.010.352. Modern and Contemporary Art: Middle East and South Asia. 3 Credits.
This course will explore modern and contemporary art in colonial and postcolonial contexts from Bangladesh to northern Africa. How do artists negotiate demands to support their national and local identities while participating in modernism across borders? What role do secularism and spirituality have in modern art? How do anticolonial, Marxist, and feminist politics shape art in these regions? How do global economic forces and the rise of powerful collectors, private museums, and international art fairs shape art and artists working across this geographic area? We will foreground the role of women as artists, collectors, patrons, and scholars throughout.
Area: Writing Intensive

AS.010.364. Babylon: Myth and Reality. 3 Credits.
Babylon – the name resonates even today, from the biblical whore of Revelation to sci-fi. It evokes exotic places and time long past. But what do we really know about the ancient city and the civilization that flourished there thousands of years ago? The first part of this course examines the archaeological city of Babylon, located in the modern state of Iraq, and considers its artistic and architectural achievements in the context of Mesopotamian history. The second part of the class explores the ongoing impact of Babylon in the cultural imagination of later periods, from the Classical and biblical authors, to European artists, Hollywood movies, science fiction, and contemporary political movements.

AS.010.365. Art of the Ancient Andes. 3 Credits.
The ancient visual arts of Andean South America and their respective cultural contexts form the basis of this course. In conjunction with the Baltimore Museum of Art and the Johns Hopkins Archaeological Museum students will have access to collections for study.

AS.010.366. Native American Art. 3 Credits.
The works of Native American artists are examined and discussed in their respective social and historical contexts. Such works include Hopewell stone sculpture, Mimbres pictorial painting, and Tlingit guardian figures. We examine the concept of sacred landscape through analysis of monumental earthworks and effigy mounds, Anasazi architecture, and rock art. In conjunction with the Baltimore Museum of Art (BMA), and Johns Hopkins Special Collections, students will have access to collections for study.

AS.010.367. Photography, the Archive, and Memory. 3 Credits.
This seminar will culminate in an exhibition in the library, focused on the photographic works of Dayanita Singh (b. India, 1961) in Hopkins' collections. Singh's work delves deeply into her subjects, exploring issues of identity, the body, and sexuality as well as questions related to memory and the archive. She has long presented her photography in the form of the book, and as such we will pursue readings in photography, book arts, and the archive, and bring nineteenth-century illustrated books in our collection into dialogue with Singh's work. This will be a hands-on seminar: students will develop the framework for the exhibition, write the textual materials (labels, wall text), and decide on the arrangements of objects in the show.

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through an examination of colonial exhibitions, the rise of national, regional, and archaeological museums, and current practices of display and representation in institutions, we will explore how the image of South Asia has been constructed in the colonial, modern, and contemporary eras. We will engage with the politics of representation, spectacle, and the economies of desire as related to colonialism and the rise of modernity. Readings from postcolonial theory, museum studies, anthropology, history, and art history.
Area: Writing Intensive

AS.010.389. The Stone and the Thread. 3 Credits.
Advanced inquiry into imperial Inka architecture and fiber arts.
Area: Writing Intensive

AS.010.390. Ancient Americas Object Workshop. 3 Credits.
Analysis of ancient Americas collection held in the Johns Hopkins Archaeological Museum.
Area: Writing Intensive
AS.010.105 OR AS.010.407 OR AS.010.398 OR AS.010.365 OR AS.010.389 OR AS.010.366 OR AS.010.214 or in consultation with professor prior to registration.

AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Case studies are drawn from North America, Mesoamerica, and the Andes. Collections study in museums.

AS.010.400. Research Lab: The Dutch Americas. 3 Credits.
The Dutch East India Company, or VOC, is historically and art historically well documented and firmly understood. But the Dutch also had significant holdings to the west via the Dutch West India Company, or WIC. They operated and held outposts in the present-day United States (New York/New Amsterdam), Caribbean (Surinam, Curaçao, Bonaire), Latin America (Brazil), and West Africa. Despite the abundance of materials associated with the WIC from this wide geography, these have been scarcely assessed by art historians, and a defined and comprehensive corpus has never been assembled. This class will act as a research lab in which to do so. In research teams, students will map artworks and objects created from that broad, transnational cultural ambit—categories that might include maps, landscape paintings, still life paintings featuring American flora and fauna, botanical illustrations, plantation architecture, luxury objects made from precious raw materials gathered in the Americas, the urban environment of slavery—and develop individual research questions around them.The class will run with a partner lab in the form of a course led by Professor Stephanie Porras at Tulane University. The course will feature speakers; and there is potential for funded travel to conduct research. We will start at the ground level; no previous knowledge about the field is required. Students from all disciplines are welcome.
Area: Writing Intensive

AS.010.405. The Medieval Image and Concepts of Authenticity. 3 Credits.
The course examines the notion of the authentic in conjunction with medieval images, relic veneration, and the practice of law. It investigates the construction, reception, and theoretical grounding of authenticity of reliquaries, icons, and imprints on cloth or seals, and legal documents. These objects elucidate artistic strategies such as cross media references, abstraction, mimesis and bricolage to convey an aura of authenticity. We address other authenticating factors, such as complex ritualized forms of communication. This is a new course for the undergraduate section, existing course is AS.010.644. Will be taught as a hybrid this Fall 2020.
Area: Writing Intensive

AS.010.407. Ancient Americas Metallurgy. 3 Credits.
This course addresses the technology, iconography and social significance of metals and draws on case studies from the Americas. Collections study in museums.

AS.010.409. Theories and Works of “The Baroque”. 3 Credits.
There is perhaps no more confounding, though also no more persistent, art historical concept than that of “the Baroque.” This course introduces students to foundational histories and critiques of “the Baroque” while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.
Area: Writing Intensive

AS.010.410. The Epistemology of Photography. 3 Credits.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Area: Writing Intensive

AS.010.413. Historical and Conceptual Bases of Art History. 3 Credits.
This course introduces students to the principal methods and theories of art history. Students will work through readings foundational for the discipline, texts that define key methodological consolidations in the twentieth century, and more recent (e.g. feminist, visual studies, global, post-colonial, and/or ecological) critiques and rethinking. Specific texts will vary by instructor, but the course seeks—in any instantiation—to include a plurality of perspectives.

AS.010.414. The Cartographic Imaginary: Maps, Charts, and the Navigation of the Early Modern Globe. 3 Credits.
In the early modern world, people traveled further and more routinely than ever before. This course looks at the tools used to facilitate such endeavors—from maps to navigational charts, from atlases to astrolabes. However, beyond mere logistical instruments for imperial expansion, colonial settlement, and commercial trade, these objects and pictures structured new ways of thinking about and imagining the world and its spaces. An armchair traveler in Amsterdam could envision a journey to and travel within a place like modern-day Indonesia; a Spaniard living in the highlands of present-day Bolivia could imagine, in period terms, “all the cities of the universe and more.” This course attends to excavating the representational economies forged from the mass-production and wide circulation of navigational objects and pictorialized territories. Though the focus will be on the early modern period, we will read broadly and engage a wide range of theories; and students are encouraged to use the tools we develop in class to research representation from any time and place.
Area: Writing Intensive

AS.010.419. Passion Image, Passion Cult, Passion Drama: Narrative and Metaphor in the Middle Ages, Renaissance, and Beyond. 3 Credits.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.
Area: Writing Intensive

AS.010.423. Modern and Contemporary Art in South Asia. 3 Credits.
How does modernism operate in the colonial context, work with and against the nationalisms of new countries (India, Pakistan, Sri Lanka, Nepal, and Bangladesh), challenge existing norms of the art world and the art market, engage with the difficult and violent upheavals of Partition and sectarian conflict, and allow for experimentations and new forms all the while? This course will explore the history of the art of the subcontinent from c. 1880 to the present by critical engagement with the art, artists, and theories at play in the South Asian region.
Area: Writing Intensive

AS.010.424. Art and Colonialism: Nineteenth-century India. 3 Credits.
This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the “people of India,” and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library’s Special Collections.
Area: Writing Intensive

AS.010.431. Obsessed with the Past: the Art and Architecture of Medieval Rome. 3 Credits.
In antiquity, Rome became the capital of an empire, its growing status reflected in its sophisticated urban planning, its architecture, and the arts. While an abundance of studies explores the revival of this glorious past in the Renaissance, this seminar discusses various ways of the reception of antiquity during the medieval period. We address the practice of using "spolia" in medieval architecture, the appropriation of ancient pagan buildings for the performance of Christian cult practices, the continuation of making (cult)images and their veneration, the meaning and specific visuality of Latin script (paleography and epigraphy) in later medieval art. We discuss the revival and systematic study of ancient knowledge (f. ex. medicine, astronomy, and the liberal arts), in complex allegorical murals. As we aim to reconstruct the art and architecture of medieval Rome, this course discusses ideas and concepts behind different forms of re-building and picturing the past, as they intersect with the self-referential character of a city that is obsessed with its own history.
Area: Writing Intensive

AS.010.432. Therapies of Art and Literature from Antiquity to Early Modern Europe. 3 Credits.
This seminar examines the myriad ways artists and writers geared their work toward the therapeutic healing of mind, body, and soul, and the role images and texts could play in programs of individual and collective transformation. Taking as our point of departure the ancient tradition of spiritual exercises and inner dialogue, Petrarch’s therapy of the passions, and the revival of consolatory letters, we will consider how the Christian artist could invest their work with medicinal, magical, sacramental, or spiritual efficacies, and even take on the mantle of a "physician of souls." Intersections with the histories of medicine and religion will lead us to the ways natural medicine and the thaumaturgical practices associated with pilgrimage could be transposed into the arena of spiritual therapy. Featured authors include Cicero, Marcus Aurelius, Augustine of Hippo, Boethius, Petrarch, Michel Foucault, Pierre Hadot, and Allain de Botton; artists include Hieronymus Bosch, Albrecht Dürer, Matthias Grünewald, and many others.
Area: Writing Intensive

AS.010.433. Hands-On Approaches to European Books and Prints before 1800. 3 Credits.
Baltimore’s rich museum and library collections create a dynamic laboratory for students to gain an understanding of early modern European traditions of prints and books. Engraving, etching, woodcut, mezzotint, à la poupée; Rembrandt, Dürer, Aldus Manutius, Plantin-Moretus. This course will introduce students to the basic techniques, concepts, terms, and artists that shaped the production of reproductive works on paper in early modern Europe and their subsequent art historical study. All sessions will be taught out of local collections (BMA, Walters, NGA, Hopkins Special Collections); that is, this is a hands-on class that—while requiring no previous experience—will attend to the nitty-gritty details and methods of studying works in person, giving students the tools, expertise, and confidence to pursue their own research with historical printed materials.
Area: Writing Intensive

AS.010.440. Power Dressing: The Politics of Costume between the Ottoman Empire and the West. 3 Credits.
In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—how one dressed was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire’s long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums —books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-century dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world’s fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.
Area: Writing Intensive

AS.010.444. Classics Research Lab: Antioch Recovery Project (ARP). 3 Credits.

Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term “narcissism”. Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard’s Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.

AS.010.451. Script, Character, Scribble: Writing and Pseudo-Writing in Modern and Contemporary Art. 3 Credits.

Almost readable, but not quite: artists in the twentieth and twenty-first century played with script of all kinds, from ancient glyphs and Persian script to Roman typefaces and Korean Hangul. Artists also scribbled in ways that evoke writing without script or meaning. This course takes on the question of meaning-making in art through the form of script—flirting with that tantalizing feeling that we can almost read the work of art through the marks on its surface. We will engage with artists from around the world whose work grapples with knowledge, meaning, and script, and discuss the limits and possibilities of legibility, knowing, and language. In addition to painting and drawing, we will also discuss conceptual art, installation, video, architecture, tapestry, ceramics, graphic novel forms, book arts, and sculpture. We will have opportunities to situate these works within longer histories of script and pseudo-script and image-text relations. Our discussion-driven seminars will be guided by readings in art history and theory. The course carries no expectation that you are multi-lingual or have experience with multiple scripts. Central to our semester will be group trips to see art in person in DC and Baltimore. Assignments include an option for short, focused writing with feedback and opportunities to experiment with genre and to rewrite, or a longer seminar paper, chosen in consultation with the professor.
Area: Writing Intensive

AS.010.459. The illuminated charter: visual splendor, performance, and authenticity of medieval legal documents. 3 Credits.

This course investigates the complexities of medieval legal documents, their specific visuality and materiality, as well as practices of copying and forgery. We will address the aesthetics of legal documents, their graphic signs, seals, and paleography and the authenticating strategies used to corroborate their legitimacy. Another emphasis is set on the performative aspects of the medieval charters in court and church rituals. Comparison with contemporary illuminated sacred books will reveal the tight connections of monastic scriptoria and royal/imperial chanceries. The geographic focus is set wide, ranging from medieval Spain, to Carolingian and Ottonian chanceries in France and Germany, to the papal court in Rome and the imperial and monastic scriptoria in Byzantium.
Area: Writing Intensive

AS.010.501. Independent Study. 1 - 3 Credits.

You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.010.502. Independent Study. 1 - 3 Credits.

You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.010.521. Honors Thesis. 1 - 3 Credits.

Open to students by arrangement with a faculty advisor in the History of Art Department. Interested students should review the program description available in the department office.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.010.522. Honors Thesis. 3 Credits.

Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.010.603. Beyond Word & Image.

The relationship of “word” and “image” has been a central concern of both the history of art and other humanistic disciplines; and semiotics, (post-)structuralism, narrative studies, media studies, and theories of ekphrasis and representation have been marshalled to probe how visual and verbal systems work in conjunction, overlap, and conflict. Much less art historical attention has been paid to the visuality of writing itself. Against the backdrop of robust work on the relationship between text and image, this course focuses on text as image: the visuality of text, the imagistic dimensions of writing, Schriftbildlichkeit. The seminar takes as guiding premise that art historical method might be robustly brought to bear on the visual and material features of texts, both those that appear as part of traditional art historical media (paintings, sculptures, and architectural monuments) and those that have primarily remained within the purview of other humanistic subfields: books, archival documents, writers’ manuscripts, epistolary communication, and inscriptions (both analog and digital). In this course, we will survey a broad range of textual objects, from ancient inscriptions to moveable type to digital texts to “writing” in twenty-first century artists’ books; and we will work together towards assembling an art historical toolkit for excavating the full valences of texts, accounting for the ways they make meaning in linguistic, semiotic, formal, material, visual, and media-specific registers. Though art historical in focus, this course will be essentially interdisciplinary, and students from other subfields are warmly welcomed. There will be ample opportunity for discussing and studying objects in local collections.

AS.010.604. Contested Patterns: Islamic Art History and Its Challenges.
Formed against the backdrop of nineteenth- and twentieth-century Orientalism and colonialism, the field of Islamic art history continues to grapple with the overwhelmingly Eurocentric assumptions, narratives, and approaches that shaped its emergence and development. These inherited perspectives and the debates they have sparked are the focus of this seminar, which critically examines the foundational characterizations of Islamic art—as ornamental, iconophobic, and timelessly other—together with the exhibitory, commercial, and scholarly contexts in which such ideas took root. Adopting a simultaneously thematic and chronological approach, the seminar will trace the ways in which diverse constellations of actors—including those from within the Islamic world itself—have variously established, consolidated, or challenged the field's underlying concepts. We will explore how this discursive process has intensified in our own time, in which a spate of scholarly and popular treatments have laid bare the tension between calls to reevaluate the field and an enduring impulse to reinscribe its established contours. Alois Riegl, Oleg Grabar, Gülru Necipoglu, Yasser Tabbaa, and Wendy Shaw are among the authors whose writings will be assessed and compared. Throughout the seminar, we will ground our historiographical inquiry in discussions of specific works and categories of Islamic art—particularly those like carpets that traditional frameworks have fetishized as decorative—and consider more fruitful avenues for addressing such material, making use of local collections to the extent that we can.

AS.010.606. Approaches to Ancient Art.
The discipline of art history has passed through a number of major methodological and theoretical shifts since its inception (and in particular, over the last thirty years). Foundational disciplinary methods derive principally from the arts of Classical Greece, the Renaissance and contemporary periods. As the discipline embraces an enlarged field of inquiry, particularly drawing upon developments in anthropology, material culture studies, feminism, queer theory, and political theory, additional avenues for understanding the arts of the ancient world are emerging. The seminar focuses on how art historical method and theory – both foundational and emergent – might be profitably applied to the subfields of the ancient Near East and eastern Mediterranean (understood in the broadest sense).
Area: Writing Intensive

AS.010.607. The Epistemology of Photography.
This seminar will ask how photography produces ways of knowing: how does photography's reality-effect shape its dissemination and absorption? Is photography's emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.

AS.010.608. The Picture as Object.
The seminar will explore cases of European pre-modern picture-making in various media that solicit tactile as well as sensory engagement, and that call into question the "Albertian" metaphor of pictura as window. Case studies will include mosaics, reliefs, pastiglia, medals, portable paintings, et al."

AS.010.611. Seminar in Near Eastern Art.

AS.010.613. Geographies of Art: Theories and Cases Studies from the Renaissance to the Present.
The role of place in the art historiography of the Renaissance, with readings in geographical theory. The seminar will also consider the role in the art of Lorenzo Lotto, Gaudenzio Ferrari, Cesare da Sesto, Romanino, Moretto, Pordenone, Titian, and other artists active before the canon-formation enterprise of Giorgio Vasari definitively altered the map of Italian art after 1550.

AS.010.614. Research Lab: The Dutch Americas.
The Dutch East India Company, or VOC, is historically and art historically well documented and firmly understood. But the Dutch also had significant holdings to the west via the Dutch West India Company, or WIC. They operated and held outposts in the present-day United States (New York/New Amsterdam), Caribbean (Surinam, Curaçao, Bonaire), Latin America (Brazil), and West Africa. Despite the abundance of materials associated with the WIC from this wide geography, these have been scarcely assessed by art historians, and a defined and comprehensive corpus has never been assembled. This class will act as a research lab in which to do so. In research teams, students will map artworks and objects created from that broad, transnational cultural ambit—categories that might include maps, landscape paintings, still life paintings featuring American flora and fauna, botanical illustrations, plantation architecture, luxury objects made from precious raw materials gathered in the Americas, the urban environment of slavery—and develop individual research questions around them.The class will run with a partner lab in the form of a course led by Professor Stephanie Porras at Tulane University. The course will feature speakers; and there is potential for funded travel to conduct research. We will start at the ground level; no previous knowledge about the field is required. Students from all disciplines are welcome.
Area: Writing Intensive

AS.010.615. Therapies of Art and Literature from Antiquity to Early Modern Europe.
This seminar examines the myriad ways artists and writers geared their work toward the therapeutic healing of mind, body, and soul, and the role images and texts could play in programs of individual and collective transformation. Taking as our point of departure the ancient tradition of spiritual exercises and inner dialogue, Petrarch's therapy of the passions, and the revival of consolatory letters, we will consider how the Christian artist could invest their work with medicinal, magical, sacramental, or spiritual efficacies, and even take on the mantle of a "physician of souls." Intersections with the histories of medicine and religion will lead us to the ways natural medicine and the thaumaturgical practices associated with pilgrimage could be transposed into the arena of spiritual therapy. Featured authors include Cicero, Marcus Aurelius, Augustine of Hippo, Boethius, Petrarch, Michel Foucault, Pierre Hadot, and Allain de Botton; artists include Hieronymus Bosch, Albrecht Dürer, Matthias Grünewald, and many others.

AS.010.620. Theories and Geographies of the Baroque: 1600 to the Present.
Topics in artistic theory and multimedia practice from seventeenth century Italy and Spain to other early modern and modern global baroques.

AS.010.624. Art and Colonialism: Nineteenth-century India.
This seminar explores the technologies of colonial power, from small ephemeral watercolor images of religious processions to massive multi-volume photographic projects documenting the “people of India,” and extending to the establishment of new urban and architectural spaces, archaeological museums, and art schools, the circulation of diplomatic art collections, and the commissioning of survey data. We will engage with the anti-colonial movements of resistance and uprising that took place across this century, examining the central participation of modern artists with these political movements, and explore the way this period fundamentally shaped the foundations for the study of South Asian art and archaeology. Readings will include colonial and postcolonial theory, Orientalism, historiography; we will be actively working with materials in the library’s special collections.
Area: Writing Intensive

AS.010.625. Art and Interaction in the Bronze Age Eastern Mediterranean.
The arts of the Near East, Aegean and Egypt are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. During the Bronze Age (3000 to 1200 BCE), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Near Easterners, Greeks, Egyptians and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war and imperialism.Students are not expected to have extensive knowledge of all the areas, although some experience in at least one of them will be helpful. The course will interweave establishing a knowledge base necessary to tackle this topic with broader conceptual concerns and interdisciplinary approaches (art historical, archaeological, anthropological, and historical).There will be a final paper.

AS.010.631. Performing Power: Ceremonial, Diplomacy, and Gift-Giving in and beyond the Ottoman Empire.
As a major global power straddling three continents, the Ottoman Empire developed a rich and diversified ceremonial culture aimed at impressing local and international audiences alike. This seminar will explore the ways in which works of art and architecture provided settings and apparatus for, and were themselves shaped and enlivened by, the ceremonial acts in which they featured. Covering the period between the sixteenth and nineteenth centuries, we will address a range of case studies—including mosque inaugurations, royal processions, the reception of foreign ambassadors, and the exchange of diplomatic gifts—with regard to their sociopolitical, visual, material, and spatial contexts. A major concern of the seminar will be the question of how Ottoman ceremonies, together with their staging and attendant art forms, were adapted in response to changing conditions and audiences, particularly with the shift from the early modern to the modern period. While our focus will be on the Ottoman Empire, the course will also consider the ceremonial cultures of the various Asian and European polities with which the Ottomans interacted, investigating the points of comparison and contrast that defined these multifarious but connected interregional approaches.

AS.010.633. Theories and Works of “The Baroque”.
There is perhaps no more confounding, though also no more persistent, art historical concept than that of “the Baroque.” This course introduces students to foundational histories and critiques of “the Baroque” while exploring works of art that have proved central to these formulations. That is, this course will balance careful reading of historiography with close examination of works of art (both digitally presented and visited in local collections). Students will come away with a layered understanding of the Baroque objects—from relatively small-scale museum works to major architectural and sculptural monuments—and their place within the broader evolution of the history of art. Particular attention will be given to newer global and (post-)colonial approaches to notions of the Baroque, ultra-Baroque, and neo-Baroque.
Area: Writing Intensive

AS.010.634. Rethinking the Renaissance: Alternatives to "Early Modernity".
"The Renaissance" as a periodization under attack, and its persistance; the hermeneutics of the Pre-Modern Image since Panofsky; the critique of Eurocentrism; challenges to and recuperations of iconology, assessing the contributions of semiotics, psycholanalysis and queer theory.

AS.010.638. Interrogating the Material Turn.
This course considers the turn to centering materials and materiality in the history of art. Since the publication of Michael Baxandall’s Painting and Experience in Fifteenth Century Italy (1972) and in particular since the turn of the millennium, critical engagement with the materiality of art has proliferated. This seminar will tackle renewed investment in materiality within the discipline of art history and draw on perspectives from archaeology, philosophy, anthropology, conservation science, feminist and queer theory, and postcolonial studies, among others. Particular emphasis will be placed on the polycentrism of materiality as a theoretical lens that cuts across seemingly disjunct cultural, social, and political frames and subject positions. While this course focuses on the art of the ancient Mediterranean, students will be encouraged to bring their own subfields to bear on the material turn and to pursue research topics related their individual research goals. Open to interested students from all disciplines.

AS.010.639. Obsessed with the Past: the Art and Architecture of Medieval Rome.
In antiquity, Rome became the capital of an empire, its growing status reflected in its sophisticated urban planning, its architecture, and the arts. While an abundance of studies explores the revival of this glorious past in the Renaissance, this seminar discusses various ways of the reception of antiquity during the medieval period. We address the practice of using spolia in medieval architecture, the appropriation of ancient pagan buildings for the performance of Christian cult practices, the continuation of making (cult)images and their veneration, the meaning and specific visuality of Latin script (paleography and epigraphy) in later medieval art. We discuss the revival and systematic study of ancient knowledge (f. ex. medicine, astronomy, and the liberal arts), in complex allegorical murals. As we aim to reconstruct the art and architecture of medieval Rome, this course discusses ideas and concepts behind different forms of re-building and picturing the past, as they intersect with the self-referential character of a city that is obsessed with its own history.
Area: Writing Intensive

AS.010.641. Hands-On Approaches to European Books and Prints before 1800.
Baltimore's rich museum and library collections create a dynamic laboratory for students to gain an understanding of early modern European traditions of prints and books. Engraving, etching, woodcut, mezzotint, à la poupée; Rembrandt, Dürer, Aldus Manutius, Plantin-Moretus. This course will introduce students to the basic techniques, concepts, terms, and artists that shaped the production of reproductive works on paper in early modern Europe and their subsequent art historical study. All sessions will be taught out of local collections (BMA, Walters, NGA, Hopkins Special Collections); that is, this is a hands-on class that—while requiring no previous experience—will attend to the nitty-gritty details and methods of studying works in person, giving students the tools, expertise, and confidence to pursue their own research with historical printed materials.
Area: Writing Intensive

AS.010.644. The Medieval Image and Concepts of Authenticity.
The course examines the notion of the authentic in conjunction with medieval images, relic veneration, and the practice of law. It investigates the construction, reception, and theoretical grounding of authenticity of reliquaries, icons, and imprints on cloth or seals, and legal documents. These objects elucidate artistic strategies such as cross media references, abstraction, mimesis and bricolage to convey an aura of authenticity. We address other authenticating factors, such as complex ritualized forms of communication.

AS.010.646. Art and Architecture at the Eastern Frontier: Medieval Georgia.
This seminar investigates the fascinating landscape of medieval art and architecture of Georgia. Its specific geographic position in the South Caucasus, at the cross roads between the East and West, the Christian and Islamic Worlds, had a profound impact on the art and architecture in the region. Ancient sites show close connections with the Graeco-Roman World on the western border and with the Sassanid Empire in the East. The Christianization of the Kingdom of Kartli in the early fourth century resulted in close ties with the development of early Christian art in Syria, the Holy Land, and Byzantium. While the Christian religion remained an identifying factor during several hundred years of Muslim rule (736 to 1122) during which the city of Tbilisi was the capital of an emirate, Islamic motifs and style became an important factor for art works in medieval Georgia. Art and architecture with a specific Byzantine profile flourished in particular after the reunification of Georgia during the reign of King David the Builder (1073- 1125) and Queen Tamar (1184 to 1213). The cathedral and monastery of Gelati and Mzcheta, the murals in the royal monasteries of Vardzia and Khintsvisi, and the countless icons are a testimony to this relationship. We will discuss the specific diverse aesthetics and materiality (stone, enamel and metal works) of Georgian art with the goal to reassess the map of medieval art and architecture that currently does not include the Eastern Frontier. A mandatory c. 10 days field trip to Georgia is planned after classes end in May 2020.
Area: Writing Intensive

AS.010.649. Power Dressing: The Politics of Costume between the Ottoman Empire and the West.
In the Ottoman Empire—a vast multiethnic state straddling Africa, Asia, and Europe—how one dressed was a deeply political affair. Ottoman rulers and subjects alike used clothing to express (and sometimes transgress) the hierarchical, religious, and communal distinctions defining their society, much to the fascination of foreigners who visited the empire or sought knowledge of its sartorial traditions in texts and images. This seminar will explore Ottoman dress and dress codes in the context of the empire's long and complicated relationship with Western powers, focusing on the role that costume played as a charged site of cross-cultural interaction, posturing, and self-assertion from the sixteenth to the nineteenth century. Our case studies will include costume albums —books showing people high and low in their characteristic garb—painted by Ottoman artists for Western buyers; diplomatic robes of honor and their attendant ceremonies; and cultural cross-dressing as manifested in European turquerie portraiture and masquerades. Moving into the modern period, we will consider how nineteenth-century dress reforms bridged the gap between Ottoman and Western costume while engendering new modes of Ottoman sartorial self-representation that challenged hardening Orientalist discourses in such venues as mannequin museums and world's fairs. The seminar will make considerable use of artworks in local collections, including rare books and prints at Hopkins itself.
Area: Writing Intensive

AS.010.650. Before and After Trent: the Image and Sacred Space in Rome and Spanish Italy.
The seminar will investigate the question of art and reform in three major centers of the Italian peninsula (Rome, Naples, Milan), with attention to parallel phenomena in other centers of Catholic Europe (Spain and the Spanish Netherlands). We will examine transformations in the practice of pilgrimage and the organization of sacred shrines, tensions between centralization and the persistence of the local, and the initiative of artists and architects in responding to the call for a "reform" of sacred art."

AS.010.652. Classics Research Lab: Antioch Recovery Project (ARP).
Antioch Recovery Project investigates mosaics from the ancient city of Antioch (modern Antakya, Turkey, near the border with Syria) now in the collection of the Baltimore Museum of Art. Excavated by an international team of archaeologists in the 1930s, hundreds of ancient mosaics from the cosmopolitan city were subsequently dispersed to museums across the globe, with twenty-four mosaics entering the collection of the BMA. Phase I will focus on the digital documentation and analysis of the mosaic of Narcissus as a prototype for ongoing research bringing together the fragments of ancient Antioch for contemporary beholders. The Greek myth of Narcissus tells the story of a beautiful Theban hunter doomed to love his own reflection and is the origin of the modern psychiatric term "narcissism". Researching the mythology, materials, conservation history, archival material, historiography, and contemporary reception of the Narcissus mosaic and myth offers extensive opportunities to collaborate with scholars across a range of disciplines at JHU, in the Baltimore museum community, and beyond. Investigators will move between the Baltimore Museum of Art, the CRL processing lab in Gilman Hall, and Special Collections. The course will involve some travel to visit other mosaics from Antioch now in collections at Harvard's Dumbarton Oaks in Washington D.C., and the Princeton Art Museum in Princeton, New Jersey.

AS.010.656. The Cut.
This seminar focuses on “the cut”—both as material practice and conceptual trope. Looking specifically at the early modern period, we will attempt to stitch together arts of cutting that have all too often been thought of separately or entirely in isolation—decoupage and inlaid stone, silhouette and turned ivory, repurposed drawing and perfectly hewn precious gem, pared-down panel and paper cut-out. To do so, we will look to expansive modern treatments and theorizations of “the cut” as literal gesture and figurative process, material technique and metaphoric mode. At stake is a reappraisal of creative paradigms that rest upon myths of wholeness, finitude, completion, generation, etc., and that thus undergird the early modern emergence of the very notion of “Art.” This seminar thus asks whether recentering the cut has the potential to position the art object within more expansive fields of material culture and to resituate artistic production within less hegemonic frameworks of creation and creativity. Though focused on the early modern period, students are encouraged to pursue research in their own fields/periods of study.
Area: Writing Intensive

AS.010.659. Passion Image, Passion Cult, Passion Drama: Narrative and Metaphor in the Middle Ages, Renaissance, and Beyond.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.

AS.010.660. The Hegemony of Bodies.
Bodies—material, artistic, political, cartographic—and their breakdown, form the focus of this seminar. Situating this inquiry in the ancient Mediterranean, we will analyze the human body as an organizing term, giving rise to a robust set of practices and performances. We will consider the conception of atoms as bodies in motion, the role of direct democracy and assembly as they intersect with artistic practices of both figuration and other non-figural corpora, and the emerging body of medical knowledge that would eventually be gathered under the Hippocratic corpus. The Mediterranean sea itself as it connects with other bodies of water and forged connections between different land bodies will also be among the topics we explore. While organized around the ancient Mediterranean and its afterlives, students from all formations are very welcome.

AS.010.662. Script, Character, Scribble: Writing and Pseudo-Writing in Modern and Contemporary Art.
Almost readable, but not quite: artists in the twentieth and twenty-first century played with script of all kinds, from ancient glyphs and Persian script to Roman typefaces and Korean Hangul. Artists also scribbled in ways that evoke writing without script or meaning. This course takes on the question of meaning-making in art through the form of script—flirting with that tantalizing feeling that we can almost read the work of art through the marks on its surface. We will engage with artists from around the world whose work grapples with knowledge, meaning, and script, and discuss the limits and possibilities of legibility, knowing, and language. In addition to painting and drawing, we will also discuss conceptual art, installation, video, architecture, tapestry, ceramics, graphic novel forms, book arts, and sculpture. We will have opportunities to situate these works within longer histories of script and pseudo-script and image-text relations. Our discussion-driven seminars will be guided by readings in art history and theory. The course carries no expectation that you are multi-lingual or have experience with multiple scripts. Central to our semester will be group trips to see art in person in DC and Baltimore. Assignments include an option for short, focused writing with feedback and opportunities to experiment with genre and to rewrite, or a longer seminar paper, chosen in consultation with the professor.
Area: Writing Intensive

AS.010.671. The illuminated charter: visual splendor, performance, and authenticity of medieval legal documents.
This course investigates the complexities of medieval legal documents, their specific visuality and materiality, as well as practices of copying and forgery. We will address the aesthetics of legal documents, their graphic signs, seals, and paleography and the authenticating strategies used to corroborate their legitimacy. Another emphasis is set on the performative aspects of the medieval charters in court and church rituals. Comparison with contemporary illuminated sacred books will reveal the tight connections of monastic scriptoria and royal/imperial chanceries. The geographic focus is set wide, ranging from medieval Spain, to Carolingian and Ottonian chanceries in France and Germany, to the papal court in Rome and the imperial and monastic scriptoria in Byzantium.
Area: Writing Intensive

AS.010.672. Inventions of Antiquity. Constructing the Ancient Past in Early Modern Europe.
TBA

AS.010.702. 1525: Prints and Politics in the German Reformation.
Examines the involvement of prints, print culture, and the professional activity of the German painter-printmaker with the patterns of social and religious dissent, propagandizing, and political confrontation that marked the first decade of the Protestant Reformation, with a special focus on the revolutionary year 1525. Seminar includes planned visits to the print collections of the Baltimore Museum of Art and the National Gallery in Washington.

AS.010.703. Patterns of Attention in the Visual Arts.
This seminar aims to excavate six distinct modalities of attention and attentiveness in the visual arts from Middle Ages to Modernity (cultic, narrational, speculative, ethical, sexual, and artistic). While emphasizing European developments, close consideration will be given to the role of visual attention in Hindu and Islamic visual cultures, providing the opportunity for cross-cultural comparison. Each case study will consider the historically shifting roles given to vision, cognition, imagination, affect, desire and power-knowledge in the culturally prevalent patterns of attention we study, and explore how specific kinds of pictorial schema or spatial environments served to structure and guide, or deflect and disrupt, the attention of their beholders. Finally, we will ask whether the historical study of attention can suggest analytical models or ethical lessons for the (re)mobilization of attentiveness in our own art-historical methods.

AS.010.704. Pieter Bruegel the Elder: New Directions in Scholarship.
Examines major interpretations of the art and career of the great Flemish painter Pieter Bruegel the Elder (1525?-1569), with an emphasis on new approaches and research agendas. In the aftermath of the 450-year Bruegel Anniversary of 2019, with its major exhibitions and comprehensive catalogues, what comes next?

AS.010.708. Topics in Late Medieval Art.
A critical interrogation of past and current interpretative approaches to the devotional arts of western Europe, c. 1300-1500.
Area: Writing Intensive

AS.010.801. Special Rsrch & Problems.

AS.010.802. Spec Research/Problems.

AS.010.803. Individual Work.

AS.010.804. Individual Work.

AS.010.807. Summer Research.
Summer research for doctoral students

AS.020 (Biology)

AS.020.115. Bioenergetics. 2 Credits.
This course is a combination of lectures, student presentations and group discussions that address fundamental principles and also contemporary issues examining the way all forms of Life on Earth are ultimately dependent on sunlight to satisfy their food and energy requirements. We examine the steps from the capture of Physical energy (photons), to the development of electrochemical potentials and finally, to their utilization by cellular organelles towards the synthesis of the chemical "currency" that fuels all biological processes (biosynthesis, cell communication, movements, etc.). Special emphasis will be on current developments in biotechnologies that utilize microbial populations to supply us with fuels and also to clean up environmental hazards. The course will also consider ways to extract lessons from Nature's successful designs and harmonious adaptations so that we, in the long run, can utilize them towards a minimization of our negative impact on the environment.Note: Freshmen and Sophomores only, with good foundations in any two of the following: Physics, Chemistry, Biology, Biophysics.

AS.020.120. Introduction to Laboratory Research. 1 Credit.
In this program, you will be introduced to a variety of biochemical and molecular biological laboratory techniques. These will include DNA analysis by restriction enzyme mapping, amplification of DNA segments by PCR, lipid analysis by chromatography. Additionally, you will visit a variety of biological laboratories to observe actual research projects.Recommended Course Background in Chemistry and Biology is strongly recommended.

AS.020.125. Microbe Hunters- Student-sourcing Antibiotic Discovery. 3 Credits.
This is an introductory course open to all students regardless of intended major. No science background is required. This course covers concepts of biology taught through the lens of microbes and antibiotic resistance. Using environmental samples students actively engage in the hunt for novel antimicrobials. Broader concepts include the meaning of disease, how that meaning has changed over time, and the implications of widespread antibiotic resistance for society. This is a research-based project lab course in which students participate as part of an international consortium of undergraduates at other colleges. Students will isolate and characterize antibiotic-producing bacteria from the environment using modern molecular biological techniques. The course includes a lecture and two lab meetings per week.

AS.020.132. Medical School Intensive. 1 Credit.
Learn the basic knowledge and techniques related to surgery, internal medicine, pediatrics, emergency medicine, and biomedical science by participating in interactive lectures and labs. You and your fellow high-school students will explore new aspects of this critical field at one of the nation's leading institutions as you are taught and guided by experts in the field of medicine.

AS.020.134. Introduction to Surgery. 1 Credit.
Students will be introduced to the fundamentals of a surgical practice. Students will also acquire skills used in the assessment and treatment of surgical conditions.

AS.020.135. Project Lab: Phage Hunting. 2 Credits.
This is an introductory course open to all freshman regardless of intended major. No science background is required. This is the first semester of a year-long research-based project lab course in which students will participate in a nation-wide program in collaboration with undergraduates at other colleges. Students will isolate and characterize novel bacteriophages (viruses that infect bacteria) from the environment using modern molecular biological techniques. The course includes two lab meetings per week. Continues in the spring. Each semester provides 2 credit hours of Natural Sciences (N) distribution credits and/or counts 2 hours toward the research requirement for the Molecular and Cellular Biology degree. No textbook is required. Freshmen only.

AS.020.136. Phage Hunting II. 1 Credit.
This is an introductory course open to all freshman regardless of intended major. No science background is required. This is the second semester of a year-long research-based project lab course in which students will participate in a nation-wide program in collaboration with undergraduates at other colleges. In the spring semester, students will annotate the genome of a bacteriophage isolated and characterized by a student in AS.020.135, in preparation for submission to a database and eventual publication. Enrollment by permission of the instructor only. Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.020.137 or permission of instructor

AS.020.137. Phage Discovery Lab. 1 Credit.
In this small-section introductory research lab course, students are introduced to basic microbiological techniques as they isolate and characterize a bacteriophage, a virus that infects bacteria, from an environmental sample. One meeting per week. No textbook required. Not open to anyone who has taken AS.020.135;Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.151. General Biology I. 3 Credits.
This course is an introduction to biology from an evolutionary, molecular and cellular perspective. Specific topics and themes include evolutionary theory, the structure and function of biological molecules, mechanisms of harvesting energy, cell division, classical genetics and gene expression.

AS.020.152. General Biology II. 3 Credits.
This course builds on the concepts presented and discussed in General Biology I. The primary foci of this course will be on the diversity of life and on the anatomy, physiology, and evolution of plants and animals. There will be a special emphasis on human biology.
AS.020.151

AS.020.153. General Biology Laboratory I. 1 Credit.
This course reinforces the topics covered in AS.020.151. Students participate in a semester-long project, identifying bacteria from Homewood campus soils using molecular biology techniques. Other laboratory exercises cover aspects of evolution, genomics and biochemistry. Cross-listed with Behavioral Biology. Student must have enrolled in AS.020.151 either this term or in past terms. Students who have credit for AP Biology but take General Biology Lab I will lose four credits of AP Biology credit. Cross-listed with Behavioral Biology.
AS.020.151 can be taken prior to or at the same time as AS.020.153.;Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.154. General Biology Lab II. 1 Credit.
This course reinforces the topics covered in AS.020.152. Laboratory exercises explore subjects ranging from evolution to anatomy and physiology. Students participate in a project using molecular biology techniques to determine whether specific foods are made from genetically engineered plants.Cross-listed with Behavioral Biology
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.161. Current Events in Biology I. 1 Credit.
In this lively and collaborative course, students discuss current events and controversies in biology ranging from bioterrorism to the health of the Chesapeake Bay.

AS.020.162. Current Events in Biology II. 1 Credit.
Students will discuss current events and controversies in biology, ranging from genetic engineering to nanotechnology in medicine.

AS.020.303. Genetics. 3 Credits.
Presentation of the principles of heredity and variation, and their application to evolution and development; physico-chemical nature of the gene; problems of recombination; gene action.

AS.020.304. Molecular Biology. 3 Credits.
This course will focus on the ways that nucleic acids direct the synthesis of nucleic acids and proteins. Emphasis will be on modern techniques to study these fundamental processes and important biological molecules. This course fulfills a core requirement for biology majors and molecular and cellular biology majors. This course does not fulfill the elective requirement for biology or molecular and cellular biology majors.

AS.020.305. Biochemistry. 3 Credits.
The molecules responsible for the life processes of animals, plants, and microbes will be examined. The structures, biosynthesis, degradation, and interconversion of the major cellular constituents including carbohydrates, lipids, proteins, and nucleic acids will illustrate the similarity of the biomolecules and metabolic processes involved in diverse forms of life.Sophomores, Juniors, and Seniors Only.
AS.030.205 OR AS.030.212 OR EN.540.202, may be taken concurrently.

AS.020.306. Cell Biology. 3 Credits.
How the molecules of living systems are organized into organelles, cells, tissues, and organisms will be explored, as well as how the activities of all of these are orchestrated and regulated to produce “life”—a phenomenon greater than the sum of its parts. Considerable emphasis is placed on experimental approaches to answering these questions. Topics covered include biological membranes, cytoskeletal elements, cell locomotion, membrane and protein traffic, the nucleus, signal transduction, the cell cycle, the extracellular matrix, epithelial structure and function. Sophomores, juniors, and seniors only. Recommended Course Background: (AS.020.151 or AS.020.305) or equivalent knowledge of biomolecules or AS.020.303.
Cell Biology restriction: students who have completed EN.540.307 may not enroll..

AS.020.312. Introduction to the Human Brain. 3 Credits.
This course explores the outstanding problem of biology: how knowledge is represented in the brain. Relating insights from cognitive psychology and systems neuroscience with formal theories of learning and memory, topics include (1) anatomical and functional relations of cerebral cortex, basal ganglia, limbic system, thalamus, cerebellum, and spinal cord; (2) cortical anatomy and physiology including laminar/columnar organization, intrinsic cortical circuit, hierarchies of cortical areas; (3) activity-dependent synaptic mechanisms; (4) functional brain imaging; (5) logicist and connectist theories of cognition; and (6) relation of mental representations and natural language.
AS.020.306 OR EN.540.307

AS.020.314. The Biology of Disease. 3 Credits.
Explore the current understanding of the biology of diseases in this upper-level elective! Each week, a new faculty member will present one class in a lecture style, followed by one class in an interactive discussion style. The faculty member will describe a disease and the fundamental biology relating to that disease and discuss the current state of the field, how their research influenced understanding of the disease, and progress towards treatments. The topics will build upon the basic concepts covered in genetics, cell biology, and molecular biology, and introduce topics related to biochemistry and developmental biology. The class will discuss a wide range of diseases including vision disorders, neurodegenerative diseases, and cancer. Class assessment will be based on homework involving asking questions about the seminar, writing brief summaries of seminars and discussions, and a final project related to topics and techniques from the semester. Open to juniors and seniors.
AS.020.303 AND AS.020.306

AS.020.315. Biochemistry Project lab. 1 Credit.
This research project laboratory investigates the flow of energy through biological systems using focused examination of key cellular energy-conversion processes. Students will be introduced to the broad field of biochemistry research through computational structural analysis, directed mutation, recombinant protein production, and enzymatic analysis. Participants will be trained in biochemical laboratory techniques and expected to contribute their findings to the scientific community using formal, academic communications.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.020.305 OR AS.250.307 OR AS.250.315. These may be taken concurrently.

AS.020.316. Cell Biology Lab. 1 Credit.
The Cell Biology Laboratory will use projects with the nematode C. elegans and mouse 3T3 cells in culture to illustrate experimental systems which are used in cell biology. Light microscopy, fluorescence microscopy, RNA interference, fluorescence-activated cell sorting, Western blotting and the culture of nematodes and cells are techniques which will be used. Because we will be using growing organisms, there will be at least one week when students will have to visit the lab the day after their section meets to complete an experiment.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;Students may have previously taken AS.020.306 prior to enrolling in AS.020.316 OR students may concurrently enroll in AS.020.306 ANDAS.020.316 OR students must have previously completed both EN.540.202 and AS EN.540.307 prior to enrolling in as.020.316.

AS.020.319. Human Genome Variation. 2 Credits.
Human Genome Variate (HGV) exposes students to the power of genomics for understanding human evolutionary history, biological traits, and medical conditions. HGV incorporates basic population genetics, direct-to-consumer DNA tests, and emerging research on human populations and their ancestors. Social and ethical issues related to the use of genetic information are also discussed.
AS.020.303

AS.020.320. Cell Division Mechanisms and Regulation. 3 Credits.
This course will focus upon the molecular mechanisms that underpin the reproduction of eukaryotic cells. General topics will include chromosome duplication, mitotic spindle action, cytokinesis, meiosis, cell cycle control, damage repair and checkpoints, and aberrant regulation characteristic of cancer. Most readings will be from recent research manuscripts and review articles. Classes will consist of a mix of lectures and student oral presentations.
AS.020.306

AS.020.321. Human Genome Variation with Computational Lab. 3 Credits.
This option combines the main course and computational lab components of HGV. HGV exposes students to the power of genomic studies for understanding human evolutionary history, biological traits, and genetic conditions. HGV incorporates basic population genetics, direct-to-consumer DNA tests, and emerging research on human populations and their ancestors. What does real human genomic data look like? How are these data analyzed in practice? Supplementing the main course, the computational lab component will explore public datasets and bioinformatic tools used to analyze human genomic data to better understand how patterns in these data can be used to test hypotheses about evolution and human phenotypes.
AS.020.303;Students who have taken AS.020.319 are not eligible to take AS.020.321.

AS.020.323. Computation Lab: Human Genome Variation. 1 Credit.
This is a stand-alone version of the HGV computational lab. This computation lab course is offered only to students who have completed AS.020.319 (Human Genome Variation without lab). What does real human genomic data look like? How are these data analyzed in practice? Supplementing the main course, this computational lab will explore public datasets and bioinformatic tools used to analyze human genomic data to better understand how patterns in these data can be used to test hypotheses about evolution and human phenotypes.
AS.020.319

AS.020.329. Microbiology. 2 Credits.
This course explores the physiology and genetics of microorganisms within an evolutionary and ecological framework. Concepts in microbiology will be supported by molecular studies of microbial evolution and microbial communities including that of the human microbiome. Recommended Course Background: AS.020.305

AS.020.331. Human Genetics. 3 Credits.
Will examine the growing impact of human genetics on the biological sciences, on law and medicine, and on our understanding of human origins. Topics include structure and evolution of human genome, genetic and physical mapping of human chromosomes, molecular genetics of inherited diseases and forensic genetics.
AS.020.303

AS.020.337. Stem Cells & the Biology of Aging & Disease. 2 Credits.
This will be a team-taught lecture course that focuses on the properties of stem cells, their possible role in cancer (breast and prostate), stem cell aging, and the potential utilization of stem cells for therapy. Topics will include: mechanisms of stem cell renewal, stem cell potency, the impact of the stem cell niche, stem cells and the hematopoietic system, stem cells and the neural system, stem cells in the male and female gonads, induced pluripotent stem cells and cellular reprogramming, stem cell changes with aging, and ethical and policy issues in stem cell research and use. Most lectures will be research-oriented. Students will be expected to read and critically analyze current literature, with an emphasis on the experimental bases from which our current understandings derive.
AS.020.305 (Biochemistry) or AS.020.306 (Cell Biology) or EN.580.221 (Molecules and Cells) or EN.540.307 (Cell Biology for Engineers) or permission of instructor.

AS.020.340. Developmental Genetics Lab. 3 Credits.
CRISPR (clustered regularly-interspaced short palindromic repeat) is one of the greatest advances in biology in the past decade, providing researchers with the tools to precisely and affordably edit genomes and physicians a new tool to cure disease. However, the ability to edit plant and animal genomes, including human genomes, comes with significant ethical considerations. This course will utilize a hybrid classroom-laboratory approach to provide students with both a comprehensive knowledge of the CRISPR system and a deeper understanding of how gene function is studied. At the end of the semester, you will not only understand how CRISPR works, but also have a better understanding of the power of genetics to illuminate molecular mechanisms of protein function.
AS.020.303 can be taken prior to or during enrollment in AS.020.340.;Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.344. Virology. 3 Credits.
This course will cover basic principles of viral replication and pathogenesis, as well as the host response to viral infection. It will then focus on several viruses of interest, including HIV-1, Influenza, Human Papilloma Virus, and SARS-CoV-2.
AS.020.304 OR AS.020.306

AS.020.347. AIDS. 3 Credits.
AIDS is the world's deadliest infectious disease. This course will cover the biology of human immunodeficiency virus (HIV, the infectious agent that causes AIDS), the effects of HIV on the immune system, the pharmacology of the anti-viral agents that are used to suppress HIV infection, and the ongoing quest for an HIV vaccine. Because HIV drugs cannot cure HIV-infected individuals and no HIV vaccine yet exists, we will also study the long-term consequences of HIV infection including opportunistic infections, comorbid conditions, and the HIV-related cancers Kaposi's Sarcoma and AIDS-Related lymphoma. Recommended Course Background: AS.020.306
AS.020.306

AS.020.350. Introduction to Clinical Medicine. 2 Credits.
Perm. Req'd. Post-Bac Students Only

AS.020.351. Cancer Biology. 3 Credits.
While the "war on cancer" has produced modest victories with respect to clinical outcomes, our knowledge of the cellular mechanisms of cancer is now vast and represents one of the most significant scientific achievements of the past 40 years. Key aspects of cancer biology will be covered with a combination of textbook and original literature readings. Topics will include cancer cell characteristics, oncogenes, tumor suppressor genes, apoptosis, metastasis and immuno-surveillance of cancer cells. Application of our knowledge to the rational treatment of cancer will also be discussed.
Cell Biology 020.306 or permission of instructor

AS.020.361. Advanced Research Lab in Cell and Molecular Biology. 2 Credits.
An intensive research laboratory course on single-molecule, live-cell imaging of chromatin and epigenetic factors designed for undergraduate students with interests in biochemistry, molecular, cellular and computational biology. The course introduces the use of advanced fluorescence microscopy to visualize the single-molecule dynamic behaviors and spatial distributions of important nuclear proteins and chromatin factors in living cells of Saccharomyces cerevisiae as a model for conserved epigenetic regulators in humans. Students will learn and apply imaging and computational tools to localize and track single protein molecules in real time and calculate their diffusive parameters. Students are expected to interpret and integrate data to acquire conceptual insights on chromatin functions, e.g. how chromatin proteins, enzymes, and large protein complexes are distributed in nuclear space and time. After course completion, there is a further option for post-course research in the Wu laboratory.Open to advanced sophomores or upper level students with permission of Professor Carl Wu (wuc@jhu.edu)
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.362. Single Molecule Approaches to Biology. 3 Credits.
This course examines how recently developed single-molecule methods have enhanced our understanding of cellular processes. The ability to observe and manipulate individual biological macromolecules has revolutionized our understanding of the machines and processes that enable life. The course will provide an overview of single-molecule approaches and discuss relevant publications that exemplify how these methodologies are applied to biological problems. For each approach, key concepts will be introduced in a lecture/discussion, followed by a student-led presentation of a related publication.Recommended coursework: Physics II
AS.020.305 OR AS.250.316

AS.020.363. Developmental Biology. 3 Credits.
This class will explore the development of animals from a single fertilized egg into a fullyformed organism. We will emphasize experimental methods to understand the molecular mechanisms controlling development.
AS.020.306 AND (AS.020.330 OR AS.020.303)

AS.020.364. Molecular and Cellular Mechanisms of Reproduction. 2 Credits.
This course will address current research in the cellular and molecular biology of fundamental reproductive processes. The topics covered will vary from year to year, based on current issues in the scientific literature. The focus will be on cellular and molecular mechanisms involved in the synthesis and actions of hormones, gametogenesis, fertilization, pathologies of the reproductive tracts, developmental origins of reproductive health and disease, contraception, and infertility. The emphasis will be on defining cellular and molecular mechanisms that regulate reproductive processes, identifying the hypotheses tested in scientific papers and the strengths and limitations of experimental methods used to test the hypotheses, and evaluating and integrating data described in scientific papers. Classes will consist of a mix of lectures and student oral presentations.Recommended coursework: Reproductive Physiology
AS.020.306

AS.020.367. Primate Adaptation and Evolution. 3 Credits.
A close look at our closest relatives, the primates. Topics include: evolutionary theory, primate evolution, primate behavior and ecology, human evolution, and modern human variation.

AS.020.374. Comparative Physiology. 3 Credits.
This class examines animal physiology from an evolutionary and comparative viewpoint. The goal is to examine the commonalities, as well as unique differences, in how various animal organisms address the necessary life functions. Topics will include metabolism, neural systems, respiration, muscle systems, water and salt homeostasis, thermal regulation, and reproduction
AS.020.305

AS.020.377. Comparative Physiology Lab. 1 Credit.
This course examines the physiological principles that guide animal life processes. As a complement to the Comparative Animal Physiology lecture course, this Laboratory examines fundamental physiological principles through hands-on investigations of animal physiology using zebrafish and mussel as model systems and research-grade data acquisition systems.
AS.020.374, students may enroll concurrently.;Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.379. Evolution. 3 Credits.
This course takes a broad look at the impact of natural selection and other evolutionary forces on evolution. Emphasis is placed on what we can learn from genome sequences about the history of life, as well as current evolutionary pressures.Recommended Course Background: AS.020.306, AS.020.330, or permission required

AS.020.380. Chromatin, Chromosomes and The Cell Nucleus. 3 Credits.
The course will present analysis of the structural basis of the genome organization in a eukaryotic nucleus and the utilization of its genomic content. We start with the analysis of the fluctuations of the structure of the double helix in response to its cellular microenvironment that yield DNA structural and functional polymorphism. Next we will deal with the mechanics of DNA compaction into chromatin and the differentiation of the chromatin structure at the level of the nucleosome via histone variants and posttranslational modifications and chromatin-based epigenetics. We will next move to chromosomal territories, chromosomal imprinting and chromosome inactivation. Finally, a few lectures will focus on selected topics of special interests that bridge current basic discoveries with potential medical applications such as the nature of telomeres and telomerase-related diseases; the role of histone octamer tails in epigenetics; transcription factors and the regulated expression of the genome. Whenever possible. paradigms will be used that correlate chromatin differentiation to certain human diseases.
AS.020.305 OR AS.020.306; AS.020.303 with approval of the instructor only.

AS.020.382. A Biophysical View of Biology. 3 Credits.
The objective of this course is to develop in students a strong, intuitive, and physically based sense of how fundamental biological processes work—that is, the sizes, shapes, motions, interactions, and cellular functions of biological molecules. Topics will include cell and population growth, diffusion, enzyme kinetics, the qualitative and quantitative aspects of the synthesis, structure, and function of proteins and nucleic acids, least squares equation fitting, Bayesian statistics, and the fluctuation test. The biophysical constraints that dictate the form of the immune system and constraints relevant to development will be discussed.

AS.020.384. Fundamentals of Drug Discovery. 3 Credits.
The creation and implementation of new approaches to the drug discovery and development process is a very active area of research. Currently, only one compound out of 5,000 that enter preclinical studies becomes a drug. Moreover, the development process is time consuming, lasting more than ten years on average. The rate of failure is extremely high. It has become evident that this field is in urgent need of revolutionary changes. This course will cover drug discovery issues ranging from the identification of hits to their optimization as drug candidates. Current as well as novel and proposed approaches aimed at accelerating discovery, potency optimization, selectivity, pharmacokinetics and other drug properties will be discussed.
AS.020.305 AND AS.020.306

AS.020.385. Epigenetics. 3 Credits.
Course description: This course emphasizes epigenetic regulatory mechanisms including DNA methylation, histone modifications, histone variants, non-coding RNA regulation, and chromatin remodeling, etc. We will discuss the broad impact of epigenetic regulation in various biological events, ranging from stem cell activity, small RNAs' and long non-coding RNAs' function, to transgenerational epigenetic inheritance and human diseases. We will mainly use recent literatures to discuss various topics. There are both students' presentation and writing components for this course. Students will be assigned a series of papers for their presentation and faculty will meet with student presenters ahead of the time to go through the presentation content.
AS.020.303 OR AS.020.330

AS.020.401. Master's Seminar: Molecular & Cellular Biology I. 3 Credits.
This is a weekly seminar designed for graduate students enrolled in the B.A./M.S. and Ph.D. programs. The seminar involves student presentations of research and discussion of topics of current interest in the field. BA/MS candidates only.

AS.020.402. Master's Seminar: Molecular and Cellular Biology II. 3 Credits.
This is a weekly seminar designed for students enrolled in the BA/MS program. The seminar involves student presentations of research and discussion of topics of current interest in the field. BA/MS students only.

AS.020.410. Teaching and Learning in Biology. 1 Credit.
This course is by instructor permission only and exclusively for students who are invited and accepted to be learning assistants for other Biology courses. The course will focus on discussing education and application of current best teaching practices to Biology classes.

AS.020.441. Mentoring in General Biology. 1 Credit.
To become a mentor, students must have successfully completed AS.020.151/152, must apply using the form on the Biology Dept. website (https://bio.jhu.edu/undergraduate/courses/), and must be accepted by the instructors. The deadline to apply is April 15th. S/U

AS.020.442. Mentoring in General Biology. 1 Credit.
This course provides students who have taken General Biology I & II the opportunity to mentor new students in General Biology I & II. Mentors collaborate with faculty on how to lead effective sessions, create study materials for students, help student teams complete team assignments, and generally help students understand difficult concepts and principles in biology. Mentors must have a firm command of the topics covered in biology and must meet with both faculty and students through the course of the semester. To become a mentor, students must have successfully completed AS.020.151/AS.020.152, must apply using the form on the Biology Department website, and must be accepted by the instructors.

AS.020.502. Introduction Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.503. Independent Research in Biology. 1 - 3 Credits.
Planning and conducting original laboratory investigations on biological problems, collection and analysis of data, reporting of results. Permission of full-time faculty member in Biology dept.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.504. Independent Research in Biology. 1 - 3 Credits.
Perm. Req'd. Freshmen or Sophomores only
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.505. Internship - Biology. 0 - 3 Credits.
An independent course of study may be pursued under the direction of an adviser on those topics not specifically listed in the form of regular courses. Consent of adviser required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.506. Internship - Biology. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.508. Literature Research in Biology. 2 Credits.
Graduating students in the Molecular and Cellular Biology major will fulfill their research credit requirement by researching a topic in the modern scientific literature and writing a review of that topic. The topics will be self-chosen by pairs of students, who will then work together with guidance from the instructor. Intended for graduating students, not those who can fulfill this requirement at a later date with in-person research.

AS.020.511. Independent Study. 3 Credits.
An independent course of study may be pursued under the direction of an adviser on those topics not specifically listed in the form of regular courses. Perm. Req'd.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.512. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.513. Research Problems. 3 Credits.
Planning and conducting original laboratory investigations on biological problems, collection and analysis of data, reporting of results. Juniors and Seniors Only. Recommended Course Background: Permission of full-time faculty member in Biology dept.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.514. Research Problems. 1 - 3 Credits.
Perm. Req'd.Juniors and Seniors only
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.551. Mentored Research. 9 Credits.
This courses provide BA/MS students with intensive research experience for a full academic year. Students in the program work under the direction of a research mentor on an original research project, produce a written report in the form of a thesis, and make a presentation of the work to the Biology Department. BA/MS or BS/MS candidates only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.553. Mentored Research. 9 Credits.
BA/MS candidates only.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.597. Research. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.020.601. Current Research in Bioscience.
This course involves 30 minute sessions with each member of the training faculty. It is designed to acquaint incoming graduate students with the research topics and research philosophy of each laboratory. This should help students choose future rotations. More generally the course provides a range of perspectives on the future of specific fields and strategies for success in science. First year Biology Graduate students only

AS.020.605. Computational Simulation and Analysis of Protein Stability and Interactions.
This course deals with the development of computer code for the simulation and non-linear least squares analysis of experimental macromolecular data including protein stability (chemical and temperature denaturation, single and multiple domain proteins); different types of binding (single site, multiple sites, independent and cooperative binding); linkage between conformational equilibrium and binding; enzyme kinetics and inhibition; kinetics of protein denaturation/aggregation. The course will use Python as the programing language.Requirements for this course include: 1) Basic Python programing skills; 2) Calculus; 3) Students must have a basic understanding of conformational equilibrium, binding equilibrium and enzyme kinetics. If not sure, please talk to the Instructor.

AS.020.607. Quantitative Biology Bootcamp.
Quantitative and computational methods have become essential to modern biological research. The goal of this course is to provide an introduction to basic skills that will enable students to employ these methods. Students will learn how to work in a command line shell and use software to perform analyses of large biological datasets.Students will learn basic programming using the Python language.Throughout the course students will apply the skills learned to practical analysis problems emphasizing parsing and working with biological data formats, exploratory data analysis and visualization, and numerical and statistical methods. This course is only open to first-year students in the CMDB program.

AS.020.608. Graduate Course in Optical Microscopy.
An introduction to optical microscopy from basic principles to advanced techniques. The course will involve both lectures and practical experience on a number optical microscopes available within the IIC, other core facilities and labs in the university.

AS.020.612. Introduction to the Human Brain.
This course explores the outstanding problem of biology; how knowledge is represented in the brain. Relating insights from cognitive psychology and systems neuroscience with formal theories of learning and memory, topics include (1) anatomical and functional relations of cerebral cortex, basal ganglia, limbic system, thalamus, cerebellum, and spinal cord; (2) cortical anatomy and physiology including laminar/columnar organization, intrinsic cortical circuit, hierarchies of cortical areas; (3) activity-dependent synaptic mechanism; (4) functional brain imaging; (5) logicist and connectist theories of cognition; and (6) relation of mental representations and natural language. Co-listed with AS.020.312.

AS.020.617. Quantitative Biology Lab 1.
This computer lab is designed for first year CMDB graduate students to enhance their quantitative skills for fall core courses.This course will cover quantitative and computational analysis of biological datasets, emphasizing molecular biology. In a hands on lab setting, students will carry learn to perform essential analyses including assembly of genomes, detection of DNA methylation, analysis of transcription factor binding and motifs, detecting genome variation, measuring expression of genes, and understanding genome evolution.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.618. Quantitative Biology Lab II.
This computer lab is a continuation of the fall quantitative biology lab for CMDB graduate students. This semester will cover quantitative and computational modeling of selected topics from biophysics, cellular biology, and developmental biology
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.020.619. Thesis Proposal Preparation.
This is an elective course for 2nd year PhD students in the CMDB program only. The goal of the course is to help students prepare written thesis proposals. Students will also gain practical experience in peer review, with additional lectures on using their proposals to prepare applications for the NIH National Research Service Award (F31). Because of the considerable time commitment required, students may not enroll in the course without explicit approval from their thesis advisors.

AS.020.629. Microbiology.
This course explores the physiology and genetics of microorganisms within an evolutionary and ecological framework. Concepts will be supported by primary literature exploring microbial evolution and microbial communities including that of the human microbiome.

AS.020.630. Human Genetics.
Will examine the growing impact of human genetics on the biological sciences, on law and medicine, and on our understanding of human origins. Topics include structure and evolution of human genome, genetic and physical mapping of human chromosomes, molecular genetics of inherited diseases and forensic genetics.

AS.020.637. Genomes & Development.
This course covers gametogenesis, embryogenesis, post-embryonic development, genetic analysis, developmental genetics, model developmental systems, and cell determination. Biology graduate students only except with written permission from the instructor.

AS.020.643. Graduate Virology.
This course will cover basic principles of viral replication and pathogenesis, as well as the host response to viral infection. It will then focus on several viruses of interest, including HIV-1, Influenza, Human Papilloma Virus, and SARS-CoV-2.

AS.020.644. RNA.
A graduate seminar course that will explore RNA from its beginning in the primordial RNA world to its present-day roles in gene regulation in bacteria, mammals, and viruses. Topics will include: The early RNA world, Riboswitches, Ribozymes, evolution of protein synthesis, splicing, telomerase, RNA interference, microRNAs, long non-coding RNAs, Viral non-coding RNAs, and RNA therapeutics.Biology PHD students only. MCB MS students with instructor's permission during ADD/DROP Period.

AS.020.662. Single Molecule Approaches to Biology.
This course examines how recently developed single-molecule methods have enhanced our understanding of cellular processes. The ability to observe and manipulate individual biological macromolecules has revolutionized our understanding of the machines and processes that enable life. The course will provide an overview of single-molecule approaches and discuss relevant publications that exemplify how these methodologies are applied to biological problems. For each approach, key concepts will be introduced in a lecture/discussion, followed by a student-led presentation of a related publication.

AS.020.668. Advanced Genetics and Molecular Biology.
This course examines modern concepts in genetics and molecular biology. The coursefocuses on the mechanisms controlling replication, recombination, transcriptional, posttranscriptional, translational, and posttranslational regulation. Lectures will have threeparts: a student-led paper presentation, a discussion about the concepts surrounding atopic, and a discussion of modern techniques to experimentally probe the topic.Biology PHD students only.

AS.020.674. Quantitative Biology and Biophysics.
Students will be given instruction in the concepts of physical and quantitative biology. Students will learn to simulate biological processes, identify the relationship between data and models, and will learn to fit biological data. Note: Friday classes will be held in UTL 398.

AS.020.675. Graduate Comparative Physiology.
This course addresses the basic principles that underlie physiological processes in animals. Framed in an evolutionary context, processes ranging from respiration, circulation, neural control, movement, excretion and metabolism will be understood in terms of core principles that also apply to humans. Emphasis is placed on the physical and chemical principles underlying the comparative biology of how different animals solve physiological problems.

AS.020.684. Fundamentals of Drug Discovery and Development.
The creation and implementation of new approaches to the drug discovery and development process is a very active area of research. Currently, only one compound out of 5,000 that enter preclinical studies becomes a drug. Moreover, the development process is time consuming, lasting more than ten years on average. The rate of failure is extremely high. It has become evident that this field is in urgent need of revolutionary changes. This course will cover drug discovery issues ranging from the identification of hits to their optimization as drug candidates. Current as well as novel and proposed approaches aimed at accelerating discovery, potency optimization, selectivity, pharmacokinetics and other drug properties will be discussed. Grad students only.

AS.020.686. Advanced Cell Biology.
All aspects of cell biology are reviewed and updated in this intensive course through critical evaluation and discussion of the current scientific literature. Topics include protein trafficking, membrane dynamics, cytoskeleton, signal transduction, cell cycle control, cell physiology, and the integration of these processes in neurons. Recommended Course Background: AS.020.306

AS.020.688. PhD Excels.
This course provides foundational and multi-tiered training in career strategy and professional development. Through synchronous and asynchronous classes, students will learn to assess and develop the skills needed to transition into a career and align them to their strengths, values and interests. By engaging in small group discussions, experiential learning activities and networking with alumni experts, students will enhance self-knowledge and confidence to explore wider career opportunities. Biology 3rd year and above students only

AS.020.689. PhD Excels II.
This is the second course in a two-part series that provides foundational and multi-tiered training in career strategy and professional development. Through synchronous and asynchronous classes, students will learn to assess and develop the skills needed to transition into a career and align them to their strengths, values and interests. By engaging in small group discussions, experiential learning activities and networking with alumni experts, students will enhance self-knowledge and confidence to explore wider career opportunities. This course provides in-depth understanding of specific career paths based on the career exploration covered in 020.688. Biology 3rd year and above students only.
AS.020.688

AS.020.699. CMDB Responsible Conduct in Research.
This course involves discussions of ethical conduct and the responsible practice of scientific research.Department signature only; restricted to graduate students in Biology PhD students only.

AS.020.753. Logic and Methods in Modern Biology.
The purpose of this course is to gain experience in critical thinking about the logic and methods used in modern biological research. The main approach will be the critical reading, presentation, and discussion of primary research papers, and the preparation and presentation of a research proposal. It is held once a week on the NIH Bethesda campus. Grad students only.
AS.020.637 AND AS.020.668 AND AS.020.674

AS.020.801. Research – Biological Problems.
Independent research for the Ph.D. dissertation. Biology Ph.D. students only

AS.020.802. Research-Biological Problems.
Biology Graduate students only.

AS.020.803. Summer Graduate Research.
Summer independent research for CMDB graduate students only.

AS.020.823. Introduction to Biology Research.
First year Biology Graduate Students only

AS.020.824. Introduction to Biology Research.
First year Biology Graduate Students only

AS.020.825. Introduction to Research.
Open to first year Biology graduate students only.

AS.020.826. Introduction to Biology Research.
Open to first year Biology graduate students only.

AS.030 (Chemistry)

AS.030.101. Introductory Chemistry I. 3 Credits.
The fundamental principles of chemistry, including atomic and molecular structure, bonding, elementary thermodynamics, equilibrium and acids and bases, are introduced in this course. Can be taken with Introductory Chemistry Laboratory – I unless lab has been previously completed. Note: Students taking this course and the laboratory 030.105 may not take any other course in the summer sessions and should devote full time to these subjects. High school physics and calculus are strongly recommended as prerequisites. First and second terms must be taken in sequence. Students not enrolled in college (unless they are rising freshmen) may not take this course.

AS.030.102. Introductory Chemistry II. 3 Credits.
Continuation of AS.030.101 emphasizing chemical kinetics, chemical bonding. Topics: energy levels and wave functions for particle-in-a-box and hydrogen atom and approximate wave functions for molecules including introduction to hybrid orbitals. Note: Appropriate adjusting caps should be used to ensure both sections are approximately the same size
AS.030.101 OR AS.030.107;Students enrolled in AS.030.103 may not enroll in or receive credit for AS.030.102.

AS.030.103. Applied Chemical Equilibrium and Reactivity w/lab. 4 Credits.
This course is designed for students who have scored a 4 or 5 on the AP Chemistry Exam or who have scored a 6 or 7 HL IB Chemistry Exam. This course will review an advanced introductory chemistry sequence in a single semester. Chemical equilibrium, reactivity and bonding will be covered. These topics will be explored through laboratory experiments and problem solving, and discussing these principles in the context of current research. For details on chemistry placement and exam credit policies, please see http://www.advising.jhu.edu/placement_chemistry.phpStudents who have previously enrolled in AS.030.101 or AS.030.105 may not earn credit for AS.030.103 and students enrolled in AS.030.103 may not enroll in or receive credit for AS.030.102/AS.030.106.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.030.104. Applications of Chemistry in Medicine. 1 Credit.
Chemistry is one of the oldest scientific disciplines through major contributions have been made in various fields such as health care, medicine, pharmaceutical sciences, materials and polymer science and forensic chemistry, to name a few. The development of new drugs involves chemical analysis and synthesis of new compounds. Chemistry also plays a vital role in the development and growth of several consumer-based industries such as pigments and paints, pharmaceuticals, cosmetics and oil and natural gas. In this program, students will be introduced to applications of chemistry in medicine and pharmaceutical sciences. Prerequisite: Background in chemistry and biology. Learning Objectives (LO) In this program, students will: ? Expand the breadth and depth of understanding of specific applications of chemistry in medicine, including acids and bases, buffers, spectroscopy, nuclear chemistry, chemical analysis and drug synthesis and purification? Research problems related to applications of chemistry in medicine? Demonstrate ability to interpret and explain different aspects of chemical and physical properties of drugs ? Provide working knowledge of biochemistry and how it is directly related to understanding disease and drug therapy ? Discuss and describe various instrumental and spectroscopic tools to detect and treat diseases

AS.030.105. Introductory Chemistry Laboratory I. 1 Credit.
Laboratory work includes quantitative analysis and the measurement of physical properties. Open only to those who are registered for or have successfully completed Introductory Chemistry 030.101.
Students must have completed or be enrolled in AS.030.101 OR EN.510.101 to register for AS.030.105.;Students enrolled in AS.030.105 may not enroll in AS.030.115, AS.030.103, or AS.030.107.;Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.030.106. Introductory Chemistry Laboratory II. 1 Credit.
Laboratory work includes some quantitative analysis and the measurement of physical properties. Open only to those who are registered for or have completed Introductory Chemistry II (AS.030.102). Permission required for pre-college students.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.030.107 OR (AS.030.105 AND (AS.030.101 OR EN.510.101));Students enrolled in AS.030.103 may not enroll in or receive credit for AS.030.106.

AS.030.112. Chemistry with Problem Solving I.
This course is for students who have had moderate or limited exposure to the subject. Special emphasis is placed on scientific problem-solving skills. There are two discussion sections per week, including one devoted exclusively to interactive quantitative problem solving. A typical student may have taken a year of descriptive chemistry as a high school sophomore, but has not been exposed to the problem-solving mathematical approach used in university-level science courses. Taken concurrently with AS.030.101 and AS.030.102.Students who have received an AP4 or higher are not considered eligible for this course and should not enroll.
AS.030.101 OR AS.030.102

AS.030.113. Chemistry with Problem Solving II. 2 Credits.
This course is for students who have had moderate or limited exposure to the subject. Special emphasis is placed on scientific problem-solving skills. There are two discussion sections per week, including one devoted exclusively to interactive quantitative problem solving. A typical student may have taken a year of descriptive chemistry as a high school sophomore, but has not been exposed to the problem-solving mathematical approach used in university-level science courses. Taken concurrently with AS.030.101 and AS.030.102.

AS.030.204. Chemical Structure and Bonding w/Lab. 4 Credits.
An introduction to the synthesis, structure, and reactivity of inorganic compounds. Modern approaches to chemical bonding, including molecular orbital, ligand field, and crystal field theories, will be applied to understanding the physical and chemical properties of inorganic materials. Other topics to be discussed include magnetic properties, electronic spectra, magnetic resonance spectra, and reaction kinetics. The integrated laboratory will cover basic synthetic, measurement, and calculation methods of inorganic chemistry.
Area: Writing Intensive
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.030.102 OR AS.030.103 OR an AP score of 5

AS.030.205. Introductory Organic Chemistry I. 4 Credits.
The fundamental chemistry of the compounds of carbon. Methods of structure determination and synthesis. The mechanisms of typical organic reactions and the relations between physical and chemical properties and structures.
AS.030.102 OR AS.030.103 OR EN.510.101 OR AS.030.204.

AS.030.206. Organic Chemistry II. 4 Credits.
Continuation of AS.030.205 Organic Chemistry I with special emphasis on organic synthesis and related synthetic methods. Students may not simultaneously enroll for AS.030.212 and AS.030.206.
Prerequisite(s): Students may not simultaneously enroll for AS.030.212 and AS.030.206.
AS.030.205

AS.030.212. Honors Organic Chemistry II. 4 Credits.
Second semester undergraduate organic chemistry from a more advanced prospective, emphasizing connections to modern examples from biochemistry (protein and DNA structure, chemical logic of metabolism, enzyme mechanisms), catalysis, materials (polymer synthesis, supramolecular chemistry), medicine (drug structure and function) and more. The standard topics of second semester organic chemistry (e.g. reactivity of aromatic and carbonyl-containing molecules) will all be covered, but amplified and enriched with topics as noted. Students may not simultaneously enroll in AS.030.212 and AS.030.206. Prereq: Must receive a B or better in the first semester (AS.030.205)
Must receive a B or better in the first semester (AS.030.205)

AS.030.225. Introductory Organic Chemistry Laboratory. 3 Credits.
Laboratory work includes fundamental laboratory techniques and preparation of representative organic compounds. Open only to those who are registered for or have completed Introductory Organic Chemistry. Note: This one-semester course is offered each term. Introductory Organic Chemistry I/II requires one semester of the laboratory.
Prerequisite(s): Students may not simultaneously enroll for AS.030.225 and AS.030.227
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.030.205, earned credit or concurrent enrollment.;((EN.510.101 OR (AS.030.101 AND AS.030.102) OR AS.030.107) AND (AS.030.105 AND AS.030.106)) OR AS.030.103 permission of instructor for freshmen.

AS.030.227. Chemical Chirality: An Introduction in Organic Chem. Lab, Techniques. 3 Credits.
This is a project lab designed for Chemistry Majors who are concurrently enrolled in AS.030.205.Techniques for the organic chemistry laboratory including methods of purification, isolation, synthesis, and analysis will be explored through a project focused on chemical chirality. Students may not simultaneously enroll for AS.030.225 and AS.030.227.
Prerequisite(s): Students may not simultaneously enroll for AS.030.225 and AS.030.227.
AS.030.205 may be taken at the same time or prior to enrolling in AS.030.227.;Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.030.228. Intermediate Organic Chemistry Laboratory. 3 Credits.
Lab skills already acquired in AS.030.225 will be further developed for synthesis, isolation, purification, and identification of organic compounds. Spectroscopic techniques, applications will be emphasized. Recommended Course Background: AS.030.225
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.030.205 AND (AS.030.225 OR AS.030.227);(AS.030.206 OR AS.030.212)

AS.030.245. Quantitative Analytical Laboratory. 3 Credits.
This is a 3 credit lab that will serve as an introduction into analytical techniques and quantitative methods. There will be a 1 hour of pre-lab lecture component to this course to discuss the lab for that day.
((AS.030.101 AS.030.102) OR AS.030.103) AND AS.030.205

AS.030.301. Physical Chemistry I. 3 Credits.
The laws of thermodynamics, their statistical foundation, and their application to chemical phenomena. Students should have knowledge of general physics, general chemistry, and calculus (two semesters recommended). Freshmen by permission only.

AS.030.302. Physical Chemistry II. 3 Credits.
Introduction to quantum mechanics, its application to simple problems for which classical mechanics fails. Topics: Harmonic oscillator, hydrogen atom, very approximate treatments of atoms and molecules, and theoretical basis for spectroscopy. Recommended Course Background: AS.030.301

AS.030.305. Physical Chemistry Instrumentation Laboratory I. 3 Credits.
This course is designed to illustrate the principles of physical chemistry and to introduce the student to techniques and instruments used in modern chemical research. Chemistry majors are expected to take this sequence of courses, rather than AS.030.307. Chemistry majors only.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module..

AS.030.306. Physical Chemistry Instrumentation Laboratory II. 3 Credits.
Designed to illustrate the principles of physical chemistry, introduce the student to spectroscopic techniques and instruments used in modern chemical research. Chemistry majors are expected to take this course rather than 030.307.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.030.301 OR AS.030.302;AS.030.305

AS.030.315. Biochemistry I. 4 Credits.
Foundation for advanced classes in Biophysics and other quantitative biological disciplines. Lecture and computer laboratory. This class is the first semester of a two semester course in biochemistry. Topics in Biochemistry I include chemical and physical properties of biomolecules and energetic principles of catabolic pathways. Computer labs include extensive use of molecular graphics and modelling of reaction kinetics and pathway flux. Co-listed with AS.250.315
AS.030.206 OR AS.030.212;Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.030.356. Advanced Inorganic Lab. 3 Credits.
Laboratory designed to illustrate the principles and practice of inorganic chemistry through the synthesis and characterization of transition metal and organometallic compounds. Methods used include vacuum and inert atmosphere techniques. Instrumental approaches and modern spectroscopic techniques are applied to the characterization of compounds generated. It is strongly recommended that students have taken or are taking one of the following courses: AS.030.204, AS.030.442, AS.030.449, or AS.030.472.
AS.030.228

AS.030.371. Chemistry for Connoisseurs. 3 Credits.
This course will survey the structural and physical properties of chemicals often considered as part of the “finer things in life” including topical discussions of the chemistries of food, drink, art, cosmetics and clothing, among others. Despite the pretentious name, the general theme of the course is to put chemical identities onto the things we interact with on a daily basis but most likely take for granted at a molecular level. Current event topics in consumer chemistry will also be covered as they arise. Students will have the chance to research topics of interest. The course material will be enriched by the contributions from special guest lecturers and occasional field trips.
Area: Writing Intensive
AS.030.205 or equivalent

AS.030.403. Optoelectronic Materials and Devices: Synthesis, Spectroscopy, and Applications. 3 Credits.
This course provides an introduction to the vast chemistry and physics of solid-state materials. The course begins with a fundamental description of bonding in crystalline solids and calculation of electronic band structure. We then extend our discussion to methods for the synthesis of low-dimensional materials and hierarchical structures, including quantum dots (0D), nanowires (1D), graphene and graphene analogs (2D), and thin-film superlattices. An in-depth discussion of spectroscopic and characterization techniques for solid-state materials will follow and focus on some of the foundational studies of quantum devices and cooperative phenomena. At this stage we will describerecent advances in electron-microscopy (e.g. aberration-corrected and energy filtered TEM, atom-probe tomography) that are revolutionizing the structural, compositional, and electronic characterization of materials. The course will conclude with a survey of contemporary topics in solid-state and nanomaterials science, including functional devices and circuits, assembly, energy conversion and catalysis, and biological sensing.Recommended Course Background: AS.030.301 and AS.030.402 are preferred, but instructor approval may be granted in lieu of these courses.

