

Thank Madam Chair for this opportunity to make our organization contribution to the 62nd Session of the Commission on Social Development.

Today, I stand before you to discuss a vision that is close to my heart – a world where every child, no matter where they live, has the opportunity to learn, grow, and thrive. Our commitment to social development and justice is not just about policies and agendas; it's about real people, real lives, and real futures.

In this digital age, technology is not just a tool; it's a bridge. A bridge that connects the most remote villages to the vast world of knowledge and opportunity. By integrating technology into our education systems, especially in rural and underserved areas, we're opening doors that were once closed. Imagine a child in a remote village attending a virtual classroom, receiving the same quality of education as a child in a bustling city. This is not a distant dream; it's a very achievable reality.

Through digital and virtual teaching platforms, we are not just educating children; we are laying the foundation for a more equitable society. Education is the most potent weapon we have in our fight against poverty. It levels the playing field, offering every child, regardless of their background, a chance to succeed. It sparks innovation, fuels economic growth, and empowers communities.

Our goal is clear – we strive to eradicate poverty. But to achieve this, we must focus on societal development through education. We must ensure that access to technology is not a privilege for the few but a basic right for all. When we educate a child, we're not just shaping an individual; we're shaping the future of our world.

Together, let's harness the power of technology to transform education, to ignite social change, and to bring us closer to a world where no child is left behind.

Thank you.
