

## Novo Nordisk Indonesia's Emergency Donation Provides Assistance to Earthquake Victims in Cianjur

On 21 November 2022, a powerful 5.6 magnitude earthquake struck Cianjur, West Java, causing widespread devastation. The tremors were felt as far away as Jakarta, approximately 107 kilometers away. The earthquake not only destroyed buildings, houses, and infrastructure but also resulted in the loss of over 300 lives. More than 7,700 individuals were injured, and more than 114,000 people were suddenly left homeless.

In response to this catastrophic event, Novo Nordisk Indonesia extended a helping hand to the affected communities by providing essential equipment and resources. The donated items included tents, *veldbed* (camp beds), tables, chair for examination, glucometers, and tensimeters, which were distributed to health posts in the area. Additionally, we equipped the refugee tents with blankets, pillows, and communal kitchen utensils, ensuring that the basic needs of the victims were met during this difficult time.

Novo Nordisk Indonesia's assistance was provided in direct response to a request from the West Java Provincial government, as we believe it is crucial to align our support with the specific needs identified by the authorities. The donated supplies were distributed directly to victims' area in Desa Cugenang, Cianjur.
