

Notification template for Article 131 of the Capital Requirements Directive (CRD) – Other Systemically Important Institutions (O-SIIs)

Template for notifying the European Central Bank (ECB) and the European Systemic Risk Board (ESRB) of the setting or resetting of an O-SII buffer under Article 131(7) CRD and of the identity of O-SIIs under Article 131(12) CRD

Please send/upload this template to:

- <u>macropru.notifications@ecb.europa.eu</u> when notifying the ECB (under Article 5 of the Single Supervisory Mechanism (SSM) Regulation¹);
- <u>DARWIN/ASTRA</u> when notifying the ESRB.

The ESRB will forward this notification to the European Commission, to the European Banking Authority (EBA) and to the competent and designated authorities of the Member States concerned without delay and will publicly disclose the names of the O-SIIs on its website. This notification will be made public by the ESRB once the relevant authorities have adopted and published the notified macroprudential measure².

E-mailing/uploading this template to the above addresses constitutes official notification; no further official letter is required. To facilitate the work of the notified authorities, please send the notification template in a format that allows the information to be read electronically.

1. Notifying national authority				
1.1 Name of the notifying authority	Finnish Financial Supervisory Authority, FIN-FSA			
1.2 Country of the notifying authority	Finland			
2. Description of the mea	asure			
	On which institution(s) is the measure applied (name and Legal Entity Identifier (LEI) code)?			
	Is the measure applied at:			
	- The highest level of consolidation?			
2.1a Institution or group of	- A sub-consolidated level?			
institutions concerned	- An individual level?			
	Name of institution	LEI	Consolidation level	
	Nordea Bank Abp	5299000DI3047E2LIV03	Highest level of consolidation	
	OP Cooperative	7437003B5WFBOIEFY714	Highest level of consolidation	
	Municipality Finance Plc	529900HEKOENJHPNN480	Highest level of consolidation	

¹ Council Regulation (EU) No 1024/2013 of 15 October 2013 conferring specific tasks on the European Central Bank concerning policies relating to the prudential supervision of credit institutions (OJ L 287, 29.10.2013, p. 63). ² On request by the notifying authority, it may be agreed with the Head of the ESRB Secretariat that this notification, or a part thereof, should not be published for reasons of confidentiality or financial stability.

2.1b Changes to the list of institutions concerned	There are no changes a notification.	to the list of Finnish O-SIIs cc	mpared to the last		
	At what level is the fully phased-in buffer (in %) applied to the institution(s)?				
	Name of institution	New O-SII buffer	Previous O-SII buffer		
	Nordea Bank Abp	2.5%	2.5		
2.2 Level of the buffer	OP Cooperative	1.5%	1.5%		
applied	Municipality Finance Plc	0.5%	0.5%		
	Please provide the name and LEI code of the ultimate EU parent institution of the group for each of the O-SIIs identified. if the ultimate EU parent institution is not the concerned institution itself. Not relevant since all the identified O-SIIs are ultimate EU parent institutions themselves.				
2.3 Name of the ultimate EU parent institution	Name of identified O-SI	I Ultimate EU parent instituti	on LEI of ultimate parent institution		
	(sub)consolidated level notified as O-SIIs (pleas Not relevant, no subsid	tified is a parent institution and please name the subsidiaries se give names and LEI codes iaries have been identified as est level of consolidation.	es of the institution that are		
	Name of parent O-SII	Name of O-SII subsidiary	LEI of O-SII subsidiary		
2.4 Names of subsidiaries	identified				
3. Timing for the measu	e				
3.1 Timing for the decision	What is the date of the official decision? For SSM countries when notifying the <u>ECB</u> : provide the date on which the decision referred to in Article 5 of the Single Supervisory Mechanism Regulation (SSMR) will be taken.				
	22/05/2024				