AS.030.404. Electrochemical Systems for Energy Conversion and Storage. 3 Credits.
This course will be focused on the fundamentals and applications of electrochemical methods in catalysis, charge transport, and energy conversion and storage. Topics that will be covered are basic electrochemical techniques, homogenous and heterogeneous (photo)electrocatalysis, fuel cells, and charge storage devices. The class will conclude with a group report and presentation on a recent development in the field of energy catalysis, conversion, and storage. Course topics include: 1) Fundamentals of electrochemistry, 2) Potential sweep methods and current-controlled techniques, 3) Impedance analysis, 4) Electrochemistry coupled with other characterization methods, 5) Electrocatalysis and photoelectrochemical catalysis, 6) Basics in fuel cells and current technologies (alkaline, polymer exchange membrane, solid oxide…), 7) Basics in batteries and current technologies (Pb acid, Li-based, other metals…)Recommended Course Background: AS.030.204 or AS.030.449 or AS.030.472, or instructor approval for undergraduate students. No pre-requisites for graduate students

AS.030.405. Introduction to Computational Chemistry. 3 Credits.
This course provides an introduction to the state-of-the-art computational chemistry.The course integrates the basics about molecular electronic structure theories and the corresponding computational aspects and practice in chemical applications. The discussions of theories cover the modern quantum-chemical methods, ranging from mean-field methods (Hartree-Fock method and density-functional theory) to post mean-field methods for treating electron-correlation effects (configuration interaction and coupled cluster). Demonstrative calculations and computer lab practice are designed to deal with the computation of energetic properties (e.g., heat of formation,bond dissociation energy, reaction activation energy, etc) and structural properties (geometry, vibrational frequencies, etc) of representative molecular systems using standard quantum chemistry program package (the Gaussian program, most probably). The class will conclude with a report and presentation on a piece of recent computational work pertinent to the student's research interests.

AS.030.415. Bioinorganic and Organometallic Chemistry. 3 Credits.
This course will cover key concepts of Bioinorganic chemistry (including metalloenzymes, synthetic catalysts, drugs, and molecular sensors) and Organometallic Chemistry (types of ligands, interactions with metals) and their applications in catalysis and bioinorganic chemistry. A background in organic chemistry and physical chemistry I is strongly recommended.
(AS.030.101 AND AS.030.102) AND (AS.030.205 AND AS.030.206)

AS.030.417. Metallo(bio)chemistry of Molecular Oxygen. 1.5 Credits.
This advanced (but descriptive) course focuses on how transition metals of the first row, i.e., iron, manganese and copper), process molecular oxygen (O2) in metalloenzymes and coordination complexes. Chemical behavior discussed will be reversible O2-binding (e.g., blood dioxygen carriers and their synthetic analogs), insertion of one or both atoms of molecular oxygen into organic substrates (i.e., oxygenase activity), or oxidase (bio)chemistry, wherein the metal ion center facilitates O2-reduction to hydrogen peroxide or water. The focus will be on the metal's role and mechanism of action. Practical societal applications will also be discussed.
AS.030.449 or equivalent

AS.030.421. Data Science Tools for the Chemical and Materials Sciences. 3 Credits.
Advances in measurement techniques and simulations have driven an explosion in the variety, quality, and quantity of data collected when investigating chemical and materials processes. Advances in computing have led to the practicality of machine learning (ML) and related analytical methods to explore and extract meaning from this cornucopia of data, and data science has been called the fourth pillar of the scientific method. This course will provide an introduction to modern tools of data science, including the Python programming language, Jupyter notebooks, ML algorithms and their practical implementation, and high performance computing, with specific emphasis on applying these tools to data of chemical relevance, including UV/Vis, IR and NMR spectra, 3-D micro computed tomography, and physical property data including specific heat, magnetization, and resistivity.

AS.030.424. Molecular Synthetic Biology. 3 Credits.
Synthetic Biology is changing the world around us. This course is designed to help you to understand these powerful emerging technologies and the science behind it, and to help prepare you if you want to contribute toward these exciting developments.
Area: Writing Intensive
AS.030.315 OR AS.020.305

AS.030.441. Spectroscopic Methods of Organic Structure Determination. 3 Credits.
The course provides fundamental theoretical background for and emphasizes practical application of ultraviolet/visible and infrared spectroscopy, proton and carbon-13 nuclear magnetic resonance and mass spectrometry to the structure proof of organic compounds.

AS.030.442. Organometallic Chemistry. 3 Credits.
An introduction to organometallic chemistry beginning with structure, bonding, and reactivity and continuing into applications to fine chemical synthesis and catalysis. Required Course Background: Organic chemistry-I and -II. Level: Upper level Undergraduate AND Graduate Students

AS.030.449. Chemistry of Inorganic Compounds. 3 Credits.
Physical and chemical properties of inorganic, coordination and organometallic compounds are discussed in terms of molecular orbital, ligand field and crystal field theories. Emphasis on structure and reactivity of these inorganic compounds. Other topics: magnetic properties, electronic spectra, magnetic resonance spectra, reaction kinetics.

AS.030.451. Spectroscopy. 3 Credits.
Spectroscopy and structure of molecules starting from rotational, vibrational and electronic spectra of diatomic molecules and extending to polyatomic molecules as time permits.Recommended Course Background: AS.030.302 or permission of instructor.

AS.030.452. Materials & Surface. 3 Credits.
The chemistry associated with surfaces and interfaces as well as a molecular level understanding of their essential roles in many technological fields. The first half of this course addresses various analytical techniques used to study surfaces including X-ray, photoelectron spectroscopy, and scanning tunneling microscopy. The second half of this course uses a number of case studies to illustrate the application of surface analytical techniques in contemporary research.

AS.030.453. Intermediate Quantum Chemistry. 3 Credits.
The principles of quantum mechanics are developed and applied to chemical problems.
(AS.030.301 OR AS.030.370 OR AS.250.372) AND AS.030.302

AS.030.454. Electrochemistry for Energy Conversion and Storage. 1.5 Credits.
This half-semester course introduces fundamental concepts in electrochemistry and the application of electrochemical methods for chemical research. The goal of this course is to enable students to practice electrochemistry in laboratory for any field. We will discuss how to use electrochemistry as an analytical technique in your toolbox for understanding chemical reactions as well as the role of electrochemistry in energy conversion and storage.
AS.030.204 OR AS.030.449 OR AS.030.472 OR Instructor Permission.

AS.030.456. Chemical Applications of Group Theory. 3 Credits.
This class will introduce group theory in the chemical/physical context. In addition to the fundamentals of (practical/applied) group theory, this course will explore how the tools of group theory enable powerful, general statements to be made about the behavior of chemical systems from the atomics scale to the macroscale, often without requiring detailed calculations or knowledge of most microscopic details. It is particularly targeted at upper level chemistry and physics undergraduates who have a basic knowledge of quantum mechanics and a brief familiarity with linear algebra.

AS.030.501. Independent Research in Physical Chemistry I. 3 Credits.
Research under the direction of members of the physical chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.502. Independent Research in Physical Chemistry. 1 - 3 Credits.
Research under the direction of members of the physical chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.503. Independent Research in Inorganic Chemistry I. 3 Credits.
Research under the direction of members of the inorganic chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.504. Independent Research in Inorganic Chemistry. 1 - 3 Credits.
Research under the direction of members of the inorganic chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.505. Independent Research in Organic Chemistry I. 3 Credits.
Research under the direction of members of the organic chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.506. Independent Research in Organic Chemistry I. 1 - 3 Credits.
Research under the direction of members of the organic chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.507. Independent Research in Biochemistry. 3 Credits.
Research under the direction of members of the biochemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.509. Independent Research in Biochemistry II. 3 Credits.
Research under the direction of members of the biochemistry faculty.
Recommended Course Background: AS.030.507-AS.030.508 and permission of instructor.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.510. Independent Research in Biochemistry II. 1 - 3 Credits.
Research under the direction of members of the biochemistry faculty.
Recommended Course Background: AS.030.507-AS.030.508 and permission of instructor.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.511. Independent Research in Materials Chemistry. 0 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.512. Independent Research in Materials Chemistry. 1 - 3 Credits.
Research under the direction of the materials chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.513. Independent Research in Medical Science. 3 Credits.
Research under the direction of members of the medical faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.514. Independent Research in Medical Science. 3 Credits.
Research under the direction of members of the medical faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.516. Independent Research in Chemical Biology II. 1 - 3 Credits.
Research under the direction of Chemical Biology faculty. Permission of instructor required.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.521. Independent Research in Inorganic Chemistry II. 3 Credits.
Research under the direction of the inorganic chemistry faculty.
Recommended Course Background: AS.030.503-AS.030.504 and permission of instructor.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.522. Independent Research in Inorganic Chemistry II. 1 - 3 Credits.
Research under the direction of the inorganic chemistry faculty.
Recommended Course Background: AS.030.503-AS.030.504 and permission of instructor.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.523. Independent Research in Physical Chemistry II. 3 Credits.
Research under the direction of the physical chemistry faculty.
Recommended Coures Background: AS.030.501-AS.030.502 and permission of instructor.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.525. Independent Research in Organic Chemistry II. 3 Credits.
Research under the direction of the organic chemistry faculty.
Recommended Course Background: AS.030.505-AS.030.506 and permission of instructor.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.526. Independent Research in Organic Chemistry II. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.527. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.530. Independent Research in Inorganic and Materials Chemistry. 1 - 3 Credits.
Research under the direction of members of the Inorganic Chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.540. Independent Research in Solid State and Materials Chemistry. 1 - 3 Credits.
Research under the direction of memebers of the Physical Chemistry faculty.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.593. Research-Organic Chemistry I. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.597. Research - Summer. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.030.601. Statistical Mechanics.
An introduction to statistical mechanics of cooperative phenomena using lattice gases and polymers as the main models. Covered topics: phase transitions and critical phenomena, scaling laws, and the use of statistical mechanics to describe time dependent phenomena.

AS.030.610. Chemical Kinetics.
The molecular mechanism of elementary physical and chemical rate processes will be studied. Topics such as elastic scattering, collisional vibrational and rotational energy transfer, chemically reactive collisions, and the theory of unimolecular decay will be covered.

AS.030.613. Chemistry-Biology Interface Program Forum I.
Chemistry-Biology Interface (CBI) program students and faculty will meet weekly in a forum that will host presentations from CBI faculty and students as well as invited guest speakers. These meetings will serve as a valuable opportunity for students to develop presentation skills and interact with CBI students and faculty. Enrollment is required for first- and second-year CBI students, and is recommended for advanced-year graduate students.

AS.030.614. Chemical-Biology Program Interface Forum II.
Chemistry-Biology Interface (CBI) program students and faculty will meet weekly in a forum that will host presentations from CBI faculty and students as well as invited guest speakers. These meetings will serve as a valuable opportunity for students to develop presentation skills and interact with CBI students and faculty. Enrollment is required for first and second year CBI students, and is recommended for advanced year graduate students.

AS.030.615. Bioinorganic Chemistry.

AS.030.616. The Chemistry of Transition Metals in Biology.
This course will cover fundamental principles in inorganic chemistry, biochemistry, and spectroscopy that are important to the field of bioinorganic chemistry. Current topics in bioinorganic chemistry will be covered, including metalloenzyme structure and function and related synthetic model systems. An emphasis will be placed on the role of transition metals in these systems, and their chemical mechanisms. The collection and interpretation of data from modern bioinorganic spectroscopic tools (e.g. UV-vis, EPR, raman, Mössbauer, X-ray absorption) will be discussed in the context of these current topics.

AS.030.617. Metallo(bio)chemistry of Molecular Oxygen.
This advanced (but descriptive) course focuses on how transition metals of the first row, i.e., iron, manganese and copper), process molecular oxygen (O2) in metalloenzymes and coordination complexes. Chemical behavior discussed will be reversible O2-binding (e.g., blood dioxygen carriers and their synthetic analogs), insertion of one or both atoms of molecular oxygen into organic substrates (i.e., oxygenase activity), or oxidase (bio)chemistry, wherein the metal ion center facilitates O2-reduction to hydrogen peroxide or water. The focus will be on the metal's role and mechanism of action. Practical societal applications will also be discussed.

AS.030.619. Chemical Biology I.
Parts I and II constitute the core course of the Chemistry-Biology Interface (CBI) Program. An introduction to the structure, synthesis, reactivity, and function of biological macromolecules (proteins, nucleic acids, carbohydrates, and lipids) will be provided using the principles of organic and inorganic chemistry. Discussion will incorporate a broad survey of molecular recognition and mechanistic considerations, and introduce the tools of molecular and cellular biology that are utilized in research at the interface of chemistry with biology and medicine.
Recommended Course Background: AS.030.206 or equivalent.

AS.030.620. Chemical Biology II.
Selected topics of current importance in chemical biology are covered. They include protein engineering and proteomics, cell signaling, protein-nucleic acid interactions (e.g. replication, transcription, DNA repair), catalytic RNA and the ribosome, biosynthesis of natural products, mechanisms of drug action, combinatorial chemistry and chemical genetics, and in vitro selection. Recommended Course Background: AS.030.619 or permission required.

AS.030.621. Literature-Organic Chemistry.

AS.030.622. Seminar: Literature of Chemistry.
Seminars are presented by advanced graduate students on topics from current chemical journals. Most first-year graduate students are expected to attend for credit. Undergraduates may take the course on a satisfactory/unsatisfactory basis.

AS.030.623. Molecular Synthetic Biology.
Principles and methods for the design and optimization of new biological systems, from a molecular perspective. Topics include: introduction to genetic parts and modern methods for their assembly; synthesis and incorporation of nucleic acids at the level of nucleotides, genes, and genomes; design of genetic programs; library generation and screening; directed evolution and its application to create new proteins and metabolic pathways; computational design of protein and RNA?using physical and bioinformatic approaches; non-canonical amino acids and genetic code expansion. This course will also feature critical evaluation of the primary literature in this fast-paced field, and practical experience with relevant software and computational tools.

AS.030.625. Advanced Mechanistic Organic Chemistry I.
The course covers the application of techniques in physical chemistry to the study of organic reaction mechanisms. Topics include chemical bonding and structure, stereochemistry, conformational effects, molecular orbital theory, methods to determine reaction mechanisms, reactive intermediates, and photochemistry. Recommended Course Background: AS.030.205-AS.030.206

AS.030.626. Advanced Mechanistic Organic Chemistry II.
This course covers advanced organic reactions and their mechanisms. Emphasis is given both to methods of postulating mechanisms for rationalizing reaction results and to the use of mechanistic thinking for designing reactions and reagents. This course is intended to be taken in sequence with AS.030.425. Recommended Course Background: AS.030.205-AS.030.206

AS.030.630. Molecular Photophysics and Photochemistry.
This course will introduce fundamental physical, chemical, and analytical concepts underlying light-induced chemical and (molecular-based) material processes. The final weeks of this course will build from these core concepts to survey molecular photoresponses and their consequences or applications in environmental chemistry, chemical biology, and materials science.

AS.030.633. Bioorganic and Natural Product Chemistry.
This is a natural products chemistry course organized according to the major natural product groups and emphasizing their origins, fundamental chemistry and applications in medicine. The organization is part traditional lecture and part case studies, like law school or business school, involving your participation in independent research, short essays and presentations. The last Workshops will be elective on your part as to topic with approval from C.A.T. Mixed in will be examples of organic and chemoenzymatic synthesis and biomimetic synthesis, relevant aspects of cofactor and enzyme function and their engineering, spectroscopic and kinetic tools.

AS.030.635. Principles of Magnetic Resonance.
This course develops the basic theoretical concepts underlying the fields of NMR (Nuclear Magnetic Resonance) and EPR (electron spin/paramagnetic resonance). From this foundation, a broad range of different applications will be surveyed. This includes applications to multidimensional solution state NMR spectroscopy, EPR spectroscopy, as well as hybrid electron/nuclear magnetic resonance applications such as dynamic nuclear polarization (DNP).

AS.030.636. Principles of Multidimensional NMR Spectroscopy.
This course is intended to be of general interest to those wanting to broaden their spectroscopy skills and will cover the theoretical and practical aspects of multidimensional NMR spectroscopy. This includes approaches to optimization of data acquisition and post-acquisition data processing as well as the development of the theoretical background needed to understand and design NMR pulse sequences.

AS.030.648. Biocatalysis: Fundamentals, Recent Advances, and Industrial Applications.
Biocatalysis is a rapidly evolving field that adapts biology's mechanisms for innovation to offer revolutionary solutions for chemical production. This course features an in-depth coverage of various topics in biocatalysis with examples of how biocatalysis has reshaped various aspects of modern industries including food manufacturing, pharmaceuticals, consumer products, and biomaterials. This course also provides an overview of common enzyme classes used in bioindustries with extensive discussions of their catalytic mechanisms and engineering. Integrated within the course will be reviewing of important literatures, assessment of critical industrial biocatalytic processes, and hands-on experience of common bioinformatic and computational tools for new enzyme discovery.

AS.030.652. A Theoretical and Experimental Approach to X-ray Crystallography.
The X-ray course will provide a complete approach to X-ray structure to determination (mostly concerned with snall molecules) and its uses in Chemistry. The first segment of this course will cover all theoretical aspects of X-ray crystallography, i.e. crystals and crystallixation, the nature of X-rays, the diffraction phenomenon of X-rays by crystals, symmetry and space groups, crystal structure analysis. Additionally, the course will provide laboratory experience for the students, involving hands-on instrumentation, experimental methodology to X-ray structure determination, structure solution/refinement, data analyses and publishing data. The course is aimed for graduate students with a strong interest in organic/inorganic chemistry, materials sciences, and physics. Undergraduate students with a major in chemistry are also encouraged to participate.

AS.030.676. Modern Synthetic Methods in Total Synthesis.
An exploration of modern synthetic methods in the context of total synthesis.

AS.030.677. Advanced Organic Synthesis I.
The reactions and principles involved in the synthesis of simple and complex organic compounds. Discussion of famous natural product syntheses and practice in developing rational designs for organic syntheses. Problems in the design of syntheses and in the use of chemical literature.

AS.030.678. Advanced Organic Synthesis II.
Advanced discussion of organic stereochemistry & its application to problems in asymmetric reactions and catalysis will be presented. Emphasis will be placed on the latest reports in the literature, especially with respect to the development of new catalytic, asymmetric processes.

AS.030.681. Nucleic Acids: Fundamental Chemistry and Applications.
The course will begin with an overview of nucleic acid structure, synthesis and reactivity. Subsequent topics will include nucleic acid damage & repair, expanding the genetic code, the role of nucleic acids in epigenetics and applications in biotechnology, such as the development of nucleic acid sensors.

AS.030.691. Hardware, Software and Materials Chemistry.
The course is designed to provide the essential principles and concepts underlying the modern study of the structure and properties of solids in bulk crystals, thin films, and nanoscale objects. Topics include basic crystallography, structure determination by x-ray, neutron, and electron diffraction, fundamental concepts of bonding in solids, lattice dynamics, electronic band structure, magnetism, and strongly correlated electron behavior. Particular emphasis is placed on the impact of the structure, dimensionality, and electron count on electrical and magnetic properties (electric conduction, superconductivity, thermoelectricity, etc). More course info available at http://occamy.chemistry.jhu.edu.. Cross-listed with Physics and Astronomy

AS.030.800. Summer Independent Research.
This course is for active Chemistry PhD students during summer terms

AS.030.802. Independent Research.
Research under the direction of the chemistry faculty.

AS.030.897. Dissertation Research.
Open to AS Chemistry Graduate Students only.

AS.040 (Classics)

AS.040.102. The Art and Archaeology of Early Greece. 3 Credits.
This course explores the origins and rise of Greek civilization from the Early Bronze Age to the Persian Wars (ca. 3100-480 B.C.), focusing on major archaeological sites, sanctuaries, material culture, and artistic production.

AS.040.103. The Roman Empire. 3 Credits.
This introductory course examines the history, society, and culture of the Roman state in the Imperial age (ca. 31 BCE-ca. 500 CE), during which it underwent a traumatic transition from an oligarchic to a monarchic form of government, attained its greatest territorial expanse, produced its most famous art, architecture, and literature, experienced vast cultural and religious changes, and finally was transformed into an entirely different ("late antique") form of society. All readings in English.

AS.040.104. The Roman Republic: History, Culture, and Afterlife. 3 Credits.
This introductory level course examines the history, society, and culture of the Roman state in the Republican period (509-31 BCE), during which it expanded from a small city-state to a Mediterranean empire. We also consider the Republic's importance for American revolutionaries in the 18th century. All readings in English.

AS.040.105. Elementary Ancient Greek. 4 Credits.
This course provides a comprehensive, intensive introduction to the study of ancient Greek. During the first semester, the focus will be on morphology and vocabulary. Cannot be taken Satisfactory/ Unsatisfactory.

AS.040.106. Elementary Ancient Greek. 4 Credits.
Course provides comprehensive, intensive introduction to the study of ancient Greek. The first semester's focus is morphology and vocabulary; the second semester's emphasis is syntax and reading. Course may not be taken Satisfactory/ Unsatisfactory.
AS.040.105

AS.040.107. Elementary Latin. 3 Credits.
This course provides a comprehensive, intensive introduction to the study of Latin for new students, as well as a systematic review for those students with a background in Latin. Emphasis during the first semester will be on morphology and vocabulary. Course may not be taken Satisfactory/Unsatisfactory.

AS.040.108. Elementary Latin. 3 Credits.
Course provides comprehensive, intensive introduction to the study of Latin for new students as well as systematic review for students with background in Latin. The first semester's emphasis is on morphology and vocabulary; the second semester's focus is on syntax and reading. Course may not be taken Satisfactory/Unsatisfactory.
AS.040.107

AS.040.111. Ancient Greek Civilization. 3 Credits.
The course will introduce students to major aspects of the ancient Greek civilization, with special emphasis placed upon culture, society, archaeology, literature, and philosophy.

AS.040.114. Science Fiction Before the Modern Era: Exploring the Ancient Scientific. 3 Credits.
Science Fiction has classically been considered a product – and even a hallmark – of the modern world. But this course opens up the world of ancient scientific fictions. From philosophical myth and utopia to the imaginary worlds of fantastical travelogues and novelistic adventures in outer space, these narratives take us deep into the scientific imagination of the ancient Greeks and Romans. We will examine how these invented worlds reflected critically and creatively on aspects of contemporary society, including political and cosmic structures; conflicts between religion and philosophy; death and the after-life; the body, sexuality and technology. We will also examine the influence these fictions had on lunar narratives of the (early) modern period, including Kepler's Dream and Richard Adams Locke's great lunar hoax of 1835.

AS.040.121. Ancient Greek Mythology: Art, Narratives, and Modern Mythmaking. 3 Credits.
This course focuses on major and often intricate myths and mythical patterns of thought as they are reflected in compelling ancient visual and textual narratives. Being one of the greatest treasure troves of the ancient world, these myths will further be considered in light of their rich reception in the medieval and modern world (including their reception in the modern fields of anthropology and philosophy).

AS.040.126. Religion, Music and Society in Ancient Greece. 3 Credits.
Emphasis on ancient Greek ritual, music, religion, and society; and on cultural institutions such as symposia (drinking parties) and festivals.

AS.040.129. Reading Homer's Odyssey. 3 Credits.
This course aims to provide an in-depth exploration of Homer's Odyssey (in translation). We will study the poem's roots in a tradition of ancient oral poetry, gain a fuller understanding of how it was interpreted within different historical contexts, and examine the poem's fascination with topics such as gender, class, tales of exploration and colonization, truth and lies and identity.

AS.040.145. Story and Argument from Homer to Petrarch. 3 Credits.
Stories entertain us, but we also tell them to make a point. This course will explore the ways that stories were used to make points by Greek and Latin authors from Homer to Petrarch, while also looking at, and comparing them to, the techniques of argument contemporaneous thinkers were developing. This is a course about narrative and rhetoric but also about how and in what way stories matter.

AS.040.152. Medical Terminology. 3 Credits.
This course investigates the Greek and Latin roots of modern medical terminology, with additional focus on the history of ancient medicine and its role in the development of that terminology.

AS.040.204. Greek Myth and Anime: Cross-cultural Concepts of Man and Divinity. 3 Credits.
This course will examine the reception of the Classics in Japanese popular culture anime. We will view how characters, creatures, and beings from Greco-Roman myth are presented in anime, with special attention to concepts such as human beings, humanity, and divinity. Dean's Teaching Fellowship course.
Area: Writing Intensive

AS.040.205. Intermediate Ancient Greek. 3 Credits.
Reading ability in classical Greek is developed through a study of various authors.
AS.040.105 AND AS.040.106 or equivalent

AS.040.206. Intermediate Ancient Greek. 3 Credits.
Reading ability in classical Greek is developed through a study of various authors.
AS.040.205

AS.040.207. Intermediate Latin. 3 Credits.
Although emphasis is still placed on development of rapid comprehension, readings and discussions introduce student to study of Latin literature, principally through texts of various authors.
AS.040.107 AND AS.040.108 or equivalent

AS.040.208. Intermediate Latin. 3 Credits.
Reading ability in Latin is developed through the study of various authors, primarily Cicero (fall) and Vergil (spring).
AS.040.207

AS.040.212. Race Before Race: Ethnic Difference in the Ancient Mediterranean. 3 Credits.
This course explores how ancient Mediterranean cultures on three continents theorized and negotiated ethnic difference, with an eye toward classical Greece and Rome's role in the later invention of race.
Area: Writing Intensive

AS.040.213. The Painted Worlds of Early Greece: Fantasy, Form and Action. 3 Credits.
This course explores the creation and role of early Aegean wall painting. Found primarily in palaces, villas and ritual spaces, these paintings interacted with architecture to create micro-worlds for social activities taking place in their midst. Their subjects range—from mythological to documentary, from ornamental to instructive. They depict dance and battle, fantastical beasts and daily life. We examine their complex relationship to lived reality as well as the activities that surrounded them, from their crafting, to performance of rituals, to their role in "international" relations.
Area: Writing Intensive

AS.040.216. Exploring the Ancient Astronomical Imagination. 3 Credits.
This course takes us on an exploratory journey through the ancient astronomical imaginary. We will focus on ancient Greek and Roman ideas about the structure of the cosmos, the substance and nature of the stars, the Earth's place and role in the universe, ancient attempts to map the stars, and ancient beliefs about the significance of cosmic phenomena for events in the human world. The course will culminate in the extraordinary ancient tradition of lunar fictions, which are our earliest imaginative accounts of life on other worlds. Come join us for a voyage to the stars!

AS.040.217. A Clash of (Ancient) Civilizations? The Jews in the Graeco-Roman World. 3 Credits.
Judaism and Hellenism have been traditionally opposed to one another: the Jewish calendar celebrates the triumph of the Maccabees against the Hellenizers at Hannukah, and mourns the destruction of the Jerusalem Temple by the Romans on Tisha Be-Av. However, the relationship between the Jewish people and the Graeco-Roman world can hardly be reduced to a military confrontation. Did these apparently opposite worlds influence one another? How were the Jews viewed among the Greeks and the Romans and the many other ethnic groups living in the ancient Mediterranean, and how did they view Greek and Latin culture? What did they have to offer on the international, multilingual 'cultural market' of the Graeco-Roman world? Through a selection of ancient texts and modern scholarship, this course analyzes the vicissitudes of the Jewish people and of Judaism from the Hellenistic Age to the Late Antique, throughout the centuries in which Greeks, Romans and Jews found themselves living "under one roof". All readings in English. Dean's Teaching Fellowship course.

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.

AS.040.232. Island Archaeology: The Social Worlds of Crete, Cyprus and the Cyclades. 3 Credits.
Islands present highly distinctive contexts for social life. We examine three island worlds of the third and second millennia BCE through their archaeological remains, each with its particularities. These are places where water had a unique and powerful meaning, where boat travel was part of daily life, where palaces flourished and where contact with other societies implied voyages of great distance across the sea. Class combines close study of material culture and consideration of island-specific interpretive paradigms; students work with artifacts in the JHU Archaeological Museum.

AS.040.245. Heroes: The Ancient Greek Way. 3 Credits.
Students will acquire more in-depth knowledge of Ancient Greek literature by reading and discussing its most important and famous texts, from the Iliad and the Odyssey to tragedy to philosophy. Knowledge of Greek is not required.
AS.040.111 OR AS.040.121

AS.040.300. The Ancient Novel. 3 Credits.
In this course we will follow the fortunes of the ancient Greek and Roman novels.
AS.040.103 OR AS.040.104 OR AS.040.111 OR AS.040.112 OR AS.040.121 OR AS.040.133 OR AS.040.245

AS.040.302. Greek Tragedy: Human Passions and Divine Power. 3 Credits.
This course introduces students to the significance of Greek theater in its original context and to masterpieces of Greek tragedy such as Medea, Oedipus the King, and The Bacchae. Readings will be in English. No Greek is required. Recommended Course Background: AS.040.111 Ancient Greek Civilization, AS.040.121 Ancient Greek Mythology, or some exposure to ancient Greek culture.

AS.040.305. Advanced Ancient Greek. 3 Credits.
This course aims to increase proficiency and improve comprehension of the ancient Greek language. Intensive reading of ancient Greek texts, with attention to grammar, idiom, translation, etc. Reading of prose or verse authors, depending on the needs of students. Specific offerings vary. Co-listed with AS.040.705.
AS.040.205 AND AS.040.206 or equivalent

AS.040.306. Advanced Ancient Greek. 3 Credits.
This course aims to increase proficiency and improve comprehension of the ancient Greek language. Intensive reading of ancient Greek texts, with attention to grammar, idiom, translation, etc. Reading of prose or verse authors, depending on the needs of students. Specific offerings vary. Co-listed with AS.040.702.
AS.040.205 AND AS.040.206 or equivalent

AS.040.307. Advanced Latin Prose. 3 Credits.
This course aims to increase proficiency and improve comprehension of the Latin language. Intensive reading of Latin texts, with attention to grammar, idiom, translation, etc. Specific offerings vary. Co-listed with AS.040.707.
AS.040.207 AND AS.040.208 or equivalent

AS.040.308. Advanced Latin Poetry. 3 Credits.
The aim of this course is to increase proficiency and improve comprehension of the Latin language. Intensive reading of Latin texts, with close attention to matters of grammar, idiom, and translation. Co-listed with AS.040.710.
AS.040.207 AND AS.040.208 or equivalent

AS.040.348. Worlds of Homer. 3 Credits.
Through texts, art, and archaeological remains, this course examines the various worlds of Homer--those recalled in the Iliad and Odyssey, those within which the epics were composed, and those born of the poet's unique creative work. Class will make museum visits. Ancient texts read in translation..

AS.040.400. The Archaeology of Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Class involves regular analysis of artifacts based in the Archaeological Museum.

AS.040.407. Survey of Latin Literature I: Beginnings to the Augustan Age. 3 Credits.
This intensive Latin survey is designed for very advanced undergraduate students--normally those who have completed two semesters of Advanced Latin (AS.040.307/308)--and PhD students preparing for their Latin translation exam. In this course, the first half of a year-long sequence, we will read substantial texts of major Republican and some Augustan authors. The weekly pace is designed to inculcate greater speed and accuracy in Latin reading, and provide significant coverage of various kinds of texts.Recommended background: AS.040.307-308 or equivalent
AS.040.307 AND AS.040.308 or permission of instructor.

AS.040.408. Survey of Latin Literature II: Early Empire to the Post-Classical Period. 3 Credits.
This intensive Latin survey is designed for very advanced undergraduate students (normally those who have completed the regular undergraduate sequence through the advanced level) and PhD students preparing for their Latin translation exam. In this course, the second half of a year-long sequence, we will read substantial texts of major Imperial authors, as well as a selection of works from Late Antiquity and the Post-Classical period. The weekly pace is designed to inculcate greater speed and accuracy in Latin reading and to provide significant coverages of various kinds of texts. Prior completion of AS.040.407 preferred but not required.
AS.040.307 AND AS.040.308 or equivalent.

AS.040.417. Survey of Greek Literature I: Homer to the Classical Period. 3 Credits.
We shall read an extensive selection of major texts of Greek literature from Homer to the classical period.

AS.040.418. Survey of Greek Literature II: Hellenistic Period to Imperial Period. 3 Credits.
We shall read, in the original Greek, major authors of Greek Literature from the Hellenistic period to the Imperial period.

AS.040.420. Classics Research Lab. 3 Credits.
This course gives participants a unique opportunity to engage directly in empirical research and its interpretation and dissemination. Topics vary. There are no prerequisites, but potential students should contact the instructor for permission to enroll.

AS.040.501. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.040.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.040.520. Honors Research. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.040.600. The Archaeology of Cyprus: Investigating a Mediterranean Island World in the JHU Museum.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Class involves regular analysis of artifacts based in the Archaeological Museum.

AS.040.601. Cosmopoetics: Aratus, Manilius and the Literature of the Stars.
This seminar will explore two ancient Greek/Roman poems about the stars: Aratus' ancient Greek poem Phaenomena (3rd century BCE) – which was second only to the Homeric epics in terms of popularity among ancient readers - Manilius' Latin poem, Astronomica (1st century CE) - and ancient catasterism-literature (myths about figures who are converted into stars). Key points for discussion will include the politics and poetics of mapping the night sky, intersections with the scientific/ philosophical tradition, the didactic voice, the interpretation of celestial phenomena and the stars' perceived influence on terrestrial events, and the extraordinarily rich visual tradition that accompanies Aratus' poem and the katasterismoi in particular. The seminar will include sessions working on early astronomical materials from our Special Collections. In order to guarantee maximum accessibility, we will approach these texts in translation, and extra provision will be made for Classics students and others who wish to study the texts in the original Greek and Latin language.

AS.040.603. Homer's Odyssey.
This seminar proposes an in-depth exploration of Homer's Odyssey. One of the monumental epics of ancient Greek and a foundational text of world-literature, the Odyssey examines, through one man's quest to make his way home, profound questions concerning the nature of identity, the meaning of suffering, the importance of sharing stories, and the strange allure of poetry itself. We will study Books 1-12 of the poem in the original Greek in order to gain advanced understanding of its language and style. Emphasis will also be placed on the study of commentaries and scholarship in order to enhance our understanding of the poem's themes, the transmission of the text, and the historical, literary and social contexts in which-and in response to which-it grew.

AS.040.605. Orality and Writing in the Literary Culture of the Early Roman Empire.
This graduate seminar focuses on the oral practices that constitute "literary culture" in Rome in the first and second centuries CE: declamation, recitation, disputation emerging from reading, and the relationship of these practices to both literary "publication" and to arenas of traditional oratory such as the courts and the Senate. Weekly assignments will include substantial readings in Latin.

AS.040.608. Neo-Latin.
This seminar will introduce participants to the reading, editing, translation, and interpretation of humanist Latin, with training in the ancillary skills of paleography, codicology, and textual criticism.

AS.040.610. Biography and the Hero.
This graduate seminar will involve a close reading and study Plutarch's Life of Romulus, particularly in relation to the paired Life of Theseus. We will examine Plutarch's frameworks and principles for "life writing" in general, as well as his understanding and application of the traditional concepts of the Greek "hero" and Roman exemplum, to shed light on his poetics in this mythistorical "biography."

AS.040.611. Labor in Latin Literature.
This graduate seminar examines work and labor in Latin literature, beginning with a close reading of Vergil's Georgics in Latin. We will pay particular attention to the female, enslaved, and non-human labor that elite male authors silence or sublimate, as well as the interpretive and methodological challenges that arise. Students will co-design the reading list; lead discussions around texts, topics and theories relevant to their research; and workshop one abstract, one grant proposal, and one conference paper each. Reading ability in Latin is required.

AS.040.613. Things with Lives in the Ancient Mediterranean.
With a focus on material culture from the ancient Mediterranean, this seminar explores the diversity of ways in which objects may be understood to have lives or to be active elements of humans' lived experience. The seminar meets in the Archaeological Museum, where we can pair direct examination of objects with an exploration of multiple theoretical approaches and interests, such as object biography and agency, affordance theory, object-oriented ontologies, material animacies, embodiment, ecological and enactive perception, and the ongoing post-depositional existences of archaeological material. Students will eventually select an object as the focus of an individual research project.

AS.040.614. Ancient Allegorical Interpretations of Greek Literature.
We shall look at several allegorical readings offered in antiquity to interpret myths and literary works, especially, but not only, the epics of Homer.

AS.040.622. Angelo Poliziano: Renaissance Humanism and Classical Antiquity.
This course will survey works in Latin and the vernacular by the fifteenth-century Florentine humanist Angelo Poliziano, with particular attention to his correspondence, and with recourse to a variety of theoretical approaches, from classical reception theory to queer theory. Good reading ability in classical Latin is required; the same in Italian is ideal but not required.

AS.040.626. Plato and Poetry.
This graduate seminar will explore Plato's contributions to the "old quarrel" between poetry and philosophy, encompassing such topics as the relationship between poetic inspiration and human reason, the role of literature in pedagogy, and the metaphysical implications of poetic fiction. We will focus on several Greek texts from the Platonic corpus related to these themes, as well as some later sources that engage with Platonic ideas.

AS.040.637. Competition in the Early Roman Empire.
A well-documented feature of the middle to late Roman republic is the ferocious competitiveness of the aristocracy, and the governing class in particular. These people competed for prestige and glory on the battlefield, for offices and honors in government and administration, for visibility in public building, in forensic oratory in the courts, in deliberative oratory in various assemblies, and sometimes in literary production. Less well-understood is how the competitiveness of this group manifested itself in the early imperial age, as the emergence of the emperor shut down competition in some of these arenas and fundamentally changed the character of the competition in others. This seminar considers how some old arenas changed under the Imperial regime, and examines new forms that aristocratic competition assumed to make up for the arenas that had altogether disappeared.

AS.040.638. Ancient Literary Criticism.
This course covers essential Greek and Latin texts (e.g. Plato, Aristotle, Horace, Plutarch) and the commentary tradition (e.g. scholia to Homer and other important authors). Focus is on poetic texts, with some prose.

AS.040.641. Reception of the Greek Novel.
In this course, we will follow the fortunes of the Greek novels from the Byzantine period onward, focusing especially on Heliodorus' _Aethiopica_. Knowledge of Greek is highly desirable but not required.

AS.040.702. Reading Ancient Greek Poetry.
This reading seminar is intended to train graduate students in direct and critical work on primary sources. Co-listed with AS.040.306.

AS.040.705. Reading Ancient Greek Prose.
This reading seminar is intended to train graduate students in direct and critical work on primary sources. Co-listed with AS.040.305. Recommended Course Background: AS.040.205-AS.040.206.

AS.040.707. Reading Latin Prose.
This reading seminar is intended to train graduate students in direct and critical work on primary sources. Co-listed with AS.040.307.

AS.040.710. Reading Latin Poetry.
This reading seminar is intended to train graduate students in direct and critical work on primary sources. Co-listed with AS.040.308. Recommended Course Background: AS.040.207-AS.040.208.

AS.040.801. Independent Study.

AS.040.802. Independent Study.

AS.040.806. Master's Thesis Research.

AS.040.807. Master's Thesis Research.

AS.040.809. Exam Preparation.
Study in preparation for a comprehensive oral exam, required to become a PhD candidate, and consisting of three fields in classics and related areas.

AS.040.810. Exam Preparation.
Study in preparation for a comprehensive oral exam, required to become a PhD candidate, and consisting of three fields in classics and related areas

AS.040.814. Dissertation Research.
No Audits.

AS.040.815. Dissertation Research.
No Audits.

AS.050 (Cognitive Science)

AS.050.102. Language and Mind. 3 Credits.
Introductory course dealing with theory, methods, and current research topics in the study of language as a component of the mind. What it is to "know" a language: components of linguistic knowledge (phonetics, phonology, morphology, syntax, semantics) and the course of language acquisition. How linguistic knowledge is put to use: language and the brain and linguistic processing in various domains.

AS.050.105. Introduction to Cognitive Neuropsychology. 3 Credits.
When the brain is damaged or fails to develop normally, even the most basic cognitive abilities (such as the ability to understand words, or perceive objects) may be disrupted, often in remarkable ways. This course explores a wide range of cognitive deficits, focusing on what these deficits can tell us about how the normal brain works. Topics include brain anatomy and causes of brain damage, reading and spelling deficits, unilateral spatial neglect, hemispheric disconnection, cortical plasticity, and visual perception of location and orientation. Students read primary sources: journal articles that report deficits and discuss their implications.

AS.050.116. Visual Cognition. 3 Credits.
How do humans make sense of the visual world around them? This course will provide an introductory survey of current research, methods, and theories in visual cognition. We will draw upon topics in cognitive psychology, cognitive neuroscience, cognitive neuropsychology, and artificial intelligence.

AS.050.135. Speech & Voice. 3 Credits.
Course on human speech production and perception, covering topics including anatomy and physiology of the vocal tract, phonetic analysis, language acquisition and impairments, and speech technologies.

AS.050.202. Introduction to Computational Cognitive Science. 3 Credits.
How does the mind work? Cognitive science addresses this question from a multidiscliplinary perspective, drawing upon methods and ideas from psychology, neurophysiology, neuroscience, philosophy, linguistics, and computer science. Within this framework, computational cognitive science has two related goals. The first is to create computational models of human cognition, computer programs that simulate certain aspects of the mind. The second is to understand how to produce intelligent behavior in machines, taking cues from humans. The computational frameworks we will discuss include symbolic structured representations, probabilistic inference and artificial neural networks, as applied to concept learning, language and vision. While this class does not have formal prerequisites, some programming experience (e.g., AS 250.205 Introduction to Computing or equivalent) and mathematical preparation (e.g., AS.110.107 Calculus II or equivalent) are essential.An optional, hands-on lab (AS.050.212) is offered to supplement this course. It is highly recommended that students with less extensive computational and mathematical experience register for this lab.

AS.050.203. Neuroscience: Cognitive. 3 Credits.
This course surveys theory and research concerning how mental processes are carried out by the human brain. Currently a wide range of methods of probing the functioning brain are yielding insights into the nature of the relation between mental and neural events. Emphasis will be placed on developing an understanding of both the physiological bases of the techniques and the issues involved in relating measures of brain activity to cognitive functioning. Methods surveyed include electrophysiological recording techniques such as EEG, ERP, single/multiple unit recording and MEG; functional imaging techniques such as PET and fMRI; and methods that involve lesioning or disrupting neural activity such as cortical stimulation, animal lesion studies, and the study of brain-damaged individuals.It's strongly recommended that students have background in one of the following courses: AS.050.101 OR AS.050.105 OR AS.200.141.

AS.050.206. Bilingualism. 3 Credits.
Do children get confused when they grow up exposed to more than one language? Is it possible to forget one's native language? Are the first and second language processed in different areas of the brain? How does brain damage impact the different languages of a polyglot? Does knowing a second language affect non-linguistic cognitive processing? This course will address questions such as these through an exploration of mental and neural processes underlying bilingual and multilingual language processing. Also offered as AS.050.606.

AS.050.212. Introduction to Computational Cognitive Science Lab. 0.5 Credits.
This course is a hands-on lab supplement for Introduction to Computational Cognitive Science. While this lab is optional, it is highly recommended to students with less extensive computational and mathematical experience.
Prerequisite(s): Must be registered for AS.050.202 in order to register for this optional lab.

AS.050.233. Lost in Space: How Humans Learn, Think, and Talk About the World Around Us. 3 Credits.
The ability to perceive, navigate, and explain space around us is essential in our everyday life: every day humans find their favorite coffee mug, make their way to work, hang their coat, and give directions to dinner guests with relative ease. How is this assorted set of tasks accomplished? How does the human mind structure the space around us and recognize the spatial relations between various objects? What happens when this ability is impaired? This course will attempt to answer these questions by sampling key concepts, theories, and experimental findings from a diverse set of disciplines, including neuroscience, psychology, and linguistics. We will get an overview of spatial cognition from multiple perspectives and draw analogies between different research paradigms.

AS.050.236. Neurolinguistics. 3 Credits.
This course provides an introductory survey of the cognitive neuroscience of language – a multidisciplinary field in the intersection of Linguistics, Psycholinguistics, and Neuroscience. We will explore current research on the neural bases of the perception, production, and acquisition or human language in neuro-typical and impaired individuals.

AS.050.311. Written Language: Normal Processing and Disorders. 3 Credits.
This course surveys both the historical development of written language as well as current cognitive theories that account for the manner in which the written language is represented and processed by readers/writers of a language. Issues regarding the relationship between the written and spoken language, the neural bases of written language, the acquisition of written language skills, as well as acquired and developmental disorders of reading and writing will be examined.
Area: Writing Intensive
AS.050.102 OR AS.050.105 OR AS.050.203 OR AS.080.203

AS.050.315. Cognitive Neuropsychology of Visual Perception: The Malfunctioning Visual Brain. 3 Credits.
When we think about our ability to see, we tend to think about our eyes, but in fact vision happens mostly in the brain. This course explores the remarkable perceptual deficits that occur when the visual regions of the brain are damaged or fail to develop normally, focusing on what these perceptual malfunctions tell us about normal visual perception. Topics include visual system anatomy and physiology; functional specialization in the lower visual system as revealed by cerebral achromatopsia (color blindness resulting from brain damage) and akinetopsia (impaired motion perception); cortical plasticity in the visual system; spatial deficits in perception and action; and the implications of high-level visual deficits, including prosopagnosia (impaired face recognition), Charles Bonnet syndrome (complex visual hallucinations in blind areas of the visual field), blindsight (accurate responding to visual stimuli despite apparent inability to see them), and aphantasia (lack of visual imagery).
AS.050.105 OR AS.050.203 OR AS.080.203 OR AS.050.101 OR AS.200.110 OR AS.200.211 or instructor's permission.

AS.050.317. Semantics I. 3 Credits.
This is an introduction to the study of meaning in natural language. We address the conceptual and empirical issues in semantic theory and introduce some formal machinery that has been developed to deal with such problems. After discussing foundational questions, we turn to formal semantics and pragmatics, as well as their interfaces with syntax and the lexicon. Specific topics include presupposition, type-driven composition, quantification, lexical aspect, argument structure, and lexical representations of meaning.
AS.050.107 OR AS.050.102 or AS.050.240 or instructor's permission.

AS.050.320. Syntax I. 3 Credits.
Introduces the basic methods and means of analysis used in contemporary syntax investigations, practicing with data from different languages. Also offered as AS.050.620.
AS.050.102 OR AS.050.240 or equivalent/see instructor.

AS.050.325. Phonology I. 3 Credits.
An introduction to the basic principles underlying the mental representation and manipulation of language sounds and their relation to human perception and vocal articulation: how units of sound are both decomposable into elementary features and combined to form larger structures like syllables and words. The role of rules and constraints in a formal theory of phonological competence and in accounting for the range of variation among the world's languages. Also offered as AS.050.625.

AS.050.326. Foundations of Cognitive Science. 3 Credits.
This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion. Also offered as AS.050.626.
Area: Writing Intensive

AS.050.332. Developmental Cognitive Neuroscience. 3 Credits.
In-depth examination of the current literature on cognitive development in the context of developmental cognitive neuroscience. Please see course prerequisites. Meets with AS.050.632.
AS.050.101 OR AS.050.339 OR AS.200.132 OR AS.050.105 OR Instructor's Permission.

AS.050.333. Psycholinguistics. 3 Credits.
This course provides a broad survey of current research on language processing in adult native speakers and language learners. Topics include speech perception, word recognition, and sentence production and comprehension. We will discuss the nature of representations that are being constructed in real-time language use, as well as how the mental procedures for constructing linguistic representations could be studied by various behavioral and physiological measures. Also offered as AS.050.633.
AS.050.102 OR AS.050.240 OR AS.050.317 OR AS.050.320 OR AS.050.325 or instructor's permission.

AS.050.339. Cognitive Development. 3 Credits.
This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.

AS.050.348. First Language Acquisition. 3 Credits.
This course provides an introduction to the fields of first and second language acquisition by looking at questions such as the following: Can the grammar of a native language be learned solely on the basis of noticing statistical correlations among words? How does native language acquisition explain — or is explained by — the universal properties, shared by all languages, of words and grammars? How does being exposed to multiple languages from birth affect language acquisition and what happens when a child is not exposed to any language early in life? Does the same cognitive mechanism guide language learning in children and adults? What factors account for individual differences in ease and ultimate attainment when a second language is learned later in life? Is it possible to become indistinguishable from a native speaker in a foreign language? What changes take place in the brain when a new language is learned? Also offered as AS.050.648.
(AS.050.240 OR AS.050.320 OR AS.050.325) AND (AS.050.102 OR AS.050.206)

AS.050.349. Second Language Acquisition. 3 Credits.
First language acquisition is natural and seemingly effortless. The situation is reversed when one tries to learn another language. This course discusses in what ways first and second language acquisition (SLA) differ and how individual differences of the learners as well as external factors contribute to the variability observed in rates and ultimate proficiency of second language learning in children and adults. We will discuss such topics as Universal Grammar access in early and late SLA, first language influence, critical periods, possibility of native-like attainment, and language attrition.
(AS.050.240 OR AS.050.320 OR AS.050.325) AND (AS.050.348 OR AS.050.102 OR AS.050.206)

AS.050.352. Applying Cognitive Neuroscience to Artificial Intelligence Part I. 3 Credits.
As a result of greater computing power and Big Data, artificial intelligence (AI) is rapidly improving for well-defined tasks and narrow intelligence. Moreover, it has entered all industries in a myriad of ways. But will AI ever have human-like general intelligence? What does humanlike general intelligence even mean? Why should we even care? This course is designed to answer these complex questions by giving students working knowledge of the underlying principles and mechanisms of human behavior and cognition, and how they may be applied to solving current and rising industry challenges. Key topics to be addressed will include vision, audition, language, learning, emotion and social cognition, creativity, and consciousness. Each topic addressed will cover latest advancements within cognitive neuroscience, with relevant applied case studies. Students will apply learned topics to a final group research project on the topic of their choice.

AS.050.353. Applying Cognitive Neuroscience to Artificial Intelligence Part II. 3 Credits.
As a myriad of artificial intelligence enabled autonomous systems enter into our lives and change how we live, we must ask: can we trust these systems? In this course we will take a human-centered perspective on assured autonomy and identify why and how insights from human perception and cognition can guide solutions for reliable, resilient, and robust autonomous systems. We will address bias, ethics, explanability, and safety by focusing on specific case studies from autonomous vehicles, cybersecurity, healthcare, fashion, law enforcement, and military systems. Students will apply learned material to a semester-long group research project on a topic of their choice.

AS.050.358. Language & Thought. 3 Credits.
Have you ever wondered about the relationships between language and thought? Philosophers, linguists, psychologists, evolutionary theorists and cognitive scientists have too and this course will survey the current thinking on this matter. Classical papers such as those by Whorf and Sapir, more recent philosophical papers by people such as Fodor and Dennett, and recent empirical work by linguists and psycholingists on the relationship between language and thinking in development and in adults will be covered. Discussions will focus on the theoretically possible relationships between language and thought and the empirical data that speak to these. Juniors and seniors only. Freshmen and sophomores by permission of instructor only.
AS.050.102 OR AS.050.320 OR AS.050.325 or instructor permission.

AS.050.360. Computational Psycholinguistics. 3 Credits.
How do we understand and produce sentences in a language we speak? How do we acquire the knowledge that underlies this ability? Computational psycholinguistics seeks to address these questions using a combination of two approaches: computational models, which aim to replicate the processes that take place in the human mind; and human experiments, which are designed to test those models. The perspective we will take in this class is that the models and experimental paradigms do not only advance our understanding of the cognitive science, but can also help us advance artificial intelligence and language technologies. While computational psycholinguistics spans all levels of linguistic structure, from speech to discourse, our focus in this class will be at the level of the sentence (syntax and semantics). The course will assume familiarity with programming and computational modeling frameworks in cognitive science, as covered by Introduction to Computational Cognitive Science or equivalent. Also offered as AS.050.660.An optional, hands-on lab (AS.050.361) is offered to supplement this course. It is highly recommended that students with less extensive computational and mathematical experience register for this lab.
(AS.050.102 OR AS.050.240 OR AS.050.317 OR AS.050.320) AND (AS.050.202 OR EN.601.465) or Instructor Permission.

AS.050.361. Computational Psycholinguistics Lab. 0.5 Credits.
This course is an optional hands-on lab supplement for Computational Psycholinguistics. While this lab is optional, it is highly recommended to students with less extensive computational and mathematical experience.
Prerequisite(s): Must be registered for AS.050.360 or AS.050.660 in order to register for this optional lab.

AS.050.365. Cracking the code: Theory and modeling of information coding in neural activity. 3 Credits.
One of the most foundational concepts in neuroscience is the idea that neural activity encodes information about an animal's sensory environment and internal mental states. This idea is closely connected to the concept of mental representation in cognitive science and philosophy, whereby the mind is proposed to contain internal symbols that represent things in the external world. There have been many fascinating discoveries about how neural signals encode information, but we are still far from a comprehensive theory of neural representation. Recent major developments in neuroscience and machine learning have opened up a new world of possibilities for investigating the underlying principles of information coding in the brains of humans and other animals.
In this course, we will discuss primary research articles on neural representation and information processing, and students will implement computational analyses that address issues in these domains. We will mostly focus on vision as a system that illustrates broader principles of information processing in the human brain. The reading material will include work from philosophy, neuroimaging, electrophysiology, and computational modeling. The topics covered include mental and neural representation, neural tuning, population coding, information theory, encoding and decoding models, dimensionality reduction, computational models, deep learning, and other applications of machine learning in neuroscience. Enrollment is limited to Juniors and Seniors. While this class does not have formal prerequisites, programming experience (e.g., AS 250.205 Introduction to Computing) and mathematical preparation (e.g., AS.110.107 Calculus II) are essential. It is also highly recommended that students have previously taken introductory courses in cognitive or systems neuroscience (e.g., AS.050.203 Neuroscience: Cognitive) and machine learning or neural network modeling (e.g., AS.050.372 Foundations of Neural Network Theory).

AS.050.370. Mathematical Models of Language. 3 Credits.
This course will be devoted to the study of formal systems that have proven useful in the cognitive science of language. We will discuss a wide range of mathematical structures and techniques and demonstrate their applications in theories of grammatical competence and performance. A major goal of this course is bringing students to a point where they can evaluate the strengths and weaknesses of existing formal theories of cognitive capacities, as well as profitably engage in such formalization, constructing precise and coherent definitions and rigorous proofs. Also offered as AS.050.670.
AS.050.102 OR AS.050.202

AS.050.371. Bayesian Inference. 3 Credits.
This course introduces techniques for computational modeling of aspects of human cognition, including perception, categorization, and induction. Possible topics include maximum likelihood and Bayesian inference, structured statistical models (including hierarchical and graphical models), nonparametric models. The course emphasizes the close connections among data analysis, theory development, and modeling, with examples drawn from language and vision. Also offered as AS.050.671.

AS.050.372. Foundations of Neural Network Theory. 4 Credits.
Introduction to continuous mathematics for cognitive science, with applications to biological and cognitive network models: real and complex numbers, differential and integral multi-variable calculus, linear algebra, dynamical systems, numerical optimization. Recommended course background in Calculus I. This is a basic-level course not appropriate for students with significant math background. tudents who have completed both Calc III (AS.110.202 or AS.110.211) and Linear Algebra (AS.110.201 or AS.110.212 or EN.553.291) or an equivalent combination may not register. Also offered as AS.050.672.
Students who have completed both (AS.110.202 OR AS.110.211) AND (AS.110.201 OR AS.110.212 OR EN.553.291) or an equivalent combination may not register.

AS.050.375. Probabilistic Models of the Visual Cortex. 3 Credits.
The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modeling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks.Required Background: Calculus I and experience in a programming language (Python preferred).
AS.110.106 OR AS.110.108

AS.050.383. Computational Social Cognition. 3 Credits.
Humans are a fundamentally social species with amazing capabilities beyond that of any other biological or artificial system. Yet the cognitive and neural computations underlying our vast social abilities are largely unknown. Advances in naturalistic neuroscience paradigms and machine learning are revolutionizing the way cognitive scientists study social cognition. This course will explore new research in computational social cognition, drawing from topics in cognitive neuroscience, development, and artificial intelligence. Our goal is to understand the motivation, methodology and implications of recent research. The class will be heavily focused on social vision, but will also explore other aspects of social cognition including theory of mind and moral reasoning.
AS.050.203 OR AS.080.203 OR AS.050.202 or equivalent.

AS.050.500. Practicum in Language Disorders- Community Based Learning. 2 Credits.
This course provides the opportunity to learn about adult aphasias, language disorders which are one of the most common consequences of stroke. You will receive training in supportive communication techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Independent mode of transportation required. Co-listed as AS.080.505 in Neuroscience. Find out more about the practicum site at https://www.leagueforpeople.org/scale.
A- or Better in AS.050.105 OR AS.050.203 OR AS.080.203 OR AS.050.311 or instructor's permission.;You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.503. Research in Cognitive Science/Freshmen. 1 - 3 Credits.
Research current topics in cognitive science. Instructor approval required. Graded S/U.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.504. Research Cognitive Science-Freshmen. 1 - 3 Credits.
Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.505. Readings in Cognitive Science/Sophomores. 1 - 3 Credits.
Research current topics in cognitive science.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.506. Readings Cognitive Science-Sophomores. 1 - 3 Credits.
Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.507. Research in Cognitive Science/Sophomores. 1 - 3 Credits.
Research current topics in cognitive science. Instructor approval required. Graded S/U.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.508. Research Cognitive Science - Sophomores. 1 - 3 Credits.
Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.510. Cognitive Science Internship. 1 Credit.
For internships in cognitive science-related fields. Graded S/U only. Student cannot recieve credit for paid internships. A Cognitive Science faculty sponsor is required and must be named in the Independent Academic Work form. Please read the relevant independent academic work FAQ. KSAS primary majors, visit https://advising.jhu.edu/research-internships-and-independent-study/. WSE primary majors, visit https://engineering.jhu.edu/advising/advising-questions/.
AS.990.500

AS.050.511. Readings in Cognitive Science/Juniors. 1 - 3 Credits.
Assigned readings on current topics in cognitive science. Instructor approval required. Letter-graded.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.512. Readings Cognitive Science-Juniors. 1 - 3 Credits.
Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.513. Research in Cognitive Science/Juniors. 1 - 3 Credits.
Research current topics in cognitive science. Instructor approval required. Graded S/U.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.514. Research Cognitive Science - Juniors. 1 - 3 Credits.
Permission Required,
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.515. Readings in Cognitive Science/Seniors. 1 - 3 Credits.
Assigned readings on current topics in cognitive science. Instructor approval required. Letter-graded.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.516. Readings Cognitive Science - Senior. 1 - 3 Credits.
Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.517. Research in Cognitive Science/Seniors. 1 - 3 Credits.
Research current topics in cognitive science. Instructor approval required. Graded S/U.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.518. Research Cognitive Science - Seniors. 1 - 3 Credits.
Permission Required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.550. Undergraduate Teaching Practicum in Cognitive Science. 1 - 3 Credits.
By invitation, qualified students may serve as undergraduate Teaching Assistants for cognitive science courses and receive credit. This practicum is graded S/U. Each section instructor will determine TA responsibilities based upon departmental policy. Students who accept an invitation, should forward that invitation to the Director of Undergraduate Studies (Dr. Colin Wilson) and make a request in SIS to add the instructor's teaching practicum section. Dr. Wilson will approve requests in SIS. Students may not both receive credit and be paid for the same undergraduate teaching position. This course may not be used toward cognitive science major degree requirements.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.599. Research-Cognitive Science. 0 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.050.603. Intro to Cognitive Neuroscience.
This course surveys theory and research concerning how mental processes are carried out by the human brain. Currently a wide range of methods of probing the functioning brain are yielding insights into the nature of the relation between mental and neural events. Emphasis will be placed on developing an understanding of both the physiological bases of the techniques and the issues involved in relating measures of brain activity to cognitive functioning. Methods surveyed include electrophysiological recording techniques such as EEG, ERP, single/multiple unit recording and MEG; functional imaging techniques such as PET and fMRI; and methods that involve lesioning or disrupting neural activity such as cortical stimulation, animal lesion studies, and the study of brain-damaged individuals.

AS.050.606. Intro to Bilingualism.
Do children get confused when they grow up exposed to more than one language? Is it possible to forget one's native language? Are the first and second language processed in different areas of the brain? How does brain damage impact the different languages of a polyglot? Does knowing a second language affect non-linguistic cognitive processing? This course will address questions such as these through an exploration of mental and neural processes underlying bilingual and multilingual language processing. Also listed as AS.050.206.

AS.050.617. Semantics I.
Also offered as AS.050.317. This is an introduction to the study of meaning in natural language. We address the conceptual and empirical issues in semantic theory and introduce some formal machinery that has been developed to deal with such problems. After discussing foundational questions, we turn to formal semantics and pragmatics, as well as their interfaces with syntax and the lexicon. Specific topics include presupposition, type-driven composition, quantification, lexical aspect, argument structure, and lexical representations of meaning.

AS.050.620. Syntax I.
Introduces the basic methods and means of analysis used in contemporary syntax investigations, practicing with data from different languages. Also offered as AS.050.320.

AS.050.625. Phonology I.
An introduction to the basic principles underlying the mental representation and manipulation of language sounds and their relation to human perception and vocal articulation: how units of sound are both decomposable into elementary features and combined to form larger structures like syllables and words. The role of rules and constraints in a formal theory of phonological competence and in accounting for the range of variation among the world's languages. Also offered as AS.050.325.

AS.050.626. Foundations of Cognitive Science.
Also offered as AS.050.326. This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion.
Area: Writing Intensive

AS.050.632. Developmental Cognitive Neuroscience.
In-depth examination of the current literature on cognitive development in the context of developmental cognitive neuroscience. Meets with AS.050.332.

AS.050.633. Psycholinguistics.
Also offered as AS.050.333. This course provides a broad survey of current research on language processing in adult native speakers and language learners. Topics include speech perception, word recognition, and sentence production and comprehension. We will discuss the nature of representations that are being constructed in real-time language use, as well as how the mental procedures for constructing linguistic representations could be studied by various behavioral and physiological measures.

AS.050.636. Intro to Neurolinguistics.
This course provides an introductory survey of the cognitive neuroscience of language – a multidisciplinary field in the intersection of Linguistics, Psycholinguistics, and Neuroscience. We will explore current research on the neural bases of the perception, production, and acquisition or human language in neuro-typical and impaired individuals. Also listed as AS.050.236.

AS.050.639. Cognitive Development.
Also offered as AS.050.339. This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.

AS.050.648. First Language Acquisition.
This course provides an introduction to the fields of first and second language acquisition by looking at questions such as the following: Can the grammar of a native language be learned solely on the basis of noticing statistical correlations among words? How does native language acquisition explain — or is explained by — the universal properties, shared by all languages, of words and grammars? How does being exposed to multiple languages from birth affect language acquisition and what happens when a child is not exposed to any language early in life? Does the same cognitive mechanism guide language learning in children and adults? What factors account for individual differences in ease and ultimate attainment when a second language is learned later in life? Is it possible to become indistinguishable from a native speaker in a foreign language? What changes take place in the brain when a new language is learned? Recommended background: An introductory course in a linguistic course such as world of language, phonology, or syntax as well as a linguistics course such as language and mind or bilingualism. Also offered as AS.050.348.

AS.050.649. Second Language Acquisition.
First language acquisition is natural and seemingly effortless. The situation is reversed when one tries to learn another language. This course discusses in what ways first and second language acquisition (SLA) differ and how individual differences of the learners as well as external factors contribute to the variability observed in rates and ultimate proficiency of second language learning in children and adults. We will discuss such topics as Universal Grammar access in early and late SLA, first language influence, critical periods, possibility of native-like attainment, and language attrition. Recommended background in AS.050.102 Language and Mind, AS.050.348 Language Acquisition, AS.050.206 Bilingualism or equivalent. Also offered as AS.050.349.

AS.050.652. Applying Cognitive Neuroscience to Artificial Intelligence Part I.
As a result of greater computing power and Big Data, artificial intelligence (AI) is rapidly improving for well-defined tasks and narrow intelligence. Moreover, it has entered all industries in a myriad of ways. But will AI ever have human-like general intelligence? What does humanlike general intelligence even mean? Why should we even care? This course is designed to answer these complex questions by giving students working knowledge of the underlying principles and mechanisms of human behavior and cognition, and how they may be applied to solving current and rising industry challenges. Key topics to be addressed will include vision, audition, language, learning, emotion and social cognition, creativity, and consciousness. Each topic addressed will cover latest advancements within cognitive neuroscience, with relevant applied case studies. Students will apply learned topics to a final group research project on the topic of their choice.

AS.050.653. Applying Cognitive Neuroscience to Artificial Intelligence Part II.
As a myriad of artificial intelligence enabled autonomous systems enter into our lives and change how we live, we must ask: can we trust these systems? In this course we will take a human-centered perspective on assured autonomy and identify why and how insights from human perception and cognition can guide solutions for reliable, resilient, and robust autonomous systems. We will address bias, ethics, explanability, and safety by focusing on specific case studies from autonomous vehicles, cybersecurity, healthcare, fashion, law enforcement, and military systems. Students will apply learned material to a semester-long group research project on a topic of their choice.

AS.050.658. Language & Thought.
Have you ever wondered about the relationships between language and thought? Philosophers, linguists, psychologists, evolutionary theorists and cognitive scientists have too and this course will survey the current thinking on this matter. Classical papers such as those by Whorf and Sapir, more recent philosophical papers by people such as Fodor and Dennett, and recent empirical work by linguists and psycholingists on the relationship between language and thinking in development and in adults will be covered. Discussions will focus on the theoretically possible relationships between language and thought and the empirical data that speak to these.

AS.050.660. Computational Psycholinguistics.
How do we understand and produce sentences in a language we speak? How do we acquire the knowledge that underlies this ability? Computational psycholinguistics seeks to address these questions using a combination of two approaches: computational models, which aim to replicate the processes that take place in the human mind; and human experiments, which are designed to test those models. The perspective we will take in this class is that the models and experimental paradigms do not only advance our understanding of the cognitive science, but can also help us advance artificial intelligence and language technologies. While computational psycholinguistics spans all levels of linguistic structure, from speech to discourse, our focus in this class will be at the level of the sentence (syntax and semantics). The course will assume familiarity with programming and computational modeling frameworks in cognitive science, as covered by Introduction to Computational Cognitive Science or equivalent. Also offered as AS.050.360.An optional, hands-on lab (AS.050.361) is offered to supplement this course. It is highly recommended that students with less extensive computational and mathematical experience register for this lab.

AS.050.665. Cracking the code: Theory and modeling of information coding in neural activity.
One of the most foundational concepts in neuroscience is the idea that neural activity encodes information about an animal's sensory environment and internal mental states. This idea is closely connected to the concept of mental representation in cognitive science and philosophy, whereby the mind is proposed to contain internal symbols that represent things in the external world. There have been many fascinating discoveries about how neural signals encode information, but we are still far from a comprehensive theory of neural representation. Recent major developments in neuroscience and machine learning have opened up a new world of possibilities for investigating the underlying principles of information coding in the brains of humans and other animals. In this course, we will discuss primary research articles on neural representation and information processing, and students will implement computational analyses that address issues in these domains. We will mostly focus on vision as a system that illustrates broader principles of information processing in the human brain. The reading material will include work from philosophy, neuroimaging, electrophysiology, and computational modeling. The topics covered include mental and neural representation, neural tuning, population coding, information theory, encoding and decoding models, dimensionality reduction, computational models, deep learning, and other applications of machine learning in neuroscience. Enrollment is limited to Juniors and Seniors. While this class does not have formal prerequisites, programming experience (e.g., AS.250.205 Introduction to Computing) and mathematical preparation (e.g., AS.110.107 Calculus II) are essential. It is also highly recommended that students have previously taken introductory courses in cognitive or systems neuroscience (e.g., AS.050.203 Neuroscience: Cognitive) and machine learning or neural network modeling (e.g., AS.050.372 Foundations of Neural Network Theory).

AS.050.670. Mathematical Models of Language.
This course will be devoted to the study of formal systems that have proven useful in the cognitive science of language. We will discuss a wide range of mathematical structures and techniques and demonstrate their applications in theories of grammatical competence and performance. A major goal of this course is bringing students to a point where they can evaluate the strengths and weaknesses of existing formal theories of cognitive capacities, as well as profitably engage in such formalization, constructing precise and coherent definitions and rigorous proofs. Recommended background in language and mind or computational cognitive science. Also offered as AS.050.370

AS.050.671. Bayesian Inference.
Also offered as AS.050.371. This course introduces techniques for computational modeling of aspects of human cognition, including perception, categorization, and induction. Possible topics include maximum likelihood and Bayesian inference, structured statistical models (including hierarchical and graphical models), nonparametric models. The course emphasizes the close connections among data analysis, theory development, and modeling, with examples drawn from language and vision.

AS.050.672. Foundations of Neural Network Theory.
Introduction to continuous mathematics for cognitive science, with applications to biological and cognitive network models: real and complex numbers, differential and integral multi-variable calculus, linear algebra, dynamical systems, numerical optimization. Recommended course background in Calculus I. This is a basic-level course not appropriate for students with significant math background. Students who have completed both Calc III and Linear Algebra or an equivalent combination may not register. Also offered as AS.050.372.

AS.050.675. Probabilistic Models of the Visual Cortex.
The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modelling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks.Also offered as AS.050.375.

AS.050.683. Computational Social Cognition.
Humans are a fundamentally social species with amazing capabilities beyond that of any other biological or artificial system. Yet the cognitive and neural computations underlying our vast social abilities are largely unknown. Advances in naturalistic neuroscience paradigms and machine learning are revolutionizing the way cognitive scientists study social cognition. This course will explore new research in computational social cognition, drawing from topics in cognitive neuroscience, development, and artificial intelligence. Our goal is to understand the motivation, methodology and implications of recent research. The class will be heavily focused on social vision, but will also explore other aspects of social cognition including theory of mind and moral reasoning. Also offered as AS.050.383.

AS.050.800. Directed Readings in Cognitive Science.
Directed readings on current topics in cognitive science. Instructor approval required.

AS.050.801. Research Seminar in Cognitive Neuropsychology.
Participants in this graduate seminar will read and discuss current research articles in cognitive neuropsychology of vision or language, and present their own research.

AS.050.802. Research Seminar in Cognitive Processes.
Permission required. Current issues and ongoing research on human cognition are discussed.

AS.050.806. Research Seminar in Cognitive Neuroscience and Machine Learning.
Participants in this seminar will read and discuss current research articles in the fields of cognitive neuroscience, computational neuroscience, machine learning, and artificial intelligence. The seminar will focus on research that provides insights into the representations and algorithms of the human brain, with an emphasis on vision and natural semantic understanding.

AS.050.809. Research Seminar in Computational Cognitive Science.
This seminar is on computational models for vision and its interaction with language. For Cognitive Science, computational models, like Deep Nets, offer the possibility of developing computational theories which can be tested on natural, or realistically synthetic images. But Deep Nets by themselves are unable to capture the richness and flexibility of human perception, so we will discuss other classes of model with more compositional structure and ability to represent the physical properties of the 3D world. These will be related to, and motivated by, behavioral and electrophysiological experiments.

AS.050.811. Research Seminar in Language & Cognition.
A specialized research seminar for individuals researching language acquisition, cognitive development and the interface between language and cognition. Students must actively carry out empirical or theoretical research in these areas. Permission required.

AS.050.812. Research Seminar in Computational Cognitive Neuroscience.
This seminar will discuss papers and ongoing research in the areas of computational cognitive neuroscience, with a focus on different areas of visual and social perception.

AS.050.814. Research Seminar in Computer Vision.
This seminar is based on topics in computational vision with the option of attending additional subgroup meetings on specific topics.

AS.050.817. Research Seminar in Semantics.
A critical analysis of current issues and debates in natural language semantics. Discussion of on-going research. Permission required.

AS.050.818. Research Seminar: AcqLab Meeting.
Participants in this graduate seminar will read and discuss current research articles in language development and present their own research. Permission required.

AS.050.819. Research Seminar in Psycholinguistics.
Discussion of current computational and experimental research on human language processing.

AS.050.822. Research Seminar Syntax.
A critical analysis of current issues and debates in theoretical syntax. Discussion of on-going research.

AS.050.826. Research Seminar in Formal Approaches to Cognitive Science.
Readings and research presentations on varying topics in mathematics, computation, and formal linguistics with bearing on cognitive science.

AS.050.827. Research Seminar in Language Acquisition.
Focus is on current research in acquisition of syntax.

AS.050.829. Research Seminar on Formal Theory in Cognitive Science.
Topics range from mathematical analysis of neural networks to computational studies of linguistic structure. Focus is ongoing research and current literature.

AS.050.830. Seminar on Special Topics.
This seminar will focus on Special Topics of current interest in Cognitive Science and reflect the breath of expertise in the department.

AS.050.839. Research in Cognitive Science.
Current topics in any area of cognitive science, including language and vision, with discussion of recent developments in theory, experimental study, and computational modeling.

AS.050.849. Teaching Practicum.
Permission required. Essential for Teaching Assistants.

AS.050.860. Professional Seminar in Cognitive Science.
Instructor permission required.Addresses professional issues such as research ethics, success on the job market and in an academic career, teaching and mentoring and differing professional standards in the sub-disciplines of cognitive science.

AS.060 (English)

AS.060.107. Introduction to Literary Study. 3 Credits.
This course serves as an introduction to the basic methods of and critical approaches to the study of literature. Some sections may have further individual topic descriptions; please check in SIS when searching for courses.
Area: Writing Intensive

AS.060.108. Time Travel. 3 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peeking backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today. Writers will likely include Mark Twain, Edward Bellamy, Harold Steele Mackay, Ray Bradbury, Robert Heinlein, and Philip K. Dick. Movies will include *The Terminator*, *Back to the Future*, and *Primer*.
Area: Writing Intensive

AS.060.109. Robots, Androids, Slaves. 3 Credits.
Since the rise of Silicon Valley, tech enthusiasts and futurists have been debating the possibility of what has been called “the singularity” — the moment when artificial intelligence (AI) decisively and irreversibly surpasses human abilities. If this does happen, observers worry, it’s not just that robots will take our jobs; will we become subservient to our new robot masters? Will we become extinct, and not because of climate change? This course explores such questions through the lens of literature and popular media. We will watch several films from the last 15 years or so that depict the rise of AI. We will ask about the roles tat gender, race and class have in our imagination of the work robots do. And we will read a range of short essays that approach the question of labor and technology from different angles than mass media usually do.

AS.060.129. Writing Africa Now. 3 Credits.
This course surveys post-2000 literary and cultural production from sub-Saharan Africa. Topics will include debates over genre and fiction’s relevance to African experience, legacies of canonical writing about independence, urban Africa as violent or “tragic” landscape, and problems of scale and geographical context. Readings by authors such as Adichie, Wainaina, Duiker, and Vladislavic, and students will be introduced to the main print and online arteries of African intellectual discussion. This class is for non-majors and does not count towards the English major or minor.
Area: Writing Intensive

AS.060.135. American Nightmares: Burroughs, Highsmith, Dick. 3 Credits.
These three authors share a common starting point: Patricia Highsmith, William S. Burroughs and Philip K. Dick all began their careers writing mass market genre fiction in pre-Stonewall, pre-civil rights, Cold War 1950s America. Absorbing the stylistic codes of their respective marketplaces of suspense writing and lesbian romance, "drug fiend" confessional, and science fiction, each writer’s conformist apprenticeship in pulp resurfaces in increasingly nightmarish forms in the violent and paranoid scenarios that dominate their mature work. Reading broadly in each author’s short fiction, novels, and prose, we will sequentially examine Burroughs’ "cut-up" techniques and "routines", Highsmith’s free indirect discourse gone wrong, and Dick’s disorienting temporal experiments as inflamed allergic reactions to generic codes. We will also examine the cinematic afterlives of these authors by looking at key scenes from three adaptations of their work: Alfred Hitchcock’s Strangers on a Train (1951), David Cronenberg’s Naked Lunch (1991), and Richard Linklater’s A Scanner Darkly (2006).

AS.060.137. Doctors Without Borders: Literature, Medicine, and the Human Condition. 3 Credits.
Doctors play a significant role in shaping literary history as both writers and fictional subjects. From Chekhov to Sherlock Holmes, W. Somerset Maugham to Middlemarch, medical practice is imagined to bestow a privileged understanding of humanity in confrontation with questions of life and death. This course explores how writing about medicine connects long-established themes of mortality, authority, and ways of knowing to timely questions of global migration, cultural contact, and social justice. We will read literary writing by physicians as well as writing that depicts their work in detail, by authors including Nawal El Saadawi, Atul Gawande, Abraham Verghese, Damon Galgut, and Taiye Selasi.

AS.060.140. Diaries, Journals, Some Notes. 3 Credits.
A study of genres of private writings, focusing on the diary form. Readings will likely include diaries by Pepys, Boswell, Frank, Woolf, as well as critical and theoretical texts on the form.
Area: Writing Intensive

AS.060.142. Indigenous Science Fiction: (Re)making Worlds. 3 Credits.
This discussion-based seminar will survey science fiction written by indigenous authors in what are now the United States, Canada, and Australia. We will investigate by what means and to what ends this particular genre has been taken up by indigenous peoples both to reflect on their settler-colonial pasts and presents and to imagine decolonial futures. Texts may include: Leslie Marmon Silko, Almanac of the Dead; William Sanders, "The Undiscovered"; Daniel Heath Justice, The Way of Thorn and Thunder; Blake Hausman, Riding the Trail of Tears; Waubgeshig Rice, Moon of the Crusted Snow; Claire Coleman, Terra Nullius; Tanya Tagaq, Split Tooth. Fulfills the Global and Minority Literatures requirement.
Area: Writing Intensive

AS.060.148. Asian and Latinx American Literatures: Rethinking Empire. 3 Credits.
This course explores the transnational convergence of Asians/Asian Americans and Latinxs/ Latinx Americans from a history of multiple imperialisms to the neoliberal, globalized present. We will situate the racialization of Asian and Latinx peoples within a larger, global framework and think critically about areas of solidarity and tension between these two multi-ethnic groups through readings in literature, history, and sociology.
Area: Writing Intensive

AS.060.151. Doubles, Demons, and Dummies: The Literature of the Fantastic. 3 Credits.
Talking reflections. Dolls with knives. Dancing automatons. They are all part of the strange and dangerous world of the fantastic. This course examines the literature of the fantastic, or what we can refer to as creepy double, demon, and dummy stories. We’ll look at everything from Poe to American Psycho in an attempt to figure out what just happened, why, and how it relates to literary meaning.

AS.060.163. William Faulkner, Race, and Southern Fiction. 3 Credits.
This course will introduce students to debates in American literary studies around questions of race, politics, and the history of the American South. The course will center around a reading of William Faulkner’s Absalom, Absalom! alongside literary history, critical theory, and other pieces of fiction from the American South. We will use these texts to explore the transformations of ra-cial discourses in 19th and 20th century America, with close attention to how they influence the present.
Area: Writing Intensive

AS.060.164. Cyberpunk: High-Tech, Low Life. 3 Credits.
This course will examine the science fiction movement of cyberpunk as an aesthetic, narrative, and political reaction to late neoliberalism. We will read and discuss literature, film, and interactive media from this genre to develop an understanding of how cyberpunk texts register, refract, and attempt to reconcile antagonisms central to contemporary life.
Area: Writing Intensive

AS.060.165. Science Fiction and Climate Change. 3 Credits.
This course will examine representations of, and confrontations with, climate change in science fiction. Special focus will be given to indigenous futurisms as uniquely valuable perspectives on the climate crisis. We will examine these narratives alongside climate change discourse, literary theory, and literary criticism.
Area: Writing Intensive

AS.060.169. Literature and Visual Art. 3 Credits.
We'll glance at the history of the relations between painting and literature, before turning to the art of the past 200 years. What has drawn writers to place their powers against those of painters (in particular)? How have they managed the comparisons? How might we understand the distinctive powers and limitations of these two modes of responding to human experience? While we may have an exam, writing assignments will constitute most of your grade.
Area: Writing Intensive

AS.060.207. William Shakespeare. 3 Credits.
Who was William Shakespeare, and what can his poems, histories, comedies and tragedies tell us about our overlap with, and divergences from, the early modern world?

