How Veeam Service Provider Console Simplifies Operations for Service Providers

Below are the top capabilities of Veeam® Service Provider Console that allow service providers to scale their Backup-as-a-Service and Disaster Recovery as-a-Service offerings and simplify business operations.

Multi-tenant monitoring and management without a centralized platform can slow scalability and exhaust resources.

Scale your business from a single pane of glass with Veeam Service Provider Console's intuitive user interface and remote monitoring and management capabilities for your customers' Veeam-protected workloads.

Manual onboarding can slow revenue growth and strain a service providers' help desk and technical resources.

Grow at a faster pace by leveraging Veeam Service Provider Console's self-service capabilities enabling resellers to deploy and manage their own customers.

Investment and resource restraints make it difficult to develop data protection services for SaaS and public cloud workloads.

Leverage Veeam Service Provider Console to scale service delivery into SaaS applications like Microsoft 365 and manage customers running in AWS, Microsoft Azure and Google Cloud.

Manually identifying patches and installing upgrades can leave customer infrastructure outdated and open to vulnerabilities.

Remotely install the latest version of Veeam Backup & Replication, upgrade existing backup servers and managed backup agents and install cumulative patches all from Veeam Service Provider Console's web-based UI.

Disparate tools for billing, licensing and gathering usage data can create operational inefficiencies.

Create, install, revoke and automatically update license keys via Veeam Service Provider Console and the VCSP Pulse integration.