3.2 Timing for publication	What is the date of publication of the notified measure? 27/06/2024					
3.3 Disclosure	Information about the strategy for if the communicating the notified measure to the market. The decision by the FIN-FSA Board as well as more detailed principles for determining O-SIIs and setting O-SII buffers will be published on the <u>FIN-FSA</u> <u>website</u> on 27 June 2024. The Finnish O-SIIs have been provided the opportunity to express their opinions on the matter according to the Administrative Procedure Act.					
3.4 Timing for application	What is the intended date of application of the measure? 01/01/2025					
3.5 Phasing in	What is the intended timeline for the phase-in of the measure? There will be no phase-in periods i.e. the buffers enter into force in full on 1 January 2025. Name of institution Date1 Date2 Date3 Date4 Date5 % % % % % % %					Date5
3.6 Review of the measure	When will the measure be reviewed (Article 131, paragraphs (6) and (12), specify that the buffer, the identification of O-SIIs and their allocation to subcategories must be reviewed at least annually)? <i>The measure will be reviewed in 2025</i>					
4. Reason for O-SII ident	ification and activation					
	Please list here the nati identified based on a. size; b. importance fo capturing sub c. complexity, in activity; d. interconnecte	r the econo stitutability/ cluding the	my of the rele financial insti additional co	evant Mem tution infra mplexities	iber State or t structure; from cross-bo	he Union, order
4.1 Scores of institutions or group of institutions	system. Name of institution	Size	Substitut-	Com-	Intercon-	Overall
concerned, as per EBA	Nordea Bank Abp	58.29%	43.03%	plexity 88.75%	60.76%	Score 62.71%
guidelines on the	OP Cooperative	15.92%	15.69%	3.24%	9.20%	11.01%
assessment of O-SIIs (Article 131.3 CRD)	Municipality Finance Plc Municipality Finance Plc Please provide other recalculations and formute	5.67%	1.34%	0.31%	8.22%	3.89%
	in a separate Excel file					mnaturs)

	Please provide information on: a. whether you followed the EBA guidelines on the assessment of O-SIIs; Yes, we have applied the EBA guidelines in the identification of O-SIIs.
	 b. which threshold score has been set to identify O-SIIs; A 2.75% threshold score has been applied. An institution is automatically identified as an O-SII institution if the total scores as per EBA GL exceed the threshold of 2.75%.
4.2 Methodology and indicators used for designation of the O-SII	 whether relevant entities with relative total assets not in excess of 0.02% have been excluded from the identification process; No, all entities are included.
(Article 131.3)	d. the names and scores of all relevant entities not excluded from the identification process (could be sent in a separate Excel file, see 4.1); <i>Please see the Excel file attached in 4.1 (all credit institutions included in the assessment process listed, branches of foreign banking groups operating in Finland have been included in calculation of denominators but not listed in the file as they cannot be identified as O-SIIs).</i>
	e. whether non-bank institutions have been included in the calculations. No, all Finnish credit institutions and branches of foreign banking groups operating in Finland are included in the calculations.
	Have any of the institutions listed in 2.1 been identified by applying supervisory judgement as laid down in EBA guidelines on the assessment of O-SIIs? If yes, please list the respective institutions and provide information on:
	 which of the optional indicators have been used to justify the supervisory assessment decisions, if any, and what the scores were; NA
4.3 Supervisory judgement	 why these optional indicators are relevant for the Member State; NA
	 why the bank is systemically important in terms of those particular optional indicators. NA
	Please provide information on the criteria and indicators used to calibrate the level of the O-SII buffer requirement and the mapping to institution-specific buffer requirements.
4.4 Calibrating the O-SII buffer	According to the national implementation of the CRD V revisions concerning macroprudential buffers (Act on Credit Institutions, Chapter 10), the FIN-FSA shall divide the credit institutions into seven classes with capital add-ons ranging from 0 % (Class 1, non-OSIIs) to 3 % (Class 7) and increasing with increments of 0.5 % of the total risk exposure amount. In practice, the calibration of the O-SII buffers is based on the assessment of the systemic importance of the identified

O-SII institutions. The systemic importance is assessed using the O-SII scores as per EBA GL.

The FIN-FSA assesses the appropriate level of O-SII buffers by using two different versions of the bucketing approach in which the identified O-SII institutions are divided into seven buckets based on their systemic importance. In both methodologies the systemic importance is measured by the O-SII score calculated according to the EBA guidelines. Pursuant to the first methodology (linear scale), equal bucket range increments are applied, consistent with the systemic importance threshold (2.75%).