AS.060.208. English Literature from Chaucer to Behn. 3 Credits.
This course is a survey of English writing from the fourteenth to the seventeenth centuries. Tracing the evolution of vernacular literature in English from the late medieval period to the early modern period and onwards to the threshold of modernity, we will focus intensively upon four key works: Geoffrey Chaucer's "The Canterbury Tales," Book I of Edmund Spenser's "The Faerie Queene", John Milton's "Paradise Lost" and Aphra Behn's "Oroonoko." These works will be examined in their formal and generic dimensions as key examples of broader aesthetic changes in the constitution of "literature" as a category. They will also be placed in their political, religious, and social contexts. Through lectures, class discussion, written responses, and longer essay assignments, students will master the fundamentals of English literary history as well as the techniques of critical reading and writing.

AS.060.209. The Literary History of the Devil to 1800. 3 Credits.
This course reads major works in European literature before 1800 (give or take) depicting the devil. It examines the history of the various social, cultural and political guises under which the devil appears, and the function that representing radical evil performs, in literature and society. Among our readings will be Dante's Inferno; Milton's Paradise Lost; Goethe's Faust, Part One, and many other major Satanic works.

AS.060.210. British Literature II. 3 Credits.
This course provides a framework for grasping the dazzling variety and explosive innovation of literature in English during the last quarter-millennium. Attending both to textual details and to historical contexts, we will see how Wordsworth, Austen, Keats, Tennyson, Dickens, Wilde, Woolf, Rushdie, and other writers extend and undo tradition, illuminate their times and places as well as our own, and conspire to bring to us the intense experience distinctive to great literary art.

AS.060.211. How Not to be Afraid of Poetry. 3 Credits.
What is poetry? And why don't we like it? This course will explore what makes poetry turn ordinary language into something extraordinary. Opening up a range of poetry in English, the course will involve reading poetry aloud, thinking about poetry and its forms, and gaining experience in understanding poetry. Assignments will include attending to details small and large in poems, becoming an expert about a single poet, debating aesthetic issues, and composing short analytical papers about poems. There are two required written assignments, a midterm and a final examination.

AS.060.212. British Literature: 18th Century to the Prese. 3 Credits.
A survey of major authors such as Wordsworth, Keats, Austen, Tennyson, Dickens, Wilde, Woolf, Joyce, and Rushdie. Substantial attention to formal conventions as well as stylistic innovation, to aesthetic value as well as social meaning.

AS.060.216. Zombies. 3 Credits.
This lecture survey will attempt to answer why the zombie has become such a fixture in contemporary literature and cinema. We will track this figure across its many incarnations--from its late-eighteenth-century appearance in ethnographic fictions growing out of the modern cultures of racialized slavery in the Americas right up to twenty-first-century Hollywood blockbusters in which the origins of the figure in the cultures of racialized slavery are perhaps not overt yet continue to manifest. What are the implications of the zombie's arc from a particular human being targeted for domination by a sorcerer to a living-dead horde created by radiation or epidemic? "Texts" may include: Mary Shelley, Frankenstein; Edgar Allan Poe, "The Man Who Was Used Up"; H.P. Lovecraft, "Herbert West--Re-Animator"; Zora Neale Hurston, Tell My Horse; Victor Halperin, dir., White Zombie; George Romero, dir., Dead series; Edgar Wright, dir., Shaun of the Dead; Alejandro Brugués, dir., Juan de los Muertos; Colm McCarthy, dir., The Girl with All the Gifts; Colson Whitehead, Zone One; Jordan Peele, dir., Get Out. Fulfills the Global and Minority Literatures requirement.
Area: Writing Intensive

AS.060.217. Time Travel. 3 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peeking backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today.
Area: Writing Intensive

AS.060.219. American Literature to 1865. 3 Credits.
A survey course of American literature from contact to the Civil War.

AS.060.220. Clint Eastwood, Race and the American Western. 3 Credits.
Drawing from the body of work engaging and recording the Hollywood gunfighter and outlaw folk-hero Clint Eastwood, the course will investigate American cinematic representations of slavery and its absence, the Civil War, and racial formation along the United States' southwestern frontier in films produced from the 1950s through the contemporary period. A focus on the cultural icon Clint Eastwood enables a close examination of American cinematic fantasies of the frontier, frontier violence and the desire to escape or erase the tensions of race and slavery that have deeply permeated the American cultural consciousness, particularly the creation of American masculine ideals. The course will also take decided note of the national shift from liberal "Great Society Programs" of the 1960s to the conservative "neoliberal" social and cultural ideals in the 1980s and 1990s. Our purpose is to consider the organization and reformation of hegemonic power by way of the complex morality play the western film evokes, typically considering the interstitial geographies between civilization and savagery, belonging and alienation, and metropolitan and colonial outpost. We will privilege in our discussions the contested frontiers of racial dominion.

AS.060.221. The Modernist Novel: Consciousness and Crisis. 3 Credits.
A course on key novels written in Britain or its former colonies between 1900 and 1960. Major attention to the meanings of modernism across the arts as well as innovations in prose fiction.
Area: Writing Intensive

AS.060.222. American Literature, 1865 to today. 3 Credits.
A survey of American literature from 1865 to today.

AS.060.232. Detective Fiction. 3 Credits.
This lecture will trace the the history of English-language detective fiction through the nineteenth and twentieth centuries. Why does the figure of the detective appear when it does? How does it change over time, and what can we learn from that? We will pay special attention to the way clues and suspense operate, the role of the reader in figuring out the mystery, and the complicated relationship of the detective with official authority. Authors will likely include some selection of Wilkie Collins, Edgar Allen Poe, Arthur Conan Doyle, Agatha Christie, Dashiell Hammet, and Raymond Chandler.

AS.060.265. Nineteenth Century British Novel. 3 Credits.
Reading major novelists from the nineteenth century including Austen, C. Brontë, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.

AS.060.304. Large Novels. 3 Credits.
This course will look at novels that are not only large in size, but which also think about the meaning and methods of trying to capture huge segments of the world into a piece of art. How much can be fit into a novel? What is gained and what is lost? How large is too large? We will read Charles Dickens's Bleak House, Lev Tolstoy's War and Peace, and Herman Melville's Moby Dick.
Area: Writing Intensive

AS.060.308. The Essay Form and Creative Non-Fiction. 3 Credits.
We'll focus on the essay form, with special attention to recent creative non-fiction that responds to art and literature itself. Theoretical, stylistic, and formal issues will all be considered.
Area: Writing Intensive

AS.060.309. Slavery in Renaissance Literature. 3 Credits.
Against the backdrop of the rise of the European slave trade, how were slaves represented in early modern English literature? How was the condition of enslavement inflected by emergent nationalism, colonialism and theological constructions of difference? This course puts Renaissance literature into conversation with comparative histories of slavery and critical race theory. Authors include Aristotle, Terence, Epictetus, Christopher Marlowe, William Shakespeare, John Milton, Aphra Behn, Orlando Patterson, Kim Hall, Stephen Greenblatt, Mary Nyquist, Moses Finley and others.
Area: Writing Intensive

AS.060.313. Literature of the Settler Revolution. 3 Credits.
The nineteenth century saw the creation of an "Angloworld" as a result of what one historian has called "the settler revolution." In perhaps the largest mass migration in human history, millions of English-speakers (and others) invaded Indigenous worlds in what have consequently come to be known as the United States, Canada, and Australia. This seminar offers an introduction to nineteenth-century Indigenous and settler Anglophone writing in the US, Canada, and Australia with a view to understanding the role of literature in inciting, interrogating, and resisting this settler revolution.
Area: Writing Intensive

AS.060.314. Social Media Fictions. 3 Credits.
Writers around the world are now searching for ways to incorporate new modes of social interaction - e.g. Facebook, Twitter, text messaging, and Skype - into their print work. This course explores the various techniques they have adopted for this purpose, with an eye to critically evaluating their implications for narrative structure and its "reality effect." From Teju Cole's very public experiments with the Twitter novel to a Zimbabwean writer's attempt to capture plot turns through SMS, we will discuss the ways in which narrative is helped or hindered by the ubiquity of social media. Writers studied will include Tendai Huchu, Zadie Smith, Jonathan Franzen, and Eben Venter.
Area: Writing Intensive

AS.060.315. Literature of Incarceration. 3 Credits.
We will take up a history of writing from and about various carceral sites (prison, detention camps, etc-- as well as Circe' island and Jonah's whale) to see what they can teach us about larger questions of the movement (or not) of certain populations, the ideology and economies of imprisonment, and campaigns for the abolition of prisons.
Area: Writing Intensive

AS.060.316. Mapping the Global Metropolis. 3 Credits.
Cities have long taken on a central role in literature, but much of our reading about urban space is confined to a few Western hubs. And while the city has traditionally been a space for fictional characters to develop into national subjects, much of the most innovative contemporary writing sees the city as a character of its own. This course will address the representational challenges of globalization through fiction and genre-bending memoir about contemporary metropolises that act as its microcosm: Johannesburg, Lagos, Delhi, London, and New York. We will read primary works by Ivan Vladislavic, Chris Abani, Aravind Adiga, Zadie Smith, and Teju Cole, as well as supplementary excerpts from books including Capital, by Rana Dasgupta, Mike Davis' Planet of Slums, Ato Quayson's Oxford Street, Accra, and Loren Kruger's Imagining the Edgy City. Finally, the course will include theoretical readings about globality and representation, such as Fredric Jameson's essay on "Cognitive Mapping" and Arjun Appadurai's seminal book Modernity at Large.
Area: Writing Intensive

AS.060.317. Jane Austen Beyond England. 3 Credits.
This will be an in-depth study of Austen's novels with an emphasis on how they have traveled outside of the country of her birth – e.g. to the United States, India, and East Asia—through the work of individuals and the flows of global capitalism. Students will gain perhaps a disorienting sense of what Austen means in different cultures at different historical moments, and conduct individual research to learn more. Knowledge of another language is not necessary but could prove useful. The course will include a field-trip to the Alberta Burke Austen collection at Goucher College.
Area: Writing Intensive
AS.060.107

AS.060.320. Icons of Feminism. 3 Credits.
This course looks at four crucial figures who have haunted feminist thought and responses to feminism over the centuries. Sappho, known as the first female poet, remains an enigmatic icon of feminine desire and creativity; Antigone, the daughter of Oedipus and the heroine of Sophocles's play Antigone, still inspires feminist analyses of women's relationship to law, the state and civil society; and Joan of Arc, the militant maid of Orleans, troubles thinking about women and violence as well as women, religion and spirituality. The last figure is Mary Wollstonecraft, often cited as the first modern feminist. The course will examine literary works written about these iconic figures, as well as contemporary feminist writing about their influence and viability as models for the future of feminism.
Area: Writing Intensive

AS.060.326. Shakespeare: The Novel. 3 Credits.
What if King Lear had been a mother? What if the we thought about Othello through the lens of the holocaust? What if the indigene Caliban was the hero, not the villain? What if Miranda chose Caliban over her European suitor? (The Tempest) Could a modern-day Kate be tricked into marriage and "tamed" (The Taming of the Shrew)? When contemporary novelists rewrite Shakespeare, they pose questions left hanging in the play and bring the plays into our own world. In this course, we will read Shakespeare plays (King Lear, The Tempest, The Taming of the Shrew, Merchant of Venice) along with contemporary novelists that rewrite – and confront -- those plays (Jane Smiley, Caryl Phillips, J. M. Coetzee, Anne Tyler). Students will take up important literary questions about kinds of literature (plays vs novels), the canon, imitation, adaptation, and also address the themes of power, gender and sexuality, family dynamics, authority, colonization and the environment.
Area: Writing Intensive

AS.060.327. "All Art is Propaganda". 3 Credits.
This course will explore black literature written as protest. We will examine how, in the face of threats to black life, Frances E.W. Harper, Richard Wright, Amiri Baraka, and others have realized versions of W.E.B. Du Bois's objective: "all art is propaganda and ever must be, despite the wailing of the purists."
Area: Writing Intensive

AS.060.328. Malcolm and Martin: An Introduction to the Lives and Thought of Two Icons of the Black Freedom Struggle. 3 Credits.
Using their recorded speeches, written lectures and published writings and drawing from their biographies, this course will explore the important life work of Malcolm X and Martin Luther King Jr. We intend to upend traditional conversations about political radicalism and ethnic politics by analyzing these spokesmen associated most indelibly with black nationalism and racial integration, respectively.
Area: Writing Intensive

AS.060.331. The Literature of the Atlantic Slavery. 3 Credits.
This seminar will trace the historical development of the slavery debate in the Atlantic world through examination of key texts from a host of genres and locations—Quaker religious tracts, political documents like the Haitian Declaration of Independence, Cuban antislavery novels, slave narratives, and "classics" of American literature like Melville's Benito Cereno. We will consider how the institution of Atlantic slavery was variously represented, justified, and criticized, discovering in the process the deep structures of modern slavery discourse.
Area: Writing Intensive

AS.060.337. James Joyce's Ulysses. 3 Credits.
A careful semester-long reading of James Joyce's masterpeice Ulysses, one of the greatest and most intimidating novels in world literature.
Area: Writing Intensive

AS.060.341. Milton. 3 Credits.
This class will study Milton's poetry and prose across the whole of his writing career, with special attention to Paradise Lost, the great epic poem retelling the story of the fall of humankind. We will consider Milton's literary background, his contemporary political and social milieu, as well as critical debates that surrounding the poet, who was accused of being 'of the devil's party.' Pre-1800 course.
Area: Writing Intensive

AS.060.342. Contemporary Novel of Ideas. 3 Credits.
The novel of ideas is often traced to 18th century French or 19th century Russian writing, but it has come broadly to signify works of robust philosophical contemplation. The inherently slippery term seems to indicate a work in which "form" is subsidiary to "content," or at least, in which narrative structures adapt to prioritize thought rather than style, image, or even character. But how, exactly, and about what, do novels "think?" In large part, the novel of ideas is now conflated with a rote and recognizable brand of social realism. This course asks what might qualify as a novel of ideas today, both in terms of the novel's changing relation to geographical space (and thereby the formal spaces in which philosophy might lurk), and of the particular "ideas" it critiques or puts forth. We will read novelists including J.M. Coetzee, Marlene van Niekerk, Jonathan Franzen, Teju Cole, and Ronan Bennett within a longer literary-philosophical tradition, with reference to works such as Candide, War and Peace, Thus Spoke Zarathustra, and Kierkegaard's Diary of a Seducer.
Area: Writing Intensive

AS.060.343. Marxism and Literature. 3 Credits.
This course will provide a survey of some of the concepts in Marx's work, especially those to be found in volume 1 of Capital, that might help us get a clearer sense of 21st-century politics and culture. We will move outward from reading Marx to reading recent and classic texts in the Marxist critical tradition. We will discuss explicitly economic ideas about commodities, surplus value, and concrete and abstract labor, as well as historical and political ideas like "primitive accumulation" and the "uneven and combined development" of nations. We will think about what reading Marx and the Marxist tradition can help us see about colonialism, gender, race, technology, and the environment, as well as how it can clarify the character of economic crises. Toward the end of the term we will turn to literary texts, not necessarily "Marxist" themselves, to help us understand important questions that Marxism cannot tackle by itself, like: who are people, anyway? What do they hope for, when they write? Is there a Marxist idea of beauty, and is it different than everybody else's? Along with Marx, and anti-colonial, anti-racist and feminist writers in the Marxist tradition, we'll read work by the novelist NK Jemisin, and the poet Stephanie Young.
Area: Writing Intensive

AS.060.348. Virginia Woolf and Bloomsbury. 3 Credits.
An exploration of the achievements and investments of one of the most influential coteries in the history of Britain. In addition to delving into key fictions by Virginia Woolf, we will examine novels by Leonard Woolf and E. M. Forster, art criticism by Roger Fry and Clive Bell, biographical essays by Lytton Strachey, economic writings by John Maynard Keynes, and poetry by T. S. Eliot.
Area: Writing Intensive

AS.060.350. Reason and Romance: Literature of the British Eighteenth Century. 3 Credits.
Any era can be characterized by its oppositions and polarities, but perhaps few were more defined by their contradictions than the eighteenth century in Britain. Reason and passion, honor and ribaldry, skepticism and fantasy, tradition and revolution: in capturing the tensions between these dyads, the wildly energetic literature of the period furnishes a singular lens through which to examine questions of consciousness, gender, celebrity, race, political theater, and even life during a pandemic that continue to shape our lives today. Authors studied may include Frances Burney, Ottobah Cugoano, Daniel Defoe, Olaudah Equiano, John Gay, Samuel Johnson, Charlotte Lennox, Alexander Pope, Jonathan Swift, and Mary Wollstonecraft.
Area: Writing Intensive

AS.060.353. Margaret Atwood: Imagining Catastrophe. 3 Credits.
This is the moment for a course on the Canadian climate activist, poet, and novelist Margaret Atwood. Best known for her dystopian The Handmaid's Tale (1985), Atwood's monitory visions in poetry, short stories, non-fiction and novels attend to themes of malevolence, metamorphosis, memory, genetic mutation, totalitarianism, corporate control, feminism, and climate disaster, while rooted in traditions of folktale, myth, and ironic detachment. Among other works, including poetry and non-fiction, we will read novels The Handmaid's Tale, The Testaments, The Blind Assassin, Oryx and Crake, The Year of the Flood, and MaddAddam, exploring Atwood's "writing with intent." Seminar discussion; midterm; class presentations; two short papers and one final project.
Area: Writing Intensive

AS.060.354. Literature of the Sea. 3 Credits.
In this course, we will read 19th- and 20th-century American and British literature about the sea, using an approach informed by recent scholarship in what has been called Blue Humanities or Oceanic Studies.
Area: Writing Intensive

AS.060.355. Poetry and Politics Today. 3 Credits.
The history of poetry is full of political poems of every kind — odes, epics, dramatic persona poems. And the history of literary criticism is full of denunciations of poetry that gets "too political," and loses sight of its job to give pleasure. In this course, we will look at a range of contemporary poetry that tackles political issues — things like the causes of climate change; immigration crises; white supremacy; patriarchal gender systems; the legacies of colonialism — and study the ways it accomplishes its goals while still giving us the kinds of surprise in language that poetry has always promised. Reading will include (but not be limited to) work by Tongo Eisen-Martin, Cathy Park Hong, Sandra Simonds, Stephanie Young, and Wendy Trevino.
Area: Writing Intensive

AS.060.358. Virginia Woolf. 3 Credits.
Beautiful, acute, and consequential, Woolf's writing opens onto an extraordinary range of aesthetic, psychological, and political issues. In this seminar, we will read from her novels, essays, and diaries as well as the varied works of art and philosophy that influenced her.
Area: Writing Intensive

AS.060.359. Slavery in Early Modern Literature. 3 Credits.
Against the backdrop of the rise of the European slave trade, how were enslaved people represented in early modern English literature? How was the condition of enslavement inflected by emergent nationalism, colonialism and theological constructions of difference? This course puts Renaissance literature into conversation with comparative histories of slavery and critical race theory. Authors include Aristotle, Plautus, Thomas More, Bartolomé de las Casas, Christopher Marlowe, William Shakespeare, Philip Massinger, John Milton, Aphra Behn, Osman of Timisoara, Stephanie Smallwood, Michael Guasco, Saidiya Hartman, Herman Bennett, Orlando Patterson, Jared Sexton, and Mary Nyquist.
Area: Writing Intensive

AS.060.360. Politics, History and Autobiography. 3 Credits.
This is an intensive seminar exploring the political and historical dimensions of personal experience. The class is designed to introduce students to writing critically about their own lives and to understanding the function of autobiographical writing in the lives of black Americans. We function partly as a writers' workshop and partly as a critical review. The final goal of the seminar is a polished 15-20 page autobiographical essay and a 5-7 page critical review of an autobiography, such as would be found in the New York Review of Books.
Area: Writing Intensive

AS.060.361. The Politics of Memoir. 3 Credits.
This course explores the interlocking political and historical dimensions of personal experience, an account of ourselves and our relations ("the quest for competitive advantage between groups, individuals, or societies") that points us in the direction of what "is 'common' to the whole community." What does it mean for people who are not the chief actors or theoreticians of political movements to construe the record of their experience as an act of political intervention, an aid in our total understanding of the structure of popular belief and behavior? Furthermore, what happens when attempt to historicize and critique these recorded experiences? The class asks its members to focus closely on an episode of autobiographical experience as both an historical fossil and tangible politicized moment, particularly the places where race, gender and economic power are visible. By producing a "critical discourse of everyday life—by turning residual, untheorized everyday experience into communicable experience… one can reframe ostensibly private and individual experiences in terms of a collective struggle." To help our investigation we will read and analyze closely memoirs, many of them from the African American experience. We function partly as a writers' workshop and partly as a critical review. The final goal of the seminar is a polished 20-25 page autobiographical essay.
Area: Writing Intensive

AS.060.362. Medicine in Renaissance Literature. 3 Credits.
From quacks to plague, from humoralism to hypochondria, this course explores how early modern literature represents and occasionally satirizes medicine. Authors include Shakespeare, Jonson, Donne, Nashe, Browne and Moliere.
Area: Writing Intensive

AS.060.363. Henry James. 3 Credits.
This seminar will focus on the novels and short fiction of one of the most brilliant crafters of prose and plot ever to write in English. Extensive attention will be devoted to the intricacies of James's language; to his transatlantic situation; to his relationship to other authors; and to his place in the histories of literature, criticism, and theory. In a few instances, we will read his work in relation to writing by his brother, the pioneering philosopher and psychologist William James.
Area: Writing Intensive

AS.060.365. Malcolm and Martin: An Intro to the Lives and Thought of Two Icons of the Black Freedom Struggle. 3 Credits.
Using their speeches, written lectures and published writings and drawing from their biographies, this course will explore the important life work of Malcolm X and Martin Luther King Jr. We intend to upend traditional conversations about political radicalism and ethnic politics by analyzing these spokesmen associated most indelibly with black nationalism and racial integration, respectively.
Area: Writing Intensive

AS.060.369. Speculative Slavery and Liberatory Fiction. 3 Credits.
This course will introduce students to the study and genre of Black speculative fiction and Afrofuturism, through the lens of narratives focused on liberation/freedom. Liberatory fiction pushes the genre of Afrofuturism further to create space for the imagination to envision alternate futures and pasts, that rewrite history to aid in the process of liberation for black lives. The intended outcome of these texts is the liberation of its subjects and, in some cases, its readers to reflect on the contemporary. The liberation of subjects comes in the form of attaining collective or personal freedoms. This course will cover themes such as, gender and the speculative, the haunting of the post-slavery subject, and black apocalypses. All of these themes will be analyzed through reading both theory and narratives including: The Graphic Novel Adaptation of Octavia Butler's Kindred, Toni Morrison's Beloved, Saidiya Hartman's "Venus in Two Acts", and N.K. Jemisin's "The City Born Great".
Area: Writing Intensive

AS.060.374. Irish Literature. 3 Credits.
This course will introduce students to the long history of Irish literature, often relegated to a footnote or subsumed under the study of British literature broadly, from the medieval period until the contemporary era. Starting with the medieval Irish epic Táin Bó Cúailnge [The Cattle Raid of Cooley] and ending with Anna Burns' 2018 masterpiece Milkman, this course will introduce students to the ways in which a colonial literature changes over time as Ireland, England's first colony, is conquered and reconquered, rebels and revolts, and continues to confront the legacy of colonization as the nation remains divided between the North and the Republic today. Throughout the course, students will read texts written Jonathan Swift, Brian Ferriman, Peig Sayers, J.M. Synge, James Connolly, Elizabeth Bowen, Samuel Beckett, Edna O'Brien and others. This course will serve as a case study for students interested in literature of conflict, colonial and neo-colonial politics, and the fight for justice globally.
Area: Writing Intensive

AS.060.377. Edmund Spenser's Fairie Queene. 3 Credits.
After a diagnostic introduction to his early poetry, this reading intensive seminar will concentrate upon Edmund Spenser's masterpiece, The Faerie Queene (1590/1596), which we will read in its entirety.
Area: Writing Intensive

AS.060.381. The Asian American Novel. 3 Credits.
This course provides a foundation for reading Asian American novels. We will be discussing the origins of "Asian American" as a political coalition in the 1960s amidst a longer historical narrative of U.S. imperial and military projects and immigration policies that have influenced the racialization of those who identify with this multi-ethnic group. At the same time, we will be examining the limitations of this U.S.-centric perspective by rethinking the geopolitical spaces of both "Asia" and "the Americas" through transpacific and hemispheric lenses. Discussions will center around how the novel form could provide insight into linked social struggles and the new narratives of political community they imagine.
Area: Writing Intensive

AS.060.384. The Contemporary Novel. 3 Credits.
In the first two decades of the twenty-first century, writers of narrative fiction have been working furiously to keep up with the turbulence that global capitalism has visited on the world — war, political chaos, environmental catastrophe, massive forced migration and displacement — while trying to maintain ties to the techniques of narrative that gave the 19th century reality novel its successes and its prestige. In this course we will read a range of texts, mostly in translation, that stretch and deform those conventions in order to represent the lives and struggles of characters who are caught up in immense historical change. More and more often, novelists are choosing to depict characters drawn from what Marx would have called "surplus populations" — people for whom economic stability and personal safety are out of reach, partly because they are seen as not worth employing (or exploiting). Under these conditions, we will ask, is it only possible to tell tragic stories? What do happy endings look like? What do changes do character development and point of view have to undergo, for instance, to keep up with 21st-century history? Is realism still the best vehicle for telling these stories? Readings will include novels by Sally Rooney, Eduard Louis, Fernanda Melchor, Elena Ferrante, Marlon James, and Manoranjan Byapari, as well as secondary material by Sarah Chihaya, Merve Emre, Katherine Hill, Jill Richards, and the Endnotes collective.
Area: Writing Intensive

AS.060.388. Old World/New World Women. 3 Credits.
The course considers the transatlantic writing of three women in the early modern period, Anne Bradstreet, Aphra Behn, and Phillis Wheatley. We will consider issues of identity, spatiality, religion, commerce, enforced labor, sexuality, race, and gender, along with literary tradition, formal analysis and poetics. We will read a good deal of these early women writers. Foremost in our mind will be the question of how perceptions of space and time are mediated through the global experiences of early modernity.
Area: Writing Intensive

AS.060.389. Emily Dickinson. 3 Credits.
Dickinson's poetry, more than most, has seemed to prompt creativity in others. In the past two decades, especially, poets, writers, critics, and filmmakers have found their own voices in response to hers. We will focus on the formal, aesthetic, historical and gendered aspects of her poetry as we try to understand, and benefit from, this power to elicit response. Exams are unlikely. Instead, expect close attention to your own writing, as we pay close attention to hers.
Area: Writing Intensive

AS.060.391. Early American Literature. 3 Credits.
This course is an introduction to literatures drawn from across the Americas, although primarily the British North American colonies that would eventually become the United States, from first contact in 1492 up through the American wars of independence. Our readings are roughly organized according to chronology and genre. We will think about the adapted and emergent generic forms through which "the New World" was ongoingly invented, including genres like the Indian captivity narrative and the slave narrative that arguably make their debut in world literary history in the Americas during this time frame. We will conclude by attending to the rather late emergence of the novel in American literary history, reading four novels that appeared in the early US national period. The objective of the course is simply to contextualize and analyze a wide array of texts, each of which richly rewards the engaged reader, in order to trace the origins of American literatures. Course texts may include contact narratives (Columbus, Caminha, Smith, Hennepin); conquest narratives (Mather, Las Casas, Poma de Ayala); Indian captivity narratives (Cabeza de Vaca, Rowlandson, Staden); slave narratives (Gronniosaw, Jea, Cugoano); revolutionary polemics (Paine, Bolívar); and the earliest American novels: William Hill Brown, The Power of Sympathy; Hannah Webster Foster, The Coquette; Leonora Sansay, Secret History or, the Horrors of Santo Domingo; Charles Brockden Brown, Arthur Mervyn. Fulfills the pre-1800 requirement.
Area: Writing Intensive

AS.060.394. Class Fictions. 3 Credits.
This seminar investigates one of the central concerns of nineteenth-century fiction: social and economic class. Why did raising oneself from humble beginnings, and falling into poverty, become such familiar stories? And why are they still so familiar today? We will look at how a number of writers approached the topic of class mobility, each with a unique blend of excitement and anxiety. Authors will likely include Jane Austen, Honoré de Balzac (in translation), Charles Dickens, and William Dean Howells. In order to understand our topic better, we will also look at a selection of theoretical work on the nature of class.
Area: Writing Intensive

AS.060.397. Thomas Pynchon. 3 Credits.
Intensive reading of two major Pynchon novels, along with theories of modernity, postmodernity, etc.
Area: Writing Intensive

AS.060.400. Billie Holiday's Baltimore 1870-1960: A Reverse Classroom Journey in the Archives. 3 Credits.
This course will use the tools of the historical archive to etch a social history of Baltimore during the long Billie Holiday (1915-1959) era from the Reconstruction through post-World War II. Holiday's remarkable and unique art has earned her the title of the premier jazz singer of all-time, but unknown to most, her voice and experience were strongly shaped by her early life in Baltimore City, the city's black habitation and migration, its musical culture, its black middle and lower class, its urban density, as well as its cabaret and underworld life. Our task is to examine the city as an unfolding, racializing process, and to glean the evidence from multiple local archival sources to reconstruct some of the rough margins of possibility for the lived experience of Holiday's grandparents and parents, all born in Baltimore, as well as her own experience as truant, orphan, and sex assault victim in the 1920s. Two questions will occupy our interests intensely. How did the two black communities she lived in extensively evolve from the late 19th through the early 20th centuries? Second, what information can be unearthed about black musical culture--ragtime, marching bands, banjo and fiddle ditties, riverboat music--as it evolved in the post-World War I "jazz" age of sound recording and broadcasting? What was the artist's relationship to her urban geography? How did it change over space and time? What dimension of shared fate did she have with the community of black Baltimore domestic workers, laborers, artisans, and small business people from the first half of the twentieth century? In what manner did Baltimore's racial segregation and racism define her life and art? How was her consciousness as a vocal opponent to segregation shaped by her grooming in the city?
Area: Writing Intensive

AS.060.402. The Computer in Modern Literature. 3 Credits.
How have computers, and human interactions with computers, been represented in twentieth- and twenty-first-century literature? How have attitudes toward computers changed over that time? Now most books are written on computers, and many are read on them as well: what traces of these forms of production and consumption can we find in literary texts?
Area: Writing Intensive

AS.060.405. Psychoanalysis and Literature. 3 Credits.
In this course we will read some foundational texts by Sigmund Freud, and pair them with a select group of literary works--Sophocles' "Oedipus the King" and "Oedipus at Colonus", William Shakespeare's "Hamlet", Edgar Allan Poe's "The Purloined Letter", Wilhelm Jensen's "Gradiva"—which have inspired psychoanalytic ideas and generations of psychoanalytic literary interpretation.
Area: Writing Intensive

AS.060.406. Transfiguring the Renaissance. 3 Credits.
Tracing the poetics of bodily transformation then and now, this course puts early modern literature into dialogue with medical epistemologies of the sexed body and contemporary critical reflections upon transgender experience, embodiment and transition. Early modern texts might include Arthur Golding's translation of Ovid's "Metamorphosis", John Lyly's "Gallathea", Francis Beaumont's "Salmacis and Hermaphroditus", Ben Jonson's "Epicoene, or The Silent Woman", Middleton & Dekker's "The Roaring Girl" and John Milton's "Paradise Lost."
Area: Writing Intensive

AS.060.501. Independent Study. 3 Credits.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.060.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.060.509. Senior Essay. 3 Credits.
The English Department offers qualified majors the option of writing a senior essay. This is to be a one-semester project undertaken in the fall of the senior year, resulting in an essay of 30-35 pages. The senior essay counts as a three-credit course which can be applied toward the requirements for the major. Each project will be assigned both an advisor and a second reader. In addition, students writing essays will meet as a group with the Director of Undergraduate Study once or twice in the course of the project. The senior essay option is open to all students with a cumulative GPA of 3.6 or higher in English Department courses at the end of the fall term of their junior year. Project descriptions (generally of one to two pages) and a preliminary bibliography should be submitted to a prospective advisor selected by the student from the core faculty. All proposals must be received at least two weeks prior to the beginning of registration period during the spring term of the junior year. Students should meet with the prospective advisor to discuss the project in general terms before submitting a formal proposal. The advisor will determine whether the proposed project is feasible and worthwhile. Individual faculty need not direct more than one approved senior essay per academic year. Acceptance of a proposal will therefore depend on faculty availability as well as on the strength of the proposal itself. When completed, the senior essay will be judged and graded by the advisor in consultation with the second reader. The senior essay will not be part of the Department’s honors program, which will continue to be based solely on a cumulative GPA of 3.6 in English Department courses.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.060.602. Proseminar.
This course is intended to train students in skills required by the discipline, help prepare them for a range of futures, and integrate them into the university community.

AS.060.603. Secularism & Theory.
This graduate seminar will construct a history of critical theory through the lens of contemporary narratives about secularization and methodological critiques of secularism.
Area: Writing Intensive

AS.060.604. Philology.
An examination of the many ways (both as old and then 'New', but also as the subject of a key 'return') that 'philology' has been claimed as the master category of literary study. The nuts and bolts of older philological procedures as well as the broadest theoretical claims for the term will be attended to.
Area: Writing Intensive

AS.060.607. Fiction and Doubt After 1888.
Examines the interrelation between fiction and doubt since the late nineteenth century. Authors may include Ward, Conrad, Joyce, Eliot, Stevens, Woolf, Baldwin, Flannery O’Connor, Ishmael Reed, Sefi Atta, R. O. Kwon.
Area: Writing Intensive

AS.060.613. American Movement.
This seminar examines representations of people in motion in U.S. writing from 1900 to the present. Migration, international and intranational, will be central to our study, but we’ll also consider other forms of travel, transits of authorial and readerly attention, experiences of vagrancy and acceleration, and predicaments of stasis in primary texts as well as theoretical work around mobility. Authors and directors studied may include Simone de Beauvoir, Henry James, Gayl Jones, Jack Kerouac, Chang-Rae Lee, Claude McKay, Bernadette Mayer, Muriel Rukeyser, and Gertrude Stein.
Area: Writing Intensive

AS.060.614. Postcolonial/Global/World.
The field now known as “global Anglophone literature” has emerged from a complicated and rapidly advancing disciplinary lineage. A host of past and present recordings – including postcolonial, Commonwealth, Third World, global, transnational, world, and the Global South – provide a record of the wider profession’s anxieties in relation to non-Western literary traditions. This course prepares graduate students to be able to articulate some of the subtle differences in approach that this nexus of closely related terms may obscure, from the heyday of postcolonial theory in the 1980s and 90s to contemporary subfields like Indian Ocean studies. In addition to key critical texts by theorists including Edward Said, Gayatri Spivak, Franco Moretti, Peter Hallward, and Emily Apter, students will be introduced to some outstanding recent methodologies and critiques from the adjacent body of work on comparative literature.
Area: Writing Intensive

AS.060.615. Human Rights Before Human Rights.
This course asks in what ways did literature mitigate population category distinctions within a pre-history of human rights from the period 1500-1700. We will take the situations of sponsored violence, and in particular, war captivity, in order to explore how premodern concepts of duties, rights, atrocity, inhumanity (and prohibitions against abuse) arise and become a locus of mimetic complexity within the literature of the period. Prospecting a historical transformation between ancient, early modern, and modern conceptions of rights, duties, and the human, readings may include: Euripides, Suppliant Women; Seneca, Trojan Women; Shakespeare, Troilus and Cressida; Cicero, Grotius, Gentili, Vitoria, Las Casas, Spenser, Bradstreet, Milton, Dryden, and Behn, as well as literature depicting violence resulting from Britain’s East India Company’s global intrusions. Splicing apart the "human" from "rights" we consider theoretical material from the liberal tradition and its critique; the problem of 'failed universals'; the historical connection between natural law and human rights; the distinctions drawn around legal and gendered categories of person; and critical race theory, with readings from Asad, Foucault, Moten, Wynter, Cavarero, Brown, Butler, Rawls, Dworkin, Drucilla Cornell, depending on the class’s interests.
Area: Writing Intensive

AS.060.616. Milton.
A seminar covering the career of John Milton, including all his major poetry and much of his prose. There will be attention to the history of printing, publication and concepts of reading and writing, as well as to current issues and topics within early modern studies that bear on Milton (e.g. materialism, secularization, 'surface' reading, political theology, quantitative vs hermeneutic methods, actor-network theory). As such, the course will also be an introduction to various methods in early modern studies.
Area: Writing Intensive

AS.060.617. Black Print Culture.
Students interested in black print culture will engage in intensive archival research, both collaborative and individual, using the Sheridan Library's Rare Book and Manuscript collections. Texts include poems, printed lectures, pamphlets, novels, periodicals, ephemera, correspondence, etc., alongside relevant critical and theoretical reading.
Area: Writing Intensive

AS.060.618. Milton: Black and White.
In Milton: Black and White we will consider Milton and the discourses of racialized categories (poetical, political, and embodied), specifically attending to his role in the historical developments of white identity; concepts of justice; the genre of epic; and universal notions of personhood through the liberal tradition. We will also consider how Black writers have responded to Milton (including Phillis Wheatley, Frederick Douglass, Malcolm X, the gospel tradition, Toni Morrison, Chris Ofili) through readings of Paradise Lost and selected prose, as well as readings in contemporary critical theory.

AS.060.619. Sentimental Reasons.
Recent work in cognitive approaches to literature have led critics to return to the sentimental novel of the eighteenth-century as a "laboratory," in Daniel Goss's words, for the investigation of human emotion. There is no easy "fit" between these literary narratives and the narratives of cognitive science, nor between them and the regnant moral philosophy of the age (built upon the mechanism of human sympathy or upon "nervous" association). There is rather a discomfort that reveals social inequities as well as alternative possibilities for both thinking and feeling. The sentimental mode took hold in the circuits of the Atlantic world. This course will study several sentimental narratives that traveled promiscuously through those circuits: Bernardin de St. Pierre's Paul and Virginia, Sterne's Sentimental Journey, Mackenzie's Man of Feeling; Equiano's Interesting Narrative; Williams' Peru; and Brown's The Power of Sympathy. Alongside these works we will read studies by critics working the seams between affect and cognition, philosophy and literature, rhetoric and science. The course will provide a broad history of the sentimental mode, stretching to reflections on the links between the sentimental and the melodramatic. It will simultaneously attend to the experience of reading for sentiment, to forms of feeling and what those feelings know.
Area: Writing Intensive

AS.060.620. Thinking with Scale: Frameworks in Early Modernity.
Concepts include expansion, crowding, data collection, the miniscule, temporality, the planetary and the cosmic in the first age of European mercantile activity and colonial expansion. With readings from world-systems theory and theories of the anthropocene, our case studies will comprise pre-modern English literary texts, including Milton, Paradise Lost, Anne Bradstreet, The Four Monarchies, early modern science (Hooke, Newton), Defoe, The Storm, and early British and colonial American holdings in the Garrett Library. The class will be hands-on, working with material from Special Collections, and will include working towards a digital project (no digital project background necessary).
Area: Writing Intensive

AS.060.625. Theory of the Novel.
This course will look at the development of novel theory from the eighteenth century until the present. Authors will include Scott, Barbauld, Dallas, Lewes, Eliot, James, Shklovsky, Tomashevsky, Jakobson, Bakhtin, Lukács, Auerbach, Barthes, Jameson, Girard, Sedgwick, Moretti, Armstrong, Miller, Hale, Lynch, and Woloch. Novelists will likely include Madame de Lafayette, Austen, Goethe, and Wolfe.
Area: Writing Intensive

AS.060.627. Poetry and Performance.
This course will be devoted to the histories and theories of 19th-, 20th-, and 21st-century poetry and performance, beginning with William Wordsworth's and Samuel Taylor Coleridge's Lyrical Ballads. Upon hearing the poets read, William Hazlitt remarked that "[t]here is a chaunt in the recitation both of Coleridge and Wordsworth, which acts as a spell upon the hearer, and disarms the judgment." This early instance of reception history will provide the backdrop for our discussion throughout the semester. Besides Wordsworth and Coleridge, our reading list will include verse, theory, and criticism by Robert Browning, Walt Whitman, T.S. Eliot, James Weldon Johnson, Langston Hughes, William Carlos Williams, Charles Olson, Allen Ginsberg, Norman Pritchard, Amiri Baraka, Tracie Morris, Christian Bök, Lisa Gitelman, Frederich Kittler, Peter Middleton, John M. Picker, Susan Stewart, and others.
Area: Writing Intensive

AS.060.628. Literature and Human Rights: 1500-1720.
Today human rights and capabilities are two intertwined concepts. In the early modern period, these were much debated and literature was a key site for the development of these imperfect, variable and contested discourses. Reading literary works from the European tradition, in particular in Europeans' engagement with dissident groups both within and outside Europe, we will explore themes of embodiment, power, risk, vulnerability and the languages and practices of equivalence and domination in the variable discourses of humanitarianism, natural law, and rights in authors including Shakespeare, Grotius, Montaigne, Hobbes, Milton, Behn, Locke, Swift, Montagu and Defoe.
Area: Writing Intensive

AS.060.629. The History of the Book.
The course will account for the major transformations in the media used for writing from the scroll to the web as well as the rich account of this history and its theorizations.
Area: Writing Intensive

AS.060.636. Settler Colonialism: Theory, History, Literature.
This seminar offers an introduction to a key concept in contemporary critical theory and literary and cultural studies: settler colonialism, understood as a specific form of colonialism focused on the appropriation of land rather than the exploitation of labor and thereby involving the attempted elimination and replacement of indigenous polities and societies by an invading force. The course will have a dual focus: 1) tracing the theoretical distinction of settler colonialism from other forms of colonialism and tracking the critique implicit in this distinction of dominant forms of leftism that arguably presuppose a settler-colonial frame of reference; 2) tracking the history of what James Belich has called the “Anglo settler revolution” of the nineteenth century and engaging in a comparative analysis of the literatures produced in the course of that revolution in what are now Ireland, the United States, Canada, Australia, and elsewhere in the Pacific. We will especially attend to narrative fictions—often (self-) identified as “romances”—that chronicle settlement and register the temporal disruption of indigenous persistence and resistance. Secondary texts may include: Belich, Replenishing the Earth; Glen Coulthard, Red Skin, White Masks; Aileen Moreton-Robinson, The White Possessive; Eve Tuck and K. Wayne Yang, “Decolonization is Not a Metaphor”; Patrick Wolfe, Settler Colonialism and the Transformation of Anthropology. Primary texts may include: Charles Brockden Brown, Edgar Huntly; S. Alice Callahan, A Child of the Forest; Marcus Clarke, His Natural Life; Susanna Moodie, Roughing It in the Bush; Herman Melville, Typee; Sydney Owenson, The Wild Irish Girl; Simon Pokagon, Ogimawkwe Mitigwaki (Queen of the Woods); John Richardson, Wacousta or, The Prophecy; Catharine Maria Sedgwick, Hope Leslie; and the FX television series, Taboo.
Area: Writing Intensive

AS.060.637. Counterfactual Literature.
This course will focus on the formal, affective, ethical, and conceptual issues associated with forking-path texts—poems, fictions and films that openly offer alternative paths to the experience of individuals.
Area: Writing Intensive

AS.060.638. Whitman and the Whitmanian.
This course will take the occasion of the bicentennial of the birth of Walt Whitman as an occasion to think about the legacies of his poetry in American literary history, especially in contemporary poetry. We will read key texts of Whitman’s then move to more recent writing, paying attention to the key scholarship on Whitman from the last few decades, as well as to recent scholarship on poetry that is in dialog with the questions of democracy, capitalism, on the one hand, and form and address, on the other, that have shaped our reading of Whitman and of poetry in the Whitmanian mode.
Area: Writing Intensive

AS.060.639. The American Renaissance: History of a Field.
This seminar will provide an intensive introduction to antebellum nineteenth-century U.S. literature by way of tracking a critical formulation foundational to the field of American studies as whole: "the American Renaissance." Coined by F.O. Matthiessen in 1941, "the American Renaissance" initially referred to a canon of five white male writers (Ralph Waldo Emerson, Nathaniel Hawthorne, Herman Melville, Henry David Thoreau, and Walt Whitman) alleged to have produced work of distinction in two interrelated senses--the first specifically "American" literature deserving of academic study. We will follow the fortunes of this critical formulation, tracing how some of the authors in Matthiessen’s canon have subsequently been reinterpreted and repositioned as well as how "the American Renaissance" canon has been expanded and its very conceptualization contested. Primary authors whose work may be examined include William Apess, William Wells Brown, Lydia Maria Child, Frederick Douglass, Emerson, Margaret Fuller, Hawthorne, Harriet Jacobs, Melville, Harriet Beecher Stowe, and the anonymous author of Xicotencatl. Secondary works may include: Matthiessen, The American Renaissance (1941); Reynolds, Beneath the American Renaissance (1988); Michaels and Pease, The American Renaissance Reconsidered (1989); Crews, "Whose American Renaissance?" (1988); Colacurcio, "The American-Renaissance Renaissance" (1991); Avallone, "What American Renaissance?" (1997); Grossman, Reconstituting the American Renaissance (2003); Brickhouse, Transamerican Literary Relations (2004); Fluck, Romance with America (2009); Hager and Marrs, "Against 1865" (2013).
Area: Writing Intensive

AS.060.641. Close Reading, Exhaustive Reading, and the Novel.
How much can you say about a novel? How much of a novel can a critic interpret? The large scale of the novel form seems to resist the interpretive techniques of literary criticism, which look closely at a small number of textual examples. But what if we tried to read every word of a novel, and see it in all its forms: genre, structure, history, politics, biography, and so on? This seminar will look closely at a small number of Victorian novels (probably Dickens’ *David Copperfield* and Eliot’s *Daniel Deronda*, subject to change). We will approach these novels through a variety of theroetical lenses. There will be a special emphasis placed on the relations between form, history, and politics. This seminar will also offer students a chance to apply theories of literature and the novel often considered in abstract.
Area: Writing Intensive

AS.060.642. Reading Capital Now.
Since the 2008 financial crash, there’s been rising popular consciousness of capitalism’s crisis-bound character and, therefore, its vulnerability. But finance isn’t the only thing that capitalism has brought to a boiling point: for attentive readers of Marx, the mounting climate disaster, the COVID pandemic, and the struggle for Black Lives have only further highlighted the complex interconnections among our energy and food infrastructures, histories of racist and settler-colonial violence, the patriarchal organization of sexuality, and the maintenance of capitalist profitability no matter the social cost. The aim of this seminar is, first, to show how a thorough reading of the first volume of Marx’s Capital goes a long way toward helping us see all these histories and crises as part of a single, many-faceted dynamic, and second, to highlight 20th- and 21st-century Marxist work that takes Marx in new directions, from critiques of racial capitalism, colonialism, and the patriarchy of the wage, to studies of climate crisis and the global recomposition of the labor pool. Along with Marx, we’ll read work by WEB DuBois, James Boggs, Silvia Federici, Thiti Bhattacharya, Jairus Banaji, Nikhil Singh, Andreas Malm, the Endnotes collective, James Parisot, and others.
Area: Writing Intensive

AS.060.644. Oceanic Studies & the Black Diaspora.
In this course, we take up Hester Blum's blunt observation that "the sea is not a metaphor" in order to consider the visions and hopes black writers have associated with the sea, as well as the despair and trauma transatlantic slavery has left "in the wake," to quote Christina Sharpe.
Area: Writing Intensive

AS.060.645. What was Literary Character?.
What role did literary character play along the passage from ancient theories of dramatic action to contemporary theories of subjectivity and personhood? What role, specifically, did Shakespearean personhood play in the theorization of literature's capacity to stage and represent a portable, exemplary "self"? How do group categories of race, gender and class qualify and inflect the ostensive individuation of character outcomes? As test cases, in this course we will consider an array of early modern literary persons from before and after Shakespeare as depicted in poetry, drama and prose : Heywood's Lucrece, Marlowe's Tamburlaine, Shakespeare's Hamlet and Cleopatra, Middleton's Timon, Moliere's Alceste, Milton's Christ and Behn's Oroonoko. This course will range widely across theorists of literary character and the reader/character relationship, considering Aristotle, Theophrastus, Sir Thomas Overbury, Sigmund Freud, Aaron Kunin, Blakey Vermeule, Toril Moi, Rita Felski, Amanda Anderson, and Thomas Metzinger, among others.
Area: Writing Intensive

AS.060.649. The Essay Form & Academic Prose.
While we will spend some time with the history and theory of the essay, much of our time will be spent considering the contemporary essay and its form. Across the past decade, academics have increasingly published essays designed for non-specialists. We'll study many of them, both as objects of critical attention and of practical value. Writing assignments will include the option to write essays.
Area: Writing Intensive

AS.060.650. Character Studies.
What are literary characters? Can we imagine literature without them? And how do they relate to questions of form and society? Starting with Aristotle, and moving through 20th- and 21st-century critics such as Lukacs, Barthes, and Woloch. We will pay special attention to the historical relationship between theories of character and approaches to the novel.

AS.060.651. The Sensorium of Reading c. 1800.
This seminar aims to think hard about the embodied reader and the material realm of reading. Our work will position reading less as a strict function of cognition and more as a matter of phenomenology, sensation, and material structures. Though we will attend to question of vision (and loss of vision) we will also highlight other senses: hearing, touch, smell, taste and bodily proprioception. Course materials will include recent studies that link reading and the senses, as well as texts from the late eighteenth and early nineteenth-century, a moment when the idea of Literature emerged alongside a theorizing of media and mediation, and investigations linking aesthetics and phenomenology. Samuel Taylor Coleridge will be one guide for the seminar, but so will the ballad revival and the literature of abolition. Seminar participants are invited to target other periods and places in their own research projects for the seminar.
Area: Writing Intensive

AS.060.652. The Time and Space of Capital.
This course will look at the relationship between the logical and historical aspects of Marx's analysis of capitalism, which special emphasis on key arguments in volumes 2 and 3 of Capitalism. We will ask questions about capital's use of time and space in the service of accumulation, and read more recent secondary material all term from anti-colonial, feminist, queer, Indigenous, and Black radical traditions, in order to develop a fresh picture of the complex interrelation or different types of oppression and exploitation across capitalist history. Some familiarity with the concepts and argument of Capital, volume 1 will be helpful, but are not required.

AS.060.653. Dark Conceits: Allegory, Interpretation, and Psychoanalysis.
Bringing theological commentary and psychoanalytic diagnosis into conversation with historicism, formalism, sexuality studies and premodern critical race studies, this course uses Edmund Spenser's "Fairie Queene" to re-open the question of hermeneutics.
Area: Writing Intensive

AS.060.654. The Romance.
This graduate seminar takes a long view of the romance—the genre of literary imagination, par excellence—as originating and recurring in the Anglo world as a crucial technology of settler indigenization on stolen land and also of Indigenous resistance to settler fantasies of realization, from twelfth-century Norman England and Ireland to nineteenth-century North America and Australasia. Texts may include: Geoffrey of Monmouth, History of the Kings of Britain; Wace, Roman de Brut; Catharine Maria Sedgwick, Hope Leslie; Joseph Smith, The Book of Mormon; Mark Twain, A Connecticut Yankee in King Arthur's Court; Simon Pokagon, Queen of the Woods; Eleanor Catton, The Luminaries.
Area: Writing Intensive

AS.060.658. 1922 and Its Neighbors.
A course focusing on works published in the _annus mirabilis_ of modernism, 1922, and the years nearby. In addition to reading these texts in detail, we'll consider what it means to periodize at a granular level and how our primary texts and theoretical readings take up the problem of the neighbor as well as questions of of hospitality, community, social obligation, and domesticity.
Area: Writing Intensive

AS.060.668. The Slavery Debate in the Atlantic World.
This graduate seminar will trace the historical development of the slavery debate in the Atlantic world through examination of key texts from a host of genres and locations—Quaker religious tracts, political documents like the Haitian Declaration of Independence, Cuban antislavery novels, slave narratives, and "classics" of "American" literature like Melville's Benito Cereno. Our historical investigations into the rhetorical field of anti- and proslavery will be framed by a theoretical interest in political theology. How might critical reflection on sovereignty, recent and not so recent—from Derrida back to Bodin (widely acknowledged as having provided one of the first philosophical defenses of antislavery)—help us recast the intellectual history of the slavery debate and Atlantic radicalism, more generally?
Area: Writing Intensive

AS.060.800. Independent Study.
This course is a semester-long independent research course for graduate students. Students will have one-on-one assignments and check-in's with designated faculty throughout the semester.

AS.060.893. Individual Work.

AS.060.894. Independent Reading.

AS.060.895. Journal Club.

AS.061 (Film and Media Studies)

AS.061.102. The Cannes Film Festival: Introduction and History. 1 Credit.
In recent decades, film festivals have become important venues for generating international audiences by simultaneously fostering aesthetic communities and creating marketing opportunities. This course considers the purpose and function of the film festival by examining the singularly influential festivals of Cannes. We will read about the culture, politics, and commerce of the festival, and compare Official Selection films with more the more unorthodox choices of the parallel sections: A Certain Regard and Directors' Fortnight. Meets 5x during the semester.Required for students participating in the Cannes Study Abroad. Open to all.

AS.061.103. Navigating the Entertainment Industry: A Preparation for Intersession. 1 Credit.
This course prepares students for FMS's Intersession field trip to Los Angeles, and also serves as an introduction to the professional skills necessary to navigate a career in film, television, and other fields of entertainment. Through discussion, hands-on practice, and guest lectures with FMS alumni, students will learn how to find their way in a complex industry, how to present themselves and their work, how to choose the right path, and how to cultivate the connections and opportunities they'll need to succeed. We will also discuss what to expect and how to make the most of the week-long intersession course, which introduces students to alumni in a range of professions in film, television, and entertainment. Meets 6 times during the semester. Required for students planning to enroll in The Entertainment Industry in Contemporary Hollywood. Open to all FMS majors and minors.

AS.061.120. The Art of the Screenplay. 3 Credits.
Screenwriting workshop. This course will look at the screenplay as both a literary text and blue-print for production. Several classic screenplays will be analyzed. We will intensively focus on character development, creating "believable" cinematic dialogue, plot development, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext, and visual story-telling. Several classic and contemporary films will be analyzed and discussed with film clips screened in class (PSYCHO, CHINATOWN, WITNESS, THE DEVIL WEARS PRADA, NO COUNTRY FOR OLD MEN, THE SOCIAL NETWORK, WINTER'S BONE, BOOKSMART, GET OUT). The art of the outline, proper script formatting and character development will be explored as students embark on writing their own 8-12 page screenplays that will be read in class and closely critiqued. Current marketplace and business requirements for screenplays will also be covered.
Area: Writing Intensive

AS.061.137. Virtual and Augmented Reality Technologies. 1 Credit.
This program will provide an overview of the cutting-edge tools and creators shaping the future's narrative journeys. As technologies, such as virtual and augmented reality, along with artificial intelligence and machine learning, continue to evolve, how will we create, share, and experience the most fundamental unit of human culture - the story?

AS.061.138. Acting for Filmmakers. 1 Credit.
This is a series of 3 workshops.1. ACTORS' HOMEWORK & CAMERA AS OBSERVER~Students will discuss and experiment with different methods of preparing for a role. Trying different methods, feel what works for them. We will work on short scenes and have an open discussion about goals, believability, emotional fatigue, distractions of the filming process. ~On the Sound Stage working in front of the camera: ~show how the camera watches performers' thoughts. ~differences between working in front of a camera and playing to a live audience. ~Shooting: coverage continuity eye lines & marks blocking & restricted movement 2. AUDITIONS AND CASTING: ~Students will be given a variety of scripts to audition for. ~Discussion of casting; from actors', directors' and casting directors' perspectives. ~How others perceive you- an exercise in diplomacy and self awareness. ~Preparing for an audition. both cold and rehearsed. ~Improv during auditions. ~Memorization (quick!) for auditions. ~We will rehearse and film auditions. ~Review and analyze audition videos.3. ACTORS DIRECTING DIRECTORS. Working in groups and/or pairs, students will explore what kinds of direction works for them and for others. Students will have an open discussion as to what they need to hear from their director. This will be a class where it is safe to learn what does and doesn't work when communicating with actors- from the actors' perspective. The goal is not to deliver a professional performance in the class, but to explore how it feels to be directed.

AS.061.140. Introduction to Cinema, 1892-1960. 3 Credits.
This course explores the fundamentals of film analysis and encourages students to embark on an exploration of the first half of our first century of movies. It teaches the basic elements of film form, as well as their use in films across the globe from the turn of the twentieth century through the start of World War II. Movements discussed include the silent comedy of Charles Chaplin, Buster Keaton, and Harold Lloyd, moody German Expressionism, the playful anarchy of Surrealism, the fundamentals of editing with Soviet Montage, the beauty of French poetic realism, the rule-breaking of Pre-Production Code cinema, the work of the young Alfred Hitchcock, and, of course, highlights of classical Hollywood filmmaking.
Area: Writing Intensive

AS.061.141. Introduction to Cinema, 1941-present. 3 Credits.
Introduction to Cinema provides an overview of American and international cinema from thepost World War II era to the present. Through lectures and discussion, weekly screenings, andintensive visual analysis of individual films, we will explore the aesthetic, cultural, political, andeconomic forces that have shaped the art and industry of film over the past 70 years. Regularquizzes, writing assignments, class participation required. Mandatory film screenings. Lab Fee $50.
Area: Writing Intensive

AS.061.145. Introduction to Digital Video Production: Visual Language. 3 Credits.
This course is a study of the visual language used to create a moving picture. Through screenings and discussion of films, videos, and related readings, students will develop a visual critical facility and will demonstrate this facility in a few response papers to screenings and video projects. The course will focus on image construction, including composition, framing, movement inside the frame and use of light as well as use of sound. Students will learn to be attentive to rhythm and tempo in picture editing and sound. In-class video assignments included, in which students will work in small groups of three.

AS.061.147. Visual Storytelling. 3 Credits.
This primer to screenwriting will emphasize the power of the image to deliver character, situation, and theme, and to advance even complex plots. Students will analyze narrative films, compose their own still and moving images with cellphone cameras, and write several short dramatic pieces to be read and workshopped by the group. They'll learn the basics of scene design and of screenplay format. For FMS majors in the screenwriting track, this course fulfills the Media and Narrative requirement . $50 lab fee.
Area: Writing Intensive

AS.061.148. Storytelling for Film and Fiction. 3 Credits.
Through the analysis of narrative films, short fiction, myths, fairy tales, and ghost stories, and through the workshopping of their own creative writing, students will explore the art and science of "a good story well told." The course will offer an introduction to dramatic and visual storytelling, and is an essential primer for upper-level screenwriting. Lab fee $50.
Area: Writing Intensive

AS.061.150. Introduction to Film Production. 3 Credits.
This course introduces students to basic considerations of shooting 16mm film. Through lectures and practice, the course approaches the basics of light meter readings, basic camera operations and shot composition. The course also highlights specific readings from classical film theory to augment weekly shooting exercises. Each week students, working in groups, shoot film exercises, providing a general overview of film production. For the final project, each group shoots and edits (physical edits) a short (3-5 minutes) film on 16mm black and white reversal film stock.

AS.061.152. Introduction to Digital Video Production. 3 Credits.
This course introduces students to the world of digital filmmaking. Through screenings, production assignments, and in-class labs, students will develop proficiency in digital cameras, sound recording devices, and software. Students will work individually to produce several video projects. For their final projects students will pitch an idea and develop a more complex film.

AS.061.154. Lights, Camera, Action: Bogart. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of films starring the legendary Humphrey Bogart. Short weekly written responses. No prior experience in film studies required; non-majors welcome. This one-credit course will meet September 3, 10, 17, 24, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.

AS.061.155. Lights, Camera, Action: Coming of Age Films. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of coming of age films. Short weekly written responses, in-class screenings, and emphasis on discussion over lecture. No prior experience in film studies required. This one-credit course will meet September 5, 12, 19, 26, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.

AS.061.156. Lights, Camera, Action: On Location. 1 Credit.
This mini-course will explore the role of place in film; location not merely as setting, but as character, condition, mode of thought. Real and imagined, found and constructed worlds will be considered. Are all cinematic worlds virtual? In-class screenings and an emphasis on discussion over lecture. This 1-credit course will be graded Pass/Fail. Perfect attendance required. Class meets September 19, 26, October 3, 10.

AS.061.159. Lights, Camera, Action: In the City. 1 Credit.
This mini-course will provide a survey of American and international films to which city as setting is integral. In-class screenings and emphasis on discussion over lecture. Four short written responses. No prior experience in film studies required. Due to the limited number of meetings, perfect attendance is required.

AS.061.166. Lights, Camera, Action: The Female Gaze. 1 Credit.
This mini-course will offer an introduction to the basics of film analysis through a survey of films directed by women. In-class screenings and emphasis on discussion over lecture. Short weekly written responses. No prior experience in film studies required; non-majors welcome. This one-credit course will meet September 2, 9, 16, 23, and will be graded Pass/Fail. Due to the limited number of meetings, perfect attendance is required.

AS.061.202. Intermediate Film Production: Personal Essay Film. 3 Credits.
In this course students will consider variations of the personal essay film, wherein filmmakers explore their own experiences, both real and imagined. These films constitute dialogues between filmmaker and world using subjective approaches, including but not limited to first person narration. Students will make a short (4-6 minutes) 16mm film from original and possibly archival footage; their own filmic essays based upon personal experiences. We will look at the works of several essay filmmakers including Ross McElwee, Jean Luc Godard, Chris Marker, and Su Friedrich.

AS.061.205. Introduction to Screenwriting. 3 Credits.
In this course we will explore the basic principles of visual storytelling in narrative film as they apply to the design, creation, and revision of the screenplay. Specifically, we will focus on learning the craft of screenwriting — strategies, processes, and philosophies that writers can develop, practice, and rely upon as they progress through a series of screenwriting exercises and write a 12-page screenplay, which will be critiqued in-class during weekly table reads and with the Instructor (one-on-one) during office hours. Select professional screenplays will be read and analyzed — and clips from select films viewed — to further explore what works well on the page, and how it translates to working well onscreen. (Scripts and clips often selected from American films spanning the 60s through the 2000s.) Final Draft screenwriting software is required; a FREE 18-week trial will be made available for all students who don't already have Final Draft.
Area: Writing Intensive

AS.061.211. Intermediate Film Production: First Person/Third Person Essay Film. 3 Credits.
Each student shoots an essay film (16mm color and/or black and white) written either in first person or third person, or perhaps, both. The third person essay incorporates the ideas of various authors while the first person film is written chiefly from personal experience. Each film should run between 4-8 minutes. Lab Fee: $200. This course satisfies the Intermediate Film Production requirement.
AS.061.150

AS.061.213. Screening Difference: Race in American Film. 3 Credits.
This course will explore how race and ethnicity have been represented in popular American film from the early 20th century to the present. Weekly screenings, regular quizzes, and open discussion will emphasize close observation and critical thinking. Requirements include an oral presentation and a written analysis. No prior experience in film studies required; majors and non-majors welcome.

AS.061.214. Demystifying the Entertainment Business. 1 Credit.
For many, the entertainment business is alluring. For all, it's pretty confusing. Demystifying the Entertainment Business is a two-week online course that offers students insight into: behind-the-camera careers in the field (specifically writing, directing, producing, and developing); how to best prepare for those careers; and how to break into the industry once graduation finally comes. Students should be prepared to write and read scripts, offer feedback to their fellow students, shoot and edit videos, and create career goal maps and resumes. (Note: some level of basic shooting and video editing acumen will be necessary, as a short film deliverable will be required for successful course completion.) By the end of the course students will understated the basic mechanics of the entertainment industry and where they might like to fall within it, and they will walk away with a complete short film they've written and directed.

AS.061.218. Modernist Literature and Film. 3 Credits.
This course explores the exchange of ideas and techniques between literary modernism and modernist cinema: how Virginia Woolf's writings on the cinema connect with her use of shifting points-of-view as literary devices, how James Joyce influenced the Soviet filmmaker Sergei Eisenstein and how Eisenstein in turn influenced the American novelist John Dos Passos, how Franz Kafka's frequent trips to the movies reflect in his fiction, and how artists ventured broadly to develop experimental languages for expressing the new speeds and scales of modern life. Additional texts will be drawn from novels, essays, poems, and films from Ezra Pound, T. S. Eliot, Charlie Chaplin, Claude McKay, Zora Neale Hurston, Anita Loos, Andrei Bely, Dziga Vertov, Gertrude Stein, Louis Aragon, and René Clair. The course fulfills the writing intensive requirement and involves a series of essays on literature and cinema from a critical perspective.
Area: Writing Intensive

AS.061.219. Special Topics: Animation Workshop. 3 Credits.
Students will produce several animations using hand-made techniques, including drawinganimation, paper puppets and stop-motion. Screenings and readings will provide a historical and conceptual context to the exploration of animation as an experimental technique within both narrative and non-narrative works.

AS.061.221. Special Topics: Producing the Independent Film. 3 Credits.
This class will guide students through the process of producing an independent film in the United States. The chronology of lectures and coursework will follow the lifeline of a project, from conception through financing and development, production, postproduction, marketing, and exhibition. Students will learn how to package and pitch projects, budget and schedule a screenplay, develop a financing plan, supervise production and post-production, and mount a viable festival and distribution strategy.Lab Fee: $40

AS.061.226. Special Topics: Writing About Film. 3 Credits.
This workshop promotes more effective writing, hones interpretive skills, and encourages the development of a distinctive voice through a series of progressively more complex assignments. By sharing draft essays with the class, commenting on one another's work, and revising, students will learn to edit their own work and to thoughtfully critique others'. Fulfills the Film and Media Studies expository writing requirement. Lab Fee: $50
Area: Writing Intensive

AS.061.229. French New Wave. 3 Credits.
An exploration of the major films and directors of the French New Wave that is also designed to help students consolidate their skills in the analysis of film. The course will examine the origins of the French New Wave, looking at the directors as critics and as passionate film fans, along with the institutional and historical context of the films. It will also ask how the French New Wave changed the process of filmmaking, and transformed the way we think about the work of the director--inspiring more vocations in filmmaking than any other movement in cinema history. Film screenings T 7:30-10:00PM. $40 lab fee.

AS.061.232. Intermediate Video: Dreams, Psychosis, and Altered States in Cinema. 3 Credits.
In this production course, students will create multiple video projects that reflect the representation of dreams, psychosis, and altered states in cinema. We will screen and deconstruct a variety of feature films, video artworks, and music videos to understand the mechanics and language of subjective realism as a narrative form. We will trace this stylistic lineage from its roots in art house cinema to its rise as an accepted Hollywood modality. We will also explore editing and software techniques that will further students' ability to create stunning works of strange beauty.Basic proficiency with digital cameras and editing is required. This class fulfills the intermediate film production requirement.
AS.061.145 OR AS.061.152

AS.061.233. Intermediate Digital Video Production: Adobe After Effects. 3 Credits.
This course will serve as an introduction to Adobe After Effects. Students will learn a variety of motion graphics techniques such as digital character animation, rotoscoping, motion tracking, chroma key compositing and automating 3D cameras. Through screenings and discussions students will gain insight into the myriad of ways After Effects is used in Film and Television. Throughout the semester students will complete several short video art projects.
AS.061.152OR AS.061.145

AS.061.234. Intermediate Digital Video Production: Experimental Forms. 3 Credits.
This Production course focuses on key movements in both Experimental Film and Video Art. Production assignments will arise from: Structural Film, Performance Art, Lyrical Film, Psychedelic Video, and Experimental Ethnography. Students will explore how these movements developed outside (and at times in opposition to) the mainstream, and became integral to the aesthetics of contemporary art, film, and television. Students will think critically about the personal and societal function that video artwork serves, and gain insight into the history of Experimental Film. At the end of this course, students will have a more nuanced understanding of contemporary media art, and they will be more proficient in video editing and cinematography, which they can apply to future work on: commercials, music videos, webcasts, and feature films.
AS.061.152 OR AS.061.145

AS.061.235. Intermediate Digital Video Production: Advanced Camera. 3 Credits.
In this production course students will gain proficiency on a variety of Digital Cinema Cameras. Students will work with the Canon C300, C500, and FS7. We will discuss picture profiles, different lense options, external capture devices, and shotgun microphones. We will thoroughly explore the various unique functionality of each camera. Throughout the semester students will complete several cinematography focused video projects.
AS.061.145 OR AS.061.152

AS.061.237. Portrait Films. 3 Credits.
Portraiture has a long history in the arts, in painting, sculpture and photography. The film portrait is closer to these plastic arts, rather than traditional documentary, in that it approaches it's subject mostly though looking and finding new forms. Screenings will include the work of Andy Warhol, Philippe Garrel, Shirley Clarke, varied screen tests, some animation and more. Coursework will include a presentation, short papers and a film portrait.
AS.061.145 OR AS.061.152

AS.061.238. Reading the Moving Image. 3 Credits.
This course will emphasize close observation and critical thinking. Through weekly screenings and class discussion, students will practice noticing; seeing and hearing with fresh eyes and ears, and taking nothing on screen for granted. And they'll learn to reflect on and contextualize what they find, drawing evolved conclusions about how film texts communicate ideas and what those ideas may be. They'll consider all elements of cinematic form; an array of analytical frameworks including genre, historical era, authorship, and modes of production; and representations of gender, race, and class. Regular quizzes, a short oral presentation, and a short written analysis. No prior experience in film studies required; majors and non-majors welcome.
Area: Writing Intensive

AS.061.240. Hybrid Cinema: Spaces Where Documentary and Fiction Meet. 3 Credits.
From the films of Robert Flaherty, Jean-Luc Godard, Agnes Varda and Andy Warhol, through the work of Peter Watkins, Ulrich Seidl, Jia Zhangke, Lizzie Borden, Pedro Costa, Abbas Kiarostami, Kevin Jerome Everson, Sacha Baron Cohen and Chloé Zhao, this course explores the dominant techniques, the aberrations, and the virtues and limitations of hybrid filmmaking. Topics discussed include the ethics of representation, the significance of craft, questions of selection, narrative hegemony, the nature of performance, and the porous boundaries between documentary and fiction film. Students will be guided in their own hybrid filmmaking experiments throughout the semester.

AS.061.244. Film Genres. 3 Credits.
$40 lab feeA survey of American genres: the Western, the Gangster Film, Science Fiction, Horror, Comedy, Melodrama, and others. Twice-weekly screenings. Short film responses and a final paper, 10pp.
Area: Writing Intensive

AS.061.245. Introduction to Film Theory. 3 Credits.
This course offers an introduction to the major paradigms of film theory, covering how significant thinkers have conceived of the medium from its inception to the present day. Frequent film screenings help to illustrate key concepts. Topics include the classical opposition between formalist and realist film theories as well as critical approaches to narrative, spectatorship, and representation. Students are expected to enter the course ready to engage in discussion. Weekly film screenings. $50 lab fee.
Area: Writing Intensive
AS.061.140 OR AS.061.141

AS.061.248. Women Making Films About Women. 3 Credits.
This course will examine films (features and shorts) throughout the history of cinema beginning with Alice Guy-Blaché . We will look at how form reveals content, thematic issues and how films relate to the culture and politics of the filmmaker. Filmmakers include Germaine Dulac, Nelly Kaplan, Marguerite Duras, Chantal Ackerman, Barbara Hammer and Nina Menkes. Readings include critical essays, texts by the filmmakers and fiction. Assignments consist of weekly papers on the films.

AS.061.263. Poetry and the Moving Image. 3 Credits.
Using P. Adams Sitney's text: The Cinema of Poetry, this course will explore the relationship between poetry and the moving image. When experimental film began to define itself in the 1950s and 60s the terms cine-poem and film-poem were ubiquitous as identifying avant-garde cinema. Poetic structures in the moving image will be studied in relation to language, images and formation of meaning. Students will independently research a poet who greatly inspired and influenced a filmmaker/moving image artist and write on that filmmaker's work. One moving image project will be undertaken and completed during the semester as well. Weekly assignments will include screenings, reading, writing, and or video work.
Area: Writing Intensive

AS.061.266. Introduction to Writing for Television. 3 Credits.
This course will take novice television writing students from show concept to show bible and into the early stages of pilot writing. It teaches the basics of how to develop a television concept, and dramatic structure for television writing. Students will read analytical work on what makes a successful television series, dramatic structure, and effective characterization, and will engage in both critical readings and writing workshop. The result will be the creation of their own show bible and the beginnings of an original thirty-minute television pilot.
Area: Writing Intensive
AS.061.205

AS.061.267. Cultural History of the Internet. 3 Credits.
This course offers an introduction to internet studies through the many ways digital culture has touched our everyday lives: memes, blogs, gaming, social networking, instant messaging, and more. From its origins in connecting scientific researchers to its present form as a multi-device, multi-platform web connecting us to everything from each other to our smart homes, the internet has proven that nearly our entire social world can be processed as data and linked up. While this has meant greater connection, it has also raised questions about how we learn, communicate, behave, and organize. The internet has long promised new avenues of personal expression, but it has also brought with it the quandaries of echo chambers, information silos, and disinformation campaigns. In response to these complicating effects, the course offers an opportunity for students to develop the critical mapping tools necessary to orient oneself within this vast cultural network and its rapid historical unfolding.

AS.061.268. History of Computer Animation. 3 Credits.
This course offers a journey through the history of computer animation. We'll start with an archaeology of the digital image, look at experimental animations by early computer artists, and sketch out the work of engineers in developing techniques of wire-frame modeling, texture mapping, shadowing, and facial animation. Beginning with short films and digital sequences in otherwise live-action movies, we'll cover a wide variety of animation styles in an international context. Screenings will be drawn from a selection of fully computer-animated features, such as those from Studio Ghibli and Pixar; live-action movies with digital special effects in the mode of Tron (Lisberger, USA, 1982) and Terminator 2: Judgment Day (Cameron, USA, 1992); films that use computer software to aid traditional methods of animating, such as The Illusionist (Chomet, France, 2010) and Boy and the World (Abreu, Brazil, 2014); and animated documentaries, such as Waltz with Bashir (Folman, Israel, 2008) and Tower (Maitland, USA, 2016).

AS.061.269. Feminist Filmmaking: A Theory and Practice Workshop. 3 Credits.
In this workshop for 10 students (no gender preference) documentary filmmaker and media theorist Bernadette Wegenstein and filmmaker and director of the Saul Zaentz Film Innovation Fund co-teach the fundamental principles of gender theory and feminism as applied to practical filmmaking. We will cover the history of women filmmakers, as well as embark on a concrete mini-production where students will be placed in the roles of writers, directors, producers, cinematographers, and editors to make a feminist film. The anthology Feminist Film Studies(Hollinger) and Feminism and Documentary(Waldman/Walker) will be among the readings that our workshop is based on.
AS.061.145 OR AS.061.152

AS.061.270. The Body and Cinema. 3 Credits.
Before film even emerged as a popular entertainment form, motion pictures were used to study the human body for purposes of scientific inquiry and medical practice. The present-day crossovers between imaging science and cinema—the inclusion of medical imaging in movies and television shows, the deployment of informational videos and animations in telehealth, and the myriad ways that digital imaging itself is spurred on by the needs of scientific investigation and the demand for cultural works—suggest that what we know about the human body is caught up in a complex web of technical representations and cultural meanings. This course explores the construction of the human body within this array of cinematic practice. Our approach will be twofold: First, we will consider scientific and medical images not merely as powerful means of seeing what would otherwise be unseeable but also as technically enabled and culturally influenced ways of knowing, that is, images, as in cinema, that are historical and could be otherwise. Second, we will examine representations of the human body in the history of film, focusing on how bodies are represented, what bodies are privileged, and how bodies are figured using medical imaging.

AS.061.271. Intermediality: Between Word, Image, and Sound. 3 Credits.
This course explores film adaptation by considering how words, images, and sounds offer different affordances and constraints for creative expression. A central goal is to conceive of adaptation outside of typical discussions of fidelity to a source work and instead consider how different artistic media open up unique opportunities for storytelling. To this end, we will draw on a number of different intermedial translations, which may include from novel to film (The Night of the Hunter, from Davis Grubb's book to James Agee's screenplay to Charles Laughton's film), from short story to film (The Turin Horse), from graphic novel to film (Ghost World) or television series (HBO's Watchmen), from personal essay to documentary film (James Baldwin's The Devil Finds Work and I Am Not Your Negro), from poetry to film (O Brother, Where Art Thou), from play to film (A Raisin in the Sun and My Own Private Idaho), from radio drama to film (Sorry, Wrong Number), and film-to-film homage (Far From Heaven and All That Heaven Allows). We will also delve into the vagaries of film-to-book novelizations and the curious case of concurrently writing film and book, as in Stanley Kubrick and Arthur C. Clark's collaboration on the film and novel 2001: A Space Odyssey (both adapted from a short story).
Area: Writing Intensive

AS.061.301. Advanced Film Production: The mongrel film. 3 Credits.
In this course, each student is responsible for the design and production of a short 16mm film. The film may be shot on color and/or black and white negative stock. The format is Super 16mm. The film may include sync and/or non-sync sound. The idea behind the "mongrel" film is for the student to incorporate a variety of genres within this project. These may include stylistic elements typically associated with documentaries, experimental, narrative, animation, and lost and found films. Students are expected to have previously completed AS.061.150 and an intermediate level film production class.
AS.061.150

AS.061.302. Strategic Approaches to Filmmaking in 2021. 3 Credits.
The year 2020 challenged the film industry by imposing restrictions on our mobility, collaboration and access. Unable to gather in large groups or travel to the ideal location, much less rent equipment or leave the confines of our homes, moving-image makers found creative ways to embrace these limitations and continue making exceptional things. This intro-level production course will go back to basics in an attempt to define and explore the essential elements of visual storytelling. In this present, and in the future, how do we embrace the aesthetic challenges that come with limited resources and means? Can we make a compelling film or video without human subjects? Can we tell a dynamic story using only one location? Is there a possibility for drama when only one character appears on screen? Can sound be used to evoke the world outside the frame? And how do we make meaningful, relevant, transcendent work amidst a social, political and public health crisis? Over the course of the semester, students will be exposed to films and filmmakers who use these questions to stimulate their practice, and in turn, will be asked to address these challenging questions for themselves through the work they create for class. This course will fulfill the Advanced Filmmaking requirement for the major and minor. Students should have already completed an introductory and intermediate production course before enrolling.

AS.061.303. Podcasting: Critical and Creative Practice. 3 Credits.
In this critical studies course with a creative component, students will learn about the history and cultural significance of podcasting, develop tools for critically listening to and analyzing podcasts, and learn how to research, write for, and produce podcasts. Examples will come from a broad sample of narrative, documentary, interview, and discussion-based podcasts. While no formal training in audio production is necessary to take the course, students will be expected to learn the necessary skills to create their own podcasts. In-class demonstrations of microphones, editing software, and approaches to sound design will be offered, and students are encouraged to take advantage of office hours for further help with audio production.

AS.061.304. After Effects: Intermediate and Advanced Technique. 3 Credits.
This hybrid After Effects course will offer two simultaneous tracks of study. One for students using After Effects for the first time, the other for intermediate After Effects users who are looking to master the program. The class will meet to learn new techniques and to discuss each other's work and the instructor will regularly introduce exciting new material applicable for all skill levels. Students will have the option to create a motion graphics reel for their final project, a valuable asset when applying for any post-production job. The coursework will be supported with robust video tutorials, weekly group instruction, and critique as well as periodic individual meetings with the instructor. Additionally, the entire class will gather for several Zoom sessions with professionals working in the industry.

AS.061.305. Advanced Video Production: Comedy Films!. 3 Credits.
This course will be a hands-on, immersive, deep dive into executing comedic moments through cinematic tools and language. Through screenings and critique, we will analyze a diverse spectrum of films and television until we distill and synthesize that ineffable substance of what makes something funny. Subjects like "Spoof," "Slapstick" and "Not Funny" will be covered. Students should expect multiple artist visits, time to edit in class and plenty of group discussion. Each student will create two short comedy films throughout the semester, and work collaboratively on a third. We will also have technical days devoted to operating advanced cameras such as the Canon C300 MK2. $100 lab fee.
AS.061.145 OR AS.061.152

AS.061.309. Advanced Video Production: Influence and Anxiety. 3 Credits.
This is an advanced production course focusing on artistic influence. Each student will be working with and around a filmmaker who greatly inspires and influences their work. The evolution of style will be considered. The work will include screenings, readings, and short projects all feeding into a final movie. This course fulfills the advanced production requirement. Students should have completed a Introductory and Intermediate Digital Video Production course prior to enrollment. $100 Lab fee.

AS.061.312. The Fallen World: Morally Complex Storytelling. 3 Credits.
A workshop devoted to creating complex characters in challenging moral landscapes. Students will view and discuss a wide range of films; and creative assignments may include profiles, short fiction, monologues, and dramatic scenes for the screen. Short critical and creative written exercises, and a longer, creative final project.
Area: Writing Intensive
AS.061.148 OR AS.061.205 OR AS.061.315 OR AS.061.316 OR Instructor Permission

AS.061.313. Personal Storytelling for the Screen. 3 Credits.
A workshop devoted to creating compelling short scripts based on personal experience. Analysis of screened films and collaborative development of student work will emphasize how unique worlds and world views can reflect a larger shared humanity. Short critical and creative written exercises, and a longer, creative final project.
Area: Writing Intensive
AS.061.148 OR AS.061.205 OR AS.061.315 OR AS.061.316 or Instructor permission.

