Volume 1

PART ONE. GRAVITY AND DIFFERENTIAL GEOMETRY

Chapter I.0. Introduction	3
Chapter I.1. Exterior Calculus	9
I.1.1. Exterior forms on vector spaces	10
I.1.2. Mappings and operations on forms	23
I.1.3. Differentiable manifolds, vector fields and differential forms	28
I.1.4. Functions, vector fields and differential forms	37
I.1.5. Exterior differentiation and behaviour under mappings	47
I.1.6. The vielbein basis	53
I.1.7. Lie derivative, coordinate transformations and invariance	59
Appendix: The δ Operator and the Hodge Decomposition	72
Chapter I.2. Riemannian Manifolds	75
I.2.1. Introduction	75
I.2.2. Geometry of the linear spaces	76
I.2.3. The geometry of general Riemannian manifolds in the vielbein basis	80
I.2.4. Relation with the standard world-tensor formalism	91
Chapter I.3. Group Manifolds and Maurer-Cartan Equations	97
I.3.1. Introduction	97
I.3.2. Lie groups as manifolds: left and right invariant vector fields	98
I.3.3. Maurer-Cartan equations	104
I.3.4. Adjoint representation and Killing metric	107
I.3.5. Killing metric	113
I.3.6. Riemannian geometry of semisimple groups	116
I.3.7. Soft group manifolds	119
I.3.8. The example of Poincaré and anti de Sitter soft group manifold	131
Chapter I.4. Poincaré Gravity	141
I.4.1. Poincaré gravity	141
I.4.2. Extension to the soft group manifold	152
I.4.3. Building rules for the gravity Lagrangians	157
I.4.4. Gravity in de Sitter and anti de Sitter space	166
Chapter I.5. Coupling of Gravity to Matter Fields	170
I.5.1. Geometrical Lagrangian for scalar fields on a rigid background	170
I.5.2. Extension to the Poincaré group manifold and interpretation of the Lorentz transformation rules as variational equations	174

1.5.3.	The interaction of the scalar fields with gravity and the effective cosmological constant	176
1.5.4.	The field equation of a massless scalar field in anti de Sitter space (in general in a curved space)	181
1.5.5.	Geometrical Lagrangians for spin 1 fields	185
1.5.6.	Geometrical Lagrangian for spin 1/2 fields	188
Chapter 1.6.	Differential Geometry of Coset Manifolds	190
1.6.1.	Introduction	190
1.6.2.	Classification of coset manifolds	195
1.6.3.	Coordinates on G/H and finite G-transformations	197
1.6.4.	Finite transformations on G/H	204
1.6.5.	Infinitesimal transformations and Killing vectors	210
1.6.6.	Vielbeins and metric on G/H	212
1.6.7.	Covariant Lie derivative	219
1.6.8.	Geodesics	222
1.6.9.	Invariant measure	225
1.6.10.	Connection and curvature	226
1.6.11.	Rescalings	231
1.6.12.	A Note on the isometries of G/H	235
1.6.13.	Some examples	240
1.6.14.	Elements of algebraic topology	254
1.6.15.	Homotopy and (co)homology of coset spaces	262
Chapter 1.7.	Applications of the Formalism and Miscellaneous Examples	272
1.7.1.	The Brans-Dicke theory	272
1.7.2.	Minimal coupling of pseudoscalars through a torsion mechanism	278
1.7.3.	The Schwarzschild solution	283
Bibliography		296

PART TWO. THE ALGEBRAIC BASIS OF SUPERSYMMETRY

Chapter II.1.	Introduction	301
Chapter II.2.	Super Lie algebras, Supermanifolds and Supergroups	310
II.2.1.	The definition of superalgebras and the example of N -extended super Poincaré algebra	310
II.2.2.	Classification of the simple superalgebras whose Lie algebra is reductive	323
II.2.3.	Grassmann algebras	333
II.2.4.	Supermanifolds	338
II.2.5.	Supergroups and graded matrices	345
II.2.6.	$Osp(4/N)$ as the N -extended supersymmetry algebra in anti de Sitter space	352
Chapter II.3.	Super Maurer-Cartan Equations and the Geometry of Superspace	360
II.3.1.	Maurer-Cartan equations of supergroups on supergroup manifolds	360
II.3.2.	Maurer-Cartan equations of $Osp(4/N)$ and $Osp(4/N)$	364