According to the second methodology, bucket ranges are calibrated in line with the Equal Expected Impact (EEI) approach. The EEI approach has been applied e.g. in calibrating the additional capital requirements for global systemically important institutions (G-SIIs). Under the EEI approach, the additional capital requirements of systemically important institutions (SIIs) are calibrated so that the expected social costs from the default of an SII equal those from the default of a non-SII. The parameters of the EEI approach applied by the FIN-FSA are based on ECB analyses.

Bucket	O-SII score, %	O-SII score, %	Buffer guidenee
	(linear scale)	(EEU scale)	Buffer guidance
1	0–2.75	0–2.75	0.0%
2	2.75–5.50	2.75-6.00	0.5%
3	5.50–8.25	6.00–10.00	1.0%
4	8.25–11.00	10.00–17.00	1.5%
5	11.00–13.75	17.00–28.00	2.0%
6	13.75–16.50	28.00–48.00	2.5%
7	16.50-	48.00-	3.0%

The table below illustrates the bucket ranges according to both the linear and the EEI methodologies and the buffer guidance applied to each individual bucket.

The recommended buffer rates under the different calibration approaches suggest that the current O-SII buffer of 0.5% for Municipality Finance is proportionate to the systemic importance of the institution. However, the recommended rates partly support an increase in the O-SII buffer of OP Group from 1.5% or 2.0%.

In the case of Nordea, the buffer requirements under the bucketing approaches suggest that it is justified to increase the O-SII buffer of Nordea from 2.0% to the allowed regulatory upper limit of 3.0%. Setting the highest possible O-SII buffer for Nordea would also be supported by the fact that Nordea is the most significant O-SII in the whole euro area both as measured by the O-SII score and relative to the national financial system.

Keeping the O-SII buffer rates intact for Nordea and OP Group is justified based on a holistic assessment of buffer requirements. The establishment of the first and second pillars of the European Banking Union, namely the Single Supervisory Mechanism and Single Resolution Mechanism, have reduced the probability and the associated social costs of the default or distress of systemically important institutions headquartered within the Banking Union. This also supports the application of more moderate O-SII buffer requirements.

The assessment of the adequate total amount of macroprudential buffers based on stress tests is also used as an input in the calibration of the target O-SII buffer

P	
	levels. In March 2023, the FIN-FSA Board decided to raise the additional capital requirement based on the structural characteristics of the financial system (systemic risk buffer) to 1%. The raise entered into force on 1 April 2024. In June 2023, the FIN-FSA Board decided to reciprocate the systemic risk buffer imposed by the Norwegian macroprudential authority for partial application to Finnish banks' exposures in Norway. The buffer requirement enters into force on 1 July 2024. These buffer requirement decisions contribute to the resilience of the Finnish banking sector, and once they enter into force, the combined amount of the macroprudential buffer requirements on the Finnish banking sector will rise to an overall level deemed adequate by the FIN-FSA.
	By leaving the highest bucket empty, the buffer framework retains the incentive for the most significant credit institutions to avoid increasing their systemic importance further.
	Moreover, in the calibration of O-SII buffers, the FIN-FSA has considered the current economic situation and the potential impact of an increase in buffer rates on the lending capacity of credit institutions. The prevailing degree of uncertainty surrounding the macroeconomic outlook as well as the estimated effects of increasing capital requirements on credit institutions' lending capacity speak in favour of keeping macroprudential buffer requirements intact at this point.
	Please provide a justification for why the O-SII buffer is considered likely to be effective and proportionate to mitigate the risk.
4.5 Effectiveness and proportionality of measure	The levels of the O-SII buffers are benchmarked against the different versions of the ECB floor methodology to ensure the level playing field and sufficient mitigation of systemic risks within the Banking Union. The applicable O-SII buffer rates for the Finnish O-SII institutions exceed the minimum requirements given by the ECB floor methodologies as well as average level of O-SII buffers in EU, which is supported by the higher-than-average level of concentration of the Finnish banking sector and the large size of the most significant institutions relative to the economy.
	The war in Ukraine and global economic fragility have weakened the economic outlook in Finland, heightening uncertainty in financial markets. The consequences of these developments for Finnish banks' loan loss risks still remain unclear in many respects. The banks' lending capacity could weaken if economic shocks would result in significant loan losses.
5. Sufficiency, consisten	cy and non-overlap of the policy response
5.1 Sufficiency of the policy response	For a macroprudential policy to be 'sufficient', the policy responses must be deemed to significantly mitigate, or reduce the build-up of, risks over an appropriate time horizon with a limited unintended impact on the general economy. Note that the ESRB will use the assessment of the macroprudential stance as relevant input in assessing the sufficiency of the macroprudential policy in the Member State.
	Please provide any additional information that the ESRB should consider in assessing the sufficiency of the policy response.
	In the light of the analysis presented in 4.4 and 4.5, the updated O-SII buffers are assessed to sufficiently mitigate risks related to the systemic footprint of the largest Finnish credit institutions (while also providing incentives for all O-SIIs to avoid an increase in their systemic importance). The decision is not expected to have any material unintended consequences for the general economy.