AS.061.315. Screenwriting By Genre. 3 Credits.
Story design for the screenplay with special attention to the genres of comedy, horror, melodrama, and adventure. Regular workshops, short written exercises, and a longer final project.
Area: Writing Intensive
AS.061.148 OR AS.061.205 OR AS.061.270 OR permission of the instructor.

AS.061.316. Characters for the Screenplay. 3 Credits.
A workshop devoted to creating complex characters for the screen. Students will examine memorable film characters from the silent era to the present, with attention to how these characters are revealed through both the drama and the mise en scene. Weekly screenings. Short critical and creative written exercises and a longer, creative final project.Recommended Course Background: AS.061.148 OR AS.061.205 OR AS.061.265
Area: Writing Intensive

AS.061.317. Media and Narrative. 3 Credits.
Using narrative theory, this hybrid course teaches students the ins and outs of narrative forms that interact with cinema, engaging with both screenwriting and narrative studies. Using the adaptation of author Neil Gaiman's Coraline to teach students the differences in narrative structure that align with fiction, the graphic novel, and the film, it also enables them to engage in their own adaptation. Taking an original concept from short fiction to a graphic novel treatment to a film treatment, culminating in a short film script and storyboard, the course teaches the fundamentals of narrative theory and encourages students to engage with them creatively.
Area: Writing Intensive
AS.061.205

AS.061.320. 21st Century Television Auteurs and American Culture. 3 Credits.
Since the rise of HBO in the late 1990s, cable, network, and streaming television has become home to a diverse range of "quality" shows that showcase strong perspectives by unique creators. These series creators work within an intensive commercial medium and a cultural context they speak to but cannot themselves determine. This course examines the relationship between the cultural milieu in which they create work and the show creator themselves. Featuring such examples as Donald Glover's Atlanta, Michael Shur's The Good Place, Phoebe Waller-Bridge's Fleabag, Rebecca Sugar's Steven Universe, Mindy Kaling's The Mindy Project, and Terence Nance's Random Acts of Flyness, among others, it encourages students to engage in aesthetic critique as well as cultural analysis, with the ultimate end of making students better understand the relationship between television and auteur, and be better able to engage with the culture in which they swim via its media.
AS.061.140 OR AS.061.141

AS.061.321. Environmental Cinema. 3 Credits.
An exploration of cinema's unique capacity to reveal the world, this course presents an international and richly historical survey of environmental films. Examples come from narrative, documentary, and experimental filmmaking, including blockbusters, exposés of waste and pollution, guerrilla media projects, and poetic contemplations of landscapes and oceans. Filmmakers and artists include Andrei Tarkovsky, Angès Varda, Jia Zhangke, Lucy Walker, Ai Weiwei, Edward Burtynsky, and Werner Herzog.

AS.061.322. Women in Popular Film and Television. 3 Credits.
A survey of female beauty, villainy, comedy, and humanity in film and television from the silent era to the present. $50 lab fee.
AS.061.140 OR AS.061.141 or permission of instructor.

AS.061.323. Masculinities. 3 Credits.
From tap dancer to gangster, assassin to anguished teen, versions of the male in film from the silent era to the present. Cross-listed with Studies of Women, Gender, and Sexuality. One core course in Film and Media Studies is preferred but not required.

AS.061.326. Contested Ground: The American West on Film. 3 Credits.
Fantasized, mythologized, and revised: the cinematic west as landscape and idea through the lens of classical Hollywood and of contemporary independent women and indigenous filmmakers.

AS.061.328. Gangster Films. 3 Credits.
The bad guy as hero from Little Caesar to Goodfellas. Film screenings Th 7:30-10:00 PM, Sun 7:00-9:30 PM. Lab fee: $40.

AS.061.329. Left-Handed Endeavors: Crime Film. 3 Credits.
A survey of primarily American, 20th century, popular crime film: hits, heists, cons, organized crime, crimes of passion, and other "left-handed form[s] of human endeavor." Oral presentation, short critical response (5 pp.), essay (12 pp.).
AS.061.140 AND AS.061.141 AND AS.061.238 AND AS.061.144 or Instructor Permission.

AS.061.335. Monster Films. 3 Credits.
Monstrous others and monstrous selves in classic 20th century horror. One core course or permission required.
AS.061.140 OR AS.061.141 OR AS.061.238 or permission of instructor is required.

AS.061.336. American Landscapes on Film. 3 Credits.
American setting and identity: the frontier, the city, the highway, the sea, the small town, the suburb, and outer space as represented in popular film from the silent era to the present.
AS.061.140 OR AS.061.141 OR AS.061.238 OR AS.061.244 or instructor permission.

AS.061.339. A Cinema Of Anxiety: Film Noir. 3 Credits.
Shadows, dead ends, and dangerous women in the postwar films of Sam Fuller, John Huston, Fritz Lang, Anthony Mann, Jacques Tourneur, and others.

AS.061.340. The Body in French Cinema; Sexuality, Physicality, Vulnerability. 3 Credits.
This course explores how French films have interrogated the body. We will ask how they have attempted to come to terms with human physicality, desire, and fragility--and with the ability of cinema itself to move spectators emotionally and even physically. Themes explored will include sexuality, gender identity and disability. AS.061.140 or AS.061.141 or permission of instructor. $50 lab fee.
AS.061.140 OR AS.061.141 or instructor permission.

AS.061.346. Persistence of Vision: Time, Memory and the Past in Recent Global Cinema. 3 Credits.
This course will examine the ways film represents, remakes, and re-visions cultural and personal memory in a range of recent national and international films, including those by Chantal Akerman, Pedro Almdóvar, Lee Chang-dong, Claire Denis, Joanna Hogg, Hirokazu Kore-eda, Terrence Malick, Joshua Oppenheimer, Christian Petzold, Sarah Polley, Hong Sang Soo, and Jia Zhangke.

AS.061.347. Teens On Screen. 3 Credits.
This course will explore changing representations of adolescence in films from the 1950s to today across a range of mainstream Hollywood, independent, and international films. We'll examine how this dynamic and misunderstood genre shapes and reshapes perceptions of youth, and we'll discuss the frank and sometimes explosive ways teen films address difficult questions of race, class and sexual identity, often in the guise of "pure" entertainment. Recommended Course Background: Introduction to Cinema I or Introduction to Cinema II, or permission of instructor.

AS.061.348. Acting and Screenwriting for Narrative Productions. 3 Credits.
This pre-production course brings together student filmmakers from Maryland Institute College of Art (MICA) and from Johns Hopkins University (JHU), providing intensive training in the crucial aspects of preparing to shoot a successful narrative film. Students work with a professional screenwriter, allowing students to hone and improve their existing screenplays, practice the elements of writing for film, and learn how to do a script breakdown. Workshops on working with actors, taught by a professional actor, will teach students the ins and outs of casting and directing. Supplemental workshops will cover elements of pre-production such as budgets, production schedules, call sheets, and legal issues. Film screenings will train students to see films as festival curators do, with an eye toward what constitutes exciting, innovative filmmaking. This course is the prelude and prerequisite to Narrative Filmmaking II, a production course during which students will collaborate to shoot a short narrative film based on student screenplays.

AS.061.354. Invisible Cities. 3 Credits.
In Italo Calvino's book, Invisible Cities, Marco Polo depicts an eclectic array of imaginary, and fantastic, cities to Kublai Khan. Using this book as a guide, each student will create an imaginary city composed entirely from online archival footage. Following Calvino's advice, these projects will "take delight not in a city's seven or seventy wonders but in the answer it gives to a question of yours". Additional readings will include works by Louis Aragon, Walter Benjamin, Michel de Certeau, Rainer Maria Rilke, and W.G. Sebald. This course satisfies the Advanced Film Production requirement for FMS majors and minors.

AS.061.356. Narrative Productions. 6 Credits.
Narrative Productions is a joint production course for JHU and MICA undergraduates who have completed Acting and Screenwriting for Narrative Productions (AS.061.348). Students work in teams to produce a narrative short from a script written in AS.061.348. Students are assigned a primary and a secondary role on the production or post-production of their chosen film. Students fill all roles from casting, producing, direction, design, cinematography, sound recording and editing. Throughout the course, instructors will facilitate contact with relevant films and film professionals to illuminate the key creative roles necessary in the making of a successful narrative film. Instructors serve in an advisory role in the production of student projects, offering technical information and guidance throughout the filmmaking process. Students should be prepared to spend a significant amount of time outside of class working on their films.
AS.061.348

AS.061.361. Documentary Film Theory. 3 Credits.
Documentary Theory: The Work of Documentary in the Age of Reality Reproduction This course explores contemporary documentary film and video with an emphasis on selected directors and the theoretical implications suggested by their work. In particular, we look at the notion of the 'real' as it is constructed and maintained through and by documentaries. This inquiry necessarily involves a reflection that is philosophically as well as politically motivated. Directors include Errol Morris, Trinh Minh-ha, Ross McElwee, and Werner Herzog. Readings are eclectic, ranging from Annie Dillard to Martin Heidegger. Counts toward 300 or 400-level critical studies requirement.

AS.061.364. The Films of Alfred Hitchcock. 3 Credits.
Close examinations of Hitchcock's films from the Lodger to Frenzy. $40 lab fee.
Area: Writing Intensive

AS.061.365. The New Hollywood:American Films of the Seventies. 3 Credits.
This course will explore the extraordinary renaissance in American film that arose from the death of the studio system and ended with the advent of the blockbuster. We'll discuss how the political and cultural struggles over the Vietnam war, civil rights, and the feminist movement affected American filmmaking between roughly 1967 and 1980, heralded by a new generation of filmmakers working both within and outside of the system. Emphasis will be on both close formal analysis and historical contexts. Filmmakers to be discussed will include Robert Altman, Hal Ashby, Charles Burnett, Ivan Dixon, Francis Ford Coppola, Barbara Loden, Elaine May, Mike Nichols, Alan Pakula, Arthur Penn, Bob Rafelson, Martin Scorsese, Melvin Van Peebles, and Claudia Weill. This is a discussion-based class, and regular participation is required.
Area: Writing Intensive

AS.061.366. Labyrinths of Passion: The Films of Pedro Almodóvar. 3 Credits.
This course will explore a range of Almodóvar's work, from the early films emerging out of La Movida Madrileña up to and including The Human Voice and Parallel Mothers, with particular emphasis on All About My Mother, Talk to Her, Bad Education, Volver, and Pain and Glory. We will examine the director's influences and antecedents—Bunuel, Hitchcock, Sirk, Cassavetes, among others—against the backdrop of Spain's dramatic political and cultural transformation after the death of Franco. And we will closely analyze the characteristics that define Almodóvar's status as an auteur: his groundbreaking approach to sexuality, queer politics and gender transformation; his innovative use of melodrama; and his dazzlingly eclectic visual style.

AS.061.373. Intermediate Screenwriting. 3 Credits.
This course will explore strategy and process for developing a short screenplay from pre-existing literary or journalistic source material (short story, news/feature article, etc.). By exploring several "case studies" — feature films and the source material that inspired them — students will identify the practical strategies employed by professional screenwriters with the goal of employing such strategies with their own screenplay adaptations. Bulk of class will focus on designing, writing, and rewriting a 20-30 page screenplay, and sharing multiple drafts with the class (and with the professor one-on-one) for critique over the course of the semester. Each student should have 2-3 pieces of material under consideration for possible adaptation by the start of class. Discussions from time to time will also touch on the business of screenwriting. (Scripts and clips often selected from American films spanning the 60s through the 2000s.) Students will be required to purchase a license for Final Draft screenwriting software for $99. Students are expected to have previously completed AS.061.205 or another lower level screenwriting class.
Area: Writing Intensive

AS.061.374. Terrence Malick: The Poetics of Space. 3 Credits.
This course will closely examine Malick's films, with particular emphasis on his visionary manipulation of the epic vastness and lyrical intimacies of screen space. With this primary concern in mind, we will consider his films' engagement with philosophies of history and time; their increasingly experimental approach to narrative and stylistic conventions; and their enduring fascination with the interaction among the human, natural, and spiritual worlds. We will also look at recent films influenced by his work, including Carlos Reygadas's Silent Light and Shane Carruth's Upstream Color, addressing the question of what constitutes a "Malickian" cinema.
Area: Writing Intensive
AS.061.140 OR AS.061.141

AS.061.375. Surrealism and Film. 3 Credits.
We will define Surrealism through primary texts, including those of Andre Breton, Antonin Artaudand Rene Daumal and other works that defined and influenced the movement in the early part ofthe 20th century. Using an understanding of the practice of surrealism found in the readings, aswell as in surrealist games and automatic writing, we'll study a diverse group of filmmakersinfluenced by the practice, including Luis Buñuel, Joseph Cornell, Raul Ruiz and contemporary artists such as David Lynch. Assignments include weekly papers and one final creative project. Weekly film screenings Thursday 7:30-10:00 PM. $50 lab fee.Media, Online
Area: Writing Intensive

AS.061.378. Automatic Animation. 3 Credits.
A hand-made, 2-D animation course based on ideas of automatism. Students will create their own animated movie during the semester with in-class animation exercises. Readings will included Dada and Surrealist texts, poetry and theory of poetics. Sounds ideas will be discussed and pursued related to the ideas explored throughout the semester. $125 lab fee.
AS.061.145 OR AS.061.152

AS.061.380. French Cinema of Immigration, Cultural Identity, and Difference. 3 Credits.
An exploration of a series of contemporary French films that bear witness to the contemporary reality of France as a multi-ethnic society and ask essential questions about cultural identity. Is cultural and ethnic identity something that you are born into or it is a role that you elect or perform? How should individuals living today understand their relation to historical injustices? Are there things that we can learn only through relationships with people from other cultures? Screenings include works of Abdellatif Kechiche, Jacques Audiard, Claire Denis, Céline Sciamma, Michael Haneke, Mathieu Kassovitz, the Dardennes. $50 LAB FEE

AS.061.382. Explorations in Film Sound. 3 Credits.
This course traces the history of the soundtrack from Vitaphone at the coming of sound to Dolby Stereo in the New Hollywood era to the fully immersive, atmospheric sound systems of today's cinemas and home theaters. We consider major theories on the relationship between sound and image, the production of sound space, the role of the voice in cinema, and the effects of film music. Assignments will engage with the materials through both analytical reflection and short creative sound production. Screenings and examples are likely to include early sound classics, such as Sunrise (1927) and 42nd Street (1933); notable international innovators, such as The Testament of Dr. Mabuse (1933) and A Man Escaped (1956); pathbreaking stereo entries, such as Fantasia (1940) and Apocalypse Now (1979); recent exemplars of film music, such as In the Mood for Love (2000) and Morvern Callar (2002); and films that reflect on the very nature of sound recording, such as The Conversation (1974) and The Lives of Others (2006).
AS.061.140 OR AS.061.141

AS.061.384. Fabric of the Real. 3 Credits.
Maurice Merleau-Ponty writes, "the real is a closely woven fabric". In this course we will consider how several artistic disciplines weave their own version of that fabric. These disciplines include documentary film, prose poetry, landscape painting, literature, and music. The course will be predicated upon Martin Heidegger's essay, "The Age of the World Picture" and follow the lead of Roland Barthe's essay on the "effect of the real". We will also highlight various hybrid forms within these disciplines, with particular attention to the work of W.G.Sebald and StevenReich.

AS.061.391. Love and Film. 3 Credits.
In this course, we explore different understandings of "love" and the way that film has dealt with the concept as a medium. We explore a variety of approaches to the question of "love" - from the agapic to the familial to the romantic - through a series of interdisciplinary readings ranging from philosophy to anthropology. We will also equally explore the question of how film has engaged with the question of love as a concept, and what depictions of human affection - from the general to the personal - it has offered us. Screenings are required for this course. Lab fee: $50
Area: Writing Intensive
AS.061.140 OR AS.061.141 OR AS.061.226

AS.061.396. Modern Paris on Film. 3 Credits.
This course uses French film to examine the history of twentieth-century Paris. We will consider how filmmakers interpreted the social, political, and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. $50 lab fee.

AS.061.397. French Masculinities. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.

AS.061.399. Stop-Motion Puppet Animation. 3 Credits.
Students will create their own stop-motion models (puppets) based on a wire armature model. In small groups, students will design and create a simple set and make a short stop-motion movie using a DSLR camera. The question of "why animate" will be explored in student projects and responses to screenings. We will study the history of stop-motion puppet animation from Starewicz to Svankmajer to Nick Park.

AS.061.403. Advanced Screenwriting: Concocting the Thriller. 3 Credits.
If you love watching thrillers — and believe you are possessed with the right blend of obsession, stamina and blind faith required to write one — then please join us for 13 weeks of screenwriting exploration as we tangle with this most beguiling and and satisfying of film genres. By semester's end, you'll have written a "killer" first act of a feature script, developed a detailed step outline for acts 2 and 3, designed a look-book to inspire yourself and future collaborators, and hatched a plan to see you project through to completion (on your own, or in a future class.)
Area: Writing Intensive
AS.061.205 AND AS.061.373

AS.061.404. Advanced Screenwriting. 3 Credits.
Intensive workshop course where students will write a first draft of a feature-length screenplay. Classes will focus on the specific challenges of the students' works-in-progress, with an emphasis on developing a story idea that is suitable for a feature, and the craft to see it through to completion. Particular emphasis will be placed on the feature screenwriter's central challenge: creating enough of a structure in the early writing stages to keep the screenplay on track, while remaining open to new ideas for scenes and sequences that inevitably arise as the characters come to life. Select professional screenplays will be read and analyzed — and clips from select films viewed—to explore what works well on the page, and how it translates to working well onscreen. Students will aim to have a solid and workable first draft at the end of the semester, at which point avenues for further revision may be discussed. Throughout the course, Instructor will also devote a portion of class time to discuss the business of screenwriting. Students will be required to purchase a license for Final Draft screenwriting software for $99.
Area: Writing Intensive

AS.061.406. Animating Cartoons. 3 Credits.
Animating Cartoons: This class will focus on character animation. Through weekly screenings of cartoons and animations and reading comics, the form will be analyzed in class discussions and short papers. Students will create their own hand drawn character and create an extensive story board for an animation involving their character. A scene will be chosen and a short hand-drawn animation from the storyboard will be created.

AS.061.407. Advanced Screenwriting II. 3 Credits.
You've just finished the first draft of your feature screenplay or long-format teleplay. If you're like most mortals, including the teacher of this course, it's likely to be terrifically average. Here's the chance to make it good — and possibly great — with a semester's worth of systematic, high-octane rewriting. Hard labor, creative breakthroughs and a glimpse at what it takes to get Hollywood's attention included.
Area: Writing Intensive
AS.061.404

AS.061.409. The Films of P. T. Anderson: Innovation and Influences. 3 Credits.
This course will investigate Paul Thomas Anderson's stylistic and narrative innovations, as well as cinematic influences such as Altman, Kubrick, Scorsese, and Welles.

AS.061.413. Lost & Found Film. 3 Credits.
This course explores various elements of film production and filmic expression through a somewhat nebulous field typically described as lost films. Lost films (or as they are sometimes called, "orphan" films) can be generally described as films that have, for a variety of reasons, fallen out of the public view. They frequently come from educational, scientific, medical, or industrial films from the 1950s and 1960s. Using these films as source materials, lost film filmmakers explore and expose cultural conventions, visual icons, and historical value materials. Each week, students are responsible for re-editing sources found on an internet archive site. The assignments follow thematic concerns related to film editing. Students complete a final project (4-8 minutes). All editing for the course is accomplished with non-linear software, generally Adobe Premiere or Final Cut.

AS.061.440. Senior Capstone Project: Production. 3 Credits.
Permission required. Production track students complete an independent project. Should must have completed one advanced level FMS production course (POS tag FILM-PROD).

AS.061.441. Senior Capstone Project: Critical Studies. 3 Credits.
Critical studies track students complete an independent research project.

AS.061.501. Independent Study - Film. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.502. Independent Study:Film & Media. 1 - 3 Credits.
For students who wish to explore an aspect of film studies not covered by existing courses. The course may be used for research or directed readings/viewings and should include one lengthy essay or several short ones as well as regular meetings with the adviser.Permanently required: Lab Fee: $100 (if production related)
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.505. Internship-Film/Media. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.506. Internship-Film & Media. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.542. Senior Capstone Project: Screenwriting. 3 Credits.
Permission required. Screenwriting Track students complete an independent project.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.596. Ind Study - Film & Media. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.061.599. Internship-Film & Media. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.070 (Anthropology)

AS.070.125. Technology and Politics in Native North America. 3 Credits.
How have biodiversity protection measures, cultural heritage NGOs, genomic science, and transnational media altered the lives of Indigenous groups in North America in the twenty-first century? What does "recognition" mean for these people, and how does it actually work in practice? This course will explore the emergence of new spaces and technologies of Indigenous politics and their new roles in shaping everyday experiences, from Inuit communities in Arctic Canada to urban centers in the United States.
Area: Writing Intensive

AS.070.132. Invitation to Anthropology. 3 Credits.
This course invites students to explore the intellectual tools anthropology offers for understanding humanity in its multiple manifestations. We will examine anthropological concepts and methods, and engage in critical analysis of a range of topics including language, exchange, class, kinship, race, community, gender and sexuality, magic and religion, and capitalism.
Area: Writing Intensive

AS.070.140. Anthropology of Food. 3 Credits.
This introductory course investigates what we eat and, as a consequence, who we are. By taking a cross-cultural perspective, students will examine the politics of food production, the values associated with food preparation, and the material and social dynamics of food consumption. Through readings, films, field trips, demonstrations, and tastings, the course offers an interdisciplinary and dynamic pedagogical approach to analyzing cooking and eating—activities central to daily life and social forms more broadly. Local- and global-level issues will be addressed as students explore histories, economics, social issues, and identity formation related to food.

AS.070.154. Maps and Mapping. 3 Credits.
This course explores maps as cultural documents and ethnographic sites. Students will learn how cultural understandings of space, time, and the visible world shape cartographic conventions. Through mapping exercises we will explore how ethnographer can use maps to theorize the nature of political, cultural, and economic life.

AS.070.201. Picturizing Climate Change. 3 Credits.
Climate change is represented in many pictures, such as those of tables, graphs, iconic photographs and filmic images. It materializes in many objects and qualities in our everyday lives, such as emissions, heat, solar grids and taxes. Artists attempt to picturize climate through photographs, installations and performance art. In this class we will examine these myriad representations, materializations and artistic efforts to see what ethical, political and aesthetic issues are at stake within them. We will ask to what concerns and desires does climate change give expression?
Area: Writing Intensive

AS.070.212. Minorites in South Asia. 3 Credits.
This course will introduce first-year students to the anthropology of modern South Asia from the lens of its varied minorities. We will interrogate ideas of nation, community, tradition, and belonging across the region to understand contemporary dilemmas of diversity, heterogeneity, and cultural citizenship.
Area: Writing Intensive

AS.070.213. Data and Society. 3 Credits.
This course explores the context, experience, and consequences of data proliferation in the contemporary moment. Both experts and laypeople generate and study data at unprecedented rates to make decisions, communicate with each other, and process their environments. How do data advance or constrain our social, political, and economic relationships at large? How is knowledge transformed when it is mediated by large volumes of data? What are the consequences of trusting sociopolitical decisions to data-processing algorithms? What happens when everyday users generate data about themselves and volunteer their data to for-profit entities? The course consists of different modules zeroing in on topics ranging from the economy, to public health, climate change, media, and the law. Each module consists of lectures and seminar-type discussions, as well as interactions with invited speakers. Students will be expected to actively participate in all discussions and develop one independent project. The course content and activities tie into the 2019-2021 Sawyer Seminar on "Precision and Uncertainty in a World of Data" led by the Departments of Anthropology and the History of Medicine.
Area: Writing Intensive

AS.070.216. Militarization & Mental Health. 3 Credits.
The course explores contemporary approaches to illness and disease in which somatic expressions reflect broader histories of political violence. The readings in the course will challenge students to consider the ways in which the contours of the human body, its interior as well as its dynamic relations with the milieu are touched by structures of violence and histories of militarization. This will enable students to understand the varying expressions in which illness is expressed in the interactions between medical professionals and patients in clinical and non-clinical settings..
Area: Writing Intensive

AS.070.221. Cityness: Anthropology and the Urban Experience. 3 Credits.
This course is an introduction to urban anthropology through the study of diverse "urban experiences," to explore how they are shaped by power relations as well as resistance. We will read about crowds and anonymity, finance and poverty, media and public space to understand how they change through the evolution of technology, shifts in capital investment and flows of migration. We will examine the scope and limitations of classical (Western) notions of foundational studies city life. We will also explore how the notion of "cityness" better captures the variety of affects and dynamics of contemporary urban everyday life.
Area: Writing Intensive

AS.070.223. Engaging Plants: Human-Plant Relations in Anthropology. 3 Credits.
With their biogeochemical power of rearranging elements, plants have sustained and proliferated life on Earth. Accordingly, humans have cultivated different relations with plants, from domestication to sciences, from agriculture to industrialized plantation, across space and time. Planetary ecological crises have radically pushed us to reconsider not simply what it means to be human but also what it means to live as an “earthling” within the complicated, fast-changing webs of life and nonlife, which are fundamentally intertwined with the vegetal forms of life. This course will explore anthropologically-informed diagnoses and prognoses of the various ways of engaging plants. Specifically, we will delve into standard forms through which humans have engaged plants, institutional frameworks that have given rise to these forms, and alternatives to these forms and institutions
Area: Writing Intensive

AS.070.239. Hinduism and Ethics: The Epics. 3 Credits.
We will read sections of the two major epics Ramayana and Mahabharata to see how issues of morality and ethics are posed in these texts and the disputations around these issues.
Area: Writing Intensive

AS.070.241. African Cities. 3 Credits.
Over the past two decades, African cities have absorbed rapid population increase without accompanying economic growth. Students will review the major challenges of this mode of urbanization and explore the vibrant ways residents have sought to meet them. Following anthropology’s commitment to lived experience, we will track these issues through the twists and turns of everyday life, and consider what they may say about urbanity more broadly in the 21st century. Topics include livelihood, the built environment, conflict and membership, and popular culture.
Area: Writing Intensive

AS.070.253. Introduction to Medical Anthropology. 3 Credits.
Is illness bound within an individual body, or is it entangled with our relations? What are the ethics and politics of the doctor/patient relation? How are medical technologies changing the way we experience illness and healing? How have global institutions responded to the problems posed by disease and development? Drawing on ethnography, film, and literature, this course introduces students to how anthropologists have explored and researched problems related to health and illness.
Area: Writing Intensive

AS.070.267. Culture, Religion and Politics in Iran. 3 Credits.
This is an introductory course for those interseted in gaining basic knowledge about contemporary Iran. The focus will be on culture and religion and the ways they in which they become interwoven into different kinds of political stakes.
Area: Writing Intensive

AS.070.273. Ethnographies. 3 Credits.
What does it mean to translate the field onto the page? This course explores the craft of ethnography and its relationship to anthropological knowledge. Reading a series of classic and contemporary works, and engaging in our own writing experiments, we attend to the knotty problem of rendering lived experience, attending to narrative, voice, structure, and the relationship between description and analysis.
Area: Writing Intensive

AS.070.281. Home and Belonging. 3 Credits.
In this course we will examine different conceptions and experiences of "home" through studies of domesticity, kinship and household in diverse cultural settings. Reading anthropological analysis of urban built environment and locality, we will explore the notions of home and homeland, as realms of care, intimacy and belonging yet also as sites of subjection, discrimination and gender/racial inequality.
Area: Writing Intensive

AS.070.295. Conflict and Security in a Global World. 3 Credits.
Students will be introduced to problems of global governance in the context of transnational conflicts, changing nature of war, new epidemics and pandemics, and the threats of planetary extinction. What are the ways security is imagined and what kinds of political passions are mobilized for security of people versus security of states.
Area: Writing Intensive

AS.070.317. Methods. 3 Credits.
This course aims to teach basic fieldwork skills: Choosing and entering a community; establishing contacts; learning to listen and to ask questions and locating archival material that might be relevant. It is a hands-on course that increases student familiarity with various neighborhoods such as the Arts District in Baltimore. Recommended Course Background: two or more prior courses in anthropology (not cross-listed courses). Course is a requirement for anthropology major.
Area: Writing Intensive
AS.070.132 OR AS.070.273

AS.070.324. Latin America in a Fracturing World. 3 Credits.
This course examines the multiple and overlapping crises afflicting Latin America today through an ethnographic lens. Featuring conversations with authors of recent work on the region’s most pressing issues, we will explore the contours of knowledge production itself under conditions of precarity and violence. Discussions will include the retrenchment of borders, migration crises, the state management of life and death, the resurgence of authoritarianism, food insecurity, and resource conflicts.
Area: Writing Intensive

AS.070.329. An Introduction to Reality. 3 Credits.
Reality is a key concept we often think with more than we think about. And yet reality is not a self-evident thing. This seminar explores a central paradox in the concept of reality: as a totality—an ‘everything’—nonetheless produced and maintained from a partial and situated practice of making. The course begins with historical examinations of reality-making and -undoing then proceeds to approaches from anthropological theory and ethnography. It looks critically at the role of scientific knowledge, technological development, and capitalist and socialist ideological regimes in making realities in their own image. The course puts forth the case that anthropology is uniquely situated to understand how systems of knowledge come into being and stabilize a social order while investigating the inherent contestability and fragility of those systems.
Area: Writing Intensive

AS.070.330. Sheltering in Places: Architecture and Anthropology in Conversation. 3 Credits.
What is the relation between social life and shelter? How do the kinds of buildings we move through shape our sense of what is important, beautiful, or possible? Why do some buildings feel good and others bad? And how do buildings evolve as people inhabit, repurpose, repair or degrade them over time? The course begins with philosophical reflections on spheres, shells, and containers in relation to childhood and memory. It then explores the long interdisciplinary conversation between architecture and anthropology, focusing on the social and cultural dimensions of built structures. Finally, it considers how architectural practice is responding to contemporary challenges of migration, pandemics, and climate change.
Area: Writing Intensive

AS.070.332. Reverberations Of The Korean War. 3 Credits.
This course will takes the reverberations of the Korean War to examine the ways in which catastrophic violence is absorbed into and corrodes social life. Particular attention is paid to the transnational nature of conflict, how boundaries around peace and war are established, and how recent scholarly and artistic work on the Korean War has critically engaged dominant frameworks of memory and trauma. Readings will draw from fiction, ethnography, historiography and will also include film. This course also draws from the public syllabus on Ending the Korean War.
Area: Writing Intensive

AS.070.334. Contemporary Anthropology. 1 Credit.
Students are invited to attend, for credit, the departmental research colloquium in anthropology. The colloquium meets most (but not all) Tuesday afternoons during the semester. Students are expected to attend and listen, encouraged to ask questions when they wish, and to write one brief reflection on contemporary trends in the field, based on what they have observed during these sessions. Prerequisite: Students must have completed one Anthropology course previously This course does not apply to Anthropology major or minors towards their minimum department requirement. It counts towards your total credit requirement to degree..

AS.070.336. Ethnographic Perspectives on Brazil. 3 Credits.
This seminar offers an examination of Brazilian culture and politics through close readings of classic and contemporary ethnography. The course will track how anthropologists have approached the complexities and contradictions of Brazilian society. And, conversely, we investigate how studies in Brazil have prompted challenges to and generated innovations in anthropological thought.
Area: Writing Intensive

AS.070.337. Invisible Cities. 3 Credits.
This year marks the 50th anniversary of the publication of Invisible Cities by the Italian writer Italo Calvino. The curious little book, a kind of re-imagining of Marco Polo’s travels as a parable about the tensions between description and abstraction, has enchanted countless readers and directly inspired projects in architecture, performance art, and the social sciences. This course embarks in a close reading of Invisible Cities to enliven engagements with urban anthropology.?We will explore the hidden and uncanny in urban worlds as an inroads into discussions of theory and ethnographic inquiry.
Area: Writing Intensive

AS.070.342. Common Ground: Shared Resources, Social Economies. 3 Credits.
This course explores the idea and practice of the commons through various sites and objects (money, work, natural resources, urban land, knowledge and culture, etc.). We will examine the promise and limitations of local, grassroots social and economic forms of organization that propose alternatives to the market economy. Focusing on workers, consumers and housing cooperatives; community currencies; urban gardens; self-help associations; fair trade organizations and knowledge networks; we will enquire how these social economies propose autonomous forms of living together, and sharing resources, property and labor.
Area: Writing Intensive

AS.070.359. Korean War. 3 Credits.
This course takes the Korean War as a site to both explore: 1) contemporary historical and political transformations in East Asia and globally and 2) the ways in which violence, catastrophic loss, and separation are woven into everyday life. It will explore the Korean War through film, fiction, historiography, and draw on comparative materials in anthropology
Area: Writing Intensive

AS.070.363. Religious Freedom and Prisons in America. 3 Credits.
"Although we often think of religious freedom as a fixed philosophical doctrine of Enlightenment liberalism, it is a concept continually being (re)made from the ground up in increasingly important ways that today affect national politics and the judiciary. Nowadays, religious freedom has cultivated oppositional meanings: it holds together both a freedom from and to supersede government regulation; where actions in the name of religious freedom seek both to separate from government and to radically engage it as a theological force. We begin by taking this tension as a provocation to look locally and draw widely from a variety of ethnographic, historical, philosophical, literary, and other present-day texts and media, which will deepen how we understand the significant scope of what is at play and at stake in contemporary America and its politics. Through our readings and discussions, we will better grasp how religious freedom and its legal interpretations have grown from the bottom up, moving through local policies, social geographies and institutions, such as churches and prisons, as much as through any singular adherence to transcendent philosophical doctrine. While this class is an overarching exploration of how American Christianity has developed, it will pay particular attention to the Alabama and Louisiana prison systems and their distinctive religious histories. And we will focus on how the varied conceptual forms of religious freedom relate to the social geographies, religious discourses, literary texts, and media produced in and through ideas of the American South."
Area: Writing Intensive

AS.070.367. Science and Technology in Africa. 3 Credits.
This course explores the role of science and technology in the making of African histories and politics. We will examine precolonial iron-working, healing, and weaving; the ways guns and railroads functioned as tools of empire; the role of hydroelectric dams in postcolonial nation building; and the rise of digital communication and payment systems in the present. Throughout, we will challenge commonsense distinctions between the material and the spiritual, designers and users, wealth and people.
Area: Writing Intensive

AS.070.368. Law and Infrastructure. 3 Credits.
Students will learn to read legal judgement and decipher how law is used to make and contest claims over infrastructure.
Area: Writing Intensive

AS.070.369. Media Artist in Residence Jane Jin Kaisen. 3 Credits.
Media Artist in Residence Jane Jin Kaisen is a team-taught class between Clara Han (Anthropology) and Bernadette Wegenstein (MLL). In this class we will prepare the artist residency of Jane Jin Kaisen, a visual artist born in Jeju Island, South Korea and raised in Denmark. In the first part of the semester, we will cover theoretical questions raised in Jane Jin Kaisen's work such as cross-cultural adoption, diaspora, migration, war, gender and sexuality, and translation. In the second part we will involve students practically in questions of media arts curation for the artist's exhibit planned for April 2-9, 2022, at the Parkway Theatre, featuring three of her recent and acclaimed installations and films: The Woman, the Orphan, and the Tiger (2010), Apertures/ Rifts (2016), and Community of Parting (2019. In this class students will be closely involved with JHU's Center for Advanced Media Studies (CAMS), and the Baltimore Stavros Niarchos Parkway Theatre's artistic director Christy LeMaster. They will also meet the artist Jane Jin Kaisen during her residency.
Area: Writing Intensive

AS.070.373. Housing Matters. 3 Credits.
This course will collectively craft an anthropological critique of housing, both as a social concern and as an object of public policy and urban planning. As a key component of the structure and functioning of cities, housing is instrumental to urban governance, segregation, and citizenship, as well as to cultures of consumption and class formation, identities, solidarities and the imagination of alternative social orders. We will study several ethnographies to examine how the material and social effects of housing shape the politics of difference, rights, markets and property relations, consumption and activism in the US urban context.
Area: Writing Intensive

AS.070.375. Technology, Trust, and Expertise. 3 Credits.
How does an idea or an observation become a "fact"? How does one study "science" anthropologically? This course will introduce students to the field of science and technology studies (STS) by asking how different societies have defined the relationship between experimentation, knowledge, and power. Through ethnographic portraits of laboratories, clinics, toxic landscapes, and virtual simulations, we will explore how scientists and other experts have understood their relationships with other citizens, the state, and the physical environment.
Area: Writing Intensive

AS.070.376. Social Ecology. 3 Credits.
This course will explore social and cultural dimensions of contemporary ecological problems, thinking between ecological anthropology, environmental philosophy, and activist literature and media. It will be taught as a community-based learning course in partnership with the Center for Social Concern and a Baltimore environmental organization. Coursework will be organized on a collaborative studio basis and a project-based approach.Recommended Course Background: One prior course in either Anthropology or Environmental Studies.

AS.070.379. Social Ecology Studio. 3 Credits.
This course will grapple with the social and cultural dimensions of contemporary ecological problems through a local, project-based approach. Coursework will be organized on a studio basis in partnership with a local environmental organization, Friends of Stony Run. Continuing a collaborative project initiated in the fall of 2019, we will work together to develop interpretive materials for the Stony Run stream and urban watershed adjoining our campus.

AS.070.380. Slumworld: Life in informal Settlements. 3 Credits.
One quarter of the planet's urban population lives today in slums, shantytowns, favelas, chawls, colonias and other forms of rudimentary settlements (according to UN Habitat). Despite their prevalence throughout the world, these places are still depicted as spaces of informality and abjection, rather than as sites of emergence ofinnovative - even if disadvantaged-, makeshift ways of producing the city. This course will combine ethnographic and geographical literature, as well as works of fiction and film to explore the lives of squatters and slum-dwellers in many regions of the world and examine in what way their practices, forms of dwelling, sociality, conflict and cooperation are constitutive of the urban experience.
Area: Writing Intensive

AS.070.381. Addiction: An anthropological approach to substance dependence in the U.S.. 3 Credits.
This course offers an advanced examination of the interpersonal, institutional, and societal dimensions of addiction in the United States. The course will be divided into four sections. This first section tracks the evolution of addiction from a moral problem of the will to a formal, biomedical disease category over the course of the 20th century. This section introduces the problem of addiction within the societal context of the United States, exploring questions of political governance, social control, and issues of race, class, and gender inequality. It asks the question: what is the social life of addiction in the United States? The second section of the course will ground these broad inquiries in the urban U.S. by examining how addiction overlaps with mass incarceration, poverty, and homelessness in the U.S. city. Over the course of this section, we will engage and reframe the crack crisis of the late 20th century. The third section of the course will shift our attention to the rural United States and how addiction overlays unemployment, social isolation, and the urbanization of the U.S. Through this social and institutional lens, the third course section will explore the contemporary opioid crisis and draw comparisons with the crack crisis. The course concludes with an examination of the personal dimensions of the addiction experience and explores substance dependence in the realms of kinship, love, and personal understandings of recovery.
Area: Writing Intensive

AS.070.389. Precarity in South Korea through TV and Film:Aesthetics and everyday life. 3 Credits.
This seminar explores how precarity in South Korea gains expression in the medium of TV and film. In particular, this seminar will focus on how the moving image brings the viewer into the texture of everyday life. We will focus on the TV show Misaeng and include films such as Parasite and Burning. TV and film will be paired with readings on the transformations of intimate life in contemporary South Korea and comparative work on precarity.
Area: Writing Intensive

AS.070.402. Sustainable Design Studio. 4 Credits.
Environmental justice issues require sustainable design solutions founded on social scientific practice, technical expertise, and solidarity with community partners. Building on theoretical and methodological knowledge gained in the Fall 2020 Sustainable Design course (AS.070.433/633), the Sustainable Design Studio will bring together students, members of Baltimore social justice organizations, and practitioners from a variety of disciplines to work in collaboration to research and design solutions to complex social-ecological problems faced by partner organizations. This studio class provides students with practical, project-based design experience through community collaboration. Instructor permission required.

AS.070.403. Public Anthropology. 3 Credits.
Recent years have seen a renewed commitment to public work in anthropology, in terms of writing, presentation, and activist engagement. This course will focus on recent ethnographic work in a public vein, examining questions of medium, voice, and responsibility, as well as contexts of circulation and reception. We will explore what it means to pursue anthropology with a broader public in mind.

AS.070.407. Design Anthropology. 3 Credits.
From casinos to canoes, algorithms to animal traps, our worlds are bursting with intentional objects. The word design has come to evoke the prestige of such objects, and their power to shape our collective habits and sensations. This course explores the anthropology of designed artifacts and their complex social trajectories. Beginning with philosophical investigations into the relationship between materials, form, and craft, we will proceed through ethnographic case studies of design as expert discourse and ordinary practice. Ultimately we will consider the affinities between the ethnography and design as open-ended and not entirely predictable engagements with the world.
Area: Writing Intensive

AS.070.413. Reading Marx. 3 Credits.
This seminar offers a close reading of selected works of Karl Marx, along with supplemental secondary literature. We will explore how the central pillars of Marx's thought--including dialectical materialism, critical political economy, and utopian socialist thought—shape his critical method in interrogating the logic of capital.
Area: Writing Intensive

AS.070.419. Logic of Anthropological Inquiry. 3 Credits.
Anthropology is an endeavor to think with the empirical richness of the world at hand, a field science with both literary and philosophical pretensions. This course grapples with the nature of anthropological inquiry, reading classic works in the discipline as well as contemporary efforts to reimagine its foundations. Required for anthropology majors.
Area: Writing Intensive

AS.070.424. Normal and Pathological. 3 Credits.
This seminar explores the shifting lines of the normal and the pathological and the constitution of disease in the complex of medicine, public health, and the social. Readings include the works of Canguilhem and Foucault, historical monographs and ethnographies. Students will have the opportunity to develop substantial research or review papers throughout the course of the seminar.
Area: Writing Intensive

AS.070.425. Anthropology of Epidemics. 3 Credits.
In this course we will examine how forms of governance, politics, expert knowledge, and citizen actions are implicated in the emergence and management of epidemics.
Area: Writing Intensive

AS.070.426. Kinship: Old and New. 3 Credits.
We wil track the transformations in kinship theory in relation to wider changes in legal theory, biomedicine, and the relation between state and family. In particular we will ask how the concepts of sovereignty, gift, exchange, human and non-human milieus affect notions of relations.Co-listed with AS.070.639
Area: Writing Intensive

AS.070.433. Development without Displacement: Sustainable Design Practicum. 4 Credits.
This year-long course will create a space for students to join in the collective struggle to build equitable and sustainable urban futures in Baltimore. The course is co-taught by community organizer Shashawnda Campbell (South Baltimore Community Land Trust) and anthropologist Anand Pandian (Johns Hopkins University). Students will gain first-hand exposure to environmental conditions, community needs, and organizing efforts in south Baltimore, working closely together with community members in developing collaborative and interdisciplinary projects in sustainable design. Team projects will continue in the spring. Class sessions will take place mainly in south Baltimore, and meeting times include transportation to/from the Homewood campus.Admission by permission of instructor. Apply at this link: https://tinyurl.com/ykjauf84

AS.070.435. New War/ Civil Conflicts/ Policing. 3 Credits.
This is an advanced course in which we will interrogate the boundaries between war, civil conflict and techniques of policing. Students should be prepared to work through texts of an interdisciplinary character.
Area: Writing Intensive

AS.070.465. Concepts: How to Read Hindu and Islamic Texts. 3 Credits.
What is the nature of anthropological concepts and what relations do they bear to concepts internal to a society? We invite students to think with key ideas from Hindu and Islamic traditions, asking if anthropological concepts are best seen as abstractions from the particular or as intertwined with ongoing lines of inquiry, say into the nature of the real and continual efforts to test it? Topics in ritual theory, grammar, aesthetics, translation, revelation, luminosity, figuration and the mythological among those to be considered.
Area: Writing Intensive

AS.070.472. Rumors, Conspiracy Theories And Disinformation. 3 Credits.
Our present is said to be rife with more rumors, conspiracy theories and disinformation than ever before. Is this moment so different from previous, historical moments of crisis? Haven't these modes of expression always been present, albeit at the margins of the political order? What does it say about knowledge to have multiple "regimes of truth" (Foucault)? How does a new media landscape based in algorithmic modularity, and particularly social media, change the set up from an old analogue media economy? This course, co-taught by an, a literary theorist, and a media theorist, aims to provide a diversity of theoretical and methodological perspectives to help us examine the current state of reality.
Area: Writing Intensive

AS.070.495. Householding on a Warming Earth. 3 Credits.
The household appears as commonsensical to us. It is where people, most often those of a family, reside together, sharing its resources, labor and collective fate. However, anthropologists have been arguing against this commonsense since it emerged in the 1950s. Yet the household is back again in climate change policy discussions as being most vulnerable to the problems associated with climate change, such as, temperature extremes, food insecurity, exacerbated disease, enhanced competition and violence. How might anthropological debates and controversies relating to households and householding as an activity within the context of war, famine and migration, provide important insights into today's urgencies?
Area: Writing Intensive

AS.070.503. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.070.504. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.070.508. Directed Readings. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.070.561. Senior Essay-Fall. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.070.562. Senior Essay - Spring. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.070.596. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.070.602. Sustainable Design Studio.
Environmental justice issues require sustainable design solutions founded on social scientific practice, technical expertise, and solidarity with community partners. Building on theoretical and methodological knowledge gained in the Fall 2020 Sustainable Design course (AS.070.433/633), the Sustainable Design Studio will bring together students, members of Baltimore social justice organizations, and practitioners from a variety of disciplines to work in collaboration to research and design solutions to complex social-ecological problems faced by partner organizations. This studio class provides students with practical, project-based design experience through community collaboration. Instructor permission required.

AS.070.603. Public Anthropology.
Recent years have seen a renewed commitment to public work in anthropology, in terms of writing, presentation, and activist engagement. This course will focus on recent ethnographic work in a public vein, examining questions of medium, voice, and responsibility, as well as contexts of circulation and reception. We will explore what it means to pursue anthropology with a broader public in mind. Cross-listed with AS.070.403

AS.070.607. Schelling and Anthropology.
The 18th century German philosopher Schelling has been hugely influential on 20th century thought (Freud, Heidegger, Nancy, Zizek, Pierce) but remains unknown outside of philosophical circles. This neglect is unfortunate given that he has so much to offer anthropological inquiries into the relations between mind and matter, nature and culture, theology and mythology among other topics. This course places Schelling's writings and commentaries on his work alongside anthropological texts and figures to explore lines of productive conversation. The theme of a romanticism appropriate to our present will be consistently explored throughout the course.
Area: Writing Intensive

AS.070.613. Reading Marx.
This seminar offers a close reading of selected works of Karl Marx, along with supplemental secondary literature. We will explore how the central pillars of Marx's thought--including dialectical materialism, critical political economy, and utopian socialist thought—shape his critical method in interrogating the logic of capital.
Area: Writing Intensive

AS.070.616. Proseminar.
This course will consist of close reading of anthropological and philosophical texts to tracesome important aspects of the underlying presuppositions of social theory. We will try to see how regions generate both data and theory; and also see how some abiding concerns around the relation between structural formations and formations of subjects are expressed in classical and current anthropological thought.

AS.070.617. Methods.
The seminar will offer a forum for students to reflect on preliminary field research and think further about problems of ethnographic method. We will proceed in the manner of a workshop for ongoing projects. Open to anthropology graduate students only.

AS.070.619. Logic of Anthropological Inquiry.
Anthropology is an endeavor to think with the empirical richness of the world at hand, a field science with both literary and philosophical pretensions. This course grapples with the nature of anthropological inquiry, reading classic works in the discipline as well as contemporary efforts to reimagine its foundations. Required for anthropology majors.

AS.070.624. Normal and Pathological.
This seminar explores the shifting lines of the normal and the pathological and the constitution of disease in the complex of medicine, public health, and the social. Readings include the works of Canguilhem and Foucault, historical monographs and ethnographies. Students will have the opportunity to develop substantial research or review papers throughout the course of the seminar.
Area: Writing Intensive

AS.070.625. Anthropology of Epidemics.
In this course we will examine how forms of governance, politics, expert knowledge, and citizen actions are implicated in the emergence and management of epidemics.

AS.070.629. Play, Performance, And Personhood.
To approach social life as performative marked a pivotal moment in anthropology and related disciplines, and even as an implicit framework it continues to undergird more recent theoretical orientations. Revisiting foundational works in ethnography and critical theory and tracing their resonances in contemporary turns and experiments, this seminar explores play and performance as both subject and method.

AS.070.633. Development without Displacement: Sustainable Design Practicum.
This year-long course will create a space for students to join in the collective struggle to build equitable and sustainable urban futures in Baltimore. The course is co-taught by community organizer Shashawnda Campbell (South Baltimore Community Land Trust) and anthropologist Anand Pandian (Johns Hopkins University). Students will gain first-hand exposure to environmental conditions, community needs, and organizing efforts in south Baltimore, working closely together with community members in developing collaborative and interdisciplinary projects in sustainable design. Team projects will continue in the spring of 2023. Class sessions will take place mainly in south Baltimore, and meeting times include transportation to/from the Homewood campus.

AS.070.635. New War/ Civil Conflicts/ Policing.
This is an advanced course in which we will interrogate the boundaries between war, civil conflict and techniques of policing. Students should be prepared to work through texts of an interdisciplinary character."
Area: Writing Intensive

AS.070.639. Kinship: Old and New.
We will track the transformations in kinship theory in relation to wider changes in legal theory, biomedicine, and the relation between state and family. In particular, we will ask how the concepts of sovereignty, gift, exchange, human and non-human milieus affect notions of relations.Open to undergraduate anthropology majors with instructors approval..Co-listed with AS.070.426

AS.070.640. Invisible Cities.
This year marks the 50th anniversary of the publication of Invisible Cities by the Italian writer Italo Calvino. The curious little book, a kind of re-imagining of Marco Polo's travels as a parable about the tensions between description and abstraction, has enchanted countless readers and directly inspired projects in architecture, performance art, and the social sciences. This course embarks in a close reading of Invisible Cities to enliven engagements with urban anthropology.?We will explore the hidden and uncanny in urban worlds as an inroads into discussions of theory and ethnographic inquiry.
Area: Writing Intensive

AS.070.659. Proposal Writing.
The seminar will offer a forum for students to discuss research projects, prepare grant proposals and think further about issues of ethnographic methodology and writing. Open to Anthropology graduate students only.
Area: Writing Intensive

AS.070.664. n the Shadow of War: Korea, Violence, and Poverty.
This seminar will explore how violence and catastrophe are embedded in everyday life in Korea. It will focus on how to interconnect the catastrophic with the everyday, and focus on the level of the household and on forms of state knowledge of the population and the unit called "the family". This is a research seminar. Students are expected to discuss their research in depth each week and should be prepared to write a significant research paper during the course.
Area: Writing Intensive

AS.070.665. Concepts: How to Read Hindu and Islamic Texts.
What is the nature of anthropological concepts and what relations do they bear to concepts internal to a society? We invite students to think with key ideas from Hindu and Islamic traditions, asking if anthropological concepts are best seen as abstractions from the particular or as intertwined with ongoing lines of inquiry, say into the nature of the real and continual efforts to test it? Topics in ritual theory, grammar, aesthetics, translation, revelation, luminosity, figuration and the mythological among those to be considered.
Area: Writing Intensive

AS.070.672. Rumors, Conspiracy Theories And Disinformation.
Our present is said to be rife with more rumors, conspiracy theories and disinformation than ever before. Is this moment so different from previous, historical moments of crisis? Haven't these modes of expression always been present, albeit at the margins of the political order? What does it say about knowledge to have multiple "regimes of truth" (Foucault)? How does a new media landscape based in algorithmic modularity, and particularly social media, change the set up from an old analogue media economy? This course, co-taught by an, a literary theorist, and a media theorist, aims to provide a diversity of theoretical and methodological perspectives to help us examine the current state of reality.
Area: Writing Intensive

AS.070.673. Readings of Foucault.
We will do a close reading of selected texts of Foucault to track the concepts of power, subjectivity, government, and care of the self.

AS.070.674. Readings in Anthropology.
In this course we will engage classical texts from the anthropological archives and explore debates and contemporary salience.
Area: Writing Intensive

AS.070.676. Semiotics and its Discontents.
The relationship between speakers, communities, and forms of language-in-use (ritual, everyday life, oral literature) can only partly be captured by conceptions of language as a sign system. In this course, we will review structuralist approaches most closely identified with semiotics and move on to explore the concept of "presence" and its explanatory potential for anthropological attempts in understanding language.
Area: Writing Intensive

AS.070.682. Readings in Anthropology.
This course introduces classical texts from the anthropological archives in relation to contemporary debates in the discipline. In this year's iteration, our readings and discussion will explore the idea of a public and engaged anthropology.

AS.070.687. Romanticism and Anthropology.
The word "romantic" has long carried negative connotations within anthropology meaning the tendency to idealize, exoticize, or seek out the irrational. Instead, through a focus on the themes of magic, art, myth, nature and creativity, we suggest that romantic philosophy has offered and continues to offer much of interest for contemporary anthropology. Drawing on select readings in philosophy and anthropology, we will explore the suppressed romantic legacy of anthropology. This is an undergraduate and graduate combined course. Recommended Course Background: Undergraduates have to have taken at least one anthropology course (any level) to register. Or else they need the permission of the instructor.
Area: Writing Intensive

AS.070.691. The Anthropological Tone in Philosophy.
This course will ask: what constitutes an anthropological tone in philosophy? We will take up classical topics such as rule following, everyday life, skepticism, concept formation, realism, and signification in selected texts of anthropology and philosophy for understanding if these crisscross and overlap.
Area: Writing Intensive

AS.070.698. Defining Region.
This course is open to anthropology graduate students only and is to be run on a workshopmodel. It is to help those students writing their regional essay for the comprehensive exams toacquire expertise in regional debates and literature relevant to their field research. Our understanding of regions is one of cross-cutting concepts and questions rather than geographical framings alone. After identifying a concept or question, each student will create an annotated bibliography, trace the shape of arguments as they emerge within the readings, create an outline and work toward a draft of the final essay.

AS.070.801. Dissertation Research.

AS.070.802. Dissertation Research.

AS.070.803. Summer Research.
Summer Research for doctoral students

AS.070.866. Directed Readings and Research.

AS.070.867. Directed Reading and Research.

AS.070.871. Directed Reading and Research.

AS.070.872. Directed Readings and Research.

AS.070.874. Directed Readings and Research.

AS.070.886. Dir Readings & Research.

AS.070.892. Directed Readings and Research.

AS.080 (Neuroscience)

AS.080.140. Neuroscience and Human Behavior. 1 Credit.
Consider how behavioral neuroscience can help you understand these curiosities and more: a native Australian man suffers a stroke, recovers, but can only speak Chinese; altering but one neural receptor in the prairie vole will change it from a monogamous to polygamous animal; neurodegenerative disease can cause fits of uncontrollable laughter, despite nothing being funny. Learn how cells and chemicals result in complex behavior and critically examine whether or not the mind is an organic computer in this behavioral neuroscience program.

AS.080.160. Neurobiology: Cellular & Systems. 1 Credit.
Establish a foundation for advanced study of neuroscience in research and medicine. Your curriculum will cover university-level cellular, network, and behavioral neurobiology using engaging evidence-based educational models that encourage enthusiasm and uninhibited critical thought. Additional emphasis will be placed on familiarizing you with the laboratory and research methods useful in a scientific career. There are no prerequisites, but a background in biology is helpful.

AS.080.250. Neuroscience Laboratory. 3 Credits.
This course will give students the "hands-on" experience of the inter-disciplinary nature of neuroscience. Students will use anatomical and neuro-physiological techniques to understand the basic underlying principles of neuroscience.
(AS.080.305 AND AS.080.306) OR AS.200.141

AS.080.301. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3 Credits.
What does a rat exploring it's environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. Topics will include motor function, emotional and motivational states, disorders such as dementia and schizophrenia, among others. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures.
AS.200.141 OR AS.080.105 OR (AS.080.305 and AS.080.306), OR by instructor permission.

AS.080.303. Structure of the Nervous System. 3 Credits.
This course takes a structural biological approach to studying the nervous system. In using a systems approach it provides students of cellular-molecular and computational neuroscience with a thorough introduction to functional, microscopic and submicroscopic organization of the brain, spinal cord and peripheral nervous system.
AS.080.305 AND AS.080.306

AS.080.304. Neuroscience Learning and Memory. 3 Credits.
This course is an advanced survey of the scientific study of learning and memory. Different perspectives will be used to review the science of learning and memory including the cellular-molecular basis of synaptic plasticity, the functional circuitry involved in learning and memory and memory systems in the brain. The course is designed to provide a deep understanding of the issues and current debates in learning and memory research and focuses specifically on animal models of memory and memory impairment. This is an interactive lecture course with a strong emphasis on student participation.
AS.200.141 OR (AS.080.305 AND AS.080.306) OR (AS.020.312 AND AS.020.306) or instructor permission.

AS.080.305. Neuroscience: Cellular and Systems I. 3 Credits.
(Formerly Nervous Systems I) Neuroscience: Cellular and Systems I is a fully integrated, two-semester course that surveys the cellular and molecular biology of neurons as well as the structure and function of the nervous system. Students must register for Neuroscience: Cellular and Systems II offered in the second term. Course open to JHU undergraduates only.
AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.080.105 OR AS.050.105 or instructor permission.

AS.080.306. Neuroscience: Cellular and Systems II. 3 Credits.
(Formerly Nervous Systems II) Neuroscience: Cellular and Systems II uses the functional organization of the somatosensory system as a means to examine mechanisms of neutral development. Generation and maturation of neurons, guidance of axons, formation of synapses and the regressive events that shape the adult nervous system will be examined. At the same time we will explore the structure and function of brain regions that allow us to feel pain and temperature, detect vibration, recognize shape and perceive where we are in space. Finally, the single-neuron events that lead to adaptive changes in function will be explored in the context of central nervous system control of movement and of higher order functions of speech and memory. Students who do not register for Neuroscience: Cellular and Systems I offered during the first term should not register for this class.
AS.080.305

AS.080.308. Neuroeconomics. 3 Credits.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience.
AS.080.306 OR AS.200.141 OR AS.020.312

AS.080.310. Synaptic Function and Plasticity. 3 Credits.
The function of the nervous system is based on synaptic transmission between neurons. Synapses are not static structures, but dynamically change with experience. Experience-dependent synaptic plasticity not only allows proper development of the nervous system in tune with the environment, but also is the basis for learning and memory. This course will cover the structure and function of synapses, and how they are altered by experience to encode information.
(AS.020.305 AND AS.020.306) OR (AS.080.305 AND AS.080.306)

AS.080.314. How to Live a SPECtacular Life. 3 Credits.
Good mental health is key to living a happy and healthy life. This statement is true whether you are an elementary, middle, high school, or college student. It is also true if you are a recent graduate in the work force, middle aged, retired or elderly. According to the literature, to achieve good mental health you need to focus on the role that the brain plays in our Social, Physical, Emotional and Cognitive (SPEC) health. These are four key components needed to achieve and maintain good mental health. The main focus of the course will be mental health. Using the research, we will come up with tools to help educate individuals, at any point in their lifespan, on how to live a SPECtacular life.
Area: Writing Intensive
AS.080.306

AS.080.316. Prefrontal Cortex- Computational Models and Neurophysiology. 3 Credits.
The course will cover the function of the prefrontal cortex. We will discuss various computational models of prefrontal function and neurobiological evidence for these models. The class will consist of lectures, student presentations, and discussions.
AS.080.305 AND AS.080.306 or Instructor Permission.

AS.080.321. Computational Neuroscience. 3 Credits.
This course is designed to give students an overview of computational neuroscience. The topics discussed will cover many exciting domains of the field including neural coding, decision-making, learning, attention and connectomics. Lectures will be complemented with hands on experience working with computational models using Matlab and/or other programming language. The overarching goal of the course is to increase overall literacy in the field of computational neuroscience and to gain an appreciation of the interplay between experimental and theoretical neuroscience.
AS.080.306 OR AS.200.141. Familiarity with programing in Matlab will be helpful but not necessary.

AS.080.326. Neurobiology and Diseases of the Peripheral Nervous System. 3 Credits.
This course will cover neurobiology and disorders of the peripheral nervous system (PNS). A particular emphasis will be on cellular interactions within the PNS and with target tissues. For example, the two principal components of the peripheral nerves- axons and Schwann cells- have intimate and continuous cellular communications that are critical for physiological function of the PNS. The course will teach how these cellular interactions are developed, maintained throughout life, and are impacted by injury and diseases.
AS.080.305 AND AS.080.306

AS.080.328. Behavioral Neuroscience Lab. 3 Credits.
Class designed to give students first-hand knowledge of the behavioral procedures and techniques used to study behavior in the field of neuroscience. Students will gain hands-on experience by carrying out some of the behavioral tasks used to assess animals under specific behavioral domains, discuss why certain aspects (i.e. genotype, environment conditions, group size, etc.) are important factors to consider when designing, planning, and carrying out such experiments, and learn the relevance of behavioral research in translational medicine.
AS.200.141 OR AS.200.302 OR AS.080.301 OR (AS.080.305 AND AS.080.306) or permission by instructor.

AS.080.334. Unraveling Circuits in Systems Neuroscience- Emerging Techniques. 3 Credits.
Rapid technological development in neuroscience provides researchers with new tools and strategies to ask important questions about the neural basis of behavior. In this course, we will examine some of these emerging techniques, along with a sampling of the questions they have allowed scientists to answer. We will consider the conceptual insights that arise from answering these questions, as well as investigate the fundamental science behind the cutting-edge techniques that allow us to understand brain function in health and disease.
AS.080.305 AND AS.080.306 or Instructor Approval

AS.080.336. Brain-Body Interactions in Health and Disease. 3 Credits.
Both classical and recent primary research papers that deal with cross signaling of other major organs with the nervous system, particularly the central nervous system, will be discussed. Students will be exposed to emerging literature on how peptides, signaling molecules, and hormones effect the nervous system function both in health and in diseases.
AS.080.305 AND AS.080.306

AS.080.339. Cognitive Neuroscience of Aging. 3 Credits.
When will I start forgetting things? Do I have Alzheimer's disease? What can I do to minimize the chances I experience cognitive decline with aging? This class will spend a significant amount of time exploring the answers to all of these questions and many more. We will review basic information about cognitive neuroscience techniques such as fMRI, DTI, PET, and EEG and explore how aging changes the brain. The heart of the class will be about cognitive changes with aging with a focus on attention, executive function, memory, and emotion. The class will end with discussions about Alzheimer's disease and Parkinson's disease as well as lifestyle choices that increase/decrease the chances of healthy aging.
Area: Writing Intensive
AS.200.141 OR AS.080.306

AS.080.345. Great Discoveries in Neuroscience. 3 Credits.
This course examines the historical and intellectual context of selected, key advances in neuroscience, how they were made and the impact they had on an understanding of the nervous system. Particular attention will be paid to advances in cellular and molecular neuroscience. Among the topics covered will be the discovery of monoamine neurotransmitters and of endocannabinoids, the role of neurotrophins in neural development, and prion-based diseases of the brain.
AS.080.306

AS.080.355. Computational Principles of Biological Vision. 3 Credits.
Even though we take it for granted, vision is a superpower. It is so central to how most of us interact with the world, and so effortless, that we are unaware of the astronomically complex computations that underlie it. There are no computer vision programs that can match the performance of the human visual system in understanding the real, physical, 3D world. On the biological side, vision is the most thoroughly studied sensory system. As such, vision is a rich target for computational understanding of the brain. Vision is the topic that both of us actively study, and remain passionately excited about. In this course, we present our up-to-the-minute synthesis of what we consider to be the most important insights into how vision, especially object vision, works, at the level of biological information processing. We believe the result is a coherent, mechanistic account of how the brain transforms images into visual understanding. We know of no textbook that provides a comparable viewpoint. In addition to presenting this visual information processing framework, we hope to teach you how to critically evaluate current research papers within that framework. To this end, we will be incorporating discussions of current research papers into our lectures and assignments. The course will feature a series of weekly lectures (delivered as videos) and a weekly assignment. The weekly assignment will be an essay, and will make up the largest portion of your grade. The remainder of your grade will come from one larger final essay. We will offer 2 weekly, voluntary Zoom meetings to discuss any questions about the material that might have come up.

AS.080.360. Diseases & Disorders of the Nervous System. 3 Credits.
(EN.580.421 AND EN.580.422) OR (AS.020.305 AND AS.020.306) OR AS.080.306 or instructor permission.

AS.080.366. Neuroscience of Pain. 3 Credits.
This course is a systems-oriented course focusing on the basic neural processing of pain signals in both the spinal cord and the brain. Class lectures will cover the anatomical and molecular basis for the transmission and perception of pain signals, basic concepts such as allodynia, hyperalgesia, peripheral and central sensitization, remodeling, the pathophysiology of chronic pain disorders and the cognitive and emotional aspects of pain. We will also discuss the regulation of pain signals by descending systems, and current practices and new advances in the treatment of pain.
Area: Writing Intensive
AS.080.305 OR AS.080.306 OR AS.020.312 or permission of instructor.

AS.080.370. The Cerebellum: Is it just for motor control?. 3 Credits.
The cerebellum is traditionally thought to be involved in movement and motor control, and observations of patients with cerebellar damage do in fact show motor deficits. However, since the proliferation of functional MRI, cerebellar activations have been observed in a surprising number of brain activation studies that were designed to investigate the neural correlates of cognitive function. Over the past 2 decades, an increasing number of investigators have tried to characterize the role of the cerebellum in cognitive function. Through lectures and reading discussions this course will survey cerebellar circuitry, neuroimaging and neuromodulatory methods for investigating the cerebellum, and traditional and non-traditional functions of the cerebellum, including cerebellar involvement in cognitive functions such as language, working memory, and executive control.
(AS.080.306 AND AS.080.203) OR AS.050.203

AS.080.411. Advanced Seminar: Neuroscience I. 3 Credits.
For students in the first semester of the BS/MS Program. Instructor permission required.

AS.080.412. Advanced Seminar: Neuroscience II. 3 Credits.
For students in the 2nd semester of the BS/MS Program. Permission Required.

AS.080.413. Advanced Seminar: Neuroscience III. 3 Credits.
For students in the 3rd semester of the BS/MS Program. Permission Required.

AS.080.500. Scientific Communication: Neuroscience. 0.5 Credits.
Scientific communication is crucial to encouraging engagement with the public and advancing science. The Scientific Communication course consists of a two hour research orientation session held at the beginning of the semester and a two hour exit session held at the end of the semester. In addition to the two in-person sessions, students will work with faculty and peers to hone their ability to communicate complex topics to a broad audience. These interactions will take place over the course of the semester via Blackboard and have a more flexible timeline. See special notes section for specific meeting day/time for the two in-person sessions. Students need to complete two semesters of Scientific Communications. Students are strongly encouraged to only take Scientific Communications when they are either actively involved in research or have completed at least three credits of research. See Neuroscience Research website for more details.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.505. Practicum in Language Disorders- Community Based Learning. 2 Credits.
This course provides the opportunity to learn about adult aphasias, language disorders which are one of the most common consequences of stroke. You will receive training in supportive communication techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Independent mode of transportation required. Co-listed as AS.050.500 in Cognitive Science. Find out more about the practicum site at https://www.leagueforpeople.org/scale.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.;Students must have earned an A- or Better in AS.050.105 OR AS.050.203 OR AS.080.203 OR AS.050.311, or obtain instructor's permission.

AS.080.511. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.531. Research Neuroscience-Freshmen. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.534. Neuroscience Research- Freshmen. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.541. Research Neuroscience – Neuroscience Majors. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.544. Research Neuroscience – Neuroscience Majors. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.555. Neuroscience DUS Approved Research. 1 - 3 Credits.
TBA
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.582. Neuroscience: Internship. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.592. Research Neuroscience – Freshmen. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. See the Neuroscience Research website for more details (https://krieger.jhu.edu/neuroscience/research/research-credit-requirements/).
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.080.594. Research Neuroscience – Neuroscience Majors. 1 - 3 Credits.
Students will receive a hands-on experience conducting Neuroscience Research. In addition to participating in laboratory research students are required to submit a research style paper summarizing their work (https://krieger.jhu.edu/neuroscience/research/research-paper-guidelines/). Students are also strongly encouraged to take Scientific Communication when they are either actively involved in research or have completed at least three credits of research. AS.080.601. Neuroeconomics -Graduate Level.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience. Only graduate students can register for this course. Instructor signature is required.

AS.080.610. Experiential Learning: HopKids – Kennedy Krieger Institute.
This experiential learning experience provides the opportunity to learn and interact with children recovering from brain, spinal, and musculoskeletal injuries. Students will travel to the Kennedy Krieger Institute to volunteer in the Child Life Department where they will participate in a variety of therapeutic activities including playing with the children and helping them achieve goals on Saturdays (days/times TBA). Students will gain valuable clinical experience while learning patient empathy. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

AS.080.612. Experiential Learning: KEEN (Kids Enjoying Exercise Now).
In this experiential learning experience, students will work with children who have a variety of neurological disabilities, including autism, cerebral palsy and Down syndrome through exercise and recreational activities. We partner with the KEEN (Kids Enjoy Exercise Now), a nonprofit organization. Student “coaches” will receive a profile for the KEEN athlete that they will pair up with during a session. Students will receive initial training and then select 4 sessions to attend. Sessions are held on the first and third Sunday of each month during the semester at KEEN centers in Maryland. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be via student carpools using Zipcars, personal vehicles or Hop Vans. No credit - S/U Grading Only

AS.080.614. Experiential Learning: Making Neuroscience Fun.
The goal of Making Neuroscience Fun (MNF), a community outreach program, is to educate Baltimore city and county elementary school students, on how to achieve good mental health by focusing on the role the brain plays in our Social, Physical, Emotional and Cognitive (SPEC) health. The MNF- Brain Health: It’s SPECtacular program focuses on using scientific research as the foundation for developing information about mental health and relaying the information in an age-appropriate manner. The elementary school students (pre-K through 5th grade) learn about their brain and how to keep it healthy and our students learn valuable communication skills. Hopkins students will receive initial training and certification on content & presenting skills prior to participating and will then be part of the new launch of the program. In order to participate, students must be available either 7am-11am or 11am-3pm at least one day per week, Monday-Friday. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times of the orientation/exit sessions). Transportation to the schools will be via student carpools using Zipcars or personal vehicles. No credit - S/U Grading Only

AS.080.616. Experiential Learning: HopKids- Children's Center.
This experiential learning experience provides students the opportunity to learn, play and interact with children receiving treatment in over 20 different specialties including dermatology, endocrine, GI, immunology, urology, plastics and hematology. Students will volunteer in outpatient clinics at the Johns Hopkins Children’s Center where they will encourage, provide developmentally supportive play for children and participate in a variety of activities including art projects, coloring, board games, and reading. Students will gain valuable clinical experience and be exposed to a wide range of children with a variety of diseases/illnesses. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times. Students will sign up for 5 shifts on a first-come, first-serve basis after the mandatory orientation. Shifts are Mondays 1pm-3pm, Tuesdays 10am-12pm, Wednesdays 1pm-3pm, Thursdays 10am-12pm and Fridays 10am-12pm throughout the semester. Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Volunteer shifts will take place at outpatient clinics in the Rubenstein Child Health Building. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

AS.080.618. Experiential Learning: Helping an Aging Community: Social and Cognitive Support for Seniors.
This experiential learning opportunity provides a hands-on experience, working side-by-side with elderly individuals at the Keswick Multi-care Center and the Roland Park Place. Students will have a chance to interact with residents that have both short-term and long-term cognitive and physical impairments. The residents typically live on the premises but may also be participating in a daytime care only program. Students will interact with the residents in various enriching ways in order to develop a better understanding of how our mind and body ages with time. Students will gain hands-on experience working with residents with dementia, Alzheimer’s and other cognitive impairments that effect the body and the brain. 4 students per semester. Students MUST attend a mandatory orientation and a mandatory exit session to be held onsite (Day/Time TBD). Students are required to provide a written description of their experiences and to discuss their experiences at the exit session. Time Commitment: 2-3 hours a week for the entire semester. Must provide medical immunization records to include- flu shot and PPD (tuberculosis). Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only

AS.080.620. Theoretical and Computational Neuroscience.
The objective of this class is to introduce fundamentals of quantitative neuroscience. The focus is on understanding basic information processing in neurons and networks of neurons, with some more advanced topics added. Knowledge of basic calculus and linear algebra is required.

AS.080.630. Bodian Seminar Series.
The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures, which will be announced per e-mail. Undergraduate students who register for this course are asked to study a publication by the speaker, as provided with the announcement, and to prepare a question for each speaker together with a brief discussion of the possible answers. Permission required for undergraduate students.

AS.080.631. Bodian Seminar Series.
Graduate students and Seniors with instructor permission. The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures. About 12 lectures are scheduled per semester (see http://www.mb.jhu.edu/seminars.asp). Speakers, titles of lectures, and dates are announced to participants per e-mail. The announcements also include links to one or two recent publications of the speaker. Undergraduate students who register for this course are asked to study these papers and to prepare a question for each speaker together with a brief discussion of the possible answers. Question and discussion have to be in writing and turned in the day before the lecture. Undergraduates must e-mail the instructor for permission (cfetsch@jhu.edu) prior to registering for the course.

AS.080.660. Commencement Project.
This course is for BA/MS students that have completed their year of research and are now working on their final thesis. In this course, students devote their semester to preparing their final thesis documentation and move forward with their Master's Thesis Defense which is the last piece to the program. This course is for BA/MS student only and students should only register for this course in their last semester in the program.

AS.080.849. Teaching Practicum.
Permission required. Graduate students only.

AS.080.850. Mentored Research: Neuroscience I.
For students in the BS/MS Program first semester. Permission required.

AS.080.851. Mentored Research: Neuroscience.
Permission Required. For students in the BS/MS Program.
Area: Writing Intensive

AS.080.852. Mentored Research: Neuroscience II.
For students in the BS/MS Program second semester. Permission required.

AS.100 (History)

AS.100.102. The Medieval World. 3 Credits.
This course explores selected topics in the political, economic, social, and intellectual history of Western Europe in the wider world in the period between the fall of the Roman Empire and the fourteenth century. Special emphasis will be given to understanding the ways in which medieval society functioned as it reorganized itself after the almost total collapse of the ancient world. Topics include: religious plurality, sovereignty and subjecthood, flourishing of learning, chivalric culture, crusading, and the plague and its effects. We will follow the interplay between material and cultural forces in the processes of social organization.
Area: Writing Intensive

AS.100.103. Early Modern Europe & the Wider World. 3 Credits.
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.

AS.100.104. Modern Europe and the Wider World. 3 Credits.
The Modern European World familiarizes students with key moments, ideas, communities, individuals, and movements which have formed European History since the Revolutionary era.

AS.100.108. Making America: Black Freedom Struggles to 1896. 3 Credits.
From slave revolts on the West African coast to national conventions and civil war, people of African descent have defined freedom and struggle in terms of kinship, diasporic connection, and fighting antiblack violence. This course explores the arc of that history and its role in the making of America.

AS.100.113. Making America: Race, Radicalism, and Reform. 3 Credits.
This course examines race and social movements in America from the Revolution to 1921.

AS.100.115. Modern Latin America. 3 Credits.
A class combining Latin American history since independence and digital humanities (revised with 2021 student feedback). Students will build guided research projects while thinking about questions of republicanism, freedom and unfreedom, migration, and development.

AS.100.122. Introduction to History of Africa (since 1880). 3 Credits.
An introduction to the African past since 1880.
Area: Writing Intensive

AS.100.123. Introduction to African History: Diversity, Mobility, Innovation. 3 Credits.
Introduction to three major themes in African history, from the precolonial era to the present.
Area: Writing Intensive

AS.100.128. Approaches to Jewish History. 3 Credits.
The course will provide an introduction to the study of Jewish History.

AS.100.129. Introduction to Modern Jewish History. 3 Credits.
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel.

AS.100.154. Modern Mexico from the Alamo to El Chapo. 3 Credits.
In this course we will use popular depictions of Mexico's heroes and villains, tragedies and triumphs to delve into both the nation's history and the importance of thinking historically.

AS.100.165. Japan in the World. 3 Credits.
This course is an introduction to Japan's history from 1800 to the present with emphasis on the influences of an increasing global circulation of ideas and people. Topics include the emperor system, family and gender, imperialism, World War II, the postwar economy, and global J-pop.

AS.100.170. Chinese Cultural Revolution. 3 Credits.
The Cultural Revolution was Mao Zedong's last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. (Previously offered as AS.100.219 and AS.100.236.)

AS.100.180. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography.

AS.100.190. Modern African American History, 1896 – present. 3 Credits.
This course introduces students to the defining social, political, and cultural moments that reflect the experience of African Americans in the United States, 1896 – present. Topics include the Great Migration, the Harlem Renaissance, the Black Freedom Struggle, African American politics, urban rebellion, mass incarceration, Hip Hop culture, the current movement for Black Lives, and more.

AS.100.193. Undergraduate Seminar In History. 3 Credits.
The first semester of the two-semester sequence required for majors, this course introduces students to the theory and practice of history. Following a survey of approaches to the study of the past and an introduction to research methods, students undertake original research and write an extended essay. Intended for history majors and prospective majors.
Area: Writing Intensive

AS.100.194. Undergraduate Seminar in History. 3 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Area: Writing Intensive
AS.100.193

AS.100.216. Reformation and Counter Reformation Europe. 3 Credits.
This course explores the series of religious and political conflicts that make up what are known now as the Reformation and Counter-Reformation in Europe.

AS.100.230. Bones, Blood, and Ecstasy: Religious Culture in Western Christendom, 1100-1700. 3 Credits.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture.
Area: Writing Intensive

AS.100.231. Worlds of Hip Hop. 3 Credits.
Worlds of Hip-Hop explores hip-hop as an arts movement whose forms, conventions, and standards responded to the specific political and social conditions to address questions of freedom and community.

AS.100.233. History of Modern Germany. 3 Credits.
There is more to Germany than beer, BMWs, and Bayern Munich. We explore politics, culture, economics and society to understand Germany and its role within Europe and the world from the 18th century to the ‘Refugee Crisis’, climate change and EU politics today.

AS.100.238. Expansion and the Early U.S. Republic. 3 Credits.
This course will introduce students to some major issues and problems in the history of the Early U.S. Republic, c. 1750 to 1815, by focusing on the theme of “expansion.”

AS.100.240. American Cultural Criticism. 3 Credits.
This course explores 20th century U.S. history through the works of writers and artists. We will ask how essays, novels, performance, and art can function as cultural and social criticism.
Area: Writing Intensive

AS.100.241. American Revolution. 3 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the first republic in the Americas, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance.
Area: Writing Intensive

AS.100.243. China: Neolithic to Song. 3 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered.

AS.100.248. Japan in the World. 3 Credits.
An introduction to Japan’s history from 1700 to the present, with emphasis on the influences of an increasing global circulation of ideas, goods, and people in early modern and modern times. Topics include samurai, nation-building, gender, imperialism, World War II, the postwar economy, and contemporary popular culture.

AS.100.250. The American Revolution in Unexpected Places. 3 Credits.
This course considers the American Revolution from the perspective of locations beyond the thirteen rebelling colonies. Covering a range of global hotspots, the focus is on events from 1763 to 1788.

AS.100.251. West African History. 3 Credits.
This course explores the rich history of West Africa and its place in the broader world. Topics include the environmental history of the Sahara desert, West African empires, and the rise of Nollywood and contemporary culture.
Area: Writing Intensive

AS.100.268. Jewish and Christian mysticism in the Middle Ages and the Early Modern Period. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.

AS.100.270. Europe since 1945. 3 Credits.
This class focuses on Europe from the end of World War II until today. We will discuss such topics as the Cold War, social democracy, the welfare state, the relationship to the US and the Soviet Union, decolonization, migration, 1989, European integration, neoliberalism, and the EU. We will discuss and analyze academic literature, movies, documentary films, textual and visual primary sources.

AS.100.273. A Comparative History of Jewish and Christian Mysticism. 3 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 11th and the 19th centuries.

AS.100.275. Passing in American Culture. 3 Credits.
This course explores passing narratives – stories that feature people who cross race, class, ethnic, or gender boundaries. We will consider what passing narratives can teach us about power and identity, especially as power is presumed to reside in the self and race is presumed to no longer matter.

AS.100.282. Race & Power in Modern South Africa. 3 Credits.
Overview of modern South African history, with a focus on the origins of the racial state and the development of black liberation movements.

AS.100.283. Making and Unmaking Queer Histories, 1800-Present. 3 Credits.
Making and Unmaking Queer Histories introduces students to the major themes and historical developments which shape contemporary understandings of LGBTQ+-identified subjects and communities in the US and Western Europe.
Area: Writing Intensive

AS.100.291. Medicine in an Age of Empires, 1500-1800. 3 Credits.
How did medicine emerge as a distinctive body of knowledge and a profession in the early modern period? The answers lie in the histories of disease, empire, and global commerce.