II.3.3.	$Osp(4/N)$ Maurer-Cartan equations as the structural equations of rigid superspace	370
II.3.4.	Killing vectors on superspace, that is the generators of the supersymmetry algebra of supersometries	380
Chapter II.4.	Poincaré Supermultiplets	390
II.4.1.	How to construct the unitary irreducible representations of the N -extended Poincaré superalgebra	390
II.4.2.	Massive multiplets without central charges	395
II.4.3.	Massive multiplets with central charges	411
II.4.4.	Massless multiplets	416
Chapter II.5.	Supermultiplets in Anti de Sitter Space	425
II.5.1.	Free field equations and the concept of mass in anti de Sitter space	425
II.5.2.	Unitary irreducible representations of $SO(2,3)$	435
II.5.3.	Unitary irreducible representations of $Osp(4/N)$	448
II.5.4.	$Osp(4/1)$ supermultiplets	454
II.5.5.	Remarks about the N -extended case and the example of the $Osp(4/2)$ multiplets	464
Chapter II.6.	Supersymmetric Field Theories: The Example of the Wess-Zumino Multiplet	473
II.6.1.	Supersymmetric field-theories corresponding to an irreducible representation of the supersymmetry algebra	473
II.6.2.	The Wess-Zumino model: the simplest example of a supersymmetric field theory	477
II.6.3.	Superfield interpretation of the Wess-Zumino model and rheonomy	489
II.6.4.	The integrability of the rheonomic conditions and the Bianchi identities	500
II.6.5.	The rheonomic action principle	508
Chapter II.7.	Γ -matrix Algebra and Spinors in $4 \leq D \leq 11$	519
II.7.1.	The construction of Γ -matrices	519
II.7.2.	The charge conjugation matrix	523
II.7.3.	Majorana, Weyl and Majorana-Weyl spinors	526
II.7.4.	Useful formulae in Γ -matrix algebra	530
Chapter II.8.	Fierz Identities and Group Theory	535
II.8.1.	Introduction	535
II.8.2.	The structure of forms on N -extended $D = 4$ superspace	537
II.8.3.	Fierz decompositions in the $N = 1, D = 4$ superspace	545
II.8.4.	The $N = 2, D = 4$ case	547
II.8.5.	The $N = 3, D = 4$ case	552
II.8.6.	The $N = 2, D = 5$ case	555
II.8.7.	Systematics of Fierz identities in eleven dimensions	563
II.8.8.	Irreducible representations of $SO(1,9)$ and the irreducible basis of the $D = 10$ superspace	567

Chapter II.9. Super Yang-Mills Theories	582
II.9.1. Introduction	582
II.9.2. Super Yang-Mills theories in $D = 4$	584
II.9.3. The action principle for $N = 1$, $D = 10$ super Yang-Mills theory	594
Historical Remarks and References	597

