

Veeam Backup for Microsoft Azure

Azure Cloud Backup and Recovery

Challenge

Microsoft Azure provides a robust platform that lets you create and deploy applications without having to maintain your own infrastructure. However, as referenced in the Microsoft Shared Responsibility Model, your applications and data still remain your responsibility to secure and protect.

Veeam® Backup for Microsoft Azure delivers native, policy-based protection for reliable recovery from accidental deletion, ransomware and other data loss scenarios. An API-first approach, secure backups, and fill-and file-level restores ensure resilient protection that's easy and cost-optimized, which frees up time and resources for strategic IT priorities.

Hybrid- and multi-cloud Veeam users experience:

\$1.1M average annual
cost savings

+61% security cost
efficiency gains

7x faster recovery
for cloud workloads

Key capabilities

Relentless Security

- **Logical air-gaps:** Isolated backups separate protected data from production data
- **Secure access:** Least-privilege IAM and role-based access control (RBAC)
- **Immutable:** Leverage immutable storage in Azure Blob to store data in a WORM state

Cloud Efficiency

- **Cost-optimized:** Backup lifecycle to object storage with cost calculations
- **Hybrid ready:** Operationally consistent management across the hybrid- and multi-cloud
- **Policy based:** Automated detection and protection with native backups

Fast, Reliable Recovery

- **Recover anywhere:** Across subscriptions, regions or outside of Azure*
- **Full- and file-level:** Full instance or granular recovery, in-place or as new
- **Simplified recovery:** Wizard-driven, automated and self-service workflows

Latest Release

- **Azure Blob backup:** Execute granular recoveries of production data and keep archival data resilient with new backup capabilities for Azure Blob
- **Azure virtual network backup:** Back up, restore and compare virtual network settings and configurations for disaster recovery (DR), migrations, dev/test and more!
- **Granular Azure account permissions:** Assign granular backup/restore permissions on a per-resource basis through Azure AD apps to ensure least-privilege access

*When combined with Veeam Backup & Replication™

Supported Services:

Supported Services

Azure VMs

Managed Disks

Azure SQL

Azure files

Azure Blob

“ Veeam is much more than a backup provider to Frimesa. They’re offering us automated data recovery workflows for Azure that will facilitate our ongoing journey to the cloud. ”

Thiago Algeri
CIO, Frimesa