AS.100.293. Historical Methods, Archives and Interpretations. 3 Credits.
Surveys methods, approaches, and practices of historical writing. It asks students to think about the questions historians ask, the archives they use, and the arguments they make. Students will be introduced to subversive and emancipatory potential of contemporary scholarship that importantly incorporates subaltern, marginalized, or formerly forgotten voices.
Area: Writing Intensive

AS.100.294. Undergraduate Seminar in History. 3 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Area: Writing Intensive

AS.100.295. American Intellectual History since the Civil War. 3 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Area: Writing Intensive

AS.100.301. America after the Civil Rights Movement. 3 Credits.
This course explores the history of late twentieth-century America by examining the social, economic, and political legacies of 1960s civil rights protest for the 1970s, 1980s, and 1990s.
Area: Writing Intensive

AS.100.303. Old Regime and Revolutionary France. 3 Credits.
Examines the history of France from the reign of Louis XIV to the French Revolution, focusing on early modern society, popular culture, absolutism, the Enlightenment, overseas empire, and the French and Haitian Revolutions.
Area: Writing Intensive

AS.100.304. Ecstasy: Mystical, Visionary, and Holy Women and their Writings in Medieval Europe, ca. 1000-1400. 3 Credits.
This course uses the writings of medieval women to explore their social and religious worlds and orients visionary writing within the broader narrative of religious movements from the 12th-14th centuries.
Area: Writing Intensive

AS.100.305. Peter to Putin: Survey. 3 Credits.
Seminar on modern Russia. No midterm and no final. 6 short weekly journals, two short papers, and two small quizzes.
Area: Writing Intensive

AS.100.310. The French Revolution. 3 Credits.
Political, social and cultural history of a turning-point in European history that witnessed the birth and death of democracy.

AS.100.314. The Enlightenment. 3 Credits.
Examines the Enlightenment, an intellectual movement that swept Europe in the eighteenth century to shape the modern world. Topics include science and religion; print culture; gender and sociability; political economy; and race, slavery, and colonialism.
Area: Writing Intensive

AS.100.319. History of American Reproductive Politics. 3 Credits.
This course examines reproductive politics in the United States from the colonial era to the present. Topics include contraception, abortion, and sterilization, emphasizing the impact of gender, class, and race.
Area: Writing Intensive

AS.100.321. Political Thought and Social Transformation in the Haitian Revolution and Early Independent Mexico, c. 1789-1850. 3 Credits.
This course will examine both the Haitian Revolution and the early period of Mexican independence by engaging with the ideas of actors within these events in international contexts.
Area: Writing Intensive

AS.100.323. America in the 1960s. 3 Credits.
The years between 1959, when the course begins, and 1971, when it ends, were tumultuous and divisive. This course explores the political, racial, and cultural struggles of a half century ago.
Area: Writing Intensive

AS.100.324. American Origins, ca. 1619-ca. 1776. 3 Credits.
This discussion-based seminar focuses on Colonial American history, using maps, objects, and other primary sources to examine such topics as colonialism, slavery, war, disease, trade, empire, and cultural encounters.

AS.100.326. From Blood Feud to Black Death: European Society in the High Middle Ages, 1000-1400. 3 Credits.
Explores the development of society and institutions in the medieval west including kingship and law, religion and difference, gender and ideology. Looks closely at social responses to change and adversity.

AS.100.327. The Islamic Age of Empires. 3 Credits.
In this course we will survey the political, social, intellectual, and cultural history of the three Islamic early modern gunpowder empires that ranged from “the Balkans to Bengal”: The Ottomans (1300-1922), the Safavids (1501-1736), and the Mughals (1526-1858).
Area: Writing Intensive

AS.100.329. Russian Imagination in Three Revolutions. 3 Credits.
Russian Literature and the arts in Revolutions of 1905, 1917, and Stalin era to 1941. Req: 6 journals of 350 words, 2 papers 1250, 2 quizzes. No midterm or final.
Area: Writing Intensive

AS.100.333. Making Money in the Atlantic World. 3 Credits.
The history of money is a history of power exercised by states, institutions, and individuals. It is also a history of the structural possibilities and constraints faced by people in the past. We will address making, using, and conceptualizing money in the early modern Atlantic World, a time and a place of expanding empires, extractive enterprises, and changing categories of difference like race, gender, and class.

AS.100.335. The American West. 3 Credits.
This course explores the expansion and creation of an American West—and its inhabitants—from the Constitution to the end of the nineteenth century.
Area: Writing Intensive

AS.100.336. The United Kingdom? A Cultural History of Four Nations, 1707-Present. 3 Credits.
This course delves into the variegated, often divergent national politics, social landscapes, and cultural shifts in England, Scotland, Wales, and Ireland since Britain’s Acts of Union in 1707.
Area: Writing Intensive
AS.100.101 OR AS.100.102 OR AS.100.103[OR AS.100.104

AS.100.340. Asian American Art and Activism: Third World, Feminist, and Queer Solidarities. 3 Credits.
This interdisciplinary course surveys critical themes related to Asian American art and activism including perspectives from history, art and visual culture, literature and gender and sexuality studies.
Area: Writing Intensive

AS.100.343. The Annales School. 3 Credits.
This is not a typical history course but one on historical theory and modern historiographical thought. How did historians in the past generations attempt to analyze the past? To what extent is history connected to other disciplines? What was the French contribution to contemporary historiography? What is "new history"? In this seminar, we are going to examine the scholarship of the French Annales, arguably the most influential and revolutionary “school” of historiography in the twentieth century. Students will read selected works of the Annales historians and discuss concepts such as economic history, serial history, longue durée, conjuncture, total history, mentalité, historical psychology, and historical anthropology.
Area: Writing Intensive

AS.100.346. Soviet-American Cold War. 3 Credits.
The focus will be on Soviet-American interactions, Cold-War Cultures, and the impact on both societies.
Area: Writing Intensive

AS.100.347. Early Modern China. 3 Credits.
The history of China from the 16th to the late 19th centuries.
Area: Writing Intensive

AS.100.348. 20th-Century China. 3 Credits.
Survey of the history of China from ca. 1895 to ca. 1976.
Area: Writing Intensive

AS.100.349. Entertaining America: Popular Culture from Blackface to Broadcast. 3 Credits.
"Entertaining America" will trace the history of popular culture in the United States, starting inthe 1830s, when blackface minstrelsy initiated a new wave of commercial performance, andending in the 1920s, when records, films, and radio ushered in the era of mass culture.
Area: Writing Intensive

AS.100.354. Playing in the White: Black Writers, the Literary Colorline and Writing Whiteness. 3 Credits.
This course will turn to known and not-so-known black writers during the early to mid-twentieth century who defied literary expectation and wrote stories that featured or focused on whiteness. We will consider what whiteness offered black writers and the political work that their literary experimentations did for a white American publishing industry.

AS.100.355. Sex and Society in Early Modern Europe. 3 Credits.
This course will examine how early modern views on the body, gender, and sexuality shaped beliefs about the abilities and rights of women and men.
Area: Writing Intensive

AS.100.360. The Modern British World: Imperial Encounters, Regimes, and Resistance, from the American Revolution to the present. 3 Credits.
The Modern British World introduces some of the major events, themes, and controversies that led to Britain’s global dominance and ultimate decline as an imperial power. This course focuses on varying forms of imperial governance, the interrelationships between metropole and colony, and the formation of British and colonial national identities.
Area: Writing Intensive

AS.100.361. Age of Tolstoy. 3 Credits.
Tolstoy and his era, 1820s to 1910s. Topics include state and politics, empire, the Russian identity, and forms of cultural expression. Students consider "War and Peace" and other masterworks.
Area: Writing Intensive

AS.100.365. Culture & Society in the High Middle Ages. 3 Credits.
This course will cover the period commonly known as the High Middle Ages, that is, the civilization of Western Europe in the period roughly from 1050 to 1350. . It is a period of exceptional creativity in the history of Western Europe and in medieval history specifically, a time when many of the most characteristic institutions of Europe came into being.
Area: Writing Intensive

AS.100.369. Themes and Concepts in Jewish History. 3 Credits.
The course will introduce the student to the main themes and debates in Jewish historiography from the 19th century to the present.

AS.100.371. Modernity, Catastrophe, and Power in Jewish History: 1881 to the Present. 3 Credits.
Jewish history, politics, and culture across a century of enormous transformations and transformative enormities in Europe, the US, and the Middle East. Topics include: impacts on Jewish life of World War I, the Russian Revolution, and the post-imperial reordering of the Eastern Europe and the Middle East; Zionism and other modes of Jewish contestatory politics; the consolidation of American Jewry; Nazism and the Holocaust in Europe; formation and development of the State of Israel; the global reordering of Jewish life amid cross-currents of the Cold War, conflict in the Middle East, and success in the US. Substantial attention to recent and contemporary history including the dramatic changes in Israeli society and polity over the past forty years and the ongoing Israeli-Palestinian conflict.
Area: Writing Intensive

AS.100.373. Crime, Punishment, Felony and Freedom: Law and Society in Pre-Modern England. 3 Credits.
Using legal texts as a window into English society, we will address the changing nature of royal power, trial by jury, treason, felony, and the freedoms enshrined in the Magna Carta.

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3 Credits.
Examines case-studies of imperial conquests (Islamic, Mongol, reconquista, early colonialism) and attendant changes in religion (Christianization; Islamization) and in language (Arabization; transition from Latin to European vernaculars) across medieval Eurasia.

AS.100.375. Histories of Women and the Vote. 3 Credits.
The year 2020 will mark 100 years since the 19th Amendment guaranteed American women the right to vote. Or did it? This course will examine the long history of women’s voting rights in the United States, including the story that extends from a convention at Seneca Falls, NY to a constitutional amendment. It will also examine alternative stories, especially those of women of color whose campaigns for the vote did not end in 1920 – and continue until today.

AS.100.377. The Age of Reason on the Silver Screen: Cinematic Representations of the Enlightenment. 3 Credits.
This course will discuss the problem of historical representation on the basis of an analysis of movies depicting the Age of the Enlightenment.

AS.100.379. Brazil History and Cultures: A Glance from Baltimore. 3 Credits.
Using textual and visual documents (including books from Peabody Library), we will examine the contrasts of Brazilian history and culture, and its connections with 19th and 20th century Baltimore.

AS.100.383. Conversion and Apostasy in the Middle Ages. 3 Credits.
Compares religious transformation in medieval Europe and the Middle East (ca. 600-1500), including conquest and conversion; conversion narratives; apostasy, martyrdom and other encounters between medieval Jews, Christians, and Muslims. Pre-requisite for enrollment: Students must have taken one history course.

AS.100.384. Intoxicated: Commodities & Globalization in the Early Modern World. 3 Credits.
Each week we examine a commodity that defined a new era of global connectivity in the centuries after 1492, including money, medicines, slaves, and fashion.

AS.100.386. The Cold War as Sports History. 3 Credits.
Sport is key to understanding the Cold War. We will investigate how the Cold War has shaped sports, the Olympic movement, the role of athletes at home and abroad, how sports were used in domestic and foreign policy, and how Cold War sports reinforce or challenge notions of race, gender, and class.
Area: Writing Intensive

AS.100.387. Everyday Life in the Medieval Middle East. 3 Credits.
Explores the daily lives of non-elites in the medieval Middle East—food; housing; clothes; marriage and divorce; urban festivals—through primary documents (e.g. letters, court records) and artifacts (e.g. clothing).Pre-requisite for enrollment: Students must have taken one history course.

AS.100.389. History of Law and Social Justice. 3 Credits.
Cause lawyering aims to change the status quo. This course examines histories of this approach to social justice, from battles against the slave trade to contemporary campaigns for marriage equality.

AS.100.390. The Medieval Crusades: Cultural Convergence and Religious Conflict, 1000-1400. 3 Credits.
This course explores the origins of the idea of crusading, examines the experiences of those who traveled east, and analyzes the cultures of contact that developed ca. 1095 and 1291.

AS.100.392. The Art of Lying: Lie, Dissimulation, and the "Fake News" in Pre-modern Europe. 3 Credits.
The course will examine the early modern attitudes to lie and dissimulation.

AS.100.393. Think Globally, Research Locally: Early Maryland and the World. 3 Credits.
A research-intensive seminar, this course uses the rich history of Maryland to approach broader themes in early modern American and global history including colonialism, slavery, revolution, race, gender, and sex.

AS.100.394. Brazilian Paradoxes: Slavery, Race, and Inequality in Brazil (from a Portuguese Colony to the World's 8th Largest Economy). 3 Credits.
Place of contrasts, Brazil has a multi-ethnic cultural heritage challenged by social and racial inequalities. Its political life remains chaotic. We will examine these problems through Brazilian history and culture.

AS.100.395. History of Global Development. 3 Credits.
This course explores development as an ideology and a practice. From colonialism to the Cold War to contemporary NGOs, we will interrogate the history of our attempts to improve the world.
Area: Writing Intensive

AS.100.396. The Gender Binary and American Empire. 3 Credits.
This discussion-based seminar will explore some of the ways that the sex and gender binary was produced out of American statecraft in the late nineteenth and twentieth centuries. Particular attention will be paid to US imperialism, both domestically in its settler form, as well as in Hawaii, the Caribbean, and the Pacific. What happens to the study of the modern gender binary if it is treated as a transnational artefact of US imperialism's encounter with a multitude of cultures and nations?
Area: Writing Intensive

AS.100.397. The Trouble with "Diversity". 3 Credits.
Through archival, literary, and other cultural texts, this course considers the history of "diversity" as both a practice and concept, beginning with the arrival of "colorblindness" in the 1890s and moving through recent approaches to institutionalized multiculturalism.
Area: Writing Intensive

AS.100.404. John Locke. 3 Credits.
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.
Area: Writing Intensive

AS.100.408. Theorizing the Age of Enormity: Social Theory and the History of the 20th Century. 3 Credits.
We will read and analyze key works of social and critical theory produced in relation to 20th and 21st century problems of state and society, nationalism, empire, totalitarianism, genocide, capitalism, political order, gender, race, sexuality, secularism, religion, environmental catastrophe. Possible readings include Weber, Du Bois, Adorno, Arendt, Foucault, Balibar, Beckamong others.
Area: Writing Intensive

AS.100.409. Israel and Palestine from 1967 to the Present: a Current and Entangled History. 3 Credits.
Through intensive and extensive reading, we will explore contemporary Israeli society, politics, and culture, contemporary Palestinian society, politics, and culture under occupation, and the historical processes that have shaped both societies and their ongoing entanglement.

AS.100.410. Decolonizing The Museum: Case Studies. 3 Credits.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

AS.100.413. London 1580-1830: The History of Britain's capital city. 3 Credits.
Seminar-style class analyzing the social, cultural, gender, religious, economic, and political history of London from Shakespeare's time through revolutions, plague, fire, and commercial, colonial, and industrial expansion.
Area: Writing Intensive

AS.100.415. The Holocaust in Jewish History and in Global Culture. 3 Credits.
Key works on the history of Nazi Germany's murder of European Jewry during the Second World War; Jewish responses; the recasting of Jewish and global thought in relation to this signal event; genocide and 'ethnic cleansing' since the Holocaust.
Area: Writing Intensive

AS.100.416. History through Things: Objects, Circulation, and Encounters in the Medieval World. 3 Credits.
Objects from the past offer a powerful window into a set of experiences not recorded in texts. We will follow objects and things as they appear in lists, letters, and descriptions, as they travel surprising routes, and bring to life the medieval world before 1400.
Area: Writing Intensive

AS.100.421. Sex, Law and Islam. 3 Credits.
ISIS, “virgins” in paradise, the sexual slavery of Yazidi women…. This course will use anthropological and historical studies to examine the long history of how rules and understandings about sex, sexuality, and gender have mattered in how people think about Islam.
Area: Writing Intensive

AS.100.422. Society & Social Change in 18th Century China. 3 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?

AS.100.423. Multiethnic Japan. 3 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.

AS.100.424. Women & Modern Chinese History. 3 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women’s experiences for their own political and social agendas.
Area: Writing Intensive

AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Area: Writing Intensive

AS.100.430. Gender and Sexuality in African History. 3 Credits.
An upper-level history reading seminar with a focus on histories of gender and sexuality in colonial and postcolonial Africa.

AS.100.433. Free Speech and Censorship in the United States. 3 Credits.
This undergraduate research seminar examines censorship laws, practices, and debates over the past century; topics include political radicalism, indecency, pornography, and racist hate speech. In addition to discussing common readings, each student will choose a censorship case or issue to research and present to the class.

AS.100.438. The City Victorious: Medieval Cairo. 3 Credits.
What was medieval Cairo like? Students explore urban life in this imperial capital (969-1517), including food and market habits; relations between Jews, Christians, and Muslims; patronage; plague, drought, and famine.Pre-requisite for enrollment: Students must have taken two history courses.

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Area: Writing Intensive

AS.100.444. Migrants and Refugees in Africa. 3 Credits.
A history of forced and voluntary migration and displacement in Africa, its causes and consequences, with a focus on refugees and labor migrants since 1960.

AS.100.445. Revolution, Anti-Slavery, and Empire 1773-1792: British and American Political Thought from Paine, Smith, and the Declaration of Independence to Cugoano, Wollstonecraft, and the Bill of Rights. 3 Credits.
This seminar-style course will focus on discussing British and American political thought from the "Age of Revolutions", a period also of many critiques of Empire and of many works of Antislavery. Readings include Paine's Common Sense and Rights of Man, the Declaration of Rights, the Constitution and Bill of Rights, the Federalist Papers; works by Smith, Burke, and Wollstonecraft; and antislavery works by Cugoano, Equiano, Rush, Wesley, and Wilberforce.
Area: Writing Intensive

AS.100.450. History Research Lab. 3 Credits.
In this course, students participate in a research “laboratory,” engaging in direct research on an area of faculty’s research, leading to the development of a collective, digital humanities project.
Area: Writing Intensive

AS.100.478. Japan from its Peripheries. 3 Credits.
An advanced undergraduate seminar on the history of modern Japan from the perspective of regions and people often considered as belonging to its geographical, cultural, social, and political peripheries.
Area: Writing Intensive

AS.100.482. Historiography of Modern China. 3 Credits.
Study of Western, Chinese, and Japanese understandings of the history of China, emphasizing their implications for cultural understanding and for policy.

AS.100.486. Jim Crow in America. 3 Credits.
This course explores the history, politics, and culture of legalized racial segregation in the United State between the mid-nineteenth and twentieth centuries – a regime commonly known as “Jim Crow.”
Area: Writing Intensive

AS.100.490. Writing Power, or Dueling in Print with Light Sabers: An RIC Seminar on Scholarly Composition. 3 Credits.
A first-of-its kind seminar hosted by the Program in Racism, Immigration, and Citizenship, this course explores the practice of composition for professional writers. It considers the “light” and “dark” sides of clear, direct scholarly writing and intentional, academic obfuscation, respectively. Attendees will also learn strategies and potential hazards that accompany the written description of power in the Humanities and Social Sciences.
Area: Writing Intensive

AS.100.494. Senior Honors Seminar. 1 Credit.
A two-semester coordinating seminar for history majors writing senior honors theses. Admission is granted by instructor only after the student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Area: Writing Intensive
AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.

AS.100.495. Senior Honors Seminar. 1 Credit.
The Senior Honors Seminar is a coordinating seminar for senior history majors who are writing senior honors theses and wish to graduate with departmental honors. To be taken concurrently with AS.100.508, Senior Thesis.
Prerequisite(s): AS.100.508
Area: Writing Intensive

AS.100.497. 1968: Rebels, Revolutions & the Right-Wing Backlash. 3 Credits.
The sixties were a polarizing decade of unrest, revolutions, and fundamental change across Europe and the US. We will discuss 1968 through the lens of national case studies, the Cold War, and the history of Baltimore. This is a community-engaged class!
Area: Writing Intensive

AS.100.507. Senior Thesis. 3 Credits.
Two semesters. Senior thesis writers will undertake research in primary materials that will explore a significant historical issue or problem. The DUS will confirm admission as soon as the student has selected a faculty thesis advisor: the outside deadline for confirmation is May 1. AS.100.507 is to be taken concurrently with AS.100.494 Senior Honors Seminar.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.100.508. Senior Thesis. 3 Credits.
This seminar is required for senior history majors who are writing senior honors theses and wish to graduate with departmental honors.
Area: Writing Intensive
AS.100.507;You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.100.535. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.100.536. Independent Study. 1 - 3 Credits.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.100.601. Decolonizing The Museum: Case Studies.
How do museums represent the world? The course will focus on the colonial legacy of museums and complicate discourses of decolonization by looking at a range of case studies. We will study the world's fairs, artworks, artifacts, collections, curatorial practices, exhibition histories, repatriation requests, and exhibitionary modes of display, in order to analyze their relationship to histories of decolonization, temporality, translation, untranslatability, spectatorship, provenance, and the life of objects.

AS.100.602. The French Revolution.
Introduces graduate students to the rich historiography of the French Revolution. Topics include: revolutionary origins, political culture and radicalization, citizenship, violence, family & gender, the search for stability after the Terror, global revolution, Napoleon's Brumaire coup.

AS.100.603. Readings in the Early U.S. Republic.
Small intensive group reading: the course is primarily intended for students working on their graduate field lists. Other formats are possible with permission of the instructor.

AS.100.605. Modern Britain & the British Empire.
Modern Britain and the British World is a graduate seminar which familiarizes students with major themes and historiographic debates in Modern British and Modern British Imperial History.

AS.100.607. Consumer Revolution in Global Perspective.
First semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include cultural theory; fashion, gender, and social identity; capitalism, retail, and credit; Enlightenment and the public sphere; political economy; overseas empire; globalization; and the Atlantic revolutions.

AS.100.608. The Consumer Revolution in Global Perspective.
Second semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include capitalism and consumption; political economy; fashion, gender, and identity; Enlightenment and the public sphere; globalization; empire and colonization; and the Atlantic revolutions.

AS.100.609. "Baroque" as a Historical Category.
This seminar will discuss the use of the concept of the "Baroque", as developed in the history of art, architecture, and music, as a category of historical periodization.

AS.100.610. Readings in Medieval Islamic Cultural History.
The seminar examines scholarship on central questions in medieval Islamic cultural history including historical writing; the history of education and scholarly cultures; cultural patronage and urban development.

AS.100.613. Modern Japanese and Korean Histories.
A reading seminar on the interconnected histories and historiographies of Japan and Korea in the nineteenth and twentieth centuries.

AS.100.614. Seminar in Modern Chinese History.
A seminar covering major milestones in research on late imperial and modern Chinese history, primarily in English.Open to undergraduates with the permission of the instructor.

AS.100.615. States, Scribes, and Archives: Medieval Arabic Documentary Cultures.
Historical survey of scribal and archiving practices of medieval Islamic states (in comparative perspective); includes close readings of primary documents, including legal deeds, petitions, edicts, fiscal receipts, and administrative reports.

AS.100.616. Post-WWII French and Francophone Writing On History.
This seminar will focus on texts by post-1945 authors who wrote in French and engaged with what it means to write about the past and how to do so. Among those we will focus on are: Aimé Césaire, Frantz Fanon, Assia Djebbar, Simone de Beauvoir, Michel Foucault, Félix Guattari and Gilles Deleuze, Paul Ricoeur, Alain Corbin, Arlette Farge, François Hartog, Paul Ricoeur, Etienne Balibar, Jacques Rancière, Paul B. Preciado, Fernand Braudel.

AS.100.617. Black Political History and Activism in Modern America.
This course focuses on the emergence and development of various strains of Black political thought and action within the modern US. Our course will explore themes of equality, citizenship, democracy, and freedom throughout the 20th Century, specifically as it pertains to the Black experience in America.

AS.100.618. Historiography of Law and Empire.
Introduction to recent work on the history of law and empire, with a focus on critical legal history perspectives.

AS.100.619. Early Modern France.
The second part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the French Revolution.

AS.100.620. Early Modern France and the French Empire.
Part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the early nineteenth century. Topics include: state formation; political culture; political economy; commercial capitalism; the Enlightenment; popular culture; empire, race, and slavery; and the French and Haitian Revolutions.

AS.100.621. Historiography of the Western European 1970s and 1980s.
How have historians grappled with the quite recent past? We will explore histories of the 1970s and 1980s, with a focus on France, Germany, and the UK, as well as transnational and post-decolonization approaches.

AS.100.622. Religion in Modernity: Theories and Histories.
Drawing on key works in classic and contemporary social theory of religion and secularity as well as historical, ethnographic, and sociological monographs, this course investigates some scholars' answers to the question of why we might want to take "religion in modernity" as an object of study (or not), what kinds of roles and importance religion (or various institutions, impulses, practices, and ideas connected to major faith traditions) has/have arguably enjoyed in an arguably global modernity often imagined as intrinsically secular, whether and how it matters that the category of religion itself may be a modern invention intertwined with specifically Christian-European and European imperial and colonial projects, whether and how we should take “secularism” or “secularity” as our object of study no less than or more than religion, what special kinds of research agendas and assumptions the empirical study of 'religion' and its workings and significance in modern political and cultural life might demand, what sorts of scholarly value it might add, and how the answers to those questions change when we look to a global present which is sometimes framed as post-secular. A more theoretically and comparatively oriented first part of the course will give way to focused attention on historical, sociological, and ethnographic monographs, with much attention to European, North American, and Near Eastern histories and societies, but ample room for students interested in East Asian, South Asian, African, and Latin American religious formations to investigate those literatures and bring to bear in class discussion. Readings likely include Weber, Bergson, Asad, Charles Taylor, de Vries, Lambek, Das, Roger Friedland, Wuthnow, Margaret Jacobs, Blackbourn, Mahmood, Susan Harding, William Connolly, Chidester, Bryan Turner.

AS.100.623. Telling Japanese Histories.
A graduate-level seminar on the political, social, and intellectual concerns that have both shaped and undermined dominant ways of telling Japanese history, especially in Japan and the U.S. since 1945.

AS.100.627. Histories of Development.
Reading seminar on the history of development as both ideology and practice in the nineteenth and twentieth centuries.

AS.100.632. Capetian France: Documents, Devotions and Sovereign Authority.
Through a careful study of texts and objects produced for and by the Capetian rulers during the thirteenth century we will interrogate the creation of the French state, the cultivation of royal ideology, and its practice of sovereign power.
Area: Writing Intensive

AS.100.634. The Haitian Revolution.
This seminar examines the origins, course, and legacies of the Haitian Revolution (1791-1804), the most radical movement of the Age of Revolutions. It explores the colonial background, the overthrow of slavery, the founding of an independent nation, and the aftermath of revolution in the nineteenth century.

AS.100.638. Reading Seminar in Early Modern History.
This is a graduate seminar devoted to close reading of crucial works in early modern history and historiography.

AS.100.640. 20th-Century European Imperial and Transnational Histories.
This course will look at recent historiography on extranational approaches to 20th-century European histories, with a focus on France, the United Kingdom, USSR/Russia, and Germany.

AS.100.641. Global Catholicism in the Early Modern Period.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture. Graduate students only.

AS.100.643. Jewish Paths Through Modernity.
Intensive introduction to the key trends and trajectories in modern Jewish history and the major themes in Jewish historiography. Intended to serve both graduate students outside the Jewish history field and graduate students pursuing a field in modern Jewish history.
Area: Writing Intensive

AS.100.645. Race, Law, History.
This seminar examines the relationship of law to the construction of race and inequality in US history, investigating the legal archive through the perspectives of critical race theory and critical legal history. Course can be taken a maximum of two times.

AS.100.648. Crown, Court, and Charter: Political Culture in the High Middle Ages.
Explores mechanisms of political power and the rise of the state in Europe during the High Middle Ages by analyzing royal ideology, administrative growth, legal change, and cultural production.

AS.100.652. European Socialist Thought.
A survey of European socialist theories, including Marxism, anarchism, Social Democracy, feminism, and anti-imperialism. Authors include Proudhon, Marx, Engels, Bakunin, Bernstein, Lenin, Luxemburg, Sorel, Kollontai, Gramsci, and Fanon.

AS.100.653. Africa in the Twentieth Century.
Reading seminar in modern African history. Focus for 2022 will be on gender and sexuality.

AS.100.661. Racial Literacy in the Archives.
This course explores how to use race as a historical category of analysis, and teaches attendees how to locate how historical actors deploy race and racism to make claims, organize labor and identities, and imagine political possibility.

AS.100.664. Heresy and the Holy: Religion and Society in Medieval Europe.
The course explores the rise of heresy and holiness as categories during the Middle Ages.It traces the advent of religious movements, the effects of religious reform, the centralization of ecclesiastical authority, the rise of vernacular spirituality and dissent, and analyzes the historiographical and methodological approaches to the study of medieval religion.

AS.100.666. Topics in Modern Jewish History.
Continuation of AS.100.668 Colloquium in Modern Jewish History.

AS.100.671. Play and Violence in Medieval France.
Since the work of Geertz, Huizinga, Bakhtin and Caillois, among others, the intersection of play and violence has been a focal point for historians, anthropologists, literary scholars, even psychologists. This seminar traces the twin themes of violence and play as instantiated by the fighting classes in the High Middle Ages, beginning with the emergence of the tournament and the crusading movement in the eleventh century. By examining sources in Old French and Latin, we will contextualize music, dances, comedies, and contests that accompanied the violent rituals around which French aristocratic life revolved. Course may not meet weekly.
Area: Writing Intensive

AS.100.672. Medieval Materialities: Objects, Ontologies, Texts and Contexts.
We will use the meanings and methodologies of “materiality” to examine the medieval world, by analyzing objects, texts, networks, patterns of circulation and appropriation, aesthetics and enshrinement, production and knowledge communities.

AS.100.680. Reading Seminar in Early American History, c. 1500-1800.
Colonization and settlement in the Americas brought people from all kinds of places together. This course will explore those contacts, and how they shaped the American experience. The focus is on new books in early American history.

AS.100.681. Research Seminar in Atlantic History, 1600-1800.
Writing workshop for graduate students at all stages presenting work in progress. Discussion of theories, methods, and challenges of graduate student writing.

AS.100.682. Introductory Topics in Computation for Scholarship in the Humanities.
The first half of this seminar course consists of non-mathematical introductions to, and discussions of, the fundamental motivations, vocabulary, and methods behind computational techniques of particular use for humanistic research. The second half combines selected readings chosen to address specific questions raised by these discussions with hands-on application to students’ research goals. Each participant will lead discussion for one of the selected readings relevant to their interests.

AS.100.695. Problems in U.S. Social & Cultural History.
A graduate level seminar in social and cultural history in the 19th and 20th centuries.

AS.100.696. Problems in American Society and Culture.
An intensive graduate seminar exploring various topics in US social and cultural history, focusing on the period from the late 19th century to the late 20th century.

AS.100.700. American Intellectual History.
Readings on late nineteenth- and twentieth-century American and transatlantic social theory.

AS.100.707. The Black World.
This course explores the practice of writing and reading the history of African Americans and the wider African Diaspora. Participants will share written work and do close readings of primary and secondary texts exploring the black experience in Europe, Asia, Africa, and the Americas.

AS.100.708. The Black World II.
The Black World Seminar considers the making and meaning of blackness between the 14th and 20th centuries and Africans and people of African descent’s impact on the making of the modern world, from the slave trade to the present. We explore, too, the historical forces which created blackness as a marker on the body and as a political and cultural identity.

AS.100.710. Reformation Europe.
A course discussing major recent works of historiography on Reformation Europe, examining Lutheranism, Calvinism and Anabaptism; iconoclasm, visual, and print culture; urban, social, and gender history; demonology and witchcraft; and martyrology, tolerance and intolerance.

AS.100.713. Black Womanhood.
What does a usable history of black womanhood (black queer and trans womanhood inclusive) look like? How do we imagine, create, and narrate black women’s stories? Black women’s history across time and space.

AS.100.716. Cultural Theory For Historians.
An examination of modern cultural theories, with emphasis on mass culture and consumerism. Authors include Simmel, Kracauer, Benjamin, Horkheimer, Adorno, Barthes, Debord, Bourdieu, and de Certeau.

AS.100.722. The History of Trans Femininity.
This seminar will offer training in feminist, queer, transgender and postcolonial approaches to the history of sexuality by exploring what methods are adequate to writing the history of trans femininity as a specifically nineteenth and twentieth century phenomenon. Areas of emphasis will include histories of sexology, sex work, social movements, and trans feminism and its opponents. The primary geographic focus will be the US, but through a transnational lens that connects to Western Europe, South Asia, and Latin America.

AS.100.724. Sex and Slavery.
Research and methods in the field of sexuality and slavery studies. Graduate students may take this course up to two times.

AS.100.725. Sex and Slavery II.
Research and methods in the field of sexuality and slavery studies. Part 2: Caribbean & African Continent.

AS.100.728. Historical Writing in the Middle Ages.
This course investigates the basic techniques of writing history and the matters traditionally covered in medieval historical texts by reading a series of exemplary medieval historiographical works. This is preceded by a section on theoretical orientations to the study of history and historiography in order to provide the analytic tools for analyzing medieval texts.

AS.100.729. Reading Seminar: British America and the Early United States in Atlantic Perspective.
Introduction to the history and historiography on British North America and the United States.

AS.100.730. Reading Seminar: British and French North America and the Early United States in Atlantic Perspective.
Continuation of AS.100.729 for students conducting field exams.

AS.100.731. Colonial Africa: French African Empire.
A reading seminar in colonial African history; the focus may be on French African empire.

AS.100.733. Reading Qing Documents.
Open also to advanced undergraduates with at least one semester of Classical Chinese. This course has several objectives. First and foremost, it is a hands-on document reading class designed to familiarize students with the skills, sources, and reference materials necessary to conduct research in Qing history. To that end, we will spend much of our time reading documents. At the same time, we will engage in problem solving exercises designed to develop and enhance basic research skills. Finally, we will consider important archive-based secondary works which demonstrate the ways in which historians have made use of Qing documents in their scholarship.

AS.100.735. Early Modern Britain and the Early Modern British Empire.

AS.100.736. Early Modern Britain and the Early Modern British Empire.

AS.100.738. Women, Genders and Sexualities.
In May 2020, Johns Hopkins will host the meeting of the Berkshire Conference on Women, Gender and Sexualities, a gathering of 1200 scholars from across the world. Our seminar will use the Berkshire Conference program to organize a set of readings that will anticipate the panels, roundtables, performances, and plenaries that will be on campus between May 28 and 31, 2020. Attendance at the conference is not required, but it is recommended.

AS.100.744. Twentieth Century France and the French Empire.
We will read and discuss recent monographs and historiographical essays that emerge from and inform French history, with particular attention transnational, imperial, Mediterranean, international, and colonial frames and questions.

AS.100.749. Social Theory for Historians: Marx, Durkheim, Weber.
An examination of the works of Marx, Durkheim, and Weber, as examples of the Hegelian, positivist, and hermeneutic traditions of social theory.

AS.100.751. Early Modern European Intellectual History.
Early Modern European Intellectual History

AS.100.753. Modern American Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly

AS.100.755. Modern American Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.756. Reading Seminar in Chinese History.
A seminar covering recent work on late imperial and modern Chinese history, primarily in English.

AS.100.757. Cultural Histories of Late Imperial China.
This reading seminar will introduce graduate students and advanced undergraduates (by permission) to recent studies of Late Imperial and Republican China that can (by various standards) be classified as works of cultural history.

AS.100.759. Arabic Historical Writing in the Middle Ages.
The course examines various genres of Arabic historical writing during the high and late Middle Ages (10th-15th c.). All primary readings are in English/French translation (no Arabic required).

AS.100.761. History of Capitalism.
Readings on the history of capitalism since the mid-nineteenth century, with an emphasis on the American context.

AS.100.762. History and Historiography of 19th France in Europe and the World.
This course will look at recent historiography on France and the French empire, notably in North Africa. We will pay particular attention to transnational and imperial questions.

AS.100.765. Problems in Women and Gender Studies.
An exploration of recent work in women's and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, difference, and civic orders.

AS.100.769. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome.

AS.100.770. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome. Graduate students only.

AS.100.781. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.782. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.783. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.784. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.785. Seminar: Early Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Early Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.786. Seminar: Early Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Early Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.787. Seminar: Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.788. General Seminar: Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.789. Seminar: American.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.790. General Seminar: America.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.791. Seminar: Latin American.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in Latin American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly

AS.100.792. General Seminar: Latin America.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in Latin American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.793. Seminar: African.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in African History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.794. General Seminar: Africa.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in African History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.

AS.100.797. First Year Graduate Workshop.
First-year graduate workshop for History PhD candidates only.

AS.100.798. First Year Graduate Workshop.
First-year graduate workshop for History PhD candidates only.

AS.100.801. Dissertation Research.
TBA

AS.100.802. Dissertation Research.

AS.100.803. Independent Study.
TBA

AS.100.804. Independent Study.

AS.100.890. Independent Study.

AS.110 (Mathematics)

AS.110.102. College Algebra. 3 Credits.
This introductory course will create a foundational understanding of topics in Algebra. An emphasis will be on applications to prepare students for future courses like Precalculus or Statistics. After a review of elementary algebra concepts, topics covered include: equations and inequalities, linear equations, exponents and polynomials, factoring, rational expressions and equations, relations and functions, radicals, linear and quadratic equations, higher-degree polynomials, exponential, logarithmic, and rational functions.

AS.110.105. Precalculus. 4 Credits.
This course provides students with the background necessary for the study of calculus. It begins with a review of the coordinate plane, linear equations, and inequalities, and moves purposefully into the study of functions. Students will explore the nature of graphs and deepen their understanding of polynomial, rational, trigonometric, exponential, and logarithmic functions, and will be introduced to complex numbers, parametric equations, and the difference quotient.

AS.110.106. Calculus I (Biology and Social Sciences). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Many applications to the biological and social sciences will be discussed.

AS.110.107. Calculus II (For Biological and Social Science). 4 Credits.
Differential and integral Calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Applications to the biological and social sciences will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Recommended Course Background: Grade of C- or Better in AS.110.106 or AS.110.108, or a 5 on the AP AB exam.

AS.110.108. Calculus I (Physical Sciences & Engineering). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor's theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.

AS.110.109. Calculus II (For Physical Sciences and Engineering). 4 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor's theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines. Recommended Course Background: Grade of C- or Better in AS.110.106 or AS.110.108, or a 5 on the AP AB exam.

AS.110.113. Honors Single Variable Calculus. 4 Credits.
This is an honors alternative to the Calculus sequences AS.110.106-AS.110.107 or AS.110.108-AS.110.109 and meets the general requirement for both Calculus I and Calculus II (although the credit hours count for only one course). It is a more theoretical treatment of one variable differential and integral calculus and is based on our modern understanding of the real number system as explained by Cantor, Dedekind, and Weierstrass. Students who want to know the "why's and how's" of Calculus will find this course rewarding. Previous background in Calculus is not assumed. Students will learn differential Calculus (derivatives, differentiation, chain rule, optimization, related rates, etc), the theory of integration, the fundamental theorem(s) of Calculus, applications of integration, and Taylor series. Students should have a strong ability to learn mathematics quickly and on a higher level than that of the regular Calculus sequences.

AS.110.201. Linear Algebra. 4 Credits.
Vector spaces, matrices, and linear transformations. Solutions of systems of linear equations. Eigenvalues, eigenvectors, and diagonalization of matrices. Applications to differential equations.
Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113 OR AS.110.202 OR AS.110.302, or a 5 on the AP BC exam.

AS.110.202. Calculus III. 4 Credits.
Calculus of functions of more than one variable: partial derivatives, and applications; multiple integrals, line and surface integrals; Green's Theorem, Stokes' Theorem, and Gauss' Divergence Theorem.
Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113 OR AS.110.201 OR AS.110.212 OR AS.110.302, or a 5 or better on the AP BC exam.

AS.110.211. Honors Multivariable Calculus. 4 Credits.
This course includes the material in AS.110.202 with some additional applications and theory. Recommended for mathematically able students majoring in physical science, engineering, or especially mathematics. AS.110.211-AS.110.212 used to be an integrated yearlong course, but now the two are independent courses and can be taken in either order.
Grade of C- or better in (AS.110.201 or AS.110.212)

AS.110.212. Honors Linear Algebra. 4 Credits.
This course includes the material in AS.110.201 with additional applications and theory, and is recommended only for mathematically able students majoring in physical science, engineering, or mathematics who are interested in a proof-based version of linear algebra. This course can serve as an Introduction to Proofs (IP) course. Prerequisites: Grade of B+ or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam. Area: Quantitative and Mathematical Sciences.
Grade of B+ or better in AS.110.107 or AS.110.109 or AS.110.113 or AS.110.202, or AS.110.302, or a 5 on the AP BC exam.

AS.110.225. Problem Solving Lab. 2 Credits.
This course is an introduction to mathematical reason and formalism in the context of mathematical problem solving, such as induction, invariants, inequalities and generating functions. This course does not satisfy any major requirement, and may be taken more than once for credit It is primarily used as training for the William Lowell Putnam Mathematics Competition. Area: Quantitative and Mathematical Sciences.

AS.110.275. Probability. 4 Credits.
This course follows the actuarial Exam P syllabus and learning objectives to prepare students to pass the SOA/CAS Probability Exam. Topics include axioms of probability, discrete and continuous random variables, conditional probability, Bayes' theorem, Chebyshev's Theorem, Central Limit Theorem, univariate and joint distributions and expectations, loss frequency, loss severity and other risk management concepts. Exam P learning objectives and learning outcomes are emphasized. Recommended Course Background: Calculus II
AS.110.107 OR AS.110.109

AS.110.276. Introduction to Financial Mathematics. 4 Credits.
This course is designed to develop students' understanding of fundamental concepts of financial mathematics. The course will cover mathematical theory and applications including the time value of money, annuities and cash flows, bond pricing, loans, amortization, stock and portfolio pricing, immunization of portfolios, swaps and determinants of interest rates, asset matching and convexity. A basic knowledge of calculus and an introductory knowledge of probability is assumed.

AS.110.301. Introduction to Proofs. 4 Credits.
This course will provide a practical introduction to mathematical proofs with the aim of developing fluency in the language of mathematics, which itself is often described as “the language of the universe.” Along with a library of proof techniques, we shall tour propositional logic, set theory, cardinal arithmetic, and metric topology and explore “proof relevant” mathematics by interacting with a computer proof assistant. This course on the construction of mathematical proof will conclude with a deconstruction of mathematical proof, interrogating the extent to which proof serves as a means to discover universal truths and assessing the mechanisms by which the mathematical community achieves consensus regarding whether a claimed result has been proven.

AS.110.302. Differential Equations and Applications. 4 Credits.
This is a course in ordinary differential equations (ODEs), equations involving an unknown function of one independent variable and some of its derivatives, and is primarily a course in the study of the structure of and techniques for solving ODEs as mathematical models. Specific topics include first and second ODEs of various types, systems of linear differential equations, autonomous systems, and the qualitative and quantitative analysis of nonlinear systems of first-order ODEs. Laplace transforms, series solutions and the basics of numerical solutions are included as extra topics.Prerequisites: Grade of C- or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam. Area: Quantitative and Mathematical Sciences.
Grade of C- or better in AS.110.107 or AS.110.109 or AS.110.113 or AS.110.201 or AS.110.202 or AS.110.211 or AS.110.212, or a 5 on the AP BC exam.

AS.110.303. The Mathematics of Politics, Democracy, and Social Choice. 4 Credits.
This course is designed for students of all backgrounds to provide a mathematical introduction tosocial choice theory, weighted voting systems, apportionment methods, and gerrymandering. Inthe search for ideal ways to make certain kinds of political decisions, a lot of wasted effort couldbe averted if mathematics could determine that finding such an ideal were actually possible in thefirst place. The course will analyze data from recent US elections as well as provide historicalcontext to modern discussions in politics, culminating in a mathematical analysis of the USElectoral College. Case studies, future implications, and comparisons to other governing bodiesoutside the US will be used to apply the theory of the course. Students will use Microsoft Excel toanalyze data sets. There are no mathematical prerequisites for this course.
Area: Writing Intensive

AS.110.304. Elementary Number Theory. 4 Credits.
The student is provided with many historical examples of topics, each of which serves as an illustration of and provides a background for many years of current research in number theory. Primes and prime factorization, congruences, Euler's function, quadratic reciprocity, primitive roots, solutions to polynomial congruences (Chevalley's theorem), Diophantine equations including the Pythagorean and Pell equations, Gaussian integers, Dirichlet's theorem on primes.
Grade of C- or better in (AS.110.201 or AS.110.212)

AS.110.311. Methods of Complex Analysis. 4 Credits.
This course is an introduction to the theory of functions of one complex variable. Its emphasis is on techniques and applications, and it serves as a basis for more advanced courses. Functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions.
Grade of C- or better in (AS.110.202 or AS.110.211)

AS.110.365. Mathematical Foundations of AI Bias. 4 Credits.
At the end of this course students should be able to understand various sources of algorithmic bias; understand what types of bias can or cannot be addressed in a given data set; be able to reason over when different algorithms can be applied to a data set, and how they can be interpreted; take the outcomes of a given algorithm and reason about the bias of the output. Recommended Course Background: Vector calc, linear algebra, a suffiently advanced stats course, programming ability in R, matlab or python
AS.110.201 OR AS.110.202 OR EN.553.310

AS.110.375. Introduction to Mathematical Cryptography. 4 Credits.
An Introduction to Mathematical Cryptography is an introduction to modern cryptography with an emphasis on the mathematics behind the theory of public key cryptosystems and digital signature schemes. The course develops the mathematical tools needed for the construction and security analysis of diverse cryptosystems. Other topics central to mathematical cryptography covered are: classical cryptographic constructions, such as Diffie-Hellmann key exchange, discrete logarithm-based cryptosystems, the RSA cryptosystem, and digital signatures. Fundamental mathematical tools for cryptography studied include: primality testing, factorization algorithms, probability theory, information theory, and collision algorithms. A survey of important recent cryptographic innovations, such as elliptic curves, elliptic curve and pairing-based cryptography are included as well. This course is an ideal introduction for mathematics and computer science students to the mathematical foundations of modern cryptography.

AS.110.401. Introduction to Abstract Algebra. 4 Credits.
An introduction to the basic notions of modern abstract algebra and can serve as as Introduction to Proofs (IP) course. This course is an introduction to group theory, with an emphasis on concrete examples, and especially on geometric symmetry groups. The course will introduce basic notions (groups, subgroups, homomorphisms, quotients) and prove foundational results (Lagrange's theorem, Cauchy's theorem, orbit-counting techniques, the classification of finite abelian groups). Examples to be discussed include permutation groups, dihedral groups, matrix groups, and finite rotation groups, culminating in the classification of the wallpaper groups.Prerequisites: Grade of C- or better in 110.201 or 110.212 Area: Quantitative and Mathematical Sciences.
Grade of C- or better in (AS.110.201 or AS.110.212)

AS.110.405. Real Analysis I. 4 Credits.
This course is designed to give a firm grounding in the basic tools of analysis. It is recommended as preparation (but may not be a prerequisite) for other advanced analysis courses and may be taken as an Introduction to Proofs (IP) course. Topics include the formal properties of real and complex number systems, topology of metric spaces, limits, continuity, infinite sequences and series, differentiation, Riemann-Stieltjes integration. Prerequisites: Grade of C- or better in 110.201 or 110.212 and 110.202 or 110.211
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)

AS.110.406. Real Analysis II. 4 Credits.
This course continues AS.110.405 with an emphasis on the fundamental notions of modern analysis. Sequences and series of functions, Fourier series, equicontinuity and the Arzela-Ascoli theorem, the Stone-Weierstrass theorem, functions of several variables, the inverse and implicit function theorems, introduction to the Lebesgue integral.

AS.110.407. Honors Complex Analysis. 4 Credits.
AS.110.407. Honors Complex Analysis. 4.00 Credits.This course is an introduction to the theory of functions of one complex variable for honors students. Its emphasis is on techniques and applications, and can serve as an Introduction to Proofs (IP) course. Topics will include functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions, as well as applications to number theory and harmonic analysis.Area: Quantitative and Mathematical Sciences.This is not an Introduction to Proofs course (IP) and may not be taken as a first proof-based mathematics course except at the discretion of the instructor. This course satisfies a core requirement of the mathematics major as a second analysis course, and is a core requirement for honors in the major.
AS.110.405 OR AS.110.415

AS.110.411. Honors Algebra I. 4 Credits.
An introduction to the basic notions of modern algebra for students with some prior acquaintance with abstract mathematics. Elements of group theory: groups, subgroups, normal subgroups, quotients, homomorphisms. Generators and relations, free groups, products, abelian groups, finite groups. Groups acting on sets, the Sylow theorems. Definition and examples of rings and ideals.
Grade of C- or better in AS.110.212 OR AS.110.304 OR AS.110.113 OR AS.110.405 OR AS.110.415 OR AS.110.407 OR AS.110.413 OR AS.110.421

AS.110.412. Honors Algebra II. 4 Credits.
This is a continuation of 110.411 Honors Algebra I. Topics studies include principal ideal domains, structure of finitely generated modules over them. Introduction to field theory. Linear algebra over a field. Field extensions, constructible polygons, non-trisectability. Splitting field of a polynomial, algebraic closure of a field. Galois theory: correspondence between subgroups and subfields. Solvability of polynomial equations by radicals. Prerequisites: Grade of C- or better in 110.201 or 110.212.Area: Quantitative and Mathematical Sciences.
C- or better in AS.110.411

AS.110.413. Introduction To Topology. 4 Credits.
Topological spaces, connectedness, compactness, quotient spaces, metric spaces, function spaces. An introduction to algebraic topology: covering spaces, the fundamental group, and other topics as time permits.
Grade of C- or better in (AS.110.202 OR AS.110.211)

AS.110.415. Honors Analysis I. 4 Credits.
This highly theoretical sequence in analysis is reserved for the most able students. The sequence covers the real number system, metric spaces, basic functional analysis, the Lebesgue integral, and other topics.

AS.110.416. Honors Analysis II. 4 Credits.
Lebesgue integration and differentiation. Elementary Hilbert and Banach space theory. Baire category theorem. Continuation of AS.110.415, introduction to real analysis.
Grade of C- or better in AS.110.415

AS.110.417. Partial Differential Equations. 4 Credits.
Characteristics. classification of second order equations, well-posed problems. separation ofvariables and expansions of solutions. The wave equation: Cauchy problem, Poisson's solution,energy inequalities, domains of influence and dependence. Laplace's equation: Poisson's formula, maximum principles, Green's functions, potential theory Dirichlet and Neumann problems, eigenvalue problems. The heat equation: fundamental solutions, maximum principles. Recommended Course Background: AS.110.405 or AS.110.415

AS.110.421. Dynamical Systems. 4 Credits.
This is a course in the modern theory of Dynamical Systems. Topic include both discrete (iterated maps) and continuous (differential equations) dynamical systems and focuses on the qualitative structure of the system in developing properties of solutions. Topics include contractions, interval and planar maps, linear and nonlinear ODE systems including bifurcation theory, recurrence, transitivity and mixing, phase volume preservation as well as chaos theory, fractional dimension and topological entropy. May be taken as an Introduction to Proofs (IP) course.Prerequisites: Grade of C- or better in 110.201 or 110.212 OR 110.202 or 110.211 and 110.302 Area: Quantitative and Mathematical Sciences
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 or AS.110.211) AND 110.302

AS.110.422. Representation Theory. 4 Credits.
This course will focus on the basic theory of representations of finite groups in characteristic zero: Schur's Lemma, Mashcke's Theorem and complete reducibility, character tables and orthogonality, direct sums and tensor products. The main examples we will try to understand are the representation theory of the symmetric group and the general linear group over a finite field. If time permits, the theory of Brauer characters and modular representations will be introduced.
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.401 OR AS.110.411)

AS.110.433. Introduction to Harmonic Analysis and Its Applications. 4 Credits.
The course is an introduction to methods in harmonic analysis, in particular Fourier series, Fourier integrals, and wavelets. These methods will be introduced rigorously, together with their motivations and applications to the analysis of basic partial differential equations and integral kernels, signal processing, inverse problems, and statistical/ machine learning.
(AS.110.201 OR AS.110.212 OR EN.550.291 OR EN.553.291) AND (AS.110.202 OR AS.110.211) AND (AS.110.405 OR AS.110.415)

AS.110.435. Introduction to Algebraic Geometry. 4 Credits.
Algebraic geometry studies zeros of polynomials in several variables and is based on the use of abstract algebraic techniques, mainly from commutative algebra, for solving geometric problems about these sets of zeros. The fundamental objects of study are algebraic varieties which are the geometric manifestations of solutions of systems of polynomial equations. Algebraic geometry occupies a central place in modern mathematics and has multiple conceptual connections with diverse fields such as complex analysis, topology and number theory.This course aims to provide to an undergraduate student majoring in mathematics the fundamental background to approach the study of algebraic geometry by providing the needed abstract knowledge also complemented by several examples and applications.

AS.110.439. Introduction To Differential Geometry. 4 Credits.
Theory of curves and surfaces in Euclidean space: Frenet equations, fundamental forms, curvatures of a surface, theorems of Gauss and Mainardi-Codazzi, curves on a surface; introduction to tensor analysis and Riemannian geometry; theorema egregium; elementary global theorems.
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.100.211)

AS.110.441. Calculus on Manifolds. 4 Credits.
This course provides the tools for classical three-dimensional physics and mechanics. This course extends these techniques to the general locally Euclidean spaces (manifolds) needed for an understanding of such things as Maxwell's equations or optimization in higher dimensional contexts, eg. in economics. The course will cover the theory of differential forms and integration. Specific topics include Maxwell's equations in terms of 4D Lorentz geometry, vector (in particular, tangent) bundles, an introduction to de Rham theory, and Sard's theorem on the density of regular values of smooth functions. The course is intended to be useful to mathematics students interested in analysis, differential geometry, and topology, as well as to students in physics and economics.

AS.110.443. Fourier Analysis. 4 Credits.
An introduction to the Fourier transform and the construction of fundamental solutions of linear partial differential equations. Homogeneous distributions on the real line: the Dirac delta function, the Heaviside step function. Operations with distributions: convolution, differentiation, Fourier transform. Construction of fundamental solutions of the wave, heat, Laplace and Schrödinger equations. Singularities of fundamental solutions and their physical interpretations (e.g., wave fronts). Fourier analysis of singularities, oscillatory integrals, method of stationary phase.
Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)

AS.110.445. Mathematical and Computational Foundations of Data Science. 4 Credits.
We will cover several topics in the mathematical and computational foundations of Data Science. The emphasis is on fundamental mathematical ideas (basic functional analysis, reproducing kernel Hilbert spaces, concentration inequalities, uniform central limit theorems), basic statistical modeling techniques (e.g. linear regression, parametric and non-parametric methods), basic machine learning techniques for unsupervised (e.g. clustering, manifold learning), supervised (classification, regression), and semi-supervised learning, and corresponding computational aspects (linear algebra, basic linear and nonlinear optimization to attack the problems above). Applications will include statistical signal processing, imaging, inverse problems, graph processing, and problems at the intersection of statistics/machine learning and physical/dynamical systems (e.g. model reduction for stochastic dynamical systems).

AS.110.503. Undergraduate Research in Mathematics. 1 - 4 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.110.586. Independent Study. 1 - 4 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.110.587. DRP Independent Study. 1 Credit.
Directed Reading Program (DRP) Independent Study.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.110.599. Independent Study. 1 - 3 Credits.

AS.110.601. Algebra I.
The first of a two semester algebra sequence to provide the student with the foundations for Number Theory, Algebraic Geometry, Representation Theory, and other areas. Topics include refined elements of group theory, commutative algebra, Noetherian rings, local rings, modules, and rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.

AS.110.602. Algebra II.
The second of a two semester algebra sequence to provide the student with the foundations for Number Theory, Algebraic Geometry, Representation Theory, and other areas. Topics include refined elements of group theory, commutative algebra, Noetherian rings, local rings, modules, and rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.

AS.110.605. Real Analysis.
This course covers the theory of the Lebesgue theory of integration in d-dimensional Euclidean space, and offers a brief introduction to the theory of Hilbert spaces. Topics include the Lebesgue measure on Euclidean space, the Lebesgue integral, classical convergence results for the Lebesgue integral, Fubini's theorem, the spaces of L^1 and L^2 functions.

AS.110.607. Complex Variables.
Analytic functions of one complex variable. Topics include Cauchy integral theorems, residue theory, conformal mapping, harmonic functions, riemann mapping theorem, normal families. Other topics may include Mittag-Leffler theorem, Weierstrass factorization theorem, elliptic functions, Picard theorem, and Nevanlinna theory.

AS.110.608. Riemann Surfaces.
Abstract Riemann surfaces. Examples: algebraic curves, elliptic curves and functions on them. Holomorphic and meromorphic functions and differential forms, divisors and the Mittag-Leffler problem. The analytic genus. Bezout's theorem and applications. Introduction to sheaf theory, with applications to constructing linear series of meromorphic functions. Serre duality, the existence of meromorphic functions on Riemann surfaces, the equality of the topological and analytic genera, the equivalence of algebraic curves and compact Riemann surfaces, the Riemann-Roch theorem. Period matrices and the Abel-Jacobi mapping, Jacobi inversion, the Torelli theorem. Uniformization (time permitting).

AS.110.615. Algebraic Topology I.
Singular homology theory, cohomology and products, category theory and homological algebra, Künneth and universal coefficient theorems, Poincaré and Alexander duality theorems, Lefschetz fixed-point theorem, covering spaces and fundamental groups. Prerequsites: the equivalent of one semester in both Abstract Algebra and Real Analysis (specifically, point set topology).

AS.110.616. Algebraic Topology II.
Higher homotopy groups, CW complexes, cellular homology and cohomology, spectral sequences and comparison theorems, graded homological algebra, fibrations, Serre and Eilenberg-Moore spectral sequence, Eilenberg-MacLane spaces, Steenrod algebra, spectra.

AS.110.617. Number Theory I.
Elements of advanced algebra and number theory. Possible topics for the year-long sequence include local and global fields, Galois cohomology, semisimple algebras, class field theory, elliptic curves, modular and automorphic forms, integral representations of L-functions, adelic geometry and function fields, fundamental notions in arithmetic geometry (including Arakelov and diophantine geometry).

AS.110.618. Number Theory II.
Topics in advanced algebra and number theory. Possible topics for the year-long sequence include local and global fields, Galois cohomology, semisimple algebras, class field theory, elliptic curves, modular and automorphic forms, integral representations of L-functions, adelic geometry and function fields, fundamental notions in arithmetic geometry (including Arakelov and diophantine geometry).

AS.110.619. Lie Groups and Lie Algebras.
Lie groups and Lie algebras, classification of complex semi-simple Lie algebras, compact forms, representations and Weyl formulas, symmetric Riemannian spaces.

AS.110.631. Partial Differential Equations I.
This course is the first in the sequence about the general theory of PDEs. The beginning of the course will describe several important results of functional analysis which are instrumental for the study of PDEs: Hahn-Banach theorem, Uniform boundedness and closed graph theorems, reflexive spaces and weak topologies, elements of semi-group theory. Then we will describe the basic theory of Sobolev spaces and the standard existence theory for (initial) boundary value problems of elliptic/parabolic type. Finally, the rest of the course will be devoted to finer properties of solutions of elliptic equations such as maximum principles, Harnack principles and regularity.

AS.110.632. Partial Differential Equations II.
An introductory graduate course in partial differential equations. Classical topics include first order equations and characteristics, the Cauchy-Kowalevski theorem, Laplace's equation, heat equation, wave equation, fundamental solutions, weak solutions, Sobolev spaces, maximum principles. The second term focuses on special topics such as second order elliptic theory.

AS.110.633. Harmonic Analysis.
Fourier multipliers, oscillatory integrals, restriction theorems, Fourier integral operators, pseudodifferential operators, eigenfunctions. Undergrads need instructor's permission.

AS.110.637. Functional Analysis.
This class will explore basic aspects of functional analysis, focusing mostly on normed vector spaces. This will include the Hahn-Banach and open mapping theorems, a discussion of strong and weak topologies, the theory of compact operators, and spaces of integrable functions and Sobolev spaces, with applications to the study of some partial differential equations. Prerequisite: Real Analysis

AS.110.643. Algebraic Geometry I.
Introduction to affine varieties and projective varieties. Hilbert's theorems about polynomials in several variables with their connections to geometry. Abstract algebraic varieties and projective geometry. Dimension of varieties and smooth varieties. Sheaf theory and?some notions of cohomology. Applications of sheaves to?geometry;?e.g., theory of divisors, rudiments of scheme theory for the understanding of the Riemann-Roch theorem for curves and surfaces. Other topics may include Jacobian varieties, resolution of singularities, birational geometry on surfaces, schemes, connections with complex analytic geometry and topology.?

AS.110.644. Algebraic Geometry II.
Introduction to affine varieties and projective varieties. Hilbert's theorems about polynomials in several variables with their connections to geometry. Abstract algebraic varieties and projective geometry. Dimension of varieties and smooth varieties. Sheaf theory and?some notions of cohomology. Applications of sheaves to?geometry;?e.g., theory of divisors, rudiments of scheme theory for the understanding of the Riemann-Roch theorem for curves and surfaces. Other topics may include Jacobian varieties, resolution of singularities, birational geometry on surfaces, schemes, connections with complex analytic geometry and topology.

AS.110.645. Riemannian Geometry I.
This course is a graduate-level introduction to foundational material in Riemannian Geometry. Riemannian manifolds, a smooth manifold equipped with a Riemannian metric. Topics include connections, geodesics, Jacobi fields, submanifold theory including the second fundamental form and Gauss equations, manifolds of constant curvature, comparison theorems, Morse index theorem, Hadamard theorem and Bonnet-Myers theorem.

AS.110.646. Riemannian Geometry II.
This course covers more advanced topics in Riemannian geometry chosen at the instructors discretion. Possible topics include: minimal surface theory, geometric heat flows, harmonic mappings, Einstein manifolds, etc.

AS.110.653. Stochastic Differential Equations: An Introduction With Applications.
This course is an introduction to stochastic differential equations and applications. Basic topics to be reviewed include Ito and Stratonovich integrals, Ito formula, SDEs and their integration. The course will focus on diffusion processes and diffusion theory, with topics include Markov properties, generator, Kolmogrov's equations (Fokker-Planck equation), Feynman-Kac formula, the martingale problem, Girsanov theorem, stability and ergodicity. The course will briefly introduce applications, with topics include statistical inference of SDEs, filtering and control.

AS.110.707. Functional Analysis.

AS.110.710. What is... Seminar.
This is a professional development course for graduate students, where they will learn, practice, or enhance their skills at giving math talks. The course will run in the format of a "What is... Seminar", where each week one of the participants will present a 1 hour talk on an accessible and relatively self-contained topic, titled What is (insert your math notion of choice). In preparation for their talk, students will meet with the instructor at least once, where they will receive guidance and detailed advice to help them give a great talk. Although the definition of a "great talk" is subjective, participants should be willing to follow the instructors' advice. Graduate students at any stage of their PhD are encouraged to attend, regardless of their experience giving talks.

AS.110.711. Topics in Topos Theory.
Reading course to discuss Topics in Topos Theory

AS.110.712. Topics in Mathematical Physics.

AS.110.721. Topics In Homotopy Type Theory.
Homotopy type theory (HoTT) is a new proposed foundation system for mathematics that extends Martin-Löf's dependent type theory with Voevodsky's univalence axiom. Dependent type theory is a formal system for constructive mathematics, in which a theorem is proven by constructing a term in the type that encodes its statement. In Homotopy type theory, types are thought of as spaces and terms as points in those spaces. A proof that two terms in a common type are equal is now interpreted as a path between two points in a space. In particular, types might have interesting higher homotopical structure, which can be thought of as revealing fundamental differences between two proofs of a common proposition. One advantage of this foundation system is its amenability to computer formalization, which this course will illustrate by introducing the computer proof assistant Agda.

AS.110.722. Topics in Homotopy Theory.
The course will focus on recent developments in homotopy theory, such as Galois theory for E_n (n \geq 2) ring-spectra, and on connections with number theory; in particular, work of Bhatt, Hesselholt, Lurie, Scholze and others on topological Hochschild homology and its applications to geometry over the p-adic complex numbers.

AS.110.726. Topics in Analysis.
The topics covered will involve the theory of calculus of Functors applied to Geometric problems like Embedding theory. Other related areas will be covered depending on the interest of the audience.

AS.110.727. Topics in Algebraic Topology.

AS.110.731. Topics in Geometric Analysis.

AS.110.733. Topics In Alg Num Theory.

AS.110.737. Topics Algebraic Geometry.

AS.110.739. Topics in Analytic Number Theory.
This course will be on functional analysis (applied to number theory) and Connes-Meyer's spectral interpretation of zeroes of Hecke L functions. Topics will include : adeles, ideles, bornologies, spectral theory, condensed/liquid modules à la Scholze-Clausen, Pontryagin duality and almost-periodic functions, Tate's thesis, Connes-Meyer's spectral interpretation. Relations with category theory, quantum mechanics, Bost-Connes systems and non-commutative geometry will be evoked. This course will be designed to be appealing for students from analysis or from algebra.

AS.110.741. Topics in Partial Differential Equations.

AS.110.742. Topics In Partial Differential Equations.
In this course we will be discussing some dispersive evolution equations, primarily the nonlinear Schrodinger equation. Topics will include well - posedness theory, conservation laws, and scattering. The course will be accessible to students who have not taken graduate partial differential equations or functional analysis.

AS.110.745. Introduction to Curvature Flows.

AS.110.749. Topics in Differential Geometry.
In this class, we will study Aaron Naber and Jeff Cheeger's recent result on proving codimension four conjecture. We plan to talk about some early results of the structure on manifolds with lower Ricci bound by Cheeger and Colding. We will prove quantitative splitting theorem, volume convergence theorem, and the result that almost volume cone implies almost metric cone. Then we will discuss regularity of Einstein manifolds and the codimension four conjecture.

AS.110.750. Topics in Representation Theory.

AS.110.756. Topics in Algebra.
This will be a course in commutative algebra. Topics may include: Noetherian rings and modules, the Nullstellensatz, Hilbert basis theorem, localization, integrality, Noether normalization, primary decomposition, DVRs, Dedekind domains, dimension theory, smoothness and regularity, and homological methods.

AS.110.757. Topics in Stochastic Dynamical Systems.
The course will present an introduction to stochastic dynamical systems and some applications in model reduction and data assimilation. The main focus will be on stability and ergodicity of stochastic dynamical systems, including stochastic differential equations driven by white and fractional noise, and their numerical approximations. We will then discuss model reduction, focusing on Mori-Zwanzig formalism and approximation of the generalized Langevin equation, and methods on the parametric inference of related stochastic systems. Data assimilation and stochastic control will also be briefly introduced.

AS.110.771. Mathematics GTA Teaching Seminar.
he goals of this seminar center on the preparedness for graduate students in mathematics to engage in classroom instructions for undergraduates at Johns Hopkins University. This seminar augments the teaching orientation provided to graduate students by the CER and Mathematics Department by addressing (1) teaching-techniques: student-centered inclusive teaching strategies, facilitating small group work, incorporating student ideas and student thinking into active hole class discussions, and choosing appropriate mathematical tasks, (2) opportunities for practice teaching in classrooms before their first assignment to TA for a course in scaffolded micro-teaching experiences and (3) preparing for the practice of and documentation of a reflective teaching practice necessary for success in their careers as mathematicians and educators.

AS.110.791. Seminar in Analysis and Partial Differential Equations.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.793. Seminar in Topology.
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers.

AS.110.794. Seminar in Category Theory.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.795. Data Science Seminar.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.798. Seminar in Number Theory.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.

AS.110.799. Seminar in Algebraic Geometry.
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers.

AS.110.800. Independent Study-Graduates.

AS.110.801. Thesis Research.

AS.130 (Near Eastern Studies)

AS.130.101. Ancient Near Eastern Civilizations. 3 Credits.
Review of important issues in ancient Near Eastern history and culture from the Neolithic era to the Persian period. Included will be an examination of the Neolithic agricultural revolution, the emergence of cities, states and writing, and formation of empires. Cultures such as Sumer and Akkad, Egypt, the Hittites, Israelites, Assyrians, Babylonians, and Persians will be discussed.

AS.130.119. Medicine in Ancient Egypt. 3 Credits.
A survey of medicine and medical practice in Egypt and, to a lesser extent, the ancient Near East in general. The abundant sources range from magical spells to surprisingly "scientific" treatises and handbooks. Readings are selected from translations of primary sources in the writings of ancient Egypt, Mesopotamia, and Israel. Topics will include the sources of our knowledge; the nature of medical practitioners, medical treatment, and surgery; beliefs about disease and the etiology of illness; concepts of contagion and ritual purity.

AS.130.124. Texts, Tablets, and Tweets: The Sociolinguistics of Writing. 3 Credits.
This course examines the evolution of writing and the relationship between speech and writing in ancient and modern societies. We will examine the ways in which orthography, scripts, and the visual components inherent to written language (e.g., scripts, fonts, emoticons, diacritics etc.) are used to create and/or project certain social identities in these new written spaces. A primary aim of this course is to generate discussion regarding the ways in which writing in all of its forms—at the institutional, group, and individual level, in official documents, in emails, texts, tweets, and graffiti, using standardized and non-standard orthographies, in both regulated and unregulated spaces—can be a social and often political act of identity. The writing assignments for the course will encourage you to consider the ways in which writing can be harnessed to express social identities. You will work as a group to develop your own writing system and present it to the class. This will hone your creative and critical thinking skills and give you practice collaborating on a project. You will also research and conduct an original analysis on a corpus of writing.

AS.130.126. Gods and Monsters in Ancient Egypt. 3 Credits.
A basic introduction to Egyptian Religion, with a special focus on the nature of the gods and how humans interact with them. We will devote particular time to the Book of the Dead and to the "magical" aspects of religion designed for protective purposes.

AS.130.136. History of Hasidism. 3 Credits.
Although it appears to be a relic of pre-modern Judaism, Hasidism is a phenomenon of the modern era of Jewish history. This course surveys the political and social history of the Hasidic movement over the course of the last three centuries. Students will also explore basic features of Hasidic culture and thought in their historical development. Cross-listed with Jewish Studies.

AS.130.140. Hebrew Bible / Old Testament. 3 Credits.
The Bible is arguably the most read and yet most misinterpreted book of all time, one of the most influential and yet most misapplied work of literature. The Hebrew Bible (Old Testament) is Scripture to Jews and Christians yet also a rich collection of literature w/ numerous literary genres that has been highly influential on secular Western culture. At its core, it is our most important literary source that (when wed with archaeology) helps us to understand the people and culture of Iron Age Israel and Judah. This is an introductory course surveying of the books of the Hebrew Bible (Old Testament) giving primary attention to the religious ideas they contain and the ancient contexts in which they were composed. Topics include: The Academic Study of Religion, Ancient Creation Accounts, Ancestral Religion, The Exodus and Moses, Covenant, Tribalism and Monarchy, The Ideology of Kingship, Prophecy, Priestly Sources, Psalms, Wisdom Literature, and Apocalyptic Thought.

AS.130.152. After Babylon: Mesopotamia from Athens to Anime. 3 Credits.
This course is an exploration of how ancient Mesopotamian art, literature, history, and culture have been transmitted from the fall of Babylon in 539 BCE to the present day and the ways in which they have been adapted and transformed along the way. While all aspects of ancient Mesopotamia will be under discussion, the course will principally focus on the narratives of Gilgamesh, Semiramis/Shammuramat, and Sardanapalus/Assurbanipal. After briefly introducing ancient Mesopotamia, we will see how the region and its history are portrayed in biblical, Classical, Quranic, and medieval sources. From there we will discuss the “rediscovery” of Mesopotamia and the decipherment of cuneiform. The latter half of the course will then be devoted to Mesopotamia in 20th and 21st century popular culture.

AS.130.153. A (Virtual) Visit to the Louvre Museum: Introduction to the Material Culture of Ancient Egypt. 3 Credits.
This course will present the Egyptological collections of the musée du Louvre in Paris, room by room, as in a real visit. The experience will be enhanced by the study of objects that are not shown to the public but are kept in the reserves of the museum. From the 4th millennium BC to Roman time, the iconic “masterpieces” of this world-renowned art museum, as well as its little-known artifacts, will allow us to explore the history and material culture of ancient Egypt. We will also learn to observe, describe and analyze archaeological objects, in a global manner and without establishing a hierarchy between them, while questioning their place in the museum and its particular language. The objective will be to go beyond the objects themselves and answer, in fine, the following questions: What do these objects tell us about the men and women who produced them, exchanged them, used them, and lived among them in antiquity? What do they also reveal about those who discovered them in Egypt, several millennia later, about those who collected them and sometimes traded them, and what does this say about the relations between Egypt and the Western countries over time? The courses will be complemented by visits to the rich Egyptian collections in Baltimore.

AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3 Credits.
The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity’s earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.

AS.130.177. World Prehistory: An Anthropological Perspective. 3 Credits.
How and why did our nomadic hunting and gathering ancestors become farmers? What led agricultural societies to build cities, develop writing, religious institutions, wage war, and trade for exotic goods? This course surveys prehistory and ancient history from the origins of human culture to the emergence civilization. Although prehistory and ancient history yield evidence of tremendous cultural diversity this course emphasizes common elements of past human experience, culture, and culture change. These include the origins of modern humans and their adjustment to a variety of post-ice age environments, shifts from hunting and gathering to agricultural lifeways, and the initial development of the world’s earliest cities and civilizations.

AS.130.202. Ancient Mythology. 3 Credits.
This course explores the mythology of the ancient Near East from the invention of writing in Sumer in 3000 B.C. until the conquest of Alexander the Great near the end of the first millennium B.C. Mythological texts from Mesopotamia, Egypt, Anatolia, the Levant, and the Bible will be read from a comparative perspective. Special attention is paid to the origin and development of the epic, culminating in the great Epic of Gilgamesh, but considerable time is also given to the vast mythological and historical literature, and such diverse genres as love poetry, proverbs, humorous dialogues, Omens, and legal and medical texts. All readings are in English translation.

AS.130.203. Archaeology of Africa: From Human Origins to the Emergence of Civilizations. 3 Credits.
This course examines Africa’s ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.

AS.130.214. The Origins of Civilization: A Cross-Cultural Perspective. 3 Credits.
One of the most significant transformations in human history was the “urban revolution” in which cities, writing, and social classes formed for the first time. In this course, we compare five areas where this development occurred: China, Mesopotamia, the Indus Valley, Egypt, and Mesoamerica (Mexico/Guatemala/Honduras/Belize). In each region, we review the physical setting, the archaeological and textual evidence, and the theories advanced to explain the rise (and eventual collapse) of these complex societies.

AS.130.216. History of the Jews in Pre-Modern Times, from the Middle Ages to 1789. 3 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.

AS.130.223. Ancient Revolutions: The Archaeology of Culture Change. 3 Credits.
The last 250,000 years have seen many moments that could be referred to as “revolutions” in art, technology, or other aspects of human society. The “Human Revolution” of the Upper Paleolithic saw the birth of artistic ability and symbolic thinking in hominids. We call the transition from hunting and gathering to settled agriculture the “Neolithic Revolution,” while the “Urban Revolution” gave us complex societies and urban life. Times of dynamic change gave rise to important aspects of our shared behavioral and societal identity. They have become the subject not only of much archaeological investigation, but also of popular discourse about the human past. This class will explore famous cultural “revolutions” by looking at the causes and consequences of these important changes. We will evaluate the archaeological evidence, and through it interrogate the term “revolution” itself. What do we mean when we speak of “revolutions?” Are there other ways to think of past social and technological change, and when, if ever, do we truly see “revolutions” in the human condition in the ancient past?

AS.130.245. The Archaeology of Gender in the Ancient Eastern Mediterranean. 3 Credits.
How do art historians and archaeologists recover and study genders and sexualities of ancient people? This writing-intensive seminar looks at texts and objects from ancient Egypt, Assyria, and Greece through the lens of gender and sexuality studies. Beyond exploring concepts of gender in the ancient Eastern Mediterranean, students will also consider how modern scholars have approached, recovered, and written about ancient gender identities. There are no prerequisites for this course.
Area: Writing Intensive

AS.130.246. Writing History in the Ancient Mediterranean World. 3 Credits.
Just what does it mean to "write history"? In this course, we will read a selection of historical texts from ancient Egypt, Mesopotamia, Greece, and Rome, in order to examine how these cultures conceived of, and narrated, their own pasts. A major focus will be how these texts were created in order to understand or control the present. We will also examine how these texts have come down to us, and in what ways this might affect how we use them in constructing our own historical narratives. No prior knowledge of the ancient world necessary; all texts read in English translation.
Area: Writing Intensive

AS.130.247. Digging for Legitimacy Archaeology, Museums, and Ideology. 3 Credits.
Archaeology was born out of Western Colonial endeavors into Africa, the Middle East, Asia, and the Americas. Large scale excavations conducted by the United Kingdom, France, Germany, Italy, and the United States resulted in the removal and transfer of valuable (culturally and monetarily) material culture from local stewards and stakeholders to the West. To this day the discipline of archaeology is still saddled by its colonial past and the Hollywood interpretation of archaeologists as saviors of ancient treasures. Today, most interaction between people and ancient objects is facilitated via the museum. In this course we will explore 19th- 21st century archaeological and museum practices and the role they play in modern narratives of identity and representation in the America and the Middle East. Students will engage with the historical, legal, economic, and ethical implications of archaeology and analyze how political, religious, cultural, and academic institutions have leveraged archaeology and cultural artifacts to reify and legitimize their pursuits and ideologies.

AS.130.248. Up the Nile: New Approaches to the History of Egyptology and Nubiology. 3 Credits.
King Tut, Napoleon, Champollion, Ozymandias, Nefertiti: the history of Egyptology is filled with big characters, huge monuments, and glimmering objects. But it is also made up of colonialist practices, looted sites, and forgotten scholarly contributions. “Up the Nile” examines the antiquarian, colonialist, racist, Western-centric, and patriarchal roots of modern Egyptology and Nubiology, and addresses how scholars and enthusiasts alike are continuing to grapple with these lasting legacies and biases. This class investigates how the Egyptians and Nubians thought of their own histories, as well as how other ancient cultures viewed the cultures of the Nile. It moves roughly chronologically, tracing understudied and marginalized voices from the Islamic, Medieval, and Ottoman periods into the 20th and 21st centuries. It examines the origins of scholarship, modern collecting, Egyptomania, and museums, delving into the problems and repercussions that still haunt us today. “Up the Nile” will engage with important and difficult aspects regarding Egyptology’s and Nubiology’s colonialist, racist, and sexist past and present. It asks: who decides who writes history, then and now?

AS.130.249. Everything She Says is Done for Her: Exploring the Spheres of Influence of Women in Ancient Egypt. 3 Credits.
How did women move within their gendered spheres of influence in ancient Egyptian society? How do scholars discuss women in the ancient world and what are the spheres influence often allotted to women? How can we investigate the lives of women through the material record? What methodologies are applied by scholars to study women in antiquity? This course seeks to explore these questions and much more. The course will utilize textual and material evidence to examine and deconstruct the economic, social, religious, and political roles of women in ancient Egypt.

AS.130.300. History of Ancient Mesopotamia. 3 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.

AS.130.301. History of Ancient Syria-Palestine. 3 Credits.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.

AS.130.302. History: Ancient Syria-Palestine II. 3 Credits.
A survey of the history of Ancient Syria and Cannan, including ancient Israel. Taught with AS.134.661. Cross-listed with Jewish Studies.

AS.130.334. Egyptian Funerary Arts in the Archaeological Museum. 3 Credits.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.

AS.130.338. The Talmud as Read in the Middle Ages: The Sugya of Kavod HaBriot (Human Dignity). 3 Credits.
In the early Middle Ages the Talmud emerged as the defining document of official Jewish religion and culture, and remained so until the dawn of the Modern Era. Jewish scholars in many different countries, and in a wide variety of cultural contexts, developed certain ways of reading, interpreting, and applying the Talmud. In the process, they produced an immense corpus of commentary and law. This course will examine how and why the Talmud was studied in these centuries by Jews who mined it, subject by subject, for emotional, philosophical, and legal meaning.

AS.130.346. Introduction to the History of Rabbinic Literature. 3 Credits.
Broadly surveying classic rabbinic literature, including the Talmud and its commentaries, the legal codes and the response, this seminar explores the immanent as well as the external factors that shaped the development of this literature, the seminal role of this literature in Jewish self-definition and self-perception, and the role of this literature in pre-modern and modern Jewish culture.

AS.130.348. Survey Jewish History as Relected in Responsa Literature: How Immutable Judaism Wrestles with Change. 3 Credits.
How does a religious system which defines its ancient laws as God-given and unchangeable apply them to radically different and changing social, political and intellectual situations? This course explores the literature of "Questions and Answers"(She'elot u-Teshuvot), the Jewish legal responsa which have struggled to match Jewish religious law to modern life for fifteen centuries. A sweeping survey of Jewish history as revealed by one of its most impenetrable yet fascinating sources.

AS.130.353. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS. 3 Credits.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.131.653.

AS.130.354. Archaeological Method and Theory. 3 Credits.
Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced.

AS.130.357. Geographic Information Systems in Archaeology. 3 Credits.
Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI's ArcGIS software. Taught with AS.131.657.

AS.130.364. Archaeology of Arabia. 3 Credits.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.131.664.

AS.130.373. Prophets and Prophecy in the Bible. 3 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?