Volume 2

PART THREE. SUPERGRAVITY IN THE RHEONOMY FRAMEWORK

Chapter III.1. Introduction	607
Chapter III.2. Supergravity in the Standard Component Approach	611
III.2.1. Local supersymmetry and gravity	611
III.2.2. Space-time Lagrangian of $D = 4$, $N = 1$ supergravity	615
III.2.3. The equations of motion of $D = 4$, $N = 1$ supergravity	618
III.2.4. Supersymmetry transformations and action invariance	624
III.2.5. On-shell supersymmetry invariance	629
III.2.6. The linearized theory of supergravity	633
Appendix III.2.A. Commutator of Two Supersymmetries on the Gravitino Field	636
Chapter III.3. Supergravity in Superspace and the Rheonomy Principle	641
III.3.1. From space-time to superspace	641
III.3.2. Geometry of superspace	643
III.3.3. The rheonomy principle	649
III.3.4. An extended action principle	661
III.3.5. $D = 4$, $N = 1$ supergravity and rheonomy	665
III.3.6. Rheonomic constraints and Bianchi identities	672
III.3.7. On-shell supersymmetry	677
III.3.8. Action invariance and off-shell supersymmetry	680
III.3.9. Building rules for supergravity Lagrangians	686
III.3.10. Retrieving $N = 1$, $D = 4$ supergravity from the building rules	706
III.3.11. Extension to anti de Sitter supergravity	709
III.3.12. Building rules for supergravity theories using rheonomy and Bianchi identities	716
Chapter III.4. $D = 4$, $N = 2$ Simple Supergravity	726
III.4.1. Introduction	726
III.4.2. Rheonomic solution of the $N = 2$, $D = 4$ Bianchi identities	728
III.4.3. The Lagrangian of $N = 2$, $D = 4$ supergravity	737
Chapter III.5. The $D = 5$, $N = 2$ Supergravity Theory	755
III.5.1. Introduction	755
III.5.2. Identification of the supergroup and construction of its curvatures	758
III.5.3. Construction of the Lagrangian	767
III.5.4. Superspace equations of motion and on-shell supersymmetry	777
III.5.5. The second order formulation and the contracted version of the theory	789
Chapter III.6. The Theory of Free Differential Algebras and Some Applications	794
III.6.1. Introduction	794
III.6.2. The concept of free differential algebra	795
III.6.3. The structure of free differential algebras and some theorems	796

III.6.4. Gauging of the free differential algebras and the building rules revisited	806
III.6.5. The Sohnius-West model (new minimal $N = 1$ supergravity): the on-shell formulation	810
III.6.6. The Sohnius-West model: off-shell extensions	817
III.6.7. The building rules in their final form	826
Chapter III.7. Supergravity in 6 Dimensions	832
III.7.1. Introduction	832
III.7.2. $D = 6$ Weyl spinors and selfdual tensors	834
III.7.3. The free differential algebra of $D = 6$ supergravity	841
III.7.4. Construction of the model	844
III.7.5. Non-invariance of the space-time action and how to cure it	855
Chapter III.8. $D = 11$ Supergravity	861
III.8.1. Introduction	861
III.8.2. Free differential algebra of $D = 11$ supergravity	863
III.8.3. Extended F.D.A. and the introduction of a 6-form	866
III.8.4. The gauging of F.D.A. revisited	868
III.8.5. Constructing the theory from Bianchi identities	873
III.8.6. The action of $D = 11$ supergravity	881
III.8.7. The completion of the action and the equations of motion	897
Historical Remarks and References	911

PART FOUR. THE ROLE OF THE SCALAR FIELDS: σ -MODEL AND SUPERHIGGS PHENOMENON IN SIMPLE AND EXTENDED SUPERGRAVITY

Chapter IV.1. Introduction	919
Chapter IV.2. Kähler manifolds	926
IV.2.1. σ -models of supergravity and complex manifolds	926
IV.2.2. Almost complex and complex structures on a $2n$ -dimensional manifold	928
IV.2.3. Hermitean and Kähler metrics	934
IV.2.4. The differential geometry of Kähler manifolds	937
Chapter IV.3. Coupling of $N = 1$ Supergravity to n Scalar Multiplets	943
IV.3.1. Kähler geometry for the $N = 1$ coupling	943
IV.3.2. Solution of the Bianchi identities and auxiliary fields	950
IV.3.3. Construction of the action: generalities	967
IV.3.4. Construction of $\mathcal{L}^{(im)}$	969
IV.3.5. Construction of $\Delta\mathcal{L}$	976
Chapter IV.4. The Vector Multiplets and the Gauging of the Kähler Manifold Isometries	983
IV.4.1. Killing vectors and isometries of the scalar manifold	983
IV.4.2. The vector multiplet	987

