

Veeam Agent for IBM AIX 4.0 Release Notes

This document provides last-minute information about Veeam Agent for IBM AIX, including system requirements, installation procedure, as well as relevant information on technical support, documentation, online resources and so on.

Veeam Agent for IBM AIX 4.0 is available for download at: <https://www.veeam.com/downloads.html> starting from May 30, 2022.

System Requirements

Hardware

Memory: 1 GB RAM (for standard backup and restore operations) / 4 GB RAM (for bare-metal recovery).

For information about RAM requirements for backup of a great number of files, see the [RAM Requirements for Large-Scale Environments](#) section in the Veeam Agent for IBM AIX User Guide.

Disk Space: 1.5 GB free disk space for product installation.

Network: 10 Mbps or faster network connection to a backup target.

OS

- IBM AIX versions starting from version 7.1 up to the latest update of version 7.3 are supported.
- IBM AIX 6.1 has an experimental support status. For details about experimental support, see [this Veeam KB article](#).
- Backup of a Virtual I/O Server (VIOS) is not supported.

File Systems

All file systems supported by the supported operating systems.

Software

The following utilities must be installed on the machine:

- **mlocate** (version 0.26-1) – required for file system indexing. It is provided along with the product in the product installation media.
- **tar** – required for file system indexing, exporting and rotating logs. It is installed with the product.
- **gzip** – required for file system indexing, exporting and rotating logs. It must be installed separately.
- **mkisofs** – required for creating Veeam Recovery Media.
[For IBM AIX 7.3, 7.2 and 7.1 TL1 or higher] This utility is pre-installed in the OS and does not require separate installation.
[For IBM AIX 7.1 TLO and 6.1] You must install version 1.13 of the mkisofs utility.

Backup Target

Backup can be performed to the following disk-based storage:

- Local (internal) storage of the protected computer (not recommended).
- Direct attached storage (DAS), such as USB, eSATA or Firewire external drives.
- Network Attached Storage (NAS) able to represent itself as SMB (CIFS) or NFS share.
- Veeam Backup & Replication 11a (build 11.0.1.1261) or later backup repository (Veeam Cloud Connect repositories are not supported).

Limitations

General

- Veeam Agent for IBM AIX can perform file system indexing only with the `mlocate` utility version 0.26-1 that comes with the product installation package.
- Veeam Agent for IBM AIX does not back up extended attributes and ACL of backed-up files and directories.
- Veeam Agent for IBM AIX does not support JFS2 snapshots.
- Veeam Agent for IBM AIX does not support sparse files.

Bare Metal Recovery

- Restoring only from file-level backups created by the current version of Veeam Agent is supported.
- Bare-metal recovery to dissimilar hardware is not supported.
- Bare-metal recovery from backups created from within WPARs is not supported.
- Bare-metal recovery requires a backup that includes the full contents of the root directory (the `--includedirs` option must be set to `/`).

Known Issues

General

- Enumeration progress is not shown in the beginning of a backup session.
- During the mount session started for file-level restore, Veeam Agent for IBM AIX might require more time to read backed-up directories that contain a large number of files. For example, listing a directory with 100,000 files takes more than 1 hour.
- While a backup is mounted for file-level restore within a WPAR, it is not possible to start a backup job on the WPAR's host server.
- If the network connection between Veeam backup repository and Veeam Agent is interrupted during backup or restore operation, you must restart the operation because Veeam Agent for IBM AIX cannot automatically reconnect to Veeam backup server.

Bare Metal Recovery

- [For bare-metal recovery with Recovery wizard] If you restore from a backup file residing in a repository managed by Veeam backup server, regardless of the user role, you must explicitly allow them access to that repository in Veeam backup console. For more information, see [Setting Up User Permissions on Backup Repositories](#).
- Disks are not automatically assigned to WPARs after bare-metal recovery.
- Paths longer than 1006 symbols cannot be restored during bare-metal recovery and must be restored manually afterwards.
- In the Recovery Media environment, for static IP addresses (non-DHCP) the default route must be set manually in command line interface.

- After bare-metal recovery, you may need to reset, or close and open the HMC terminal to resolve any possible issues with its behavior.
- If you performed bare-metal recovery from a backup located in an SMB (CIFS) network shared folder, some volume groups may become unavailable after reboot. For details, see [this Veeam KB article](#).

Installing Veeam Agent for IBM AIX

To install Veeam Agent for IBM AIX:

1. Download the installation archive from the Veeam Download page at <https://www.veeam.com/downloads.html>.
2. Extract the contents of the installation archive to a directory that can be accessed from the machine where you want to install the product. For example, this can be a directory in the local file system or an NFS directory.
3. Navigate to the directory where you extracted the archive with the `cd` command, and then use the following command:

```
rpm -ivh VeeamAgent-4.0.0.891-ppc64.rpm
```

Uninstalling Veeam Agent for IBM AIX

To uninstall Veeam Agent for IBM AIX, use the following command:

```
rpm -e VeeamAgent
```

Licensing

By installing Veeam Agent for IBM AIX, you agree to the Veeam End User License Agreement (EULA) and 3rd party components license agreements. To view the license agreements, visit the following link: <https://www.veeam.com/eula.html>.

To work with Veeam Agent for IBM AIX, you must obtain a license key and install it on the protected machine.

Technical Documentation References

To view the product help, type in your terminal:

```
man veeamconfig
```

If you have any questions about Veeam Agent for IBM AIX, you may use the following resources:

- Product web page: <https://www.veeam.com/ibm-aix-oracle-solaris-backup.html>
- User guide: <https://helpcenter.veeam.com/docs/agentforaix/userguide/about.html?ver=40>

Technical Support

We offer email and phone technical support for customers with current subscriptions, as well as during the official evaluation period. For better experience, please provide the following when contacting our technical support:

- Version information for the product and all infrastructure components
- Error message and/or description of the problem you are having
- Log files

To submit your support ticket or obtain additional information, please visit <https://www.veeam.com/support.html>.

TIP

Before contacting technical support, consider searching for a resolution on Veeam community forums at <https://www.veeam.com/forums>.

Contacting Veeam Software

At Veeam Software we pay close attention to comments from our customers. We make it our mission to listen to your input, and to build our products with your suggestions in mind. The best way to submit your feedback is by posting it on [Veeam R&D Forums](#).

Customer Support

For the most up to date information about our support practices, business hours and contact details, please visit <https://www.veeam.com/support.html>. You can also use this page to submit a support ticket and download the support policy guide.

Company Contacts