AS.130.376. Ancient Magic and Ritual. 3 Credits.
This course will introduce students to the vast body of rituals that were practiced and performed in antiquity, with a particular emphasis on rituals from ancient Mesopotamia, Egypt, and the Hebrew Bible. In addition to examining rituals from a comparative perspective, anthropological and sociological studies of ritual will be read and discussed to shed light on the social, cultural, and political significance of ritual in the ancient world and beyond.
Area: Writing Intensive

AS.130.378. Geoarchaeology: Applications of Earth Science to Archaeology. 3 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.

AS.130.381. Elementary Akkadian. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Co-listed with AS.132.600

AS.130.382. History of Mesopotamia II. 3 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.

AS.130.383. Elementary Akkadian II. 3 Credits.
An introduction to the paleography, grammar, and lexicon of the Akkadian language, and the reading of simpler texts in that language.Continues AS.130.381

AS.130.388. Elementary Sumerian. 3 Credits.
An introduction to the paleography, grammar and lexicon of the Sumerian language, and the reading of simpler texts in that language.

AS.130.389. Elementary Sumerian II. 3 Credits.
An introduction to the paleography,, grammar and lexicon of the Sumerian language and the reading of simpler texts in that language.

AS.130.400. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2055-1650 B.C.). In the second semester, literary texts and royal inscriptions will be read. Course meets with AS.133.600.

AS.130.401. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2011- 1700 B.C.). Co-listed with AS.133.601.
AS.130.400 or equivalent.

AS.130.420. Seminar in Research Methods in Near Eastern Studies. 3 Credits.
This writing intensive seminar examines the relationship between religion and science in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, and through engagement with scholarly literature pertaining to the topic of the course, students will develop skills in specific research skills such as critical reading, analysis, and interpretation.
Area: Writing Intensive

AS.130.440. Elementary Biblical Hebrew. 3 Credits.
Introduction to the grammar, vocabulary, and writing system of biblical Hebrew.

AS.130.441. Elementary Biblical Hebrew II. 3 Credits.
Survey of grammar and reading of simple texts. May not be taken on a satisfactory/unsatisfactory basis. A continuation of Elementary Biblical Hebrew I.
AS.130.440

AS.130.442. Readings - Hebrew Prose. 3 Credits.
Reading of biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings. Cross-listed with Jewish Studies.

AS.130.443. Readings - Hebrew Prose and Poetry. 3 Credits.
Reading of Biblical Hebrew Prose, from texts such as the Pentateuch, Joshua, Judges, Samuel, and Kings.

AS.130.501. Readings & Research. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.504. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.505. Archaeology Fieldwork. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.506. Independent Study-Archaeology Fieldwork. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.510. Archaeology Major Honors Thesis I. 3 Credits.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.511. Archaeology Major Honors Thesis II. 3 Credits.
Area: Writing Intensive
AS.130.510;You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.130.590. Independent Study. 0 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.131.600. Seminar Near Eastern History.
Seminar in Near Eastern History.

AS.131.601. Seminar Near Eastern History: Mesopotamia.
A three-year history cycle required of all graduate students and forming the core of our graduate program. One year each will be devoted to Egyptian history, Mesopotamian history, and Syro-Palestinian history.

AS.131.613. Archaeology of Africa: From Human Origins to the Emergence of Civilizations.
This course examines Africa's ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.

AS.131.634. Seminar: Near Eastern Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).

AS.131.635. Seminar: Near East Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).

AS.131.653. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.130.353.

AS.131.654. Advanced Archaeological Method and Theory.
Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced.

AS.131.657. Geographic Information Systems in Archaeology.
Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensible tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI's ArcGIS software.Taught with AS.130.357.

AS.131.664. Archaeology of Arabia.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.130.364.

AS.131.678. Geoarchaeology: Applications of Earth Science to Archaeology.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.

AS.131.800. Readings & Research.

AS.131.801. Readings And Research.

AS.131.848. Dissertation Research.

AS.131.849. Dissertation Research.

AS.131.850. Summer Independent Research.
Independent summer research

AS.132.600. Elementary Akkadian.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language.

AS.132.601. Elementary Akkadian II.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language.

AS.132.606. Intermediate Akkadian Texts.
In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden's Akkadisches Handwoerterbuch.

AS.132.607. Intermediate Akkadian Texts.
In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden's Akkadisches Handwoerterbuch.

AS.132.608. Akkadian Letters.
This course introduces students to letters written in the Akkadian language from a variety of historical periods. Recommended course background: AS.132.600 and AS.132.601.

AS.132.609. Seminar in Research Methods in Near Eastern Studies.
Area: Writing Intensive

AS.132.612. Advanced Akkadian.
Students read texts in the original Akkadian cuneiform with attention to their philological, archaeological, historical, and literary features. The seminar topic varies from semester to semester but usually consists either of texts of various genres from a single period (e.g., Neo-Assyrian) or texts of various period from a single genre (e.g., letters).

AS.132.631. Literature and Religious Texts.

AS.132.643. Ancient Magic and Ritual.
This course will introduce students to the vast body of rituals that were practiced and performed in antiquity, with a particular emphasis on rituals from Ancient Mesopotamia, Egypt, and the Hebrew Bible. In addition to examining rituals from a comparative perspective, anthropological and sociological studies of ritual will be read and discussed to shed light on the social, cultural, and political significance of ritual in the ancient world and beyond.

AS.132.644. Treaties And Diplomacy.
Reading treaties and related materials in Akkadian.

AS.132.701. Elementary Sumerian II.

AS.132.710. Advanced Sumerian.
We will read Letter Collection B and related materials in the original cuneiform.

AS.132.711. Advanced Sumerian.
In this course a selection of Sumerian texts from different periods and genres will be read and discussed from a linguistic, philological, historical, and literary perspective.

AS.132.800. Mesopotamian Seminar.
Research and discussion on topics of current interest.

AS.132.801. Mesopotamian Seminar.
Research and discussion on topics of current interest.

AS.133.304. Let's Play! Games from Ancient Egypt and Beyond. 3 Credits.
The ancient Egyptians played many games, as we do today. Board games, ball games, games of skill, etc., were not only part of daily life, but also had a role to play in religious practices and beliefs. Although the rules of the games are largely unknown to us, archaeological objects, funerary images, and texts help us to better understand their roles and meanings in ancient Egyptian culture. These various sources also show how games reflect some facets of the organization of the society, and reveal how the ancient Egyptians perceived some aspects of their world - social hierarchy, gender division, representation of death, relationship to chance/fate/divine will, etc. This course will present the evolution of games and play in Ancient Egypt from the 4th millennium B.C., with the first board game discovered in the tomb of a woman, through those deposited in the tomb of Tutankhamun, and up to the Roman period, with the games engraved on the ground by soldiers in the fortresses of the Eastern Desert. Particular attention will be paid to the travels of the games - Egyptian games played outside of Egypt and games of foreign origin played inside Egypt - because they allow for a better understanding of the intercultural connections that were established in between Egypt, Nubia, the Near East in general and the Mediterranean world. By replacing the games in their archaeological, historical and cultural contexts, the course is also intended as an original introduction to the civilization of ancient Egypt.

AS.133.600. Introduction To Middle Egyptian.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2135-2000 B.C.). In the second semester, literary texts and royal inscriptions will be read.

AS.133.601. Introduction To Middle Egyptian (Hieroglyphs).
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2011-1700 B.C.). Co-listed with AS.130.401
AS.133.600 or equivalent.

AS.133.610. Middle Egyptian Texts.
In this course we read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian Required.

AS.133.611. Middle Egyptian Texts.
In this course we read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian Required.

AS.133.616. Let's Play! Games from Ancient Egypt and Beyond.
The ancient Egyptians played many games, as we do today. Board games, ball games, games of skill, etc., were not only part of daily life, but also had a role to play in religious practices and beliefs. Although the rules of the games are largely unknown to us, archaeological objects, funerary images, and texts help us to better understand their roles and meanings in ancient Egyptian culture. These various sources also show how games reflect some facets of the organization of the society, and reveal how the ancient Egyptians perceived some aspects of their world - social hierarchy, gender division, representation of death, relationship to chance/fate/divine will, etc. This course will present the evolution of games and play in Ancient Egypt from the 4th millennium B.C., with the first board game discovered in the tomb of a woman, through those deposited in the tomb of Tutankhamun, and up to the Roman period, with the games engraved on the ground by soldiers in the fortresses of the Eastern Desert. Particular attention will be paid to the travels of the games - Egyptian games played outside of Egypt and games of foreign origin played inside Egypt - because they allow for a better understanding of the intercultural connections that were established in between Egypt, Nubia, the Near East in general and the Mediterranean world. By replacing the games in their archaeological, historical and cultural contexts, the course is also intended as an original introduction to the civilization of ancient Egypt.

AS.133.620. Hieratic.

AS.133.630. Old Egyptian.

AS.133.631. Old Egyptian.

AS.133.640. Late Egyptian.

AS.133.641. Late Egyptian Texts.
An introduction to the grammar and texts of Late Egyptian.

AS.133.646. Demotic Texts.

AS.133.647. Demotic Texts.

AS.133.648. Intro To Coptic.

AS.133.649. Advanced Coptic.
In this class we will read Coptic texts of various genres.

AS.133.706. Egyptian Funerary Arts in the Archaeological Museum.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.

AS.133.751. Seminar in Egyptian Art and Archaeology: Egyptian Art in Museums.
This course will utilize Egyptian collections in museums as a basis for studying Egyptian art. An aim is to evaluate how the experience of the objects impacts approaches to the discipline.

AS.134.101. GOD 101: The Early History of God - Origin, Character, Practice. 3 Credits.
In a world of big ideas, there is none larger than that of God. Divinity is an ever-present topic for both religious devotees and hard core secularists —for anyone who embraces the humanities or ponders what makes us human. Humans are, for better and worse, homo-religiosus (humans who practice religion) as much as homo-sapiens. But what do we know of God historically? How do we go about reconstructing divinity from ancient texts and archaeology? How do we best walk back in time to understand ancient Middle Eastern cultures that gave birth to notions of the divine that have come down to today's Judaism, Christianity and Islam? This course looks synthetically at the vast topic of God—exploring questions of historical origin, how God was characterized in literature (mythic warrior, king, parent, judge, holy, compassionate) and how God was represented in iconography, both materially and abstractly. Secondly, how did belief intersect with practice? Using the indow of divinity, this course will peer into the varieties of religion experience, exploring the royal use of religion for power, prestige and control balanced against the intimacy of family and household religion. It will probe priestly prerogatives and cultic status, prophetic challenges to injustice, and the pondering of theodicy by poetic sages.

AS.134.301. Introduction to the Pentateuch. 3 Credits.
This course surveys the linguistic and literary structure of the Pentateuch, with a focus on P and non-P in Genesis and Exodus. A second and equally important focus will be the history of scholarship and its broader impact on the study of the history and religion of ancient Israel and Judah. We will examine critical issues in the study of the Pentateuch, focusing on scholarly reconstructions of composition and redaction and key literary themes. Throughout our examination of the biblical text, we will also address parallels to other ancient Near Eastern corpora.

AS.134.400. Northwest Semitic Epigraphy. 3 Credits.
This course will provide an introduction to West Semitic dialects as reflected in inscriptions from the first millennium BCE. We will survey the grammar (phonology, morphology, syntax, and lexicon) of epigraphic Hebrew, Phoenician, and known Transjordanian languages (Moabite, Ammonite, Edomite). We will also discuss the methodological challenges inherent to the study of script evolution, scribalism, and the reconstruction of NWS languages through the study of inscriptions. This course will also introduce students to scholarship outside of the field of NWS and Hebrew Bible on literacy, the study of visual grammar, and the socio-semiotic approach to the study of writing.

AS.134.404. The Book of Job. 3 Credits.
Reading portions of the Book of Job in Hebrew. In addition to increasing proficiency in biblical Hebrew, the course also involves critical exegesis including grammatical analysis and textual criticism. Students will interact with various aspects of interpretation for the Book of Job (e.g., philology, text history, structure, literary history, message, poetics, rhetoric, philosophy, theology and reception history).

AS.134.406. Kings, Prophets, and Scribes: The Creation of "Israel" in the Deuteronomistic History. 3 Credits.
This class will introduce students to “The Deuteronomistic History,” which comprises the biblical books of Deuteronomy, Joshua, 1-2 Samuel and 1-2 Kings. The narrative arc of this “history” spans the giving of the law to Moses to the rise and fall of the monarchies of Israel and Judah, respectively in the Neo-Assyrian and Neo-Babylonian periods. During this course we will examine the reasons why biblical scholars have argued in varying ways that this body of text represents the work of a group of ideologically driven scribes, the Deuteronomists; we will also investigate the primary texts themselves for evidence for divergent views about the need for a king in Israel and the role and fate of the royal house of David. We will also explore the relationship between the books of the former prophets (Joshua>2 Kings) and Deuteronomy, which is a book that concludes the Pentateuch. This course requires students to engage with the biblical text in the original Hebrew language at an advanced level. We will also engage with biblical scholarship regarding the scope, purpose, and nature of a cohesive Deuteronomistic History, as well as with dissenting voices that probe the unity of these biblical books.

AS.134.408. The Book of Ezekiel. 3 Credits.
A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions.

AS.134.409. Prophets and Prophecy in the Hebrew Bible. 3 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?"

AS.134.410. Kings and Chronicles. 3 Credits.
This course surveys scholarship on the histories of Israel and Judah as presented in Kings and Chronicles. The course also addresses changes in the Hebrew language in the first millennium BCE.
AS.130.440 OR AS.130.441

AS.134.450. Seminar in Hebrew: Archaic Biblical Poetry. 3 Credits.
Translation and analysis of selected texts in Biblical Hebrew giving attention to advanced features of grammar and syntax. Topic: "Archaic Biblical Poetry".

AS.134.604. The Book Of Job.
Reading portions of the Book of Job in Hebrew. In addition to increasing proficiency in biblical Hebrew, the course also involves critical exegesis including grammatical analysis and textual criticism. Students will interact with various aspects of interpretation for the Book of Job (e.g., philology, text history, structure, literary history, message, poetics, rhetoric, philosophy, theology and reception history)

AS.134.606. Kings, Prophets, and Scribes: The Creation of "Israel" in the Deuteronomistic History.
This class will introduce students to “The Deuteronomistic History,” which comprises the biblical books of Deuteronomy, Joshua, 1-2 Samuel and 1-2 Kings. The narrative arc of this “history” spans the giving of the law to Moses to the rise and fall of the monarchies of Israel and Judah, respectively in the Neo-Assyrian and Neo-Babylonian periods. During this course we will examine the reasons why biblical scholars have argued in varying ways that this body of text represents the work of a group of ideologically driven scribes, the Deuteronomists; we will also investigate the primary texts themselves for evidence for divergent views about the need for a king in Israel and the role and fate of the royal house of David. We will also explore the relationship between the books of the former prophets (Joshua>2 Kings) and Deuteronomy, which is a book that concludes the Pentateuch. This course requires students to engage with the biblical text in the original Hebrew language at an advanced level. We will also engage with biblical scholarship regarding the scope, purpose, and nature of a cohesive Deuteronomistic History, as well as with dissenting voices that probe the unity of these biblical books.

AS.134.607. Texts, Tablets, and Tweets: The Sociolinguistics of Writing.
This course examines the evolution of writing and the relationship between speech and writing in ancient and modern societies. We will examine the ways in which orthography, scripts, and the visual components inherent to written language (e.g., scripts, fonts, emoticons, diacritics etc.) are used to create and/or project certain social identities in these new written spaces.A primary aim of this course is to generate discussion regarding the ways in which writing in all of its forms—at the institutional, group, and individual level, in official documents, in emails, texts, tweets, and graffiti, using standardized and non-standard orthographies, in both regulated and unregulated spaces—can be a social and often political act of identity. The writing assignments for the course will encourage you to consider the ways in which writing can be harnessed to express social identities. You will work as a group to develop your own writing system and present it to the class. This will hone your creative and critical thinking skills and give you practice collaborating on a project. You will also research and conduct an original analysis on a corpus of writing.

AS.134.608. Book Of Ezekiel.
A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions. Cross-listed with Jewish Studies.

AS.134.609. Prophets and Prophecy in the Hebrew Bible.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?"

AS.134.623. Pentateuch.
This course surveys the linguistic and literary structure of the Pentateuch. A second and equally important focus will be the history of scholarship and its broader impact on the study of the history and religion of ancient Israel and Judah.

AS.134.650. Seminar in Hebrew:.

AS.134.651. Seminar: Hebrew.

AS.134.652. Seminar in Ancient Israelite Religion.
Topics include history of scholarship, methodology, representations of deity, the aniconic tradition, solar Yahwism, sacred space, blood rituals, passover, royal cult, family religion, divination, prophecy, incantations, etc.

AS.134.660. History of Ancient Syria/Palestine.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.

AS.134.661. History: Ancient Syria-Palestine II.
A survey of the history of Ancient Syria and Cannan, including Ancient Israel.

AS.134.700. Northwest Semitic Epigraphy.

AS.134.720. Ugaritic I.
A year-long course studying Ugaritic language and literature. The first semester will focus on grammar and translating a representative selection of mythological texts. The second semester will concentrate on ritual texts. The course will also be epigraphic in nature using both conventional and digital techniques.

AS.134.721. Ugaritic II.
A continuation of AS.134.720 with emphasis on the mythological and ritual texts from Ugarit. A digital epigraphy lab will also form part of the course.

AS.134.744. Survey Of Aramaic Texts.

AS.134.747. Archaic Aramaic.
An advanced course in Aramaic devoted to the study of Old Aramaic inscriptions. We will be translating and analyzing a selection of texts from Northern Syria (e.g. Bar-Rakib; Hadad; Kuttamuwa, Nerab, Panamuwa, Sefire, Zakkur), Southern Syria (e.g. Bar-Hadad/Melqart Stela, Hazael, Tel Dan) and Northern Mesopotamia (e.g. Tell Fakhariyah). Students will be expected to vocalize such texts as a study in historical and comparative linguistics and to clarify their understanding of the morphology and syntax.

AS.136 (Archaeology)

AS.136.101. Introduction To Archaeology. 3 Credits.
An introduction to archaeology and to archaeological method and theory, exploring how archaeologists excavate, analyze, and interpret ancient remains in order to reconstruct how ancient societies functioned. Specific examples from a variety of archaeological projects in different parts of the world will be used to illustrate techniques and principles discussed.

AS.140 (History of Science, Medicine, and Technology)

AS.140.105. History of Medicine. 3 Credits.
Course provides an introduction to health and healing in the ancient world, the Middle Ages, and the Renaissance. Topics include religion and medicine; medicine in the Islamicate world; women and healing; patients and practitioners.

AS.140.106. History of Modern Medicine. 3 Credits.
The history of medicine and public health from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.

AS.140.178. History of Biology. 3 Credits.
The course surveys the emergence and development of life sciences since the 1700s. It examines major ideas, approaches, and debates regarding life, along with their material and cultural underpinnings as well as social impacts. One crucial question throughout the course is how social and cultural contexts have shaped views of life at particular times and places. Topics include natural history, classification, morphology, cell theory, physiology, evolution, genetics and eugenics, molecular biology, biomedicine, and biotechnology. Lectures are supplemented with discussions about primary historical texts and scholarly articles. Students will learn about the course content, methods in historical inquiries of scientific fields, and will develop an original research essay as a final project.

AS.140.198. Technology and Environment in Japanese Films and Anime. 1 Credit.
In the course of the semester we will watch Japanese films and animation that touch upon topics of technology and environment. The list of screenings includes several blockbusters, classics in film studies, and documentaries. The course is a companion course to 140.398 “Godzilla and Fukushima,” but is also open to anyone interested. Students who do not take 140.398 will be required to write a short review paper by the end of the semester.

AS.140.227. Race, Racism and Medicine. 3 Credits.
How can we think about the interconnections between racism, theories of race and the practice of medicine? Living at a moment when racial disparities in health outcomes in the United States are still very stark, this course will provide a historically grounded approach to thinking about the roles that race and racism have played in healthcare, the production of health disparities as well as the role of medicine in the development of racist thought. While much of this course will focus geographically within the United States, this class will also explore global histories of medicine, encountering questions of race and medicine in Africa, the South Pacific and Asia. In addition to the analysis of primary source documents and historical texts, students will also be introduced to theoretical approaches to the study of race and racism from W.E.B. Dubois, Sylvia Wynter, Frantz Fanon and others.
Area: Writing Intensive

AS.140.228. Epidemic!: Diseases that Shaped our World. 3 Credits.
In this course, we will look at a number of key epidemic diseases in the pre-modern and modern world, from Black Death to COVID-19, and investigate how it affected medical thought and practice, as well as political, social and economic lives. We will pay special attention to how these diseases spread and how they affected and were influenced by questions of race, gender, sexuality and colonialism.

AS.140.231. Health & Society in Latin America & the Caribbean. 3 Credits.

Medical practice is complex in Latin America and the Caribbean. Most countries in the region have universal healthcare; yet, the quality of clinical services varies widely, and is influenced by degrees of incorporation into—or marginalization from—social power structures. Many people take their health into their own hands by supplementing biomedicine with plant based remedies as well as religious and spiritual services. This course will interrogate the history and contemporary relevance of healthcare in Latin America and the Caribbean, with particular interest in how medicine intersects with colonialism, slavery, capitalism, neo-colonialism, grassroots revolutionary movements, the Cold War, and neoliberalism. Drawing on films, visual and performance art, and music, students will consider the ways in which race, gender, indigeneity, ability, class, and nation have affected people's experiences with medical practice. Informed by postcolonial and decolonial scholarship, we will also examine why Latin America and the Caribbean have become "laboratories" for the production of medical knowledge, and importantly, how that knowledge was created by indigenous, enslaved, and migrant people as well as professionals. Finally, we seek to understand individual health problems in relation to the social and political determinants of health. As such, the course prompts students to reflect on why healthcare professionals—in the United States and abroad—would benefit from historically-informed communication with patients and their communities. This is a discussion-based seminar that requires active participation. There are no exams. The course does not assume any previous knowledge of the history of medicine or Latin American history.
Area: Writing Intensive

AS.140.232. Food, Environment, and Society. 3 Credits.

A seminar discussing crucial events and processes in global history which have shaped how food production and consumption impacted the environment and human societies. Students will learn how food practices, originally bounded within certain places and cultures, became transformed in modern societies with the rise of modern agricultural, transportation and food processing technologies, as well as the public health and environmental consequences of these transformations. Sessions will include lectures, seminar discussions, field visits or guest speaker events, and some hands-on activities. For the final project, students will conduct original research on topics of interest and produce a multi-media, public-facing intellectual product.
Area: Writing Intensive

AS.140.245. Biology and Society in Asia. 3 Credits.

What major knowledge traditions about life's generation and function have taken shape in Asia that continue to shape our contemporary world? How have they fared in encounters with Western knowledge traditions? How have modern biology, biotechnology and biomedicine developed in Asia in recent years within distinct geopolitical contexts? This course addresses these questions with selected historical cases from China, India, Japan, Koreas and selected Southeast Asian countries. It first introduces concepts and frameworks of major non-Western knowledge systems about life such as yin-yang and five phases and examine how religions, politics, and cross-cultural encounters impacted these systems, their evolutions or replacements. Then the class will examine the political, material, cultural and institutional contexts of more recent development in the life sciences in Asia. Class activities include lectures, discussions, research seminars, a final research project, and possible conversations with visiting professors and field trips.

AS.140.301. History of Science: Antiquity To Renaissance. 3 Credits.

The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted.
Area: Writing Intensive

AS.140.302. Rise Of Modern Science. 3 Credits.

Survey of major scientific developments from the mid-18th century to the present.

AS.140.306. Science And Religion. 3 Credits.

Science and religion are crucial influences on Western culture. This course examines their interrelations during the past 2000 years, including the Athens-Jerusalem debate, medieval theology, the Galileo affair, evolution, and current issues.

AS.140.312. The Politics of Science in America. 3 Credits.

This course examines the relations of the scientific and technical enterprise and government in the United States in the 20th and 21st centuries. Topics will include the funding of research and development, public health, national defense, etc. Case studies will include the 1918 Spanish influenza epidemic, the Depression-era Science Advisory Board, the founding of the National Science Foundation and the National Institutes of Health, the institution of the President's Science Advisor, the failure of the Superconducting Supercollider, the Hubble Space Telescope, the covid pandemic, etc.

AS.140.316. Minds and Machines. 3 Credits.

Is the mind identical to the brain? Is the mind (or brain) a computer? Could a computer reason, have emotions, or be ethically culpable? How have computers changed our minds? This course examines such questions philosophically and historically. Topics include early AI research, computationalism, connectionism, 4EA cognitive science, simulation theory, and the Singularity.

AS.140.317. The Hydrologic Sphere: Histories of Water in the Colonial and Postcolonial World. 3 Credits.

Water supplies are becoming scarcer globally due to climate change. We use clean water—fresh and salt—in a variety of ways that provide comfort, stability, and health, making it one of the most valuable commodities on Earth. While countries in the Global North are beginning to see more frequent and lengthier droughts, those in the Latin America, Africa, and South Asia have long struggled over how to distribute and use their clean water supplies. This class will examine how colonialism and its far-reaching effects have created an environment of scarce water supplies in many areas of the world. Water access is difficult to achieve, but for much of the Global South, the colonial period helped craft the problems we see today. This class will ask what colonial and postcolonial technologies' construction and use teach us about equitable clean water distribution, how social and cultural identities influence water supplies and use, and why water has been such an important element—and commodity—in our world, especially where Europeans settled and oppressed local populations.
Area: Writing Intensive

AS.140.321. Scientific Revolution. 3 Credits.

How did the Western understanding of nature change between 1500 and 1720? We'll study the period through the works of astronomers and astrologers, naturalists and magi, natural philosophers and experimentalists, doctors and alchemists & many others.

AS.140.322. Follow the money: Science, technology, and the 'knowledge economy,' c.1800-present. 3 Credits.
This course examines the historical emergence of knowledge-driven economies, paying special attention to the funding, development, and use of science and technology for commercial purposes.
Area: Writing Intensive

AS.140.324. Commercializing Science: Academic Entrepreneurs from Kelvin to Venter. 3 Credits.
From the 19th century physicist William Thomson (Lord Kelvin) to contemporary geneticists such as Walter Gilbert and Craig Venter, academic scientists and engineers across a broad range of disciplines have commercialized academic knowledge and inventions as patentees, consultants, and entrepreneurs. This course examines the motives and strategies behind such commercialization activities, ethical issues associated with them, and the factors influencing their success. We will also explore the history of currently dominant policies and institutions designed to foster the commercialization of academic science and evaluate their impact from a longer-term perspective.
Area: Writing Intensive

AS.140.327. Science and Utopia. 3 Credits.
This seminar will explore the complex interaction between science, technology and utopian/dystopian thought from the late nineteenth century. Major utopians will include Bellamy, H.G. Wells, Mark Twain, Frank Lloyd Wright, Aldous Huxley, George Orwell, Sinclair Lewis, B.F. Skinner, Margaret Atwood, and Walt Disney.

AS.140.329. Women, Health, and Medicine in Colonial and Antebellum America. 3 Credits.
This class will examine the history of women's health and medicine in America from the 17th century to the mid-19th century, a period in which settler colonialism and the trans-Atlantic slave trade mixed European, Indigenous American, and African people and belief systems, resulting in diverse healing practices and understandings of the body and gender. Major themes addressed in the course include reproductive health, domestic and "alternative" medicine, as well as enslavement, racialized medicine, poverty, disability, and sexuality.
Area: Writing Intensive

AS.140.335. Photography in Science and Medicine (19th Century-Present). 3 Credits.
How did photography change science and medicine, and vice versa? This course explores how and why photography and related imaging techniques became central to a broad variety of fields of science and medicine, ranging from anthropology and astronomy to embryology, nuclear physics, and radiology. It also considers how these techniques were created in the first place and to what extent they affected the standing of photography as an "art-science." Central themes will include (among others) the status and objectivity of photographic evidence; the historical relationships between technical, scientific, and artistic change; the role of photography in disseminating scientific and medical knowledge and (mis)information; the racial and gender biases of scientific and medical photography; and photography's use as a tool of scientific exploration, measurement, and surveillance. Students will be developing their own research projects in consultation with the instructor.

AS.140.336. History of Mental Healthcare in the United States. 3 Credits.
In recent decades, much has been done in the United States to destigmatize mental illness and incorporate psychiatric services into broader systems of healthcare and welfare. As clinicians, policy makers, social scientists, activists, and other stakeholders have collaborated to promote mental health and reintegrate people with behavioral disorders into society, they have often contrasted their efforts with those made in the past, portraying community-based approaches as more efficacious and humane. Narratives like these, however, deemphasize many important continuities in the history of American psychiatry. In this discussion-based course, students will explore how concerns about citizenship and social control have shaped the organization and provision of mental healthcare in the United States from the early nineteenth century to the present day. They will also complete various assignments designed to hone their ability to evaluate historical arguments, conduct independent and collaborative research on primary sources, and communicate the results of their scholarship to professional and lay audiences.

AS.140.338. Unsafe America: Accidents, Disasters, and Society, 1800–2020. 3 Credits.
According to the latest data from the National Safety Council, accidents cause over 173,000 deaths and 48,300,000 injuries per year across the United States. Since the nineteenth century, accidents ranging from burns to car crashes to the Three Mile Island nuclear disaster have become increasingly central to American life. This course examines the history of accidents and why Americans have chosen to control some hazards but not others. We will investigate how accidents have changed over time alongside the introduction and spread of new technologies; cultural beliefs about safety; the economic and political interests of different stakeholders; and the efforts of safety experts, nonprofits, corporations, families, and the government to protect Americans from harm. On one level, this course traces the unexpected consequences of remaking the United States with modern industry, transportation, infrastructure, and consumer products. At the same time, it captures how the principles of free enterprise and personal responsibility continue to influence the American safety movement.
Area: Writing Intensive

AS.140.341. Humanoid Robots in Global History. 3 Credits.
Humanoid machines reflect their creators' ideals of humanity. Comparing examples from societies across the globe we will investigate what factors shaped these ideals, and how they manifested in technological design.
Area: Writing Intensive

AS.140.347. History Of Genetics. 3 Credits.
Intellectual and social history of the gene concept, including Mendelism, eugenics, medical genetics, DNA, genomics, and personalized medicine.
Area: Writing Intensive

AS.140.356. Man vs. Machine: Resistance to New Technology since the Industrial Revolution. 3 Credits.
This course analyzes different episodes of "luddism" in the history of science and technology, from the destruction of textile machinery in the early 1800s up to recent controversies about biotechnology and ICT.

AS.140.364. The City Course: Disciplinary Perspectives on Urban Life and Form. 3 Credits.
This course aims, first, at enlarging our understanding of cities by looking at them from a variety of disciplinary perspectives and, secondly, at examining the distinctive ways of thinking associated with disciplines from engineering, the sciences and medicine to anthropology, sociology, economics, archaeology, history and literature. Baltimore and cities from around the world will provide resource material. Lectures, discussions, term projects.

AS.140.374. Force and Matter from Galileo to Maxwell's Field Theory. 3 Credits.
This seminar will trace the concept of force and its interaction with matter from Galileo in the late sixteenth century to rise of field theory in the work of James Clerk Maxwell in the late nineteenth century. Major figures to be studied through primary source readings are Galileo, Kepler, Descartes, Hobbes, Newton, Boscovich, Schelling, Laplace, Fourier, Faraday, William Thomson (Lord Kelvin) and Maxwell.

AS.140.391. Individualized Medicine from Antiquity to the Genome Age. 3 Credits.
A seminar for advanced undergraduates. We explore the notion of the individual in medicine over twenty-five centuries, from the Hippocratics to the invention of the case study during the Renaissance to the current JHU medical curriculum. The history of medicine survey, AS.140.105 or AS.140.106, is recommended though not required. Graduate students are welcomed but should expect to do additional work and readings.
Area: Writing Intensive

AS.140.393. Technology and the Making of the Modern World. 3 Credits.
This course critically examines the role of technology in some of the main developments that have shaped the modern world, ranging from industrialization and globalization processes to the rise of new political ideologies and gender patterns. This course is co-taught by an instructor from the Smithsonian Institution and will include a public history research project.

AS.140.394. Heredity, Eugenics, and Society. 3 Credits.
In this course, we will examine the ways in which concepts of the gene, heredity, and innateness have both shaped and been shaped by society over the last two-plus centuries. Topics under discussion may include: eugenics, biological determinism, scientific racism, human breeding programs, genetics and gender, genetics and intelligence, genetic engineering including CRISPR, assisted reproductive technologies, sociogenomics, and polygenic risk scores. Term paper. AS.140.106 recommended.
Area: Writing Intensive

AS.140.395. Prosthetics and Technologies of Disability. 3 Credits.
The purpose of prosthetics seems to be fairly straightforward—to restore function that was lost due to the loss of a body part. According to this logic, the quality of prosthetics is measured in its ability to replicate lost human function and restore individuals with disabilities to normalcy. And indeed, numerous disability technologies enrich the experience of individuals in need of them. At the same time, these very technologies are often perceived as a marker of something abnormal, or, by the nature of their design prove to be an obstacle for mobility and access. Therefore, as much as prosthetics and other technologies of disabilities improve the quality of life, they also led to stigmatization, marginalization, and exclusion. By looking at prosthetics and disability in a variety of historical contexts, we will learn what kind of ideas of 'normalcy' they reflect, and how they shape the experience of individuals who use them.
Area: Writing Intensive

AS.140.396. Encoding Bias: Algorithms, Artificial Intelligence, and the History of Computing. 3 Credits.
How can an inanimate object be biased? How is it possible for a machine or software to discriminate on the basis of race, gender, or economic status? After all, machines are supposed be free from the lapses of judgement that can cloud human minds. And yet, the more we rely on digital technologies, the more we realize that algorithms are not as neutral and objective as we hoped they would be. This course traces the origins of computer bias to the aspirations, ideals, metaphors, hopes, fears, and, of course, biases of the people who developed computer technologies. During the semester, we will learn about the humble origins of computing technologies, the original, human "computers" in astronomical labs, Alan Turing's invention of a "digital" mechanical computer to decipher Nazi codes, the Cybernetics movement, the models of rationality and intelligence that guided the development of AI, the gendering of the computing profession, the advent of personal computers, and more. While exploring these episodes in the history of computing we will discuss and analyze the social and structural origins of computer and algorithm bias.
Area: Writing Intensive

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Japan is often described as "nature-loving," and is considered to be one of world leaders in environmental protection policies. Yet current environmental successes come on the heels of numerous environmental disasters that plagued Japan in the past centuries. Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture.
Area: Writing Intensive

AS.140.401. The Knowledge City: from Silicon Valley to Bloomberg's New York. 3 Credits.
This seminar will explore the increasingly productive relationship between research universities and urban and regional development in the period after World War II to the present. Working with the faculty, participants will be expected to develop a research paper. Discussion, presentations, lectures.

AS.140.411. Senior Research Seminar. 3 Credits.

AS.140.412. Research Seminar. 2 Credits.
Departmental Majors Writing a Senior Thesis Only
Area: Writing Intensive

AS.140.423. Science and Science Fiction in Global Perspective. 3 Credits.
What can we learn from science fiction about the history of science and technology? What ideas about science do Sci-Fi novels manifest? Is the relationship between science and science fiction always the same, across different time periods and geographical areas? This course will explore these questions by taking a comparative perspective. Each meeting we will read a Sci-Fi novel from Europe, America, South and East Asia, and discuss it in conjunction with historical writing about relevant scientific developments. Reading Sci-Fi novels from 17th-century Germany, 19th-century England and India, and 20th-century Japan, China, Korea and the US, the students will explore how actual scientific developments were reflected in fiction, and what fictional depictions say about the aspirations and anxieties provoked by new technologies.
Area: Writing Intensive

AS.140.435. Ways of Knowing: New Histories of Science, Medicine, and Technology. 3 Credits.
What does it mean for science to have a history? Comparing newer approaches with classic works, we will explore different strategies for placing science, medicine, and technology in social context.
Area: Writing Intensive

AS.140.501. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.140.502. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.140.598. HoST Internship. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.140.601. Research Methods/Hist Sci.
This graduate seminar introduces students to a variety of methods, sources, and approaches used in the historical study of science, medicine, and technology. The emphasis will be on the development of skills crucial to the successful completion of research projects.

AS.140.609. Technology and Labor.
In recent years historians, anthropologists, and sociologists of technology show increasing interest in questions of human labor. Adding to the literature that explores emergence, production, and use of technology, the new direction seeks to uncover and to analyze human labor that is necessitated by emerging technologies, and that is often concealed by them. The course will cover several classic works but will mainly focus on recent exciting scholarship that explores the relationship between technology and labor.

AS.140.614. Media of Science, Medicine, and Technology.
This research seminar starts from the premise that the production and circulation of scientific knowledge has always been mediated: through parchment and paper, books and journals, laboratory notebooks and electronic datasets. Likewise the body in health and illness has mediated through material objects, from the uroscopy flask to the stethoscope to MRIs and PET scans. Students will explore the theory and method of media history in developing their own research projects in the history of science, medicine, and technology.

AS.140.641. Departmental Colloquium.
Reports by staff members, students, and invited speakers.

AS.140.642. Colloquium.
Reports by faculty, students, and invited speakers.

AS.140.660. Working with Manuscripts: Paleography, Codicology, and Editing.
This is a practical course on using manuscript materials (especially premodern documents). It covers how to read both Latin and early modern vernacular scripts in various formats (paleography), how to describe, date, and document manuscript materials (codicology), and how to edit texts and make critical (and not-so-critical) editions. Other related topics of interest to enrolled students are possible. The specific topics that will be stressed will respond to the interests and needs of those students who enroll. Students are encouraged to bring examples or problems from their own research for study, practice, and analysis.

AS.140.678. Catching Up: Responses to Technical Change in the 19th and 20th Centuries.
This research seminar focuses on varieties of paths to modernity by nations in the 19th and 20th centuries as driven by technological change. The approach will be comparative and its reach global. The emphasis will be on preparing a research paper by semester's end.

AS.140.679. Humanoid Robots in Global History.
Graduate section of AS.140.341.

AS.140.681. Graduate Readings in History of Science and Technology.
The course explores advanced topics in History of Technology, as well as in History of Science, Medicine, and Technology in East Asia.

AS.140.683. Non-human Agency in Science, Medicine, and Technology Studies.
Studies of non-humans repeatedly challenge the assumption that agency is an exclusively human prerogative. We not only witness animals scheme and carry out their plans, be also experience interaction with non-animate objects as if they had will and capacity to manipulate us. What is the relationship between anthropomorphization and agency? What does our attribution of agency to objects say about our understanding of agency as an analytical category? How do we integrate non-humans into our investigation of human activity? In this course we will explore studies of non-human agency in history, sociology, and anthropology of science, medicine, and technology. Learning from authors such as Donna Haraway, Anna Tsing, Bruno Latour, Sherry Turkle, Lucy Suchman, Cynthia Breazeal and others, we will examine human relationship with companion species, vermin, mycelium, humanoids, digital technologies, and others.

AS.140.684. Science and the Marketplace.
This seminar explores the global economic history of science and technology and the historical entanglements between science and capitalism by investigating various practices that were simultaneously scientific and economic or had both scientific and economic dimensions. Through this lens, which reflects recent trends in the historiography of science-economy relationships, this course seeks to develop new perspectives on topics ranging from the modern histories of scientific publishing and popularization to the acquisition and standardization of research tools and materials and the conduct of various forms of knowledge work. Specific interests of the seminar participants will be taken into account.

AS.140.685. Histories of Reproduction.
While there is a vast literature on reproduction in a global context, this course will focus on the arc of what we might call decolonial histories of reproduction—those that center issues of justice, freedom, intimacy, and agency, as well as cultural negotiation, conflict, and change. Students will write critical histories of reproduction, with attention to the ways in which reproductive politics interface with institutions that exert hegemonic, racialized, gendered, and ableist forms of state power and colonial power. We will also appreciate the ways in which reproduction interacts with other—non geographically-bound, non-institutionalized, and non-state mediated—forms of biopolitical power. We will analyze how the historiography has evolved over time and discuss future directions in the field.

AS.140.705. History of Science: Antiquity To Renaissance.
Graduate-level version of 140.301 with additional readings, discussions and assignments in seminar format.

AS.140.708. Rise of Modern Science.
Survey of history of science, 18th-20th c. Students are encouraged to attend lectures for 140.302, but seminar may be taken without attending those lectures.

AS.140.710. Scientific Revolution.
Reading intensive seminar that studies the events and ideas that transformed western science from Medieval natural philosophy to the experimental sciences (1500-1720s). Lecture meets with AS.140.321.

AS.140.801. Directed Readings & Dissertation.

AS.140.808. Graduate Independent Research.
Independent research for graduate students in the History of Science and Technology Department only.

AS.140.888. Dissertation Research.
For graduate students in the History of Science and Technology Department Only.

AS.145 (Medicine, Science and the Humanities)

AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3 Credits.
In this course, four essential aspects of the theme of death and dying will be examined: Death and Medicine; Emotional Responses to Death; Burying and Commemorating the Dead; and Conceptions of Death. Specific topics relating to each of these aspects that will be covered include illness and causes of death; prevention of death; suicide; death and grief; burial practices; mourning the dead; public commemoration of the dead; life after death; and death and rebirth. Students will explore these topics from a historical-anthropological perspective with Paul Delnero, a specialist in the history and culture of the ancient Near East (Near Eastern Studies); from a literary perspective, by reading and writing poetry relating to these subjects with the acclaimed poet James Arthur (Writing Seminars); and from a musical perspective, through direct encounters with the music and creative process of the award-winning composer, Michael Hersch (Peabody).
Area: Writing Intensive

AS.145.104. Science, Medicine, Media. 3 Credits.
Much of our understanding of science and medicine is filtered through what we casually refer to as “the media”: newspapers, magazines, television shows, films, and electronic social media. But the scientific world relies on its own media to produce and circulate knowledge: from scientific journals and conferences, to agar plates and petri dishes, cloud chambers and electrophoresis gels. Medical technologies from the stethoscope to the echocardiogram likewise mediate the perception of the body in health and disease, and increasingly our own understanding and perception of our bodies and our health is mediated via screens, scans, and images — without which we can hardly imagine ourselves anymore. Students will learn theoretical tools to critically assess the technologies that mediate our knowledge of our own bodies and the broader world, as well as practical tools in media production and visual storytelling (video, podcast, website etc.) to bring these analytics to bear on our broader understandings of science and medicine.
Area: Writing Intensive

AS.145.106. Health, Science, Environment. 3 Credits.
Environment has an inexorable effect on human health, and certain human activities have had outsized impacts on the natural world and the ability of forms of life to thrive. This course brings medical humanities, history of science, and science & technology studies into conversation with environmental humanities to ask: how have our conceptions of the natural world emerged, and how have these shaped our understandings of bodies, ecologies, and health outcomes? How do we know and measure the environment and health, and to what effects? How have human and ecological health affected environmental politics? How have writers and artists understood and depicted their environments and environmental questions? Can works of fiction shape ecological transformations? What can we learn from case studies of health and environment in Baltimore and the Chesapeake Bay as well as in global contexts? Course topics will include ecology, epigenetics, toxicity, agriculture and food, radiation, air quality, and more-than-human entanglements.

AS.145.201. Clues: Unreasoning the Medical Mystery. 3 Credits.
Foundational authors of detective fiction, including Edgar Allen Poe, Arthur Conan Doyle, and Pauline Hopkins, often used medical doctors and themes in their mystery plots. It’s no coincidence that medicine and crime fiction share a vocabulary of clues, evidence, and diagnosis. The mystery genre was integrally tied to the rise of scientific medicine as a respected profession. Indeed, classic detective stories are practically propaganda for the scientific method, showing readers how the powerful tools of observation and inference can solve any problem. Over the course of the 20th century, not only doctors, but also psychologists, social scientists and historians adopted the authoritative stance of the detective in constructing or reconstructing facts. However, as we study Sherlock Holmes and his modern proteges, such as TV doctor Gregory House, we will analyze how "medical mystery" narratives can limit our thinking about problems and solutions in medicine. We will consider post-modern detective stories that offer alternatives to the "Holmsian" model for understanding the complex clinical realities of today.
Area: Writing Intensive

AS.145.202. Health Care Activism in Baltimore and Beyond. 3 Credits.
National struggles over the right to health care, and over the health needs of marginalized groups, have taken distinctive forms in Baltimore City during the past century. The renowned Johns Hopkins University came to symbolize, for many residents, the power of medicine both to heal and to harm – and the need for community action. This course delves into the archives of local institutions to understand the work of activists and advocates who connected health, medicine, and social justice. We focus on specific sites, from the segregated wards of Johns Hopkins to the People’s Free Medical Clinic on Greenmount Avenue, where demands for equity changed the city’s health care landscape. Through interdisciplinary readings and conversations with local organizers, we consider how historical memory can serve as a creative resource for the art and politics of the present.
Area: Writing Intensive

AS.145.203. Constructing memories: between art and science. 3 Credits.
What is a personal memory? Is it a story or a scene, as if in a film? Is there such a thing as body memory? How tight is the connection between remembering and story-telling? Scientific articles and book chapters in cognitive psychology and the neurosciences can provide some answers to such questions. Two films, “Memento” and “Inside Out” can also help us grasp the impact of major scientific discoveries of how memory works. But our discussions will depend above all on literary and biographical accounts based on the experiences of “rememberers” such as St Augustine, Proust, Woolf, Freud, as well as on cases on amnesia documented by Oliver Sacks, Antonio Damasio, and David Shenk. The latter will help us understand why our ability to engage in mental time-travel is essential to our personal and social existence. Coming out of this course, you will not only have a better comprehension of how autobiographical memory works, you’ll have learned also how some of the sharpest scientific and philosophical minds of our times have tried to make sense of this mysterious human capacity.

AS.145.204. Graphic! Visualizing Medicine from Textbooks to Comics. 3 Credits.
Visuals play an important role in the history and practice of medicine, from medical textbooks to medical imaging, and from hospital signage and public health posters to comics and graphic novels. This course will examine the visual aspects of the history and practice of medicine by focusing on the rising genre of medical comics and graphic novels, known as “graphic medicine.” The course will embed this examination of “graphic medicine” in a wider examination of the various uses of visuals in medicine, the complicated history of class, race and gender in those uses, and how visuals have served different functions in the history and practice of medicine, from assisting medical diagnosis to enabling new forms of medical consumerism, and from facilitating doctor-patient communication to practicing art therapy, as well as presenting visual pathographies and documenting patients’ and caregivers’ experiences of disease. Through an assortment of primary sources that include medical comics and graphic novels, aided by a variety of secondary sources that embed these narratives in larger issues in the history of medicine, medical anthropology, and the medical humanities, the course will aim to introduce students to some of the most important themes in the field of “graphic medicine.”

AS.145.205. The Costs of Care: Writing about Illness in America. 3 Credits.
Health care can be expensive for those who receive it and those who provide it. In the United States, patients go into debt while doctors suffer from burnout and nurses rush through understaffed wards. The U.S. has the highest healthcare spending of any wealthy nation, yet suffers comparatively worse outcomes. This seminar brings together social science research with patient experiences that show the human face of the American health care debate. We read the work of scholars, poets, and medical practitioners who reflect on core questions: What should be the government’s role in healthcare provision? What alternative models have people in marginalized groups developed when the system fails them? Understanding both failures and successes gives us the tools to build new paths.
Area: Writing Intensive

AS.145.215. Representations of Pain and Suffering in Contemporary Culture. 3 Credits.
What does it mean to experience pain or encounter the suffering of another person in our post-truth era? This course explores the changing representation of pain and suffering in contemporary film, fiction, creative non-fiction, science and technology. Through analysesand close-readings of a variety of primary and secondary sources, we will consider the different ways twentieth- and twenty-first-century historical, cultural, and media representations have mediated pain and suffering. Such investigations allow us to understand the workings of pain in the present.
Area: Writing Intensive

AS.145.217. Neurofictions: History and Literature of the Mind Sciences. 3 Credits.
Neuroscience has a long way to go from mapping neural connections to a precise account of memory, emotion, and consciousness. But the limits of science have never stopped us from imagining its possible futures. Engaging two centuries of debate in the mind sciences and in western culture at large, this course looks at historical attempts to explain and control human consciousness. By placing each period’s scientific texts in dialog with contemporaneous science fiction -- from Edgar Allan Poe to Ursula K. Le Guin -- we discover how theories about the brain can shape society while at the same time responding to social contexts.

AS.145.219. Science Studies and Medical Humanities: Theory and Methods. 3 Credits.
The knowledge and practices of science and medicine are not as self-evident as they may appear. When we observe, what do we see? What counts as evidence? How does evidence become fact? How do facts circulate and what are their effects? Who is included in and excluded from our common-sense notions of science, medicine, and technology? This course will introduce students to central theoretical concerns in Science and Technology Studies and the Medical Humanities, focusing on enduring problematics that animate scholars. In conjunction with examinations of theoretical bases, students will learn to evaluate the methodological tools used in different fields in the humanities to study the production and circulation of scientific knowledge and the structures of medical care and public health. This problem-centered approach will help students understand and apply key concepts and approaches in critical studies of science, technology, and medicine.
Area: Writing Intensive

AS.145.220. Health, Medicine, Gender, and Sexuality. 3 Credits.
This course invites students to take the perspective of gender and sexuality on health and medicine. In this course, we do not see gender and sexuality as a separate domain of health. Instead, we will learn how a gender perspective is in fact crucial for critically exposing the ways in which medicine is interpenetrated by social life and by law. For example, what technologies and discourses constitute “the normal”? How is sexuality braided into disease surveillance? How do we understand the lawfare on the terrain of reproductive rights? What aspects of disease are suppressed in dominant forms of knowledge production, due to the undervaluation of gendered forms of experience? We will take cases involving HIV/AIDS; reproductive justice and rights; poverty, marginality and queer kinship; and household patterns of care.

AS.145.303. Research in the Medical Humanities: A Practical Introduction. 3 Credits.
This seminar is designed to prepare students for an extended interdisciplinary writing project, such as an honor's thesis or an undergraduate research proposal. The first part will be devoted to establishing or consolidating skills in research, in methods, and in approaches specific to the medical humanities. Class meeting will involve different formats and types of preparation: studying examples of writing in different domains related to MSH, visits of specialists (e.g. librarians and authors), preparing a proposal to be presented in a workshop, and a well-documented capstone project outlining a proposal. You'll be asked to submit at regular intervals written results of your work in progress and you must be prepared as well to present your results orally at different important points in our unfolding semester.
Area: Writing Intensive

AS.145.305. Lives in Medicine: Exploring the Personal Writing of Patients and Practitioners. 3 Credits.
The personal accounts of patients and practitioners offer a rich exposure to human experience in medicine. What is it like to be a patient, to be sick or to face the threats or limits that illness presents? What is it like to be a doctor or nurse in this world of illness? In this course we will read such accounts as published in book form, discuss them in a seminar setting and write about them. We will select a small number from the thousands of such publications to introduce the student to this unique genre, emphasizing reading, writing and group discussion.
Area: Writing Intensive

AS.145.310. A Noble Profession? Doctors as Social and Political Actors. 3 Credits.
Medicine is a profession known for its ethical code of conduct—a code that is imbued with an ethos of neutrality and impartiality. However, real life shows us that doctors do not occupy a special moral class, but are rather members of social and political communities, citizens with grievances, political affiliations and loyalties, and are often subject to many social and political influences around them. This course will examine how doctors' political choices shape their medical practice, and how their medical practice—especially their temporally and spatially privileged access to bodily suffering and loss of life—shapes in turn their political choices. It investigates the roles of doctors, not simply as technical experts, but as social and political actors informed by technical expertise among other factors. Relying on histories, ethnographies, memoirs and even works of fiction, this course will explore narratives of doctors' social and political engagement in the US and around the globe.
Area: Writing Intensive

AS.145.350. MSH Research Capstone. 3 Credits.
The Research Capstone seminar prepares students to undertake original extended research in the medical humanities and science studies. The course will help students synthesize the interdisciplinary knowledge upon which the Medicine, Science, and the Humanities (MSH) major is built. Students will have the opportunity to form research topics, devise and execute research plans, write a research grant application, and share their work with the class. The course is aimed at MSH juniors seeking to create Honors projects, though the course is open to any student wishing to learn or enhance research skills.

AS.145.360. Incarceration and Health: Critical Perspectives. 3 Credits.
Can care exist in a space of punishment? Institutions of incarceration are inherently spaces of violence and social control and, in the U.S.'s current context of mass incarceration, racial oppression. Yet prisons, jails, and detention centers are required to provide individuals access to health care. How can we understand this convergence of care for the body and psyche with multiple forms of carceral violence? This course will examine modes of health and health care inside institutions of incarceration as they are situated within broader socio-political contexts that shape society's over-reliance on incarceration as a means of social and racialized control. Drawing on history, anthropology, sociology, legal theory, critical race studies, and public health, the course will explore the everyday realities inside institutions of incarceration as they relate to suffering and care and how those are connected to policies and processes of subjugation outside the institutions' walls. Case studies for examining these relationships include pregnancy, COVID-19, addiction, and mental illness behind bars. Students will engage with concepts such as disciplinary power, biopower, carceral and anti-carceral feminism, theories of care, medical abolition, and dual loyalty. While the course will primarily focus on the U.S. context, we will also draw comparisons to non-U.S. settings. Throughout the course we will seek to understand how institutions of incarceration are not, as popularly understood, isolated places "elsewhere," but implicitly porous with so-called free society—and therefore as exemplars for understanding the connections among health, inequality, and state institutions.
Area: Writing Intensive

AS.145.502. Medicine, Science & the Humanities Internship. 3 Credits.
An internship in Medicine, Science & the Humanities approved by the director of the program.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.145.510. Medicine, Science & the Humanities Independent Research. 1 - 3 Credits.
This course is for students in the Medicine, Science & the Humanities doing independent research. Course can be taken up to 3 credits with approval from the director.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.145.511. Medicine, Science & the Humanities Independent Research. 1 - 3 Credits.
This class is for the MSH majors completing their research project. Instructor approval required.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.145.516. MSH Honors Thesis. 1 - 3 Credits.
This class is for the MSH majors completing their honors thesis. Instructor approval required. This course can be taken for up to 3 credits with instructor approval.

AS.150 (Philosophy)

AS.150.111. Philosophic Classics. 3 Credits.
The course introduces students to philosophy by critically examining selected texts in the Western philosophical tradition. Philosophers whose ideas will be examined include Plato, Descartes, Rousseau and Nietzsche.
Area: Writing Intensive

AS.150.112. Philosophical Problems. 3 Credits.
An introduction to philosophy through several central problems. This year's topics are free will, death, time, and race.

AS.150.118. Introduction to Formal Logic. 3 Credits.
An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion of an argument follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life.

AS.150.125. Life and Death. 3 Credits.
This course will address some of the Big Picture questions about human life using the methods of analytic philosophy. These questions include: What am I, and what kinds of things could happen to me before I'd no longer be me? Should I be afraid of death? Is it better to be than to never have been anything at all? When is it permissible to end a life? To what extent do I live my life freely?

AS.150.136. Philosophy & Science: An Introduction to Both. 3 Credits.
Philosophers and scientists raise important questions about the nature of the physical world, the mental world, the relationship between them, and the right methods to use in their investigations of these worlds. The answers they present are very different. Scientists are usually empiricists, and want to answer questions by experiment and observation. Philosophers don't want to do this, but defend their views a priori. Why? Can both be right? Readings will present philosophical and scientific views about the world and our knowledge of it. They will include selections from major historical and contemporary figures in philosophy and science. The course has no prerequisites in philosophy or science.

AS.150.161. Introduction to Nietzsche. 3 Credits.
This course will provide an introduction to Nietzsche's thought. We shall read and discuss selections from each period of his philosophical development. Students will receive a grade based on a combination of attendance, participation, and a final essay, drafts of which will be discussed with the instructor prior to the final due date.
Area: Writing Intensive

AS.150.193. Philosophy of Language Seminar: Proper Names and Definite Descriptions. 3 Credits.
In talking with each other, we often use proper names like 'Juliet' and definite descriptions like 'The most beautiful fresco in Italy' to pick out persons and objects in our world. But what do these expressions mean exactly? In this seminar, we'll slowly and carefully work through some classic philosophical texts that address this issue. These texts will provide an introduction to the philosophy of language, and to analytic philosophy in general.
Area: Writing Intensive

AS.150.201. Introduction To Greek Philosophy. 3 Credits.
A survey of the earlier phase of Greek philosophy. Socrates, Plato, and Aristotle will be discussed, as well as two groups of thinkers who preceded them, usually known as the pre-Socratics and the Sophists.

AS.150.205. Introduction to the History of Modern Philosophy. 3 Credits.
An overview of philosophical thought in the seventeenth and eighteenth centuries. We shall focus on fundamental questions in epistemology (knowledge, how we acquire it, its scope and limits), metaphysics (the ultimate nature of reality, the relation of mind and body, free will), and theology (the existence and nature of God, God's relation to the world, whether knowledge of such things is possible): all questions that arose in dramatic ways as a result of the rise of modern science. The principal philosophers to be discussed are Descartes, Locke, Hume and Kant, though we shall also make the acquaintance of Spinoza, Leibniz and Berkeley.

AS.150.215. Problems with Knowledge, Evidence, and Action. 3 Credits.
This course covers a selection of recent work in epistemology and serves as an introduction to these topics. Issues to be discussed include new approaches to the nature of knowledge and skepticism, normative aspects of the way we handle information in our decision-making, epistemic injustices, and epistemic requirements for democratic discourse.
Area: Writing Intensive

AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Area: Writing Intensive

AS.150.220. Introduction to Moral Philosophy. 3 Credits.
An introduction to moral philosophy through in-depth and critical reading of selected texts from the history of philosophy. The philosophers whose texts will be discussed include Aristotle, Kant, Mill, and Hannah Arendt.

AS.150.223. Formal Methods of Philosophy. 3 Credits.
For better or for worse (and we think better), during the last century or so, philosophy has become infused with logic. Logic informs nearly every area of philosophy; it is part of our shared language and knowledge base. Vast segments of literature, especially in contemporary analytic philosophy, presuppose basic competence in logic and a familiarity with associated formal methods, particularly set theoretical. The standard philosophy curriculum should therefore guarantee a minimum level of logic literacy, thus enabling students to read the literature without it seeming like an impenetrable foreign tongue. This course is an introductory survey of the formal methods that a contemporary philosopher should be familiar with. It is not mathematically demanding in the way that more advanced courses in metalogic and specialized topics may be. The emphasis is on basic comprehension, not on mathematical virtuosity.

AS.150.235. Philosophy of Religion. 3 Credits.
Can one prove or disprove the existence of God? What is the relation between reason and faith? Are science and religion at odds with one another? We will consider historically significant discussions of these questions as well as important contemporary writings.

AS.150.237. Foundations of Modern Political Philosophy. 3 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill.

AS.150.240. Intro-Political Philosop. 3 Credits.
This course begins by reviewing canonical texts in modern political philosophy beginning with Thomas Hobbes and John Locke and ends by exploring classic questions in contemporary debates in race, gender, and identity.
Area: Writing Intensive

AS.150.245. Philosophy of Mind. 3 Credits.
If we know anything, it is natural to think it is our own minds. Despite this, philosophers have long disagreed about the natures of the states which make up our minds. And there is equally little agreement as to what makes such states count as mental in the first place. This course will investigate the nature of different aspects of mind and their interrelations. Time permitting, we will explore debates and puzzles about perception, memory, imagination, dreaming, pain and bodily sensation, emotion, action, volition and those states commonly classed as propositional attitudes: knowledge, belief, desire and intention. This will put us in a position to ask what if anything unifies such phenomena as mental

AS.150.260. Introduction to Metaphysics. 3 Credits.
Metaphysics addresses fundamental questions about the nature and structure of reality. This course will offer an introduction to metaphysics, and a survey of metaphysical debates about topics including free will, possibility and necessity, and arguments for the existence of God.

AS.150.300. Prometheus Editorial Workshop. 1 Credit.
Prometheus is an international undergraduate philosophy journal published by students at Johns Hopkins University. The purpose of the journal is to promote philosophic discourse of the highest standard by offering students an opportunity to engage in open discussion, participate in the production and publication of an academic journal, and establish a community of aspiring philosophers. Students enrolled in this workshop will act as the staff readers for the journal. For more information, please visithttps://prometheus.students.jh.edu/Prerequisite: MUST have taken one philosophy course

AS.150.301. Majors Seminar:. 3 Credits.
Topics change by semester. Please view class search to see what the topic is for a specific term.
Area: Writing Intensive

AS.150.307. Plato's Phaedrus. 3 Credits.
This is a reading course. Together we will do a close reading of one of Plato's masterpieces, the Phaedrus. We will also use this text to address general questions of interpretation, such as how to approach a philosophical classic, how to discern its underlying idea, etc.

AS.150.312. Applied Public Health Ethics and Decision-Making. 3 Credits.
In this course, students receive an introduction to core theoretical foundations and case studies in public and global health ethics. this course adopts an applied framework for understanding how public health ethical values are navigated in different decision-making processes. This course is geared toward juniors and seniors.
Area: Writing Intensive

AS.150.313. Technology, Democracy, and Social Justice. 3 Credits.
This course will consider healthcare technologies through the lens of political values: democracy and social justice. At a broad level, we will ask of these technologies: Who should decide on their design and use when the experts don't resemble the public and the public lacks expertise? How can we provide broad access to the benefits of these new technologies without exposing vulnerable people to further risk and unfairness? More narrowly, the course will focus on four technologies that affect healthcare: anti-malarial "gene drive" mosquitoes, medical AI, genomic data collection, and social media. Gene drives hold the promise of modifying mosquitoes to prevent the spread of infectious disease, but they also expose people in lower-income countries to unanticipated risks. Artificial intelligence and genomic data can deliver scarce medical resources to those who need it most and tailor it to minorities based on their precise characteristics. But they can also exacerbate existing unfairness while exposing minorities to risks of further discrimination and surveillance. Social media has a similar potential to deliver crucial health data, especially in a pandemic. But it also promotes the spread of misinformation among the populations most in need of help. This course will consider how we can balance the benefits and risks of these novel technologies and who gets to decide that balance.
Area: Writing Intensive

AS.150.330. Decisions, Games & Social Choice. 3 Credits.
We investigate rational decision making at the individual and group level. In the first section of the course on decision theory, we consider how a single rational agent will act in a choice situation given her knowledge, or lack thereof, about the world and her particular risk profile. In the second section on game theory, we explore different kinds of competitive and cooperative strategic interactions between agents, and we define different kinds of solutions, or equilibria, of these games. We also apply game theory to the study of morality, convention, and the social contract. In the final section of the course on social choice theory, we turn to group decision making with a focus on the impossibility results of Arrow and Sen.

AS.150.331. Themes from the Philosophy of Religion. 3 Credits.
Religion has always been a contested and extensively debated topic throughout the history of philosophy, and the topics from the philosophy of religion are still relevant today. In this course, we will look at several of those topics: what is religion? Do we have reason to believe or not believe in God? How does God relate to the world (or are there many Gods)? How can we understand religious practice? And what role (if any) should religion play in our society?

AS.150.355. Philosophy of Law. 3 Credits.
In this course we will examine major issues in the philosophy of law, including the nature of law, the role of the Constitution in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required.

AS.150.356. Political Philosophy and Public Health Ethics. 3 Credits.
In 2015, Rand Paul generated controversy by insisting that parents should have complete discretion over whether to vaccinate their children. When pressed to come up with a defense for this policy, Paul replied, "The state doesn't own your children. Parents own the children, and it is an issue of freedom and public health." His rationale for his policy proposal and the responses to it hint at several fundamental questions about the role of the State as it pertains to producing health, as well as more practically oriented questions concerning policy. In this seminar, we will consider both sorts of questions. We will consider the merits of and objections to various policies such as cigarette bans, mandatory seatbelt or helmet laws for motorists, taxes for sugary beverages, and prohibitions of the private sale of organs. We will also ask more philosophical questions: When discussing public health, what constitutes 'the public'? And how should we connect public health and policy measures to salient concepts such as legitimacy, justice, coercion, manipulation, paternalism, autonomy, liberty, privacy, and parental rights? In asking these questions, both at the level of policy and more philosophically, we will engage with a variety of political theories, including various strands of feminism, anarchism, libertarianism, perfectionism, critical race theory, leftist theories, broadly consequentialist theories, and public reason liberalism. Must have some background in philosophy or bioethics.
AS.150.219 OR AS.150.220 OR AS.150.237 OR AS.150.240

AS.150.400. Simone de Beauvoir. 3 Credits.
Seminar on Beauvoir's moral philosophy, covering the major works of the 1940s. Readings will include selections from The Blood of Others, Pyrrhus and Cineas, All Men are Mortal, The Ethics of Ambiguity, and The Second Sex. Open to graduate students and advanced undergraduates. (Beginning undergraduates should contact Professor Kosch.) No prerequisites.
Area: Writing Intensive

AS.150.401. Greek Philosophy: Plato and His Predecessors. 3 Credits.
A study of pre-Socratic philosophers, especially those to whom Plato reacted; also an examination of major dialogues of Plato with emphasis upon his principal theses and characteristic methods. Cross-listed with Classics.
Area: Writing Intensive

AS.150.402. Aristotle. 3 Credits.
A study of major selected texts of Aristotle.
Area: Writing Intensive

AS.150.403. Hellenistic Philosophy. 3 Credits.
A study of later Greek philosophy, stretching roughly from the death of Aristotle to the Roman imperial period. Epicureans, Stoics, and Skeptics will be the main philosophical schools examined.
Area: Writing Intensive

AS.150.404. The Idea of Power. 3 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations

AS.150.405. Evidence: An Introduction. 3 Credits.
What is evidence? Can it ever be disregarded in science, the law, or religion, and if so, when? What are the paradoxes of evidence (grue, ravens) and how can they be solved?

AS.150.406. Tragedy and Living Well. 3 Credits.
This course revisits the idea of tragedy as represented in Ancient Greek thought for the purpose of approaching questions of flourishing and ethical living from a different angle.
Area: Writing Intensive

AS.150.409. Wittgenstein On Certainty. 3 Credits.
Wittgenstein's On Certainty consists of four notebooks containing remarks on knowledge, certainty, doubt and truth. In this course, we will undertake a close study of Wittgenstein's notes, critically examining competing interpretations of Wittgenstein's ideas and the different use of those ideas have been taken up in current debates about philosophical skepticism.

AS.150.410. The Philosophy of Afrofuturism I. 3 Credits.
The main goal of speculatibe fiction is to render a familiar world slightly unfamiliar to then ask familiar questions in new ways. Afrofuturism as a genre of sci-fi, fantasy, and horror written by and about black people, applies this ethic to the problems of race, broadly speaking. In this course we survey major texts to philosophically inquire into phenomena like incaceration., Slavery and it's lingering effects, and colonialism among other themes.
Area: Writing Intensive

AS.150.411. Modal Psychology. 3 Credits.
In this seminar, we'll consider recent theoretical and experimental work by philosophers, psychologists, and cognitive scientists on the impact of our modal judgments (i.e., our judgments about whether a state or event is possible or not, statistically probable or not, morally bad or not, and so forth) in various cognitive domains. Among other things, we'll look at recent studies suggesting that our moral judgments can affect our judgments about whether an agent is free to act, our selection of causes, and our simulation of counterfactual possibilities in surprising ways.

AS.150.415. Typefaces and Meaning. 3 Credits.
While linguists and philosophers have developed deep and intricate theories of meaning for natural language, considerably less attention has been paid to how the form of written and printed language can itself communicate content. In this seminar, we'll look at recent theoretical and experimental work across a range of different disciplines that converges on the idea that typeface choice can be a rational means to communicate and construct different personae. To get clearer about this phenomenon, we'll also look at philosophical work on meaning, and related research on sociolinguistic variation and the semantics and pragmatics of expressive language.

AS.150.417. Kant's 'Critique Of Pure Reason'. 3 Credits.
An examination of the philosophy of Immanuel Kant, with emphasis on The Critique of Pure Reason.

AS.150.418. Hermeneutics and Critrical Theory. 3 Credits.
An introduction to two of the most important and influential schools in twentieth-century German philosophy. This course examines the works of four leading representatives of these schools, i.e. Heidegger, Gadamer, Horkheimer, and Habermas.

AS.150.419. Kant's Critique/Judgment. 3 Credits.
This course will examine closely and in detail the aesthetic and teleological parts of Kant's third masterpiece, The Critique of the Power of Judgment.

AS.150.420. Mathematical Logic I. 3 Credits.
Mathematical Logic I (H,Q) is the first semester of a year long course. It introduces the two notions of validity and provability for both sentential logic and first-order predicate logic, showing in each case that there is a system of derivation such that any argument is valid if and only if the conclusion is provable from the premises. The result is non-trivial since validity is a semantic notion involving the preservation of truth, while a proof is a finite syntactic object whose correctness can be effectively decided. The goal of the course, however, is to learn how to formulate mathematical theories in first-order logic and to explore various of their properties (or lack thereof) such as completeness, decidability, axiomatizability, finite axiomatizability, and consistency. The course concludes with a brief introduction to model theory and the interpretability of one theory in another, which is the basis for relative consistency proofs in mathematics.

AS.150.421. Mathematical Logic II. 3 Credits.
Euclid set a precedent for the codification of mathematics by axiomatizing the set of geometric truths. An obvious question that arises is whether all branches of mathematics are axiomatizable, especially fundamental ones, such as arithmetic. In the late nineteenth century, what became known as Peano arithmetic was proposed as an axiomatization. The essential feature of an axiomatization is that, although one might have an infinite number of axioms, as does Peano arithmetic, one must have a decision procedure for determining whether a given proposition is or is not an axiom. In 1931, Gödel proved the astounding result that, not only is Peano arithmetic incomplete in the sense that it does not entail all arithmetic truths, but any attempted axiomatization of arithmetic is incomplete, and thus the set of arithmetic truths must be undecidable. Subsequently, Alfred Tarski showed the set of arithmetic truths is not even definable. Also, by finding a finitely axiomatizable undecidable subtheory of Peano arithmetic, Alonzo Church was able to show that there is not even an effective procedure for determining whether a given sentence is a logical truth.Finally, in his 1931 paper, Gödel argued a second incompleteness theorem, viz., that any theory strong enough to express its own consistency, as he showed Peano arithmetic to be, cannot prove its own consistency unless it is inconsistent. We will cover these and other results that have had a profound effect on the foundations of mathematics. It remains an open question whether so basic a theory as Peano arithmetic is consistent.
AS.150.420

AS.150.422. Axiomatic Set Theory. 3 Credits.
A development of Zermelo-Fraenkel set theory (ZF), including the axiom of choice (ZFC), a system in which all of mathematics can be formulated (i.e., entails all theorems of mathematics). Although, we'll do an exposure to transfinite ordinals and cardinals in general so that you can get a sense for how stupendously “large” these can be, the main thrust concerns certain simple, seemingly well-posed conjectures whose status appears problematic. For example, the Continuum Hypothesis (CH) is the conjecture that the cardinality of the real numbers is the first uncountable cardinality, i.e., the first cardinality greater than that of the set of natural numbers. Equivalently, there is no uncountable subset of real numbers strictly smaller in cardinality than the full set of reals. (You'd think that if there were one, you would be able eventually to find such.) Cantor thought that CH is true, but could not prove it. Gödel showed, at least, that if ZFC is consistent, then so is ZFC+CH. However, Paul Cohen later proved that if ZFC is consistent, then so is ZFC + the negation of CH. In fact, CH could fail in astoundingly many ways. For example, the cardinality of the continuum could be (weakly) inaccessible, i.e., of a cardinality that cannot even be proved to exist in ZFC (although the reals can certainly can be proved to exist in ZFC). So, are there further, intuitively true axioms that can be added to ZFC to resolve the cardinality of the continuum, and CH is definitely true or false? Or, as Cohen thought, does CH simply lack a definite truth value?

AS.150.423. Theory of Knowledge. 3 Credits.
An advanced introduction to the central problems, concepts and theories of contemporary philosophical epistemology (theory of knowledge). Topics to be explored will includes: what is knowledge (and why do we want it)?; theories of justification (foundationalism, the coherence theory, etc.); externalism and internalism in epistemology; skepticism, relativism and how to avoid them. Reading from contemporary sources.

AS.150.425. Enlightenment Moral and Political Theory. 3 Credits.
An examination of some of the central texts of the Enlightenment, including works by Locke, Montesquieu, Rousseau, and Kant.
Area: Writing Intensive

AS.150.426. Philosophy and Disability. 3 Credits.
In this course, we will consider various philosophical issues related to disability. What counts as a disability? What obligations do we have, both as individuals and as a society, to people with disabilities? What counts as respecting people with disabilities, and what counts as unjustifiable discrimination against them?
Area: Writing Intensive
AS.150.219 OR AS.150.220

AS.150.428. Spinoza's Theological Political Treatise. 3 Credits.
The course is an in-depth study of Spinoza's Theological-Political Treatise. Among the topics to be discussed are: Spinoza's Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza's theory of the State, the role of religion in Spinoza's political theory, the freedom to philosophize, the metaphysics of Spinoza's Theological-Political Treatise, and finally, the reception of the TTP.

AS.150.430. Hegel's Phenomenology of Spirit. 3 Credits.
From the opening chapter on "Sense-certainty" to the concluding "Absolute Knowledge," we will follow Hegel's account of the experience of consciousness through the transitions to self-consciousness, reason, spirit, and religion.

AS.150.432. Philosophy of Memory. 3 Credits.
Memory is amongst the most fundamental capacities of the mind. Without memory, we would be limited to our present experience, and many of our other cognitive capacities and social practices would be impossible. In this course we will investigate interconnected questions including: What is the nature of memory and of its different varieties? How should we study memory: what should be the roles of psychology, neuroscience, and introspection? If someone loses many of their memories due to injury or disease, are they still the same person—and should we still respect their past wishes and hold them responsible for their past deeds? What kinds of memory do other animals have and is this morally significant? Is forgetting always bad, or do we have a duty to remember? How do collective memory and public memorials relate to individual memory, and what lessons does the study of individual memory have for the politics of collective memory?
Area: Writing Intensive

AS.150.433. Philosophy of Space & Time. 3 Credits.
Is space an entity that exists independently of matter (substantivalism), or is it only an abstraction from spatial relations between bodies (relationism)? Is there a lapse of time even when nothing changes, or is time only a measure of motion? Are motion and rest contrary properties or states of a body, or are there only changes in the positions of bodies relative to one another? Philosophers and physicists have disputed these questions from antiquity to the present day. We survey the arguments and attempt to find a resolution. But there are further questions. What is the significance of incongruent counterparts (left hands vs. right hands)? Is there a fact of the matter as to the geometry of space (flat, hyperbolic or elliptical), or as to whether space-like separated events occur at the same time? What is the principle of relativity? Does Einstein's theory have consequences for the substantivalist/relationist debate? What is the status of spacetime in current physics and cosmology? Why does time but not space have a "direction"? Are past, present and future objective features of reality, or are they merely "stubborn illusions"? Does time flow? If not, how do we account for our sense of the passage of time?

AS.150.434. Formal Methods of Philosophy. 3 Credits.
For better or for worse (and we think better), during the last century or so, philosophy has become infused with logic. Logic informs nearly every area of philosophy; it is part of our shared language and knowledge base. Vast segments of literature, especially in contemporary analytic philosophy, presuppose basic competence in logic and a familiarity with associated formal methods, particularly set theoretical. The standard philosophy curriculum should therefore guarantee a minimum level of logic literacy, thus enabling students to read the literature without it seeming like an impenetrable foreign tongue. This course is an introductory survey of the formal methods that a contemporary philosopher should be familiar with. It is not mathematically demanding in the way that more advanced courses in metalogic and specialized topics may be. The emphasis is on basic comprehension, not on mathematical virtuosity. Co-taught with AS.150.223 Formal Methods of Philosophy.

AS.150.436. Philosophy of Gender. 3 Credits.
In this class we will examine philosophical questions about gender, and about the intersections between gender and other social categories including race, class and sexuality. We will focus specifically on questions about the metaphysics of gender and other social categories.

AS.150.437. Kierkegaard. 3 Credits.
A survey of the works of Danish philosopher Søren Kierkegaard, considered by many to be the most important figure in the history of what came to be called 'existential philosophy', and one of the great moral psychologists in the history of western philosophy. We will read a broad selection from Kierkegaard's pseudonymous works, including Either/Or, Fear and Trembling, The Concept of Anxiety and The Sickness unto Death.
Area: Writing Intensive

AS.150.441. Paradoxes of Agency and Belief. 3 Credits.
This course will focus on issues arising from the Socratic paradoxes of agency and from Moore's Paradox. Readings will include Platonic dialogues, the ethical writings of Kant, Fichte and Hegel, selections from Moore and Wittgenstein, and writings by contemporary philosophers of agency.

AS.150.442. Wittgenstein. 3 Credits.
An advanced introduction to the philosophical work of Ludwig Wittgenstein. We shall begin by examining the central ideas of Wittgenstein's Tractatus Logico-Philosophicus against the background of the philosophical work of Frege and Russell. We shall then move on to the Philosophical Investigations, paying special attention to his searching self-criticisms and to the "rule-following" and "private language" problems, as highlighted by Saul Kripke's pathbreaking but controversial account of Wittgenstein's argument.
Area: Writing Intensive

AS.150.445. Berkeley's Idealism. 3 Credits.
Idealism is the view that, at bottom, whatever is - is an idea. For the idealist, to be is to be perceived. George Berkeley is probably the most famous idealist among European philosophers, and on this seminar we will read closely two of his major texts: Principles of Human Knowledge and Three Dialogues between Hylas and Philonus. Topics to be discussed include: the nature of bodies, the nature of the mind, the possible sources of our ides, and Berkeley's understanding of God.

AS.150.447. The Logic of Spinoza's Ethics. 3 Credits.
One of the unique aspects of Spinoza's major work, the Ethics, is its formal or "geometric" structure. The book is written following the model of Euclid's Elements, with Definitions, Axioms, Propositions, and Demonstrations. In this seminar, we scrutinize the deductive structure of the Ethics and some of its earlier drafts. We consider the role and epistemic status of the definitions and axioms, attempt to provide rigorous reconstructions of some of its key propositions, and also investigate the possibility of alternative routes between these propositions.

AS.150.448. The Religion of Morality. 3 Credits.
In the wake of the Enlightenment criticism of traditional forms of religion, philosophers attempted to give religion a rational basis by equating it with moral practice. We will examine this religion of morality with the goal of determining whether it can vindicate its claim to be a genuine religion. We will read texts by Rousseau, Kant, Fichte, Hegel and Emerson.

AS.150.449. New Foundations for Mathematics. 3 Credits.
With the appearance of Zermelo-Fraenkel set theory (ZF) in the early 20th century and the subsequent identification of first-order logic, the problem of an adequate foundations for mathematics was thought to have been solved. The emergence of category theory (Cat) in the latter half of the century and more recently of homotopy type theory (HoT) has been seen to undermine ZF's foundational status and to threaten to replace it. In this course we will (1) see how ZF serves as a foundation, (2) learn a bit of Cat and HoT, and (3) discuss what the foundations can and should be (if any).

AS.150.450. Topics in Biomedical Ethics. 3 Credits.
Area: Writing Intensive

AS.150.451. Animal Points of View. 3 Credits.
Are non-human animals conscious? Do they possess a stream of consciousness like our own? This course will explore these questions by asking what it is for an animal to possess a point of view and a temporal point of view in particular.

AS.150.452. Freedom of Will & Moral Responsibility. 3 Credits.
What are freedom of the will and moral responsibility? Are they compatible with determinism or naturalism? This course will examine various philosophers' answers to these questions.
Area: Writing Intensive

AS.150.453. Hegel's Logic. 3 Credits.
This seminar is a close study of Hegel's major work, the Science of Logic. Among the issues to be discussed are the questions: How should philosophy begin and what - if anything - can it take for granted? We will also attempt to scrutinize Hegel's attitude toward the law of non-contradiction.

AS.150.455. Ethics And Animals. 3 Credits.
Area: Writing Intensive

AS.150.458. The Biggest Hits in Philosophy of Science (20th and 21st Centuries). 3 Credits.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who got us where we are in the field today. Quine said: Philosophy of science is philosophy enough. Is it?

AS.150.459. Counterfactual Reasoning, Normative & Descriptive Aspects. 3 Credits.
Counterfactual reasoning is reasoning about what would be the case if things had been other than they are: If it had been sunny and so I didn't run into that store for cover from the rain, maybe I would never have met my future partner! How ought one to reason counterfactually? How do people in fact do it? Counterfactual reasoning might seem like a narrow topic, but it is of fundamental importance to both scientific and everyday inquiry, where it is intimately connected to the use of imagination, planning for the future, assessment of and learning from the past, providing explanations, understanding fictions, and constructing experiments. This course will explore both normative and empirical aspects of counterfactual reasoning, drawing upon readings in philosophy, psychology, and linguistics. An overarching goal of this course is to arrive at a better understanding of counterfactuality that is informed by research across these different disciplines.