Chapter IV.5. The Super Higgs Phenomenon	997
IV.5.1. Introduction	997
IV.5.2. The mass relation in the minimal coupling case	1003
IV.5.3. Examples and flat potentials	1013
Chapter IV.6. Duality Transformations and the Coset Structure of Extended Supergravities	1018
IV.6.1. How to extend the symmetries of the non linear σ -model to the vector fields	1018
IV.6.2. The coset structure of extended supergravities in $D = 4$	1030
Chapter IV.7. The Example of the $N = 3$ Theory	1033
IV.7.1. Introductory remarks	1033
IV.7.2. The $N = 3$ vector multiplet and the G/H structure of the supergravity coupling	1034
IV.7.3. $SU(3,n)/SU(3) \otimes SU(n) \otimes U(1)$ formalism and the solution of Bianchi identities	1042
IV.7.4. The Lagrangian	1051
IV.7.5. The scalar field potential	1064
Appendix A: The Scalar Potential	1067
Appendix B: The A_{12} Matrix and the Embedding of $SU(3,N)$ into the Symplectic Group	1069
Chapter IV.8. The Supersymmetry Breaking in the $N = 3$ Theory and a Short Account of the $N = 4$ Theory	1077
IV.8.1. Introduction to partial supersymmetry breaking	1077
IV.8.2. Features of the $N = 3$ theory and of its potential	1085
IV.8.3. A short discussion of simple $N = 4$ supergravity	1087
IV.8.4. A short discussion of matter coupled $N = 4$ supergravity	1093
Chapter IV.9. The Directory of Supergravity Theories and the $N = 8$ Model	1106
IV.9.1. Introduction	1106
IV.9.2. Classification of $D = 4$ supergravities and guide to the related literature	1107
IV.9.3. The $N = 8$ Theory	1115
IV.9.4. Results for matter coupling in $D = 4$ supergravities	1131
References	1139

PART FIVE. KALUZA-KLEIN SUPERGRAVITY

Chapter V.1. Introduction	1147
Chapter V.2. Spontaneous Compactification of $D = 5$ Pure Gravity	1157
V.2.1. Spontaneous compactification of $D = 5$ pure gravity	1157
V.2.2. Symmetries in $D = 4$	1162
V.2.3. A preliminary example: the spectrum of $M_4 \times S^1$ Maxwell theory	1166
V.2.4. The Spectrum of $M_4 \times S^1$ gravity	1169

Chapter V.3. Harmonic Expansions on Coset Manifolds	1175
V.3.1. H-harmonics on G/H	1175
V.3.2. Harmonic expansions in Kaluza-Klein theories	1182
V.3.3. Yang-Mills fields from $M_4 \times M_k$ compactifications	1186
Chapter V.4. Compactifying Solutions of $D = 11$ Supergravity	1189
V.4.1. The $D = 4$ vacuum: maximal symmetry	1189
V.4.2. $AdS^4 \times M^7$ solutions (Freund-Rubin)	1192
V.4.3. Properties of the internal space M^7 : Killing spinors and Weyl holonomy	1194
V.4.4. $Osp(4/N)$ formulation	1199
V.4.5. Differential operators on M^7	1204
Appendix V.4.1. $SO(7)$ Γ -matrices	1217
Chapter V.5. The $D = 4$ Mass Spectrum in $AdS^4 \times M^7$ Backgrounds	1221
V.5.1. The linearized field equations of $D = 11$ supergravity	1221
V.5.2. Fermion masses	1224
V.5.3. Boson masses	1230
V.5.4. Supersymmetric mass relations	1232
V.5.5. Vacuum stability	1241
Chapter V.6. Classification of Compact Homogeneous $D = 7$ Einstein Spaces	1249
V.6.1. Homogeneous 7-manifolds	1249
V.6.2. The spaces $SU(3) \times SU(2) \times U(1)/SU(2) \times U(1) \times U(1)$	1251
V.6.3. The other $D = 7$ Einstein spaces G/H	1254
Chapter V.7. The Spectra of Specific Solutions: The Seven-Sphere	1259
V.7.1. How to compute \mathcal{D} on the G/H harmonics	1259
V.7.2. The spectrum of the round S^7 : harmonic analysis	1262
V.7.3. The spectrum of the round seven-sphere: $Osp(4/8)$ analysis	1277
Chapter V.8. The $M^{p,q}$ spaces	1302
V.8.1. The $M^{p,q}$ spaces	1302
V.8.2. Harmonics on the $M^{p,q}$ spaces	1306
V.8.3. The spectrum of the $SU(3) \times SU(2) \times U(1)$ irreps in the $M^{p,q}$ spinor expansion	1313
V.8.4. Conjugation in the longitudinal spectrum	1322
V.8.5. Calculation of the longitudinal mass eigenvalues	1329
Chapter V.9. Other Classical Solutions of $D = 11$ Supergravity	1343
V.9.1. Introduction	1343
V.9.2. Nonvanishing internal photon (Englert-type solutions)	1343
V.9.3. Symmetries of Englert-type solutions	1347
V.9.4. Stretched and warped solutions	1347
Chapter V.10. The Embedding of $D = 4$ S.G. into $D = 11$ S.G.	1355
Chapter V.11. The Chirality Problem	1360
Bibliographical Note	1367

