

TREND VISION ONE™ - CLOUD SECURITY

# Comprehensive cloud security for those building and innovating on Google Cloud Platform™ (GCP)

Trend Vision One - Cloud Security enables you to unify, simplify, and standardize your organization's security operations. Bringing our market-leading hybrid cloud security to Trend Vision One™, our unified cybersecurity platform, allows you to integrate security across your entire enterprise. Centralize visibility, better manage risk, and ultimately build business resilience.

## Connecting SecOps and cloud security across the entire hybrid cloud journey

**Unify:** Integrate your security controls with centralized visibility and management across security layers, service providers, and on-premises, hybrid, and multi-cloud environments from a single platform.

**Simplify:** Optimize your analyst experience with connected platform workflows, streamlined integrations, and cloud automation and orchestration processes.

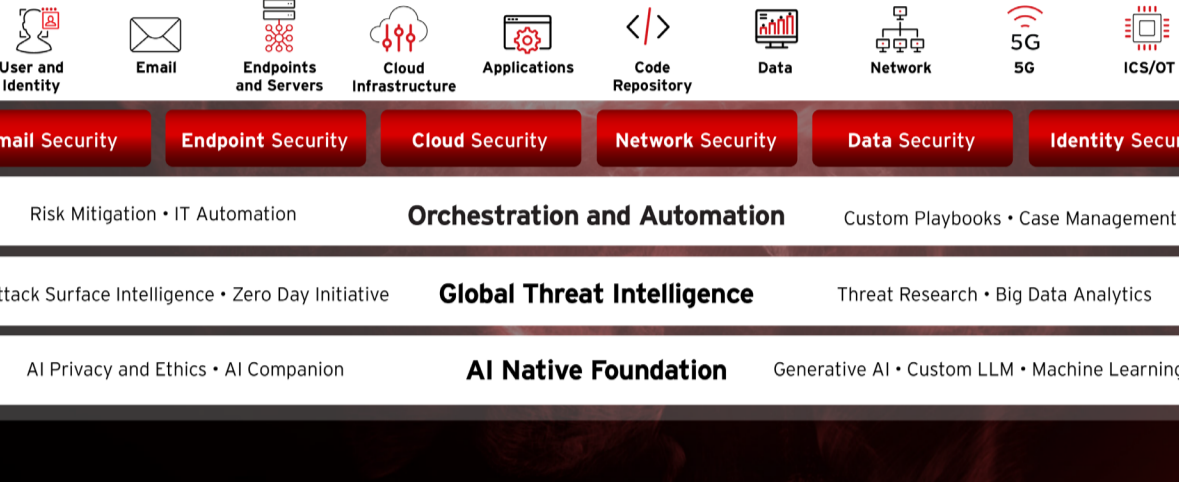

**Standardize:** Gain consistency across cloud platform functions and on-premises data centers with asset discovery, security policy management, and licensing to empower your team to visualize and report on risk.

### Zero Trust Architecture

#### Extended Detection and Response (XDR)

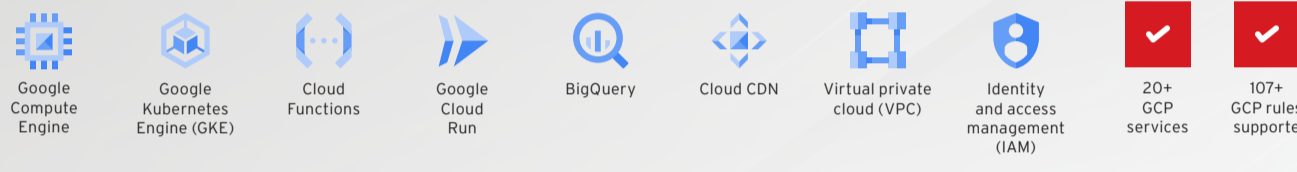

## Attack surface risk management (ASRM) in the cloud

### Turning visibility into decisions

Take charge of your cyber risks with internal and external attack surface discovery, assessment, risk prioritization, and remediation across your hybrid cloud environment.

### Visibility of your GCP environment

### Key benefits

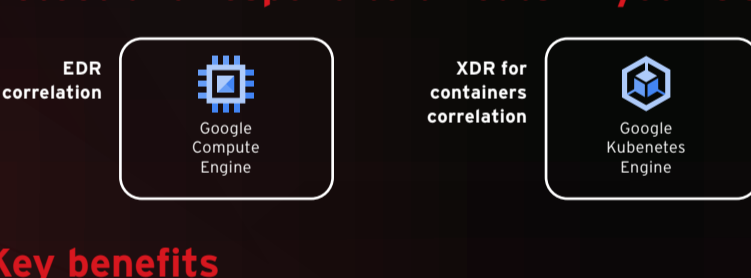

- Understand the business impact of risks in your environment, ensure alignment with the Google Cloud Well-Architected Framework, and maintain compliance of all cloud accounts
- Identify and prioritize current threats and vulnerabilities with actionable insights and guided remediation and prevention
- Assess the risk of each asset, along with its relationships to other resources and show potential attack paths before malicious actors can access them
- Look beyond your internal cloud accounts, maintaining the security posture of internet- and other external-facing assets

## Extended detections and response (XDR) in the cloud

### Streamline cloud investigations

Stop adversaries faster with broader perspective and better context to hunt, detect, investigate, and respond to threats by leveraging bespoke hybrid cloud telemetry correlation.

### Detect and respond to threats in your GCP environment

### Key benefits

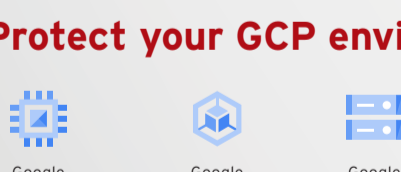

- Unify visibility across cloud, hybrid, and on-premises environments
- Improve detection speed and precision while reducing false positives
- Scale threat hunting and investigation by visualizing the full attack story
- Prioritize, automate, and accelerate cloud detection and response actions

## Protection in the cloud

### Proactive threat defense

Quickly identify, mitigate, and respond to security threats across your hybrid cloud environment by leveraging on-demand and runtime protection techniques for instances, containers, storage, VPC, IAC, databases, and APIs.

### Protect your GCP environment

### Key benefits

- Prevent attacks, intrusions, and suspicious behavior
- Meet ever-changing compliance and data sovereignty requirements
- Understand the business impact of risks in your environment
- Mitigate threats across your distributed virtual machines, containers, and cloud storage

## Why Trend Vision One?

Break down security silos and build up your defenses with the power of a single cybersecurity platform. Trend Vision One leverages leading global threat intelligence, AI/machine learning (ML) technology, and zero-trust principles to bridge robust ASRM, cross-layer protection, and next-generation XDR technology. Accelerate, simplify, and converge your security operations, enabling better protection against cyber threats across diverse hybrid IT environments.

Trend Vision One is available in Google Cloud Marketplace.