AS.150.461. Theory Of Value. 3 Credits.
What is value? What is the difference between instrumental and final value? What is the relation of ethical and economic value? This course will explore a range of answers to these questions, with special focus on the role of desire and reason in determining value. Readings will include historical and contemporary authors.

AS.150.464. Hegel's Philosophy of Right. 3 Credits.
This course will be a close reading of G.W.F. Hegel's Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel's Logic, and the relation of individual and social conceptions of freedom.

AS.150.465. Topics in the Philosophy of Physics. 3 Credits.
This course will consider some philosophical topics in the foundations of physics. Entropy and the arrow of time -- why time has a direction, whether it can be explained in terms of entropy, and what role the arrow of time plays in causation and emergence. Anthropics and indexical uncertainty -- approaches to probability, reference classes, the cosmological multiverse, Boltzmann brains, simulation and doomsday arguments. Foundations of quantum mechanics -- the measurement problem, many-worlds, probability and structure, alternative approaches.

AS.150.473. Classics of Analytic Philosophy. 3 Credits.
A reading of some of the classic philosophical works in 20th Century Analytic Philosophy, beginning with G. Frege and ending with V.O. Quine.

AS.150.474. Justice and Health. 3 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.

AS.150.475. The Nature and Significance of Animal Minds. 3 Credits.
Humans have a complicated relationship with other animals. We love them, befriend them and save them. We hunt, farm and eat them. We experiment on and observe them to discover more about them and to discover more about ourselves. For many of us, our pets are amongst the most familiar inhabitants of our world. Yet when we try to imagine what is going on in a dog or cat's mind — let alone that of a crow, octopus or bee — many of us are either stumped about how to go about this, or (the science strongly suggests) get things radically wrong. Is our thought about and behaviour towards animals ethically permissible, or even consistent? Can we reshape our habits of thought about animals to allow for a more rational, richer relationship with the other inhabitants of our planet? In this course, students will reflect on two closely intertwined questions: an ethical question, what sort of relationship ought we to have with animals?; and a metaphysical question, what is the nature of animal minds? Readings will primarily be from philosophy and ethics and the cognitive sciences, with additional readings from literature and biology. There are no prerequisites for this class. It will be helpful but certainly not necessary to have taken previous classes in philosophy (especially ethics and philosophy of mind) or in cognitive science
Area: Writing Intensive

AS.150.476. Philosophy and Cognitive Science. 3 Credits.
This year's topic is perception. Questions will include: In what ways might perceptual states be like and unlike pictures? Does what we believe affect what we perceive? Is linguistic comprehension a kind of perception? This course is geared toward advanced undergraduates and graduate students in philosophy and in the mind brain sciences and related fields. Others may be successful in the course depending on their prior course of study.

AS.150.480. Death and Dying. 3 Credits.
What is death? How should we think about death? How should we think about it? How should we treat those who are dying including ourselves? This course will examine these and other philosophical questions.
Area: Writing Intensive

AS.150.481. Hobbes' Leviathan. 3 Credits.
Thomas Hobbes' Leviathan is a masterpiece of modern political philosophy. This class is an in-depth study of that work.

AS.150.482. Food Ethics. 3 Credits.
Eating is an essential human activity: we need to eat to survive. But how should we eat? In this course, we consider such ethical questions as: Is it morally wrong to make animals suffer and to kill them in order to eat them? What is the extent of hunger and food insecurity, in this country and globally, and what should we as individuals do about it? Should the government try to influence our food choices, to make them healthier?

AS.150.483. Evidence, Foundations of Probability, and Speculation. 3 Credits.
The course examines major theories about the meaning of evidence and probability, and in terms of these provides answers to the questions “What is a scientific speculation?” and “When, if at all, is speculating important or even legitimate in science?” No preview study of evidence or probability is required.

AS.150.485. Descartes and Spinoza. 3 Credits.
Descartes and Spinoza are two of the leading philosophers of the modern period. In the class we will study the works of both figures. Special attention will be assigned to Spinoza’s early works.

AS.150.486. Moral Imagination. 3 Credits.
This course explores the relationship between moral principles and how we use imagination to put or fail to put principles to work. We will read widely and eclectically in exploring this relationship.

AS.150.491. American Philosophy: Pragmatism. 3 Credits.
Studies of major figures in the history of American philosophy beginning with the 19th century. The course focuses on the development of pragmatism in the work Peirce, James and Dewey. Other philosophers, such as Royce and Mead, may also be studied.

AS.150.492. Plato's Republic. 3 Credits.
This course will be a close reading of Plato’s Republic, with special attention to the parallel of city and soul, the relevance of metaphysics to politics, and the relation of aristocracy, democracy and tyranny.

AS.150.498. Modal Logic and Its Applications. 3 Credits.
In the first part of the course, we’ll investigate the theory of modal logic, considering its syntax, semantics, and proof theory. We’ll then turn to some its philosophical applications: epistemic logic, counterfactuals, deontic logic, intuitionistic logic, and the metaphysics of time.

AS.150.511. Directed Study. 3 Credits.
Individual study of special topics, under regular supervision of a faculty member. Special permission is required.
Area: Writing Intensive
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.150.512. Directed Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.150.551. Honors Project. 3 Credits.
See departmental major adviser.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.150.552. Honors Project. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.150.603. Seminar in Modern Philosophy.
German-style colloquium for advanced graduate students working in the history of modern philosophy. Course will meet synchronously online every other week for the duration of the academic year. Spring offering will carry a separate course number.

AS.150.604. Graduate Seminar in the Philosophy of Science: The Big Issues.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who, in the 20th and 21st centuries, got us where we are in the field today. And Quine added: philosophy of science is philosophy enough. Is it?

AS.150.606. Seminar on Skepticism - Ancient & Modern.
Course will focus on ancient skepticism as a way of life, and on the role of epistemological argument in skepticism so conceived. The seminar will end with a brief look at early modern reactions to ancient skepticism.

AS.150.607. Graduate Seminar: Knowledge and Perception.
How does perception reveal the world, if it does? Why have philosophical reflections on perception often led to skepticism? For background, we will start with readings from Ayer and Austin (on the sense-datum theory), and Sellars (on the Myth of the Given). We will then spend time on contemporary "disjunctive" accounts of perceptual consciousness, with readings from McDowell, Travis and (possibly) others.

AS.150.609. Fichte, Schelling and Spinoza.
Spinoza constituted a major philosophical interlocutor for both Fichte and Schelling. In this class will study the critical reception of Spinoza by the two philosophers. Among the topics we intend to discuss are: freedom, God, the concept of substance, the nature of thought, and reason.Recommended Course Background: Previous acquaintance with Spinoza’s ethics.

AS.150.612. The Birth of German Idealism.
This course will mainly consist of close readings of the work F.H. Jacobi, J.G. Fichte, and F.W.J. Schelling. We will focus on the issues of freedom and systematicity in the transformation of Kant’s critical philosophy through the influence of Spinoza.

AS.150.613. Graduate Seminar: Topics in the Philosophy of Mind - Perception.
Recent work on the philosophy of perception, including Tyler Burge’s new book Perception: First Form of Mind

AS.150.616. Is Scientific Knowledge Possible?.
Philosophical Views of Descartes, Newton, Duhem, Popper, Carnap, Goodman (grue), Kuhn, and Feyerabend.

AS.150.617. Origins of Analytic Philosophy; Frege to Carnap.
Course description forthcoming. Previous philosophy classes of History of Modern Philosophy and/or Elementary Logic useful. This class is geared toward graduate students in philosophy.

AS.150.619. Topics in Hegel’s Philosophy: The Philosophy of Right.
This course will be a close reading of G.W.F. Hegel’s Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel’s Logic, and the relation of individual and social conceptions of freedom.

AS.150.620. Political Philosophy.
A high level review of key thinkers in contemporary political thought.
Area: Writing Intensive

AS.150.622. Graduate Seminar: Metametaphysics.
Metametaphysics is the study of the nature and viability of metaphysics. In this seminar we will engage with questions about metametaphysics, including questions about the relationship between metaphysics and science, responses to deflationist challenges, and the nature of social metaphysics.

AS.150.623. Seminar in German Idealism.
This course explores the transformation of Kantian idealism by F.W.J. Schelling and G.W.F. Hegel in their early years in Jena. Readings will include Schelling's System of Transcendental Idealism as well as Hegel's "Difference" essay and Faith and Knowledge.

AS.150.632. Formal Logic.
"An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion of an argument follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life." Co-listed with AS.150.118 (for undergraduate students) (01-F 11:00-11:50am).

AS.150.633. Kant's Opus Postumum.
This research seminar examines the reasons that led Kant to revise his transcendental philosophy late in life. Special attention to problems in the Metaphysics of Nature and the Metaphysics of Morals. Students should be familiar with Kant's theoretical and practical philosophy.

AS.150.635. Graduate Seminar: Truthmaker Semantics & Pragmatics.
An investigation into the theory of truthmaker semantics and pragmatics and its applications to various problems in philosophical logic and linguistics. This course is geared toward graduate students. Some background in mathematical logic will be useful in this class.

AS.150.642. Seminar on Ancient Greek Ethics.
The seminar will focus on the ethical system of the Stoics. Stoic ethics is notorious for a number of apparently extreme assertions, such as "Virtue is the only good", "Virtue is sufficient for happiness", and "The wise man is happy on the rack". Yet the system had a wide following, over several centuries, in both the Greek and Roman worlds; and its devotees (including at least one Roman emperor, and a close adviser to another) were certainly not all fanatics. We will attempt to make sense of this ethical outlook, with particular focus on the relations among virtue, wisdom and happiness.

AS.150.645. Truthmakers.
An investigation into the metaphysics and semantics of truthmakers and their application in various areas of philosophy.

AS.150.651. Animal Points of View.
Are non-human animals conscious? Do they possess a stream of consciousness like our own? This course will explore these questions by asking what it is for an animal to possess a point of view and a temporal point of view in particular.

AS.150.653. Seminar: Philosophy of Physics.
Physicists, natural philosophers and ordinary people have long held that space and time are fundamental entities, the stage as it were for all bodies and their interactions. Although relativity now teaches us that space and time are not fundamental, but aspects of a single entity, spacetime, it is typically thought that the latter is strictly fundamental, especially given its dynamical role in general relativity as the gravitational field. Yet recent attempts to unify general relativity and quantum mechanics reject this view and instead hold that spacetime emerges from something non-spatiotemporal and more fundamental. But what is the nature of this emergence and from what does spacetime emerge? We will examine a variety of proposals and ask (i) what it means for spacetime to emerge from non-spatiotemporal features and (ii) how this compares with philosophical theories of emergence. On one approach in particular, spacetime (gravity) emerges from the entropy of quantum entanglement. Thus, because it appears to come in various forms, we will also be concerned to understand the concept of entropy. But we will consider other approaches as well (e.g., loop quantum gravity and causal set theory) and attendant issues such as the black hole information loss paradox, the holographic principle, and the conjecture that entangled particles are connected by a wormhole.

AS.150.668. Graduate Seminar on Essence.
An exploration of historical and contemporary work on the metaphysics of essence, and related questions about modality, explanation, identity and the Principle of Sufficient Reason. Readings will include work from Aristotle, Spinoza, Kripke and Fine. This course is open to upper level undergraduate students with the permission of the instructor.

AS.150.669. Topics in Practical Philosophy.
An investigation into central topics in practical philosophy.

AS.150.675. Recent Works in Skepticism.
We all take it for granted that perceptual experience yields knowledge of the world around us. But in his Meditations on First Philosophy, Descartes presents new and puzzling thought experiments. He asks whether there is any way to be sure that, when he tales himself to be experiencing things in the world around him, he is not dreaming. From there, he goes on to imagines an Evil Demon with the power to manipulate the total course of his (Descartes's) experience, so that what he naturally takes to be experience of the world around him is really a kind of perpetual dream: a simulation or virtual reality, as we might say today. Descartes's problem, which has made its way into popular culture through films like those in the "Matrix" series, remains a source of philosophical puzzlement. While no one believes that skeptical hypotheses like Demon or computer deception are true, it is not easy to say how we can exclude them. Given that the deception is systematic, it seems that any 'evidence' I cite could itself be part of the simulation. So how do I (or could I) know (for sure) that I'm not the victim of the Deceiver or the Matrix? We shall examine some of the latest attempts to respond to Descartes's challenge. Does the "How could I know?" question admit of a theoretical answer. Is the question itself somehow ill-posed? Can we answer it without making significant concessions to skepticism? What can we learn about knowledge (or the concept of knowledge) by coming to understand how skepticism arises and how it goes wrong (if it does)? Readings from contemporary sources.

AS.150.676. Graduate Seminar: Current Topics in Philosophy.
Rather than having a set topic, the point of this seminar is to stay up-to-date with the current philosophy literature by working through 1-2 recently published papers each week. The papers covered will depend on the research interests of the seminar participants (and my own).

AS.150.677. Moral Imagination.
This course explores the relationship between moral principles and how we use imagination to put or fail to put principles to work. We will read widely and eclectically in exploring this relationship.

AS.150.678. Social Construction.
An exploration of the metaphysics of social construction, examining different theories of social construction and related questions about social ontology, scientific realism and the boundaries of metaphysics.

AS.150.688. Philosophy of Psychology.
An examination of recent philosophical and empirical work on perception and consciousness.

AS.150.810. Independent Study.

AS.150.811. Directed Study.
Please see AS.150.810 for section numbers to use when registering.

AS.150.812. Directed Study.
Please see AS.150.810 for section number to use when registering.

AS.150.813. Seminar in Modern Philosophy.
German-style colloquium for graduate students working in the history of modern philosophy. We will read newly-published work, invite speakers, and have presentations by advanced graduate students. First- and second-year students may register for a grade. Advanced graduate students in history of modern should audit/present

AS.150.821. Research Seminar in Language and Mind.
A workshop for current departmental research in language and mind. Permission required.

AS.150.822. READINGS AND SKILLS IN CONTEMPORARY PHILOSOPHY PART I.
This course provides skills training for a successful career in philosophy, through engagement with contemporary work across a wide range of areas of philosophy. As a class, we will choose accessible articles of general interest recently published in top journals. Each student will be responsible for presenting one of these articles to the class and leading discussion, with guidance from the instructors. All students will be required to carefully and closely read each paper for each class, and come prepared to discuss it in depth. The aim of this part of the course is to learn how to read and analyze articles, present work, and engage in constructive philosophical discussion. After presenting the paper, each presenter will be required to write a short reply. As a class, we will then engage in a mock review process, crafting anonymous referee reports, revising replies in the light of these, and writing letters to the editor explaining the revisions. The aim of this part of the course is to gain knowledge and skills relevant to writing philosophy and successful publication. The course is open to 1st and 2nd year Philosophy PhD students only. It will meet every other week in both the fall and the spring semesters; each semester is worth 2 credits and students are required to enroll in both. Grading will be based predominantly on participation and effort

AS.150.823. READINGS AND SKILLS IN CONTEMPORARY PHILOSOPHY II.
This course provides skills training for a successful career in philosophy, through engagement with cutting-edge contemporary work across a wide-range of areas of philosophy. As a class, we will choose accessible articles of general interest recently published in top journals. Each student will be responsible for presenting one of these articles to the class and leading discussion, with guidance from the instructors. All students will be required to carefully and closely read each paper for each class, and come prepared to discuss it in depth. The aim of this part of the course is to learn how to read and analyze articles, present work, and engage in constructive philosophical discussion. After presenting the paper, each presenter will be required to write a short reply to it, in the style of the relevant journal. As a class, we will then engage in a mock review process, crafting anonymous referee reports, revising replies in the light of these, and discussing these as editors. The aim of this part of the course is to gain knowledge and skills relevant to writing philosophy and successful publication. The course is open to 1st and 2nd year graduate students. It will meet every other week in both the fall and the spring semesters; each semester is worth 2 credits and students are required to enroll in both. Grading will be based predominantly on participation and effort. Upper-year graduate students may audit the course by permission of the instructors, conditional on their commitment to attend and engage as full members of the class; if student numbers are high, priority with respect to presentations will be given to 1st and 2nd year students.
Area: Writing Intensive
AS.150.822

AS.150.824. Research Seminar.
For 3rd and 4th year Philosophy graduate students working on their Qualifying Papers and Dissertation Proposals. Meets every other week.

AS.150.825. Research Seminar.
In this course students will present drafts of Qualifying Papers and first dissertation chapters, receiving feedback from students, the instructor and other relevant faculty.

AS.150.850. Summer Research.
Students research and develop their dissertation topic.

AS.171 (Physics & Astronomy)

AS.171.101. General Physics: Physical Science Major I. 4 Credits.
First semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed.
Corequisite: AS.110.108-AS.110.109, AS.173.111-AS.173.112

AS.171.102. General Physics: Physical Science Major II. 4 Credits.
Second semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed.
Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Intro to Mechanics I (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.123)
Prerequisites: A grade of C- or better in either Physics I or the first semester of Engineering Mechanics (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR (EN.530.103 OR EN.530.123)

AS.171.103. General Physics I for Biological Science Majors. 4 Credits.
First-semester of two-semester sequence in calculus-based general physics, tailored to students majoring in one of the biological sciences. In this term, the topics covered include the basic principles of classical mechanics and fluids as well as an introduction to wave motion. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113).Midterm exams are given at 8am Tuesdays, so students must leave their schedules open at this time in order to be able to take these exams

AS.171.104. General Physics/Biology Majors II. 4 Credits.
This two-semester sequence is designed to present a standard calculus-based physics preparation tailored to students majoring in one of the biological sciences. Topics in electricity & magnetism, optics, and modern physics will be covered in this semester. Midterm exams for every section are given during the 8 AM section time!Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: C- or better in AS.171.101 or AS.171.103 or AS.171.105 or AS.171.107; Corequisite: AS.110.109, AS173.112 or OR EN.530.123.

AS.171.105. Classical Mechanics I. 4 Credits.
An in-depth introduction to classical mechanics intended for physics majors/minors and other students with a strong interest in physics. This course treats fewer topics than AS.171.101 and AS.171.103 but with greater mathematical sophistication. It is particularly recommended for students who intend to take AS.171.201-AS.171.202 or AS.171.309-AS.171.310. Recommended Corequisites: AS.173.115 and AS.110.108

AS.171.106. Electricity and Magnetism I. 4 Credits.
Classical electricity and magnetism with fewer topics than 171.101-103, but with greater mathematical sophistication. Particularly recommended for students who plan to take AS.171.201-AS.171.202. Recommended Course Background: C- or better in AS.171.105; Corequisite: AS.173.116, AS.110.109

AS.171.107. General Physics for Physical Sciences Majors (AL). 4 Credits.
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an "active learning" style with most class time given to small group problem-solving guided by instructors. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113)

AS.171.108. General Physics for Physical Science Majors (AL). 4 Credits.
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an "active learning" style with most class time given to small group problem-solving guided by instructors. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Engineering Mechanics (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.123)
Can be taken concurrently or as a prerequisite: (AS.110.107 OR AS.110.109 OR AS.110.211 OR AS.110.113)

AS.171.113. Subatomic World. 3 Credits.
Introduction to the concepts of physics of the subatomic world: symmetries, relativity, quanta, neutrinos, particles and fields. The course traces the history of our description of the physical world from the Greeks through Faraday and Maxwell to quantum mechanics in the early 20th century and on through nuclear physics and particle physics. The emphasis is on the ideas of modern physics, not on the mathematics. Intended for non-science majors.

AS.171.114. Powering the world: the science of energy. 3 Credits.
We all know that the energy we use on a daily basis can come from a variety of sources, but a discussion of the merits and drawbacks to those sources more often leads to political argument than fact-based scientific dialogue. This course, meant for science and non-science students alike, explores the principles behind how energy from fossil fuels, solar, wind, nuclear, and other resources is produced, how efficiently the energy can be harnessed, and what effect the process has and will have on our environment and society today and in the future. Students will apply this fundamental understanding to compare and understand how each source could be used in real world scenarios. Ultimately, the course is intended to help students use a scientific perspective to shape their opinions when faced with these controversial topics.

AS.171.118. Stars and the Universe: Cosmic Evolution. 3 Credits.
This course looks at the evolution of the universe from its origin in a cosmic explosion to emergence of life on Earth and possibly other planets throughout the universe. Topics include big-bang cosmology; origin and evolution of galaxies, stars, planets, life, and intelligence; black holes; quasars; and relativity theory. The material is largely descriptive, based on insights from physics, astronomy, geology, chemistry, biology, and anthropology.

AS.171.201. Special Relativity/Waves. 4 Credits.
Course continues introductory physics sequence (begins with AS.171.105-AS.171.106). Special theory of relativity, forced and damped oscillators, Fourier analysis, wave equation, reflection and transmission, diffraction and interference, dispersion. Meets with AS.171.207.

AS.171.202. Modern Physics. 4 Credits.
Course completes four-semester introductory sequence that includes AS.171.105-AS.171.106 and AS.171.201. Planck's hypothesis, de Broglie waves, Bohr atom, Schrodinger equation in one dimension, hydrogen atom, Pauli exclusion principle, conductors and semiconductors, nuclear physics, particle physics.

AS.171.204. Classical Mechanics II. 4 Credits.
Principles of Newtonian and Lagrangian mechanics; application to central-force motion, rigid body motion, and the theory of small oscillations. Recommended Course Background: AS.110.108 and AS.110.109, AS.110.202, AS.171.201, or AS.171.309. AS.110.201 or equivalent is strongly recommended.

AS.171.205. Introduction to Practical Data Science: Beautiful Data. 3 Credits.
The class will provide an overview of data science, with an introduction to basic statistical principles, databases, fundamentals of algorithms and data structures, followed by practical problems in data analytics. Recommend Course Background: Familiarity with principles of computing.

AS.171.207. Special Relativity. 1 Credit.
Three-week introduction to special relativity for students who elect to take AS.171.209 in place of AS.171.201.

AS.171.301. Electromagnetic Theory II. 4 Credits.
Static electric and magnetic fields in free space and matter; boundary value problems; electromagnetic induction; Maxwell's equations; and an introduction to electrodynamics.

AS.171.303. Quantum Mechanics I. 4 Credits.
Fundamental aspects of quantum mechanics. Uncertainty relations, Schrodinger equation in one and three dimensions, tunneling, harmonic oscillator, angular momentum, hydrogen atom, spin, Pauli principle, perturbation theory (time-independent and time-dependent), transition probabilities and selection rules, atomic structure, scattering theory. Recommended Course Background: AS.110.302 or AS.110.306.
(AS.171.204) AND (AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)

AS.171.304. Quantum Mechanics II. 4 Credits.
Fundamental aspects of quantum mechanics. Uncertainty relations, Schrodinger equation in one and three dimensions, tunneling, harmonic oscillator, angular momentum, hydrogen atom, spin, Pauli principle, perturbation theory, transition probabilities and selection rules, atomic structure, scattering theory. Recommended Course Background: AS.171.303, AS.171.202, AS.171.204, AS.110.202.

AS.171.310. Biological Physics. 4 Credits.
Introduces topics of classical statistical mechanics. Additional topics include low-Reynolds number hydrodynamics and E&M of ionic solutions, via biologically relevant examples.

AS.171.312. Statistical Physics/Thermodynamics. 4 Credits.
Undergraduate course that develops the laws and general theorems of thermodynamics from a statistical framework.
Calculus II (AS.110.107 or AS.110.109 or AS.110.113). Linear Algebra (AS.110.201 or AS.110.212) and Calculus III (AS.110.202 or AS.110.211)

AS.171.313. Introduction to Stellar Physics. 3 Credits.
Survey of stellar astrophysics. Topics include stellar atmospheres, stellar interiors, nucleosynthesis, stellar evolution, supernovae, white dwarfs, neutron stars, pulsars, black holes, binary stars, accretion disks, protostars, and extrasolar planetary systems. Recommended Course Background: AS.110.108-AS.110.109, AS.171.202

AS.171.314. Introduction to Galaxies and Active Galactic Nuclei. 3 Credits.
This course will introduce student to the physics of galaxies and their constituents: stars, gas, dust, dark matter and a supermassive black hole in the central regions.Recommended Course Background: AS.110.108-AS.110.109, AS.171.202

AS.171.321. Introduction to Space, Science, and Technology. 3 Credits.
Topics include space astronomy, remote observing of the earth, space physics, planetary exploration, human space flight, space environment, orbits, propulsion, spacecraft design, attitude control and communication. Crosslisted by Departments of Earth and Planetary Sciences, Materials Science and Engineering and Mechanical Engineering. Recommended Course Background: AS.171.101-AS.171.102 or similar; AS.110.108-AS.110.109.

AS.171.324. Learn to Think Statistically. 3 Credits.
We live in a data-rich world where the flux of information increases exponentially. We will learn how to think statistically and see patterns and structure in many systems around us: news reports, images, cities, social networks, etc. We will learn how to use this knowledge to analyze data, make decisions and predictions. We will explore correlations, patterns, entropy, fractals. This course will allow students to better understand the complex world we live in. The course will occasionally involve some coding. Junior, senior and graduate students only. More at https://bit.ly/3iJ90ps

AS.171.402. Applied Quantum Information. 3 Credits.
This course will provide a basic introduction to quantum computing and quantum algorithms. This course will cover celebrated quantum algorithms that are of interest in the long term in addition to having a particular focus on near-term quantum algorithms for specific applications (e.g., material simulation, approximate optimization and machine learning) that can be readily studied on currently available hardware. Course attendees will also receive hands-on experience in near-term quantum algorithm implementation on the IBM Quantum Experience (IBM QE), a publicly available quantum computing platform.Recommended Background : Calculus, Python (Basic), Linear Algebra, Basic Quantum Mechanics (Preferred/Optional)

AS.171.405. Condensed Matter Physics. 3 Credits.
Undergraduate course covering basic concepts of condensed matter physics: crystal structure, diffraction and reciprocal lattices, electronic and optical properties, band structure, phonons, superconductivity and magnetism. Co-listed with AS.171.621Recommended Course Background: AS.171.304, AS.110.201-AS.110.202.

AS.171.406. Condensed Matter Physics. 3 Credits.

AS.171.408. Nuclear and Particle Physics. 3 Credits.
Basic properties of nuclei, masses, spins, parity. Nuclear scattering, interaction with electromagnetic radiation, radioactivity, Pions, muons, and elementary particles, including resonances. Recommended Course Background: AS.171.303

AS.171.410. Physical Cosmology. 3 Credits.
This course provides an overview of modern physical cosmology. Topics covered include: the contents, shape, and history of the universe; the big bang theory; dark matter; dark energy; the cosmic microwave background; Hubble's law; the Friedmann equation; and inflation. Recommended Course Background: (AS.171.101-AS.171.102), or (AS.171.103-AS.171.104), or (AS.171.105-AS.171.106), or (AS.171.107-AS.171.108), or equivalent.

AS.171.411. Light and Optics. 3 Credits.
What is light? How does it propagate and interact with matter? How do we use it to transmit information? How does technology make use of light? This course is designed for majors in physics as well as other science and engineering departments.

AS.171.416. Numerical Methods for Physicists. 4 Credits.

AS.171.425. Group Theory in Physics. 3 Credits.
Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology.Recommended Prerequisite: AS.171.304

AS.171.430. Introduction to Quantum Field Theory. 3 Credits.
Quantum Field Theory marries the principles of special relativity with quantum mechanics and provides a remarkably consistent description of a wide variety of phenomena, ranging from the theory of elementary particles to processes in condensed matter physics. It is an essential element in the toolkit of every physicist. In this course, we provide an introduction to this vast topic and aim to provide an intuitive understanding of this field. We will start by learning how to think about quantum mechanics in a manner consistent with special relativity (the Klein Gordon and Dirac equations), learn how to estimate relativistic quantum processes (Feynman diagrams), analyze nonsensical infinities that arise in these theories (Renormalization) and conclude with an overview of the Standard Model of Particle Physics (QCD and Electroweak theory). The course is aimed at introducing the student to how physicists think about these issues and it is a stepping stone to graduate study in this topic.
AS.171.304

AS.171.449. Astrophysical Plasmas. 3 Credits.
This course is for both graduate students and undergraduate students. There is no prerequisite although reading for introductory texts will be supplied where useful. Postdocs are also welcome to attend. Topics that will be discussed include: 1.Gravitational Wave Astronomy (related to cosmic plasmas),2. Ultra-High Energy Cosmic Rays,3. Black Hole Electrodynamics, 4.the Intergalactic, Interstellar and Intra-Cluster Medium, 5.Pulsars, 6.Magnetars, 7.Stellar and Galactic Dynamos,8.Solar Flares and CMEs, 9.Gamma Ray Bursts, 10.Supernovae and their Remnants, 11. Radio Sources and Jets and, 12. the universal cosmic plasma from earliest times13.Finally the detailed dusty plasmas around protostellar and protoplanetary disks including debris components of comets, asteroids planetesimals and interstellar intruders. We will spend roughly one week on each topic. In class, we will combine the lectures with reading interesting new papers from the current literature and it is expected that students will be sufficiently fluent in this field by the end of the semester to critically discuss and analyze such papers as experts.

AS.171.501. Independent Research- Undergraduate. 3 Credits.
Students may register for independent research with a faculty member in the Department of Physics and Astronomy. A research plan should be sent to the Director of Undergraduate Study before the add/drop date that includes project details, the number of hours of effort each week and the number of credits. This course may not be used for one of the two electives required for a BA, but one semester of research may be used as one of four focused electives in a BS program.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.171.502. Undergraduate Independent Research. 1 - 3 Credits.
Research done in senior year in conjunction with experimental equipment of intermediate laboratory or as special project in research group. Credit for independent study given to junior and senior students who act as tutors.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.171.597. Independent Research. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.171.603. Electromagnetic Theory.
Classical field theory, relativistic dynamics, Maxwell's equations with static and dynamic applications, boundary-value problems, radiation and propagation of electromagnetic waves, advanced topics in electrodynamics in media and plasmas

AS.171.605. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation.

AS.171.606. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time -independent and time - dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation. Recommended Course Background: AS.171.303 and AS.171.304

AS.171.610. Numerical Methods for Physicists.
Topics in applied mathematics used by physicists, covering numerical methods: linear problems, numerical integration, pseudo-random numbers, finding roots of nonlinear equations, function minimization, eigenvalue problems, fast Fourier transforms, solution of both ordinary and partial differential equations. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.

AS.171.611. Stellar Structure and Evolution.
Basic physics of stellar structure and evolution will be discussed with emphasis on current research.

AS.171.612. Interstellar Medium and Astrophysical Fluid Dynamics.

AS.171.613. Radiative Astrophysics.
A one-term survey of the processes that generate radiation of astrophysical importance. Topics include radiative transfer, the theory of radiation fields, polarization and Stokes parameters, radiation from accelerating charges, bremsstrahlung, synchrotron radiation, thermal dust emission, Compton scattering, properties of plasmas, atomic and molecular quantum transitions, and applications to astrophysical observations.

AS.171.618. Observational Astronomy.
How do we observe the Universe at each wavelength and what do we see? This course will present the knowledge required for astronomical observations across the entire spectrum. For each wavelength range (gamma rays, X-rays, UV, visible, IR, radio) we will discuss the typeof detector used, the range of possible observations and current open questions. We will also discuss the dominant astronomical and terrestrial sources across the spectrum, and study the differences between ground- and space-based observations.

AS.171.620. Soft Matter Physics.
This course is aimed at both graduate students and upper level undergraduate students. It will cover a range of topics going from the traditional areas of soft matter (polymers, liquid crystals, membranes) to newer areas at the intersection with biological physics and condensed matter. In class, we will combine lectures with reading and discussing papers from the current literature. In the second part of the course, students will at turn lead the paper discussions.

AS.171.621. Condensed Matter Physics.
This sequence is intended for graduate students in physics and related fields. Topics include: metals and insulators, diffraction and crystallography, phonons, electrons in a periodic potential, transport. Co-listed with AS.171.405

AS.171.622. Condensed Matter Physics.
This sequence is intended for graduate students in physics and related fields. Topics include superconductivity, magnetism, metal-insulator transitions, low dimensional materials, quantized hall effect.

AS.171.625. Experimental Particle Physics.
For graduate students interested in experimental particle physics, or theory students, or students from other specialties. Subjects covered: experimental techniques, including particle beams, targets, electronics, and various particle detectors; and a broad description of high energy physics problems. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.

AS.171.627. Astrophysical Dynamics.
This is a graduate course that covers the fundamentals of galaxy formation, galactic structure and stellar dynamics and includes topics in current research.

AS.171.630. First Year Research.

AS.171.639. Group Theory in Physics.
Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology.

AS.171.642. Second Year Research.

AS.171.644. Exoplanets and Planet Formation.
A graduate-level introduction to the properties of the solar system, the known exoplanet systems, and the astrophysics of planet formation and evolution. Topics also include the fundamentals of star formation, protoplanetary disk structure and evolution, exoplanet detection techniques, and the status of the search for other Earths in the Galaxy. Upper-level undergraduates may enroll with the permission of the instructor.

AS.171.646. General Relativity.
An introduction to the physics of general relativity. Principal topics are: physics in curved spacetimes; the Equivalence Principle; the Einstein Field Equations; the post-Newtonian approximation and Solar System tests; the Schwarzschild and Kerr solutions of the Field Equations and properties of black holes; Friedmann solutions and cosmology; and gravitational wave propagation and generation.

AS.171.648. Physics of Cell Biology: From Mechanics to Information.
Cells are actively-driven soft materials – but also efficient sensors and information processors. This course will cover the physics of those cellular functions, from the mechanics of DNA to the sensing of chemical signals. Questions answered include: How does polymer physics limit how quickly chromosomes move? Why do cells use long, thin flagella to swim? What limits the accuracy of a cell’s chemotaxis?Some experience with partial differential equations required. No biology knowledge beyond the high school level necessary. Some problem sets will require minimal programming.

AS.171.649. Astrophysical Plasmas.
This course is for both graduate students and undergraduate students. There is no prerequisite although reading for introductory texts will be supplied where useful. Postdocs are also welcome to attend. Topics that will be discussed include: 1.Gravitational Wave Astronomy (related to cosmic plasmas),2. Ultra-High Energy Cosmic Rays,3. Black Hole Electrodynamics, 4.the Intergalactic, Interstellar and Intra-Cluster Medium, 5.Pulsars, 6.Magnetars, 7.Stellar and Galactic Dynamos,8.Solar Flares and CMEs, 9.Gamma Ray Bursts, 10.Supernovae and their Remnants, 11. Radio Sources and Jets and, 12. the universal cosmic plasma from earliest times13.Finally the detailed dusty plasmas around protostellar and protoplanetary disks including debris components of comets, asteroids planetesimals and interstellar intruders. We will spend roughly one week on each topic. In class, we will combine the lectures with reading interesting new papers from the current literature and it is expected that students will be sufficiently fluent in this field by the end of the semester to critically discuss and analyze such papers as experts.

AS.171.652. Exoplanets and their Atmospheres.
This course covers the basic theory of planetary atmospheres as applied to extrasolar planets. The fundamental physical processes related to the structure, composition, radiative transfer, chemistry and dynamics of planetary atmospheres are covered, with an emphasis on those related to observable exoplanet properties. We also provide an overview of the observational techniques of exoplanetary atmospheres and discuss the habitability of exoplanets.

AS.171.698. Physics Beyond the Standard Model.
The Standard Model of particle physics has withstood every direct experimental test, explaining physics from sub nuclear to cosmological length scales. But, we know that it is not a complete theory. It fails to explain observational facts such as the nature of dark matter and dark energy. The theory is also beset by theoretical problems such as the hierarchy, strong CP, cosmological constant and the black hole information problem. Attempts to explain these puzzles have not been successful. In this course, we will highlight the main obstacles towards solving these problems and discuss new approaches to these problems, both from the experimental and theoretical point of view.

AS.171.701. Quantum Field Theory.
Introduction to relativistic quantum mechanics and quantum field theory. Canonical quantization; scalar, spinor, and vector fields; scattering theory; renormalization; functional integration; spontaneous symmetry breaking; Standard Model of particle physics.

AS.171.702. Quantum Field Theory II.
Introduction to relativistic quantum mechanics and quantum field theory. Recommended Course Background: AS.171.605-AS.171.606 or equivalent.

AS.171.703. Advanced Statistical Mechanics.
Brief review of basic statistical mechanics and thermodynamics. Then hydrodynamic theory is derived from statistical mechanics and classical treatments of phase transitions, including Ginzburg-Landau theory.

AS.171.704. Phase Transitions and Critical Phenomena.
Course covers phase transitions and critical phenomena. Building on the ideas of spontaneous symmetry breaking and scale invariance at a critical point we develop Landau’s theory of phase transitions and the apparatus of renormalization group using both analytic and numerical techniques for studying interacting systems.

AS.171.708. Gravitational Waves.
In September 2015, one hundred years after Einstein's prediction of the existence of gravitational waves, the LIGO/Virgo collaboration detected the gravitational radiation produced by the merger of two black holes, marking the beginning of a new era in astronomy. This course will review the theory of gravitational waves, the main astrophysical and cosmological sources of gravitational radiation, and the modeling of these sources through numerical and analytical techniques. We will discuss how present and future gravitational wave detections on Earth and in space can be used to study the astrophysics of compact objects (such as black holes and neutron stars) and to test Einstein's theory of general relativity.

AS.171.732. Elementary Particle Physics.
Description TBA

AS.171.749. Machine Learning for Scientists.
Artificial Intelligence is penetrating the world at many levels. Neural networks have changed the ways we interact with data and think about statistics. For scientists, it is important to understand the fundamental concepts behind these systems, why they work, what are their potential and limitations. This course will provide an introduction to the subject, including aspects of statistics, information theory, optimization, and neural network architectures. We will alternate between theory and applications in python. More at https://bit.ly/3LEAg7D

AS.171.750. Cosmology.
Review of special relativity and an introduction to general relativity, Robertson-Walker metric, and Friedmann equation and solutions. Key transitions in the thermal evolution of the universe, including big bang nucleosynthesis, recombination, and reionization. The early universe (inflation), dark energy, dark matter, and the cosmic microwave background. Development of density perturbations, galaxy formation, and large-scale structure.

AS.171.752. Black Hole Astrophysics.
Black holes are the central engines for a wide variety of astrophysical objects: Galactic X-ray sources, active galactic nuclei, gamma-ray bursts, stellar tidal disruptions, and black hole mergers. Although the mass distribution of astrophysical black holes spans ten orders of magnitude and their circumstances can vary tremendously, the physical processes relevant to them are often closely related. The class will begin with an overview of astrophysical black hole phenomenology and then review the most important physical mechanisms responsible for their observed properties: relativistic orbits for both matter and photons; accretion dynamics and radiation; relativistic jet launching, propagation, and radiation; binary black hole dynamics and gravitational wave emission; and lastly, black hole creation.

AS.171.753. String Theory.

AS.171.755. Fourier Optics and Interferometry in Astronomy.
A course for advanced undergraduate and beginning graduate students covering the principles of optics and image formation using Fourier Transforms, and a discussion of interferometry and other applications both in radio and optical astronomy.

AS.171.762. Advanced Condensed Matter.
This course is designed for graduate students interested in learning the language, techniques, and problematic of modern quantum many-body theory as applied to condensed matter physics.

AS.171.764. Experimental Techniques in Condensed Matter Physics.
This course will be a survey of modern techniques in experimental condensed matter physics and is intended for graduate students interested in this area, but others interested in this topic (especially condensed matter the- ory students) are encouraged to enroll. Topics include low temperature techniques, transport, the SQUID and other magnetic probes, digital and analog signal processing, scattering (neutron, X-ray, and light), EPR, NMR, data analysis, and Monte Carlo. Sample preparation, including crystal and film growth and lithography will also be covered.

AS.171.781. Symmetry and anomalies in quantum systems.
This course with cover various aspects of gauge symmetries and anomaly cancelations, Anomaly matching and EFT, phases of matter, topological states, SPT phases, edge mode, discrete symmetries, aspect of quantum gravity and anomaly cancelations, QCD at low energies and chiral symmetry. A background in quantum mechanics and quantum field theory is recommended for the course.

AS.171.782. Advanced Particle Theory: Quantum Gravity.
Advanced course on the AdS/CFT correspondence and its relationship with contemporary research topics.

AS.171.783. Black Hole Physics.
General Relativity predicts its own demise in the existence of singular black hole solutions. There have been mounting astrophysical evidence that black holes do exist in nature. Thus they are not just pathologies of the theory but fundamental objects in gravity that require understanding. Theoretically, they serve as "laboratories" for studies in quantum gravity; indeed, most of the research in the field aims to resolve various paradoxes and puzzles that emerge when one tries to understand physics inside or outside black holes. The goal of this course is to elucidate these paradoxes and puzzles. First, we will study the classical properties of black holes in general relativity such as horizons, causal history, singularity theorems, area theorems and black hole mining. Next, we will study semi-quantum and quantum properties such as black hole thermodynamics, Hawking radiation, black hole evaporation. We will also explore modern results and perspectives on the fundamental physics of black holes that are necessary for current research. A background in general relativity and quantum field theory is recommended for the course.

AS.171.801. Independent Research- Graduates.

AS.171.802. Independent Research-Graduate.

AS.171.803. Independent Research-Graduate.

AS.172.203. Contemporary Physics Seminar. 1 Credit.
This seminar exposes physics majors to a broad variety of contemporary experimental and theoretical issues in the field. Students read and discuss reviews from the current literature, and are expected to make an oral or written presentation. Recommended Course Background: AS.171.101-AS.171.102, AS.171.103-AS.171.104, or AS.171.105-AS.171.106.

AS.172.601. Department Colloquium.

AS.172.604. Joint JHU/STScI Colloquium.
A joint JHU Department of Physics and Astronomy and Space Telescope Science Institute Colloquium Series.

AS.172.633. Language Of Astrophysics.
Survey of the basic concepts, ideas, and areas of research in astrophysics, discussing general astrophysical topics while highlighting specialized terms often used compared to physics.

AS.172.732. CAS Research Seminar.

AS.172.751. Elementary Particle Physics Seminar.

AS.172.752. Elementary Particle Physics Seminar.

AS.172.753. Advanced Particle Theory Seminar.

AS.172.754. Advanced Particle Theory Seminar.

AS.172.763. Condensed Matter Physics Seminar.

AS.172.764. Condensed Matter.

AS.173.111. General Physics Laboratory I. 1 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Corequisite: AS.171.101, AS.171.103, AS.171.105 or AS.171.107, or EN.530.123.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.173.112. General Physics Laboratory II. 1 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Recommended Course Background: AS.173.111; Corequisite: AS.171.102.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.;AS.171.101 OR AS.171.102 OR AS.171.104 OR AS.171.106 OR AS.171.108 OR EN.530.123

AS.173.115. Classical Mechanics Laboratory. 1 Credit.
Experiments chosen to complement the lecture course Classical Mechanics I, II AS.171.105-AS.171.106 and introduce students to experimental techniques and statistical analysis. Corequisite: AS.171.105.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.173.116. Electricity and Magnetism Laboratory. 1 Credit.
Experiments chosen to complement Electricity and Magnetism AS.171.106 and introduce students to experimental techniques and statistical analysis.
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.173.308. Advanced Physics Laboratory. 3 Credits.
A broad exposure to modern laboratory procedures such as holography, chaos, and atomic, molecular, and particle physics.
Area: Writing Intensive
Students must have completed Lab Safety training prior to registering for this class. To access the tutorial, login to myLearning and enter 458083 in the Search box to locate the appropriate module.

AS.180 (Economics)

AS.180.101. Elements of Macroeconomics. 3 Credits.
An introduction to the economic system and economic analysis, with emphasis on total national income and output, employment, the price level and inflation, money, the government budget, the national debt, and interest rates. The role of public policy. Applications of economic analysis to government and personal decisions. Prerequisite: basic facility with graphs and algebra.

AS.180.102. Elements of Microeconomics. 3 Credits.
An introduction to the economic system and economic analysis with emphasis on demand and supply, relative prices, the allocation of resources, and the distribution of goods and services, theory of consumer behavior, theory of the firm, and competition and monopoly, including the application of microeconomic analysis to contemporary problems.

AS.180.203. Faculty Research in Economics. 1 Credit.
This course will consist of a series of informal lectures by various professors in the Department of Economics. Each lecture will consist of a description of a professional research project which he/she has undertaken over the course of his/her professional career.
AS.180.101 and AS.180.102, both may be taken concurrently.

AS.180.210. Migrating to Opportunity? Economic Evidence from East Asia, the U.S. and the EU. 3 Credits.
Increased mobility of people across national borders, whether by choice or by force, has become an integral part of the modern world. Using a comparative perspective and an applied economics approach, the course explores the economic and political determinants, and (likely) consequences of migration flows for East Asia, the US and the EU. Lectures, assignments and in class discussions, will be built around the following topics: i) migrants' self-selection; ii) human capital investment decision-making; iii) remittance decisions and effects; iv) impacts on labor markets of both receiving and sending countries; and v) the economic benefits from immigration. Overall, the course will give students perspective on the why people choose or feel compelled to leave their countries, how receiving countries respond to migrants' presence, and the key economic policy concerns that are influencing the shaping of immigration policy in East Asia, the US, and the EU.
AS.180.101 AND AS.180.102

AS.180.214. The Economic Experience of the BRIC Countries. 3 Credits.
In 2001, Jim O'Neill, the Chief Economist at Goldman Sachs, coined the acronym BRIC to identify the four large emerging economies, Brazil, Russia, India and China. These economies have since had an amazing run, and have emerged as the biggest and fastest growing emerging markets. In this course, we look at the economic experiences of the BRIC countries for the past 50 years. We discuss the reasons that have contributed to their exceptional growth rates, with particular emphasis on their transformation into market economies. We also analyze the challenges that these countries continue to face in their development process.
AS.180.101 AND AS.180.102

AS.180.217. Game Theory in Social Sciences. 3 Credits.
Game Theory is the study of multiple person decision problems in which the well-being of a decision maker depends not only on his own actions but also on those of others. Such problems arise frequently in economics, political science, business, military science and many other areas. In this course, we will learn how to model different social situations as games and how to use solution concepts to understand players' behavior. We will consider various examples from different fields and will play several games in class. The emphasis of the class is on the conceptual analysis and applications and we will keep the level of mathematical technicalities at the minimum -- high school algebra and one term of calculus will be sufficient. Students who took AS.180.117 are not eligible to take AS.180.217.
AS.180.102 or instructor permission;Students may not have previously taken AS.180.117.

AS.180.221. The Informal Economy: Who Wins, Who Loses, and Why We Care About It.. 3 Credits.
The informal economy is one of the most complex economic and political phenomena of our time. It exists in rich and poor countries alike, currently employs almost half of the world's workers, about 1.8 billion people, and totals to economic activity of around $10 trillion. If the informal economy were an independent nation, it would be the second-largest economy in the world, after the United States and before China. In today's globalizing environment, are informal economies a poverty trap or an engine of growth? Do they stimulate entrepreneurship and popular empowerment, or promote exploitation? How does an improved understanding of the size and organization of informal economies affect service provision, social policy or taxation? What are the implications of the informal economy for social cohesion and popular politics? The proposed course will address these (as well as other) questions related to the informal economy to offer students an understanding of such complex phenomenon from a variety of perspectives. The course will comprise three parts. Part 1 will explore the complexities of the informal economy, and the effects of informality on policies of inclusive growth. Part 2 will draw on empirical evidence and comparative case studies to examine informal economies in various regions, including Africa, East Asia, North and South America, and Europe, highlighting variations in activities, relations with the state, global integration and economic outcomes. Finally, Part 3 will discuss the ongoing economic policy shift from punitive measures to accepting informality as a virtual space through which citizens flow from job-seeker to compliant entrepreneurs.
AS.180.101 AND AS.180.102

AS.180.223. Economic Development in Sub-Saharan Africa. 3 Credits.
Many sub-Saharan African countries are among the least developed countries in the world. In this course, we explore the economic development experiences of African countries, with more focus on sub-Saharan Africa. The course starts with a historical perspective, delves into development strategies, and examines evidence on successes and failures of some case study countries. We conclude by analyzing the many challenges that these countries continue to face in their development process. Elements of Microeconomics and Macroeconomics are required prerequisites. There would be group presentations on assigned readings.
AS.180.101 AND AS.180.102

AS.180.228. Economic Development. 3 Credits.
A comprehensive survey of economic behavior by households, farms and firms in poor countries and the role of and for governments. Discussions include measurement of income levels, economy-wide equilibrium, sources of growth, agriculture and industry, international trade and investment, savings, population, fertility, education, health, income distribution and public finances. Applies economic theory rigorously to interpret and evaluate the economic experience of poor countries. Diagnostic test on Elements of Economics is required in the second week. Grading based on 3 exams and one paper.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.229. Economics of Health and Education in South Asia. 3 Credits.
Human capital is an important factor of economic growth in South Asian economies, along with physical capital and technology. Addressing health and education challenges has implications for improving a country's human capital formation and income growth. In this course, we look at past and present health and educational outcomes in South Asian Countries. We discuss the gaps in access to education and health care services, the quality of education and health care services as well as the impacts on the productivity of the labor force. We also empirically analyze the link between economic growth and human capital development. Furthermore, we focus on some challenges and future policy options for economies in South Asia.
AS.180.101 AND AS.180.102

AS.180.231. Debates in Macroeconomics. 3 Credits.
This course covers some of the more contentious current debates in macroeconomics. Topics include: recent and proposed tax changes (are workers affected by the corporate tax?); unconventional monetary policies (have they helped?); modern monetary theory (sound doctrine or hokum?); why are interest rates so low? backlash against globalization (warranted? unprecedented?); immigration (economic bane or boon?); rising income inequality (causes? consequences? pervasiveness?); has competition waned in US markets? Students will use the tools of economics to analyze these and other pressing issues. Though definitive answers may prove elusive, sound economic analysis can shed considerable light, not least by unmasking the political biases that often drive protagonists on both sides of these debates.
AS.180.101 AND AS.180.102

AS.180.233. Economics of Transition and Institutional Change. 3 Credits.
This course will introduce students to the comparative analysis of institutions of existing capitalist systems and to the historical evolution of those institutions. By comparing the economic systems of different nations, we will try to reveal the institutional setups that either contribute or hinder economic performance. We will also examine the process of countries transforming their economies and investigate the factors that determine the differences in reforms' outcomes between countries.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.238. Rethinking Economics After the Great Recession. 3 Credits.
The financial crisis that began in the United States in 2007 threw virtually the entire world into recession. This class will look at the causes of the crisis and at how it unfolded. It will look into the conventional wisdom of economists, circa 2006, and why that wisdom proved to be so wrong. It will examine the financial innovations that contributed to the crisis, at the reasons financial regulators were blindsided, and at the reforms enacted after the crisis.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.239. Urban Economics. 3 Credits.
This course introduces students to the major ideas of modern urban economics focused on the causes and consequences of urban economic growth, urban poverty and a city's quality of life. We will analyze basic questions such as; Why is Silicon Valley in Silicon Valley? Why did Beijing become so polluted? Why is crime high in Baltimore? Why does rich San Francisco face a homelessness challenge? The role of federal, state, and local government in urban life will be explored.
AS.180.101 AND AS.180.102

AS.180.241. International Trade. 3 Credits.
Theory of comparative advantage and the international division of labor: the determinants and pattern of trade, factor price equalization, factor mobility, gains from trade and distribution of income, and theory and practice or tariffs and other trade restrictions. Recommended Course Background: AS.180.101.
AS.180.101 AND AS.180.102

AS.180.242. International Monetary Economics. 3 Credits.
This course presents International Monetary Economics theory and applies it towards gaining an understanding of recent events and current policy issues. The theory presented in this course covers a broad range of topics including exchange rate determination, monetary and fiscal policy in an open economy, balance of payments crisis, the choice of exchange rate, and international debt. The insights provided by these theoretical frameworks will enable us to discuss topics such as the global financial crisis, global financial imbalances, the Chinese exchange rate regime, and proposed changes in the international financial architecture.
AS.180.101 AND AS.180.102

AS.180.244. Market Design. 3 Credits.
We will study how the rules of a market impact behavior, and in turn whether this behavior leads to (un)desirable outcomes. We will cover how the lessons learned from both successful and failing markets have been used by economists to design new markets.It will help us address questions such as:(i) Can economics help with the shortage of donated kidneys? (ii) How should a ride share service assign cars to clients?(iii) Can changing the way school seats are assigned change the welfare of students in a city?The material is intended to be as accessible as possible, keeping the mathematical technicalities to a minimum (i.e. one-term of calculus would be sufficient).
AS.180.102

AS.180.246. Environmental Economics. 3 Credits.
This course presents a broad overview of the key issues in modern environmental economics with a focus on understanding and solving urban pollution challenges in developed and developing nations. This course explores how cities and nations can achieve the "win-win" of economic growth and reduced urban pollution. Special attention is paid to the incentives of households, firms and governments in reducing the production of pollution. The course examines a number of pollution challenges including; air, water, noise, garbage and the global challenge of climate change.

AS.180.248. Financial Writing and Analysis. 3 Credits.
There is an immense chasm between economic and financial commentary in academic discussions and that provided by private sector analysts and the press. Some of the difference is merely semantic, but much of the difference has real substance. Academic and nonacademic commentators tend to simply write off the other as being clueless in some way. Sorting out which bits of each style of analysis are most valuable and synthesizing them into a coherent commentary is a rare and valuable skill. This is a hands-on course with a goal of building skills reading and writing commentary in financial economics. The course begins critically studying commentary regarding prominent topics in the news over the recent months and then moves to writing "explainer" pieces for publication on the Center for Financial Economics blog. Students will work in teams both analyzing commentary, and writing and critiquing the work of fellow students.
Area: Writing Intensive
AS.180.101 AND AS.180.102

AS.180.249. Gender Economics. 3 Credits.
"We've begun to raise daughters more like sons... but few have the courage to raise our sons more like our daughters." ? Gloria Steinem This course aims to explore the differences in economic outcomes observed among women and men. We will study those differences in earnings, income, asset ownership, hours of work, unpaid work, poverty, and the allocation of resources within the household. The course explores the gender dimensions of paid labor and how gender roles in unpaid work and in caring labor impact how men and women participate in the formal and informal economy. It will evaluate women's perspectives and experiences in the United States and around the world.
AS.180.101 AND AS.180.102

AS.180.252. Economics of Discrimination. 3 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Area: Writing Intensive
AS.180.102

AS.180.259. Demystifying Hedge Funds: A Firsthand Look at the Alternative Investment Industry. 3 Credits.
An introduction to hedge funds taught by two industry professionals and JHU alumnae. This course will examine the interplay between hedge funds, their investors, and investment banks. Students will explore types of hedge fund strategies, delve into market trends, and discuss key investment themes in the alternatives industry.
AS.180.101 AND AS.180.102

AS.180.260. Real Estate Economics and Finance. 3 Credits.
An introduction to the economic analysis of real estate markets. Various perspectives will be considered, including individual homeowners and renters, investors and financiers, and policymakers. Topics include the determinants of property valuations, financing considerations, real estate development, and analysis of real estate as an investment class. The course qualifies as an elective for the Financial Economics Minor.
AS.180.101 AND AS.180.102

AS.180.261. Monetary Analysis. 3 Credits.
This course analyzes the financial and monetary system of the U.S. economy and the design and implementation of U.S. monetary policy. Among other topics, we will examine the role of banks in the economy, the term structure of interest rates, the stock market, the supply of money, the role of the Federal Reserve in the economy, the objectives of monetary policy in the United States and current monetary policy practice.
AS.180.101 AND AS.180.102

AS.180.263. Corporate Finance. 3 Credits.
This course is an introduction to the financial management of a corporation. Students study the following broad questions. How should a firm decide whether to invest in a new project? How much debt and equity should a firm use to finance its activities? How should a firm pay its investors? How do taxes affect a firm's investment and financing decisions? What determines the value of a firm? The emphasis throughout the course is on the economic principles that underlie answers to these questions.
AS.180.101 AND AS.180.102

AS.180.266. Financial Markets and Institutions. 3 Credits.
Understanding design and functioning of financial markets and institutions, connecting theoretical foundations and real-world applications and cases. Basic principles of asymmetric information problems, management of risk. Money, bond, and equity markets; investment banking, security brokers, and venture capital firms; structure, competition, and regulation of commercial banks. Importance of electronic technology on financial systems.
AS.180.101 AND AS.180.102

AS.180.277. Economic Activity in the Black Community. 3 Credits.
This course uses the study of economic concepts and dynamics to increase our understanding of the activity and issues that arise in the urban Black Community. If you take this course, you will learn about the correlation of education, employment opportunities, and health to the economics of an area. While doing this, you will expand your understanding of economic theory to learn how the theoretical concepts and models can be applied to Black Communities. We will begin with African Americans in slavery in the United States and examine their economic contributions. We will move through history to present day to address issues and problems like: Why are many low-income level communities populated with large numbers of African Americans? What are the particular characteristics of those neighborhoods? Where do we generally find these types of neighborhoods? Learning and using the tools of GIS, students will map issues of importance by the neighborhood to show the relationship of economic activity in the Black Community to other communities.
AS.180.101 AND AS.180.102

AS.180.280. The History and Future of the Hedge Fund Industry. 3 Credits.
The precursors to modern hedge funds began more than 50 years ago, but in the 1990s the hedge fund, or alternative investments, industry began a period of rapid growth and evolution. With growth came controversy. Some argue that hedge funds, by allowing immense amounts of capital to be rapidly and freely deployed, play a vital role in pushing prices toward the efficient markets ideal. Others claim that hedge funds may accentuate speculative price dynamics, threatening the stability of the financial sector. While many hedge funds claim to offer outstanding returns to investors, data suggest that many clients end up paying high fees for unspectacular results. This course examines these and other controversies, while tracing the history of the alternative investments industry over the last 25 years.
AS.180.101 AND AS.180.102 AND (AS.180.266 OR AS.180.263 OR AS.180.367)

AS.180.285. Information and Investing Seminar. 3 Credits.
The course will seek to discuss and illuminate the information (news reports, industry reports, government statistics, and proprietary indicators) that investors use to make investment decisions.The course will be conducted in the framework of a weekly investment committee format wherein information is processed to maximize an investment portfolio's return to risk.Each class will be conducted in two parts. The first part will require students to share with the class information gathered from their assigned specialty (e.g.: fixed income, equities, emerging markets, commodities) and the second part will require group interaction as to what decisions need to be made to a hypothetical portfolio in order to maximize objectives.The course will require regular reading of financial and economic news as well as numerous assigned industry and academic research related to global finance.Other: this course will require quite a bit of reading and regular interaction in group discussion and with the instructor.
AS.180.280 or permission of instructor Kevin Heerdt or Robert Barbera

AS.180.289. Economics Of Health. 3 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
AS.180.102

AS.180.301. Microeconomic Theory. 4 Credits.
An introduction to the modern theory of allocation of resources, starting with the theories of the individual consumer and producer, and proceeding to analysis of systems of interacting individuals, first in the theory of exchange, then to systems which include production as well.
AS.180.102 AND (AS.110.106 OR AS.110.107 OR AS.110.108 OR AS.110.109) OR equivalent.;AS.180.101 may be taken concurrently.

AS.180.302. Macroeconomic Theory. 4 Credits.
The course provides a treatment of macroeconomic theory including a static analysis of the determination of output, employment, the price level, the rate of interest, and a dynamic analysis of growth, inflation, and business cycles. In addition, the use and effectiveness of monetary and fiscal policy to bring about full employment, price stability, and steady economic growth will be discussed.
AS.180.101 and (AS.110.106 or AS.110.107 or AS.110.108 or AS.110.109);AS.180.102 can be taken at the same time as AS.180.302.

AS.180.303. Topics in International Macroeconomics and Finance. 3 Credits.
The course will review selected topics in international macroeconomics and finance. The topics for the Fall of 2019 include: financial globalization; international portfolio diversification; capital account liberalization and the choice of the exchange rate regime in emerging markets; the global financial safety net; macroeconomic adjustment in the euro area.
AS.180.101 AND AS.180.102 AND AS.180.302

AS.180.309. Economics of Uncertainty and Information. 3 Credits.
In this course we'll discuss the theory of decision making in the face of risk, the theory of risk aversion and its applications to financial and insurance markets. Building on the theory of individual decision making under risk, we will study the economic implications of asymmetric information, the type of market failures produced by adverse selection and moral hazard problems, and the models that were advanced to analyze these problems, including incentive contracts, screening and signaling equilibria.
AS.180.301 OR AS.180.401

AS.180.310. Economics Of Antitrust. 3 Credits.
This course explores the economic rationale for, and consequence of, antitrust laws. In addition to economic analysis we will study landmark antitrust cases.
Area: Writing Intensive
AS.180.301 OR AS.180.401

AS.180.314. Mathematical Economics. 3 Credits.
This course traces the extent to which modern economic theory, particularly as it pertains to pure competition in market and non-market games under the rationality postulate.
AS.180.301

AS.180.315. Housing Problems and Policy: An Economics Perspective. 3 Credits.
This course uses economic theory and econometric research approaches as a lens on housing issues and policy. Housing is at the center of the effects of segregation and the Great Recession, and bears a significant connection to the labor market as well. This course briefly explores microeconomic theory specifically relevant to the housing market, then uses readings from academic social science literatures to dive deeper into these issues and others. Finally, students will examine public housing policies, using the literature and proposing statistical techniques to assess their effectiveness. The course will improve the understanding and use of basic econometric techniques with respect to policy questions as well as the ability to critically read academic literature.
(AS.180.301 OR AS.180.401)AND (EN.550.420 OR EN.550.310 OR EN.550.112 OR EN.550.113 OR EN.550.211 OR EN.550.311 OR EN.550.430 OR EN.550.435 OR EN.550.111 OR AS.280.345)

AS.180.327. Economics of Matching Markets. 3 Credits.
Matching markets are those markets where the identities or characteristics of the agents engaged in a transaction matter, not only the price. In fact, no monetary transactions may happen at all. Examples include donated organ allocation, school choice, refugee resettlement, among others. Although the mathematical pre-requisites are low, emphasis is given to proofs; thus, some degree of mathematical/logical maturity is assumed. Evaluation consists of problem sets, presenting a summary of an academic paper in-class, and a final paper (either original research or critical literature review).
AS.180.102;AS.180.244 AND (AS.180.301 OR AS.180.401), may be taken at the same time as AS.180.327.

AS.180.334. Econometrics. 3 Credits.
Introduction to the methods of estimation in economic research. The course begins with a review of basic statistics. This is followed by developing the primary method employed in economic research, the method of least squares, and an investigation of the performance of this method in a variety of important situations. The course considers a way to handle many of the situations in which ordinary least squares is not useful, the method of instrumental variables. The modeling of economic time series, binary dependent variables, panel data and differences in differences are all also considered. Applications are intended to showcase how the tools of econometrics can be brought to bear on important policy questions.
AS.180.301 OR AS.180.401, may be taken concurrently.;One semester of calculus, AS.280.345 OR EN.540.305 OR EN.553.211 OR EN.553.111 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.560.435 OR EN.560.348 OR EN.553.112 OR EN.540.382

AS.180.336. Macroeconomic Strategies. 3 Credits.
Will sketch out a strategy for anticipating economic turning points. Business cycle basics,monetary policy/financial market/real economy interactions will be reviewed. Long-term growth issues will be explored.
AS.180.101 AND AS.180.102 AND AS.180.302 or instructor permission.

AS.180.338. Political Economy and Development. 3 Credits.
Good governance is associated with desirable outcomes across countries and societies: higher life satisfaction, greater income per capita, lower child mortality, longer life expectancy, less disease, etc. But these statistical associations in the data are not sufficient to establish either that good governance truly causes such societal outcomes, or what types of policies produce them. This course asks: What are the determinants of good governance? Is good governance "good" beyond its intrinsic desirability? If so, how? We use a data-driven approach, focusing on quantitative empirical methods and their applications to policy. The goal is to develop skills to be savvy consumers, as well as producers, of policy-relevant evidence related to issues of governance, in rich and poor countries alike. Topics will include: democracy, corruption, conflict, culture, mass media, quotas, and foreign aid.
(AS.180.301 OR AS.180.401) AND AS.180.334

AS.180.345. Rationality: Meaning and Measurement. 3 Credits.
Economists generally work with a number of classic models of how people behave in different contexts. These models (such as utility maximization and expected utility maximization) are widely used because they are tractable and elegant, but are they also accurate models of human behavior? In this course, we examine the axiomatic foundations of these models, explore their implications for choice behavior, and discuss the empirical and experimental strategies economists have developed to test these models. The course would require you to solve mathematical problems; knowledge of mathematics up to the level of multi-variate calculus would be very helpful.
AS.180.301

AS.180.347. Macroeconomic Thinking 1936-2020: Evolution or Devolution?. 3 Credits.
This course charts a narrative for the evolution of macroeconomics from its very initiation to its present formulation in a way that is sensitive to issues of principle and of policy, and without becoming totally subservient to the disciplinary boundaries within which the problems are formulated and studied. Rather than macroeconomics as a subject that takes its shape in current conventional texts, the focus of the course shall be how it got there. As such, it touches on the development of ideas and intellectual history. The course will be mathematically self-contained but will pre-suppose conceptual sophistication that one expects after completion of courses in micro and macroeconomics at the intermediate level. The course is open to students in the sister-disciplines in anthropology, political science, and sociology, but it would be advisable for interested students in these departments to talk to the instructors.
AS.180.302

AS.180.349. Economics of Race, Gender and Culture. 3 Credits.
This course will review popular causal analysis tools used in economics research and cover papers on race, gender, and culture that used the causal analysis tools.This course will ask you to use STATA to solve problem sets and exams. Exams will take place in a computer lab.Students must be familiar with undergraduate-level econometrics.
AS.180.101 AND AS.180.102 AND AS.180.301 AND AS.180.334

AS.180.351. Labor Economics. 3 Credits.
The course discusses various issues in labor markets from the perspective of economic theory. We first study the major forces at work that shape labor market behavior; firms' labor demand and workers' labor supply. Then we discuss the equilibrium behavior of employment and wages. Using these tools, we also cover various applied topics in labor economics, such as minimum wage regulations, male-female wage differentials, human capital investment, worker mobility, and unemployment.
AS.180.301 OR AS.180.401

AS.180.352. Public Economics. 3 Credits.
This course explores issues related to expenditure and tax policies of governments, as well as views regarding the purpose of government and criteria for evaluating government actions. The course also includes a discussion of how group or collective choices are made within society, how environmental policies affect the level of pollution, and the importance of public debt.
AS.180.301 OR AS.180.401

AS.180.355. Economics of Poverty/Inequality. 3 Credits.
This course focuses on the economics of poverty and inequality. It covers the measurement of poverty and inequality, facts and trends over time, the causes of poverty and inequality with a focus on those related to earnings and the labor market, and public policy toward poverty and inequality, covering both taxation and government expenditure and programs. By the nature of the material, the course is fairly statistical and quantitative. Students should have an intermediate understanding of microeconomic concepts. Basic knowledge of regression analysis is also helpful.
Area: Writing Intensive
AS.180.301

AS.180.361. Rich Countries, Poor Countries. 3 Credits.
Why are some countries rich while some other countries poor? Why does a country's income per person generally grow over time? We try to analyze these questions using the theoretical and empirical growth literature. We will study seminal growth models, and also try to explain cross-country income differences in terms of factors like geography, institutions and global integration. Knowledge of regression analysis (including instrumental variables estimation) is required.
AS.180.302 AND (AS.180.334 OR AS.180.434)

AS.180.363. Sex, Drugs and Dynamic Optimization: The Economics of Risky Behavior. 3 Credits.
We apply the tools of economic analysis to understand behaviors that are enjoyable today, but may have negative consequences in the future.
(AS.180.301 OR AS.180.401) AND AS.180.302;AS.180.334 can be taken concurrently.

AS.180.365. Topics in Macroeconomics. 3 Credits.
This course builds on AS.180.302 (Macroeconomic Theory) to consider the leading macroeconomic controversies of today (such as the appropriate monetary and fiscal policies of the Federal Reserve and U.S. Government). The classes will include frequent student presentations.
AS.180.302

AS.180.367. Investment-Portfolio Management. 3 Credits.
Investment securities and their markets, especially the stock market. The relations between expected return and risk. The determination of security prices. Financial portfolio selection. The assessment of the performance of managed portfolios.
(AS.180.301 OR AS.180.334 OR AS.180.401) AND (EN.553.111 OR EN.553.112 OR EN.553.310 OR EN.553.311 OR EN.553.420 OR EN.553.430)

AS.180.368. Managerial Economics and Business Strategy. 3 Credits.
Seminar on quantitative concepts, decision-making, and strategy in business organizations. Overall context is 'value' – how it is measured and maximized long term. Microeconomic theory of the firm, competitive analysis, corporate finance.
(AS.180.301 OR AS.180.401) AND (EN.550.111 OR AS.180.367 OR AS.180.263) or permission of the instructor.

AS.180.371. Industrial Organization. 3 Credits.
Investigation of firm behavior in markets characterized by imperfect competition. Imperfect competition lies in between monopoly and perfect competition and characterizes most major industries in modern capitalist economies. Central issues to be covered in the course include what determines the intensity of competition? What determines the extent of entry and exit? How is it that some firms consistently dominate their industries?
AS.180.301 OR AS.180.401

AS.180.389. Social Policy Implications of Behavioral Economics. 3 Credits.
Economists increasingly incorporate insights from psychology into models of rational decision-making. Known as "behavioral economics", this line of research considers how, for example, emotions, rules-of-thumb, biased beliefs and time-inconsistent preferences influence how we make choices. Behavioral economics increasingly pervades policy discussions on topics as diverse as: obesity, the role of media, subprime mortgages and voting patterns. Behavioral models are certainly novel, but do they help us to design superior social policies? With the goal of preparing students to address this question, this course (1) provides a thorough overview of the main contributions of behavioral economics, highlighting departures from more traditional economic models and (2) emphasizes how behavioral economic models might (or might not) improve how we think about social policy.
AS.180.301 OR AS.180.401;AS.180.334 OR AS.180.434 can be taken concurrently.

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Benefits of good health and its costs. Health demand and supply in poor countries. Welfare economics of Public Health. This is a writing seminar. There are some lectures on how to write a paper and on the substance of the economics of international health but the focus and only assignment is a 40-page paper by each student under the supervision of the instructor.
Area: Writing Intensive
AS.180.301 or AS.180.401;Students may not take AS.180.390 if they took AS.180.391.

AS.180.391. Economics of China. 3 Credits.
Discussion of the economic experience of Post-War China, primarily emphasizing topics rather than historical narrative: agriculture, industry including corporate governance and public enterprises, international trade, population, migration, education, health, public finances among other topics. This course is writing intensive and the only assignment for the course is a 40 page paper on some aspect of the Chinese economy to be done under the close supervision of the instructor. The course is not primarily a lecture course, although there will be some lectures on how to do a paper and on the substance of the Chinese economic experience.
Area: Writing Intensive
AS.180.301 OR AS.180.401;Students may not take AS.180.390 if they took AS.180.391.

AS.180.434. Advanced Econometrics. 3 Credits.
This is a faster-paced and more intensive version of Econometrics 180.334. You can use either 180.334 or 180.434 to satisfy the requirement for the economics major. This course is suitable for those students who prefer a more technical treatment of econometric methodologies.NOTE: Students may not take both 180.334 and 180.434.
AS.180.301 or AS.180.401, one semester of linear algebra, one semester of calculus, AS.280.345 or EN.580.305 or EN.550.211 or EN.550.111 or EN.550.310 or EN.550.311 or EN.550.420 or EN.560.435 OR EN.560.348.;Students may only receive credit for either AS.180.334 or AS.180.434.

AS.180.501. Independent Study. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.180.521. Research in Economics. 2 Credits.
The assignment in this course is to complete the initial stages of research for the Senior Honors Thesis in Economics. Students will work independently under the supervision of a thesis advisor from the department. Students must discuss with their departmental academic advisor about possible thesis advisors. They should get the approval from their thesis advisor, and register for the section of the course assigned to the thesis advisor, who will also be responsible for grade reporting. Open to Senior and Junior Economics majors. Note: This course cannot be counted as one of the five elective economics courses required for the Economics major.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.180.522. Senior Thesis. 3 Credits.
Students enrolled in this course will complete the Senior Honors Thesis under the supervision of a thesis advisor (who will have been chosen by the student prior to registration for AS.180.521). Students should register for the section of the course assigned to their thesis advisor. The thesis advisor will be responsible for submitting grades for their section. Note: This course cannot be counted as one of the five elective economics courses required for the Economics Major.
Area: Writing Intensive
AS.180.521;You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.180.600. General Equilibrium Theory.
The mathematical theory of general static equilibrium. The course will emphasize the formal mathematical expression of economic ideas and the ability to give a loose economic intuition a coherent logical meaning. Different mathematical structures in general equilibrium theory will be isolated and discussed. The text will be Debreu's book "Theory of Value". Recommended Course Background: AS.110.106, AS.180.301, and AS.180.302 or permission of the instructor.

AS.180.601. Microeconomic Theory I.
This course covers the basics of Walrasian general equilibrium theory as set out in Debreu's Theory of Value, and thereby covers the standard (neoclassical) partial equilibrium theories of production and consumption. In addition, it covers Kuhn-Tucker optimization theory and its specializations of concave and linear programming. Finally, it touches on order structures and monotone comparative statics, as well as decision making under risk. A subtext of the course will be an exploration of how loose economic ideas and intuitions can be given formal mathematical expression. Prerequisites: Economics PhD students or permission of the instructor

AS.180.603. Macroeconomic Theory I.
A comprehensive treatment of macroeconomic theory, including static analysis of aggregate output employment, the rate of interest, and the price level; aggregative theory of investment, consumption, demand and supply of money; empirical work on aggregative relationships.

AS.180.604. Macroeconomic Theory II.
First term: a comprehensive treatment of macroeconomic theory, including static analysis of aggregate output employment, the rate of interest, and the price level; aggregative theory of investment, consumption, demand and supply of money; empirical work on aggregative relationships. Second term: the macrodynamic theory of growth, cycles, unemployment and inflation, and selected subjects.

AS.180.605. Advanced Macroeconomics I.
Topics of recent research in macro-economics. Content will vary from year to year. Likely topics include implicit contract theory, search theory and unemployment, disequilibrium macroeconomic models, monetary policy and the control of inflation, contract-based rational expectations models, imperfect competition in macrodynamic models, business cycle models, empirical tests of rational expectations models, theories of investment behavior, and debt neutrality.Open to 2nd year Grad Students and up.

AS.180.606. Advanced Macroeconomics II.
Topics of recent research in macroeconomics. Prof. Ball's course covers nominal rigidities, dynamic-consistency theories of inflation, inflation inertia and the costs of disinflation, monetary policy, costs and benefits of price stability, benefits of output stabilization, alternative policy rules, measuring inflation, unemployment, efficiency-wage theories, the behavior of the NAIRU, macro in middle-income countries, high inflation and stabilization, currency crises. Prof. Carroll's course analyzes implications of the buffer-stock and habit formation theories of consumption for comovement of aggregate variables and asset pricing. The models are applied to study the phenomena of declining U.S. saving rate, the dynamic relationship between saving rates and growth, and the equity premium puzzle.
AS.180.603

AS.180.607. Macroeconometrics I.
The course is an attempt to provide a framework for discussing the techniques that are used in macroeconometric analysis. Generally the bias that it has is one of looking at these from the perspective of someone analyzing macroeconomic data for policy analysis. Consequently, many of the applications considered are drawn from the type of research conducted in central banks and finance ministries. Its emphasis is therefore upon the issues raised by the analysis of time series of macro-economic data. Today there is an emerging literature that looks at micro-economic data as well as conducting cross-country studies. We will tend to ignore that material as the methods used in such research are essentially those of micro-econometrics, although sometimes with adjustments made to reflect the nature of macro-economic time series.
AS.180.633

AS.180.609. Core Mathematics for Economics.
This course will develop the necessary mathematical language and tools that are to be regarded as a pre-requisite for graduate study in economics at Johns Hopkins. Specifically, the course will focus on set theory, linear algebra and real analysis.

AS.180.611. Economics of Uncertainty.
This course offers a review of subjective expected utility theory of decision making under uncertainty and choice based subjective probabilities. It also explores the motivation for the recent developments of non-expected utility theories under risk and under uncertainty. It examines the role of completeness and awareness in these theories as well as the theories of menu choice and random choice behavior.

AS.180.622. Game Theory.
The topics covered include solutions concepts such as dominance, rationalizability, Nash equilibrium, correlated equilibrium, subgame perfect equilibrium and Perfect Bayesian equilibrium. We will discuss both static and dynamic games and games of complete and incomplete information.
Prerequisite(s): AS.180.623
AS.180.623

AS.180.623. Economics of Information.
The course introduces the economic issues associated asymmetric information and analyses the institutions and mechanisms designed to mitigate the resulting inefficiencies. Topics include: Adverse selection; moral hazard; incentive contracts; and mechanism design.
Prerequisite(s): AS.180.622
Area: Writing Intensive
AS.180.600 AND AS.180.601

AS.180.626. Computational Methods.
This class will introduce students to the computational tools that are used to get things done in scientific research. Such tools include, but are not limited to, unix bash shell scripting, LaTeX/Beamer, virtual machines, git and github, tools for parallel computation, cloud services, and others. Brief treatments of special-purpose tools (like Mathematica for symbolic math) will conclude this part of the class. After this introduction, the course will involve an intensive introduction to the use of the Python language for scientific computation purposes, including a discussion of why Python dominates other choices like Matlab and Julia. The final third of the course will apply the tools in a practical application to a specific problem identified jointly between the instructor and the student. There is no required text; readings will be assigned in class. (The characteristic that distinguishes this class from alternatives is that this class will not teach specific algorithms nor frontier computational techniques; rather, it aims to expose students to a broad set of tools that they will use regularly thereafter).

AS.180.632. Topics in Applied Microeconometrics.
This course teaches methods for using micro-data to recover structural parameters of microeconomic models. We cover static models, but focus largely on single-agent dynamic programming, including “full solution” methods along with innovations that permit circumvention of daunting computational tasks. Additional topics will be partially based on students’ interests, but will likely include: general equilibrium models, static and dynamic games, matching models, unobserved heterogeneity, structural methods with experimental data and biased expectations. The goal is to teach students to use structural methods in their own research, and so we will delve into the nuts and bolts of structural work, examining how researchers actually get from raw data to results. This includes: how the sub-sample for analysis is chosen, how the model is specified, how the programming problem is solved, which moments are generated, how these are matched to the analogous moments in the data and, importantly, how identification is established.

AS.180.633. Econometrics.
Mathematical models of economic behavior and the use of statistical methods for testing economic theories and estimating economic parameters. Subject matter will vary from year to year; statistical methods, such as linear regression, multivariate analysis, and identification, estimation and testing in simultaneous equation models, will be stressed.
AS.180.636

AS.180.634. Panel Data Models & Applications.
This course is a reading course for the panel data models in the economics department. We will focus on econometric theories that are commonly used in panel data analysis, although many of these techniques can be applied to other areas as well. In addition, we will discuss applications of these theories. The course material will start form chapter 10 & 11 in Wooldridge’s book which covers linear panel data models. And then we discuss the discrete choice models from chapter 7 of Hsiao’s book. After these, we will try to read papers relatedto panel data models.

AS.180.636. Statistical Inference.
Theory and applications of statistical inference. Topics include probability and sampling, distribution theory, estimation, hypothesis testing, and simple regression analysis. Statistical applications will be drawn from economics. Limited to graduate students in Economics except by permission of the chair. Recommended Course Background: AS.110.201, AS.110.302

AS.180.637. Microeconometrics I.
This is an advanced graduate course on major econometric techniques and models that are used in empirical microeconomics. We will cover topics like extremum estimators, empirical process, quantile regression, plugin estimator, Bootstrap, weak Instrumental variables, MCMC, and partial identification in this course.
AS.180.601 AND AS.180.622 AND AS.180.633 AND AS.180.636

AS.180.638. Microeconometrics II.
This course is the second in the microeconometrics sequence in the Economics Department. It will introduce a selection of models and techniques that are useful when a researcher wants to estimate a structural model, i.e. a model derived from economic theory. Structural models that try to incorporate restrictions derived from economic theory are used in empirical IO, but also in quantitative marketing research, labor economics and other fields that consider individual decision making. No attempt will be made to be comprehensive. Instead we will focus on a few areas that have been well-researched in recent years: dynamic discrete choice, microeconomic models with latent variables, program evaluation, the empirical analysis of auctions and nonseparable models. Some topics will be included only if time permits. The models and methods developed for these areas are relevant for other cases. The emphasis is on the interaction between economic theory and econometrics. Basic issues are specification and (nonparametric) identification, computational problems and the use of simulation, semiparametric estimation to avoid functional form and distributional assumptions that cannot be derived from economic theory.
AS.180.601 AND AS.180.622

AS.180.641. International Trade.
This is a graduate course in international trade. It will develop basic analytical tools and frameworks used in the general equilibrium analysis of international trade. Recent research topics will be discussed in the second half of the course.
AS.180.601 AND AS.180.603

AS.180.642. International Monetary Economics.
A link between the balance of payments and asset accumulation/ decumulation, microeconomics of international finance and open-economy macroeconomics. The section on open-economy macroeconomics covers approaches to balance-of-payments adjustments, theories of exchange rate determination and monetary, fiscal, and exchange-market policies under fixed and flexible rate regimes.