	For a macroprudential policy to be 'consistent', the policy instruments meet their respective objectives, as outlined in ESRB/2013/1 ³ , and must be implemented in accordance with the common principles set out in the relevant legal texts.
5.2 Consistency of application of the policy response	Note that the ESRB assessment of consistency will consider whether the same systemic risks are addressed in a similar way across and within the Member States over time.
	Please provide any additional information that the ESRB should consider in assessing the consistency of the policy response.
	The application of O-SII buffers is consistent with the changes in the Act on Credit Institutions following the new Capital Requirements Directive (CRD V). The applied O-SII buffer rates reflect the differences in the systemic importance of Finnish credit institutions as O-SII buffers should exclusively address the risks related to the systemic footprint of individual institutions.
5.3 Non-overlap of the policy	For a policy instrument to be 'non-overlapping', it should aim to address a systemic risk that either differs from a risk addressed by other active tools in the same Member State, or be complementary to another tool in that Member State which addresses the same systemic risk.
response	- Are other policy instruments used to address the <u>same</u> systemic risk? No. As per the changes in Act on Credit Institutions (and corresponding provisions in CRD V), all macroprudential buffer requirements must address different systemic risks.
	 If yes, please explain the need for more than one instrument to address the same systemic risk and how the different instruments interact with each other. NA
6. Cross-border and cros	s-sector impact of the measure
	Assessment of the cross-border effects of implementation of the measure.
	a. Assessment of the spillover channels operating via risk adjustment and
	regulatory arbitrage. The relevant indicators provided in Chapter 11 of the
	ESRB Handbook on Operationalising Macroprudential Policy in the Banking
	Sector ⁵ and the Framework to assess cross-border spillover effects of

border effects and the likely	effects of macroprudential measures can be used.
impact on the Internal Market	b. Assessment of the:
(Recommendation ESRB/2015/2 ⁴)	 cross-border effects of implementation of the measure in your own jurisdiction (inward spillovers);
	 cross-border effects on other Member States and on the Single
	Market of the measure (outward spillovers);
	 overall impact on the Single Market of implementation of the measure.

 ³ Recommendation of the European Systemic Risk Board of 4 April 2013 on intermediate objectives and instruments of macro-prudential policy (ESRB/2013/1) (OJ C 170, 15.6.2013, p. 1)
 ⁴ Recommendation of the European Systemic Risk Board of 15 December 2015 on the assessment of cross-border effects of and voluntary reciprocity for macroprudential policy measures (ESRB/2015/3) (OJ C 97, 12.3.2016, p. 9).
 ⁵ Available on the ESRB's website at www.esrb.europa.eu.

	The cross-border effects as well The buffer rates applicable to Fi			narket are limited.
6.2 Assessment of leakages and regulatory arbitrage within the notifying Member State	Referring to your Member State's specific characteristics, what is the scope for "leakages and regulatory arbitrage" in your own jurisdiction (i.e. circumvention of the measure/leakages to other parts of the financial sector)? Is there scope for "leakages and regulatory arbitrage" in other jurisdictions? The scope for leakages and regulatory arbitrage in the Finnish financial sector and in other jurisdictions is limited.
