(57) **ABSTRACT**

A software facility for analyzing each of a plurality of  
groups of items is described. The facility retrieves informa-  
tion identifying, for each of a plurality of groups, items that  
are members of the group. For each group, the facility  
analyzes attributes of the items of the group to identify  
attributes that distinguish items that are members of the  
group from items that are not members of the group.