AS.180.643. Topics of Game Theory.
This course covers topics such as repeated games, dynamic games, bargaining and strategic communication.
AS.180.622

AS.180.645. Topics in Economic Theory.
The course will cover matching markets, which typically deal with assignment problems with and without the use of transfers. Examples of these include school choice, course allocation, and organ exchange. We will cover the theoretical underpinnings, field applications, and empirical evaluations of these markets.

AS.180.646. Revealed Preference and Comparative Statics.
The overall theme of this course is the observable implications of optimizing choice. We will cover the theory of monotone comparative statics and supermodular games. We also discuss results in the revealed preference literature, such as Afriat's Theorem, that deal with the consistency of data with different canonical models. The course is useful to students doing research in pure or applied theory, where comparative statics tools/insights are often needed for model building. It could also be interesting to those with an empirical focus who would like to know more about revealed preference approaches to testing models and drawing inferences from them.

AS.180.647. Topics in Economic Theory and Finance.
This course studies the theory of asset trading in which agents hold different information and/or beliefs. Foundational papers as well as recent ones will be covered, with applications both within and outside of Finance. Topics include: information aggregation via prices; rational expectations equilibrium; market micro-structure; large auctions; herding/information cascades/price bubbles; dynamic models and learning.

AS.180.648. Topics in Applied Microeconomics.
This course will cover popular research designs in applied microeconomics, from reduced-form approach to structural estimation. The first half of this course will be devoted to studying methodologies in reduced-form approach and the second half will be about structural estimation. Students must be familiar with at least one programming language of own choice (python, matlab, R, Julia, Fortran, C/C++) and statistical package (STATA, R) to solve problem sets in this course. The course will introduce various papers related to unobserved heterogeneity in applied microeconomics literature.Basic programming skills are needed for dynamic programming in this course.
AS.180.600 AND AS.180.601

AS.180.649. Structural Approach in Family and Cultural Economics.
This course will introduce structual approach in applied microeconomics, with emphasis on models including endogenous unobservable heterogeneity. The first half of this course will cover popular estimators, such as simulated method of moments, indirect inference, conditional choice probability estimator. The course will cover both single agent problem and multi- agents problem, potentially including endogenious unobservable heterogeneity. The second half of this course will discuss multiple decision maker problem, so- called collective model, and family formation and dissolution model, and cultural economics.

AS.180.651. Labor Economics I.
Theories of the allocation of time and supply of labor, human capital, demand for labor, market equilibrium, and income distribution. As time allows, other topics, such as unemployment, unions, and compensating differences are discussed. Corequisite: AS.180.601

AS.180.661. Bayesian Methods and Machine Learning in Macro and Finance.
This course is composed of two parts. In the first half, we will cover an introduction to Bayesian methods and standard methods as Metropolis, Metropolis-Hasting, Gibbs sampling, etc. We will then review the relation between Bayesian methods and machine learning. In the second part, we will study how Bayesian methods and machine learning have been used in the macro and macro-finance literatures to handle DSGE's, VAR's, Markov-switching-VAR's, Time-Varying VAR's, textual analysis, forecasting, etc.

AS.180.662. Asset Pricing.
This course is an introduction and guide to the most important issues in asset pricing. It begins with classic concepts such as the Capital Asset Pricing Model and the Arbitrage Pricing Theory and continues through continuous-time dynamic no-arbitrage models. It covers both basic theory and classic empirical research. Recommended Course Background: AS.180.604, AS.180.633, AS.180.636 or instructor's permission.

AS.180.672. Industrial Organization.
First term: This course covers methods in applied empirical Industrial Organization. The focus will be on the use of econometric analysis and data both for descriptive and measurement purposes, and to test the predictions of economic theories. The course will cover demand estimation, cost and production function estimation, and estimation of auction models.Second term: The emphasis in this course is on empirical analysis of firm behavior. The first part of the course focuses on models of the internal organization of the firm. The second part considers empirical analysis of firm behavior in markets, with an emphasis on the "new industrial economics."
AS.180.601

AS.180.673. Advanced Economics of Labor.
This course is for graduate students at the 3rd year and above who wish to participate in a semester in-depth readings and discussion topics in labor economics and in econometric methods typically used in labor economics and in many other applied microeconomics fields. Students will have to participate in discussions of materials in each class. The topics covered in each semester are partly a function of student interest and their dissertation topics.

AS.180.690. Advanced Econometrics.
Advanced econometric techniques are often essential to innovative empirical work, but finding and implementing the right methods for a particular problem poses formidable challenges. This course/seminar aims to address these challenges by combining lectures and discussions of foundational econometric methods in areas of student interest (whether those interests be specific for thesis work or more speculative) with examples of implementation, including software development, in more of a 'workshop' environment. The emphasis will be on drawing on the resources of econometric theory to address specific empirical issues while at the same time developing implementation skills.

AS.180.694. Applied Microeconomics Workshop.
This is a weekly seminar series that brings in speakers from other universities to present their research in the field of applied microeconomics. Graduate Students only.
Area: Writing Intensive

AS.180.695. Microeconomic Theory Workshop.
This is a seminar series devoted to the presentation of research in microeconomic theory, typically by speakers from outside the department. Graduate students only.

AS.180.696. Macroeconomics Workshop.
This course features lectures by economists from other universities. They present research findings at the frontier of the field. Graduate students only.

AS.180.697. Research Seminar.
The purpose of this seminar is to train students to do research in economics. This course is for second year graduate students in the PhD program in Economics. For Graduate Students Only.

AS.180.891. Dissertation Research.
This course is for students working on the dissertation for the Ph.D. in Economics. It is graded pass-fail
Area: Writing Intensive

AS.180.899. Independent Study.

AS.190 (Political Science)

AS.190.101. Introduction to American Politics. 3 Credits.
This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.

AS.190.102. Introduction To Comparative Politics. 3 Credits.
To understand politics, the sound bites of the modern media take us only so far. In this course, we will take a step back and implement an intellectually rigorous method. Scholars of comparative politics use the method of comparison in order to illuminate important political phenomena of our times. Following this method, we will embark on a scholarly tour of the world and compare the politics of various countries. We will also trace these politics back to their historical sources. We will work from the assumption that there is something to be gained from such comparisons across space and time.

AS.190.108. Contemporary International Politics. 3 Credits.
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered. This course was previously AS.190.209.

AS.190.109. Politics of East Asia. 3 Credits.
This course examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. We analyze two enduring themes of classic and contemporary scholarship in comparative politics: development and democracy. The purpose is to introduce students to the various schools of thought within comparative politics as well as to the central debates concerning East Asian politics.

AS.190.111. Introduction to Global Studies. 3 Credits.
This course surveys scholarly approaches to processes, relations, institutions, and social structures that cross, subvert, or transcend national borders. The course will also introduce students to research tools for global studies. Students who have taken Contemporary International Politics 190.209 or International Politics 190.104 may not register.

AS.190.180. Introduction to Political Theory. 3 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, adn the relationship between freedom, responsibility, and political judgement. Spanning texts ancient, modern, and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past impossible? By wrestling with slavery (freedom's opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.

AS.190.204. Ancient Political Thought. 3 Credits.
The premise of this course is that a political perspective is tied up with a (meta)physical one, that is to say, with ideas about the nature of Nature and of the status of the human and nonhuman elements within it. How is the universe ordered? Who or what is responsible for it? What place do or should humans occupy within it? How ought we to relate to nonhuman beings and forces? We will read three different responses to such questions and show how they are linked to a particular vision of political life. In the first, the world into which human are born is ordered by gods whose actions often appear inexplicable: Prometheus Bound by Aeschylus, Oedipus the King by Sophocles, and Hippolytus by Euripedes will represent this tragic vision of the cosmos. In the second, Plato , in Republic and in Phaedrus, the forces of reason and eros play central and powerful roles. In the third, Augustine of Hippo presents a world designed by a benevolent, omnipotent God who nevertheless has allowed humans a share in their own fate. We end the course with Nietzsche's Birth of Tragedy , which offers a perspective on these three visions of the world -- the tragic, the rational, and the faithful -- which will help us evaluate them in the light of contemporary political and ecological concerns.
Area: Writing Intensive

AS.190.207. The Power of Rhetoric. 3 Credits.
In a time when people claim language "has no preference to facts, truths, or realities," the power of rhetoric is both vilified and lauded in the strongest possible terms. According to some, rhetoric is responsible for the dismissal of everything from political dissent to science as a species of "fake news". By contrast, others argue public life cannot be repaired without a "restoration" of rhetoric. What are these people talking about? This course will help us figure this out. Students will be introduced to the art of persuasive speech, writing, and visual media so as to be prepared to critically examine and evaluate the claims made for and about the role of language in contemporary politics. Topics will include informal logic, appeals, fallacies, figures and tropes. Among others, we will read texts by Aristotle, Austin, Barthes, Foucault, Freud, Kierkegaard, Nietzsche, and Zizek. In addition to a number of short exercises and writing assignments throughout the semester, there will be a mid-term and a final paper.

AS.190.220. Global Security Politics. 3 Credits.
Contemporary and emerging technologies of nuclear (weapons, terrorism, energy) outer space (missiles, missile defense, asteroids), biosecurity (bioweapons, pandemics, terrorism) and cyber (war, spying, surveillance) and implications for security, international politics, arms control, and political freedom.

AS.190.223. Understanding the Food System. 3 Credits.
This course examines the politics and policies that shape the production and consumption of food. Topics include food security, obesity, crop and animal production, and the impacts of agriculture on climate change. We will also consider the vulnerabilities of our food system to challenges such as the Covid-19 pandemic, as well as efforts to transform food and agriculture through new food technologies and grass-roots movements to create a more democratic food system.
Students who have completed AS.190.405 may not enroll in this class.

AS.190.226. Global Governance. 3 Credits.
Global problems like poverty, financial instability, human rights abuses, and climate change threaten both international order and human well-being. In the absence of a world state, these problems must be addressed by an increasingly complex, transnational network of organizations and social groups. First, we will aim to understand and explain how global problems are governed through detailed case studies of International Organizations and Non-Governmental Organizations such as the United Nations, World Bank, Intergovernmental Panel on Climate Change, Amnesty International and more. Second, we will critically evaluate the successes and failures of these organizations and explore the possibilities for improving democratic governance at the global level.

AS.190.227. U.S. Foreign Policy. 3 Credits.
This course provides an analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. It offers a broad historical survey that starts with US involvement in the First World War, covers major developments of the twentieth century, and concludes with contemporary issues. Important themes include the developments underpinning the emergence of the liberal world order, strategies of containment during the Cold War, nuclear deterrence and antiproliferation efforts, the politics of international trade, alliance politics, technological and security policy, and the re-emergence of great power competition.

AS.190.228. The American Presidency. 3 Credits.
Over the past several decades, the power and importance of America's presidency have greatly expanded . Of course, presidential history includes both ups and downs, some coinciding with the rise and fall of national party systems and others linked to specific problems, issues, and personalities. We should train our analytic eyes, however, to see beneath the surface of day-to-day and even decade-to-decade political turbulence. We should focus, instead, on the pronounced secular trend of more than two and a quarter centuries of American history. Two hundred years ago, presidents were weak and often bullied by Congress. Today, presidents are powerful and often thumb their noses at Congress and the courts. For better or worse, we have entered a presidentialist era.

AS.190.244. Weapons of Mass Destruction. 3 Credits.
This course examines the impact of weapons of mass destruction on global politics and American interests. The first half of the course focuses on nuclear weapons, examining their development and targeting throughout the Cold War. The second half of the course examines contemporary issues involving nuclear weapons (including arms control, nuclear zero, terrorism, proliferation and defense). It also considers other weapons of mass destruction (or disruption) including chemical, biological, radiological and cyber weapons. The growing concerns about Artificial Intelligence will also be addressed. Requirements include a midterm and a final exam.

AS.190.245. The Politics of Global Development. 3 Credits.
Development is often assumed to be an economic issue. In this course we examine the politics of development on a global scale. We begin by looking at the colonial and Cold War histories of development. We then use these histories to contextualise contemporary development issues that directly affect international relations such as aid and debt, humanitarianism, food security, land "grabs", migration and indigenous rights. The course also seeks to understand the ways in which the issues underlying global development have always connected and continue to connect the peoples and polities of the Global North and Global South.

AS.190.249. Fictional World Politics: International Relations Through Fiction. 3 Credits.
The plots and settings of fictitious works provide "cases" for the exploration of international relations theories. Incorporates literature, film, and works of IR scholarship.
Area: Writing Intensive

AS.190.255. Race and Racism in International Relations. 3 Credits.
This course introduces students to the foundational importance of race and racism to the construction of our contemporary global order. Topics include the Crusades, European imperialism, eugenics, Apartheid, freedom struggles, decolonization, and global development.

AS.190.264. What You Need to Know About Chinese Politics (Part 1). 3 Credits.
What you need to know about Chinese politics covers the major scandals, political events, and policy debates that every China watcher needs to know. This first module of a two-semester experience brings together two professors, Prof. Andrew Mertha (SAIS) and Prof. John Yasuda (KSAS), with very different perspectives on China's past achievements, its political and economic futures, and the global implications of China's rise. The course seeks to give ample coverage to every major political question about China that is often missed in a semester long class. In addition to lively debates between the instructors, students can also expect guest speakers from the policy world, business, and the academy for a fresh take on what's going on in China today.

AS.190.267. Introduction to Political Economy. 3 Credits.
An introduction to the fundamental questions and concepts of political economy: money, commodities, profit, and capital. The course will study the nature of economic forces and relations as elements larger social and political orders.

AS.190.269. What you need to know about Chinese Politics, Part 2. 3 Credits.
This serves as a two-semester survey of Chinese politics from 1911-Present. This second module explores the politics of the reform and post-reform eras.

AS.190.283. Human Security. 3 Credits.
While traditional studies on security have focused largely on border protection, sovereign authority of the state, and interstate alliances, the threats posed to everyday people were not a central focus of security analyses until the end of the Cold War. The human security approach has evolved as a challenge to conventional thinking on security. This course will introduce the notion of human security, trace its emergence and evolution in the global political discourse, explore the theoretical scholarship from which it developed, and evaluate its effectiveness as a framework for addressing the most egregious threats human beings face today. From refugee flows, gender inequality, ethnic conflict, mass atrocities, poverty, to climate change, human security scholarship and policy has sought to examine the various threats to the lives of people that transcend national borders and allow us to break out of narrow thinking to develop innovative and globally-minded solutions.
Area: Writing Intensive

AS.190.284. Classics of Political Theory: Political Freedom. 3 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, and the relationship between freedom, responsibility and political judgment. Spanning texts ancient, modern and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past possible? By wrestling with slavery (freedom's opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.

AS.190.300. Racial Inequality, Policy and Politics in the US. 3 Credits.
While policies were passed to ensure equal opportunity for racially subjugated Americans, the United States witnessed increasing stratification of wealth and income and deepening concentration of poverty, stagnation in closing racial gaps, and new forms of inequality posed by the striking upsurge in contact with the criminal justice system at the bottom of the skills ladder and concentration of wealth at the top. At the same time, the welfare state came under attack and faced challenges posed by an aging population, women entering the labor force, deindustrialization, and international pressures of globalization. Social spending withered in some areas while spending on citizens was increasingly likely to happen through tax expenditures and private means. This course investigates the politics around these developments and competing perspectives in debates over redistributive policies in the United States and their impact on inequality, particularly race and gender inequality. We will examine the contours of inequality and explanations for why it has expanded over the past several decades. We explore why the US is exceptional in both the level of inequality it tolerates and the generosity and types of remedies to alleviate poverty in comparison to its European counterparts and debate the role of race, unions, electoral politics and institutions. We investigate several specific cases of persistent racial inequality – concentrated poverty, segregation, and incarceration. We investigate both how policies have reinforced racial and gender divisions from a top-down perspective as well as examining under what conditions the disadvantaged contest inequality, exploring how political struggle shapes policy from the bottom-up. The last part of the course examines the consequences of inequality and social policy for representation and citizenship and how economic inequality affects political representation and responsiveness of elites to masses.

AS.190.306. Latin American Politics and Society in Comparative and Historical Prespective. 3 Credits.
The seminar will introduce students to the political and economic trajectories of Latin America as a whole and of individual countries, including Mexico, Brazil, Argentina, and Chile. Special attention will be paid to the long-term trajectory of the political regime (democracy versus dictatorship) and of economic development (variations in GDP per capita). Competing theories, from economic dependence to historical institutionalism, will be examined for their contribution to our understanding of Latin America's relative economic backwardness and low quality democracies.
Area: Writing Intensive

AS.190.307. Race, Politics and Literature. 3 Credits.
Area: Writing Intensive

AS.190.308. Democracy and Dictatorship: Theory and Cases. 3 Credits.
The course will cover three topics: 1) The conceptualization of political regime, democracy and authoritarianism. We will also consider neighboring concepts of other macro-political structures—government, state, and administration—in order to be able to demarcate what is distinctive about the study of political regimes.2) The characterization of political regimes in most Western and some non-Western countries, in history and today. We will centrally focus on the so called "Waves of Democratization," but we will also consider stories with less happy outcomes, that is, processes that led to the breakdown of democracies and the installation of repressive dictatorships.3) The explanation(s) of the stability and change of political regimes around the world. Theoretical accounts of regime change come in many flavors—emphasis on economic versus political causes, focus on agents and choices versus structures and constraints, international versus domestic factors, among others. We will consider most of them.

AS.190.311. Disposable People: Race, Immigration and Biopolitics. 3 Credits.
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.

AS.190.315. Asian American Politics. 3 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.

AS.190.319. Policy & Politics Design. 3 Credits.
The study of public policy is the study of power—who has it, how it is acquired, and how policies themselves grant or diminish the power of individuals and groups. It is also the study of choice—how political actors make consequential decisions to deploy their resources in different ways, some of which enhance magnify their power while others diminish it. This class will examine the scholarly literature on how public policy is made and how it can be changed. We will also engage directly with actors seeking to change public policy, in order to integrate our academic knowledge with their practical experience.
Area: Writing Intensive

AS.190.322. Future of American Democracy. 3 Credits.
For the most part, observers of American politics have not considered the possibility that the American democratic regime might be at risk. But the unexpected election of Donald Trump in 2016 and the subsequent course of his presidency have occasioned a great deal of uncertainty and anxiety about whether democracy in the United States is at risk and whether American political institutions can withstand the stresses of contemporary politics. This course will use the Trump era to explore the conditions that seem to threaten the stability of the American regime. We will begin by exploring the political circumstances that led to Trump's rise. We will then examine what we can learn from the experience of other countries about the conditions that make democracy either robust or fragile. Finally, we will consider how a set of contemporary political conditions in the United States — extreme partisan polarization, intense racial antagonism, growing economic inequality, and expanded executive power — contribute to the challenges facing American democracy today and in the future.
Area: Writing Intensive

AS.190.324. The Law of Democracy: The United States and Canada in Comparative Perspective. 3 Credits.
The Law of Democracy refers to the statutes, court decisions, and other practices that govern the electoral processes. Although the United States and Canada have a great deal in common, they have approached many of the problems involved in institutionalizing democracy quite differently. Recognizing these differences should contribute to understanding both the strengths, and the problems, of the two approaches. Specific topic will include the right to vote, political finance, delineation of district boundaries, electoral dispute resolution, and the role of electoral management bodies and elections administrators.

AS.190.325. Finding Equality in Law and Society. 3 Credits.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served these movements well and how it has worked. We will pay particular attention to movements based on race, gender, and economic class.

AS.190.326. Democracy And Elections. 3 Credits.
An examination of most aspects of democratic elections with the exception of th e behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.

AS.190.327. Politics of Information. 3 Credits.
Considers global and comparative politics of information, information technologies, and the Internet. Examines governance of information (ownership of information, rights to information, privacy) and governance of information technologies (domain names, social media websites, etc.).

AS.190.328. Political Thought in the Americas. 3 Credits.
Reflection on political ideas and institutions in the United States is often oriented by the notion that the US is in some sense exceptional. For some commentators, the US is exceptionally democratic, exceptionally stable, exceptionally productive, and exceptionally innovative. For others, the US is exceptionally racist, exceptionally unequal, exceptionally violent, and exceptionally unhealthy. What both sides share is a common point of comparative reference in Europe. For all these commentators, Europe is the norm against which all of the exceptional qualities of the US stand out. In this course, we will ask how well notions of US exceptionalism stand up against the different comparative references found in the Americas, focusing in particular on the history of political thought in the Americas. We'll begin by studying texts from the pre-colonial and colonial periods, noting similarities and differences between the political institutions, economies, and social and racial hierarchies of in the regions that comprised British, Spanish, Portuguese, and French America. Next, we'll consider the US, Latin American, and Caribbean independence movements, early constitutionalism, and debates on women's role in society, slavery, and the rights of Indigenous Americans, asking what, if anything, distinguished the US from its neighbors in its early years. Finally, we'll examine theories of imperialism, racism, patriarchy, exploitation, and environmental destruction that have emerged from the Americas in the course of the 20th century, to see how both shared and divergent historical experiences have shaped perspectives relevant to contemporary political issues.

AS.190.329. National Security-Nuclear Age. 3 Credits.
This course examines the impact of weapons of mass destruction on international politics with an emphasis on security issues. The first half of the course focuses on the history of nuclear weapons development during the Cold War and theories of deterrence. The second half of the class considers contemporary issues including terrorism, chemical and biological weapons, ballistic missile defense and proliferation. Requirements include a midterm, final and a ten page paper.

AS.190.331. America and the World. 3 Credits.
This course is a survey of the unique position of the United States in world politics. We will cover the broader international relations literature on the dynamics of hegemony and empire, from work in the realist tradition to more critical approaches. The course will encompass security politics as well as the economic and monetary dimensions of American influence. Interested students must have at least completed one 100 or 200 level introductory course in international relations.

AS.190.332. The University in Democracy. 3 Credits.
From the founding of the United States to the COVID-19 pandemic, modern universities have evolved into expansive, complex institutions that play a variety of indispensable roles in the support of democratic societies. They educate citizens as well as specialists; produce new knowledge that shapes discourse and public policy; foster reasoned debate; and act as engines of social mobility. They also incite a great deal of controversy, criticism, and distrust, including for how they have performed these roles. In this course, we will study the centuries-long relationship between universities and democracy, and assess how successfully these institutions (including Johns Hopkins) are fulfilling their most profound functions today.
Area: Writing Intensive

AS.190.333. American Constitutional Law. 3 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.

AS.190.334. Constitutional Law. 3 Credits.
Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.

AS.190.335. Imagining Borders. 3 Credits.
What is a border and why do borders matter in global politics. What do borders mean under conditions of globalization? An examination of the politics of borders, transborder flows, and networks within and across borders. The readings which come from political science and other disciplines, will include theoretical and case-specific works.

AS.190.338. Comparative Political Behavior. 3 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.

AS.190.339. American Racial Politics. 3 Credits.
Recommended Course Background: AS.190.214

AS.190.340. Black Politics I. 3 Credits.
This course is a survey of the bases and substance of politics among black Americans and the relation of black politics to the American political system up to the end of Jim Crow. The intention is both to provide a general sense of pertinent issues and relations over this period as a way of helping to make sense of the present and to develop criteria for evaluating political scientists' and others' claims regarding the status and characteristics of black American political activity.

AS.190.341. Korean Politics. 3 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations.Recommended students should take Intro to Comparative Politics or a course related to East Asia first.(CP)
Area: Writing Intensive

AS.190.342. Black Politics II. 3 Credits.
Recommended Course Background: AS.190.340.

AS.190.344. Seminar In Anti-Semitism. 3 Credits.
Jews exercise a good deal of power in contemporary America.. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America's citizens, about one-third of the nation's wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, "From the Vatican to the Kremlin, from the White House to Capitol Hill, the world's movers and shakers view American Jewry as a force to be reckoned with." Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become "a force to be reckoned with" than they found themselves banished to the political ma rgins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Area: Writing Intensive

AS.190.346. Foundations of International Relations Theory. 3 Credits.
This course is a broad conceptual introduction to international relations theory in a format that stresses close reading and critical discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field. By the end of the course, students will have a firm grasp of the core issues and debates in the field. The course is conceptually demanding; interested students should have at least completed an introductory course in political science.

AS.190.347. A New Cold War? Sino-American Relations in the 21st Century. 3 Credits.
"Can the United States and China avoid a new Cold War? One might think not given disputes over the South China Sea, Taiwan, Hong Kong, human rights, trade, ideology and so much more. Moreover, competition for influence in the developing world and American concerns as to whether China will replace it as the preeminent world power suggest a new Cold War is in the offing. Nevertheless, their extensive economic ties and need to work together to solve common problems such as climate change, nuclear proliferation, and pandemics argues against a continuing confrontation. This course will examine whether cooperation or conflict will define Sino-American relations, and whether a new Cold War—or even a shooting war—lies in the future."

AS.190.348. Business, Finance, and Government in E. Asia. 3 Credits.
Business, Finance, and Government in East Asia explores the dynamics of East Asia's economic growth (and crises) over the last fifty years. We will examine Japan's post-war development strategy, the Asian tiger economies, and China's dramatic rise. Centered on case studies of major corporations, this course examines the interplay between politics and economics in East Asia, and considers the following questions: How have businesses navigated East Asia's complex market environment? In what ways can the state foster economic development? How has the financial system been organized to facilitate investment? What are the long-term prospects for growth in the region?

AS.190.350. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include civil wars, targeted killings, terrorism, ethnic conflict and war itself. Students examine what makes types of political violence unique and what unites them.

AS.190.355. Comparative Racial Politics. 3 Credits.
This course surveys the major trends and approaches to the comparative study of race in political science and critically examines the link between race and politics. Topics include race and state formation, citizenship and national membership, immigration, racial regimes, and the political economy of race.

AS.190.356. The Social Contract and its Discontents. 3 Credits.
This course focuses on one of the most powerful stories told in the tradition of western political theory: the story of the social contract. This story is about the constitution of legitimate political authority. It is told in many ways and each version makes different assumptions, in particular about human nature, the power of reason, the value of order, and the character of justice. We examine this often-conflicting assumptions and explore how they continue to inform the way we think about the possibilities and problems of politics. Readings include texts by Arendt, Hobbes, Locke, Rousseau, Freud, Pateman, the Federalists, Derrida, and Douglass. Final grades are based on class participation, two exams and two papers.
Area: Writing Intensive

AS.190.357. The State of Nature. 3 Credits.
Though it is possible to imagine ways of addressing the multiple crises the world will face as the atmosphere warms, seas rise, and pollutants seep into the surface of the planet, any serious proposal will require a degree of coordination amongst nation-states that has proven impossible to achieve in the past. In this course, we will consider this difficult situation by treating it as an instance of an old problem in political theory: how to escape the infamous "state of nature," where individuals struggle to obtain the resources they need to survive at others' expense, rather than cooperating to satisfy their needs and address the threats they face in common. First, we will study some influential reflections on the state of nature by Hobbes, Locke, Rousseau, Freud, and Pateman, as well as efforts to apply the logic of the state of nature to problems in international politics by Kant, Wendt, Waltz, Enloe, and others. Then we will read contemporary work on the international politics of climate change and ask what it would take to start building the better world that is possible today.

AS.190.365. Research and Inquiry in the Social Sciences. 3 Credits.
How do we assess research in the social sciences? What makes one study more persuasive than another? What are the advantages and disadvantages of the main methods used in research in the social sciences? What are the elements that go into designing a research project? This course considers these questions, introducing students to the basic principles of research design.

AS.190.366. Free Speech and the Law in Comparative Perspective. 3 Credits.
This class explores the ideas and legal doctrines that define the freedom of speech. We will examine the free speech jurisprudence of the U.S. in comparison to that of other systems, particularly the jurisprudence of the European Court of Human Rights and the Supreme Court of Canada.

AS.190.368. Political Arts: Dada, Surrealism, and Societal Transformation. 3 Credits.
An exploration of the political aims, tactics, and strengths and liabilities, of Dada and Surrealism, as it operated in Europe and the Americas in the years between the World Wars, with a comparison to political conditions today.
Area: Writing Intensive

AS.190.370. Chinese Politics. 3 Credits.
This course is designed to help students better understand the politics of China. Lectures will focus on the tools of governance that China has employed to navigate its transition from plan to market, provide public goods and services to its citizens, and to maintain social control over a rapidly changing society. The course will draw heavily from texts covering a range of subjects including China's political economy, social and cultural developments, regime dynamics, and historical legacies. Students interested in authoritarian resilience, governance, post-communist transition, and domestic will find this course particularly instructive.

AS.190.372. Decolonizing Politics. 3 Credits.
This course introduces students to the colonial logics that underpin key categories and concepts in Political Science. Working through four sub-fields – political theory, political behavior, comparative politics and international relations, the course also introduces students to alternative knowledge traditions, emanating from minority communities and colonized peoples, which seek to explain the stuff of Political Science via anti-colonial logics.

AS.190.374. Political Violence. 3 Credits.
This undergraduate seminar is designed to introduce students to the comparative study of political violence and intra-state conflict. We will examine social science theories and empirical studies on a wide range of forms of political violence, including civil war, coups, state repression, communal violence, riots, terrorism, genocide, and criminal-political violence. We will study these phenomena at the micro, meso and macro levels, and focus on understanding their causes, dynamics, outcomes, and aftermath. The class will also equip students with an ability to analyze political violence by using social scientific tools.

AS.190.379. Nationalism and the Politics of Identity. 3 Credits.
Nationalism ties powerful organizations to political mobilization, territory, and individual loyalty. Yet nationalism is typically studied in isolation from other social formations that depend upon organizational – individual linkages. Alternative types of identity category sometimes depend similarly upon organizations that collect and deploy resources, mobilize individuals, erect boundaries, and promote strong emotional connections among individuals as well as between individuals and institutions. In this class, we study classic and contemporary works on nationalism, drawn from multiple disciplinary and analytic traditions, in the comparative context of alternative forms of identity. The focus of the class will be primarily theoretical, with no regional or temporal limitations.

AS.190.380. The American Welfare State. 3 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments – and explain the actual workings of policy – across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Trump. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Area: Writing Intensive
Students may take AS.190.380 or AS.360.380, but not both.

AS.190.381. Global Environmental Politics. 3 Credits.
Area: Writing Intensive

AS.190.382. Democracy and Development: Theory and Cases. 3 Credits.
Most wealthy countries are democracies. But not all democracies are wealthy—India, Costa Rica, and Mongolia are prominent examples of poor countries with democratic regimes. The course will examine the relation between economic development and political democratization under three big questions. (a) Under what conditions, and through which mechanisms, does economic development promote democracy? (b) If economic development is not possible in the foreseeable future, how do countries achieve stable democratization? (c) Under what conditions, and through which mechanisms, does democracy foster economic development?
Area: Writing Intensive

AS.190.384. Urban Politics & Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations.
Cross-listed with Africana Studies

AS.190.385. Urban Politics and Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross listed with Africana Studies.

AS.190.386. The Right to the City. 3 Credits.
Over the past several years the city has been the center of almost every significant political struggle we've had over the past several years, from Occupy Wall Street to Black Lives Matter. Theorists, activists, and scholars have argued for a specific "right to the city". What does that right look like? What might it look like? How has it informed political struggle over space and time? This course will seek to answer this question.
Area: Writing Intensive

AS.190.387. Parties and Elections in America. 3 Credits.
Considers how parties and elections structure political conflict, and facilitate (or not) democratic control of government. Topics include campaigns, voting behavior, election administration, money in politics, presidential nomination, and party coalitions.
Area: Writing Intensive

AS.190.388. Race and the Politics of Memory. 3 Credits.
This is a writing intensive, advanced undergraduate political theory seminar. The course will examine the politics of memory: how power shapes what is available to be remembered, the timing and occasions of memory, who is allowed to remember, and the spaces inside of which remembrance takes place. Specifically, the seminar will explore how segregated memory enables racial segregation and racial inequality. Toward that end, we shall investigate political and theoretical interventions potentially equipped to contest contemporary forms of racial amnesia haunting what some have labeled a “post-truth” world.
Area: Writing Intensive

AS.190.389. China's Political Economy. 3 Credits.
This course examines the most important debates about China's political economic development. After exploring Mao Zedong's disastrous economic policies, we will consider the politics of reform and opening under Deng Xiaoping, and finally conclude with China's state capitalist policies across a variety of issue areas. The course will cover literatures on financial reform, public goods provision, foreign trade and investment, agriculture, corruption, business groups, and regulatory development. Where possible we will draw comparisons with the economic experiences of other East Asian nations as well as other post-communist states.

AS.190.390. Race and American Democracy. 3 Credits.
While the United States has long been a democracy for white men, it has mostly been anything but democratic when seen through the eyes of Black Americans. But progress toward the expansion of democracy has occurred at a few times in American history. What made American democratization possible, and how might the United States again move toward more complete and inclusive democracy?

AS.190.391. Imperialism and Anti-Imperialism. 3 Credits.
Since antiquity, global politics have been defined by the struggle between imperialism and anti-imperialism. This course examines the arguments that have accompanied this struggle, considering influential texts written to defend or to denounce empires, as well as contemporary scholarship on imperial and anti-imperial ideologies. We will focus in particular on how imperial conflicts shaped natural law, international law, liberalism, and cosmopolitanism, as well as the connections between imperialism and contemporary capitalism, development assistance, and humanitarian intervention. The fundamental questions for the course are: What is an empire? and What would it mean to decolonize our world, our international institutions, and our minds?

AS.190.393. Nonviolent Resistance in World Politics. 3 Credits.
In this seminar we examine the origins, dynamics, and consequences of nonviolent struggles around the world. How do ordinary people organize for social change? What are the differences in people power campaigns in authoritarian and democratic contexts? When does nonviolent resistance succeed or fail, and what are the political consequences of these outcomes? In answering these questions, we will study the central ideas behind nonviolent action, learn about the most important scholarly discoveries in this field and analyze paradigmatic cases. Students will choose a historical or contemporary nonviolent movement to interrogate throughout the semester, as we learn new concepts, theories, and empirical patterns to make sense of them.
Area: Writing Intensive

AS.190.394. Comparative Politics of the Middle East and North Africa. 3 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors.

AS.190.396. Capitalism and Ecology. 3 Credits.
Capitalism and Ecology focuses on the relations between capitalism and climate during the era of the Anthropocene. How do capitalist processes of fossil extraction, consumption, production and governance contribute to the pace of climate warming, glacier flows, the ocean conveyor system, species loss and other phenomena? What are the effects and the possible modes of political response? How do the nonhuman, self-organizing processes such as glaciers, oceans and climate change on their own as they also amplify the effects of capitalist emissions? The course combines texts on capitalism and activism with those by geoscientists on how the nonhuman systems work. Books by authors in the fields of political theory, geology, anthropology, economics, philosophy and ethology will be drawn upon. Authors such as Michael Benton, Brian Fagan, Hayek, Naomi Klein, Fred Hirsch, Fred Pearce, van Dooren and Connolly are apt to be read to engage these issues. A previous course in political theory is recommended. The class is organized around student presentations on assigned readings. Two papers, 10-12 pages in length. Extensive class discussion.
Area: Writing Intensive

AS.190.398. Politics Of Good & Evil. 3 Credits.
The Politics of Good and Evil examines comparatively a series of classical myths and modern philosophies concerning the sources of evil, the nature of goodness and nobility, the relations of culture to politics, nature and the gods, the degree to which any metaphysic or theological faith is certain, and so on. It is a course in “elemental theory” in the sense that each text pursued challenges and disrupts others we read. Often the reader is disrupted existentially too, in ways that may spur new thought. A previous course in political theory or a theoretical course in the humanities is advised. A high tolerance for theory is essential. Texts on or by Sophocles, Job, Genesis ("J" version), Augustine, Voltaire, Nietzsche, James Baldwin, W. Connolly and Elizabeth Kolbert form the core of the class. Assignments: 1) One 12 page paper and a second 5-7 page paper, both anchored in the readings; 2) a class presentation on one text; 3) regular attendance and quality participation in class discussions.
Area: Writing Intensive

AS.190.402. Environmental Racism. 3 Credits.
This is an undergraduate political theory seminar that addresses the disproportionate impact of environmental destruction on racially stigmatized populations. We shall examine the logics of power whereby the natural world is subjected to exploitation and domination, in tandem with the subordination of racial subjects historically identified as closer to nature. Likewise, we will explore political and theoretical challenges to environmental racism, such as those posed by indigenous communities, decolonial theory, and political movements contesting the intersection of racial inequalities and ecological crises.
Area: Writing Intensive

AS.190.403. Arendt/Foucault. 3 Credits.
This upper-level undergraduate writing intensive course brings together the work of Hannah Arendt and Michel Foucault to focus on their critiques of modernity and their discussions of political change/revolution. Although Arendt and Foucault are often understood as coming from and supporting different political theoretical traditions, the course will also explore ways in which their shared debt to the work of Friedrich Nietzsche illuminates sometimes surprising commonalities and complementary positions. There is no final exam in this course but in addition to reading assignments, students will be required to write three papers.
Area: Writing Intensive

AS.190.404. Race and Debt: Living on Borrowed Time. 3 Credits.
This is an advanced undergraduate seminar that explores how racial stigma functions as a marker of being always already in debt. In view of the legacies of settler-colonialism, imperialism and chattel slavery, how is it that those from whom so much has been taken are nevertheless regarded as perpetually in debt? We shall examine the moral, economic and racialized logics of power through which a range of political subjects come to be regarded as ungrateful “takers” as opposed to “makers,” and owing a debt to society. In so doing, we will investigate how temporality functions as a tool of power by considering how the indebted are made vulnerable to precarity, discipline, and disposability—in effect, forced to live life on borrowed time.
Area: Writing Intensive

AS.190.405. Food Politics. 3 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies. A student who takes AS.190.223 (Understanding the Food System) in Summer 2021 cannot also enroll in this course.
Area: Writing Intensive
A student who takes AS.190.223 (Understanding the Food System) cannot also enroll in this course.

AS.190.406. The Executive Branch. 3 Credits.
In the 19th Century America was noted for its courts, political parties and representative institutions. Today, America’s political parties and representative institutions have declined in importance while the institutions of the executive branch have increased in importance. This seminar will examine the nation’s key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week’s readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.

AS.190.408. Sovereignty: Historical Perspectives and Contemporary Issues. 3 Credits.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development, current controversies, and its salience in international relations scholarship. Works in political theory and the international law literature will also inform our discussion. The course is open to advanced undergraduate students with previous coursework in political science. .
Area: Writing Intensive

AS.190.409. Research Seminar in State Politics. 3 Credits.
The United States Constitution creates a federal system that leaves a great deal of power in the hands of the individual states. Each year, the states collectively adopt nearly 20,000 new laws, an average of 400 per state, while the U.S. Congress in recent years has on average enacted hardly more than 150 new statutes. In terms of spending, state and local governments collectively spent $3 trillion dollars last year–almost as much as the federal government. The states are especially important in the realms of education, health care, environmental policy and transportation. In all these areas, to be sure, the states share power with the federal government but possess considerable discretionary authority. Despite the importance of the states, most Americans know little about them. Hardly anyone knows much about their state’s executive branch or legislature. In a recent survey, most Americans couldn’t say whether their state had a constitution (they all do). In this seminar we will explore some of the mysteries of state politics. Each student will develop a research project designed to discover something about the states that no one else knows.
Area: Writing Intensive

AS.190.410. Beyond Bob Marley: Exploring the Rastafari Movement in the Greater Baltimore Area. 3 Credits.
This course uses a community based learning approach to inquire into the presence of the Rastafari community in the Baltimore area. Most people will have heard of Rastafari through the music of Bob Marley. People might not know, however, that Rastafari emerges out of and has been part of a global history of liberation struggles. This course is co-taught with a local Rastafari organization. You will be intellectually and practically equipped to take part in a project of original research on the Rastafari presence in the Baltimore region, starting with the demonization of the movement in the 1980s “war on drugs” and including the movement’s response.

AS.190.412. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372)

AS.190.418. The End of Whiteness. 3 Credits.
This is a writing intensive, advanced undergraduate political theory seminar on racial formation. Specifically, the course explores the end of whiteness in multiple senses of the phrase. First, to what extent do the ends served by whiteness change, or remain continuous, over time? What power hierarchies and political goals has white identity been engineered to advance historically? We shall then examine the contemporary phenomenon whereby the end of white supremacy is conceived by some as the end of the world. This, in turn, will lead us to investigate how we should best understand white disavowal of threats of climate change and pandemics/health-care crises currently coursing through white identity politics. The last part of the course will be dedicated to exploring the end of whiteness in terms of the theories and practices potentially required to dismantle whiteness as white supremacy. Readings include Du Bois, Fanon, Painter, Baldwin, Moreton-Robinson, Hartmann, Olson
Area: Writing Intensive

AS.190.419. Race and Segregated Time. 3 Credits.
This course explores how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: criminal (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course.
Area: Writing Intensive

AS.190.421. Violence: State and Society. 3 Credits.
This course will examine violence that occurs mainly within the territory of nominally sovereign states. We will focus on violence as an object of study in its own right. For the most part, we will look at violence as a dependent variable, though in some instances it will function as an independent variable, a mechanism, or an equilibrium. We will ask why violence starts, how it “works” or fails to work, why it takes place in some locations and not others, why violence take specific forms (e.g., insurgency, terrorism, civilian victimization, etc.), what explains its magnitude (the number of victims), and what explains targeting (the type or identity of victims).

AS.190.423. Planetary Geopolitics. 3 Credits.
With the tools of geopolitics, course explores political debates over globalization of machine civilization and changes in scope and pace, space and place, and role of nature in human affairs.
Area: Writing Intensive

AS.190.424. Policy Disasters. 3 Credits.
Investigates the causes of large-scale policy disasters, examining the role of ideology, psychology, organization design and political incentives. Examples may be drawn from the Iraq War, Bay of Pigs, Hurricane Katrina, the U.S. Financial crisis, Shuttle Challenger disaster. economic development policy, privatization, and the Great Society. Limited to seniors or with permission of instructor. (CP / AP)

AS.190.425. The New Deal and American Politics. 3 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state.
Area: Writing Intensive

AS.190.426. Qualitative Research. 3 Credits.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first-hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?

AS.190.427. Political Economy of Japan and Korea. 3 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.
Area: Writing Intensive

AS.190.428. The Politics of Disaster in the Middle East and Beyond. 3 Credits.
This course examines the politics of natural and man-made disasters, including war, forced migration, drought, famine, earthquakes, tsunamis, storms, and epidemics. Focusing on the Middle East, it also presents comparative cases from Africa, South and Southeast Asia, and North America. In doing so, the class will examine the unique ways that different types of disasters interact with governance structures; social and economic inequalities; medical infrastructure; gender; race and ethnicity; and political cleavages. Throughout the course, students will learn basic elements of research design and methods in addition to welcoming experienced disaster response and analysis practitioners to class. Finally, the Politics of Disaster in the Middle East and Beyond addresses some of the philosophical aspects of working in and studying disaster-affected contexts, bringing an ethical sensibility to policy-relevant analysis.

AS.190.429. The Political Bases of the Market Economy. 3 Credits.
Although “the market” is conventionally understood as separate from “politics”, the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.

AS.190.431. Global Climate Governance. 3 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.

AS.190.433. Race and the Politics of Punishment in the US. 3 Credits.
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold for citizenship. In this advanced undergraduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history and racial orders seriously. Why did the carceral state expand in "fits and starts" and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system "makes race" and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields - history, sociology, law and criminology - and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad's Condemnation of Blackness: race, Crime, and the Making of Modern Urban America, Elizabeth Hinton's From the War on Poverty to the War on Crime, David Oshinsky's Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western's Punishment and Inequality in America, and Michael Fortner's Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.
Area: Writing Intensive

AS.190.434. Does Israel Have a Future?. 3 Credits.
Israel is one of the only countries whose existence is openly challenged. This class will examine the future of Israel focusing on international and domestic threats to its continued existence as a Jewish democracy. Outside threats to be considered include nuclear attack and the growing international movement to delegitimize Israel. domestic challenges include demographic changes, the role of religion in governance, and doubts as to whether one can be a Jewish state and still be a democracy. Lessons from the destruction of the ancient Israelite kingdoms and from contemporary state deaths will be included. The course will conclude by considering efforts that Israel can undertake to meet the threats it faces.

AS.190.437. Race and Ethnic Politics in the United States. 3 Credits.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the “struggle with difference” within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Writing Intensive

AS.190.438. Violence and Politics. 3 Credits.
This seminar will address the role of violence–both domestic and international–in political life. Though most claim to abhor violence, since the advent of recorded history, violence and politics have been intimately related. States practice violence against internal and external foes. Political dissidents engage in violence against states. Competing political forces inflict violence upon one another. Writing in 1924, Winston Churchill declared–and not without reason–that, "The story of the human race is war." Indeed, violence and the threat of violence are the most potent forces in political life. It is, to be sure, often averred that problems can never truly be solved by the use of force. Violence, the saying goes, is not the answer. This adage certainly appeals to our moral sensibilities. But whether or not violence is the answer presumably depends upon the question being asked. For better or worse, it is violence that usually provides the most definitive answers to three of the major questions of political life--statehood, territoriality and power. Violent struggle, in the form of war, revolution, civil war, terrorism and the like, more than any other immediate factor, determines what states will exist and their relative power, what territories they will occupy, and which groups will and will not exercise power within them. Course is open to juniors and seniors.

AS.190.440. European Politics in Comparative Perspective. 3 Credits.
Europe has been in a sense the first testing ground for theories of comparative politics, but many outsiders now see Europe as a pacified and somewhat boring place. This course will question conventional wisdom through an examination of European politics in historical and cross-national perspective. We will apply the comparative method to the study of European politics today, and conversely we will ask what Europe tells us more generally about politics. We will see that Europe is still a locus of intense conflict as well as remarkably diverse experimentation. Topics will include: political, legal, and economic governance; the evolution of democracy and fundamental rights, the welfare state, class stratification, immigration and race, the role of religion; European integration and globalization. Recommended background: Introduction to Comparative Politics.

AS.190.442. Civil Society. 3 Credits.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and global civil society. This course is open to graduate students from any discipline. Advanced undergraduate students must obtain permission from the instructor and are expected to keep up with graduate students during class discussions.
Area: Writing Intensive

AS.190.443. Politics of Outer Space. 3 Credits.
Intensive examination of the political aspects of human activities in outer space, past, present and future, with focus on militarization, earth-remote sensing, surveillance, navigation, resource exploitation, the Outer Space Treaty, and colonization.
Area: Writing Intensive

AS.190.450. Power. 3 Credits.
Power is a -- if not the -- key concept of international relations, yet there is no single definition of power that is accepted by all scholars in the field. In this course we will critically examine definitions of power from classic and contemporary works of international relations, political science, and related areas of study.

AS.190.451. Geopolitics. 3 Credits.
Intensive exploration of theories of how geography, ecology, and technology shape political orders. Case studies of ancient, early modern, global, and contemporary topics, including European ascent, industrial revolution, tropics and North South divide, climate change, geo-engineering and global commons (oceans, atmosphere and orbital space
Area: Writing Intensive

AS.190.452. Party Politics from the Founding to the Progressives. 3 Credits.
Though the torchlight parade has long since passed, American parties still stand in the shadow of the nineteenth-century Party Period. This course seeks to untangle the ideologies and practices of party politics from the Founding to the Progressive Era. Topics include the rise of mass parties, political violence, the coming of the Republican Party, the party politics of Reconstruction and westward expansion, corruption and the political machine, Populism, and movements for reform. We pay particular attention to comparisons between past and present, and to opportunities taken and foregone.
Area: Writing Intensive

AS.190.454. Nuclear Weapons and World Politics. 3 Credits.
An intensive examination of competing theories of the role of nuclear weapons in world politics and alternative global security orders. Focus on nuclear weapons and the interstate system, deterrence, war fighting, arms control, proliferation and terrorism, with select historical and contemporary case studies.
Area: Writing Intensive

AS.190.471. The University and Society. 3 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.

AS.190.473. Political Polarization. 3 Credits.
The American constitutional order, which was designed to operate without political parties, now has parties as divided as any in the democratic world. This course will examine explanations of how this happened, the consequences of party polarization for public policy and governance, and what if anything should be done about it.
Area: Writing Intensive

AS.190.474. Philosophy of Law. 3 Credits.
The philosophy of law or jurisprudence investigates the nature of law and what makes law, as it were, law. Thus, this course will examine various ways in which law has been defined and understood. It will also consider how law is distinguished from other systems of norms and values, such as morality, and how law is distinguished from other aspects of government, such as politics. In addition, the course will introduce students to discussions of legal reasoning and interpretation. Students will be required to participate in class discussion, take three exams, and write one paper.

AS.190.476. Frantz Fanon's Global Politics: Racism, Madness, and Colonialism. 3 Credits.
“The abnormal is he who demands, appeals, and begs” – Frantz Fanon. This course explores the writings and politics of Frantz Fanon, the radical anti-colonial author, psychiatrist, diplomat, and revolutionary who inspired decolonial and anti-racist struggles across the globe. We will situate Fanon’s writings in the global historical context of decolonization, and ask how they can illuminate contemporary questions of madness, racism, fascism, and empire. In addition to reading Fanon’s work, we will trace his influence on radical social movements, political thought, and global politics, and explore the limits and promises of culture, art, and film for social transformation.

AS.190.498. Thesis Colloquium. 3 Credits.
Open to and required for Political Science majors writing a thesis. International Studies majors writing a senior thesis under the supervision of a Political Science Department faculty member may also enroll. Topics include: research design, literature review, evidence collection and approaches to analysis of evidence, and the writing process. The course lays the groundwork for completing the thesis in the second semester under the direction of the faculty thesis supervisor. Students are expected to have decided on a research topic and arranged for a faculty thesis supervisor prior to the start of the semester. Seniors. Under special circumstances, juniors will be allowed to enroll. Enrollment limit: 15.
Area: Writing Intensive

AS.190.499. Senior Thesis. 3 Credits.
Seniors also have the opportunity to write a senior research thesis. To be eligible to write this thesis, students must identify a faculty sponsor who will supervise the project.
Area: Writing Intensive

AS.190.501. Internship-Political Science. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.502. Political Science Internship. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.541. Independent Study-Seniors. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.542. Independent Study-Seniors. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.543. Independent Research. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.544. Independent Research. 1 - 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.592. Summer Internship. 1 Credit.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.598. Independent Study. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.599. Research - Summer. 3 Credits.
You must request Independent Academic Work using the Independent Academic Work form found in Student Self-Service: Registration > Online Forms.

AS.190.601. Qualitative Research.
This class is designed to introduce students to qualitative methodology. Practically, students will gain first hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?

AS.190.602. Introduction to Quantitative Political Science.
An introduction to measurement and data analysis in contemporary American political science. Measurement topics will include the formation of indices and cumulative scales. Analytic topics will topics include sampling variations, statistical association and causation, as manifested in contingency tables and correlation and regression. Emphasis will be on fundamental concepts and assumptions, and on comprehension and evaluation of the scholarly literature. Advanced undergraduates by permission only.

AS.190.604. Foucault and Kant.
This seminar will explore Kant and Foucault comparatively across the registers of ontology, morality, epistemology, time, and politics. How does each move into and across these registers? How do the two thinkers inform and challenge one another? Texts will include: Kant, The Critique of Practical Reason, Conflict of the Faculties, Perpetual Peace and Other Essays, The Anthropology (sections); Foucault, The Order of Things (chapters), Discipline and Punish, “On the Genealogy of Ethics,” “What Was Enlightenment?”, and Subjectivity and Truth.

AS.190.605. Enviromental racism.
Environmental racism has largely been understood in terms of environmental policy-making that discriminates against people of color, particularly with respect to the state-sanctioned siting of toxic waste facilities, the distribution of pollutants, food-deserts, and the exclusion of non-white peoples from leading positions in the environmental movement. This graduate seminar explores environmental racism more broadly, pushing beyond its conventional, place-based understandings and approaching the corresponding logics that produce human disposability and environmental waste from the standpoint of both space and time. Examining colonial legacies of coding racial others in terms natural disasters, epidemics, infestations, non-human animals and dirt, we shall investigate how the natural world is subjected to exploitation and domination in tandem with the subordination of racial subjects historically identified with nature and rendered expendable. In other words, we shall illuminate the logics of power through which race-making coincides with waste-making. Accordingly, we will explore political and theoretical challenges to environmental racism in multiple registers; such as those posed by indigenous studies, decolonial thinkers and Afro-diasporic theories contesting the intersection of racial biopolitics, ecological crises and racial capitalism in an era of proliferating human disposability. Authors considered may include; Mbembe, Du Bois, Hage, Glissant, Césaire, Wynter & Chakrabarty.

AS.190.607. Decolonizing the Episteme: Knowledge, Empire and the Academy.
What complicity does the Western academy have with empire? How might the development of certain intellectual dispositions be implicated in the challenges of imperial rule? And how might such implications have produced influential concepts and theories? In this course we will consider the ways in which - and extent to which - the academy’s claim to epistemic privilege has a colonial provenance. Seniors permitted with instructor permission only.

AS.190.610. Process Philosophies and Political Manifestos.
What do the process philosophies of Bergson, Whitehead and Daoism have to say to political manifestos advanced by writers such as Marx and Engels, Naomi Klein, Hardt and Negri, Dziga Vertov, Haitian and French revolutionaries, Folco Portinari. How, in turn, can the latter illuminate, deform, or inform them? The readings in this seminar bounce back and forth between the cosmic politics of process philosophy and a variety of short manifestos designed to speak to the vicissitudes of today.

AS.190.612. Comparative Citizenship and Immigration Politics.
Graduate students only. Examines the contemporary political dynamics of migration, citizenship, and race concentrating on North America, Europe and East Asia. We will focus on how citizenship and immigration policies shape immigrant political identities, claims, and strategies as well as how immigrants impact public debates and policies in receiving societies.

AS.190.613. Political Arts: Dada, Surrealism, and Societal Transformation.
An exploration of the political aims and tactics, and strengths and liabilities, of Dada and Surrealism, as it operated in Europe and the Americas in the years between and after the World Wars. Readings by Andre Breton, Leonora Carrington, Georges Bataille, Roger Caillois, Meret Oppenheim, College of Sociology, and others. Seniors allowed by permission of instructor only.

AS.190.616. American Political Development.
An examination of state-building and nation-building throughout American political history. (AP)

AS.190.617. The Politics of Finance.
This graduate seminar considers the relationship between finance and state building in both the developing and developed world. Topics will explore the role of central banking, the development of equity and debt markets, bubble economy politics, the effects of financialization, and financial regulatory politics.

AS.190.619. Great Powers in the Middle East and North Africa.
How have Great Powers shaped the history and politics of states in the Middle East and North Africa? For over a century, Great Powers have been extensively involved in the region: they established colonies, protectorates, and mandates during colonial period; afterward, they employed military force to constrain and shape regimes. Focusing primarily on Great Britain, France, and the United States, this course examines the causes and consequences of foreign military intervention from colonial conquest through the post-colonial period. Students will critically assess claims that link Great Power actions to current-day conditions in the region through evaluating contemporary scholarship and analyzing the history of selected cases.

AS.190.620. Stengers, Nietzsche and Whitehead: Three Process Philosophies.
This seminar explores the philosophies of Stengers, Nietzsche and Whitehead comparatively, focusing on their philosophies of agency, multitemporality, affect in ethics and politics, flirtations with panexperientialism, and accounts of planetary/culture imbrications. We will also read contemporary engagements with all three on subjectivity, biology and politics, the Anthropocene, democracy, the shapes of logic, and the visiccitudes of time. Primary texts by Stengers may be Another Science is Possible and Thinking with Whitehead, by Nietzsche Daybreak, Thus Spoke Zarathustra, and the Late Notebooks. For Whitehead, Process and Reality and Modes of Thought. Presentation, class discussions, and a seminar paper.

AS.190.621. Poesis and Politics.
This graduate seminar will investigate how an aesthetic approach to political concepts and practices – in particular the concept of the polity and the practice of judgment – responds to, troubles, and complicates political thought. In the company of Plato, Kant, Heidegger, Arendt, and Auden, we will explore two related sets of questions. First, what are the advantages and disadvantages of figuring the polity as a work of art or as an artistic creation? Second, how might poetry play a role in politics? Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course, drawing on the work of at least two of the thinker-poets discussed.

AS.190.622. Republicanism, Realism, and Liberalism.
Close reading of major texts in western political thought on violence, security and politics developed by republicans, realists and liberals

AS.190.623. Law's Love: Command, Submission, Obligation, Power.
This course focuses on the affective dimensions of law, a power that both creates and preserves the system of rules which a particular country or community recognizes as regulating the actions of its members and which it may enforce by the imposition of penalties. Two related questions will guide our examination of the affection dimensions of law: What are the grounds of law? Why do we obey law? Students will turn in response papers every week on the reading. In addition, there will be a 20-30 page paper due at the end of the semester.

AS.190.625. Theories of Comparative Politics.
This seminar is intended for graduate students planning to take the comprehensive exam in comparative politics, either as a major or as a minor. In addition to exploring central methodological debates and analytic approaches, the seminar reviews the literature on state-society relations, political and economic development, social movements, nationalism, revolutions, formal and informal political institutions, and regime durability vs. transition. Graduate students only.

AS.190.626. Quantitative Methods for the Study of Politics.
This course is intended as Ph.D.-level introduction to applied statistics, with a focus on the identification of causal effects in the tradition of the Neyman/Rubin potential outcomes framework. Prior coursework in applied statistics or quantitative methods will be useful but is not required. Upon completion of the course, students will be in a position to understand and critically assess scholarship that uses instrumental variables, difference-in-differences, regression discontinuity, and other quasi- and natural-experimental research designs. Formal mathematical proof will be kept to a minimum. Students will be asked to adapt existing code and write some of their own code in R.

AS.190.627. Gilles Deleuze and Classical Theory.
What can Deleuze teach classical Eurocentric theories? And what can representatives of those traditions teach him? We will read Deleuze in relation to theorists he has examined, such as Plato, Lucretius, Spinoza, Kant, Kafka, Nietzsche and Hegel, as we seek to hear the history of political theory in a new key. Concepts and issues such as politics, history, time, culture/nature divisions, capitalism, the source of ethics, the shape of political ideals, and the nature of explanation will come up for review. The course will typically read a text from a classical thinker and then consult Deleuze's engagements with them.

AS.190.628. Hobbes & Spinoza.
A close reading of Leviathan by Thomas Hobbes (1588-1679) and Ethics by Baruch Spinoza (1632-1677), with consideration of important commentaries on these works. What conceptions of the human being, nature, reason, God, and freedom are defended and affirmed by Hobbes and Spinoza? What rhetorical strategies accompany their theories of self, ethics, social life?

AS.190.629. American Racial Politics.
Race is not a biological fact but rather a social construction. However, it is a social construction with very real consequences. Definitions of citizenship, allocation of state resources, attitudes about government and government policy, the creation of government policy, all shape and are shaped by race and racial classifications. Serving as a critical corrective to American politics treatments that ignore race, this class will examine how race functions politically in the United States. While not required, some knowledge of statistics is helpful.

AS.190.630. Interpretation and Critique of Political Ideas.
This is a graduate seminar on the interpretive and critical problems that arise when political theorists read and write about texts from long, long ago or far, far away. The first part of the course will consider approaches to the history of European political thought influenced by Marx, Foucault, Strauss, Skinner, and Arendt, amongst others. Readings will include both major methodological statements and examples of interpretive and critical scholarship undertaken by proponents of these different schools of thought. In the second part of the course, we will ask whether and how methods developed to analyze and learn from the history of political thought can be applied to the study of political thinkers who lived and wrote outside western Europe and North America. Major questions for consideration in both parts of the course include: Can old ideas help us solve problems arising in contemporary politics and political theory? What can we learn from intellectual traditions unconnected to our own? What do we have to do in order to understand the ideas contained within a given text? Do we have to understand a text for it to be useful to us?

AS.190.631. Making Social Policy.
Examines American social policy in comparative perspective. Special attention to issues of poverty and inequality, and their relation to the political system.

AS.190.632. The Development of American Political Institutions.
This course explores institutional development in American national politics, from the Founding until the present. It traces parties, Congress, the presidency, bureaucracy, and courts, and also examines how those institutions have interacted with one another across American history. Throughout the course, we will consider how ideas, interests, procedures, and sequence together shape institutions as they collide and abrade over time. Finally, although it hardly covers the entire corpus across the subfield, the course is also designed to prepare students to sit for comprehensive examinations in American politics.

AS.190.633. Black Political Thought.
This course will introduce you to a survey of Black political thought. Our examination will cover the time period between the latter years of the Transatlantic Slave Trade and the present. In the first two thirds of the course we will deal with primary texts (including but not limited to Incidents in the Life of a Slave Girl, The Souls of Black Folk, and The Wretched of the Earth), and in the last third we will deal with modern day attempts to wrestle with the ideas in these texts (including but not limited to Intimate Justice and Critique of Black Reason).

AS.190.634. Political Corruption.
Political corruption is widely seen to be an impediment to economic and political development and stability. But what is political corruption? The common definition of corruption as abuse of power for private gain is too vague to be of serious scholarly use. Is “abuse” culturally specific or merely a synonym for “illegal” - or even worse, for undesirable according to some unspecified standard? Does “private gain” refer only to under-the-table cash payments to a corrupt official, or does it extend to intangible private benefits, and does it extend to gains for identifiable favored groups (“club goods”) and may or may not include the corrupt official him or herself?This seminar will focus on several questions. How should political corruption be defined, and what is at stake in the choice if definition? Are there identifiable patterns to, or types of, political corruption? What conditions encourage or discourage corruption, and how might corruption be controlled or limited? What are the consequences of corruption - and are they necessarily all negative?

AS.190.635. Theories of Constitutional Governance.
This class is focused on the nature of constitutions and the way that they should and do work within a political system, with particular emphasis on the U.S. context. We will examine both normative and empirical arguments about the relationship between politics and constitutional law. More specifically, we will think about how societies and individual actors should make meaning out of constitutional texts, how they do seem to make meaning out of those texts, and the conditions that give rise to constitutional drafting and change. Graduate students only.

AS.190.636. Information/Knowledge/Power/Politics.
Explores how information and knowledge flow through political/social/economic configurations, forming and reforming the politics of everyday engagements at different scales. Topics such as mis/disinformation, commodification of information, embodied information, surveillance, and cyber-mediated information provide the context for analyzing practices, power, agency, and ethics. Critical security studies scholarship provides an overarching template, and we will also draw theoretical insights from multiple disciplines. The format will combine elements of seminar and workshop, and the emphasis will be on collaborative participation in the research process.

AS.190.637. The Colonial Constitution of the "Human".
This course inquires into the colonial constitution of the "human" across philosophical, legal, political, social and economic dimensions. Special attention is paid to the ways in which sexuality, gender, race, class and faith are complicit in this constitution. The course finishes by critically considering theories of the "post-human" from the perspective of both a colonial genealogy of the "human" and anti-colonial claims upon humanism.

AS.190.638. Racial Capitalism.
This graduate seminar will explore the imbrication of the theory, history, and politics of the logic of race and the logic of capital.

AS.190.641. Race and Ethnic Politics in the United States.
Race has been and continues to be centrally important to American political life and development. In this course, we will engage with the major debates around racial politics in the United States, with a substantial focus on how policies and practices of citizenship, immigration law, social provision, and criminal justice policy shaped and continue to shape racial formation, group-based identities, and group position; debates around the content and meaning of political representation and the responsiveness of the political system to American minority groups; debates about how racial prejudice has shifted and its importance in understanding American political behavior; the prospects for contestation or coalitions among groups; the “struggle with difference” within groups as they deal with the interplay of race and class, citizenship status, and issues that disproportionately affect a subset of their members; and debates about how new groups and issues are reshaping the meaning and practice of race in the United States.
Area: Writing Intensive

AS.190.642. Institutions, Power, Ideas and Practices.
Comparative politics scholars have long identified institutions as a crucial source of cross-national variation in political life. Yet institutions are not static. We know from everyday experience that institutions change over time, sometimes quite fast. Scholars have attempted to address the problem of institutional change in various ways. Some institutionalist scholars underscore the endogenous logic of institutional evolution, whereas others resort to exogenous factors such as power. Constructivist and pragmatist scholars foreground ideas and practices as sources of institutional change. This course will explore these different strands of scholarship and attempt to reconstruct a fruitful dialogue between them.”

AS.190.643. Practice and Process in International Relations Theory.
This course covers a series of special topics in IR theory with an emphasis on how an appreciation of practices and process provides a fresh perspective on old questions and raises new ones. The course will focus on the pertinent sociological literature and how this has been applied in IR.
Area: Writing Intensive

AS.190.644. Colonialism and Foreign Intervention in the Middle East and Africa.
How did colonial rule and post-colonial foreign intervention shape the history and politics of states in the Middle East and Africa? The first part of this course focuses on the colonial period, examining the era of conquest, considering how and whether colonial rule differed from other types of ruling arrangements, and studying how people in colonized territories reacted to conquest and foreign rule. Part Two focuses on post-colonial foreign military interventions. Part Three considers the potential long-term consequences of colonialism and foreign intervention. The course focuses on British, French, and American imperialism.
Area: Writing Intensive

AS.190.645. Black Politics.
Grad Students Only.

AS.190.646. CLR James: Black Marxism, Pan-Africanism and International Relations.
This course uses the life and writings of famous Trinidadian Marxist CLR James to explore a set of analytical issues of importance to understanding Pan-Africanism and international relations, including: political economy and slavery, culture and freedom, and the fraught relationship between black intellectuals and black masses.

AS.190.647. Community and Its Disconcents.
This course is inspired by Hannah Arendt’s claim that the calamity of stateless people is “not that they are deprived of life, liberty and the pursuit of happiness” but that “they no longer belong to any community whatsoever.” Rather than attempt to verify or disprove this claim, the course will use this claim as a provocation. How do we understand, experience, and imagine “community”? What does it mean to “belong” to a community? Is it possible not to belong to any community? Why is the language of community so ubiquitous? To help us consider these questions, we will read among others, Anderson, Freud, Harney and Moten, Joseph, LeGuin, McMillan, and Rousseau. A final paper of 20-30 pages is required.

AS.190.648. Writing for Research.
This course is designed to help graduate students in political science craft an original piece of high-quality writing. This class is open to students in their first, second, or third years of the graduate program. We will work on developing the skill of academic writing step by step, focusing first on the question of how to identify and articulate a good question, second on the skill of literature review, third on the art of theoretical engagement, and fourth on the presentation of evidence. During the semester, students may choose to turn a set of interests and questions into a prospectus draft. Alternatively, they may decide to use the class to turn a seminar paper into a dissertation chapter, or a revise a dissertation chapter into an article manuscript. Special sessions will bring other faculty to the class to talk about writing a dissertation and the peer-review process.

AS.190.649. The Economic and the Political.
The neoclassical paradigm of economics utterly excludes politics, yet a large swath of the subfield of “political economy” presupposes or is predicated upon that very paradigm. Neither approach can account for the distinct force of “the economic” as it continually interacts with “the political” (and the social, the cultural, etc.) This graduate seminar will be an experimental effort in exploring a whole new terrain of the economic — not another critique of the neoclassical paradigm, but the initial (re)formulation of a new approach to the economic and the political.

AS.190.651. Policy Dynamics.
Policy dynamics is the study of changes of the political system in its entirety, from the point of view of the system’s outputs--what government actually does, or fails to do. It is dynamic in that it seeks to explain changes in what matters governments feel can or must be addressed, the tools that are available to deal with problems, and the interactions of government and non-government actors that generate change. Particular emphasis will be placed on studying policy dynamics over long periods of time, including such post-enactment issues as implementation, policy feedback on political identities and group formation, and policy durability.

AS.190.652. The Politics of Money, Debt and Credit.
This course will survey recent scholarship on the politics of monetary and financial flows in the economy. We will reflect on the significance and causes of changes in underlying political economy and institutions since the mid-20th century. We will pay special attention to the rise of a new political economy often characterized as neoliberal, and we will discuss how scholars within and beyond political science make sense of these changes.
Area: Writing Intensive

AS.190.653. Organizations.
Graduate students only. "Organizations are the fundamental building blocks of economic, social and political life. This course will examine how different disciplines (sociology, economics, political science) approach the problem of explaining how organizations operate, as well as exploring the structure and development of a very wide range of organizations (firms, interest groups, charitable foundations, universities, militaries, bureaucracies, international organizations, and professions)."

AS.190.654. The Development of the Conservative Movement.
The last twenty years has seen a flourishing of literature on conservatism across multiple disciplines. This course will survey that literature, placing it in a developmental context. Particular focus will be placed on the relationship between elite and mass conservatism, especially in the light of the rise of populism in the US, UK and elsewhere.

AS.190.655. Decolonizing Time and Memory.
This graduate seminar is a critical encounter with the colonial imprint on the politics of memory, temporality and race. We shall investigate the recent turn to "decolonize" virtually everything and ask what such efforts might entail given that the hallmarks of colonialism include a disavowal of the past, the capacity to set the clock to zero and begin the world anew, a linear conception of time and an abiding desire for temporal sovereignty. While investigating the possibility of decolonizing futurity, we will pay particular attention to the Promethean construction of the human race (and its constitutive others) across history. We shall confront the role of segregated temporality and mnemonic politics in modern race-making projects and their impact on the contemporary political imagination. Authors may include Nietzsche, Wynter, Fanon, Foucault, Deleuze, Anzaldúa, Baldwin, & Du Bois.

AS.190.657. Re-Turn to Language.
A central claim of structuralism is that all systems of meaning are structured along the lines of language. Post-structuralism challenges this claim but does not dismiss it so much as probe the ways in which these systems fail and reveal interesting things about how communication may (not) take place. What is sometimes called "post-post-structuralism" rejects the focus on language, emphasing instead how meaning is generated in and by culture or with the (mostly) unacknowledged collaboration of matter. This course will revisit these claims, challenges, and refusals within the context of contemporary, philosophy, literary theory, and political thought. We will read, among others, texts by Saussure, Liev-Strauss, Lacan, Barthes, Derrida, Foucault, Kristeva, Butler, and Barad. Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course.

AS.190.659. Postcolonial Political Economy.
There is currently an intermittent and under-examined relationship between postcolonial studies and critical political economy. The aim of this module is to help you to account for this relationship on your own terms. We will examine the entanglements of capitalism and colonialism by building unconventional conversations between classical political economists (as well as their 19th century successors) and thinkers and traditions invested in confronting colonialism and its legacies. We will focus primarily on regions affected by (Anglo) settler colonialism – especially the Americas and the Pacific.

AS.190.660. Democratic Resilience: US Democracy in Comparative and Historical Perspective.
What gives democratic regimes the ability to withstand challenges such as extreme polarization, racial and ethnic conflict, rising economic inequality, and institutional sclerosis and avoid the prospect of backsliding toward authoritarianism? This course will examine the problem of democratic resilience by locating the contemporary crisis of American democracy in comparative and historical perspective, bringing together literatures in comparative democratization and American politics.

AS.190.662. Reading (vols 2 & 3 of) Capital.
TBA

AS.190.664. Decolonizing Political Science: Contexts, Concepts, and Imaginations.
This graduate course explores the colonial contexts out of which key sub-fields of political science arose. The course then examines the colonial logics that underpin the conceptual formation of each sub-field. Finally, the course considers alternative knowledge traditions, emanating from minority communities and colonized peoples, which seek to alternatively explain the phenomena engaged with by each sub-field.

AS.190.666. Political Economy Of Development.
Graduate students only.

AS.190.667. Reconstructing International Relations Theory.
In this class, we will study IR theory in a reconstructive mode. We will return to foundational texts in light of more recent theoretical developments both in IR and social thought more broadly. Our goal will be to critically assess the basic epistemological, ontological, and historical assumptions of IR theory while charting paths for its possible futures.

AS.190.668. Rethinking Western Thought.
The history of Euro-American Political Thought has been criticized for its orientations to race, gender, class, Christianity, the subject, capitalism, colonialism, sociocentrism, and humanist exceptionalism. How deeply are those themes ensconced in early Christian traditions, secular orientations to the earth, practices of capitalism, and contemporary images of "the political"? What openings are discernible? The seminar starts with Hesiod's Theogony and a chapter from Tim Whitmarsh on atheism in ancient Greece. It then explores how Augustine consolidates sharp shifts in orientations to faith, divinity, nature, discipline, time and the earth. An agent of the first conquest of paganism. Readings in The City of God: Against the Pagans and The Confessions in relation to Foucault's newly translated book, Confessions of The Flesh. Then we turn to what might be called the second Christian/imperial conquest of paganism, launched during the 15th century Spanish invasion of the Americas. How did that conquest re-enact and differ from the first? Texts by Todorov, The Conquest of America, alongside essays by C.L.R. James and perhaps de Castro. Followed by essays from Kant, Marx, Arendt, or Deleuze/Guattari, to see how each consolidates or turns earlier western theories. The seminar then engages Dipesh Chakrabarty in The climate of history in a planetary age as he criticizes Euro-centered thought ("the political", the earth as background to politics, racism, exceptionalism, etc) and some currents in post-colonial thought. Critiques and augmentations will be explored, too.

AS.190.670. The Dream of the 90s: Political Theory, 1990-1995.
This graduate seminar will explore works from this extraordinary period in contemporary political theory.

AS.190.672. Money.
What is money? And given its absolute centrality to economics and politics, shouldn't political economy and political theory hold answers to this question? Instead, the history of both neoclassical economics and modern political thought is marked by eschewals or refusals of it or its importance. This graduate seminar will explore the theory and politics of money, through critical readings of orthodox theories, engagements with heterodox political economy, and encounters with contemporary political theory.

AS.190.675. Nuclear Weapons and Global Politics: History, Strategy, Race and Gender.
This course provides an analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. It offers a broad historical survey that starts with US involvement in the First World War, covers major developments of the twentieth century, and concludes with contemporary issues. Important themes include the developments underpinning the emergence of the liberal world order, strategies of containment during the Cold War, nuclear deterrence and antiproliferation efforts, the politics of international trade, alliance politics, technological and security policy, and the re-emergence of great power competition.

AS.190.676. Field Survey of International Relations.
This course provides a scaffold for the study of international relations theory, organized historically and by major approaches. The focus is on close reading and discussion of exemplars of important bodies of theory. Intended for doctoral students with IR as their major or minor field. Graduate students only.

AS.190.678. Law and Politics.
As a field, Law and Politics has evolved from the study of constitutional law and judicial politics to the political behavior of judges and their associates to the study of law and society, the operation of law and courts "on the ground" in the international arena as well as in the United States, historical institutionalism, and the carceral state. In this graduate course, we will review some of the classic texts in the field, with a focus on the tension between legal institutions and democratic politics. In particular, we will examine how that tension is manifest in the foundations of the American political system and in critical reflection on contemporary practices of American democracy. Students will turn in response papers every week on the reading. In addition, there will be two 10-20 page papers due during the semester. Graduate Students Only.

AS.190.679. The Political Poetics of Walt Whitman and Henry Thoreau.
A study of the works of Thoreau and Whitman, with an eye toward how they explore the process of outside influences upon subjectivity-formation. What are the powers and limits of Whitman's and Thoreau's experiments with language and writing (rhetoric, syntax, imagery, myth) as they seek to induce, cultivate, and transform influences? What role is played by physical encounters with the nonhuman agencies (of plants, animals, objects, divinities)?

AS.190.681. Race and Politics of Punishment in the U.S..
Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold impacts for citizenship. In this graduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history, and racial orders seriously. Why did the carceral state expand in "fits and starts" and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system "makes race" and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields – history, sociology, law, and criminology – and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad's Condemnation of Blackness: Race, Crime, and the Making of Modern Urban America, Elizabeth Hinton's From the War on Poverty to the War on Crime, David Oshinsky's Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western's Punishment and Inequality in America, and Michael Fortner's Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment.

AS.190.682. Regulatory Politics.
This graduate seminar considers regulatory politics in both the developing and developed world. Topics will explore the role of independent agencies, soft paternalism, co-regulation, regulatory failure, and other topics, across a host of sectors.

AS.190.683. Research Seminar/Political Parties.

AS.190.684. How to Be(Come) an Intellectual.
The university both provides a platform for critical intellectual life and, particularly during its neoliberalization, sets severe barriers to it. The latter involve increasing administrative entanglement with corporate and state forces of authoritarian control, disciplinary drives to narrow professionalism and reductive epistemologies, attacks on tenure and university governance, and cutbacks in university budgets. How can those with intellectual aspirations negotiate such departmental, professional, trustee and state pressures? What preparations and role models are conducive to help carve out such space in the academy? What critical role can intellectuals play today in and beyond the academy? What intellectual personae from the recent past are helpful here? The seminar will be divided into two parts. Part I will explore a group of academics who created intellectual space in the United States during a period resistant to it in the 1960s. Texts by Charles Taylor, Sheldon Wolin, Donna Haraway, Herbert Marcuse, Cornel West, Althusser, and me may be consulted. Part II moves into the contemporary era. Texts by Foucault, Theweleit, Latour, Haraway (again), and Moten may be reviewed, along with new explorations of relations between adjunct faculty and intellectual life. Readings for Part II thus remain in flux. But intersections between new fascist drives, climate change, racism, professional retreatism, and pandemics may be explored. Seminar assignments include a class presentation, two short papers, and regular participation in discussion.

AS.190.685. Critical theory, method, and application in International Relations.
Critical theories are often taught by focusing on their various philosophical and ethical claims. But how do you “apply” critical theories in the study of International Relations? Is “method” only a “mainstream” concern? This course seeks to relate philosophy and ethics to method with a (future) eye to dissertation writing. We will consider e.g. Marxist, feminist, postcolonial, and poststructural lines of inquiry, as well as, at the same time, a range of conceptual areas of inquiry – e.g., the affective, the normative, the poetic, the phenomenological, and the material.

AS.190.686. The Right to the City.
Over the past decade, political, economic, and cultural struggles in and over the city have become more important than ever before. Protests against the growing carceral state, against increasing wealth inequality, as well as revanchist attempts to rollback multicultural societal shifts all have the city as its core. While some Marxist thinkers suggest these struggles represent larger struggles over use- versus exchange-value, Black Radical thinkers connect these struggles to anti-black racism. In the wake of one world challenging movement – Black Lives Matter – and one world altering crisis – the Covid-19 pandemic - this course will reflect critically on these two traditions of thinking about the city and to rethink the Marxist tradition through the Black Radical tradition. We will anchor these conversations in an exploratory dialogue between two exemplars of each tradition - the French geographer Henri Lefebvre, and Detroit movement intellectuals James and Grace Lee Boggs. This class will be a vital component of the 2022-23 Sawyer Seminar.

AS.190.687. Philosophy and the Anthropocene.
How do philosophers such as Heidegger, Whitehead, Deleuze and Braidotti help us to think about the dynamics of the Anthropocene? What do anthropologists and geoscientists such as Anna Tsing, Bruno Latour, Jason Moore, Michael Benton, Jan Zalasiewics and Wally Broecker--teach those philosophies and us about the contemporary condition? Class presentations on assigned readings, seminar paper, and class discussions.

AS.190.688. Political Violence.
This undergraduate seminar is designed to introduce students to the comparative study of political violence and intra-state conflict. We will examine social science theories and empirical studies on a wide range of forms of political violence, including civil war, coups, state repression, communal violence, riots, terrorism, genocide, and criminal-political violence. We will study these phenomena at the micro, meso and macro levels, and focus on understanding their causes, dynamics, outcomes, and aftermath. The class will also equip students with an ability to analyze political violence by using social scientific tools.

AS.190.690. Statelessness.
This course will examine Hannah Arendt’s claim that the most “symptomatic group” of contemporary politics is “the existence of an ever-growing new people comprised of stateless persons.” We will consider what, if anything, this group may be a symptom of and its consequences for theories of law and politics. Among other authors we will read Arendt, Agamben, Brown, Foucault, Moten, Said, and Somers. A final paper of 20-30 pages is required.

AS.190.691. The Hopkins Seminar on Racial Politics.
This class surveys the ways in which racial politics has become an increasingly salient topic for Political Science. We examine how racial politics has been engaged with in various sub-fields, and how the study of racial politics might be pursued through cross-sub-field and inter-disciplinary interventions. The class also situates these investigations in the historical importance of Hopkins as a key site in the emergence of a racist discipline and, alternatively, as a site from which important interventions have been launched towards formulating an anti-racist Political Science.

AS.190.800. Independent Study.

AS.190.801. Summer Research.

AS.190.849. Graduate Research.

AS.191.131. An Introduction to Global Migration. 3 Credits.
We live in a world in motion. There are over 272 million migrants in the world today and these numbers are expected to increase in the next decades. Simultaneously, migration is one of the most contested contemporary issues and dominates politics and the media. This course provides students with a thorough understanding of key themes, policies, dilemmas and debates in migration. The first part will focus on theories of migration where students can learn about the history of migration, how and why migrants move today and what categories of migrants exist. The second part will focus on debates around migration and discursive strategies used to ’other’ migrants. Part three will focus on core issues in migration studies such as racism, integration, border controls and the link between migration and the economy.
Area: Writing Intensive

AS.191.303. Critical Race Theory, Law, and Criminal Justice. 3 Credits.