Volume 3

PART SIX. HETEROTIC SUPERSTRINGS AND SUPERGRAVITY

Chapter VI.1. Introduction	1375
Chapter VI.2. Elements of Two-dimensional Differential Geometry and of Riemann Surface Theory	1391
VI.2.1. Introduction	1391
VI.2.2. Definition of a Riemann surface; metrics, complex structures and moduli space	1393
VI.2.3. The simply connected Riemann surfaces and the uniformization theorem	1400
VI.2.4. Deformation of the metric, quadratic differentials and the complex structure of Teichmüller space	1416
VI.2.5. Homology bases, abelian differentials and the period matrix	1428
VI.2.6. Dehn twists, the mapping class group and its homomorphism onto $Sp(2g, \mathbb{Z})$	1449
VI.2.7. The group of divisors and the Riemann-Roch theorem	1458
VI.2.8. The Jacobian variety: Riemann theta functions and spin structures	1472
Chapter VI.3. The Classical Action of the Heterotic Superstrings and Their Canonical Quantization	1501
VI.3.1. Introduction	1501
VI.3.2. $N = 1$, $D = 2$ conformal supergravity and the heterotic superspace geometry	1511
VI.3.3. Classical superconformal theories and the WZW-action	1518
VI.3.4. Heterotic σ -model on a general target space and the choice of M_{target} leading to a classical superconformal theory	1531
VI.3.5. Canonical quantization of the heterotic WZW-model and the superconformal algebra	1541
Appendix: Rules for the Wick Rotation of Spinors	1556
Chapter VI.4. The BRST Charge and the Ghost Fields	1558
VI.4.1. Introduction	1558
VI.4.2. BRST quantization. Abstract properties of Q	1559
VI.4.3. Construction of Q	1561
VI.4.4. The BRST invariant hamiltonian and the Fradkin-Vilkovski theorem	1565
VI.4.5. BRST quantization of string theories	1566
Chapter VI.5. Quantum Determination of the Target Manifold and Kac-Moody Algebras	1582
VI.5.1. Introduction	1582
VI.5.2. The BRST charge: cancellation of the conformal anomaly, boundary conditions and intercepts	1585
VI.5.3. Twisted Kac-Moody algebras and massless target fermions	1600
Chapter VI.6. The Polyakov Path Integral and the Partition Function of String Models	1629
VI.6.1. Introduction	1629

VI.6.2. The cosmological constant, the partition function and the Polyakov path integral	1632
VI.6.3. Operatorial evaluation of the bosonic string partition function	1646
VI.6.4. The Polyakov integration measure for the bosonic string	1654
VI.6.5. Functional evaluation of the bosonic string partition function in the case of the torus	1672
VI.6.6. Functional determinants of the Laplacian and of the Dirac operator on the torus	1677
VI.6.7. The gravitino ghost	1692
Appendix. A Detailed Treatment of Conformal Killing Vectors	1697
Chapter IV.7. Modular Invariance, Fermionization and the Particle Spectrum of Heterotic Superstrings	1702
VI.7.1. Introduction	1702
VI.7.2. Modular invariance and GNO fermionization	1707
VI.7.3. Modular invariance and spin structures	1730
VI.7.4. An example in $D = 10$: the $SO(32)$ superstring	1745
VI.7.5. A second example in $D = 10$: the $E_8 \otimes E_8$ and $SO(16) \otimes SO(16)$ heterotic strings	1754
VI.7.6. Examples in $D = 4$	1760
Chapter VI.8. Quantum Conformal Field Theories, Vertex Operators and String Tree Amplitudes	1766
VI.8.1. Introduction	1766
VI.8.2. Quantum conformal field theories and emission vertices	1769
VI.8.3. Bosonization, vertex operators and spin fields in the matter sector	1787
VI.8.4. b-c systems, superghost bosonization and the background charge	1804
VI.8.5. The covariant lattice for $D = 10$ superstrings	1819
VI.8.6. Conjugacy classes and GSO projectors: the $SO(32)$ example in $D = 10$	1832
VI.8.7. Massless emission vertices and the effective theory of $D = 10$ superstrings	1838
Chapter VI.9. Effective Supergravity Theories and the Coupling of the Lorentz Chern-Simons Term	1854
VI.9.1. Introduction	1854
VI.9.2. The algebraic basis of $N = 1, D = 10$ matter-coupled supergravity	1859
VI.9.3. The general solution of the $D = 10$ super Poincaré Bianchi identities	1865
VI.9.4. The H-Bianchi identity in the (0,4)- and (1,3)-sectors: determination of the H-parametrization	1891
VI.9.5. The (2,2)- and (3,1)-sectors of the \mathcal{H} -Bianchi identity and the equations of motion	1915
VI.9.6. The Lagrangian of $N = 1, D = 10$ matter-coupled supergravity at $\gamma = 0$	1942
VI.9.7. Retrieving the superspace constraints from the κ symmetry of the Green-Schwarz string formulation	1959
VI.9.8. Bianchi identities and off-shell formulations of $N = 1, D = 4$ supergravity revisited	1982
VI.9.9. Chiral multiplets, the linear multiplet and the geometrical interpretation of R-symmetry	1997
VI.9.10. $D = 4$ Chern-Simons cohomology and the linear multiplet	2012

Chapter VI.10. (2,2) Superconformal Field Theories and the Classification of $N = 1, D = 4$ Heterotic Superstring Vacua	2028
VI.10.1. Introduction	2028
VI.10.2. Type II superstrings on $SU(2)^3$ groupfolds	2032
VI.10.3. Construction of modular invariants and GSO projectors for the type II superstring	2037
VI.10.4. $SU(2)^3$ groupfolds and superconformal field theories	2039
VI.10.5. The h-map	2050
VI.10.6. Emission vertices of the massless multiplets in an $N = 1$ heterotic model based on a $(2,2)_{9,9}$ internal theory	2056
VI.10.7. Emission vertices of the massless multiplets in $N = 2$ heterotic models based on a $(4,4)_{6,6} \oplus (2,2)_{3,3}$ internal theory	2068
VI.10.8. Embedding of a $(2,2)_{9,9}$ into the direct sum $(4,4)_{6,6} \oplus (2,2)_{3,3}$	2076
VI.10.9. Classification of the $SU(2)^3$ groupfold realizations of the internal conformal field theory	2078
VI.10.10. Details of the $SU(2)^3$ groupfold construction with emphasis on bosonization	2083
Appendix VI.10.A. A bosonizable (2,2) vacuum of type A: $A1(1,2,3,4)\epsilon_{13}$	2091
Appendix VI.10.B. A Bosonizable (2,2) Vacuum of Type B: $B5(1,2,3,4)\epsilon_{23}$	2094
Appendix VI.10.C. An LRP (2,2) Vacuum of Type B: $B26(1,2,3)$	2097
Bibliographical Note	2102
Historical Remarks and References	2117
Index	2129
